- a. Compute the weighted-average accumulated expenditures on Laserwords' new building during the capitalization period.
- b. Compute the avoidable interest on Laserwords' new building. (Round to one decimal place.)
- c. Some interest cost of Laserwords Inc. is capitalized for the year ended May 31, 2021.
 1. Identify the items relating to interest costs that must be disclosed in Laserwords' financial statements.
 2. Compute the amount of each of the items that must be disclosed.

(CMA adapted)

P10.8 (LO 3) (Nonmonetary Exchanges) Holyfield Corporation wishes to exchange a machine used in its operations. Holyfield has received the following offers from other companies in the industry.

1. Dorsett Company offered to exchange a similar machine plus \$23,000. (The exchange has commercial substance for both parties.)
2. Winston Company offered to exchange a similar machine. (The exchange lacks commercial substance for both parties.)
3. Liston Company offered to exchange a similar machine, but wanted \$3,000 in addition to Holyfield's machine. (The exchange has commercial substance for both parties.)

In addition, Holyfield contacted Greeley Corporation, a dealer in machines. To obtain a new machine, Holyfield must pay \$93,000 in addition to trading in its old machine.

| | <u>Holyfield</u> | <u>Dorsett</u> | <u>Winston</u> | <u>Liston</u> | <u>Greeley</u> |
|--------------------------|------------------|----------------|----------------|---------------|----------------|
| Machine cost | \$160,000 | \$120,000 | \$152,000 | \$160,000 | \$130,000 |
| Accumulated depreciation | 60,000 | 45,000 | 71,000 | 75,000 | –0– |
| Fair value | 92,000 | 69,000 | 92,000 | 95,000 | 185,000 |

Instructions

For each of the four independent situations, prepare the journal entries to record the exchange on the books of each company.

P10.9 (LO 3) (Nonmonetary Exchanges) On August 1, Hyde, Inc. exchanged productive assets with Wiggins, Inc. Hyde's asset is referred to below as "Asset A," and Wiggins' is referred to as "Asset B." The following facts pertain to these assets.

| | <u>Asset A</u> | <u>Asset B</u> |
|--|----------------|----------------|
| Original cost | \$96,000 | \$110,000 |
| Accumulated depreciation (to date of exchange) | 40,000 | 47,000 |
| Fair value at date of exchange | 60,000 | 75,000 |
| Cash paid by Hyde, Inc. | 15,000 | |
| Cash received by Wiggins, Inc. | | 15,000 |

Instructions

- Assuming that the exchange of Assets A and B has commercial substance, record the exchange for both Hyde, Inc. and Wiggins, Inc. in accordance with generally accepted accounting principles.
- Assuming that the exchange of Assets A and B lacks commercial substance, record the exchange for both Hyde, Inc. and Wiggins, Inc. in accordance with generally accepted accounting principles.

P10.10 (LO 3) (Nonmonetary Exchanges) During the current year, Marshall Construction trades an old crane that has a book value of \$90,000 (original cost \$140,000 less accumulated depreciation \$50,000) for a new crane from Brigham Manufacturing Co. The new crane cost Brigham \$165,000 to manufacture and is classified as inventory. The following information is also available.

| | <u>Marshall Const.</u> | <u>Brigham Mfg. Co.</u> |
|-------------------------|------------------------|-------------------------|
| Fair value of old crane | \$ 82,000 | |
| Fair value of new crane | | \$200,000 |
| Cash paid | 118,000 | |
| Cash received | | 118,000 |

Instructions

- Assuming that this exchange is considered to have commercial substance, prepare the journal entries on the books of (1) Marshall Construction and (2) Brigham Manufacturing.
- Assuming that this exchange lacks commercial substance for Marshall, prepare the journal entries on the books of Marshall Construction.
- Assuming the same facts as those in (a), except that the fair value of the old crane is \$98,000 and the cash paid is \$102,000, prepare the journal entries on the books of (1) Marshall Construction and (2) Brigham Manufacturing.
- Assuming the same facts as those in (b), except that the fair value of the old crane is \$97,000 and the cash paid \$103,000, prepare the journal entries on the books of (1) Marshall Construction and (2) Brigham Manufacturing.

P10.11 (LO 1, 3) (Purchases by Deferred Payment, Lump-Sum, and Nonmonetary Exchanges)

Klamath Company, a manufacturer of ballet shoes, is experiencing a period of sustained growth. In an effort to expand its production capacity to meet the increased demand for its product, the company recently made several acquisitions of plant and equipment. Rob Joffrey, newly hired in the position of fixed-asset accountant, requested that Danny Nolte, Klamath's controller, review the following transactions.

Transaction 1: On June 1, 2020, Klamath Company purchased equipment from Wyandot Corporation. Klamath issued a \$28,000, 4-year, zero-interest-bearing note to Wyandot for the new equipment. Klamath will pay off the note in four equal installments due at the end of each of the next 4 years. At the date of the transaction, the prevailing market rate of interest for obligations of this nature was 10%. Freight costs of \$425 and installation costs of \$500 were incurred in completing this transaction. The appropriate factors for the time value of money at a 10% rate of interest are given below.

| | |
|--|------|
| Future value of \$1 for 4 periods | 1.46 |
| Future value of an ordinary annuity for 4 periods | 4.64 |
| Present value of \$1 for 4 periods | 0.68 |
| Present value of an ordinary annuity for 4 periods | 3.17 |

Transaction 2: On December 1, 2020, Klamath Company purchased several assets of Yakima Shoes Inc., a small shoe manufacturer whose owner was retiring. The purchase amounted to \$220,000 and included the assets listed below. Klamath Company engaged the services of Tennyson Appraisal Inc., an independent appraiser, to determine the fair values of the assets which are also presented below.

| | Yakima Book Value | Fair Value |
|-----------|-------------------|------------------|
| Inventory | \$ 60,000 | \$ 50,000 |
| Land | 40,000 | 80,000 |
| Buildings | 70,000 | 120,000 |
| | <u>\$170,000</u> | <u>\$250,000</u> |

During its fiscal year ended May 31, 2021, Klamath incurred \$8,000 for interest expense in connection with the financing of these assets.

Transaction 3: On March 1, 2021, Klamath Company exchanged a number of used trucks plus cash for vacant land adjacent to its plant site. (The exchange has commercial substance.) Klamath intends to use the land for a parking lot. The trucks had a combined book value of \$35,000, as Klamath had recorded \$20,000 of accumulated depreciation against these assets. Klamath's purchasing agent, who has had previous dealings in the secondhand market, indicated that the trucks had a fair value of \$46,000 at the time of the transaction. In addition to the trucks, Klamath Company paid \$19,000 cash for the land.

Instructions

- a. Plant assets such as land, buildings, and equipment receive special accounting treatment. Describe the major characteristics of these assets that differentiate them from other types of assets.
- b. For each of the three transactions described above, determine the value at which Klamath Company should record the acquired assets. Support your calculations with an explanation of the underlying rationale.
- c. The books of Klamath Company show the following additional transactions for the fiscal year ended May 31, 2021.
 1. Acquisition of a building for speculative purposes.
 2. Purchase of a 2-year insurance policy covering plant equipment.
 3. Purchase of the rights for the exclusive use of a process used in the manufacture of ballet shoes.

For each of these transactions, indicate whether the asset should be classified as a plant asset. If it is a plant asset, explain why it is. If it is not a plant asset, explain why not, and identify the proper classification.

(CMA adapted)

Concepts for Analysis

CA10.1 (LO 1, 5) Writing (Acquisition, Improvements, and Sale of Realty) Tonkawa Company purchased land for use as its corporate headquarters. A small factory that was on the land when it was purchased was torn down before construction of the office building began. Furthermore, a substantial amount of rock blasting and removal had to be done to the site before construction of the building foundation began. Because the office building was set back on the land far from the public road, Tonkawa Company had the contractor construct a paved road that led from the public road to the parking lot of the office building.

Three years after the office building was occupied, Tonkawa Company added four stories to the office building. The four stories had an estimated useful life of 5 years more than the remaining estimated useful life of the original office building.

Ten years later, the land and building were sold at an amount more than their net book value, and Tonkawa Company had a new office building constructed in another state for use as its new corporate headquarters.

Instructions

- a. Which of the expenditures above should be capitalized? How should each be depreciated or amortized? Discuss the rationale for your answers.
- b. How would the sale of the land and building be accounted for? Include in your answer an explanation of how to determine the net book value at the date of sale. Discuss the rationale for your answer.

CA10.2 (LO 1) (Accounting for Self-Constructed Assets) Troopers Medical Labs, Inc., began operations 5 years ago producing stetricks, a new type of instrument it hoped to sell to doctors, dentists, and hospitals. The demand for stetricks far exceeded initial expectations, and the company was unable to produce enough stetricks to meet demand.

The company was manufacturing its product on equipment that it built at the start of its operations. To meet demand, more efficient equipment was needed. The company decided to design and build the equipment, because the equipment currently available on the market was unsuitable for producing stetricks.

In 2020, a section of the plant was devoted to development of the new equipment and a special staff was hired. Within 6 months, a machine developed at a cost of \$714,000 increased production dramatically and reduced labor costs substantially. Elated by the success of the new machine, the company built three more machines of the same type at a cost of \$441,000 each.

Instructions

- a. In general, what costs should be capitalized for self-constructed equipment?
- b. Discuss the propriety of including in the capitalized cost of self-constructed assets:
 1. The increase in overhead caused by the self-construction of fixed assets.
 2. A proportionate share of overhead on the same basis as that applied to goods manufactured for sale.
- c. Discuss the proper accounting treatment of the \$273,000 ($\$714,000 - \$441,000$) by which the cost of the first machine exceeded the cost of the subsequent machines. This additional cost should not be considered research and development costs.

CA10.3 (LO 2) Writing (Capitalization of Interest) Vania Magazines started construction of a warehouse building for its own use at an estimated cost of \$5,000,000 on January 1, 2019, and completed the building on December 31, 2019. During the construction period, Vania has the following debt obligations outstanding.

| | |
|---|-------------|
| Construction loan—12% interest, payable semiannually, issued December 31, 2018 | \$2,000,000 |
| Short-term loan—10% interest, payable monthly, and principal payable at maturity, on May 30, 2020 | 1,400,000 |
| Long-term loan—11% interest, payable on January 1 of each year; principal payable on January 1, 2022 | 1,000,000 |

Total cost amounted to \$5,200,000, and the weighted average of accumulated expenditures was \$3,500,000.

Jane Esplanade, the president of the company, has been shown the costs associated with this construction project and capitalized on the balance sheet. She is bothered by the “avoidable interest” included in the cost. She argues that, first, all the interest is unavoidable—no one lends money without expecting to be compensated for it. Second, why can’t the company use all the interest on all the loans when computing this avoidable interest? Finally, why can’t her company capitalize all the annual interest that accrued over the period of construction?

Instructions

(Round the weighted-average interest rate to two decimal places.)

You are the manager of accounting for the company. In a memo, explain what avoidable interest is, how you computed it (being especially careful to explain why you used the interest rates that you did), and why the company cannot capitalize all its interest for the year. Attach a schedule supporting any computations that you use.

CA10.4 (LO 3) Writing (Nonmonetary Exchanges) You have two clients that are considering trading machinery with each other. Although the machines are different from each other, you believe that an assessment of expected cash flows on the exchanged assets will indicate the exchange lacks commercial substance. Your clients would prefer that the exchange be deemed to have commercial substance, to allow them to record gains. Here are the facts:

| | Client A | Client B |
|--------------------------|-----------|-----------|
| Original cost | \$100,000 | \$150,000 |
| Accumulated depreciation | 40,000 | 80,000 |
| Fair value | 80,000 | 100,000 |
| Cash received (paid) | (20,000) | 20,000 |

Instructions

- a. Record the trade-in on Client A's books assuming the exchange has commercial substance.
- b. Record the trade-in on Client A's books assuming the exchange lacks commercial substance.
- c. Write a memo to the controller of Company A indicating and explaining the dollar impact on current and future statements of treating the exchange as having, versus lacking, commercial substance.
- d. Record the entry on Client B's books assuming the exchange has commercial substance.
- e. Record the entry on Client B's books assuming the exchange lacks commercial substance.
- f. Write a memo to the controller of Company B indicating and explaining the dollar impact on current and future statements of treating the exchange as having, versus lacking, commercial substance.

CA10.5 (LO 1) (Costs of Acquisition) The invoice price of a machine is \$50,000. Various other costs relating to the acquisition and installation of the machine including transportation, electrical wiring, special base, and so on amount to \$7,500. The machine has an estimated life of 10 years, with no salvage value at the end of that period.

The owner of the business suggests that the incidental costs of \$7,500 be charged to expense immediately for the following reasons.

1. If the machine should be sold, these costs cannot be recovered in the sales price.
2. The inclusion of the \$7,500 in the machinery account on the books will not necessarily result in a closer approximation of the market price of this asset over the years, because of the possibility of changing demand and supply levels.
3. Charging the \$7,500 to expense immediately will reduce federal income taxes.

Instructions

Discuss each of the points raised by the owner of the business.

(AICPA adapted)

CA10.6 (LO 1) Ethics (Cost of Land vs. Building—Ethics) Tones Company purchased a warehouse in a downtown district where land values are rapidly increasing. Gerald Carter, controller, and Wilma Ankara, financial vice president, are trying to allocate the cost of the purchase between the land and the building. Noting that depreciation can be taken only on the building, Carter favors placing a very high proportion of the cost on the warehouse itself, thus reducing taxable income and income taxes. Ankara, his supervisor, argues that the allocation should recognize the increasing value of the land, regardless of the depreciation potential of the warehouse. Besides, she says, net income is negatively impacted by additional depreciation and will cause the company's stock price to go down.

Instructions

Answer the following questions.

- a. What stakeholder interests are in conflict?
- b. What ethical issues does Carter face?
- c. How should these costs be allocated?

Using Your Judgment

Financial Statement Analysis Cases

Johnson & Johnson

Johnson & Johnson, the world's leading and most diversified healthcare corporation, serves its customers through specialized worldwide franchises. Each of its franchises consists of a number of companies throughout the world that focus on a particular healthcare market, such as surgical sutures, consumer pharmaceuticals, or contact lenses. Information related to its property, plant, and equipment in its 2017 annual report is shown in the following notes to the financial statements.

1. Property, Plant and Equipment and Depreciation

Property, plant and equipment are stated at cost. The Company utilizes the straight-line method of depreciation over the estimated useful lives of the assets:

| | |
|---------------------------------|-------------|
| Building and building equipment | 20–30 years |
| Land and leasehold improvements | 10–20 years |
| Machinery and equipment | 2–13 years |

4. Property, Plant and Equipment

At the end of 2017 and 2016, property, plant and equipment at cost and accumulated depreciation were:

| (dollars in millions) | 2017 | 2016 |
|----------------------------------|-----------------|-----------------|
| Land and land improvements | \$ 829 | \$ 753 |
| Buildings and building equipment | 11,240 | 10,112 |
| Machinery and equipment | 25,949 | 23,554 |
| Construction in progress | 3,448 | 3,354 |
| | <u>41,466</u> | <u>37,773</u> |
| Less: accumulated depreciation | 24,461 | 21,861 |
| | <u>\$17,005</u> | <u>\$15,912</u> |

The Company capitalizes interest expense as part of the cost of construction of facilities and equipment. Interest expense capitalized in 2017, 2016 and 2015 was \$94 million, \$102 million and \$102 million, respectively. Depreciation expense, including the amortization of capitalized interest in 2017, 2016 and 2015 was \$2.6 billion, \$2.5 billion and \$2.5 billion, respectively.

Johnson & Johnson provided the following selected information in its 2017 cash flow statement.

Johnson & Johnson
2017 Annual Report

Consolidated Financial Statements (excerpts)

| | |
|---|-----------------|
| Net cash flows from operating activities | \$21,056 |
| Cash flows from investing activities | |
| Additions to property, plant and equipment | (3,279) |
| Proceeds from the disposal of assets | 1,832 |
| Acquisitions, net of cash acquired | (35,151) |
| Purchases of investments | (6,153) |
| Sales of investments | 28,117 |
| Other (primarily intangibles) | (234) |
| Net cash used by investing activities | (14,868) |
| Cash flows from financing activities | |
| Dividends to shareholders | (8,943) |
| Repurchase of common stock | (6,358) |
| Proceeds from short-term debt | 869 |
| Retirement of short-term debt | (1,330) |
| Proceeds from long-term debt | 8,992 |
| Retirement of long-term debt | (1,777) |
| Proceeds from the exercise of stock options/excess tax benefits | 1,062 |
| Other | (188) |
| Net cash used by financing activities | (7,673) |
| Effect of exchange rate changes on cash and cash equivalents | 337 |
| Increase in cash and cash equivalents | (1,148) |
| Cash and cash equivalents, beginning of year (Note 1) | 18,972 |
| Cash and cash equivalents, end of year (Note 1) | <u>\$17,824</u> |
| Supplemental cash flow data | |
| Cash paid during the year for: | |
| Interest | \$ 960 |
| Interest, net amount capitalized | 866 |
| Income taxes | 3,312 |

Instructions

- What was the cost of buildings and building equipment at the end of 2017?
- Does Johnson & Johnson use a conservative or liberal method to depreciate its property, plant, and equipment?
- What was the actual interest paid by the company in 2017?
- What is Johnson & Johnson's free cash flow? From the information provided, comment on Johnson & Johnson's financial flexibility.

Accounting, Analysis, and Principles

Durler Company purchased equipment on January 2, 2016, for \$112,000. The equipment had an estimated useful life of 5 years with an estimated salvage value of \$12,000. Durler uses straight-line depreciation on all assets. On January 2, 2020, Durler exchanged this equipment plus \$12,000 in cash for newer equipment. The old equipment has a fair value of \$50,000.

Accounting

Prepare the journal entry to record the exchange on the books of Durler Company. Assume that the exchange has commercial substance.

Analysis

How will this exchange affect comparisons of the return on asset ratio for Durler in the year of the exchange compared to prior years?

Principles

How does the concept of commercial substance affect the accounting and analysis of this exchange?

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

CE10.1 Access the glossary ("Master Glossary") to answer the following.

- What does it mean to "capitalize" an item?
- What is the definition of a nonmonetary asset?
- What is a nonreciprocal transfer?
- What is the definition of "contribution"?

CE10.2 Herb Scholl, the owner of Scholl's Company, wonders whether interest costs associated with developing land can ever be capitalized. What does the Codification say on this matter?

CE10.3 What guidance does the Codification provide on the accrual of costs associated with planned major maintenance activities?

CE10.4 Briefly describe how the purchases and sales of inventory with the same counterparty are similar to the accounting for other nonmonetary exchanges.

Codification Research Case

Your client is in the planning phase for a major plant expansion, which will involve the construction of a new warehouse. The assistant controller does not believe that interest cost can be included in the cost of the warehouse, because it is a financing expense. Others on the planning team believe that some interest cost can be included in the cost of the warehouse, but no one could identify the specific authoritative guidance for this issue. Your supervisor asks you to research this issue.

Instructions

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

- a. Is it permissible to capitalize interest into the cost of assets? Provide authoritative support for your answer.
- b. What are the objectives for capitalizing interest?
- c. Discuss which assets qualify for interest capitalization.
- d. Is there a limit to the amount of interest that may be capitalized in a period?
- e. If interest capitalization is allowed, what disclosures are required?

Depreciation, Impairments, and Depletion

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

1. Describe depreciation concepts and methods of depreciation.
2. Discuss special depreciation methods and other depreciation issues.
3. Identify the accounting issues related to asset impairment.
4. Explain the accounting procedures for depletion of natural resources.
5. Demonstrate how to report and analyze property, plant, equipment, and natural resources.

PREVIEW OF CHAPTER 11 As noted in the following opening story, both U.S. and foreign companies are affected by impairment rules. These rules recognize that when economic conditions deteriorate, companies may need to write off an asset's cost to indicate the decline in its usefulness. The purpose of this chapter is to examine the depreciation process and the methods of writing off the cost of property, plant, and equipment and natural resources. The content and organization of the chapter are as follows.

This chapter also includes numerous conceptual and global discussions that are integral to the topics presented here.

DEPRECIATION, IMPAIRMENTS, AND DEPLETION

Depreciation

- Factors involved
- Methods of depreciation

Special Methods and Other Issues

- Special depreciation methods
- Other depreciation issues

Impairments

- Recognizing impairments
- Measuring impairments
- Restoration of loss
- Assets to be disposed of

Depletion

- Establishing a base
- Write-off of resource cost
- Estimating reserves
- Liquidating dividends
- Continuing controversy

Presentation and Analysis

- Presentation
- Analysis

Here Come the Write-Offs

The credit crisis starting in late 2008 affected many financial and nonfinancial institutions. Many of the statistics related to this crisis are sobering, as noted below.

- In October 2008, the FTSE 100 in the United Kingdom suffered its biggest one-day fall since October 1987. The index closed at its lowest level since October 2004.
- The Dow Jones Industrial Average fell below the 8,000 level for the first time since 2003.
- Germany's benchmark DAX tumbled after the collapse of the proposed rescue plan for **Hypo Real Estate**.
- Tightening credit and less disposable income led to Japanese electronic groups losing value. The Nikkei fell to its lowest point since February 2004.
- The Hong Kong Hang Seng dropped in line with the rest of Asia, closing below 17,000 points for the first time in two years in October 2008 and below 11,000 by November of that year.
- Governments spent billions of dollars bailing out financial institutions.

Although a financial rebound has occurred since October 2008, it is clear that most economies of the world are now in a slower growth pattern. This slowdown raises many questions related to the proper accounting for many long-term assets, such as property, plant, and equipment; intangible assets; and many types of financial assets. One of the most difficult issues relates to the possibility of higher impairment charges related to these assets and the related disclosures that may be needed. The following is an example of an impairment charge taken by **Fujitsu Limited**.

Impairment Losses (in part)

Due to the worsening of the global business environment, Fujitsu recognized consolidated impairment losses of 58.9 billion yen in relation to property, plant, and equipment of businesses with decreased profitability. The main losses are as follows:

(1) Property, Plant, and Equipment of LSI Business

Impairment losses related to the property, plant, and equipment of the LSI business of Fujitsu Microelectronics Limited totaled 49.9 billion yen. In January, Fujitsu Microelectronics announced business reforms in response to a sharp downturn in customer demand that began last autumn.

(2) Property, Plant, and Equipment of Optical Transmission Systems and Other Businesses

Consolidated impairment losses of 8.9 billion yen were recognized in relation to the property, plant, and equipment of the optical transmission systems business, the electronic components business and other businesses due to their decreased profitability.

(3) Property, Plant, and Equipment of HDD Business (included in business restructuring expenses)

Impairment losses of 16.2 billion yen have been recognized in relation to the property, plant, and equipment of the reorganized HDD business. These losses are included in business restructuring expenses. The impairment loss includes 5.3 billion yen recognized in the third quarter for the discontinuation of the HDD head business.

Thus, when the economy falters, impairment losses for property, plant, and equipment for many companies could be substantial. Here are some of the questions that need to be addressed regarding possible impairments.

1. How often should a company test for impairment?
2. What are key impairment indicators?
3. What disclosures are necessary for impairments?
4. How do companies match their cash flows to the asset that is potentially impaired?

Assessing whether a company has impaired assets is difficult. On the technical side, assumptions on cash flows must be reasonable, supportable, and cross-checked to ensure the final answer reconciles to external market data. And in discounting future cash flows, companies must determine the appropriate discount rate.

In addition to the technical accounting issues, the environment can change quickly. Reduced spending by consumers, changes in consumer preferences, disruption due to technology, as well as higher volatility in both stock and commodity markets are factors to consider. For example, **Nieman Marcus** recently booked \$466.2 million in impairment charges related to lowering the value of long-lived assets like real estate. The luxury retailer cited a challenging retail environment, a strong dollar discouraging tourists from shopping, as well as shortening trend cycles in which the newness and excitement for products wears off, putting pressure on sales. At **Sony**, write-downs of \$976 million (leading to a 2 percent decline in stock price) were explained by the continuing shift to streaming of movies and entertainment away from DVD, Blu-ray discs, and other home entertainment, all of which have been a strength for Sony. Nevertheless, for investors and creditors to have assurance that the amounts reported on the balance sheet for property, plant, and equipment are relevant and representationally faithful, appropriate impairment charges must be reported on a timely basis.

Depreciation—A Method of Cost Allocation

LEARNING OBJECTIVE 1

Describe depreciation concepts and methods of depreciation.

Most individuals at one time or another purchase and trade in an automobile. The automobile dealer and the buyer typically discuss what the trade-in value of the old car is. Also, they may talk about what the trade-in value of the new car will be in several years. In both cases, a decline in value is considered to be an example of depreciation.

To accountants, however, depreciation is not a matter of valuation. Rather, **depreciation is a means of cost allocation. Depreciation is the accounting process of allocating the cost of tangible assets to expense in a systematic and rational manner to those periods expected to benefit from the use of the asset.** For example, a company like **Goodyear** (one of the world’s largest tire manufacturers) does not depreciate assets on the basis of a decline in their fair value. Instead, it depreciates assets through systematic charges to expense.

This approach is employed because the value of the asset may fluctuate between the time the asset is purchased and the time it is sold or junked. Attempts to measure these interim value changes have not been well received because values are difficult to measure objectively. Therefore, Goodyear charges the asset’s cost to depreciation expense over its estimated life. It makes no attempt to value the asset at fair value between acquisition and disposition. Companies use the cost allocation approach because it recognizes the expense in the periods expected to benefit from the use of the asset and because fluctuations in fair value are uncertain and difficult to measure.

When companies write off the cost of long-lived assets over a number of periods, they typically use the term **depreciation**. They use the term **depletion** to describe the reduction in the cost of natural resources (such as timber, gravel, oil, and coal) over a period of time. The expiration of intangible assets, such as patents or copyrights, is called **amortization** (discussed in Chapter 12).

Factors Involved in the Depreciation Process

Before establishing a pattern of charges to revenue, a company must answer three basic questions:

1. What depreciable base is to be used for the asset?
2. What is the asset's useful life?
3. What method of cost apportionment is best for this asset?

The answers to these questions involve combining several estimates into one single figure. Note the calculations assume perfect knowledge of the future, which is never attainable.

Depreciable Base for the Asset

The base established for depreciation is a function of two factors: the original cost, and salvage or disposal value. We discussed historical cost in Chapter 10. **Salvage value** is the estimated amount that a company will receive when it sells the asset or removes it from service. It is the amount to which a company writes down or depreciates the asset during its useful life. If an asset has a cost of \$10,000 and a salvage value of \$1,000, its **depreciation base** is \$9,000 as shown in **Illustration 11.1**.

ILLUSTRATION 11.1

Computation of Depreciation Base

| | |
|--------------------------|------------------------|
| Original cost | \$10,000 |
| Less: Salvage value | <u>1,000</u> |
| Depreciation base | <u>\$ 9,000</u> |

From a practical standpoint, companies often assign a zero salvage value. Some long-lived assets, however, have substantial salvage values.

Estimation of Service Lives

The service life of an asset often differs from its physical life. A piece of machinery may be physically capable of producing a given product for many years beyond its service life. But a company may not use the equipment for all that time because the cost of producing the product in later years may be too high. For example, the old Slater cotton mill in Pawtucket, Rhode Island, is preserved in remarkable physical condition as an historic landmark in U.S. industrial development, although its service life was terminated many years ago.¹

Companies retire assets for two reasons: **physical factors** (such as casualty or expiration of physical life) and **economic factors** (obsolescence). Physical factors are the wear and tear, decay, and casualties that make it difficult for the asset to perform indefinitely. These physical factors set the outside limit for the service life of an asset.

We can classify the economic or functional factors into three categories:

1. **Inadequacy** results when an asset ceases to be useful to a company because the demands of the firm have changed. An example would be the need for a larger building to handle increased production. Although the old building may still be sound, it may have become inadequate for the company's purpose.

¹Taken from J. D. Coughlan and W. K. Strand, *Depreciation Accounting, Taxes and Business Decisions* (New York: The Ronald Press, 1969), pp. 10–12.

2. **Supersession** is the replacement of one asset with another more efficient and economical asset. Examples would be the replacement of the mainframe computer with a PC network, or the replacement of the Boeing 767 with the Boeing 787.
3. **Obsolescence** is the catchall for situations not involving inadequacy and supersession.

Because the distinction between these categories appears artificial, it is probably best to consider economic factors collectively instead of trying to make distinctions that are not clear-cut.

To illustrate the concepts of physical and economic factors, consider a new nuclear power plant. Which is more important in determining the useful life of a nuclear power plant—physical factors or economic factors? The limiting factors seem to be (1) ecological considerations, (2) competition from other power sources, and (3) safety concerns. Physical life does not appear to be the primary factor affecting useful life. Although the plant's physical life may be far from over, the plant may become obsolete in 10 years.

For a house, physical factors undoubtedly are more important than the economic or functional factors relative to useful life. Whenever the physical nature of the asset primarily determines useful life, maintenance plays an extremely vital role. The better the maintenance, the longer the life of the asset.²

In most cases, a company estimates the useful life of an asset based on its past experience with the same or similar assets. Others use sophisticated statistical methods to establish a useful life for accounting purposes. And in some cases, companies select arbitrary service lives. In a highly industrial economy such as that of the United States, where research and innovation are so prominent, technological factors have as much effect, if not more, on service lives of tangible plant assets as physical factors do.

What Do the Numbers Mean? Alphabet Dupe

Some companies try to imply that depreciation is not a cost. For example, in their press releases they will often make a bigger deal over earnings before interest, taxes, depreciation, and amortization (often referred to as EBITDA) than net income under GAAP. They like it because it “dresses up” their earnings numbers. Some on Wall Street buy this hype because they don't like the allocations that are required to determine net income. Some banks, without batting an eyelash, even let companies base their loan covenants on EBITDA.

For example, look at **Premier Parks**, which operates the Six Flags chain of amusement parks. Premier touts its EBITDA performance. But that number masks a big part of how the company operates—and how it spends its money. Premier argues that analysts should ignore depreciation for big-ticket items like roller coasters because the rides have a long life. Critics, however, say that the amusement industry has to spend as much as 50 percent of its EBITDA just to keep its rides and attractions current. Those expenses are not optional—let the rides get a little rusty, and ticket sales start to tail off. That means analysts really should view depreciation associated with the costs of maintaining the rides (or buying new ones) as an everyday expense. It also means investors in those companies should have strong stomachs.

The “Oracle of Omaha,” Warren Buffett, is also critical of depreciation accounting. In his view, “in certain cases, those charges

materially **understate** true economic costs”; this results in reported earnings being considerably higher than true economic earnings. As one analyst noted, the solution is not to ignore depreciation but to also look at capital spending in combination with reported depreciation expense and consider that as a proxy for a more valid depreciation expense.

What's the risk of trusting a fad accounting measure? Just look at a recent year's bankruptcy numbers. Of the 147 companies tracked by Moody's that defaulted on their debt, most borrowed money based on EBITDA performance. The bankers in those deals probably wish they had looked at a few other factors. On the other hand, nonfinancial companies in the S&P 500 recently generated a substantial EBITDA margin of 20.9 percent. Some analysts are concerned that such a high number suggests that companies are reluctant to incur costs and want to stockpile cash. The lesson? Investors will do well to avoid focus on any single accounting measure.

Ciesielski, “Buffett's Annual Letter: What He Said About Accounting,” *The Analyst's Accounting Observer* blog posts (February 27, 2017).

²The airline industry also illustrates the type of problem involved in estimation. In the past, aircraft were assumed not to wear out—they just became obsolete. However, some jets have been in service as long as 20 years, and maintenance of these aircraft has become increasingly expensive. As a result, some airlines now replace aircraft not because of obsolescence but because of physical deterioration.

Methods of Depreciation

Underlying Concepts

Depreciation attempts to recognize the cost of an asset in the periods that benefit from the use of that asset.

The third factor involved in the depreciation process is the **method** of cost apportionment. The profession requires that the depreciation method employed be “systematic and rational” (see **Underlying Concepts**). Companies may use a number of depreciation methods, as follows.

1. Activity method (units of use or production).
2. Straight-line method.
3. Decreasing-charge methods (accelerated):
 - a. Sum-of-the-years'-digits.
 - b. Declining-balance method.
4. Special depreciation methods:
 - a. Group and composite methods.
 - b. Hybrid or combination methods.³

To illustrate these depreciation methods, assume that Stanley Coal Mines recently purchased an additional crane for digging purposes. **Illustration 11.2** contains the pertinent data concerning this purchase.

ILLUSTRATION 11.2

Data Used to Illustrate Depreciation Methods

| | |
|--------------------------|--------------|
| Cost of crane | \$500,000 |
| Estimated useful life | 5 years |
| Estimated salvage value | \$50,000 |
| Productive life in hours | 30,000 hours |

Activity Method

The **activity method** (also called the **variable-charge** or **units-of-production approach**) assumes that depreciation is a **function of use or productivity, instead of the passage of time**. A company considers the life of the asset in terms of either the **output** it provides (units it produces) or an **input** measure such as the number of hours it works. Conceptually, the proper cost association relies on output instead of hours used, but often the output is not easily measurable. In such cases, an input measure such as machine hours is a more appropriate method of measuring the dollar amount of depreciation charges for a given accounting period.

The crane poses no particular depreciation problem. Stanley can measure the usage (hours) relatively easily. If Stanley uses the crane for 4,000 hours the first year, the depreciation charge is as shown in **Illustration 11.3**.

ILLUSTRATION 11.3

Depreciation Calculation, Activity Method—Crane Example

| |
|--|
| $\frac{(\text{Cost less Salvage Value}) \times \text{Hours This Year}}{\text{Total Estimated Hours}} = \text{Depreciation Charge}$ |
| $\frac{(\$500,000 - \$50,000) \times 4,000}{30,000} = \$60,000$ |

The major limitation of this method is that it is inappropriate in situations in which depreciation is a function of time instead of activity. For example, a building steadily deteriorates due to the elements (time) regardless of its use. In addition, where economic or functional factors affect an asset, independent of its use, the activity method loses much of its significance. For example, if a company is expanding rapidly, a particular building may soon become obsolete for its intended purposes. In both cases, activity is irrelevant. Another problem in using an activity method is the difficulty of estimating units of output or service hours received.

³Accounting Trends and Techniques reported that of its 500 surveyed companies, for reporting purposes, 490 used straight-line, 9 used declining-balance, 2 used sum-of-the-years'-digits, 9 used an accelerated method (not specified), 12 used units-of-production, and 17 used group/composite.

In cases where loss of utility results from variation in activity or productivity, the activity method does the best to record expenses in the same period as associated revenues. Companies that desire low depreciation during periods of low productivity, and high depreciation during high productivity, either adopt or switch to an activity method. In this way, a plant running at 40 percent of capacity generates 60 percent lower depreciation charges. **Inland Steel**, for example, switched to units-of-production depreciation at one time and reduced its losses by \$43 million, or \$1.20 per share.

Straight-Line Method

The **straight-line method** considers depreciation as a **function of time rather than a function of usage** (see **Underlying Concepts**). Companies widely use this method because of its simplicity. The straight-line procedure is often the most conceptually appropriate, too. When creeping obsolescence is the primary reason for a limited service life, the decline in usefulness may be constant from period to period. Stanley computes the depreciation charge for the crane as shown in **Illustration 11.4**.

Underlying Concepts
If benefits flow on a “straight-line” basis, then justification exists for recording the cost of the asset on a straight-line basis.

$$\frac{\text{Cost less Salvage Value}}{\text{Estimated Service Life}} = \text{Depreciation Charge}$$

$$\frac{\$500,000 - \$50,000}{5} = \$90,000$$

ILLUSTRATION 11.4
Depreciation Calculation, Straight-Line Method—Crane Example

The major objection to the straight-line method is that it rests on two tenuous assumptions: (1) the asset’s economic usefulness is the same each year, and (2) the maintenance and repair expense is essentially the same each period.

One additional problem that occurs in using the straight-line method—as well as some others—is that distortions in the rate of return analysis (income/assets) develop. **Illustration 11.5** indicates how the rate of return increases, given constant revenue flows, because the asset’s book value decreases.

| Year | Depreciation Expense | Undepreciated Asset Balance (book value) | Income (after depreciation expense) | Rate of Return (Income ÷ Assets) |
|------|----------------------|--|-------------------------------------|----------------------------------|
| 0 | | \$500,000 | | |
| 1 | \$90,000 | 410,000 | \$100,000 | 24.4% |
| 2 | 90,000 | 320,000 | 100,000 | 31.3 |
| 3 | 90,000 | 230,000 | 100,000 | 43.5 |
| 4 | 90,000 | 140,000 | 100,000 | 71.4 |
| 5 | 90,000 | 50,000 | 100,000 | 200.0 |

ILLUSTRATION 11.5
Depreciation and Rate of Return Analysis—Crane Example

Decreasing-Charge Methods

The **decreasing-charge methods** provide for a higher depreciation cost in the earlier years and lower charges in later periods (see **Underlying Concepts**). Because these methods allow for higher early-year charges than in the straight-line method, they are often called **accelerated depreciation methods**.

What is the main justification for this approach? The rationale is that companies should charge more depreciation in earlier years because the asset is most productive in its earlier years. Furthermore, the accelerated methods provide a constant cost because the depreciation charge is lower in the later periods, at the time when the repair and maintenance costs are often higher. Generally, companies use one of two decreasing-charge methods: the sum-of-the-years'-digits method or the declining-balance method.

Underlying Concepts
The expense recognition principle does not justify a constant charge to income. If the benefits from the asset decline as the asset ages, then a decreasing charge to income better captures the use of the asset.

Sum-of-the-Years'-Digits The **sum-of-the-years'-digits method** results in a decreasing depreciation charge based on a decreasing fraction of depreciable cost (original cost less salvage value). Each fraction uses the sum of the years as a denominator (5 + 4 + 3 + 2 + 1 = 15). The numerator is the number of years of estimated life remaining as of the beginning of

the year. In this method, the numerator decreases year by year, and the denominator remains constant (5/15, 4/15, 3/15, 2/15, and 1/15). At the end of the asset's useful life, the balance remaining should equal the salvage value. **Illustration 11.6** shows this method of computation.⁴

ILLUSTRATION 11.6**Sum-of-the-Years'-Digits
Depreciation Schedule—Crane
Example**

| Year | Depreciation Base | Remaining Life in Years | Depreciation Fraction | Depreciation Expense | Book Value, End of Year |
|------|-------------------|-------------------------|-----------------------|----------------------|-------------------------|
| 1 | \$450,000 | 5 | 5/15 | \$150,000 | \$350,000 |
| 2 | 450,000 | 4 | 4/15 | 120,000 | 230,000 |
| 3 | 450,000 | 3 | 3/15 | 90,000 | 140,000 |
| 4 | 450,000 | 2 | 2/15 | 60,000 | 80,000 |
| 5 | 450,000 | 1 | 1/15 | 30,000 | 50,000 ^a |
| | | 15 | 15/15 | \$450,000 | |

^aSalvage value.

Declining-Balance Method The **declining-balance method** utilizes a depreciation rate (expressed as a percentage) that is some multiple of the straight-line method. For example, the double-declining rate for a 10-year asset is 20 percent (double the straight-line rate, which is 1/10 or 10 percent). Companies apply the constant rate to the declining book value each year.

Unlike other methods, the declining-balance method **does not deduct the salvage value** in computing the depreciation base. The declining-balance rate is multiplied by the book value of the asset at the beginning of each period. Since the depreciation charge reduces the book value of the asset each period, applying the constant-declining-balance rate to a successively lower book value results in lower depreciation charges each year. This process continues until the book value of the asset equals its estimated salvage value. At that time, the company discontinues depreciation.

Companies use various multiples in practice. For example, the **double-declining-balance method** depreciates assets at twice (200 percent) the straight-line rate. **Illustration 11.7** shows Stanley's depreciation charges if using the double-declining approach.

ILLUSTRATION 11.7**Double-Declining
Depreciation Schedule—Crane
Example**

| Year | Book Value of Asset, Beginning of Year | Rate on Declining Balance ^a | Depreciation Expense | Balance Accumulated Depreciation | Book Value, End of Year |
|------|--|--|----------------------|----------------------------------|-------------------------|
| 1 | \$500,000 | 40% | \$200,000 | \$200,000 | \$300,000 |
| 2 | 300,000 | 40 | 120,000 | 320,000 | 180,000 |
| 3 | 180,000 | 40 | 72,000 | 392,000 | 108,000 |
| 4 | 108,000 | 40 | 43,200 | 435,200 | 64,800 |
| 5 | 64,800 | 40 | 14,800 ^b | 450,000 | 50,000 |

^aBased on twice the straight-line rate of 20% ($\$90,000 \div \$450,000 = 20\%$; $.20 \times 2 = 40\%$).
^bLimited to \$14,800 because book value should not be less than salvage value.

Companies often switch from the declining-balance method to the straight-line method near the end of the asset's useful life to ensure that they depreciate the asset only to its salvage value.⁵

⁴What happens if the estimated service life of the asset is, let us say, 51 years? How would we calculate the sum-of-the-years'-digits? Fortunately mathematicians have developed the following formula that permits easy computation:

$$\frac{n(n+1)}{2} = \frac{51(51+1)}{2} = 1,326$$

⁵A pure form of the declining-balance method (sometimes appropriately called the "fixed percentage of book value method") has also been suggested as a possibility. This approach finds a rate that depreciates the asset exactly to salvage value at the end of its expected useful life. The formula for determination of this rate is as follows.

$$\text{Depreciation rate} = 1 - \sqrt[n]{\frac{\text{Salvage value}}{\text{Acquisition cost}}}$$

The life in years is n . After computing the depreciation rate, a company applies it on the declining book value of the asset from period to period, which means that depreciation expense will be successively lower. This method is not used extensively in practice due to cumbersome computations. Further, it is not permitted for tax purposes.

Special Depreciation Methods and Other Issues

LEARNING OBJECTIVE 2

Discuss special depreciation methods and other depreciation issues.

Special Depreciation Methods

Sometimes companies adopt special depreciation methods. Reasons for doing so might be that a company's assets have unique characteristics, or the nature of the industry. Two of these special methods are:

1. Group and composite methods.
2. Hybrid or combination methods.

Group and Composite Methods

Companies often depreciate multiple-asset accounts using one rate. For example, **AT&T** might depreciate telephone poles, microwave systems, or switchboards by groups.

Two methods of depreciating multiple-asset accounts exist: the group method and the composite method. The choice of method depends on the nature of the assets involved. Companies frequently use the **group method** when the assets are similar in nature and have approximately the same useful lives. They use the **composite approach** when the assets are dissimilar and have different lives. The group method more closely approximates a single-unit cost procedure because the dispersion from the average is not as great. The computation for group or composite methods is essentially the same: find an average and depreciate on that basis.

Companies determine the **composite depreciation rate** by dividing the depreciation per year by the total cost of the assets. To illustrate, Mooney Motors establishes the composite depreciation rate for its fleet of cars, trucks, and campers as shown in **Illustration 11.8**.

| Asset | Original Cost | Salvage Value | Depreciation Base | Estimated Life (yrs.) | Depreciation per Year (straight-line) |
|---------|------------------|-----------------|-------------------|-----------------------|---------------------------------------|
| Cars | \$145,000 | \$25,000 | \$120,000 | 3 | \$40,000 |
| Trucks | 44,000 | 4,000 | 40,000 | 4 | 10,000 |
| Campers | 35,000 | 5,000 | 30,000 | 5 | 6,000 |
| | <u>\$224,000</u> | <u>\$34,000</u> | <u>\$190,000</u> | | <u>\$56,000</u> |

$$\text{Composite depreciation rate} = \frac{\$56,000}{\$224,000} = 25\%$$

$$\text{Composite life} = 3.39 \text{ years } (\$190,000 \div \$56,000)$$

ILLUSTRATION 11.8

Depreciation Calculation, Composite Basis

If there are no changes in the asset account, Mooney will depreciate the group of assets to the residual or salvage value at the rate of \$56,000 ($\$224,000 \times .25$) a year. As a result, it will take Mooney 3.39 years to depreciate these assets. The length of time it takes a company to depreciate its assets on a composite basis is called the **composite life**.

We can highlight the differences between the group or composite method and the single-unit depreciation method by looking at asset retirements. If Mooney retires an asset before or after the average service life of the group is reached, it buries the resulting gain or loss in the Accumulated Depreciation account. This practice is justified because Mooney will retire some assets before the average service life and others after the average life. For this reason, the

debit to Accumulated Depreciation is the difference between original cost and cash received. Mooney does not record a gain or loss on disposition.

To illustrate, suppose that Mooney Motors sold one of the campers with a cost of \$5,000 for \$2,600 at the end of the third year. The entry is:

| | | |
|---------------------------------------|-------|-------|
| Accumulated Depreciation—Plant Assets | 2,400 | |
| Cash | 2,600 | |
| Cars, Trucks, and Campers | | 5,000 |

If Mooney purchases a new type of asset (mopeds, for example), it must compute a new depreciation rate and apply this rate in subsequent periods.

Illustration 11.9 presents a typical financial statement disclosure of the group depreciation method for **Ampco-Pittsburgh Corporation**.

ILLUSTRATION 11.9

Disclosure of Group Depreciation Method

Ampco-Pittsburgh Corporation

Depreciation rates are based on estimated useful lives of the asset groups. Gains or losses on normal retirements or replacements of depreciable assets, subject to composite depreciation methods, are not recognized; the difference between the cost of the assets retired or replaced and the related salvage value is charged or credited to the accumulated depreciation.

The group or composite method simplifies the bookkeeping process and tends to average out errors caused by over- or underdepreciation. As a result, gains or losses on disposals of assets do not distort periodic income.

On the other hand, the unit method (depreciation of single assets) has several advantages over the group or composite methods: (1) it simplifies the computation mathematically, (2) it identifies gains and losses on disposal, (3) it isolates depreciation on idle equipment, and (4) it represents the best estimate of the depreciation of each asset, not the result of averaging the cost over a longer period of time. As a consequence, companies generally use the unit method.⁶ *Unless stated otherwise, you should use the unit method in homework problems.*

Hybrid or Combination Methods

In addition to the depreciation methods already discussed, companies are free to develop their own special or tailor-made depreciation methods. GAAP requires only that the method result in the allocation of an asset's cost over the asset's life in a **systematic and rational manner**.

For example, the steel industry widely uses a hybrid depreciation method, called the **production variable method**, that is a combination straight-line/activity approach. The note from **WHX Corporation**'s annual report, shown in **Illustration 11.10**, explains one variation of this method.

ILLUSTRATION 11.10

Disclosure of Hybrid Depreciation Method

WHX Corporation

The Company utilizes the modified units of production method of depreciation which recognizes that the depreciation of steelmaking machinery is related to the physical wear of the equipment as well as a time factor. The modified units of production method provides for straight-line depreciation charges modified (adjusted) by the level of raw steel production. In the prior year, depreciation under the modified units of production method was \$21.6 million or 40% less than straight-line depreciation, and in the current year it was \$1.1 million or 2% more than straight-line depreciation.

⁶Many believe that an even better way to depreciate property, plant, and equipment is to use *component depreciation*. Under component depreciation, a company should depreciate over its expected useful life any part or portion of property, plant, and equipment that can be separately identified as an asset. For example, a company could separate the various components of a building (e.g., roof, heating and cooling system, elevator, leasehold improvements) and depreciate each component over its useful life. In fact, IFRS requires use of component depreciation.

What Do the Numbers Mean? Decelerating Depreciation

Which depreciation method should management select? Many believe that the method that best matches revenues with expenses should be used. For example, if revenues generated by the asset are constant over its useful life, select straight-line depreciation. On the other hand, if revenues are higher (or lower) at the beginning of the asset's life, then use a decreasing (or increasing) method. Thus, if a company can reliably estimate revenues from the asset, selecting a depreciation method that best matches costs with those revenues would seem to provide the most useful information to investors and creditors for assessing the future cash flows from the asset.

Managers in the real estate industry face a different challenge when considering depreciation choices. Real estate managers object to traditional depreciation methods because

in their view, real estate often does not decline in value. In addition, because real estate is highly debt-financed, most real estate concerns report losses in earlier years of operations when the sum of depreciation and interest exceeds the revenue from the real estate project. As a result, real estate companies, like **Kimco Realty** and **Equity Residential**, argue for some form of **increasing-charge** method of depreciation (lower depreciation at the beginning and higher depreciation at the end). With such a method, companies would report higher total assets and net income in the earlier years of the project.⁷

Source: D. Harper, "How to Assess a Real Estate Investment Trust (REIT)," *Investopedia* (April 6, 2018).

Other Depreciation Issues

We still need to discuss several special issues related to depreciation:

1. How should companies compute depreciation for partial periods?
2. Does depreciation provide for the replacement of assets?
3. How should companies handle revisions in depreciation rates?

Depreciation and Partial Periods

Companies seldom purchase plant assets on the first day of a fiscal period or dispose of them on the last day of a fiscal period. A practical question is: How much depreciation should a company charge for the partial periods involved?

In computing depreciation expense for partial periods, companies must determine the depreciation expense for the full year and then prorate this depreciation expense between the two periods involved. This process should continue throughout the useful life of the asset.

Assume, for example, that Steeltex Company purchases an automated drill machine with a five-year life for \$45,000 (no salvage value) on June 10, 2019. The company's fiscal year ends December 31. Steeltex therefore charges depreciation for only $6\frac{2}{3}$ months during that year. The total depreciation for a full year (assuming straight-line depreciation) is \$9,000 ($\$45,000/5$). The depreciation for the first, partial year is therefore:

$$\frac{6\frac{2}{3}}{12} \times \$9,000 = \$5,000$$

The partial-period calculation is relatively simple when Steeltex uses straight-line depreciation. But how is partial-period depreciation handled when it uses an accelerated method such as sum-of-the-years'-digits or double-declining-balance? As an illustration, assume that Steeltex purchased another machine for \$10,000 on July 1, 2019, with an estimated useful life of five years and no salvage value. **Illustration 11.11** shows the depreciation figures for 2019, 2020, and 2021.

⁷In this regard, real estate investment trusts (REITs) often report (in addition to net income) an earnings measure, funds from operations (FFO), that adjusts income for depreciation expense and other noncash expenses. This method is not GAAP. There is mixed empirical evidence about whether FFO or GAAP income is more useful to real estate investment trust investors. See, for example, Richard Gore and David Stott, "Toward a More Informative Measure of Operating Performance in the REIT Industry: Net Income vs. FFO," *Accounting Horizons* (December 1998); and Linda Vincent, "The Information Content of FFO for REITs," *Journal of Accounting and Economics* (January 1999).

ILLUSTRATION 11.11**Calculation of Partial-Period Depreciation, Two Accelerated Methods**

| | <u>Sum-of-the-Years'-Digits</u> | <u>Double-Declining-Balance</u> |
|---|---|--|
| 1st full year | $(5/15 \times \$10,000) = \$3,333.33$ | $(.40 \times \$10,000) = \$4,000$ |
| 2nd full year | $(4/15 \times 10,000) = 2,666.67$ | $(.40 \times 6,000) = 2,400$ |
| 3rd full year | $(3/15 \times 10,000) = 2,000.00$ | $(.40 \times 3,600) = 1,440$ |
| Depreciation from July 1, 2019, to December 31, 2019 | | |
| | $6/12 \times \$3,333.33 = \underline{\underline{\$1,666.67}}$ | $6/12 \times \$4,000 = \underline{\underline{\$2,000}}$ |
| Depreciation for 2020 | | |
| | $6/12 \times \$3,333.33 = \$1,666.67$ | $6/12 \times \$4,000 = \$2,000$ |
| | $6/12 \times 2,666.67 = 1,333.33$ | $6/12 \times 2,400 = 1,200$ |
| | <u><u>\$3,000.00</u></u> | <u><u>\$3,200</u></u> |
| | | or $(\$10,000 - \$2,000) \times .40 = \underline{\underline{\$3,200}}$ |
| Depreciation for 2021 | | |
| | $6/12 \times \$2,666.67 = \$1,333.33$ | $6/12 \times \$2,400 = \$1,200$ |
| | $6/12 \times 2,000.00 = 1,000.00$ | $6/12 \times 1,440 = 720$ |
| | <u><u>\$2,333.33</u></u> | <u><u>\$1,920</u></u> |
| | | or $(\$10,000 - \$5,200) \times .40 = \underline{\underline{\$1,920}}$ |

Sometimes a company like Steeltex modifies the process of allocating costs to a partial period to handle acquisitions and disposals of plant assets more simply. One variation is to take no depreciation in the year of acquisition and a full year's depreciation in the year of disposal. Other variations charge one-half year's depreciation both in the year of acquisition and in the year of disposal (referred to as the **half-year convention**), or charge a full year in the year of acquisition and none in the year of disposal.

In fact, Steeltex may adopt any one of these fractional-year policies in allocating cost to the first and last years of an asset's life so long as it applies the method consistently. However, **unless otherwise stipulated, companies normally compute depreciation on the basis of the nearest full month.**

Illustration 11.12 shows depreciation allocated under five different fractional-year policies using the straight-line method on the \$45,000 automated drill machine purchased by Steeltex Company on June 10, 2019, discussed earlier.

ILLUSTRATION 11.12**Fractional-Year Depreciation Policies**

| Machine Cost = \$45,000 Fractional-Year Policy | Depreciation Allocated per Period over 5-Year Life* | | | | | |
|--|---|---------------------------------|-----------------------------|-----------------------------|---------|----------------------|
| | 2019 | 2020 | 2021 | 2022 | 2023 | 2024 |
| 1. Nearest fraction of a year. | \$5,000 ^a | \$9,000 | \$9,000 | \$9,000 | \$9,000 | \$4,000 ^b |
| 2. Nearest full month. | 5,250 ^c | 9,000 | 9,000 | 9,000 | 9,000 | 3,750 ^d |
| 3. Half year in period of acquisition and disposal. | 4,500 | 9,000 | 9,000 | 9,000 | 9,000 | 4,500 |
| 4. Full year in period of acquisition, none in period of disposal. | 9,000 | 9,000 | 9,000 | 9,000 | 9,000 | -0- |
| 5. None in period of acquisition, full year in period of disposal. | -0- | 9,000 | 9,000 | 9,000 | 9,000 | 9,000 |
| | ^a 6.667/12 (\$9,000) | ^b 5.333/12 (\$9,000) | ^c 7/12 (\$9,000) | ^d 5/12 (\$9,000) | | |
| | *Rounded to nearest dollar. | | | | | |

Depreciation and Replacement of Property, Plant, and Equipment

A common misconception about depreciation is that it provides funds for the replacement of fixed assets. Depreciation is like other expenses in that it reduces net income. It differs, though, in that **it does not involve a current cash outflow.**

To illustrate why depreciation does not provide funds for replacement of plant assets, assume that a business starts operating with plant assets of \$500,000 that have a useful life of five years. The company's balance sheet at the beginning of the period is:

| | | | |
|--------------|-----------|----------------------|-----------|
| Plant assets | \$500,000 | Stockholders' equity | \$500,000 |
|--------------|-----------|----------------------|-----------|

If we assume that the company earns no revenue over the five years, the income statements are:

| | Year 1 | Year 2 | Year 3 | Year 4 | Year 5 |
|--------------|---------------------|---------------------|---------------------|---------------------|---------------------|
| Revenue | \$ -0- | \$ -0- | \$ -0- | \$ -0- | \$ -0- |
| Depreciation | (100,000) | (100,000) | (100,000) | (100,000) | (100,000) |
| Loss | <u>\$ (100,000)</u> | <u>\$ (100,000)</u> | <u>\$ (100,000)</u> | <u>\$ (100,000)</u> | <u>\$ (100,000)</u> |

Total depreciation of the plant assets over the five years is \$500,000. The balance sheet at the end of the five years therefore is:

| | | | |
|--------------|-----|----------------------|-----|
| Plant assets | -0- | Stockholders' equity | -0- |
|--------------|-----|----------------------|-----|

This extreme example illustrates that depreciation **in no way** provides funds for the replacement of assets. **The funds for the replacement of the assets come from the revenues** (generated through use of the asset). Without the revenues, no income materializes and no cash inflow results.

Revision of Depreciation Rates

When purchasing a plant asset, companies carefully determine depreciation rates based on past experience with similar assets and other pertinent information. The provisions for depreciation are only estimates, however. Companies may need to revise them during the life of the asset. Unexpected physical deterioration or unforeseen obsolescence may decrease the estimated useful life of the asset. Improved maintenance procedures, revision of operating procedures, or similar developments may prolong the life of the asset beyond the expected period.⁸

For example, assume that **International Paper Co.** purchased machinery with an original cost of \$90,000. It estimates a 20-year life with no salvage value. However, during year 6, International Paper estimates that it will use the machine for an additional 25 years. Its total life, therefore, will be 30 years instead of 20. Depreciation has been recorded at the rate of 1/20 of \$90,000, or \$4,500 per year by the straight-line method. On the basis of a 30-year life, International Paper should have recorded depreciation as 1/30 of \$90,000, or \$3,000 per year. It has therefore overstated depreciation, and understated net income, by \$1,500 for each of the past five years, or a total amount of \$7,500. **Illustration 11.13** shows this computation.

| | Per Year | For 5 Years |
|--|----------------|-----------------|
| Depreciation charged per books (1/20 × \$90,000) | \$4,500 | \$22,500 |
| Depreciation based on a 30-year life (1/30 × \$90,000) | (3,000) | (15,000) |
| Excess depreciation charged | <u>\$1,500</u> | <u>\$ 7,500</u> |

ILLUSTRATION 11.13

Computation of Accumulated Difference Due to Revisions

International Paper should report this change in estimate in the current and prospective periods (prospectively): It should not make any changes in previously reported results. And it does not adjust opening balances nor attempt to “catch up” for prior periods. The reason? Changes in estimates are a continual and inherent part of any estimation process. Continual restatement of prior periods would occur for revisions of estimates unless handled prospectively. Therefore, no entry is made at the time the change in estimate occurs. Charges for depreciation in subsequent periods (assuming use of the straight-line method)

⁸As an example of a change in operating procedures, **General Motors (GM)** used to write off its tools—such as dies and equipment used to manufacture car bodies—over the life of the body type. Through this procedure, it expensed tools twice as fast as **Ford** and three times as fast as **Chrysler**. However, with changes in body types, it slowed the depreciation process on these tools and lengthened the lives on its plant and equipment. These revisions reduced depreciation and amortization charges by approximately \$1.23 billion, or \$2.55 per share, in the year of the change. In Chapter 22, we provide a more complete discussion of changes in estimates.

are determined by **dividing the remaining book value less any salvage value by the remaining estimated life**, as shown in **Illustration 11.14**.

ILLUSTRATION 11.14**Computing Depreciation after Revision of Estimated Life**

| | |
|--|------------------------|
| Machinery | \$90,000 |
| Less: Accumulated depreciation | <u>22,500</u> |
| Book value of machinery at end of 5th year | <u>\$67,500</u> |
| Depreciation (future periods) = \$67,500 book value ÷ 25 years remaining life = \$2,700 | |

The entry to record depreciation for each of the remaining 25 years is:

| | | |
|------------------------------------|-------|-------|
| Depreciation Expense | 2,700 | |
| Accumulated Depreciation—Machinery | | 2,700 |

What Do the Numbers Mean? Depreciation Choices

The amount of depreciation expense recorded depends on both the depreciation method used and estimates of service lives and salvage values of the assets. Differences in these choices and estimates can significantly impact a company's reported results and make it difficult to compare the depreciation numbers of different companies.

An analyst determines the impact of these management choices and judgments on the amount of depreciation expense by examining the notes to financial statements. For example, **Willamette Industries** provided the note shown here in its financial statements.

As indicated, when Willamette Industries extended the estimated service lives of its machinery and equipment by five years, it increased income by nearly \$54 million.

Note 4: Property, Plant, and Equipment (partial)

| | Range of Useful Lives |
|-----------------------|--------------------------|
| Land | — |
| Buildings | 15–35 |
| Machinery & equipment | 5–25 |
| Furniture & fixtures | 3–15 |

During the year, the estimated service lives for most machinery and equipment were extended five years. The change was based upon a study performed by the company's engineering department, comparisons to typical industry practices, and the effect of the company's extensive capital investments which have resulted in a mix of assets with longer productive lives due to technological advances. As a result of the change, net income was increased by \$54,000,000.

Impairments

LEARNING OBJECTIVE 3

Identify the accounting issues related to asset impairment.

Underlying Concepts

The going concern concept assumes that the company can recover the investment in its assets. Under GAAP, companies do not report the fair value of long-lived assets because a going concern does not plan to sell such assets. However, if the assumption of being able to recover the cost of the investment is not valid, then a company should report a reduction in value.

The general accounting standard of **lower-of-cost-or-net realizable value (or market in some cases) for inventories does not apply to property, plant, and equipment**. Even when property, plant, and equipment has suffered partial obsolescence, accountants have been reluctant to reduce the asset's carrying amount. Why? Because, unlike inventories, it is difficult to arrive at a fair value for property, plant, and equipment that is not subjective and arbitrary (see **Underlying Concepts**).

For example, **Falconbridge Ltd. Nickel Mines** had to decide whether to write off all or a part of its property, plant, and equipment in a nickel-mining operation in the Dominican Republic. The project had been incurring losses because nickel prices were low and operating costs were high. Only if nickel prices increased by approximately 33 percent would the project be reasonably profitable. Whether a write-off was appropriate depended on the future price of nickel. Even if the company decided to write off the asset, how much should be written off?

Recognizing Impairments

As discussed in the opening story, the credit crisis starting in late 2008 affected many financial and nonfinancial institutions. As a result of the global slump, many companies are

considering write-offs of some of their long-lived assets. These write-offs are referred to as **impairments**.

Various events and changes in circumstances might lead to an impairment. Examples are:

- A significant decrease in the fair value of an asset.
- A significant change in the extent or manner in which an asset is used.
- A significant adverse change in legal factors or in the business climate that affects the value of an asset.
- An accumulation of costs significantly in excess of the amount originally expected to acquire or construct an asset.
- A projection or forecast that demonstrates continuing losses associated with an asset.

These events or changes in circumstances indicate that the company may not be able to recover the carrying amount of the asset. In that case, a **recoverability test** is used to determine whether an impairment has occurred. [1] (See the FASB Codification References near the end of the chapter.)

To apply the first step of the recoverability test, a company like **UPS** estimates the future net cash flows expected from the **use of that asset and its eventual disposition**. If the sum of the expected future net cash flows (undiscounted) is **less than the carrying amount** of the asset, UPS considers the asset impaired. Conversely, if the sum of the expected future net cash flows (undiscounted) is **equal to or greater than the carrying amount** of the asset, no impairment has occurred.

The recoverability test therefore screens for asset impairment. For example, if the expected future net cash flows from an asset are \$400,000 and its carrying amount is \$350,000, no impairment has occurred. However, if the expected future net cash flows are \$300,000, an impairment has occurred. The rationale for the recoverability test relies on a basic presumption: A balance sheet should report long-lived assets at no more than the carrying amounts that are recoverable.

Measuring Impairments

If the recoverability test indicates an impairment, UPS computes a loss. The **impairment loss** is the amount by which the carrying amount of the asset **exceeds its fair value**. How does UPS determine the fair value of an asset? It is measured based on the market price if an active market for the asset exists. If no active market exists, UPS uses the **present value of expected future net cash flows to determine fair value**.

To summarize, the process of determining an impairment loss is as follows.

1. Review events or changes in circumstances for possible impairment.
2. If the review indicates a possible impairment, apply the recoverability test. If the sum of the expected future net cash flows from the long-lived asset is less than the carrying amount of the asset, an impairment has occurred (see **Global View**).
3. Assuming an impairment, the impairment loss is the amount by which the carrying amount of the asset exceeds the fair value of the asset. The fair value is the market price of the asset or the present value of expected future net cash flows.

Global View

IFRS also uses a fair value test to measure the impairment loss. However, IFRS does not use the first-stage recoverability test used under GAAP—comparing the undiscounted cash flows to the carrying amount. As a result, the IFRS test is more strict than GAAP.

Impairment—Example 1

M. Alou Inc. has equipment that, due to changes in its use, it reviews for possible impairment. The equipment's carrying amount is \$600,000 (\$800,000 cost less \$200,000 accumulated depreciation). Alou determines the expected future net cash flows (undiscounted) from the use of the equipment and its eventual disposal to be \$650,000.

The recoverability test indicates that the \$650,000 of expected future net cash flows from the equipment's use exceed the carrying amount of \$600,000. As a result, no impairment occurred. (Recall that the undiscounted future net cash flows must be less than the carrying amount for Alou to deem an asset to be impaired and to measure the impairment loss.) Therefore, M. Alou Inc. does not recognize an impairment loss in this case.

Impairment—Example 2

Assume the same facts as in Example 1, except that the expected future net cash flows from Alou's equipment are \$580,000 (instead of \$650,000). The recoverability test indicates that the expected future net cash flows of \$580,000 from the use of the asset are less than its carrying amount of \$600,000. Therefore, an impairment has occurred.

The difference between the carrying amount of Alou's asset and its fair value is the impairment loss. Assuming this asset has a fair value of \$525,000, **Illustration 11.15** shows the loss computation.

ILLUSTRATION 11.15

Computation of Impairment Loss

| | |
|----------------------------------|------------------|
| Carrying amount of the equipment | \$600,000 |
| Fair value of equipment | (525,000) |
| Loss on impairment | <u>\$ 75,000</u> |

M. Alou Inc. records the impairment loss as follows.

| | | |
|------------------------------------|--------|--------|
| Loss on Impairment | 75,000 | |
| Accumulated Depreciation—Equipment | | 75,000 |

Alou reports the impairment loss as part of income from continuing operations, in the "Other expenses and losses" section. Costs associated with an impairment loss are the same costs that would flow through operations and that it would report as part of continuing operations. Alou will continue to use these assets in operations. Therefore, it should not report the loss below "Income from continuing operations."

A company that recognizes an impairment loss should disclose the asset(s) impaired, the events leading to the impairment, the amount of the loss, and how it determined fair value (disclosing the interest rate used, if appropriate).

Restoration of Impairment Loss

After recording an impairment loss, the reduced carrying amount of an asset held for use becomes its new cost basis. A company does not change the new cost basis except for depreciation or amortization in future periods or for additional impairments.

To illustrate, assume that Damon Company at December 31, 2019, has equipment with a carrying amount of \$500,000. Damon determines this asset is impaired and writes it down to its fair value of \$400,000. At the end of 2020, Damon determines that the fair value of the asset is \$480,000. The carrying amount of the equipment should not change in 2020 except for the depreciation taken in 2020. Damon **may not restore an impairment loss for an asset held for use**. The rationale for not writing the asset up in value is that the new cost basis puts the impaired asset on an equal basis with other assets that are unimpaired (see **Global View**).

Global View

IFRS permits write-ups for subsequent recoveries of impairment, back up to the original amount before the impairment. GAAP prohibits those write-ups, except for assets to be disposed of.

Impairment of Assets to Be Disposed Of

What happens if a company intends to dispose of the impaired asset, instead of holding it for use? At one time, **Kroger** recorded an impairment loss of \$54 million on property, plant, and equipment it no longer needed due to store closures. In this case, Kroger reports the impaired asset at the lower-of-cost-or-net realizable value (fair value less costs to sell). Because Kroger intends to dispose of the assets in a short period of time, it uses net realizable value in order to provide a better measure of the net cash flows that it will receive from these assets.

Kroger does not depreciate or amortize assets held for disposal during the period it holds them. The rationale is that depreciation is inconsistent with the notion of assets to be disposed of and with the use of the lower-of-cost-or-net realizable value. In other words, **assets held for disposal are like inventory; companies should report them at the lower-of-cost-or-net realizable value**.

Because Kroger will recover assets held for disposal through sale rather than through operations, it continually revalues them. Each period, the assets are reported at the lower-of-cost-or-net realizable value. Thus, **Kroger can write up or down an asset held for disposal**

in future periods, as long as the carrying value after the write-up never exceeds the carrying amount of the asset before the impairment. Companies should report losses or gains related to these impaired assets as part of **income from continuing operations**.

Illustration 11.16 summarizes the key concepts in accounting for impairments.

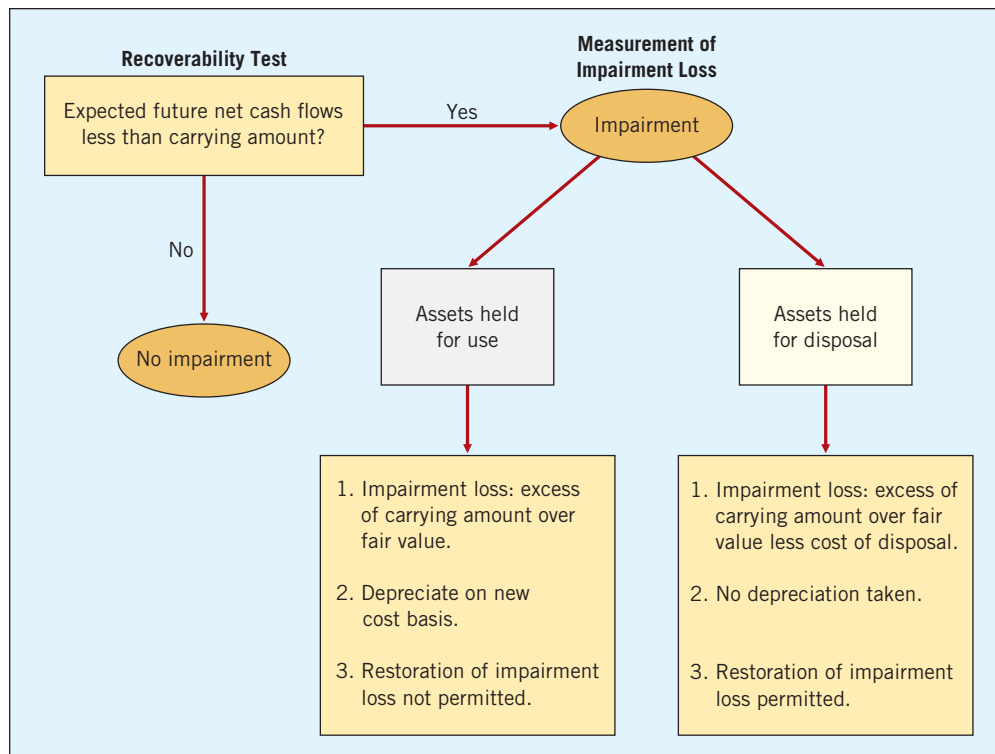

ILLUSTRATION 11.16

Graphic of Accounting for Impairments

Depletion

LEARNING OBJECTIVE 4

Explain the accounting procedures for depletion of natural resources.

Natural resources, often called wasting assets, include petroleum, minerals, and timber. They have two main features: (1) the complete removal (consumption) of the asset, and (2) replacement of the asset only by an act of nature. Unlike plant and equipment, natural resources are consumed physically over the period of use and do not maintain their physical characteristics. Still, the accounting problems associated with natural resources are similar to those encountered with fixed assets. The questions to be answered are:

1. How do companies establish the cost basis for write-off?
2. What pattern of allocation should companies employ?

Recall that the accounting profession uses the term **depletion** for the process of allocating the cost of natural resources.

Establishing a Depletion Base

How do we determine the depletion base for natural resources? For example, a company like **ExxonMobil** makes sizable expenditures to find natural resources. And for every successful discovery, there are many failures. Furthermore, the company encounters long

delays between the time it incurs costs and the time it obtains the benefits from the extracted resources. As a result, a company in the extractive industries, like ExxonMobil, frequently adopts a conservative policy in accounting for the expenditures related to finding and extracting natural resources.

Computation of the depletion base involves four factors: (1) acquisition cost of the deposit, (2) exploration costs, (3) development costs, and (4) restoration costs.

Acquisition Costs

Acquisition cost is the price ExxonMobil pays to obtain the property right to search and find an undiscovered natural resource. It also can be the price paid for an already-discovered resource. A third type of acquisition cost can be lease payments for property containing a productive natural resource. Included in these acquisition costs are royalty payments to the owner of the property.

Generally, the acquisition cost of natural resources is recorded in an account titled Undeveloped Property. ExxonMobil later assigns that cost to the natural resource if exploration efforts are successful. If the efforts are unsuccessful, it writes off the acquisition cost as a loss.

Exploration Costs

As soon as a company has the right to use the property, it often incurs **exploration costs** to find the resource. When exploration costs are substantial, some companies capitalize them into the depletion base. In the oil and gas industry, where the costs of finding the resource are significant and the risks of finding the resource are very uncertain, most large companies expense these costs. Smaller oil and gas companies often capitalize these exploration costs. We examine the unique issues related to the oil and gas industry in this “Continuing Controversy” section later in this chapter.

Development Costs

Companies divide **development costs** into two parts: (1) tangible equipment costs and (2) intangible development costs. Tangible equipment costs include all of the transportation and other heavy equipment needed to extract the resource and get it ready for market. Because companies can move the heavy equipment from one extracting site to another, companies do not normally include **tangible equipment costs in the depletion base**. Instead, they use separate depreciation charges to allocate the costs of such equipment. However, some tangible assets (e.g., a drilling rig foundation) cannot be moved. Companies depreciate these assets over their useful life or the life of the resource, whichever is shorter.

Intangible development costs, on the other hand, are such items as drilling costs, tunnels, shafts, and wells. These costs have no tangible characteristics but are needed for the production of the natural resource. **Intangible development costs are considered part of the depletion base.**

Restoration Costs

Companies sometimes incur substantial costs to restore property to its natural state after extraction has occurred. These are **restoration costs**. Companies consider **restoration costs part of the depletion base**. The amount included in the depletion base is the fair value of the obligation to restore the property after extraction. A more complete discussion of the accounting for restoration costs and related liabilities (sometimes referred to as asset retirement obligations) is provided in Chapter 13. Similar to other long-lived assets, companies deduct from the depletion base any salvage value to be received on the property.

Write-Off of Resource Cost

Once the company establishes the depletion base, the next problem is determining how to allocate the cost of the natural resource to accounting periods.

Normally, companies compute depletion (often referred to as **cost depletion**) on a **units-of-production method** (an activity approach). Thus, depletion is a function of the number of units extracted during the period. In this approach, the total cost of the natural

resource less salvage value is divided by the number of units estimated to be in the resource deposit, to obtain a **cost per unit of product**. To compute depletion, the cost per unit is then multiplied by the number of units extracted.

For example, MaCledde Co. acquired the right to use 1,000 acres of land in Alaska to mine for silver. The lease cost is \$50,000, and the related exploration costs on the property are \$100,000. Intangible development costs incurred in opening the mine are \$850,000. Total costs related to the mine before the first ounce of silver is extracted are, therefore, \$1,000,000. MaCledde estimates that the mine will provide approximately 100,000 ounces of silver. **Illustration 11.17** shows computation of the depletion cost per unit (depletion rate).

| |
|--|
| $\frac{\text{Total Cost} - \text{Salvage Value}}{\text{Total Estimated Units Available}} = \text{Depletion Cost per Unit}$ |
| $\frac{\$1,000,000}{100,000} = \10 per ounce |

ILLUSTRATION 11.17

Computation of Depletion Rate

If MaCledde extracts 25,000 ounces in the first year, then the depletion for the year is \$250,000 (25,000 ounces × \$10). It records the depletion as follows.

| | | |
|--------------------|---------|---------|
| Inventory (silver) | 250,000 | |
| Silver Mine | | 250,000 |

MaCledde debits Inventory for the total depletion for the year and credits Silver Mine to reduce the carrying value of the natural resource. MaCledde credits Inventory when it sells the inventory and debits Cost of Goods Sold. The amount not sold remains in inventory and is reported in the current assets section of the balance sheet.⁹

Sometimes companies use an Accumulated Depletion account. In that case, MaCledde's balance sheet would present the cost of the natural resource and the amount of accumulated depletion entered to date as shown in **Illustration 11.18**.

| | | |
|-----------------------------|-------------|-----------|
| Silver mine (at cost) | \$1,000,000 | |
| Less: Accumulated depletion | 250,000 | \$750,000 |

ILLUSTRATION 11.18

Balance Sheet Presentation of Natural Resource

For purposes of homework, credit depletion to the asset account.

MaCledde may also depreciate on a units-of-production basis the tangible equipment used in extracting the silver. This approach is appropriate if it can directly assign the estimated lives of the equipment to one given resource deposit. If MaCledde uses the equipment on more than one job, other cost allocation methods such as straight-line or accelerated depreciation methods would be more appropriate.

Estimating Recoverable Reserves

Sometimes companies need to change the estimate of recoverable reserves. They do so either because they have new information or because more sophisticated production processes are available. Natural resources such as oil and gas deposits and some rare metals have recently provided the greatest challenges. Estimates of these reserves are in large measure merely “knowledgeable guesses.”

This problem is the **same as accounting for changes in estimates for the useful lives of plant and equipment**. The procedure is to **revise the depletion rate on a prospective basis**: A company divides the remaining cost by the new estimate of the remaining recoverable reserves. This approach has much merit because the required estimates are so uncertain.

⁹The tax law has long provided a deduction against revenue from oil, gas, and most minerals for the greater of cost or **percentage depletion**. The percentage (statutory) depletion allows some companies a write-off ranging from 5 percent to 22 percent (depending on the natural resource) of gross revenue received. As a result of this tax benefit, the amount of depletion may exceed the cost assigned to a given natural resource. An asset's carrying amount may be zero, but the company may take a depletion deduction if it has gross revenue. The significance of the percentage depletion allowance is now greatly reduced since Congress repealed it for most oil and gas companies.

What Do the Numbers Mean? Reserve Surprise

Cuts in the estimates of oil and natural gas reserves at **Royal Dutch Shell, El Paso Corporation**, and other energy companies at one time highlighted the importance of reserve disclosures. Investors believe that these disclosures provide useful information for assessing the future cash flows from a company's oil and gas reserves. For example, when Shell's estimates turned out to be overly optimistic (to the tune of 3.9 billion barrels or 20 percent of reserves), Shell's stock price fell.

The experience at Shell and other companies has led the SEC to look at how companies are estimating their "proved" reserves. *Proved reserves* are quantities of oil and gas that can be shown "with reasonable certainty to be recoverable in future years. . . ." The phrase "reasonable certainty" is crucial to this guidance, but differences in interpretation of what is reasonably certain can result in a wide range of estimates.

The problem of evaluation is compounded by determining the prices for crude oil. For example, the price of crude oil fell

more than 50 percent from \$115 per barrel in June 2014 to \$49 per barrel in early October 2016. These rapidly changing oil prices can make it difficult to judge the present value of assets for investment decisions on capital allocation or for evaluation of impairments.

In one case, for example, **ExxonMobil**'s estimate was 29 percent higher than an estimate the SEC developed. ExxonMobil was more optimistic about the effects of new technology that enables the industry to retrieve more of the oil and gas it finds. Thus, to ensure the continued usefulness of reserve information disclosures, the SEC continues to work on measurement methodologies that keep up with technology changes in the oil and gas industry.

Bahree, "Big Oil Differs with SEC on Methods to Calculate the Industry's Reserves," *Wall Street Journal* (February 24, 2005), p. C1; and C. Krauss, "Exxon Concedes It May Need to Declare Lower Value for Oil in Ground," *The New York Times* (October 29, 2016).

Liquidating Dividends

A company often owns as its only major asset a property from which it intends to extract natural resources. If the company does not expect to purchase additional properties, it may gradually distribute to stockholders their capital investments by paying **liquidating dividends**, which are dividends greater than the amount of accumulated net income.

The major accounting problem is to distinguish between dividends that are a return of capital and those that are not. Because the dividend is a return of the investor's original contribution, the company issuing a liquidating dividend should debit Paid-in Capital in Excess of Par for that portion related to the original investment, instead of debiting Retained Earnings.

To illustrate, at year-end, Callahan Mining had a retained earnings balance of \$1,650,000, accumulated depletion on mineral properties of \$2,100,000, and paid-in capital in excess of par of \$5,435,493. Callahan's board declared a dividend of \$3 per share on the 1,000,000 shares outstanding. It records the \$3,000,000 cash dividend as follows.

| | | |
|-----------------------------------|-----------|-----------|
| Retained Earnings | 1,650,000 | |
| Paid-in Capital in Excess of Par— | | |
| Common Stock | 1,350,000 | |
| Cash | | 3,000,000 |

Callahan must inform stockholders that the \$3 dividend per share represents a \$1.65 ($\$1,650,000 \div 1,000,000$ shares) per share return on investment and a \$1.35 ($\$1,350,000 \div 1,000,000$ shares) per share liquidating dividend.

Continuing Controversy

A major controversy relates to the accounting for exploration costs in the oil and gas industry. Conceptually, the question is whether unsuccessful ventures are a cost of those that are successful. Those who support the **full-cost concept** argue that the cost of drilling a dry hole is a cost needed to find the commercially profitable wells. Others believe that companies should capitalize only the costs of successful projects. This is the **successful-efforts concept**. Its proponents believe that the only relevant measure for a project is the cost directly related to that project, and that companies should report any remaining costs as period charges. In addition, they argue that an unsuccessful company will end up capitalizing many costs that will make it, over a short period of time, show no less income than does one that is successful.¹⁰

¹⁰Large international oil companies such as **ExxonMobil** use the successful-efforts approach. Most of the smaller, exploration-oriented companies use the full-cost approach. The differences in net income figures under the two methods can be staggering. Analysts estimated that the difference between full-cost and successful-efforts for **ChevronTexaco** would be \$500 million over a 10-year period (income lower under successful-efforts).

The FASB has attempted to narrow the available alternatives, with little success. Here is a brief history of the debate.

1. **1977—The FASB required oil and gas companies to follow successful-efforts accounting.** Small oil and gas producers, voicing strong opposition, lobbied extensively in Congress. Governmental agencies assessed the implications of this standard from a public interest perspective and reacted contrary to the FASB's position.¹¹
2. **1978—In response to criticisms of the FASB's actions, the SEC reexamined the issue and found both the successful-efforts and full-cost approaches inadequate. Neither method, said the SEC, reflects the economic substance of oil and gas exploration.** As a substitute, the SEC argued in favor of a yet-to-be developed method, **reserve recognition accounting (RRA)**, which it believed would provide more useful information. Under RRA, as soon as a company discovers oil, it reports the value of the oil on the balance sheet and in the income statement. Thus, RRA is a fair value approach, in contrast to full-costing and successful-efforts, which are historical cost approaches. The use of RRA would make a substantial difference in the balance sheets and income statements of oil companies. For example, **Atlantic Richfield Co.** at one time reported net producing property of \$2.6 billion. Under RRA, the same properties would be valued at \$11.8 billion.
3. **1979–1981—As a result of the SEC's actions, the FASB issued another standard that suspended the requirement that companies follow successful-efforts accounting.** Therefore, full-costing was again permissible. In attempting to implement RRA, however, the SEC encountered practical problems in estimating **(1) the amount of the reserves, (2) the future production costs, (3) the periods of expected disposal, (4) the discount rate, and (5) the selling price.** Companies needed an estimate for each of these to arrive at an accurate valuation of existing reserves. Estimating the future selling price, appropriate discount rate, and future extraction and delivery costs of reserves that are years away from realization can be a formidable task.
4. **1981—The SEC abandoned RRA in the primary financial statements of oil and gas producers.** The SEC decided that RRA did not possess the required degree of reliability for use as a primary method of financial reporting. However, it continued to stress the need for some form of fair-value-based disclosure for oil and gas reserves. As a result, the profession now requires fair value disclosures for those natural resources.

Currently, companies can use either the full-cost approach or the successful-efforts approach (see **Global View**). It does seem ironic that Congress directed the FASB to develop one method of accounting for the oil and gas industry, and when the FASB did so, the government chose not to accept it. Subsequently, the SEC attempted to develop a new approach, failed, and then urged the FASB to develop the disclosure requirements in this area. After all these changes, the two alternatives still exist.¹²

Global View

IFRS also permits companies to use either full-cost or successful-efforts approaches.

Evolving Issue Full-Cost or Successful-Efforts?

The controversy in the oil and gas industry provides a number of lessons. First, it demonstrates the strong influence that the federal government has in financial reporting matters. Second, the

concern for economic consequences places pressure on the FASB to weigh the economic effects of any required standard. Third, the experience with RRA highlights the problems that accompany any

¹¹The Department of Energy indicated that companies using the full-cost method at that time would reduce their exploration activities because of the unfavorable earnings impact associated with successful-efforts accounting. The Justice Department asked the SEC to postpone adoption of one uniform method of accounting in the oil and gas industry until the SEC could determine whether the information reported to investors would be enhanced and competition constrained by adoption of the successful-efforts method.

¹²One requirement of the full-cost approach is that companies can capitalize costs only up to a ceiling, which is the present value of company reserves. Companies must expense costs above that ceiling. When the price of oil fell in the mid-1980s, so did the present value of companies' reserves, which forced expensing of costs beyond the ceiling. Companies lobbied for leniency, but the SEC decided that the write-offs had to be taken. **Mesa Limited Partnerships** restated its \$31 million profit to a \$169 million loss, and **Pacific Lighting** restated its \$44.5 million profit to a \$70.5 million loss.

proposed change from an historical cost to a fair value approach. Fourth, this controversy illustrates the difficulty of establishing standards when affected groups have differing viewpoints.

Indeed, failure to consider the economic consequences of accounting principles is a frequent criticism of the profession. However, the neutrality concept requires that the statements be

free from bias. Freedom from bias requires that the statements reflect economic reality, even if undesirable effects occur. Finally, the debate over oil and gas accounting reinforces the need for a conceptual framework with carefully developed guidelines for recognition, measurement, and reporting, so that interested parties can more easily resolve issues of this nature in the future.

Presentation and Analysis

LEARNING OBJECTIVE 5

Demonstrate how to report and analyze property, plant, equipment, and natural resources.

Presentation of Property, Plant, Equipment, and Natural Resources

A company should disclose the basis of valuation—usually historical cost—for property, plant, equipment, and natural resources along with pledges, liens, and other commitments related to these assets. It should not offset any liability secured by property, plant, equipment, and natural resources against these assets. Instead, this obligation should be reported in the liabilities section. The company should segregate property, plant, and equipment not currently employed as producing assets in the business (such as idle facilities or land held as an investment) from assets used in operations.

When depreciating assets, a company credits a valuation account such as Accumulated Depreciation—Equipment. Using an accumulated depreciation account permits the user of the financial statements to see the original cost of the asset and the amount of depreciation that the company charged to expense in past years.

When depleting natural resources, some companies use an accumulated depletion account. Many, however, simply credit the natural resource account directly. The rationale for this approach is that the natural resources are physically consumed, making direct reduction of the cost of the natural resources appropriate.

Because of the significant impact on the financial statements of the depreciation method(s) used, companies should disclose the following.

1. Depreciation expense for the period.
2. Balances of major classes of depreciable assets, by nature and function.
3. Accumulated depreciation, either by major classes of depreciable assets or in total.
4. A general description of the method or methods used in computing depreciation with respect to major classes of depreciable assets. [2]¹³

Special disclosure requirements relate to the oil and gas industry. Companies engaged in these activities must disclose the following in their financial statements: (1) the basic method of accounting for those costs incurred in oil and gas producing activities (e.g., full-cost versus successful-efforts), and (2) how the company disposes of costs related to extractive activities (e.g., expensing immediately versus depreciation and depletion). [3]¹⁴

¹³Some believe that companies should disclose the average useful life of the assets or the range of years of asset life to help users understand the age and life of property, plant, and equipment.

¹⁴Public companies, in addition to these two required disclosures, must include as supplementary information numerous schedules reporting reserve quantities; capitalized costs; acquisition, exploration, and development activities; and a standardized measure of discounted future net cash flows related to proved oil and gas reserve quantities. Given the importance of these disclosures, the SEC has issued rules for disclosures to help investors better understand the nature of oil and gas company operations. These rules provide updated guidance on (1) estimates of quantities of proved reserves, (2) estimates of future net revenues, and (3) disclosure of reserve information. See “Modernization of Oil and Gas Reporting,” SEC Financial Reporting Release No. 78 (Release No. 33-8995) (December 31, 2008).

The 2017 annual report of **International Paper Company** in **Illustration 11.19** shows a typical disclosure. It uses condensed balance sheet data supplemented with details and policies in notes to the financial statements.

|  International Paper Company | | | |
|---|-----------------|-----------------|---------|
| Consolidated Balance Sheet (partial) | | | |
| In millions at December 31 | 2017 | 2016 | |
| Assets | | | |
| Total current assets | \$ 8,277 | \$ 6,670 | |
| Plants, properties and equipment, net | 13,265 | 13,003 | |
| Forestlands | 448 | 456 | |
| Investments | 390 | 360 | |
| Financial assets of special purpose entities | 7,051 | 7,033 | |
| Long-term assets held for sale | – | 1,018 | |
| Goodwill | 3,411 | 3,364 | |
| Deferred charges and other assets | 1,061 | 1,189 | |
| Total assets | <u>\$33,903</u> | <u>\$33,093</u> | |
| Note 1 (partial) | | | |
| Plants, Properties and Equipment. Plants, properties and equipment are stated at cost, less accumulated depreciation. Expenditures for betterments are capitalized, whereas normal repairs and maintenance are expensed as incurred. The units-of-production method of depreciation is used for major pulp and paper mills, and the straight-line method is used for other plants and equipment. Annual straight-line depreciable lives generally are, for buildings—20 to 40 years, and for machinery and equipment—3 to 20 years. | | | |
| Forestlands. At December 31, 2017, International Paper and its subsidiaries owned or managed approximately 329,000 acres of forestlands in Brazil, and through licenses and forest management agreements had harvesting rights on government-owned forestlands in Russia. All owned lands in Brazil are independently third-party certified for sustainable forestry under the Brazilian National Forest Certification Program (CERFLOR) and the Forest Stewardship Council (FSC). Costs attributable to timber are expensed as trees are cut. The rate charged is determined annually based on the relationship of incurred costs to estimated current merchantable volume. | | | |
| Note 8 (partial) | | | |
| Plants, properties and equipment by major classification were: | | | |
| In millions at December 31 | 2017 | 2016 | |

| Depreciation expense | \$1,200 | \$1,000 | \$1,100 |

ILLUSTRATION 11.19**Disclosures for Property, Plant, Equipment, and Natural Resources**

Analysis of Property, Plant, and Equipment

Analysts evaluate assets relative to activity (turnover) and profitability.

Asset Turnover

How efficiently a company uses its assets to generate sales is measured by the **asset turnover**. This ratio divides net sales by average total assets for the period. The resulting number is the dollars of sales produced by each dollar invested in assets. To illustrate, we use the following data from the **Kellogg** 2017 annual report. **Illustration 11.20** shows computation of the asset turnover.

The asset turnover shows that Kellogg generated sales of \$0.82 per dollar of assets in the year ended December 31, 2017.

Asset turnovers vary considerably among industries. For example, a large utility like **Ameren** has a ratio of 0.32 times. A large grocery chain like **Kroger** has a ratio of 2.73 times.

Thus, in comparing performance among companies based on the asset turnover ratio, you need to consider the ratio within the context of the industry in which a company operates.

|  Kellogg | | (in millions) |
|--|--|---------------|
| Net sales | | \$12,923 |
| Total assets, 12/28/17 | | 16,350 |
| Total assets, 12/24/16 | | 15,111 |
| Net income | | 1,269 |

ILLUSTRATION 11.20**Asset Turnover**

$$\begin{aligned} \text{Asset Turnover} &= \frac{\text{Net Sales}}{\text{Average Total Assets}} \\ &= \frac{\$12,923}{(\$16,350 + \$15,111)/2} \\ &= .822 \end{aligned}$$

Profit Margin on Sales

Another measure for analyzing the use of property, plant, and equipment is the **profit margin on sales** (return on sales). Calculated as net income divided by net sales, this profitability ratio does not, by itself, answer the question of how profitably a company uses its assets. But by relating the profit margin on sales to the asset turnover during a period of time, we can ascertain how profitably the company used assets during that period of time in a measure of the return on assets. Using the above Kellogg data, we compute the profit margin on sales and the return on assets as shown in **Illustration 11.21**.

ILLUSTRATION 11.21**Profit Margin on Sales**

$$\begin{aligned} \text{Profit Margin on Sales} &= \frac{\text{Net Income}}{\text{Net Sales}} \\ &= \frac{\$1,269}{\$12,923} \\ &= 9.82\% \\ \text{Return on Assets} &= \text{Profit Margin on Sales} \times \text{Asset Turnover} \\ &= .0982 \times .822 \\ &= 8.07\% \end{aligned}$$

Return on Assets

The **return on assets (ROA)** is computed directly by dividing net income by average total assets. Using the Kellogg data, we compute the ratio as shown in **Illustration 11.22**.

ILLUSTRATION 11.22**Return on Assets**

$$\begin{aligned} \text{Return on Assets} &= \frac{\text{Net Income}}{\text{Average Total Assets}} \\ &= \frac{\$1,269}{(\$16,350 + \$15,111)/2} \\ &= 8.07\% \end{aligned}$$

The 8.07 percent return on assets computed in this manner equals the 8.07 percent rate computed by multiplying the profit margin on sales by the asset turnover. The rate of return on assets measures profitability well because it combines the effects of profit margin and asset turnover.

APPENDIX 11A

Income Tax Depreciation

LEARNING OBJECTIVE *6

Describe income tax methods of depreciation.

For the most part, a financial accounting course does not address issues related to the computation of income taxes. However, because the concepts of tax depreciation are similar to those of book depreciation and because tax depreciation methods are sometimes adopted for book purposes, we present an overview of this subject.

Congress passed the Accelerated Cost Recovery System (ACRS) as part of the Economic Recovery Tax Act of 1981. The goal was to stimulate capital investment through faster write-offs and to bring more uniformity to the write-off period. For assets purchased in the years 1981 through 1986, companies use ACRS and its preestablished “cost recovery periods” for various classes of assets.

In the Tax Reform Act of 1986 Congress enacted a **Modified Accelerated Cost Recovery System**, known as **MACRS**. It applies to depreciable assets placed in service in 1987 and later. The following discussion is based on these MACRS rules. Realize that tax depreciation rules are subject to change annually.¹⁵

Modified Accelerated Cost Recovery System

The computation of depreciation under MACRS differs from the computation under GAAP in three respects: (1) a mandated tax life, which is generally shorter than the economic life; (2) cost recovery on an accelerated basis; and (3) an assigned salvage value of zero.

Tax Lives (Recovery Periods)

Each item of depreciable property belongs to a property class. The recovery period (depreciable tax life) of an asset depends on its property class. **Illustration 11A.1** presents the MACRS property classes.

| | |
|---------------------------|---|
| 3-year property | Includes small tools, horses, and assets used in research and development activities |
| 5-year property | Includes automobiles, trucks, computers and peripheral equipment, and office machines |
| 7-year property | Includes office furniture and fixtures, agriculture equipment, oil exploration and development equipment, railroad track, manufacturing equipment, and any property not designated by law as being in any other class |
| 10-year property | Includes railroad tank cars, mobile homes, boilers, and certain public utility property |
| 15-year property | Includes roads, shrubbery, and certain low-income housing |
| 20-year property | Includes waste-water treatment plants and sewer systems |
| 27.5-year property | Includes residential rental property |
| 39-year property | Includes nonresidential real property |

ILLUSTRATION 11A.1**MACRS Property Classes**

¹⁵For example, in an effort to jump-start the economy following the September 11, 2001, terrorist attacks, Congress passed the Job Creation and Worker Assistance Act of 2002 (the Act). The Act allowed a 30 percent first-year **bonus depreciation** for assets placed into service after September 11, 2001, but before September 11, 2004. Since then, Congress has enacted enhanced bonus depreciation provisions to encourage companies to invest in fixed assets because they can front-load depreciation expense and reduce their tax bill. The most recent tax law—the Tax Cuts and Jobs Act of 2017—allows **100%** bonus depreciation (full write-off in the year of purchase) for new and used assets placed in service before 2026. See Tax Foundation, “Preliminary Details and Analysis of the Tax Cuts and Jobs Act,” No. 241 (December 2017), <https://taxfoundation.org/final-tax-cuts-and-jobs-act-details-analysis/>.

Tax Depreciation Methods

Companies compute depreciation expense using the tax basis—usually the cost—of the asset. The depreciation method depends on the MACRS property class, as shown in **Illustration 11A.2**.

ILLUSTRATION 11A.2
Depreciation Method for Various MACRS Property Classes

| MACRS Property Class | Depreciation Method |
|----------------------------------|--------------------------|
| 3-, 5-, 7-, and 10-year property | Double-declining-balance |
| 15- and 20-year property | 150% declining-balance |
| 27.5- and 39-year property | Straight-line |

Depreciation computations for income tax purposes are based on the **half-year convention**. That is, a half year of depreciation is allowable in the year of acquisition and in the year of disposition.¹⁶ A company depreciates an asset to a zero value so that there is no salvage value at the end of its MACRS life.

Use of IRS-published tables, shown in **Illustration 11A.3**, simplifies application of these depreciation methods.

ILLUSTRATION 11A.3
IRS Table of MACRS Depreciation Rates, by Property Class

| Recovery Year | MACRS Depreciation Rates by Class of Property | | | | | |
|---------------|---|------------------|------------------|-------------------|-------------------|-------------------|
| | 3-year (200% DB) | 5-year (200% DB) | 7-year (200% DB) | 10-year (200% DB) | 15-year (150% DB) | 20-year (150% DB) |
| 1 | 33.33 | 20.00 | 14.29 | 10.00 | 5.00 | 3.750 |
| 2 | 44.45 | 32.00 | 24.49 | 18.00 | 9.50 | 7.219 |
| 3 | 14.81* | 19.20 | 17.49 | 14.40 | 8.55 | 6.677 |
| 4 | 7.41 | 11.52* | 12.49 | 11.52 | 7.70 | 6.177 |
| 5 | | 11.52 | 8.93* | 9.22 | 6.93 | 5.713 |
| 6 | | 5.76 | 8.92 | 7.37 | 6.23 | 5.285 |
| 7 | | | 8.93 | 6.55* | 5.90* | 4.888 |
| 8 | | | 4.46 | 6.55 | 5.90 | 4.522 |
| 9 | | | | 6.56 | 5.91 | 4.462* |
| 10 | | | | 6.55 | 5.90 | 4.461 |
| 11 | | | | 3.28 | 5.91 | 4.462 |
| 12 | | | | | 5.90 | 4.461 |
| 13 | | | | | 5.91 | 4.462 |
| 14 | | | | | 5.90 | 4.461 |
| 15 | | | | | 5.91 | 4.462 |
| 16 | | | | | 2.95 | 4.461 |
| 17 | | | | | | 4.462 |
| 18 | | | | | | 4.461 |
| 19 | | | | | | 4.462 |
| 20 | | | | | | 4.461 |
| 21 | | | | | | 2.231 |

*Switchover to straight-line depreciation.

Example of MACRS

To illustrate depreciation computations under both MACRS and GAAP straight-line accounting, assume the following facts for a computer and peripheral equipment purchased by Denise Rode Company on January 1, 2019.

| Acquisition Date | January 1, 2019 |
|-----------------------------------|------------------------|
| Cost | \$100,000 |
| Estimated useful life | 7 years |
| Estimated salvage value | \$16,000 |
| MACRS class life | 5 years |
| MACRS method | 200% declining-balance |
| GAAP method | Straight-line |
| Disposal proceeds—January 2, 2026 | \$11,000 |

¹⁶The tax law requires mid-quarter and mid-month conventions for MACRS purposes in certain circumstances.

Using the rates from the MACRS depreciation rate schedule for a 5-year class of property, Rode computes depreciation for tax purposes as shown in **Illustration 11A.4**.

| MACRS Depreciation | | |
|--------------------|---------------------------|-------------------------|
| 2019 | $\$100,000 \times .20$ | = \$ 20,000 |
| 2020 | $\$100,000 \times .32$ | = 32,000 |
| 2021 | $\$100,000 \times .192$ | = 19,200 |
| 2022 | $\$100,000 \times .1152$ | = 11,520 |
| 2023 | $\$100,000 \times .1152$ | = 11,520 |
| 2024 | $\$100,000 \times .0576$ | = 5,760 |
| | Total depreciation | <u>\$100,000</u> |

ILLUSTRATION 11A.4**Computation of MACRS Depreciation**

Rode computes the depreciation under GAAP straight-line method, with \$16,000 of estimated salvage value and an estimated useful life of 7 years, as shown in **Illustration 11A.5**.

| GAAP Depreciation | |
|--|---|
| $(\$100,000 - \$16,000) \div 7 = \$12,000$ | annual depreciation |
| | <u>× 7 years</u> |
| 1/1/19–1/2/26 | <u>\$84,000</u> total depreciation |

ILLUSTRATION 11A.5**Computation of GAAP Depreciation**

The MACRS depreciation recovers the total cost of the asset on an accelerated basis. But, a taxable gain of \$11,000 results from the sale of the asset at January 2, 2026. Therefore, the net effect on taxable income for the years 2019 through 2026 is \$89,000 (\$100,000 depreciation – \$11,000 gain).

Under GAAP, the company recognizes a loss on disposal of \$5,000 (\$16,000 book value – \$11,000 disposal proceeds). The net effect on income before income taxes for the years 2019 through 2026 is \$89,000 (\$84,000 depreciation + \$5,000 loss), the same as the net effect of MACRS on taxable income.

Even though the net effects are equal in amount, the deferral of income tax payments under MACRS from early in the life of the asset to later in the life is desirable. The different amounts of depreciation for income tax reporting and financial GAAP reporting in each year are a matter of timing and result in temporary differences, which require **interperiod tax allocation**. (See Chapter 19 for an extended treatment of this topic.)

Optional Straight-Line Method

An alternate MACRS method exists for determining depreciation deductions. Based on the straight-line method, it is referred to as the **optional** (elective) **straight-line method**. This method applies to the six classes of property described earlier. The alternate MACRS applies the straight-line method to the MACRS recovery periods. It ignores salvage value.

Under the optional straight-line method, in the first year in which the property is put in service, the company deducts half of the amount of depreciation that would be permitted for a full year (half-year convention). *Use the half-year convention for homework problems.*

Tax versus Book Depreciation

GAAP requires that companies allocate the cost of depreciable assets to expense over the expected useful life of the asset in a systematic and rational manner. Some argue that from a cost-benefit perspective it would be better for companies to adopt the MACRS approach in order to eliminate the necessity of maintaining two different sets of records.

However, the tax laws and financial reporting have different objectives. The purpose of taxation is to raise revenue from constituents in an equitable manner. The purpose of financial reporting is to reflect the economic substance of a transaction as closely as possible and to help predict the amounts, timing, and uncertainty of future cash flows. Because these objectives differ, the adoption of one method for both tax and book purposes in all cases is not in accordance with GAAP.

What Do the Numbers Mean? In the Bonus (Boomerang?)

As discussed, Congress has used changes in tax depreciation rules related to bonus depreciation to encourage capital investment,

thereby boosting the economy in response to economic downturns. Here is a summary of the bonus depreciation history.

| Law | Provisions |
|---|--|
| Job Creation and Worker Assistance Act of 2002 | Allowed a 30% deduction for assets purchased before September 2004. |
| Amendment to Job Creation and Worker Assistance Act of 2002 (enacted in 2003) | Extended bonus depreciation provisions to 2005. |
| Small Business Jobs Act of 2010 | Enacted 50% bonus depreciation for smaller companies for assets purchased in 2010. |
| Tax Cuts and Jobs Act of 2017 | Allows 100% bonus depreciation for new and used assets placed in service before 2026. |

Businesses love bonus depreciation. It allows them to front-load depreciation expense, which lowers taxable income and the amount of taxes companies pay in the early years of an asset's life. Investors need to beware. Although bonus depreciation may be a good thing for the economy, it can distort cash flow measures—making them look artificially strong when the

allowances are in place but reversing once the bonus depreciation expires.

Learning Objectives Review

1 Describe depreciation concepts and methods of depreciation.

Depreciation allocates the cost of tangible assets to expense in a systematic and rational manner to those periods expected to benefit from the use of the asset. Three factors involved in the depreciation process are (1) determining the depreciation base for the asset, (2) estimating service lives, and (3) selecting a method of cost apportionment (depreciation).

Methods of depreciation are as follows.

1. *Activity method*: Assumes that depreciation is a function of use or productivity instead of the passage of time. The life of the asset is considered in terms of either the output it provides, or an input measure such as the number of hours it works.
2. *Straight-line method*: Considers depreciation a function of time instead of a function of usage. The straight-line procedure is often the most conceptually appropriate when the decline in usefulness is constant from period to period.
3. *Decreasing-charge methods*: Provide for a higher depreciation cost in the earlier years and lower charges in later periods. The main justification for this approach is that the asset is the most productive in its early years.

2 Discuss special depreciation methods and other depreciation issues.

Two **special depreciation methods** are as follows. (1) *Group and composite methods*: The group method is frequently used when the assets are fairly similar in nature and have approximately the same useful lives. The composite method may be used when the assets are dissimilar and have different lives. (2) *Hybrid or combination methods*: These methods may combine straight-line/activity approaches. **Other depreciation issues** relate to partial period depreciation and changes in depreciation estimates.

3 Identify the accounting issues related to asset impairment.

The process to determine an impairment loss is as follows. (1) Review events and changes in circumstances for possible impairment. (2) If events or changes suggest impairment, determine if the sum of the expected future net cash flows from the long-lived asset is less than the carrying amount of the asset. If less, measure the impairment loss. (3) The impairment loss is the amount by which the carrying amount of the asset exceeds the fair value of the asset.

After a company records an impairment loss, the reduced carrying amount of the long-lived asset is its new cost basis. **Impairment losses may not be restored for assets held for use.** If the company expects to dispose of the asset, it should report the impaired asset at the lower-of-cost-or-net realizable value. It is not depreciated. It can be continuously revalued, as long as the

write-up is never to an amount greater than the carrying amount before impairment.

4 Explain the accounting procedures for depletion of natural resources.

To account for depletion of natural resources, companies (1) establish the depletion base and (2) write off resource cost. Four factors are part of establishing the depletion base: (a) acquisition costs, (b) exploration costs, (c) development costs, and (d) restoration costs. To write off resource cost, companies normally compute depletion on the units-of-production method. Thus, **depletion is a function of the number of units withdrawn during the period.** To obtain a cost per unit of product, the total cost of the natural resource less salvage value is divided by the number of units estimated to be in the resource deposit. To compute depletion, this cost per unit is multiplied by the number of units withdrawn.

5 Demonstrate how to report and analyze property, plant, equipment, and natural resources.

The basis of valuation for property, plant, and equipment and for natural resources should be disclosed along with pledges, liens, and other commitments related to these assets. Companies should not offset any liability secured by property, plant, and equipment or by natural resources against these assets, but should report it in the liabilities section. When depreciating assets, credit a valuation account normally called Accumulated Depreciation. When depleting assets, use an accumulated depletion account, or credit the depletion directly to the natural resource account. Companies engaged in significant oil and gas producing activities must provide additional disclosures about these activities. Analysis may be performed to evaluate the **asset turnover, profit margin on sales, and return on assets.**

*6 Describe income tax methods of depreciation.

Congress enacted a Modified Accelerated Cost Recovery System (MACRS) in the Tax Reform Act of 1986. It applies to depreciable assets placed in service in 1987 and later. The computation of depreciation under MACRS differs from the computation under GAAP in three respects: (1) a mandated tax life, which is generally shorter than the economic life; (2) cost recovery on an accelerated basis; and (3) an assigned salvage value of zero.

Enhanced Review and Practice

Go online for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Practice Problem

Norwel Company manufactures miniature circuit boards used in smartphones. On June 5, 2020, Norwel purchased a circuit board stamping machine at a retail price of \$24,000. Norwel paid 5% sales tax on this purchase and hired a contractor to build a specially wired platform for the machine for \$1,800, to meet OSHA safety requirements. Norwel estimates the machine will have a 5-year useful life, with a salvage value of \$2,000 at the end of 5 years. Norwel uses straight-line depreciation and employs the “half-year” convention in accounting for partial-year depreciation. Norwel’s fiscal year ends on December 31.

Instructions

- At what amount should Norwel record the acquisition cost of the machine?
- How much depreciation expense should Norwel record in 2020 and in 2021?
- At what amount will the machine be reported in Norwel’s balance sheet at December 31, 2021?
- During 2022, Norwel’s circuit board business is experiencing significant competition from companies with more advanced low-heat circuit boards. As a result, at June 30, 2022, Norwel conducts an impairment evaluation of the stamping machine purchased in 2020. Norwel determines that undiscounted future cash flows for the machine are estimated to be \$15,200 and the fair value of the machine, based on prices in the re-sale market, to be \$13,400. Prepare the journal entry to record an impairment, if any, on the stamping machine.

Solution

- Historical cost is measured by the cash or cash equivalent price of obtaining the asset and bringing it to the location and condition for its intended use. For Norwel, this is:

| | |
|-------------------------------|-----------------|
| Price | \$24,000 |
| Tax ($\$24,000 \times .05$) | 1,200 |
| Platform | <u>1,800</u> |
| Total | <u>\$27,000</u> |

- Depreciable base: $\$27,000 - \$2,000 = \$25,000$

Depreciation expense: $\$25,000 \div 5 = \$5,000$ per year

2020: $1/2$ year = $\$5,000 \times .50 = \$2,500$

2021: full year = $\$5,000$

- The amount reported on the December 31, 2021, balance sheet is the cost of the asset less accumulated depreciation:

| | |
|--------------------------------|-----------------|
| Machinery | \$27,000 |
| Less: Accumulated depreciation | <u>7,500</u> |
| Book value | <u>\$19,500</u> |

- Norwel first conducts the recoverability test, comparing the book value of the machine to the undiscounted future cash flows. This indicates the future cash flows (\$15,200) are less than the June 30, 2022, book value (\$17,000*).

| | |
|---|-----------------|
| *Cost | \$27,000 |
| Less: Accumulated depreciation ($\$2,500 + \$5,000 + \$2,500$) | <u>10,000</u> |
| Book value of machine and platform | <u>\$17,000</u> |

Thus, Norwel will record an impairment, based on comparison of the fair value of the machine and platform to the book value. The entry is as follows.

| | | |
|--|-------|-------|
| Loss on Impairment ($\$17,000 - \$13,400$) | 3,600 | |
| Accumulated Depreciation—Machinery | | 3,600 |

WileyPLUS

Exercises, Problems, Problem Solution Walkthrough Videos, and many more assessment tools and resources are available for practice in WileyPLUS.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

Questions

1. Distinguish among depreciation, depletion, and amortization.
2. Identify the factors that are relevant in determining the annual depreciation charge, and explain whether these factors are determined objectively or whether they are based on judgment.
3. Some believe that accounting depreciation measures the decline in the value of fixed assets. Do you agree? Explain.
4. Explain how estimation of service lives can result in unrealistically high carrying values for fixed assets.
5. The plant manager of a manufacturing firm suggested in a conference of the company's executives that accountants should speed up depreciation on the machinery in the finishing department because improvements were rapidly making those machines obsolete, and a depreciation fund big enough to cover their replacement is needed. Discuss the accounting concept of depreciation and the effect on a business concern of the depreciation recorded for plant assets, paying particular attention to the issues raised by the plant manager.
6. For what reasons are plant assets retired? Define inadequacy, supersession, and obsolescence.
7. What basic questions must be answered before the amount of the depreciation charge can be computed?
8. Workman Company purchased a machine on January 2, 2020, for \$800,000. The machine has an estimated useful life of 5 years and a salvage value of \$100,000. Depreciation was computed by the 150% declining-balance method. What is the amount of accumulated depreciation at the end of December 31, 2021?
9. Silverman Company purchased machinery for \$162,000 on January 1, 2020. It is estimated that the machinery will have a useful life of 20 years, salvage value of \$15,000, production of 84,000 units, and working hours of 42,000. During 2020, the company uses the machinery for 14,300 hours, and the machinery produces 20,000 units. Compute depreciation under the straight-line, units-of-output, working hours, sum-of-the-years'-digits, and double-declining-balance methods.
10. What are the major factors considered in determining what depreciation method to use?
11. Under what conditions is it appropriate for a business to use the composite method of depreciation for its plant assets? What are the advantages and disadvantages of this method?
12. If Remmers, Inc. uses the composite method and its composite rate is 7.5% per year, what entry should it make when plant assets that originally cost \$50,000 and have been used for 10 years are sold for \$14,000?
13. A building that was purchased on December 31, 2006, for \$2,500,000 was originally estimated to have a life of 50 years with no salvage value at the end of that time. Depreciation has been recorded through 2020. During 2021, an examination of the building by an engineering firm discloses that its estimated useful life is 15 years after 2020. What should be the amount of depreciation for 2021?
14. Charlie Parker, president of Spinners Company, has recently noted that depreciation increases cash provided by operations and therefore depreciation is a good source of funds. Do you agree? Discuss.
15. Andrea Kremer purchased a computer for \$8,000 on July 1, 2020. She intends to depreciate it over 4 years using the double-declining-balance method. Salvage value is \$1,000. Compute depreciation for 2021.
16. Walkin Inc. is considering the write-down of its long-term plant because of a lack of profitability. Explain to the management of Walkin how to determine whether a write-down is permitted.
17. Last year, Wyeth Company recorded an impairment on an asset held for use. Recent appraisals indicate that the asset has increased in value. Should Wyeth record this recovery in value under GAAP?
18. Toro Co. has equipment with a carrying amount of \$700,000. The expected future net cash flows from the equipment are \$705,000, and its fair value is \$590,000. The equipment is expected to be used in operations in the future. What amount (if any) should Toro report as an impairment to its equipment?
19. Explain how gains or losses on impaired assets should be reported in income.
20. It has been suggested that plant and equipment could be replaced more quickly if depreciation rates for income tax and accounting purposes were substantially increased. As a result, business operations would receive the benefit of more modern and more efficient plant facilities. Discuss the merits of this proposition.
21. Neither depreciation on replacement cost nor depreciation adjusted for changes in the purchasing power of the dollar has been recognized as generally accepted accounting principles for inclusion in the primary financial statements. Briefly present the accounting treatment that might be used to assist in the maintenance of the ability of a company to replace its productive capacity.
22. List (a) the similarities and (b) the differences in the accounting treatments of depreciation and cost depletion.
23. Describe cost depletion and percentage depletion. Why is the percentage depletion method permitted?
24. In what way may the use of percentage depletion violate sound accounting theory?
25. In the extractive industries, businesses may pay dividends in excess of net income. What is the maximum permissible? How can this practice be justified?

26. The following statement appeared in a financial magazine: “RRA—or Rah-Rah, as it’s sometimes dubbed—has kicked up quite a storm. Oil companies, for example, are convinced that the approach is misleading. Major accounting firms agree.” What is RRA? Why might oil companies believe that this approach is misleading?

27. Shumway Oil uses successful-efforts accounting and also provides full-cost results as well. Under full-cost, Shumway Oil would have reported retained earnings of \$42 million and net income of \$4 million.

Under successful-efforts, retained earnings were \$29 million, and net income was \$3 million. Explain the difference between full-costing and successful-efforts accounting.

28. **Target** in 2017 reported net income of \$2,934 billion, net sales of \$71,879 billion, and average total assets of \$38,215 billion. What is Target’s asset turnover? What is Target’s return on assets?

*29. What is a modified accelerated cost recovery system (MACRS)? Speculate as to why this system is now required for tax purposes.

Brief Exercises

(Unless otherwise instructed, round all answers to the nearest dollar.)

BE11.1 (LO 1) Fernandez Corporation purchased a truck at the beginning of 2020 for \$50,000. The truck is estimated to have a salvage value of \$2,000 and a useful life of 160,000 miles. It was driven 23,000 miles in 2020 and 31,000 miles in 2021. Compute depreciation expense using the units-of-production method for 2020 and 2021.

BE11.2 (LO 1) Lockard Company purchased machinery on January 1, 2020, for \$80,000. The machinery is estimated to have a salvage value of \$8,000 after a useful life of 8 years. (a) Compute 2020 depreciation expense using the straight-line method. (b) Compute 2020 depreciation expense using the straight-line method assuming the machinery was purchased on September 1, 2020.

BE11.3 (LO 1) Use the information for Lockard Company given in BE11.2. (a) Compute 2020 depreciation expense using the sum-of-the-years'-digits method. (b) Compute 2020 depreciation expense using the sum-of-the-years'-digits method, assuming the machinery was purchased on April 1, 2020.

BE11.4 (LO 1) Use the information for Lockard Company given in BE11.2. (a) Compute 2020 depreciation expense using the double-declining-balance method. (b) Compute 2020 depreciation expense using the double-declining-balance method, assuming the machinery was purchased on October 1, 2020.

BE11.5 (LO 1) Cominsky Company purchased a machine on July 1, 2021, for \$28,000. Cominsky paid \$200 in title fees and county property tax of \$125 on the machine. In addition, Cominsky paid \$500 shipping charges for delivery, and \$475 was paid to a local contractor to build and wire a platform for the machine on the plant floor. The machine has an estimated useful life of 6 years with a salvage value of \$3,000. Determine the depreciation base of Cominsky’s new machine. Cominsky uses straight-line depreciation.

BE11.6 (LO 2) Dickinson Inc. owns the following assets.

| Asset | Cost | Salvage | Estimated Useful Life |
|-------|----------|---------|-----------------------|
| A | \$70,000 | \$7,000 | 10 years |
| B | 50,000 | 5,000 | 5 years |
| C | 82,000 | 4,000 | 12 years |

Compute the composite depreciation rate and the composite life of Dickinson’s assets.

BE11.7 (LO 2) Holt Company purchased a computer for \$8,000 on January 1, 2019. Straight-line depreciation is used, based on a 5-year life and a \$1,000 salvage value. In 2021, the estimates are revised. Holt now feels the computer will be used until December 31, 2022, when it can be sold for \$500. Compute the 2021 depreciation.

BE11.8 (LO 3) Jurassic Company owns equipment that cost \$900,000 and has accumulated depreciation of \$380,000. The expected future net cash flows from the use of the asset are expected to be \$500,000. The fair value of the equipment is \$400,000. Prepare the journal entry, if any, to record the impairment loss.

BE11.9 (LO 4) Everly Corporation acquires a coal mine at a cost of \$400,000. Intangible development costs total \$100,000. After extraction has occurred, Everly must restore the property (estimated fair value of the obligation is \$80,000), after which it can be sold for \$160,000. Everly estimates that 4,000 tons of coal can be extracted. If 700 tons are extracted the first year, prepare the journal entry to record depletion.

BE11.10 (LO 5) In its 2017 annual report, **Campbell Soup Company** reports beginning-of-the-year total assets of \$7,837 million, end-of-the-year total assets of \$7,726 million, total sales of \$7,890 million, and net income of \$887 million. (a) Compute Campbell’s asset turnover. (b) Compute Campbell’s profit margin on sales. (c) Compute Campbell’s return on assets using (1) asset turnover and profit margin and (2) net income. (Round to two decimal places.)

***BE11.11 (LO 6)** Francis Corporation purchased an asset at a cost of \$50,000 on March 1, 2020. The asset has a useful life of 8 years and a salvage value of \$4,000. For tax purposes, the MACRS class life is 5 years. Compute tax depreciation for each year 2020–2025.

Exercises

E11.1 (LO 1) Excel (Depreciation Computations—SL, SYD, DDB) Deluxe Ezra Company purchases equipment on January 1, Year 1, at a cost of \$469,000. The asset is expected to have a service life of 12 years and a salvage value of \$40,000.

Instructions

- Compute the amount of depreciation for each of Years 1 through 3 using the straight-line depreciation method.
- Compute the amount of depreciation for each of Years 1 through 3 using the sum-of-the-years'-digits method.
- Compute the amount of depreciation for each of Years 1 through 3 using the double-declining-balance method. (In performing your calculations, round constant percentage to the nearest one-hundredth of a point and round answers to the nearest dollar.)

E11.2 (LO 1) (Depreciation—Conceptual Understanding) Rembrandt Company acquired a plant asset at the beginning of Year 1. The asset has an estimated service life of 5 years. An employee has prepared depreciation schedules for this asset using three different methods to compare the results of using one method with the results of using other methods. You are to assume that the following schedules have been correctly prepared for this asset using (1) the straight-line method, (2) the sum-of-the-years'-digits method, and (3) the double-declining-balance method.

| Year | Straight-Line | Sum-of-the-Years'-Digits | Double-Declining-Balance |
|-------|-----------------|--------------------------|--------------------------|
| 1 | \$ 9,000 | \$15,000 | \$20,000 |
| 2 | 9,000 | 12,000 | 12,000 |
| 3 | 9,000 | 9,000 | 7,200 |
| 4 | 9,000 | 6,000 | 4,320 |
| 5 | 9,000 | 3,000 | 1,480 |
| Total | <u>\$45,000</u> | <u>\$45,000</u> | <u>\$45,000</u> |

Instructions

Answer the following questions.

- What is the cost of the asset being depreciated?
- What amount, if any, was used in the depreciation calculations for the salvage value for this asset?
- Which method will produce the highest charge to income in Year 1?
- Which method will produce the highest charge to income in Year 4?
- Which method will produce the highest book value for the asset at the end of Year 3?
- If the asset is sold at the end of Year 3, which method would yield the highest gain (or lowest loss) on disposal of the asset?

E11.3 (LO 1, 2) (Depreciation Computations—SYD, DDB—Partial Periods) Judds Company purchased a new plant asset on April 1, 2020, at a cost of \$711,000. It was estimated to have a service life of 20 years and a salvage value of \$60,000. Judds' accounting period is the calendar year.

Instructions

- Compute the depreciation for this asset for 2020 and 2021 using the sum-of-the-years'-digits method.
- Compute the depreciation for this asset for 2020 and 2021 using the double-declining-balance method.

E11.4 (LO 1, 2) Excel (Depreciation Computations—Five Methods) Jon Seceda Furnace Corp. purchased machinery for \$315,000 on May 1, 2020. It is estimated that it will have a useful life of 10 years, salvage value of \$15,000, production of 240,000 units, and working hours of 25,000. During 2021, Seceda Corp. uses the machinery for 2,650 hours, and the machinery produces 25,500 units.

Instructions

From the information given, compute the depreciation charge for 2021 under each of the following methods. (Round to the nearest dollar.)

- a. Straight-line.
- b. Units-of-output.
- c. Working hours.
- d. Sum-of-the-years'-digits.
- e. Declining-balance (use 20% as the annual rate).

E11.5 (LO 1, 2) (Depreciation Computations—Four Methods) Robert Parish Corporation purchased a new machine for its assembly process on August 1, 2020. The cost of this machine was \$117,900. The company estimated that the machine would have a salvage value of \$12,900 at the end of its service life. Its life is estimated at 5 years, and its working hours are estimated at 21,000 hours. Year-end is December 31.

Instructions

Compute the depreciation expense under the following methods. Each of the following should be considered unrelated.

- a. Straight-line depreciation for 2020.
- b. Activity method for 2020, assuming that machine usage was 800 hours.
- c. Sum-of-the-years'-digits for 2021.
- d. Double-declining-balance for 2021.

E11.6 (LO 1, 2) (Depreciation Computations—Five Methods, Partial Periods) Muggsy Bogues Company purchased equipment for \$212,000 on October 1, 2020. It is estimated that the equipment will have a useful life of 8 years and a salvage value of \$12,000. Estimated production is 40,000 units and estimated working hours are 20,000. During 2020, Bogues uses the equipment for 525 hours and the equipment produces 1,000 units.

Instructions

Compute depreciation expense under each of the following methods. Bogues is on a calendar-year basis ending December 31.

- a. Straight-line method for 2020.
- b. Activity method (units of output) for 2020.
- c. Activity method (working hours) for 2020.
- d. Sum-of-the-years'-digits method for 2022.
- e. Double-declining-balance method for 2021.

E11.7 (LO 1, 2) (Different Methods of Depreciation) Jackel Industries presents you with the following information.

| Description | Date Purchased | Cost | Salvage Value | Life in Years | Depreciation Method | Accumulated Depreciation to 12/31/21 | Depreciation for 2022 |
|-------------|----------------|-----------|---------------|---------------|---------------------|--------------------------------------|-----------------------|
| Machine A | 2/12/20 | \$142,500 | \$16,000 | 10 | (a) | \$33,350 | (b) |
| Machine B | 8/15/19 | (c) | 21,000 | 5 | SL | 29,000 | (d) |
| Machine C | 7/21/18 | 75,400 | 23,500 | 8 | DDB | (e) | (f) |
| Machine D | 10/15/(g) | 219,000 | 69,000 | 5 | SYD | 70,000 | (h) |

Instructions

Complete the table for the year ended December 31, 2022. The company depreciates all assets using the half-year convention.

E11.8 (LO 1, 2) (Depreciation Computation—Replacement, Nonmonetary Exchange) George Zidek Corporation bought a machine on June 1, 2018, for \$31,000, f.o.b. the place of manufacture. Freight to the point where it was set up was \$200, and \$500 was expended to install it. The machine's useful life was estimated at 10 years, with a salvage value of \$2,500. On June 1, 2019, an essential part of the machine is replaced, at a cost of \$1,980, with one designed to reduce the cost of operating the machine. The cost of the old part and related depreciation cannot be determined with any accuracy.

On June 1, 2022, the company buys a new machine of greater capacity for \$35,000, delivered, trading in the old machine which has a fair value and trade-in allowance of \$20,000. To prepare the old machine for removal from the plant cost \$75, and expenditures to install the new one were \$1,500. It is estimated

that the new machine has a useful life of 10 years, with a salvage value of \$4,000 at the end of that time. (The exchange has commercial substance.)

Instructions

Assuming that depreciation is to be computed on the straight-line basis, compute the annual depreciation on the new equipment that should be provided for the fiscal year beginning June 1, 2022. (Round to the nearest dollar.)

E11.9 (LO 2) (Composite Depreciation) Presented below is information related to LeBron James Manufacturing Corporation.

| Asset | Cost | Estimated Salvage | Estimated Life (in years) |
|-------|----------|-------------------|---------------------------|
| A | \$40,500 | \$5,500 | 10 |
| B | 33,600 | 4,800 | 9 |
| C | 36,000 | 3,600 | 9 |
| D | 19,000 | 1,500 | 7 |
| E | 23,500 | 2,500 | 6 |

Instructions

- Compute the rate of depreciation per year to be applied to the plant assets under the composite method.
- Prepare the adjusting entry necessary at the end of the year to record depreciation for the year.
- Prepare the entry to record the sale of asset D for cash of \$4,800. It was used for 6 years, and depreciation was entered under the composite method.

E11.10 (LO 1) (Depreciation Computations, SYD) Five Satins Company purchased a piece of equipment at the beginning of 2017. The equipment cost \$430,000. It has an estimated service life of 8 years and an expected salvage value of \$70,000. The sum-of-the-years'-digits method of depreciation is being used. Someone has already correctly prepared a depreciation schedule for this asset. This schedule shows that \$60,000 will be depreciated for a particular calendar year.

Instructions

Show calculations to determine for what particular year the depreciation amount for this asset will be \$60,000.

E11.11 (LO 1, 2) (Depreciation—Change in Estimate) Machinery purchased for \$60,000 by Tom Brady Co. in 2016 was originally estimated to have a life of 8 years with a salvage value of \$4,000 at the end of that time. Depreciation has been entered for 5 years on this basis. In 2021, it is determined that the total estimated life should be 10 years with a salvage value of \$4,500 at the end of that time. Assume straight-line depreciation.

Instructions

- Prepare the entry to correct the prior years' depreciation, if necessary.
- Prepare the entry to record depreciation for 2021.

E11.12 (LO 1, 2) (Depreciation Computation—Addition, Change in Estimate) In 1993, Herman Moore Company completed the construction of a building at a cost of \$2,000,000 and first occupied it in January 1994. It was estimated that the building will have a useful life of 40 years and a salvage value of \$60,000 at the end of that time.

Early in 2004, an addition to the building was constructed at a cost of \$500,000. At that time, it was estimated that the remaining life of the building would be, as originally estimated, an additional 30 years, and that the addition would have a life of 30 years and a salvage value of \$20,000.

In 2022, it is determined that the probable life of the building and addition will extend to the end of 2053, or 20 years beyond the original estimate.

Instructions

- Using the straight-line method, compute the annual depreciation that would have been charged from 1994 through 2003.
- Compute the annual depreciation that would have been charged from 2004 through 2021.
- Prepare the entry, if necessary, to adjust the account balances because of the revision of the estimated life in 2022.
- Compute the annual depreciation to be charged, beginning with 2022.

E11.13 (LO 1, 2) (Depreciation—Replacement, Change in Estimate) Greg Maddox Company constructed a building at a cost of \$2,200,000 and occupied it beginning in January 2001. It was estimated at that time that its life would be 40 years, with no salvage value.

In January 2021, a new roof was installed at a cost of \$300,000, and it was estimated then that the building would have a useful life of 25 years from that date. The cost of the old roof was \$160,000.

Instructions

- What amount of depreciation should have been charged annually from the years 2001 to 2020? (Assume straight-line depreciation.)
- What entry should be made in 2021 to record the replacement of the roof?
- Prepare the entry in January 2021 to record the revision in the estimated life of the building, if necessary.
- What amount of depreciation should be charged for the year 2021?

E11.14 (LO 1) (Error Analysis and Depreciation, SL and SYD) Mike Devereaux Company shows the following entries in its Equipment account for 2021. All amounts are based on historical cost.

| Equipment | | | |
|-----------|----------------------|---------|--------------------------------|
| 2021 | | | 2021 |
| Jan. 1 | Balance | 134,750 | June 30 Cost of equipment sold |
| Aug. 10 | Purchases | 32,000 | (purchased prior |
| 12 | Freight on equipment | | to 2021) |
| | purchased | 700 | 23,000 |
| 25 | Installation costs | 2,700 | |
| Nov. 10 | Repairs | 500 | |

Instructions

- Prepare any correcting entries necessary.
- Assuming that depreciation is to be charged for a full year on the ending balance in the asset account, compute the proper depreciation charge for 2021 under each of the methods listed below. Assume an estimated life of 10 years, with no salvage value. The machinery included in the January 1, 2021, balance was purchased in 2019.
 - Straight-line.
 - Sum-of-the-years'-digits.

E11.15 (LO 1, 2) (Depreciation for Fractional Periods) On March 10, 2022, Lost World Company sells equipment that it purchased for \$192,000 on August 20, 2015. It was originally estimated that the equipment would have a life of 12 years and a salvage value of \$16,800 at the end of that time, and depreciation has been computed on that basis. The company uses the straight-line method of depreciation.

Instructions

- Compute the depreciation charge on this equipment for 2015, for 2022, and the total charge for the period from 2016 to 2021, inclusive, under each of the six following assumptions with respect to partial periods.
 - Depreciation is computed for the exact period of time during which the asset is owned. (Use 365 days for base and record depreciation through March 9, 2022.)
 - Depreciation is computed for the full year on the January 1 balance in the asset account.
 - Depreciation is computed for the full year on the December 31 balance in the asset account.
 - Depreciation for one-half year is charged on plant assets acquired or disposed of during the year.
 - Depreciation is computed on additions from the beginning of the month following acquisition and on disposals to the beginning of the month following disposal.
 - Depreciation is computed for a full period on all assets in use for over one-half year, and no depreciation is charged on assets in use for less than one-half year. (Use 365 days for base.)
- Briefly evaluate the methods above, considering them from the point of view of basic accounting theory as well as simplicity of application.

E11.16 (LO 3) (Impairment) Presented below is information related to equipment owned by Suarez Company at December 31, 2020.

| | |
|----------------------------------|-------------|
| Cost | \$9,000,000 |
| Accumulated depreciation to date | 1,000,000 |
| Expected future net cash flows | 7,000,000 |
| Fair value | 4,800,000 |

Assume that Suarez will continue to use this asset in the future. As of December 31, 2020, the equipment has a remaining useful life of 4 years.

Instructions

- Prepare the journal entry (if any) to record the impairment of the asset at December 31, 2020.
- Prepare the journal entry to record depreciation expense for 2021.
- The fair value of the equipment at December 31, 2021, is \$5,100,000. Prepare the journal entry (if any) necessary to record this increase in fair value.

E11.17 (LO 3) (Impairment) Assume the same information as E11.16, except that Suarez intends to dispose of the equipment in the coming year. It is expected that the cost of disposal will be \$20,000.

Instructions

- Prepare the journal entry (if any) to record the impairment of the asset at December 31, 2020.
- Prepare the journal entry (if any) to record depreciation expense for 2021.
- The asset was not sold by December 31, 2021. The fair value of the equipment on that date is \$5,300,000. Prepare the journal entry (if any) necessary to record this increase in fair value. It is expected that the cost of disposal is still \$20,000.

E11.18 (LO 3) (Impairment) The management of Petro Garcia Inc. was discussing whether certain equipment should be written off as a charge to current operations because of obsolescence. This equipment has a cost of \$900,000 with depreciation to date of \$400,000 as of December 31, 2020. On December 31, 2020, management projected its future net cash flows from this equipment to be \$300,000 and its fair value to be \$230,000. The company intends to use this equipment in the future.

Instructions

- Prepare the journal entry (if any) to record the impairment at December 31, 2020.
- Where should the gain or loss (if any) on the write-down be reported in the income statement?
- At December 31, 2021, the equipment's fair value increased to \$260,000. Prepare the journal entry (if any) to record this increase in fair value.
- What accounting issues did management face in accounting for this impairment?

E11.19 (LO 4) (Depletion Computations—Timber) Stanislaw Timber Company owns 9,000 acres of timberland purchased in 2009 at a cost of \$1,400 per acre. At the time of purchase, the land without the timber was valued at \$400 per acre. In 2010, Stanislaw built fire lanes and roads, with a life of 30 years, at a cost of \$84,000. Every year, Stanislaw sprays to prevent disease at a cost of \$3,000 per year and spends \$7,000 to maintain the fire lanes and roads. During 2011, Stanislaw selectively logged and sold 700,000 board feet of timber, of the estimated 3,500,000 board feet. In 2012, Stanislaw planted new seedlings to replace the trees cut at a cost of \$100,000.

Instructions

- Determine the depreciation expense and the cost of timber sold related to depletion for 2011.
- Stanislaw has not logged since 2011. If Stanislaw logged and sold 900,000 board feet of timber in 2022, when the timber cruise (appraiser) estimated 5,000,000 board feet, determine the cost of timber sold related to depletion for 2022.

E11.20 (LO 4) (Depletion Computations—Oil) Diderot Drilling Company has leased property on which oil has been discovered. The oil wells on this property produced 18,000 barrels of oil during the past year that sold at an average sales price of \$55 per barrel. Total oil resources of this property are estimated to be 250,000 barrels.

The lease provided for an outright payment of \$500,000 to the lessor (owner) before drilling could be commenced and an annual rental of \$31,500. A premium of 5% of the sales price of every barrel of oil removed is to be paid annually to the lessor. In addition, Diderot (lessee) is to clean up all the waste and debris from drilling and to bear the costs of reconditioning the land for farming when the wells are abandoned. The estimated fair value, at the time of the lease, of this clean-up and reconditioning is \$30,000.

Instructions

From the provisions of the lease agreement, you are to compute the cost per barrel for the past year, exclusive of operating costs, to Diderot Drilling Company. (Round to the nearest cent.)

E11.21 (LO 4) (Depletion Computations—Timber) Forda Lumber Company owns a 7,000-acre tract of timber purchased in 2006 at a cost of \$1,300 per acre. At the time of purchase, the land was estimated to have a value of \$300 per acre without the timber. Forda Lumber Company has not

logged this tract since it was purchased. In 2020, Forda had the timber cruised. The cruise (appraiser) estimated that each acre contained 8,000 board feet of timber. In 2020, Forda built 10 miles of roads at a cost of \$7,840 per mile. After the roads were completed, Forda logged and sold 3,500 trees containing 850,000 board feet.

Instructions

- Determine the cost of timber sold related to depletion for 2020.
- If Forda depreciates the logging roads on the basis of timber cut, determine the depreciation expense for 2020.
- If Forda plants five seedlings at a cost of \$4 per seedling for each tree cut, how should Forda treat the reforestation?

E11.22 (LO 4) (Depletion Computations—Mining) Alcide Mining Company purchased land on February 1, 2020, at a cost of \$1,190,000. It estimated that a total of 60,000 tons of mineral was available for mining. After it has removed all the natural resources, the company will be required to restore the property to its previous state because of strict environmental protection laws. It estimates the fair value of this restoration obligation at \$90,000. It believes it will be able to sell the property afterwards for \$100,000. It incurred developmental costs of \$200,000 before it was able to do any mining. In 2020, resources removed totaled 30,000 tons. The company sold 22,000 tons.

Instructions

Compute the following information for 2020.

- Per unit material cost.
- Total material cost of December 31, 2020, inventory.
- Total material cost in cost of goods sold at December 31, 2020.

E11.23 (LO 4) (Depletion Computations—Minerals) At the beginning of 2020, Aristotle Company acquired a mine for \$970,000. Of this amount, \$100,000 was ascribed to the land value and the remaining portion to the minerals in the mine. Surveys conducted by geologists have indicated that approximately 12,000,000 units of ore appear to be in the mine. Aristotle incurred \$170,000 of development costs associated with this mine prior to any extraction of minerals. It also determined that the fair value of its obligation to prepare the land for an alternative use when all of the mineral has been removed was \$40,000. During 2020, 2,500,000 units of ore were extracted and 2,100,000 of these units were sold.

Instructions

Compute the following.

- The total amount of depletion for 2020.
- The amount that is charged as an expense for 2020 for the cost of the minerals sold during 2020.

E11.24 (LO 5) Groupwork (Ratio Analysis) The 2017 annual report of **Tootsie Roll Industries** contains the following information.

| (in millions) | December 31, 2017 | December 31, 2016 |
|-------------------|-------------------|-------------------|
| Total assets | \$930.9 | \$920.1 |
| Total liabilities | 197.1 | 208.6 |
| Net sales | 515.7 | 517.4 |
| Net income | 80.7 | 67.2 |

Instructions

Compute the following ratios for Tootsie Roll for 2017.

- Asset turnover.
- Return on assets.
- Profit margin on sales.
- How can the asset turnover be used to compute the return on assets?

***E11.25 (LO 6) (Book vs. Tax (MACRS) Depreciation)** Futabatei Enterprises purchased a delivery truck on January 1, 2020, at a cost of \$27,000. The truck has a useful life of 7 years with an estimated salvage value of \$6,000. The straight-line method is used for book purposes. For tax purposes, the truck, having a MACRS class life of 7 years, is classified as 5-year property; the optional MACRS tax rate tables are used to compute depreciation. In addition, assume that for 2020 and 2021 the company has revenues of \$200,000 and operating expenses (excluding depreciation) of \$130,000.

Instructions

- Prepare income statements for 2020 and 2021. (The final amount reported on the income statement should be income before income taxes.)
- Compute taxable income for 2020 and 2021.
- Determine the total depreciation to be taken over the useful life of the delivery truck for both book and tax purposes.
- Explain why depreciation for book and tax purposes will generally be different over the useful life of a depreciable asset.

***E11.26 (LO 6) (Book vs. Tax (MACRS) Depreciation)** Shimei Inc. purchased computer equipment on March 1, 2020, for \$31,000. The computer equipment has a useful life of 10 years and a salvage value of \$1,000. For tax purposes, the MACRS class life is 5 years.

Instructions

- Assuming that the company uses the straight-line method for book and tax purposes, what is the depreciation expense reported in (1) the financial statements for 2020 and (2) the tax return for 2020?
- Assuming that the company uses the double-declining-balance method for both book and tax purposes, what is the depreciation expense reported in (1) the financial statements for 2020 and (2) the tax return for 2020?
- Why is depreciation for tax purposes different from depreciation for book purposes even if the company uses the same depreciation method to compute them both?

Problems

P11.1 (LO 2) Excel Groupwork (Depreciation for Partial Period—SL, SYD, and DDB) Alladin Company purchased Machine #201 on May 1, 2020. The following information relating to Machine #201 was gathered at the end of May.

| | |
|--|------------|
| Price | \$85,000 |
| Credit terms | 2/10, n/30 |
| Freight-in | \$ 800 |
| Preparation and installation costs | \$ 3,800 |
| Labor costs during regular production operations | \$10,500 |

It is expected that the machine could be used for 10 years, after which the salvage value would be zero. Alladin intends to use the machine for only 8 years, however, after which it expects to be able to sell it for \$1,500. The invoice for Machine #201 was paid May 5, 2020. Alladin uses the calendar year as the basis for the preparation of financial statements.

Instructions

- Compute the depreciation expense for the years indicated using the following methods. (Round to the nearest dollar.)
 - Straight-line method for 2020.
 - Sum-of-the-years'-digits method for 2021.
 - Double-declining-balance method for 2020.
- Suppose Kate Crow, the president of Alladin, tells you that because the company is a new organization, she expects it will be several years before production and sales reach optimum levels. She asks you to recommend a depreciation method that will allocate less of the company's depreciation expense to the early years and more to later years of the assets' lives. What method would you recommend?

P11.2 (LO 1, 2) (Depreciation for Partial Periods—SL, Act., SYD, and Declining-Balance) The cost of equipment purchased by Charleston, Inc., on June 1, 2020, is \$89,000. It is estimated that the machine will have a \$5,000 salvage value at the end of its service life. Its service life is estimated at 7 years, its total working hours are estimated at 42,000, and its total production is estimated at 525,000 units. During 2020, the machine was operated 6,000 hours and produced 55,000 units. During 2021, the machine was operated 5,500 hours and produced 48,000 units.

Instructions

Compute depreciation expense on the machine for the year ending December 31, 2020, and the year ending December 31, 2021, using the following methods.

- a. Straight-line.
- b. Units-of-output.
- c. Working hours.
- d. Sum-of-the-years'-digits.
- e. Declining-balance (twice the straight-line rate).

P11.3 (LO 1, 2) (Depreciation—SYD, Act., SL, and DDB) The following data relate to the Machinery account of Eshkol, Inc. at December 31, 2020.

| | Machinery | | | |
|----------------------------|--------------------------|--------------|---------------|--------------------------|
| | A | B | C | D |
| Original cost | \$46,000 | \$51,000 | \$80,000 | \$80,000 |
| Year purchased | 2015 | 2016 | 2017 | 2019 |
| Useful life | 10 years | 15,000 hours | 15 years | 10 years |
| Salvage value | \$ 3,100 | \$ 3,000 | \$ 5,000 | \$ 5,000 |
| Depreciation method | Sum-of-the-years'-digits | Activity | Straight-line | Double-declining-balance |
| Accum. depr. through 2020* | \$31,200 | \$35,200 | \$15,000 | \$16,000 |

*In the year an asset is purchased, Eshkol, Inc. does not record any depreciation expense on the asset. In the year an asset is retired or traded in, Eshkol, Inc. takes a full year's depreciation on the asset.

The following transactions occurred during 2021.

- a. On May 5, Machine A was sold for \$13,000 cash. The company's bookkeeper recorded this retirement in the following manner in the cash receipts journal.

| | | |
|-----------------------|--------|--------|
| Cash | 13,000 | |
| Machinery (Machine A) | | 13,000 |

- b. On December 31, it was determined that Machine B had been used 2,100 hours during 2021.
- c. On December 31, before computing depreciation expense on Machine C, the management of Eshkol, Inc. decided the useful life remaining from January 1, 2021, was 10 years.
- d. On December 31, it was discovered that a machine purchased in 2020 had been expensed completely in that year. This machine cost \$28,000 and has a useful life of 10 years and no salvage value. Management has decided to use the double-declining-balance method for this machine, which can be referred to as "Machine E."

Instructions

Prepare the necessary correcting entries for the year 2021. Record the appropriate depreciation expense on the above-mentioned machines. No entry is necessary for Machine D.

P11.4 (LO 1, 2) (Depreciation and Error Analysis) A depreciation schedule for semi-trucks of Ichiro Manufacturing Company was requested by your auditor soon after December 31, 2021, showing the additions, retirements, depreciation, and other data affecting the income of the company in the 4-year period 2018 to 2021, inclusive. The following data were ascertained.

| | |
|--|-----------------|
| Balance of Trucks account, Jan. 1, 2018 | |
| Truck No. 1 purchased Jan. 1, 2015, cost | \$18,000 |
| Truck No. 2 purchased July 1, 2015, cost | 22,000 |
| Truck No. 3 purchased Jan. 1, 2017, cost | 30,000 |
| Truck No. 4 purchased July 1, 2017, cost | 24,000 |
| Balance, Jan. 1, 2018 | <u>\$94,000</u> |

The Accumulated Depreciation—Trucks account previously adjusted to January 1, 2018, and entered in the ledger, had a balance on that date of \$30,200 (depreciation on the four trucks from the respective dates of purchase, based on a 5-year life, no salvage value). No charges had been made against the account before January 1, 2018.

Transactions between January 1, 2018, and December 31, 2021, which were recorded in the ledger, are as follows.

- July 1, 2018 Truck No. 3 was traded for a larger one (No. 5), the agreed purchase price of which was \$40,000. Ichiro. paid the automobile dealer \$22,000 cash on the transaction. The entry was a debit to Trucks and a credit to Cash, \$22,000. The transaction has commercial substance.

- Jan. 1, 2019 Truck No. 1 was sold for \$3,500 cash; entry debited Cash and credited Trucks, \$3,500.
- July 1, 2020 A new truck (No. 6) was acquired for \$42,000 cash and was charged at that amount to the Trucks account. (Assume truck No. 2 was not retired.)
- July 1, 2020 Truck No. 4 was damaged in a wreck to such an extent that it was sold as junk for \$700 cash. Ichiro received \$2,500 from the insurance company. The entry made by the bookkeeper was a debit to Cash, \$3,200, and credits to Miscellaneous Income, \$700, and Trucks, \$2,500.

Entries for straight-line depreciation had been made at the close of each year as follows: 2018, \$21,000; 2019, \$22,500; 2020, \$25,050; and 2021, \$30,400.

Instructions

- For each of the 4 years, compute separately the increase or decrease in net income arising from the company's errors in determining or entering depreciation or in recording transactions affecting trucks, ignoring income tax considerations.
- Prepare one compound journal entry as of December 31, 2021, for adjustment of the Trucks account to reflect the correct balances as revealed by your schedule, assuming that the books have not been closed for 2021.

P11.5 (LO 1, 4) (Depletion and Depreciation—Mining) Khamsah Mining Company has purchased a tract of mineral land for \$900,000. It is estimated that this tract will yield 120,000 tons of ore with sufficient mineral content to make mining and processing profitable. It is further estimated that 6,000 tons of ore will be mined the first and last year and 12,000 tons every year in between. (Assume 11 years of mining operations.) The land will have a salvage value of \$30,000.

The company builds necessary structures and sheds on the site at a cost of \$36,000. It is estimated that these structures can serve 15 years but, because they must be dismantled if they are to be moved, they have no salvage value. The company does not intend to use the buildings elsewhere. Mining machinery installed at the mine was purchased secondhand at a cost of \$60,000. This machinery cost the former owner \$150,000 and was 50% depreciated when purchased. Khamsah Mining estimates that about half of this machinery will still be useful when the present mineral resources have been exhausted, but that dismantling and removal costs will just about offset its value at that time. The company does not intend to use the machinery elsewhere. The remaining machinery will last until about one-half the present estimated mineral ore has been removed and will then be worthless. Cost is to be allocated equally between these two classes of machinery.

Instructions

- As chief accountant for the company, you are to prepare a schedule showing estimated depletion and depreciation costs for each year of the expected life of the mine.
- Also compute the depreciation and depletion for the first year assuming actual production of 5,000 tons. Nothing occurred during the year to cause the company engineers to change their estimates of either the mineral resources or the life of the structures and equipment.

P11.6 (LO 4) (Depletion, Timber, and Unusual Loss) Conan O'Brien Logging and Lumber Company owns 3,000 acres of timberland on the north side of Mount Leno, which was purchased in 2008 at a cost of \$550 per acre. In 2020, O'Brien began selectively logging this timber tract. In May 2020, Mount Leno erupted, burying the timberland of O'Brien under a foot of ash. All of the timber on the O'Brien tract was downed. In addition, the logging roads, built at a cost of \$150,000, were destroyed, as well as the logging equipment, with a net book value of \$300,000.

At the time of the eruption, O'Brien had logged 20% of the estimated 500,000 board feet of timber. Prior to the eruption, O'Brien estimated the land to have a value of \$200 per acre after the timber was harvested. O'Brien includes the logging roads in the depletion base.

O'Brien estimates it will take 3 years to salvage the downed timber at a cost of \$700,000. The timber can be sold for pulp wood at an estimated price of \$3 per board foot. The value of the land is unknown, but must be considered nominal due to future uncertainties.

Instructions

- Determine the depletion cost per board foot for the timber harvested prior to the eruption of Mount Leno.
- Prepare the journal entry to record the depletion prior to the eruption.
- If this tract represents approximately half of the timber holdings of O'Brien, determine the amount of the unusual loss due to the eruption of Mount Leno for the year ended December 31, 2020.

P11.7 (LO 1, 4) (Natural Resources—Timber) Bronson Paper Products purchased 10,000 acres of forested timberland in March 2020. The company paid \$1,700 per acre for this land, which was above the

\$800 per acre most farmers were paying for cleared land. During April, May, June, and July 2020, Bronson cut enough timber to build roads using moveable equipment purchased on April 1, 2020. The cost of the roads was \$250,000, and the cost of the equipment was \$225,000; this equipment was expected to have a \$9,000 salvage value and would be used for the next 15 years. Bronson selected the straight-line method of depreciation for the moveable equipment. Bronson began actively harvesting timber in August and by December had harvested and sold 540,000 board feet of timber of the estimated 6,750,000 board feet available for cutting.

In March 2021, Bronson planted new seedlings in the area harvested during the winter. Cost of planting these seedlings was \$120,000. In addition, Bronson spent \$8,000 in road maintenance and \$6,000 for pest spraying during calendar-year 2021. The road maintenance and spraying are annual costs. During 2021, Bronson harvested and sold 774,000 board feet of timber of the estimated 6,450,000 board feet available for cutting.

In March 2022, Bronson again planted new seedlings at a cost of \$150,000, and also spent \$15,000 on road maintenance and pest spraying. During 2022, the company harvested and sold 650,000 board feet of timber of the estimated 6,500,000 board feet available for cutting.

Instructions

Compute the amount of depreciation and depletion expense for each of the 3 years (2020, 2021, and 2022). Assume that the roads are usable only for logging and therefore are included in the depletion base.

P11.8 (LO 1) Groupwork (Comprehensive Fixed-Asset Problem) Darby Sporting Goods Inc. has been experiencing growth in the demand for its products over the last several years. The last two Olympic Games greatly increased the popularity of basketball around the world. As a result, a European sports retailing consortium entered into an agreement with Darby's Roundball Division to purchase basketballs and other accessories on an increasing basis over the next 5 years.

To be able to meet the quantity commitments of this agreement, Darby had to obtain additional manufacturing capacity. A real estate firm located an available factory in close proximity to Darby's Roundball manufacturing facility, and Darby agreed to purchase the factory and used machinery from Encino Athletic Equipment Company on October 1, 2019. Renovations were necessary to convert the factory for Darby's manufacturing use.

The terms of the agreement required Darby to pay Encino \$50,000 when renovations started on January 1, 2020, with the balance to be paid as renovations were completed. The overall purchase price for the factory and machinery was \$400,000. The building renovations were contracted to Malone Construction at \$100,000. The payments made, as renovations progressed during 2020, are shown below. The factory was placed in service on January 1, 2021.

| | 1/1 | 4/1 | 10/1 | 12/31 |
|--------|----------|----------|-----------|-----------|
| Encino | \$50,000 | \$90,000 | \$110,000 | \$150,000 |
| Malone | | 30,000 | 30,000 | 40,000 |

On January 1, 2020, Darby secured a \$500,000 line-of-credit with a 12% interest rate to finance the purchase cost of the factory and machinery, and the renovation costs. Darby drew down on the line-of-credit to meet the payment schedule shown above; this was Darby's only outstanding loan during 2020.

Bob Sprague, Darby's controller, will capitalize the maximum allowable interest costs for this project. Darby's policy regarding purchases of this nature is to use the appraisal value of the land for book purposes and prorate the balance of the purchase price over the remaining items. The building had originally cost Encino \$300,000 and had a net book value of \$50,000, while the machinery originally cost \$125,000 and had a net book value of \$40,000 on the date of sale. The land was recorded on Encino's books at \$40,000. An appraisal, conducted by independent appraisers at the time of acquisition, valued the land at \$290,000, the building at \$105,000, and the machinery at \$45,000.

Angie Justice, chief engineer, estimated that the renovated plant would be used for 15 years, with an estimated salvage value of \$30,000. Justice estimated that the productive machinery would have a remaining useful life of 5 years and a salvage value of \$3,000. Darby's depreciation policy specifies the 200% declining-balance method for machinery and the 150% declining-balance method for the plant. One-half year's depreciation is taken in the year the plant is placed in service, and one-half year is allowed when the property is disposed of or retired. Darby uses a 360-day year for calculating interest costs.

Instructions

- a. Determine the amounts to be recorded on the books of Darby Sporting Goods Inc. as of December 31, 2020, for each of the following properties acquired from Encino Athletic Equipment Company.
 1. Land.
 2. Buildings.
 3. Machinery.

- b. Calculate Darby Sporting Goods Inc.'s 2021 depreciation expense, for book purposes, for each of the properties acquired from Encino Athletic Equipment Company.
- c. Discuss the arguments for and against the capitalization of interest costs.

(CMA adapted)

P11.9 (LO 3) (Impairment) Roland Company uses special strapping equipment in its packaging business. The equipment was purchased in January 2019 for \$10,000,000 and had an estimated useful life of 8 years with no salvage value. At December 31, 2020, new technology was introduced that would accelerate the obsolescence of Roland's equipment. Roland's controller estimates that expected future net cash flows on the equipment will be \$6,300,000 and that the fair value of the equipment is \$5,600,000. Roland intends to continue using the equipment, but it is estimated that the remaining useful life is 4 years. Roland uses straight-line depreciation.

Instructions

- a. Prepare the journal entry (if any) to record the impairment at December 31, 2020.
- b. Prepare any journal entries for the equipment at December 31, 2021. The fair value of the equipment at December 31, 2021, is estimated to be \$5,900,000.
- c. Repeat the requirements for (a) and (b), assuming that Roland intends to dispose of the equipment and that it has not been disposed of as of December 31, 2021.

P11.10 (LO 1) Groupwork (Comprehensive Depreciation Computations) Kohlbeck Corporation, a manufacturer of steel products, began operations on October 1, 2019. The accounting department of Kohlbeck has started the fixed-asset and depreciation schedule presented as follows.

Kohlbeck Corporation
Fixed-Asset and Depreciation Schedule
For Fiscal Years Ended September 30, 2020, and September 30, 2021

| Assets | Acquisition Date | Cost | Salvage | Depreciation Method | Estimated Life in Years | Depreciation Expense | |
|-------------------|--------------------|-------------------|----------|--------------------------|-------------------------|-------------------------------|-------------------------------|
| | | | | | | Year Ended September 30, 2020 | Year Ended September 30, 2021 |
| Land A | October 1, 2019 | \$ (1) | N/A* | N/A | N/A | N/A | N/A |
| Building A | October 1, 2019 | (2) | \$40,000 | Straight-line | (3) | \$13,600 | (4) |
| Land B | October 2, 2019 | (5) | N/A | N/A | N/A | N/A | N/A |
| Building B | Under Construction | \$320,000 to date | — | Straight-line | 30 | — | (6) |
| Donated Equipment | October 2, 2019 | (7) | 3,000 | 150% declining-balance | 10 | (8) | (9) |
| Machinery A | October 2, 2019 | (10) | 6,000 | Sum-of-the-years'-digits | 8 | (11) | (12) |
| Machinery B | October 1, 2020 | (13) | — | Straight-line | 20 | — | (14) |

*N/A—Not applicable

You have been asked to assist in completing this schedule. In addition to ascertaining that the data already on the schedule are correct, you have obtained the following information from the company's records and personnel.

1. Depreciation is computed from the first of the month of acquisition to the first of the month of disposition.
2. Land A and Building A were acquired from a predecessor corporation. Kohlbeck paid \$800,000 for the land and building together. At the time of acquisition, the land had an appraised value of \$90,000, and the building had an appraised value of \$810,000.
3. Land B was acquired on October 2, 2019, in exchange for 2,500 newly issued shares of Kohlbeck's common stock. At the date of acquisition, the stock had a par value of \$5 per share and a fair value of \$30 per share. During October 2019, Kohlbeck paid \$16,000 to demolish an existing building on this land so it could construct a new building.
4. Construction of Building B on the newly acquired land began on October 1, 2020. By September 30, 2021, Kohlbeck had paid \$320,000 of the estimated total construction costs of \$450,000. It is estimated that the building will be completed and occupied by July 2022.

5. Certain equipment was donated to the corporation by a local university. An independent appraisal of the equipment when donated placed the fair value at \$40,000 and the salvage value at \$3,000.
6. Machinery A's total cost of \$182,900 includes installation expense of \$600 and normal repairs and maintenance of \$14,900. Salvage value is estimated at \$6,000. Machinery A was sold on February 1, 2021.
7. On October 1, 2020, Machinery B was acquired with a down payment of \$5,740 and the remaining payments to be made in 11 annual installments of \$6,000 each beginning October 1, 2020. The prevailing interest rate was 8%. The following data were abstracted from present value tables (rounded).

| Present Value of \$1.00 at 8% | | Present Value of an Ordinary Annuity of \$1.00 at 8% | |
|-------------------------------|------|--|-------|
| 10 years | .463 | 10 years | 6.710 |
| 11 years | .429 | 11 years | 7.139 |
| 15 years | .315 | 15 years | 8.559 |

Instructions

For each numbered item on the schedule, supply the correct amount. (Round each answer to the nearest dollar.)

P11.11 (LO 1, 2) (Depreciation for Partial Periods—SL, Act., SYD, and DDB) On January 1, 2018, a machine was purchased for \$90,000. The machine has an estimated salvage value of \$6,000 and an estimated useful life of 5 years. The machine can operate for 100,000 hours before it needs to be replaced. The company closed its books on December 31 and operates the machine as follows: 2018, 20,000 hours; 2019, 25,000 hours; 2020, 15,000 hours; 2021, 30,000 hours; and 2022, 10,000 hours.

Instructions

- a. Compute the annual depreciation charges over the machine's life assuming a December 31 year-end for each of the following depreciation methods.
 1. Straight-line method.
 2. Activity method.
 3. Sum-of-the-years'-digits method.
 4. Double-declining-balance method.
- b. Assume a fiscal year-end of September 30. Compute the annual depreciation charges over the asset's life applying each of the following methods.
 1. Straight-line method.
 2. Sum-of-the-years'-digits method.
 3. Double-declining-balance method.

***P11.12 (LO 1, 6) Groupwork (Depreciation—SL, DDB, SYD, Act., and MACRS)** On January 1, 2019, Locke Company, a small machine-tool manufacturer, acquired for \$1,260,000 a piece of new industrial equipment. The new equipment had a useful life of 5 years, and the salvage value was estimated to be \$60,000. Locke estimates that the new equipment can produce 12,000 machine tools in its first year. It estimates that production will decline by 1,000 units per year over the remaining useful life of the equipment.

The following depreciation methods may be used: (1) straight-line, (2) double-declining-balance, (3) sum-of-the-years'-digits, and (4) units-of-output. For tax purposes, the class life is 7 years. Use the MACRS tables for computing depreciation.

Instructions

- a. Which depreciation method would maximize net income for financial statement reporting for the 3-year period ending December 31, 2021? Prepare a schedule showing the amount of accumulated depreciation at December 31, 2021, under the method selected. Ignore present value, income tax, and deferred income tax considerations.
- b. Which depreciation method (MACRS or optional straight-line) would minimize net income for income tax reporting for the 3-year period ending December 31, 2021? Determine the amount of accumulated depreciation at December 31, 2021. Ignore present value considerations.

(AICPA adapted)

Concepts for Analysis

CA11.1 (LO 1) (Depreciation Basic Concepts) Burnitz Manufacturing Company was organized on January 1, 2020. During 2020, it has used in its reports to management the straight-line method of depreciating its plant assets.

On November 8, you are having a conference with Burnitz's officers to discuss the depreciation method to be used for income tax and stockholder reporting. James Bryant, president of Burnitz, has suggested the use of a new method, which he feels is more suitable than the straight-line method for the needs of the company during the period of rapid expansion of production and capacity that he foresees. Following is an example in which the proposed method is applied to a fixed asset with an original cost of \$248,000, an estimated useful life of 5 years, and a salvage value of approximately \$8,000.

| Year | Years of Life Used | Fraction Rate | Depreciation Expense | Accumulated Depreciation at End of Year | Book Value at End of Year |
|------|--------------------|---------------|----------------------|---|---------------------------|
| 1 | 1 | 1/15 | \$16,000 | \$ 16,000 | \$232,000 |
| 2 | 2 | 2/15 | 32,000 | 48,000 | 200,000 |
| 3 | 3 | 3/15 | 48,000 | 96,000 | 152,000 |
| 4 | 4 | 4/15 | 64,000 | 160,000 | 88,000 |
| 5 | 5 | 5/15 | 80,000 | 240,000 | 8,000 |

The president favors the new method because he has heard that:

1. It will increase the funds recovered during the years near the end of the assets' useful lives when maintenance and replacement disbursements are high.
2. It will result in increased write-offs in later years and thereby will reduce taxes.

Instructions

- a. What is the purpose of accounting for depreciation?
- b. Is the president's proposal within the scope of generally accepted accounting principles? In making your decision, discuss the circumstances, if any, under which use of the method would be reasonable and those, if any, under which it would not be reasonable.
- c. The president wants your advice on the following issues.
 1. Do depreciation charges recover or create funds? Explain.
 2. Assume that the Internal Revenue Service accepts the proposed depreciation method in this case. If the proposed method were used for stockholder and tax reporting purposes, how would it affect the availability of cash flows generated by operations?

CA11.2 (LO 1, 2) Writing (Unit, Group, and Composite Depreciation) The certified public accountant is frequently called upon by management for advice regarding methods of computing depreciation. Of comparable importance, although it arises less frequently, is the question of whether the depreciation method should be based on consideration of the assets as units, as a group, or as having a composite life.

Instructions

- a. Briefly describe the depreciation methods based on treating assets as (1) units and (2) a group or as having a composite life.
- b. Present the arguments for and against the use of each of the two methods.
- c. Describe how retirements are recorded under each of the two methods.

(AICPA adapted)

CA11.3 (LO 1) (Depreciation—Strike, Units-of-Production, Obsolescence) The following are three different and unrelated situations involving depreciation accounting. Answer the question(s) at the end of each situation.

Situation I: Recently, Broderick Company experienced a strike that affected a number of its operating plants. The controller of this company indicated that it was not appropriate to report depreciation expense during this period because the equipment did not depreciate and an improper matching of costs and revenues would result. She based her position on the following points.

1. It is inappropriate to charge the period with costs for which there are no related revenues arising from production.
2. The basic factor of depreciation in this instance is wear and tear. Because equipment was idle, no wear and tear occurred.

Instructions

Comment on the appropriateness of the controller's comments.

Situation II: Etheridge Company manufactures electrical appliances, most of which are used in homes. Company engineers have designed a new type of blender which, through the use of a few attachments, will perform more functions than any blender currently on the market. Demand for the new blender can be projected with reasonable probability. In order to make the blenders, Etheridge needs a specialized machine that is not available from outside sources. It has been decided to make such a machine in Etheridge's own plant.

Instructions

- Discuss the effect of projected demand in units for the new blenders (which may be steady, decreasing, or increasing) on the determination of a depreciation method for the machine.
- What other matters should be considered in determining the depreciation method? (Ignore income tax considerations.)

Situation III: Haley Paper Company operates a 300-ton-per-day kraft pulp mill and four sawmills in Wisconsin. The company is in the process of expanding its pulp mill facilities to a capacity of 1,000 tons per day and plans to replace three of its older, less efficient sawmills with an expanded facility. One of the mills to be replaced did not operate for most of 2020 (current year), and there are no plans to reopen it before the new sawmill facility becomes operational.

In reviewing the depreciation rates and in discussing the salvage values of the sawmills that were to be replaced, it was noted that if present depreciation rates were not adjusted, substantial amounts of plant costs on these three mills would not be depreciated by the time the new mill came on stream.

Instructions

What is the proper accounting for the four sawmills at the end of 2020?

CA11.4 (LO 1) Writing (Depreciation Concepts) As a cost accountant for San Francisco Cannery, you have been approached by Phil Perriman, canning room supervisor, about the 2020 costs charged to his department. In particular, he is concerned about the line item "depreciation." Perriman is very proud of the excellent condition of his canning room equipment. He has always been vigilant about keeping all equipment serviced and well oiled. He is sure that the huge charge to depreciation is a mistake; it does not at all reflect the cost of minimal wear and tear that the machines have experienced over the last year. He believes that the charge should be considerably lower.

The machines being depreciated are six automatic canning machines. All were put into use on January 1, 2020. Each cost \$625,000, having a salvage value of \$55,000 and a useful life of 12 years. San Francisco depreciates this and similar assets using double-declining-balance depreciation. Perriman has also pointed out that if you used straight-line depreciation, the charge to his department would not be so great.

Instructions

Write a memo dated January 22, 2020, to Phil Perriman to clear up his misunderstanding of the term "depreciation." Also, calculate year-1 depreciation on all machines using both methods. Explain the theoretical justification for double-declining-balance and why, in the long run, the aggregate charge to depreciation will be the same under both methods.

CA11.5 (LO 1) Ethics (Depreciation Choice—Ethics) Jerry Prior, Beeler Corporation's controller, is concerned that net income may be lower this year. He is afraid upper-level management might recommend cost reductions by laying off accounting staff, including him.

Prior knows that depreciation is a major expense for Beeler. The company currently uses the double-declining-balance method for both financial reporting and tax purposes, and he's thinking of selling equipment that, given its age, is primarily used when there are periodic spikes in demand. The equipment has a carrying value of \$2,000,000 and a fair value of \$2,180,000. The gain on the sale would be reported in the income statement. He doesn't want to highlight this method of increasing income. He thinks, "Why don't I increase the estimated useful lives and the salvage values? That will decrease depreciation expense and require less extensive disclosure, since the changes are accounted for prospectively. I may be able to save my job and those of my staff."

Instructions

Answer the following questions.

- Who are the stakeholders in this situation?
- What are the ethical issues involved?
- What should Prior do?

Using Your Judgment

Financial Reporting Problem

The Procter & Gamble Company (P&G)

The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

- What descriptions are used by P&G in its balance sheet to classify its property, plant, and equipment?
- What method or methods of depreciation does P&G use to depreciate its property, plant, and equipment?
- Over what estimated useful lives does P&G depreciate its property, plant, and equipment?
- What amounts for depreciation and amortization expense did P&G charge to its income statement in 2017, 2016, and 2015?
- What were the capital expenditures for property, plant, and equipment made by P&G in 2017, 2016, and 2015?

Comparative Analysis Case

The Coca-Cola Company and PepsiCo., Inc.

The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- What amount is reported in the balance sheets as property, plant, and equipment (net) of Coca-Cola at December 31, 2017, and of PepsiCo at December 31, 2017? What percentage of total assets is invested in property, plant, and equipment by each company?
- What depreciation methods are used by Coca-Cola and PepsiCo for property, plant, and equipment? How much depreciation and amortization was reported by Coca-Cola and PepsiCo in 2017? In 2016? (Use cash flow statement amounts.)
- Compute and compare the following ratios for Coca-Cola and PepsiCo for 2017.
 - Asset turnover.
 - Profit margin on sales.
 - Return on assets.
- What amount was spent in 2017 for capital expenditures by Coca-Cola and PepsiCo?

Financial Statement Analysis Case

McDonald's Corporation

McDonald's is the largest and best-known global food-service retailer, with more than 32,000 restaurants in over 115 countries. On any day, McDonald's serves approximately 1 percent of the world's population. The following is information related to McDonald's property and equipment.

McDonald's Corporation

Summary of Significant Accounting Policies Section

Property and Equipment. Property and equipment are stated at cost, with depreciation and amortization provided using the straight-line method over the following estimated useful lives: buildings—up to 40 years; leasehold improvements—the lesser of useful lives of assets or lease terms, which generally include option periods; and equipment—three to 12 years.

[In the notes to the financial statements:]

Property and Equipment

Net property and equipment consisted of:

| (In millions) | December 31 | |
|---|-------------------|-------------------|
| | 2017 | 2016 |
| Land | \$ 5,662.2 | \$ 5,465.0 |
| Buildings and improvements on owned land | 14,776.9 | 13,695.2 |
| Buildings and improvements on leased land | 12,509.2 | 11,511.9 |
| Equipment, signs and seating | 3,165.7 | 3,270.9 |
| Other | 512.4 | 500.4 |
| | <u>36,626.4</u> | <u>34,443.4</u> |
| Accumulated depreciation and amortization | 14,178.1 | 13,185.8 |
| Net property and equipment | <u>\$22,448.3</u> | <u>\$21,257.6</u> |

Depreciation and amortization expense for property and equipment was (in millions): 2017—\$1,227.5; 2016—\$1,390.7; 2015—\$1,438.0.

[In its 6-year summary, McDonald's provides the following information.]

| (in millions) | 2017 | 2016 | 2015 |
|-----------------------------|---------|---------|---------|
| Cash provided by operations | \$5,551 | \$6,060 | \$6,539 |
| Capital expenditures | 1,854 | 1,821 | 1,814 |

Instructions

- What method of depreciation does McDonald's use?
- Does depreciation and amortization expense cause cash flow from operations to increase? Explain.
- What does the schedule of cash flow measures indicate?

Accounting, Analysis, and Principles

Electroboy Enterprises, Inc. operates several stores throughout the western United States. As part of an operational and financial reporting review in a response to a downturn in its markets, the company's management has decided to perform an impairment test on five stores (combined). The five stores' sales have declined due to aging facilities and competition from a rival that opened new stores in the same markets. Management has developed the following information concerning the five stores as of the end of fiscal 2019.

| | |
|--|------------------------|
| Original cost | \$36 million |
| Accumulated depreciation | \$10 million |
| Estimated remaining useful life | 4 years |
| Estimated expected future annual cash flows (not discounted) | \$4.0 million per year |
| Appropriate discount rate | 5 percent |

Accounting

- Determine the amount of impairment loss, if any, that Electroboy should report for fiscal 2019 and the book value at which Electroboy should report the five stores on its fiscal year-end 2019 balance sheet. Assume that the cash flows occur at the end of each year.
- Repeat part (a), but instead assume that (1) the estimated remaining useful life is 10 years, (2) the estimated annual cash flows are \$2,720,000 per year, and (3) the appropriate discount rate is 6 percent.

Analysis

Assume that you are a financial analyst and you participate in a conference call with Electroboy management in early 2020 (before Electroboy closes the books on fiscal 2019). During the conference call, you learn that management is considering selling the five stores, but the sale won't likely be completed until the second quarter of fiscal 2020. Briefly discuss what implications this would have for Electroboy's 2019 financial statements. Assume the same facts as in part (b) above.

Principles

Electroboy management would like to know the accounting for the impaired asset in periods subsequent to the impairment. Can the assets be written back up? Briefly discuss the conceptual arguments for this accounting.

Analytics in Action

Accounting software systems collect vast amounts of data about the economic events experienced by a company and about the parties with whom the company engages, such as suppliers and customers. Business decision-makers take advantage of this wealth of information by using data analytics, which often employs both software and statistics, to draw inferences and make more informed business decisions. As both data access and analytical software improve, the use of data analytics to support decisions is becoming increasingly common at virtually all types of companies.

Evaluating long-lived assets for possible impairment requires developing estimates of future cash flows and net realizable value compared to the carrying value of the asset, based on the depreciation method used.

Instructions Go to WileyPLUS for a data analytics exercise focusing on analysis of company information related to depreciation and impairment of property, plant, and equipment.

Bridge to the Profession

FASB Codification References

- [1] FASB ASC 360-10-05. [Predecessor literature: “Accounting for the Impairment or Disposal of Long-lived Assets,” *Statement of Financial Accounting Standards No. 144* (Norwalk, Conn.: 2001).]
- [2] FASB ASC 360-10-50-1. [Predecessor literature: “Omnibus Opinion—1967,” *Opinions of the Accounting Principles Board No. 12* (New York: AICPA, 1967), par. 5.]

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

CE11.1 Access the glossary (“Master Glossary”) to answer the following.

- a. What is the definition of amortization?
- b. What is the definition of impairment?
- c. What is the definition of recoverable amount?
- d. What are activities, as they relate to the construction of an asset?

CE11.2 Your client, Barriques Inc., is contemplating a restructuring of its operations, including the possibility of spinning off some of its assets to the original owners. However, management is unsure of the accounting for any impairment on the assets. What does the authoritative literature say about these types of impairments?

CE11.3 Your great-uncle, who is a CPA, is impressed that you are majoring in accounting. However, he believes that depreciation is something that companies do based on past practice, not on the basis of any authoritative guidance. Provide the authoritative literature to support the practice of fixed-asset depreciation.

CE11.4 What is the nature of SEC guidance concerning property, plant, and equipment disclosures?

Codification Research Case

Matt Holmes recently joined Klax Company as a staff accountant in the controller’s office. Klax Company provides warehousing services for companies in several midwestern cities.

The location in Dubuque, Iowa, has not been performing well due to increased competition and the loss of several customers that have recently gone out of business. Matt’s department manager suspects that the plant and equipment may be impaired and wonders whether those assets should be written down. Given the company’s prior success, this issue has never arisen in the past, and Matt has been asked to conduct some research on this issue.

Instructions

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

- a. What is the authoritative guidance for asset impairments? Briefly discuss the scope of the standard (i.e., explain the types of transactions to which the standard applies).
- b. Give several examples of events that would cause an asset to be tested for impairment. Does it appear that Klax should perform an impairment test? Explain.
- c. What is the best evidence of fair value? Describe alternate methods of estimating fair value.

Additional Professional Resources

Go to WileyPLUS for other career-readiness resources, such as career coaching, internship opportunities, and CPAexcel prep.

IFRS Insights

LEARNING OBJECTIVE 7

Compare the accounting for property, plant, and equipment under GAAP and IFRS.

GAAP adheres to many of the same principles of IFRS in the accounting for property, plant, and equipment. Major differences relate to use of component depreciation, impairments, and revaluations.

Relevant Facts

Following are the key similarities and differences between GAAP and IFRS related to property, plant, and equipment.

Similarities

- The definition of property, plant, and equipment is essentially the same under GAAP and IFRS.
- Under both GAAP and IFRS, changes in depreciation method and changes in useful life are treated in the current and future periods. Prior periods are not affected.
- The accounting for plant asset disposals is the same under GAAP and IFRS.
- The accounting for the initial costs to acquire natural resources is similar under GAAP and IFRS.
- Under both GAAP and IFRS, interest costs incurred during construction must be capitalized. Recently, IFRS converged to GAAP.
- The accounting for exchanges of non-monetary assets is essentially the same between IFRS and GAAP. GAAP requires that gains on exchanges of non-monetary assets be recognized if the exchange has commercial substance. This is the same framework used in IFRS.
- GAAP and IFRS both view depreciation as allocation of cost over an asset's life. GAAP permits the same depreciation methods (straight-line, diminishing-balance, units-of-production) as IFRS.

Differences

- IFRS requires component depreciation. Under GAAP, component depreciation is permitted but is rarely used.
- Under IFRS, companies can use either the historical cost model or the revaluation model. GAAP does not permit revaluations of property, plant, and equipment or mineral resources.
- In testing for impairments of long-lived assets, GAAP uses a different model than IFRS to test for impairments (details of the IFRS impairment test is presented in the *About the Numbers* discussion). As long as future undiscounted cash flows exceed the carrying amount of the asset, no impairment is recorded. The IFRS impairment test is stricter. However, unlike GAAP, reversals of impairment losses are permitted.

About the Numbers

Component Depreciation

Under IFRS, companies are required to use **component depreciation**. IFRS requires that each part of an item of property, plant, and equipment that is significant to the total cost of the asset must be depreciated separately. Companies therefore have to exercise judgment to determine the proper allocations to the components. As an example, when a company like **Nokia** purchases a building, it must determine how the various building components (e.g., the foundation, structure, roof, heating and cooling system, and elevators) should be segregated and depreciated.

To illustrate the accounting for component depreciation, assume that EuroAsia Airlines purchases an airplane for \$100,000,000 on January 1, 2020. The airplane has a useful life of 20 years and a residual value of \$0. EuroAsia uses the straight-line method of depreciation for all its airplanes. EuroAsia identifies the following components, amounts, and useful lives, as shown in **Illustration IFRS11.1**.

| Components | Component Amount | Component Useful Life |
|-------------------|------------------|-----------------------|
| Airframe | \$60,000,000 | 20 years |
| Engine components | 32,000,000 | 8 years |
| Other components | 8,000,000 | 5 years |

Illustration IFRS11.2 shows the computation of depreciation expense for EuroAsia for 2020.

| Components | Component Amount | ÷ | Useful Life | = | Component Depreciation |
|-------------------|----------------------|---|-------------|---|------------------------|
| Airframe | \$ 60,000,000 | | 20 | | \$3,000,000 |
| Engine components | 32,000,000 | | 8 | | 4,000,000 |
| Other components | 8,000,000 | | 5 | | 1,600,000 |
| Total | <u>\$100,000,000</u> | | | | <u>\$8,600,000</u> |

As indicated, EuroAsia records depreciation expense of \$8,600,000 in 2020 as follows.

| | |
|-----------------------------------|-----------|
| Depreciation Expense | 8,600,000 |
| Accumulated Depreciation—Airplane | 8,600,000 |

On the statement of financial position at the end of 2020, EuroAsia reports the airplane as a single amount. The presentation is shown in **Illustration IFRS11.3**.

| | |
|---|----------------------|
| Non-current assets | |
| Airplane | \$100,000,000 |
| Less: Accumulated depreciation—airplane | <u>8,600,000</u> |
| | <u>\$ 91,400,000</u> |

In many situations, a company may not have a good understanding of the cost of the individual components purchased. In that case, the cost of individual components should be estimated based on reference to current market prices (if available), discussion with experts in valuation, or use of other reasonable approaches.

Recognizing Impairments

As discussed in the text, the credit crisis starting in late 2008 has affected many financial and non-financial institutions. As a result of this global slump, many companies have considered write-offs of some of their long-lived assets. These write-offs are referred to as **impairments**. The accounting for impairments is different under GAAP and IFRS.

A long-lived tangible asset is impaired when a company is not able to recover the asset's carrying amount either through using it or by selling it. To determine whether an asset is impaired, **on an annual basis, companies review the asset for indicators of impairments**—that is, a decline in the asset's cash-generating ability through use or sale. This review should consider internal sources (e.g., adverse changes in performance) and external sources (e.g., adverse changes in the business or regulatory environment) of information. **If impairment indicators are present, then an impairment test must be conducted.** This test compares the asset's recoverable amount with its carrying amount. If the carrying amount is higher than the recoverable amount, the difference is an impairment loss. If the recoverable amount is greater than the carrying amount, no impairment is recorded.

Recoverable amount is defined as the higher of fair value less costs to sell or value-in-use. **Fair value less costs to sell** means what the asset could be sold for after deducting costs of disposal. **Value-in-use** is the present value of cash flows expected from the future use and eventual sale of the asset at the end of its useful life. **Illustration IFRS11.4** highlights the nature of the impairment test.

Computation of Component Depreciation

ILLUSTRATION IFRS11.3

Presentation of Carrying Amount of Airplane

ILLUSTRATION IFRS11.4

Impairment Test

If either the fair value less costs to sell or value-in-use is higher than the carrying amount, there is no impairment. If both the fair value less costs to sell and value-in-use are lower than the carrying amount, a loss on impairment occurs.

Example: No Impairment Assume that Cruz Company performs an impairment test for its equipment. The carrying amount of Cruz's equipment is \$200,000, its fair value less costs to sell is \$180,000, and its value-in-use is \$205,000. In this case, the value-in-use of Cruz's equipment is higher than its carrying amount of \$200,000. As a result, there is no impairment. (If a company can more readily determine value-in-use (or fair value less costs to sell) and it determines that no impairment is needed, it is not required to compute the other measure.)

Example: Impairment Assume the same information for Cruz Company above except that the value-in-use of Cruz's equipment is \$175,000 rather than \$205,000. Cruz measures the impairment loss as the difference between the carrying amount of \$200,000 and the higher of fair value less costs to sell (\$180,000) or value-in-use (\$175,000). Cruz therefore uses the fair value less cost of disposal to record an impairment loss of \$20,000 (\$200,000 – \$180,000). Cruz makes the following entry to record the impairment loss.

| | | |
|------------------------------------|--------|--------|
| Loss on Impairment | 20,000 | |
| Accumulated Depreciation—Equipment | | 20,000 |

Loss on Impairment is reported in the income statement in the “Other income and expense” section. The company then either credits Equipment or Accumulated Depreciation—Equipment to reduce the carrying amount of the equipment for the impairment. *For purposes of homework, credit accumulated depreciation when recording an impairment for a depreciable asset.*

Reversal of Impairment Loss After recording the impairment loss, the recoverable amount becomes the basis of the impaired asset. What happens if a review in a future year indicates that the asset is no longer impaired because the recoverable amount of the asset is higher than the carrying amount? In that case, the impairment loss may be reversed.

To illustrate, assume that Tan Company purchases equipment on January 1, 2020, for \$300,000, with a useful life of three years, and no residual value. Its depreciation and related carrying amount over the three years is as follows.

| Year | Depreciation Expense | Carrying Amount |
|------|-------------------------|-----------------|
| 2020 | \$100,000 (\$300,000/3) | \$200,000 |
| 2021 | \$100,000 (\$300,000/3) | \$100,000 |
| 2022 | \$100,000 (\$300,000/3) | –0– |

At December 31, 2020, Tan determines it has an impairment loss of \$20,000 and therefore makes the following entry.

| | | |
|------------------------------------|--------|--------|
| Loss on Impairment | 20,000 | |
| Accumulated Depreciation—Equipment | | 20,000 |

Tan's depreciation expense and related carrying amount after the impairment is as indicated in **Illustration IFRS11.5**.

ILLUSTRATION IFRS11.5

Carrying Value of Impaired Asset

| Year | Depreciation Expense | Carrying Amount |
|------|------------------------|-----------------|
| 2021 | \$90,000 (\$180,000/2) | \$90,000 |
| 2022 | \$90,000 (\$180,000/2) | –0– |

At the end of 2021, Tan determines that the recoverable amount of the equipment is \$96,000, which is greater than its carrying amount of \$90,000. In this case, Tan reverses the previously recognized impairment loss with the following entry.

| | | |
|------------------------------------|-------|-------|
| Accumulated Depreciation—Equipment | 6,000 | |
| Recovery of Loss from Impairment | | 6,000 |

The recovery of the impairment loss is reported in the “Other income and expense” section of the income statement. The carrying amount of Tan's equipment is now \$96,000 (\$90,000 + \$6,000) at December 31, 2021. The general rule related to reversals of impairments is as follows. The amount of the recovery of the loss is limited to the carrying amount that would result if the impairment had not occurred. For example, the carrying amount of Tan's equipment at the end of 2021 would be \$100,000, assuming no impairment.

The \$6,000 recovery is therefore permitted because Tan's carrying amount on the equipment is now only \$96,000.

However, any recovery above \$10,000 is not permitted. The reason is that any recovery above \$10,000 results in Tan carrying the asset at a value above its historical cost.

Revaluations

Up to this point, we have assumed that companies use the historical cost principle to value long-lived tangible assets after acquisition. However, under IFRS companies have a choice. They may value these assets at cost or at fair value.

Recognizing Revaluations **Network Rail** (a company in Great Britain) is an example of a company that elected to use fair values to account for its railroad network. Its use of fair value led to an increase of £4,289 million to its long-lived tangible assets. When companies choose to fair value their long-lived tangible assets subsequent to acquisition, they account for the change in the fair value by adjusting the appropriate asset account and establishing an unrealized gain on the revalued long-lived tangible asset. This unrealized gain is often referred to as **revaluation surplus**.

Revaluation—Land. To illustrate revaluation of land, assume that **Siemens Group** purchased land for \$1,000,000 on January 5, 2020. The company elects to use revaluation accounting for the land in subsequent periods. At December 31, 2020, the land's fair value is \$1,200,000. The entry to record the land at fair value is as follows.

| | | |
|---------------------------------------|---------|---------|
| Land | 200,000 | |
| Unrealized Gain on Revaluation (land) | | 200,000 |

The land is reported on the statement of financial position at \$1,200,000, and Unrealized Gain on Revaluation (land) increases other comprehensive income in the statement of comprehensive income. In addition, if this is the only revaluation adjustment to date, the statement of financial position reports accumulated other comprehensive income of \$200,000.

Revaluation—Depreciable Assets. To illustrate the accounting for revaluations of depreciable assets, assume that **Lenovo Group** purchases equipment for \$500,000 on January 2, 2020. The equipment has a useful life of five years, is depreciated using the straight-line method of depreciation, and its residual value is zero. Lenovo chooses to revalue its equipment to fair value over the life of the equipment. Lenovo records depreciation expense of \$100,000 ($\$500,000 \div 5$) at December 31, 2020, as follows.

December 31, 2020

| | | |
|--|---------|---------|
| Depreciation Expense | 100,000 | |
| Accumulated Depreciation—Equipment | | 100,000 |
| (To record depreciation expense in 2020) | | |

After this entry, Lenovo's equipment has a carrying amount of \$400,000 ($\$500,000 - \$100,000$). Lenovo receives an independent appraisal for the fair value of equipment at December 31, 2020, which is \$460,000. To report the equipment at fair value, Lenovo does the following.

1. Reduces the Accumulated Depreciation—Equipment account to zero.
2. Reduces the Equipment account by \$40,000—it then is reported at its fair value of \$460,000.
3. Records Unrealized Gain on Revaluation (equipment) for the difference between the fair value and carrying amount of the equipment, or \$60,000 ($\$460,000 - \$400,000$).

The entry to record this revaluation at December 31, 2020, is as follows.

December 31, 2020

| | | |
|---|---------|--------|
| Accumulated Depreciation—Equipment | 100,000 | |
| Equipment | | 40,000 |
| Unrealized Gain on Revaluation (equipment) | | 60,000 |
| (To adjust the equipment to fair value and record revaluation increase) | | |

The equipment is now reported at its fair value of \$460,000 ($\$500,000 - \$40,000$). As an alternative to the entry shown here, companies restate on a proportionate basis the cost and accumulated depreciation of the asset, such that the carrying amount of the asset after revaluation equals its revalued amount.

The increase in the fair value of \$60,000 is reported on the statement of comprehensive income as other comprehensive income. In addition, the ending balance is reported in accumulated other comprehensive income on the statement of financial position in the equity section. **Illustration IFRS11.6** shows the presentation of revaluation elements.

ILLUSTRATION IFRS11.6

Financial Statement
Presentation—Revaluations

| | |
|--|-----------|
| On the statement of comprehensive income: | |
| Depreciation expense | \$100,000 |
| <i>Other comprehensive income</i> | |
| Unrealized gain on revaluation (equipment) | \$ 60,000 |
| On the statement of financial position: | |
| Non-current assets | |
| Equipment (\$500,000 – \$40,000) | \$460,000 |
| Accumulated depreciation—equipment (\$100,000 – \$100,000) | –0– |
| Carrying amount | \$460,000 |
| Equity | |
| Accumulated other comprehensive income | \$ 60,000 |

As indicated, at December 31, 2020, the carrying amount of the equipment is now \$460,000. Lenovo reports depreciation expense of \$100,000 in the income statement and Unrealized Gain on Revaluation (equipment) of \$60,000 in “Other comprehensive income.” Assuming no change in the useful life of the equipment, depreciation in 2021 is \$115,000 ($\$460,000 \div 4$).

In summary, a revaluation increase generally goes to equity. A revaluation decrease is reported as an expense (as an impairment loss), unless it offsets previously recorded revaluation increases. If the revaluation increase offsets a revaluation decrease that went to expense, then the increase is reported in income. **Under no circumstances can the Accumulated Other Comprehensive Income account related to revaluations have a negative balance.**

On the Horizon

With respect to revaluations, as part of the conceptual framework project, the Boards will examine the measurement bases used in accounting. It is too early to say whether a converged conceptual framework will recommend fair value measurement (and revaluation accounting) for property, plant, and equipment. However, this is likely to be one of the more contentious issues, given the long-standing use of historical cost as a measurement basis in GAAP.

IFRS Self-Test Questions

- Mandall Company constructed a warehouse for \$280,000 on January 2, 2020. Mandall estimates that the warehouse has a useful life of 20 years and no residual value. Construction records indicate that \$40,000 of the cost of the warehouse relates to its heating, ventilation, and air conditioning (HVAC) system, which has an estimated useful life of only 10 years. What is the first year of depreciation expense using straight-line component depreciation under IFRS?
 - \$28,000.
 - \$14,000.
 - \$16,000.
 - \$4,000.
- Francisco Corporation is constructing a new building at a total initial cost of \$10,000,000. The building is expected to have a useful life of 50 years with no residual value. The building’s finished surfaces (e.g., roof cover and floor cover) are 5% of this cost and have a useful life of 20 years. Building services systems (e.g., electric, heating, and plumbing) are 20% of the cost and have a useful life of 25 years. The depreciation in the first year using component depreciation, assuming straight-line depreciation with no residual value, is:
 - \$200,000.
 - \$215,000.
 - \$255,000.
 - None of the above.
- Which of the following statements is **correct**?
 - Both IFRS and GAAP permit revaluation of property, plant, and equipment.
 - IFRS permits revaluation of property, plant, and equipment but not GAAP.
 - Both IFRS and GAAP do not permit revaluation of property, plant, and equipment.
 - GAAP permits revaluation of property, plant, and equipment but not IFRS.
- Hilo Company has land that cost \$350,000 but now has a fair value of \$500,000. Hilo Company decides to use the revaluation method specified in IFRS to account for the land. Which of the following statements is **correct**?
 - Hilo Company must continue to report the land at \$350,000.
 - Hilo Company would report a net income increase of \$150,000 due to an increase in the value of the land.
 - Hilo Company would debit Revaluation Surplus for \$150,000.
 - Hilo Company would credit Revaluation Surplus by \$150,000.
- Under IFRS, value-in-use is defined as:
 - net realizable value.
 - fair value.
 - future cash flows discounted to present value.
 - total future undiscounted cash flows.

IFRS Concepts and Application

IFRS11.1 Walkin Inc. is considering the write-down of its long-term plant because of a lack of profitability. Explain to the management of Walkin how to determine whether a write-down is permitted.

IFRS11.2 Last year, Wyeth Company recorded an impairment on an asset held for use. Recent appraisals indicate that the asset has increased in value. Should Wyeth record this recovery in value?

IFRS11.3 Toro Co. has equipment with a carrying amount of \$700,000. The value-in-use of the equipment is \$705,000, and its fair value less costs of disposal is \$590,000. The equipment is expected to be used in operations in the future. What amount (if any) should Toro report as an impairment to its equipment?

IFRS11.4 Explain how gains or losses on impaired assets should be reported in income.

IFRS11.5 Tanaka Company has land that cost \$15,000,000. Its fair value on December 31, 2020, is \$20,000,000. Tanaka chooses the revaluation model to report its land. Explain how the land and its related valuation should be reported.

IFRS11.6 Why might a company choose not to use revaluation accounting?

IFRS11.7 Ortiz purchased a piece of equipment that cost \$202,000 on January 1, 2020. The equipment has the following components.

| Component | Cost | Residual Value | Estimated Useful Life |
|-----------|----------|----------------|-----------------------|
| A | \$70,000 | \$7,000 | 10 years |
| B | 50,000 | 5,000 | 5 years |
| C | 82,000 | 4,000 | 12 years |

Compute the depreciation expense for this equipment at December 31, 2020.

IFRS11.8 Tan Chin Company purchases a building for \$11,300,000 on January 2, 2020. An engineer's report shows that of the total purchase price, \$11,000,000 should be allocated to the building (with a 40-year life), \$150,000 to 15-year property, and \$150,000 to 5-year property. No residual (salvage) value should be considered. Compute depreciation expense for 2020 using component depreciation.

IFRS11.9 Brazil Group purchases a vehicle at a cost of \$50,000 on January 2, 2020. Individual components of the vehicle and useful lives are as follows.

| | Cost | Useful Lives |
|--------------|----------|--------------|
| Tires | \$ 6,000 | 2 years |
| Transmission | 10,000 | 5 years |
| Trucks | 34,000 | 10 years |

Instructions

(Assume no residual (salvage) value.)

- Compute depreciation expense for 2020, assuming Brazil depreciates the vehicle as a single unit.
- Compute depreciation expense for 2020, assuming Brazil uses component depreciation.
- Why might a company want to use component depreciation to depreciate its assets?

IFRS11.10 Jurassic Company owns machinery that cost \$900,000 and has accumulated depreciation of \$380,000. The present value of expected future net cash flows from the use of the asset are expected to be \$500,000. The fair value less cost of disposal of the equipment is \$400,000. Prepare the journal entry, if any, to record the impairment loss.

IFRS11.11 Presented below is information related to equipment owned by Pujols Company at December 31, 2020.

| | |
|----------------------------------|-------------|
| Cost (residual value \$0) | \$9,000,000 |
| Accumulated depreciation to date | 1,000,000 |
| Value-in-use | 5,500,000 |
| Fair value less cost of disposal | 4,400,000 |

Assume that Pujols will continue to use this asset in the future. As of December 31, 2020, the equipment has a remaining useful life of 8 years. Pujols uses straight-line depreciation.

Instructions

- Prepare the journal entry (if any) to record the impairment of the asset at December 31, 2020.
- Prepare the journal entry to record depreciation expense for 2021.
- The recoverable amount of the equipment at December 31, 2021, is \$6,050,000. Prepare the journal entry (if any) necessary to record this increase.

IFRS11.12 Assume the same information as in IFRS11.11, except that Pujols intends to dispose of the equipment in the coming year.

Instructions

- Prepare the journal entry (if any) to record the impairment of the asset at December 31, 2020.
- Prepare the journal entry (if any) to record depreciation expense for 2021.
- The asset was not sold by December 31, 2021. The fair value of the equipment on that date is \$5,100,000. Prepare the journal entry (if any) necessary to record this increase. It is expected that the cost of disposal is \$20,000.

IFRS11.13 Falcetto Company acquired equipment on January 1, 2019, for \$12,000. Falcetto elects to value this class of equipment using revaluation accounting. This equipment is being depreciated on a straight-line basis over its 6-year useful life. There is no residual value at the end of the 6-year period. The appraised value of the equipment approximates the carrying amount at December 31, 2019 and 2021. On December 31, 2020, the fair value of the equipment is determined to be \$7,000.

Instructions

- Prepare the journal entries for 2019 related to the equipment.
- Prepare the journal entries for 2020 related to the equipment.
- Determine the amount of depreciation expense that Falcetto will record on the equipment in 2021.

International Reporting Case

IFRS11.14 Companies following international accounting standards are permitted to revalue fixed assets above the assets' historical costs. Such revaluations are allowed under various countries' standards and the standards issued by the IASB. **Liberty International**, a real estate company headquartered in the United Kingdom (U.K.), follows U.K. standards. In a recent year, Liberty disclosed the following information on revaluations of its tangible fixed assets. The revaluation reserve measures the amount by which tangible fixed assets are recorded above historical cost and is reported in Liberty's stockholders' equity.

**Liberty International****Completed Investment Properties**

Completed investment properties are professionally valued on a market value basis by external valuers at the balance sheet date. Surpluses and deficits arising during the year are reflected in the revaluation reserve.

Liberty reported the following additional data. Amounts for **Kimco Realty** (which follows GAAP) in the same year are provided for comparison.

| | Liberty (pounds sterling, in thousands) | Kimco (dollars, in millions) |
|----------------------|---|--|
| Total revenues | £ 741 | \$ 517 |
| Average total assets | 5,577 | 4,696 |
| Net income | 125 | 297 |

Instructions

- Compute the following ratios for Liberty and Kimco.
 - Return on assets.
 - Profit margin on sales.
 - Asset turnover.

How do these companies compare on these performance measures?

- b. Liberty reports a revaluation surplus of £1,952. Assume that £1,550 of this amount arose from an increase in the net replacement value of investment properties during the year. Prepare the journal entry to record this increase.
- c. Under U.K. (and IASB) standards, are Liberty's assets and equity overstated? If so, why? When comparing Liberty to U.S. companies, like Kimco, what adjustments would you need to make in order to have valid comparisons of ratios such as those computed in (a) above?

Professional Research

IFRS11.15 Matt Holmes recently joined Klax Company as a staff accountant in the controller's office. Klax Company provides warehousing services for companies in several European cities. The location in Koblenz, Germany, has not been performing well due to increased competition and the loss of several customers that have recently gone out of business. Matt's department manager suspects that the plant and equipment may be impaired and wonders whether those assets should be written down. Given the company's prior success, this issue has never arisen in the past, and Matt has been asked to conduct some research on this issue.

Instructions

Access the IFRS authoritative literature at the IASB website (click on the IFRS tab and then register for free eIFRS access if necessary). When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- a. What is the authoritative guidance for asset impairments? Briefly discuss the scope of the standard (i.e., explain the types of transactions to which the standard applies).
- b. Give several examples of events that would cause an asset to be tested for impairment. Does it appear that Klax should perform an impairment test? Explain.
- c. What is the best evidence of fair value? Describe alternate methods of estimating fair value.

International Financial Reporting Problem

Marks and Spencer plc (M&S)

IFRS11.16 The financial statements of **M&S** are presented in Appendix E. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- a. What descriptions are used by M&S in its statement of financial position to classify its property, plant, and equipment?
- b. What method or methods of depreciation does M&S use to depreciate its property, plant, and equipment?
- c. Over what estimated useful lives does M&S depreciate its property, plant, and equipment?
- d. What amounts for depreciation expense did M&S charge to its income statement in 2017 and 2016?
- e. What were the capital expenditures for property, plant, and equipment made by M&S in 2017 and 2016?

Intangible Assets

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

1. Discuss the characteristics, valuation, and amortization of intangible assets.
2. Discuss the accounting for various types of intangible assets.
3. Explain the accounting issues for recording goodwill.
4. Identify impairment procedures and presentation requirements for intangible assets.
5. Describe accounting and presentation for research and development and similar costs.

PREVIEW OF CHAPTER 12 As the following opening story indicates, sustainability strategies are taking on increased importance for companies like **Southwest Airlines** and **Clorox**. Reporting challenges for effective sustainability investments are similar to those for intangible assets. In this chapter, we explain the basic conceptual and reporting issues related to intangible assets. The content and organization of the chapter are as follows.

This chapter also includes numerous conceptual and global discussions that are integral to the topics presented here.

INTANGIBLE ASSETS

Intangible Asset Issues

- Characteristics
- Valuation
- Amortization

Types of Intangibles

- Marketing-related
- Customer-related
- Artistic-related
- Contract-related
- Technology-related
- Goodwill

Impairment and Presentation of Intangibles

- Limited-life intangibles
- Indefinite-life intangibles other than goodwill
- Goodwill
- Presentation

Research and Development Costs

- Identifying R&D
- Accounting for R&D
- Similar costs
- Presentation

Is This Sustainable?

In today's economy, companies are increasingly shifting away from bricks-and-mortar operating models to technology-driven models. As a result, more of a company's valuation is underpinned by factors such as its brand, customer base, depth of talent, and other nonfinancial factors. The growing impact of such intangibles is shown in the chart, which indicates that "implied" intangible asset value (the difference between a company's market value and book value) comprises 84 percent of total market value of the S&P 500, as compared to 32 percent 30 years ago.

These trends have resulted in the investment community to factor a broader range of non-financial information into their decisions, including environmental, social, and governance (ESG) matters. In response, companies also are increasing their focus on sustainability issues. Companies like **Southwest Airlines**, **Clorox**, and **Northrop Grumman** are executing strategic initiatives including fuel-spill control, use of recycled materials, and water conservation. Why the growing importance of responsible management of resource use? One reason is that market participants are now more interested in investing in companies that are pursuing sustainability strategies.

For example, as indicated in the following graph, sustainable investing by professional portfolio managers in the United States has increased from below \$500 billion in the mid-1990s to nearly \$6 trillion (or 30.2 percent of the total under management) in 2016.

In light of investor focus on sustainability, it is not surprising that companies are increasing the amount of information reported to the market about their sustainability efforts. However, rather than adding a line item in the income statement or balance sheet, companies instead provide more useful information about the future cash flow consequences of sustainability strategies, which are intangible and usually “nonfinancial” in nature.

Consider, for example, the disclosure of information about greenhouse gases. The Securities and Exchange Commission has identified the circumstances in which public companies should disclose information related to climate change, as well as the impact on financial performance of their efforts to manage the consequences of greenhouse gas emissions. So here’s the paradox: If nonfinancial data, such as greenhouse gas emissions per dollar of revenue, is included in a financial report for investors, how can it still be called nonfinancial?

As with the reporting of research and development expenditures and other intangible assets—many of which do not show up on a balance sheet or income statement—companies are now exploring ways to combine the nonfinancial information with mandated disclosures in what is called an **integrated report**. In such a report, a company might disclose data on any of dozens of metrics beyond conventional accounting measures, whether they are “integrated” or released separately.

While over 400 U.S. companies issued a sustainability report in a recent year, there was significant variation in the content and format. Only a handful, like those prepared by **Clorox**, **Northrop Grumman**, **SAS**, **Genentech**, and **Polymer Group Inc.**, integrated a

sustainability report with the financial statements. And with the emergence of sustainability and integrated reporting standards, companies are voluntarily seeking assurance that their sustainability reports are meeting these standards. For example, over half of the world's largest companies recently reporting on sustainability also invested in external assurance for their reports. With standards and assurance, it is hoped that sustainability reports will gain the same credibility as the GAAP-based financial statements.

Review and Practice

Go to the **Review and Practice** section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions as well as additional exercises and practice problem with solutions are also available online.

Intangible Asset Issues

LEARNING OBJECTIVE 1

Discuss the characteristics, valuation, and amortization of intangible assets.

Characteristics

Gap Inc.'s most important asset is its brand image, not its store fixtures. **The Coca-Cola Company**'s success comes from its secret formula for making Coca-Cola, not its plant facilities. **Amazon Prime**'s subscriber base, not its warehouses, provides its most important asset. The U.S. economy is dominated by information and service providers. For these companies, their major assets are often intangible in nature.

What exactly are intangible assets? **Intangible assets** have two main characteristics. [1] (See the FASB Codification References near the end of the chapter.)

1. **They lack physical existence.** Tangible assets such as property, plant, and equipment have physical form. Intangible assets, in contrast, derive their value from the rights and privileges granted to the company using them.
2. **They are not financial instruments.** Assets such as bank deposits, accounts receivable, and long-term investments in bonds and stocks also lack physical substance. However, financial instruments derive their value from the right (claim) to receive cash or cash equivalents in the future. Financial instruments are not classified as intangibles.

In most cases, intangible assets provide benefits over a period of years. Therefore, companies normally classify them as long-term assets.

Following a discussion of the general valuation and accounting provisions for intangible assets, we present a more extensive discussion of the types of intangible assets and their accounting.

Valuation

Purchased Intangibles

Companies **record at cost** intangibles purchased from another party. Cost includes all acquisition costs plus expenditures to make the intangible asset ready for its intended use. Typical costs include purchase price, legal fees, and other incidental expenses.

Sometimes companies acquire intangibles in exchange for stock or other assets. In such cases, **the cost of the intangible is the fair value of the consideration given or the fair value of the intangible received, whichever is more clearly evident.** What if a company buys several intangibles, or a combination of intangibles and tangibles? In such a “basket purchase,” the company should allocate the cost on the basis of fair values. Essentially, the accounting treatment for purchased intangibles closely parallels that for purchased tangible assets.¹

Internally Created Intangibles

Sometimes a company may incur substantial research and development (R&D) costs to create an intangible. For example, **Google** expensed the R&D costs incurred to develop its valuable search engine. Costs incurred internally to create intangibles are generally expensed (see **Underlying Concepts**).

How do companies justify this approach? Some argue that the costs incurred internally to create intangibles often bear no relationship to their real value. Therefore, they reason, expensing these costs is appropriate. Others note that it is difficult to associate internal costs with a specific intangible. Still others contend that due to the underlying subjectivity related to intangibles, companies should follow a conservative approach—that is, expense as incurred. As a result, **companies capitalize only direct costs** incurred in developing the intangible, such as legal costs, and expense the rest.

Underlying Concepts

The controversy surrounding the accounting for R&D expenditures reflects a debate about whether such expenditures meet the definition of an asset. If so, then an “expense all R&D costs” policy results in overstated expenses and understated assets.

Amortization of Intangibles

The allocation of the cost of intangible assets in a systematic way is called **amortization**. Intangibles have either a **limited (finite) useful life** or an **indefinite useful life**. For example, a company like **Walt Disney Company** has both types of intangibles. Disney **amortizes its limited-life** intangible assets (e.g., copyrights on its movies and licenses related to its branded products). It **does not amortize indefinite-life** intangible assets (e.g., the Disney trade name or its Internet domain name).

Limited-Life Intangibles

Companies amortize their limited-life intangibles by systematic charges to expense over their useful life. The useful life should reflect the periods over which these assets will contribute to cash flows. Disney, for example, considers these factors in determining useful life:

1. The expected use of the asset by the company.
2. The expected useful life of another asset or a group of assets to which the useful life of the intangible asset may relate (such as lease rights to a studio lot).
3. Any legal, regulatory, or contractual provisions that may limit the useful life.

¹The accounting in this section relates to the acquisition of a single asset or group of assets. The accounting for intangible assets acquired in a **business combination** (transaction in which the purchaser obtains control of one or more businesses) is discussed later in this chapter.

4. Any provisions (legal, regulatory, or contractual) that enable renewal or extension of the asset's legal or contractual life without substantial cost. This factor assumes that there is evidence to support renewal or extension. Disney also must be able to accomplish renewal or extension without material modifications of the existing terms and conditions.
5. The effects of obsolescence, demand, competition, and other economic factors. Examples include the stability of the industry, known technological advances, legislative action that results in an uncertain or changing regulatory environment, and expected changes in distribution channels.
6. The level of maintenance expenditure required to obtain the expected future cash flows from the asset. For example, a material level of required maintenance in relation to the carrying amount of the asset may suggest a very limited useful life. [2]

The amount of amortization expense for a limited-life intangible asset should reflect the pattern in which the company consumes or uses up the asset, if the company can reliably determine that pattern. For example, assume that Second Wave, Inc. purchases a license to provide a specified quantity of a gene product called Mega. Second Wave should amortize the cost of the license following the pattern of use of Mega. If Second Wave's license calls for it to provide 30 percent of the total the first year, 20 percent the second year, and 10 percent per year until the license expires, it would amortize the license cost using that pattern. If it cannot determine the pattern of production or consumption, Second Wave should use the straight-line method of amortization. *(For homework problems, assume the use of the straight-line method unless stated otherwise.)* **When Second Wave amortizes these licenses, it should show the charges as expenses. It should credit either the appropriate asset accounts or separate accumulated amortization accounts.**

The amount of an intangible asset to be amortized should be its cost less residual value. The residual value is assumed to be zero unless at the end of its useful life the intangible asset has value to another company. For example, if Hardy Co. commits to purchasing an intangible asset from U2D Co. at the end of the asset's useful life, U2D Co. should reduce the cost of its intangible asset by the residual value. Similarly, U2D Co. should consider fair values, if reliably determined, for residual values.

What happens if the life of a limited-life intangible asset changes? In that case, the remaining carrying amount should be amortized over the revised remaining useful life. Companies should, on a regular basis, evaluate the limited-life intangibles for **impairment**. Similar to the accounting for property, plant, and equipment, an impairment loss should be recognized if the carrying amount of the intangible is not recoverable and its carrying amount exceeds its fair value. (We will cover impairment of intangibles in more detail later in the chapter.)

Indefinite-Life Intangibles

If no factors (legal, regulatory, contractual, competitive, or other) limit the useful life of an intangible asset, a company considers its useful life indefinite. An **indefinite life** means that there is no foreseeable limit on the period of time over which the intangible asset is expected to provide cash flows. A company **does not amortize** an intangible asset with an indefinite life. To illustrate, assume that Double Klik Inc. acquired a trademark that it uses to distinguish a leading consumer product. It renews the trademark every 10 years. All evidence indicates that this trademarked product will generate cash flows for an indefinite period of time. In this case, the trademark has an indefinite life; Double Klik does not record any amortization (see **Global View**).

Companies should test indefinite-life intangibles for **impairment** at least annually. As we will discuss in more detail later in the chapter, the **impairment test** for indefinite-life intangibles differs from the one for limited-life intangibles. Only the fair value test is performed for indefinite-life intangibles; there is no recoverability test for these intangibles. The reason? Indefinite-life intangible assets might never fail the undiscounted cash flows recoverability test because cash flows could extend indefinitely into the future.

Illustration 12.1 summarizes the accounting treatment for intangible assets.

Global View

IFRS requires capitalization of some development costs.

ILLUSTRATION 12.1**Accounting Treatment for Intangibles**

| Type of Intangible | Manner Acquired | | Amortization | Impairment Test |
|-----------------------------|-----------------|--------------------|------------------|--|
| | Purchased | Internally Created | | |
| Limited-life intangibles | Capitalize | Expense* | Over useful life | Recoverability test and then fair value test |
| Indefinite-life intangibles | Capitalize | Expense* | Do not amortize | Fair value test only |

*Except for direct costs, such as legal costs.

What Do the Numbers Mean? Are All Brands the Same?

Does it matter how a company builds brand value? In a word, yes. If the brand is internally developed, its value does not appear in the financial statements. This is the case for **The Coca-Cola Company**, whose brand value is estimated to be worth about \$69.7 billion but its balance sheet values its “trademarks with indefinite-lives” (i.e., brands) at just \$6.7 billion. As you are learning in this chapter, this reporting results because the accounting rules prohibit companies from recognizing brands and many other “intangible” assets if they created them internally. In contrast, when **Procter & Gamble (P&G)** acquired **Gillette**, it realized an additional \$24 billion in intangible assets on its balance sheet. That is, P&G paid \$57 billion for Gillette and estimated the Gillette brand value to be worth \$24 billion of the total paid.

Some have criticized this inconsistency in accounting, noting that information about the value of a brand is important to investors in consumer-product companies. Those supporting the difference in accounting cite the difficulty in arriving at reliable estimates of internally generated intangible assets. This latter argument seems to be carrying the day in support of the current accounting, under which only purchased intangibles, including brands, are recognized in accounting reports.

Source: “Untouchable Intangibles: Sometimes You See Brands on the Balance Sheet, Sometimes You Don’t,” *The Economist* (August 30, 2014).

Types of Intangible Assets

LEARNING OBJECTIVE 2

Discuss the accounting for various types of intangible assets.

As indicated, the accounting for intangible assets depends on whether the intangible has a limited or an indefinite life. There are many different types of intangibles, often classified into the following six major categories. [3]

1. Marketing-related intangible assets.
2. Customer-related intangible assets.
3. Artistic-related intangible assets.
4. Contract-related intangible assets.
5. Technology-related intangible assets.
6. Goodwill.

Marketing-Related Intangible Assets

Companies primarily use **marketing-related intangible assets** in the marketing or promotion of products or services. Examples are trademarks or trade names, newspaper mastheads, Internet domain names, and noncompetition agreements.

A **trademark** or **trade name** is a word, phrase, or symbol that distinguishes or identifies a particular company or product. Trade names like Kleenex, Pepsi-Cola, Buick, Tylenol, Wheaties, and Sunkist create immediate product identification in our minds, thereby enhancing marketability. Under common law, the right to use a trademark or trade name, whether registered or not, rests exclusively with the original user as long as the original user continues to use it. Registration with the U.S. Patent and Trademark Office provides legal protection for an **indefinite number of renewals for periods of 10 years each**. Therefore, a company

that uses an established trademark or trade name may properly consider it to have an indefinite life and does not amortize its cost.

If a company buys a trademark or trade name, it capitalizes the purchase price as the cost of the asset. If a company develops a trademark or trade name, it capitalizes costs related to securing it, such as attorney fees, registration fees, design costs, consulting fees, and successful legal defense costs. However, it excludes research and development costs. When the total cost of a trademark or trade name is insignificant, a company simply expenses it.

The value of a marketing-related intangible can be substantial. Consider Internet **domain names**. The name **Drugs.com** at one time sold for \$800,000. The bidding for the name **Loans.com** approached \$500,000. An expansion of domain names will allow industries to use terms like .cars or even Internet slang like lol. This expansion has led to a new wave of domain name activity. Companies can register their own domain names. Applications received include company names (such as **Microsoft**, which would have the name .microsoft) and for city-based domains (such as .nyc and .berlin).

Company names also identify qualities and characteristics that companies work hard and spend much to develop. In a recent year, an estimated 1,230 companies took on new names in an attempt to forge new identities and paid over \$250 million to corporate-identity consultants. Among these were **Primerica** (formerly American Can), **Navistar** (formerly International Harvester), and **Nissan** (formerly Datsun).

What Do the Numbers Mean? Keep Your Hands Off My Intangible!

Companies go to great extremes to protect their valuable intangible assets. Consider how the creators of the highly successful game *Trivial Pursuit* protected their creation. First, they copyrighted the 6,000 questions that are at the heart of the game. Then they shielded the *Trivial Pursuit* name by applying for a registered trademark. As a third mode of protection, they obtained a design patent on the playing board's design as a unique graphic creation.

Another example is the case of **Converse** and its efforts to protect its classic Chuck Taylor trademark. Converse (owned by **Nike**) accused 31 companies (including **Wal-Mart Stores, Inc.**, **Kmart**, and **Skechers**) of trademark infringement for co-opting

its widely recognizable Chuck Taylor® sneakers. While Converse sued for monetary damages, its main goal was to get these imposters off store shelves. The company went as far as filing a separate complaint with the International Trade Commission to stop any shoes considered to be counterfeit from entering the country. That Converse (Nike) went to these ends to protect its trademark is understandable given that Nike reinvigorated the brand by expanding the franchise, introducing more colors and styles, and helping to push All Stars® into overseas markets.

Source: "Converse Sues to Protect Its Chuck Taylor All Stars," *The New York Times* (October 14, 2014).

Customer-Related Intangible Assets

Customer-related intangible assets result from interactions with outside parties. Examples include customer lists, order or production backlogs, and both contractual and noncontractual customer relationships.

To illustrate, assume that Green Market Inc. acquires the customer list of a large newspaper for \$6,000,000 on January 1, 2020. This customer database includes names, contact information, order history, and demographic information. Green Market expects to benefit from the information evenly over a three-year period. In this case, the customer list is a limited-life intangible that Green Market should amortize on a straight-line basis.

Green Market records the purchase of the customer list and the amortization of the customer list at the end of each year as follows.

| | | |
|---|-----------|-----------|
| To record purchase of customer list (January 1, 2020) | | |
| Customer List | 6,000,000 | |
| Cash | | 6,000,000 |
| To record amortization expense (December 31, 2020, 2021, 2022) | | |
| Amortization Expense (\$6,000,000 ÷ 3) | 2,000,000 | |
| Customer List (or Accumulated Amortization) | | 2,000,000 |

The preceding example assumed no residual value for the customer list. But what if Green Market determines that it can sell the list for \$60,000 to another company at the end of three years? In that case, Green Market should subtract this residual value from the cost in order to determine the amortization expense for each year. Amortization expense would be \$1,980,000, as shown in **Illustration 12.2**.

ILLUSTRATION 12.2
Calculation of Amortization Expense with Residual Value

| | |
|---|--------------------|
| Cost | \$6,000,000 |
| Less: Residual value | <u>60,000</u> |
| Amortization base | <u>\$5,940,000</u> |
| Amortization expense per period: \$1,980,000 ($\$5,940,000 \div 3$) | |

Companies should assume a zero residual value unless the asset's useful life is less than the economic life and reliable evidence is available concerning the residual value. [4]

Artistic-Related Intangible Assets

Artistic-related intangible assets involve ownership rights to plays, literary works, musical works, pictures, photographs, and video and audiovisual material. Copyrights protect these ownership rights.

A **copyright** is a federally granted right that all authors, painters, musicians, sculptors, and other artists have in their creations and expressions. A copyright is granted for the **life of the creator plus 70 years**. It gives the owner or heirs the exclusive right to reproduce and sell an artistic or published work. Copyrights are not renewable.

Copyrights can be valuable. At one time, **Walt Disney Company** faced the loss of its copyright on Mickey Mouse, which could have affected sales of billions of dollars of Mickey-related goods and services (including theme parks). This copyright was so important that Disney and many other big entertainment companies fought all the way to the Supreme Court—and won an extension of copyright lives from 50 to 70 years.

As another example, **Really Useful Group** owns copyrights on the musicals of Andrew Lloyd Webber—*Cats*, *Phantom of the Opera*, *Jesus Christ Superstar*, and others. The company has little in the way of tangible assets, yet analysts value it at over \$300 million.

Companies capitalize the costs of acquiring and defending a copyright. They amortize any capitalized costs over the useful life of the copyright if less than its legal life (life of the creator plus 70 years). For example, Really Useful Group should allocate the costs of its copyrights to the years in which it expects to receive the benefits. The difficulty of determining the number of years over which it will receive benefits typically encourages a company like Really Useful Group to write off these costs over a fairly short period of time. Companies must expense the research and development costs that lead to a copyright as those costs are incurred.

Contract-Related Intangible Assets

Contract-related intangible assets represent the value of rights that arise from contractual arrangements. Examples are franchise and licensing agreements, construction permits, broadcast rights, and service or supply contracts.

A **franchise** is a contractual arrangement under which the franchisor grants the franchisee the right to sell certain products or services, to use certain trademarks or trade names, or to perform certain functions, usually within a designated geographical area. When you purchase a Prius from a **Toyota** dealer, fill up your tank at the corner **Shell** station, eat lunch at **Subway**, or make reservations at a **Marriott** hotel, you are dealing with franchises.

The franchisor, having developed a unique concept or product, protects its concept or product through a patent, copyright, or trademark or trade name. The franchisee acquires the right to exploit the franchisor's idea or product by signing a franchise agreement.

Another type of franchise, granted by a governmental body, permits the business to use public property in performing its services. Examples are the use of city streets for a bus line or taxi service; the use of public land for telephone, electric, and cable television lines; and the use of airwaves for radio or TV broadcasting. Such operating rights are referred to as **licenses** or **permits**. For example, **Fox**, **CBS**, and **NBC** agreed to pay \$27.9 billion for the right to broadcast **NFL** football games over an eight-year period.

Franchises and licenses may be for a definite period of time, for an indefinite period of time, or perpetual. The company securing the franchise or license carries an intangible asset account (entitled Franchises or Licenses) on its books, only when it can identify costs with the acquisition of the operating right. (Such costs might be legal fees or an advance lump-sum payment, for example.) **A company should amortize the cost of a franchise (or license) with a limited life as an operating expense over the life of the franchise.** It should not amortize a franchise with an indefinite life nor a perpetual franchise; the company should instead carry such franchises at cost.

Annual payments made under a franchise agreement should be entered as operating expenses in the period in which they are incurred. These payments do not represent an asset since they do not relate to *future rights* to use the property.

Technology-Related Intangible Assets

Technology-related intangible assets relate to innovations or technological advances. Examples are patented technology and trade secrets granted by the U.S. Patent and Trademark Office.

A **patent** gives the holder exclusive right to use, manufacture, and sell a product or process **for a period of 20 years** without interference or infringement by others. Companies such as **Merck**, **Polaroid**, and **Xerox** were founded on patents and built on the exclusive rights thus granted.² The two principal kinds of patents are **product patents**, which cover actual physical products, and **process patents**, which govern the process of making products.

If a company like **Qualcomm** purchases a patent from an inventor, the purchase price represents its cost. Qualcomm can capitalize other costs incurred in connection with securing a patent, as well as attorney fees and other unrecovered costs of a successful legal suit to protect the patent, as part of the patent cost. However, it **must expense as incurred** any research and development costs related to the **development** of the product, process, or idea that it subsequently patents. (We discuss accounting for research and development costs in more detail later in this Chapter.)

Companies should amortize the cost of a patent over its legal life or its useful life (the period in which benefits are received), **whichever is shorter**. If Qualcomm owns a patent from the date it is granted and expects the patent to be useful during its entire legal life, the company should amortize it over 20 years. If it appears that the patent will be useful for a shorter period of time, say for five years, it should amortize its cost over five years.

Changing demand, new inventions superseding old ones, inadequacy, and other factors often limit the useful life of a patent to less than the legal life. For example, the useful life of pharmaceutical patents is frequently less than the legal life because of the testing and approval period that follows their issuance. A typical drug patent has several years knocked off its 20-year legal life. Why? Because a drug-maker spends one to four years on animal tests, four to six years on human tests, and two to three years for the Food and Drug Administration to review the tests. All this time occurs *after* issuing the patent but *before* the product goes on pharmacists' shelves.

²Consider the opposite result. Sir Alexander Fleming, who discovered penicillin, decided not to use a patent to protect his discovery. He hoped that foregoing a patent would help companies produce the medication more quickly. Companies, however, refused to develop it because they did not have the patent shield and therefore were afraid to make the investment.

What Do the Numbers Mean? Patent Battles

The smartphone industry has been a patent battleground. For example, **Nokia** filed patent lawsuits against **Apple** (and Apple countersued) over cell phone features such as swiping gestures on touch screens and the “app store” for downloading software. Apple also targeted **HTC** for infringing on Apple’s patented feature that allows screens to detect more than one finger touch at a time. This facilitates the popular zoom-in and zoom-out capability. HTC, in turn, sued Apple for infringing on patented technology that helps extend battery life.

With respect to popular apps used on smartphones, **BlackBerry** sued **Facebook** alleging that Facebook apps WhatsApp and Instagram co-opted BlackBerry’s intellectual property. This property includes the very features that users demand in these apps, explaining why BlackBerry would go to these legal lengths to protect its patents.

The activity-tracker product space is another patent battleground. Competition in that market heated up when **Under**

Armour paid \$150 million to acquire **MapMyFitness**, which had 20 million people registered to use its websites and mobile applications to map, record, and share their workouts. To protect the value of the patent related to its **miCoach** fitness tracking system, **adidas AG** sued Under Armour to protect its 10 patents, underscoring the growing importance of gadgetry and personal technology for sportswear makers that traditionally focused on shoes and apparel.

Sources: J. Mintz, “Smart Phone Makers in Legal Fights over Patents,” *Wisconsin State Journal* (December 19, 2010), p. F4; S. Germano, “adidas Sues Under Armour Over Patents: Company Alleges Under Armour Infringes on 10 miCoach Patents,” *Wall Street Journal* (February 4, 2014); and D. George-Cosh, “BlackBerry Brings Patent Case Against Facebook, WhatsApp and Instagram,” *Wall Street Journal* (March 6, 2018).

As mentioned earlier, companies capitalize the costs of defending copyrights. The accounting treatment for a patent defense is similar. **A company charges all unrecovered legal fees and other costs incurred in successfully defending a patent suit to Patents**, an asset account. Such costs should be amortized along with acquisition cost over the remaining useful life of the patent.

Amortization expense should reflect the pattern, if reliably determined, in which a company uses up the patent.³ A company may credit amortization of patents directly to the Patents account or to an Accumulated Amortization account. To illustrate, assume that Harcott Co. incurs \$180,000 in legal costs on January 1, 2020, to successfully defend a patent. The patent’s useful life after defense is 12 years, amortized on a straight-line basis. Harcott records the legal fees and the amortization at the end of 2020 as follows.

| | | |
|---|---------|---------|
| To record legal fees related to patent (January 1, 2020) | | |
| Patents | 180,000 | |
| Cash | | 180,000 |
| To record amortization of patent (December 31, 2020) | | |
| Amortization Expense ($\$180,000 \div 12$) | 15,000 | |
| Patents (or Accumulated Amortization) | | 15,000 |

We’ve indicated that a patent’s useful life should not extend beyond its legal life of 20 years. However, companies often make small modifications or additions that lead to a new patent. For example, **Astra Zeneca plc** filed for additional patents on minor modifications to its heartburn drug Prilosec. The effect may be to extend the life of the old patent. If the new patent provides essentially the same benefits, Astra Zeneca can apply the unamortized costs of the old patent to the new patent.⁴

Alternatively, if a patent becomes impaired because demand drops for the product, the asset should be written down or written off immediately to expense.

³Companies may compute amortization on a units-of-production basis in a manner similar to that described for depreciation on property, plant, and equipment.

⁴Another classic example is **Eli Lilly’s** drug Prozac (prescribed to treat depression). At one time, this product accounted for 43 percent of Eli Lilly’s sales. However, when the patent on Prozac expired, the company was unable to extend its protection with a second-use patent for the use of Prozac to treat appetite disorders. Sales of the product slipped substantially as generic equivalents entered the market.

What Do the Numbers Mean? The Value of a Secret Formula

The Coca-Cola Company has managed to keep the recipe for the world's best-selling soft drink under wraps for more than 100 years. The company offers almost no information about its lifeblood, and the only written copy of the formula resides in a bank vault in Atlanta. This handwritten sheet is available to no one except by vote of Coca-Cola's board of directors.

Can't science offer some clues? Coke purportedly contains 17 to 18 ingredients. That includes the usual caramel color and corn syrup, as well as a blend of oils known as 7X (rumored to be a mix of orange, lemon, cinnamon, and others). Distilling natural products like these is complicated since they are made of thousands of compounds. One

ingredient you will not find, by the way, is cocaine. Although the original formula did contain trace amounts, today's Coke doesn't. When was it removed? That too is a secret.

Some experts indicate that the power of the Coca-Cola formula and related brand image account for almost \$69.7 billion, or roughly 37 percent, of Coke's \$186.5 billion stock value.

Sources: Adapted from Reed Tucker, "How Has Coke's Formula Stayed a Secret?" *Fortune* (July 24, 2000), p. 42; and "Best Global Brands 2017," www.interbrand.com (accessed March 7, 2018).

Goodwill

LEARNING OBJECTIVE 3

Explain the accounting issues for recording goodwill.

Although companies may capitalize certain costs incurred in developing specifically identifiable assets such as patents and copyrights, the amounts capitalized are generally insignificant. But companies do record material amounts of intangible assets when purchasing them, particularly in situations involving a business combination (the purchase of another business).

To illustrate, assume that Portofino Company decides to purchase Aquinas Company. In this situation, Portofino measures the assets acquired and the liabilities assumed at fair value. In measuring these assets and liabilities, Portofino must identify all the assets and liabilities of Aquinas. As a result, Portofino may recognize some assets or liabilities not previously recognized by Aquinas. For example, Portofino may recognize intangible assets such as a brand name, patent, or customer list that were not recorded by Aquinas. In this case, Aquinas may not have recognized these assets because they were developed internally and charged to expense.

In many business combinations, the purchasing company records goodwill. **Goodwill** is measured as the excess of the cost of the purchase over the fair value of the identifiable net assets (assets less liabilities) purchased. For example, if Portofino paid \$2,000,000 to purchase Aquinas's identifiable net assets (with a fair value of \$1,500,000), Portofino records goodwill of \$500,000. Goodwill is therefore measured as a residual rather than measured directly. That is why goodwill is sometimes referred to as a **plug**, a **gap filler**, or a **master valuation account**.⁵

Conceptually, goodwill represents the future economic benefits arising from the other assets acquired in a business combination that are not individually identified and separately recognized. It is often called "the most intangible of the intangible assets" because it is identified only with the business as a whole. The only way to sell goodwill is to sell the business.

Recording Goodwill

Internally Created Goodwill Goodwill generated internally should not be capitalized in the accounts. The reason? Measuring the components of goodwill is simply too complex, and associating any costs with future benefits is too difficult. The future benefits of

⁵GAAP [5] provides detailed guidance regarding the recognition of identifiable intangible assets in a business combination. With this guidance, companies should recognize more identifiable intangible assets, and less goodwill, in the financial statements as a result of business combinations.

Underlying Concepts

Capitalizing goodwill only when it is purchased in an arm's-length transaction, and not capitalizing any goodwill generated internally, is another example of faithful representation winning out over relevance.

goodwill may have no relationship to the costs incurred in the development of that goodwill. To add to the mystery, goodwill may even exist in the absence of specific costs to develop it. Finally, because no objective transaction with outside parties takes place, a great deal of subjectivity—even misrepresentation—may occur (see **Underlying Concepts**).

Purchased Goodwill As indicated earlier, **goodwill is recorded only when an entire business is purchased.** To record goodwill, a company compares the fair value of the net tangible and identifiable intangible assets with the purchase price of the acquired business. The difference is considered goodwill. **Goodwill is the residual—the excess of cost over fair value of the identifiable net assets acquired.**

To illustrate, Multi-Diversified, Inc. decides that it needs a parts division to supplement its existing tractor distributorship. The president of Multi-Diversified is interested in buying Tractorling Company, a small concern in Chicago. **Illustration 12.3** presents the balance sheet of Tractorling Company.

ILLUSTRATION 12.3

Tractorling Co. Balance Sheet

| Tractorling Co. Balance Sheet As of December 31, 2020 | | | |
|--|-------------------------|-------------------------------------|-------------------------|
| Assets | | Liabilities and Equity | |
| Cash | \$ 25,000 | Current liabilities | \$ 55,000 |
| Accounts receivable | 35,000 | Common stock | 100,000 |
| Inventory | 42,000 | Retained earnings | 100,000 |
| Property, plant, and equipment, net | 153,000 | | |
| Total assets | <u>\$255,000</u> | Total liabilities and equity | <u>\$255,000</u> |

After considerable negotiation, Tractorling Company decides to accept Multi-Diversified's offer of \$400,000. What, then, is the value of the goodwill, if any?

The answer is not obvious. Tractorling's historical-cost-based balance sheet does not disclose the fair values of its identifiable assets. Suppose, though, that as the negotiations progress, Multi-Diversified investigates Tractorling's underlying assets to determine their fair values. Such an investigation may be accomplished either through a purchase audit undertaken by Multi-Diversified or by an independent appraisal from some other source. The investigation determines the valuations shown in **Illustration 12.4**.

ILLUSTRATION 12.4

Fair Value of Tractorling's Net Assets

| Fair Values | |
|-------------------------------------|-------------------------|
| Cash | \$ 25,000 |
| Accounts receivable | 35,000 |
| Inventory | 122,000 |
| Property, plant, and equipment, net | 205,000 |
| Patents | 18,000 |
| Liabilities | <u>(55,000)</u> |
| Fair value of net assets | <u>\$350,000</u> |

Normally, differences between current fair value and book value are more common among long-term assets than among current assets. Cash obviously poses no problems as to value. Receivables normally are fairly close to current valuation although they may at times need certain adjustments due to inadequate bad debt provisions. Liabilities usually are stated at book value. However, if interest rates have changed since the company incurred the liabilities, a different valuation (such as present value based on expected cash flows) is appropriate. Careful analysis must be made to determine that no unrecorded liabilities are present.

The \$80,000 difference in Tractorling's inventories (\$122,000 – \$42,000) could result from a number of factors. The most likely is that the company uses LIFO. Recall that during periods of inflation, LIFO better matches expenses against revenues. However, it also creates a balance sheet distortion. Ending inventory consists of older layers costed at lower valuations.

In many cases, the values of long-term assets such as property, plant, and equipment and intangibles may have increased substantially over the years. This difference could be due to inaccurate estimates of useful lives, continual expensing of small expenditures (say, less than \$300), inaccurate estimates of residual values, and the discovery of some unrecorded assets. (For example, in Tractorling's case, analysis determines Patents have a fair value of \$18,000.) Or, fair values may have substantially increased.

Since the investigation now determines the fair value of net assets to be \$350,000, why would Multi-Diversified pay \$400,000? Undoubtedly, Tractorling points to its established reputation, good credit rating, top management team, well-trained employees, and so on. These factors make the value of the business greater than \$350,000. Multi-Diversified places a premium on the future earning power of these attributes as well as on the basic asset structure of the company today.

Multi-Diversified labels the difference between the purchase price of \$400,000 and the fair value of net assets of \$350,000 as goodwill. Goodwill is viewed as one or a group of unidentifiable values (intangible assets), the cost of which "is measured by the difference between the cost of the group of assets or enterprise acquired and the sum of the assigned costs of individual tangible and identifiable intangible assets acquired less liabilities assumed."⁶ This procedure for valuation is called a **master valuation approach**. It assumes goodwill covers all the values that cannot be specifically identified with any identifiable tangible or intangible asset. **Illustration 12.5** shows this approach.

| | | | |
|---|---------------------------------------|--|-----------|
| Assigned to purchase price of \$400,000 | → Cash | \$ 25,000 | |
| | → Accounts receivable | 35,000 | |
| | → Inventory | 122,000 | |
| | → Property, plant, and equipment, net | 205,000 | |
| | → Patents | 18,000 | |
| | → Liabilities | (55,000) | |
| | | Fair value of net identifiable assets | \$350,000 |
| | | Purchase price | 400,000 |
| | | | \$ 50,000 |
| | | Value assigned to goodwill | |

ILLUSTRATION 12.5

Determination of Goodwill— Master Valuation Approach

Multi-Diversified records this transaction as follows.

| | |
|--------------------------------|---------|
| Cash | 25,000 |
| Accounts Receivable | 35,000 |
| Inventory | 122,000 |
| Property, Plant, and Equipment | 205,000 |
| Patents | 18,000 |
| Goodwill | 50,000 |
| Liabilities | 55,000 |
| Cash | 400,000 |

Companies often identify goodwill on the balance sheet as the **excess of cost over the fair value** of the net assets acquired.⁷

Goodwill Write-Off

Companies that recognize goodwill in a business combination **consider it to have an indefinite life and therefore should not amortize it**. Although goodwill may decrease in value over time, predicting the actual life of goodwill and an appropriate pattern of amortization is

⁶The FASB expressed concern about measuring goodwill as a residual but noted that there is no real measurement alternative since goodwill is not separable from the company as a whole. [6]

⁷Based on a recommendation from the Private Company Council (PCC), the FASB recently issued guidance [7] that allows private companies to forego separately recognizing and measuring certain intangible assets that are not capable of being sold or licensed independently in a business combination (e.g., customer relationships). An expanded discussion of the PCC and private company alternatives is provided in Appendix A.

extremely difficult. In addition, investors find the amortization charge of little use in evaluating financial performance.

Furthermore, the investment community wants to know the amount invested in goodwill, which often is the largest intangible asset on a company's balance sheet. Therefore, **companies adjust its carrying value only when goodwill is impaired**. This approach significantly impacts the income statements of some companies.

Some believe that goodwill's value eventually disappears. Therefore, they argue, companies should charge goodwill to expense over the periods affected, to better match expense with revenues. Others note that the accounting treatment for purchased goodwill and goodwill created internally should be consistent. They point out that companies immediately expense goodwill created internally and should follow the same treatment for purchased goodwill. Though these arguments may have some merit, nonamortization of goodwill combined with an adequate impairment test should provide the most useful financial information to the investment community. We discuss the accounting for goodwill impairments later in the chapter.⁸

Bargain Purchase

In a few cases, the purchaser in a business combination pays *less than* the fair value of the identifiable net assets. Such a situation is referred to as a **bargain purchase**. A bargain purchase results from a market imperfection. That is, the seller would have been better off to sell the assets individually than in total. However, situations do occur (e.g., a forced liquidation or distressed sale due to the death of a company founder) in which the purchase price is less than the value of the net identifiable assets. **This excess amount is recorded as a gain by the purchaser.**

The FASB notes that an economic gain is inherent in a bargain purchase. The purchaser is better off by the amount by which the fair value of what is acquired exceeds the amount paid. Some expressed concern that some companies may attempt inappropriate gain recognition by making an intentional error in measurement of the assets or liabilities. As a result, the FASB requires companies to disclose the nature of this gain transaction. Such disclosure will help users to better evaluate the quality of the earnings reported.⁹

Impairment and Presentation of Intangible Assets

LEARNING OBJECTIVE 4

Identify impairment procedures and presentation requirements for intangible assets.

In some cases, the carrying amount of a long-lived asset (property, plant, and equipment or intangible assets) is not recoverable. Therefore, a company needs to record a write-off. As discussed in Chapter 11, this write-off is referred to as an **impairment**.

Impairment of Limited-Life Intangibles

The rules that apply to **impairments of property, plant, and equipment also apply to limited-life intangibles**. As discussed in Chapter 11, a company should review property, plant, and equipment for impairment at certain points—whenever events or changes in circumstances indicate that the carrying amount of the asset may not be recoverable. In performing this **recoverability test**, the company estimates the future cash flows expected from use of the asset and its eventual disposal. If the sum of the expected future net cash flows

⁸Private companies may account for goodwill as a limited-life intangible asset [8] and amortize goodwill on a straight-line basis over a period not to exceed 10 years. Under this alternative, goodwill is tested for impairment similar to other limited-life intangibles. An expanded discussion of this and other private company alternatives is provided in Appendix A.

⁹This gain is reported as an unusual or infrequent item. [9]

(undiscounted) is less than the carrying amount of the asset, the company measures and recognizes an impairment loss. [10]

To measure the impairment, the company uses the **fair value test**. This test measures the impairment loss by comparing the asset's fair value with its carrying amount. The impairment loss is the carrying amount of the asset less the fair value of the impaired asset. As with other impairments, the loss on the limited-life intangible is reported as part of income from continuing operations. The loss is generally reported in the "Other expenses and losses" section of the income statement.

To illustrate, assume that Lerch, Inc. has a patent on how to extract oil from shale rock. Unfortunately, several recent non-shale oil discoveries adversely affected the demand for shale-oil technology. Thus, the patent has provided little income to date. As a result, Lerch performs a recoverability test. It finds that the expected future net cash flows from this patent are \$35 million. Lerch's patent has a carrying amount of \$60 million. Because the expected future net cash flows of \$35 million are less than the carrying amount of \$60 million, Lerch must determine an impairment loss.

Discounting the expected future net cash flows at its market rate of interest, Lerch determines the fair value of its patent to be \$20 million. **Illustration 12.6** shows the impairment loss computation (based on fair value).

| | |
|---|----------------------------|
| Carrying amount of patent | \$60,000,000 |
| Less: Fair value (based on present value computation) | <u>20,000,000</u> |
| Loss on impairment | <u>\$40,000,000</u> |

ILLUSTRATION 12.6

Computation of Loss on Impairment of Patent

Lerch records this loss as follows.

| | | |
|--------------------|------------|------------|
| Loss on Impairment | 40,000,000 | |
| Patents | | 40,000,000 |

After recognizing the impairment, the reduced carrying amount of the patents is its new cost basis (see **Underlying Concepts**). Lerch should amortize the patent's new cost over its remaining useful life or legal life, whichever is shorter. Even if shale-oil prices increase in subsequent periods and the value of the patent increases, Lerch **may not recognize restoration of the previously recognized impairment loss**.

Underlying Concepts

The basic attributes of intangibles, their uncertainty as to future benefits, and their uniqueness have discouraged valuation in excess of cost.

Impairment of Indefinite-Life Intangibles Other Than Goodwill

Companies should test indefinite-life intangibles other than goodwill for impairment at least annually. The impairment test for an indefinite-life intangible asset other than goodwill is a **fair value test**. This test compares the fair value of the intangible asset with the asset's carrying amount. If the fair value is less than the carrying amount, the company recognizes an impairment. Companies use this one-step test because many indefinite-life assets easily meet the recoverability test (because cash flows may extend many years into the future). **Thus, companies do not use the recoverability test.**

To illustrate, assume that Arcon Radio purchased a broadcast license for \$2,000,000. The license is renewable every 10 years if the company provides appropriate service and does not violate Federal Communications Commission (FCC) rules. Arcon Radio has renewed the license with the FCC twice, at a minimal cost. Because it expects cash flows to last indefinitely, Arcon reports the license as an indefinite-life intangible asset. Recently, the FCC decided to auction significantly more of these licenses. As a result, Arcon Radio expects reduced cash flows for the remaining two years of its existing license. Arcon performs a fair value test for this indefinite-life intangible and determines that the fair value of the intangible asset is \$1,500,000. Arcon therefore reports an impairment loss of \$500,000, computed as shown in **Illustration 12.7**.

| | |
|---------------------------------------|--------------------------|
| Carrying amount of broadcast license | \$2,000,000 |
| Less: Fair value of broadcast license | <u>1,500,000</u> |
| Loss on impairment | <u>\$ 500,000</u> |

ILLUSTRATION 12.7

Computation of Loss on Impairment of Broadcast License

Arcon Radio now reports the license at \$1,500,000, its fair value. Even if the value of the license increases in the remaining two years, Arcon may not restore the previously recognized impairment loss.

Companies have the option to perform a qualitative assessment (hereafter referred to as the optional qualitative assessment) to determine whether it is more likely than not (i.e., a likelihood of more than 50 percent) that an indefinite-life intangible asset is impaired. [11] If the optional qualitative assessment indicates that the fair value of the reporting unit is more likely than not to be greater than the carrying value (i.e., the asset is not impaired), **the company need not continue with the fair value test.** As a result, use of the optional qualitative assessment should reduce both the cost and complexity of performing the impairment test.¹⁰

Impairment of Goodwill

Goodwill must be tested for impairment at least annually. **The impairment rule for goodwill is a fair value (quantitative) test.** A company compares the fair value of the reporting unit to its carrying amount, including goodwill. If the fair value of the reporting unit exceeds the carrying amount, goodwill is not impaired. The company does not have to do anything else.

To illustrate, assume that Kohlbuy Corporation has three divisions. It purchased one division, Pritt Products, four years ago for \$2 million. Unfortunately, Pritt experienced operating losses over the last three quarters. Kohlbuy management is now reviewing the division for purposes of recognizing an impairment. **Illustration 12.8** lists the Pritt Division’s net assets, including the associated goodwill of \$900,000 from the purchase.

ILLUSTRATION 12.8
Net Assets of Pritt Division,
Including Goodwill

| | |
|--------------------------------------|--------------------|
| Cash | \$ 200,000 |
| Accounts receivable | 300,000 |
| Inventory | 700,000 |
| Property, plant, and equipment (net) | 800,000 |
| Goodwill | 900,000 |
| Accounts and notes payable | <u>(500,000)</u> |
| Net assets | <u>\$2,400,000</u> |

Kohlbuy determines that the fair value of Pritt Division is \$2,800,000. **Because the fair value of the division exceeds the carrying amount of the net assets, Kohlbuy does not recognize any impairment.**

However, if the fair value of Pritt Division were less than the carrying amount of the net assets, then Kohlbuy measures the impairment. Kohlbuy determines the fair value of the reporting unit (including goodwill) and compares it to its carrying amount. To illustrate, assume that the fair value of the Pritt Division is \$1,900,000 instead of \$2,800,000. **Illustration 12.9** computes the impairment loss to be recorded.¹¹

ILLUSTRATION 12.9
Determination of Implied
Value of Goodwill

| | |
|--|-------------------|
| Fair value of Pritt Division | \$1,900,000 |
| Less: Net identifiable assets (including goodwill) | <u>2,400,000</u> |
| Loss on impairment | <u>\$ 500,000</u> |

Kohlbuy makes the following entry to record the impairment.

| | | |
|--------------------|---------|---------|
| Loss on Impairment | 500,000 | |
| Goodwill | | 500,000 |

Following this entry, the carrying value of the goodwill is \$400,000.

Similar to other indefinite-life intangibles, companies may instead perform an optional qualitative assessment to determine whether it is more likely than not that goodwill is

¹⁰ Examples of events and circumstances to be evaluated in the optional qualitative assessment include but are not limited to (1) deterioration in general economic conditions; (2) an increased competitive environment, a decline in market-dependent multiples or metrics, a change in the market for a company’s products or services, or a regulatory or political development; (3) cost factors such as increases in raw materials, labor, or other costs that have a negative effect on earnings; and (4) overall financial performance such as negative or declining cash flows or a decline in actual or planned revenue or earnings.

¹¹ Illustration 12.9 assumes that the carrying amount equals the fair value of net identifiable assets (excluding goodwill). That is, prior to performing the goodwill impairment test, any impairments of other assets in the reporting unit should have been recorded. [12]

impaired. If the optional qualitative assessment indicates that the fair value of the reporting unit is more likely than not to be greater than the carrying value, the company need not continue with the fair value impairment test.¹²

Impairment Summary

Illustration 12.10 summarizes the impairment tests for various intangible assets.

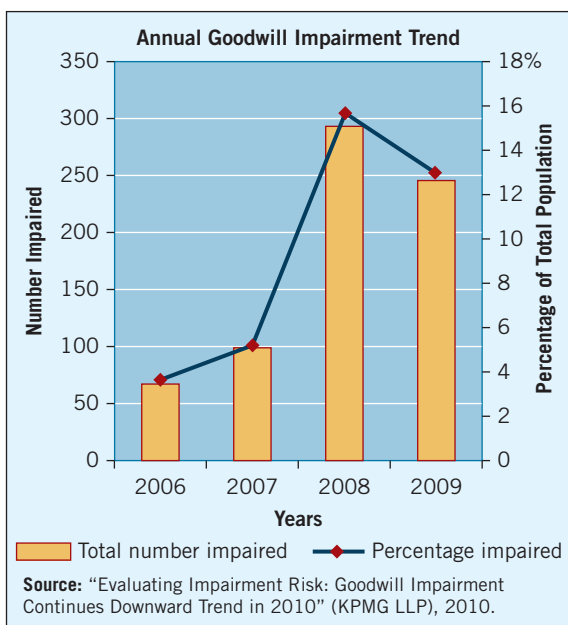

| Type of Intangible Asset | Impairment Test |
|-------------------------------------|---|
| Limited life | Recoverability test, then fair value test |
| Indefinite life other than goodwill | Fair value test* |
| Goodwill | Fair value test on reporting unit* |

*An optional qualitative assessment may be performed to determine whether the fair value test needs to be performed.

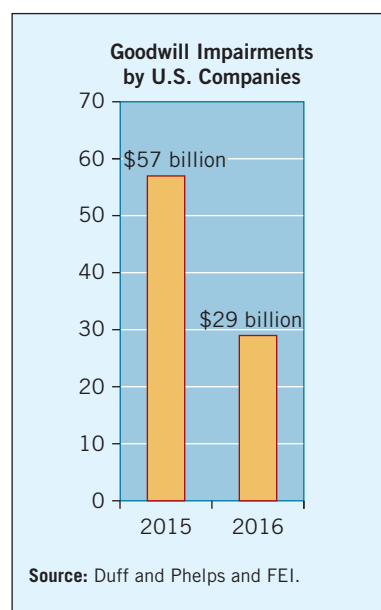

ILLUSTRATION 12.10
Summary of Intangible Asset Impairment Tests

What Do the Numbers Mean? Impairments Ups and Downs

The following two charts illustrate how ups and downs in general market conditions correspond to ups and downs in goodwill impairments. As indicated in the following chart, goodwill impairments spiked in 2008 and 2009, coinciding with the stock market downturn in the wake of the financial crisis. A spike in impairments when the market declines is understandable because decreases in stock price are indicators that the fair values of acquired assets have declined below the carrying value.

The next chart shown illustrates the old adage that what goes up must come down. As indicated, in the wake of continued economic growth and general market improvement since 2010, goodwill impairments declined by 50 percent from 2015 to 2016. In fact, the decline in impairments in 2016 is a continuing trend from a prior post-crisis study of large U.S. companies, showing a 20 percent decline in goodwill impairments in 2013 (compared to 2012). Nonetheless, some notable goodwill impairments have

been recorded by such major companies as **HP** (\$12.5 billion) and **Microsoft** (\$6 billion) in the post-crisis period.

Some are expecting more goodwill impairments for other companies, with analysts taking a laser focus on companies with book values well above market value of equity. As one analyst noted, "Anybody looking at a decline in market price could see the company was placing a much higher value on its assets than the market thought they were worth." Investors need to keep watch. Such asset write-downs—for brand names, franchise rights, and other intangible assets (including goodwill)—are important because they tell investors that management have concluded their companies' future cash flows will not achieve previous estimates.

Todorova, "Important Trends in Goodwill Impairment" (2014), http://www.financialexecutives.org/KenticoCMS/Financial-Executive-Magazine/2014_04/Accounting.aspx#axzz3Qd9BQ5zC; and Duff and Phelps and FEI, *2017 U.S. Goodwill Impairment Study* (November 2017), www.duffandphelps.com/GWISudies.

¹²This optional assessment examines similar factors as those used in the optional qualitative assessment for other indefinite-life intangibles but are based on events and circumstances related to the reporting unit. [13]

Presentation of Intangible Assets

The reporting of intangible assets is similar to the reporting of property, plant, and equipment. However, contra accounts are not normally shown for intangibles on the balance sheet. As **Illustration 12.11** shows, on the balance sheet companies should report as a separate item all

| during year | 189 | 115 | 304 |
| Impairment losses | — | (46) | (46) |
| Balance as of | | | |
| December 31, 2020 | <u>\$1,602</u> | <u>\$973</u> | <u>\$2,575</u> |
| The Communications segment is tested for impairment in the third quarter, after the annual forecasting process. Due to an increase in competition in the Texas and Louisiana cable industry, operating profits and cash flows were lower than expected in the fourth quarter of 2019 and the first and second quarters of 2020. Based on that trend, the earnings forecast for the next 5 years was revised. In September 2020, a goodwill impairment loss of \$46 was recognized in the Communications reporting unit. The fair value of that reporting unit was estimated using the expected present value of future cash flows. | | | |

Types of intangibles and carrying values

Current and future expense

Goodwill by segment and carrying values

Impairment methodology

intangible assets other than goodwill. If goodwill is present, companies should report it separately. The FASB concluded that since goodwill and other intangible assets differ significantly from other types of assets, such disclosure benefits users of the balance sheet.

On the income statement, companies should present amortization expense and impairment losses for intangible assets other than goodwill separately and as part of continuing operations (see Illustration 12.11). Goodwill impairment losses should also be presented as a separate line item in the continuing operations section, unless the goodwill impairment is associated with a discontinued operation.

The notes to the financial statements should include information about acquired intangible assets, including the aggregate amortization expense for each of the succeeding five years. If separate accumulated amortization accounts are not used, accumulated amortization should be disclosed in the notes. The notes should include information about changes in the carrying amount of goodwill during the period.

Research and Development Costs

LEARNING OBJECTIVE 5

Describe accounting and presentation for research and development and similar costs.

Research and development (R&D) costs are not in themselves intangible assets. However, we present the accounting for R&D costs here because R&D activities frequently result in the development of patents or copyrights (such as a new product, process, idea, formula, composition, or literary work) that may provide future value.

Many companies spend considerable sums on research and development. **Illustration 12.12** shows the outlays for R&D made by selected global companies.

| Company | Sales (billions) | R&D/Sales |
|----------------|---------------------|-----------|
| Facebook | \$ 40,653 | 19.07% |
| Motorola | 6,380 | 8.90 |
| 3M | 31,657 | 5.84 |
| Boeing | 93,392 | 3.40 |
| Kimberly-Clark | 18,259 | 1.70 |
| PepsiCo | 63,525 | 1.16 |
| Yum Brands | 5,878 | 0.37 |

ILLUSTRATION 12.12

R&D Outlays, as a Percentage of Sales

Two difficulties arise in accounting for R&D expenditures: (1) identifying the costs associated with particular activities, projects, or achievements, and (2) determining the magnitude of the future benefits and length of time over which such benefits may be realized. Because of these latter uncertainties, the FASB has simplified the accounting practice in this area. **Companies must expense all research and development costs when incurred** (see **Global View**). [14]

Identifying R&D Activities

Illustration 12.13 shows the definitions for **research activities** and **development activities**. These definitions differentiate research and development costs from other similar costs. [15]

R&D activities do not include routine or periodic alterations to existing products, production lines, manufacturing processes, and other ongoing operations, even though these alterations may represent improvements. For example, routine ongoing efforts to refine, enrich, or improve the qualities of an existing product are not considered R&D activities.

Global View

IFRS requires the capitalization of certain development expenditures. This conflicts with GAAP.

ILLUSTRATION 12.13
Research Activities versus
Development Activities

| <p style="text-align: center;">Research Activities</p>  <p style="text-align: center;">Planned search or critical investigation aimed at discovery of new knowledge.</p> | <p style="text-align: center;">Development Activities</p>  <p style="text-align: center;">Translation of research findings or other knowledge into a plan or design for a new product or process or for a significant improvement to an existing product or process whether intended for sale or use.</p> |
|--|---|
| <p style="text-align: center;">Examples</p> <p>Laboratory research aimed at discovery of new knowledge; searching for applications of new research findings.</p> | <p style="text-align: center;">Examples</p> <p>Conceptual formulation and design of possible product or process alternatives; construction of prototypes and operation of pilot plants.</p> |

Accounting for R&D Activities

The costs associated with R&D activities and the accounting treatments accorded them are as follows.

1. **Materials, equipment, and facilities.** Expense the entire costs, **unless the items have alternative future uses** (in other R&D projects or otherwise). If there are alternative future uses, carry the items as inventory and allocate as consumed, or capitalize and depreciate as used.
2. **Personnel.** Expense as incurred salaries, wages, and other related costs of personnel engaged in R&D.
3. **Purchased intangibles.** Recognize and measure at fair value. After initial recognition, account for in accordance with their nature (as either limited-life or indefinite-life intangibles).¹³
4. **Contract services.** Expense the costs of services performed by others in connection with the R&D as incurred.
5. **Indirect costs.** Include a reasonable allocation of indirect costs in R&D costs, except for general and administrative cost, which must be clearly related in order to be included in R&D. [17]

Consistent with item 1 above, if a company owns a research facility that conducts R&D activities and that has alternative future uses (in other R&D projects or otherwise), it should capitalize the facility as an operational asset. The company accounts for depreciation and other costs related to such research facilities as R&D expenses.¹⁴

To illustrate, assume that Next Century Incorporated develops, produces, and markets laser machines for medical, industrial, and defense uses.¹⁵ **Illustration 12.14** lists the types of expenditures related to its laser-machine activities, along with the recommended accounting treatment.

¹³If R&D-related intangibles (often referred to as **in-process R&D**) are also acquired in a business combination, they are also recognized and measured at fair value. After initial recognition, these intangible assets are accounted for in accordance with their nature (as either limited-life or indefinite-life intangibles). [16]

¹⁴Companies in **the extractive industries** can use the following accounting treatment for the unique costs of research, exploration, and development activities and for those costs that are similar to but not classified as R&D costs: (1) expense as incurred, (2) capitalize and either depreciate or amortize over an appropriate period of time, or (3) accumulate as part of inventoriable costs. Choice of the appropriate accounting treatment for such costs is based on the degree of certainty of future benefits and the principle of matching revenues and expenses.

¹⁵Sometimes companies conduct R&D activities for other companies under a contractual arrangement. In this case, the contract usually specifies that the company performing the R&D work be reimbursed for all direct costs and certain specific indirect costs, plus a profit element. Because reimbursement is expected, the company doing the R&D work records the R&D costs as a receivable. The company for whom the work has been performed reports these costs as R&D and expenses them as incurred. For a more complete discussion of how an enterprise should account for funding of its R&D by others, see [18].

ILLUSTRATION 12.14 Sample R&D Expenditures and Their Accounting Treatment

| Next Century Incorporated | | |
|---|--|--|
| Type of Expenditure | Accounting Treatment | Rationale |
| 1. Construction of long-range research facility for use in current and future projects (three-story, 400,000-square-foot building). | Capitalize and depreciate as R&D expense. | Has alternative future use. |
| 2. Acquisition of R&D equipment for use on current project only. | Expense immediately as R&D. | Research cost. |
| 3. Acquisition of machinery for use on current and future R&D projects. | Capitalize and depreciate as R&D expense. | Has alternative future use. |
| 4. Purchase of materials for use on current and future R&D projects. | Inventory and allocate to R&D projects; expense as consumed. | Has alternative future use. |
| 5. Salaries of research staff designing new laser bone scanner. | Expense immediately as R&D. | Research cost. |
| 6. Research costs incurred under contract with New Horizon, Inc., and billable monthly. | Record as a receivable. | Not R&D cost (reimbursable expense). |
| 7. Material, labor, and overhead costs of prototype laser scanner. | Expense immediately as R&D. | Development cost. |
| 8. Costs of testing prototype and design modifications. | Expense immediately as R&D. | Development cost. |
| 9. Legal fees to obtain patent on new laser scanner. | Capitalize as patent and amortize to overhead as part of cost of goods manufactured. | Direct cost of patent. |
| 10. Executive salaries. | Expense as operating expense. | Not R&D cost (general and administrative expense). |
| 11. Cost of marketing research to promote new laser scanner. | Expense as operating expense. | Not R&D cost (selling expense). |
| 12. Engineering costs incurred to advance the laser scanner to full production stage. | Expense immediately as R&D. | Development cost. |
| 13. Costs of successfully defending patent on laser scanner. | Capitalize as patent and amortize to overhead as part of cost of goods manufactured. | Direct cost of patent. |
| 14. Commissions to sales staff marketing new laser scanner. | Expense as operating expense. | Not R&D cost (selling expense). |

Costs Similar to R&D Costs

Many costs have characteristics similar to research and development costs. Examples are:

1. Start-up costs for a new operation.
2. Initial operating losses.
3. Advertising costs.
4. Computer software costs.

For the most part, these costs are expensed as incurred, similar to the accounting for R&D costs. We briefly explain these costs in the following sections.

Start-Up Costs

Start-up costs are incurred for one-time activities to start a new operation. Examples include opening a new plant, introducing a new product or service, or conducting business in a new territory. Start-up costs include **organizational costs**, such as legal and state fees incurred to organize a new business entity.

The accounting for start-up costs is straightforward: **Expense start-up costs as incurred.** The profession recognizes that companies incur start-up costs with the expectation of future revenues or increased efficiencies. However, to determine the amount and timing of future benefits is so difficult that a conservative approach—expensing these costs as incurred—is required. [19]

To illustrate examples of start-up costs, assume that U.S.-based Hilo Beverage Company decides to construct a new plant in Brazil. This represents Hilo's first entry into the Brazilian market. Hilo plans to introduce the company's major U.S. brands into Brazil on a locally produced basis. The following costs might be involved.

1. Travel-related costs; costs related to employee salaries; and costs related to feasibility studies, accounting, tax, and government affairs.

2. Training of local employees related to product, maintenance, computer systems, finance, and operations.
3. Recruiting, organizing, and training related to establishing a distribution network.

Hilo Beverage should expense all these start-up costs as incurred.

Start-up activities commonly occur at the same time as activities involving the acquisition of assets. For example, as it is incurring start-up costs for the new plant, Hilo probably is also buying or building property, plant, equipment, and inventory. Hilo should not immediately expense the costs of these tangible assets. Instead, it should report them on the balance sheet, using appropriate GAAP reporting guidelines.

Initial Operating Losses

Some contend that companies should be allowed to capitalize initial operating losses incurred in the start-up of a business. They argue that such operating losses are an unavoidable cost of starting a business.

For example, assume that Hilo lost money in its first year of operations and wishes to capitalize this loss. Hilo's CEO argues that as the company becomes profitable, it will offset these losses in future periods. What do you think? We believe that this approach is unsound since losses have no future service potential and therefore cannot be considered an asset.

GAAP requires that operating losses during the early years **should not be capitalized**. In short, **the accounting and reporting standards should be no different for an enterprise trying to establish a new business than they are for other enterprises.** [20]¹⁶

Advertising Costs

Over the years, **PepsiCo** has hired various pop stars, such as Elton John and Beyoncé, to advertise its products. How should it report such advertising costs related to its star spokespeople? Pepsi could expense the costs in various ways:

1. When the pop stars have completed their singing assignments.
2. The first time the advertising takes place.
3. Over the estimated useful life of the advertising.
4. In an appropriate fashion to each of the three periods identified above.
5. Over the period revenues are expected to result.

For the most part, Pepsi must expense advertising costs as incurred or the first time the advertising takes place. Whichever of these two approaches is followed, the results are essentially the same. On the other hand, companies record as assets any tangible assets used in advertising, such as billboards or blimps. The rationale is that such assets do have alternative future uses. Again the profession has taken a conservative approach to recording advertising costs because defining and measuring the future benefits can be so difficult. [21]¹⁷

Computer Software Costs

A special problem arises in distinguishing R&D costs from selling and administrative activities. The FASB's intent was that companies exclude from the definition of R&D activities the acquisition, development, or improvement of a product or process **for use in their selling or administrative activities**. For example, the costs of software incurred by an airline in improving its

¹⁶A company is considered to be in the developing stages when it is directing its efforts toward establishing a new business and either the company has not started the principal operations or it has earned no significant revenue.

¹⁷There are some exceptions for immediate expensing of advertising costs when they relate to direct-response advertising, but that subject is beyond the scope of this text.

computerized reservation system or the costs incurred in developing a company's management information system **are not** research and development costs, but should be reported as selling and administrative expenses.

What Do the Numbers Mean? Branded

For many companies, developing a strong brand image is as important as developing the products they sell. Now more than ever, companies see the power of a strong brand, enhanced by significant and effective advertising investments.

As the following chart indicates, the value of brand investments is substantial. **Apple** heads the list with an estimated brand value of about \$184 billion.

| The World's 10 Most Valuable Brands (in billions) | |
|--|---------|
| 1. Apple | \$184.2 |
| 2. Google | 141.7 |
| 3. Microsoft | 80.0 |
| 4. Coca-Cola | 69.7 |
| 5. Amazon | 64.8 |
| 6. Samsung | 56.2 |
| 7. Toyota | 50.3 |
| 8. Facebook | 48.2 |
| 9. Mercedes-Benz | 47.8 |
| 10. IBM | 46.8 |

Source: Interbrand Corp.

Occasionally you may find the value of a brand included in a company's financial statements under goodwill. But generally you will not find the estimated values of brands recorded in companies' balance sheets. The reason? The subjectivity that goes into estimating a brand's value. In some cases, analysts base an estimate of brand value on opinion polls or on some multiple of ad spending. For example, in estimating the brand values, **Interbrand Corp.** estimates the percentage of the overall future revenues the brand will generate and then discounts the net cash flows, to arrive at a present value.

Some analysts believe that information on brand values is relevant. Others voice valid concerns about the faithful representation of brand value estimates due to subjectivity in the estimates for revenues, costs, and the risk component of the discount rate. For example, another brand valuation firm, **Millward Brown**, ranks **Apple** as number one with an estimated brand value of about one-third of Apple's market value. These data support the highly subjective nature of brand valuation estimates.

Presentation of Research and Development Costs

Companies should disclose in the financial statements (generally in the notes) the total R&D costs charged to expense each period for which they present an income statement. **Merck & Co., Inc.**, a global research pharmaceutical company, reported both internal and acquired research and development in its recent income statement, as shown in **Illustration 12.15**.

| | Years Ended December 31 | | |
|------------------------------|-------------------------|----------|----------|
| | 2017 | 2016 | 2015 |
| Sales | \$40,122 | \$39,801 | \$39,498 |
| Costs, expenses and other | | | |
| Materials and production | 12,775 | 13,891 | 14,934 |
| Marketing and administrative | 9,830 | 9,762 | 10,313 |
| Research and development | 10,208 | 10,124 | 6,704 |
| Restructuring costs | 776 | 651 | 619 |
| Other (income) expense, net | 12 | 720 | 1,527 |
| | \$33,601 | \$35,148 | \$34,097 |

ILLUSTRATION 12.15

Income Statement Disclosure of R&D Costs

In addition, Merck provides a discussion about R&D expenditures in its annual report, as shown in **Illustration 12.16**.

ILLUSTRATION 12.16
Merck's R&D Disclosure

Merck & Co., Inc.

Research and development in the pharmaceutical industry is inherently a long-term process. The following data show the trend of the Company's research and development spending. For the period 2004 to 2017, research and development expenditures approximately tripled.

Evolving Issue Recognition of R&D and Internally Generated Intangibles

The requirement that companies expense immediately all R&D costs (as well as start-up costs) incurred internally is a practical solution. It ensures consistency in practice and uniformity among companies. But the practice of immediately writing off expenditures made in the expectation of benefiting future periods is conceptually incorrect.

Proponents of immediate expensing contend that from an income statement standpoint, long-run application of this standard frequently makes little difference. They argue that because of the ongoing nature of most companies' R&D activities, the amount of R&D cost charged to expense each accounting period is about the same, whether there is immediate expensing or capitalization and subsequent amortization.

Others criticize this practice. They believe that the balance sheet should report an intangible asset related to expenditures that have future benefit. To preclude capitalization of all R&D expenditures removes from the balance sheet what may be a company's most valuable asset.

Indeed, research findings indicate that capitalizing R&D costs may be helpful to investors. For example, one study showed a significant relationship between R&D outlays and subsequent benefits in the form of increased productivity, earnings, and shareholder value

for R&D-intensive companies. Another study found that there was a significant decline in earnings' usefulness for companies that were forced to switch from capitalizing to expensing R&D costs, and that the decline appears to persist over time.

The current accounting for R&D and other internally generated intangible assets represents one of the many trade-offs made among relevance, faithful representation, and cost-benefit considerations. The FASB and IASB have completed some limited-scope projects on the accounting for intangible assets, and the Boards have contemplated a project on the accounting for identifiable intangible assets (i.e., excluding goodwill). Such a project would address concerns that the current accounting requirements lead to inconsistent treatments for some types of intangible assets depending on how they arise.

| franchise 12-8 | organizational costs 12-21 | |
| goodwill 12-11 | patent 12-9 | |

Learning Objectives Review

1 Discuss the characteristics, valuation, and amortization of intangible assets.

Intangible assets have two main characteristics: (1) they lack physical existence, and (2) they are not financial instruments. In most cases, intangible assets provide services over a period of years and so are normally classified as long-term assets.

Intangibles are recorded at cost. Cost includes all acquisition costs and expenditures needed to make the intangible asset ready for its intended use. If intangibles are acquired in exchange for stock or other assets, the cost of the intangible is the fair value of the consideration given or the fair value of the intangible received, whichever is more clearly evident. When a company makes a “basket purchase” of several intangibles or a combination of intangibles and tangibles, it should allocate the cost on the basis of fair values.

Intangibles have either a limited useful life or an indefinite useful life. Companies amortize limited-life intangibles. They do not amortize indefinite-life intangibles. Limited-life intangibles should be amortized by systematic charges to expense over their useful life. The useful life should reflect the period over which these assets will contribute to cash flows. The amount to report for amortization expense should reflect the pattern in which a company consumes or uses up the asset, if it can reliably determine that pattern. Otherwise, use a straight-line approach.

2 Discuss the accounting for various types of intangible assets.

Major types of intangibles are (1) *marketing-related intangibles*, used in the marketing or promotion of products or services; (2) *customer-related intangibles*, resulting from interactions with outside parties; (3) *artistic-related intangibles*, giving ownership rights to such items as plays and literary works; (4) *contract-related intangibles*, representing the value of rights that arise from contractual arrangements; (5) *technology-related intangibles*, relating to innovations or technological advances; and (6) *goodwill*, arising from business combinations. The accounting for these intangible assets depends on whether they have a limited or indefinite life.

3 Explain the accounting issues for recording goodwill.

Unlike receivables, inventories, and patents that a company can sell or exchange individually in the marketplace, goodwill can be identified only with the company as a whole. **Goodwill is a “going concern” valuation and is recorded only when an entire business is purchased.** A company should not capitalize goodwill generated internally. The future benefits of goodwill may have no relationship to the costs incurred in the development of that goodwill. Goodwill may exist even in the absence of specific costs to develop it.

To record goodwill, a company compares the fair value of the net tangible and identifiable intangible assets with the purchase price of the acquired business. The difference is considered goodwill. Goodwill is the residual. Goodwill is often identified on the balance sheet as the excess of cost over the fair value of the net assets acquired.

4 Identify impairment procedures and presentation requirements for intangible assets.

Impairment occurs when the carrying amount of the intangible asset is not recoverable. Companies use a recoverability test and a fair value test to determine impairments for limited-life intangibles. Companies use only a fair value test for indefinite-life intangibles. Goodwill impairments are based on a fair value test of the reporting unit.

With respect to presentation, on the balance sheet, companies should report all intangible assets other than goodwill as a separate item. Contra accounts are not normally shown. If goodwill is present, it too should be reported as a separate item. On the income statement, companies should report amortization expense and impairment losses in continuing operations. The notes to the financial statements have additional detailed information.

5 Describe accounting and presentation for research and development and similar costs.

R&D costs are not in themselves intangible assets, but R&D activities frequently result in the development of something a company patents or copyrights. The difficulties in accounting for R&D

expenditures are (1) identifying the costs associated with particular activities, projects, or achievements, and (2) determining the magnitude of the future benefits and length of time over which a company may realize such benefits. Because of these latter uncertainties, companies are required to expense all research and development costs when incurred.

Illustration 12.14 shows typical costs associated with R&D activities and the accounting treatment accorded them. Many costs have characteristics similar to R&D costs. Examples are start-up costs, initial operating losses, and advertising costs. For the most part, these costs are expensed as incurred, similar to the accounting

for R&D costs. Financial statements must disclose the total R&D costs charged to expense each period for which an income statement is presented.

Practice Problem

Sky Co., organized in 2020, provided you with the following information.

1. Purchased a license for \$20,000 on July 1, 2020. The license gives Sky exclusive rights to sell its services in the tri-state region and will expire on July 1, 2028.
2. Purchased a patent on January 2, 2021, for \$40,000. It is estimated to have a 5-year life.
3. Costs incurred to develop an exclusive Internet connection process as of June 1, 2021, were \$45,000. The process has an indefinite life.
4. On April 1, 2021, Sky purchased a small circuit board manufacturer for \$350,000. Goodwill recorded in the transaction was \$90,000.
5. On July 1, 2021, legal fees for successful defense of the patent purchased on January 2, 2021, were \$11,400.
6. Research and development costs incurred as of September 1, 2021, were \$75,000.

Instructions

- a. Prepare the journal entries to record all the entries related to the patent during 2021.
- b. At December 31, 2021, an impairment test is performed on the license purchased in 2020. It is estimated that the net cash flows to be received from the license will be \$13,000, and its fair value is \$7,000. Compute the amount of impairment, if any, to be recorded on December 31, 2021.
- c. What is the amount to be reported for intangible assets on the balance sheet at December 31, 2020? At December 31, 2021?

Solution

| | | | |
|-----------|--|---------------------------|------------------------|
| a. | | January 2, 2021 | |
| | Patents | 40,000 | |
| | Cash | | 40,000 |
| | | July 1, 2021 | |
| | Patents | 11,400 | |
| | Cash | | 11,400 |
| | | December 31, 2021 | |
| | Patent Amortization Expense | 9,267 | |
| | Patents | | 9,267 |
| | Computation of patent expense: | | |
| | | $\$40,000 \times 12/60 =$ | \$8,000 |
| | | $\$11,400 \times 6/54 =$ | <u>1,267</u> |
| | | Total | <u><u>\$9,267</u></u> |
| b. | Computation of impairment loss: | | |
| | Cost | | \$20,000 |
| | Less: Accumulated amortization ($\$20,000 \times 18/96$) | | <u>3,750</u> |
| | Book value | | <u><u>\$16,250</u></u> |

Book value of \$16,250 is greater than net cash flows of \$13,000. Therefore, the license is impaired. The impairment loss is computed as follows.

| | |
|--------------------|-----------------|
| Book value | \$16,250 |
| Fair value | 7,000 |
| Loss on impairment | <u>\$ 9,250</u> |

c. Intangible assets as of December 31, 2020:

| | |
|---|------------------|
| License | \$18,750* |
| *Cost | \$ 20,000 |
| Less: Accumulated amortization ($\$20,000 \times 6/96$) | 1,250 |
| Total | <u>\$ 18,750</u> |

Intangible assets as of December 31, 2021:

| | |
|---|----------|
| License | \$ 7,000 |
| Patents ($\$40,000 + \$11,400 - \$9,267$) | 42,133 |
| Goodwill | 90,000 |

All the costs to develop the Internet connection process and the research and development costs are expensed as incurred.

Exercises, Problems, Problem Solution Walkthrough Videos, and many more assessment tools and resources are available for practice in WileyPLUS.

Questions

- What are the two main characteristics of intangible assets?
- If intangibles are acquired for stock, how is the cost of the intangible determined?
- Intangibles have either a limited useful life or an indefinite useful life. How should these two different types of intangibles be amortized?
- Why does the accounting profession make a distinction between internally created intangibles and purchased intangibles?
- In 2020, Ghostbusters Corp. spent \$420,000 for “goodwill” visits by sales personnel to key customers. The purpose of these visits was to build a solid, friendly relationship for the future and to gain insight into the problems and needs of the companies served. How should this expenditure be reported?
- What are factors to be considered in estimating the useful life of an intangible asset?
- What should be the pattern of amortization for a limited-life intangible?
- Columbia Sportswear Company** acquired a trademark that is helpful in distinguishing one of its new products. The trademark is renewable every 10 years at minimal cost. All evidence indicates that this trademarked product will generate cash flows for an indefinite period of time. How should this trademark be amortized?
- Romo Company spent \$190,000 developing a new process, \$45,000 in legal fees to obtain a patent, and \$91,000 to market the process that was patented, all in the year 2020. How should these costs be accounted for in 2020?
- Izzy Inc. purchased a patent for \$350,000 which has an estimated useful life of 10 years. Its pattern of use or consumption cannot be reliably determined. Prepare the entry to record the amortization of the patent in its first year of use.
- Explain the difference between artistic-related intangible assets and contract-related intangible assets.
- What is goodwill? What is a bargain purchase?
- Under what circumstances is it appropriate to record goodwill in the accounts? How should goodwill, properly recorded on the books, be written off in order to conform with generally accepted accounting principles?
- In examining financial statements, financial analysts often write off goodwill immediately. Comment on this procedure.
- Braxton Inc. is considering the write-off of a limited-life intangible because of its lack of profitability. Explain to the management of Braxton how to determine whether a write-off is permitted.
- Last year, Zeno Company recorded an impairment on an intangible asset held for use. Recent appraisals indicate that the asset has increased in value. Should Zeno record this recovery in value?
- Explain how losses on impaired intangible assets should be reported in income.
- Simon Company determines that its goodwill is impaired. It finds that the book value of its reporting unit is \$1,490,000, including recorded goodwill of \$400,000. The fair value of the identifiable assets of the reporting unit is \$1,450,000. What is the amount of goodwill impaired?
- What is the nature of research and development costs?
- Research and development activities may include (a) personnel costs, (b) materials and equipment costs, and (c) indirect costs. What

is the recommended accounting treatment for these three types of R&D costs?

21. Which of the following activities should be expensed currently as R&D costs?
- Testing in search for or evaluation of product or process alternatives.
 - Engineering follow-through in an early phase of commercial production.
 - Legal work in connection with patent applications or litigation, and the sale or licensing of patents.
22. Indicate the proper accounting for the following items.
- Organization costs.
 - Advertising costs.
 - Operating losses.
23. In 2019, Austin Powers Corporation developed a new product that will be marketed in 2020. In connection with the development of this product, the following costs were incurred in 2019: research and development costs \$400,000, materials and supplies consumed

\$60,000, and compensation paid to research consultants \$125,000. It is anticipated that these costs will be recovered in 2022. What is the amount of research and development costs that Austin Powers should record in 2019 as a charge to expense?

24. Recently, a group of university students decided to incorporate for the purposes of selling a process to recycle the waste product from manufacturing cheese. Some of the initial costs involved were legal fees and office expenses incurred in starting the business, state incorporation fees, and stamp taxes. One student wishes to charge these costs against revenue in the current period. Another wishes to defer these costs and amortize them in the future. Which student is correct?

25. An intangible asset with an estimated useful life of 30 years was acquired on January 1, 2010, for \$540,000. On January 1, 2020, a review was made of intangible assets and their expected service lives, and it was determined that this asset had an estimated useful life of 30 more years from the date of the review. What is the amount of amortization for this intangible in 2020?

Brief Exercises

BE12.1 (LO 1, 2) Taylor Swift Corporation purchases a patent from Salmon Company on January 1, 2020, for \$54,000. The patent has a remaining legal life of 16 years. Taylor Swift feels the patent will be useful for 10 years. Prepare Taylor Swift's journal entries to record the purchase of the patent and 2020 amortization.

BE12.2 (LO 1, 2) Use the information provided in BE12.1. Assume that at January 1, 2022, the carrying amount of the patent on Taylor Swift's books is \$43,200. In January, Taylor Swift spends \$24,000 successfully defending a patent suit. Taylor Swift still feels the patent will be useful until the end of 2029. Prepare the journal entries to record the \$24,000 expenditure and 2022 amortization.

BE12.3 (LO 1, 2) Stephan Curry, Inc., spent \$68,000 in attorney fees while developing the trade name of its new product, the Mean Bean Machine. Prepare the journal entries to record the \$68,000 expenditure and the first year's amortization, using an 8-year life.

BE12.4 (LO 1, 2) Gershwin Corporation obtained a franchise from Sonic Hedgehog Inc. for a cash payment of \$120,000 on April 1, 2020. The franchise grants Gershwin the right to sell certain products and services for a period of 8 years. Prepare Gershwin's April 1 journal entry and December 31 adjusting entry.

BE12.5 (LO 3) On September 1, 2020, Winans Corporation acquired Aumont Enterprises for a cash payment of \$700,000. At the time of purchase, Aumont's balance sheet showed assets of \$620,000, liabilities of \$200,000, and owners' equity of \$420,000. The fair value of Aumont's assets is estimated to be \$800,000. Compute the amount of goodwill recorded by Winans in the acquisition.

BE12.6 (LO 4) Kenoly Corporation owns a patent that has a carrying amount of \$300,000. Kenoly expects future net cash flows from this patent to total \$210,000. The fair value of the patent is \$110,000. Prepare Kenoly's journal entry, if necessary, to record the loss on impairment.

BE12.7 (LO 4) Waters Corporation purchased Johnson Company 3 years ago and at that time recorded goodwill of \$400,000. The Johnson Division's net assets, including the goodwill, have a carrying amount of \$800,000. The fair value of the division is estimated to be \$1,000,000. Prepare Waters' journal entry, if necessary, to record impairment of the goodwill.

BE12.8 (LO 4) Use the information provided in BE12.7. Assume that the fair value of the division is estimated to be \$750,000. Prepare Waters' journal entry, if necessary, to record impairment of the goodwill.

BE12.9 (LO 1, 2, 5) Nieland Industries had one patent recorded on its books as of January 1, 2020. This patent had a book value of \$288,000 and a remaining useful life of 8 years. During 2020, Nieland incurred research and development costs of \$96,000 and brought a patent infringement suit against a competitor. On December 1, 2020, Nieland received the good news that its patent was valid and that its competitor could not use the process Nieland had patented. The company incurred \$85,000 to defend this patent. At what amount should patent(s) be reported on the December 31, 2020, balance sheet, assuming monthly amortization of patents?

BE12.10 (LO 1, 2, 5) Sinise Industries acquired two copyrights during 2020. One copyright related to a textbook that was developed internally at a cost of \$9,900. This textbook is estimated to have a useful life of 3 years from September 1, 2020, the date it was published. The second copyright (a history research

textbook) was purchased from University Press on December 1, 2020, for \$24,000. This textbook has an indefinite useful life. How should these two copyrights be reported on Sinise's balance sheet as of December 31, 2020?

BE12.11 (LO 5) R. Wilson Corporation commenced operations in early 2020. The corporation incurred \$60,000 of costs such as fees to underwriters, legal fees, state fees, and promotional expenditures during its formation. Prepare journal entries to record the \$60,000 expenditure and 2020 amortization, if any.

BE12.12 (LO 5) Treasure Land Corporation incurred the following costs in 2020.

| | |
|---|------------------|
| Cost of laboratory research aimed at discovery of new knowledge | \$120,000 |
| Cost of testing in search for product alternatives | 100,000 |
| Cost of engineering activity required to advance the design of a product to the manufacturing stage | <u>210,000</u> |
| | <u>\$430,000</u> |

Prepare the necessary 2020 journal entry or entries for Treasure Land.

BE12.13 (LO 5) Indicate whether the following items are capitalized or expensed in the current year.

- a. Purchase cost of a patent from a competitor.
- b. Research and development costs.
- c. Organizational costs.
- d. Costs incurred internally to create goodwill.

Exercises

E12.1 (LO 1, 2) (Classification Issues—Intangibles) The following is a list of items that could be included in the intangible assets section of the balance sheet.

1. Investment in a subsidiary company.
2. Timberland.
3. Cost of engineering activity required to advance the design of a product to the manufacturing stage.
4. Lease prepayment (6 months' rent paid in advance).
5. Cost of equipment obtained.
6. Cost of searching for applications of new research findings.
7. Costs incurred in the formation of a corporation.
8. Operating losses incurred in the start-up of a business.
9. Training costs incurred in start-up of new operation.
10. Purchase cost of a franchise.
11. Goodwill generated internally.
12. Cost of testing in search for product alternatives.
13. Goodwill acquired in the purchase of a business.
14. Cost of developing a patent.
15. Cost of purchasing a patent from an inventor.
16. Legal costs incurred in securing a patent.
17. Unrecovered costs of a successful legal suit to protect the patent.
18. Cost of conceptual formulation of possible product alternatives.
19. Cost of purchasing a copyright.
20. Research and development costs.
21. Long-term receivables.
22. Cost of developing a trademark.
23. Cost of purchasing a trademark.

Instructions

- a. Indicate which items on the list above would generally be reported as intangible assets in the balance sheet.

- b. Indicate how, if at all, the items not reportable as intangible assets would be reported in the financial statements.

E12.2 (LO 1, 2) (Classification Issues—Intangibles) Presented below is selected information related to Martin Burke Inc. at year-end. All these accounts have debit balances.

| | |
|--------------------------------|-------------------------------------|
| Cable television franchises | Film contract rights |
| Music copyrights | Customer lists |
| Research and development costs | Prepaid expenses |
| Goodwill | Covenants not to compete |
| Cash | Brand names |
| Discount on notes payable | Notes receivable |
| Accounts receivable | Investments in affiliated companies |
| Property, plant, and equipment | Organization costs |
| Internet domain name | Land |

Instructions

Identify which items should be classified as an intangible asset. For those items not classified as an intangible asset, indicate where they would be reported in the financial statements.

E12.3 (LO 1, 2) Excel (Classification Issues—Intangible Assets) Joni Hyde Inc. has the following amounts reported in its general ledger at the end of the current year.

| | |
|---|----------|
| Organization costs | \$24,000 |
| Trademarks | 15,000 |
| Discount on bonds payable | 35,000 |
| Deposits with advertising agency for ads to promote goodwill of company | 10,000 |
| Excess of cost over fair value of net identifiable assets of acquired subsidiary | 75,000 |
| Cost of equipment acquired for research and development projects; the equipment has an alternative future use | 90,000 |
| Costs of developing a secret formula for a product that is expected to be marketed for at least 20 years | 80,000 |

Instructions

- On the basis of the information above, compute the total amount to be reported by Hyde for intangible assets on its balance sheet at year-end.
- If an item is not to be included in intangible assets, explain its proper treatment for reporting purposes.

E12.4 (LO 1, 2, 5) (Intangible Amortization) The following is selected information for Alatorre Company.

- Alatorre purchased a patent from Vania Co. for \$1,000,000 on January 1, 2018. The patent is being amortized over its remaining legal life of 10 years, expiring on January 1, 2028. During 2020, Alatorre determined that the economic benefits of the patent would not last longer than 6 years from the date of acquisition. What amount should be reported in the balance sheet for the patent, net of accumulated amortization, at December 31, 2020?
- Alatorre bought a franchise from Alexander Co. on January 1, 2019, for \$400,000. The carrying amount of the franchise on Alexander's books on January 1, 2019, was \$400,000. The franchise agreement had an estimated useful life of 30 years. Because Alatorre must enter a competitive bidding at the end of 2021, it is unlikely that the franchise will be retained beyond 2028. What amount should be amortized for the year ended December 31, 2020?
- On January 1, 2020, Alatorre incurred organization costs of \$275,000. What amount of organization expense should be reported in 2020?
- Alatorre purchased the license for distribution of a popular consumer product on January 1, 2020, for \$150,000. It is expected that this product will generate cash flows for an indefinite period of time. The license has an initial term of 5 years but by paying a nominal fee, Alatorre can renew the license indefinitely for successive 5-year terms. What amount should be amortized for the year ended December 31, 2020?

Instructions

Answer the questions asked about each of the factual situations.

E12.5 (LO 1, 2, 5) (Correct Intangible Assets Account) As the recently appointed auditor for Bryan Corporation, you have been asked to examine selected accounts before the 6-month financial statements

of June 30, 2020, are prepared. The controller for Bryan Corporation mentions that only one account is kept for intangible assets. The account is shown below.

| Intangible Assets | | | | |
|--------------------------|---|--------------|---------------|----------------|
| | | <u>Debit</u> | <u>Credit</u> | <u>Balance</u> |
| Jan. 4 | Research and development costs | 940,000 | | 940,000 |
| Jan. 5 | Legal costs to obtain patent | 75,000 | | 1,015,000 |
| Jan. 31 | Payment of 7 months' rent on property leased by Bryan | 91,000 | | 1,106,000 |
| Feb. 11 | Premium on common stock | | 250,000 | 856,000 |
| March 31 | Unamortized bond discount on bonds due March 31, 2040 | 84,000 | | 940,000 |
| April 30 | Promotional expenses related to start-up of business | 207,000 | | 1,147,000 |
| June 30 | Operating losses for first 6 months | 241,000 | | 1,388,000 |

Instructions

Prepare the entry or entries necessary to correct this account. Assume that the patent has a useful life of 10 years.

E12.6 (LO 1, 2, 5) Excel (Recording and Amortization of Intangibles) Marshall Company, organized in 2019, has set up a single account for all intangible assets. The following summary discloses the debit entries that have been recorded during 2020.

| | | |
|--------|---|--------------------|
| 1/2/20 | Purchased patent (8-year life) | \$ 350,000 |
| 4/1/20 | Purchase goodwill (indefinite life) | 360,000 |
| 7/1/20 | Purchased franchise with 10-year life; expiration date 7/1/30 | 450,000 |
| 8/1/20 | Payment of copyright (5-year life) | 156,000 |
| 9/1/20 | Research and development costs | <u>215,000</u> |
| | | <u>\$1,531,000</u> |

Instructions

Prepare the necessary entries to clear the Intangible Assets account and to set up separate accounts for distinct types of intangibles. Make the entries as of December 31, 2020, recording any necessary amortization and reflecting all balances accurately as of that date. (Use straight-line amortization.)

E12.7 (LO 1, 2, 4) (Accounting for Trade Name) In early January 2019, Outkast Corporation applied for a trade name, incurring legal costs of \$16,000. In January 2020, Outkast incurred \$7,800 of legal fees in a successful defense of its trade name.

Instructions

- a. Compute 2019 amortization, 12/31/19 book value, 2020 amortization, and 12/31/20 book value if the company amortizes the trade name over 10 years.
- b. Compute the 2020 amortization and the 12/31/20 book value, assuming that at the beginning of 2020, Outkast determines that the trade name will provide no future benefits beyond December 31, 2023.
- c. Ignoring the response for part (b), compute the 2021 amortization and the 12/31/21 book value, assuming that at the beginning of 2021, based on new market research, Outkast determines that the fair value of the trade name is \$15,000. Estimated total future cash flows from the trade name is \$16,000 on January 3, 2021.

E12.8 (LO 1, 2, 5) (Accounting for Patents, Franchises, and R&D) Carter Company has provided information on intangible assets as follows.

A patent was purchased from Ford Company for \$2,000,000 on January 1, 2019. Carter estimated the remaining useful life of the patent to be 10 years. The patent was carried in Ford's accounting records at a net book value of \$2,000,000 when Ford sold it to Carter.

During 2020, a franchise was purchased from Polo Company for \$480,000. In addition, 5% of revenue from the franchise must be paid to Polo. Revenue from the franchise for 2020 was \$2,500,000. Carter estimates the useful life of the franchise to be 10 years and takes a full year's amortization in the year of purchase.

Carter incurred research and development costs in 2020 as follows.

| | |
|-------------------------|------------------|
| Materials and equipment | \$142,000 |
| Personnel | 189,000 |
| Indirect costs | <u>102,000</u> |
| | <u>\$433,000</u> |

Carter estimates that these costs will be recouped by December 31, 2023. The materials and equipment purchased have no alternative uses.

On January 1, 2020, because of recent events in the field, Carter estimates that the remaining life of the patent purchased on January 1, 2019, is only 5 years from January 1, 2020.

Instructions

- Prepare a schedule showing the intangibles section of Carter's balance sheet at December 31, 2020. Show supporting computations in good form.
- Prepare a schedule showing the income statement effect (related to expenses) for the year ended December 31, 2020, as a result of the facts above. Show supporting computations in good form.

(AICPA adapted)

E12.9 (LO 1, 2, 5) (Accounting for Patents) During 2016, Winston Corporation spent \$170,000 in research and development costs. As a result, a new product called the New Age Piano was patented. The patent was obtained on October 1, 2016, and had a legal life of 20 years and a useful life of 10 years. Legal costs of \$18,000 related to the patent were incurred as of October 1, 2016.

Instructions

- Prepare all journal entries required in 2016 and 2017 as a result of the transactions above.
- On June 1, 2018, Winston spent \$9,480 to successfully prosecute a patent infringement suit. As a result, the estimate of useful life was extended to 12 years from June 1, 2018. Prepare all journal entries required in 2018 and 2019.
- In 2020, Winston determined that a competitor's product would make the New Age Piano obsolete and the patent worthless by December 31, 2021. Prepare all journal entries required in 2020 and 2021.

E12.10 (LO 1, 2, 4) (Accounting for Patents) Tones Industries has the following patents on its December 31, 2019, balance sheet.

| <u>Patent Item</u> | <u>Initial Cost</u> | <u>Date Acquired</u> | <u>Useful Life at Date Acquired</u> |
|--------------------|---------------------|----------------------|-------------------------------------|
| Patent A | \$30,600 | 3/1/16 | 17 years |
| Patent B | \$15,000 | 7/1/17 | 10 years |
| Patent C | \$14,400 | 9/1/18 | 4 years |

The following events occurred during the year ended December 31, 2020.

- Research and development costs of \$245,700 were incurred during the year.
- Patent D was purchased on July 1 for \$36,480. This patent has a useful life of 9½ years.
- As a result of reduced demands for certain products protected by Patent B, a possible impairment of Patent B's value may have occurred at December 31, 2020. The controller for Tones estimates the expected future cash flows from Patent B will be as follows.

| <u>Year</u> | <u>Expected Future Cash Flows</u> |
|-------------|-----------------------------------|
| 2021 | \$2,000 |
| 2022 | 2,000 |
| 2023 | 2,000 |

The proper discount rate to be used for these flows is 8%. (Assume that the cash flows occur at the end of the year.)

Instructions

- Compute the total carrying amount of Tones' patents on its December 31, 2019, balance sheet.
- Compute the total carrying amount of Tones' patents on its December 31, 2020, balance sheet.

E12.11 (LO 3) (Accounting for Goodwill) Fred Moss, owner of Moss Interiors, is negotiating for the purchase of Zweifel Galleries. The following balance sheet of Zweifel is given in an abbreviated form as follows.

| Zweifel Galleries | | | |
|--------------------------------|------------------|---|------------------------------|
| Balance Sheet | | | |
| As of December 31, 2020 | | | |
| Assets | | Liabilities and Stockholders' Equity | |
| Cash | \$100,000 | Accounts payable | \$ 50,000 |
| Land | 70,000 | Notes payable (long-term) | <u>300,000</u> |
| Buildings (net) | 200,000 | Total liabilities | 350,000 |
| Equipment (net) | 175,000 | Common stock | \$200,000 |
| Copyrights (net) | <u>30,000</u> | Retained earnings | <u>25,000</u> <u>225,000</u> |
| Total assets | <u>\$575,000</u> | Total liabilities and stockholders' equity | <u>\$575,000</u> |

Moss and Zweifel agree that:

1. Land is undervalued by \$30,000.
2. Equipment is overvalued by \$5,000.

Zweifel agrees to sell the gallery to Moss for \$350,000.

Instructions

Prepare the entry to record the purchase of Zweifel Galleries on Moss's books.

E12.12 (LO 1, 2, 3) (Accounting for Goodwill) On July 1, 2020, Brigham Corporation purchased Young Company by paying \$250,000 cash and issuing a \$100,000 note payable to Steve Young. At July 1, 2020, the balance sheet of Young Company was as follows.

| | | | |
|---------------------|------------------|----------------------|------------------|
| Cash | \$ 50,000 | Accounts payable | \$200,000 |
| Accounts receivable | 90,000 | Stockholders' equity | <u>235,000</u> |
| Inventory | 100,000 | | <u>\$435,000</u> |
| Land | 40,000 | | |
| Buildings (net) | 75,000 | | |
| Equipment (net) | 70,000 | | |
| Trademarks | <u>10,000</u> | | |
| | <u>\$435,000</u> | | |

The recorded amounts all approximate current values except for land (fair value of \$60,000), inventory (fair value of \$125,000), and trademarks (fair value of \$15,000).

Instructions

- a. Prepare the July 1 entry for Brigham Corporation to record the purchase.
- b. Prepare the December 31 entry for Brigham Corporation to record amortization of intangibles. The trademark has an estimated useful life of 4 years with a residual value of \$3,000.

E12.13 (LO 4) (Copyright Impairment) Presented below is information related to a copyright owned by Mare Company at December 31, 2020.

| | |
|--------------------------------|-------------|
| Cost | \$8,600,000 |
| Carrying amount | 4,300,000 |
| Expected future net cash flows | 4,000,000 |
| Fair value | 3,200,000 |

Assume that Mare Company will continue to use this copyright in the future. As of December 31, 2020, the copyright is estimated to have a remaining useful life of 10 years.

Instructions

- a. Prepare the journal entry (if any) to record the impairment of the asset at December 31, 2020. The company does not use accumulated amortization accounts.
- b. Prepare the journal entry to record amortization expense for 2021 related to the copyright.

- c. The fair value of the copyright at December 31, 2021, is \$3,400,000. Prepare the journal entry (if any) necessary to record the increase in fair value.

E12.14 (LO 3, 4) (Goodwill Impairment) Presented below is net asset information related to the Carlos Division of Santana, Inc.

| Carlos Division | |
|--------------------------------------|---------------|
| Net Assets | |
| As of December 31, 2020 | |
| (in millions) | |
| Cash | \$ 50 |
| Accounts receivable | 200 |
| Property, plant, and equipment (net) | 2,600 |
| Goodwill | 200 |
| Less: Notes payable | (2,700) |
| Net assets | <u>\$ 350</u> |

The purpose of the Carlos Division is to develop a nuclear-powered aircraft. If successful, traveling delays associated with refueling could be substantially reduced. Many other benefits would also occur. To date, management has not had much success and is deciding whether a write-down at this time is appropriate. Management estimated its future net cash flows from the project to be \$400 million. Management has also received an offer to purchase the division for \$335 million (deemed an appropriate fair value). All identifiable assets' and liabilities' book and fair value amounts are the same.

Instructions

- Prepare the journal entry (if any) to record the impairment at December 31, 2020.
- At December 31, 2021, it is estimated that the division's fair value increased to \$345 million. Prepare the journal entry (if any) to record this increase in fair value.

E12.15 (LO 5) (Accounting for Organization Costs) Angelou Corporation was organized in 2019 and began operations at the beginning of 2020. The company is involved in interior design consulting services. The following costs were incurred prior to the start of operations.

| | |
|---|-----------------|
| Attorney fees in connection with organization of the company | \$15,000 |
| Purchase of drafting and design equipment | 10,000 |
| Costs of meetings of incorporators to discuss organizational activities | 7,000 |
| State filing fees to incorporate | <u>1,000</u> |
| | <u>\$33,000</u> |

Instructions

- Compute the total amount of organization costs incurred by Angelou.
- Prepare the journal entry to record organization costs for 2020.

E12.16 (LO 2, 5) (Accounting for R&D Costs) Price Company from time to time embarks on a research program when a special project seems to offer possibilities. In 2019, the company expends \$325,000 on a research project, but by the end of 2019 it is impossible to determine whether any benefit will be derived from it.

Instructions

- What account should be charged for the \$325,000, and how should it be shown in the financial statements?
- The project is completed in 2020, and a successful patent is obtained. The R&D costs to complete the project are \$110,000. The administrative and legal expenses incurred in obtaining patent number 472-1001-84 in 2020 total \$16,000. The patent has an expected useful life of 5 years. Record these costs in journal entry form. Also, record patent amortization (full year) in 2020.
- In 2021, the company successfully defends the patent in extended litigation at a cost of \$47,200, thereby extending the patent life to December 31, 2028. What is the proper way to account for this cost? Also, record patent amortization (full year) in 2021.
- Additional engineering and consulting costs incurred in 2021 required to advance the design of a product to the manufacturing stage total \$60,000. These costs enhance the design of the product considerably. Discuss the proper accounting treatment for this cost.

E12.17 (LO 5) (Accounting for R&D Costs) More Company incurred the following costs during the current year in connection with its research and development activities.

| | |
|---|-----------|
| Cost of equipment acquired that will have alternative uses in future R&D projects over the next 5 years (uses straight-line depreciation) | \$280,000 |
| Materials consumed in R&D projects | 59,000 |
| Consulting fees paid to outsiders for R&D projects | 100,000 |
| Personnel costs of persons involved in R&D projects | 128,000 |
| Indirect costs reasonably allocable to R&D projects | 50,000 |
| Materials purchased for future R&D projects | 34,000 |

Instructions

Compute the amount to be reported as research and development expense by More on its current year income statement. Assume equipment is purchased at the beginning of the year.

Problems

P12.1 (LO 1, 2, 3, 5) Groupwork (Correct Intangible Assets Account) Reichenbach Co., organized in 2019, has set up a single account for all intangible assets. The following summary discloses the debit entries that have been recorded during 2020 and 2021.

| Intangible Assets | | |
|-------------------|---|-----------|
| 7/1/20 | 8-year franchise; expiration date 6/30/28 | \$ 48,000 |
| 10/1/20 | Advance payment on laboratory space (2-year lease) | 24,000 |
| 12/31/20 | Net loss for 2020 including state incorporation fee, \$1,000, and related legal fees of organizing, \$5,000 (all fees incurred in 2020) | 16,000 |
| 1/2/21 | Patent purchased (10-year life) | 84,000 |
| 3/1/21 | Cost of developing a secret formula (indefinite life) | 75,000 |
| 4/1/21 | Goodwill purchased (indefinite life) | 278,400 |
| 6/1/21 | Legal fee for successful defense of patent purchased above | 12,650 |
| 9/1/21 | Research and development costs | 160,000 |

Instructions

Prepare the necessary entries to clear the Intangible Assets account and to set up separate accounts for distinct types of intangibles. Make the entries as of December 31, 2021, recording any necessary amortization and reflecting all balances accurately as of that date. (Ignore income tax effects.)

P12.2 (LO 1, 2, 4, 5) Excel (Accounting for Patents) Fields Laboratories holds a valuable patent (No. 758-6002-1A) on a precipitator that prevents certain types of air pollution. Fields does not manufacture or sell the products and processes it develops. Instead, it conducts research and develops products and processes which it patents, and then assigns the patents to manufacturers on a royalty basis. Occasionally it sells a patent. The history of Fields patent number 758-6002-1A is as follows.

| Date | Activity | Cost |
|------------|---|-----------|
| 2011–2012 | Research conducted to develop precipitator | \$384,000 |
| Jan. 2013 | Design and construction of a prototype | 87,600 |
| March 2013 | Testing of models | 42,000 |
| Jan. 2014 | Fees paid engineers and lawyers to prepare patent application; patent granted June 30, 2014 | 59,500 |
| Nov. 2015 | Engineering activity necessary to advance the design of the precipitator to the manufacturing stage | 81,500 |
| Dec. 2016 | Legal fees paid to successfully defend precipitator patent | 42,000 |
| April 2017 | Research aimed at modifying the design of the patented precipitator | 43,000 |
| July 2021 | Legal fees paid in unsuccessful patent infringement suit against a competitor | 34,000 |

Fields assumed a useful life of 17 years when it received the initial precipitator patent. On January 1, 2019, it revised its useful life estimate downward to 5 remaining years. Amortization is computed for a full year if the cost is incurred prior to July 1, and no amortization for the year if the cost is incurred after June 30. The company's year ends December 31.

Instructions

Compute the carrying value of patent No. 758-6002-1A on each of the following dates:

- December 31, 2014.
- December 31, 2018.
- December 31, 2021.

P12.3 (LO 1, 2, 5) (Accounting for Franchise, Patents, and Trademark) Information concerning Sandro Corporation's intangible assets is as follows.

- On January 1, 2020, Sandro signed an agreement to operate as a franchisee of Hsian Copy Service, Inc. for an initial franchise fee of \$75,000. Of this amount, \$15,000 was paid when the agreement was signed, and the balance is payable in 4 annual payments of \$15,000 each, beginning January 1, 2021. The agreement provides that the down payment is not refundable and no future services are required of the franchisor. The present value at January 1, 2020, of the 4 annual payments discounted at 14% (the implicit rate for a loan of this type) is \$43,700. The agreement also provides that 5% of the revenue from the franchise must be paid to the franchisor annually. Sandro's revenue from the franchise for 2020 was \$900,000. Sandro estimates the useful life of the franchise to be 10 years. (*Hint:* You may want to refer to Chapter 18 to determine the proper accounting treatment for the franchise fee and payments.)
- Sandro incurred \$65,000 of experimental and development costs in its laboratory to develop a patent that was granted on January 2, 2020. Legal fees and other costs associated with registration of the patent totaled \$17,600. Sandro estimates that the useful life of the patent will be 8 years.
- A trademark was purchased from Shanghai Company for \$36,000 on July 1, 2017. Expenditures for successful litigation in defense of the trademark totaling \$10,200 were paid on July 1, 2020. Sandro estimates that the useful life of the trademark will be 20 years from the date of acquisition.

Instructions

- Prepare a schedule showing the intangible assets section of Sandro's balance sheet at December 31, 2020. Show supporting computations in good form.
- Prepare a schedule showing all expenses resulting from the transactions that would appear on Sandro's income statement for the year ended December 31, 2020. Show supporting computations in good form.

(AICPA adapted)

P12.4 (LO 3, 4, 5) Groupwork (Goodwill, Impairment) On July 31, 2020, Mexico Company paid \$3,000,000 to acquire all of the common stock of Conchita Incorporated, which became a division (a reporting unit) of Mexico. Conchita reported the following balance sheet at the time of the acquisition.

| | | | |
|-------------------|--------------------|--|--------------------|
| Current assets | \$ 800,000 | Current liabilities | \$ 600,000 |
| Noncurrent assets | 2,700,000 | Long-term liabilities | 500,000 |
| Total assets | <u>\$3,500,000</u> | Stockholders' equity | <u>2,400,000</u> |
| | | Total liabilities and stockholders' equity | <u>\$3,500,000</u> |

It was determined at the date of the purchase that the fair value of the identifiable net assets of Conchita was \$2,750,000. Over the next 6 months of operations, the newly purchased division experienced operating losses. In addition, it now appears that it will generate substantial losses for the foreseeable future. At December 31, 2020, Conchita reports the following balance sheet information.

| | |
|---|--------------------|
| Current assets | \$ 450,000 |
| Noncurrent assets (including goodwill recognized in purchase) | 2,400,000 |
| Current liabilities | (700,000) |
| Long-term liabilities | (500,000) |
| Net assets | <u>\$1,650,000</u> |

Finally, it is determined that the fair value of the Conchita Division is \$1,850,000.

Instructions

- Compute the amount of goodwill recognized, if any, on July 31, 2020.
- Determine the impairment loss, if any, to be recorded on December 31, 2020.
- Assume that fair value of the Conchita Division is \$1,600,000 instead of \$1,850,000. Determine the impairment loss, if any, to be recorded on December 31, 2020.
- Prepare the journal entry to record the impairment loss, if any, and indicate where the loss would be reported in the income statement.

P12.5 (LO 1, 2, 3, 4) Excel (Comprehensive Intangible Assets) Montana Matt's Golf Inc. was formed on July 1, 2019, when Matt Magilke purchased the Old Master Golf Company. Old Master provides video golf instruction at kiosks in shopping malls. Magilke plans to integrate the instructional business into his golf equipment and accessory stores. Magilke paid \$770,000 cash for Old Master. At the time, Old Master's balance sheet reported assets of \$650,000 and liabilities of \$200,000 (thus owners' equity was \$450,000). The fair value of Old Master's assets is estimated to be \$800,000. Included in the assets is the Old Master trade name with a fair value of \$10,000 and a copyright on some instructional books with a fair value of \$24,000. The trade name has a remaining life of 5 years and can be renewed at nominal cost indefinitely. The copyright has a remaining life of 40 years.

Instructions

- Prepare the intangible assets section of Montana Matt's Golf Inc. at December 31, 2019. How much amortization expense is included in Montana Matt's income for the year ended December 31, 2019? Show all supporting computations.
- Prepare the journal entry to record amortization expense for 2020. Prepare the intangible assets section of Montana Matt's Golf Inc. at December 31, 2020. (No impairments are required to be recorded in 2020.)
- At the end of 2021, Magilke is evaluating the results of the instructional business. Due to fierce competition from online and television (e.g., the Golf Channel), the Old Master reporting unit has been losing money. Its book value is now \$500,000. The fair value of the Old Master reporting unit is \$420,000. Magilke has collected the following information related to the company's intangible assets.

| Intangible Asset | Expected Cash Flows | |
|------------------|---------------------|-------------|
| | (undiscounted) | Fair Values |
| Trade names | \$ 9,000 | \$ 3,000 |
| Copyrights | 30,000 | 25,000 |

Prepare the journal entries required, if any, to record impairments on Montana Matt's intangible assets. (Assume that any amortization for 2021 has been recorded.) Show supporting computations.

P12.6 (LO 2, 4, 5) (Accounting for R&D Costs) During 2018, Wright Tool Company purchased a building site for its proposed research and development laboratory at a cost of \$60,000. Construction of the building was started in 2018. The building was completed on December 31, 2019, at a cost of \$320,000 and was placed in service on January 2, 2020. The estimated useful life of the building for depreciation purposes was 20 years. The straight-line method of depreciation was to be employed, and there was no estimated residual value.

Management estimates that about 50% of the projects of the research and development group will result in long-term benefits (i.e., at least 10 years) to the corporation. The remaining projects either benefit the current period or are abandoned before completion. A summary of the number of projects and the direct costs incurred in conjunction with the research and development activities for 2020 appears below.

| | Number of Projects | Salaries and Employee Benefits | Other Expenses (excluding Building Depreciation Charges) |
|--|-----------------------|--------------------------------------|--|
| Completed projects with long-term benefits | 15 | \$ 90,000 | \$50,000 |
| Abandoned projects or projects that benefit the current period | 10 | 65,000 | 15,000 |
| Projects in process—results indeterminate | 5 | 40,000 | 12,000 |
| Total | 30 | \$195,000 | \$77,000 |

Upon recommendation of the research and development group, Wright Tool Company acquired a patent for manufacturing rights at a cost of \$88,000. The patent was acquired on April 1, 2019, and has an economic life of 10 years.

Instructions

If generally accepted accounting principles were followed, how would the items above relating to research and development activities be reported on the following financial statements?

- The company's income statement for 2020.
- The company's balance sheet as of December 31, 2020.

Be sure to give account titles and amounts, and briefly justify your presentation.

(CMA adapted)

Concepts for Analysis

CA12.1 (LO 1, 2, 5) (Accounting for Pre-Opening Costs) After securing lease commitments from several major stores, Auer Shopping Center, Inc. was organized and built a shopping center in a growing suburb.

The shopping center would have opened on schedule on January 1, 2020, if it had not been struck by a severe tornado in December. Instead, it opened for business on October 1, 2020. All of the additional construction costs that were incurred as a result of the tornado were covered by insurance.

In July 2019, in anticipation of the scheduled January opening, a permanent staff had been hired to promote the shopping center, obtain tenants for the uncommitted space, and manage the property.

A summary of some of the costs incurred in 2019 and the first nine months of 2020 follows.

| | 2019 | January 1, 2020 through September 30, 2020 |
|----------------------------|-----------|--|
| Interest on mortgage bonds | \$720,000 | \$540,000 |
| Cost of obtaining tenants | 300,000 | 360,000 |
| Promotional advertising | 540,000 | 557,000 |

The promotional advertising campaign was designed to familiarize shoppers with the center. Had it been known in time that the center would not open until October 2020, the 2019 expenditure for promotional advertising would not have been made. The advertising had to be repeated in 2020.

All of the tenants who had leased space in the shopping center at the time of the tornado accepted the October occupancy date on condition that the monthly rental charges for the first 9 months of 2020 be canceled.

Instructions

Explain how each of the costs for 2019 and the first 9 months of 2020 should be treated in the accounts of the shopping center corporation. Give the reasons for each treatment.

(AICPA adapted)

CA12.2 (LO 1, 2) Writing (Accounting for Patents) On June 30, 2020, your client, Ferry Company, was granted two patents covering plastic cartons that it had been producing and marketing profitably for the past 3 years. One patent covers the manufacturing process, and the other covers the related products.

Ferry executives tell you that these patents represent the most significant breakthrough in the industry in the past 30 years. The products have been marketed under the registered trademarks Evertight, Duratainer, and Sealrite. Licenses under the patents have already been granted by your client to other manufacturers in the United States and abroad, and are producing substantial royalties.

On July 1, Ferry commenced patent infringement actions against several companies whose names you recognize as those of substantial and prominent competitors. Ferry's management is optimistic that these suits will result in a permanent injunction against the manufacture and sale of the infringing products as well as collection of damages for loss of profits caused by the alleged infringement.

The financial vice president has suggested that the patents be recorded at the discounted value of expected net royalty receipts.

Instructions

- What is the meaning of “discounted value of expected net receipts”? Explain.
- How would such a value be calculated for net royalty receipts?
- What basis of valuation for Ferry’s patents would be generally accepted in accounting? Give supporting reasons for this basis.
- Assuming no practical problems of implementation and ignoring generally accepted accounting principles, what is the preferable basis of valuation for patents? Explain.
- What would be the preferable theoretical basis of amortization? Explain.
- What recognition, if any, should be made of the infringement litigation in the financial statements for the year ending September 30, 2020? Discuss.

(AICPA adapted)

CA12.3 (LO 5) Writing (Accounting for Research and Development Costs) Cuevas Co. is in the process of developing a revolutionary new product. A new division of the company was formed to develop, manufacture, and market this new product. As of year-end (December 31, 2020), the new product has not been manufactured for resale. However, a prototype unit was built and is in operation.

Throughout 2020, the new division incurred certain costs. These costs include design and engineering studies, prototype manufacturing costs, administrative expenses (including salaries of administrative personnel), and market research costs. In addition, approximately \$900,000 in equipment (with an estimated useful life of 10 years) was purchased for use in developing and manufacturing the new product. Approximately \$315,000 of this equipment was built specifically for the design development of the new product. The remaining \$585,000 of equipment was used to manufacture the pre-production prototype and will be used to manufacture the new product once it is in commercial production.

Instructions

- How are “research” and “development” defined in the authoritative literature (GAAP)?
- Briefly indicate the practical and conceptual reasons for the conclusion reached by the Financial Accounting Standards Board on accounting and reporting practices for research and development costs.
- In accordance with GAAP, how should the various costs of Cuevas described above be recorded on the financial statements for the year ended December 31, 2020?

(AICPA adapted)

CA12.4 (LO 5) Ethics (Accounting for Research and Development Costs) Czeslaw Corporation’s research and development department has an idea for a project it believes will culminate in a new product that would be very profitable for the company. Because the project will be very expensive, the department requests approval from the company’s controller, Jeff Reid.

Reid recognizes that corporate profits have been down lately and is hesitant to approve a project that will incur significant expenses that cannot be capitalized due to the requirements of the authoritative literature. He knows that if they hire an outside firm that does the work and obtains a patent for the process, Czeslaw Corporation can purchase the patent from the outside firm and record the expenditure as an asset. Reid knows that the company’s own R&D department is first-rate, and he is confident they can do the work well.

Instructions

Answer the following questions.

- Who are the stakeholders in this situation?
- What are the ethical issues involved?
- What should Reid do?

Using Your Judgment

Financial Reporting Problem**The Procter & Gamble Company (P&G)**

The financial statements of P&G are presented in Appendix B. The company’s complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

- a. Does P&G report any intangible assets, especially goodwill, in its 2017 financial statements and accompanying notes?
- b. How much research and development (R&D) cost was expensed by P&G in 2016 and 2017? What percentage of sales revenue and net income did P&G spend on R&D in 2016 and 2017?

Comparative Analysis Case**The Coca-Cola Company and PepsiCo, Inc.**

The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- a. 1. What amounts for intangible assets were reported in their respective balance sheets by Coca-Cola and PepsiCo at year-end 2017?
2. What percentage of total assets is each of these reported amounts at year-end 2017?
3. What was the change in the amount of intangibles from 2016 to 2017 for Coca-Cola and PepsiCo?
- b. 1. On what basis and over what periods of time did Coca-Cola and PepsiCo amortize their intangible assets?
2. What were the amounts of accumulated amortization reported by Coca-Cola and PepsiCo at the end of 2016 and 2017?
3. What was the composition of the identifiable and unidentifiable intangible assets reported by Coca-Cola and PepsiCo at the end of 2017?

Financial Statement Analysis Cases**Case 1: Merck and Johnson & Johnson**

Merck & Co., Inc. and **Johnson & Johnson** are two leading producers of healthcare products. Each has considerable assets, and each expends considerable funds each year toward the development of new products. The development of a new healthcare product is often very expensive, and risky. New products frequently must undergo considerable testing before approval for distribution to the public. For example, it took Johnson & Johnson 4 years and \$200 million to develop its 1-DAY ACUVUE contact lenses. Below are some basic data compiled from the financial statements of these two companies.

| (all dollars in millions) | <u>Johnson & Johnson</u> | <u>Merck</u> |
|----------------------------------|------------------------------|--------------|
| Total assets | \$53,317 | \$42,573 |
| Total revenue | 47,348 | 22,939 |
| Net income | 8,509 | 5,813 |
| Research and development expense | 5,203 | 4,010 |
| Intangible assets | 11,842 | 2,765 |

Instructions

- a. What kinds of intangible assets might a healthcare products company have? Does the composition of these intangibles matter to investors—that is, would it be perceived differently if all of Merck's intangibles were goodwill than if all of its intangibles were patents?
- b. Suppose the president of Merck has come to you for advice. He has noted that by eliminating research and development expenditures the company could have reported \$4 billion more in net income. He is frustrated because much of the research never results in a product, or the products take years to develop. He says shareholders are eager for higher returns, so he is considering eliminating research and development expenditures for at least a couple of years. What would you advise?
- c. The notes to Merck's financial statements note that Merck has goodwill of \$1.1 billion. Where does recorded goodwill come from? Is it necessarily a good thing to have a lot of goodwill on a company's books?

Case 2: Analysis of Goodwill

As a new intern for the local branch office of a national brokerage firm, you are excited to get an assignment that allows you to use your accounting expertise. Your supervisor provides you with the spreadsheet below, which contains data for the most recent quarter for three companies that the firm has been recommending to its clients as “buys.” Each of the companies’ returns on assets has outperformed their industry cohorts in the past. But, given recent challenges in their markets, there is concern that the companies may experience operating challenges and lower earnings. (All numbers in millions, except return on assets.)

| | A | B | C | D | E |
|---|--------------------|-----------------------|--|----------------------------|------------------|
| 1 | Company | Fair Value of Company | Book Value (Net Assets Including Goodwill) | Carrying Value of Goodwill | Return on Assets |
| 2 | Sprint Nextel | \$36,361 | \$51,271 | \$30,718 | 3.5% |
| 3 | Washington Mutual | 11,742 | 23,941 | 9,062 | 2.4 |
| 4 | E* Trade Financial | 1,639 | 4,104 | 2,035 | 5.6 |
| 5 | | | | | |

Instructions

- The fair value for each of these companies is lower than the corresponding book value. What implications does this have for each company’s future prospects?
- To date, none of these companies has recorded goodwill impairments. Your supervisor suspects that they will need to record impairments in the near future, but he is unsure about the goodwill impairment rules. Is it likely that these companies will recognize impairments? Explain.
- Estimate the amount of goodwill impairment for each company and indicate how to record the impairment.
- Discuss the effects of your entries in part (c) on your evaluation of these companies based on the return on assets ratio.

Accounting, Analysis, and Principles

On January 2, 2020, Raconteur Corp. reported the following intangible assets: (1) copyright with a carrying value of \$15,000, and (2) a trade name with a carrying value of \$8,500. The trade name has a remaining life of 5 years and can be renewed at nominal cost indefinitely. The copyright has a remaining life of 10 years.

At December 31, 2020, Raconteur assessed the intangible assets for possible impairment and developed the following information.

| | Estimated Undiscounted Expected Future Cash Flows | Estimated Fair Value |
|------------|--|----------------------|
| Copyright | \$20,000 | \$16,000 |
| Trade name | 10,000 | 5,000 |

Accounting

Prepare any journal entries required for Raconteur’s intangible assets at December 31, 2020.

Analysis

Many stock analysts indicate a preference for less-volatile operating income measures. Such measures make it easier to predict future income and cash flows, using reported income measures. How does the accounting for impairments of intangible assets affect the volatility of operating income?

Principles

Many accounting issues involve a trade-off between the primary characteristics of relevant and representationally faithful information. How does the accounting for intangible asset impairments reflect this trade-off?

Analytics in Action

Accounting software systems collect vast amounts of data about the economic events experienced by a company and about the parties with whom the company engages, such as suppliers and customers. Business decision-makers take advantage of this wealth of information by using data analytics, which often employs both software and statistics, to draw inferences and make more informed business decisions. As both data access and analytical software improve, the use of data analytics to support decisions is becoming increasingly common at virtually all types of companies.

For example, consider goodwill, which has been rising briskly since 2011, to a total of \$3.408 trillion among all corporate filers in 2015. The bad news is that impairments have plummeted further during this same period, from a low of \$34.66 billion in 2013 to \$83.02 billion in 2015 (see <http://www.radicalcompliance.com/2016/05/04/impairments-hinting-at-bigger-problems-ahead/>). So are goodwill impairments more likely as goodwill balances rise? Business decision-makers would definitely want to investigate this trend further using data analytics.

Instructions Go to WileyPLUS for a data analytics exercise focusing on goodwill for companies in the Dow Jones average.

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

CE12.1 Access the Codification glossary (“Master Glossary”) to answer the following.

- a. What is the definition provided for an intangible asset?
- b. What is the definition of goodwill?
- c. What is the definition of research and development (R&D)?
- d. What is a development stage entity?

CE12.2 Your friend Harry does not understand the concept of an indefinite-life intangible asset. He wonders, “Does this mean the life is infinite?” What does the authoritative literature say about indefinite-life intangible assets?

CE12.3 What guidance does the Codification provide concerning the disclosure of research and development (R&D) costs?

CE12.4 What is the nature of the authoritative guidance for advertising costs for entertainment companies?

Codification Research Case

King Company is contemplating the purchase of a smaller company, which is a distributor of King's products. Top management of King is convinced that the acquisition will result in significant synergies in its selling and distribution functions. The financial management group (of which you are a part) has been asked to prepare some analysis of the effects of the acquisition on the combined company's financial statements. This is the first acquisition for King, and some of the senior staff insist that based on their recollection of goodwill accounting, any goodwill recorded on the acquisition will result in a "drag" on future earnings for goodwill amortization. Other younger members on the staff argue that goodwill accounting has changed. Your supervisor asks you to research this issue.

Instructions

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

- Identify the accounting literature that addresses goodwill and other intangible assets.
- Define goodwill.
- Is goodwill subject to amortization? Explain.
- What is the quantitative impairment test? Are defined taxes considered in the test? Explain.

IFRS Insights

LEARNING OBJECTIVE 6

Compare the accounting for intangible assets under GAAP and IFRS.

There are some significant differences between IFRS and GAAP in the accounting for both intangible assets and impairments. IFRS related to intangible assets is presented in *IAS 38* ("Intangible Assets"). IFRS related to impairments is found in *IAS 36* ("Impairment of Assets").

Relevant Facts

Following are the key similarities and differences between GAAP and IFRS related to intangible assets.

Similarities

- Like GAAP, under IFRS intangible assets (1) lack physical substance and (2) are not financial instruments. In addition, under IFRS an intangible asset is identifiable. To be identifiable, an intangible asset must either be separable from the company (can be sold or transferred) or it arises from a contractual or legal right from which economic benefits will flow to the company. Fair value is used as the measurement basis for intangible assets under IFRS, if it is more clearly evident.
- With issuance of a converged statement on business combinations (*IFRS 3* and *SFAS No. 141—Revised*), IFRS and GAAP are very similar for intangibles acquired in a business combination. That is, companies recognize an intangible asset separately from goodwill if the intangible represents contractual or legal rights or is capable of being separated or divided and sold, transferred, licensed, rented, or exchanged. In addition, under both GAAP and IFRS, companies recognize acquired in-process research and development (IPR&D) as a separate intangible asset if it meets the definition of an intangible asset and its fair value can be measured reliably.
- As in GAAP, under IFRS the costs associated with research and development are segregated into the two components. Costs in the research phase are always expensed under both IFRS and GAAP.

Differences

- IFRS permits revaluation of limited-life intangible assets. Revaluations are not permitted for goodwill and other indefinite-life intangible assets.

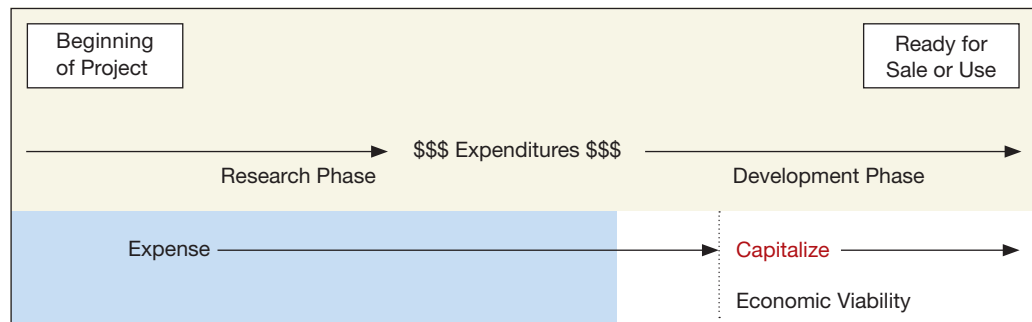

- IFRS permits some capitalization of internally generated intangible assets (e.g., brand value) if it is probable there will be a future benefit and the amount can be reliably measured. GAAP requires expensing of all costs associated with internally generated intangibles.
- IFRS requires an impairment test at each reporting date for long-lived assets and intangibles, and records an impairment if the asset's carrying amount exceeds its recoverable amount. The recoverable amount is the higher of the asset's fair value less costs to sell and its value-in-use. **Value-in-use** is the future cash flows to be derived from the particular assets, discounted to present value. Under GAAP, impairment loss is measured as the excess of the carrying amount over the asset's fair value.
- IFRS allows reversal of impairment losses when there has been a change in economic conditions or in the expected use of limited-life intangibles. (Reversals of goodwill impairments are not allowed.) Under GAAP, impairment losses cannot be reversed for assets to be held and used; the impairment loss results in a new cost basis for the asset. IFRS and GAAP are similar in the accounting for impairments of assets held for disposal.
- Under IFRS, costs in the development phase of a research and development project are capitalized once technological feasibility (referred to as **economic viability**) is achieved.

About the Numbers

Development Costs

Businesses frequently incur costs on a variety of intangible resources, such as scientific or technological knowledge, market research, intellectual property, and brand names. These costs are commonly referred to as research and development (R&D) costs. Intangible assets that might arise from these expenditures include patents, computer software, copyrights, and trademarks. For example, **Nokia** incurred R&D costs to develop its cell phones, resulting in patents related to its technology. In determining the accounting for these costs, Nokia must determine whether its R&D project is at a sufficiently advanced stage to be considered economically viable. To perform this assessment, Nokia evaluates costs incurred during the research phase and the development phase. **Illustration IFRS12.1** indicates the two stages of research and development activities, along with the accounting treatment for costs incurred during these phases.

ILLUSTRATION IFRS12.1 Research and Development Stages

As indicated, all costs incurred in the research phase are expensed as incurred. Once a project moves to the development phase, certain development costs are capitalized. Specifically, development costs are capitalized when certain criteria are met, indicating that an economically viable intangible asset will result from the R&D project. In essence, economic viability indicates that the project is far enough along in the process such that the economic benefits of the R&D project will flow to the company. Therefore, development costs incurred from that point forward meet the recognition criteria and should be recorded as an intangible asset.

In summary, companies expense all research phase costs and some development phase costs. Certain development costs are capitalized once economic viability criteria are met.

Impairment of Intangible Assets

An intangible asset is **impaired** when a company is not able to recover the asset's carrying amount either through using it or by selling it. As discussed in Chapter 11, to determine whether a long-lived

asset (property, plant, and equipment or intangible asset) is impaired, a review is made of the asset's cash-generating ability through use or sale. If the carrying amount is higher than the recoverable amount, the difference is an impairment loss. If the recoverable amount is greater than the carrying amount, no impairment is recorded. The specific procedures for recording impairments depend on the type of intangible asset—limited-life or indefinite-life (including goodwill).

Impairment of Limited-Life Intangibles The rules that apply to **impairments of property, plant, and equipment also apply to limited-life intangibles**. At each statement of financial position date, a company should review limited-life intangibles for impairment. Information indicating that an impairment test should be performed might be internal (e.g., physical damage or adverse changes in performance) or external (e.g., adverse changes in the business or regulatory environment, or technological or competitive developments). If there is an indication that an intangible asset is impaired, the company performs an impairment test: compare the carrying value of the intangible asset to the recoverable amount.

Recall that **recoverable amount** is defined as the higher of fair value less costs to sell or value-in-use. Fair value less costs to sell means what the asset could be sold for after deducting costs of disposal. Value-in-use is the present value of cash flows expected from the future use and eventual sale of the asset at the end of its useful life. The **impairment loss** is the carrying amount of the asset less the recoverable amount of the impaired asset. As with other impairments, the loss is reported in profit or loss. Companies generally report the loss in the "Other income and expense" section.

To illustrate, assume that Lerch, Inc. has a patent on how to extract oil from shale rock, with a carrying value of \$5,000,000 at the end of 2020. Unfortunately, several recent non-shale-oil discoveries adversely affected the demand for shale-oil technology, indicating that the patent is impaired. Lerch determines the recoverable amount for the patent, based on value-in-use (because there is no active market for the patent). Lerch estimates the patent's value-in-use at \$2,000,000, based on the discounted expected future net cash flows at its market rate of interest. **Illustration IFRS12.2** shows the impairment loss computation (based on value-in-use).

| | |
|--|---------------------------|
| Carrying value of patent | \$5,000,000 |
| Recoverable amount (based on value-in-use) | (2,000,000) |
| Loss on impairment | <u>\$3,000,000</u> |

ILLUSTRATION IFRS12.2
Computation of Loss on Impairment of Patent

Lerch records this loss as follows.

| | | |
|--------------------|-----------|-----------|
| Loss on Impairment | 3,000,000 | |
| Patents | | 3,000,000 |

After recognizing the impairment, the recoverable amount of \$2,000,000 is the new cost basis of the patent. Lerch should amortize the patent's recoverable amount (new carrying amount) over its remaining useful life or legal life, whichever is shorter.

Reversal of Impairment Loss What happens if a review in a future year indicates that an intangible asset is no longer impaired because the recoverable amount of the asset is higher than the carrying amount? In that case, the impairment loss may be reversed. To illustrate, continuing the Lerch patent example, assume that the remaining life of the patent is five years with zero residual value. Recall the carrying value of the patent after impairment is \$2,000,000 (\$5,000,000 – \$3,000,000). Thus, Lerch's amortization is \$400,000 (\$2,000,000 ÷ 5) over the remaining five years of the patent's life. The amortization expense and related carrying amount after the impairment is shown in **Illustration IFRS12.3**.

| Year | Amortization Expense | Carrying Amount | |
|------|----------------------|-----------------|---------------------------|
| 2021 | \$400,000 | \$1,600,000 | (\$2,000,000 – \$400,000) |
| 2022 | 400,000 | 1,200,000 | (\$1,600,000 – \$400,000) |
| 2023 | 400,000 | 800,000 | (\$1,200,000 – \$400,000) |
| 2024 | 400,000 | 400,000 | (\$800,000 – \$400,000) |
| 2025 | 400,000 | 0 | (\$400,000 – \$400,000) |

ILLUSTRATION IFRS12.3
Post-Impairment Carrying Value of Patent

Early in 2022, based on improving conditions in the market for shale-oil technology, Lerch remeasures the recoverable amount of the patent to be \$1,750,000. In this case, Lerch reverses a portion of the recognized impairment loss with the following entry.

| | | |
|-------------------------------------|---------|---------|
| Patents (\$1,750,000 – \$1,600,000) | 150,000 | |
| Recovery of Loss on Impairment | | 150,000 |

The recovery of the impairment loss is reported in the “Other income and expense” section of the income statement. The carrying amount of the patent is now \$1,750,000 (\$1,600,000 + \$150,000). Assuming the remaining life of the patent is four years, Lerch records \$437,500 ($\$1,750,000 \div 4$) amortization expense in 2022.

Impairment of Indefinite-Life Intangibles Other Than Goodwill Companies test indefinite-life intangibles (including goodwill) for impairment annually. To illustrate, assume that Arcon Radio purchased a broadcast license for \$2,000,000. The license is renewable every 10 years if the company provides appropriate service and does not violate Government Communications Commission (GCC) rules. Arcon Radio has renewed the license with the GCC twice, at a minimal cost. Because it expects cash flows to last indefinitely, Arcon reports the license as an indefinite-life intangible asset. Recently, the GCC decided to issue significantly more of these licenses, which will reduce the value of Arcon’s license. Based on recent auctions of similar licenses, Arcon Radio estimates the fair value less costs to sell (the recoverable amount) of its license to be \$1,500,000. Arcon therefore reports an impairment loss of \$500,000, computed as shown in **Illustration IFRS12.4**.

ILLUSTRATION IFRS12.4
Computation of Loss on Impairment of Broadcast License

| | |
|---|-------------------|
| Carrying value of broadcast license | \$ 2,000,000 |
| Recoverable amount (based on fair value less costs to sell) | (1,500,000) |
| Loss on impairment | <u>\$ 500,000</u> |

Impairment of Goodwill The timing of the impairment test for goodwill is the same as that for other indefinite-life intangibles. That is, companies must test goodwill at least annually. However, because goodwill generates cash flows only in combination with other assets, the impairment test is conducted based on the cash-generating unit to which the goodwill is assigned. Recall from our discussion in Chapter 11 that companies identify a **cash-generating unit** based on the smallest identifiable group of assets that generate cash flows independently of the cash flows from other assets. Under IFRS, when a company records goodwill in a business combination, it must assign the goodwill to the cash-generating unit that is expected to benefit from the synergies and other benefits arising from the business combination.

To illustrate, assume that Kohlbuy Corporation has three divisions. It purchased one division, Pritt Products, four years ago for \$2 million. Unfortunately, Pritt experienced operating losses over the last three quarters. Kohlbuy management is now reviewing the division (the cash-generating unit), for purposes of its annual impairment testing. **Illustration IFRS12.5** lists the Pritt Division’s net assets, including the associated goodwill of \$900,000 from the purchase.

ILLUSTRATION IFRS12.5
Net Assets of Pritt Division, Including Goodwill

| | |
|--------------------------------------|--------------------|
| Property, plant, and equipment (net) | \$ 800,000 |
| Goodwill | 900,000 |
| Inventory | 700,000 |
| Receivables | 300,000 |
| Cash | 200,000 |
| Accounts and notes payable | (500,000) |
| Net assets | <u>\$2,400,000</u> |

Kohlbuy determines the recoverable amount for the Pritt Division to be \$2,800,000, based on a value-in-use estimate. **Because the recoverable amount of the division exceeds the carrying amount of the net assets, Kohlbuy does not recognize any impairment.** However, if the recoverable amount for the Pritt Division were less than the carrying amount of the net assets, then Kohlbuy must record an impairment. To illustrate, assume that the recoverable amount for the Pritt Division is \$1,900,000 instead of \$2,800,000. **Illustration IFRS12.6** computes the amount of the impairment loss to be recorded.

ILLUSTRATION IFRS12.6

Determination of Impairment for the Pritt Division

| | |
|--------------------------------------|--------------------|
| Recoverable amount of Pritt Division | \$ 1,900,000 |
| Net identifiable assets | <u>(2,400,000)</u> |
| Loss on impairment | <u>\$ 500,000</u> |

Kohlbuy makes the following entry to record the impairment.

| | | |
|--------------------|---------|---------|
| Loss on Impairment | 500,000 | |
| Goodwill | | 500,000 |

Following this entry, the carrying value of the goodwill is \$400,000 (\$900,000 – \$500,000). If conditions change in subsequent periods, such that the recoverable amount of the Pritt Division's assets other than goodwill exceeds their carrying value, Kohlbuy may reverse an impairment loss on the Pritt Division assets other than goodwill. **Goodwill impairment loss reversals are not permitted.**

On the Horizon

At one time, the IASB and FASB identified a project that would consider expanded recognition of internally generated intangible assets. As indicated, IFRS permits more recognition of intangibles compared to GAAP. Thus, it will be challenging to develop converged standards for intangible assets, given the long-standing prohibition on capitalizing internally generated intangible assets and research and development in GAAP. At present, this project is not active.

IFRS Self-Test Questions

- All of the following are key similarities between GAAP and IFRS with respect to accounting for intangible assets **except**:
 - for accounting purposes, costs associated with research and development activities are segregated into the two components.
 - the accounting for intangibles acquired in a business combination.
 - recovery of impairments on intangibles other than goodwill.
 - the accounting for impairments of assets held for disposal.
- Research and development costs are:
 - expensed under GAAP.
 - expensed under IFRS.
 - expensed under both GAAP and IFRS.
 - None of the above.
- Which of the following statements is **correct**?
 - Both IFRS and GAAP permit revaluation of property, plant, and equipment and intangible assets (except for goodwill).
 - GAAP permits capitalization of development costs.
 - IFRS requires capitalization of research and development costs once economic viability is met.
 - IFRS requires capitalization of development costs once economic viability is met.
- A loss on impairment of an intangible asset under IFRS is the asset's:
 - carrying amount less the expected future net cash flows.
 - carrying amount less its recoverable amount.
 - recoverable amount less the expected future net cash flows.
 - book value less its fair value.
- Recovery of impairment is recognized under IFRS for all the following **except**:
 - patent held for sale.
 - patent held for use.
 - trademark.
 - goodwill.

IFRS Concepts and Application

IFRS12.1 Where can authoritative IFRS guidance related to intangible assets be found?

IFRS12.2 Briefly describe some of the similarities and differences between GAAP and IFRS with respect to the accounting for intangible assets.

IFRS12.3 Briefly discuss the convergence efforts that are underway in the area of intangible assets.

IFRS12.4 Treasure Land Corporation incurred the following costs in 2020.

| | |
|---|------------------|
| Cost of laboratory research aimed at discovery of new knowledge | \$120,000 |
| Cost of testing in search for product alternatives | 100,000 |
| Cost of engineering activity required to advance the design of a product to the manufacturing stage | 210,000 |
| Prototype testing subsequent to meeting economic viability | 75,000 |
| | <u>\$505,000</u> |

Prepare the necessary 2020 journal entry(ies) for Treasure Land.

IFRS12.5 Indicate whether the following items are capitalized or expensed in the current year.

- a. Purchase cost of a patent from a competitor.
- b. Research costs.
- c. Development costs (after achieving economic viability).
- d. Organizational costs.
- e. Costs incurred internally to create goodwill.

IFRS12.6 Kenoly Corporation owns a patent that has a carrying amount of \$300,000. Kenoly expects future net cash flows from this patent to total \$210,000 over its remaining life of 10 years. The recoverable amount of the patent is \$110,000. Prepare Kenoly's journal entry, if necessary, to record the loss on impairment.

IFRS12.7 Use the information in IFRS12.6. Assume that at the end of the year following the impairment (after recording amortization expense), the estimated recoverable amount for the patent is \$130,000. Prepare Kenoly's journal entry, if needed.

IFRS12.8 Waters Corporation purchased Johnson Company 3 years ago and at that time recorded goodwill of \$400,000. The Johnson Division's net assets, including the goodwill, have a carrying amount of \$800,000. The recoverable amount of the division is estimated to be \$1,000,000. Prepare Waters' journal entry, if necessary, to record impairment of the goodwill.

IFRS12.9 Use the information provided in IFRS12.8. Assume that the recoverable amount of the division is estimated to be \$750,000. Prepare Waters' journal entry, if necessary, to record impairment of the goodwill.

IFRS12.10 Margaret Avery Company from time to time embarks on a research program when a special project seems to offer possibilities. In 2018, the company expends \$325,000 on a research project, but by the end of 2018, it is impossible to determine whether any benefit will be derived from it.

- a. What account should be charged for the \$325,000, and how should it be shown in the financial statements?
- b. The project is completed in 2019, and a successful patent is obtained. The R&D costs to complete the project are \$130,000 (\$36,000 of these costs were incurred after achieving economic viability). The administrative and legal expenses incurred in obtaining patent number 472-1001-84 in 2019 total \$24,000. The patent has an expected useful life of 5 years. Record these costs in journal entry form. Also, record patent amortization (full year) in 2019.
- c. In 2020, the company successfully defends the patent in extended litigation at a cost of \$47,200, thereby extending the patent life to December 31, 2027. What is the proper way to account for this cost? Also, record patent amortization (full year) in 2020.
- d. Additional engineering and consulting costs incurred in 2020 required to advance the design of a new version of the product to the manufacturing stage total \$60,000. These costs enhance the design of the product considerably, but it is highly uncertain if there will be a market for the new version of the product. Discuss the proper accounting treatment for this cost.

Professional Research

IFRS12.11 King Company is contemplating the purchase of a smaller company, which is a distributor of King's products. Top management of King is convinced that the acquisition will result in significant synergies in its selling and distribution functions. The financial management group (of which you are a part) has been asked to analyze the effects of the acquisition on the combined company's financial statements. This is the first acquisition for King, and some of the senior staff insist that based on their recollection of goodwill accounting, any goodwill recorded on the acquisition will result in a "drag" on future earnings for goodwill amortization. Other younger members on the staff argue that goodwill accounting has changed. Your supervisor asks you to research this issue.

Instructions

Access the IFRS authoritative literature at the IASB website. (Click on the IFRS tab and then register for free eIFRS access if necessary.) When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- a. Identify the accounting literature that addresses goodwill and other intangible assets.
- b. Define goodwill.
- c. Is goodwill subject to amortization? Explain.
- d. When goodwill is recognized by a subsidiary, should it be tested for impairment at the consolidated level or the subsidiary level? Discuss.

International Financial Reporting Problem

Marks and Spencer plc (M&S)

IFRS12.12 The financial statements of **M&S** are presented in Appendix E. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- a. Does M&S report any intangible assets and goodwill in its financial statements and accompanying notes? Briefly explain.
- b. How much selling and marketing expenses does M&S report in 2016 and 2017? Briefly discuss the significance of these expenses to M&S's operating results.

Current Liabilities and Contingencies

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

1. Describe the nature, valuation, and reporting of current liabilities.
2. Explain the classification issues of short-term debt expected to be refinanced.
3. Explain the accounting for gain and loss contingencies.
4. Indicate how to present and analyze liabilities and contingencies.

PREVIEW OF CHAPTER 13 As the following opening story indicates, the convergence of GAAP and IFRS should lead to improved reporting of liabilities. In this chapter, we explain the basic issues related to accounting and reporting for current and contingent liabilities. The content and organization of the chapter are as follows.

This chapter also includes numerous conceptual and global discussions that are integral to the topics presented here.

CURRENT LIABILITIES AND CONTINGENCIES

Current Liabilities

- Accounts payable
- Notes payable
- Dividends payable
- Customer advances and deposits
- Unearned revenues
- Taxes payable
- Employee-related liabilities
- Current maturities of long-term debt

Short-Term Obligations

- Refinancing illustration

Contingencies

- Gain contingencies
- Loss contingencies

Presentation and Analysis

- Presentation of current liabilities
- Presentation of contingencies
- Analysis of current liabilities

Now You See It, Now You Don't

Not too long ago, a look at the liabilities side of the balance sheet of an international company like **BERU AG**, showed how international companies reported financial information. Here is how one liability was shown:

| | |
|--|-----------------|
| Anticipated losses arising from pending transactions | 3,285,000 euros |
|--|-----------------|

Do you believe a liability should be reported for such transactions? *Anticipated losses* means the losses have not yet occurred. *Pending transactions* means that the condition that might cause the loss has also not occurred. So where is the liability? To whom does the company owe something? Where is the obligation?

German accounting rules at that time were permissive. They allowed companies to report liabilities for possible future events. In essence, the establishment of this general-purpose “liability” provided a buffer for BERU if losses did materialize. If you take a more skeptical view, you might say the accounting rules let BERU smooth its income by charging expenses in good years and reducing expenses in bad years.

The story has a happy ending: all public European companies switched to International Financial Reporting Standards (IFRS) in 2005. Under IFRS, liabilities like “Anticipated losses arising from pending transactions” disappear. So when we look at BERU’s financial statements today, we find a note stating that the company has reported as liabilities only obligations arising from past transactions that can be reasonably estimated.

Standard-setters continue to work on the financial reporting of certain “contingent” liabilities, such as those related to pending lawsuits and other possible losses for which a company might be liable. As you will learn in this chapter, standard-setters have provided much more transparency in reporting liability-type transactions. However, much still needs to be done. For example, the IASB and FASB have deliberated changes in how to recognize and measure contingent liabilities. The task will not be easy. Consider a simple illustration involving a company that sells hamburgers:

- The hamburgers are sold in a jurisdiction where the law states that the seller must pay \$100,000 to each customer that purchases a contaminated hamburger;
- At the end of the reporting period, the company has sold one hamburger; and
- Past experience indicates there is a one in a million chance that a hamburger sold by the entity is contaminated. No other information is available.

Does the company have a liability? What is the conceptual justification, if any, to record a liability or for that matter, not to record a liability? And if you conclude that the sale of the hamburger results in a liability, how do you measure it? Another way to ask the question is whether the hamburger issue is a recognition issue or a measurement issue. This example illustrates some of the difficult questions that the FASB (and IASB) face in this area.

The FASB recently proposed expanded disclosure about the nature of contingencies, more quantitative and qualitative background on contingencies, and, maybe most welcome of all, required tabular presentation of the changes in contingencies, including explanation of the changes. Note that these disclosures are similar to those required in IFRS. What’s not to like about these enhanced disclosures? Well quite a bit, according to responses by some companies and the legal profession. These parties are concerned that the information in these enhanced disclosures could be used against them in a lawsuit. These issues were in play in the recent product liability cases at **Beazer Homes**, **Fiat Chrysler**, and **GM**, and explains the strong opposition to the proposed rules. We do not know the end of this liability story. However, the controversy over the proposed rules illustrates the challenges of developing accounting rules for liabilities that meet the needs of investors while avoiding harm to the companies reporting the information.

Spector, “Fiat Chrysler Faces More Legal Hazards: Jeep Verdict Could Encourage Harder Lines Among Victims in Other Rear-End Crashes,” *Wall Street Journal* (April 6, 2015); C. Dulaney, “Beazer Homes Loss Widens Amid Warranty Charge,” *Wall Street Journal* (January 31, 2015); and M. Spector, “SEC Fines GM \$1 Million for Accounting Control Failures,” *Wall Street Journal* (January 19, 2017).

Review and Practice

Go to the **Review and Practice** section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions as well as additional exercises and practice problem with solutions are also available online.

Current Liabilities

LEARNING OBJECTIVE 1

Describe the nature, valuation, and reporting of current liabilities.

The question, “What is a liability?” is not easy to answer. For example, is preferred stock a liability or an ownership claim? The first reaction is to say that preferred stock is in fact an ownership claim, and companies should report it as part of stockholders’ equity. In fact, preferred stock has many elements of debt as well.¹ The issuer (and in some cases the holder) often has the right to call the stock within a specific period of time—making it similar to a repayment of principal. The dividend on the preferred stock is in many cases almost guaranteed (the cumulative provision)—making it look like interest. As a result, preferred stock is one of many financial instruments that are difficult to classify (see **Underlying Concepts**).²

To help resolve some of these controversies, the FASB, as part of its conceptual framework, defined **liabilities** as “**probable future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or provide services to other entities in the future as a result of past transactions or events.**”³ In other words, a liability has three essential characteristics:

1. It is a present obligation that entails settlement by probable future transfer or use of cash, goods, or services.
2. It is an unavoidable obligation.
3. The transaction or other event creating the obligation has already occurred.

Because liabilities involve future disbursements of assets or services, one of their most important features is the date on which they are payable. A company must satisfy currently maturing obligations in the ordinary course of business to continue operating. Liabilities with a more distant due date do not, as a rule, represent a claim on the company’s current resources. They are therefore in a slightly different category. This feature gives rise to the basic division of liabilities into (1) current liabilities and (2) long-term debt.

Underlying Concepts

To determine the appropriate classification of specific financial instruments, companies need proper definitions of assets, liabilities, and equities. They often use the conceptual framework definitions as the basis for resolving controversial classification issues.

¹This illustration is not just a theoretical exercise. In practice, a number of preferred stock issues have all the characteristics of a debt instrument, except that they are called and legally classified as preferred stock. In some cases, the IRS has even permitted companies to treat the dividend payments as interest expense for tax purposes.

²The FASB has issued a standard to address the accounting for some of these securities [1] (see the FASB Codification References near the end of the chapter) and is collaborating with the IASB on a broader project to address the accounting for securities with debt and equity features.

³“Elements of Financial Statements of Business Enterprises,” *Statement of Financial Accounting Concepts No. 6* (Stamford, Conn.: FASB, 1980).

Recall that current assets are cash or other assets that companies reasonably expect to convert into cash, sell, or consume in operations within a single operating cycle or within a year (if completing more than one cycle each year). **Current liabilities** are “**obligations whose liquidation is reasonably expected to require use of existing resources properly classified as current assets, or the creation of other current liabilities.**” [2] This definition has gained wide acceptance because it recognizes operating cycles of varying lengths in different industries. This definition also considers the important relationship between current assets and current liabilities. [3]

The **operating cycle** is the period of time elapsing between the acquisition of goods and services involved in the manufacturing process and the final cash realization resulting from sales and subsequent collections. Industries that manufacture products requiring an aging process, and certain capital-intensive industries, have an operating cycle of considerably more than one year. On the other hand, most retail and service establishments have several operating cycles within a year.

Here are some typical current liabilities:

1. Accounts payable.
2. Notes payable.
3. Dividends payable.
4. Customer advances and deposits.
5. Unearned revenues.
6. Sales taxes payable.
7. Income taxes payable.
8. Employee-related liabilities.
9. Current maturities of long-term debt.

Accounts Payable

Accounts payable, or **trade accounts payable**, are balances owed to others for goods, supplies, or services purchased on open account. Accounts payable arise because of the time lag between the receipt of services or acquisition of assets and the payment for them. The terms of the sale (e.g., 2/10, n/30 or 1/10, E.O.M.) usually state this period of extended credit, commonly 30 to 60 days.

Most companies record liabilities for purchases of goods upon receipt of the goods. If control has passed to the purchaser before receipt of the goods, the purchaser should record the transaction at the time of transfer of control. A company must pay special attention to transactions occurring near the end of one accounting period and at the beginning of the next. It needs to ascertain that the record of goods received (the inventory) agrees with the liability (accounts payable), and that it records both in the proper period.

Measuring the amount of an account payable poses no particular difficulty. The invoice received from the creditor specifies the due date and the exact outlay in money that is necessary to settle the account. The only calculation that may be necessary concerns the amount of cash discount. See Chapter 8 for illustrations of entries related to accounts payable and purchase discounts.

Notes Payable

Notes payable are written promises to pay a certain sum of money on a specified future date. They may arise from purchases, financing, or other transactions. Some industries require notes (often referred to as **trade notes payable**) as part of the sales/purchases transaction in lieu of the normal extension of open account credit. Notes payable to banks or loan companies generally arise from cash loans. Companies classify notes as short-term or long-term, depending on the payment due date. Notes may also be interest-bearing or zero-interest-bearing.

Interest-Bearing Note Issued

Assume that Castle National Bank agrees to lend \$100,000 on March 1, 2020, to Landscape Co. if Landscape signs a \$100,000, 6 percent, four-month note. Landscape records the cash received on March 1 as follows.

| March 1 | | |
|--|---------|---------|
| Cash | 100,000 | |
| Notes Payable | | 100,000 |
| (To record issuance of 6%, 4-month note to Castle National Bank) | | |

If Landscape prepares financial statements semiannually, it makes the following adjusting entry to recognize interest expense and interest payable of \$2,000 ($\$100,000 \times .06 \times 4/12$) at June 30.

| June 30 | | |
|--|-------|-------|
| Interest Expense | 2,000 | |
| Interest Payable | | 2,000 |
| (To accrue interest for 4 months on Castle National Bank note) | | |

If Landscape prepares financial statements monthly, its adjusting entry at the end of each month is \$500 ($\$100,000 \times .06 \times 1/12$).

At maturity (July 1), Landscape must pay the face value of the note (\$100,000) plus \$2,000 interest ($\$100,000 \times .06 \times 4/12$). Landscape records payment of the note and accrued interest as follows.

| July 1 | | |
|--|---------|---------|
| Notes Payable | 100,000 | |
| Interest Payable | 2,000 | |
| Cash | | 102,000 |
| (To record payment of Castle National Bank interest-bearing note and accrued interest at maturity) | | |

Zero-Interest-Bearing Note Issued

A company may issue a zero-interest-bearing note instead of an interest-bearing note. A zero-interest-bearing note does not explicitly state an interest rate on the face of the note. **Interest is still charged**, however. At maturity, the borrower must pay back an amount greater than the cash received at the issuance date. In other words, the borrower receives in cash the present value of the note. The present value equals the face value of the note at maturity minus the interest or discount charged by the lender for the term of the note. In essence, the bank takes its fee “up front” rather than on the date the note matures.

To illustrate, assume that Landscape issues a \$102,000, four-month, zero-interest-bearing note to Castle National Bank. The present value of the note is \$100,000.⁴ Landscape records this transaction as follows.

| March 1 | | |
|---|---------|---------|
| Cash | 100,000 | |
| Discount on Notes Payable | 2,000 | |
| Notes Payable | | 102,000 |
| (To record issuance of 4-month, zero-interest-bearing note to Castle National Bank) | | |

Landscape credits the Notes Payable account for the face value of the note, which is \$2,000 more than the actual cash received. It debits the difference between the cash received and the face value of the note to Discount on Notes Payable. **Discount on Notes Payable is a contra account to Notes Payable, and therefore is subtracted from Notes Payable on the balance sheet.** **Illustration 13.1** shows the balance sheet presentation on March 1.

| | | | |
|---------------------------------|-----------|-----------|--|
| Current liabilities | | | |
| Notes payable | \$102,000 | | |
| Less: Discount on notes payable | 2,000 | \$100,000 | |

ILLUSTRATION 13.1

Balance Sheet Presentation of Discount

⁴The bank discount rate used in this example to find the present value is 5.96 percent.

Underlying Concepts

Preferred dividends in arrears do represent a probable future economic sacrifice, but the expected sacrifice does not result from a past transaction or past event. The sacrifice will result from a future event (declaration by the board of directors). Note disclosure improves the predictive value of the financial statements.

The amount of the discount, \$2,000 in this case, represents the cost of borrowing \$100,000 for 4 months. Accordingly, Landscape charges the discount to interest expense over the life of the note. That is, the Discount on Notes Payable balance **represents interest expense chargeable to future periods**. Thus, Landscape should not debit Interest Expense for \$2,000 at the time of obtaining the loan. We discuss additional accounting issues related to notes payable in Chapter 14.

Dividends Payable

A **cash dividend payable** is an amount owed by a corporation to its stockholders as a result of its board of directors' authorization. At the date of declaration, the corporation assumes a liability that places the stockholders in the position of creditors in the amount of dividends declared. Because companies always pay cash dividends within one year of declaration (generally within three months), they classify them as current liabilities.

On the other hand, companies do not recognize accumulated but undeclared dividends on cumulative preferred stock as a liability. Why? Because **preferred dividends in arrears** are not an obligation until the board of directors authorizes the payment. Nevertheless, companies should disclose the amount of cumulative dividends unpaid in a note, or show it parenthetically in the capital stock section (see **Underlying Concepts**).

Dividends payable in the form of additional shares of stock are not recognized as a liability. Such **stock dividends** (as we discuss in Chapter 15) do not require future outlays of assets or services. Companies generally report such undistributed stock dividends in the stockholders' equity section because they represent retained earnings in the process of transfer to paid-in capital.

Customer Advances and Deposits

Current liabilities may include **returnable cash deposits** received from customers and employees. Companies may receive deposits from customers to guarantee performance of a contract or service or as guarantees to cover payment of expected future obligations. For example, a company like **Alltel Corp.** often requires a deposit on equipment that customers use to connect to the Internet or to access its other services. Alltel also may receive deposits from customers as guarantees for possible damage to property. Additionally, some companies require their employees to make deposits for the return of keys or other company property.

The classification of these items as current or noncurrent liabilities depends on the time between the date of the deposit and the termination of the relationship that required the deposit.

Unearned Revenues

A magazine publisher such as **Condé Nast** receives payment when a customer subscribes to *Golf Digest*. An airline company such as **American Airlines** sells tickets for future flights. And software companies like **Microsoft** issue coupons that allow customers to upgrade to the next version of their software. How do these companies account for **unearned revenues** that they receive before delivering goods or rendering services?

1. When a company receives an advance payment, it debits Cash, and credits a current liability account identifying the source of the unearned revenue.
2. When a company recognizes revenue, it debits the unearned revenue account, and credits a revenue account.

To illustrate, assume that Allstate University sells 10,000 season football tickets at \$50 each for its five-game home schedule. The entries for Allstate University's unearned ticket revenue are presented in **Illustration 13.2**.

| | | |
|---|---------|---------|
| Allstate University records the sale of 10,000 season tickets on August 6: | | |
| Cash | 500,000 | |
| Unearned Sales Revenue (10,000 × \$50) | | 500,000 |
| When the first game is played on September 7, Allstate University records sales revenue: | | |
| Unearned Sales Revenue (2,000 × \$50) | 100,000 | |
| Sales Revenue | | 100,000 |

ILLUSTRATION 13.2

Unearned Revenue Entries

As subsequent games are played, Allstate satisfies a performance obligation and records sales revenue (and reduces Unearned Sales Revenue).

The account Unearned Sales Revenue represents unearned revenue. Allstate reports it as a current liability in the balance sheet as the school has a performance obligation. As the school recognizes revenue, it reclassifies the amount from Unearned Sales Revenue to Sales Revenue. Unearned revenue is material for some companies. In the airline industry, for example, tickets sold for future flights represent almost 50 percent of total current liabilities.

Illustration 13.3 shows specific unearned revenue and revenue accounts used in selected types of businesses.

| Type of Business | Account Title | |
|--------------------|-------------------------------|----------------------|
| | Unearned Revenue | Revenue |
| Airline | Unearned Ticket Revenue | Passenger Revenue |
| Magazine publisher | Unearned Subscription Revenue | Subscription Revenue |
| Hotel | Unearned Rent Revenue | Rent Revenue |
| Auto dealer | Unearned Warranty Revenue | Warranty Revenue |
| Retailers | Unearned Gift Card Revenue | Sales Revenue |

ILLUSTRATION 13.3

Unearned Revenue and Revenue Accounts

The balance sheet reports obligations for any commitments that are redeemable in goods and services. The income statement reports revenues related to performance obligations satisfied during the period.

What Do the Numbers Mean? Microsoft’s Liabilities—Good or Bad?

Users of financial statements generally examine current liabilities to assess a company’s liquidity and overall financial flexibility. Companies must pay many current liabilities, such as accounts payable, wages payable, and taxes payable, sooner rather than later. A substantial increase in these liabilities should raise a red flag about a company’s financial position.

This is not the case for all current liabilities. For example, **Microsoft** had a current liability entitled “Short-term unearned revenue” of \$34,102 million in 2017 that has increased year after year. Unearned revenue is a liability that arises from sales of Microsoft products such as *Internet Explorer* and *Windows*. Microsoft also has provided coupons for upgrades to its programs to bolster sales of its Xbox consoles and Surface tablets. At the time of a sale, customers pay not only for the current version of the product but also for future upgrades. Microsoft recognizes sales revenue from the current version of the software or product and records as a liability (unearned revenue) the value of future upgrades that it “owes” to customers.

Apple faces a similar accounting issue related to software updates on its popular iPhones. Recently, the value of the upgrades

has declined, meaning that future upgrade-related revenue will not materialize. So while Apple’s current liabilities (Unearned Revenue) are declining, that is a negative signal about future profits.

Market analysts read increases in unearned revenue as a positive signal about Microsoft’s and Apple’s sales and profitability. When Microsoft’s sales are growing, its unearned revenue account increases. Thus, an *increase* in a liability is good news about Microsoft sales. At the same time, a decline in unearned revenue is bad news. As one analyst noted, a slowdown or reversal of the growth in Microsoft’s unearned revenues indicates slowing sales, which is bad news for investors. Thus, increases in current liabilities can sometimes be viewed as good signs instead of bad.

B8; D. Bass, “Microsoft Unearned Revenue Tops Estimates on Upgrades,” *Bloomberg Business* (July 19, 2012); and M. Murphy, “Apple Profits Benefit from 2015 Accounting Change,” *Wall Street Journal* (October 27, 2016).

Sales Taxes Payable

Retailers like **Wal-Mart Stores, Inc.**, **Best Buy Co.**, and **Gap Inc.** must collect sales taxes from customers on transfers of tangible personal property and on certain services and then must remit these taxes to the proper governmental authority. Gap, for example, sets up a liability to provide for taxes collected from customers but not yet remitted to the tax authority. The Sales Taxes Payable account should reflect the liability for sales taxes due various governments.

The entry below illustrates use of the Sales Taxes Payable account on a sale of \$3,000 when a 4 percent sales tax is in effect.

| | | |
|---------------------|-------|-------|
| Cash | 3,120 | |
| Sales Revenue | | 3,000 |
| Sales Taxes Payable | | 120 |

Sometimes the sales tax collections credited to the liability account are not equal to the liability as computed by the governmental formula. In such a case, Gap makes an adjustment of the liability account by recognizing a gain or a loss on sales tax collections.

Many companies do not segregate the sales tax and the amount of the sale at the time of sale. Instead, the company credits both amounts in total in the Sales Revenue account. Then, to reflect correctly the actual amount of sales and the liability for sales taxes, the company would debit the Sales Revenue account for the amount of the sales taxes due the government on these sales, and would credit the Sales Taxes Payable account for the same amount.

To illustrate, assume that the Sales Revenue account balance of \$150,000 includes sales taxes of 4 percent. Thus, the amount recorded in the Sales Revenue account is comprised of the sales amount plus sales tax of 4 percent of the sales amount. Sales therefore are \$144,230.77 ($\$150,000 \div 1.04$) and the sales tax liability is \$5,769.23 ($\$144,230.77 \times 0.04$; or $\$150,000 - \$144,230.77$). The following entry would record the amount due the taxing unit.

| | | |
|---------------------|----------|----------|
| Sales Revenue | 5,769.23 | |
| Sales Taxes Payable | | 5,769.23 |

Income Taxes Payable

Any federal or state income tax varies in proportion to the amount of annual income. Using the best information and advice available, a business must prepare an income tax return and compute the income taxes payable resulting from the operations of the current period. Corporations should classify as a current liability the taxes payable on taxable income, as computed per the tax return.⁵ Unlike a corporation, proprietorships and partnerships are not taxable entities. Because the individual proprietor and the members of a partnership are subject to personal income taxes on their share of the business's taxable income, income tax liabilities do not appear on the financial statements of proprietorships and partnerships.

Most corporations must make periodic tax payments throughout the year in an authorized bank depository or a Federal Reserve Bank. These payments are based upon estimates of the total annual tax liability. As the estimated total tax liability changes, the periodic contributions also change. If in a later year the taxing authority assesses an additional tax on the income of an earlier year, the company should credit Income Taxes Payable and charge the related debit to current operations.

Differences between taxable income under the tax laws and accounting income under generally accepted accounting principles sometimes occur. Because of these differences, the amount of income taxes payable to the government in any given year may differ substantially from income tax expense as reported on the financial statements. Chapter 19 is devoted solely to income tax matters and presents an extensive discussion of this complex topic.

⁵The corporate tax rate is a flat tax of 21 percent, which applies to all corporations, regardless of income.

Employee-Related Liabilities

Companies also report as a current liability amounts owed to employees for salaries or wages at the end of an accounting period. In addition, they often also report as current liabilities the following items related to employee compensation.

1. Payroll deductions.
2. Compensated absences.
3. Bonuses.

Payroll Deductions

The most common types of payroll deductions are taxes, insurance premiums, employee savings, and union dues. **To the extent that a company has not remitted the amounts deducted to the proper authority at the end of the accounting period, it should recognize them as current liabilities.**

Social Security Taxes Since January 1, 1937, Social Security legislation has provided federal **Old Age, Survivor, and Disability Insurance (OASDI)** benefits for certain individuals and their families. Funds for these payments come from taxes levied on both the employer and the employee. Employers collect the employee's share of this tax by deducting it from the employee's gross pay, and remit it to the government along with their share. The government taxes both the employer and the employee at the same rate, currently 6.2 percent based on the employee's gross pay up to a \$128,400 annual limit. The OASDI tax is usually referred to as **FICA** (the Federal Insurance Contribution Act).

In 1965, Congress passed the first federal health insurance program for the aged—popularly known as **Medicare**. This two-part program alleviates the high cost of medical care for those over age 65. A separate Hospital Insurance tax, paid by both the employee and the employer at the rate of 1.45 percent on the employee's total compensation, finances the Basic Plan, which provides for hospital and other institutional services.⁶ The Voluntary Plan covers the major part of doctors' bills and other medical and health services. Monthly payments from all who enroll, plus matching funds from the federal government, finance this plan.

The combination of the OASDI tax (FICA) and the federal Hospital Insurance Tax is commonly referred to as the **Social Security tax**. The combined rate for these taxes, 7.65 percent on an employee's wages to \$128,400 and 1.45 percent in excess of \$128,400, changes intermittently by acts of Congress. **Companies should report the amount of unremitted employee and employer Social Security tax on gross wages paid as a current liability.**

Unemployment Taxes Another payroll tax levied by the federal government in cooperation with state governments provides a system of unemployment insurance. All employers who meet the following criteria are subject to the **Federal Unemployment Tax Act (FUTA)**: (1) those who paid wages of \$1,500 or more during any calendar quarter in the year or preceding year, or (2) those who employed at least one individual on at least one day in each of 20 weeks during the current or preceding calendar year.

In general, only employers pay the unemployment tax. The rate of this tax is 6 percent on the first \$7,000 of compensation paid to each employee during the calendar year. The employer receives a tax credit not to exceed 5.4 percent for contributions paid to a state plan for unemployment compensation. Thus, if an employer is subject to a state unemployment tax of 5.2 percent or more, it pays only 0.8 percent tax to the federal government.

State unemployment compensation laws differ both from the federal law and among various states. Therefore, employers must refer to the unemployment tax laws in each state in which they pay wages and salaries. However, all states provide for some form of **merit rating**, which reduces the state contribution rate. Employers who display by their benefit and contribution experience that they provide steady employment may receive this reduction—if

⁶Under provisions of the Affordable Care Act, the Medicare rate for some high-income taxpayers may be higher.

the size of the state fund is adequate. In order not to penalize an employer who has earned a reduction in the state contribution rate, federal law allows a credit of 5.4 percent, even when the effective state contribution rate is less than 5.4 percent.

To illustrate, Appliance Repair Co. has a taxable payroll of \$100,000. It is subject to a federal rate of 6 percent and a state contribution rate of 5.7 percent. However, its stable employment experience reduces the company's state rate to 1 percent. Appliance Repair computes its federal and state unemployment taxes as shown in **Illustration 13.4**.

ILLUSTRATION 13.4
Computation of Unemployment Taxes

| | |
|--|-----------------------|
| State unemployment tax payment (.01 × \$100,000) | \$1,000 |
| Federal unemployment tax [(0.06 – .054) × \$100,000] | 600 |
| Total federal and state unemployment tax | <u>\$1,600</u> |

Companies pay federal unemployment tax quarterly, and file a tax form annually. Companies also generally pay state contributions quarterly as well. Because both the federal and the state unemployment taxes accrue on earned compensation, companies should record the amount of accrued but unpaid employer contributions **as an operating expense and as a current liability when preparing financial statements at year-end**.

Income Tax Withholding Federal and some state income tax laws require employers to withhold from each employee's pay the applicable income tax due on those wages. The employer computes the amount of income tax to withhold according to a government-prescribed formula or withholding tax table. That amount depends on the length of the pay period and each employee's taxable wages, marital status, and claimed dependents. If the income tax withheld plus the employee and the employer Social Security taxes exceeds specified amounts per month, the employer must make remittances to the government during the month. **Illustration 13.5** summarizes payroll deductions and liabilities.

ILLUSTRATION 13.5
Summary of Payroll Liabilities

| Item | Who Pays | |
|---------------------------|----------|---|
| Income tax withholding | Employee | Employer reports these amounts as liabilities until remitted. |
| FICA taxes—employee share | | |
| Union dues | | |
| FICA taxes—employer share | Employer | |
| Federal unemployment | | |
| State unemployment | | |

Payroll Deductions Example Assume a weekly payroll of \$10,000 entirely subject to FICA and Medicare (7.65%), federal (0.8%) and state (4%) unemployment taxes, with income tax withholding of \$1,320 and union dues of \$88 deducted. **Illustration 13.6** presents the entries for payroll and payroll deductions.

ILLUSTRATION 13.6
Payroll Deductions

| | | |
|---|--------|-------|
| To record salaries and wages paid and the employee payroll deductions: | | |
| Salaries and Wages Expense | 10,000 | |
| Withholding Taxes Payable | | 1,320 |
| FICA Taxes Payable (\$10,000 × .0765) | | 765 |
| Union Dues Payable | | 88 |
| Cash | | 7,827 |
| To record employer payroll taxes: | | |
| Payroll Tax Expense | 1,245 | |
| FICA Taxes Payable | | 765 |
| FUTA Taxes Payable (\$10,000 × .008) | | 80 |
| SUTA Taxes Payable (\$10,000 × .04) | | 400 |

The employer must remit to the government its share of FICA tax along with the amount of FICA tax deducted from each employee's gross compensation. It records all unremitted employer FICA taxes as payroll tax expense and payroll taxes payable.⁷

Compensated Absences

Compensated absences are paid absences from employment—such as vacation, illness, and holidays.⁸ Companies should accrue a liability for the cost of compensation for future absences if **all of the following conditions** exist (see **Underlying Concepts**). [4]

- The employer's obligation relating to employees' rights to receive compensation for future absences is attributable to employees' services **already rendered**.
- The obligation relates to the rights that **vest or accumulate**.
- Payment of the compensation is **probable**.
- The amount can be **reasonably estimated**. [5]

Illustration 13.7 shows an example of an accrual for compensated absences, in an excerpt from the balance sheet of **Clarcor Inc.**

Underlying Concepts

When these four conditions exist, all elements in the definition of a liability exist. In addition, the expense recognition principle requires that the company report the expense for the services in the period consumed.

|  Clarcor Inc. | |
|---|-----------------|
| Current liabilities | |
| Accounts payable | \$ 6,308 |
| Accrued salaries, wages and commissions | 2,278 |
| Compensated absences | 2,271 |
| Accrued pension liabilities | 1,023 |
| Other accrued liabilities | 4,572 |
| | <u>\$16,452</u> |

ILLUSTRATION 13.7

Balance Sheet Presentation of Accrual for Compensated Absences

If an employer meets conditions (a), (b), and (c) but does not accrue a liability because of a failure to meet condition (d), it should disclose that fact. **Illustration 13.8** shows an example of such a disclosure, in a note from the financial statements of **Gotham Utility Company**.

|  Gotham Utility Company | |
|--|--|
| Employees of the Company are entitled to paid vacation, personal, and sick days off, depending on job status, length of service, and other factors. Due to numerous differing union contracts and other agreements with nonunion employees, it is impractical to estimate the amount of compensation for future absences, and, accordingly, no liability has been reported in the accompanying financial statements. The Company's policy is to recognize the cost of compensated absences when actually paid to employees; compensated absence payments to employees totaled \$2,786,000. | |

ILLUSTRATION 13.8

Disclosure of Policy for Compensated Absences

The following considerations are relevant to the accounting for compensated absences.

⁷A manufacturing company allocates all of the payroll costs (wages, payroll taxes, and fringe benefits) to appropriate cost accounts such as Direct Labor, Indirect Labor, Sales Salaries, Administrative Salaries, and the like. This abbreviated and somewhat simplified discussion of payroll costs and deductions is not indicative of the volume of records and clerical work that may be involved in maintaining a sound and accurate payroll system.

⁸In addition, companies provide **postemployment benefits** to past or inactive employees **after employment but prior to retirement**. Examples include salary continuation, supplemental unemployment benefits, severance pay, job training, and continuation of health and life insurance coverage.

Vested rights exist when an employer has an obligation to make payment to an employee even after terminating his or her employment. Thus, vested rights are not contingent on an employee's future service. **Accumulated rights** are those that employees can carry forward to future periods if not used in the period in which earned. For example, assume that you earn four days of vacation pay as of December 31, the end of your employer's fiscal year. Company policy is that you will be paid for this vacation time even if you terminate employment. In this situation, your four days of vacation pay are vested, and your employer must accrue the amount.

Now assume that your vacation days are not vested but that you can carry the four days over into later periods. Although the rights are not vested, they are accumulated rights for which the employer must make an accrual. However, the amount of the accrual is adjusted to allow for estimated forfeitures due to turnover.

A modification of the general rules relates to the issue of **sick pay**. If sick pay benefits vest, a company must accrue them. If sick pay benefits accumulate but do not vest, a company may choose whether to accrue them. Why this distinction? Companies may administer compensation designated as sick pay in one of two ways. In some companies, employees receive sick pay only if illness causes their absence. Therefore, these companies may or may not accrue a liability because its payment depends on future employee illness. Other companies allow employees to accumulate unused sick pay and take compensated time off from work even when not ill. For this type of sick pay, a company must accrue a liability because the company will pay it, regardless of whether employees become ill.

Companies should recognize the expense and related liability for compensated absences in the year earned by employees. For example, if new employees receive rights to two weeks' paid vacation at the beginning of their second year of employment, a company considers the vacation pay to be earned during the first year of employment.

What rate should a company use to accrue the compensated absence cost—the current rate or an estimated future rate? GAAP is silent on this subject. Therefore, companies will likely use the current rather than future rate. The future rate is less certain and raises time value of money issues. To illustrate, assume that Amutron Inc. began operations on January 1, 2020. The company employs 10 individuals and pays each \$480 per week. Employees earned 20 unused vacation weeks in 2020. In 2021, the employees used the vacation weeks, but now they each earn \$540 per week. Amutron records vacation pay as follows.

| To record accrual of vacation pay on December 21, 2020: | | |
|--|-------|--------|
| Salaries and Wages Expense | 9,600 | |
| Salaries and Wages Payable ($\$480 \times 20$) | | 9,600 |
| To record the payment of vacation pay in 2021: | | |
| Salaries and Wages Payable | 9,600 | |
| Salaries and Wages Expense | 1,200 | |
| Cash ($\$540 \times 20$) | | 10,800 |

At December 31, 2020, the company reports on its balance sheet a liability of \$9,600. In 2021, the use of the vacation weeks extinguishes the liability. Note that Amutron records the difference between the amount of cash paid and the reduction in the liability account as an adjustment to Salaries and Wages Expense in the period when paid. This difference arises because it accrues the liability account at the rates of pay in effect during the period when employees **earned** the compensated time. The cash paid, however, depends on the rates in effect during the period when employees **used** the compensated time. If Amutron used the

future rates of pay to compute the accrual in 2020, then the cash paid in 2021 would equal the liability.⁹

What Do the Numbers Mean? How Do You Want That?

One of the more puzzling aspects of the long and slow economic recovery is stagnant wage growth. While employers have been slow to reward workers with higher pay, they have been a bit quicker to offer signing bonuses, more paid time off, and other

perks such as health insurance. As shown in the chart, the benefits part of compensation has been increasing for management and production/transportation workers, while wages and salaries are on the decline.

The move toward benefits over pay provides a few clues that help explain the unusually sluggish growth in wages. Some of this move reflects a workforce that puts a high value on flexibility, health insurance, time off, and other non-wage compensation. At the same time, the shift also highlights the fragility of an expansion in which employers remain hesitant to commit to higher wages and are turning instead to more revocable perks. Said one analyst, “It’s a structural shift that is going on . . . from wages to benefits.” Companies began offering health insurance to skirt wage controls during World War II. Now they are getting more creative, offering gym memberships, cappuccino machines, free cell phones, and dog-friendly workplaces.

There are also tax implications for higher-income earners. Many benefits, including health insurance, are generally

not taxed, but wages are. From a company’s perspective, tilting compensation toward benefits can make sense. In addition, it is often quicker and easier to offer benefits like a signing bonus than it is to restructure salaries, a process that can take a lengthy review and then ripple across a company’s pay structure. It is unclear how much longer this shift can go on. If the economy continues to heal and the labor market tightens further, it may be difficult for employers to shift even more toward the benefits side of the ledger, and bigger raises already could be happening.

Source: E. Morath and J. Sparshott, “Shift to Benefits from Pay Helps Explain Sluggish Wage Growth,” *Wall Street Journal* (November 1, 2015).

Bonus Agreements

Many companies give a **bonus** to certain or all employees in addition to their regular salaries or wages. Frequently the bonus amount depends on the company’s yearly profit. For example, employees at **Ford Motor Company** share in the success of the company’s operations on the basis of a complicated formula using net income as its primary basis for computation. A company may consider **bonus payments to employees** as additional wages and should include them as a deduction in determining the net income for the year.

⁹Some companies also have obligations for benefits paid to employees after they retire. The accounting and reporting standards for postretirement benefit payments are complex. These standards relate to two different types of **post-retirement benefits**: (1) pensions, and (2) postretirement healthcare and life insurance benefits. We discuss these issues extensively in Chapter 20.

To illustrate the entries for an employee bonus, assume that Palmer Inc. shows income for the year 2020 of \$100,000. It will pay out bonuses of \$10,700 in January 2021. Palmer makes the entries presented in **Illustration 13.9**.

ILLUSTRATION 13.9**Bonus Plan Entries**

| Adjusting entry dated December 31, 2020, to record the bonuses: | | |
|---|--------|--------|
| Salaries and Wages Expense | 10,700 | |
| Salaries and Wages Payable | | 10,700 |
| Bonus paid in January 2021: | | |
| Salaries and Wages Payable | 10,700 | |
| Cash | | 10,700 |

Palmer should show the expense account in the income statement as an operating expense. **The liability, Salaries and Wages Payable, is usually payable within a short period of time. Companies should include it as a current liability in the balance sheet.** Similar to bonus agreements are contractual agreements for **conditional expenses**. Examples would be agreements covering rents or royalty payments conditional on the amount of revenues recognized or the quantity of product produced or extracted. Conditional expenses based on revenues or units produced are usually less difficult to compute than bonus arrangements.

For example, assume that a lease calls for a fixed rent payment of \$500 per month and 1 percent of all sales over \$300,000 per year. The company's annual rent obligation would amount to \$6,000 plus \$0.01 of each dollar of revenue over \$300,000. Or, a royalty agreement may give to a patent owner \$1 for every ton of product resulting from the patented process, or give to a mineral rights owner \$0.50 on every barrel of oil extracted. As the company produces or extracts each additional unit of product, it creates an additional obligation, usually a current liability.

Current Maturities of Long-Term Debt

PepsiCo reports as part of its current liabilities the portion of bonds, mortgage notes, and other long-term indebtedness that matures within the next fiscal year. It categorizes this amount as **current maturities of long-term debt**. Companies, like PepsiCo, exclude long-term debts maturing currently as current liabilities if they are to be:

1. Retired by assets accumulated for this purpose that properly have not been shown as current assets,
2. Refinanced, or retired from the proceeds of a new debt issue, or
3. Converted into capital stock.

In these situations, the use of current assets or the creation of other current liabilities does not occur. Therefore, classification as a current liability is inappropriate. A company should disclose the plan for liquidation of such a debt either parenthetically or by a note to the financial statements. When only a part of a long-term debt is to be paid within the next 12 months, as in the case of serial bonds that it retires through a series of annual installments, **the company reports the maturing portion of long-term debt as a current liability**, and the remaining portion as a long-term debt.

However, a company should classify as current any liability that is **due on demand** (callable by the creditor) or will be due on demand within a year (or operating cycle, if longer). Liabilities often become callable by the creditor when there is a violation of the debt agreement. For example, most debt agreements specify a given level of equity to debt be maintained, or specify that working capital be of a minimum amount. If the company violates an agreement, it must classify the debt as current because it is a reasonable expectation that existing working capital will be used to satisfy the debt. Only if a company can show that it is **probable** that it will cure (satisfy) the violation within the grace period specified in the agreements can it classify the debt as noncurrent. [6]

Short-Term Obligations Expected to Be Refinanced

LEARNING OBJECTIVE 2

Explain the classification issues of short-term debt expected to be refinanced.

Short-term obligations are debts scheduled to mature within one year after the date of a company's balance sheet or within its operating cycle, whichever is longer. Some **short-term obligations** are **expected to be refinanced** on a long-term basis. These short-term obligations will not require the use of working capital during the next year (or operating cycle, if longer).¹⁰

Until recently, the accounting profession generally supported the exclusion of short-term obligations expected to be refinanced from current liabilities, if a company had the intent and ability to refinance. However, many expressed concerns that management intent is often in the "eyes of the beholder" and therefore may be subjective and could introduce non-comparability between companies and within companies over time.

As a result, the FASB concluded that applying a principle based on the terms and conditions of a contract (i.e., a contractual approach) is more appropriate. This is because the contractual evidence is more objective than the evidence provided by management expectations. A company therefore can classify short-term debt expected to be refinanced as noncurrent only if one or both of the following criteria are met as of the balance sheet date:

1. The liability is contractually due to be settled more than one year (or operating cycle, if longer) after the balance sheet date.
2. The entity has a contractual right to defer settlement of the liability for at least one year (or operating cycle, if longer) after the balance sheet date. [7]

A company therefore should not report short-term debt expected to be refinanced as noncurrent, unless a valid contract exists to support long-term presentation. For example, if **IBM** has debt due in six months, it is unreasonable for **IBM** to assert that the debt is noncurrent on the basis of its intent and ability to refinance.

What Do the Numbers Mean? Going, Going, Gone

A classic example of the need for rules for liabilities expected to be refinanced is the case of **Penn Central Railroad** before it went bankrupt. The railroad was deep into short-term debt but classified it as long-term debt. Why? Because the railroad believed

it had commitments from lenders to keep refinancing the short-term debt. When those commitments suddenly disappeared, it was "good-bye Pennsy." As the Greek philosopher Epictetus once said, "Some things in this world are not and yet appear to be."

Refinancing Illustration

Another issue related to short-term debt expected to be refinanced involves short-term debt that is refinanced after the balance sheet date but before its financial statements are issued. In this situation, the debt is classified as current because at the balance sheet date, the company does not have the refinancing completed (see **Global View**). **Illustration 13.10** presents an analysis of a refinancing.

Global View

IFRS also requires that the current portion of long-term debt be classified as current unless an agreement to refinance on a long-term basis is completed before the date of the financial statements.

¹⁰Refinancing a short-term obligation on a long-term basis means either replacing it with a long-term obligation or renewing, extending, or replacing it with short-term obligations for an uninterrupted period extending beyond one year (or the operating cycle, if longer) from the date of the company's balance sheet.

ILLUSTRATION 13.10**Short-Term Debt Expected to Be Refinanced****Refinancing**

Facts: Montavon Winery provides the following information related to its note payable:

1. Issued note payable of \$3,000,000 on November 30, 2020. The note is due on February 28, 2021, Montavon's balance sheet date is December 31, and the financial statements are issued on March 1, 2021.
2. Montavon plans to extend the maturity date of the loan (refinance the loan) to June 15, 2022.

The refinancing events are shown in the following timeline.

Questions: (1) What is the accounting treatment for Montavon's short-term debt to be refinanced if a contract to refinance is completed on January 15, 2021?
(2) What is the accounting treatment for the short-term debt to be refinanced if a contract to refinance is completed by December 31, 2020?

Solution: 1. Montavon must classify its note payable as a current liability because the contract for refinancing is not completed by December 31, 2020. The rationale: Refinancing a liability after the balance sheet date does not affect the liquidity or solvency at the balance sheet date, the reporting of which should reflect contractual agreements in force only up to the balance sheet date.
2. Montavon should classify the note payable as noncurrent because it has a contract, which gives it the right to defer payment to June 30, 2022, and the contract is in effect as of December 31, 2020.

As indicated in solutions to questions one and two, decisions about the classification of debt are based on facts and circumstances that exist as of the reporting date (that is, as of the balance sheet date).¹¹

What Do the Numbers Mean? What About That Short-Term Debt?

The evaluation of credit quality involves more than simply assessing a company's ability to repay loans. Credit analysts also evaluate debt management strategies. Analysts and investors will reward what they view as prudent management decisions with lower debt service costs and a higher stock price. The wrong decisions can bring higher debt costs and lower stock prices.

At one time, **General Electric Capital Corp.**, a subsidiary of **General Electric**, experienced the negative effects of market scrutiny of its debt management policies. Analysts complained that GE had been slow to refinance its mountains of short-term debt. GE had issued these current obligations, with maturities of 270 days or less, when interest rates were low. However, in light of expectations that the Fed would raise interest rates, analysts began to worry about the higher interest costs GE would pay when it refinanced these loans. Some analysts recommended that it was time to reduce dependence on short-term credit. The

reasoning goes that a shift to more dependable long-term debt, thereby locking in slightly higher rates for the long-term, is the better way to go.

Thus, scrutiny of GE debt strategies led to analysts' concerns about GE's earnings prospects. Investors took the analysis to heart, and GE experienced a two-day 6 percent drop in its stock price. GE and other companies, such as **CVS** and **Apple**, have responded to these criticisms and have been increasing issuance of long-term debt to lock-in continuing low interest rates.

Cheney, "Apple's Record Plunge into the Debt Pool," *Wall Street Journal* (May, 1, 2013); and N. Trentmann and T. Vossos, "Despite Rising Yields, Most Companies Bide Their Time on Debt," *Wall Street Journal* (March 12, 2018).

¹¹Proposed FASB Accounting Standards Update 2019-XX, *Debt (Topic 470)*: "Simplifying the Classification of Debt in a Classified Balance Sheet (Current versus Noncurrent)." One exception to the contractual classification principle is for waivers of debt covenant violations. Generally, a company that has covenant violations at the balance sheet date must report its debt as current. However, for companies to get covenant violations waived, they are often required by the lender to provide draft financial statements to assess whether a waiver should be granted. Recognizing that companies cannot obtain waivers before the balance sheet date, any company that obtains waivers may report the debt as noncurrent, assuming the waivers occur before the financial statement are issued.

Contingencies

LEARNING OBJECTIVE 3

Explain the accounting for gain and loss contingencies.

Companies often are involved in situations where uncertainty exists about whether an obligation to transfer cash or other assets has arisen and/or the amount that will be required to settle the obligation. For example:

- **Merck** may be a defendant in a lawsuit, and any payment is contingent upon the outcome of a settlement or an administrative or court proceeding.
- **Ford Motor Company** provides a warranty for a car it sells, and any payments are contingent on the number of cars that qualify for benefits under the warranty.
- **Briggs & Stratton** acts as a guarantor on a loan for another entity, and any payment is contingent on whether the other entity defaults.

Broadly, these situations are called contingencies. A **contingency** is “an existing condition, situation, or set of circumstances involving uncertainty as to possible gain (**gain contingency**) or loss (**loss contingency**) to an enterprise that will ultimately be resolved when one or more future events occur or fail to occur.” [8]

Gain Contingencies

Gain contingencies are claims or rights to receive assets (or have a liability reduced) whose existence is uncertain but which may become valid eventually. The typical gain contingencies are:

1. Possible receipts of monies from gifts, donations, asset sales, and so on.
2. Possible refunds from the government in tax disputes.
3. Pending court cases with a probable favorable outcome.
4. Tax loss carryforwards (discussed in Chapter 19).¹²

Companies follow a conservative policy in this area; they do not record gain contingencies. A company discloses gain contingencies in the notes only when a high probability exists for realizing them. As a result, it is unusual to find information about contingent gains in the financial statements and the accompanying notes. **Illustration 13.11** presents an example of a gain contingency disclosure.

| | |
|---|-----------------------------|
| | BMC Industries, Inc. |
| <p>Note 13: Legal Matters. In the first quarter, a U.S. District Court in Miami, Florida, awarded the Company a \$5.1 million judgment against Barth Industries (Barth) of Cleveland, Ohio and its parent, Nesco Holdings, Inc. (Nesco). The judgment relates to an agreement under which Barth and Nesco were to help automate the plastic lens production plant in Fort Lauderdale, Florida. The Company has not recorded any income relating to this judgment because Barth and Nesco have filed an appeal.</p> | |

ILLUSTRATION 13.11

Disclosure of Gain Contingency

¹²Accounting Trends and Techniques indicates that the most common gain contingencies are related to operating loss carryforwards and other tax credits and to tax credit carryforwards.

Loss Contingencies

Loss contingencies involve possible losses. A liability incurred as a result of a loss contingency is by definition a contingent liability. **Contingent liabilities** depend on the occurrence of one or more future events to confirm either the amount payable, the payee, the date payable, or its existence. That is, these factors depend on a contingency.

Likelihood of Loss

When a loss contingency exists, the likelihood that the future event or events will confirm the incurrence of a liability can range from probable to remote (see **Global View**). The FASB uses the terms **probable**, **reasonably possible**, and **remote** to identify three areas within that range and assigns the following meanings.

- **Probable.** The future event or events are likely to occur.
- **Reasonably possible.** The chance of the future event or events occurring is more than remote but less than likely.
- **Remote.** The chance of the future event or events occurring is slight.

Companies should accrue an estimated loss from a loss contingency by a charge to expense and a liability recorded only if **both** of the following conditions are met.¹³

1. Information available prior to the issuance of the financial statements indicates that it is **probable that a liability has been incurred** at the date of the financial statements.
2. The amount of the loss can be **reasonably estimated**.

To record a liability, a company does not need to know the exact payee nor the exact date payable. **What a company must know is whether it is probable that it incurred a liability.**

To meet the second criterion, a company needs to be able to reasonably determine an amount for the liability. To determine a reasonable estimate of the liability, a company may use its own experience, experience of other companies in the industry, engineering or research studies, legal advice, or educated guesses by qualified personnel. **Illustration 13.12** shows disclosure of an accrual recorded for a loss contingency, from the annual report of **Quaker State Oil Refining Company**.

Global View

IFRS uses the term *provisions* to refer to estimated liabilities.

ILLUSTRATION 13.12

Disclosure of Accrual for Loss Contingency

Quaker State Oil Refining Company

Note 5: Contingencies. During the period from November 13 to December 23, a change in an additive component purchased from one of its suppliers caused certain oil refined and shipped to fail to meet the Company's low-temperature performance requirements. The Company has recalled this product and has arranged for reimbursement to its customers and the ultimate consumers of all costs associated with the product. Estimated cost of the recall program, net of estimated third party reimbursement, in the amount of \$3,500,000 has been charged to current operations.

Use of the terms probable, reasonably possible, and remote to classify contingencies involves judgment and subjectivity. **Illustration 13.13** lists examples of loss contingencies and the general accounting treatment accorded them.

Practicing accountants express concern over the diversity that now exists in the interpretation of "probable," "reasonably possible," and "remote." Current practice relies heavily on the exact language used in responses received from lawyers (such language is necessarily

¹³We discuss loss contingencies that result in the incurrence of a liability in this chapter. We discuss loss contingencies that result in the impairment of an asset (e.g., collectibility of receivables or threat of expropriation of assets) in other sections of this text.

ILLUSTRATION 13.13**Accounting Treatment of Loss Contingencies****Usually Accrued****Loss related to:**

1. Collectibility of receivables.
2. Obligations related to product warranties and product defects.
3. Premiums offered to customers.

Not Accrued**Loss related to:**

4. Risk of loss or damage of enterprise property by fire, explosion, or other hazards.
5. General or unspecified business risks.
6. Risk of loss from catastrophes assumed by property and casualty insurance companies, including reinsurance companies.

May Be Accrued***Loss related to:**

7. Threat of expropriation of assets.
8. Pending or threatened litigation.
9. Actual or possible claims and assessments.**
10. Guarantees of indebtedness of others.
11. Obligations of commercial banks under “standby letters of credit.”
12. Agreements to repurchase receivables (or the related property) that have been sold.

*Should be accrued when both criteria—probable and reasonably estimable—are met.

**Estimated amounts of losses incurred prior to the balance sheet date but settled subsequently should be accrued as of the balance sheet date.

biased and protective rather than predictive). As a result, accruals and disclosures of contingencies vary considerably in practice. Some of the more common loss contingencies are:¹⁴

1. Litigation, claims, and assessments.
2. Guarantee and warranty costs.
3. Consideration payable (e.g., premiums and coupons).
4. Environmental liabilities.

As discussed in the opening story, companies do not record or report in the notes to the financial statements general risk contingencies inherent in business operations (e.g., the possibility of war, strike, uninsurable catastrophes, or a business recession).

Litigation, Claims, and Assessments

Companies must consider the following factors, among others, in determining whether to record a liability with respect to **pending or threatened litigation** and actual or possible **claims** and **assessments**.

1. The **time period** in which the underlying cause of action occurred.
2. The **probability** of an unfavorable outcome.
3. The ability to make a **reasonable estimate** of the amount of loss.

To report a loss and a liability in the financial statements, **the cause for litigation must have occurred on or before the date of the financial statements**. It does not matter that the company became aware of the existence or possibility of the lawsuit or claims after the date of the financial statements but before issuing them. To evaluate the probability of an unfavorable outcome, a company considers the following: the nature of the litigation, the progress of the case, the opinion of legal counsel, its own and others’ experience in similar cases, and any management response to the lawsuit. The **Kroger Supermarkets** note in **Illustration 13.14** indicates the judgments involved in determining whether a liability should be recognized.

Companies can seldom predict the outcome of pending litigation, however, with any assurance. And, even if evidence available at the balance sheet date does not favor the company, it is

¹⁴Accounting Trends and Techniques indicated that 500 companies report loss contingencies for the following: litigation, 355; environmental, 195; possible tax assessments, 124; insurance, 154; governmental investigation, 101; and others, 71.

ILLUSTRATION 13.14**Lawsuit Liability****Lawsuit**

Facts: Assume that an employee filed a \$1,000,000 lawsuit on November 30, 2020, against **Kroger Supermarkets** for damages suffered when the employee slipped and suffered a serious injury at one of the company's facilities. Kroger's lawyers believe that the company will not lose the lawsuit, putting the probability of future payments at less than 50 percent.

Question: Should Kroger recognize a liability for legal claims at December 31, 2020?

Solution: Although a past obligating event has occurred (the injury leading to the filing of the lawsuit), **it is not probable** that Kroger will have to pay any damages. Kroger therefore does not need to record a liability (an accrual). If, on the other hand, Kroger's lawyer determined that it is probable that the company will lose the lawsuit, then Kroger should accrue the liability at December 31, 2020.

hardly reasonable to expect the company to publish in its financial statements a dollar estimate of the probable negative outcome. Such specific disclosures might weaken the company's position in the dispute and encourage the plaintiff to intensify its efforts. A typical example of the wording of such a disclosure is the note to the financial statements of **Apple Inc.**, relating to its litigation concerning repetitive stress injuries, as shown in **Illustration 13.15**.

ILLUSTRATION 13.15**Disclosure of Litigation****Apple Inc.**

“Repetitive Stress Injury” Litigation. The Company is named in numerous lawsuits (fewer than 100) alleging that the plaintiff incurred so-called “repetitive stress injury” to the upper extremities as a result of using keyboards and/or mouse input devices sold by the Company. In a trial of one of these cases (*Dorsey v. Apple*) in the United States District Court for the Eastern District of New York, the jury rendered a verdict in favor of the Company, and final judgment in favor of the Company has been entered. The other cases are in various stages of pretrial activity. These suits are similar to those filed against other major suppliers of personal computers. Ultimate resolution of the litigation against the Company may depend on progress in resolving this type of litigation in the industry overall.

With respect to **unfiled suits** and **unasserted claims and assessments**, a company must determine (1) the degree of **probability** that a suit may be filed or a claim or assessment may be asserted, and (2) the **probability** of an unfavorable outcome. For example, assume that the Federal Trade Commission investigates the Nawtee Company for restraint of trade, and institutes enforcement proceedings. Private claims of triple damages for redress often follow such proceedings. In this case, Nawtee must determine the probability of the claims being asserted **and** the probability of triple damages being awarded. If both are probable, if the loss is reasonably estimable, and if the cause for action is dated on or before the date of the financial statements, then Nawtee should accrue the liability.¹⁵

Guarantee and Warranty Costs

A **warranty (product guarantee)** is a promise made by a seller to a buyer to make good on a deficiency of quantity, quality, or performance in a product. Manufacturers commonly use it as a sales promotion technique. Automakers, for instance, “hyped” their sales by extending their new-car warranty to seven years or 100,000 miles. For a specified period of time following the date of sale to the consumer, the manufacturer may promise to bear all or part of the cost of replacing defective parts, to perform any necessary repairs or servicing without charge, to refund the purchase price, or even to “double your money back.”

Warranties and guarantees entail future costs. These additional costs, sometimes called “after costs” or “post-sale costs,” frequently are significant. Although the future cost is

¹⁵Companies need not disclose contingencies involving an unasserted claim or assessment when no claimant has come forward unless (1) it is considered probable that a claim will be asserted, and (2) there is a reasonable possibility that the outcome will be unfavorable. The FASB recently had a project to develop disclosures that are sufficient to enable users of financial statements to assess the likelihood, timing, and amount of future cash flows associated with loss contingencies. As indicated in the opening story, this project and its proposed recommendations were extremely controversial. Although the SEC continues to focus on these disclosures, the FASB has now removed the project from its active agenda.

indefinite as to amount, due date, and even customer, the company has a performance obligation for which a liability should be recognized. The estimated amount of the liability includes all the costs that the company will incur after sale and delivery and that are incident to the correction of defects or deficiencies required under the warranty provisions. Warranty costs are a classic example of a loss contingency.

Companies often provide one of two types of warranties to customers:

1. Warranty that the product meets agreed-upon specifications in the contract at the time the product is sold. This type of warranty is included in the sales price of a company's product and is often referred to as an **assurance-type warranty**.
2. Warranty that provides an additional service beyond the assurance-type warranty. This warranty is not included in the sales price of the product and is referred to as a **service-type warranty**. As a result, it is recorded as a separate performance obligation.

Assurance-Type Warranty Companies do not record a separate performance obligation for assurance-type warranties. This type of warranty is nothing more than a quality guarantee that the good or service is free from defects at the point of sale. These types of obligations should be expensed in the period the goods are provided or services performed. In addition, the company should record a warranty liability. The estimated amount of the liability includes all the costs that the company will incur in the future due to the correction of defects or deficiencies required under the warranty provisions. **Illustration 13.16** provides an example of an assurance-type warranty.

Assurance-Type Warranty

Facts: Denson Machinery Company begins production of a new machine in July 2020 and sells 100 of these machines for \$5,000 cash by year-end for a total sales revenue of \$500,000 ($100 \times \$5,000$). Each machine is under warranty for one year. Denson estimates, based on past experience with similar machines, that the warranty cost will average \$200 per unit for a total expected warranty expense of \$20,000 ($100 \times \200). Further, as a result of parts replacements and services performed in compliance with machinery warranties, it incurs \$4,000 in warranty costs in 2020 and \$16,000 in 2021.

Question: What are the journal entries for the sale and the related warranty costs for 2020 and 2021?

Solution: For the sale of the machines and related warranty costs in 2020, the entries are as follows.

1. To recognize sales of machines:

| July–December 2020 | | |
|--|---------|---------|
| Cash | 500,000 | |
| Sales Revenue ($\$5,000 \times 100$) | | 500,000 |

2. To record payment for warranty costs incurred in 2020:

| July–December 2020 | | |
|----------------------------------|-------|-------|
| Warranty Expense | 4,000 | |
| Cash, Inventory, Accrued Payroll | | 4,000 |

3. The adjusting entry to record estimated warranty expense and warranty liability for expected warranty claims in 2021:

| December 31, 2020 | | |
|---|--------|--------|
| Warranty Expense | 16,000 | |
| Warranty Liability ($\$20,000 - \$4,000$) | | 16,000 |

As a consequence of this adjusting entry at December 31, 2020, the balance sheet reports a warranty liability (current) of \$16,000 ($\$20,000 - \$4,000$). The income statement for 2020 reports sales revenue of \$500,000 and warranty expense of \$20,000.

4. To record payment for warranty costs incurred in 2021 related to 2020 machinery sales:

| January 1–December 31, 2021 | | |
|------------------------------------|--------|--------|
| Warranty Liability | 16,000 | |
| Cash, Inventory, Accrued Payroll | | 16,000 |

At the end of 2021, no warranty liability is reported for the machinery sold in 2020.

ILLUSTRATION 13.16

Accounting for an Assurance-Type Warranty

Service-Type Warranty A warranty is sometimes sold separately from the product. For example, when you purchase a television, you are entitled to an assurance-type warranty. You also will undoubtedly be offered an extended warranty on the product at an additional cost, referred to as a service-type warranty. In most cases, service-type warranties provide the customer a service beyond fixing defects that existed at the time of sale.

Companies record a service-type warranty as a separate performance obligation. For example, in the case of the television, the seller recognizes the sale of the television with the assurance-type warranty separately from the sale of the service-type warranty. The sale of the service-type warranty is usually recorded in an Unearned Warranty Revenue account.

Companies then recognize revenue on a straight-line basis over the period the service-type warranty is in effect. Companies only defer and amortize costs that vary with and are directly related to the sale of the contracts (mainly commissions). Companies expense employees' salaries and wages, advertising, and general and administrative expenses because these costs occur even if the company did not sell the service-type warranty. **Illustration 13.17** presents an example of both an assurance-type and service-type warranty.

ILLUSTRATION 13.17**Assurance-Type and Service-Type Warranties****Warranties**

Facts: You purchase an automobile from Hamlin Auto for \$30,000 on January 2, 2020. Hamlin estimates the assurance-type warranty costs on the automobile to be \$700 (Hamlin will pay for repairs for the first 36,000 miles or three years, whichever comes first). You also purchase for \$900 a service-type warranty for an additional three years or 36,000 miles. "Hamlin incurs warranty costs related to the assurance-type warranty of \$500 in 2020 and expects costs of \$100 in 2021 and 2022. Hamlin records revenue on the service-type warranty on a straight-line basis.

Question: What entries should Hamlin make in 2020 and 2023?*Solution:*

1. To record the sale of the automobile and related warranties:

| January 2, 2020 | | |
|---------------------------|--------|--------|
| Cash (\$30,000 + \$900) | 30,900 | |
| Unearned Warranty Revenue | | 900 |
| Sales Revenue | | 30,000 |

2. To record warranty costs incurred in 2020:

| January 2–December 31, 2020 | | |
|------------------------------------|-----|-----|
| Warranty Expense | 500 | |
| Cash, Inventory, Accrued Payroll | | 500 |

3. The adjusting entry to record estimated warranty expense and warranty liability for expected assurance warranty claims in 2021:

| December 31, 2020 | | |
|--------------------------|-----|-----|
| Warranty Expense | 200 | |
| Warranty Liability | | 200 |

As a consequence of this adjusting entry at December 31, 2020, the balance sheet reports a warranty liability of \$200 for the assurance-type warranty costs in 2021 and 2022. The income statement for 2020 reports sales revenue of \$30,000 and warranty expense of \$700.

4. To record revenue recognized in 2023 on the service-type warranty:

| January 1–December 31, 2023 | | |
|---------------------------------------|-----|-----|
| Unearned Warranty Revenue (\$900 ÷ 3) | 300 | |
| Warranty Revenue | | 300 |

Warranty costs under the service-type warranty will be expensed as incurred in 2023–2025.

Consideration Payable

Companies often make payments (provide consideration) to their customers as part of a revenue arrangement. Consideration paid or payable may indicate discounts, volume rebates, free products, or services. For example, numerous companies offer premiums (either on a limited or continuing basis) to customers in return for box tops, certificates, coupons, labels, or wrappers. The **premium** may be silverware, dishes, a small appliance, a toy, or free transportation. Also, **printed coupons** that can be redeemed for a cash discount on items purchased are extremely

popular. Another popular marketing innovation is the **cash rebate**, which the buyer can obtain by returning the store receipt, a rebate coupon, and Universal Product Code (UPC label) or “bar code” to the manufacturer.¹⁶

Companies offer premiums, coupon offers, and rebates to stimulate sales. And to the extent that the premiums reflect a material right promised to the customer, a performance obligation exists and should be recorded as a liability (see **Underlying Concepts**). However, the period that benefits is not necessarily the period in which the company pays the premium. At the end of the accounting period, many premium offers may be outstanding and must be redeemed when presented in subsequent periods. In order to reflect the existing current liability, the company estimates the number of outstanding premium offers that customers will present for redemption. The company then charges the cost of premium offers to Premium Expense. It credits the outstanding obligations to an account titled Premium Liability. [9] **Illustration 13.18** provides an example of the accounting for consideration payable using premiums.¹⁷

ILLUSTRATION 13.18 Accounting for Consideration Payable

Consideration Payable

Facts: Fluffy Cake Mix Company sells boxes of cake mix for \$3 per box. In addition, Fluffy Cake Mix offers its customers a large durable mixing bowl in exchange for \$1 and 10 box tops. The mixing bowl costs Fluffy Cake Mix \$2, and the company estimates that customers will redeem 60 percent of the box tops. The premium offer began in June 2020. During 2020, Fluffy Cake Mix purchased 20,000 mixing bowls at \$2, sold 300,000 boxes of cake mix for \$3 per box, and redeemed 60,000 box tops.

Question: What entries should Fluffy Cake Mix record in 2020?

Solution:

- To record purchase of 20,000 mixing bowls at \$2 per bowl in 2020:

| | | |
|---|--------|--------|
| Premium Inventory (20,000 mixing bowls × \$2) | 40,000 | |
| Cash | | 40,000 |
- The entry to record the sale of the cake mix boxes in 2020 is as follows:

| | | |
|--|---------|---------|
| Cash (300,000 boxes of cake mix × \$3) | 900,000 | |
| Sales Revenue | | 900,000 |
- To record the actual redemption of 60,000 box tops, the receipt of \$1 per 10 box tops, and the delivery of the mixing bowls:

| | | |
|---|-------|--------|
| Cash [(60,000 ÷ 10) × \$1] | 6,000 | |
| Premium Expense | 6,000 | |
| Premium Inventory [(60,000 ÷ 10) × \$2] | | 12,000 |
- The adjusting entry to record additional premium expense and the estimated premium liability at December 31, 2020, is as follows:

| | | |
|-------------------|--------|---------|
| Premium Expense | 12,000 | |
| Premium Liability | | 12,000* |

*Computation of Premium Liability at 12/31/20:

| | |
|---|-----------------|
| Total box tops sold in 2020 | 300,000 |
| Estimated redemptions (in percent) | × .60 |
| Total estimated redemptions | <u>180,000</u> |
| Cost of estimated redemptions | |
| [(180,000 box tops ÷ 10) × (\$2 - \$1)] | \$18,000 |
| Redemptions to date | <u>(6,000)</u> |
| Liability at 12/31/20 | <u>\$12,000</u> |

The December 31, 2020, balance sheet of Fluffy Cake Mix reports Premium Inventory of \$28,000 (\$40,000 - \$12,000) as a current asset and Premium Liability of \$12,000 (\$18,000 - \$6,000) as a current liability. The 2020 income statement reports \$18,000 premium expense as a selling expense.

Underlying Concepts

Warranties and coupons are loss contingencies that satisfy the conditions necessary for a liability. Regarding the income statement, the *expense recognition principle* requires that companies report the related expense in the period in which the expense is incurred. According to the revenue recognition principle, revenue is recorded in the period in which the performance obligation is satisfied.

¹⁶Coupons and rebates originated in the early twentieth century as a marketing gimmick. Such promotions are traditionally issued by consumer products manufacturers. In a recent year, there were a total of 305 billion consumer packed goods coupons distributed throughout the United States. However, consumers only redeemed 2.9 billion (less than 1%) of those coupons (for about \$3.7 billion). Online and mobile coupons are also becoming a popular trend, with 20 percent of consumers using in-app mobile coupons for grocery shopping. For many retailers, the cost of coupon/rebate programs is more than worth the cost, especially when they can gather data on customers through the process. See <https://www.statista.com/topics/1156/coupon-market-trends-in-the-united-states/>.

¹⁷We provide expanded discussion of performance obligations, such as those reflected in warranties and premiums, in Chapter 18.

What Do the Numbers Mean? Frequent Flyers

Numerous companies offer premiums to customers in the form of a promise of future goods or services as an incentive for purchases today. Premium plans that have widespread adoption are the frequent-flyer programs used by all major airlines. On the basis of mileage accumulated, frequent-flyer members receive discounted or free airline tickets. Airline customers can earn miles toward free travel by making expenditures for such items as staying in hotels and charging gasoline and groceries on a credit card. Those free tickets represent an enormous potential liability because people using them may displace paying passengers.

When airlines first started offering frequent-flyer bonuses, everyone assumed that they could accommodate the free-ticket holders with otherwise-empty seats. That made the additional cost of the program so minimal that airlines did not accrue it or report the small liability. But, as more and more paying passengers have been crowded off flights by frequent-flyer awardees, the loss of revenues has grown enormously. For example, **Delta Air Lines** reported liabilities of over \$3.9 billion for frequent-flyer tickets.

Environmental Liabilities

Estimates to clean up existing toxic waste sites total upward of \$752 billion over a 30-year period. In addition, cost estimates of cleaning up our air and preventing future deterioration of the environment run even higher. These costs are likely to only grow, considering “Superfund legislation.” This federal legislation provides the Environmental Protection Agency (EPA) with the power to clean up waste sites and charge the clean-up costs to parties the EPA deems responsible for contaminating the site. These potentially responsible parties can have a significant liability.

In many industries, the construction and operation of long-lived assets involves obligations for the retirement of those assets. When a mining company opens up a strip mine, it may also commit to restore the land once it completes mining. Similarly, when an oil company erects an offshore drilling platform, it may be legally obligated to dismantle and remove the platform at the end of its useful life.

Accounting Recognition of Asset Retirement Obligations A company must recognize an **asset retirement obligation (ARO)** when it has an existing legal obligation associated with the retirement of a long-lived asset and when it can reasonably estimate the amount of the liability. Companies should record the ARO at fair value. [10]

Obligating Events Examples of existing legal obligations, which require recognition of a liability include, but are not limited to:

- Decommissioning of nuclear facilities;
- Dismantling, restoring, and reclaiming of oil and gas properties;
- Certain closure, reclamation, and removal costs of mining facilities; and
- Closure and post-closure costs of landfills.

In order to capture the benefits of these long-lived assets, **the company is generally legally obligated for the costs associated with retirement of the asset, whether the company hires another party to perform the retirement activities or performs the activities with its own workforce and equipment.** AROs give rise to various recognition patterns. For example, the obligation may arise at the outset of the asset’s use (e.g., erection of an oil-rig), or it may build over time (e.g., a landfill that expands over time).

Measurement A company initially measures an ARO at fair value, which is defined as the amount that the company would pay in an active market to settle the ARO. While active markets do not exist for many AROs, companies should estimate fair value based on the best information available. Such information could include market prices of similar liabilities, if available. Alternatively, companies may use present value techniques to estimate fair value.

Recognition and Allocation To record an ARO in the financial statements, a company includes the cost associated with the ARO in the carrying amount of the related long-lived asset, and records a liability for the same amount. It records an asset retirement cost as part of the related asset because these costs are directly related to operating the asset and are

necessary to prepare the asset for its intended use. Therefore, the specific asset (e.g., mine, drilling platform, nuclear power plant) should be increased because the future economic benefit comes from the use of this productive asset. **Companies should not record the capitalized asset retirement costs in a separate account because there is no future economic benefit that can be associated with these costs alone.**

In subsequent periods, companies allocate the cost of the ARO to expense over the period of the related asset's useful life. Companies may use the straight-line method for this allocation, as well as other systematic and rational allocations.

Example of ARO Accounting Provisions To illustrate the accounting for AROs, assume that on January 1, 2020, Wildcat Oil Company erected an oil platform in the Gulf of Mexico. Wildcat is legally required to dismantle and remove the platform at the end of its useful life, estimated to be five years. Wildcat estimates that dismantling and removal will cost \$1,000,000. Based on a 10 percent discount rate, the fair value of the asset retirement obligation is estimated to be \$620,920 ($\$1,000,000 \times .62092$). Wildcat records this ARO as follows.

| January 1, 2020 | | |
|-----------------------------|---------|---------|
| Drilling Platform | 620,920 | |
| Asset Retirement Obligation | | 620,920 |

During the life of the asset, Wildcat allocates the asset retirement cost to expense. Using the straight-line method, Wildcat makes the following entries to record this expense.

| December 31, 2020, 2021, 2022, 2023, 2024 | | |
|--|---------|---------|
| Depreciation Expense ($\$620,920 \div 5$) | 124,184 | |
| Accumulated Depreciation—Plant Assets | | 124,184 |

In addition, Wildcat must accrue interest expense each period. Wildcat records interest expense and the related increase in the asset retirement obligation on December 31, 2020, as follows.

| December 31, 2020 | | |
|---|--------|--------|
| Interest (Accretion) Expense ($\$620,920 \times .10$) | 62,092 | |
| Asset Retirement Obligation | | 62,092 |

On January 10, 2025, Wildcat contracts with Rig Reclaimers, Inc. to dismantle the platform at a contract price of \$995,000. Wildcat makes the following journal entry to record settlement of the ARO.

| January 10, 2025 | | |
|-----------------------------|-----------|---------|
| Asset Retirement Obligation | 1,000,000 | |
| Gain on Settlement of ARO | | 5,000 |
| Cash | | 995,000 |

Companies provide extensive disclosure regarding environmental liabilities. In addition, some believe that companies should record more of these liabilities. The SEC recommends that companies not delay recognition of a liability due to significant uncertainty. The SEC argues that if the liability is within a range, and no amount within the range is the best estimate, then management should recognize the minimum amount of the range. That treatment is in accordance with GAAP. The SEC also believes that companies should report environmental liabilities in the balance sheet independent of recoveries from third parties. Thus, companies may not net possible insurance recoveries against liabilities but must show them separately. Because there is much litigation regarding recovery of insurance proceeds, these “assets” appear to be gain contingencies. Therefore, companies should not report these on the balance sheet.¹⁸

¹⁸As we indicated earlier, the FASB requires that, when some amount within the range appears at the time to be a better estimate than any other amount within the range, a company accrues that amount. When no amount within the range is a better estimate than any other amount, the company accrues the dollar amount at the low end of the range and discloses the dollar amount at the high end of the range. Unfortunately, in many cases, zero may arguably be the low point of the range, resulting in no liability being recognized. [11], [12]

Evolving Issue Greenhouse Gases: Let's Be Standard-Setters

Ok, here is your chance to determine what to do about a very fundamental issue—how to account for greenhouse gases (GHG), often referred to as carbon emissions. Many governments are trying a market-based system, in which companies pay for an excessive amount of carbon emissions put into the atmosphere. In this market-based system, companies are granted carbon allowance permits. Each permit allows them to discharge, as an example, one metric ton of carbon dioxide (CO₂). In some cases, companies may receive a number of these permits free—in other situations, they must pay for them. Other approaches require companies only to pay when they exceed a certain amount. The question then is how to account for these permits and related liabilities? For example, what happens when the permits issued by the government are free? Should an asset and revenue be reported? And if an asset is recorded, should the debit be to an intangible asset or inventory? Also, should the company recognize a liability related to its pollution? And how do we account for companies that have to purchase permits because they have exceeded their allowance?

Two views seem to have emerged. The first is referred to as the **net liability approach**. In this approach, a company does not recognize an asset or liability. A company only recognizes a liability

once GHG exceed the permits granted. To illustrate, Holton Refinery receives permits on January 1, 2020, representing the right to emit 10,000 tons of GHG for the year 2020. Other data:

- The market price of each permit at date of issuance is \$10 per ton.
- During the year, Holton emits 12,000 tons.
- The market price for a permit is \$16 per ton at December 31, 2020.

Under the net liability approach, Holton records only a liability of \$32,000 for the additional amount that it must pay for the 2,000 permits it must purchase at \$16 per ton.

Another approach is referred to as the **government grant approach**. In this approach, permits granted by the government are recorded at their fair value based on the initial price of \$10 per ton. The asset recorded is an intangible asset. At the same time, an Unearned Revenue account is credited, which is subsequently recognized in income over the 2020 year. During 2020, a liability and a related emission expense of \$132,000 is recognized [(10,000 tons × \$10) + (2,000 tons × \$16)]. The chart below compares the results of each approach on the financial statements.

| | Net Liability Approach | Government Grant Approach |
|-------------------|-------------------------|---------------------------|
| | Income Statement | |
| Revenues | \$ -0- | \$100,000 |
| Emission expenses | 32,000 | 132,000 |
| Net loss | <u>\$32,000</u> | <u>\$ 32,000</u> |
| | Balance Sheet | |
| Assets | \$ -0- | \$100,000 |
| Liabilities | 32,000 | 132,000 |

So what do you think—net liability or government grant approach? As indicated, companies presently can report this information either way, plus some other variants which were not

mentioned here. Please feel free to contact the FASB regarding your views.

Underlying Concepts

Even if companies can estimate the amount of losses with a high degree of certainty, the losses are not liabilities because they result from a future event and not from a past event.

Self-Insurance

As discussed earlier, contingencies are not recorded for general risks (e.g., losses that might arise due to poor expected economic conditions). Similarly, companies do not record contingencies for more specific future risks such as allowances for repairs. The reason: These items do not meet the definition of a liability because they do not arise from a past transaction but instead relate to future events (see **Underlying Concepts**).

Some companies take out insurance policies against the potential losses from fire, flood, storm, and accident. Other companies do not. The reasons: Some risks are not insurable, the insurance rates are prohibitive (e.g., earthquakes and riots), or they make a business decision to self-insure. Self-insurance is another item that is not recognized as a contingency.

Despite its name, **self-insurance** is **not insurance but risk assumption**. Any company that assumes its own risks puts itself in the position of incurring expenses or losses as they happen. There is little theoretical justification for the establishment of a liability based on a hypothetical charge to insurance expense. This is “as if” accounting. The conditions for accrual stated in GAAP are not satisfied prior to the occurrence of the event. Until that time there is no diminution in the value of the property. And unlike an insurance company, which has contractual obligations to reimburse policyholders for

losses, a company can have no such obligation to itself and, hence, no liability either before or after the occurrence of damage. [13]¹⁹

The note shown in **Illustration 13.19** from the annual report of **Molson Coors Brewing Company** is typical of the self-insurance disclosure.

| Molson Coors Brewing Company | |
|---|--|
| Notes to Financial Statements (in part) | |
| Note 21: Insurance. | We are self-insured for certain insurable risks consisting primarily of employee health insurance programs, as well as workers' compensation, general liability, automobile liability, and property insurance deductibles or retentions . . . we fully insured future risks for long-term disability, and, in most states, workers' compensation, but maintained a self-insured position for workers' compensation for certain self-insured states and for claims incurred prior to the inception of the insurance coverage in Colorado in 1997. |

ILLUSTRATION 13.19
Disclosure of Self-Insurance

Exposure to **risks of loss resulting from uninsured past injury to others**, however, is an existing condition involving uncertainty about the amount and timing of losses that may develop. In such a case, a contingency exists. A company with a fleet of vehicles for example, would have to accrue uninsured losses resulting from injury to others or damage to the property of others that took place prior to the date of the financial statements (if the experience of the company or other information enables it to make a reasonable estimate of the liability). However, it should not establish a liability for **expected future injury** to others or damage to the property of others, even if it can reasonably estimate the amount of losses.

What Do the Numbers Mean? More Disclosure, Please

As discussed in the opening story, over the past several years standard-setters have debated recognition and measurement of liabilities. The **Enron** failure highlighted another deficiency in the reporting of liabilities that spurred regulatory action.

On November 19, 2001, Enron filed its third-quarter financial statements and reported on its balance sheet debt of approximately \$13 billion. Yet on the same day, at a meeting to discuss its liquidity crisis, Enron informed its bankers that its debt was approximately \$38 billion. Company officers described the difference of *\$25 billion* as being either off-balance-sheet or on the balance sheet other than debt.

As a result of the Enron bankruptcy and other financial reporting scandals, Congress passed the Sarbanes-Oxley Act in 2002 and amendments in 2010. One of its provisions mandates that the Securities and Exchange Commission conduct a study to determine the extent of off-balance-sheet transactions occurring in U.S. businesses.

The following table indicates the extent of disclosure and recognition of contingent liabilities. The study classified contingent liabilities into three categories: (1) litigation contingent liabilities, (2) environmental contingent liabilities, and (3) guarantees. The statistics provided relate to reports filed by 10,100 companies listed on the U.S. stock exchanges.

| Type of Contingency | Companies Disclosing | Companies Recording |
|--------------------------------------|----------------------|---------------------|
| Litigation contingent liabilities | 46.3% | 5.1% |
| Environmental contingent liabilities | 10.2 | 5.1 |
| Guarantees | 35.4 | 10.2 |

As indicated, approximately 46 percent of companies disclosed litigation contingent liabilities, but only 5.1 percent recorded any liability related to these contingencies. On the other hand, 35 percent of the companies disclosed guarantees but a third of these companies (10.2 percent) recorded a liability for these contingencies.

The next table shows the dollar amounts of the contingent liabilities companies disclosed and recorded.

| Type of Contingency | Companies Disclosing (\$ millions) | Companies Recording (\$ millions) |
|--------------------------------------|------------------------------------|-----------------------------------|
| Litigation contingent liabilities | \$ 52,354 | \$ 11,814 |
| Environmental contingent liabilities | 23,414 | 18,723 |
| Guarantees | 46,535,399 | 123,949 |

¹⁹A commentary in *Forbes* (June 15, 1974, p. 42) stated its position on this matter quite succinctly: "The simple and unquestionable fact of life is this: Business is cyclical and full of unexpected surprises. Is it the role of accounting to disguise this unpleasant fact and create a fairyland of smoothly rising earnings? Or, should accounting reflect reality, warts and all—floods, expropriations and all manner of rude shocks?"

As indicated, companies disclosed litigation contingent liabilities of approximately \$52 billion but recorded only \$11.8 billion as liabilities. Incredibly, companies disclosed more than \$46 trillion of guarantees, a small fraction of which (just \$124 billion) they recorded as liabilities.

The results of this study suggest that the FASB must continue to address the issue of contingencies to ensure that companies provide relevant and representationally faithful information for these types of financial events.

Presentation and Analysis

LEARNING OBJECTIVE 4

Indicate how to present and analyze liabilities and contingencies.

Presentation of Current Liabilities

In practice, current liabilities are usually recorded and reported in financial statements at their full maturity value. Because of the short time periods involved, frequently less than one year, the difference between the present value of a current liability and the maturity value is usually not large. The profession accepts as immaterial any slight overstatement of liabilities that results from carrying current liabilities at maturity value. [14]²⁰

The current liabilities accounts are commonly presented as the first classification in the liabilities and stockholders’ equity section of the balance sheet. Within the current liabilities section, companies may list the accounts in order of maturity, in descending order of amount, or in order of liquidation preference. A total for current liabilities should be presented in a classified balance sheet. **Illustration 13.20** presents an excerpt of **Best Buy Co.**’s financial statements that is representative of the reports of large corporations.

ILLUSTRATION 13.20

Balance Sheet Presentation of Current Liabilities

| | Jan. 28, 2017 | Jan. 30, 2016 |
|---|------------------|------------------|
| Current assets | | |
| Cash and cash equivalents | \$ 2,240 | \$1,976 |
| Short-term investments | 1,681 | 1,305 |
| Receivables | 1,347 | 1,162 |
| Merchandise inventories | 4,864 | 5,051 |
| Other current assets | 384 | 392 |
| Total current assets | \$10,516 | \$9,886 |
| Current liabilities | | |
| Accounts payable | \$ 4,984 | \$4,450 |
| Deferred revenue | 427 | 409 |
| Unredeemed gift card liabilities | 418 | 357 |
| Accrued compensation and related expenses | 358 | 384 |
| Accrued liabilities | 865 | 802 |
| Accrued income taxes | 26 | 128 |
| Current portion of long-term debt | 44 | 395 |
| Total current liabilities | \$ 7,122 | \$6,925 |

²⁰GAAP specifically exempts from present value measurements those payables arising from transactions with suppliers in the normal course of business that do not exceed approximately one year.

Detail and supplemental information concerning current liabilities should be sufficient to meet the requirement of full disclosure. Companies should clearly identify secured liabilities, as well as indicate the related assets pledged as collateral. If the due date of any liability can be extended, a company should disclose the details. Companies should not offset current liabilities against assets that it will apply to their liquidation. Finally, current maturities of long-term debt are classified as current liabilities (see **Global View**).

A major exception exists when a company will pay a currently maturing obligation from assets classified as long-term. For example, if **Disney** retires a bond payable using a bond sinking fund that is classified as a long-term asset, it should report the bonds payable in the long-term liabilities section. Presentation of this debt in the current liabilities section would distort the working capital position of the company.

If a company excludes a short-term obligation from current liabilities because of refinancing, it should include the following in the note to the financial statements:

1. A general description of the financing agreement.
2. The terms of any new obligation incurred or to be incurred.
3. The terms of any equity security issued or to be issued.

When a company expects to refinance on a long-term basis by issuing equity securities, it is not appropriate to include the short-term obligation in stockholders' equity. At the date of the balance sheet, the obligation is a liability and not stockholders' equity. **Illustration 13.21** shows the disclosure requirements for an actual refinancing situation.

| | December 31, 2020 |
|---|-------------------|
| Current liabilities | |
| Accounts payable | \$ 3,600,000 |
| Accrued payables | 2,500,000 |
| Income taxes payable | 1,100,000 |
| Current portion of long-term debt | 1,000,000 |
| Notes payable refinanced in January 2021 (Note 1) | <u>2,000,000</u> |
| Total current liabilities | \$10,200,000 |
| Long-term debt | |
| 11% bonds due serially through 2031 | <u>15,000,000</u> |
| Total long-term debt | \$17,000,000 |

Note 1: On January 19, 2021, the Company issued 50,000 shares of common stock and received proceeds totaling \$2,385,000, of which \$2,000,000 was used to liquidate notes payable that matured on February 1, 2021. Such notes payable have been classified as a current liability at December 31, 2020, because the refinancing was not completed by the balance sheet date.

Global View

Companies reporting under IFRS often report noncurrent liabilities before current liabilities.

ILLUSTRATION 13.21

Actual Refinancing of Short-Term Debt

Presentation of Contingencies

A company records a loss contingency and a liability if the loss is both probable and estimable. But, if the loss is **either probable or estimable but not both**, and if there is at least a **reasonable possibility** that a company may have incurred a liability, it must disclose the following in the notes.

1. The nature of the contingency.
2. An estimate of the possible loss or range of loss or a statement that an estimate cannot be made.

Illustration 13.22 presents an extensive litigation disclosure note from the financial statements of **Raymark Corporation**. The note indicates that Raymark charged actual losses to operations and that a further liability may exist, but that the company cannot currently estimate this liability.

ILLUSTRATION 13.22**Disclosure of Loss Contingency through Litigation****Raymark Corporation**

Note 1: Litigation. Raymark is a defendant or co-defendant in a substantial number of lawsuits alleging wrongful injury and/or death from exposure to asbestos fibers in the air. The following table summarizes the activity in these lawsuits:

| | |
|--|---------|
| Claims | |
| Pending at beginning of year | 8,719 |
| Received during year | 4,494 |
| Settled or otherwise disposed of | (1,445) |
| Pending at end of year | 11,768 |
| Average indemnification cost | \$3,364 |
| Average cost per case, including defense costs | \$6,499 |
| Trial activity | |
| Verdicts for the Company | 23 |
| Total trials | 36 |

The following table presents the cost of defending asbestos litigation, together with related insurance and workers' compensation expenses.

| | |
|------------------------------|---------------------|
| Included in operating profit | \$ 1,872,000 |
| Nonoperating expense | 9,077,000 |
| Total | <u>\$10,949,000</u> |

The Company is seeking to reasonably determine its liability. However, it is not possible to predict which theory of insurance will apply, the number of lawsuits still to be filed, the cost of settling and defending the existing and unfiled cases, or the ultimate impact of these lawsuits on the Company's consolidated financial statements.

Global View

GAAP provides more guidance on the content of disclosures about contingencies than does IFRS.

Companies should disclose certain other contingent liabilities, even though the possibility of loss may be remote, as follows (see **Global View**).

1. Guarantees of indebtedness of others.
2. Obligations of commercial banks under "stand-by letters of credit."
3. Guarantees to repurchase receivables (or any related property) that have been sold or assigned.

Disclosure should include the nature and amount of the guarantee and, if estimable, the amount that the company can recover from outside parties.²¹ **Cities Service Company** disclosed its guarantees of others' indebtedness in the note shown in **Illustration 13.23**.

ILLUSTRATION 13.23**Disclosure of Guarantees of Indebtedness****Cities Service Company**

Note 10: Contingent Liabilities. The Company and certain subsidiaries have guaranteed debt obligations of approximately \$62 million of companies in which substantial stock investments are held. Also, under long-term agreements with certain pipeline companies in which stock interests are held, the Company and its subsidiaries have agreed to provide minimum revenue for product shipments. The Company has guaranteed mortgage debt (\$80 million) incurred by a 50 percent owned tanker affiliate for construction of tankers which are under long-term charter contracts to the Company and others. It is not anticipated that any loss will result from any of the above described agreements.

Analysis of Current Liabilities

The distinction between current liabilities and long-term debt is important. It provides information about the liquidity of the company. Liquidity regarding a liability is the expected time to elapse before its payment. In other words, a liability soon to be paid is a current liability.

²¹The FASB has issued additional disclosure and recognition requirements for guarantees. The interpretation responds to confusion about the reporting of guarantees used in certain transactions. The rules expand existing disclosure requirements for most guarantees, including loan guarantees such as standby letters of credit. It also will result in companies recognizing more liabilities at fair value for the obligations assumed under a guarantee. [15]

A liquid company is better able to withstand a financial downturn. Also, it has a better chance of taking advantage of investment opportunities that develop.

Analysts use certain basic ratios such as net cash flow provided by operating activities to current liabilities, and the turnover ratios for receivables and inventory, to assess liquidity. Two other ratios used to examine liquidity are the current ratio and the acid-test ratio.

Current Ratio

The **current ratio** is the ratio of total current assets to total current liabilities. **Illustration 13.24** shows its formula.

$$\text{Current Ratio} = \frac{\text{Current Assets}}{\text{Current Liabilities}}$$

ILLUSTRATION 13.24

Formula for Current Ratio

The ratio is frequently expressed as a coverage of so many times. Sometimes it is called the **working capital ratio** because working capital is the excess of current assets over current liabilities.

A satisfactory current ratio does not disclose that a portion of the current assets may be tied up in slow-moving inventories. With inventories, especially raw materials and work in process, there is a question of how long it will take to transform them into the finished product and what ultimately will be realized in the sale of the merchandise. Eliminating the inventories, along with any prepaid expenses, from the amount of current assets might provide better information for short-term creditors. Therefore, some analysts use the acid-test ratio in place of the current ratio.

Acid-Test Ratio

Many analysts favor an **acid-test** or **quick ratio** that relates total current liabilities to cash, short-term investments, and receivables. **Illustration 13.25** shows the formula for this ratio. As you can see, the acid-test ratio does not include inventories.

$$\text{Acid-Test Ratio} = \frac{\text{Cash} + \text{Short-Term Investments} + \text{Accounts Receivable (net)}}{\text{Current Liabilities}}$$

ILLUSTRATION 13.25

Formula for Acid-Test Ratio

To illustrate the computation of these two ratios, we use the information for **Best Buy Co.** in Illustration 13.20. **Illustration 13.26** shows the computation of the current and acid-test ratios for Best Buy.

$$\begin{aligned} \text{Current ratio} &= \frac{\text{Current assets}}{\text{Current liabilities}} = \frac{\$10,516}{\$7,122} = 1.48 \text{ times} \\ \text{Acid-test ratio} &= \frac{\text{Cash} + \text{Short-term investments} + \text{Accounts receivable (net)}}{\text{Current liabilities}} = \frac{\$5,268}{\$7,122} = 0.74 \text{ times} \end{aligned}$$

ILLUSTRATION 13.26

Computation of Current and Acid-Test Ratios for Best Buy Co.

From this information, it appears that Best Buy's current position is adequate. However, the acid-test ratio is well below 1. A comparison to another retailer, **Wal-Mart Stores, Inc.**, whose current ratio is 0.86 and whose acid-test ratio is 0.19, indicates that Best Buy is more liquid based on these ratios.

What Do the Numbers Mean? I'll Pay You Later

As indicated in the comparison of liquidity for **Best Buy** and **Wal-Mart**, Best Buy appears to be the more liquid company. However, a closer look at the elements of working capital may suggest a different story. This is because Wal-Mart and other retailers like **Tesco** could be using a strategy adopted recently to extend the period of time for paying their vendors. By pushing out payments to suppliers to three and four months, companies can pursue any number of other projects. For example, **Mondelez** is buying back stock. **Kellogg's** is in the middle of a restructuring. **Procter & Gamble's** recent move to extend its payment terms to 75 days added about \$1 billion to its cash flow. These strategies result in higher current liabilities and lower liquidity ratios. So while Wal-Mart looks less liquid, its strategy may pay off in the form of lower overall financing costs. According to a Kellogg's spokesperson, by extending payments to 120 days, "it gives Kellogg's and our suppliers more flexibility to manage our businesses effectively through better cash flow management."

Suppliers, however, may not share the same enthusiasm for extended paying terms. Receiving payments later is often crippling for suppliers, especially smaller businesses that have little cushion. In Britain, the Marketing Agencies Association called on its

member advertising agencies to "strike" in April against **Anheuser-Busch InBev**, after the company began seeking new terms. Those included acceptance of a payment period longer than 120 days and a request for pro bono work. On the other hand, offsetting these costs for suppliers in arrangements with powerful retailers are longer-term contracts and more consistency in order volumes.

Either way, according to one accounting analyst, "the additional financing costs that suppliers incur because they aren't being paid promptly work their way back into higher prices for consumers." In addition, this makes it difficult for investors to compare companies, if some are able to squeeze suppliers and others do not. Those with power in the supply chain, like Wal-Mart, may appear less liquid. So to make valid comparisons of liquidity ratios, you need to know something about the company's supply chain strategy.

Learning Objectives Review

1 Describe the nature, valuation, and reporting of current liabilities.

Current liabilities are **obligations whose liquidation a company reasonably expects to require the use of current assets or the creation of other current liabilities**. Theoretically, liabilities should be measured by the present value of the future outlay of cash required to

liquidate them. In practice, companies usually record and report current liabilities at their full maturity value.

There are several **types of current liabilities**, such as (1) accounts payable, (2) notes payable, (3) current maturities of long-term debt, (4) dividends payable, (5) customer advances and deposits, (6) unearned revenues, (7) taxes payable, and (8) employee-related liabilities. The employee-related liabilities are (1) payroll deductions, (2) compensated absences, and (3) bonus agreements.

2 Explain the classification issues of short-term debt expected to be refinanced.

A short-term obligation is excluded from current liabilities if either of the following conditions are met: (1) the liability is contractually due to be settled more than one year (or operating cycle, if longer) after the balance sheet date, or (2) the company has a contractual right to defer settlement of the liability for at least one year (or operating cycle, if longer) after the balance sheet date.

3 Explain the accounting for gain and loss contingencies.

Gain contingencies are not recorded. Instead, they are disclosed in the notes only when the probabilities are high that a gain contingency will occur. A company should accrue an estimated loss from a **loss contingency** by charging expense and recording a liability only if *both* of the following conditions are met: (1) information available prior to the issuance of the financial statements indicates that it is probable that a liability has been incurred at the date of the financial statements, and (2) the amount of the loss can be reasonably estimated.

The following factors must be considered in **determining whether to record a liability** with respect to pending or threatened litigation and actual or possible claims and assessments: (1) the time period in which the underlying cause for action occurred, (2) the probability of an unfavorable outcome, and (3) the ability to reasonably estimate the amount of loss.

If it is probable that customers will make claims under **warranties** relating to goods or services that have been sold and it can reasonably estimate the costs involved, the company uses the accrual

method. It charges warranty costs under the accrual basis to operating expense in the year of sale.

Premiums, coupon offers, and rebates are made to stimulate sales. Companies should charge their costs to expense in the period of the sale that benefits from the premium plan.

A company must recognize asset retirement obligations when it has an existing legal obligation related to the retirement of a long-lived asset and it can reasonably estimate the amount.

4 Indicate how to present and analyze liabilities and contingencies.

The current liability accounts are usually presented as the first classification in the liabilities and stockholders' equity section of the balance sheet. Within the current liabilities section, companies may list the accounts in order of maturity, in descending order of amount, or in order of liquidation preference. Detail and supplemental information concerning current liabilities should be sufficient to meet the requirement of full disclosure. If the loss is either probable or estimable but not both, and if there is at least a reasonable possibility that a company may have incurred a liability, it should disclose in the notes both the nature of the contingency and an estimate of the possible loss. Two ratios used to analyze liquidity are the **current and acid-test ratios**.

Enhanced Review and Practice

Practice Problem

Listed below are selected transactions of Baileys' Department Store for the current year ending December 31.

- On December 5, the store received \$500 from the Jackson Players as a deposit to be returned after certain furniture to be used in stage production was returned on January 15.
- During December, cash sales totaled \$798,000, which includes the 5% sales tax that must be remitted to the state by the fifteenth day of the following month.
- On December 10, the store purchased for cash three delivery trucks for \$120,000. The trucks were purchased in a state that applies a 5% sales tax.
- The store determined it will cost \$100,000 to restore the area (considered a land improvement) surrounding one of its store parking lots, when the store is closed in 2 years. Baileys' estimates the fair value of the obligation at December 31 is \$84,000.
- As a result of uninsured accidents during the year, personal injury suits for \$350,000 and \$60,000 have been filed against the company. It is the judgment of Baileys' legal counsel that an unfavorable outcome is unlikely in the \$60,000 case but that an unfavorable verdict approximating \$250,000 (reliably estimated) will probably result in the \$350,000 case.
- Baileys' Midwest store division consisting of 12 stores in "Tornado Alley" is uninsurable because of the special risk of injury to customers, employees, and losses due to severe weather and subpar construction standards in older malls. The year 2020 is considered one of the safest (luckiest) in the division's history because no loss due to injury or casualty was suffered. Having suffered an average of three casualties a year during the rest of the past decade (ranging from \$60,000 to \$700,000), management is certain that next year the company will probably not be so fortunate.

Instructions

- a. Prepare all the journal entries necessary to record the transactions noted above as they occurred and any adjusting journal entries relative to the transactions that would be required to present fair financial statements at December 31. Date each entry. For simplicity, assume that adjusting entries are recorded only once a year on December 31.
- b. For items 5 and 6, indicate what should be reported relative to each situation in the financial statements and accompanying notes. Explain why.

Solution

| | | | | |
|--------------|-----------|--|---------|---------|
| a. 1. | Dec. 5 | Cash | 500 | |
| | | Due to Customer | | 500 |
| 2. | Dec. 1–31 | Cash | 798,000 | |
| | | Sales Revenue ($\$798,000 \div 1.05$) | | 760,000 |
| | | Sales Taxes Payable ($\$760,000 \times .05$) | | 38,000 |
| 3. | Dec. 10 | Trucks ($\$120,000 \times 1.05$) | 126,000 | |
| | | Cash | | 126,000 |
| 4. | Dec. 31 | Land Improvements | 84,000 | |
| | | Asset Retirement Obligation | | 84,000 |
| 5. | | Lawsuit Loss | 250,000 | |
| | | Lawsuit Liability | | 250,000 |

6. No entry required.
- b. 5. A loss and a liability have been recorded in the first case because (i) information is available prior to the issuance of the financial statements that indicates it is probable that a liability had been incurred at the date of the financial statements and (ii) the amount is reasonably estimable. That is, the occurrence of the uninsured accidents during the year plus the outstanding injury suits and the attorney's estimate of probable loss required recognition of a loss contingency.
6. Even though Baileys' Midwest store division is uninsurable due to high risk and has sustained repeated losses in the past, as of the balance sheet date no assets have been impaired or liabilities incurred, nor is an amount reasonably estimable. Therefore, this situation does not satisfy the criteria for recognition of a loss contingency. Also, unless a casualty has occurred or there is some other evidence to indicate impairment of an asset prior to the issuance of the financial statements, there is no disclosure required relative to a loss contingency. Disclosure is required when one or both of the criteria for a loss contingency are not satisfied and there is a reasonable possibility that a liability may have been incurred or an asset impaired, or it is probable that a claim will be asserted and there is a reasonable possibility of an unfavorable outcome.

WileyPLUS

Exercises, Problems, Problem Solution Walkthrough Videos, and many more assessment tools and resources are available for practice in WileyPLUS.

Questions

1. Distinguish between a current liability and a long-term debt.
2. Assume that your friend Will Morris, who is a music major, asks you to define and discuss the nature of a liability. Assist him by preparing a definition of a liability and by explaining to him what you believe are the elements or factors inherent in the concept of a liability.
3. Why is the liabilities section of the balance sheet of primary significance to bankers?
4. How are current liabilities related by definition to current assets? How are current liabilities related to a company's operating cycle?
5. Leon Wight, a newly hired loan analyst, is examining the current liabilities of a corporate loan applicant. He observes that unearned revenues have declined in the current year compared to the prior year. Is this a positive indicator about the client's liquidity? Explain.
6. How is present value related to the concept of a liability?

7. What is the nature of a “discount” on notes payable?
8. How should a debt callable by the creditor be reported in the debtor’s financial statements?
9. Discuss the accounting treatment or disclosure that should be accorded a declared but unpaid cash dividend, an accumulated but undeclared dividend on cumulative preferred stock, and a stock dividend distributable.
10. How does unearned revenue arise? Why can it be classified properly as a current liability? Give several examples of business activities that result in unearned revenues.
11. What are compensated absences?
12. Under what conditions must an employer accrue a liability for the cost of compensated absences?
13. Under what conditions is an employer required to accrue a liability for sick pay? Under what conditions is an employer permitted but not required to accrue a liability for sick pay?
14. Faith Battle operates a health food store, and she has been the only employee. Her business is growing, and she is considering hiring some additional staff to help her in the store. Explain to her the various payroll deductions that she will have to account for, including their potential impact on her financial statements, if she hires additional staff.
15. Under what conditions should a short-term obligation be excluded from current liabilities?
16. What evidence is necessary to demonstrate the ability to consummate the refinancing of short-term debt?
17. Define (a) a contingency and (b) a contingent liability.
18. Under what conditions should a contingent liability be recorded?
19. Distinguish between a determinable current liability and a contingent liability. Give two examples of each type.
20. How are the terms “probable,” “reasonably possible,” and “remote” related to contingent liabilities?
21. Grant Company has had a record-breaking year in terms of growth in sales and profitability. However, market research indicates that it will experience operating losses in two of its major businesses next year. The controller has proposed that the company record a provision for these future losses this year, since it can afford to take the charge and still show good results. Advise the controller on the appropriateness of this charge.
22. Explain the accounting for an assurance-type warranty.
23. Explain the accounting for a service-type warranty.
24. Southeast Airlines Inc. awards members of its Flightline program a second ticket at half price, valid for 2 years anywhere on its flight system, when a full-price ticket is purchased. How would you account for the full-fare and half-fare tickets?
25. Pacific Airlines Co. awards members of its Frequent Fliers Club one free round-trip ticket, anywhere on its flight system, for every 50,000 miles flown on its planes. How would you account for the free ticket award?
26. When must a company recognize an asset retirement obligation?
27. Should a liability be recorded for risk of loss due to lack of insurance coverage? Discuss.
28. What factors must be considered in determining whether or not to record a liability for pending litigation? For threatened litigation?
29. Within the current liabilities section, how do you believe the accounts should be listed? Defend your position.
30. How does the acid-test ratio differ from the current ratio? How are they similar?
31. When should liabilities for each of the following items be recorded on the books of an ordinary business corporation?
 - a. Acquisition of goods by purchase on credit.
 - b. Officers’ salaries.
 - c. Special bonus to employees.
 - d. Dividends.
 - e. Purchase commitments.

Brief Exercises

BE13.1 (LO 1) Roley Corporation uses a periodic inventory system and the gross method of accounting for purchase discounts. On July 1, Roley purchased \$60,000 of inventory, terms 2/10, n/30, FOB shipping point. Roley paid freight costs of \$1,200. On July 3, Roley returned damaged goods and received credit of \$6,000. On July 10, Roley paid for the goods. Prepare all necessary journal entries for Roley.

BE13.2 (LO 1) Upland Company borrowed \$40,000 on November 1, 2020, by signing a \$40,000, 9%, 3-month note. Prepare Upland’s November 1, 2020, entry; the December 31, 2020, annual adjusting entry; and the February 1, 2021, entry.

BE13.3 (LO 1) Takemoto Corporation borrowed \$60,000 on November 1, 2020, by signing a \$61,350, 3-month, zero-interest-bearing note. Prepare Takemoto’s November 1, 2020, entry; the December 31, 2020, annual adjusting entry; and the February 1, 2021, entry.

BE13.4 (LO 1) Sport Pro Magazine sold 12,000 annual subscriptions on August 1, 2020, for \$18 each. Prepare Sport Pro’s August 1, 2020, journal entry and the December 31, 2020, annual adjusting entry, assuming the magazines are published and delivered monthly.

BE13.5 (LO 1) Dillons Corporation made credit sales of \$30,000 which are subject to 6% sales tax. The corporation also made cash sales which totaled \$20,670 including the 6% sales tax. (a) Prepare the entry to record Dillons’ credit sales. (b) Prepare the entry to record Dillons’ cash sales.

BE13.6 (LO 1) Lexington Corporation’s weekly payroll of \$24,000 included FICA taxes withheld of \$1,836, federal taxes withheld of \$2,990, state taxes withheld of \$920, and insurance premiums withheld of \$250. Prepare the journal entry to record Lexington’s payroll.

BE13.7 (LO 1) Kasten Inc. provides paid vacations to its employees. At December 31, 2020, 30 employees have each earned 2 weeks of vacation time. The employees' average salary is \$500 per week. Prepare Kasten's December 31, 2020, adjusting entry.

BE13.8 (LO 1) Mayaguez Corporation provides its officers with bonuses based on net income. For 2020, the bonuses total \$350,000 and are paid on February 15, 2021. Prepare Mayaguez's December 31, 2020, adjusting entry and the February 15, 2021, entry.

BE13.9 (LO 2) At December 31, 2020, Burr Corporation owes \$500,000 on a note payable due February 15, 2021. (a) If Burr had restructured the note on December 15, 2020, such that Burr has the contractual right to defer payment of \$250,000 of the note until February 15, 2022, how much of the \$500,000 should be reported as a current liability at December 31, 2020? (b) If Burr pays off the note on February 15, 2021, and then borrows \$1,000,000 on a long-term basis on March 1, how much of the \$500,000 should be reported as a current liability at December 31, 2020, the end of the fiscal year?

BE13.10 (LO 3) Scorcese Inc. is involved in a lawsuit at December 31, 2020. (a) Prepare the December 31 entry assuming it is probable that Scorcese will be liable for \$900,000 as a result of this suit. (b) Prepare the December 31 entry, if any, assuming it is *not* probable that Scorcese will be liable for any payment as a result of this suit.

BE13.11 (LO 3) Buchanan Company recently was sued by a competitor for patent infringement. Attorneys have determined that it is probable that Buchanan will lose the case and that a reasonable estimate of damages to be paid by Buchanan is \$300,000. In light of this case, Buchanan is considering establishing a \$100,000 self-insurance allowance. What entry(ies), if any, should Buchanan record to recognize this loss contingency?

BE13.12 (LO 3) Calaf's Drillers erects and places into service an off-shore oil platform on January 1, 2021, at a cost of \$10,000,000. Calaf is legally required to dismantle and remove the platform at the end of its useful life in 10 years. Calaf estimates it will cost \$1,000,000 to dismantle and remove the platform at the end of its useful life in 10 years. (The fair value at January 1, 2021, of the dismantle and removal costs is \$450,000.) Prepare the entry to record the asset retirement obligation.

BE13.13 (LO 3) Strep Factory provides a 2-year warranty with one of its products which was first sold in 2020. Strep sold \$1,000,000 of products subject to the warranty. Strep expects \$125,000 of warranty costs over the next 2 years. In that year, Strep spent \$70,000 servicing warranty claims. Prepare Strep's journal entry to record the sales (ignore cost of goods sold) and the December 31 adjusting entry, assuming the expenditures are inventory costs.

BE13.14 (LO 3) Leppard Corporation sells DVD players. The corporation also offers its customers a 4-year warranty contract. During 2020, Leppard sold 20,000 warranty contracts at \$99 each. The corporation spent \$180,000 servicing warranties during 2020. Prepare Leppard's journal entries for (a) the sale of contracts, (b) the cost of servicing the warranties, and (c) the recognition of warranty revenue. Assume the service costs are inventory costs.

BE13.15 (LO 3) Wynn Company offers a set of building blocks to customers who send in 3 UPC codes from Wynn cereal, along with 50¢. The block sets cost Wynn \$1.10 each to purchase and 60¢ each to mail to customers. During 2020, Wynn sold 1,200,000 boxes of cereal. The company expects 30% of the UPC codes to be sent in. During 2020, 120,000 UPC codes were redeemed. Prepare Wynn's December 31, 2020, adjusting entry.

Exercises

E13.1 (LO 1) (Balance Sheet Classification of Various Liabilities) How would each of the following items be reported on the balance sheet?

- | | |
|---|--|
| a. Accrued vacation pay. | j. Premium offers outstanding. |
| b. Estimated taxes payable. | k. Discount on notes payable. |
| c. Service warranties on appliance sales. | l. Personal injury claim pending. |
| d. Bank overdraft. | m. Current maturities of long-term debts to be paid from current assets. |
| e. Employee payroll deductions unremitted. | n. Cash dividends declared but unpaid. |
| f. Unpaid bonus to officers. | o. Dividends in arrears on preferred stock. |
| g. Deposit received from customer to guarantee performance of a contract. | p. Loans from officers. |
| h. Sales taxes payable. | |
| i. Gift certificates sold to customers but not yet redeemed. | |

E13.2 (LO 1) Excel (Accounts and Notes Payable) The following are selected 2020 transactions of Astin Corporation.

- Sept. 1 Purchased inventory from Encino Company on account for \$50,000. Astin records purchases gross and uses a periodic inventory system.
- Oct. 1 Issued a \$50,000, 12-month, 8% note to Encino in payment of account.
- Oct. 1 Borrowed \$50,000 from the Shore Bank by signing a 12-month, zero-interest-bearing \$54,000 note.

Instructions

- a. Prepare journal entries for the selected transactions above.
- b. Prepare adjusting entries at December 31.
- c. Compute the total net liability to be reported on the December 31 balance sheet for:
 1. The interest-bearing note.
 2. The zero-interest-bearing note.

E13.3 (LO 1) (Compensated Absences) Broderick Company began operations on January 2, 2019. It employs 9 individuals who work 8-hour days and are paid hourly. Each employee earns 10 paid vacation days and 6 paid sick days annually. Vacation days may be taken after January 15 of the year following the year in which they are earned. Sick days may be taken as soon as they are earned; unused sick days accumulate. Additional information is as follows.

| Actual Hourly Wage Rate | | Vacation Days Used by Each Employee | | Sick Days Used by Each Employee | |
|----------------------------|------|--|------|------------------------------------|------|
| 2019 | 2020 | 2019 | 2020 | 2019 | 2020 |
| \$10 | \$11 | 0 | 9 | 4 | 5 |

Broderick Company has chosen to accrue the cost of compensated absences at rates of pay in effect during the period when earned and to accrue sick pay when earned.

Instructions

- a. Prepare journal entries to record transactions related to compensated absences during 2019 and 2020.
- b. Compute the amounts of any liability for compensated absences that should be reported on the balance sheet at December 31, 2019 and 2020.

E13.4 (LO 1) Excel (Compensated Absences) Assume the facts in E13.3 except that Broderick Company has chosen not to accrue paid sick leave until used, and has chosen to accrue vacation time at expected future rates of pay without discounting. The company used the following projected rates to accrue vacation time.

| Year in Which Vacation Time Was Earned | Projected Future Pay Rates Used to Accrue Vacation Pay |
|---|---|
| 2019 | \$10.75 |
| 2020 | 11.60 |

Instructions

- a. Prepare journal entries to record transactions related to compensated absences during 2019 and 2020.
- b. Compute the amounts of any liability for compensated absences that should be reported on the balance sheet at December 31, 2019, and 2020.

E13.5 (LO 1) (Adjusting Entry for Sales Tax) During the month of June, Rowling Boutique recorded cash sales of \$233,200 and credit sales of \$153,700, both of which include the 6% sales tax that must be remitted to the state by July 15.

Instructions

Prepare the adjusting entry that should be recorded to fairly present the June 30 financial statements.

E13.6 (LO 1) (Payroll Tax Entries) The payroll of YellowCard Company for September 2020 is as follows.

Total payroll was \$480,000, of which \$110,000 is exempt from Social Security tax because it represented amounts paid in excess of \$128,400 to certain employees. The amount paid to employees in excess of \$7,000 was \$400,000. Income taxes in the amount of \$80,000 were withheld, as was \$9,000 in union

dues. The state unemployment tax is 3.5%, but YellowCard Company is allowed a credit of 2.3% by the state for its unemployment experience. Also, assume that the current FICA tax is 7.65% on an employee's wages to \$128,400 and 1.45% in excess of \$128,400. No employee for YellowCard makes more than \$125,000. The federal unemployment tax rate is 0.8% after state credit.

Instructions

Prepare the necessary journal entries if the wages and salaries paid and the employer payroll taxes are recorded separately.

E13.7 (LO 1) (Payroll Tax Entries) Green Day Hardware's payroll for November 2020 is summarized below.

| Payroll | Wages Due | Amount Subject to Payroll Taxes | | |
|----------------|-----------|---------------------------------|------------------|----------|
| | | FICA | Unemployment Tax | |
| | | | Federal | State |
| Factory | \$120,000 | \$120,000 | \$40,000 | \$40,000 |
| Sales | 32,000 | 32,000 | 4,000 | 4,000 |
| Administrative | 36,000 | 36,000 | — | — |
| Total | \$188,000 | \$188,000 | \$44,000 | \$44,000 |

At this point in the year, some employees have already received wages in excess of those to which payroll taxes apply. Assume that the state unemployment tax is 2.5%. The FICA rate is 7.65% on an employee's wages to \$128,400 and 1.45% in excess of \$128,400. Of the \$188,000 wages subject to FICA tax, \$20,000 of the sales wages is in excess of \$128,400. Federal unemployment tax rate is 0.8% after credits. Income tax withheld amounts to \$16,000 for factory, \$7,000 for sales, and \$6,000 for administrative.

Instructions

- Prepare a schedule showing the employer's total cost of wages for November by function. (Round all computations to nearest dollar.)
- Prepare the journal entries to record the factory, sales, and administrative payrolls including the employer's payroll taxes.

E13.8 (LO 2) (Refinancing of Short-Term Debt) On December 31, 2020, McDaniel Company had \$1,200,000 of short-term debt in the form of notes payable due February 2, 2021. On January 21, 2021, the company issued 25,000 shares of its common stock for \$38 per share, receiving \$950,000 proceeds after brokerage fees and other costs of issuance. On February 2, 2021, the proceeds from the stock sale, supplemented by an additional \$250,000 cash, are used to liquidate the \$1,200,000 debt. The December 31, 2020, balance sheet is issued on February 23, 2021.

Instructions

Show how the \$1,200,000 of short-term debt should be presented on the December 31, 2020, balance sheet, including note disclosure.

E13.9 (LO 2) (Refinancing of Short-Term Debt) On December 31, 2020, Holmes Company has \$7,000,000 of short-term debt in the form of notes payable to Gotham State Bank due in 2021. On December 28, 2020, Holmes enters into a refinancing agreement with Gotham that will permit it to borrow up to 60% of the gross amount of its accounts receivable. Receivables are expected to range between a low of \$6,000,000 in May to a high of \$8,000,000 in October during the year 2021. The interest cost of the maturing short-term debt is 15%, and the new agreement calls for a fluctuating interest at 1% above the prime rate on notes due in 2025. Holmes's December 31, 2020, balance sheet is issued on February 15, 2021.

Instructions

Prepare a partial balance sheet for Holmes at December 31, 2020, showing how its \$7,000,000 of short-term debt should be presented, including footnote disclosure.

E13.10 (LO 3) (Warranties) Soundgarden Company sold 200 color laser copiers on July 10, 2020, for \$4,000 apiece, together with a 1-year warranty. Maintenance on each copier during the warranty period is estimated to be \$330.

Instructions

Prepare entries to record the sale of the copiers, the related warranty costs, and any accrual on December 31, 2020. Actual warranty costs (inventory) incurred in 2020 were \$17,000.

E13.11 (LO 3) (Warranties) Early in 2020, Crow Equipment sold 500 Rollomatics at \$6,000 each. During 2020, Crow spent \$20,000 servicing the 2-year assurance warranties that accompany the Rollomatic. All applicable transactions are on a cash basis.

Instructions

- Prepare 2020 entries for Crow. Assume that Crow estimates the total cost of servicing the warranties in the second year will be \$35,000.
- Prepare 2020 entries for Crow assuming that the warranties are not an integral part of the sale (a service-type warranty). Assume that of the sales total, \$56,000 relates to sales of warranty contracts. Warranty costs incurred in 2020 were \$20,000. Estimate revenues to be recognized on a straight-line basis.

E13.12 (LO 3) (Premium Entries) No Doubt Company includes one coupon in each box of soap powder that it packs, and 10 coupons are redeemable for a premium (a kitchen utensil). In 2020, No Doubt Company purchased 8,800 premiums at 80 cents each and sold 110,000 boxes of soap powder at \$3.30 per box; 44,000 coupons were presented for redemption in 2020. It is estimated that 60% of the coupons will eventually be presented for redemption.

Instructions

Prepare all the entries that would be made relative to sales of soap powder and to the premium plan in 2020.

E13.13 (LO 3) (Contingencies) Presented below are three independent situations. Answer the question at the end of each situation.

- During 2020, Salt-n-Pepa Inc. became involved in a tax dispute with the IRS. Salt-n-Pepa's attorneys have indicated that they believe it is probable that Salt-n-Pepa will lose this dispute. They also believe that Salt-n-Pepa will have to pay the IRS between \$900,000 and \$1,400,000. After the 2020 financial statements were issued, the case was settled with the IRS for \$1,200,000. What amount, if any, should be reported as a liability for this contingency as of December 31, 2020?
- On October 1, 2020, Jackson Chemical was identified as a potentially responsible party by the Environmental Protection Agency. Jackson's management along with its counsel have concluded that it is probable that Jackson will be responsible for damages, and a reasonable estimate of these damages is \$5,000,000. Jackson's insurance policy of \$9,000,000 has a deductible clause of \$500,000. How should Jackson Chemical report this information in its financial statements at December 31, 2020?
- Etheridge Inc. had a manufacturing plant in Sudan, which was destroyed in the civil war. It is not certain who will compensate Etheridge for this destruction, but Etheridge has been assured by governmental officials that it will receive a definite amount for this plant. The amount of the compensation will be less than the fair value of the plant, but more than its book value. How should the contingency be reported in the financial statements of Etheridge Inc.?

E13.14 (LO 3) (Asset Retirement Obligation) Oil Products Company purchases an oil tanker depot on January 1, 2020, at a cost of \$600,000. Oil Products expects to operate the depot for 10 years, at which time it is legally required to dismantle the depot and remove the underground storage tanks. It is estimated that it will cost \$75,000 to dismantle the depot and remove the tanks at the end of the depot's useful life.

Instructions

- Prepare the journal entries to record the depot and the asset retirement obligation for the depot on January 1, 2020. Based on an effective-interest rate of 6%, the present value of the asset retirement obligation on January 1, 2020, is \$41,879.
- Prepare any journal entries required for the depot and the asset retirement obligation at December 31, 2020. Oil Products uses straight-line depreciation; the estimated salvage value for the depot is zero.
- On December 31, 2029, Oil Products pays a demolition firm to dismantle the depot and remove the tanks at a price of \$80,000. Prepare the journal entry for the settlement of the asset retirement obligation.

E13.15 (LO 3) Groupwork (Premiums) The following are three independent situations.

- Hairston Stamp Company records stamp service revenue and provides for the cost of redemptions in the year stamps are sold to licensees. Hairston's past experience indicates that only 80% of the stamps sold to licensees will be redeemed. Hairston's liability for stamp redemptions was \$13,000,000 at December 31, 2019. Additional information for 2020 is as follows.

| | |
|--|-------------|
| Stamp service revenue from stamps sold to licensees | \$9,500,000 |
| Cost of redemptions (stamps sold prior to 1/1/20) | 6,000,000 |

If all the stamps sold in 2020 were presented for redemption in 2021, the redemption cost would be \$5,200,000. What amount should Hairston report as a liability for stamp redemptions at December 31, 2020?

2. In packages of its products, Burnitz Inc. includes coupons that may be presented at retail stores to obtain discounts on other Burnitz products. Retailers are reimbursed for the face amount of coupons redeemed plus 10% of that amount for handling costs. Burnitz honors requests for coupon redemption by retailers up to 3 months after the consumer expiration date. Burnitz estimates that 60% of all coupons issued will ultimately be redeemed. Information relating to coupons issued by Burnitz during 2020 is as follows.

| | |
|--|-----------|
| Consumer expiration date | 12/31/20 |
| Total face amount of coupons issued | \$800,000 |
| Total payments to retailers as of 12/31/20 | 330,000 |

What amount should Burnitz report as a liability for unredeemed coupons at December 31, 2020?

3. Roland Company sold 700,000 boxes of pie mix under a new sales promotional program. Each box contains one coupon, which submitted with \$4.00, entitles the customer to a baking pan. Roland pays \$6.00 per pan and \$0.50 for handling and shipping. Roland estimates that 70% of the coupons will be redeemed, even though only 250,000 coupons had been processed during 2020. What amount should Roland report as a liability for unredeemed coupons at December 31, 2020?

(AICPA adapted)

E13.16 (LO 4) (Financial Statement Impact of Liability Transactions) Presented below is a list of possible transactions.

- Purchased inventory for \$80,000 on account (assume perpetual system is used).
- Issued an \$80,000 note payable in payment on account (see item 1 above).
- Recorded accrued interest on the note from item 2 above.
- Borrowed \$100,000 from the bank by signing a 6-month, \$112,000, zero-interest-bearing note.
- Recognized 4 months' interest expense on the note from item 4 above.
- Recorded cash sales of \$75,260, which includes 6% sales tax.
- Recorded wage expense of \$35,000. The cash paid was \$25,000; the difference was due to various amounts withheld.
- Recorded employer's payroll taxes.
- Accrued accumulated vacation pay.
- Recorded an asset retirement obligation.
- Recorded bonuses due to employees.
- Recorded a contingent loss on a lawsuit that the company will probably lose.
- Accrued warranty expense.
- Paid warranty costs that were accrued in item 13 above.
- Recorded sales of product and related service-type warranties.
- Paid warranty costs under contracts from item 15 above.
- Recognized warranty revenue (see item 15 above).
- Recorded estimated liability for premium claims outstanding.

Instructions

Set up a table using the format shown below and analyze the effect of the 18 transactions on the financial statement categories indicated.

| # | Assets | Liabilities | Owners' Equity | Net Income |
|---|--------|-------------|----------------|------------|
| 1 | | | | |

Use the following code:

I: Increase D: Decrease NE: No effect

E13.17 (LO 4) (Ratio Computations and Discussion) Sprague Company has been operating for several years, and on December 31, 2020, presented the following balance sheet.

| Sprague Company Balance Sheet December 31, 2020 | | | |
|--|------------------|------------------------|------------------|
| Cash | \$ 40,000 | Accounts payable | \$ 80,000 |
| Receivables | 75,000 | Mortgage payable | 140,000 |
| Inventory | 95,000 | Common stock (\$1 par) | 150,000 |
| Plant assets (net) | <u>220,000</u> | Retained earnings | <u>60,000</u> |
| | <u>\$430,000</u> | | <u>\$430,000</u> |

The net income for 2020 was \$25,000. Assume that total assets are the same in 2019 and 2020.

Instructions

Compute each of the following ratios. For each of the four, indicate the manner in which it is computed and its significance as a tool in the analysis of the financial soundness of the company.

- a. Current ratio.
- b. Acid-test ratio.
- c. Debt to assets ratio.
- d. Return on assets.

E13.18 (LO 4) (Ratio Computations and Analysis) Prior Company's condensed financial statements provide the following information.

| Prior Company Balance Sheet | | |
|--|--------------------|--------------------|
| | Dec. 31, 2020 | Dec. 31, 2019 |
| Cash | \$ 52,000 | \$ 60,000 |
| Accounts receivable (net) | 198,000 | 80,000 |
| Short-term investments | 80,000 | 40,000 |
| Inventory | 440,000 | 360,000 |
| Prepaid expenses | <u>3,000</u> | <u>7,000</u> |
| Total current assets | \$ 773,000 | \$ 547,000 |
| Property, plant, and equipment (net) | <u>857,000</u> | <u>853,000</u> |
| Total assets | <u>\$1,630,000</u> | <u>\$1,400,000</u> |
| Current liabilities | 240,000 | 160,000 |
| Bonds payable | 400,000 | 400,000 |
| Common stockholders' equity | <u>990,000</u> | <u>840,000</u> |
| Total liabilities and stockholders' equity | <u>\$1,630,000</u> | <u>\$1,400,000</u> |

| Income Statement For the Year Ended 2020 | |
|---|-------------------|
| Sales revenue | \$1,640,000 |
| Cost of goods sold | <u>(800,000)</u> |
| Gross profit | 840,000 |
| Selling and administrative expenses | <u>(440,000)</u> |
| Interest expense | <u>(40,000)</u> |
| Net income | <u>\$ 360,000</u> |

Instructions

- a. Determine the following for 2020.
 1. Current ratio at December 31.
 2. Acid-test ratio at December 31.
 3. Accounts receivable turnover.

4. Inventory turnover.
 5. Return on assets.
 6. Profit margin on sales.
- b. Prepare a brief evaluation of the financial condition of Prior Company and of the adequacy of its profits.

E13.19 (LO 4) (Ratio Computations and Effect of Transactions) Presented below is information related to Carver Inc.

| Carver Inc. Balance Sheet December 31, 2020 | | | |
|---|-----------|-----------|---|
| Cash | | \$ 45,000 | Notes payable (short-term) \$ 50,000 |
| Receivables | \$110,000 | | Accounts payable 32,000 |
| Less: Allowance | 15,000 | 95,000 | Accrued liabilities 5,000 |
| Inventory | | 170,000 | Common stock (par \$5) 260,000 |
| Prepaid insurance | | 8,000 | Retained earnings 141,000 |
| Land | | 20,000 | |
| Equipment (net) | | 150,000 | |
| | | \$488,000 | \$488,000 |

| Carver Inc. Income Statement For the Year Ended December 31, 2020 | | |
|---|-----------|-------------|
| Sales revenue | | \$1,400,000 |
| Cost of goods sold | | |
| Inventory, Jan. 1, 2020 | \$200,000 | |
| Purchases | 790,000 | |
| Cost of goods available for sale | 990,000 | |
| Inventory, Dec. 31, 2020 | (170,000) | |
| Cost of goods sold | | 820,000 |
| Gross profit on sales | | 580,000 |
| Operating expenses | | 170,000 |
| Net income | | \$ 410,000 |

Instructions

- a. Compute the following ratios or relationships of Carver Inc. Assume that the ending account balances are representative unless the information provided indicates differently.
 1. Current ratio.
 2. Inventory turnover.
 3. Accounts receivable turnover.
 4. Earnings per share.
 5. Profit margin on sales.
 6. Return on assets on December 31, 2020.
- b. Indicate for each of the following transactions whether the transaction would improve, weaken, or have no effect on the current ratio of Carver Inc. at December 31, 2020.
 1. Write off an uncollectible account receivable, \$2,200.
 2. Purchase additional capital stock for cash.
 3. Pay \$40,000 on notes payable (short-term).
 4. Collect \$23,000 on accounts receivable.
 5. Buy equipment on account.
 6. Give an existing creditor a short-term note in settlement of account.

Problems

P13.1 (LO 1) Groupwork (Current Liability Entries and Adjustments) Described below are certain transactions of Edwardson Corporation. The company uses the periodic inventory system.

- On February 2, the corporation purchased goods from Martin Company for \$70,000 subject to cash discount terms of 2/10, n/30. Purchases and accounts payable are recorded by the corporation at net amounts after cash discounts. The invoice was paid on February 26.
- On April 1, the corporation bought a truck for \$50,000 from General Motors Company, paying \$4,000 in cash and signing a 1-year, 12% note for the balance of the purchase price.
- On May 1, the corporation borrowed \$83,000 from Chicago National Bank by signing a \$92,000 zero-interest-bearing note due 1 year from May 1.
- On August 1, the board of directors declared a \$300,000 cash dividend that was payable on September 10 to stockholders of record on August 31.

Instructions

- Make all the journal entries necessary to record the transactions above using appropriate dates.
- Edwardson Corporation's year-end is December 31. Assuming that no adjusting entries relative to the transactions above have been recorded, prepare any adjusting journal entries concerning interest that are necessary to present fair financial statements at December 31. Assume straight-line amortization of discounts.

P13.2 (LO 1, 3) Excel (Liability Entries and Adjustments) Listed below are selected transactions of Schultz Department Store for the current year ending December 31.

- On December 5, the store received \$500 from the Selig Players as a deposit to be returned after certain furniture to be used in stage production was returned on January 15.
- During December, cash sales totaled \$798,000, which includes the 5% sales tax that must be remitted to the state by the fifteenth day of the following month.
- On December 10, the store purchased for cash three delivery trucks for \$120,000. The trucks were purchased in a state that applies a 5% sales tax.
- The store determined it will cost \$100,000 to restore the area (considered a land improvement) surrounding one of its store parking lots, when the store is closed in 2 years. Schultz estimates the fair value of the obligation at December 31 is \$84,000.

Instructions

Prepare all the journal entries necessary to record the transactions noted above as they occurred and any adjusting journal entries relative to the transactions that would be required to present fair financial statements at December 31. Date each entry. For simplicity, assume that adjusting entries are recorded only once a year on December 31.

P13.3 (LO 1) (Payroll Tax Entries) Cedarville Company pays its office employee payroll weekly. Below is a partial list of employees and their payroll data for August. Because August is their vacation period, vacation pay is also listed.

| Employee | Earnings to July 31 | Weekly Pay | Vacation Pay to Be Received in August |
|---------------|------------------------|---------------|--|
| Mark Hamill | \$4,200 | \$200 | – |
| Karen Robbins | 3,500 | 150 | \$300 |
| Brent Kirk | 2,700 | 110 | 220 |
| Alec Guinness | 7,400 | 250 | – |
| Ken Sprouse | 8,000 | 330 | 660 |

Assume that the federal income tax withheld is 10% of wages. Union dues withheld are 2% of wages. Vacations are taken the second and third weeks of August by Robbins, Kirk, and Sprouse. The state unemployment tax rate is 2.5% and the federal is 0.8%, both on a \$7,000 maximum. The FICA rate is 7.65% on employee and employer on a maximum of \$128,400 per employee. In addition, a 1.45% rate is charged both employer and employee for an employee's wages in excess of \$128,400.

Instructions

Make the journal entries necessary for each of the four August payrolls. The entries for the payroll and for the company's liability are made separately. Also make the entry to record the monthly payment of accrued payroll liabilities.

P13.4 (LO 1) Excel (Payroll Tax Entries) The following is a payroll sheet for Otis Imports for the month of September 2020. The company is allowed a 1% unemployment compensation rate by the state; the federal unemployment tax rate is 0.8% and the maximum for both is \$7,000. Assume a 10% federal income tax rate for all employees and a 7.65% FICA tax on employee and employer on a maximum of \$128,400. In addition, 1.45% is charged both employer and employee for an employee's wages in excess of \$128,400 per employee.

| Name | Earnings to Aug. 31 | September Earnings | Income Tax | | Unemployment Tax | |
|---------------|------------------------|-----------------------|---------------|------|------------------|---------|
| | | | Withholding | FICA | State | Federal |
| B.D. Williams | \$ 6,800 | \$ 800 | | | | |
| D. Raye | 6,500 | 700 | | | | |
| K. Baker | 7,600 | 1,100 | | | | |
| F. Lopez | 13,600 | 1,900 | | | | |
| A. Daniels | 116,900 | 13,000 | | | | |
| B. Kingston | 121,900 | 16,000 | | | | |

Instructions

- Complete the payroll sheet and make the necessary entry to record the payment of the payroll.
- Make the entry to record the payroll tax expenses of Otis Imports.
- Make the entry to record the payment of the payroll liabilities created. Assume that the company pays all payroll liabilities at the end of each month.

P13.5 (LO 3) Groupwork (Warranties) Brooks Corporation sells computers under a 2-year warranty contract that requires the corporation to replace defective parts and to provide the necessary repair labor. During 2020, the corporation sells for cash 400 computers at a unit price of \$2,500. On the basis of past experience, the 2-year warranty costs are estimated to be \$155 for parts and \$185 for labor per unit. (For simplicity, assume that all sales occurred on December 31, 2020.) The warranty is not sold separately from the computer.

Instructions

- Record any necessary journal entries in 2020.
- What liability relative to these transactions would appear on the December 31, 2020, balance sheet and how would it be classified?
- In 2021, the actual warranty costs to Brooks Corporation were \$21,400 for parts and \$39,900 for labor. Record any necessary journal entries in 2021.

P13.6 (LO 3) (Extended Warranties) Dos Passos Company sells televisions at an average price of \$900 and also offers to each customer a separate 3-year warranty contract for \$90 that requires the company to perform periodic services and to replace defective parts. During 2020, the company sold 300 televisions and 270 warranty contracts for cash. It estimates the 3-year warranty costs as \$20 for parts and \$40 for labor, and accounts for warranties separately. Assume sales occurred on December 31, 2020, and straight-line recognition of warranty revenues occurs.

Instructions

- Record any necessary journal entries in 2020.
- What liability relative to these transactions would appear on the December 31, 2020, balance sheet and how would it be classified?

In 2021, Dos Passos Company incurred actual costs relative to 2020 television warranty sales of \$2,000 for parts and \$4,000 for labor.

- Record any necessary journal entries in 2021 relative to 2020 television warranties.
- What amounts relative to the 2020 television warranties would appear on the December 31, 2021, balance sheet and how would they be classified?

P13.7 (LO 3) (Warranties) Alvarado Company sells a machine for \$7,400 with a 12-month warranty agreement that requires the company to replace all defective parts and to provide the repair labor at no cost to the customers. With sales being made evenly throughout the year, the company sells 600 machines in 2020 (warranty expense is incurred half in 2020 and half in 2021). As a result of product testing, the company estimates that the total warranty cost is \$390 per machine (\$170 parts and \$220 labor).

Instructions

Assuming that actual warranty costs are incurred exactly as estimated, what journal entries would be made relative to the following facts?

- Sale of machinery and warranty expense incurred in 2020.
- Warranty accrual on December 31, 2020.
- Warranty costs incurred in 2021.
- What amount, if any, is disclosed in the balance sheet as a liability for future warranty costs as of December 31, 2020?

P13.8 (LO 3) (Premium Entries) To stimulate the sales of its Alladin breakfast cereal, Loptien Company places 1 coupon in each box. Five coupons are redeemable for a premium consisting of a children's hand puppet. In 2021, the company purchases 40,000 puppets at \$1.50 each and sells 480,000 boxes of Alladin at \$3.75 a box. From its experience with other similar premium offers, the company estimates that 40% of the coupons issued will be mailed back for redemption. During 2021, 115,000 coupons are presented for redemption.

Instructions

Prepare the journal entries that should be recorded in 2021 relative to the premium plan.

P13.9 (LO 3, 4) (Premium Entries and Financial Statement Presentation) Sycamore Candy offers an MP3 download (seven-single medley) as a premium for every five candy bar wrappers presented by customers together with \$2.50. The candy bars are sold by the company to distributors for 30 cents each. The purchase price of each download code to the company is \$2.25. In addition, it costs 50 cents to distribute each code. The results of the premium plan for the years 2020 and 2021 are as follows. (All purchases and sales are for cash.)

| | 2020 | 2021 |
|---|-----------|-----------|
| MP3 codes purchased | 250,000 | 330,000 |
| Candy bars sold | 2,895,400 | 2,743,600 |
| Wrappers redeemed | 1,200,000 | 1,500,000 |
| 2020 wrappers expected to be redeemed in 2021 | 290,000 | |
| 2021 wrappers expected to be redeemed in 2022 | | 350,000 |

Instructions

- Prepare the journal entries that should be made in 2020 and 2021 to record the transactions related to the premium plan of the Sycamore Candy.
- Indicate the account names, amounts, and classifications of the items related to the premium plan that would appear on the balance sheet and the income statement at the end of 2020 and 2021.

P13.10 (LO 3) Writing (Loss Contingencies: Entries and Essay) On November 24, 2020, 26 passengers on Windsor Airlines Flight No. 901 were injured upon landing when the plane skidded off the runway. Personal injury suits for damages totaling \$9,000,000 were filed on January 11, 2021, against the airline by 18 injured passengers. The airline carries no insurance. Legal counsel has studied each suit and advised Windsor that it is probable that it will pay 60% of the damages claimed. The financial statements for the year ended December 31, 2020, were issued February 27, 2021.

Instructions

- Prepare any disclosures and journal entries required by the airline in preparation of the December 31, 2020, financial statements.
- Ignoring the November 24, 2020, accident, what liability due to the risk of loss from lack of insurance coverage should Windsor Airlines record or disclose? During the past decade, the company has experienced at least one accident per year and incurred average damages of \$3,200,000. Discuss fully.

P13.11 (LO 3) Writing (Loss Contingencies: Entries and Essays) Polska Corporation, in preparation of its December 31, 2020, financial statements, is attempting to determine the proper accounting treatment for each of the following situations.

- As a result of uninsured accidents during the year, personal injury suits for \$350,000 and \$60,000 have been filed against the company. It is the judgment of Polska's legal counsel that an unfavorable outcome is unlikely in the \$60,000 case but that an unfavorable verdict approximating \$250,000 will probably result in the \$350,000 case.

2. Polska owns a subsidiary in a foreign country that has a book value of \$5,725,000 and an estimated fair value of \$9,500,000. The foreign government has communicated to Polska its intention to expropriate the assets and business of all foreign investors. On the basis of settlements other firms have received from this same country, Polska expects to receive 40% of the fair value of its properties as final settlement.
3. Polska's chemical product division consisting of five plants is uninsurable because of the special risk of injury to employees and losses due to fire and explosion. The year 2020 is considered one of the safest (luckiest) in the division's history because no loss due to injury or casualty was suffered. Having suffered an average of three casualties a year during the rest of the past decade (ranging from \$60,000 to \$700,000), management is certain that next year the company will probably not be so fortunate.

Instructions

- a. Prepare the journal entries that should be recorded as of December 31, 2020, to recognize each of the situations above.
- b. Indicate what should be reported relative to each situation in the financial statements and accompanying notes. Explain why.

P13.12 (LO 3) (Warranties and Premiums) Garison Music Emporium carries a wide variety of musical instruments, sound reproduction equipment, recorded music, and sheet music. Garison uses two sales promotion techniques—warranties and premiums—to attract customers.

Musical instruments and sound equipment are sold with a 1-year warranty for replacement of parts and labor. The estimated warranty cost, based on past experience, is 1% of sales.

The premium is offered on the recorded and sheet music. Customers receive a coupon for each dollar spent on recorded music or sheet music. Customers may exchange 200 coupons and \$20 for an MP3 player. Garison pays \$32 for each player and estimates that 60% of the coupons given to customers will be redeemed.

Garison's total sales for 2020 were \$7,200,000—\$5,700,000 from musical instruments and sound reproduction equipment and \$1,500,000 from recorded music and sheet music. Replacement parts and labor for warranty work totaled \$94,000 during 2020 (\$44,000 of the work is related to pre-2020 sales). A total of 6,500 players used in the premium program were purchased during the year and there were 1,200,000 coupons redeemed in 2020.

The balances in the accounts related to warranties and premiums on January 1, 2020, were as shown below.

| | |
|--------------------|----------|
| Premium Inventory | \$37,600 |
| Premium Liability | 44,800 |
| Warranty Liability | 56,000 |

Instructions

Garison Music Emporium is preparing its financial statements for the year ended December 31, 2020. Determine the amounts that will be shown on the 2020 financial statements for the following.

- a. Warranty Expense.
- b. Warranty Liability.
- c. Premium Expense.
- d. Premium Inventory.
- e. Premium Liability.

(CMA adapted)

P13.13 (LO 3) Writing Groupwork (Liability Errors) You are the independent auditor engaged to audit Millay Corporation's December 31, 2020, financial statements. Millay manufactures household appliances. During the course of your audit, you discovered the following contingent liabilities.

1. Millay began production of a new dishwasher in June 2020 and, by December 31, 2020, sold 120,000 to various retailers for \$500 each. Each dishwasher is under a 1-year warranty. The company estimates that its warranty expense per dishwasher will amount to \$25. At year-end, the company had already paid out \$1,000,000 in warranty expenses. Millay's income statement shows warranty expenses of \$1,000,000 for 2020.
2. In response to your attorney's letter, Morgan Sondgeroth, Esq., has informed you that Millay has been cited for dumping toxic waste into the Kishwaukee River. Clean-up costs and fines amount to \$2,750,000. Although the case is still being contested, Sondgeroth is certain that Millay will most probably have to pay the fine and clean-up costs. No disclosure of this situation was found in the financial statements.
3. Millay is the defendant in a patent infringement lawsuit by Megan Drabek over Millay's use of a hydraulic compressor in several of its products. Sondgeroth claims that, if the suit goes against Millay, the loss may be as much as \$5,000,000. However, Sondgeroth believes the loss of this suit to be only reasonably possible. Again, no mention of this suit is made in the financial statements.

As presented, these contingencies are not reported in accordance with GAAP, which may create problems in issuing a favorable audit report. You feel the need to note these problems in the work papers.

Instructions

Heading each page with the name of the company, balance sheet date, and a brief description of the problem, write a brief narrative for each of the above issues in the form of a **memorandum** to be incorporated in the audit work papers. Explain what led to the discovery of each problem, what the problem really is, and what you advised your client to do (along with any appropriate journal entries) in order to bring these contingencies in accordance with GAAP.

P13.14 (LO 3) (Warranty and Coupon Computation) Schmitt Company must make computations and adjusting entries for the following independent situations at December 31, 2021.

- Its line of amplifiers carries a 3-year warranty against defects. On the basis of past experience the estimated warranty costs related to dollar sales are first year after sale—2% of sales revenue; second year after sale—3% of sales revenue; and third year after sale—5% of sales revenue. Sales and actual warranty expenditures for the first 3 years of business were:

| | Sales Revenue | Warranty Expenditures |
|------|------------------|--------------------------|
| 2019 | \$ 800,000 | \$ 6,500 |
| 2020 | 1,100,000 | 17,200 |
| 2021 | 1,200,000 | 62,000 |

Instructions

Compute the amount that Schmitt should report as a liability in its December 31, 2021, balance sheet. Assume that all sales are made evenly throughout each year with warranty expenses also evenly spaced relative to the rates above.

- With some of its products, Schmitt includes coupons that are redeemable in merchandise. The coupons have no expiration date and, in the company's experience, 40% of them are redeemed. The liability for unredeemed coupons at December 31, 2020, was \$9,000. During 2021, coupons worth \$30,000 were issued, and merchandise worth \$8,000 was distributed in exchange for coupons redeemed.

Instructions

Compute the amount of the liability that should appear on the December 31, 2021, balance sheet.

(AICPA adapted)

Concepts for Analysis

CA13.1 (LO 1) (Nature of Liabilities) Presented below is the current liabilities section of Micro Corporation.

| | (\$000) | |
|--------------------------------------|-----------|-----------|
| | 2021 | 2020 |
| Current liabilities | | |
| Notes payable | \$ 68,713 | \$ 7,700 |
| Accounts payable | 179,496 | 101,379 |
| Compensation to employees | 60,312 | 31,649 |
| Accrued liabilities | 158,198 | 77,621 |
| Income taxes payable | 10,486 | 26,491 |
| Current maturities of long-term debt | 16,592 | 6,649 |
| Total current liabilities | \$493,797 | \$251,489 |

Instructions

Answer the following questions.

- What are the essential characteristics that make an item a liability?
- How does one distinguish between a current liability and a long-term liability?

- c. What are accrued liabilities? Give three examples of accrued liabilities that Micro might have.
- d. What is the theoretically correct way to value liabilities? How are current liabilities usually valued?
- e. Why are notes payable reported first in the current liabilities section?
- f. What might be the items that comprise Micro's liability for "Compensation to employees"?

CA13.2 (LO 1, 2) (Current versus Noncurrent Classification) Rodriguez Corporation includes the following items in its liabilities at December 31, 2020.

1. Notes payable, \$25,000,000, due June 30, 2021.
2. Deposits from customers on equipment ordered by them from Rodriguez, \$6,250,000.
3. Salaries and wages payable, \$3,750,000, due January 14, 2021.

Instructions

Indicate in what circumstances, if any, each of the three liabilities above would be excluded from current liabilities.

CA13.3 (LO 2) Writing (Refinancing of Short-Term Debt) Dumars Corporation reports in the current liability section of its balance sheet at December 31, 2020 (its year-end), short-term obligations of \$15,000,000, which includes the current portion of 12% long-term debt in the amount of \$10,000,000 (matures in March 2021). Management has stated its intention to refinance the 12% debt whereby no portion of it will mature during 2021. The date of issuance of the financial statements is March 25, 2021.

Instructions

- a. Is management's intent enough to support long-term classification of the obligation in this situation?
- b. Assume that Dumars Corporation issues \$13,000,000 of 10-year debentures to the public in January 2021 and that management intends to use the proceeds to liquidate the \$10,000,000 debt maturing in March 2021. Furthermore, assume that the debt maturing in March 2021 is paid from these proceeds prior to the issuance of the financial statements. Will this have any impact on the balance sheet classification at December 31, 2020? Explain your answer.
- c. Assume that Dumars Corporation, on December 15, 2020, entered into a financing agreement with a commercial bank that permits Dumars Corporation to borrow at any time through 2022 up to \$15,000,000 at the bank's prime rate of interest. Borrowings under the financing agreement mature three years after the date of the loan. The agreement is not cancelable except for violation of a provision with which compliance is objectively determinable. No violation of any provision exists at the date of issuance of the financial statements. Assume further that the current portion of long-term debt does not mature until August 2021. In addition, management has the contractual right to refinance the \$10,000,000 obligation under the terms of the financial agreement with the bank, which is expected to be financially capable of honoring the agreement.
 1. Given these facts, should the \$10,000,000 be classified as current on the balance sheet at December 31, 2020?
 2. Is disclosure of the refinancing method required?

CA13.4 (LO 3) Writing (Loss Contingencies) On February 1, 2021, one of the huge storage tanks of Viking Manufacturing exploded. Windows in houses and other buildings within a one-mile radius of the explosion were severely damaged, and a number of people were injured. As of February 15, 2021 (when the December 31, 2020, financial statements were completed and sent to the publisher for printing and public distribution), no suits had been filed or claims asserted against the company as a consequence of the explosion. The company fully anticipates that suits will be filed and claims asserted for injuries and damages. Because the casualty was uninsured and the company is considered at fault, Viking Manufacturing will have to cover the damages from its own resources.

Instructions

Discuss fully the accounting treatment and disclosures that should be accorded the casualty and related contingent losses in the financial statements dated December 31, 2020.

CA13.5 (LO 3) (Loss Contingency) Presented below is a note disclosure for Matsui Corporation.

Litigation and Environmental: The Company has been notified, or is a named or a potentially responsible party in a number of governmental (federal, state and local) and private

actions associated with environmental matters, such as those relating to hazardous wastes, including certain sites which are on the United States EPA National Priorities List (“Superfund”). These actions seek clean-up costs, penalties and/or damages for personal injury or to property or natural resources.

In 2020, the Company recorded a pre-tax charge of \$56,229,000, included in the “Other expense (income)—net” caption of the Company’s consolidated income statements, as an additional provision for environmental matters. These expenditures are expected to take place over the next several years and are indicative of the Company’s commitment to improve and maintain the environment in which it operates. At December 31, 2020, environmental accruals amounted to \$69,931,000, of which \$61,535,000 are considered noncurrent and are included in the “Deferred credits and other liabilities” caption of the Company’s consolidated balance sheets.

While it is impossible at this time to determine with certainty the ultimate outcome of environmental matters, it is management’s opinion, based in part on the advice of independent counsel (after taking into account accruals and insurance coverage applicable to such actions) that when the costs are finally determined they will not have a material adverse effect on the financial position of the Company.

Instructions

Answer the following questions.

- What conditions must exist before a loss contingency can be recorded in the accounts?
- Suppose that Matsui Corporation could not reasonably estimate the amount of the loss, although it could establish with a high degree of probability the minimum and maximum loss possible. How should this information be reported in the financial statements?
- If the amount of the loss is uncertain, how would the loss contingency be reported in the financial statements?

CA13.6 (LO 3) (Warranties and Loss Contingencies) The following two independent situations involve loss contingencies.

Part 1: Benson Company sells two products, Grey and Yellow. Each carries a 1-year warranty.

- Product Grey—Product warranty costs, based on past experience, will normally be 1% of sales.
- Product Yellow—Product warranty costs cannot be reasonably estimated because this is a new product line. However, the chief engineer believes that product warranty costs are likely to be incurred.

Instructions

How should Benson report the estimated product warranty costs for each of the two types of merchandise above? Discuss the rationale for your answer. Do not discuss disclosures that should be made in Benson’s financial statements or notes.

Part 2: Constantine Company is being sued for \$4,000,000 for an injury caused to a child as a result of alleged negligence while the child was visiting the Constantine Company plant in March 2020. The suit was filed in July 2020. Constantine’s lawyer states that it is probable that Constantine will lose the suit and be found liable for a judgment costing anywhere from \$400,000 to \$2,000,000. However, the lawyer states that the most probable judgment is \$1,000,000.

Instructions

How should Constantine report the suit in its 2020 financial statements? Discuss the rationale for your answer. Include in your answer disclosures, if any, that should be made in Constantine’s financial statements or notes.

(AICPA adapted)

CA13.7 (LO 3) Ethics (Warranties) The Dotson Company, owner of Bleacher Mall, charges Rich Clothing Store a rental fee of \$600 per month plus 5% of yearly profits over \$500,000. Matt Rich, the owner of the store, directs his accountant, Ron Hamilton, to increase the estimate of bad debt expense and warranty costs in order to keep profits at \$475,000.

Instructions

Answer the following questions.

- Should Hamilton follow his boss’s directive?
- Who is harmed if the estimates are increased?
- Is Matt Rich’s directive ethical?

Using Your Judgment

Financial Reporting Problem

The Procter & Gamble Company (P&G)

The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to these financial statements and the accompanying notes to answer the following questions.

- What was P&G's 2017 short-term debt and related weighted-average interest rate on this debt?
- What was P&G's 2017 working capital, acid-test ratio, and current ratio? Comment on P&G's liquidity.
- What types of commitments and contingencies has P&G's reported in its financial statements? What is management's reaction to these contingencies?

Comparative Analysis Case

The Coca-Cola Company and PepsiCo, Inc.

The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- How much working capital do each of these companies have at the end of 2017?
- Compute each company's (a) current cash debt coverage, (b) cash debt coverage, (c) current ratio, (d) acid-test ratio, (e) accounts receivable turnover, and (f) inventory turnover for 2017. Comment on each company's overall liquidity.
- What types of loss or gain contingencies do these two companies have at the end of 2017?

Financial Statement Analysis Cases

Case 1: Northland Cranberries

Despite being a publicly traded company only since 1987, **Northland Cranberries** of Wisconsin Rapids, Wisconsin, is one of the world's largest cranberry growers. During its short life as a publicly traded corporation, it has engaged in an aggressive growth strategy. As a consequence, the company has taken on significant amounts of both short-term and long-term debt. The following information is taken from recent annual reports of the company.

| | Current Year | Prior Year |
|----------------------|-----------------|---------------|
| Current assets | \$ 6,745,759 | \$ 5,598,054 |
| Total assets | 107,744,751 | 83,074,339 |
| Current liabilities | 10,168,685 | 4,484,687 |
| Total liabilities | 73,118,204 | 49,948,787 |
| Shareholders' equity | 34,626,547 | 33,125,552 |
| Net sales | 21,783,966 | 18,051,355 |
| Cost of goods sold | 13,057,275 | 8,751,220 |
| Interest expense | 3,654,006 | 2,393,792 |
| Income tax expense | 1,051,000 | 1,917,000 |
| Net income | 1,581,707 | 2,942,954 |

Instructions

- Evaluate the company's liquidity by calculating and analyzing working capital and the current ratio.
- The discussion of the company's liquidity, shown below, was provided by the company in the Management Discussion and Analysis section of the company's annual report. Comment on whether you agree with management's statements, and what might be done to remedy the situation.

The lower comparative current ratio in the current year was due to \$3 million of short-term borrowing then outstanding which was incurred to fund the Yellow River Marsh acquisitions last year. As a result of the extreme seasonality of its business, the company does not believe that its current ratio or its underlying stated working capital at the current, fiscal year-end is a meaningful indication of the Company's liquidity. As of March 31 of each fiscal year, the Company has historically carried no significant amounts of inventories and by such date all of the Company's accounts receivable from its crop sold for processing under the supply agreements have been paid in cash, with the resulting cash received from such payments used to reduce indebtedness. The Company utilizes its revolving bank credit facility, together with cash generated from operations, to fund its working capital requirements throughout its growing season.

Case 2: Mohican Company

Presented below is the current liabilities section and related note of Mohican Company.

| | (dollars in thousands) | |
|-----------------------------------|------------------------|-------------------|
| | <u>Current Year</u> | <u>Prior Year</u> |
| Current liabilities | | |
| Current portion of long-term debt | \$ 15,000 | \$ 10,000 |
| Short-term debt | 2,668 | 405 |
| Accounts payable | 29,495 | 42,427 |
| Accrued warranty | 16,843 | 16,741 |
| Accrued marketing programs | 17,512 | 16,585 |
| Other accrued liabilities | 35,653 | 33,290 |
| Accrued and deferred income taxes | <u>16,206</u> | <u>17,348</u> |
| Total current liabilities | \$133,377 | \$136,796 |

Notes to Consolidated Financial Statements

Note 1 (in part): Summary of Significant Accounting Policies and Related Data
Accrued Warranty The company provides an accrual for future warranty costs based upon the relationship of prior years' sales to actual warranty costs.

Instructions

Answer the following questions.

- What is the difference between the cash basis and the accrual basis of accounting for warranty costs?
- Under what circumstance, if any, would it be appropriate for Mohican Company to recognize deferred revenue on warranty contracts?
- If Mohican Company recognized deferred revenue on warranty contracts, how would it recognize this revenue in subsequent periods?

Case 3: BOP Clothing Co.

As discussed in the chapter, an important consideration in evaluating current liabilities is a company's operating cycle. The operating cycle is the average time required to go from cash to cash in generating revenue. To determine the length of the operating cycle, analysts use two measures: the average days to sell inventory (*inventory days*) and the average days to collect receivables (*receivable days*). The inventory-days computation measures the average number of days it takes to move an item from raw materials or purchase to final sale (from the day it comes in the company's door to the point it is converted to cash or an account receivable). The receivable-days computation measures the average number of days it takes to collect an account.

Most businesses must then determine how to finance the period of time when the liquid assets are tied up in inventory and accounts receivable. To determine how much to finance, companies first determine accounts payable days—how long it takes to pay creditors. Accounts payable days measures the number of days it takes to pay a supplier invoice. Consider the following operating cycle worksheet for BOP Clothing Co.

| | 2019 | 2020 |
|--|------------|------------|
| Cash | \$ 45,000 | \$ 30,000 |
| Accounts receivable | 250,000 | 325,000 |
| Inventory | 830,000 | 800,000 |
| Accounts payable | 720,000 | 775,000 |
| Purchases | 1,100,000 | 1,425,000 |
| Cost of goods sold | 1,145,000 | 1,455,000 |
| Sales | 1,750,000 | 1,950,000 |
| Operating Cycle | | |
| Inventory days ¹ | 264.6 | 200.7 |
| Receivable days ² | 52.1 | 60.8 |
| Operating cycle | 316.7 | 261.5 |
| Less: Accounts payable days ³ | 238.9 | 198.5 |
| Days to be financed | 77.8 | 63.0 |
| Working capital | \$ 405,000 | \$ 380,000 |
| Current ratio | 1.56 | 1.49 |
| Acid-test ratio | 0.41 | 0.46 |

¹Inventory days = (Inventory × 365) ÷ Cost of goods sold

²Receivable days = (Accounts receivable × 365) ÷ Sales

³Accounts payable days = (Accounts payable × 365) ÷ Purchases

Purchases = Cost of goods sold + Ending inventory – Beginning inventory.

The ratios above assume that other current assets and liabilities are negligible.

These data indicate that BOP has reduced its overall operating cycle (to 261.5 days) as well as the number of days to be financed with sources of funds other than accounts payable (from 78 to 63 days). Most businesses cannot finance the operating cycle with accounts payable financing alone, so working capital financing, usually short-term interest-bearing loans, is needed to cover the shortfall. In this case, BOP would need to borrow less money to finance its operating cycle in 2020 than in 2019.

Instructions

- Use the BOP analysis to briefly discuss how the operating cycle data relate to the amount of working capital and the current and acid-test ratios.
- Select two other real companies that are in the same industry and complete the operating cycle worksheet, along with the working capital and ratio analysis. Briefly summarize and interpret the results. To simplify the analysis, you may use ending balances to compute turnover ratios.

[Adapted from Operating Cycle Worksheet]

Accounting, Analysis, and Principles

(Note: For any part of this problem requiring an interest or discount rate, use 10%.)

YellowCard Company manufactures accessories for iPods. It had the following selected transactions during 2020.

- YellowCard provides a 2-year warranty on its docking stations, which it began selling in 2020. During 2020, YellowCard spent \$6,000 servicing warranty claims. At year-end, YellowCard estimates that an additional \$45,000 will be spent in the future to service warranties related to 2020 sales.
- YellowCard has a \$200,000 loan outstanding from First Trust Corp. The loan is set to mature on February 28, 2021. For several years, First Trust has agreed to extend the loan, as long as YellowCard makes all its quarterly interest payments (interest is due on the last days of each February, May, August, and November) and maintains an acid-test ratio (also called “quick ratio”) of at least 1.25. First Trust has provided YellowCard a contractual right indicating that First Trust will extend the loan another 12 months, providing YellowCard has made interest payments.

3. During 2019, YellowCard constructed a small manufacturing facility specifically to manufacture one particular accessory. YellowCard paid the construction contractor \$5,000,000 cash (which was the total contract price) and placed the facility into service on January 1, 2020. Because of technological change, YellowCard anticipates that the manufacturing facility will be useful for no more than 10 years. The local government where the facility is located required that, at the end of the 10-year period, YellowCard remediate the facility so that it can be used as a community center. YellowCard estimates the cost of remediation to be \$500,000.

Accounting

Prepare all 2020 journal entries relating to (a) YellowCard's warranties, (b) YellowCard's loan from First Trust Corp., and (c) the new manufacturing facility YellowCard opened on January 1, 2020.

Analysis

Describe how the transactions above affect ratios that might be used to assess YellowCard's liquidity. How important is the commitment letter that YellowCard has from First Trust Corp. to these ratios?

Principles

YellowCard is contemplating offering an extended warranty. If customers pay an additional \$50 at the time of product purchase, YellowCard would extend the warranty an additional two years. Would the extended warranty meet the definition of a liability under current generally accepted accounting principles? Briefly explain.

Analytics in Action

Accounting software systems collect vast amounts of data about the economic events experienced by a company and about the parties with whom the company engages, such as suppliers and customers. Business decision-makers take advantage of this wealth of information by using data analytics, which often employs both software and statistics, to draw inferences and make more informed business decisions. As both data access and analytical software improve, the use of data analytics to support decisions is becoming increasingly common at virtually all types of companies.

Analysis of liquidity, based on the current ratio, requires careful evaluation of current liability balances arising from accounts payable, some of which may reflect short-term financing at very low rates. For example, **WalMart** commonly reports a current ratio less than one, but many analysts do not view this a liquidity risk.

Instructions Go to WileyPLUS for a data analytics exercise focusing on analysis of current liabilities as part of a valid analysis of liquidity.

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

CE13.1 Access the glossary (“Master Glossary”) to answer the following.

- What is an asset retirement obligation?
- What is the definition of “current liabilities”?
- What does it mean if something is “reasonably possible”?
- What is a warranty?

CE13.2 What must an entity disclose about its asset retirement obligations?

CE13.3 What are three examples of estimates that are used in accounting that are not contingencies? Can you explain why they are not considered contingencies?

CE13.4 Under what conditions must an employer accrue a liability for employees’ compensation for future absences?

Codification Research Case

Pleasant Co. manufactures specialty bike accessories. The company is known for product quality, and it has offered one of the best warranties in the industry on its higher-priced products—a lifetime guarantee, performing all the warranty work in its own shops. The warranty on these products is included in the sales price.

Due to the recent introduction and growth in sales of some products targeted to the low-price market, Pleasant is considering partnering with another company to do the warranty work on this line of products, if customers purchase a service contract at the time of original product purchase. Pleasant has called you to advise the company on the accounting for this new warranty arrangement.

Instructions

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

- Identify the accounting literature that addresses the accounting for the type of separately priced extended warranty that Pleasant is considering.
- When are warranty contracts considered separately priced?
- When shall a loss be recognized on an extended warranty.

IFRS Insights

LEARNING OBJECTIVE 5

Compare the accounting procedures for current liabilities and contingencies under GAAP and IFRS.

IFRS and GAAP have similar definitions for liabilities. IFRS related to reporting and recognition of liabilities is found in *IAS 1* (“Presentation of Financial Statements”) and *IAS 37* (“Provisions, Contingent Liabilities, and Contingent Assets”).

Relevant Facts

Following are the key similarities and differences between GAAP and IFRS related to current liabilities and contingencies.

Similarities

- Similar to U.S. practice, IFRS requires that companies present current and non-current liabilities on the face of the statement of financial position (balance sheet), with current liabilities generally presented in order of liquidity. However, many companies using IFRS present non-current liabilities before current liabilities on the statement of financial position.
- The basic definition of a liability under GAAP and IFRS is very similar. In a more technical way, liabilities are defined by the IASB as a present obligation of the entity arising from past events, the settlement of which is expected to result in an outflow from the entity of resources embodying economic benefits. Liabilities may be legally enforceable via a contract or law but need not be. That is, they can arise due to normal business practices or customs.
- IFRS requires that companies classify liabilities as current or non-current on the face of the statement of financial position (balance sheet), except in industries where a presentation based on liquidity would be considered to provide more useful information (such as financial institutions).
- Under IFRS, short-term obligations expected to be refinanced can be classified as non-current if the refinancing is completed by the financial statement date. GAAP now also uses the balance sheet date.

Differences

- Under IFRS, the measurement of a provision related to a contingency is based on the best estimate of the expenditure required to settle the obligation. If a range of estimates is predicted and no amount in the range is more likely than any other amount in the range, the “midpoint” of the range is used to measure the liability. In GAAP, the minimum amount in a range is used.
- Both IFRS and GAAP prohibit the recognition of liabilities for future losses. However, IFRS permits recognition of a restructuring liability, once a company has committed to a restructuring plan. GAAP has additional criteria (i.e., related to communicating the plan to employees) before a restructuring liability can be established.
- IFRS and GAAP are similar in the treatment of asset retirement obligations (AROs). However, the recognition criteria for an ARO are more stringent under GAAP: The ARO is not recognized unless there is a present legal obligation and the fair value of the obligation can be reasonably estimated.
- IFRS uses the term *provisions* to refer to estimated liabilities. Under IFRS, contingencies are not recorded but are often disclosed. The accounting for provisions under IFRS and estimated liabilities under GAAP are very similar.
- GAAP uses the term *contingency* in a different way than IFRS. Contingent liabilities are not recognized in the financial statements under IFRS, whereas under GAAP, a contingent liability is sometimes recognized.

About the Numbers

Refinancing Criteria

The IASB has developed criteria for determining the circumstances under which short-term obligations may be properly excluded from current liabilities. Specifically, a company can exclude a short-term obligation from current liabilities if **both** of the following conditions are met as of the statement of financial position date:

1. It must intend to refinance the obligation on a long-term basis; and
2. It must have an unconditional right to defer settlement of the liability for at least 12 months after the reporting date.

Intention to refinance on a long-term basis means that the company intends to refinance the short-term obligation so that it will not require the use of working capital during the ensuing fiscal year (or operating cycle, if longer). Entering into a financing arrangement that clearly permits the company to refinance the debt on a long-term basis on terms that are readily determinable before the next reporting date is one way to satisfy the second condition. In addition, the fact that a company has the right to refinance at any time and intends to do so permits the company to classify the liability as non-current.

To illustrate, assume that Haddad Company provides the following information related to its note payable.

- Issued note payable of \$3,000,000 on November 30, 2019, due on February 28, 2020. Haddad’s reporting date is December 31, 2019.
- Haddad intends to extend the maturity date of the loan (refinance the loan) to June 30, 2021.
- Its December 31, 2019, financial statements are authorized for issue on March 15, 2020.
- The necessary paperwork to refinance the loan is completed on January 15, 2020. Haddad did not have an unconditional right to defer settlement of the obligation at December 31, 2019.

A graphical representation of the refinancing events is provided in **Illustration IFRS13.1**.

ILLUSTRATION IFRS13.1

Refinancing Events

In this case, Haddad must classify its note payable as a current liability because the refinancing was not completed by December 31, 2019, the financial reporting date. Only if the refinancing was completed before December 31, 2019, can Haddad classify the note obligation as non-current. The rationale: Refinancing a liability after the statement of financial position date does not affect the liquidity or solvency at the date of the statement of financial position, the reporting of which should reflect contractual agreements in force on that date.

What happens if Haddad has both the intention and the discretion (within the loan agreement) to refinance or roll over its \$3,000,000 note payable to June 30, 2021? In this case, Haddad should classify the note payable as non-current because it has the ability to defer the payment to June 30, 2021.

Provisions

As indicated in the *Relevant Facts* section, a **provision** is a liability of uncertain timing or amount (sometimes referred to as an *estimated liability*). Provisions are very common and may be reported either as current or non-current depending on the date of expected payment. Common types of provisions are obligations related to litigation, warranties or product guarantees, business restructurings, and environmental damage.

The difference between a provision and other liabilities (such as accounts or notes payable, salaries payable, and dividends payable) is that **a provision has greater uncertainty about the timing or amount of the future expenditure required to settle the obligation**. For example, when **Siemens AG** reports an accounts payable, there is an invoice or formal agreement as to the existence and the amount of the liability. Similarly, when Siemens accrues interest payable, the timing and the amount are known.²²

Recognition of a Provision Companies accrue an expense and related liability for a provision only if the following three conditions are met:

1. A company has a present obligation (legal or constructive) as a result of a past event;
2. It is probable that an outflow of resources embodying economic benefits will be required to settle the obligation; and
3. A reliable estimate can be made of the amount of the obligation.

If any of these three conditions are not met, no provision is recognized.

In applying the first condition, the past event (often referred to as the *past obligatory event*) must have occurred. In applying the second condition, the term **probable** is defined as “more likely than not to occur.” This phrase is interpreted to mean the probability of occurrence is greater than 50 percent. If the probability is 50 percent or less, the provision is not recognized.

Measurement of Provisions How does a company like **Toyota**, for example, determine the amount to report for its warranty cost on its automobiles? How does a company like **Carrefour** determine its liability for customer refunds? Or, how does **Novartis** determine the amount to report for a lawsuit that it probably will lose? And, how does a company like **Total S.A.** determine the amount to report as a provision for its remediation costs related to environmental clean-up?

IFRS provides an answer: The amount recognized should be the **best estimate of the expenditure required to settle the present obligation**. Best estimate represents the amount that a company would pay to settle the obligation at the statement of financial position date.

Measurement Examples. In determining the best estimate, the management of a company must use judgment, based on past or similar transactions, discussions with experts, and any other pertinent information. Here is how this judgment might be used in three different types of situations to arrive at best estimate:

- **Toyota warranties.** Toyota sells many cars and must make an estimate of the number of warranty repairs and related costs it will incur. Because it is dealing with a large population of automobiles, it is often best to weight all possible outcomes by associated probabilities. For example, it might determine that 80 percent of its cars will not have any warranty cost, 12 percent will have substantial costs, and

²²The distinction is important because provisions are subject to disclosure requirements that do not apply to other types of payables.

8 percent will have a much smaller cost. In this case, by weighting all the possible outcomes by their associated probabilities, Toyota **arrives at an expected value** for its warranty liability.

- **Carrefour refunds.** Carrefour sells many items at varying selling prices. Refunds to customers for products sold may be viewed as a continuous range of refunds, with each point in the range having the same probability of occurrence. In this case, the **midpoint in the range** can be used as the basis for measuring the amount of the refunds.
- **Novartis lawsuit.** Large companies like Novartis are involved in numerous litigation issues related to their products. Where a single obligation such as a lawsuit is being measured, **the most likely outcome** of the lawsuit may be the best estimate of the liability.

Common Types of Provisions Here are some common areas for which provisions may be recognized in the financial statements:

1. Lawsuits.
2. Warranties.
3. Premiums.
4. Environmental.
5. Onerous contracts.
6. Restructuring.

IFRS accounting guidance is similar to GAAP for these items. Although companies generally report only one current and one non-current amount for provisions in the statement of financial position, IFRS also requires extensive disclosure related to provisions in the notes to the financial statements. Companies do not record or report in the notes to the financial statements general risk contingencies inherent in business operations (e.g., the possibility of war, strike, uninsurable catastrophes, or a business recession).

Onerous Contract Provisions Sometimes, companies have what are referred to as **onerous contracts**. These contracts are ones in which “the unavoidable costs of meeting the obligations exceed the economic benefits expected to be received.” An example of an onerous contract is a loss recognized on unfavorable non-cancelable purchase commitments related to inventory items.

To illustrate another situation, assume that Sumart Sports operates profitably in a factory that it has leased and on which it pays monthly rentals. Sumart decides to relocate its operations to another facility. However, the lease on the old facility continues for the next three years. Unfortunately, Sumart cannot cancel the lease nor will it be able to sublet the factory to another party. The expected costs to satisfy this onerous contract are \$200,000. In this case, Sumart makes the following entry.

| | | |
|--------------------------|---------|---------|
| Loss on Lease Contract | 200,000 | |
| Lease Contract Liability | | 200,000 |

The expected costs should reflect the least net cost of exiting from the contract, which is the lower of (1) the cost of fulfilling the contract, or (2) the compensation or penalties arising from failure to fulfill the contract.

Contingencies

In a general sense, all provisions are contingent because they are uncertain in timing or amount. However, IFRS uses the term “contingent” for liabilities and assets that are not recognized in the financial statements.

Contingent Liabilities **Contingent liabilities** are not recognized in the financial statements because they are (1) a possible obligation (not yet confirmed as a present obligation), (2) a present obligation for which it is not probable that payment will be made, or (3) a present obligation for which a reliable estimate of the obligation cannot be made. Examples of contingent liabilities are:

- A lawsuit in which it is only possible that the company might lose.
- A guarantee related to collectability of a receivable.

Illustration IFRS13.2 presents the general guidelines for the accounting and reporting of contingent liabilities.

| Outcome | Probability* | Accounting Treatment |
|---------------------------------|-----------------|----------------------------------|
| Virtually certain | At least 90% | Report as liability (provision). |
| Probable (more likely than not) | 51–89% probable | Report as liability (provision). |
| Possible but not probable | 5–50% | Disclosure required. |
| Remote | Less than 5% | No disclosure required. |

*In practice, the percentages for virtually certain and remote may deviate from those presented here.

ILLUSTRATION IFRS13.2

Contingent Liability Guidelines

Unless the possibility of any outflow in settlement is remote, companies should disclose the contingent liability at the end of the reporting period, providing a brief description of the nature of the contingent liability and, where practicable:

1. An estimate of its financial effect;
2. An indication of the uncertainties relating to the amount or timing of any outflow; and
3. The possibility of any reimbursement.

Contingent Assets A **contingent asset** is a possible asset that arises from past events and whose existence will be confirmed by the occurrence or non-occurrence of uncertain future events not wholly within the control of the company. Typical contingent assets are:

1. Possible receipts of monies from gifts, donations, bonuses.
2. Possible refunds from the government in tax disputes.
3. Pending court cases with a probable favorable outcome.

Contingent assets are not recognized on the statement of financial position. If realization of the contingent asset is virtually certain, it is no longer considered a contingent asset and is recognized as an asset.

Virtually certain is generally interpreted to be at least a probability of 90 percent or more.

The general rules related to contingent assets are presented in **Illustration IFRS13.3**.

ILLUSTRATION IFRS13.3

Contingent Asset Guidelines

| Outcome | Probability* | Accounting Treatment |
|---------------------------------|-----------------------|---|
| Virtually certain | At least 90% probable | Report as asset (no longer contingent). |
| Probable (more likely than not) | 51–90% probable | Disclose. |
| Possible but not probable | 5–50% | No disclosure required. |
| Remote | Less than 5% | No disclosure required. |

*In practice, the percentages for virtually certain and remote may deviate from those presented here.

Contingent assets are disclosed when an inflow of economic benefits is considered more likely than not to occur (greater than 50 percent). However, it is important that disclosures for contingent assets avoid giving misleading indications of the likelihood of income arising. As a result, it is not surprising that the thresholds for allowing recognition of contingent assets are more stringent relative to those for liabilities.

What might be an example of a contingent asset that becomes an asset to be recorded? To illustrate, assume that Marcus Realty leases a property to **Marks and Spencer plc (M&S)**. The contract is non-cancelable for five years. On December 1, 2019, before the end of the contract, M&S withdraws from the contract and is required to pay £245,000 as a penalty. At the time M&S cancels the contract, a receivable and related income should be reported by Marcus. The disclosure includes the nature and, where practicable, the estimated financial effects of the asset.

IFRS Self-Test Questions

1. The presentation of current and non-current liabilities in the statement of financial position (balance sheet):
 - a. is shown only on GAAP financial statements.
 - b. is shown on both a GAAP and an IFRS statement of financial position.
 - c. is always shown with current liabilities reported first in an IFRS statement of financial position.
 - d. includes contingent liabilities under IFRS.
2. In accounting for short-term debt expected to be refinanced to long-term debt:
 - a. GAAP uses the authorization date to determine classification of short-term debt to be refinanced.
 - b. IFRS uses the authorization date to determine classification of short-term debt to be refinanced.
 - c. IFRS and GAAP use the financial statement date to determine classification of short-term debt to be refinanced.
 - d. GAAP uses the date of issue, but only for secured debt, to determine classification of short-term debt to be refinanced.
3. Under IFRS, a provision is the same as:
 - a. a contingent liability.
 - b. an estimated liability.
 - c. a contingent gain.
 - d. None of the above.
4. A typical provision is:
 - a. bonds payable.
 - b. cash.
 - c. a warranty liability.
 - d. accounts payable.
5. In determining the amount of a provision, a company using IFRS should generally measure:
 - a. using the midpoint of the range between the lowest possible loss and the highest possible loss.
 - b. using the minimum amount of the loss in the range.
 - c. using the best estimate of the amount of the loss expected to occur.
 - d. using the maximum amount of the loss in the range.

IFRS Concepts and Application

IFRS13.1 Under what conditions should a short-term obligation be excluded from current liabilities?

IFRS13.2 What evidence is necessary to demonstrate the ability to defer settlement of short-term debt?

IFRS13.3 Define a provision, and give three examples of a provision.

IFRS13.4 Under what conditions should a provision be recorded?

IFRS13.5 Distinguish between a current liability, such as accounts payable, and a provision.

IFRS13.6 What is an onerous contract? Give two examples of an onerous contract.

IFRS13.7 On December 31, 2020, Alexander Company had \$1,200,000 of short-term debt in the form of notes payable due February 2, 2021. On January 21, 2021, the company issued 25,000 ordinary shares for \$36 per share, receiving \$900,000 proceeds after brokerage fees and other costs of issuance. On February 2, 2021, the proceeds from the share sale, supplemented by an additional \$300,000 cash, are used to liquidate the \$1,200,000 debt. The December 31, 2020, statement of financial position is authorized for issue on February 23, 2021.

Instructions

Show how the \$1,200,000 of short-term debt should be presented on the December 31, 2020, statement of financial position.

IFRS13.8 Presented below are two different situations related to Mckee Corporation's debt obligations. Mckee's next financial reporting date is December 31, 2020. The financial statements are authorized for issuance on March 1, 2021.

1. Mckee has a long-term obligation of \$400,000, which is maturing over 4 years in the amount of \$100,000 per year. The obligation is dated November 1, 2020, and the first maturity date is November 1, 2021.
2. Mckee has a short-term obligation due February 15, 2021. Its lender agrees to extend the maturity date of this loan to February 15, 2023. The agreement for extension is signed on January 15, 2021.

Instructions

Indicate how each of these debt obligations is reported on Mckee's statement of financial position on December 31, 2020.

IFRS13.9 The following situations relate to Bolivia Company.

1. Bolivia provides a warranty with all its products it sells. It estimates that it will sell 1,000,000 units of its product for the year ended December 31, 2020, and that its total revenue for the product will be \$100,000,000. It also estimates that 60% of the product will have no defects, 30% will have major defects, and 10% will have minor defects. The cost of a minor defect is estimated to be \$5 for each product sold, and the cost for a major defect cost is \$15. The company also estimates that the minimum amount of warranty expense will be \$2,000,000 and the maximum will be \$10,000,000.
2. Bolivia is involved in a tax dispute with the tax authorities. The most likely outcome of this dispute is that Bolivia will lose and have to pay \$400,000. The minimum it will lose is \$20,000 and the maximum is \$2,500,000.

Instructions

Prepare the journal entry to record provisions, if any, for Bolivia at December 31, 2020.

IFRS13.10 Kobayashi Corporation reports in the current liability section of its statement of financial position at December 31, 2020 (its year-end), short-term obligations of \$15,000,000, which includes the current portion of 12% long-term debt in the amount of \$10,000,000 (matures in March 2021). Management has stated its intention to refinance the 12% debt whereby no portion of it will mature during 2021. The date of issuance of the financial statements is March 25, 2021.

Instructions

- a. Is management's intent enough to support long-term classification of the obligation in this situation?
- b. Assume that Kobayashi Corporation issues \$13,000,000 of 10-year debentures to the public in January 2021 and that management intends to use the proceeds to liquidate the \$10,000,000 debt maturing in March 2021. Furthermore, assume that the debt maturing in March 2021 is paid from

these proceeds prior to the authorization to issue the financial statements. Will this have any impact on the statement of financial position classification at December 31, 2020? Explain your answer.

- c. Assume that Kobayashi Corporation issues ordinary shares to the public in January and that management intends to entirely liquidate the \$10,000,000 debt maturing in March 2021 with the proceeds of this equity securities issue. In light of these events, should the \$10,000,000 debt maturing in March 2021 be included in current liabilities at December 31, 2020?

Professional Research

IFRS13.11 Hincapie Co. manufactures specialty bike accessories. The company is most well known for its product quality, and it has offered one of the best warranties in the industry on its higher-priced products—a lifetime guarantee. The warranty on these products is included in the sales price. Hincapie has a contract with a service company, which performs all warranty work on Hincapie products. Under the contract, Hincapie guarantees the service company at least \$200,000 of warranty work for each year of the 3-year contract.

The recent economic recession has been hard on Hincapie's business, and sales for its higher-end products have been especially adversely impacted. As a result, Hincapie is planning to restructure its high-quality lines by moving manufacturing for those products into one of its other factories, shutting down assembly lines, and terminating workers. In order to keep some workers on-board, Hincapie plans to bring all warranty work in-house. It can terminate the current warranty contract by making a one-time termination payment of \$75,000.

The restructuring plans have been discussed by management during November 2019; they plan to get approval from the board of directors at the December board meeting and execute the restructuring in early 2020. Given the company's past success, the accounting for restructuring activities has never come up. Hincapie would like you to do some research on how it should account for this restructuring according to IFRS.

Instructions

Access the IFRS authoritative literature at the IASB website. (Click on the IFRS tab and then register for free eIFRS access if necessary.) When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- Identify the accounting literature that addresses the accounting for the various costs that will be incurred in the restructuring.
- Advise Hincapie on the restructuring costs. When should Hincapie recognize liabilities arising from the restructuring? What costs can be included? What costs are excluded?
- Does Hincapie have a liability related to the service contract? Explain. If Hincapie has a liability, at what amount should it be recorded?

International Financial Reporting Problem

Marks and Spencer plc (M&S)

IFRS13.12 The financial statements of **M&S** are presented in Appendix E. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- What was M&S's 2017 short-term debt and related weighted-average interest rate on this debt?
- What was M&S's 2017 working capital, acid-test ratio, and current ratio? Comment on M&S's liquidity.
- What types of commitments and contingencies has M&S reported in its financial statements?

Long-Term Liabilities

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

1. Describe the nature of bonds and indicate the accounting for bond issuances.
2. Describe the accounting for the extinguishment of debt.
3. Explain the accounting for long-term notes payable.
4. Indicate how to present and analyze long-term debt.

PREVIEW OF CHAPTER 14 As the following opening story indicates, companies may rely on different forms of long-term borrowing, depending on market conditions and the features of various noncurrent liabilities. In this chapter, we explain the accounting issues related to long-term liabilities. The content and organization of the chapter are as follows.

This chapter also includes numerous conceptual and global discussions that are integral to the topics presented here.

LONG-TERM LIABILITIES

Bonds Payable

- Issuing bonds
- Types of bonds
- Valuation and accounting
- Effective-interest method

Extinguishment of Debt

- Economic substance
- Illustration

Long-Term Notes Payable

- Notes issued at face value
- Notes not issued at face value
- Special situations
- Mortgage notes payable

Reporting and Analyzing Liabilities

- Fair value option
- Off-balance-sheet financing
- Presentation and analysis

Going Long

The clock is ticking. Every second, it seems, someone in the world takes on more debt. The idea of a debt clock for an individual nation is familiar to anyone who has been to Times Square in New York, where the American public shortfall is revealed. The global debt clock shown below (accessed in November 2018) indicates the global figure for almost all government debts in dollar terms.

Does it matter? After all, world governments owe the money to their own citizens, not to the Martians. But the rising total is important for two reasons. First, when government debt rises faster than economic output (as it has been doing in recent years), this implies more state interference in the economy and higher taxes in the future. Second, debt must be rolled over at regular intervals. This creates a recurring popularity test for individual governments, much like reality-TV contestants facing a public online vote every week. Fail that vote, as various euro-zone governments have done, and the country (and its neighbors) can be plunged into crisis.

In addition to government debt, companies are issuing corporate debt at a record pace. Why this trend? For one thing, low interest rates and rising inflows into fixed-income funds have triggered record bond issuances as banks cut back lending. In addition, for some high-rated companies, it can be riskier to borrow from a bank than the bond markets. The reason: High-rated companies tend to rely on short-term commercial paper, backed up by undrawn loans, to fund working capital but are left stranded when these markets freeze up. Some are now financing themselves with longer-term bonds instead.

In fact, nonfinancial companies are issuing long-term bonds at a record pace, as they look to increase long-term borrowings, lock in low interest rates, and take advantage of investor demand. The following charts show the substantial increase in bonds issues as interest rates have fallen since the financial crisis of 2008.

Companies, like **Phillip Morris**, **Medtronic**, **Plains All American Pipeline**, and **Simon Property Group**, have all sold long-term bonds recently. Increases in the issuance of these bonds suggest confidence in the economy as investors appear comfortable holding such long-term investments. In addition, companies have a strong appetite for issuing these bonds because they provide a substantial cash infusion at a relatively low interest rate.

However, note the recent uptick in rates in recent years (in response to increases in benchmark interest rates by the Federal Reserve) and the corresponding drop-off in long-term issuances in 2016. Some companies such as **CVS** are still wading into the debt issue market, even before they need the funds, in anticipation of additional rate increases. Yet, other companies are scaling back debt issuance due to increases in rates as well as limitations on interest expense deductibility under the new tax law. Hopefully, the long-term bond market ups and downs will work out for both the investor and the company in the long run.

Review and Practice

Go to the **Review and Practice** section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions as well as additional exercises and practice problem with solutions are also available online.

Bonds Payable

LEARNING OBJECTIVE 1

Describe the nature of bonds and indicate the accounting for bond issuances.

As indicated in Chapter 13, current liabilities are defined as “obligations whose liquidation is reasonably expected to require use of existing resources properly classified as current assets, or the creation of other current liabilities.” No explicit definition of a noncurrent (long-term) liability is provided in current GAAP. In practice, therefore, many use the following approach: “If does not meet the definition of a current liability, it must be long-term.”

Recently, the FASB concluded that a principle based on the terms and conditions of a contract (a contractual approach) is most appropriate for defining a long-term liability because the evidence is more objective than the evidence provided by management expectations. This principle is to be applied to all long-term liabilities.¹ In this chapter, that is bonds payable (**long-term debt**) and long-term notes payable (including mortgages payable).

Generally, long-term debt has various **covenants** or **restrictions** that protect both lenders and borrowers. The indenture or agreement often includes the amounts authorized to be issued, interest rate, due date(s), call provisions, property pledged as security, sinking fund requirements, working capital and dividend restrictions, and limitations concerning the assumption of additional debt. Companies should describe these features in the body of the financial statements or the notes if important for a complete understanding of the financial position and the results of operations.

Although it would seem that these covenants provide adequate protection to the long-term debtholder, many bondholders suffer considerable losses when companies add more debt to the capital structure. Consider what can happen to bondholders in leveraged buyouts (LBOs), which are usually led by management. In an LBO of **RJR Nabisco**, for example, solidly rated 9³/₈ percent bonds plunged 20 percent in value when management announced the leveraged buyout. Such a loss in value occurs because the additional debt added to the capital structure increases the likelihood of default. Although covenants protect bondholders, these investors can still suffer losses when debt levels get too high.

Issuing Bonds

A bond arises from a contract known as a **bond indenture**. A bond represents a promise to pay (1) a sum of money at a designated maturity date, plus (2) periodic interest at a specified

¹Proposed FASB Accounting Standards Update 2019-XX, *Debt (Topic 470)*: “Simplifying the Classification of Debt in a Classified Balance Sheet (Current versus Noncurrent).” Specifically, companies classify liabilities as noncurrent (long-term) only if one or both of the following criteria are met as of the balance sheet date:

1. The liability is contractually due to be settled more than one year (or operating cycle, if longer) after the balance sheet date.
2. The entity has a contractual right to defer settlement of the liability for at least one year (or operating cycle, if longer) after the balance sheet date.

This definition is far-reaching as it covers such liabilities as long-term debt, due-on-demand loan agreements, callable debt agreements, convertible debt, debt with subjective acceleration clauses, and many more.

rate on the maturity amount (face value). Individual bonds are evidenced by a paper certificate and typically have a \$1,000 face value. Companies usually make bond interest payments semi-annually, although the interest rate is generally expressed as an annual rate. The main purpose of bonds is to borrow for the long term when the amount of capital needed is too large for one lender to supply. By issuing bonds in \$100, \$1,000, or \$10,000 denominations, a company can divide a large amount of long-term indebtedness into many small investing units, thus enabling more than one lender to participate in the loan.

A company may sell an entire bond issue to an investment bank, which acts as a selling agent in the process of marketing the bonds. In such arrangements, investment banks may either underwrite the entire issue by guaranteeing a certain sum to the company, thus taking the risk of selling the bonds for whatever price they can get (firm underwriting). Or they may sell the bond issue for a commission on the proceeds of the sale (best-efforts underwriting). Alternatively, the issuing company may sell the bonds directly to a large institution, financial or otherwise, without the aid of an underwriter (private placement).

Types of Bonds

We define some of the more common types of bonds found in practice as follows.

Types of Bonds

Secured and Unsecured Bonds. **Secured bonds** are backed by a pledge of some sort of collateral. Mortgage bonds are secured by a claim on real estate. Collateral trust bonds are secured by stocks and bonds of other corporations. Bonds not backed by collateral are **unsecured**. A **debenture bond** is unsecured. A “junk bond” is unsecured and also very risky, and therefore pays a high interest rate. Companies often use these bonds to finance leveraged buyouts.

Term, Serial Bonds, and Callable Bonds. Bond issues that mature on a single date are called **term bonds**. Issues that mature in installments are called **serial bonds**. Serially maturing bonds are frequently used by school or sanitary districts, municipalities, or other local taxing bodies that receive money through a special levy. **Callable bonds** give the issuer the right to call and redeem the bonds prior to maturity.

Convertible, Commodity-Backed, and Deep-Discount Bonds. If bonds are convertible into other securities of the corporation for a specified time after issuance, they are **convertible bonds**.

Two types of bonds have been developed in an attempt to attract capital in a tight money market—commodity-backed bonds and deep-discount bonds. **Commodity-backed bonds** (also called **asset-linked bonds**) are redeemable in measures of a commodity, such as barrels of oil, tons of coal, or ounces of rare metal. To

illustrate, **Sunshine Mining**, a silver-mining company, sold two issues of bonds redeemable with either \$1,000 in cash or 50 ounces of silver, whichever is greater at maturity, and that have a stated interest rate of 8½ percent. The accounting problem is one of projecting the maturity value, especially since silver has fluctuated between \$4 and \$40 an ounce since issuance.

JCPenney Company sold the first publicly marketed long-term debt securities in the United States that do not bear interest. These **deep-discount bonds**, also referred to as **zero-interest debenture bonds**, are sold at a discount that provides the buyer’s total interest payoff at maturity.

Registered and Bearer (Coupon) Bonds. Bonds issued in the name of the owner are **registered bonds** and require surrender of the certificate and issuance of a new certificate to complete a sale. A **bearer** or **coupon bond**, however, is not recorded in the name of the owner and may be transferred from one owner to another by mere delivery.

Income and Revenue Bonds. **Income bonds** pay no interest unless the issuing company is profitable. **Revenue bonds**, so called because the interest on them is paid from specified revenue sources, are most frequently issued by airports, school districts, counties, toll-road authorities, and governmental bodies.

What Do the Numbers Mean? All About Bonds

How do investors monitor their bond investments? One way is to review the bond listings found in the newspaper or online. Corporate bond listings show the coupon (interest) rate, maturity date, and last price. However, because corporate bonds are more actively traded by large institutional investors, the listings also indicate the current yield and the volume traded. Corporate bond listings would look like the following.

| Issuer | Maturity | Amount (\$ millions) | Price | Coupon | Yield |
|------------------------------|------------|-------------------------|--------|--------|-------|
| Wal-Mart Stores, Inc. | 12/19/2030 | 500 | 140.83 | 5.75 | 2.14 |
| General Electric | 9/16/2020 | 2,000 | 108.79 | 4.375 | 2.58 |

The companies issuing the bonds are listed in the first column, in this case, **Wal-Mart Stores, Inc.** and **General Electric**.

Immediately after the names is a column with the maturity date, followed by the amount and price of the bonds. As indicated, Wal-Mart pays a coupon rate of 5.75 percent and yields 2.14 percent. General Electric (GE) pays a coupon rate of 4.375 percent and yields 2.58 percent. The higher yield for GE indicates that investors view GE as relatively more risky than Wal-Mart, likely due to GE's recent financial challenges.

Also, interest rates and the bond's term to maturity have a real effect on bond prices. For example, an increase in interest rates will lead to a decline in bond values. Similarly, a decrease in interest rates will lead to a rise in bond values. The data reported in the following table, based on three different bond funds, demonstrate these relationships between interest rate changes and bond values.

| Bond Price Changes in Response to Interest Rate Changes | 1% Interest Rate | 1% Interest Rate |
|---|------------------|------------------|
| | Increase | Decrease |
| Short-term fund (2–5 years) | -2.5% | +2.5% |
| Intermediate-term fund (5 years) | -5 | +5 |
| Long-term fund (10 years) | -10 | +10 |

Source: The Vanguard Group.

Another factor that affects bond prices is the call feature, which decreases the value of the bond. Investors must be rewarded for the risk that the issuer will call the bond if interest rates decline, which would force the investor to reinvest at lower rates.

Valuation and Accounting for Bonds Payable

The issuance and marketing of bonds to the public does not happen overnight. It usually takes weeks or even months. First, the issuing company must arrange for underwriters that will help market and sell the bonds. Then, it must obtain the Securities and Exchange Commission's approval of the bond issue, undergo audits, and issue a prospectus (a document that describes the features of the bond and related financial information). Finally, the company must generally have the bond certificates printed. Frequently, the issuing company establishes the terms of a bond indenture well in advance of the sale of the bonds. Between the time the company sets these terms and the time it issues the bonds, the market conditions and the financial position of the issuing corporation may change significantly. Such changes affect the marketability of the bonds and thus their selling price.

The selling price of a bond issue is set by the supply and demand of buyers and sellers, relative risk, market conditions, and the state of the economy. The investment community values a bond at the **present value of its expected future cash flows**, which consist of (1) interest and (2) principal. The rate used to compute the present value of these cash flows is the interest rate that provides an acceptable return on an investment commensurate with the issuer's risk characteristics.

The interest rate written in the terms of the bond indenture (and often printed on the bond certificate) is known as the **stated, coupon, or nominal rate**. The issuer of the bonds sets this rate. The stated rate is expressed as a percentage of the **face value** of the bonds (also called the **par value, principal amount, or maturity value**).

If the rate employed by the investment community (buyers) differs from the stated rate, the present value of the bonds computed by the buyers (and the current purchase price) will differ from the face value of the bonds. The difference between the face value and the present value of the bonds determines the actual price that buyers pay for the bonds. This difference is either a discount or premium.²

- If the bonds sell for less than face value, they sell at a **discount**.
- If the bonds sell for more than face value, they sell at a **premium**.

The rate of interest actually earned by the bondholders is called the **effective yield** or **market rate**. If bonds sell at a discount, the effective yield exceeds the stated rate. Conversely, if bonds sell at a premium, the effective yield is lower than the stated rate. Several variables affect the bond's price while it is outstanding, most notably the market rate of interest. There is an inverse relationship between the market interest rate and the price of the bond.

²It is generally the case that the stated rate of interest on bonds is set in rather precise decimals (such as 6.875%). Companies usually attempt to align the stated rate as closely as possible with the market or effective rate at the time of issue.

Here we consider an example to illustrate the computation of the **present value of a bond issue**. Assume that ServiceMaster issues \$100,000 in bonds, due in five years with 9 percent interest payable annually at year-end. At the time of issue, the market rate for such bonds is 11 percent. The time diagram in **Illustration 14.1** depicts both the interest and the principal cash flows.

ILLUSTRATION 14.1
Time Diagram for Bond Cash Flows

The actual principal and interest cash flows are discounted at an 11 percent rate for five periods, as shown in **Illustration 14.2**.

ILLUSTRATION 14.2
Present Value Computation of Bond Selling at a Discount

| | |
|---|---------------------------|
| Present value of the principal: | |
| $\$100,000 \times .59345$ (Table 6.2) | \$59,345.00 |
| Present value of the interest payments: | |
| $\$9,000 \times 3.69590$ (Table 6.4) | 33,263.10 |
| Present value (selling price) of the bonds | <u>\$92,608.10</u> |

By paying \$92,608.10 at the date of issue, investors earn an effective rate or yield of 11 percent over the five-year term of the bonds. These bonds would sell at a discount of \$7,391.90 ($\$100,000 - \$92,608.10$). The price at which the bonds sell is typically stated as a **percentage** of the face or par value of the bonds. For example, the ServiceMaster bonds sold for 92.6 (92.6% of par). If ServiceMaster had received \$102,000, then the bonds sold for 102 (102% of par).

When bonds sell at less than face value, it means that investors demand a rate of interest **higher** than the stated rate. Usually this occurs because the investors can earn a greater rate on alternative investments of equal risk. They cannot change the stated rate, so they refuse to pay face value for the bonds. Thus, by changing the amount invested, they alter the effective rate of return. The investors receive interest at the stated rate computed on the face value, but they actually earn at **an effective rate that exceeds the stated rate because they paid less than face value for the bonds**. (Later in the chapter, in Illustrations 14.7 and 14.8, we show an illustration for a bond that sells at a premium.)

Bonds Issued at Par on Interest Date

When a company issues bonds on an interest payment date at par (face value), it accrues no interest. No premium or discount exists. The company simply records the cash proceeds and the face value of the bonds. To illustrate, if Buchanan Company issues at par 10-year term bonds with a par value of \$800,000, dated January 1, 2020, and bearing interest at an annual rate of 10 percent payable semiannually on January 1 and July 1, it records the following entry.

| | | |
|---------------|---------|---------|
| Cash | 800,000 | |
| Bonds Payable | | 800,000 |

Buchanan records the first semiannual interest payment of \$40,000 ($\$800,000 \times .10 \times \frac{6}{12}$) on July 1, 2020, as follows.

| | | |
|------------------|--------|--------|
| Interest Expense | 40,000 | |
| Cash | | 40,000 |

It records accrued interest expense at December 31, 2020 (year-end), as follows.

| | | |
|------------------|--------|--------|
| Interest Expense | 40,000 | |
| Interest Payable | | 40,000 |

Bonds Issued at Discount or Premium on Interest Date

If Buchanan Company issues the \$800,000 of bonds on January 1, 2020, at 97 (meaning 97% of par), it records the following issuance.

| | | |
|---------------------------------|---------|---------|
| Cash ($\$800,000 \times .97$) | 776,000 | |
| Discount on Bonds Payable | 24,000 | |
| Bonds Payable | | 800,000 |

Recall from our earlier discussion that because of its relation to interest, **companies amortize the discount and charge it to interest expense over the period of time that the bonds are outstanding.**

The **straight-line method** amortizes a constant amount each interest period (in this case 20 interest periods).³ For example, using the bond discount of \$24,000, Buchanan amortizes \$1,200 to interest expense each period for 20 periods ($\$24,000 \div 20$).

Buchanan records the semiannual interest payments of \$40,000 ($\$800,000 \times .10 \times \frac{1}{12}$) and the bond discount for the first year of the bond as indicated in **Illustration 14.3**.

| July 1, 2020 | | |
|---------------------------|--------|--------|
| Interest Expense | 41,200 | |
| Discount on Bonds Payable | | 1,200 |
| Cash | | 40,000 |
| December 31, 2020 | | |
| Interest Expense | 41,200 | |
| Discount on Bonds Payable | | 1,200 |
| Interest Payable | | 40,000 |

ILLUSTRATION 14.3
Straight-Line Amortization

At the end of the first year, 2020, the balance in the Discount on Bonds Payable account is \$21,600 ($\$24,000 - \$1,200 - \$1,200$). Over the term of the bonds, the balance in Discount on Bonds Payable will decrease by the same amount until it has zero balance at the maturity date of the bonds.

If instead of issuing the bonds on January 1, 2020, Buchanan dates and sells the bonds on October 1, 2020, and if the fiscal year of the corporation ends on December 31, the discount amortized during 2020 would be only 3/12 of 1/10 of \$24,000, or \$600. Buchanan must also record three months of accrued interest on December 31.

Premium on Bonds Payable is accounted for in a manner similar to that for Discount on Bonds Payable. If Buchanan dates and sells 10-year bonds with a par value of \$800,000 on January 1, 2020, at 103, it records the issuance as follows.

| | | |
|----------------------------------|---------|---------|
| Cash ($\$800,000 \times 1.03$) | 824,000 | |
| Premium on Bonds Payable | | 24,000 |
| Bonds Payable | | 800,000 |

With the bond premium of \$24,000, Buchanan amortizes \$1,200 to interest expense each period for 20 periods ($\$24,000 \div 20$).

Buchanan records the first semiannual interest payment of \$40,000 ($\$800,000 \times .10 \times \frac{1}{12}$) and the bond premium on July 1, 2020, as follows.

| | | |
|--------------------------|--------|--------|
| Interest Expense | 38,800 | |
| Premium on Bonds Payable | 1,200 | |
| Cash | | 40,000 |

³The effective-interest method is preferred for amortization of discount or premium. To keep these initial illustrations simple, we have chosen to use the straight-line method.

At December 31, 2020, Buchanan makes the following adjusting entry.

| | | |
|--------------------------|--------|--------|
| Interest Expense | 38,800 | |
| Premium on Bonds Payable | 1,200 | |
| Interest Payable | | 40,000 |

Amortization of a discount increases interest expense. Amortization of a premium decreases interest expense. Later in the chapter, we discuss amortization of a discount or premium under the effective-interest method.

The issuer may call some bonds at a stated price after a certain date. This call feature gives the issuing corporation the opportunity to reduce its bonded indebtedness or take advantage of lower interest rates. **Whether callable or not, a company must amortize any premium or discount over the bond's life to maturity because early redemption (call of the bond) is not a certainty.**

What Do the Numbers Mean? How's My Rating?

Two major publication companies, **Moody's Investors Service** and **Standard & Poor's Corporation**, issue quality ratings on every public debt issue. The following table summarizes the ratings issued by Standard & Poor's, along with historical default rates on bonds with different ratings.

| | | | | | | | |
|-----------------|-------|------|------|------|-------|-------|-------|
| Original rating | AAA | AA | A | BBB | BB | B | CCC |
| Default rate | 0.52% | 1.31 | 2.32 | 6.64 | 19.52 | 35.76 | 54.38 |

Source: Standard & Poor's Corp.

As expected, bonds receiving the highest quality rating of AAA have the lowest historical default rates. Bonds rated below BBB, which are considered below investment grade ("junk bonds"), experience default rates ranging from 20 to 50 percent.

Debt ratings reflect credit quality. The market closely monitors these ratings when determining the required yield and pricing of bonds at issuance and in periods after issuance, especially if a bond's rating is upgraded or downgraded. Unfortunately, the median rating of companies assessed by Standard & Poor's has recently fallen from A to BBB.

The BBB rating is the lowest possible "investment grade" or, to put it another way, is just one notch above "junk" bond status. It should be noted that investors who seek triple-A debt are running out of options. Standard & Poor's recently gave its top rating to just three U.S. industrial companies: **ExxonMobil**, **Johnson & Johnson**, and **Microsoft**.

Indeed, the overall decline in ratings can be explained in part by the growing issuance of CCC-rated debt in response to higher rates on high-yield debt. However, recent declines in high-risk yields (combined with rate increases for less risky debt) have cooled off the high-yield market as shown in the following chart.

Years of low interest rates had encouraged some of the riskiest corporate borrowers to tap yield-hungry investors to finance their growth, spurring issuance of debt that comes with triple-C credit ratings. For investors willing to shoulder the burden of those extra risks in exchange for heftier returns, CCC-rated bonds have been alluring.

Only 3 U.S. Companies Now Rated AAA," *USA Today* (April 11, 2014); T. Alloway, "A Towering Bond Trade Has Been Quietly Falling Apart," *Bloomberg.com* (August 3, 2015); and "High-Yield and Bank Loan Outlook: Be Wary of Eroding Investor Protections," <https://www.guggenheiminvestments.com/perspectives> (January 18, 2018).

Bonds Issued Between Interest Dates

Companies usually make bond interest payments semiannually, on dates specified in the bond indenture. When companies issue bonds on other than the interest payment dates, **buyers of the bonds will pay the seller the interest accrued from the last interest payment date to the date of issue.** The purchasers of the bonds, in effect, pay the bond issuer in advance for that portion of the full six-months' interest payment to which they are not entitled because they have not held the bonds for that period. **Then, on the next semiannual interest payment date, purchasers will receive the full six-months' interest payment.**

To illustrate, assume that on March 1, 2020, Taft Corporation issues 10-year bonds, dated January 1, 2020, with a par value of \$800,000. These bonds have an annual interest rate of 6 percent, payable semiannually on January 1 and July 1. Because Taft issues the bonds between interest dates, it records the bond issuance at **par plus accrued interest** as follows.

| | | |
|--|---------|---------|
| March 1, 2020 | | |
| Cash | 808,000 | |
| Bonds Payable | | 800,000 |
| Interest Expense (\$800,000 × .06 × 2/12) | | 8,000 |
| (Interest Payable might be credited instead) | | |

| Interest Expense | | |
|------------------|---------------------|---------------------------|
| | | 3/1/20 8,000 ^a |
| 7/1/20 | 24,000 ^b | |
| Balance | 16,000 | |

^aAccrued interest received.
^bCash paid.

The purchaser advances two months' interest. On July 1, 2020, four months after the date of purchase, Taft pays the purchaser six months' interest. Taft makes the following entry.

| | | |
|-------------------------------|--------|--------|
| July 1, 2020 | | |
| Interest Expense | 24,000 | |
| Cash (\$800,000 × .06 × 6/12) | | 24,000 |

The Interest Expense account now contains a debit balance of \$16,000, which represents the proper amount of interest expense—four months at 6 percent on \$800,000.

The illustration above was simplified by having the January 1, 2020, bonds issued on March 1, 2020, **at par**. If, however, Taft issued the 6 percent bonds at 102, its March 1 entry would be:

| | | |
|--|---------|---------|
| March 1, 2020 | | |
| Cash [(\$800,000 × 1.02) + (\$800,000 × .06 × 2/12)] | 824,000 | |
| Bonds Payable | | 800,000 |
| Premium on Bonds Payable (\$800,000 × .02) | | 16,000 |
| Interest Expense | | 8,000 |

Taft would amortize the premium **from the date of sale** (March 1, 2020), not from the date of the bonds (January 1, 2020). As a result, the premium amortization at July 1, 2020, is \$542.37 [(\$16,000 ÷ 118) × 4]. That is, the total amortization period is two months shorter [(12 × 10) – 2].

Effective-Interest Method

The preferred procedure for amortization of a discount or premium is the **effective-interest method** (also called **present value amortization**) (see **Global View**). Under the effective-interest method, companies:

1. Compute bond interest expense first by multiplying the **carrying value** (book value) of the bonds at the beginning of the period by the effective-interest rate.⁴
2. Determine the bond discount or premium amortization next by comparing the bond interest expense with the interest (cash) to be paid.

Illustration 14.4 depicts graphically the computation of the amortization.

Global View

IFRS requires the use of the effective-interest method. GAAP permits the use of the straight-line method if not materially different than the effective-interest method.

ILLUSTRATION 14.4
Bond Discount and Premium Amortization Computation

The effective-interest method produces a periodic interest expense equal to a **constant percentage of the carrying value of the bonds**. Since the percentage is the effective rate

⁴The carrying value (or amount) is the face amount minus any unamortized discount or plus any unamortized premium. The term *carrying value* is synonymous with *book value*.

of interest incurred by the borrower at the time of issuance, the effective-interest method provides a more relevant measure of interest expense than the straight-line method.⁵

Both the effective-interest and straight-line methods result in the **same total amount of interest expense over the term of the bonds**. However, when the annual amounts are materially different, generally accepted accounting principles require use of the effective-interest method. [2]

Bonds Issued at a Discount

To illustrate amortization of a discount under the effective-interest method, Evermaster Corporation issued \$100,000 of 8 percent term bonds on January 1, 2020, due on January 1, 2025, with interest payable each July 1 and January 1. Because the investors required an effective-interest rate of 10 percent, they paid \$92,278 for the \$100,000 of bonds, creating a \$7,722 discount. Evermaster computes the \$7,722 discount as shown in **Illustration 14.5**.⁶

ILLUSTRATION 14.5

Computation of Discount on Bonds Payable

| | | |
|---|----------|-----------------|
| Maturity value of bonds payable | | \$100,000 |
| Present value of \$100,000 due in 5 years at 10%, interest payable semiannually (Table 6.2); $FV(PVF_{10,5\%})$; $(\$100,000 \times .61391)$ | \$61,391 | |
| Present value of \$4,000 interest payable semiannually for 5 years at 10% annually (Table 6.4); $R(PVF-OA_{10,5\%})$; $(\$4,000 \times 7.72173)$ | 30,887 | |
| Less: Proceeds from sale of bonds | | 92,278 |
| Discount on bonds payable | | \$ 7,722 |

The five-year amortization schedule is shown in **Illustration 14.6**.

ILLUSTRATION 14.6

Bond Discount Amortization Schedule

| Calculator Solution for Present Value of Bonds: | | |
|---|----------|--------|
| | Inputs | Answer |
| N | 10 | |
| I/YR | 5 | |
| PV | ? | 92,278 |
| PMT | -4,000 | |
| FV | -100,000 | |

| Schedule of Bond Discount Amortization | | | | |
|--|-----------------------|-----------------------|---------------------|--------------------------|
| Effective-Interest Method—Semiannual Interest Payments | | | | |
| 5-Year, 8% Bonds Sold to Yield 10% | | | | |
| Date | Cash Paid | Interest Expense | Discount Amortized | Carrying Amount of Bonds |
| 1/1/20 | | | | \$ 92,278 |
| 7/1/20 | \$ 4,000 ^a | \$ 4,614 ^b | \$ 614 ^c | 92,892 ^d |
| 1/1/21 | 4,000 | 4,645 | 645 | 93,537 |
| 7/1/21 | 4,000 | 4,677 | 677 | 94,214 |
| 1/1/22 | 4,000 | 4,711 | 711 | 94,925 |
| 7/1/22 | 4,000 | 4,746 | 746 | 95,671 |
| 1/1/23 | 4,000 | 4,783 | 783 | 96,454 |
| 7/1/23 | 4,000 | 4,823 | 823 | 97,277 |
| 1/1/24 | 4,000 | 4,864 | 864 | 98,141 |
| 7/1/24 | 4,000 | 4,907 | 907 | 99,048 |
| 1/1/25 | 4,000 | 4,952 | 952 | 100,000 |
| | <u>\$40,000</u> | <u>\$47,722</u> | <u>\$7,722</u> | |

^a\$4,000 = \$100,000 × .08 × 6/12
^b\$4,614 = \$92,278 × .10 × 6/12
^c\$614 = \$4,614 − \$4,000
^d\$92,892 = \$92,278 + \$614

Underlying Concepts

Because bond issue costs do not meet the definition of an asset, some argue they should be expensed at issuance.

⁵The issuance of bonds involves engraving and printing costs, legal and accounting fees, commissions, promotion costs, and other similar charges. These costs should be recorded as a reduction to the carrying value of the bond payable and then amortized into expense over the life of the bond, through an adjustment to the effective-interest rate. (see **Underlying Concepts**). [1] (See the FASB Codification References near the end of the chapter.) For example, if the face value of the bond is \$100,000 and issue costs are \$1,000, then the bond payable (net of the bond issue costs) is recorded at \$99,000. Thus, the effective-interest rate will be higher, based on the reduced carrying value

⁶Because companies pay interest semiannually, the interest rate used is 5% (.10 × 6/12). The number of periods is 10 (5 years × 2).

Evermaster makes the following entries for the bonds issued at a discount.

| January 1, 2020 | | |
|--|--------|---------|
| Cash | 92,278 | |
| Discount on Bonds Payable | 7,722 | |
| Bonds Payable | | 100,000 |
| (Issuance of bonds at discount) | | |
| July 1, 2017 | | |
| Interest Expense | 4,614 | |
| Discount on Bonds Payable | | 614 |
| Cash | | 4,000 |
| (First interest payment and amortization of discount) | | |
| December 31, 2020 | | |
| Interest Expense | 4,645 | |
| Interest Payable | | 4,000 |
| Discount on Bonds Payable | | 645 |
| (Interest expense accrued (year-end) and amortization of discount) | | |

Bonds Issued at a Premium

Now assume that for the previous bond issue by Evermaster Corporation, investors are willing to accept an effective-interest rate of 6 percent. In that case, they would pay \$108,530 or a premium of \$8,530, computed as shown in **Illustration 14.7**.

| | | |
|--|----------|-----------------|
| Maturity value of bonds payable | | \$100,000 |
| Present value of \$100,000 due in 5 years at 6%, interest payable semiannually (Table 6.2); $FV(PVF_{10,3\%})$; $(\$100,000 \times .74409)$ | \$74,409 | |
| Present value of \$4,000 interest payable semiannually for 5 years at 6% annually (Table 6.4); $R(PVF-OA_{10,3\%})$; $(\$4,000 \times 8.53020)$ | 34,121 | |
| Less: Proceeds from sale of bonds | | 108,530 |
| Premium on bonds payable | | \$ 8,530 |

ILLUSTRATION 14.7

Computation of Premium on Bonds Payable

The five-year amortization schedule is shown in **Illustration 14.8**.

| Schedule of Bond Premium Amortization | | | | |
|--|-----------------------|-----------------------|---------------------|--------------------------|
| Effective-Interest Method—Semiannual Interest Payments | | | | |
| 5-Year, 8% Bonds Sold to Yield 6% | | | | |
| Date | Cash Paid | Interest Expense | Premium Amortized | Carrying Amount of Bonds |
| 1/1/20 | | | | \$108,530 |
| 7/1/20 | \$ 4,000 ^a | \$ 3,256 ^b | \$ 744 ^c | 107,786 ^d |
| 1/1/21 | 4,000 | 3,234 | 766 | 107,020 |
| 7/1/21 | 4,000 | 3,211 | 789 | 106,231 |
| 1/1/22 | 4,000 | 3,187 | 813 | 105,418 |
| 7/1/22 | 4,000 | 3,162 | 838 | 104,580 |
| 1/1/23 | 4,000 | 3,137 | 863 | 103,717 |

| 1/1/24 | 4,000 | 3,085 | 915 | 101,914 |
| 7/1/24 | 4,000 | 3,057 | 943 | 100,971 |
| 1/1/25 | 4,000 | 3,029 | 971 | 100,000 |
| | <u>\$40,000</u> | <u>\$31,470</u> | <u>\$8,530</u> | |

^a\$4,000 = \$100,000 × .08 × 6/12
^b\$3,256 = \$108,530 × .06 × 6/12
^c\$744 = \$4,000 – \$3,256
^d\$107,786 = \$108,530 – \$744

ILLUSTRATION 14.8

Bond Premium Amortization Schedule

| Calculator Solution for Present Value of Bonds: | | |
|---|----------|---------|
| | Inputs | Answer |
| N | 10 | |
| I/YR | 3 | |
| PV | ? | 108,530 |
| PMT | -4,000 | |
| FV | -100,000 | |

Evermaster records the issuance of its bonds at a premium as follows.

| January 1, 2020 | | |
|--------------------------|---------|---------|
| Cash | 108,530 | |
| Premium on Bonds Payable | | 8,530 |
| Bonds Payable | | 100,000 |

Evermaster records the first interest payment and amortization of the premium as follows.

| July 1, 2020 | | |
|--------------------------|-------|-------|
| Interest Expense | 3,256 | |
| Premium on Bonds Payable | 744 | |
| Cash | | 4,000 |

Evermaster should amortize the discount or premium as an adjustment to interest expense over the life of the bond in such a way as to result in a **constant rate of interest** when applied to the carrying amount of debt outstanding at the beginning of any given period.

Accruing Interest

In our previous examples, the interest payment dates and the date the financial statements were issued were essentially the same. For example, when Evermaster sold bonds at a premium, the two interest payment dates coincided with the financial reporting dates. However, what happens if Evermaster wishes to report financial statements at the end of February 2020? In this case, the company **prorates** the premium by the appropriate number of months, to arrive at the proper interest expense, as shown in **Illustration 14.9**.

ILLUSTRATION 14.9

Computation of Interest Expense

| | | |
|---|------------|-------------------|
| Interest accrual ($\$4,000 \times \frac{1}{2}$) | \$1,333.33 | |
| Premium amortized ($\$744 \times \frac{1}{2}$) | | (248.00) |
| Interest expense (Jan.–Feb.) | | <u>\$1,085.33</u> |

Evermaster records this accrual as follows.

| | | |
|--------------------------|----------|----------|
| Interest Expense | 1,085.33 | |
| Premium on Bonds Payable | 248.00 | |
| Interest Payable | | 1,333.33 |

If the company prepares financial statements six months later, it follows the same procedure. That is, the premium amortized would be as shown in **Illustration 14.10**.

ILLUSTRATION 14.10

Computation of Premium Amortization

| | | |
|--|----------|-----------------|
| Premium amortized (March–June) ($\$744 \times \frac{1}{2}$) | \$496.00 | |
| Premium amortized (July–August) ($\$766 \times \frac{1}{2}$) | | 255.33 |
| Premium amortized (March–August) | | <u>\$751.33</u> |

The interest-accrual computation is much simpler if the company uses the straight-line method. For example, the total premium is \$8,530, which Evermaster allocates evenly over the five-year period. Thus, premium amortization per month is \$142.17 ($\$8,530 \div 60$ months).

Classification of Discount and Premium

Discount on bonds payable is **not an asset**. It does not provide any future economic benefit. In return for the use of borrowed funds, a company must pay interest. A bond discount means that the company borrowed less than the face or maturity value of the bond. It therefore faces an actual (effective) interest rate higher than the stated (nominal) rate. Conceptually, discount on bonds payable is a liability valuation account. That is, it reduces the face or maturity amount of the related liability.⁷ This account is referred to as a **contra account**.

⁷"Elements of Financial Statements of Business Enterprises," *Statement of Financial Accounting Concepts No. 6* (Stamford, Conn.: FASB, 1980).

Similarly, premium on bonds payable has no existence apart from the related debt. The lower interest cost results because the proceeds of borrowing exceed the face or maturity amount of the debt. Conceptually, premium on bonds payable is a **liability** valuation account. It adds to the face or maturity amount of the related liability.⁸ This account is referred to as an **adjunct account**. As a result, **companies report bond discounts and bond premiums as a direct deduction from or addition to the face amount of the bond.**

Extinguishment of Debt

LEARNING OBJECTIVE 2

Describe the accounting for the extinguishment of debt.

Economic Substance

How do companies record the payment of debt—often referred to as **extinguishment of debt**? If a company holds the bonds (or any other form of debt security) to maturity, the answer is straightforward: The company does not compute any gains or losses. It will have fully amortized any premium or discount at the date the bonds mature. As a result, the carrying amount will equal the maturity (face) value of the bond. As the maturity or face value will also equal the bond's fair value at that time, no gain or loss exists.

In some cases, a company extinguishes debt before its maturity date.⁹ The amount paid on extinguishment or redemption before maturity, including any call premium and expense of reacquisition, is called the **reacquisition price**. On any specified date, the **net carrying amount** of the bonds is the amount payable at maturity, adjusted for unamortized premium or discount. Any excess of the net carrying amount over the reacquisition price is a **gain from extinguishment**. The excess of the reacquisition price over the net carrying amount is a **loss from extinguishment**. At the time of reacquisition, **the unamortized premium or discount, and any costs of issue applicable to the bonds, must be amortized up to the reacquisition date.**

Illustration

To illustrate, assume that on January 1, 2013, General Bell Corp. issued at 95, bonds with a par value of \$800,000, due in 20 years. Eight years after the issue date, General Bell calls the entire issue at 101 and cancels it.¹⁰ At that time, the unamortized discount balance is \$24,000. **Illustration 14.11** indicates how General Bell computes the loss on redemption (extinguishment).

⁸*Ibid.*, par. 238.

⁹Some companies have attempted to extinguish debt through an in-substance defeasance. **In-substance defeasance** is an arrangement whereby a company provides for the future repayment of a long-term debt issue by placing purchased securities in an irrevocable trust. The company pledges the principal and interest of the securities in the trust to pay off the principal and interest of its own debt securities as they mature. However, it is not legally released from its primary obligation for the debt that is still outstanding. In some cases, debtholders are not even aware of the transaction and continue to look to the company for repayment. This practice is not considered an extinguishment of debt, and therefore the company does not record a gain or loss.

¹⁰The issuer of callable bonds must generally exercise the call on an interest date. Therefore, the amortization of any discount or premium will be up to date, and there will be no accrued interest. However, early extinguishments through purchases of bonds in the open market are more likely to be on other than an interest date. If the purchase is not made on an interest date, the discount or premium must be amortized, and the interest payable must be accrued from the last interest date to the date of purchase.

ILLUSTRATION 14.11**Computation of Loss on Redemption of Bonds**

| | | |
|--|-----------|------------------|
| Reacquisition price ($\$800,000 \times 1.01$) | | \$808,000 |
| Net carrying amount of bonds redeemed: | | |
| Face value | \$800,000 | |
| Unamortized discount ($\$40,000^* \times \frac{12}{20}$) | 24,000 | (776,000) |
| Loss on redemption | | \$ 32,000 |
| * $[\$800,000 \times (1 - .95)]$ | | |

General Bell records the reacquisition and cancellation of the bonds as follows.

| | | |
|-----------------------------|---------|---------|
| Bonds Payable | 800,000 | |
| Loss on Redemption of Bonds | 32,000 | |
| Discount on Bonds Payable | | 24,000 |
| Cash | | 808,000 |

Note that it is often advantageous for the issuer to acquire the **entire** outstanding bond issue and replace it with a new bond issue bearing a lower rate of interest. The replacement of an existing issuance with a new one is called **refunding**. Whether the early redemption or other extinguishment of outstanding bonds is a nonrefunding or a refunding situation, a company should recognize the difference (gain or loss) between the reacquisition price and the net carrying amount of the redeemed bonds in income of the period of redemption.

What Do the Numbers Mean? Your Debt Is Killing My Equity

Traditionally, investors in the equity and bond markets operate in their own separate worlds. However, in recent volatile markets, even quiet murmurs in the bond market have been amplified into movements (usually negative) in share prices. At one extreme, these gyrations heralded the demise of a company well before the investors could sniff out the problem.

The swift decline of **Enron** in late 2001 provided the ultimate lesson: A company with no credit is no company at all. As one analyst remarked, “You can no longer have an opinion on a company’s shares without having an appreciation for its credit rating.” Indeed, other energy companies also felt the effect of Enron’s troubles as lenders tightened or closed down the credit supply and raised interest rates on already-high levels of debt. The result? Stock prices took a hit.

Other industries are not immune from the negative shareholder effects of credit problems. For example, analysts at **TheStreet.com** compiled a list of companies with a focus on debt levels. Companies like **Copel CIA** (an energy distribution company) were rewarded with improved stock ratings, based on their manageable debt levels.

Or consider the cases of **Apple**, **IBM**, and **Comcast**, which are taking advantage of an improved market tone as U.S. stocks rally. Apple recently issued a whopping \$12 billion of debt while its stock continued to perform well. The reason? Apple is reporting

strong profitability and good cash flows, so there is little concern that it cannot meet its debt obligations. In contrast, other companies with high debt levels and low ability to cover interest costs were not viewed very favorably. Among them are **Herbalife** and **Goodyear Tire and Rubber**, the latter of which reported debt levels several times greater than its equity.

Goodyear is a classic example of how swift and crippling a heavy debt-load can be. Not long ago, Goodyear had a good credit rating and was paying a good dividend. But, with mounting operating losses, Goodyear’s debt became a huge burden, its debt rating fell to junk status, the company cut its dividend, and its stock price dropped 80 percent. Only recently has Goodyear been able to dig out of its debt ditch. This was yet another example of stock prices taking a hit due to concerns about credit quality. Thus, even if your investment tastes are in equity, keep an eye on the liabilities.

R4; Christine Richard, “Holders of Corporate Bonds Seek Protection from Risk,” *Wall Street Journal* (December 17–18, 2005), p. B4; S. Nielson, “Ackman Says Herbalife’s Debt Levels Are Cause for Concern,” <http://finance.yahoo.com/news> (December 29, 2014); and M. Cherney, “Apple Leads Bond Market Back to Life,” *Wall Street Journal* (February 16, 2016).

Long-Term Notes Payable

LEARNING OBJECTIVE 3

Explain the accounting for long-term notes payable.

The difference between current notes payable and **long-term notes payable** is the maturity date. As discussed in Chapter 13, short-term notes payable are those that companies expect to

pay within a year or the operating cycle, whichever is longer. Long-term notes are similar in substance to bonds in that both have fixed maturity dates and carry either a stated or implicit interest rate. However, notes do not trade as readily as bonds in the organized public securities markets. Noncorporate and small corporate enterprises issue notes as their long-term instruments. Larger corporations issue both long-term notes and bonds.

Accounting for notes and bonds is quite similar. **Like a bond, a note is valued at the present value of its future interest and principal cash flows. The company amortizes any discount or premium over the life of the note,** just as it would the discount or premium on a bond.¹¹ Companies compute the present value of an **interest-bearing note**, record its issuance, and amortize any discount or premium and accrual of interest in the same way that they do for bonds (as shown earlier in this chapter).

As you might expect, accounting for long-term notes payable parallels accounting for long-term notes receivable as was presented in Chapter 7.

Notes Issued at Face Value

In Chapter 7, we discussed the recognition of a \$10,000, three-year note Scandinavian Imports issued at face value to Bigelow Corp. In this transaction, the stated rate and the effective rate were both 10 percent. The time diagram and present value computation in Chapter 7 (see Illustration 7.7) for Bigelow Corp. are the same for the issuer of the note, Scandinavian Imports, in recognizing a note payable. Because the present value of the note and its face value are the same, \$10,000, Scandinavian recognizes no premium or discount. It records the issuance of the note as follows.

| | | |
|---------------|--------|--------|
| Cash | 10,000 | |
| Notes Payable | | 10,000 |

Scandinavian Imports recognizes the interest incurred each year as follows.

| | | |
|-----------------------------------|-------|-------|
| Interest Expense (\$10,000 × .10) | 1,000 | |
| Cash | | 1,000 |

Notes Not Issued at Face Value

Zero-Interest-Bearing Notes

If a company issues a zero-interest-bearing (non-interest-bearing) note¹² solely for cash, it measures the note's present value by the cash received. The implicit interest rate is the **rate that equates the cash received with the amounts to be paid in the future.** The issuing company records the difference between the face amount and the present value (cash received) as **a discount and amortizes that amount to interest expense over the life of the note.**

An example of such a transaction is Beneficial Corporation's offering of \$150 million of zero-coupon notes (deep-discount bonds) having an eight-year life. With a face value of \$1,000 each, these notes sold for \$327—a deep discount of \$673 each. The present value of each note is the cash proceeds of \$327. We can calculate the interest rate by determining the rate that equates the amount the investor currently pays with the amount to be received in the future. Thus, Beneficial amortizes the discount over the eight-year life of the notes using an effective-interest rate of 15 percent.¹³

 Calculator Solution for Effective Interest on Note:

| | Inputs | Answer |
|------|--------|--------|
| N | 8 | |
| I/YR | ? | 15 |
| PV | -327 | |
| PMT | 0 | |
| FV | 1,000 | |

¹¹All payables that represent commitments to pay money at a determinable future date are subject to present value measurement techniques, except for the following specifically excluded types:

1. Normal accounts payable due within one year.
2. Security deposits, retainages, advances, or progress payments.
3. Transactions between parent and subsidiary.
4. Obligations payable at some indeterminable future date. [3]

¹²Although we use the term “note” throughout this discussion, the basic principles and methodology apply equally to other long-term debt instruments.

¹³ $\$327 = \$1,000(PVF_{8,i})$
 $PVF_{8,i} = \frac{\$327}{\$1,000} = .327$
 $i = 15\%$ (in Table 6.2 locate .32690).

To illustrate the entries and the amortization schedule for a long-term note payable, assume that Turtle Cove Company issued the three-year, \$10,000, zero-interest-bearing note to Jeremiah Company illustrated in Chapter 7 (notes receivable). The implicit rate that equated the total cash to be paid (\$10,000 at maturity) to the present value of the future cash flows (\$7,721.80 cash proceeds at date of issuance) was 9 percent. (The present value of \$1 for 3 periods at 9% is \$0.77218.) **Illustration 14.12** shows the time diagram for the single cash flow.

ILLUSTRATION 14.12
Time Diagram for Zero-Interest-Bearing Note

Turtle Cove records issuance of the note as follows.

| | | |
|---------------------------|----------|-----------|
| Cash | 7,721.80 | |
| Discount on Notes Payable | 2,278.20 | |
| Notes Payable | | 10,000.00 |

Turtle Cove amortizes the discount and recognizes interest expense annually using the **effective-interest method**. **Illustration 14.13** shows the three-year discount amortization and interest expense schedule. (This schedule is similar to the note receivable schedule of Jeremiah Company in Illustration 7.10.)

ILLUSTRATION 14.13
Schedule of Note Discount Amortization

| Schedule of Note Discount Amortization | | | | |
|--|------------------|--|---------------------------|--------------------------------|
| Effective-Interest Method | | | | |
| 0% Note Discounted at 9% | | | | |
| | <u>Cash Paid</u> | <u>Interest Expense</u> | <u>Discount Amortized</u> | <u>Carrying Amount of Note</u> |
| Date of issue | | | | \$ 7,721.80 |
| End of year 1 | \$-0- | \$ 694.96 ^a | \$ 694.96 ^b | 8,416.76 ^c |
| End of year 2 | -0- | 757.51 | 757.51 | 9,174.27 |
| End of year 3 | -0- | 825.73 ^d | 825.73 | 10,000.00 |
| | \$-0- | \$2,278.20 | \$2,278.20 | |
| ^a \$7,721.80 × .09 = \$694.96 | | ^c \$7,721.80 + \$694.96 = \$8,416.76 | | |
| ^b \$694.96 - 0 = \$694.96 | | ^d \$0.05 adjustment to compensate for rounding. | | |

Turtle Cove records interest expense at the end of the first year using the effective-interest method as follows.

| | | |
|-------------------------------------|--------|--------|
| Interest Expense (\$7,721.80 × .09) | 694.96 | |
| Discount on Notes Payable | | 694.96 |

The total amount of the discount, \$2,278.20 in this case, represents the expense that Turtle Cove Company will incur on the note over the three years.

Interest-Bearing Notes

The zero-interest-bearing note above is an example of the extreme difference between the stated rate and the effective rate. In many cases, the difference between these rates is not so great.

Consider the example from Chapter 7 where Marie Co. issued for cash a \$10,000, three-year note bearing interest at 10 percent to Morgan Corp. The market rate of interest for a note of similar risk is 12 percent. Illustration 7.11 shows the time diagram depicting the cash flows and the computation of the present value of this note. In this case, because the effective rate of interest (12%) is greater than the stated rate (10%), the present value of the note is less than the face value. That is, the note is exchanged at a **discount**. Marie Co. records the issuance of the note as follows.

| | | |
|---------------------------|-------|--------|
| Cash | 9,520 | |
| Discount on Notes Payable | 480 | |
| Notes Payable | | 10,000 |

Marie Co. then amortizes the discount and recognizes interest expense annually using the **effective-interest method**. **Illustration 14.14** shows the three-year discount amortization and interest expense schedule.

ILLUSTRATION 14.14
Schedule of Note Discount Amortization

| Schedule of Note Discount Amortization Effective-Interest Method 10% Note Discounted at 12% | | | | |
|---|----------------------|--|-----------------------|-------------------------------|
| | Cash Paid | Interest Expense | Discount Amortized | Carrying Amount of Note |
| Date of issue | | | | \$ 9,520 |
| End of year 1 | \$1,000 ^a | \$1,142 ^b | \$142 ^c | 9,662 ^d |
| End of year 2 | 1,000 | 1,159 | 159 | 9,821 |
| End of year 3 | 1,000 | 1,179 | 179 | 10,000 |
| | <u>\$3,000</u> | <u>\$3,480</u> | <u>\$480</u> | |
| ^a \$10,000 × .10 = \$1,000 | | ^c \$1,142 – \$1,000 = \$142 | | |
| ^b \$9,520 × .12 = \$1,142 | | ^d \$9,520 + \$142 = \$9,662 | | |

Marie Co. records payment of the annual interest and amortization of the discount for the first year as follows (amounts per amortization schedule).

| | | |
|---------------------------|-------|-------|
| Interest Expense | 1,142 | |
| Discount on Notes Payable | | 142 |
| Cash | | 1,000 |

When the present value exceeds the face value, Marie Co. exchanges the note at a premium. It does so by recording the premium as a credit and amortizing it using the effective-interest method over the life of the note as annual reductions in the amount of interest expense recognized.

Special Notes Payable Situations

Notes Issued for Property, Goods, or Services

Sometimes, companies may receive property, goods, or services in exchange for a note payable. When exchanging the debt instrument for property, goods, or services in a bargained transaction entered into at arm’s length, the stated interest rate is presumed to be fair unless:

1. No interest rate is stated, or
2. The stated interest rate is unreasonable, or
3. The stated face amount of the debt instrument is materially different from the current cash sales price for the same or similar items or from the current fair value of the debt instrument.

In these circumstances, the company measures the present value of the debt instrument by the fair value of the property, goods, or services or by an amount that reasonably approximates the fair value of the note. [4] If there is **no stated rate of interest, the amount of interest is the difference between the face amount of the note and the fair value of the property.**

For example, assume that Scenic Development Company sells land having a cash sale price of \$200,000 to Health Spa, Inc. In exchange for the land, Health Spa gives a five-year, \$293,866, zero-interest-bearing note. The \$200,000 cash sale price represents the present value of the \$293,866 note discounted at 8 percent for five years. Should both parties record the transaction on the sale date at the face amount of the note, which is \$293,866? No—if they did, Health Spa’s Land account and Scenic’s sales would be overstated by \$93,866 (the interest for five years at an effective rate of 8%). Similarly, interest revenue to Scenic and interest expense to Health Spa for the five-year period would be understated by \$93,866.

Because the difference between the cash sale price of \$200,000 and the \$293,866 face amount of the note represents interest at an effective rate of 8 percent, the companies’ transaction is recorded at the exchange date as shown in **Illustration 14.15**.

ILLUSTRATION 14.15
Entries for Noncash Note Transactions

| Health Spa, Inc. (Buyer) | | | Scenic Development Company (Seller) | | |
|---------------------------|---------|---------|-------------------------------------|---------|---------|
| Land | 200,000 | | Notes Receivable | 293,866 | |
| Discount on Notes Payable | 93,866 | | Discount on Notes Rec. | | 93,866 |
| Notes Payable | | 293,866 | Sales Revenue | | 200,000 |

During the five-year life of the note, Health Spa amortizes annually a portion of the discount of \$93,866 as a charge to interest expense. Scenic Development records interest revenue totaling \$93,866 over the five-year period by also amortizing the discount. The effective-interest method is required, unless the results obtained from using another method are not materially different from those that result from the effective-interest method.

Choice of Interest Rate

In note transactions, the effective or market interest rate is either evident or determinable by other factors involved in the exchange, such as the fair value of what is given or received. But, if a company cannot determine the fair value of the property, goods, services, or other rights, and if the note has no ready market, the problem of determining the present value of the note is more difficult. To estimate the present value of a note under such circumstances, a company must approximate an applicable interest rate that may differ from the stated interest rate. This process of interest-rate approximation is called **imputation**, and the resulting interest rate is called an **imputed interest rate**.

The prevailing rates for similar instruments of issuers with similar credit ratings affect the choice of a rate. Other factors such as restrictive covenants, collateral, payment schedule, and the existing prime interest rate also play a part. Companies determine the imputed interest rate when they issue a note; any subsequent changes in prevailing interest rates are ignored.

To illustrate, assume that on December 31, 2020, Wunderlich Company issued a promissory note to Brown Interiors Company for architectural services. The note has a face value of \$550,000, a due date of December 31, 2025, and bears a stated interest rate of 2 percent, payable at the end of each year. Interest paid each period is therefore \$11,000 ($\$550,000 \times .02$). Wunderlich cannot readily determine the fair value of the architectural services, nor is the note readily marketable. On the basis of Wunderlich’s credit rating, the absence of collateral, the prime interest rate at that date, and the prevailing interest on Wunderlich’s other outstanding debt, the company imputes an 8 percent interest rate as appropriate in this circumstance. **Illustration 14.16** shows the time diagram depicting both cash flows.

ILLUSTRATION 14.16
Time Diagram for Interest-Bearing Note

The present value of the note and the imputed fair value of the architectural services are determined as shown in **Illustration 14.17**.

| | | |
|--|---------------|------------------|
| Face value of the note | | \$550,000 |
| Present value of \$550,000 due in 5 years at 8% interest payable annually (Table 6.2); $FV(PVF_{5,8\%})$; $(\$550,000 \times .68058)$ | \$374,319 | |
| Present value of \$11,000 interest payable annually for 5 years at 8%; $R(PVF-OA_{5,8\%})$; $(\$11,000 \times 3.99271)$ | <u>43,920</u> | |
| Present value of the note | | <u>(418,239)</u> |
| Discount on notes payable | | <u>\$131,761</u> |

ILLUSTRATION 14.17

Wunderlich records payment of the first year's interest and amortization of the discount as follows.

| | | |
|---------------------------|--------|--------|
| December 31, 2021 | | |
| Interest Expense | 33,459 | |
| Discount on Notes Payable | | 22,459 |
| Cash | | 11,000 |

Mortgage Notes Payable

The most common form of long-term notes payable is a mortgage note payable. A **mortgage note payable** is a promissory note secured by a document called a mortgage that pledges title to property as security for the loan. Individuals, proprietorships, and partnerships use mortgage notes payable more frequently than do corporations. (As noted in the opening story, corporations usually find that bond issues offer advantages in obtaining large loans.)

The borrower usually receives cash for the face amount of the mortgage note. In that case, the face amount of the note is the true liability, and no discount or premium is involved. When the lender assesses “points,” however, the total amount received by the borrower is less than the face amount of the note.¹⁴ Points raise the effective-interest rate above the rate specified in the note. A **point** is 1 percent of the face of the note.

For example, assume that Harrick Co. borrows \$1,000,000, signing a 20-year mortgage note with a stated interest rate of 10.75 percent as part of the financing for a new plant. If Associated Savings demands 4 points to close the financing, Harrick will receive 4 percent less than \$1,000,000—or a net amount of \$960,000—but it will be obligated to repay the entire \$1,000,000. Because Harrick received only \$960,000, and must repay \$1,000,000, its effective-interest rate is increased to approximately 11.4 percent on the money actually borrowed.

On the balance sheet, Harrick should report the mortgage note payable as a liability using a title such as “Mortgage Payable” or “Notes Payable—Secured,” with a brief disclosure of the property pledged in notes to the financial statements.

Mortgages may be payable in full at maturity or in installments over the life of the loan. If payable at maturity, Harrick classifies its mortgage payable as a long-term liability on the balance sheet until such time as the approaching maturity date warrants showing it as a current liability. If it is payable in installments, Harrick shows the current installments due as current liabilities, with the remainder as a long-term liability.

Lenders have partially replaced the traditional **fixed-rate mortgage** with alternative mortgage arrangements. Most lenders offer **variable-rate mortgages** (also called *floating-rate* or *adjustable-rate* mortgages) featuring interest rates tied to changes in the fluctuating market rate. Generally, the variable-rate lenders adjust the interest rate at either one- or three-year intervals, pegging the adjustments to changes in the prime rate or the U.S. Treasury bond rate.

Reporting and Analyzing Liabilities

LEARNING OBJECTIVE 4

Indicate how to present and analyze long-term debt.

Fair Value Option

As indicated earlier, noncurrent liabilities, such as bonds and notes payable, are generally measured at amortized cost (face value of the payable, adjusted for any payments and amortization of any premium or discount). However, companies have the option to record fair value in their accounts for most financial assets and liabilities, including bonds and notes payable. [5] As discussed in Chapter 7, the FASB believes that fair value measurement for financial instruments, including financial liabilities, provides more relevant and understandable information than amortized cost. It considers fair value to be more relevant because it reflects the current cash equivalent value of financial instruments.

¹⁴Points, in mortgage financing, are analogous to the original issue discount of bonds.

Fair Value Measurement

If companies choose the **fair value option**, noncurrent liabilities, such as bonds and notes payable, are reported at fair value. In addition, companies report unrealized holding gains or losses as part of net income or in other comprehensive income, depending on the circumstances. An unrealized holding gain or loss is the net change in the fair value of the liability from one period to another, exclusive of interest expense recognized. As a result, the company reports the liability at fair value each reporting date.

Fair Value (Net Income) If a general change in interest rates occurs (for example, the Federal Reserve changes the long-term interest rates on government bonds), the fair value of a company's financial liabilities changes as well. To illustrate, Edmonds Company has issued \$500,000 of 6 percent bonds at face value on May 1, 2020. Edmonds chooses the fair value option for these bonds. At December 31, 2020, the value of the bonds is now \$480,000 because interest rates in the market have increased to 8 percent. The value of the debt securities falls because the bond is paying less than market rate for similar securities. Under the fair value option, Edmonds makes the following entry.

| | | |
|--|--------|--------|
| Bonds Payable | 20,000 | |
| Unrealized Holding Gain or Loss—Income | | 20,000 |
| (\$500,000 – \$480,000) | | |

As the journal entry indicates, the value of the bonds declined. This decline leads to a reduction in the bond liability and a resulting unrealized holding gain, which is reported as part of net income. The value of Edmonds' debt declined because market interest rates increased. It should be emphasized that Edmonds must continue to value the bonds payable at fair value in all subsequent periods.

Fair Value (Other Comprehensive Income) With the Edmonds bonds, we assumed that the decline in value of the bonds was due to a market interest rate increase. In other situations, the decline may occur because the bonds become more likely to default. That is, **if the creditworthiness of Edmonds Company declines, the value of its debt also declines.** If its creditworthiness declines, its bond investors are receiving a lower rate relative to investors with similar-risk investments. How to report these changes is controversial. Some support reporting changes in the fair value of the bonds payable for a decline in creditworthiness in income, noting that the debtholders' loss is the shareholders' gain. That is, the shareholders' claims on the assets of the company increase when the value of the debtholders' claims declines. Others question how Edmonds can record a gain when its creditworthiness is becoming worse.

The FASB now requires that the credit-risk portion of gains or losses on a financial liability be reported in other comprehensive income. To illustrate, assume that the Edmonds Company fair value change on its bonds is due to its credit rating dropping from AA to BB. In this case, Edmonds makes the following entry to record the fair value change in other comprehensive income.

| | | |
|--|--------|--------|
| Bonds Payable | 20,000 | |
| Unrealized Holding Gain or Loss—Equity | | 20,000 |

As indicated, unrealized gains and losses due to changes in credit risk will not affect income. When the Edmonds bonds mature or are extinguished, any accumulated other comprehensive gains and losses due to changes in interest rates are reclassified to net income.

What Do the Numbers Mean? Fair Value Fun House

The move to change the accounting for financial liabilities under the fair value option began in 2011, when **Citigroup's** third-quarter earnings rose 68 percent from a year earlier, partly due to an accounting adjustment. The accounting adjustment was a \$1.9 billion gain related to a change in the valuation of its debt obligations. A similar situation resulted in the third quarter of

2011 for **JPMorgan**. Its results were enhanced by decreasing the value of its debt, also by \$1.9 billion.

Some wondered how these banks' net incomes increased even though their credit ratings declined. This result seems counterintuitive—how does a company that is actually doing worse have its income increase? Well, at that time, fair value

adjustments for liabilities under the fair value option were recorded in income, rather than in OCI. As one expert noted, “At its worse, bank accounting can seem like the mirrors in a fun house. Reality is reflected, but the distortions can be large.”

So what to do? Three different viewpoints were suggested. One view was that changes in the value of the liability should not be reported in income until the liability is extinguished. Those who supported this position believe that the information related to reporting value changes in the liability in income (or comprehensive income) was misleading and not useful to financial statement users. Others argued that reporting the unrealized gains and losses related to changes in the fair value of the liability through net income was appropriate given many financial assets could also be reported at fair value. A third group agreed with the fair value approach but indicated that if the change in value was a result of a change in credit risk, the unrealized gain or loss should be reported as other comprehensive income.

As indicated in our discussion related to the accounting for the fair value option for financial liabilities, the FASB

now requires that the unrealized gains and losses related to **changes in a company's own credit risk be reported in other comprehensive income**. This approach has the benefit of reducing the volatility in net income for preparers. The FASB reasoned that because these liabilities typically are settled with the creditor rather than through a transfer or settlement with a third party, changes in the fair value attributable to changes in the instrument-specific credit risk usually are not realized. Furthermore, the gain or loss recognized in accumulated other comprehensive income must be reclassified to earnings upon the settlement of the liability. GAAP and IFRS are now converged with respect to the accounting for liability changes arising from credit risk.

Laungani and M. Lamoute, “Banks to Remove ‘Own Credit’ Gains and Losses in 1Q 2016 Earnings,” *Moody's Global Credit Research* (April 4, 2016).

Off-Balance-Sheet Financing

What do **Krispy Kreme**, **Cisco**, **Enron**, and **Adelphia Communications** have in common? They all have been accused of using off-balance-sheet financing to minimize the reporting of debt on their balance sheets. **Off-balance-sheet financing** is an attempt to borrow monies in such a way to prevent recording the obligations. It has become an issue of extreme importance. Many allege that Enron, in one of the largest corporate failures on record, hid a considerable amount of its debt off the balance sheet. As a result, any company that uses off-balance-sheet financing today risks investors dumping the company's stock. Consequently, the company's share price will suffer. Nevertheless, a considerable amount of off-balance-sheet financing continues to exist. As one writer noted, “The basic drives of humans are few: to get enough food, to find shelter, and to keep debt off the balance sheet.”

Different Forms

Off-balance-sheet financing can take many different forms. Here are two examples.

1. **Non-consolidated subsidiary.** Under GAAP, a parent company does not have to consolidate a subsidiary company that is less than 50 percent owned. In such cases, the parent therefore does not report the assets and liabilities of the subsidiary. All the parent reports on its balance sheet is the investment in the subsidiary. As a result, users of the financial statements may not understand that the subsidiary has considerable debt for which the parent may ultimately be liable if the subsidiary runs into financial difficulty.
2. **Special-purpose entity (SPE).** A company creates a **special-purpose entity (SPE)** to perform a special project. To illustrate, assume that Clarke Company decides to build a new factory. However, management does not want to report the plant or the borrowing used to fund the construction on its balance sheet. It therefore creates an SPE, the purpose of which is to build the plant. (This arrangement is called a **project financing arrangement**.) The SPE finances and builds the plant. In return, Clarke guarantees that it or some outside party will purchase all the products produced by the plant. (Some refer to this as a **take-or-pay contract**.) As a result, Clarke might not report the asset or liability

on its books. The accounting rules in this area are complex. We discuss the accounting for SPEs in Appendix 17B.

Rationale

Why do companies engage in off-balance-sheet financing? A major reason is that many believe that **removing debt enhances the quality of the balance sheet** and permits credit to be obtained more readily and at less cost.

Second, loan covenants often limit the amount of debt a company may have. As a result, the company uses off-balance-sheet financing because **these types of commitments might not be considered in computing the debt limitation**.

Third, some argue that the asset side of the balance sheet is severely understated. For example, companies that use LIFO costing for inventories and depreciate assets on an accelerated basis will often have carrying amounts for inventories and property, plant, and equipment that are much lower than their fair values. As an offset to these lower values, some believe that part of the debt does not have to be reported. In other words, **if companies report assets at fair values**, less pressure would undoubtedly exist for off-balance-sheet financing arrangements.

Whether the arguments above have merit is debatable. The general idea of “out of sight, out of mind” may not be true in accounting. Many users of financial statements indicate that they factor these off-balance-sheet financing arrangements into their computations when assessing debt-to-equity relationships. Similarly, many loan covenants also attempt to account for these complex arrangements. Nevertheless, many companies still believe that benefits will accrue if they omit certain obligations from the balance sheet.

As a response to off-balance-sheet financing arrangements, the FASB has increased disclosure (note) requirements. This response is consistent with an “efficient markets” philosophy: The important question is not whether the presentation is off-balance-sheet or not, but whether the items are disclosed at all. In addition, the SEC, in response to the Sarbanes-Oxley Act, now requires companies to provide related information in their management discussion and analysis sections (see **Global View**). Specifically, companies must disclose (1) all contractual obligations in a tabular format and (2) contingent liabilities and commitments in either a textual or tabular format.¹⁵

We believe that recording more obligations on the balance sheet will enhance financial reporting. Given the problems with companies such as **Enron, Dynegy, Williams Company, Chesapeake Energy**, and **Calpine**, and the Sarbanes-Oxley requirements, we expect that less off-balance-sheet financing will occur in the future.

Global View

There is no comparable institution to the SEC in international securities markets. As a result, many international companies (those not registered with the SEC) are not required to provide disclosures such as those related to contractual obligations.

What Do the Numbers Mean? Obligated

The off-balance-sheet world is slowly but surely becoming more on-balance-sheet. New interpretations on guarantees (discussed in Chapter 13) and variable-interest entities (discussed in Appendix 17B) are doing their part to increase the amount of debt reported on corporate balance sheets.

In addition, the SEC has rules that require companies to disclose off-balance-sheet arrangements and contractual obligations

that currently have, or are reasonably likely to have, a material future effect on the companies' financial condition. Companies now must include a tabular disclosure (using a prescribed format) in the management discussion and analysis section of the annual report. The following is **Best Buy Co.**'s tabular disclosure of its contractual obligations.

¹⁵As discussed in Chapter 21, the FASB (and IASB) addressed a major source of off-balance-sheet financing—operating leases—with issuance of new guidance (ASU 2016-2, *Leases*), which requires that payments on all leases (including operating leases) with terms longer than one year be recorded as liabilities on the balance sheet. Nonetheless, it is unlikely that the FASB will be able to stop all types of off-balance-sheet transactions. Financial engineering is the “Holy Grail” of Wall Street. Developing new financial instruments and arrangements to sell and market to customers is not only profitable but also adds to the prestige of the investment firms that create them. Thus, new financial products will continue to appear that will test the ability of the FASB to develop appropriate accounting standards for them.

| Best Buy Co. | | | | | |
|---|---------|------------------------|-----------|-----------|----------------------|
| Contractual Obligations | | | | | |
| The following table presents information regarding our contractual obligations by fiscal year (\$ in millions): | | | | | |
| Contractual Obligations | Total | Payments due by period | | | |
| | | Less than 1 year | 1–3 years | 3–5 years | More than 5 years |
| Long-term debt obligations | \$1,499 | — | \$ 350 | \$ 500 | \$ 649 |
| Capital lease obligations | 63 | \$ 23 | 23 | 4 | 13 |
| Financing lease obligations | 95 | 22 | 37 | 21 | 15 |
| Interest payments | 428 | 86 | 151 | 113 | 78 |
| Operating lease obligations | 5,033 | 1,027 | 1,738 | 1,152 | 1,116 |
| Purchase obligations | 2,273 | 1,416 | 659 | 125 | 73 |
| Other | | | | | |
| Unrecognized tax benefits | 370 | — | — | — | — |
| Deferred compensation | 54 | — | — | — | — |

Note: For additional information refer to Note 7, Debt; Note 9, Leases; Note 11, Income Taxes and Note 13, Contingencies and Commitments, in the Notes to Consolidated Financial Statements, included in Item 8, Financial Statements and Supplementary Data, of this Annual Report on Form 10-K.

Enron's abuse of off-balance-sheet financing to hide debt was shocking and inappropriate. One silver lining in the Enron debacle, however, is that the standard-setting bodies in the accounting profession are now providing increased guidance on

companies' reporting of contractual obligations. We believe the SEC rule, which requires companies to report their obligations over a period of time, will be extremely useful to the investment community.

Presentation and Analysis of Long-Term Debt

Presentation of Long-Term Debt

Companies that have large amounts and numerous issues of long-term debt frequently report only one amount in the balance sheet, supported with comments and schedules in the accompanying notes. Long-term debt that **matures within one year** should be reported as a current liability, unless using noncurrent assets to accomplish redemption. If the company plans to refinance debt, convert it into stock, or retire it from a bond retirement fund, it should continue to report the debt as noncurrent. However, the company should disclose the method it will use in its liquidation. [6], [7]

Note disclosures generally indicate the nature of the liabilities, maturity dates, interest rates, call provisions, conversion privileges, restrictions imposed by the creditors, and assets designated or pledged as security. Companies should show any assets pledged as security for the debt in the assets section of the balance sheet. The fair value of the long-term debt should also be disclosed if it is practical to estimate fair value. Finally, companies must disclose future payments for sinking fund requirements and maturity amounts of long-term debt during each of the next five years. These disclosures aid financial statement users in evaluating the amounts and timing of future cash flows. **Illustration 14.19** shows an example of the type of information provided for **Target Corporation**. Note that if the company has any off-balance-sheet financing, it must provide extensive note disclosure. [8]

Analysis of Long-Term Debt

Long-term creditors and stockholders are interested in a company's long-run solvency, particularly its ability to pay interest as it comes due and to repay the face value of the debt at maturity. Debt to assets and times interest earned are two ratios that provide information about debt-paying ability and long-run solvency.

Target Corporation

(dollars in millions)

| | February 3, 2018 | January 28, 2017 |
|--|---------------------|---------------------|
| Total current assets | \$12,564 | \$11,990 |
| Current liabilities | | |
| Accounts payable | \$ 8,677 | \$ 7,252 |
| Accrued and other current liabilities | 4,254 | 3,737 |
| Current portion of long-term debt and other borrowings | 270 | 1,718 |
| Total current liabilities | 13,201 | 12,707 |
| Total noncurrent liabilities | 14,089 | 13,771 |

ILLUSTRATION 14.19
Long-Term Debt Disclosure
19. Notes Payable and Long-Term Debt (in part)

At February 3, 2018, the carrying value and maturities of our debt portfolio were as follows:

| Debt Maturities (millions) | February 3, 2018 | |
|-----------------------------------|------------------|-----------------|
| | Rate (a) | Balance |
| Due 2018–2022 | 3.5% | \$ 3,405 |
| Due 2023–2027 | 3.2 | 2,094 |
| Due 2028–2032 | 6.6 | 644 |
| Due 2033–2037 | 6.8 | 1,109 |
| Due 2038–2042 | 4.0 | 1,463 |
| Due 2043–2047 | 3.7 | 1,725 |
| Total notes and debentures | 4.1 | 10,440 |
| Swap valuation adjustments | | (5) |
| Capital lease obligations | | 1,152 |
| Less: Amounts due within one year | | (270) |
| Long-term debt | | <u>\$11,317</u> |

(a) Reflects the weighted-average stated interest rate as of year-end.

Required principal payments on notes and debentures over the next five years are as follows:

| Required Principal Payments (millions) | 2018 | 2019 | 2020 | 2021 | 2022 |
|---|--------------|----------------|----------------|----------------|-------------|
| Total required principal payments | <u>\$201</u> | <u>\$1,002</u> | <u>\$1,094</u> | <u>\$1,056</u> | <u>\$63</u> |

Debt to Assets Ratio The **debt to assets ratio** measures the percentage of the total assets provided by creditors. To compute it, divide total debt (both current and long-term liabilities) by total assets, as **Illustration 14.20** shows.

$$\text{Debt to Assets Ratio} = \frac{\text{Total Liabilities}}{\text{Total Assets}}$$

ILLUSTRATION 14.20
Computation of Debt to Assets Ratio

The higher the percentage of total liabilities to total assets, the greater the risk that the company may be unable to meet its maturing obligations.

Times Interest Earned The **times interest earned** ratio indicates the company's ability to meet interest payments as they come due. As shown in **Illustration 14.21**, it is computed by dividing the sum of net income, interest expense, and income tax expense by interest expense.

$$\text{Times Interest Earned} = \frac{\text{Net Income} + \text{Interest Expense} + \text{Income Tax Expense}}{\text{Interest Expense}}$$

ILLUSTRATION 14.21
Computation of Times Interest Earned

To illustrate these ratios, we use data from **Target's** 2017 annual report. Target has total liabilities of \$26,653 (\$12,564 + \$14,089) million, total assets of \$38,999 million, interest expense of \$666 million, income taxes of \$718 million, and income from continuing operations of \$2,928 million. We compute Target's debt to assets and times interest earned ratios as shown in **Illustration 14.22**.

ILLUSTRATION 14.22**Computation of Long-Term Debt Ratios for Target**

$$\text{Debt to assets} = \frac{\$26,653}{\$38,999} = 68.3\%$$

$$\text{Times interest earned} = \frac{(\$2,928 + \$666 + \$718)}{\$666} = 6.47 \text{ times}$$

Even though Target has a relatively high debt to assets ratio of 68.3 percent, its interest coverage of 6.47 times indicates it can easily meet its interest payments as they come due.

What Do the Numbers Mean? How About a 100-Year Bond?

Yes, some companies issue bonds with maturities that exceed a person's lifetime. For example, **Électricité de France S.A.** in early 2014 sold 100-year bonds in Europe. In addition, countries such as Ireland and Mexico have recently sold 100-year government bonds.

Why do these companies and countries issue 100-year bonds? A number of investors, such as pension funds and insurance companies, have noncurrent liabilities. They need long-duration assets to reduce an asset-liability mismatch. While investing in a 100-year bond carries interest-rate risk, long-term debt has an offsetting effect against long-duration assets. Thus, this group of investors has a strong demand for these bonds.

Other multibillion-dollar companies, such as **The Walt Disney Company** and **The Coca-Cola Company**, have issued 100-year bonds in the past. Many of these bonds and debentures contain an option that lets the debt issuer partially or fully repay the debt long before the scheduled maturity. For example, the 100-year bond that Disney issued in 1993 is supposed to mature

in 2093, but the company can start repaying the bonds any time after 30 years (2023).

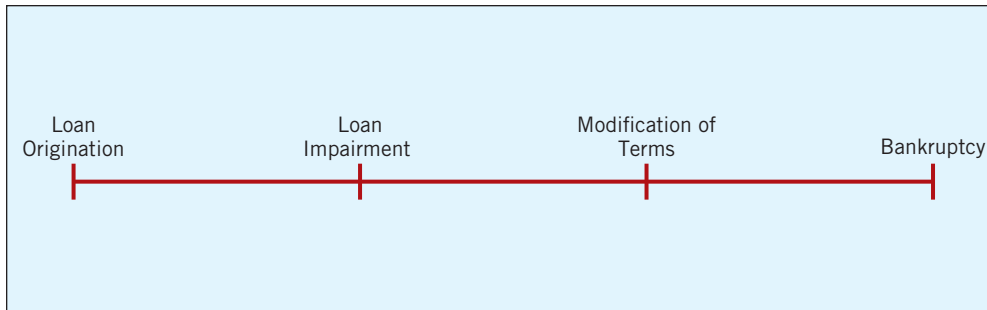

You may be surprised to learn that 1,000-year bonds also exist. A few issuers, such as the **Canadian Pacific Corporation**, have issued such bonds in the past. And, there have also been instances of bonds issued with no maturity date at all, meaning that the debt issuers continue fulfilling the coupon payments forever. These so-called "perpetual bonds" have gained popularity in China, where accounting rules permit companies to report these bonds in equity. Investors beware—such reporting understates leverage ratios.

Linsell, "EDF's Borrowing Exceeds \$12 Billion This Week with 100-Year Bond," *Bloomberg News* (January 17, 2014); Dara Doyle, "Ireland Sells First 100-Year Bond, Staying On Comeback Trail," *Bloomberg News* (March 16, 2016); and J. Chen, V. Wei, and L. Yu, "Chinese Firms Have Found a Way to Cut Debt, at Least on Paper," *Bloomberg News* (November 6, 2017).

APPENDIX 14A**Troubled-Debt Restructuring****LEARNING OBJECTIVE *5**

Describe the accounting for a debt restructuring.

Practically every day, the *Wall Street Journal* runs a story about some company in financial difficulty. In most troubled-debt situations, the creditor usually first recognizes a loss on impairment. Subsequently, the creditor either modifies the terms of the loan or the debtor settles the loan on terms unfavorable to the creditor. In unusual cases, the creditor forces the debtor into bankruptcy in order to ensure the highest possible collection on the loan. **Illustration 14A.1** shows this continuum.

**ILLUSTRATION 14A.1****Usual Progression in Troubled-Debt Situations**

To illustrate, consider the case of **Huffy Corp.**, a name that adorned the first bicycle of many American children. Before its bankruptcy, Huffy's creditors likely recognized a loss on impairment. Subsequently, the creditors either modified the terms of the loan or settled it on terms unfavorable to the creditor. Finally, the creditors forced Huffy into bankruptcy, and the suppliers received a 30 percent equity stake in Huffy. These terms helped ensure the highest possible collection on the Huffy loan.

We discussed the accounting for loan impairments in Appendix 7B. The purpose of this appendix is to explain how creditors and debtors report information in financial statements related to troubled-debt restructurings.

A **troubled-debt restructuring** occurs when a creditor “for economic or legal reasons related to the debtor’s financial difficulties grants a concession to the debtor that it would not otherwise consider.” [9] Thus, a troubled-debt restructuring does not apply to modifications of a debt obligation that reflect general economic conditions leading to a reduced interest rate. Nor does it apply to the refunding of an old debt with new debt having an effective-interest rate approximately equal to that of similar debt issued by nontroubled debtors (see **Global View**).

A troubled-debt restructuring involves one of two basic types of transactions:

1. Settlement of debt at less than its carrying amount.
2. Continuation of debt with a modification of terms.

Global View

IFRS generally assumes that all restructurings be accounted for as extinguishments of debt.

Settlement of Debt

In addition to using cash, settling a debt obligation can involve either a transfer of noncash assets (real estate, receivables, or other assets) or the issuance of the debtor’s stock. In these situations, **the creditor should account for the noncash assets or equity interest received at their fair value.**

The debtor must determine the excess of the carrying amount of the payable over the fair value of the assets or equity transferred (gain). Likewise, the creditor must determine the excess of the receivable over the fair value of those same assets or equity interests transferred (loss). The debtor recognizes a gain equal to the amount of the excess. The creditor normally charges the excess (loss) against Allowance for Doubtful Accounts. In addition, the debtor recognizes a gain or loss on disposition of assets to the extent that the fair value of those assets differs from their carrying amount (book value).

Transfer of Assets

Assume that American City Bank loaned \$20,000,000 to Union Mortgage Company. Union Mortgage, in turn, invested these monies in residential apartment buildings. However, because of low occupancy rates, it cannot meet its loan obligations. American City Bank agrees to accept from Union Mortgage real estate with a fair value of \$16,000,000 in full settlement of the \$20,000,000 loan obligation. The real estate has a carrying value of \$21,000,000 on the books of Union Mortgage. American City Bank (creditor) records this transaction as follows.

| | | |
|--|------------|------------|
| Land | 16,000,000 | |
| Allowance for Doubtful Accounts | 4,000,000 | |
| Notes Receivable (from Union Mortgage) | | 20,000,000 |

The bank records the real estate at fair value. Further, it makes a charge to Allowance for Doubtful Accounts to reflect the bad debt write-off.

Union Mortgage (debtor) records this transaction as follows.

| | | |
|---------------------------------------|------------|------------|
| Notes Payable (to American City Bank) | 20,000,000 | |
| Loss on Disposal of Land | 5,000,000 | |
| Land | | 21,000,000 |
| Gain on Restructuring of Debt | | 4,000,000 |

Union Mortgage has a loss on the disposition of real estate in the amount of \$5,000,000 (the difference between the \$21,000,000 book value and the \$16,000,000 fair value). It should show this as an ordinary loss on the income statement. In addition, it has a gain on restructuring of debt of \$4,000,000 (the difference between the \$20,000,000 carrying amount of the note payable and the \$16,000,000 fair value of the real estate).

Granting of Equity Interest

Assume that American City Bank agrees to accept from Union Mortgage 320,000 shares of common stock (\$10 par) that has a fair value of \$16,000,000, in full settlement of the \$20,000,000 loan obligation. American City Bank (creditor) records this transaction as follows.

| | | |
|--|------------|------------|
| Equity Investments | 16,000,000 | |
| Allowance for Doubtful Accounts | 4,000,000 | |
| Notes Receivable (from Union Mortgage) | | 20,000,000 |

It records the stock as an investment at the fair value at the date of restructure.

Union Mortgage (debtor) records this transaction as follows.

| | | |
|---|------------|------------|
| Notes Payable (to American City Bank) | 20,000,000 | |
| Common Stock (320,000 × \$10) | | 3,200,000 |
| Paid-in Capital in Excess of Par— Common Stock | | 12,800,000 |
| Gain on Restructuring of Debt | | 4,000,000 |

It records the stock issued in the normal manner. It records the difference between the par value and the fair value of the stock as additional paid-in capital.

Modification of Terms

In some cases, a debtor's serious short-run cash flow problems will lead it to request one or a combination of the following modifications:

1. Reduction of the stated interest rate.
2. Extension of the maturity date of the face amount of the debt.
3. Reduction of the face amount of the debt.
4. Reduction or deferral of any accrued interest.

The creditor's loss is based on expected cash flows discounted at the historical effective rate of the loan. [10] The debtor calculates its gain based on **undiscounted amounts**. As a

consequence, **the gain recorded by the debtor will not equal the loss recorded by the creditor under many circumstances.**¹⁶

Two examples demonstrate the accounting for a troubled-debt restructuring by debtors and creditors:

1. The debtor does not record a gain.
2. The debtor does record a gain.

In both instances, the creditor has a loss.

Example 1—No Gain for Debtor

This example demonstrates a restructuring in which the debtor records no gain.¹⁷ On December 31, 2019, Morgan National Bank enters into a debt restructuring agreement with Resorts Development Company, which is experiencing financial difficulties. The bank restructures a \$10,500,000 loan receivable issued at par (interest paid to date) by:

1. Reducing the principal obligation from \$10,500,000 to \$9,000,000;
2. Extending the maturity date from December 31, 2019, to December 31, 2023; and
3. Reducing the interest rate from 12% to 8%.

Debtor Calculations

The total future cash flow, after restructuring of \$11,880,000 (\$9,000,000 of principal plus \$2,880,000 of interest payments¹⁸), exceeds the total pre-restructuring carrying amount of the debt of \$10,500,000. Consequently, **the debtor records no gain nor makes any adjustment** to the carrying amount of the payable. As a result, Resorts Development (debtor) makes no entry at the date of restructuring.

The debtor must compute a new effective-interest rate in order to record interest expense in future periods. The new effective-interest rate equates the present value of the future cash flows specified by the new terms with the pre-restructuring carrying amount of the debt. In this case, Resorts Development computes the new rate by relating the pre-restructure carrying amount (\$10,500,000) to the total future cash flow (\$11,880,000). The rate necessary to discount the total future cash flow (\$11,880,000), to a present value equal to the remaining balance (\$10,500,000), is 3.46613 percent.¹⁹

On the basis of the effective rate of 3.46613 percent, the debtor prepares the schedule shown in **Illustration 14A.2**.

¹⁶In response to concerns expressed about this nonsymmetric treatment, the FASB stated that it did not address debtor accounting because expansion of the scope of the statement would delay its issuance. By basing the debtor calculation on undiscounted amounts, the amount of gain (if any) recognized by the debtor is reduced at the time the modification of terms occurs. If fair value were used, the gain recognized would be greater. The result of this approach is to spread the unrecognized gain over the life of the new agreement. We believe that this accounting is inappropriate and hopefully will change as more fair value measurements are introduced into the financial statements.

¹⁷Note that the examples given for restructuring assume the creditor made no previous entries for impairment. In actuality, it is likely that the creditor would have already made an entry when the loan initially became impaired. Restructuring would, therefore, simply require an adjustment of the initial estimated bad debt by the creditor. Recall, however, that the debtor makes no entry upon impairment.

¹⁸Total interest payments are $\$9,000,000 \times .08 \times 4 \text{ years} = \$2,880,000$.

¹⁹An accurate interest rate i can be found by using the formulas given at the tops of Tables 6.2 and 6.4 to set up the following equation.

$$\$10,500,000 = \frac{1}{(1+i)^4} \times \$9,000,000 + \frac{1 - \frac{1}{(1+i)^4}}{i} \times \$720,000$$

(from Table 6.2) (from Table 6.4)

Solving algebraically for i , we find that $i = 3.46613\%$.

| Resorts Development Co. (Debtor) | | | | |
|----------------------------------|-------------------------|-----------------------------|------------------------------|-------------------------|
| Date | Cash Paid (8%) | Interest Expense (3.46613%) | Reduction of Carrying Amount | Carrying Amount of Note |
| 12/31/19 | | | | \$10,500,000 |
| 12/31/20 | \$ 720,000 ^a | \$ 363,944 ^b | \$ 356,056 ^c | 10,143,944 |
| 12/31/21 | 720,000 | 351,602 | 368,398 | 9,775,546 |
| 12/31/22 | 720,000 | 338,833 | 381,167 | 9,394,379 |
| 12/31/23 | 720,000 | 325,621 | 394,379 | 9,000,000 |
| | <u>\$2,880,000</u> | <u>\$1,380,000</u> | <u>\$1,500,000</u> | |

^a\$720,000 = \$9,000,000 × .08
^b\$363,944 = \$10,500,000 × .0346613
^c\$356,056 = \$720,000 – \$363,944

Thus, on December 31, 2020 (date of first interest payment after restructure), the debtor makes the following entry.

| December 31, 2020 | | |
|-------------------|--|---------|
| Notes Payable | | 356,056 |
| Interest Expense | | 363,944 |
| Cash | | 720,000 |

The debtor makes a similar entry (except for different amounts for debits to Notes Payable and Interest Expense) each year until maturity. At maturity, Resorts Development makes the following entry.

| December 31, 2023 | | |
|-------------------|--|-----------|
| Notes Payable | | 9,000,000 |
| Cash | | 9,000,000 |

Creditor Calculations

Morgan National Bank (creditor) must calculate its loss based on the expected future cash flows discounted at the historical effective rate of the loan. It calculates this loss as shown in **Illustration 14A.3**.

ILLUSTRATION 14A.3**Computation of Loss to Creditor on Restructuring**

| | | |
|---|--|---------------------|
| Pre-restructure carrying amount | | \$10,500,000 |
| Present value of restructured cash flows: | | |
| Present value of \$9,000,000 due in 4 years at 12%, interest payable annually (Table 6.2); $FV(PVF_{4,12\%})$; ($\$9,000,000 \times .63552$) | | \$5,719,680 |
| Present value of \$720,000 interest payable annually for 4 years at 12% (Table 6.4); $R(PVF-OA_{4,12\%})$; ($\$720,000 \times 3.03735$) | | <u>2,186,892</u> |
| Present value of restructured cash flows | | <u>(7,906,572)</u> |
| Loss on restructuring | | <u>\$ 2,593,428</u> |

As a result, Morgan National Bank records bad debt expense as follows (assuming no establishment of an allowance balance from recognition of an impairment).

| | | |
|---------------------------------|--|-----------|
| Bad Debt Expense | | 2,593,428 |
| Allowance for Doubtful Accounts | | 2,593,428 |

In subsequent periods, Morgan National Bank reports interest revenue based on the historical effective rate. **Illustration 14A.4** provides the following interest and amortization information.

ILLUSTRATION 14A.4**Schedule of Interest and Amortization after Debt Restructuring**

| Morgan National Bank (Creditor) | | | | |
|---------------------------------|-------------------------|---------------------------|-----------------------------|-------------------------|
| Date | Cash Received (8%) | Interest Revenue (12%) | Increase of Carrying Amount | Carrying Amount of Note |
| 12/31/19 | | | | \$7,906,572 |
| 12/31/20 | \$ 720,000 ^a | \$ 948,789 ^b | \$ 228,789 ^c | 8,135,361 |
| 12/31/21 | 720,000 | 976,243 | 256,243 | 8,391,604 |
| 12/31/22 | 720,000 | 1,006,992 | 286,992 | 8,678,596 |
| 12/31/23 | 720,000 | 1,041,404 ^d | 321,404 ^d | 9,000,000 |
| Total | <u>\$2,880,000</u> | <u>\$3,973,428</u> | <u>\$1,093,428</u> | |

^a\$720,000 = \$9,000,000 × .08
^b\$948,789 = \$7,906,572 × .12
^c\$228,789 = \$948,789 – \$720,000
^d\$28 adjustment to compensate for rounding.

On December 31, 2020, Morgan National Bank makes the following entry.

| December 31, 2020 | | |
|---------------------------------|--|---------|
| Cash | | 720,000 |
| Allowance for Doubtful Accounts | | 228,789 |
| Interest Revenue | | 948,789 |

Morgan National Bank makes a similar entry (except for different amounts debited to Allowance for Doubtful Accounts and credited to Interest Revenue) each year until maturity. At maturity, the company makes the following entry.

| December 31, 2023 | | |
|---------------------------------|--|------------|
| Cash | | 9,000,000 |
| Allowance for Doubtful Accounts | | 1,500,000 |
| Notes Receivable | | 10,500,000 |

Example 2—Gain for Debtor

If the pre-restructure carrying amount exceeds the total future cash flows as a result of a modification of the terms, the debtor records a gain. To illustrate, assume the facts in the previous example except that Morgan National Bank reduces the principal to \$7,000,000 (and extends the maturity date to December 31, 2023, and reduces the interest from 12% to 8%). The total future cash flow is now \$9,240,000 (\$7,000,000 of principal plus \$2,240,000 of interest²⁰), which is \$1,260,000 (\$10,500,000 – \$9,240,000) less than the pre-restructure carrying amount of \$10,500,000.

Under these circumstances, Resorts Development (debtor) reduces the carrying amount of its payable \$1,260,000 and records a gain of \$1,260,000. On the other hand, Morgan National Bank (creditor) debits its Bad Debt Expense for \$4,350,444. **Illustration 14A.5** shows this computation.

ILLUSTRATION 14A.5**Computation of Loss to Creditor on Restructuring**

| | | |
|--|-------------|---------------------|
| Pre-restructure carrying amount | | \$10,500,000 |
| Present value of restructured cash flows: | | |
| Present value of \$7,000,000 due in 4 years at 12%, interest payable annually (Table 6.2); $FV(PVF_{4,12\%})$; | | |
| (\$7,000,000 × .63552) | \$4,448,640 | |
| Present value of \$560,000 interest payable annually for 4 years at 12% (Table 6.4); $R(PVF-OA_{4,12\%})$; | | |
| (\$560,000 × 3.03735) | 1,700,916 | (6,149,556) |
| Creditor's loss on restructuring | | <u>\$ 4,350,444</u> |

²⁰Total interest payments are \$7,000,000 × .08 × 4 years = \$2,240,000.

Illustration 14A.6 shows the entries to record the gain and loss on the debtor's and creditor's books at the date of restructure, December 31, 2019.

ILLUSTRATION 14A.6 Debtor and Creditor Entries to Record Gain and Loss on Note

| December 31, 2019 (date of restructure) | | | | |
|---|-----------|---------------------------------|-----------|-----------|
| Resorts Development Co. (Debtor) | | Morgan National Bank (Creditor) | | |
| Notes Payable | 1,260,000 | Bad Debt Expense | 4,350,444 | |
| Gain on Restructuring of Debt | 1,260,000 | Allowance for Doubtful Accounts | | 4,350,444 |

For Resorts Development (debtor), because the new carrying value of the note (\$10,500,000 – \$1,260,000 = \$9,240,000) equals the sum of the undiscounted cash flows (\$9,240,000), the imputed interest rate is 0 percent. Consequently, all of the future cash flows reduce the principal balance, and the company recognizes no interest expense.

Morgan National reports the interest revenue in the same fashion as the previous example—that is, using the historical effective-interest rate applied toward the newly discounted value of the note. **Illustration 14A.7** shows interest computations.

ILLUSTRATION 14A.7
Schedule of Interest and Amortization after Debt Restructuring

| Date | Morgan National Bank (Creditor) | | | |
|----------|---------------------------------|-------------------------|-----------------------------|-------------------------|
| | Cash Received (8%) | Interest Revenue (12%) | Increase of Carrying Amount | Carrying Amount of Note |
| 12/31/19 | | | | \$6,149,556 |
| 12/31/20 | \$ 560,000 ^a | \$ 737,947 ^b | \$177,947 ^c | 6,327,503 |
| 12/31/21 | 560,000 | 759,300 | 199,300 | 6,526,803 |
| 12/31/22 | 560,000 | 783,216 | 223,216 | 6,750,019 |
| 12/31/23 | 560,000 | 809,981 ^d | 249,981 ^d | 7,000,000 |
| Total | \$2,240,000 | \$3,090,444 | \$850,444 | |

^a\$560,000 = \$7,000,000 × .08
^b\$737,947 = \$6,149,556 × .12
^c\$177,947 = \$737,947 – \$560,000
^d\$21 adjustment to compensate for rounding.

The journal entries in **Illustration 14A.8** demonstrate the accounting by debtor and creditor for periodic interest payments and final principal payment.

ILLUSTRATION 14A.8 Debtor and Creditor Entries to Record Periodic Interest and Final Principal Payments

| Resorts Development Co. (Debtor) | | Morgan National Bank (Creditor) | | |
|---|-----------|---------------------------------|-----------|------------|
| December 31, 2020 (date of first interest payment following restructure) | | | | |
| Notes Payable | 560,000 | Cash | 560,000 | |
| Cash | 560,000 | Allowance for Doubtful Accounts | 177,947 | |
| | | Interest Revenue | | 737,947 |
| December 31, 2021, 2022, and 2023 (dates of 2nd, 3rd, and last interest payments) | | | | |
| (Debit and credit same accounts as 12/31/20 using applicable amounts from appropriate amortization schedules.) | | | | |
| December 31, 2023 (date of principal payment) | | | | |
| Notes Payable | 7,000,000 | Cash | 7,000,000 | |
| Cash | 7,000,000 | Allowance for Doubtful Accounts | 3,500,000 | |
| | | Notes Receivable | | 10,500,000 |

Concluding Remarks

The accounting for troubled debt is complex because the accounting standards allow for use of different measurement standards to determine the loss or gain reported. In addition, the assets and liabilities reported are sometimes not stated at historical cost or fair value, but at amounts adjusted for certain events but not others. This cumbersome accounting demonstrates the need for adoption of a comprehensive fair-value model for financial instruments that is consistent with finance concepts for pricing these financial instruments.

Learning Objectives Review

1 Describe the nature of bonds and indicate the accounting for bond issuances.

Incurring long-term debt is often a formal procedure. The bylaws of corporations usually require approval by the board of directors and the stockholders before corporations can issue bonds or can make other long-term debt arrangements. Generally, long-term debt has various covenants or restrictions. The covenants and other terms of the agreement between the borrower and the lender are stated in the bond indenture or note agreement.

Various types of bond issues are (1) secured and unsecured bonds; (2) term, serial, and callable bonds; (3) convertible, commodity-backed, and deep-discount bonds; (4) registered and bearer (coupon) bonds; and (5) income and revenue bonds. The variety in the types of bonds results from attempts to attract capital from different investors and risk-takers and to satisfy the cash flow needs of the issuers.

The investment community values a bond at the present value of its future cash flows, which consist of interest and principal. The rate used to compute the present value of these cash flows is the interest rate that provides an acceptable return on an investment commensurate with the issuer's risk characteristics. The interest rate written in the terms of the bond indenture and ordinarily appearing on the bond certificate is the stated, coupon, or nominal rate. The issuer of

the bonds sets the rate and expresses it as a percentage of the face value (also called the par value, principal amount, or maturity value) of the bonds. If the rate employed by the buyers differs from the stated rate, the present value of the bonds computed by the buyers will differ from the face value of the bonds. The difference between the face value and the present value of the bonds is either a discount or premium.

The discount (premium) is amortized and charged (credited) to interest expense over the life of the bonds. Amortization of a discount increases bond interest expense, and amortization of a premium decreases bond interest expense. The profession's preferred procedure for amortization of a discount or premium is the effective-interest method. **Under the effective-interest method,** (1) bond interest expense is computed by multiplying the carrying value of the bonds at the beginning of the period by the effective-interest rate; then, (2) the bond discount or premium amortization is determined by comparing the bond interest expense with the interest to be paid.

2 Describe the accounting for the extinguishment of debt.

At the time of **extinguishment (reacquisition, redemption, or refunding)** of long-term debt, the unamortized premium or discount must be amortized up to the reacquisition date. The reacquisition

price is the amount paid on extinguishment or redemption before maturity, including any call premium and expense of reacquisition. On any specified date, the net carrying amount of the debt is the amount payable at maturity, adjusted for unamortized premium or discount. Any excess of the net carrying amount over the reacquisition price is a gain from extinguishment. The excess of the reacquisition price over the net carrying amount is a loss from extinguishment. Gains and losses on extinguishments are recognized currently in income.

3 Explain the accounting for long-term notes payable.

Accounting procedures for notes payable and bonds are similar. Like a bond, a note is valued at the present value of its expected future interest and principal cash flows, with any discount or premium being similarly amortized over the life of the note. Whenever the face amount of the note does not reasonably represent the present value of the consideration in the exchange, a company must evaluate the entire arrangement in order to properly record the exchange and the subsequent interest.

4 Indicate how to present and analyze long-term debt.

Companies have the **option to record fair value** in their accounts for most financial assets and liabilities, including noncurrent liabilities. Fair value measurement for financial instruments, including financial liabilities, provides more relevant and understandable information than amortized cost. If companies choose the fair value option, noncurrent liabilities, such as bonds and notes payable, are recorded at fair value, with unrealized holding gains or losses reported as part of net income. An unrealized holding gain or loss is the net change in the fair value of the liability from one period to another, exclusive of interest expense recognized. Fair value gains due to credit deterioration are recorded in other comprehensive income.

Off-balance-sheet financing is an attempt to borrow funds in such a way to prevent recording obligations. Examples of off-balance-sheet arrangements are (1) non-consolidated subsidiaries, (2) special-purpose entities, and (3) operating leases.

Companies that have large amounts and numerous issues of long-term debt frequently report only one amount in the balance sheet and support this with comments and schedules in the accompanying notes. Any assets pledged as security for the debt should be shown in the assets section of the balance sheet. Long-term debt that matures within one year should be reported as a current liability, unless redemption is to be accomplished with other than current assets. If a company plans to refinance the debt, convert it into stock, or retire it from a bond retirement fund, it should continue to report it as noncurrent, accompanied with a note explaining the method it will use in the debt's liquidation. Disclosure is required of future payments for sinking fund requirements and maturity amounts of long-term debt during each of the next five years. Debt to assets and times interest earned are two ratios that provide information about debt-paying ability and long-run solvency.

*5 Describe the accounting for a debt restructuring.

There are two types of debt settlements: (1) transfer of noncash assets, and (2) granting of equity interest. Creditors and debtors record losses and gains on settlements based on fair values. For accounting purposes, there are also two types of restructurings with continuation of debt with modified terms: (1) the carrying amount of debt is less than the future cash flows, and (2) the carrying amount of debt exceeds the total future cash flows. Creditors record losses on these restructurings based on the expected future cash flows discounted at the historical effective-interest rate. The debtor determines its gain based on undiscounted cash flows.

Practice Problem

Consider the following independent situations:

- On March 1, 2020, Heide Co. issued at 103 plus accrued interest \$3,000,000, 9% bonds. The bonds are dated January 1, 2020, and pay interest semiannually on July 1 and January 1. In addition, Heide Co. incurred \$27,000 of bond issuance costs. Compute the net amount of cash received by Heide Co. as a result of the issuance of these bonds.
- On January 1, 2020, Reymont Co. issued 9% bonds with a face value of \$500,000 for \$469,280 to yield 10%. The bonds are dated January 1, 2020, and pay interest annually. What amount is reported as bond discount on the issue date? Prepare the journal entry to record interest expense on December 31, 2020.
- Czeslaw Building Co. has a number of long-term bonds outstanding at December 31, 2020. These long-term bonds have the following sinking fund requirements and maturities for the next 6 years.

| | Sinking Fund | Maturities |
|------|--------------|------------|
| 2021 | \$300,000 | \$100,000 |
| 2022 | 100,000 | 250,000 |
| 2023 | 100,000 | 100,000 |
| 2024 | 200,000 | — |
| 2025 | 200,000 | 150,000 |
| 2026 | 200,000 | 100,000 |

Indicate how this information should be reported in the financial statements at December 31, 2020.

Instructions

Prepare responses for each item above.

Solution

a. Heide Co.

| | |
|---|---------------------------|
| Selling price of the bonds ($\$3,000,000 \times 1.03$) | \$3,090,000 |
| Accrued interest from January 1 to February 28, 2020 ($\$3,000,000 \times .09 \times \frac{2}{12}$) | <u>45,000</u> |
| Total cash received from issuance of the bonds | 3,135,000 |
| Less: Bond issuance costs | <u>27,000</u> |
| Net amount of cash received | <u><u>\$3,108,000</u></u> |

b. Reymont Co.

| | |
|-----------------------------|-------------------------|
| Face value of bonds | \$500,000 |
| Issue price | <u>(469,280)</u> |
| Bond discount on issue late | <u><u>\$ 30,720</u></u> |

December 31, 2020

| | | |
|---|--------|--------|
| Interest Expense ($\$469,280 \times .10$) | 46,928 | |
| Discount on Bonds Payable ($\$46,928 - \$45,000$) | | 1,928 |
| Interest Payable ($\$500,000 \times .09$) | | 45,000 |

c. Czeslaw Building Co.

Maturities and sinking fund requirements on long-term debt for the next 5 years are as follows.

| | | | |
|------|-----------|------|-----------|
| 2021 | \$400,000 | 2024 | \$200,000 |
| 2022 | 350,000 | 2025 | 350,000 |
| 2023 | 200,000 | | |

Exercises, Problems, Problem Solution Walkthrough Videos, and many more assessment tools and resources are available for practice in WileyPLUS.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.
(Unless instructed otherwise, round all answers to the nearest dollar.)

Questions

- (a) From what sources might a corporation obtain funds through long-term debt? (b) What is a bond indenture? What does it contain? (c) What is a mortgage?
- Potlatch Corporation** has issued various types of bonds such as term bonds, income bonds, and debentures. Differentiate between term bonds, mortgage bonds, debenture bonds, income bonds, callable bonds, registered bonds, bearer or coupon bonds, convertible bonds, commodity-backed bonds, and deep discount bonds.
- Distinguish between the following interest rates for bonds payable:
 - Yield rate.
 - Nominal rate.
 - Stated rate.
 - Market rate.
 - Effective rate.
- Distinguish between the following values relative to bonds payable:
 - Maturity value.
 - Face value.
 - Market (fair) value.
 - Par value.

5. Under what conditions of bond issuance does a discount on bonds payable arise? Under what conditions of bond issuance does a premium on bonds payable arise?
6. How should discount on bonds payable be reported on the financial statements? Premium on bonds payable?
7. What are the two methods of amortizing discount and premium on bonds payable? Explain each.
8. Zopf Company sells its bonds at a premium and applies the effective-interest method in amortizing the premium. Will the annual interest expense increase or decrease over the life of the bonds? Explain.
9. **Briggs and Stratton** recently issued debt with issue costs of \$5.1 million. How should the costs of issuing these bonds be accounted for and classified in the financial statements?
10. Will the amortization of Discount on Bonds Payable increase or decrease Bond Interest Expense? Explain.
11. What is the “call” feature of a bond issue? How does the call feature affect the amortization of bond premium or discount?
12. Why would a company wish to reduce its bond indebtedness before its bonds reach maturity? Indicate how this can be done and the correct accounting treatment for such a transaction.
13. How are gains and losses from extinguishment of a debt classified in the income statement? What disclosures are required of such transactions?
14. What is done to record properly a transaction involving the issuance of a non-interest-bearing long-term note in exchange for property?
15. How is the present value of a non-interest-bearing note computed?
16. When is the stated interest rate of a debt instrument presumed to be fair?
17. What are the considerations in imputing an appropriate interest rate?
18. Differentiate between a fixed-rate mortgage and a variable-rate mortgage.
19. What is the fair value option? Briefly describe the controversy of applying the fair value option to financial liabilities.
20. Pierre Company has a 12% note payable with a carrying value of \$20,000. Pierre applies the fair value option to this note. Given an increase in market interest rates, the fair value of the note is \$22,600. Prepare the entry to record the fair value option for this note, assuming (a) no change in credit risk, and (b) the change is due to a change in credit risk.
21. What disclosures are required relative to long-term debt and sinking fund requirements?
22. What is off-balance-sheet financing? Why might a company be interested in using off-balance-sheet financing?
23. What are some forms of off-balance-sheet financing?
24. Explain how a non-consolidated subsidiary can be a form of off-balance-sheet financing.
- *25. What are the types of situations that result in troubled debt?
- *26. What are the general rules for measuring gain or loss by both creditor and debtor in a troubled-debt restructuring involving a settlement?
- *27. **a.** In a troubled-debt situation, why might the creditor grant concessions to the debtor?
b. What type of concessions might a creditor grant the debtor in a troubled-debt situation?
- *28. What are the general rules for measuring and recognizing gain or loss by both the debtor and the creditor in a troubled-debt restructuring involving a modification of terms?
- *29. What is meant by “accounting symmetry” between the entries recorded by the debtor and creditor in a troubled-debt restructuring involving a modification of terms? In what ways is the accounting for troubled-debt restructurings non-symmetrical?
- *30. Under what circumstances would a transaction be recorded as a troubled-debt restructuring by only one of the two parties to the transaction?

Brief Exercises

- BE14.1 (LO 1)** Whiteside Corporation issues \$500,000 of 9% bonds, due in 10 years, with interest payable semiannually. At the time of issue, the market rate for such bonds is 10%. Compute the issue price of the bonds.
- BE14.2 (LO 1)** The Colson Company issued \$300,000 of 10% bonds on January 1, 2020. The bonds are due January 1, 2025, with interest payable each July 1 and January 1. The bonds are issued at face value. Prepare Colson’s journal entries for (a) the January issuance, (b) the July 1 interest payment, and (c) the December 31 adjusting entry.
- BE14.3 (LO 1)** Assume the bonds in BE14.2 were issued at 98. Prepare the journal entries for (a) January 1, (b) July 1, and (c) December 31. Assume The Colson Company records straight-line amortization semiannually.
- BE14.4 (LO 1)** Assume the bonds in BE14.2 were issued at 103. Prepare the journal entries for (a) January 1, (b) July 1, and (c) December 31. Assume The Colson Company records straight-line amortization semiannually.
- BE14.5 (LO 1)** Devers Corporation issued \$400,000 of 6% bonds on May 1, 2020. The bonds were dated January 1, 2020, and mature January 1, 2023, with interest payable July 1 and January 1. The bonds were issued at face value plus accrued interest. Prepare Devers’s journal entries for (a) the May 1 issuance, (b) the July 1 interest payment, and (c) the December 31 adjusting entry.
- BE14.6 (LO 1)** On January 1, 2020, JWS Corporation issued \$600,000 of 7% bonds, due in 10 years. The bonds were issued for \$559,224, and pay interest each July 1 and January 1. JWS uses the effective-interest method. Prepare the company’s journal entries for (a) the January 1 issuance, (b) the July 1 interest payment, and (c) the December 31 adjusting entry. Assume an effective-interest rate of 8%.

BE14.7 (LO 1) Assume the bonds in BE14.6 were issued for \$644,636 and the effective-interest rate is 6%. Prepare the company's journal entries for (a) the January 1 issuance, (b) the July 1 interest payment, and (c) the December 31 adjusting entry.

BE14.8 (LO 1) Teton Corporation issued \$600,000 of 7% bonds on November 1, 2020, for \$644,636. The bonds were dated November 1, 2020, and mature in 10 years, with interest payable each May 1 and November 1. Teton uses the effective-interest method with an effective rate of 6%. Prepare Teton's December 31, 2020, adjusting entry.

BE14.9 (LO 2) On January 1, 2020, Henderson Corporation redeemed \$500,000 of bonds at 99. At the time of redemption, the unamortized premium was \$15,000. Prepare the corporation's journal entry to record the reacquisition of the bonds.

BE14.10 (LO 3) Coldwell, Inc. issued a \$100,000, 4-year, 10% note at face value to Flint Hills Bank on January 1, 2020, and received \$100,000 cash. The note requires annual interest payments each December 31. Prepare Coldwell's journal entries to record (a) the issuance of the note and (b) the December 31 interest payment.

BE14.11 (LO 3) Samson Corporation issued a 4-year, \$75,000, zero-interest-bearing note to Brown Company on January 1, 2020, and received cash of \$47,664. The implicit interest rate is 12%. Prepare Samson's journal entries for (a) the January 1 issuance and (b) the December 31 recognition of interest.

BE14.12 (LO 3) McCormick Corporation issued a 4-year, \$40,000, 5% note to Greenbush Company on January 1, 2020, and received a computer that normally sells for \$31,495. The note requires annual interest payments each December 31. The market rate of interest for a note of similar risk is 12%. Prepare McCormick's journal entries for (a) the January 1 issuance and (b) the December 31 interest.

BE14.13 (LO 3) Shlee Corporation issued a 4-year, \$60,000, zero-interest-bearing note to Garcia Company on January 1, 2020, and received cash of \$60,000. In addition, Shlee agreed to sell merchandise to Garcia at an amount less than regular selling price over the 4-year period. The market rate of interest for similar notes is 12%. Prepare Shlee Corporation's January 1 journal entry.

BE14.14 (LO 4) Shonen Knife Corporation has elected to use the fair value option for one of its notes payable. The note was issued at an effective rate of 11% and has a carrying value of \$16,000. At year-end, Shonen Knife's borrowing rate (credit risk) has declined; the fair value of the note payable is now \$17,500. (a) Determine the unrealized holding gain or loss on the note. (b) Prepare the entry to record any unrealized holding gain or loss.

BE14.15 (LO 4) At December 31, 2020, Hiyasaki Corporation has the following account balances:

| | |
|------------------------------------|-------------|
| Bonds payable, due January 1, 2029 | \$2,000,000 |
| Discount on bonds payable | 88,000 |
| Interest payable | 80,000 |

Show how the above accounts should be presented on the December 31, 2020, balance sheet, including the proper classifications.

Exercises

E14.1 (LO 1) (Classification of Liabilities) Presented below are various account balances of K.D. Lang Inc.

- Unamortized premium on bonds payable, of which \$3,000 will be amortized during the next year.
- Bank loans payable of a winery, due March 10, 2024. (The product requires aging for 5 years before sale.)
- Serial bonds payable, \$1,000,000, of which \$200,000 are due each July 31.
- Amounts withheld from employees' wages for income taxes.
- Notes payable due January 15, 2023.
- Credit balances in customers' accounts arising from returns and allowances after collection in full of account.
- Bonds payable of \$2,000,000 maturing June 30, 2021.
- Overdraft of \$1,000 in a bank account. (No other balances are carried at this bank.)
- Deposits made by customers who have ordered goods.

Instructions

Indicate whether each of the items above should be classified on December 31, 2020, as a current liability, a long-term liability, or under some other classification. Consider each one independently from all others; that is, do not assume that all of them relate to one particular business. If the classification of some of the items is doubtful, explain why in each case.

E14.2 (LO 1) (Classification) The following items are found in the financial statements.

- a. Discount on bonds payable.
- b. Interest expense (credit balance).
- c. Unamortized bond issue costs.
- d. Gain on repurchase of debt.
- e. Mortgage payable (payable in equal amounts over next 3 years).
- f. Debenture bonds payable (maturing in 5 years).
- g. Notes payable (due in 4 years).
- h. Premium on bonds payable.
- i. Bonds payable (due in 3 years).

Instructions

Indicate how each of these items should be classified in the financial statements.

E14.3 (LO 1) (Entries for Bond Transactions) Presented below are two independent situations.

1. On January 1, 2020, Simon Company issued \$200,000 of 9%, 10-year bonds at par. Interest is payable quarterly on April 1, July 1, October 1, and January 1.
2. On June 1, 2020, Garfunkel Company issued \$100,000 of 12%, 10-year bonds dated January 1 at par plus accrued interest. Interest is payable semiannually on July 1 and January 1.

Instructions

For each of these two independent situations, prepare journal entries to record the following.

- a. The issuance of the bonds.
- b. The payment of interest on July 1.
- c. The accrual of interest on December 31.

E14.4 (LO 1) Excel **(Entries for Bond Transactions—Straight-Line)** Celine Dion Company issued \$600,000 of 10%, 20-year bonds on January 1, 2020, at 102. Interest is payable semiannually on July 1 and January 1. Dion Company uses the straight-line method of amortization for bond premium or discount.

Instructions

Prepare the journal entries to record the following.

- a. The issuance of the bonds.
- b. The payment of interest and the related amortization on July 1, 2020.
- c. The accrual of interest and the related amortization on December 31, 2020.

E14.5 (LO 1) Excel **(Entries for Bond Transactions—Effective-Interest)** Assume the same information as in E14.4, except that Celine Dion Company uses the effective-interest method of amortization for bond premium or discount. Assume an effective yield of 9.7705%.

Instructions

Prepare the journal entries to record the following. (Round to the nearest dollar.)

- a. The issuance of the bonds.
- b. The payment of interest and related amortization on July 1, 2020.
- c. The accrual of interest and the related amortization on December 31, 2020.

E14.6 (LO 1) (Amortization Schedule—Straight-Line) Devon Harris Company sells 10% bonds having a maturity value of \$2,000,000 for \$1,855,816. The bonds are dated January 1, 2020, and mature January 1, 2025. Interest is payable annually on January 1.

Instructions

Set up a schedule of interest expense and discount amortization under the straight-line method. (Round answers to the nearest cent.)

E14.7 (LO 1) (Amortization Schedule—Effective-Interest) Assume the same information as E14.6.

Instructions

Set up a schedule of interest expense and discount amortization under the effective-interest method. (*Hint:* The effective-interest rate must be computed.)

E14.8 (LO 1) Groupwork (Determine Proper Amounts in Account Balances) Presented below are two independent situations.

- George Gershwin Co. sold \$2,000,000 of 10%, 10-year bonds at 104 on January 1, 2020. The bonds were dated January 1, 2020, and pay interest on July 1 and January 1. If Gershwin uses the straight-line method to amortize bond premium or discount, determine the amount of interest expense to be reported on July 1, 2020, and December 31, 2020.
- Ron Kenoly Inc. issued \$600,000 of 9%, 10-year bonds on June 30, 2020, for \$562,500. This price provided a yield of 10% on the bonds. Interest is payable semiannually on December 31 and June 30. If Kenoly uses the effective-interest method, determine the amount of interest expense to record if financial statements are issued on October 31, 2020.

E14.9 (LO 1) Groupwork (Entries and Questions for Bond Transactions) On June 30, 2020, Mischa Auer Company issued \$4,000,000 face value of 13%, 20-year bonds at \$4,300,920, a yield of 12%. Auer uses the effective-interest method to amortize bond premium or discount. The bonds pay semiannual interest on June 30 and December 31.

Instructions

(Round answers to the nearest cent.)

- Prepare the journal entries to record the following transactions.
 - The issuance of the bonds on June 30, 2020.
 - The payment of interest and the amortization of the premium on December 31, 2020.
 - The payment of interest and the amortization of the premium on June 30, 2021.
 - The payment of interest and the amortization of the premium on December 31, 2021.
- Show the proper balance sheet presentation for the liability for bonds payable on the December 31, 2021, balance sheet.
- Provide the answers to the following questions.
 - What amount of interest expense is reported for 2021?
 - Will the bond interest expense reported in 2021 be the same as, greater than, or less than the amount that would be reported if the straight-line method of amortization were used?
 - Determine the total cost of borrowing over the life of the bond.
 - Will the total bond interest expense for the life of the bond be greater than, the same as, or less than the total interest expense if the straight-line method of amortization were used?

E14.10 (LO 1) (Entries for Bond Transactions) On January 1, 2020, Aumont Company sold 12% bonds having a maturity value of \$500,000 for \$537,907.37, which provides the bondholders with a 10% yield. The bonds are dated January 1, 2020, and mature January 1, 2025, with interest payable December 31 of each year. Aumont Company allocates interest and unamortized discount or premium on the effective-interest basis.

Instructions

(Round answers to the nearest cent.)

- Prepare the journal entry at the date of the bond issuance.
- Prepare a schedule of interest expense and bond amortization for 2020–2022.
- Prepare the journal entry to record the interest payment and the amortization for 2020.
- Prepare the journal entry to record the interest payment and the amortization for 2022.

E14.11 (LO 1) (Information Related to Various Bond Issues) Karen Austin Inc. has issued three types of debt on January 1, 2020, the start of the company's fiscal year.

- \$10 million, 10-year, 15% unsecured bonds, interest payable quarterly. Bonds were priced to yield 12%.
- \$25 million par of 10-year, zero-coupon bonds at a price to yield 12% per year.
- \$20 million, 10-year, 10% mortgage bonds, interest payable annually to yield 12%.

Instructions

Prepare a schedule that identifies the following items for each bond: (1) maturity value, (2) number of interest periods over life of bond, (3) stated rate per each interest period, (4) effective-interest rate per each interest period, (5) payment amount per period, and (6) present value of bonds at date of issue.

E14.12 (LO 1, 2) (Entry for Redemption of Bond) On January 2, 2015, Banno Corporation issued \$1,500,000 of 10% bonds at 97 due December 31, 2024. Interest on the bonds is payable annually each December 31. The discount on the bonds is also being amortized on a straight-line basis over the 10 years. (Straight-line is not materially different in effect from the preferable “interest method.”)

The bonds are callable at 101 (i.e., at 101% of face amount), and on January 2, 2020, Banno called \$900,000 face amount of the bonds and redeemed them.

Instructions

Ignoring income taxes, compute the amount of loss, if any, to be recognized by Banno as a result of retiring the \$900,000 of bonds in 2020 and prepare the journal entry to record the redemption.

(AICPA adapted)

E14.13 (LO 1, 2) (Entries for Redemption and Issuance of Bonds) Matt Perry, Inc. had outstanding \$6,000,000 of 11% bonds (interest payable July 31 and January 31) due in 10 years. On July 1, it issued \$9,000,000 of 10%, 15-year bonds (interest payable July 1 and January 1) at 98. A portion of the proceeds was used to call the 11% bonds (with unamortized discount of \$120,000) at 102 on August 1.

Instructions

Prepare the journal entries necessary to record issue of the new bonds and the refunding of the bonds.

E14.14 (LO 1, 2) (Entries for Redemption and Issuance of Bonds) On June 30, 2012, County Company issued 12% bonds with a par value of \$800,000 due in 20 years. They were issued at 98 and were callable at 104 at any date after June 30, 2020. Because of lower interest rates and a significant change in the company’s credit rating, it was decided to call the entire issue on June 30, 2021, and to issue new bonds. New 10% bonds were sold in the amount of \$1,000,000 at 102; they mature in 20 years. County Company uses straight-line amortization. Interest payment dates are December 31 and June 30.

Instructions

- a. Prepare journal entries to record the redemption of the old issue and the sale of the new issue on June 30, 2021.
- b. Prepare the entry required on December 31, 2021, to record the payment of the first 6 months’ interest and the amortization of premium on the bonds.

E14.15 (LO 1, 2) (Entries for Redemption and Issuance of Bonds) Day Company had bonds outstanding with a maturity value of \$300,000. On April 30, 2020, when these bonds had an unamortized discount of \$10,000, they were called in at 104. To pay for these bonds, Day had issued other bonds a month earlier bearing a lower interest rate. The newly issued bonds had a life of 10 years. The new bonds were issued at 103 (face value \$300,000).

Instructions

Ignoring interest, compute the gain or loss and record this refunding transaction.

(AICPA adapted)

E14.16 (LO 3) (Entries for Zero-Interest-Bearing Notes) On January 1, 2020, Carter Company makes the two following acquisitions.

1. Purchases land having a fair value of \$200,000 by issuing a 5-year, zero-interest-bearing promissory note in the face amount of \$337,012.
2. Purchases equipment by issuing a 6%, 8-year promissory note having a maturity value of \$250,000 (interest payable annually).

The company has to pay 11% interest for funds from its bank.

Instructions

(Round answers to the nearest cent.)

- a. Record the two journal entries that should be recorded by Carter Company for the two purchases on January 1, 2020.
- b. Record the interest at the end of the first year on both notes using the effective-interest method.

E14.17 (LO 3) (Imputation of Interest) Presented below are two independent situations.

- On January 1, 2020, Wright Inc. purchased land that had an assessed value of \$350,000 at the time of purchase. A \$550,000, zero-interest-bearing note due January 1, 2023, was given in exchange. There was no established exchange price for the land, nor a ready fair value for the note. The interest rate charged on a note of this type is 12%. Determine at what amount the land should be recorded at January 1, 2020, and the interest expense to be reported in 2020 related to this transaction.
- On January 1, 2020, Field Furniture borrowed \$5,000,000 (face value) from Sinise Co., a major customer, through a zero-interest-bearing note due in 4 years. Because the note was zero-interest-bearing, Field Furniture agreed to sell furniture to this customer at lower than market price. A 10% rate of interest is normally charged on this type of loan. Prepare the journal entry to record this transaction and determine the amount of interest expense to report for 2020.

E14.18 (LO 3) (Imputation of Interest with Right) On January 1, 2020, Avery Co. borrowed and received \$400,000 from a major customer evidenced by a zero-interest-bearing note due in 3 years. As consideration for the zero-interest-bearing feature, Avery agrees to supply the customer's inventory needs for the loan period at lower than the market price. The appropriate rate at which to impute interest is 8%.

Instructions

- Prepare the journal entry to record the initial transaction on January 1, 2020. (Round all computations to the nearest dollar.)
- Prepare the journal entry to record any adjusting entries needed at December 31, 2020. Assume that the sales of Avery's product to this customer occur evenly over the 3-year period.

E14.19 (LO 4) (Fair Value Option) Fallen Company commonly issues long-term notes payable to its various lenders. Fallen has had a pretty good credit rating such that its effective borrowing rate is quite low (less than 8% on an annual basis). Fallen has elected to use the fair value option for the long-term notes issued to Barclay's Bank and has the following data related to the carrying and fair value for these notes. Any changes in fair value are due to changes in market rates, not credit risk.

| | <u>Carrying Value</u> | <u>Fair Value</u> |
|-------------------|-----------------------|-------------------|
| December 31, 2020 | \$54,000 | \$54,000 |
| December 31, 2021 | 44,000 | 42,500 |
| December 31, 2022 | 36,000 | 38,000 |

Instructions

- Prepare the journal entry at December 31 (Fallen's year-end) for 2020, 2021, and 2022, to record the fair value option for these notes.
- At what amount will the note be reported on Fallen's 2021 balance sheet?
- What is the effect of recording the fair value option on these notes on Fallen's 2022 income?
- Assuming that general market interest rates have been stable over the period, does the fair value data for the notes indicate that Fallen's creditworthiness has improved or declined in 2022? Explain.

E14.20 (LO 4) (Long-Term Debt Disclosure) At December 31, 2020, Redmond Company has outstanding three long-term debt issues. The first is a \$2,000,000 note payable which matures June 30, 2023. The second is a \$6,000,000 bond issue which matures September 30, 2024. The third is a \$12,500,000 sinking fund debenture with annual sinking fund payments of \$2,500,000 in each of the years 2022 through 2026.

Instructions

Prepare the required note disclosure for the long-term debt at December 31, 2020.

***E14.21 (LO 5) (Settlement of Debt)** Strickland Company owes \$200,000 plus \$18,000 of accrued interest to Moran State Bank. The debt is a 10-year, 10% note. During 2020, Strickland's business deteriorated due to a faltering regional economy. On December 31, 2020, Moran State Bank agrees to accept an old machine and cancel the entire debt. The machine has a cost of \$390,000, accumulated depreciation of \$221,000, and a fair value of \$180,000.

Instructions

- Prepare journal entries for Strickland Company and Moran State Bank to record this debt settlement.
- How should Strickland report the gain or loss on the disposition of machine and on restructuring of debt in its 2020 income statement?
- Assume that, instead of transferring the machine, Strickland decides to grant 15,000 shares of its common stock (\$10 par) which has a fair value of \$180,000 in full settlement of the loan obligation.

If Moran State Bank treats Strickland's stock as a trading investment, prepare the entries to record the transaction for both parties.

***E14.22 (LO 5) (Term Modification without Gain—Debtor's Entries)** On December 31, 2020, American Bank enters into a debt restructuring agreement with Barkley Company, which is now experiencing financial trouble. The bank agrees to restructure a 12%, issued at par, \$3,000,000 note receivable by the following modifications:

1. Reducing the principal obligation from \$3,000,000 to \$2,400,000.
2. Extending the maturity date from December 31, 2020, to January 1, 2024.
3. Reducing the interest rate from 12% to 10%.

Barkley pays interest at the end of each year. On January 1, 2024, Barkley Company pays \$2,400,000 in cash to American Bank.

Instructions

- a. Will the gain recorded by Barkley be equal to the loss recorded by American Bank under the debt restructuring? Explain.
- b. Can Barkley Company record a gain under the term modification mentioned above? Explain.
- c. Assuming that the interest rate Barkley should use to compute interest expense in future periods is 1.4276%, prepare the interest payment schedule of the note for Barkley Company after the debt restructuring.
- d. Prepare the interest payment entry for Barkley Company on December 31, 2022.
- e. What entry should Barkley make on January 1, 2024?

***E14.23 (LO 5) (Term Modification without Gain—Creditor's Entries)** Using the same information as in E14.22, answer the following questions related to American Bank (creditor).

Instructions

- a. What interest rate should American Bank use to calculate the loss on the debt restructuring?
- b. Compute the loss that American Bank will suffer from the debt restructuring. Prepare the journal entry to record the loss.
- c. Prepare the interest receipt schedule for American Bank after the debt restructuring.
- d. Prepare the interest receipt entry for American Bank on December 31, 2022.
- e. What entry should American Bank make on January 1, 2024?

***E14.24 (LO 5) (Term Modification with Gain—Debtor's Entries)** Use the same information as in E14.22 above except that American Bank reduced the principal to \$1,900,000 rather than \$2,400,000. On January 1, 2024, Barkley pays \$1,900,000 in cash to American Bank for the principal.

Instructions

- a. Can Barkley Company record a gain under this term modification? If yes, compute the gain for Barkley Company.
- b. Prepare the journal entries to record the gain on Barkley's books.
- c. What interest rate should Barkley use to compute its interest expense in future periods? Will your answer be the same as in E14.22 above? Why or why not?
- d. Prepare the interest payment schedule of the note for Barkley Company after the debt restructuring.
- e. Prepare the interest payment entries for Barkley Company on December 31, of 2021, 2022, and 2023.
- f. What entry should Barkley make on January 1, 2024?

***E14.25 (LO 5) (Term Modification with Gain—Creditor's Entries)** Using the same information as in E14.22 and E14.24, answer the following questions related to American Bank (creditor).

Instructions

- a. Compute the loss American Bank will suffer under this new term modification. Prepare the journal entry to record the loss on American's books.
- b. Prepare the interest receipt schedule for American Bank after the debt restructuring.
- c. Prepare the interest receipt entry for American Bank on December 31, 2021, 2022, and 2023.
- d. What entry should American Bank make on January 1, 2024?

***E14.26 (LO 5) (Debtor/Creditor Entries for Settlement of Troubled Debt)** Gottlieb Co. owes \$199,800 to Ceballos Inc. The debt is a 10-year, 11% note. Because Gottlieb Co. is in financial trouble,

Ceballos Inc. agrees to accept some land and cancel the entire debt. The property has a book value of \$90,000 and a fair value of \$140,000.

Instructions

- Prepare the journal entry on Gottlieb's books for debt restructure.
- Prepare the journal entry on Ceballos's books for debt restructure.

***E14.27 (LO 5) (Debtor/Creditor Entries for Modification of Troubled Debt)** Vargo Corp. owes \$270,000 to First Trust. The debt is a 10-year, 12% note due December 31, 2020. Because Vargo Corp. is in financial trouble, First Trust agrees to extend the maturity date to December 31, 2022, reduce the principal to \$220,000, and reduce the interest rate to 5%, payable annually on December 31.

Instructions

- Prepare the journal entries on Vargo's books on December 31, 2020, 2021, 2022.
- Prepare the journal entries on First Trust's books on December 31, 2020, 2021, 2022.

Problems

P14.1 (LO 1) Groupwork (Analysis of Amortization Schedule and Interest Entries) The following amortization and interest schedule reflects the issuance of 10-year bonds by Capulet Corporation on January 1, 2014, and the subsequent interest payments and charges. The company's year-end is December 31, and financial statements are prepared once yearly.

| Amortization Schedule | | | | |
|-----------------------|----------|----------|--------------------|----------------|
| Year | Cash | Interest | Amount Unamortized | Carrying Value |
| 1/1/2014 | | | \$5,651 | \$ 94,349 |
| 2014 | \$11,000 | \$11,322 | 5,329 | 94,671 |
| 2015 | 11,000 | 11,361 | 4,968 | 95,032 |
| 2016 | 11,000 | 11,404 | 4,564 | 95,436 |
| 2017 | 11,000 | 11,452 | 4,112 | 95,888 |
| 2018 | 11,000 | 11,507 | 3,605 | 96,395 |
| 2019 | 11,000 | 11,567 | 3,038 | 96,962 |
| 2020 | 11,000 | 11,635 | 2,403 | 97,597 |
| 2021 | 11,000 | 11,712 | 1,691 | 98,309 |
| 2022 | 11,000 | 11,797 | 894 | 99,106 |
| 2023 | 11,000 | 11,894 | | 100,000 |

Instructions

- Indicate whether the bonds were issued at a premium or a discount and how you can determine this fact from the schedule.
- Indicate whether the amortization schedule is based on the straight-line method or the effective-interest method, and how you can determine which method is used.
- Determine the stated interest rate and the effective-interest rate.
- On the basis of the schedule above, prepare the journal entry to record the issuance of the bonds on January 1, 2014.
- On the basis of the schedule above, prepare the journal entry or entries to reflect the bond transactions and accruals for 2014. (Interest is paid January 1.)
- On the basis of the schedule above, prepare the journal entry or entries to reflect the bond transactions and accruals for 2021. Capulet Corporation does not use reversing entries.

P14.2 (LO 1, 2) Excel (Issuance and Redemption of Bonds) Venezuela Co. is building a new hockey arena at a cost of \$2,500,000. It received a downpayment of \$500,000 from local businesses to support the project, and now needs to borrow \$2,000,000 to complete the project. It therefore decides to issue \$2,000,000 of 10.5%, 10-year bonds. These bonds were issued on January 1, 2019, and pay interest annually on each January 1. The bonds yield 10%.

Instructions

- Prepare the journal entry to record the issuance of the bonds on January 1, 2019.

- b. Prepare a bond amortization schedule up to and including January 1, 2023, using the effective-interest method.
- c. Assume that on July 1, 2022, Venezuela Co. redeems half of the bonds at a cost of \$1,065,000 plus accrued interest. Prepare the journal entry to record this redemption.

P14.3 (LO 1, 3) (Negative Amortization) Good-Deal Inc. developed a new sales gimmick to help sell its inventory of new automobiles. Because many new car buyers need financing, Good-Deal offered a low downpayment and low car payments for the first year after purchase. It believes that this promotion will bring in some new buyers.

On January 1, 2020, a customer purchased a new \$33,000 automobile, making a downpayment of \$1,000. The customer signed a note indicating that the annual rate of interest would be 8% and that quarterly payments would be made over 3 years. For the first year, Good-Deal required a \$400 quarterly payment to be made on April 1, July 1, October 1, and January 1, 2021. After this one-year period, the customer was required to make regular quarterly payments that would pay off the loan as of January 1, 2023.

Instructions

- a. Prepare a note amortization schedule for the first year.
- b. Indicate the amount the customer owes on the contract at the end of the first year.
- c. Compute the amount of the new quarterly payments.
- d. Prepare a note amortization schedule for these new payments for the next 2 years.
- e. What do you think of the new sales promotion used by Good-Deal?

P14.4 (LO 1, 2, 4) (Issuance and Redemption of Bonds; Income Statement Presentation) Holiday Company issued its 9%, 25-year mortgage bonds in the principal amount of \$3,000,000 on January 2, 2006, at a discount of \$150,000, which it proceeded to amortize by charges to expense over the life of the issue on a straight-line basis. The indenture securing the issue provided that the bonds could be called for redemption in total but not in part at any time before maturity at 104% of the principal amount, but it did not provide for any sinking fund.

On December 18, 2020, the company issued its 11%, 20-year debenture bonds in the principal amount of \$4,000,000 at 102, and the proceeds were used to redeem the 9%, 25-year mortgage bonds on January 2, 2021. The indenture securing the new issue did not provide for any sinking fund or for redemption before maturity.

Instructions

- a. Prepare journal entries to record the issuance of the 11% bonds and the redemption of the 9% bonds.
- b. Indicate the income statement treatment of the gain or loss from redemption and the note disclosure required.

P14.5 (LO 1, 2) Excel (Comprehensive Bond Problem) In each of the following independent cases, the company closes its books on December 31.

1. Sanford Co. sells \$500,000 of 10% bonds on March 1, 2020. The bonds pay interest on September 1 and March 1. The due date of the bonds is September 1, 2023. The bonds yield 12%. Give entries through December 31, 2021.
2. Titania Co. sells \$400,000 of 12% bonds on June 1, 2020. The bonds pay interest on December 1 and June 1. The due date of the bonds is June 1, 2024. The bonds yield 10%. On October 1, 2021, Titania buys back \$120,000 worth of bonds for \$126,000 (includes accrued interest). Give entries through December 1, 2022.

Instructions

For the two cases prepare all of the relevant journal entries from the time of sale until the date indicated. Use the effective-interest method for discount and premium amortization (construct amortization tables where applicable). Amortize premium or discount on interest dates and at year-end. (Assume that no reversing entries were made.)

P14.6 (LO 1, 2) Groupwork (Issuance of Bonds between Interest Dates, Straight-Line, Redemption) Presented below are selected transactions on the books of Simonson Corporation.

- | | |
|-------------|--|
| May 1, 2020 | Bonds payable with a par value of \$900,000, which are dated January 1, 2020, are sold at 106 plus accrued interest. They are coupon bonds, bear interest at 12% (payable annually at January 1), and mature January 1, 2030. (Use interest expense account for accrued interest.) |
| Dec. 31 | Adjusting entries are made to record the accrued interest on the bonds, and the amortization of the proper amount of premium. (Use straight-line amortization.) |

| | |
|--------------|--|
| Jan. 1, 2021 | Interest on the bonds is paid. |
| April 1 | Bonds with par value of \$360,000 are called at 102 plus accrued interest, and redeemed. (Bond premium is to be amortized only at the end of each year.) |
| Dec. 31 | Adjusting entries are made to record the accrued interest on the bonds, and the proper amount of premium amortized. |

Instructions

(Round to two decimal places.)

Prepare journal entries for the transactions above.

P14.7 (LO 1, 2) (Entries for Life Cycle of Bonds) On April 1, 2020, Seminole Company sold 15,000 of its 11%, 15-year, \$1,000 face value bonds at 97. Interest payment dates are April 1 and October 1, and the company uses the straight-line method of bond discount amortization. On March 1, 2021, Seminole took advantage of favorable prices of its stock to extinguish 6,000 of the bonds by issuing 200,000 shares of its \$10 par value common stock. At this time, the accrued interest was paid in cash. The company's stock was selling for \$31 per share on March 1, 2021.

Instructions

Prepare the journal entries needed on the books of Seminole Company to record the following.

- April 1, 2020: issuance of the bonds.
- October 1, 2020: payment of semiannual interest.
- December 31, 2020: accrual of interest expense.
- March 1, 2021: extinguishment of 6,000 bonds. (No reversing entries made.)

P14.8 (LO 3) (Entries for Zero-Interest-Bearing Note) On December 31, 2020, Faital Company acquired a computer from Plato Corporation by issuing a \$600,000 zero-interest-bearing note, payable in full on December 31, 2024. Faital Company's credit rating permits it to borrow funds from its several lines of credit at 10%. The computer is expected to have a 5-year life and a \$70,000 salvage value.

Instructions

(Round answers to the nearest cent.)

- Prepare the journal entry for the purchase on December 31, 2020.
- Prepare any necessary adjusting entries relative to depreciation (use straight-line) and amortization (use effective-interest method) on December 31, 2021.
- Prepare any necessary adjusting entries relative to depreciation and amortization on December 31, 2022.

P14.9 (LO 3) (Entries for Zero-Interest-Bearing Note; Payable in Installments) Sabonis Cosmetics Co. purchased machinery on December 31, 2019, paying \$50,000 down and agreeing to pay the balance in four equal installments of \$40,000 payable each December 31. An assumed interest of 8% is implicit in the purchase price.

Instructions

Prepare the journal entries that would be recorded for the purchase and for the payments and interest on the following dates. (Round answers to the nearest cent.)

- December 31, 2019.
- December 31, 2020.
- December 31, 2021.
- December 31, 2022.
- December 31, 2023.

P14.10 (LO 1, 2, 4) Groupwork (Comprehensive Problem: Issuance, Classification, Reporting)

The following are four independent situations.

- On March 1, 2021, Wilke Co. issued at 103 plus accrued interest \$4,000,000, 9% bonds. The bonds are dated January 1, 2021, and pay interest semiannually on July 1 and January 1. In addition, Wilke Co. incurred \$27,000 of bond issuance costs. Compute the net amount of cash received by Wilke Co. as a result of the issuance of these bonds.
- On January 1, 2020, Langley Co. issued 9% bonds with a face value of \$700,000 for \$656,992 to yield 10%. The bonds are dated January 1, 2020, and pay interest annually. What amount is reported for interest expense in 2020 related to these bonds, assuming that Langley used the effective-interest method for amortizing bond premium and discount?
- Tweedie Building Co. has a number of long-term bonds outstanding at December 31, 2020. These long-term bonds have the following sinking fund requirements and maturities for the next 6 years.

| | <u>Sinking Fund</u> | <u>Maturities</u> |
|------|---------------------|-------------------|
| 2021 | \$300,000 | \$100,000 |
| 2022 | 100,000 | 250,000 |
| 2023 | 100,000 | 100,000 |
| 2024 | 200,000 | — |
| 2025 | 200,000 | 150,000 |
| 2026 | 200,000 | 100,000 |

Indicate how this information should be reported in the financial statements at December 31, 2020.

- d. In the long-term debt structure of Beckford Inc., the following three bonds were reported: mortgage bonds payable \$10,000,000; collateral trust bonds \$5,000,000; bonds maturing in installments, secured by plant equipment \$4,000,000. Determine the total amount, if any, of debenture bonds outstanding.

P14.11 (LO 1) Writing (Effective-Interest Method) Samantha Cordelia, an intermediate accounting student, is having difficulty amortizing bond premiums and discounts using the effective-interest method. Furthermore, she cannot understand why GAAP requires that this method be used instead of the straight-line method. She has come to you with the following problem, looking for help.

On June 30, 2020, Hobart Company issued \$2,000,000 face value of 11%, 20-year bonds at \$2,171,600, a yield of 10%. Hobart Company uses the effective-interest method to amortize bond premiums or discounts. The bonds pay semiannual interest on June 30 and December 31. Prepare an amortization schedule for four periods.

Instructions

Using the data above for illustrative purposes, write a short memo (1–1.5 pages double-spaced) to Samantha, explaining what the effective-interest method is, why it is preferable, and how it is computed. (Do not forget to include an amortization schedule, referring to it whenever necessary.)

***P14.12 (LO 5) (Debtor/Creditor Entries for Continuation of Troubled Debt)** Daniel Perkins is the sole shareholder of Perkins Inc., which is currently under protection of the U.S. bankruptcy court. As a “debtor in possession,” he has negotiated the following revised loan agreement with United Bank. Perkins Inc.’s \$600,000, 12%, 10-year note was refinanced with a \$600,000, 5%, 10-year note.

Instructions

- What is the accounting nature of this transaction?
- Prepare the journal entry to record this refinancing:
 - On the books of Perkins Inc.
 - On the books of United Bank.
- Discuss whether generally accepted accounting principles provide the proper information useful to managers and investors in this situation.

***P14.13 (LO 5) (Restructure of Note Under Different Circumstances)** Halvor Corporation is having financial difficulty and therefore has asked Frontenac National Bank to restructure its \$5 million note outstanding. The present note has 3 years remaining and pays a current rate of interest of 10%. The present market rate for a loan of this nature is 12%. The note was issued at its face value.

Instructions

The following are four independent situations. Prepare the journal entry that Halvor and Frontenac National Bank would make for each of these restructurings.

- Frontenac National Bank agrees to take an equity interest in Halvor by accepting common stock valued at \$3,700,000 in exchange for relinquishing its claim on this note. The common stock has a par value of \$1,700,000.
- Frontenac National Bank agrees to accept land in exchange for relinquishing its claim on this note. The land has a book value of \$3,250,000 and a fair value of \$4,000,000.
- Frontenac National Bank agrees to modify the terms of the note, indicating that Halvor does not have to pay any interest on the note over the 3-year period.
- Frontenac National Bank agrees to reduce the principal balance due to \$4,166,667 and require interest only in the second and third year at a rate of 10%.

***P14.14 (LO 5) (Debtor/Creditor Entries for Continuation of Troubled Debt with New Effective Interest)** Crocker Corp. owes D. Yaeger Corp. a 10-year, 10% note in the amount of \$330,000 plus \$33,000 of accrued interest. The note is due today, December 31, 2020. Because Crocker Corp. is in financial trouble, D. Yaeger Corp. agrees to forgive the accrued interest, \$30,000 of the principal, and to

extend the maturity date to December 31, 2023. Interest at 10% of revised principal will continue to be due on 12/31 each year.

Assume the following present value factors for 3 periods.

| | <u>2¹/₄%</u> | <u>2³/₈%</u> | <u>2¹/₂%</u> | <u>2⁵/₈%</u> | <u>2³/₄%</u> | <u>3%</u> |
|-----------------------|------------------------------------|------------------------------------|------------------------------------|------------------------------------|------------------------------------|-----------|
| Single sum | .93543 | .93201 | .92859 | .92521 | .92184 | .91514 |
| Ordinary annuity of 1 | 2.86989 | 2.86295 | 2.85602 | 2.84913 | 2.84226 | 2.82861 |

Instructions

- Compute the new effective-interest rate for Crocker Corp. following restructure. (*Hint:* Find the interest rate that establishes approximately \$363,000 as the present value of the total future cash flows.)
- Prepare a schedule of debt reduction and interest expense for the years 2020 through 2023.
- Compute the gain or loss for D. Yaeger Corp. and prepare a schedule of receivable reduction and interest revenue for the years 2020 through 2023.
- Prepare all the necessary journal entries on the books of Crocker Corp. for the years 2020, 2021, and 2022.
- Prepare all the necessary journal entries on the books of D. Yaeger Corp. for the years 2020, 2021, and 2022.

Concepts for Analysis

CA14.1 (LO 1, 4) (Bond Theory: Balance Sheet Presentations, Interest Rate, Premium) On January 1, 2020, Nichols Company issued for \$1,085,800 its 20-year, 11% bonds that have a maturity value of \$1,000,000 and pay interest semiannually on January 1 and July 1. The following are three presentations of the long-term liability section of the balance sheet that might be used for these bonds at the issue date.

| | |
|--|-------------------------|
| 1. Bonds payable (maturing January 1, 2040) | \$1,000,000 |
| Unamortized premium on bonds payable | 85,800 |
| Total bond liability | <u>\$1,085,800</u> |
| 2. Bonds payable—principal (face value \$1,000,000 maturing January 1, 2040) | \$ 142,050 ^a |
| Bonds payable—interest (semiannual payment \$55,000) | 943,750 ^b |
| Total bond liability | <u>\$1,085,800</u> |
| 3. Bonds payable—principal (maturing January 1, 2040) | \$1,000,000 |
| Bonds payable—interest (\$55,000 per period for 40 periods) | 2,200,000 |
| Total bond liability | <u>\$3,200,000</u> |

^aThe present value of \$1,000,000 due at the end of 40 (6-month) periods at the yield rate of 5% per period.

^bThe present value of \$55,000 per period for 40 (6-month) periods at the yield rate of 5% per period.

Instructions

- Discuss the conceptual merit(s) of each of the date-of-issue balance sheet presentations shown above for these bonds.
- Explain why investors would pay \$1,085,800 for bonds that have a maturity value of only \$1,000,000.
- Assuming that a discount rate is needed to compute the carrying value of the obligations arising from a bond issue at any date during the life of the bonds, discuss the conceptual merit(s) of using for this purpose:
 - The coupon or nominal rate.
 - The effective or yield rate at date of issue.
- If the obligations arising from these bonds are to be carried at their present value computed by means of the current market rate of interest, how would the bond valuation at dates subsequent to the date of issue be affected by an increase or a decrease in the market rate of interest?

(AICPA adapted)

CA14.2 (LO 1, 2, 4) (Bond Theory: Price, Presentation, and Redemption) On March 1, 2020, Sealy Company sold its 5-year, \$1,000 face value, 9% bonds dated March 1, 2020, at an effective annual interest rate (yield) of 11%. Interest is payable semiannually, and the first interest payment date is September 1,

2020. Sealy uses the effective-interest method of amortization. The bonds can be called by Sealy at 101 at any time on or after March 1, 2021.

Instructions

- a. 1. How would the selling price of the bond be determined?
2. Specify how all items related to the bonds would be presented in a balance sheet prepared immediately after the bond issue was sold.
- b. What items related to the bond issue would be included in Sealy's 2020 income statement, and how would each be determined?
- c. Would the amount of bond discount amortization using the effective-interest method of amortization be lower in the second or third year of the life of the bond issue? Why?
- d. Assuming that the bonds were called in and redeemed on March 1, 2021, how should Sealy report the redemption of the bonds on the 2021 income statement?

(AICPA adapted)

CA14.3 (LO 1, 2, 4) Writing (Bond Theory: Amortization and Gain or Loss Recognition)

Part I: The appropriate method of amortizing a premium or discount on issuance of bonds is the effective-interest method.

Instructions

- a. What is the effective-interest method of amortization and how is it different from and similar to the straight-line method of amortization?
- b. How is amortization computed using the effective-interest method, and why and how do amounts obtained using the effective-interest method differ from amounts computed under the straight-line method?

Part II: Gains or losses from the early extinguishment of debt that is refunded can theoretically be accounted for in three ways:

1. Amortized over remaining life of old debt.
2. Amortized over the life of the new debt issue.
3. Recognized in the period of extinguishment.

Instructions

- a. Develop supporting arguments for each of the three theoretical methods of accounting for gains and losses from the early extinguishment of debt.
- b. Which of the methods above is generally accepted and how should the appropriate amount of gain or loss be shown in a company's financial statements?

(AICPA adapted)

CA14.4 (LO 4) Writing (Off-Balance-Sheet Financing) Matt Ryan Corporation is interested in building its own soda can manufacturing plant adjacent to its existing plant in Partyville, Kansas. The objective would be to ensure a steady supply of cans at a stable price and to minimize transportation costs. However, the company has been experiencing some financial problems and has been reluctant to borrow any additional cash to fund the project. The company is not concerned with the cash flow problems of making payments, but rather with the impact of adding additional long-term debt to its balance sheet.

The president of Ryan, Andy Newlin, approached the president of the Aluminum Can Company (ACC), its major supplier, to see if some agreement could be reached. ACC was anxious to work out an arrangement, since it seemed inevitable that Ryan would begin its own can production. The Aluminum Can Company could not afford to lose the account.

After some discussion, a two-part plan was worked out. First, ACC was to construct the plant on Ryan's land adjacent to the existing plant. Second, Ryan would sign a 20-year purchase agreement. Under the purchase agreement, Ryan would express its intention to buy all of its cans from ACC, paying a unit price which at normal capacity would cover labor and material, an operating management fee, and the debt service requirements on the plant. The expected unit price, if transportation costs are taken into consideration, is lower than current market. If Ryan did not take enough production in any one year and if the excess cans could not be sold at a high enough price on the open market, Ryan agrees to make up any cash shortfall so that ACC could make the payments on its debt. The bank will be willing to make a 20-year loan for the plant, taking the plant and the purchase agreement as collateral. At the end of 20 years, the plant is to become the property of Ryan.

Instructions

- What are project financing arrangements using special-purpose entities?
- What are take-or-pay contracts?
- Should Ryan record the plant as an asset together with the related obligation?
- If not, should Ryan record an asset relating to the future commitment?
- What is meant by off-balance-sheet financing?

CA14.5 (LO 1, 4) Ethics (Bond Issue) Donald Lennon is the president, founder, and majority owner of Wichita Medical Corporation, an emerging medical technology products company. Wichita is in dire need of additional capital to keep operating and to bring several promising products to final development, testing, and production. Donald, as owner of 51% of the outstanding stock, manages the company's operations. He places heavy emphasis on research and development and long-term growth. The other principal stockholder is Nina Friendly who, as a nonemployee investor, owns 40% of the stock. Nina would like to deemphasize the R & D functions and emphasize the marketing function to maximize short-run sales and profits from existing products. She believes this strategy would raise the market price of Wichita's stock.

All of Donald's personal capital and borrowing power is tied up in his 51% stock ownership. He knows that any offering of additional shares of stock will dilute his controlling interest because he won't be able to participate in such an issuance. But, Nina has money and would likely buy enough shares to gain control of Wichita. She then would dictate the company's future direction, even if it meant replacing Donald as president and CEO.

The company already has considerable debt. Raising additional debt will be costly, will adversely affect Wichita's credit rating, and will increase the company's reported losses due to the growth in interest expense. Nina and the other minority stockholders express opposition to the assumption of additional debt, fearing the company will be pushed to the brink of bankruptcy. Wanting to maintain his control and to preserve the direction of "his" company, Donald is doing everything to avoid a stock issuance and is contemplating a large issuance of bonds, even if it means the bonds are issued with a high effective-interest rate.

Instructions

- Who are the stakeholders in this situation?
- What are the ethical issues in this case?
- What would you do if you were Donald?

Using Your Judgment

Financial Reporting Problem**The Procter & Gamble Company (P&G)**

The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G's 2017 financial statements and the accompanying notes to answer the following questions.

- What cash outflow obligations related to the repayment of long-term debt does P&G have over the next 5 years?
- P&G indicates that it believes that it has the ability to meet business requirements in the foreseeable future. Prepare an assessment of its liquidity, solvency, and financial flexibility using ratio analysis.

Comparative Analysis Case**The Coca-Cola Company and PepsiCo, Inc.**

The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- Compute the debt to assets and the times interest earned ratios for these two companies. Comment on the quality of these two ratios for both Coca-Cola and PepsiCo.
- What is the difference between the fair value and the historical cost (carrying amount) of each company's debt at year-end 2017? Why might a difference exist in these two amounts?
- Both companies have debt issued in foreign countries. Speculate as to why these companies may use foreign debt to finance their operations. What risks are involved in this strategy, and how might they adjust for this risk?

Financial Statement Analysis Case**Commonwealth Edison Co.**

The following article appeared in the *Wall Street Journal*.

Bond Markets

Giant Commonwealth Edison Issue Hits Resale Market With \$70 Million Left Over

NEW YORK—Commonwealth Edison Co.'s slow-selling new 9¼% bonds were tossed onto the resale market at a reduced price with about \$70 million still available from the \$200 million offered Thursday, dealers said.

The Chicago utility's bonds, rated double-A by Moody's and double-A-minus by Standard & Poor's, originally had been priced at 99.803, to yield 9.3% in 5 years. They were marked down yesterday the equivalent of about \$5.50 for each \$1,000 face amount, to about 99.25, where their yield jumped to 9.45%.

Instructions

- How will the development above affect the accounting for **Commonwealth Edison's** bond issue?
- Provide several possible explanations for the markdown and the slow sale of Commonwealth Edison's bonds.

Accounting, Analysis, and Principles

The following information is taken from the 2020 annual report of Bugant, Inc. Bugant's fiscal year ends December 31 of each year. Bugant's December 31, 2020, balance sheet is as follows.

| | |
|--|----------------|
| Bugant, Inc. | |
| Balance Sheet | |
| December 31, 2020 | |
| <i>Assets</i> | |
| Cash | \$ 450 |
| Inventory | <u>1,800</u> |
| Total current assets | 2,250 |
| Plant and equipment | 2,000 |
| Accumulated depreciation | <u>(160)</u> |
| Total assets | <u>\$4,090</u> |
| <i>Liabilities</i> | |
| Bonds payable (net of discount) | \$1,426 |
| <i>Stockholders' equity</i> | |
| Common stock | 1,500 |
| Retained earnings | <u>1,164</u> |
| Total liabilities and stockholders' equity | <u>\$4,090</u> |
| Note X: Long Term Debt: | |
| On January 1, 2019, Bugant issued bonds with face value of \$1,500 and a coupon rate equal to 10%. The bonds were issued to yield 12% and mature on January 1, 2024. | |

Additional information concerning 2021 is as follows.

1. Sales were \$3,500, all for cash.
2. Purchases were \$2,000, all paid in cash.
3. Salaries were \$700, all paid in cash.
4. Property, plant, and equipment was originally purchased for \$2,000 and is depreciated straight-line over a 25-year life with no salvage value.
5. Ending inventory was \$1,900.
6. Cash dividends of \$100 were declared and paid by Bugant.
7. Ignore taxes.
8. The market rate of interest on bonds of similar risk was 12% during all of 2021.
9. Interest on the bonds is paid semiannually each June 30 and December 31.

Accounting

Prepare a balance sheet for Bugant, Inc. at December 31, 2021, and an income statement for the year ending December 31, 2021. Assume semiannual compounding of the bond interest.

Analysis

Use common ratios for analysis of long-term debt to assess Bugant's long-run solvency. Has Bugant's solvency changed much from 2020 to 2021? Bugant's net income in 2020 was \$550 and interest expense was \$169.

Principles

The FASB and the IASB allow companies the option of recognizing in their financial statements the fair values of their long-term debt. That is, companies have the option to change the balance sheet value of their long-term debt to the debt's fair value and report the change in balance sheet value as a gain or loss in income. In terms of the qualitative characteristics of accounting information (Chapter 2), briefly describe the potential trade-off(s) involved in reporting long-term debt at its fair value.

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

CE14.1 Access the glossary (Master Glossary) to answer the following.

- a. What does the term "callable obligation" mean?
- b. What is an imputed interest rate?
- c. What is a long-term obligation?
- d. What is the definition of "effective-interest rate"?

CE14.2 What guidance does the Codification provide on the disclosure of long-term obligations?

CE14.3 Describe how a company would classify debt that includes covenants. What conditions must exist in order to depart from the normal rule?

CE14.4 A company proposes to include in its SEC registration statement a balance sheet showing its subordinate debt as a portion of stockholders' equity. Will the SEC allow this? Why or why not?

Codification Research Case

Wie Company has been operating for just 2 years, producing specialty golf equipment for women golfers. To date, the company has been able to finance its successful operations with investments from its principal owner, Michelle Wie, and cash flows from operations. However, current expansion plans will require some borrowing to expand the company's production line.

As part of the expansion plan, Wie will acquire some used equipment by signing a zero-interest-bearing note. The note has a maturity value of \$50,000 and matures in 5 years. A reliable fair value measure for the equipment is not available, given the age and specialty nature of the equipment. As a result, Wie's accounting staff is unable to determine an established exchange price for recording the equipment (nor the interest rate to be used to record interest expense on the long-term note). They have asked you to conduct some accounting research on this topic.

Instructions

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

- Identify the authoritative literature that provides guidance on the zero-interest-bearing note. Use some of the examples to explain how the standard applies in this setting.
- How is present value determined when an established exchange price is not determinable and a note has no ready market? What is the resulting interest rate often called?
- Where should a discount or premium appear in the financial statements?

IFRS Insights

LEARNING OBJECTIVE 6

Compare the accounting procedures for long-term liabilities under GAAP and IFRS.

As indicated in Chapter 13, IFRS and GAAP have similar definitions of liabilities.

Relevant Facts

Following are the key similarities and differences between GAAP and IFRS related to long-term liabilities.

Similarities

- As indicated in our earlier discussions, GAAP and IFRS have similar liability definitions, and liabilities are classified as current and non-current.
- Much of the accounting for bonds and long-term notes is the same for GAAP and IFRS.
- Under GAAP and IFRS, bond issue costs are netted against the carrying amount of the bonds.

Differences

- Under GAAP, companies are permitted to use the straight-line method of amortization for bond discount or premium, provided that the amount recorded is not materially different than that resulting from effective-interest amortization. However, the effective-interest method is preferred and is generally used. Under IFRS, companies must use the effective-interest method.
- Under IFRS, companies do not use premium or discount accounts but instead show the bond at its net amount. For example, if a \$100,000 bond was issued at 97, under IFRS a company would record:

| | | |
|---------------|--------|--------|
| Cash | 97,000 | |
| Bonds Payable | | 97,000 |

- GAAP uses the term *troubled-debt restructurings* and has developed specific guidelines related to that category of loans. IFRS generally assumes that all restructurings will be accounted for as extinguishments of debt.
- IFRS requires a liability and related expense or cost be recognized when a contract is onerous. Under GAAP, losses on onerous contracts are generally not recognized under GAAP unless addressed by industry or transaction-specific requirements.

About the Numbers

Effective-Interest Method

As discussed earlier, by paying more or less at issuance, investors earn a rate different than the coupon rate on the bond. Recall that the issuing company pays the contractual interest rate over the term of the bonds but also must pay the face value at maturity. If the bond is issued at a discount, the amount paid at maturity is more than the issue amount. If issued at a premium, the company pays less at maturity relative to the issue price.

The company records this adjustment to the cost as **bond interest expense** over the life of the bonds through a process called **amortization**. **Amortization of a discount increases bond interest expense. Amortization of a premium decreases bond interest expense.**

Under IFRS, the required procedure for amortization of a discount or premium is the **effective-interest method** (also called **present value amortization**). Under the effective-interest method, companies:

1. Compute bond interest expense first by multiplying the **carrying value** (book value) of the bonds at the beginning of the period by the effective-interest rate.
2. Determine the bond discount or premium amortization next by comparing the bond interest expense with the interest (cash) to be paid.

Illustration IFRS14.1 depicts graphically the computation of the amortization.

ILLUSTRATION IFRS14.1

Bond Discount and Premium Amortization Computation

The effective-interest method produces a periodic interest expense equal to a **constant percentage of the carrying value of the bonds**. The issuance of bonds involves engraving and printing costs, legal and accounting fees, commissions, promotion costs, and other similar charges. These costs should be recorded as a reduction to the issue amount of the bond payable and then amortized into expense over the life of the bond, through an adjustment to the effective-interest rate. For example, if the face value of the bond is \$100,000 and issue costs are \$1,000, then the bond payable (net of the bond issue costs) is recorded at \$99,000. Thus, the effective-interest rate will be higher, based on the reduced carrying value.

Bonds Issued at a Discount To illustrate amortization of a discount under the effective-interest method, Evermaster Corporation issued \$100,000 of 8 percent term bonds on January 1, 2020, due on January 1, 2025, with interest payable each July 1 and January 1. Because the investors required an effective-interest rate of 10 percent, they paid \$92,278 for the \$100,000 of bonds, creating a \$7,722 discount. Evermaster computes the \$7,722 discount as shown in **Illustration IFRS14.2**.

| | |
|---|-----------|
| Maturity value of bonds payable | \$100,000 |
| Present value of \$100,000 due in 5 years at 10%, interest payable semiannually (Table 6.2); $FV(PVF_{10,5\%})$; $(\$100,000 \times .61391)$ | \$61,391 |
| Present value of \$4,000 interest payable semiannually for 5 years at 10% annually (Table 6.4); $R(PVF-OA_{10,5\%})$; $(\$4,000 \times 7.72173)$ | 30,887 |
| Proceeds from sale of bonds | (92,278) |
| Discount on bonds payable | \$ 7,722 |

ILLUSTRATION IFRS14.2

Computation of Discount on Bonds Payable

The five-year amortization schedule appears in **Illustration IFRS14.3**.

ILLUSTRATION IFRS14.3
Bond Discount Amortization
Schedule

| Schedule of Bond Discount Amortization | | | | |
|---|-----------------------|-----------------------|---------------------|--------------------------|
| Effective-Interest Method—Semiannual Interest Payments | | | | |
| 5-Year, 8% Bonds Sold to Yield 10% | | | | |
| Date | Cash Paid | Interest Expense | Discount Amortized | Carrying Amount of Bonds |
| 1/1/20 | | | | \$ 92,278 |
| 7/1/20 | \$ 4,000 ^a | \$ 4,614 ^b | \$ 614 ^c | 92,892 ^d |
| 1/1/21 | 4,000 | 4,645 | 645 | 93,537 |
| 7/1/21 | 4,000 | 4,677 | 677 | 94,214 |
| 1/1/22 | 4,000 | 4,711 | 711 | 94,925 |
| 7/1/22 | 4,000 | 4,746 | 746 | 95,671 |
| 1/1/23 | 4,000 | 4,783 | 783 | 96,454 |
| 7/1/23 | 4,000 | 4,823 | 823 | 97,277 |
| 1/1/24 | 4,000 | 4,864 | 864 | 98,141 |
| 7/1/24 | 4,000 | 4,907 | 907 | 99,048 |
| 1/1/25 | 4,000 | 4,952 | 952 | 100,000 |
| | <u>\$40,000</u> | <u>\$47,722</u> | <u>\$7,722</u> | |

^a\$4,000 = \$100,000 × .08 × 6/12
^b\$4,614 = \$92,278 × .10 × 6/12
^c\$614 = \$4,614 – \$4,000
^d\$92,892 = \$92,278 + \$614

Entries for Evermaster in 2020 are as follows.

| January 1, 2020 | | |
|--|--------|--------|
| Cash | 92,278 | |
| Bonds Payable | | 92,278 |
| (Issuance of bonds at discount) | | |
| July 1, 2020 | | |
| Interest Expense | 4,614 | |
| Bonds Payable | | 614 |
| Cash | | 4,000 |
| (First interest payment and amortization of discount) | | |
| December 31, 2020 | | |
| Interest Expense | 4,645 | |
| Interest Payable | | 4,000 |
| Bonds Payable | | 645 |
| (Interest expense accrued (year-end) and amortization of discount) | | |

Extinguishment with Modification of Terms

Practically every day, the *Wall Street Journal* or the *Financial Times* runs a story about some company in financial difficulty. Notable recent examples are **Nakheel**, **Parmalat**, and **General Motors**. In many of these situations, the creditor may grant a borrower concessions with respect to settlement. The creditor offers these concessions to ensure the highest possible collection on the loan. For example, a creditor may offer one or a combination of the following modifications:

1. Reduction of the stated interest rate.
2. Extension of the maturity date of the face amount of the debt.
3. Reduction of the face amount of the debt.
4. Reduction or deferral of any accrued interest.

As with other extinguishments, when a creditor grants favorable concessions on the terms of a loan, the debtor has an economic gain. Thus, the accounting for debt modifications is similar to

that for other extinguishments. That is, the original obligation is extinguished, the new payable is recorded at fair value, and a gain is recognized for the difference in the fair value of the new obligation and the carrying value of the old obligation. Thus, under IFRS, debt modifications are similar to troubled-debt restructurings in GAAP. In general, IFRS treats debt modifications as debt extinguishments.

An exception to the general rule is when the modification of terms is not substantial. A substantial modification is defined as one in which the discounted cash flows under the terms of the new debt (using the historical effective-interest rate) differ by at least 10 percent of the carrying value of the original debt. If a modification is not substantial, the difference (gain) is deferred and amortized over the remaining life of the debt at the historical effective-interest rate. In the case of a non-substantial modification, in essence, the new loan is a continuation of the old loan. Therefore, the debtor should record interest at the historical effective-interest rate.

On the Horizon

The FASB and IASB are currently involved in a project investigating approaches to differentiate between debt and equity instruments. The result of this project could change the classification of many debt and equity securities.

IFRS Self-Test Questions

- Under IFRS, bond issuance costs, including the printing costs and legal fees associated with the issuance, should be:
 - expensed in the period when the debt is issued.
 - recorded as a reduction in the carrying value of bonds payable.
 - accumulated in a deferred charge account and amortized over the life of the bonds.
 - reported as an expense in the period the bonds mature or are redeemed.
- Which of the following is stated correctly?
 - Current liabilities follow non-current liabilities on the statement of financial position under GAAP but non-current liabilities follow current liabilities under IFRS.
 - IFRS does not treat debt modifications as extinguishments of debt.
 - Bond issuance costs are recorded as a reduction of the carrying value of the debt under GAAP but are recorded as an asset and amortized to expense over the term of the debt under IFRS.
 - Under GAAP, bonds payable is recorded at the face amount and any premium or discount is recorded in a separate account. Under IFRS, bonds payable is recorded at the carrying value so no separate premium or discount accounts are used.
- All of the following are differences between IFRS and GAAP in accounting for liabilities **except**:
 - When a bond is issued at a discount, GAAP records the discount in a separate contra liability account. IFRS records the bond net of the discount.
 - Under IFRS, bond issuance costs reduce the carrying value of the debt. Under GAAP, these costs are recorded as an asset and amortized to expense over the terms of the bond.
 - GAAP, but not IFRS, uses the term “troubled-debt restructurings.”
 - GAAP, but not IFRS, uses the term “provisions” for contingent liabilities which are accrued.
- On January 1, Patterson Inc. issued \$5,000,000, 9% bonds for \$4,695,000. The market rate of interest for these bonds is 10%. Interest is payable annually on December 31. Patterson uses the effective-interest method of amortizing bond discount. At the end of the first year, Patterson should report bonds payable of:
 - \$4,725,500.
 - \$4,714,500.
 - \$258,050.
 - \$4,745,000.
- On January 1, Martinez Inc. issued \$3,000,000, 11% bonds for \$3,195,000. The market rate of interest for these bonds is 10%. Interest is payable annually on December 31. Martinez uses the effective-interest method of amortizing bond premium. At the end of the first year, Martinez should report bonds payable of:
 - \$3,185,130.
 - \$3,184,500.
 - \$3,173,550.
 - \$3,165,000.

IFRS Concepts and Application

IFRS14.1 What is the required method of amortizing discount and premium on bonds payable? Explain the procedures.

IFRS14.2 What are the general rules for measuring and recognizing gain or loss by a debt extinguishment with modification?

IFRS14.3 On January 1, 2020, JWS Corporation issued \$600,000 of 7% bonds, due in 10 years. The bonds were issued for \$559,224, and pay interest each July 1 and January 1. Prepare the company's journal entries for (a) the January 1 issuance, (b) the July 1 interest payment, and (c) the December 31 adjusting entry. Assume an effective-interest rate of 8%.

IFRS14.4 Assume the bonds in IFRS14.3 were issued for \$644,636 and the effective-interest rate is 6%. Prepare the company's journal entries for (a) the January 1 issuance, (b) the July 1 interest payment, and (c) the December 31 adjusting entry. (Round to the nearest dollar.)

IFRS14.5 Foreman Company issued \$800,000 of 10%, 20-year bonds on January 1, 2020, at 119.792 to yield 8%. Interest is payable semiannually on July 1 and January 1. Prepare the journal entries to record (a) the issuance of the bonds, (b) the payment of interest and the related amortization on July 1, 2020, and (c) the accrual of interest and the related amortization on December 31, 2020. (Round to the nearest dollar.)

IFRS14.6 Assume the same information as in IFRS14.5, except that the bonds were issued at 84.95 to yield 12%. Prepare the journal entries to record (a) the issuance of the bonds, (b) the payment of interest and related amortization on July 1, 2020, and (c) the accrual of interest and the related amortization on December 31, 2020. (Round to the nearest dollar.)

Professional Research

IFRS14.7 Wie Company has been operating for just 2 years, producing specialty golf equipment for women golfers. To date, the company has been able to finance its successful operations with investments from its principal owner, Michelle Wie, and cash flows from operations. However, current expansion plans will require some borrowing to expand the company's production line.

As part of the expansion plan, Wie is contemplating a borrowing on a note payable or issuance of bonds. In the past, the company has had little need for external borrowing so the management team has a number of questions concerning the accounting for these new non-current liabilities. They have asked you to conduct some research on this topic.

Instructions

Access the IFRS authoritative literature at the IASB website. (Click on the IFRS tab and then register for free eIFRS access if necessary.) When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- a. With respect to a decision of issuing notes or bonds, management is aware of certain costs (e.g., printing, marketing, selling) associated with a bond issue. How will these costs affect Wie's reported earnings in the year of issue and while the bonds are outstanding?
- b. If all goes well with the plant expansion, the financial performance of Wie Company could dramatically improve. As a result, Wie's market rate of interest (which is currently around 12%) could decline. This raises the possibility of retiring or exchanging the debt, in order to get a lower borrowing rate. How would such a debt extinguishment be accounted for?

International Financial Reporting Problem

Marks and Spencer plc (M&S)

IFRS14.8 The financial statements of **M&S** are presented in Appendix E. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes for 2017 to answer the following questions.

- a. What cash outflow obligations related to the repayment of long-term debt does M&S have over the next 5 years?
- b. M&S indicates that it believes that it has the ability to meet business requirements in the foreseeable future. Prepare an assessment of its liquidity, solvency, and financial flexibility using ratio analysis.

Stockholders' Equity

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

1. Describe the corporate form and the issuance of shares of stock.
2. Describe the accounting and reporting for reacquisition of shares.
3. Explain the accounting and reporting issues related to dividends.
4. Indicate how to present and analyze stockholders' equity.

PREVIEW OF CHAPTER 15 As the following opening story indicates, the growth of global equity capital markets indicates that equity investors around the world need useful information. In this chapter, we explain the accounting issues related to the stockholders' equity of a corporation. The content and organization of the chapter are as follows.

This chapter also includes numerous conceptual and global discussions that are integral to the topics presented here.

STOCKHOLDERS' EQUITY

Corporate Capital

- Corporate form
- Components of equity
- Issuance of stock
- Preferred stock

Reacquisition of Shares

- Purchase
- Sale
- Retirement

Dividend Policy

- Financial condition and dividend distributions
- Types of dividends
- Stock dividends and stock splits

Presentation and Analysis

- Presentation
- Analysis

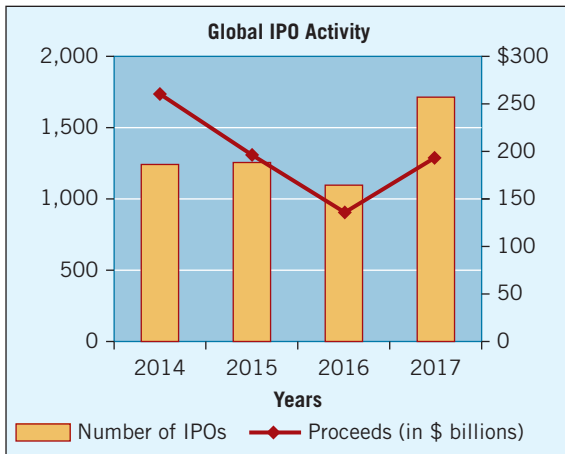

It's a Global Market

As mentioned in prior chapters, we are moving toward one set of global financial reporting standards and one “common language” for financial information. This change will probably lead to more consolidation of our capital markets. To understand how quickly the global financial world is changing, let's examine a few trends occurring on stock exchanges around the world.

In 2007, the New York Stock Exchange (NYSE) merged with Paris-based Euronext, creating the world's first transatlantic stock exchange. **NYSE Euronext** is the world's largest exchange group, now with more than 8,000 listed issuers representing over one-third

of global equity trading. Similarly, NASDAQ, the world's largest electronic stock market, merged with **OMX**, the Nordic stock market operator. This electronic exchange operates in 29 countries, on six continents, and has over 3,000 listed issuers, with a market value of approximately \$8.5 trillion. (Further exchange consolidation may be in the offing, with **IntercontinentalExchange** and international exchanges in Asia exploring mergers with NYSE Euronext.)

Another reason behind the movement to international financial reporting standards can be found in recent initial public offerings (IPOs). For example, total global IPO listings, as well as by region percentages, were as follows.

As indicated, global stock listings have been on the rise, and listings in Asia-Pacific continue to be the biggest share of IPOs.

Finally, globalization has been an enormous boon for some of the biggest names in corporate America. And that is what investors are saying as well. As shown in the adjacent chart, approximately 59 percent of the energy sector's revenue came from abroad in 2016. Information technology followed closely at 57 percent.

Large companies that had significant foreign sales are **Wal-Mart Stores, Inc.** 24.49 percent, **Microsoft Corporation** 52.44 percent, **Ford Motor Company** 38.45 percent, and **The Coca-Cola Company** 52.47 percent. Foreign exposure allows U.S.-based companies to capitalize on rapid growth in emerging markets like China, India, and Latin America, and earn much stronger profits than if they were totally dependent on the U.S. economy. As one analyst noted, “[Returns for companies] . . . in the S&P 500 continue to outgrow the U.S. economy. Earnings power is decoupled from U.S. GDP.”

Sources: R. Newman, “Why U.S. Companies Aren’t So American Anymore,” <http://money.usnews.com> (June 30, 2011); *EY Global IPO Trends: Q1 2018*, EYGM Limited (2018); and H. Silverblatt, “S&P 500 2016: Global Sales,” *S&P Dow Jones Indices* (July 2017).

Review and Practice

Go to the **Review and Practice** section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions as well as additional exercises and practice problem with solutions are also available online.

Corporate Capital

LEARNING OBJECTIVE 1

Describe the corporate form and the issuance of shares of stock.

Of the three **primary forms of business organization**—the proprietorship, the partnership, and the corporation—the corporate form dominates. The corporation is by far the leader in terms of the aggregate amount of resources controlled, goods and services produced, and people employed. All of the “Fortune 500” largest industrial firms are corporations. Although the corporate form has a number of advantages (as well as disadvantages) over the other two forms, its principal advantage is its facility for attracting and accumulating large amounts of capital.

Corporate Form

The special characteristics of the corporate form that affect accounting include:

1. Influence of state corporate law.
2. Use of the capital stock or share system.
3. Development of a variety of ownership interests.

State Corporate Law

Anyone who wishes to establish a corporation must submit **articles of incorporation** to the state in which incorporation is desired. After fulfilling requirements, the state issues a corporation charter, thereby recognizing the company as a legal entity subject to state law. Regardless of the number of states in which a corporation has operating divisions, it is incorporated in only one state.

It is to the company’s advantage to incorporate in a state whose laws favor the corporate form of business organization. For example, consider that nearly half of all public corporations in the United States are incorporated in Delaware. Why Delaware? The state has a favorable tax and regulatory environment, resulting in Delaware being home to more corporations—public and private—than people.¹

Each state has its own business incorporation act. The accounting for stockholders’ equity follows the provisions of these acts. In many cases, states have adopted the principles contained in the Model Business Corporate Act prepared by the American Bar Association. State laws are complex and vary both in their provisions and in their definitions of certain terms. Some laws fail to define technical terms. As a result, terms often mean one thing in one state and another thing in a different state. These problems may be further compounded because legal authorities often interpret the effects and restrictions of the laws differently.

What Do the Numbers Mean? 1209 North Orange Street

Nothing about 1209 North Orange Street hints at the secrets inside. It’s a humdrum office building, a low-slung affair with a faded awning and a view of a parking garage. Hardly worth a second glance, if even a first one. But behind its doors is one of the most remarkable corporate collections in the world: 1209 North Orange, you see, is the legal address of no fewer than 285,000 separate businesses.

Its occupants, on paper, include giants like **American Airlines, Apple, Bank of America, Berkshire Hathaway, Cargill, Coca-Cola, Ford, General Electric, Google, JPMorgan Chase, and Wal-Mart**. These companies do business across the nation and around the world. Here at 1209 North Orange, they simply have a dropbox.

¹L. Wayne, “How Delaware Thrives as a Corporate Tax Haven,” *The New York Times* (June 30, 2012).

What brings these marquee names to 1209 North Orange, and to other Delaware addresses, also attracts less-upstanding corporate citizens. For instance, 1209 North Orange was, until recently, a business address of Timothy S. Durham, known as “the Midwest Madoff.” Recently, Durham was found guilty of bilking 5,000 mostly middle-class and elderly investors out of \$207 million. It was also an address of Stanko Subotic, a Serbian businessman and convicted smuggler—just one of many Eastern Europeans drawn to the state.

Big corporations, small-time businesses, rogues, scoundrels, and worse—all have turned up at Delaware addresses in hopes of minimizing taxes, skirting regulations, plying friendly courts, or, when needed, covering their tracks. Federal authorities worry that, in addition to the legitimate businesses flocking here, drug-traffickers, embezzlers, and money-launderers are increasingly heading to Delaware, too. It's easy to set up shell companies here, no questions asked.

Today, Delaware regularly tops lists of domestic and foreign tax havens because it allows companies to lower their taxes in

another state—for instance, the state in which they actually do business or have their headquarters—by shifting royalties and similar revenues to holding companies in Delaware, where they are not taxed. In tax circles, the arrangement is known as “the Delaware loophole.” Over the last decade, the Delaware loophole has enabled corporations to reduce the taxes paid to other states by an estimated \$9.5 billion.

However, recently some companies are concerned that the environment in Delaware has become more hostile. Among their gripes: a growing tide of shareholder litigation, for which some feel that the state has not done enough to curb. Only time will tell if these developments have soured companies on Delaware as an incorporation target. Yet in the past two years, approximately 85 percent of the companies that went public incorporated in Delaware.

Capital Stock or Share System

Stockholders' equity in a corporation generally consists of a large number of units or shares. Within a given class of stock, each share exactly equals every other share. The number of shares possessed determines each owner's interest. If a company has one class of stock divided into 1,000 shares, a person who owns 500 shares controls one-half of the ownership interest. One holding 10 shares has a one-hundredth interest.

Each share of stock has certain rights and privileges. Only by special contract can a company restrict these rights and privileges at the time it issues the shares. Owners must examine the articles of incorporation, stock certificates, and the provisions of the state law to ascertain such restrictions on or variations from the standard rights and privileges (see **Global View**). In the absence of restrictive provisions, each share carries the following rights:

1. To share proportionately in profits and losses.
2. To share proportionately in management (the right to vote for directors).
3. To share proportionately in corporate assets upon liquidation.
4. To share proportionately in any new issues of stock of the same class—called the **preemptive right**.²

The first three rights are self-explanatory. The last right is used to protect each stockholder's proportional interest in the company. **The preemptive right protects an existing stockholder from involuntary dilution of ownership interest.** Without this right, stockholders might find their interest reduced by the issuance of additional stock without their knowledge and at prices unfavorable to them. However, many corporations have eliminated the preemptive right. Why? Because this right makes it inconvenient for corporations to issue large amounts of additional stock, as they frequently do in acquiring other companies.

The share system easily allows one individual to transfer an interest in a company to another investor. For example, individuals owning shares in **Google may sell them to others at any time and at any price without obtaining the consent of the company or other stockholders.** Each share is personal property of the owner, who may dispose of it at will. Google simply maintains a list or subsidiary ledger of stockholders as a guide to dividend payments, issuance of stock rights, voting proxies, and the like. Because owners freely and frequently transfer shares, Google must revise the subsidiary ledger of stockholders periodically, generally in advance of every dividend payment or stockholders' meeting.

Global View

In the United States, stockholders are treated equally as far as access to financial information. That is not always the case in other countries. For example, in Mexico, foreign investors as well as minority investors often have difficulty obtaining financial data. These restrictions are rooted in the habits of companies that, for many years, were tightly controlled by a few stockholders and managers.

²This privilege is referred to as a **stock right** or **warrant**. The warrants issued in these situations are of short duration, unlike the warrants issued with other securities.

In addition, the major stock exchanges require ownership controls that the typical corporation finds uneconomic to provide. Thus, corporations often use **registrars and transfer agents** who specialize in providing services for recording and transferring stock. The Uniform Stock Transfer Act and the Uniform Commercial Code govern the negotiability of stock certificates.

Variety of Ownership Interests

In every corporation, one class of stock must represent the basic ownership interest. That class is called common stock. **Common stock** is the residual corporate interest that bears the ultimate risks of loss and receives the benefits of success. Common stockholders are not guaranteed dividends or assets upon dissolution. But common stockholders generally control the management of the corporation and tend to profit most if the company is successful. In the event that a corporation has only one authorized issue of capital stock, that issue is by definition common stock, whether so designated in the charter or not.

In an effort to broaden investor appeal, corporations may offer two or more classes of stock, each with different rights or privileges. As indicated in the preceding section, each share of stock of a given issue has the same inherent rights as other shares of the same issue. By special stock contracts between the corporation and its stockholders, however, the stockholder may sacrifice certain of these rights in return for other special rights or privileges. Thus, special classes of stock, usually called **preferred stock**, are created. In return for any special preference, the preferred stockholder always sacrifices some of the inherent rights of common stock ownership.

A common type of preference is to give the preferred stockholders a priority claim on earnings. The corporation thus assures them a dividend, usually at a stated rate, before it distributes any amount to the common stockholders. In return for this preference, the preferred stockholders may sacrifice their right to a voice in management or their right to share in profits beyond the stated rate (see **Global View**).

Global View

The U.S. and British systems of corporate governance and finance depend to a large extent on equity financing and the widely dispersed ownership of shares traded in highly liquid markets. The German and Japanese systems have relied more on debt financing, interlocking stock ownership, and banker/director and worker/shareholder rights.

Components of Stockholders' Equity

Owners' equity in a corporation is defined as stockholders' equity, shareholders' equity, or corporate capital. The following four categories normally appear as part of stockholders' equity:

1. Capital stock.
2. Additional paid-in capital.
3. Retained earnings.
4. Accumulated other comprehensive income.

The first two categories, capital stock and additional paid-in capital, constitute contributed (paid-in) capital. **Contributed (paid-in) capital** is the total amount paid in on capital stock—the amount provided by stockholders to the corporation for use in the business. Contributed capital includes items such as the par value of all outstanding stock and premiums less discounts on issuance.

Earned capital is the capital that develops from profitable operations. It consists of all undistributed income that remains invested in the company. **Retained earnings** represents the earned capital of the company. **Accumulated other comprehensive income** reflects the aggregate amount of the other comprehensive income items. It includes such items as unrealized gains and losses on available-for-sale debt investments and unrealized gains and losses on certain derivative transactions.³

Stockholders' equity is the difference between the assets and the liabilities of the company. That is, the owners' or stockholders' interest in a company like **The Walt Disney Company** is a **residual interest**.⁴ **Stockholders' (owners') equity** represents the

³Chapter 17 contains an expanded discussion of accumulated other comprehensive income. Many companies report noncontrolling interests and treasury stock as part of the equity section. Chapter 5 also highlights the presentation of noncontrolling interests. The accounting and reporting for treasury stock is discussed later in this chapter.

⁴"Elements of Financial Statements," *Statement of Financial Accounting Concepts No. 6* (Stamford, Conn.: FASB, 1985), par. 60.

cumulative net contributions by stockholders plus retained earnings. As a residual interest, stockholders' equity has no existence apart from the assets and liabilities of Disney—stockholders' equity equals net assets. Stockholders' equity is not a claim to specific assets but a claim against a portion of the total assets. Its amount is not specified or fixed; it depends on Disney's profitability. Stockholders' equity grows if the company is profitable. It shrinks, or may disappear entirely, if Disney loses money.

Issuance of Stock

In issuing stock, companies follow these procedures. First, the state must authorize the stock, generally in a certificate of incorporation or charter. Next, the corporation offers shares for sale, entering into contracts to sell stock. Then, after receiving amounts for the stock, the corporation issues shares. The corporation generally makes no entry in the general ledger accounts when it receives its stock authorization from the state of incorporation.

We discuss the accounting problems involved in the issuance of stock under the following topics.

1. Accounting for par value stock.
2. Accounting for no-par stock.
3. Accounting for stock issued in combination with other securities (lump-sum sales).
4. Accounting for stock issued in noncash transactions.
5. Accounting for costs of issuing stock.

Par Value Stock

The par value of a stock has no relationship to its fair value. At present, the par value associated with most capital stock issuances is very low. For example, **PepsiCo's** par value is $1\frac{2}{3}\text{¢}$, **Kellogg's** is \$0.25, and **Hershey's** is \$1. Such values contrast dramatically with the situation in the early 1900s, when practically all stock issued had a par value of \$100. Low par values help companies avoid the contingent liability associated with stock sold below par.⁵

To show the required information for issuance of par value stock, corporations maintain accounts for each class of stock as follows.

1. **Preferred Stock or Common Stock.** Together, these two stock accounts reflect the par value of the corporation's issued shares. The company credits these accounts when it originally issues the shares. It makes no additional entries in these accounts unless it issues additional shares or retires them.
2. **Paid-in Capital in Excess of Par (also called Additional Paid-in Capital).** The **Paid-in Capital in Excess of Par** account indicates any excess over par value paid in by stockholders in return for the shares issued to them. Once paid in, the excess over par becomes a part of the corporation's additional paid-in capital. The individual stockholder has no greater claim on the excess paid in than all other holders of the same class of shares.

No-Par Stock

Many states permit the issuance of capital stock without par value, called **no-par stock**. The reasons for issuance of no-par stock are twofold. First, issuance of no-par stock **avoids the contingent liability** (see footnote 5) that might occur if the corporation issued par value stock at a discount. Second, some confusion exists over the relationship (or rather the absence of a relationship) between the par value and fair value. If shares have no-par value, **the questionable treatment of using par value as a basis for fair value never arises.**

⁵Companies rarely, if ever, issue stock at a value below par value. If issuing stock below par, the company records the discount as a debit to Additional Paid-in Capital. In addition, the corporation may call on the original purchaser or the current holder of the shares issued below par to pay in the amount of the discount to prevent creditors from sustaining a loss upon liquidation of the corporation.

This is particularly advantageous whenever issuing stock for property items such as intangible or tangible fixed assets.

A major disadvantage of no-par stock is that some states levy a high tax on these issues. In addition, in some states the total issue price for no-par stock may be considered legal capital, which could reduce the flexibility in paying dividends.

Corporations sell no-par shares, like par value shares, for whatever price they will bring. However, unlike par value shares, corporations issue them without a premium or a discount. The exact amount received represents the credit to common or preferred stock. For example, Video Electronics Corporation is organized with authorized common stock of 10,000 shares without par value. Video Electronics makes only a memorandum entry for the authorization, inasmuch as no amount is involved. If Video Electronics then issues 500 shares for cash at \$10 per share, it makes the following entry.

| | | |
|-----------------------------|-------|-------|
| Cash | 5,000 | |
| Common Stock (no-par value) | | 5,000 |

If it issues another 500 shares for \$11 per share, Video Electronics makes this entry:

| | | |
|-----------------------------|-------|-------|
| Cash | 5,500 | |
| Common Stock (no-par value) | | 5,500 |

True no-par stock should be carried in the accounts at issue price without any additional paid-in capital or discount reported. But some states require that no-par stock have a **stated value**. The stated value is a minimum value below which a company cannot issue it. Thus, instead of being no-par stock, such stated-value stock becomes, in effect, stock with a very low par value. It thus is open to all the criticism and abuses that first encouraged the development of no-par stock.⁶

If no-par stock has a stated value of \$5 per share but sells for \$11, all such amounts in excess of \$5 are recorded as additional paid-in capital, which in many states is fully or partially available for dividends. Thus, no-par value stock with a low stated value permits a new corporation to commence its operations with additional paid-in capital that may exceed its stated capital. For example, if a company issued 1,000 of the shares with a \$5 stated value at \$15 per share for cash, it makes the following entry.

| | | |
|--|--------|--------|
| Cash | 15,000 | |
| Common Stock | | 5,000 |
| Paid-in Capital in Excess of Stated Value— | | |
| Common Stock | | 10,000 |

Most corporations account for no-par stock with a stated value as if it were par value stock with par equal to the stated value.

Stock Issued with Other Securities (Lump-Sum Sales)

Generally, corporations sell classes of stock separately from one another. The reason to do so is to track the proceeds relative to each class, as well as relative to each lot. Occasionally, a corporation issues two or more classes of securities for a single payment or lump sum (e.g., in the acquisition of another company). The accounting problem in such **lump-sum sales** is how to allocate the proceeds among the several classes of securities. Companies use one of two methods of allocation: (1) the proportional method and (2) the incremental method.

Proportional Method If the fair value or other sound basis for determining relative value is available for each class of security, **the company allocates the lump sum received among the classes of securities on a proportional basis.** For instance, assume a company issues 1,000 shares of \$10 stated value common stock having a market price of \$20 a share, and 1,000 shares of \$10 par value preferred stock having a market price of \$12 a share, for a lump sum of \$30,000. **Illustration 15.1** shows how the company allocates the \$30,000 to the two classes of stock.

⁶Accounting Trends and Techniques indicated that of its 500 surveyed companies, there were just 40 no-par issues; 3 of the no-par issues were shown at their stated (assigned) values.

ILLUSTRATION 15.1**Allocation in Lump-Sum Securities Issuance—Proportional Method**

| | |
|--|--|
| Fair value of common (1,000 × \$20) = | \$20,000 |
| Fair value of preferred (1,000 × \$12) = | 12,000 |
| Aggregate fair value | <u>\$32,000</u> |
| Allocated to common: | $\frac{\$20,000}{\$32,000} \times \$30,000 = \$18,750$ |
| Allocated to preferred: | $\frac{\$12,000}{\$32,000} \times \$30,000 = \$11,250$ |
| Total allocation | <u>\$30,000</u> |

Incremental Method In instances where a company cannot determine the fair value of all classes of securities, it may use the incremental method. It uses the fair value of the securities as a basis for those classes that it knows, and allocates the remainder of the lump sum to the class for which it does not know the fair value. For instance, if a company issues 1,000 shares of \$10 stated value common stock having a fair value of \$20, and 1,000 shares of \$10 par value preferred stock having no established fair value, for a lump sum of \$30,000, it allocates the \$30,000 to the two classes as shown in **Illustration 15.2**.

ILLUSTRATION 15.2**Allocation in Lump-Sum Securities Issuance—Incremental Method**

| | |
|------------------------------------|-----------------|
| Lump-sum receipt | \$30,000 |
| Allocated to common (1,000 × \$20) | (20,000) |
| Balance allocated to preferred | <u>\$10,000</u> |

If a company cannot determine fair value for any of the classes of stock involved in a lump-sum exchange, it may need to use other approaches. It may rely on an expert's appraisal. Or, if the company knows that one or more of the classes of securities issued will have a determinable fair value in the near future, it may use a best estimate basis with the intent to adjust later, upon establishment of the future fair value.

Stock Issued in Noncash Transactions

Accounting for the issuance of shares of stock for property or services involves an issue of valuation. **The general rule is: Companies should record stock issued for services or property other than cash at either the fair value of the stock issued or the fair value of the noncash consideration received, whichever is more clearly determinable.**

If a company can readily determine both, and the transaction results from an arm's-length exchange, there will probably be little difference in their fair values. In such cases, the basis for valuing the exchange should not matter.

If a company cannot readily determine either the fair value of the stock it issues or the property or services it receives, it should employ an appropriate valuation technique. Depending on available data, the valuation may be based on market transactions involving comparable assets or the use of discounted expected future cash flows. Companies should avoid the use of the book, par, or stated values as a basis of valuation for these transactions.

A company may exchange unissued stock or treasury stock (issued shares that it has reacquired but not retired) for property or services. If it uses treasury shares, the cost of the treasury shares **should not** be considered the decisive factor in establishing the fair value of the property or services. Instead, it should use the fair value of the treasury stock, if known, to value the property or services. Otherwise, if it does not know the fair value of the treasury stock, it should use the fair value of the property or services received, if determinable.

The transactions shown in **Illustration 15.3** indicate the procedure for recording the issuance of 10,000 shares of \$10 par value common stock for a patent for Marlowe Company, in various circumstances.

ILLUSTRATION 15.3

Common Stock Issuance

Marlowe cannot readily determine the fair value of the patent, but it knows the fair value of the stock is \$140,000.

| | | |
|---|---------|---------|
| Patents | 140,000 | |
| Common Stock (10,000 shares × \$10 per share) | | 100,000 |
| Paid-in Capital in Excess of Par—Common Stock | | 40,000 |

Marlowe cannot readily determine the fair value of the stock, but it determines the fair value of the patent is \$150,000.

| | | |
|---|---------|---------|
| Patents | 150,000 | |
| Common Stock (10,000 shares × \$10 per share) | | 100,000 |
| Paid-in Capital in Excess of Par—Common Stock | | 50,000 |

Marlowe cannot readily determine the fair value of the stock nor the fair value of the patent. An independent consultant values the patent at \$125,000 based on discounted expected cash flows.

| | | |
|---|---------|---------|
| Patents | 125,000 | |
| Common Stock (10,000 shares × \$10 share) | | 100,000 |
| Paid-in Capital in Excess of Par—Common Stock | | 25,000 |

In corporate law, the board of directors has the power to set the value of noncash transactions. However, boards sometimes abuse this power. The issuance of stock for property or services has resulted in cases of overstated corporate capital through intentional overvaluation of the property or services received. The overvaluation of the stockholders' equity resulting from inflated asset values creates **watered stock**. The corporation should eliminate the “water” by simply writing down the overvalued assets.

If, as a result of the issuance of stock for property or services, a corporation undervalues the recorded assets, it creates **secret reserves**. An understated corporate structure (secret reserve) may also result from other methods: excessive depreciation or amortization charges, expensing capital expenditures, excessive write-downs of inventories or receivables, or any other understatement of assets or overstatement of liabilities. An example of a liability overstatement is an excessive provision for estimated product warranties that ultimately results in an understatement of owners' equity, thereby creating a secret reserve.

Costs of Issuing Stock

When a company like **Walgreens** issues common stock, it should report direct costs incurred to sell stock, such as underwriting costs, accounting and legal fees, printing costs, and taxes, as a reduction of the amounts paid in. Walgreens therefore debits issue costs to Paid-in Capital in Excess of Par—Common Stock because they are unrelated to corporate operations. In effect, **issue costs are a cost of financing**. As such, issue costs should reduce the proceeds received from the sale of the stock.

Walgreens should expense management salaries and other indirect costs related to the stock issue because it is difficult to establish a relationship between these costs and the sale proceeds. In addition, Walgreens expenses recurring costs, primarily registrar and transfer agents' fees, as incurred.

What Do the Numbers Mean? The Case of the Disappearing Receivable

Sometimes companies issue stock but may not receive cash in return. As a result, a company records a receivable.

Controversy existed regarding the presentation of this receivable on the balance sheet. Some argued that the company should report the receivable as an asset similar to other receivables. Others argued that the company should report the receivable as a deduction from stockholders' equity (similar to the treatment of treasury stock). The SEC settled this issue: It requires companies to use the contra equity approach because the risk of collection in this type of transaction is often very high.

This accounting issue surfaced in **Enron's** accounting. Starting in early 2000, Enron issued shares of its common stock to four “special-purpose entities” in exchange for which it received a note receivable. Enron then increased its assets (by recording a receivable) and stockholders' equity, a move the company later called an accounting error. As a result of this accounting treatment, Enron overstated assets and stockholders' equity by \$172 million in its 2000 audited financial statements and by \$828 million in its unaudited 2001 statements. This \$1 billion overstatement was 8.5 percent of Enron's reported stockholders' equity at that time.

As Lynn Turner, a former chief accountant of the SEC, noted, “It is a basic accounting principle that you don’t record equity until you get cash, and a note doesn’t count as cash.” Situations like this led investors, creditors, and suppliers to lose faith in the credibility of Enron, which eventually caused its bankruptcy.

Source: Adapted from Jonathan Weil, “Basic Accounting Tripped Up Enron—Financial Statements Didn’t Add Up—Auditors Overlook a Simple Rule,” *Wall Street Journal* (November 11, 2001), p. C1.

Preferred Stock

As noted earlier, **preferred stock** is a special class of shares that possesses certain preferences or features not possessed by the common stock.⁷ The following features are those most often associated with preferred stock issues.

1. Preference as to dividends.
2. Preference as to assets in the event of liquidation.
3. Convertible into common stock.
4. Callable at the option of the corporation.
5. Nonvoting.

The features that distinguish preferred from common stock may be of a more restrictive and negative nature than preferences. For example, the preferred stock may be nonvoting, noncumulative, and nonparticipating.

Companies usually issue preferred stock with a par value, expressing the dividend preference as a **percentage of the par value**. Thus, holders of 8 percent preferred stock with a \$100 par value are entitled to an annual dividend of \$8 per share. This stock is commonly referred to as 8 percent preferred stock. In the case of no-par preferred stock, a corporation expresses a dividend preference as a **specific dollar amount** per share, for example, \$7 per share. This stock is commonly referred to as \$7 preferred stock.

A preference as to dividends does not assure the payment of dividends. It merely assures that **the corporation must pay the stated dividend rate or amount applicable to the preferred stock before paying any dividends on the common stock**.

A company often issues preferred stock (instead of debt) because of a high debt-to-equity ratio. In other instances, it issues preferred stock through private placements with other corporations at a lower-than-market dividend rate because the acquiring corporation receives largely tax-free dividends (owing to the IRS’s 70 percent or 80 percent dividends received deduction).

Features of Preferred Stock

A corporation may attach whatever preferences or restrictions, in whatever combination it desires, to a preferred stock issue, as long as it does not specifically violate its state incorporation law. Also, it may issue more than one class of preferred stock. We discuss the most common features attributed to preferred stock next.

Cumulative Preferred Stock **Cumulative preferred stock** requires that if a corporation fails to pay a dividend in any year, it must make it up in a later year before paying any dividends to common stockholders. If the directors fail to declare a dividend at the normal date for dividend action, the dividend is said to have been “passed.” Any passed dividend on cumulative preferred stock constitutes a **dividend in arrears**. Because no liability exists until the board of directors declares a dividend, a corporation does not record a dividend in arrears as a liability but discloses it in a note to the financial statements. A corporation seldom issues noncumulative preferred stock because a passed dividend is lost forever to the preferred stockholder. As a result, this stock issue would be less marketable.

⁷*Accounting Trends and Techniques* reported that of its 500 surveyed companies, 35 had preferred stock outstanding.

Participating Preferred Stock Holders of **participating preferred stock** share ratably with the common stockholders in any profit distributions beyond the prescribed rate. That is, 5 percent preferred stock, if fully participating, will receive not only its 5 percent return, but also dividends at the same rates as those paid to common stockholders if paying amounts in excess of 5 percent of par or stated value to common stockholders. Note that participating preferred stock may be only partially participating. Although seldom used, examples of companies that have issued participating preferred stock are **LTV Corporation**, **Southern California Edison**, and **Allied Products Corporation**.

Convertible Preferred Stock **Convertible preferred stock** allows stockholders, at their option, to exchange preferred shares for common stock at a predetermined ratio. The convertible preferred stockholder not only enjoys a preferred claim on dividends but also has the option of converting into a common stockholder with unlimited participation in earnings.

Callable Preferred Stock **Callable preferred stock** permits the corporation at its option to call or redeem the outstanding preferred shares at specified future dates and at stipulated prices. Many preferred issues are callable. The corporation usually sets the call or redemption price slightly above the original issuance price and commonly states it in terms related to the par value. The callable feature permits the corporation to use the capital obtained through the issuance of such stock until the need has passed or it is no longer advantageous.

The existence of a call price or prices tends to set a ceiling on the market price of the preferred shares unless they are convertible into common stock. When a corporation redeems preferred stock, it must pay any dividends in arrears.

Redeemable Preferred Stock Recently, more and more issuances of preferred stock have features that make the security more like debt (legal obligation to pay) than an equity instrument. For example, **redeemable preferred stock** has a mandatory redemption period or a redemption feature that the issuer cannot control.

Previously, public companies were not permitted to report these debt-like preferred stock issues in equity, but they were not required to report them as a liability either. There were concerns about classification of these debt-like securities, which may have been reported as equity or in the “mezzanine” section of balance sheets between debt and equity. There also was diversity in practice as to how dividends on these securities were reported. The FASB now requires debt-like securities, such as redeemable preferred stock, to be classified as liabilities and be measured and accounted for similar to liabilities. [1] (See the FASB Codification References near the end of the chapter.)

Accounting for and Reporting Preferred Stock

The accounting for preferred stock at issuance is similar to that for common stock. A corporation allocates proceeds between the par value of the preferred stock and additional paid-in capital. To illustrate, assume that Bishop Co. issues 10,000 shares of \$10 par value preferred stock for \$12 cash per share. Bishop records the issuance as follows.

| | | |
|--|---------|---------|
| Cash | 120,000 | |
| Preferred Stock | | 100,000 |
| Paid-in Capital in Excess of Par—Preferred Stock | | 20,000 |

Thus, Bishop maintains separate accounts for these different classes of shares.

In contrast to convertible bonds (recorded as a liability on the date of issue), corporations consider convertible preferred stock as a part of stockholders’ equity. In addition, when exercising the conversion option on convertible preferred stock, there is no theoretical justification for recognition of a gain or loss. A company recognizes no gain or loss when dealing with stockholders in their capacity as business owners. Instead, the company **employs the book value method**: debit Preferred Stock, along with any related Paid-in Capital in Excess of Par—Preferred Stock, and credit Common Stock and Paid-in Capital in Excess of Par—Common Stock (if an excess exists).

Preferred stock generally has no maturity date. Therefore, no legal obligation exists to pay the preferred stockholder. As a result, companies classify preferred stock as part of

stockholders' equity. Companies generally report preferred stock at par value as the first item in the stockholders' equity section. They report any excess over par value as part of additional paid-in capital. They also consider dividends on preferred stock as a distribution of income and not an expense. Companies must disclose the pertinent rights of the preferred stock outstanding. [2]

What Do the Numbers Mean? A Class (B) Act

Some companies grant preferences to different shareholders by issuing different classes of common stock. For example, ownership of **Dow Jones & Co.** was controlled by family members who owned Class B shares, which carry super voting powers. The same is true for the Ford family's control of **Ford Motor Co.** Class B shares are often criticized for protecting owners' interest at the expense of shareholder return. These shares often can determine if a takeover deal gets done, or not. Here are some notable companies with two-tiered shares in which the Class A shares have one vote and the Class B shares have 10 votes.

For family-controlled companies, issuing newer classes of lower or nonvoting stock effectively creates currency for acquisitions, increases liquidity, or puts a public value on the company without diluting the family's voting control. This was one of the

main reasons **Facebook** gave when it created a dual-class share structure. In that IPO, Facebook founder Mark Zuckerberg owns only 16 percent of the company's shares but still holds nearly 60 percent of Facebook's voting rights.

Google has gone even further and created a Class C stock that gives its owners zero votes. That sounds bad. In practice, however, the nonvoting shares won't be so different from holders of Google's Class A shares, which get one vote apiece. Both groups are dominated by holders of the only shares that matter: Class B shares with 10 votes each. Most of those are owned by Google's founders, Larry Page and Sergey Brin.

Yet Page and Brin aren't satisfied with the 55.7 percent majority of votes that they control. As Google issues less-potent Class A shares—to compensate employees or to finance acquisitions—the company's founders have seen their voting power diluted. But now that the company is issuing the neutered Class C shares, Page and Brin are free to create as many shares as they like without giving up an iota of their grip on Google's direction.

Reacquisition of Shares

LEARNING OBJECTIVE 2

Describe the accounting and reporting for reacquisition of shares.

Companies often buy back their own shares. In fact, share buybacks now exceed dividends as a form of distribution to stockholders. For example, oil producer **ConocoPhillips**, healthcare-products giant **Johnson & Johnson**, and discount retailer **Wal-Mart Stores, Inc.** have ambitious buyback plans. As shown in **Illustration 15.4**, companies in the S&P 500 stock index are estimated to buy back \$650 billion of their own shares in 2018.

Corporations purchase their outstanding stock for several reasons:

1. **To provide tax-efficient distributions of excess cash to shareholders.** Capital gain rates on sales of stock to the company by the stockholders have been approximately half

ILLUSTRATION 15.4

Share Buybacks 1998—2018

the ordinary tax rate for many investors. This advantage has been somewhat diminished by recent changes in the tax law related to dividends.

2. **To increase earnings per share and return on equity.** Reducing both shares outstanding and stockholders' equity often enhances certain performance ratios. However, strategies to hype performance measures might increase performance in the short-run, but these tactics add no real long-term value.
3. **To provide stock for employee stock compensation contracts or to meet potential merger needs.** **Honeywell Inc.** reported that it would use part of its purchase of one million common shares for employee stock compensation contracts. Other companies acquire shares to have them available for business acquisitions.
4. **To thwart takeover attempts or to reduce the number of stockholders.** By reducing the number of shares held by the public, existing owners and managements bar "outsiders" from gaining control or significant influence. When Ted Turner attempted to acquire **CBS**, CBS started a substantial buyback of its stock. Companies may also use stock purchases to eliminate dissident stockholders.
5. **To make a market in the stock.** As one company executive noted, "Our company is trying to establish a floor for the stock." Purchasing stock in the marketplace creates a demand. This may stabilize the stock price or, in fact, increase it.

Some publicly held corporations have chosen to "go private," that is, to eliminate public (outside) ownership entirely by purchasing all of their outstanding stock. Companies often accomplish such a procedure through a **leveraged buyout (LBO)**, in which the company borrows money to finance the stock repurchases.

After reacquiring shares, a company may either retire them or hold them in the treasury for reissue. If not retired, such shares are referred to as **treasury stock (treasury shares)**. Technically, treasury stock is a corporation's own stock, reacquired after having been issued and fully paid.

Treasury stock is not an asset. When a company purchases treasury stock, a reduction occurs in both assets and stockholders' equity. It is inappropriate to imply that a corporation can own a part of itself. A corporation may sell treasury stock to obtain funds, but that does not make treasury stock a balance sheet asset. When a corporation buys back some of its own outstanding stock, it has not acquired an asset; it reduces net assets (see **Underlying Concepts**).

The possession of treasury stock does not give the corporation the right to vote, to exercise preemptive rights as a stockholder, to receive cash dividends, or to receive assets upon corporate

Underlying Concepts

As we indicated in Chapter 2, an asset should have probable future economic benefits. Treasury stock simply reduces common stock outstanding.

liquidation. **Treasury stock is essentially the same as unissued capital stock.** No one advocates classifying unissued capital stock as an asset in the balance sheet.⁸

Purchase of Treasury Stock

Companies use two general methods of handling treasury stock in the accounts: the cost method and the par value method. Both methods are generally acceptable. The cost method enjoys more widespread use.⁹

- The **cost method** results in debiting the Treasury Stock account for the reacquisition cost and in reporting this account as a deduction from the total paid-in capital **and** retained earnings on the balance sheet.
- The **par (stated) value method** records all transactions in treasury shares at their par value and reports the treasury stock as a deduction from capital stock only.

No matter which method a company uses, most states consider the cost of the treasury shares acquired as a restriction on retained earnings.

Companies generally use the cost method to account for treasury stock. This method derives its name from the fact that a company maintains the Treasury Stock account at the cost of the shares purchased.¹⁰ Under the cost method, the company debits the Treasury Stock account for the cost of the shares acquired. Upon reissuance of the shares, it credits the account for this same cost. The original price received for the stock does not affect the entries to record the acquisition and reissuance of the treasury stock.

To illustrate, assume that Pacific Company issued 100,000 shares of \$1 par value common stock at a price of \$10 per share. In addition, it has retained earnings of \$300,000. **Illustration 15.5** shows the stockholders' equity section on December 31, 2019, before purchase of treasury stock.

ILLUSTRATION 15.5

Stockholders' Equity with No Treasury Stock

| | |
|--|---------------------------|
| Stockholders' equity | |
| Paid-in capital | |
| Common stock, \$1 par value, 100,000 shares issued and outstanding | \$ 100,000 |
| Additional paid-in capital | 900,000 |
| Total paid-in capital | 1,000,000 |
| Retained earnings | 300,000 |
| Total stockholders' equity | <u>\$1,300,000</u> |

On January 20, 2020, Pacific acquires 10,000 shares of its stock at \$11 per share. Pacific records the reacquisition as follows.

| January 20, 2020 | |
|------------------|---------|
| Treasury Stock | 110,000 |
| Cash | 110,000 |

Note that Pacific debited Treasury Stock for the cost of the shares purchased. The original paid-in capital account, Common Stock, is not affected because the number of issued shares does not change. The same is true for the Paid-in Capital in Excess of Par—Common Stock account. Pacific deducts treasury stock from total paid-in capital and retained earnings in the stockholders' equity section.

Illustration 15.6 shows the stockholders' equity section for Pacific after purchase of the treasury stock.

⁸The possible justification for classifying these shares as assets is that the company will use them to liquidate a specific liability that appears on the balance sheet. *Accounting Trends and Techniques* reported that out of 500 companies surveyed, 341 disclosed treasury stock, but none classified it as an asset.

⁹*Accounting Trends and Techniques* indicated that of its selected list of 500 companies, of the 341 companies with treasury stock, all carried common stock in treasury at cost. Only one company carried preferred stock in treasury.

¹⁰If making numerous acquisitions of blocks of treasury shares at different prices, a company may use inventory costing methods—such as specific identification, average-cost, or FIFO—to identify the cost at date of reissuance.

ILLUSTRATION 15.6
**Stockholders' Equity with
Treasury Stock**

| | |
|--|--------------------|
| Stockholders' equity | |
| Paid-in capital | |
| Common stock, \$1 par value, 100,000 shares issued and 90,000 outstanding | \$ 100,000 |
| Additional paid-in capital | 900,000 |
| Total paid-in capital | <u>1,000,000</u> |
| Retained earnings | 300,000 |
| Total paid-in capital and retained earnings | <u>1,300,000</u> |
| Less: Cost of treasury stock (10,000 shares) | <u>110,000</u> |
| Total stockholders' equity | <u>\$1,190,000</u> |

Pacific subtracts the cost of the treasury stock from the total of common stock, additional paid-in capital, and retained earnings. It therefore reduces stockholders' equity. Many states require a corporation to restrict retained earnings for the cost of treasury stock purchased. The restriction keeps intact the corporation's legal capital that it temporarily holds as treasury stock. When the corporation sells the treasury stock, it lifts the restriction.

Pacific discloses both the number of shares issued (100,000) and the number in the treasury (10,000). The difference is the number of shares of stock outstanding (90,000). The term **outstanding stock** means the number of shares of issued stock that stockholders own.

Sale of Treasury Stock

Companies usually reissue or retire treasury stock. When selling treasury shares, the accounting for the sale depends on the price. If the selling price of the treasury stock equals its cost, the company records the sale of the shares by debiting Cash and crediting Treasury Stock. In cases where the selling price of the treasury stock is not equal to cost, then accounting for treasury stock sold **above cost** differs from the accounting for treasury stock sold **below cost**. However, the sale of treasury stock either above or below cost increases both total assets and stockholders' equity.

Sale of Treasury Stock Above Cost

When the selling price of shares of treasury stock exceeds its cost, a company credits the difference to Paid-in Capital from Treasury Stock. To illustrate, assume that Pacific acquired 10,000 shares of its treasury stock at \$11 per share. It now sells 1,000 shares at \$15 per share on March 10. Pacific records the entry as follows.

| March 10, 2020 | | |
|-------------------------------------|--------|--------|
| Cash | 15,000 | |
| Treasury Stock | | 11,000 |
| Paid-in Capital from Treasury Stock | | 4,000 |

There are two reasons why Pacific does not credit \$4,000 to Gain on Sale of Treasury Stock. (1) Gains on sales occur when selling **assets**; treasury stock is not an asset. (2) A gain or loss should not be recognized from stock transactions with its own stockholders. Thus, Pacific should not include paid-in capital arising from the sale of treasury stock in the measurement of net income. Instead, it lists paid-in capital from treasury stock separately on the balance sheet, as a part of paid-in capital.

Sale of Treasury Stock Below Cost

When a corporation sells treasury stock below its cost, it usually debits the excess of the cost over selling price to Paid-in Capital from Treasury Stock. Thus, if Pacific sells an additional 1,000 shares of treasury stock on March 21 at \$8 per share, it records the sale as follows.

| March 21, 2020 | | |
|-------------------------------------|-------|--------|
| Cash | 8,000 | |
| Paid-in Capital from Treasury Stock | 3,000 | |
| Treasury Stock | | 11,000 |

We can make several observations based on the two sale entries (sale above cost and sale below cost). (1) Pacific credits Treasury Stock at cost in each entry. (2) Pacific uses Paid-in Capital from Treasury Stock for the difference between the cost and the resale price of the shares. (3) Neither entry affects the original paid-in capital account, Common Stock.

After eliminating the credit balance in Paid-in Capital from Treasury Stock, the corporation debits any additional excess of cost over selling price to Retained Earnings. To illustrate, assume that Pacific sells an additional 1,000 shares at \$8 per share on April 10. **Illustration 15.7** shows the balance in the Paid-in Capital from Treasury Stock account (before the April 10 sale).

ILLUSTRATION 15.7**Treasury Stock Transactions in Paid-in Capital Account**

| Paid-in Capital from Treasury Stock | | | |
|-------------------------------------|-------|---------|-------|
| Mar. 21 | 3,000 | Mar. 10 | 4,000 |
| | | Balance | 1,000 |

In this case, Pacific debits \$1,000 of the excess to Paid-in Capital from Treasury Stock. It debits the remainder to Retained Earnings. The entry is:

| April 10, 2020 | | | |
|-------------------------------------|--|-------|--------|
| Cash | | 8,000 | |
| Paid-in Capital from Treasury Stock | | 1,000 | |
| Retained Earnings | | 2,000 | |
| Treasury Stock | | | 11,000 |

Retiring Treasury Stock

The board of directors may approve the retirement of treasury shares. This decision results in cancellation of the treasury stock and a reduction in the number of shares of issued stock. Retired treasury shares have the status of authorized and unissued shares. The accounting effects are similar to the sale of treasury stock except that corporations debit the **paid-in capital accounts applicable to the retired shares** instead of cash. For example, if a corporation originally sells the shares at par, it debits Common Stock for the par value per share. If it originally sells the shares at \$3 above par value, it also debits Paid-in Capital in Excess of Par—Common Stock for \$3 per share at retirement.

What Do the Numbers Mean? Buybacks—Good or Bad?

As indicated in Illustration 15.4, companies have ramped up repurchases of their own stock. Providing a look into the individual companies engaged in share buybacks shown in Illustration 15.4, here is what the top companies in the S&P 500 spent repurchasing shares in fiscal 2017.

| Company | Fiscal 2017 Buybacks (\$ billion) |
|--------------------|-----------------------------------|
| Apple | \$33.0 |
| Amazon | 0.0 |
| Alphabet | 4.8 |
| Microsoft | 10.3 |
| Facebook | 2.1 |
| Berkshire Hathaway | 0.0 |
| JP Morgan Chase | 15.4 |
| Exxon/Mobil | 0.5 |
| Johnson & Johnson | 6.4 |
| Bank of America | 12.8 |

Is this good or bad news for investors? Maybe neither. While it might appear that companies are getting better at timing their

purchases (when prices are falling), they also buy shares for reasons that go beyond giving a boost to shareholders—everything from mergers and acquisitions to eliminating the impact of equity compensation.

The conventional wisdom is that companies that buy back shares believe their shares are undervalued. Thus, analysts view the buyback announcement as an important piece of inside information about future company prospects. On the other hand, buybacks can actually hurt businesses and their shareholders over the long run. For example, drug-makers **Merck**, **Pfizer**, and **Amgen** spent heavily on stock repurchases, possibly at the expense of research and development. And whether the buyback is a good thing appears to depend a lot on why the company did the buyback and what the repurchased shares were used for.

Sources: Adapted from W. Lazonick, "The Buyback Boondoggle," *BusinessWeek* (August 24, 2009); B. Levisohn, "Beware All Those Buybacks," *Wall Street Journal* (September 29–30, 2012), p. B9; and A. Bary, "Why the Buyback Boom Is Bullish for Investors," *Barron's* (May 12, 2018).

Dividend Policy

LEARNING OBJECTIVE 3

Explain the accounting and reporting issues related to dividends.

Dividend payouts can be important signals to the market. The practice of paying dividends declined sharply in the 1980s and 1990s as companies focused on growth and plowed profits back into the business. A resurgence in dividend payouts is due in large part to the dividend tax cut of 2003, which reduced the rate of tax on dividends to 15 percent (quite a bit lower than the ordinary income rate charged in the past). In addition, investors who were burned by accounting scandals in recent years began demanding higher payouts in the form of dividends. Why? A dividend check provides proof that at least some portion of a company's profits is genuine.¹¹ As one analyst noted, "Companies with the ability to grow dividends over time tend to be durable businesses with strong cash flow and relatively predictable earnings. . . . So you're more likely to get a return on your investment year in and year out."

Determining the proper amount of dividends to pay is a difficult financial management decision. Companies paying dividends are extremely reluctant to reduce or eliminate their dividend. They fear that the securities market might negatively view this action. As a consequence, dividend-paying companies will make every effort to continue to do so. In addition, the type of shareholder the company has (taxable or nontaxable, retail investor or institutional investor) plays a large role in determining dividend policy.

Very few companies pay dividends in amounts equal to their legally available retained earnings. The major reasons are as follows.

1. To maintain agreements (bond covenants) with specific creditors, to retain all or a portion of the earnings, in the form of assets, to build up additional protection against possible loss.
2. To meet state corporation requirements, that earnings equivalent to the cost of treasury shares purchased be restricted against dividend declarations.
3. To retain assets that would otherwise be paid out as dividends, to finance growth or expansion. This is sometimes called internal financing, reinvesting earnings, or "plowing" the profits back into the business.
4. To smooth out dividend payments from year to year by accumulating earnings in good years and using such accumulated earnings as a basis for dividends in bad years.
5. To build up a cushion or buffer against possible losses or errors in the calculation of profits.

The reasons above are self-explanatory except for the second. The laws of some states require that the corporation restrict its legal capital from distribution to stockholders, to protect against loss for creditors.¹² The applicable state law determines the legality of a dividend.

Financial Condition and Dividend Distributions

Effective management of a company requires attention to more than the legality of dividend distributions. Management must also consider economic conditions, most importantly, liquidity. Assume an extreme situation as shown in **Illustration 15.8**.

¹¹The share of U.S. and European companies expected to increase dividends in 2018 is forecast to reach its highest level in at least a decade—a boost for investors facing resurgent stock volatility, rising interest rates, and geopolitical risk. Among big listed companies in the United States and Europe, about 71 percent and 83 percent, respectively, are expected to increase dividends in 2018, the highest share in at least a decade, according to research by **JPMorgan**. See J. Sindreu, "Firms Poised to Jack Up Dividends," *Wall Street Journal* (April 19, 2018).

¹²If the corporation buys its own outstanding stock, it reduces its legal capital and distributes assets to stockholders. If permitted, the corporation could, by purchasing treasury stock at any price desired, return to the stockholders their investments and leave creditors with little or no protection against loss.

ILLUSTRATION 15.8**Balance Sheet, Showing a Lack of Liquidity**

| Balance Sheet | | | |
|---------------|------------------|-------------------|------------------|
| Plant assets | \$500,000 | Capital stock | \$400,000 |
| | <u>\$500,000</u> | Retained earnings | <u>100,000</u> |
| | | | <u>\$500,000</u> |

The depicted company has a retained earnings credit balance. Unless restricted, it can declare a dividend of \$100,000. But because all its assets are plant assets used in operations, payment of a cash dividend of \$100,000 would require the sale of plant assets or borrowing.

Even if a balance sheet shows current assets, as in **Illustration 15.9**, the question remains as to whether the company needs its cash for other purposes.

ILLUSTRATION 15.9**Balance Sheet, Showing Cash but Minimal Working Capital**

| Balance Sheet | | | |
|---------------|------------------|---------------------|------------------|
| Cash | \$100,000 | Current liabilities | \$ 60,000 |
| Plant assets | 460,000 | Capital stock | \$400,000 |
| | <u>\$560,000</u> | Retained earnings | <u>100,000</u> |
| | | | <u>\$560,000</u> |

The existence of current liabilities strongly implies that the company needs some of the cash to meet current debts as they mature. In addition, day-to-day cash requirements for payrolls and other expenditures not included in current liabilities also require cash.

Thus, before declaring a dividend, management must consider **availability of funds to pay the dividend**. A company should not pay a dividend unless both the present and future financial position warrant the distribution.

The SEC encourages companies to disclose their dividend policy in their annual report, especially those that (1) have earnings but fail to pay dividends, or (2) do not expect to pay dividends in the foreseeable future. In addition, the SEC encourages companies that consistently pay dividends to indicate whether they intend to continue this practice in the future.

Types of Dividends

Companies generally base dividend distributions either on accumulated profits (that is, retained earnings) or on some other capital item such as additional paid-in capital. Dividends are of the following types.

1. Cash dividends.
2. Property dividends (dividends in kind).
3. Liquidating dividends.

Although commonly paid in cash, companies occasionally pay dividends in stock or some other asset.¹³ **All dividends, except for stock dividends, reduce the total stockholders' equity in the corporation.** When declaring a stock dividend, the corporation does not pay out assets or incur a liability. It issues additional shares of stock to each stockholder and nothing more.

The natural expectation of any stockholder who receives a dividend is that the corporation has operated successfully. As a result, he or she is receiving a share of its profits. A company should disclose a **liquidating dividend**—that is, a dividend not based on retained earnings—to the stockholders so that they will not misunderstand its source.

¹³*Accounting Trends and Techniques* reported that of its 500 surveyed companies, 343 paid a cash dividend on common stock, 33 paid a cash dividend on preferred stock, 2 issued stock dividends, and 1 issued or paid dividends in kind. Some companies declare more than one type of dividend in a given year.

Cash Dividends

The board of directors votes on the declaration of **cash dividends**. Upon approval of the resolution, the board declares a dividend. Before paying it, however, the company must prepare a current list of stockholders. For this reason, there is usually a time lag between declaration and payment. For example, the board of directors might approve a resolution at the January 10 (**date of declaration**) meeting and declare it payable February 5 (**date of payment**) to all stockholders of record January 25 (**date of record**).¹⁴ In this example, the period from January 10 to January 25 gives time for the company to complete and register any transfers in process. The time from January 25 to February 5 provides an opportunity for the transfer agent or accounting department, depending on who does this work, to prepare a list of stockholders as of January 25 and to prepare and mail dividend checks.

A declared cash dividend is a liability. Because payment is generally required very soon, it is usually a current liability. To illustrate, Roadway Freight Corp. on June 10 declared a cash dividend of 50 cents a share on 1.8 million shares payable July 16 to all stockholders of record June 24. The entries for declaration and payment of a cash dividend are presented in **Illustration 15.10**.

| At date of declaration (June 10) | | |
|---|---------|---------|
| Retained Earnings (Cash Dividends Declared) | 900,000 | |
| Dividends Payable | | 900,000 |
| At date of record (June 24) | | |
| No entry | | |
| At date of payment (July 16) | | |
| Dividends Payable | 900,000 | |
| Cash | | 900,000 |

ILLUSTRATION 15.10

Cash Dividend Entries

To set up a ledger account that shows the amount of dividends declared during the year, Roadway Freight might debit Cash Dividends Declared instead of Retained Earnings at the time of declaration. It then closes this account to Retained Earnings at year-end.

A company may declare dividends either as a certain percentage of par, such as a 6 percent dividend on preferred stock, or as an amount per share, such as 60 cents per share on no-par common stock. In the first case, the rate multiplied by the par value of outstanding shares equals the total dividend. In the second, the dividend equals the amount per share multiplied by the number of shares outstanding. **Companies do not declare or pay cash dividends on treasury stock.**

Dividend policies vary among corporations. Some companies, such as **JP Morgan Chase**, **Clorox Co.**, and **Tootsie Roll Industries**, take pride in a long, unbroken string of quarterly dividend payments. They would lower or pass the dividend only if forced to do so by a sustained decline in earnings or a critical shortage of cash.

“Growth” companies, on the other hand, pay little or no cash dividends because their policy is to expand as rapidly as internal and external financing permit. For example, **Questcor Pharmaceuticals Inc.** has never paid cash dividends to its common stockholders. These investors hope that the price of their shares will appreciate in value. The investors will then realize a profit when they sell their shares. Many companies focus more on increasing share price, stock repurchase programs, and corporate earnings than on dividend payout.

Property Dividends

Dividends payable in assets of the corporation other than cash are called **property dividends** or **dividends in kind**. Property dividends may be merchandise, real estate, or investments,

¹⁴Theoretically, the ex-dividend date is the day after the date of record. However, to allow time for transfer of the shares, the stock exchanges generally advance the ex-dividend date two to four days. Therefore, the party who owns the stock on the day prior to the expressed ex-dividend date receives the dividends. The party who buys the stock on and after the ex-dividend date does not receive the dividend. Between the declaration date and the ex-dividend date, the market price of the stock includes the dividend.

or whatever form the board of directors designates. **Ranchers Exploration and Development Corp.** reported one year that it would pay a fourth-quarter dividend in gold bars instead of cash. Because of the obvious difficulties of divisibility of units and delivery to stockholders, the usual property dividend is in the form of securities of other companies that the distributing corporation holds as an investment.

For example, after ruling that **DuPont's** 23 percent stock interest in **General Motors** (GM) violated antitrust laws, the Supreme Court ordered DuPont to divest itself of the GM stock within 10 years. The stock represented 63 million shares of GM's 281 million shares then outstanding. DuPont could not sell the shares in one block of 63 million. Further, it could not sell 6 million shares annually for the next 10 years without severely depressing the value of the GM stock. DuPont solved its problem by declaring a property dividend and distributing the GM shares as a dividend to its own stockholders.

When declaring a property dividend, the corporation should **restate at fair value the property it will distribute, recognizing any gain or loss** as the difference between the property's fair value and carrying value at date of declaration. The corporation may then record the declared dividend as a debit to Retained Earnings (or Property Dividends Declared) and a credit to Property Dividends Payable, at an amount equal to the fair value of the distributed property. Upon distribution of the dividend, the corporation debits Property Dividends Payable and credits the account containing the distributed asset (restated at fair value).

For example, Trendler, Inc. transferred to stockholders some of its equity investments costing \$1,250,000 by declaring a property dividend on December 28, 2019, to be distributed on January 30, 2020, to stockholders of record on January 15, 2020. At the date of declaration, the securities have a fair value of \$2,000,000. Trendler makes the entries shown in **Illustration 15.11**.

ILLUSTRATION 15.11**Property Dividend Entries**

| At date of declaration (December 28, 2019) | | |
|---|-----------|-----------|
| Equity Investments | 750,000 | |
| Unrealized Holding Gain or Loss—Income (\$2,000,000 – \$1,250,000) | | 750,000 |
| Retained Earnings (Property Dividends Declared) | 2,000,000 | |
| Property Dividends Payable | | 2,000,000 |
| At date of distribution (January 30, 2020) | | |
| Property Dividends Payable | 2,000,000 | |
| Equity Investments | | 2,000,000 |

Liquidating Dividends

Some corporations use paid-in capital as a basis for dividends. Without proper disclosure of this fact, stockholders may erroneously believe the corporation has been operating at a profit. To avoid this type of deception, intentional or unintentional, a clear statement of the source of every dividend should accompany the dividend check.

Dividends based on other than retained earnings are sometimes described as **liquidating dividends**. This term implies that such dividends are a return of the stockholder's investment rather than of profits. In other words, **any dividend not based on earnings reduces corporate paid-in capital and to that extent, it is a liquidating dividend**. Companies in the extractive industries may pay dividends equal to the total of accumulated income and depletion. The portion of these dividends in excess of accumulated income represents a return of part of the stockholder's investment.

For example, McChesney Mines Inc. issued a "dividend" to its common stockholders of \$1,200,000. The cash dividend announcement noted that stockholders should consider \$900,000 as income and the remainder a return of capital. McChesney Mines records the dividend as shown in **Illustration 15.12**.

In some cases, management simply decides to cease business and declares a liquidating dividend. In these cases, liquidation may take place over a number of years to ensure an

ILLUSTRATION 15.12

Liquidating Dividend Entries

| At date of declaration | | |
|---|-----------|-----------|
| Retained Earnings | 900,000 | |
| Paid-in Capital in Excess of Par—Common Stock | 300,000 | |
| Dividends Payable | | 1,200,000 |
| At date of payment | | |
| Dividends Payable | 1,200,000 | |
| Cash | | 1,200,000 |

orderly and fair sale of assets. For example, when **Overseas National Airways** dissolved, it agreed to pay a liquidating dividend to its stockholders over a period of years equivalent to \$8.60 per share. Each liquidating dividend payment in such cases reduces paid-in capital.

Stock Dividends and Stock Splits

Stock Dividends

If management wishes to “capitalize” part of the earnings (i.e., reclassify amounts from earned to contributed capital) and thus retain earnings in the business on a permanent basis, it may issue a stock dividend. In this case, **the company distributes no assets**. Each stockholder maintains exactly the same proportionate interest in the corporation and the same total book value after the company issues the stock dividend. Of course, the book value per share is lower because each stockholder holds more shares.

A **stock dividend** therefore is the issuance by a corporation of its own stock to its stockholders on a pro rata basis, without receiving any consideration. In recording a stock dividend, some believe that the company should transfer the **par value of the stock issued** as a dividend from retained earnings to capital stock. Others believe that it should transfer the **fair value of the stock issued**—its market value at the declaration date—from retained earnings to capital stock and additional paid-in capital.

The fair value position was adopted, at least in part, in order to influence the stock dividend policies of corporations. Evidently in 1941, both the New York Stock Exchange and many in the accounting profession regarded periodic stock dividends as objectionable. They believed that the term dividend when used with a distribution of additional stock was misleading because investors’ net assets did not increase as a result of this “dividend.” As a result, these groups decided to make it more difficult for corporations to sustain a series of such stock dividends out of their accumulated earnings, by requiring the use of fair value when it substantially exceeded book value (see **Underlying Concepts**).¹⁵

When the stock dividend is less than 20–25 percent of the common shares outstanding at the time of the dividend declaration, the company is therefore required to transfer the **fair value** of the stock issued from retained earnings. Stock dividends of less than 20–25 percent are often referred to as **small (ordinary) stock dividends**. This method of handling stock dividends is justified on the grounds that “many recipients of stock dividends look upon them as distributions of corporate earnings and usually in an amount equivalent to the fair value of the additional shares received.” [3] We consider this argument unconvincing. It is generally agreed that stock dividends are not income to the recipients. Therefore, sound accounting should not recommend procedures simply because some recipients think they are income.¹⁶

To illustrate a small stock dividend, assume that Vine Corporation has outstanding 1,000 shares of \$100 par value common stock and retained earnings of \$50,000. If Vine declares a

Underlying Concepts

By requiring fair value, the intent was to punish companies that used stock dividends. This approach violates the neutrality concept (that is, that standards-setting should be even-handed).

¹⁵This was perhaps the earliest instance of “economic consequences” affecting an accounting pronouncement. The Committee on Accounting Procedure described its action as required by “proper accounting and corporate policy.” See Stephen A. Zeff, “The Rise of ‘Economic Consequences,’” *The Journal of Accountancy* (December 1978), pp. 53–66.

¹⁶One study concluded that *small* stock dividends do not always produce significant amounts of extra value on the date after issuance (ex date) and that *large* stock dividends almost always fail to generate extra value on the ex-dividend date. Taylor W. Foster III and Don Vickrey, “The Information Content of Stock Dividend Announcements,” *The Accounting Review*, Vol. LIII, No. 2 (April 1978), pp. 360–370.

10 percent stock dividend, it issues 100 additional shares to current stockholders. If the fair value of the stock at the time of the stock dividend is \$130 per share, the entry is:

| At date of declaration | | |
|---|--------|--------|
| Retained Earnings (100 × \$130) | 13,000 | |
| Common Stock Dividend Distributable (100 × \$100) | | 10,000 |
| Paid-in Capital in Excess of Par—Common Stock | | 3,000 |

Note that the stock dividend does not affect any asset or liability. **The entry merely reflects a reclassification of stockholders' equity.** If Vine prepares a balance sheet between the dates of declaration and distribution, it should show the common stock dividend distributable in the stockholders' equity section as an addition to common stock (whereas it shows cash or property dividends payable as current liabilities).

When issuing the stock, the entry is:

| At date of distribution | | |
|-------------------------------------|--------|--------|
| Common Stock Dividend Distributable | 10,000 | |
| Common Stock | | 10,000 |

No matter what the fair value is at the time of the stock dividend, each stockholder retains the same proportionate interest in the corporation.

Some state statutes specifically prohibit the issuance of stock dividends on treasury stock. In those states that permit treasury shares to participate in the distribution accompanying a stock dividend or stock split, the planned use of the treasury shares influences corporate practice. For example, if a corporation issues treasury shares in connection with employee stock options, the treasury shares may participate in the distribution because the corporation usually adjusts the number of shares under option for any stock dividends or splits. But no useful purpose is served by issuing additional shares to the treasury stock without a specific purpose, since they are essentially equivalent to authorized but unissued shares.

To continue with our example of the effect of the small stock dividend, note in **Illustration 15.13** that the stock dividend does not change the total stockholders' equity. Also, it does not change the proportion of the total shares outstanding held by each stockholder.

ILLUSTRATION 15.13

Effects of a Small (10%) Stock Dividend

| | |

| C. 100 shares, 10% interest, book value | 15,000 |
| | <u>\$150,000</u> |
| <u>After declaration but before distribution of 10% stock dividend</u> | |
| If fair value (\$130) is used as basis for entry: | |
| Common stock, 1,000 shares at \$100 par | \$100,000 |
| Common stock distributable, 100 shares at \$100 par | 10,000 |
| Paid-in capital in excess of par—common stock | 3,000 |
| Retained earnings (\$50,000 – \$13,000) | 37,000 |
| Total stockholders' equity | <u>\$150,000</u> |
| <u>After declaration and distribution of 10% stock dividend</u> | |
| If fair value (\$130) is used as basis for entry: | |
| Common stock, 1,100 shares at \$100 par | \$110,000 |
| Paid-in capital in excess of par—common stock | 3,000 |
| Retained earnings (\$50,000 – \$13,000) | 37,000 |
| Total stockholders' equity | <u>\$150,000</u> |
| Stockholders' interest: | |
| A. 440 shares, 40% interest, book value | \$ 60,000 |
| B. 550 shares, 50% interest, book value | 75,000 |
| C. 110 shares, 10% interest, book value | 15,000 |
| | <u>\$150,000</u> |

Stock Splits

If a company has undistributed earnings over several years and accumulates a sizable balance in retained earnings, the market value of its outstanding shares likely increases. Stock issued at prices less than \$50 a share can easily attain a market price in excess of \$200 a share. The higher the market price of a stock, however, the less readily some investors can purchase it.

The managements of many corporations believe that better public relations depend on wider ownership of the corporation's stock. They therefore target a market price sufficiently low to be within range of the majority of potential investors. To reduce the market price of shares, they use the common device of a **stock split**. For example, after its stock price increased by 25-fold, **Qualcomm Inc.** split its stock 4-for-1. Qualcomm's stock had risen above \$500 per share. The split led analysts to reduce their target to \$250, which it could better meet with wider distribution of shares at lower trading prices.¹⁷

From an accounting standpoint, Qualcomm **records no entry for a stock split**. However, it enters a memorandum note to indicate the changed par value of the shares and the increased number of shares. **Illustration 15.14** shows the lack of change in stockholders' equity for a 2-for-1 stock split on 1,000 shares of \$100 par value stock with the par being halved upon issuance of the additional shares.

| Stockholders' Equity Before 2-for-1 Split | | Stockholders' Equity After 2-for-1 Split | |
|---|------------------|--|------------------|
| Common stock, 1,000 shares at \$100 par | \$100,000 | Common stock, 2,000 shares at \$50 par | \$100,000 |
| Retained earnings | 50,000 | Retained earnings | 50,000 |
| | <u>\$150,000</u> | | <u>\$150,000</u> |

ILLUSTRATION 15.14

Effects of a Stock Split

What Do the Numbers Mean? Splitsville

Guessing which companies might be next to split their shares is a hobby of investors. When companies' per share prices get high, some look to lower their per share prices to make them more attractive to individual investors. It's a bit of an old-fashioned development, but one that investors are still conditioned to monitor. There's no question that stocks with the highest per share prices would be the logical place to consider for possible splits.

On the other hand, certain large companies are taking a different approach. The godfather of the no-split camp is **Berkshire Hathaway's** chairman Warren Buffett. Berkshire's Class A shares were recently selling in excess of \$250,000 per share. Buffett said he didn't want to split the shares for people who found such a move a good reason for buying the stock. His point—people who buy for non-value reasons are likely to sell for non-value reasons. The table in the next column lists some companies that in 2018 have split their stock.

Some companies are considering reverse stock splits in which, say, five shares are consolidated into one. Thus, a stock previously trading at \$5 per share would be part of an unsplit share trading at \$25. Unsplitting might thus avoid some of the negative consequences of a low trading price. The downside to this strategy is that analysts might view reverse splits as additional bad news

| Company | Ratio |
|------------------------------------|-------|
| TrovaGene (TROV) | 1-12 |
| Gevo (GEVO) | 1-20 |
| Reshape Lifesciences (RSL) | 1-15 |
| Horizon Bancorp (IN) (HBNC) | 3-2 |
| Trex (TREX) | 2-1 |
| Arch Capital Group (ACGL) | 3-1 |

about the direction of the stock price. For example, **Webvan**, a failed Internet grocer, did a 1-for-25 reverse split just before it entered bankruptcy. And struggling **Tenet Healthcare** executed a 1-for-4 reverse split in combination with a debt restructuring, in order to get its stock price into a more favorable trading range.

Sources: M. Murphy, "Tenet CFO Says Reverse Split Could Help Land New Business," *Wall Street Journal* (October 2, 2012); M. Krantz, "Starbucks Splits Stock. Who's Next?" *USA TODAY* (March 18, 2015); and Erik Holm and Ben Eisen, "Amazon's Brush with \$1,000 Signals the Death of the Stock Split," *Wall Street Journal* (May 26, 2017). Split data found at <https://www.marketbeat.com/stock-splits/>.

¹⁷Another classic case is **Coca-Cola**. Coca-Cola had split its stock 11 times. If it had not done all of these splits, one of Coke's original shares would be worth \$10.3 million. See S. Jakob, "Coca-Cola's Currency Is Its Resilience," *Wall Street Journal* (July 16, 2012).

Stock Split and Stock Dividend Differentiated

From a legal standpoint, a stock split differs from a stock dividend. How? A stock split increases the number of shares outstanding and decreases the par or stated value per share. **A stock dividend, although it increases the number of shares outstanding, does not decrease the par value; thus, it increases the total par value of outstanding shares.**

As discussed, the reasons for issuing a stock dividend are numerous and varied. Stock dividends can be primarily a publicity gesture **because many consider stock dividends as dividends**. Another reason is that the corporation may simply wish to retain profits in the business by capitalizing a part of retained earnings. In such a situation, it makes a transfer on declaration of a stock dividend from earned capital to contributed capital.

A corporation may also use a stock dividend, like a stock split, to increase the marketability of the stock, although marketability is often a secondary consideration. If the stock dividend is large, it has the same effect on market price as a stock split. **Whenever corporations issue additional shares for the purpose of reducing the unit market price, then the distribution more closely resembles a stock split than a stock dividend. This effect usually results only if the number of shares issued is more than 20–25 percent of the number of shares previously outstanding.** [4] A stock dividend of more than 20–25 percent of the number of shares previously outstanding is called a **large stock dividend**.¹⁸ Such a distribution should not be called a stock dividend but instead “a split-up effected in the form of a dividend” or “stock split-up.”

Also, since a split-up effected in the form of a dividend does not alter the par value per share, companies generally are required to transfer the par value amount from retained earnings. In other words, companies transfer from retained earnings to capital stock **the par value of the stock issued**, as opposed to a transfer of the market price of the shares issued as in the case of a small stock dividend.¹⁹ For example, **Brown Group, Inc.** at one time authorized a 2-for-1 split, effected in the form of a stock dividend. As a result of this authorization, it distributed approximately 10.5 million shares, and transferred more than \$39 million representing the par value of the shares issued from Retained Earnings to the Common Stock account.

To illustrate a large stock dividend (stock split-up effected in the form of a dividend), Rockland Steel, Inc. declared a 30 percent stock dividend on November 20, distributable December 29 to stockholders of record December 12. At the date of declaration, 1,000,000 shares, par value \$10, are outstanding and with a fair value of \$200 per share. The entries are shown in **Illustration 15.15**.

Illustration 15.16 summarizes and compares the effects in the balance sheet and related items of various types of dividends and stock splits.

¹⁸The SEC has added more precision to the 20–25 percent rule. Specifically, the SEC indicates that companies should consider distributions of 25 percent or more as a “split-up effected in the form of a dividend.” Companies should account for distributions of less than 25 percent as a stock dividend. The SEC more precisely defined GAAP here. As a result, public companies follow the SEC rule.

¹⁹Often, a company records a split-up effected in the form of a dividend as a debit to Paid-in Capital instead of Retained Earnings to indicate that this transaction should affect only paid-in capital accounts. No reduction of retained earnings is required except as indicated by legal requirements. *For homework purposes, assume that the debit is to Retained Earnings.* See, for example, Taylor W. Foster III and Edmund Scribner, “Accounting for Stock Dividends and Stock Splits: Corrections to Textbook Coverage,” *Issues in Accounting Education* (February 1998).

Presentation and Analysis of Stockholders' Equity

LEARNING OBJECTIVE 4

Indicate how to present and analyze stockholders' equity.

Presentation

Balance Sheet

Illustration 15.17 shows a comprehensive stockholders' equity section from the balance sheet of Frost Company that includes most of the equity items we discussed in this chapter.

| Frost Company Stockholders' Equity December 31, 2020 | | |
|--|----------------|---------------------|
| <u>Capital stock</u> | | |
| Preferred stock, \$100 par value, 7% cumulative, 100,000 shares authorized, 30,000 shares issued and outstanding | | \$ 3,000,000 |
| Common stock, no-par, stated value \$10 per share, 500,000 shares authorized, 400,000 shares issued | | 4,000,000 |
| Common stock dividend distributable, 20,000 shares | | 200,000 |
| Total capital stock | | <u>7,200,000</u> |
| <u>Additional paid-in capital²⁰</u> | | |
| Excess over par—preferred | \$150,000 | |
| Excess over stated value—common | <u>840,000</u> | 990,000 |
| Total paid-in capital | | 8,190,000 |
| <u>Retained earnings</u> | | |
| Total paid-in capital and retained earnings | | 12,550,000 |
| Less: Cost of treasury stock (2,000 shares, common) | | 190,000 |
| Accumulated other comprehensive loss ²¹ | | <u>360,000</u> |
| Total stockholders' equity | | <u>\$12,000,000</u> |

ILLUSTRATION 15.17**Comprehensive Stockholders' Equity Presentation**

²⁰*Accounting Trends and Techniques* reported that of its 500 surveyed companies, 465 had additional paid-in capital.

²¹Companies may include a number of items in "Accumulated other comprehensive income (loss)." *Accounting Trends and Techniques* reported that of its 500 surveyed companies, 407 reported cumulative translation adjustments, 386 reported defined benefit postretirement plan adjustments (discussed in Chapter 20), 286 reported changes in the fair value of derivatives (discussed in Appendix 17A), and 218 reported unrealized losses/gains on certain investments (discussed in Chapter 17). A number of companies had more than one item.

Frost should disclose the pertinent rights and privileges of the various securities outstanding. For example, companies must disclose all of the following: dividend and liquidation preferences, participation rights, call prices and dates, conversion or exercise prices and pertinent dates, sinking fund requirements, unusual voting rights, and significant terms of contracts to issue additional shares. Liquidation preferences should be disclosed in the equity section of the balance sheet, rather than in the notes to the financial statements, to emphasize the possible effect of this restriction on future cash flows. [5]

Disclosure of Restrictions on Retained Earnings

Many corporations restrict retained earnings or dividends, without any formal journal entries. Such restrictions are **best disclosed by note**. Parenthetical notations are sometimes used, but restrictions imposed by bond indentures and loan agreements commonly require an extended explanation. Notes provide a medium for more complete explanations and free the financial statements from abbreviated notations. The note disclosure should reveal the source of the restriction, pertinent provisions, and the amount of retained earnings subject to restriction, or the amount not restricted.

Restrictions may be based on the retention of a certain retained earnings balance, the ability to maintain certain working capital requirements, additional borrowing, and other considerations. The example from the annual report of **Alberto-Culver Company** in **Illustration 15.18** shows a note disclosing potential restrictions on retained earnings and dividends.

ILLUSTRATION 15.18

Disclosure of Restrictions on Retained Earnings and Dividends

Alberto-Culver Company

Note 3 (in part): The \$200 million revolving credit facility, the term note, and the receivables agreement impose restrictions on such items as total debt, working capital, dividend payments, treasury stock purchases, and interest expense. At year-end, the company was in compliance with these arrangements, and \$220 million of consolidated retained earnings was not restricted as to the payment of dividends.

Statement of Stockholders' Equity

The **statement of stockholders' equity** is frequently presented in the following basic format.

1. Balance at the beginning of the period.
2. Additions.
3. Deductions.
4. Balance at the end of the period.

Companies must disclose changes in the separate accounts comprising stockholders' equity, to make the financial statements sufficiently informative. Such changes may be disclosed in separate statements or in the basic financial statements or notes thereto.²²

A **columnar format** for the presentation of changes in stockholders' equity items in published annual reports is gaining in popularity. An example is **ConAgra Foods'** statement of common stockholders' equity, shown in **Illustration 15.19**.

²²*Accounting Trends and Techniques* reported that of the 500 companies surveyed, 486 presented statements of stockholders' equity, 4 presented separate statements of retained earnings only, 1 presented combined statements of income and retained earnings, and 9 presented changes in equity items in the notes only.

ILLUSTRATION 15.19 Columnar Format for Statement of Common Stockholders' Equity

| | | For the Fiscal Year Ended May 2017 | | | | | | | Total Equity |

Analysis

Analysts use stockholders' equity ratios to evaluate a company's profitability and long-term solvency. We discuss and illustrate the following three ratios below.

1. Return on common stockholders' equity.
2. Payout ratio.
3. Book value per share.

Return on Common Stockholders' Equity

The **return on common stockholders' equity**, often referred to as **return on equity (ROE)**, measures profitability from the common stockholders' viewpoint. This ratio shows how many dollars of net income the company earned for each dollar invested by the owners. Return on equity also helps investors judge the worthiness of a stock when the overall market is not doing well. For example, **Best Buy** shares at one time dropped nearly 40 percent. But a review of its return on equity during this period and since shows a steady return of 20 to 22 percent while the overall market ROE declined from 16 percent to 8 percent. More importantly, Best Buy and other stocks, such as **3M** and **Procter & Gamble**, recovered their lost market value, while other stocks with less robust ROEs stayed in the doldrums.

Return on equity equals net income less preferred dividends, divided by average common stockholders' equity. For example, assume that Gerber's Inc. had net income of \$360,000, declared and paid preferred dividends of \$54,000, and average common stockholders' equity of \$2,550,000. **Illustration 15.20** shows how to compute Gerber's ratio.

| | | |
|--|---|---|
| Return on Common Stockholders' Equity | = | $\frac{\text{Net Income} - \text{Preferred Dividends}}{\text{Average Common Stockholders' Equity}}$ |
| | | $= \frac{\$360,000 - \$54,000}{\$2,550,000}$ |
| | | = 12% |

ILLUSTRATION 15.20

Computation of Return on
Common Stockholders' Equity

As shown in Illustration 15.20, when preferred stock is present, income available to common stockholders equals net income less preferred dividends. Similarly, the amount of common stock equity used in this ratio equals **total stockholders' equity less the par value of preferred stock**.

A company can improve its return on common stockholders' equity through the prudent use of debt or preferred stock financing. **Trading on the equity** describes the practice of using borrowed money or issuing preferred stock in hopes of obtaining a higher rate of return on the money used. Shareholders win if return on the assets is higher than the cost of financing these assets. When this happens, the return on common stockholders' equity will exceed the return on total assets. In short, the company is "trading on the equity at a gain." In this situation, the money obtained from bondholders or preferred stockholders earns enough to pay the interest or preferred dividends and leaves a profit for the common stockholders. On the other hand, if the cost of the financing is higher than the rate earned on the assets, the company is trading on equity at a loss and stockholders lose.

Payout Ratio

Another ratio of interest to investors, the **payout ratio**, is the ratio of cash dividends to net income. If preferred stock is outstanding, this ratio equals cash dividends paid to common stockholders, divided by net income available to common stockholders. For example, assume that Troy Co. has cash dividends of \$100,000 and net income of \$500,000, and no preferred stock outstanding. **Illustration 15.21** shows the payout ratio computation.

ILLUSTRATION 15.21

Computation of Payout Ratio

| | | |
|---------------------|---|---|
| Payout Ratio | = | $\frac{\text{Cash Dividends}}{\text{Net Income}}$ |
| | | = $\frac{\$100,000}{\$500,000}$ |
| | | = 20% |

ExxonMobil at one time had a payout ratio of 35.5 percent, **Apple** 28.1 percent, and **General Electric** 59.2 percent, at a time when the average payout ratio for the S&P 500 was 32.2 percent.²³

Book Value per Share

A much-used basis for evaluating net worth is found in the book value or equity value per share of stock. **Book value per share** of stock is the amount each share would receive if the company were liquidated **on the basis of amounts reported on the balance sheet**. However, the figure loses much of its relevance if the valuations on the balance sheet fail to approximate fair value of the assets. Book value per share equals common stockholders' equity divided by outstanding common shares. Assume that Chen Corporation's common stockholders' equity is \$1,000,000 and it has 100,000 shares of common stock outstanding. **Illustration 15.22** shows its book value per share computation.

ILLUSTRATION 15.22

Computation of Book Value per Share

| | | |
|-----------------------------|---|--|
| Book Value per Share | = | $\frac{\text{Common Stockholders' Equity}}{\text{Outstanding Shares}}$ |
| | | = $\frac{\$1,000,000}{100,000}$ |
| | | = \$10 per share |

²³In computing ratios like return on common stockholders' equity or the payout ratio, do not subtract the non-controlling interest from common stockholders' equity or net income.

Dividend Preferences

LEARNING OBJECTIVE *5

Explain the different types of preferred stock dividends and their effect on book value per share.

Illustrations 15A.1 to 15A.4 indicate the **effects** of various **dividend preferences** on dividend distributions to common and preferred stockholders. Assume that in 2020, Mason Company is to distribute \$50,000 as cash dividends, its outstanding common stock has a par value of \$400,000, and its 6 percent preferred stock has a par value of \$100,000. Mason would distribute dividends to each class, employing the assumptions given, as follows.

1. If the preferred stock is noncumulative and nonparticipating:

| | Preferred | Common | Total |
|-------------------------|----------------|-----------------|-----------------|
| 6% of \$100,000 | \$6,000 | | \$ 6,000 |
| The remainder to common | | \$44,000 | 44,000 |
| Totals | <u>\$6,000</u> | <u>\$44,000</u> | <u>\$50,000</u> |

ILLUSTRATION 15A.1

Dividend Distribution, Noncumulative and Nonparticipating Preferred

2. If the preferred stock is cumulative and nonparticipating, and Mason Company did not pay dividends on the preferred stock in the preceding two years:

| | Preferred | Common | Total |
|---|-----------------|-----------------|-----------------|
| Dividends in arrears, 6% of \$100,000 for 2 years | \$12,000 | | \$12,000 |
| Current year's dividend, 6% of \$100,000 | 6,000 | | 6,000 |
| The remainder to common | | \$32,000 | 32,000 |
| Totals | <u>\$18,000</u> | <u>\$32,000</u> | <u>\$50,000</u> |

ILLUSTRATION 15A.2

Dividend Distribution, Cumulative and Nonparticipating Preferred, with Dividends in Arrears

3. If the preferred stock is noncumulative and is fully participating:²⁴

²⁴When preferred stock is participating, there may be different agreements as to how the participation feature is to be executed. However, in the absence of any specific agreement the following procedure is recommended:

- a. After the preferred stock is assigned its current year's dividend, the common stock will receive a "like" percentage of par value outstanding. In example (3) shown in Illustration 15A.3, this amounts to 6 percent of \$400,000.
- b. In example (3), shown in Illustration 15A.3, the remainder of the declared dividend is \$20,000. We divide this amount by total par value (\$500,000) to find the rate of participation to be applied to each class of stock. In this case, the rate of participation is 4 percent ($\$20,000 \div \$500,000$), which we then multiply by the par value of each class of stock to determine the amount of participation.

ILLUSTRATION 15A.3**Dividend Distribution, Noncumulative and Fully Participating Preferred**

| | Preferred | Common | Total |
|------------------------------|-----------------|-----------------|------------------------|
| Current year's dividend, 6% | \$ 6,000 | \$24,000 | \$30,000 |
| Participating dividend of 4% | 4,000 | 16,000 | 20,000 |
| Totals | <u>\$10,000</u> | <u>\$40,000</u> | <u>\$50,000</u> |

The participating dividend was determined as follows.

| | | | |
|---|----------|------------------|--|
| Current year's dividend: | | | |
| Preferred, 6% of \$100,000 = | \$ 6,000 | | |
| Common, 6% of \$400,000 = | 24,000 | \$ 30,000 | |
| Amount available for participation (\$50,000 – \$30,000) | | \$ 20,000 | |
| Par value of stock that is to participate (\$100,000 + \$400,000) | | \$500,000 | |
| Rate of participation (\$20,000 ÷ \$500,000) | | 4% | |
| Participating dividend: | | | |
| Preferred, 4% of \$100,000 | \$ 4,000 | | |
| Common, 4% of \$400,000 | | 16,000 | |
| | | <u>\$ 20,000</u> | |

4. If the preferred stock is cumulative and is fully participating, and Mason Company did not pay dividends on the preferred stock in the preceding two years:

ILLUSTRATION 15A.4**Dividend Distribution, Cumulative and Fully Participating Preferred, with Dividends in Arrears**

| | Preferred | Common | Total |
|--|-----------------|-----------------|------------------------|
| Dividends in arrears, 6% of \$100,000 for 2 years | \$12,000 | | \$12,000 |
| Current year's dividend, 6% | 6,000 | \$24,000 | 30,000 |
| Participating dividend, 1.6% (\$8,000 ÷ \$500,000) | 1,600 | 6,400 | 8,000 |
| Totals | <u>\$19,600</u> | <u>\$30,400</u> | <u>\$50,000</u> |

Book Value per Share

Book value per share in its simplest form is computed as net assets divided by outstanding common shares at the end of the year. The computation of book value per share becomes more complicated if a company has preferred stock in its capital structure. For example, if preferred dividends are in arrears, if the preferred stock is participating, or if preferred stock has a redemption or liquidating value higher than its carrying amount, the company must allocate retained earnings between the preferred and common stockholders in computing book value.

To illustrate, assume that the situation shown in **Illustration 15A.5** exists.

ILLUSTRATION 15A.5**Computation of Book Value per Share—No Dividends in Arrears**

| Stockholders' equity | Preferred | Common |
|--|------------------|------------------|
| Preferred stock, 5% | \$300,000 | |
| Common stock | | \$400,000 |
| Excess of issue price over par of common stock | | 37,500 |
| Retained earnings | | 162,582 |
| Totals | <u>\$300,000</u> | <u>\$600,082</u> |
| Common shares outstanding | | 4,000 |
| Book value per share | | \$150.02 |

The situation in Illustration 15A.5 assumes that no preferred dividends are in arrears and that the preferred is not participating. Now assume that the same facts exist except that the 5 percent preferred is cumulative, participating up to 8 percent, and that dividends for three years before the current year are in arrears. **Illustration 15A.6** shows how to compute

the book value of the common stock, assuming that no action has yet been taken concerning dividends for the current year.

| Stockholders' equity | Preferred | Common |
|--|------------------|------------------|
| Preferred stock, 5% | \$300,000 | |
| Common stock | | \$400,000 |
| Excess of issue price over par of common stock | | 37,500 |
| Retained earnings: | | |
| Dividends in arrears (3 years at 5% a year) | 45,000 | |
| Current year requirement at 5% | 15,000 | 20,000 |
| Participating—additional 3% | 9,000 | 12,000 |
| Remainder to common | | 61,582 |
| Totals | <u>\$369,000</u> | <u>\$531,082</u> |
| Shares outstanding | | 4,000 |
| Book value per share | | \$132.77 |

ILLUSTRATION 15A.6**Computation of Book Value per Share—with Dividends in Arrears**

In connection with the book value computation, the analyst must know how to handle the following items: the number of authorized and unissued shares; the number of treasury shares on hand; any commitments with respect to the issuance of unissued shares or the re-issuance of treasury shares; and the relative rights and privileges of the various types of stock authorized. As an example, if the liquidating value of the preferred stock is higher than its carrying amount, the liquidating amount should be used in the book value computation.

Review and Practice

Key Terms Review

| | | |
|---|---------------------------------------|---|
| accumulated other comprehensive income 15-5 | leveraged buyout (LBO) 15-13 | residual interest 15-5 |

| large stock dividend 15-24 | redeemable preferred stock 15-11 | watered stock 15-9 |

Learning Objectives Review

1 Describe the corporate form and the issuance of shares of stock.

Among the **specific characteristics of the corporate form** that affect accounting are the (1) influence of state corporate law, (2) use of the capital stock or share system, and (3) development of a variety

of ownership interests. In the absence of restrictive provisions, each share of stock carries the right to share proportionately in (1) profits and losses, (2) management (the right to vote for directors), (3) corporate assets upon liquidation, and (4) any new issues of stock of the same class (called the preemptive right).

Stockholders' or owners' equity is classified into two categories: contributed capital and earned capital. Contributed

capital (paid-in capital) describes the total amount paid in on capital stock. Put another way, it is the amount that stockholders invested in the corporation for use in the business. Contributed capital includes items such as the par value of all outstanding capital stock and premiums less any discounts on issuance. Earned capital is the capital that develops if the business operates profitably; it consists of all undistributed income that remains invested in the company (retained earnings and accumulated other comprehensive income).

Accounts are kept for the following **different types of stock**.

Par value stock: (a) preferred stock or common stock, (b) paid-in capital in excess of par or additional paid-in capital, and (c) discount on stock. *No-par stock:* common stock or common stock and additional paid-in capital, if stated value used.

Stock issued in combination with other securities (lump-sum sales): The two methods of allocation available are (a) the proportional method and (b) the incremental method. **Stock issued in noncash transactions:** When issuing stock for services or property other than cash, the company should record the property or services at either the fair value of the stock issued, or the fair value of the noncash consideration received, whichever is more clearly determinable.

Preferred stock is a special class of shares that possesses certain preferences or features not possessed by the common stock. The features that are most often associated with preferred stock issues are (1) preference as to dividends, (2) preference as to assets in the event of liquidation, (3) convertible into common stock, (4) callable at the option of the corporation, and (5) nonvoting. At issuance, the accounting for preferred stock is similar to that for common stock. When convertible preferred stock is converted, a company uses the book value method. It debits Preferred Stock, along with any related Paid-in Capital in Excess of Par—Preferred Stock and credits Common Stock and Paid-in Capital in Excess of Par—Common Stock (if an excess exists).

2 Describe the accounting and reporting for reacquisition of shares.

The cost method is generally used in accounting for treasury stock. This method derives its name from the fact that a company maintains the Treasury Stock account at the cost of the shares purchased. Under the cost method, a company debits the Treasury Stock account for the cost of the shares acquired and credits it for this same cost upon reissuance. The price received for the stock when originally issued does not affect the entries to record the acquisition and reissuance of the treasury stock.

3 Explain the accounting and reporting issues related to dividends.

The state incorporation laws normally provide information concerning the legal restrictions related to the payment of dividends. Corporations rarely pay dividends in an amount equal to the legal limit. This is due, in part, to the fact that companies use assets represented by undistributed earnings to finance future operations of the business. If a company is considering declaring a dividend, it must ask two preliminary questions. (1) Is the condition of the corporation such that the dividend is **legally permissible**? (2) Is the condition of the corporation such that a dividend is **economically sound**?

Dividends are of the following types: (1) cash dividends, (2) property dividends, (3) liquidating dividends (dividends based on other than retained earnings), and (4) stock dividends (the issuance by a corporation of its own stock to its stockholders on a pro rata basis, but without receiving consideration).

Generally accepted accounting principles require that the accounting for **small stock dividends** (less than 20–25 percent) rely on the fair value of the stock issued. When declaring a common stock dividend, a company debits Retained Earnings at the fair value of the stock it distributes. The entry includes a credit to Common Stock Dividend Distributable at par value times the number of shares, with any excess credited to Paid-in Capital in Excess of Par—Common Stock. If the number of shares issued exceeds 20–25 percent of the shares outstanding (**large stock dividend**), it debits Retained Earnings at par value and credits Common Stock Distributable—there is no additional paid-in capital.

A **stock dividend** is a capitalization of retained earnings that reduces retained earnings and increases certain contributed capital accounts. The par value per share and total stockholders' equity remain unchanged with a stock dividend, and all stockholders retain their same proportionate share of ownership. A **stock split** results in an increase or decrease in the number of shares outstanding, with a corresponding decrease or increase in the par or stated value per share. No accounting entry is required for a stock split.

4 Indicate how to present and analyze stockholders' equity.

The stockholders' equity section of a balance sheet includes capital stock, additional paid-in capital, and retained earnings. A company might also present additional items such as treasury stock and accumulated other comprehensive income. Companies often provide a statement of stockholders' equity. Common ratios that use stockholders' equity amounts are **return on common stockholders' equity**, **payout ratio**, and **book value per share**.

*5 Explain the different types of preferred stock dividends and their effect on book value per share.

The dividend preferences of preferred stock affect the dividends paid to stockholders. Preferred stock can be (1) cumulative or noncumulative, and (2) fully participating, partially participating, or nonparticipating. If preferred dividends are in arrears, if the preferred stock is participating, or if preferred stock has a redemption or liquidation value higher than its carrying amount, allocate retained earnings between preferred and common stockholders in computing book value per share.

Practice Problem

D'Ouille Company was formed on July 1, 2017. It was authorized to issue 500,000 shares of \$10 par value common stock and 100,000 shares of 4%, \$25 par value, cumulative and nonparticipating preferred stock. D'Ouille Company has a July 1–June 30 fiscal year. The following information relates to the stockholders' equity accounts of D'Ouille Company.

Common Stock: Prior to the 2019–2020 fiscal year, D'Ouille Company had 110,000 shares of outstanding common stock issued as follows.

- 95,000 shares were issued for cash on July 1, 2017, at \$31 per share.
- On July 24, 2017, 5,000 shares were exchanged for a plot of land which cost the seller \$70,000 in 2011 and had an estimated fair value of \$220,000 on July 24, 2017.
- 10,000 shares were issued on March 1, 2019, for \$42 per share.

During the 2019–2020 fiscal year, the following transactions regarding common stock took place.

| | |
|-------------------|---|
| November 30, 2019 | D'Ouille purchased 2,000 shares of its own stock on the open market at \$39 per share. D'Ouille uses the cost method for treasury stock. |
| December 15, 2019 | D'Ouille declared a 5% stock dividend for stockholders of record on January 15, 2020, to be issued on January 31, 2020. D'Ouille was having a liquidity problem and could not afford a cash dividend at the time. D'Ouille's common stock was selling at \$52 per share on December 15, 2019. |
| June 20, 2020 | D'Ouille sold 500 shares of its own common stock that it had purchased on November 30, 2019, for \$21,000. |

Preferred Stock: D'Ouille issued 100,000 shares of preferred stock at \$44 per share on July 1, 2018.

Cash Dividends: D'Ouille has followed a schedule of declaring cash dividends in December and June, with payment being made to stockholders of record in the following month. The cash dividends which have been declared since inception of the company through June 30, 2020, are shown below.

| Declaration Date | Common Stock | Preferred Stock |
|------------------|------------------|------------------|
| 12/15/18 | \$0.30 per share | \$0.50 per share |
| 6/15/19 | \$0.30 per share | \$0.50 per share |
| 12/15/19 | — | \$0.50 per share |

No cash dividends were declared during June 2020 due to the company's liquidity problems.

Retained Earnings: As of June 30, 2019, D'Ouille retained earnings account had a balance of \$550,000. For the fiscal year ending June 30, 2020, D'Ouille reported net income of \$120,000.

Instructions

Prepare the stockholders' equity section of the balance sheet, including appropriate notes, for D'Ouille Company as of June 30, 2020, as it should appear in its annual report to the shareholders.

Solution

**D'Ouille Company
Stockholders' Equity
June 30, 2020**

| | |
|--|--------------------|
| Capital stock | |
| 4% preferred stock, \$25 par value, cumulative and nonparticipating, 100,000 shares authorized, 100,000 shares issued and outstanding—Note A | \$2,500,000 |
| Common stock, \$10 par value, 500,000 shares authorized, 115,400 shares issued, with 1,500 shares held in the treasury | 1,154,000 |
| | <i>(continued)</i> |

| | | |
|---|-------------|--------------------|
| Additional paid-in capital | | |
| On preferred stock | \$1,900,000 | |
| On common stock | 2,711,800* | |
| On treasury stock | 1,500 | 4,613,300 |
| Total paid-in capital | | 8,267,300 |
| Retained earnings | | 339,200** |
| Total paid-in capital and retained earnings | | 8,606,500 |
| Less: Treasury stock, 1,500 shares at cost | | 58,500 |
| Total stockholders' equity | | <u>\$8,548,000</u> |

Note A: D'Ouille Company is in arrears on the preferred stock in the amount of \$100,000.

*Premium on Common Stock:

| | |
|---|---------------------|
| Issue of 95,000 shares × (\$31 – \$10) | \$1,995,000 |
| Issue of 5,000 shares for plot of land (\$220,000 – \$50,000) | 170,000 |
| 10,000 shares issued (3/1/19) [10,000 × (\$42 – \$10)] | 320,000 |
| 5,400 shares as dividend [5,400 × (\$52 – \$10)] | 226,800 |
| | <u>\$ 2,711,800</u> |

**Retained Earnings:

| | | | | | | | | |
|--------------------------|---|---------------|---|-----------------------|---|---------------------------|---|--------------------------------------|
| <u>Beginning balance</u> | + | <u>Income</u> | – | <u>Stock dividend</u> | – | <u>Preferred dividend</u> | = | <u>Ret. earnings, ending balance</u> |
| \$550,000 | | + \$120,000 | | – \$280,800*** | | – \$50,000 | = | \$339,200 |

***[(108,000 × .05) × \$52]

WileyPLUS

Exercises, Problems, Problem Solution Walkthrough Videos, and many more assessment tools and resources are available for practice in WileyPLUS.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

Questions

- In the absence of restrictive provisions, what are the basic rights of stockholders of a corporation?
- Why is a preemptive right important?
- Distinguish between common and preferred stock.
- Why is the distinction between paid-in capital and retained earnings important?
- Explain each of the following terms: authorized capital stock, unissued capital stock, issued capital stock, outstanding capital stock, and treasury stock.
- What is meant by par value, and what is its significance to stockholders?
- Describe the accounting for the issuance for cash of no-par value common stock at a price in excess of the stated value of the common stock.
- Explain the difference between the proportional method and the incremental method of allocating the proceeds of lump-sum sales of capital stock.
- What are the different bases for stock valuation when assets other than cash are received for issued shares of stock?
- Explain how underwriting costs and accounting and legal fees associated with the issuance of stock should be recorded.
- What features or rights may alter the character of preferred stock?
- Dagwood Inc. recently noted that its 4% preferred stock and 4% participating preferred stock, which are both cumulative, have priority as to dividends up to 4% of their par value. Its participating preferred stock participates equally with the common stock in any dividends in excess of 4%. What is meant by the term participating? Cumulative?
- Where in the financial statements is preferred stock normally reported?
- For what reasons might a corporation purchase its own stock?
- Discuss the propriety of showing:
 - Treasury stock as an asset.
 - “Gain” or “loss” on sale of treasury stock as additions to or deductions from income.
 - Dividends received on treasury stock as income.
- List possible sources of additional paid-in capital.
- Satchel Inc. purchases 10,000 shares of its own previously issued \$10 par common stock for \$290,000. Assuming the shares are held in the treasury with intent to reissue, what effect does this transaction have on (a) net income, (b) total assets, (c) total paid-in capital, and (d) total stockholders' equity?

18. Indicate how each of the following accounts should be classified in the stockholders' equity section.
- Common Stock.
 - Retained Earnings.
 - Paid-in Capital in Excess of Par—Common Stock.
 - Treasury Stock.
 - Paid-in Capital from Treasury Stock.
 - Paid-in Capital in Excess of Stated Value—Common Stock.
 - Preferred Stock.
19. What factors influence the dividend policy of a company?
20. What are the principal considerations of a board of directors in making decisions involving dividend declarations? Discuss briefly.
21. Dividends are sometimes said to have been paid “out of retained earnings.” What is the error, if any, in that statement?
22. Distinguish among: cash dividends, property dividends, liquidating dividends, and stock dividends.
23. Describe the accounting entry for a stock dividend, if any. Describe the accounting entry for a stock split, if any.
24. Stock splits and stock dividends may be used by a corporation to change the number of shares of its stock outstanding.
- What is meant by a stock split effected in the form of a dividend?
 - From an accounting viewpoint, explain how the stock split effected in the form of a dividend differs from an ordinary stock dividend.
 - How should a stock dividend that has been declared but not yet issued be classified in a balance sheet? Why?
25. The following comment appeared in the notes of Colorado Corporation's annual report: “Such distributions, representing proceeds from the sale of Sarazan, Inc., were paid in the form of partial liquidating dividends and were in lieu of a portion of the Company's ordinary cash dividends.” How would a partial liquidating dividend be accounted for in the financial records?
26. This comment appeared in the annual report of MacCloud Inc.: “The Company could pay cash or property dividends on the Class A common stock without paying cash or property dividends on the Class B common stock. But if the Company pays any cash or property dividends on the Class B common stock, it would be required to pay at least the same dividend on the Class A common stock.” How is a property dividend accounted for in the financial records?
27. For what reasons might a company restrict a portion of its retained earnings?
28. How are restrictions of retained earnings reported?
- *29. McNabb Corp. had \$100,000 of 7%, \$20 par value preferred stock and 12,000 shares of \$25 par value common stock outstanding throughout 2020.
- Assuming that total dividends declared in 2020 were \$64,000, and that the preferred stock is not cumulative but is fully participating, common stockholders should receive 2020 dividends of what amount?
 - Assuming that total dividends declared in 2020 were \$64,000, and that the preferred stock is fully participating and cumulative with preferred dividends in arrears for 2019, preferred stockholders should receive 2020 dividends totaling what amount?
 - Assuming that total dividends declared in 2020 were \$30,000, that the preferred stock is cumulative, nonparticipating, and was issued on January 1, 2019, and that \$5,000 of preferred dividends were declared and paid in 2019, the common stockholders should receive 2020 dividends totaling what amount?

Brief Exercises

BE15.1 (LO 1) Buttercup Corporation issued 300 shares of \$10 par value common stock for \$4,500. Prepare Buttercup's journal entry.

BE15.2 (LO 1) Swarten Corporation issued 600 shares of no-par common stock for \$8,200. Prepare Swarten's journal entry if (a) the stock has no stated value, and (b) the stock has a stated value of \$2 per share.

BE15.3 (LO 1, 2) Wilco Corporation has the following account balances at December 31, 2020.

| | |
|---|------------|
| Common stock, \$5 par value | \$ 510,000 |
| Treasury stock | 90,000 |
| Retained earnings | 2,340,000 |
| Paid-in capital in excess of par—common stock | 1,320,000 |

Prepare Wilco's December 31, 2020, stockholders' equity section.

BE15.4 (LO 1) Ravonette Corporation issued 300 shares of \$10 par value common stock and 100 shares of \$50 par value preferred stock for a lump sum of \$13,500. The common stock has a market price of \$20 per share, and the preferred stock has a market price of \$90 per share. Prepare the journal entry to record the issuance.

BE15.5 (LO 1) On February 1, 2020, Buffalo Corporation issued 3,000 shares of its \$5 par value common stock for land worth \$31,000. Prepare the February 1, 2020, journal entry.

BE15.6 (LO 1) Moonwalker Corporation issued 2,000 shares of its \$10 par value common stock for \$60,000. Moonwalker also incurred \$1,500 of costs associated with issuing the stock. Prepare Moonwalker's journal entry to record the issuance of the company's stock.

BE15.7 (LO 1) Hinges Corporation issued 500 shares of \$100 par value preferred stock for \$61,500. Prepare Hinges's journal entry.

BE15.8 (LO 2) Sprinkle Inc. has outstanding 10,000 shares of \$10 par value common stock. On July 1, 2020, Sprinkle reacquired 100 shares at \$87 per share. On September 1, Sprinkle reissued 60 shares at \$90 per share. On November 1, Sprinkle reissued 40 shares at \$83 per share. Prepare Sprinkle's journal entries to record these transactions using the cost method.

BE15.9 (LO 2) Arantxa Corporation has outstanding 20,000 shares of \$5 par value common stock. On August 1, 2020, Arantxa reacquired 200 shares at \$80 per share. On November 1, Arantxa reissued the 200 shares at \$70 per share. Arantxa had no previous treasury stock transactions. Prepare Arantxa's journal entries to record these transactions using the cost method.

BE15.10 (LO 3) Woolford Inc. declared a cash dividend of \$1.00 per share on its 2 million outstanding shares. The dividend was declared on August 1, payable on September 9 to all stockholders of record on August 15. Prepare all journal entries necessary on those three dates.

BE15.11 (LO 3) Cole Inc. owns shares of Marlin Corporation stock. At December 31, 2020, the securities were carried in Cole's accounting records at their cost of \$875,000, which equals their fair value. On September 21, 2021, when the fair value of the securities was \$1,200,000, Cole declared a property dividend whereby the Marlin securities are to be distributed on October 23, 2021, to stockholders of record on October 8, 2021. Prepare all journal entries necessary on those three dates.

BE15.12 (LO 3) Graves Mining Company declared, on April 20, a dividend of \$500,000 payable on June 1. Of this amount, \$125,000 is a return of capital. Prepare the April 20 and June 1 entries for Graves.

BE15.13 (LO 3) Green Day Corporation has outstanding 400,000 shares of \$10 par value common stock. The corporation declares a 5% stock dividend when the fair value of the stock is \$65 per share. Prepare the journal entries for Green Day Corporation for both the date of declaration and the date of distribution.

BE15.14 (LO 3) Use the information from BE15.13, but assume Green Day Corporation declared a 100% stock dividend rather than a 5% stock dividend. Prepare the journal entries for both the date of declaration and the date of distribution.

***BE15.15 (LO 5)** Nottebart Corporation has outstanding 10,000 shares of \$100 par value, 6% preferred stock and 60,000 shares of \$10 par value common stock. The preferred stock was issued in January 2020, and no dividends were declared in 2020 or 2021. In 2022, Nottebart declares a cash dividend of \$300,000. How will the dividend be shared by common and preferred stockholders if the preferred is (a) noncumulative and (b) cumulative?

Exercises

E15.1 (LO 1) Excel (Recording the Issuances of Common Stock) During its first year of operations, Collin Raye Corporation had the following transactions pertaining to its common stock.

- Jan. 10 Issued 80,000 shares for cash at \$6 per share.
- Mar. 1 Issued 5,000 shares to attorneys in payment of a bill for \$35,000 for services rendered in helping the company to incorporate.
- July 1 Issued 30,000 shares for cash at \$8 per share.
- Sept. 1 Issued 60,000 shares for cash at \$10 per share.

Instructions

- a. Prepare the journal entries for these transactions, assuming that the common stock has a par value of \$5 per share.
- b. Prepare the journal entries for these transactions, assuming that the common stock is no-par with a stated value of \$3 per share.

E15.2 (LO 1) (Recording the Issuance of Common and Preferred Stock) Kathleen Battle Corporation was organized on January 1, 2020. It is authorized to issue 10,000 shares of 8%, \$100 par value preferred stock, and 500,000 shares of no-par common stock with a stated value of \$1 per share. The following stock transactions were completed during the first year.

- Jan. 10 Issued 80,000 shares of common stock for cash at \$5 per share.
- Mar. 1 Issued 5,000 shares of preferred stock for cash at \$108 per share.
- Apr. 1 Issued 24,000 shares of common stock for land. The asking price of the land was \$90,000; the fair value of the land was \$80,000.
- May 1 Issued 80,000 shares of common stock for cash at \$7 per share.
- Aug. 1 Issued 10,000 shares of common stock to attorneys in payment of their bill of \$50,000 for services rendered in helping the company organize.
- Sept. 1 Issued 10,000 shares of common stock for cash at \$9 per share.
- Nov. 1 Issued 1,000 shares of preferred stock for cash at \$112 per share.

Instructions

Prepare the journal entries to record the above transactions.

E15.3 (LO 1, 2) (Stock Issued for Land) Twenty-five thousand shares reacquired by Elixir Corporation for \$53 per share were exchanged for undeveloped land that has an appraised value of \$1,700,000. At the time of the exchange, the common stock was trading at \$62 per share on an organized exchange.

Instructions

- a. Prepare the journal entry to record the acquisition of land assuming that the purchase of the stock was originally recorded using the cost method.
- b. Briefly identify the possible alternatives (including those that are totally unacceptable) for quantifying the cost of the land and briefly support your choice.

E15.4 (LO 1) (Lump-Sum Sale of Stock with Bonds) Faith Evans Corporation is a regional company which is an SEC registrant. The corporation's securities are thinly traded on NASDAQ. Faith Evans Corp. has issued 10,000 units. Each unit consists of a \$500 par, 12% subordinated debenture and 10 shares of \$5 par common stock. The units were sold to outside investors for cash at \$880 per unit. Prior to this sale, the 2-week ask price of common stock was \$40 per share. Twelve percent is a reasonable market yield for the debentures, and therefore the par value of the bonds is equal to the fair value.

Instructions

- a. Prepare the journal entry to record Evans' transaction, under the following conditions.
 1. Employing the incremental method.
 2. Employing the proportional method, assuming the recent price quote on the common stock reflects fair value.
- b. Briefly explain which method is, in your opinion, the better method.

E15.5 (LO 1) (Lump-Sum Sales of Stock with Preferred Stock) Dave Matthew Inc. issues 500 shares of \$10 par value common stock and 100 shares of \$100 par value preferred stock for a lump sum of \$100,000.

Instructions

- a. Prepare the journal entry for the issuance when the market price of the common shares is \$165 each and market price of the preferred is \$230 each. (Round to nearest dollar.)
- b. Prepare the journal entry for the issuance when only the market price of the common stock is known and it is \$170 per share.

E15.6 (LO 1, 2) (Stock Issuances and Repurchase) Lindsey Hunter Corporation is authorized to issue 50,000 shares of \$5 par value common stock. During 2020, Lindsey Hunter took part in the following selected transactions.

1. Issued 5,000 shares of stock at \$45 per share, less costs related to the issuance of the stock totaling \$7,000.
2. Issued 1,000 shares of stock for land appraised at \$50,000. The stock was actively traded on a national stock exchange at approximately \$46 per share on the date of issuance.
3. Purchased 500 shares of treasury stock at \$43 per share. The treasury shares purchased were issued in 2016 at \$40 per share.

Instructions

- a. Prepare the journal entry to record item 1.
- b. Prepare the journal entry to record item 2.
- c. Prepare the journal entry to record item 3 using the cost method.

E15.7 (LO 2) (Effect of Treasury Stock Transactions on Financials) Joe Dumars Company has outstanding 40,000 shares of \$5 par common stock which had been issued at \$30 per share. Joe Dumars then entered into the following transactions.

1. Purchased 5,000 treasury shares at \$45 per share.
2. Resold 2,000 of the treasury shares at \$49 per share.
3. Resold 500 of the treasury shares at \$40 per share.

Instructions

Use the following code to indicate the effect each of the three transactions has on the financial statement categories listed in the table below, assuming Joe Dumars Company uses the cost method (I = Increase; D = Decrease; NE = No effect).

| # | Assets | Liabilities | Stockholders' Equity | Paid-in Capital | Retained Earnings | Net Income |
|---|--------|-------------|----------------------|-----------------|-------------------|------------|
| 1 | | | | | | |
| 2 | | | | | | |
| 3 | | | | | | |

E15.8 (LO 1, 2) (Correcting Entries for Equity Transactions) Pistons Inc. recently hired a new accountant with extensive experience in accounting for partnerships. Because of the pressure of the new job, the accountant was unable to review what he had learned earlier about corporation accounting. During the first month, he made the following entries for the corporation's capital stock.

| | | | |
|-------|---|---------|---------|
| May 2 | Cash | 192,000 | |
| | Capital Stock | | 192,000 |
| | (Issued 12,000 shares of \$5 par value common stock at \$16 per share) | | |
| 10 | Cash | 600,000 | |
| | Capital Stock | | 600,000 |
| | (Issued 10,000 shares of \$30 par value preferred stock at \$60 per share) | | |
| 15 | Capital Stock | 15,000 | |
| | Cash | | 15,000 |
| | (Purchased 1,000 shares of common stock for the treasury at \$15 per share) | | |
| 31 | Cash | 8,500 | |
| | Capital Stock | | 5,000 |
| | Gain on Sale of Stock | | 3,500 |
| | (Sold 500 shares of treasury stock at \$17 per share) | | |

Instructions

On the basis of the explanation for each entry, prepare the entries that should have been made for the capital stock transactions.

E15.9 (LO 1, 3) (Preferred Stock Entries and Dividends) Otis Thorpe Corporation has 10,000 shares of \$100 par value, 8%, preferred stock and 50,000 shares of \$10 par value common stock outstanding at December 31, 2020.

Instructions

Answer the questions in each of the following independent situations.

- If the preferred stock is cumulative and dividends were last paid on the preferred stock on December 31, 2017, (1) what are the dividends in arrears on December 31, 2020, and (2) how should these dividends be reported?
- If the preferred stock is convertible into seven shares of \$10 par value common stock and 4,000 shares are converted, what entry is required for the conversion assuming the preferred stock was issued at par value?
- If the preferred stock was issued at \$107 per share, how should the preferred stock be reported in the stockholders' equity section?

E15.10 (LO 2, 4) (Analysis of Equity Data and Equity Section Preparation) For a recent 2-year period, the balance sheet of Santana Dotson Company showed the following stockholders' equity data at December 31 (in millions).

| | 2020 | 2019 |
|--------------------------------|----------------|----------------|
| Additional paid-in capital | \$ 931 | \$ 817 |
| Common stock | 545 | 540 |
| Retained earnings | 7,167 | 5,226 |
| Treasury stock | 1,564 | 918 |
| Total stockholders' equity | <u>\$7,079</u> | <u>\$5,665</u> |
| Common stock shares issued | 218 | 216 |
| Common stock shares authorized | 500 | 500 |
| Treasury stock shares | 34 | 27 |

Instructions

- a. Answer the following questions.
 1. What is the par value of the common stock?
 2. What is the cost per share of treasury stock at December 31, 2020, and at December 31, 2019?
- b. Prepare the stockholders' equity section at December 31, 2020.

E15.11 (LO 3, 4) (Equity Items on the Balance Sheet) The following are selected transactions that may affect stockholders' equity.

1. Recorded accrued interest earned on a note receivable.
2. Declared a cash dividend.
3. Declared and distributed a stock split.
4. Approved a retained earnings restriction.
5. Recorded the expiration of insurance coverage that was previously recorded as prepaid insurance.
6. Paid the cash dividend declared in item 2 above.
7. Recorded accrued interest expense on a note payable.
8. Declared a stock dividend.
9. Distributed the stock dividend declared in item 8.

Instructions

In the following table, indicate the effect each of the nine transactions has on the financial statement elements listed. Use the following code: I = Increase, D = Decrease, NE = No effect.

| Item | Assets | Liabilities | Stockholders' Equity | Paid-in Capital | Retained Earnings | Net Income |
|------|--------|-------------|----------------------|-----------------|-------------------|------------|
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |

E15.12 (LO 3) (Cash Dividend and Liquidating Dividend) Lotoya Davis Corporation has 10 million shares of common stock issued and outstanding. On June 1, the board of directors voted an 80 cents per share cash dividend to stockholders of record as of June 14, payable June 30.

Instructions

- a. Prepare the journal entry for each of the dates above assuming the dividend represents a distribution of earnings.
- b. How would the entry differ if the dividend were a liquidating dividend?

E15.13 (LO 3) (Stock Split and Stock Dividend) The common stock of Alexander Hamilton Inc. is currently selling at \$120 per share. The directors wish to reduce the share price and increase share volume prior to a new issue. The per share par value is \$10; book value is \$70 per share. Nine million shares are issued and outstanding.

Instructions

Prepare the necessary journal entries assuming the following.

- The board votes a 2-for-1 stock split.
- The board votes a 100% stock dividend.
- Briefly discuss the accounting and securities market differences between these two methods of increasing the number of shares outstanding.

E15.14 (LO 3) (Entries for Stock Dividends and Stock Splits) The stockholders' equity accounts of G.K. Chesterton Company have the following balances on December 31, 2020.

| | |
|---|-------------|
| Common stock, \$10 par, 300,000 shares issued and outstanding | \$3,000,000 |
| Paid-in capital in excess of par—common stock | 1,200,000 |
| Retained earnings | 5,600,000 |

Shares of G.K. Chesterton Company stock are currently selling on the Midwest Stock Exchange at \$37.

Instructions

Prepare the appropriate journal entries for each of the following cases.

- A stock dividend of 5% is declared and issued.
- A stock dividend of 100% is declared and issued.
- A 2-for-1 stock split is declared and issued.

E15.15 (LO 3) Excel (Dividend Entries) The following data were taken from the balance sheet accounts of Masefield Corporation on December 31, 2019.

| | |
|----------------------------------|-----------|
| Current assets | \$540,000 |
| Debt investments (trading) | 624,000 |
| Common stock (par value \$10) | 500,000 |
| Paid-in capital in excess of par | 150,000 |
| Retained earnings | 840,000 |

Instructions

Prepare the required journal entries for the following unrelated items.

- A 5% stock dividend is declared and distributed at a time when the market price per share is \$39.
- The par value of the common stock is reduced to \$2 with a 5-for-1 stock split.
- A dividend is declared January 5, 2020, and paid January 25, 2020, in bonds held as an investment. The bonds have a book value of \$100,000 and a fair value of \$135,000.

E15.16 (LO 4) (Computation of Retained Earnings) The following information has been taken from the ledger accounts of Isaac Stern Corporation.

| | |
|--|-----------|
| Total income since incorporation | \$317,000 |
| Total cash dividends paid | 60,000 |
| Total value of stock dividends distributed | 30,000 |
| Gains on treasury stock transactions | 18,000 |
| Unamortized discount on bonds payable | 32,000 |

Instructions

Determine the current balance of retained earnings.

E15.17 (LO 4) (Stockholders' Equity Section) Bruno Corporation's post-closing trial balance at December 31, 2020, is shown as follows.

| Bruno Corporation Post-Closing Trial Balance December 31, 2020 | | |
|--|------------|------------|
| | Dr. | Cr. |
| Accounts payable | | \$ 310,000 |
| Accounts receivable | \$ 480,000 | |
| Accumulated depreciation—buildings | | 185,000 |
| Additional paid-in capital in excess of par—common | | 1,300,000 |
| From treasury stock | | 160,000 |

| | Dr. | Cr. |
|--|--------------------|--------------------|
| Allowance for doubtful accounts | | 30,000 |
| Bonds payable | | 300,000 |
| Buildings | 1,450,000 | |
| Cash | 190,000 | |
| Common stock (\$1 par) | | 200,000 |
| Dividends payable (preferred stock—cash) | | 4,000 |
| Inventory | 560,000 | |
| Land | 400,000 | |
| Preferred stock (\$50 par) | | 500,000 |
| Prepaid expenses | 40,000 | |
| Retained earnings | | 301,000 |
| Treasury stock (common at cost) | 170,000 | |
| Totals | <u>\$3,290,000</u> | <u>\$3,290,000</u> |

At December 31, 2020, Bruno had the following number of common and preferred shares.

| | Common | Preferred |
|-------------|---------|-----------|
| Authorized | 600,000 | 60,000 |
| Issued | 200,000 | 10,000 |
| Outstanding | 190,000 | 10,000 |

The dividends on preferred stock are \$4 cumulative. In addition, the preferred stock has a preference in liquidation of \$50 per share.

Instructions

Prepare the stockholders' equity section of Bruno's balance sheet at December 31, 2020.

(AICPA adapted)

E15.18 (LO 1, 2, 3, 4) Groupwork (Dividends and Stockholders' Equity Section) Anne Cleves Company reported the following amounts in the stockholders' equity section of its December 31, 2019, balance sheet.

| | |
|---|------------------|
| Preferred stock, 10%, \$100 par (10,000 shares authorized, 2,000 shares issued) | \$200,000 |
| Common stock, \$5 par (100,000 shares authorized, 20,000 shares issued) | 100,000 |
| Additional paid-in capital | 125,000 |
| Retained earnings | 450,000 |
| Total | <u>\$875,000</u> |

During 2020, Cleves took part in the following transactions concerning stockholders' equity.

1. Paid the annual 2019 \$10 per share dividend on preferred stock and a \$2 per share dividend on common stock. These dividends had been declared on December 31, 2019.
2. Purchased 1,700 shares of its own outstanding common stock for \$40 per share. Cleves uses the cost method.
3. Reissued 700 treasury shares for land valued at \$30,000.
4. Issued 500 shares of preferred stock at \$105 per share.
5. Declared a 10% stock dividend on the outstanding common stock when the stock is selling for \$45 per share.
6. Issued the stock dividend.
7. Declared the annual 2020 \$10 per share dividend on preferred stock and the \$2 per share dividend on common stock. These dividends are payable in 2021.

Instructions

- a. Prepare journal entries to record the transactions described above.
- b. Prepare the December 31, 2020, stockholders' equity section. Assume 2020 net income was \$330,000.

E15.19 (LO 4) (Comparison of Alternative Forms of Financing) Shown below is the liabilities and stockholders' equity section of the balance sheet for Jana Kingston Company and Mary Ann Benson Company. Each has assets totaling \$4,200,000.

| Jana Kingston Co. | | Mary Ann Benson Co. | |
|---|--------------------|---|--------------------|
| Current liabilities | \$ 300,000 | Current liabilities | \$ 600,000 |
| Long-term debt, 10% | 1,200,000 | Common stock (\$20 par) | 2,900,000 |
| Common stock (\$20 par) | 2,000,000 | Retained earnings (Cash dividends, \$328,000) | 700,000 |
| Retained earnings (Cash dividends, \$220,000) | 700,000 | | |
| | <u>\$4,200,000</u> | | <u>\$4,200,000</u> |

For the year, each company has earned the same income before interest and taxes.

| | Jana Kingston Co. | Mary Ann Benson Co. |
|----------------------------------|-------------------|---------------------|
| Income before interest and taxes | \$1,200,000 | \$1,200,000 |
| Interest expense | 120,000 | -0- |
| | <u>1,080,000</u> | <u>1,200,000</u> |
| Income taxes (20%) | 216,000 | 240,000 |
| Net income | <u>\$ 864,000</u> | <u>\$ 960,000</u> |

At year-end, the market price of Kingston's stock was \$101 per share, and Benson's was \$63.50.

Instructions

- Which company is more profitable in terms of return on total assets?
- Which company is more profitable in terms of return on common stockholders' equity?
- Which company has the greater net income per share of stock? Neither company issued or reacquired shares during the year.
- From the point of view of net income, is it advantageous to the stockholders of Jana Kingston Co. to have the long-term debt outstanding? Why?
- What is the book value per share for each company?

E15.20 (LO 4) (Trading on the Equity Analysis) Presented below is information from the annual report of Emporia Plastics, Inc.

| | |
|-----------------------|-------------------|
| Operating income | \$ 532,150 |
| Bond interest expense | 135,000 |
| | <u>397,150</u> |
| Income taxes | 183,432 |
| Net income | <u>\$ 213,718</u> |
| Bonds payable | \$1,000,000 |
| Common stock | 875,000 |
| Retained earnings | 375,000 |

Instructions

- Compute the return on common stockholders' equity and the rate of interest paid on bonds. (Assume balances for debt and equity accounts approximate averages for the year.)
- Is Emporia Plastics, Inc. trading on the equity successfully? Explain.

***E15.21 (LO 5) (Preferred Dividends)** The outstanding capital stock of Edna Millay Corporation consists of 2,000 shares of \$100 par value, 8% preferred, and 5,000 shares of \$50 par value common.

Instructions

Assuming that the company has retained earnings of \$90,000, all of which is to be paid out in dividends, and that preferred dividends were not paid during the 2 years preceding the current year, state how much each class of stock should receive under each of the following conditions.

- The preferred stock is noncumulative and nonparticipating.
- The preferred stock is cumulative and nonparticipating.
- The preferred stock is cumulative and participating. (Round dividend rate percentages to four decimal places.)

***E15.22 (LO 5) (Preferred Dividends)** Matt Schmidt Company's ledger shows the following balances on December 31, 2020.

| | |
|--|------------|
| 7% Preferred stock—\$10 par value, outstanding 20,000 shares | \$ 200,000 |
| Common stock—\$100 par value, outstanding 30,000 shares | 3,000,000 |
| Retained earnings | 630,000 |

Instructions

Assuming that the directors decide to declare total dividends in the amount of \$366,000, determine how much each class of stock should receive under each of the conditions stated below. One year's dividends are in arrears on the preferred stock.

- The preferred stock is cumulative and fully participating.
- The preferred stock is noncumulative and nonparticipating.
- The preferred stock is noncumulative and is participating in distributions in excess of a 10% dividend rate on the common stock.

***E15.23 (LO 5) (Preferred Stock Dividends)** Cajun Company has outstanding 2,500 shares of \$100 par, 6% preferred stock and 15,000 shares of \$10 par value common. The following schedule shows the amount of dividends paid out over the last 4 years.

Instructions

Allocate the dividends to each type of stock under assumptions (a) and (b). Express your answers in per share amounts using the format shown below.

| Year | Paid-Out | Assumptions | | | |
|------|----------|-------------|--------|-----------|--------|
| | | (a) | | (b) | |
| | | Preferred | Common | Preferred | Common |
| 2018 | \$13,000 | | | | |
| 2019 | \$26,000 | | | | |
| 2020 | \$57,000 | | | | |
| 2021 | \$76,000 | | | | |

***E15.24 (LO 5) (Computation of Book Value per Share)** Morgan Sondgeroth Inc. began operations in January 2018 and reported the following results for each of its 3 years of operations.

| | | | | | |
|------|--------------------|------|-------------------|------|----------------------|
| 2018 | \$260,000 net loss | 2019 | \$40,000 net loss | 2020 | \$800,000 net income |
|------|--------------------|------|-------------------|------|----------------------|

At December 31, 2020, Morgan Sondgeroth Inc. capital accounts were as follows.

| | |
|--|-----------|
| 8% cumulative preferred stock, par value \$100; authorized, issued, and outstanding 5,000 shares | \$500,000 |
| Common stock, par value \$1.00; authorized 1,000,000 shares; issued and outstanding 750,000 shares | \$750,000 |

Morgan Sondgeroth Inc. has never paid a cash or stock dividend. There has been no change in the capital accounts since Sondgeroth began operations. The state law permits dividends only from retained earnings.

Instructions

- Compute the book value of the common stock at December 31, 2020.
- Compute the book value of the common stock at December 31, 2020, assuming that the preferred stock has a liquidating value of \$106 per share.

Problems

P15.1 (LO 1, 2, 3, 4) Excel Groupwork (Equity Transactions and Statement Preparation) On January 5, 2020, Phelps Corporation received a charter granting the right to issue 5,000 shares of \$100 par value, 8% cumulative and nonparticipating preferred stock, and 50,000 shares of \$10 par value common stock. It then completed these transactions.

- Jan. 11 Issued 20,000 shares of common stock at \$16 per share.
- Feb. 1 Issued to Sanchez Corp. 4,000 shares of preferred stock for the following assets: equipment with a fair value of \$50,000; a factory building with a fair value of \$160,000; and land with an appraised value of \$270,000.

- July 29 Purchased 1,800 shares of common stock at \$17 per share. (Use cost method.)
 Aug. 10 Sold the 1,800 treasury shares at \$14 per share.
 Dec. 31 Declared a \$0.25 per share cash dividend on the common stock and declared the preferred dividend.
 Dec. 31 Closed the Income Summary account. There was a \$175,700 net income.

Instructions

- Record the journal entries for the transactions listed above.
- Prepare the stockholders' equity section of Phelps Corporation's balance sheet as of December 31, 2020.

P15.2 (LO 2, 4) (Treasury Stock Transactions and Presentation) Clemson Company had the following stockholders' equity as of January 1, 2020.

| | |
|---|------------------|
| Common stock, \$5 par value, 20,000 shares issued | \$100,000 |
| Paid-in capital in excess of par—common stock | 300,000 |
| Retained earnings | <u>320,000</u> |
| Total stockholders' equity | <u>\$720,000</u> |

During 2020, the following transactions occurred.

- Feb. 1 Clemson repurchased 2,000 shares of treasury stock at a price of \$19 per share.
 Mar. 1 800 shares of treasury stock repurchased above were reissued at \$17 per share.
 Mar. 18 500 shares of treasury stock repurchased above were reissued at \$14 per share.
 Apr. 22 600 shares of treasury stock repurchased above were reissued at \$20 per share.

Instructions

- Prepare the journal entries to record the treasury stock transactions in 2020, assuming Clemson uses the cost method.
- Prepare the stockholders' equity section as of April 30, 2020. Net income for the first 4 months of 2020 was \$130,000.

P15.3 (LO 1, 2, 3, 4) (Equity Transactions and Statement Preparation) Hatch Company has two classes of capital stock outstanding: 8%, \$20 par preferred and \$5 par common. At December 31, 2020, the following accounts were included in stockholders' equity.

| | |
|--|--------------|
| Preferred Stock, 150,000 shares | \$ 3,000,000 |
| Common Stock, 2,000,000 shares | 10,000,000 |
| Paid-in Capital in Excess of Par—Preferred Stock | 200,000 |
| Paid-in Capital in Excess of Par—Common Stock | 27,000,000 |
| Retained Earnings | 4,500,000 |

The following transactions affected stockholders' equity during 2021.

- Jan. 1 30,000 shares of preferred stock issued at \$22 per share.
 Feb. 1 50,000 shares of common stock issued at \$20 per share.
 June 1 2-for-1 stock split (par value reduced to \$2.50).
 July 1 30,000 shares of common treasury stock purchased at \$10 per share. Hatch uses the cost method.
 Sept. 15 10,000 shares of treasury stock reissued at \$11 per share.
 Dec. 31 The preferred dividend is declared, and a common dividend of 50¢ per share is declared.
 Dec. 31 Net income is \$2,100,000.

Instructions

Prepare the stockholders' equity section for Hatch Company at December 31, 2021. Show all supporting computations.

P15.4 (LO 1) (Stock Transactions—Lump Sum) Seles Corporation's charter authorized issuance of 100,000 shares of \$10 par value common stock and 50,000 shares of \$50 preferred stock. The following transactions involving the issuance of shares of stock were completed. Each transaction is independent of the others.

- Issued a \$10,000, 9% bond payable at par and gave as a bonus one share of preferred stock, which at that time was selling for \$106 a share.
- Issued 500 shares of common stock for equipment. The equipment had been appraised at \$7,100; the seller's book value was \$6,200. The most recent market price of the common stock is \$16 a share.

3. Issued 375 shares of common and 100 shares of preferred for a lump sum amounting to \$10,800. The common had been selling at \$14 and the preferred at \$65.
4. Issued 200 shares of common and 50 shares of preferred for equipment. The common had a fair value of \$16 per share; the equipment has a fair value of \$6,500.

Instructions

Record the transactions listed above in journal entry form.

P15.5 (LO 2) Excel (Treasury Stock—Cost Method) Before Gordon Corporation engages in the following treasury stock transactions, its general ledger reflects, among others, the following account balances (par value of its stock is \$30 per share).

| Paid-in Capital in Excess of Par—Common Stock | Common Stock | Retained Earnings |
|---|--------------|-------------------|
| \$99,000 | \$270,000 | \$80,000 |

Instructions

Record the treasury stock transactions (given below) under the cost method of handling treasury stock; use the FIFO method for purchase-sale purposes.

- a. Bought 380 shares of treasury stock at \$40 per share.
- b. Bought 300 shares of treasury stock at \$45 per share.
- c. Sold 350 shares of treasury stock at \$42 per share.
- d. Sold 110 shares of treasury stock at \$38 per share.

P15.6 (LO 2, 3, 4) Groupwork (Treasury Stock—Cost Method—Equity Section Preparation)

Washington Company has the following stockholders' equity accounts at December 31, 2020.

| | |
|---|-----------|
| Common Stock (\$100 par value, authorized 8,000 shares) | \$480,000 |
| Retained Earnings | 294,000 |

Instructions

- a. Prepare entries in journal form to record the following transactions, which took place during 2021.
 1. 280 shares of outstanding stock were purchased at \$97 per share. (These are to be accounted for using the cost method.)
 2. A \$20 per share cash dividend was declared.
 3. The dividend declared in (2) above was paid.
 4. The treasury shares purchased in (1) above were resold at \$102 per share.
 5. 500 shares of outstanding stock were purchased at \$105 per share.
 6. 350 of the shares purchased in (5) above were resold at \$96 per share.
- b. Prepare the stockholders' equity section of Washington Company's balance sheet after giving effect to these transactions, assuming that the net income for 2021 was \$94,000. State law requires restriction of retained earnings for the amount of treasury stock.

P15.7 (LO 3) (Cash Dividend Entries) The books of Conchita Corporation carried the following account balances as of December 31, 2020.

| | |
|---|------------|
| Cash | \$ 195,000 |
| Preferred Stock (6% cumulative, nonparticipating, \$50 par) | 300,000 |
| Common Stock (no-par value, 300,000 shares issued) | 1,500,000 |
| Paid-in Capital in Excess of Par—Preferred Stock | 150,000 |
| Treasury Stock (common 2,800 shares at cost) | 33,600 |
| Retained Earnings | 105,000 |

The company decided not to pay any dividends in 2020.

The board of directors, at their annual meeting on December 21, 2021, declared the following: "The current year dividends shall be 6% on the preferred and \$.30 per share on the common. The dividends in arrears shall be paid by issuing 1,500 shares of treasury stock." At the date of declaration, the preferred is selling at \$80 per share, and the common at \$12 per share. Net income for 2021 is estimated at \$77,000.

Instructions

- a. Prepare the journal entries required for the dividend declaration and payment, assuming that they occur simultaneously.

- b. Could Conchita Corporation give the preferred stockholders 2 years' dividends and common stockholders a 30 cents per share dividend, all in cash?

P15.8 (LO 3) Groupwork (Dividends and Splits) Myers Company provides you with the following condensed balance sheet information.

| Assets | | Liabilities and Stockholders' Equity | | |
|--------------------|------------------|--|-----------|------------------|
| Current assets | \$ 40,000 | Current and long-term liabilities | | \$100,000 |
| Equity investments | 60,000 | Stockholders' equity | | |
| Equipment (net) | 250,000 | Common stock (\$5 par) | \$ 20,000 | |
| Intangibles | 60,000 | Paid-in capital in excess of par | 110,000 | |
| Total assets | <u>\$410,000</u> | Retained earnings | 180,000 | 310,000 |
| | | Total liabilities and stockholders' equity | | <u>\$410,000</u> |

Instructions

For each of the following transactions, indicate the dollar impact (if any) on the following five items: (1) total assets, (2) common stock, (3) paid-in capital in excess of par, (4) retained earnings, and (5) stockholders' equity. (Each situation is independent.)

- Myers declares and pays a \$0.50 per share cash dividend.
- Myers declares and issues a 10% stock dividend when the market price of the stock is \$14 per share.
- Myers declares and issues a 30% stock dividend when the market price of the stock is \$15 per share.
- Myers declares and distributes a property dividend. Myers gives one share of its equity investment (ABC stock) for every two shares of Myers Company stock held. Myers owns 10,000 shares of ABC. ABC is selling for \$10 per share on the date the property dividend is declared.
- Myers declares a 2-for-1 stock split and issues new shares.

P15.9 (LO 1, 2, 3, 4) (Stockholders' Equity Section of Balance Sheet) The following is a summary of all relevant transactions of Vicario Corporation since it was organized in 2020.

In 2020, 15,000 shares were authorized and 7,000 shares of common stock (\$50 par value) were issued at a price of \$57. In 2021, 1,000 shares were issued as a stock dividend when the stock was selling for \$60. Three hundred shares of common stock were bought in 2022 at a cost of \$64 per share. These 300 shares are still in the company treasury.

In 2021, 10,000 preferred shares were authorized and the company issued 5,000 of them (\$100 par value) at \$113. Some of the preferred stock was reacquired by the company and later reissued for \$4,700 more than it cost the company.

The corporation has earned a total of \$610,000 in net income after income taxes and paid out a total of \$312,600 in cash dividends since incorporation.

Instructions

Prepare the stockholders' equity section of the balance sheet in proper form for Vicario Corporation as of December 31, 2022. Account for treasury stock using the cost method.

P15.10 (LO 3) Writing (Stock Dividends and Stock Split) Oregon Inc. \$10 par common stock is selling for \$110 per share. Four million shares are currently issued and outstanding. The board of directors wishes to stimulate interest in Oregon common stock before a forthcoming stock issue but does not wish to distribute capital at this time. The board also believes that too many adjustments to the stockholders' equity section, especially retained earnings, might discourage potential investors.

The board has considered three options for stimulating interest in the stock:

- A 20% stock dividend.
- A 100% stock dividend.
- A 2-for-1 stock split.

Instructions

Acting as financial advisor to the board, you have been asked to report briefly on each option and, considering the board's wishes, make a recommendation. Discuss the effects of each of the foregoing options.

P15.11 (LO 3, 4) (Stock and Cash Dividends) Earnhart Corporation has outstanding 3,000,000 shares of common stock with a par value of \$10 each. The balance in its Retained Earnings account at January 1, 2020, was \$24,000,000, and it then had Paid-in Capital in Excess of Par—Common Stock of \$5,000,000. During 2020, the company's net income was \$4,700,000. A cash dividend of \$0.60 a share was declared on May 5, 2020, and was paid June 30, 2020, and a 6% stock dividend was declared on

November 30, 2020, and distributed to stockholders of record at the close of business on December 31, 2020. You have been asked to advise on the proper accounting treatment of the stock dividend.

The existing stock of the company is quoted on a national stock exchange. The market price of the stock has been as follows.

| | |
|-------------------|------|
| October 31, 2020 | \$31 |
| November 30, 2020 | \$34 |
| December 31, 2020 | \$38 |

Instructions

- Prepare the journal entry to record the declaration and payment of the cash dividend.
- Prepare the journal entry to record the declaration and distribution of the stock dividend.
- Prepare the stockholders' equity section (including schedules of retained earnings and additional paid-in capital) of the balance sheet of Earnhart Corporation for the year 2020 on the basis of the foregoing information. Draft a note to the financial statements setting forth the basis of the accounting for the stock dividend, and add separately appropriate comments or explanations regarding the basis chosen.

P15.12 (LO 1, 2, 3, 4) (Analysis and Classification of Equity Transactions) Penn Company was formed on July 1, 2018. It was authorized to issue 300,000 shares of \$10 par value common stock and 100,000 shares of 8% \$25 par value, cumulative and nonparticipating preferred stock. Penn Company has a July 1–June 30 fiscal year.

The following information relates to the stockholders' equity accounts of Penn Company.

Common Stock

Prior to the 2020–2021 fiscal year, Penn Company had 110,000 shares of outstanding common stock issued as follows.

- 85,000 shares were issued for cash on July 1, 2018, at \$31 per share.
- On July 24, 2018, 5,000 shares were exchanged for a plot of land which cost the seller \$70,000 in 2012 and had a fair value (based on recent land sales) of \$220,000 on July 24, 2018.
- 20,000 shares were issued on March 1, 2019, for \$42 per share.

During the 2020–2021 fiscal year, the following transactions regarding common stock took place.

| | |
|-------------------|---|
| November 30, 2020 | Penn purchased 2,000 shares of its own stock on the open market at \$39 per share. Penn uses the cost method for treasury stock. |
| December 15, 2020 | Penn declared a 5% stock dividend for stockholders of record on January 15, 2021, to be issued on January 31, 2021. Penn was having a liquidity problem and could not afford a cash dividend at the time. Penn's common stock was selling at \$52 per share on December 15, 2020. |
| June 20, 2021 | Penn sold 500 shares of its own common stock that it had purchased on November 30, 2020, for \$21,000. |

Preferred Stock

Penn issued 40,000 shares of preferred stock at \$44 per share on July 1, 2019.

Cash Dividends

Penn has followed a schedule of declaring cash dividends in December and June, with payment being made to stockholders of record in the following month. The cash dividends which have been declared since inception of the company through June 30, 2021, are shown below.

| Declaration Date | Common Stock | Preferred Stock |
|------------------|------------------|------------------|
| 12/15/19 | \$0.30 per share | \$1.00 per share |
| 6/15/20 | \$0.30 per share | \$1.00 per share |
| 12/15/20 | — | \$1.00 per share |

No cash dividends were declared during June 2021 due to the company's liquidity problems.

Retained Earnings

As of June 30, 2020, Penn's retained earnings account had a balance of \$690,000. For the fiscal year ending June 30, 2021, Penn reported net income of \$40,000.

Instructions

Prepare the stockholders' equity section of the balance sheet, including appropriate notes, for Penn Company as of June 30, 2021, as it should appear in its annual report to the shareholders.

(CMA adapted)

Concepts for Analysis

CA15.1 (LO 1) (Preemptive Rights and Dilution of Ownership) Wallace Computer Company is a small, closely held corporation. Eighty percent of the stock is held by Derek Wallace, president. Of the remainder, 10% is held by members of his family and 10% by Kathy Baker, a former officer who is now retired. The balance sheet of the company at June 30, 2020, was substantially as shown below.

| Assets | | Liabilities and Stockholders' Equity | |
|--------|------------------|--------------------------------------|------------------|
| Cash | \$ 22,000 | Current liabilities | \$ 50,000 |
| Other | 450,000 | Common stock | 250,000 |
| | <u>\$472,000</u> | Retained earnings | 172,000 |
| | | | <u>\$472,000</u> |

Additional authorized common stock of \$300,000 par value had never been issued. To strengthen the cash position of the company, Wallace issued common stock with a par value of \$100,000 to himself at par for cash. At the next stockholders' meeting, Baker objected and claimed that her interests had been injured.

Instructions

- Which stockholder's right was ignored in the issue of shares to Derek Wallace?
- How may the damage to Baker's interests be repaired most simply?
- If Derek Wallace offered Baker a personal cash settlement and they agreed to employ you as an impartial arbitrator to determine the amount, what settlement would you propose? Present your calculations with sufficient explanation to satisfy both parties.

CA15.2 (LO 1) (Issuance of Stock for Land) Martin Corporation is planning to issue 3,000 shares of its own \$10 par value common stock for two acres of land to be used as a building site.

Instructions

- What general rule should be applied to determine the amount at which the land should be recorded?
- Under what circumstances should this transaction be recorded at the fair value of the land?
- Under what circumstances should this transaction be recorded at the fair value of the stock issued?
- Assume Martin intentionally records this transaction at an amount greater than the fair value of the land and the stock. Discuss this situation.

CA15.3 (LO 1, 2, 3) Writing (Conceptual Issues—Equity) Statements of Financial Accounting Concepts set forth financial accounting and reporting objectives and fundamentals that will be used by the Financial Accounting Standards Board in developing standards. *Concepts Statement No. 6* defines various elements of financial statements.

Instructions

Answer the following questions based on *SFAC No. 6*.

- Define and discuss the term "equity."
- What transactions or events change owners' equity?
- Define "investments by owners" and provide examples of this type of transaction. What financial statement element other than equity is typically affected by owner investments?
- Define "distributions to owners" and provide examples of this type of transaction. What financial statement element other than equity is typically affected by distributions?
- What are examples of changes within owners' equity that do not change the total amount of owners' equity?

CA15.4 (LO 3) (Stock Dividends and Splits) The directors of Merchant Corporation are considering the issuance of a stock dividend. They have asked you to discuss the proposed action by answering the following questions.

Instructions

- What is a stock dividend? How is a stock dividend distinguished from a stock split (1) from a legal standpoint, and (2) from an accounting standpoint?
- For what reasons does a corporation usually declare a stock dividend? A stock split?
- Discuss the amount, if any, of retained earnings to be capitalized in connection with a stock dividend.

(AICPA adapted)

CA15.5 (LO 3) (Stock Dividends) Kulikowski Inc., a client, is considering the authorization of a 10% common stock dividend to common stockholders. The financial vice president of Kulikowski wishes to discuss the accounting implications of such an authorization with you before the next meeting of the board of directors.

Instructions

- The first topic the vice president wishes to discuss is the nature of the stock dividend to the recipient. Discuss the case against considering the stock dividend as income to the recipient.
- The other topic for discussion is the propriety of issuing the stock dividend to all “stockholders of record” or to “stockholders of record exclusive of shares held in the name of the corporation as treasury stock.” Discuss the case against issuing stock dividends on treasury shares.

(AICPA adapted)

CA15.6 (LO 3) (Stock Dividend, Cash Dividend, and Treasury Stock) Mask Company has 30,000 shares of \$10 par value common stock authorized and 20,000 shares issued and outstanding. On August 15, 2020, Mask purchased 1,000 shares of treasury stock for \$18 per share. Mask uses the cost method to account for treasury stock. On September 14, 2020, Mask sold 500 shares of the treasury stock for \$20 per share.

In October 2020, Mask declared and distributed 1,950 shares as a stock dividend from unissued shares when the market price of the common stock was \$21 per share.

On December 20, 2020, Mask declared a \$1 per share cash dividend, payable on January 10, 2021, to shareholders of record on December 31, 2020.

Instructions

- How should Mask account for the purchase and sale of the treasury stock, and how should the treasury stock be presented in the balance sheet at December 31, 2020?
- How should Mask account for the stock dividend, and how would it affect the stockholders’ equity at December 31, 2020? Why?
- How should Mask account for the cash dividend, and how would it affect the balance sheet at December 31, 2020? Why?

(AICPA adapted)

CA15.7 (LO 2) Ethics (Treasury Stock—Ethics) Lois Kenseth, president of Sycamore Corporation, is concerned about several large stockholders who have been very vocal lately in their criticisms of her leadership. She thinks they might mount a campaign to have her removed as the corporation’s CEO. She decides that buying them out by purchasing their shares could eliminate them as opponents, and she is confident they would accept a “good” offer. Kenseth knows the corporation’s cash position is decent, so it has the cash to complete the transaction. She also knows the purchase of these shares will increase earnings per share, which should make other investors quite happy. (Earnings per share is calculated by dividing net income available for the common shareholders by the weighted-average number of shares outstanding. Therefore, if the number of shares outstanding is decreased by purchasing treasury shares, earnings per share increases.)

Instructions

Answer the following questions.

- Who are the stakeholders in this situation?
- What are the ethical issues involved?
- Should Kenseth authorize the transaction?

Using Your Judgment

Financial Reporting Problem

The Procter & Gamble Company (P&G)

The financial statements of P&G are presented in Appendix B. The company’s complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G’s financial statements and the accompanying notes to answer the following questions.

- What is the par or stated value of P&G’s preferred stock?
- What is the par or stated value of P&G’s common stock?

- c. What percentage of P&G's authorized common stock was issued at June 30, 2017?
- d. How many shares of common stock were outstanding at June 30, 2017, and June 30, 2016?
- e. What was the dollar amount effect of the cash dividends on P&G's stockholders' equity?
- f. What is P&G's return on common stockholders' equity for 2017 and 2016?
- g. What is P&G's payout ratio for 2017 and 2016?
- h. What was the market price range (high/low) of P&G's common stock during the quarter ended June 30, 2017?

Comparative Analysis Case

The Coca-Cola Company and PepsiCo, Inc.

The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online. Stock price data can be found in the company's annual 10K, filed at the SEC.

Instructions

Use the companies' financial information to answer the following questions.

- a. What is the par or stated value of Coca-Cola's and PepsiCo's common or capital stock?
- b. What percentage of authorized shares was issued by Coca-Cola at December 31, 2017, and by PepsiCo at December 31, 2017?
- c. How many shares are held as treasury stock by Coca-Cola at December 31, 2017, and by PepsiCo at December 31, 2017?
- d. How many Coca-Cola common shares are outstanding at December 31, 2017? How many PepsiCo shares of capital stock are outstanding at December 31, 2017?
- e. What amounts of cash dividends per share were declared by Coca-Cola and PepsiCo in 2017? What were the dollar amount effects of the cash dividends on each company's stockholders' equity?
- f. What are Coca-Cola's and PepsiCo's return on common/capital stockholders' equity for 2017? Which company gets the higher return on the equity of its shareholders?
- g. What are Coca-Cola's and PepsiCo's payout ratios for 2017?

Financial Statement Analysis Cases

Case 1: Kellogg Company

Kellogg Company is the world's leading producer of ready-to-eat cereal products. In recent years, the company has taken numerous steps aimed at improving its profitability and earnings per share. Presented below are some basic facts for Kellogg.

| (in millions) | Current Year | Prior Year |
|--|--------------|------------|
| Net sales | \$14,792 | \$14,580 |
| Net income | 1,807 | 632 |
| Total assets | 15,474 | 15,153 |
| Total liabilities | 11,867 | 12,302 |
| Common stock, \$0.25 par value | 105 | 105 |
| Capital in excess of par value | 626 | 678 |
| Retained earnings | 6,749 | 6,689 |
| Treasury stock, at cost | 2,999 | 3,470 |
| Number of shares outstanding (in millions) | 363 | 358 |

Instructions

- a. What are some of the reasons that management purchases its own stock?
- b. Explain how earnings per share might be affected by treasury stock transactions.
- c. Calculate the debt to assets ratio for the current year and the prior year, and discuss the implications of the change.

Case 2: Wiebold, Inc.

The following note related to stockholders' equity was reported in **Wiebold, Inc.**'s annual report.

On February 1, the Board of Directors declared a 3-for-2 stock split, distributed on February 22 to shareholders of record on February 10. Accordingly, all numbers of common shares, except unissued shares and treasury shares, and all per share data have been restated to reflect this stock split.

On the basis of amounts declared and paid, the annualized quarterly dividends per share were \$0.80 in the current year and \$0.75 in the prior year.

Instructions

- What is the significance of the date of record and the date of distribution?
- Why might Wiebold have declared a 3-for-2 for stock split?
- What impact does Wiebold's stock split have on (1) total stockholders' equity, (2) total par value, (3) outstanding shares, and (4) book value per share?

Accounting, Analysis, and Principles

On January 1, 2020, Agassi Corporation had the following stockholders' equity accounts.

| | |
|---|-----------|
| Common Stock (\$10 par value, 60,000 shares issued and outstanding) | \$600,000 |
| Paid-in Capital in Excess of Par—Common Stock | 500,000 |
| Retained Earnings | 620,000 |

During 2020, the following transactions occurred.

- | | |
|---------|---|
| Jan. 15 | Declared and paid a \$1.05 cash dividend per share to stockholders. |
| Apr. 15 | Declared and paid a 10% stock dividend. The market price of the stock was \$14 per share. |
| May 15 | Reacquired 2,000 common shares at a market price of \$15 per share. |
| Nov. 15 | Reissued 1,000 shares held in treasury at a price of \$18 per share. |
| Dec. 31 | Determined that net income for the year was \$370,000. |

Accounting

Journalize the above transactions. (Include entries to close net income to Retained Earnings.) Determine the ending balances for Paid-in Capital, Retained Earnings, and Stockholders' Equity.

Analysis

Calculate the payout ratio and the return on common stockholders' equity.

Principles

R. Federer is examining Agassi's financial statements and wonders whether the "gains" or "losses" on Agassi's treasury stock transactions should be included in income for the year. Briefly explain whether, and the conceptual reasons why, gains or losses on treasury stock transactions should be recorded in income.

Analytics in Action

Accounting software systems collect vast amounts of data about the economic events experienced by a company and about the parties with whom the company engages, such as suppliers and customers. Business decision-makers take advantage of this wealth of information by using data analytics, which often employs both software and statistics, to draw inferences and make more informed business decisions. As both data access and analytical software improve, the use of data analytics to support decisions is becoming increasingly common at virtually all types of companies.

Equity investors and other analysts use the return on equity (ROE) ratio to assess the profitability of an investment in a company's stock. To gain a better insight into the factors that drive ROE, many analysts decompose ROE into profitability, asset turnover, and leverage components (referred to as the **DuPont** method).

Instructions Go to WileyPLUS for a data analytics exercise focusing on analysis of ROE, using the DuPont method.

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

CE15.1 Access the glossary ("Master Glossary") to answer the following.

- What is a "convertible security"?
- What is a "stock dividend"?
- What is a "stock split"?
- What are "participation rights"?

CE15.2 At what percentage point can the issuance of additional shares still qualify as a stock dividend, as opposed to a stock split?

CE15.3 A company plans to issue shares and wants to know the SEC's stance on the accounting treatment for the costs of issuing stock. Can these costs be deferred, or must they be expensed immediately?

CE15.4 If a company chooses to purchase its own shares and then either (1) retires the repurchased shares and issues additional shares, or (2) resells the repurchased shares, can a gain or loss be recognized by the company? Why or why not?

Codification Research Case

Recall from Chapter 13 that Hincapie Co. (a specialty bike-accessory manufacturer) is expecting growth in sales of some products targeted to the low-price market. Hincapie is contemplating a preferred stock issue to help finance this expansion in operations. The company is leaning toward participating preferred stock because ownership will not be diluted, but the investors will get an extra dividend if the company does well. The company management wants to be certain that its reporting of this transaction is transparent to its current shareholders and wants you to research the disclosure requirements related to its capital structure.

Instructions

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

- Identify the authoritative literature that addresses disclosure of information about capital structure.
- Find definitions of the following:
 - Securities.
 - Participation rights.
 - Preferred stock.
- What information about securities must companies disclose? Discuss how Hincapie should report the proposed preferred stock issue.

IFRS Insights

LEARNING OBJECTIVE 6

Compare the accounting procedures for stockholders' equity under GAAP and IFRS.

The primary IFRS related to stockholders' equity are *IAS 1* ("Presentation of Financial Statements"), *IAS 32* ("Financial Instruments: Presentation"), and *IAS 39* ("Financial Instruments: Recognition and Measurement").

Relevant Facts

Following are the key similarities and differences between GAAP and IFRS related to stockholders' equity.

Similarities

- The accounting for the issuance of shares and purchase of treasury stock are similar under both IFRS and GAAP.
- The accounting for declaration and payment of dividends and the accounting for stock splits are similar under both IFRS and GAAP.

Differences

- Major differences relate to terminology used, introduction of concepts such as revaluation surplus, and presentation of stockholders' equity information.
- Many countries have different investor groups than the United States. For example, in Germany, financial institutions like banks are not only the major creditors but often are the largest shareholders as well. In the United States and the United Kingdom, many companies rely on substantial investment from private investors.
- The accounting for treasury share retirements differs between IFRS and GAAP. Under GAAP, a company has three options: (1) charge the excess of the cost of treasury shares over par value to retained earnings, (2) allocate the difference between paid-in capital and retained earnings, or (3) charge the entire amount to paid-in capital. Under IFRS, the excess may have to be charged to paid-in capital, depending on the original transaction related to the issuance of the shares.
- The statement of changes in equity is usually referred to as the statement of stockholders' equity (or shareholders' equity) under GAAP.
- Both IFRS and GAAP use the term retained earnings. However, IFRS relies on the term "reserve" as a dumping ground for other types of equity transactions, such as other comprehensive income items as well as various types of unusual transactions related to convertible debt and share option contracts. GAAP relies on the account Accumulated Other Comprehensive Income (Loss). We also use this account in the discussion below, as it appears this account is gaining prominence within the IFRS literature.
- Under IFRS, it is common to report "revaluation surplus" related to increases or decreases in items such as property, plant, and equipment; mineral resources; and intangible assets. The term surplus is generally not used in GAAP. In addition, unrealized gains on the above items are not reported in the financial statements under GAAP.

About the Numbers

Equity

Equity is the residual interest in the assets of the company after deducting all liabilities. Equity is often referred to as shareholders' equity, stockholders' equity, or corporate capital. Equity is often subclassified on the statement of financial position (balance sheet) into the following categories (as discussed in Chapter 5).

1. Share capital.
2. Share premium.
3. Retained earnings.
4. Accumulated other comprehensive income.
5. Treasury shares.
6. Non-controlling interest (minority interest).

Such classifications help financial statement users to better understand the legal or other restrictions related to the ability of the company to pay dividends or otherwise use its equity for certain defined purposes. Companies often make a distinction between contributed capital (paid-in capital) and earned capital. **Contributed capital (paid-in capital)** is the total amount paid in on capital shares—the amount provided by shareholders to the corporation for use in the business. Contributed capital includes items such as the par value of all outstanding shares and premiums less discounts on issuance. **Earned capital** is the capital that develops from profitable operations. It consists of all undistributed income that remains invested in the company. **Retained earnings** represents the earned capital of the company.

As indicated above, equity is a **residual interest** and therefore its value is derived from the amount of the corporations' assets and liabilities. Only in unusual cases will a company's equity equal the total fair value of its shares. For example, **BMW** recently had total equity of €20,265 million and a market capitalization of €21,160 million. BMW's equity represents the net contributions from shareholders (from both majority and minority shareholders) plus retained earnings and accumulated other comprehensive income. As a residual interest, its equity has no existence apart from the assets and liabilities of BMW—equity equals net assets. Equity is not a claim to specific assets but a claim against a portion of the total

assets. Its amount is not specified or fixed; it depends on BMW's profitability. Equity grows if it is profitable. It shrinks, or may disappear entirely, if BMW loses money.

Issuance of Ordinary Shares Under IFRS, the accounting for share issuances is similar to GAAP. The primary difference is the account titles. GAAP uses an account, Common Stock, for the par value of shares, while IFRS uses an account labeled Share Capital. What about no-par shares? In some countries, as in the United States, the total issue price for no-par shares may be considered legal capital, which could reduce the flexibility in paying dividends. Corporations sell no-par shares, like par value shares, for whatever price they will bring. However, unlike par value shares, corporations issue them without a premium or a discount. The exact amount received represents the credit to ordinary or preference shares.

For example, Video Electronics is organized with 10,000 ordinary shares authorized without par value. Video Electronics makes only a memorandum entry for the authorization, inasmuch as no amount is involved. If Video Electronics then issues 500 shares for cash at \$10 per share, it makes the following entry.

| | | |
|------------------------|-------|-------|
| Cash | 5,000 | |
| Share Capital—Ordinary | | 5,000 |

If it issues another 500 shares for \$11 per share, Video Electronics makes this entry.

| | | |
|------------------------|-------|-------|
| Cash | 5,500 | |
| Share Capital—Ordinary | | 5,500 |

True no-par shares should be carried in the accounts at issue price without any share premium reported. But some countries require that no-par shares have a **stated value**. The stated value is a minimum value below which a company cannot issue shares. Thus, instead of being no-par shares, such stated-value shares become, in effect, shares with a very low par value. It thus is open to all the criticism and abuses that first encouraged the development of no-par shares.

If no-par shares have a stated value of \$5 per share but sell for \$11, all such amounts in excess of \$5 are recorded as share premium, which in many jurisdictions is fully or partially available for dividends. Thus, no-par value shares, with a low stated value, permit a new corporation to commence its operations with share premium that may exceed its stated capital. For example, if a company issued 1,000 of the shares with a \$5 stated value at \$15 per share for cash, it makes the following entry.

| | | |
|------------------------|--------|--------|
| Cash | 15,000 | |
| Share Capital—Ordinary | | 5,000 |
| Share Premium—Ordinary | | 10,000 |

Most corporations account for no-par shares with a stated value as if they were par value shares with par equal to the stated value.

Accounting for and Reporting Preference Shares

The accounting for preference shares at issuance is similar to that for ordinary shares. A corporation allocates proceeds between the par value of the preference shares and share premium. To illustrate, assume that Bishop Co. issues 10,000 shares of \$10 par value preference shares for \$12 cash per share. Bishop records the issuance as follows.

| | | |
|--------------------------|---------|---------|
| Cash | 120,000 | |
| Share Capital—Preference | | 100,000 |
| Share Premium—Preference | | 20,000 |

Thus, Bishop maintains separate accounts for these different classes of shares. Corporations consider convertible preference shares as a part of equity. In addition, when exercising convertible preference shares, there is no theoretical justification for recognition of a gain or loss. A company recognizes no gain or loss when dealing with shareholders in their capacity as business owners. Instead, the company **employs the book value method**: debit Share Capital—Preference, along with any related Share Premium—Preference; credit Share Capital—Ordinary and Share Premium—Ordinary (if an excess exists).

Preference shares generally have no maturity date. Therefore, no legal obligation exists to pay the preference shareholder. As a result, companies classify preference shares as part of equity. Companies generally report preference shares at par value as the first item in the equity section. They report any excess over par value as part of share premium. They also consider dividends on preference shares as a distribution of income and not an expense. Companies must disclose the pertinent rights of the preference shares outstanding.

Presentation of Equity

Statement of Financial Position **Illustration IFRS15.1** shows a comprehensive equity section from the statement of financial position of Frost Company that includes the equity items we discussed previously.

| Frost Company Equity December 31, 2020 | | |
|--|-------------|----------------------------|
| Share capital—preference, \$100 par value, 7% cumulative, 100,000 shares authorized, 30,000 shares issued and outstanding | \$3,000,000 | |
| Share capital—ordinary, no-par, stated value \$10 per share, 500,000 shares authorized, 400,000 shares issued | 4,000,000 | |
| Ordinary share dividend distributable | 200,000 | \$ 7,200,000 |
| Share premium—preference | 150,000 | |
| Share premium—ordinary | 840,000 | 990,000 |
| Retained earnings | | 4,360,000 |
| Treasury shares (2,000 ordinary shares) | | (190,000) |
| Accumulated other comprehensive loss | | (360,000) |
| Total equity | | <u>\$12,000,000</u> |

ILLUSTRATION IFRS15.1

Comprehensive Equity Presentation

Frost should disclose the pertinent rights and privileges of the various securities outstanding. For example, companies must disclose all of the following: dividend and liquidation preferences, participation rights, call prices and dates, conversion or exercise prices and pertinent dates, sinking fund requirements, unusual voting rights, and significant terms of contracts to issue additional shares. Liquidation preferences should be disclosed in the equity section of the statement of financial position, rather than in the notes to the financial statements, to emphasize the possible effect of this restriction on future cash flows.

Presentation of Statement of Changes in Equity Companies are also required to present a statement of changes in equity. The statement of changes in equity includes the following.

1. Total comprehensive income for the period, showing separately the total amounts attributable to owners of the parent and to non-controlling interests.
2. For each component of equity, the effects of retrospective application or retrospective restatement.
3. For each component of equity, a reconciliation between the carrying amount at the beginning and the end of the period, separately disclosing changes resulting from:
 - a. Profit or loss;
 - b. Each item of other comprehensive income; and
 - c. Transactions with owners in their capacity as owners, showing separately contributions by and distributions to owners and changes in ownership interests in subsidiaries that do not result in a loss of control.

A typical statement of changes in equity is shown in **Illustration IFRS15.2**.

ILLUSTRATION IFRS15.2 Statement of Changes in Equity

| | Share Capital | Retained Earnings | Unrealized Holding Gain (Loss) on Non-Trading Equity Investments | Unrealized Holding Gain (Loss) on Property, Plant, and Equipment | Total |
|----------------------------|------------------|----------------------|--|--|--------------------|
| Balance—December 31, 2020 | \$600,000 | \$120,000 | \$22,000 | \$15,000 | \$ 757,000 |
| Issue of Ordinary Shares | 200,000 | | | | 200,000 |
| Total Comprehensive Income | | 70,000 | 11,000 | 8,000 | 89,000 |
| Dividends | | (20,000) | | | (20,000) |
| Balance—December 31, 2021 | <u>\$800,000</u> | <u>\$170,000</u> | <u>\$33,000</u> | <u>\$23,000</u> | <u>\$1,026,000</u> |

In addition, companies are required to present, either in the statement of changes in equity or in the notes, the amount of dividends recognized as distributions to owners during the period and the related amount per share.

On the Horizon

As indicated in earlier discussions, the IASB and the FASB are currently working on projects related to financial statement presentation. An important part of these studies is to determine whether certain line items, subtotals, and totals should be clearly defined and required to be displayed in the financial statements. For example, it is likely that the statement of changes in equity and its presentation will be examined closely. In addition, the options of how to present other comprehensive income under GAAP will change in any converged standard.

IFRS Self-Test Questions

- Which of the following does **not** represent a pair of GAAP/IFRS-comparable terms?
 - Additional paid-in capital/Share premium.
 - Treasury stock/Repurchase reserve.
 - Common stock/Share capital—ordinary.
 - Preferred stock/Preference shares.
- Under IFRS, the amount of capital received in excess of par value would be credited to:
 - Retained Earnings.
 - Contributed Capital.
 - Share Premium.
 - Par value is not used under IFRS.
- The term *reserves* is used under IFRS with reference to all of the following **except**:
 - gains and losses on revaluation of property, plant, and equipment.
 - capital received in excess of the par value of issued shares.
 - retained earnings.
 - fair value differences.
- Which of the following is **false**?
 - Under GAAP, companies cannot record gains on transactions involving their own shares.
 - Under IFRS, companies cannot record gains on transactions involving their own shares.
 - Under IFRS, the statement of stockholders' equity is a required statement.
 - Under IFRS, a company records a revaluation surplus when it experiences an increase in the price of its common stock.
- Under IFRS, a purchase by a company of its own shares results in:
 - an increase in treasury shares.
 - a decrease in assets.
 - a decrease in equity.
 - All of the above.

IFRS Concepts and Application

IFRS15.1 Where can authoritative IFRS guidance related to stockholders' equity be found?

IFRS15.2 Briefly describe some of the similarities and differences between GAAP and IFRS with respect to the accounting for stockholders' equity.

IFRS15.3 Briefly discuss the implications of the financial statement presentation project for the reporting of stockholders' equity.

IFRS15.4 Mary Tokar is comparing a GAAP-based company to a company that uses IFRS. Both companies report available-for-sale debt investments. The IFRS company reports unrealized losses on these investments under the heading "Reserves" in its equity section. However, Mary can find no similar heading in the GAAP-based company financial statements. Can Mary conclude that the GAAP-based company has no unrealized gains or losses on its available-for-sale debt investments? Explain.

IFRS15.5 Explain each of the following terms: authorized ordinary shares, unissued ordinary shares, issued ordinary shares, outstanding ordinary shares, and treasury shares.

IFRS15.6 Indicate how each of the following accounts should be classified in the equity section.

- | | |
|----------------------------|--|
| a. Share Capital—Ordinary. | e. Share Premium—Treasury. |
| b. Retained Earnings. | f. Share Capital—Preference. |
| c. Share Premium—Ordinary. | g. Accumulated Other Comprehensive Income. |
| d. Treasury Shares. | |

IFRS15.7 Kaymer Corporation issued 300 shares of \$10 par value ordinary shares for \$4,500. Prepare Kaymer's journal entry.

IFRS15.8 Wilco Corporation has the following account balances at December 31, 2020.

| | |
|---------------------------------------|------------|
| Share capital—ordinary, \$5 par value | \$ 510,000 |
| Treasury shares | 90,000 |
| Retained earnings | 2,340,000 |
| Share premium—ordinary | 1,320,000 |

Instructions

Prepare Wilco's December 31, 2020, equity section.

IFRS15.9 Ravonette Corporation issued 300 shares of \$10 par value ordinary shares and 100 shares of \$50 par value preference shares for a lump sum of \$13,500. The ordinary shares have a market price of \$20 per share, and the preference shares have a market price of \$90 per share.

Instructions

Prepare the journal entry to record the issuance.

IFRS15.10 Weisberg Corporation has 10,000 shares of \$100 par value, 6%, preference shares and 50,000 ordinary shares of \$10 par value outstanding at December 31, 2020.

Instructions

Answer the questions in each of the following independent situations.

- If the preference shares are cumulative and dividends were last paid on the preference shares on December 31, 2017, what are the dividends in arrears that should be reported on the December 31, 2020, statement of financial position? How should these dividends be reported?
- If the preference shares are convertible into seven shares of \$10 par value ordinary shares and 3,000 shares are converted, what entry is required for the conversion, assuming the preference shares were issued at par value?
- If the preference shares were issued at \$107 per share, how should the preference shares be reported in the equity section?

IFRS15.11 Teller Corporation's post-closing trial balance at December 31, 2020, was as follows.

| Teller Corporation | | |
|---|--------------------|--------------------|
| Post-Closing Trial Balance | | |
| December 31, 2020 | | |
| | <u>Dr.</u> | <u>Cr.</u> |
| Accounts payable | | \$ 310,000 |
| Accounts receivable | \$ 480,000 | |
| Accumulated depreciation—building and equipment | | 185,000 |
| Allowance for doubtful accounts | | 30,000 |
| Bonds payable | | 700,000 |
| Building and equipment | 1,450,000 | |
| Cash | 190,000 | |
| Dividends payable on preference shares—cash | | 4,000 |
| Inventories | 560,000 | |
| Land | 400,000 | |
| Prepaid expenses | 40,000 | |
| Retained earnings | | 201,000 |
| Share capital—ordinary (\$1 par value) | | 200,000 |
| Share capital—preference (\$50 par value) | | 500,000 |
| Share premium—ordinary | | 1,000,000 |
| Share premium—treasury | | 160,000 |
| Treasury shares—ordinary at cost | 170,000 | |
| Totals | <u>\$3,290,000</u> | <u>\$3,290,000</u> |

At December 31, 2020, Teller had the following number of ordinary and preference shares.

| | <u>Ordinary</u> | <u>Preference</u> |
|-------------|-----------------|-------------------|
| Authorized | 600,000 | 60,000 |
| Issued | 200,000 | 10,000 |
| Outstanding | 190,000 | 10,000 |

The dividends on preference shares are \$4 cumulative. In addition, the preference shares have a preference in liquidation of \$50 per share.

Instructions

Prepare the equity section of Teller's statement of financial position at December 31, 2020.

Professional Research

IFRS15.12 Hincapie Co. (a specialty bike-accessory manufacturer) is expecting growth in sales of some products targeted to the low-price market. Hincapie is contemplating a preference share issue to help finance this expansion in operations. The company is leaning toward preference shares because ownership will not be diluted, but the investors will get an extra dividend if the company does well. The company management wants to be certain that its reporting of this transaction is transparent to its current shareholders and wants you to research the disclosure requirements related to its capital structure.

Instructions

Access the IFRS authoritative literature at the IASB website. (Click on the IFRS tab and then register for free eIFRS access if necessary.) When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- a. Identify the authoritative literature that addresses disclosure of information about capital structure.
- b. What information about share capital must companies disclose? Discuss how Hincapie should report the proposed preference share issue.

International Financial Reporting Problem

Marks and Spencer plc (M&S)

IFRS15.13 The financial statements of **M&S** are presented in Appendix E. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- a. What is the par or stated value of M&S's preference shares?
- b. What is the par or stated value of M&S's ordinary shares?
- c. What percentage of M&S's authorized ordinary shares was issued at 1 April 2017?
- d. What was the pound amount effect of the cash dividends on M&S's equity?
- e. What is M&S's return on ordinary share equity for 2017 and 2016?
- f. What is M&S's payout ratio for 2017 and 2016?

Dilutive Securities and Earnings per Share

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

1. Describe the accounting for the issuance, conversion, and retirement of convertible securities.
2. Contrast the accounting for stock warrants with stock warrants issued with other securities.
3. Describe the accounting and reporting for stock compensation plans.
4. Compute basic earnings per share.
5. Compute diluted earnings per share.

PREVIEW OF CHAPTER 16 As the following opening story indicates, companies are rethinking the use of various forms of stock-based compensation. The purpose of this chapter is to discuss the proper accounting for stock-based compensation. In addition, the chapter examines issues related to other types of financial instruments, such as convertible securities, warrants, and contingent shares, including their effects on reporting earnings per share. The content and organization of the chapter are as follows.

This chapter also includes numerous conceptual and global discussions that are integral to the topics presented here.

DILUTIVE SECURITIES AND EARNINGS PER SHARE

Kicking the Habit

Some habits die hard. Take stock options—called by some “the crack cocaine of incentives.” Stock options are a form of compensation that gives key employees the choice to purchase shares at a given (usually lower-than-market) price. For many years, companies were hooked on these products. Why? The combination of a hot equity market and favorable

accounting treatment made stock options the incentive of choice. They were compensation with no expense to the companies that granted them, and they were popular with key employees, so companies granted them with abandon. However, the accounting rules that took effect in 2005 required expensing the fair value of stock options when granted. This new treatment has made it easier for companies to kick this habit.

As shown in the following chart, for both large companies and high-tech companies, a shift has occurred in the use of stock options versus restricted stock. In fact, starting in 2006 (at the time of a new standard on stock compensation), both types of companies started switching to restricted-stock plans. As a spokesperson at one company commented, “Once you begin expensing options, the attractiveness significantly drops.”

| | Large Companies | | High-Tech Companies | |
|--|-----------------|------|---------------------|------|
| | 2016 | 2013 | 2016 | 2013 |
| Types of equity awards granted—by number of units (median) | | | | |
| Stock options | 54% | 74% | 67% | 76% |
| Restricted stock | 46 | 26 | 33 | 24 |
| Types of equity awards granted—by value of awards (median) | | | | |
| Stock options | 22 | 48 | 44 | 55 |
| Restricted stock | 78 | 52 | 56 | 45 |

These stock-based awards in most cases are reserved for the key officers of a company. When coupled with other forms of compensation, these pay elements often lead to compensation levels that are quite high. To provide additional information on these levels of compensation, Congress passed the Dodd-Frank Act (2010), resulting in SEC rules requiring companies to disclose:

- The median of the annual total compensation of all employees of the company, except the CEO.
- The annual total compensation of its CEO.
- The ratio of the two amounts.

Often referred to as the “pay ratio rule,” the purpose of this disclosure is to inform investors of the magnitude of a company’s CEO pay package in relationship to the overall pay package of its employees. Some believe that this requirement does not go far enough because it shows only the CEO’s pay in relation to a median pay of its employees (two data points) without consideration of the allocations of pay amounts within the organization. Others contend that this information may be helpful to the board of directors in evaluating pay packages related to key executives.

For the largest 100 companies, these pay ratios are considerably higher. For example, one study had an estimate of 235-to-1 for large companies, whereas for smaller companies such as in the Russell 3000 index, the ratio is approximately 72-to-1. In some cases, the ratio is quite high because certain companies employ large groups of retail, temporary, or foreign workers whose wages are quite low. Two examples are **Manpower Group** (2,483-to-1) or retailer **Kohl’s** 1,264-to-1. Conversely, Warren Buffett, one of the richest individuals in the world and the CEO of **Berkshire Hathaway**, only takes a salary of \$100,000 plus costs related to security. Berkshire Hathaway’s ratio is just 1.87-to-1.

Review and Practice

Go to the **Review and Practice** section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions as well as additional exercises and practice problem with solutions are also available online.

Dilutive Securities

LEARNING OBJECTIVE 1

Describe the accounting for the issuance, conversion, and retirement of convertible securities.

Debt and Equity

Many of the controversies related to the accounting for financial instruments such as stock options, convertible securities, and preferred stock relate to whether companies should report these instruments as a liability or as equity. For example, companies should classify nonredeemable common shares as equity because the issuer has no **obligation** to pay dividends or repurchase the stock. Declaration of dividends is at the issuer's discretion, as is the decision to repurchase the stock. Similarly, preferred stock that is not redeemable does not require the issuer to pay dividends or repurchase the stock. Thus, nonredeemable common or preferred stock lacks an important characteristic of a liability—an obligation to pay the holder of the common or preferred stock at some point in the future.

However the classification is not as clear-cut for other financial instruments. For example, in Chapter 15 we discussed the accounting for mandatorily redeemable preferred stock. Companies originally classified this security as part of equity. The SEC then prohibited equity classification, and most companies classified these securities between debt and equity on the balance sheet in a separate section often referred to as the “mezzanine section.” The FASB now requires companies to report these types of securities as a liability.¹ [1] (See the FASB Codification References near the end of the chapter.)

In this chapter, we discuss securities that have characteristics of *both* debt and equity. For example, a convertible bond has both debt and equity characteristics. Should a company classify this security as debt, as equity, or as part debt and part equity? In addition, how should a company compute earnings per share if it has convertible bonds and other convertible securities in its capital structure? Convertible securities as well as options, warrants, and other securities are often called **dilutive securities** because upon exercise they may reduce (dilute) earnings per share.

Accounting for Convertible Debt

Convertible bonds can be changed into other corporate securities during some specified period of time after issuance. A convertible bond combines the benefits of a bond with the privilege of exchanging it for stock at the holder's option. Investors who purchase it desire the security of a bond holding (guaranteed interest and principal) plus the added option of conversion if the value of the stock appreciates significantly.

Corporations issue convertible securities for two main reasons. One is to raise equity capital without giving up more ownership control than necessary. To illustrate, assume a company wants to raise \$1 million; its common stock is selling at \$45 a share. To raise the \$1 million, the company would have to sell 22,222 shares (ignoring issue costs). By selling 1,000 bonds at \$1,000 par, each

¹ The FASB (and IASB) have studied the accounting for financial instruments with characteristics of both debt and equity. At one time, the Boards proposed a definition of equity that is far more restrictive than current practice. Under the proposed “basic ownership approach,” only common stock is classified as equity. All other instruments (e.g., preferred stock, options, and convertible debt) are classified as liabilities. Instruments classified as liabilities are measured at fair value, and changes are reported in income. Adoption of a narrow definition provides fewer opportunities to structure instruments and arrangements to achieve a desired accounting treatment.

The FASB has a project on distinguishing liabilities from equity (including convertible debt) with the objective of improving understandability and reducing complexity (without loss of information for users). Go to the FASB website (click on Projects and then Technical Agenda) for more details.

convertible into 20 shares of common stock, the company could raise \$1 million by committing only 20,000 shares of its common stock.

A second reason to issue convertibles is to obtain debt financing at cheaper rates. Many companies could issue debt only at high interest rates unless they attach a convertible covenant. The conversion privilege entices the investor to accept a lower interest rate than would normally be the case on a straight debt issue. For example, **Amazon.com** at one time issued convertible bonds that pay interest at an effective yield of 4.75 percent. This rate was much lower than Amazon would have had to pay by issuing straight debt. For this lower interest rate, the investor receives the right to buy Amazon's common stock at a fixed price until the bond's maturity.²

As indicated earlier, the accounting for convertible debt involves reporting issues at the time of (1) issuance, (2) conversion, and (3) retirement.

At Time of Issuance

The method for recording convertible bonds **at the date of issue follows the method used to record straight debt issues**. None of the proceeds are recorded as equity (see **Global View**). Companies amortize to the maturity date any discount or premium that results from the issuance of convertible bonds. Why this treatment? Because it is difficult to predict when, if at all, conversion will occur. However, the accounting for convertible debt as a straight debt issue is controversial; we discuss it more fully later in the chapter.

Global View

IFRS requires that the issuer of convertible debt record the liability and equity components separately.

At Time of Conversion

If converting bonds into other securities, a company uses the **book value method** to record the conversion. The book value method records the securities exchanged for the bond at the carrying amount (book value) of the bond.

To illustrate, assume that Hilton, Inc. has a \$1,000 bond that is convertible into 10 shares of common stock (par value \$10). At the time of conversion, the unamortized premium is \$50. Hilton records the conversion of the bonds as follows.

| | | |
|---|-------|-----|
| Bonds Payable | 1,000 | |
| Premium on Bonds Payable | 50 | |
| Common Stock (10 × \$10) | | 100 |
| Paid-in Capital in Excess of Par—Common Stock | | 950 |

Support for the book value approach is based on the argument that an agreement was established at the date of the issuance either to pay a stated amount of cash at maturity or to issue a stated number of shares of equity securities. Therefore, when the debtholder converts the debt to equity in accordance with the preexisting contract terms, the issuing company recognizes no gain or loss upon conversion.

Induced Conversions

Sometimes the issuer wishes to encourage prompt conversion of its convertible debt to equity securities in order to reduce interest costs or to improve its debt to equity ratio. Thus, the issuer may offer some form of additional consideration (such as cash or common stock), called a “sweetener,” to **induce conversion**. The issuing company reports the sweetener as an expense of the current period. Its amount is the fair value of the additional securities or other consideration given.

²As with any investment, a buyer has to be careful. For example, **Wherehouse Entertainment Inc.**, which had 6¼ percent convertibles outstanding, was taken private in a leveraged buyout. As a result, the convertible was suddenly as risky as a junk bond of a highly leveraged company with a coupon of only 6¼ percent. As one holder of the convertibles noted, “What’s even worse is that the company will be so loaded down with debt that it probably won’t have enough cash flow to make its interest payments. And the convertible debt we hold is subordinated to the rest of Wherehouse’s debt.” These types of situations make convertibles less attractive and lead to the introduction of take-over protection covenants in some convertible bond offerings. Or, sometimes convertibles are permitted to be called at par, and therefore the conversion premium may be lost.

Assume that Helloid, Inc. has outstanding \$1,000,000 par value convertible debentures convertible into 100,000 shares of \$1 par value common stock. Helloid wishes to reduce its annual interest cost. To do so, Helloid agrees to pay the holders of its convertible debentures an additional \$80,000 if they will convert. Assuming conversion occurs, Helloid makes the following entry.

| | | |
|---|-----------|---------|
| Debt Conversion Expense | 80,000 | |
| Bonds Payable | 1,000,000 | |
| Common Stock (100,000 × \$1) | | 100,000 |
| Paid-in Capital in Excess of Par—Common Stock | | 900,000 |
| Cash | | 80,000 |

Helloid records the additional \$80,000 as **an expense of the current period** and not as a reduction of equity.

Some argue that the cost of a conversion inducement is a cost of obtaining equity capital. As a result, they contend, companies should recognize the cost of conversion as a cost of (a reduction of) the equity capital acquired, and not as an expense. However, the FASB indicated that when an issuer makes an additional payment to encourage conversion, the payment is for a service (bondholders converting at a given time) and should be reported as an expense.

Retirement of Convertible Debt

As indicated earlier, the method for recording the **issuance** of convertible bonds follows that used in recording straight debt issues. Specifically this means that issuing companies should not attribute any portion of the proceeds to the conversion feature, nor should it credit a paid-in capital account.

Although some raise theoretical objections to this approach, to be consistent, companies need to recognize a gain or loss on **retiring convertible debt in the same way that they recognize a gain or loss on retiring nonconvertible debt**. For this reason, companies should report differences between the cash acquisition price of debt and its carrying amount **in current income as a gain or loss**.

Convertible Preferred Stock

Convertible preferred stock includes an option for the holder to convert preferred shares into a fixed number of common shares. The major difference between accounting for a convertible bond and convertible preferred stock at the date of issue is their classification. Convertible bonds are considered liabilities, whereas convertible preferreds (unless mandatory redemption exists) are considered part of stockholders' equity.

In addition, when stockholders exercise convertible preferred stock, there is no theoretical justification for recognizing a gain or loss. A company does not recognize a gain or loss when it deals with stockholders in their capacity as business owners. Therefore, companies do not recognize a gain or loss when stockholders exercise convertible preferred stock.

In accounting for the exercise of convertible preferred stock, a company uses the **book value method**. It debits Preferred Stock, along with any related Paid-in Capital in Excess of Par—Preferred Stock, and it credits Common Stock and Paid-in Capital in Excess of Par—Common Stock (if an excess exists). The treatment differs when the par value of the common stock issued **exceeds** the book value of the preferred stock. In that case, the company usually debits Retained Earnings for the difference.

To illustrate, assume Host Enterprises issued 1,000 shares of common stock (par value \$2) upon conversion of 1,000 shares of preferred stock (par value \$1) that was originally issued for a \$200 premium. The entry would be:

| | | |
|--|-------|-------|
| Convertible Preferred Stock (1,000 × \$1) | 1,000 | |
| Paid-in Capital in Excess of Par—Preferred Stock | 200 | |
| Retained Earnings | 800 | |
| Common Stock (1,000 × \$2) | | 2,000 |

The rationale for the debit to Retained Earnings is that Host has offered the preferred stockholders an **additional return** to facilitate their conversion to common stock. In this

example, Host charges the additional return to retained earnings. Many states, however, require that this charge simply reduce additional paid-in capital from other sources.

What Do the Numbers Mean? How Low Can You Go?

What do **Tesla Motors Inc.**, **Twitter Inc.**, **Etsy, Inc.**, **Red Hat Inc.**, and **Priceline Group Inc.** all have in common? They are part of the wave of U.S. companies who have raised capital in the convertible bond market. And quite a wave it is. As indicated in the following chart, convertible bond issuances are on an upward trend with over \$20 billion issued in the first two quarters of 2018.

These bonds are popular with issuing companies and investors. As we have discussed, companies like them because they allow them to raise money at rates lower than those on ordinary bonds. Investors like them because, at a time of low interest rates, they can book extra profit if the issuer's stock price rises. However, depending on the features of the bond and the stock value, some unusual results may be observed.

Consider the convertible bonds issued by **STMicroelectronics (STM)**. STM's 10-year bonds have a zero coupon and are convertible into STM common stock at an exercise price of \$33.43. When issued, the bonds sold at an effective yield of *minus 0.05* percent. That's right—a negative yield. How could this happen? When STM issued the bonds, investors thought the options to convert were so valuable that they were willing to take zero interest payments and invest an amount *in excess of* the maturity value of the bonds.

In essence, the investors are paying interest to STM, and STM records interest revenue. Why would investors do this? If the stock price rises, as many thought it would for STM and many tech companies at that time, these bond investors could convert and get a big gain in the stock.

Investors did get some additional protection in the deal: They can redeem the \$1,000 bonds after three years and receive \$975 (and after five and seven years, for lower amounts) if it looks like the bonds will never convert. In the end, STM has issued bonds with a significant equity component. And because the entire bond issue is classified as debt, STM records negative interest expense.

Cherney, "Convertible Bonds Take Off in Low-Yield Era," *Wall Street Journal* (October 5, 2014); and M. Farrell, "Bull Market in Tech-Company Convertible Debt Rages On," *Wall Street Journal* (May 25, 2018).

Stock Warrants

LEARNING OBJECTIVE 2

Contrast the accounting for stock warrants with stock warrants issued with other securities.

Warrants are certificates entitling the holder to acquire shares of stock at a certain price within a stated period. This option is similar to the conversion privilege in a convertible bond. Warrants, if exercised, become common stock and usually have a dilutive effect (reduce earnings per share) similar to that of the conversion of convertible securities. However, a substantial difference between convertible securities and stock warrants is that upon exercise of the warrants, the holder has to pay a certain amount of money to obtain the shares.

The issuance of warrants or options to buy additional shares normally arises under three situations:

1. When issuing different types of securities, such as bonds or preferred stock, companies often include warrants **to make the security more attractive**—by providing an "equity kicker."
2. Upon the issuance of additional common stock, existing stockholders have a **preemptive right to purchase common stock** first. Companies may issue warrants to evidence that right.

3. Companies give warrants, often referred to as *stock options*, to **executives and employees** as a form of **compensation**.

The problems in accounting for stock warrants are complex and present many difficulties—some of which remain unresolved. The following sections address the accounting for stock warrants in the three situations listed above.

Stock Warrants Issued with Other Securities

Warrants issued with other securities are basically long-term options to buy common stock at a fixed price. Generally the life of warrants is five years, occasionally 10 years; very occasionally, a company may offer perpetual warrants.

A warrant works like this. **Tenneco, Inc.** offered a unit comprising one share of stock and one detachable warrant. As its name implies, the **detachable stock warrant** can be detached (separated) from the stock and traded as a separate security. The Tenneco warrant in this example is exercisable at \$24.25 per share and good for five years. The unit (share of stock plus detachable warrant) sold for 22.75 (\$22.75). Since the price of the common stock the day before the sale was 19.88 (\$19.88), the difference suggests a price of 2.87 (\$2.87) for the warrant.

The investor pays for the warrant in order to receive the right to buy the stock, at a fixed price of \$24.25, sometime in the future. It would not be profitable at present for the purchaser to exercise the warrant and buy the stock, because the price of the stock was much below the exercise price.³ But if, for example, the price of the stock rises to \$30, the investor gains \$2.88 ($\$30 - \$24.25 - \$2.87$) on an investment of \$2.87, a 100 percent increase! If the price never rises, the investor loses the full \$2.87 per warrant.⁴

A company should allocate the proceeds from the sale of debt with detachable stock warrants **between the two securities**.⁵ The profession takes the position that two separable instruments are involved, that is, (1) a bond and (2) a warrant giving the holder the right to purchase common stock at a certain price. Companies can trade detachable warrants separately from the debt. This allows the determination of a fair value. The two methods of allocation available are:

1. The proportional method.
2. The incremental method.

Proportional Method

At one time, **AT&T** issued bonds with detachable five-year warrants to buy one share of common stock (par value \$5) at \$25. At the time, a share of AT&T stock was selling for approximately \$50. These warrants enabled AT&T to price its bond offering at par with an 8¾ percent yield (quite a bit lower than prevailing rates at that time). To account for the proceeds from this offering, AT&T would place a value on the two securities: (1) the value of the bonds without the warrants, and (2) the value of the warrants. The **proportional method** then allocates the proceeds using the proportion of the two amounts, based on fair values.

For example, assume that AT&T's bonds (par \$1,000) sold for 99 without the warrants soon after their issue. The market price of the warrants at that time was \$30. (Prior to sale the warrants will not have a fair value.) The allocation relies on an estimate of fair value, generally as established by an investment banker, or on the relative fair value of the bonds and the warrants soon after the company issues and trades them. The price paid for 10,000, \$1,000 bonds with the warrants attached was par, or \$10,000,000. **Illustration 16.1** shows the proportional allocation of the bond proceeds between the bonds and warrants.

³Later in this discussion, we will show that the value of the warrant is normally determined on the basis of a relative fair value approach because of the difficulty of imputing a warrant value in any other manner.

⁴From the example, it is apparent that buying warrants can be an "all or nothing" proposition.

⁵A detachable warrant means that the warrant can sell separately from the bond. GAAP makes a distinction between detachable and nondetachable warrants because companies must sell nondetachable warrants with the security as a complete package. Thus, no allocation is permitted. [2]

ILLUSTRATION 16.1**Proportional Allocation of Proceeds between Bonds and Warrants**

| | | |
|--|---|---------------------|
| Fair value of bonds (without warrants) ($\$10,000,000 \times .99$) | | \$ 9,900,000 |
| Fair value of warrants ($10,000 \times \$30$) | | <u>300,000</u> |
| Aggregate fair value | | <u>\$10,200,000</u> |
| Allocated to bonds: | $\frac{\$9,900,000}{\$10,200,000} \times \$10,000,000 = \$$ | 9,705,882 |
| Allocated to warrants: | $\frac{\$300,000}{\$10,200,000} \times \$10,000,000 = \$$ | <u>294,118</u> |
| Total allocation | | <u>\$10,000,000</u> |

In this situation, the bonds sell at a discount. AT&T records the sale as follows.

| | | |
|---------------------------|-----------|------------|
| Cash | 9,705,882 | |
| Discount on Bonds Payable | 294,118 | |
| Bonds Payable | | 10,000,000 |

In addition, AT&T sells warrants that it credits to paid-in capital. It makes the following entry.

| | | |
|--------------------------------|---------|---------|
| Cash | 294,118 | |
| Paid-in Capital—Stock Warrants | | 294,118 |

AT&T may combine the entries if desired. Here, we show them separately, to indicate that the purchaser of the bond is buying not only a bond but also a possible future claim on common stock in the form of the stock warrant.

Assuming investors exercise all 10,000 warrants (one warrant per one share of stock), AT&T makes the following entry.

| | | |
|---|---------|---------|
| Cash ($10,000 \times \$25$) | 250,000 | |
| Paid-in Capital—Stock Warrants | 294,118 | |
| Common Stock ($10,000 \times \$5$) | | 50,000 |
| Paid-in Capital in Excess of Par—Common Stock | | 494,118 |

What if investors fail to exercise the warrants? In that case, AT&T debits Paid-in Capital—Stock Warrants for \$294,118 and credits Paid-in Capital—Expired Stock Warrants for a like amount. The additional paid-in capital reverts to the former stockholders.

Incremental Method

In instances where a company cannot determine the fair value of either the warrants or the bonds, it applies the **incremental method** used in lump-sum security purchases (as explained in Chapter 15). That is, the company uses the security for which it *can* determine the fair value. It allocates the remainder of the purchase price to the security for which it does not know the fair value.

For example, assume that the fair value of the AT&T warrants is \$300,000, but the company cannot determine the fair value of the bonds without the warrants. **Illustration 16.2** shows the amount allocated to the warrants and the stock in this case.

ILLUSTRATION 16.2**Incremental Allocation of Proceeds between Bonds and Warrants**

| | |
|----------------------------|---------------------|
| Lump-sum receipt | \$10,000,000 |
| Allocated to the warrants | <u>(300,000)</u> |
| Balance allocated to bonds | <u>\$ 9,700,000</u> |

Conceptual Questions

The question arises whether the allocation of value to the warrants is consistent with the handling of convertible debt, in which companies allocate no value to the conversion privilege. The FASB stated that the features of a convertible security are **inseparable** in the sense that choices are mutually exclusive. The holder either converts the bonds or redeems them for

cash, but cannot do both. No basis, therefore, exists for recognizing the conversion value in the accounts.

The Board, however, indicated that the issuance of bonds with **detachable warrants** involves *two* securities, one a debt security, which will remain outstanding until maturity, and the other a warrant to purchase common stock. At the time of issuance, separable instruments exist. The existence of two instruments therefore justifies separate treatment. **Nondetachable warrants**, however, **do not require an allocation of the proceeds between the bonds and the warrants**. Similar to the accounting for convertible bonds, companies record the entire proceeds from nondetachable warrants as debt (see **Underlying Concepts**).⁶

Underlying Concepts

Reporting a convertible bond solely as debt is not representationally faithful. However, the cost constraint is used to justify the failure to allocate between debt and equity.

Rights to Subscribe to Additional Shares

If the directors of a corporation decide to issue new shares of stock, the old stockholders generally have the right (**preemptive privilege**) to purchase newly issued shares in proportion to their holdings. This privilege, referred to as a **stock right**, saves existing stockholders from suffering a dilution of voting rights without their consent. Also, it may allow them to purchase stock somewhat below its fair value. Unlike the warrants issued with other securities, the warrants issued for stock rights are of short duration.

The certificate representing the stock right states the number of shares the holder of the right may purchase. Each share of stock owned ordinarily gives the owner one stock right. The certificate also states the price at which the new shares may be purchased. The price is normally less than the current market price of such shares, which gives the rights a value in themselves. From the time they are issued until they expire, holders of stock rights may purchase and sell them like any other security.

Companies make only a memorandum entry when they issue rights to existing stockholders. This entry indicates the number of rights issued to existing stockholders in order to ensure that the company has additional unissued stock registered for issuance in case the rights are exercised. Companies make no formal entry at this time because they have not yet issued stock nor received cash.

If holders exercise the stock rights, a cash payment of some type usually is involved. If the company receives cash equal to the par value, it makes an entry crediting Common Stock at par value. If the company receives cash in excess of par value, it credits Paid-in Capital in Excess of Par—Common Stock. If it receives cash less than par value, a debit to Paid-in Capital in Excess of Par—Common Stock is appropriate.

What Do the Numbers Mean? Is That All Debt?

Many argue that the conversion feature of a convertible bond is not significantly different in nature from the call represented by a warrant. The question is whether, although the legal forms differ, sufficient similarities of substance exist to support the same accounting treatment. Some contend that inseparability *per se* is an insufficient basis for restricting allocation between identifiable components of a transaction.

Examples of allocation between assets of value in a single transaction *do* exist, such as allocation of values in basket

purchases and separation of principal and interest in capitalizing long-term leases. Critics of the current accounting for convertibles say that to deny recognition of value to the conversion feature merely looks to the form of the instrument and does not deal with the substance of the transaction. In an exposure draft on this subject, the FASB indicates that companies should separate the debt and equity components of securities such as convertible debt or bonds issued with nondetachable warrants (see footnotes 1 and 6).

⁶GAAP requires that for convertible debt that can be settled in cash, companies should account for the liability and equity components separately. In deliberations of the debt/equity project (see footnote 1), the FASB has proposed that all convertible bonds be separated into liability and equity components. [3] Academic research indicates that estimates of the debt and equity components of convertible bonds are subject to considerable measurement error. See Mary Barth, Wayne Landsman, and Richard Rendleman, Jr., "Option Pricing-Based Bond Value Estimates and a Fundamental Components Approach to Account for Corporate Debt," *The Accounting Review* (January 1998). This and other challenges explain in part the extended time needed to develop new standards in this area.

We agree with this position. In both situations (convertible debt and debt issued with warrants, whether detachable or not), the investor has made a payment to the company for an equity feature—the right to acquire an equity instrument in the future. The only real distinction between them is that the additional payment made when the equity instrument is formally acquired takes different forms. The warrant holder pays additional cash to the issuing company; the convertible debt holder pays for stock

by forgoing the receipt of interest from conversion date until maturity date and by forgoing the receipt of the maturity value itself. Thus, the difference is one of method or form of payment only, rather than one of substance. However, until the profession officially reverses its stand with respect to accounting for convertible debt, companies will continue to report convertible debt and bonds issued with nondetachable warrants solely as debt.

Stock Compensation Plans

LEARNING OBJECTIVE 3

Describe the accounting and reporting for stock compensation plans.

Effective compensation programs do the following:

1. Base compensation on employee and company performance.
2. Motivate employees to high levels of performance.
3. Help retain executives and allow for recruitment of new talent.
4. Maximize the employee's after-tax benefit and minimize the employer's after-tax cost.
5. Use performance criteria over which the employee has control.

Straight cash-compensation plans (salary and perhaps a bonus), though important, are oriented to the short run. Many companies recognize that they need a longer-term compensation plan in addition to the cash component.

Long-term compensation plans attempt to develop company loyalty among key employees by giving them “a piece of the action”—that is, an equity interest. These plans, generally referred to as **stock-based compensation plans**, come in many forms. For example, a **stock option** gives key employees the option to purchase common stock at a given price over an extended period of time. Essentially, these plans provide the employee with the opportunity to receive stock if the performance of the company (by whatever measure) is satisfactory. Typical performance measures focus on long-term improvements that are readily measurable and that benefit the company as a whole, such as increases in earnings per share, revenues, stock price, or market share.

Stock-based compensation is the largest single component for executive officers' pay for companies that comprise the S&P 500 (the largest companies in the United States). As shown in **Illustration 16.3**, the stock compensation of these executives far exceeds regular cash compensation (salary and bonuses).

ILLUSTRATION 16.3

Total Executive Pay by Form

| (\$ in millions) | 2016 | % of Total | 2015 | % of Total | Change |
|-----------------------|------------|------------|------------|------------|--------|
| Salary | \$ 1,983.7 | 11.2% | \$ 1,972.4 | 11.9% | 0.6% |
| Bonus | 522.7 | 2.9 | 515.3 | 3.1 | 1.4 |
| Salary and bonus | \$ 2,506.4 | 14.1% | \$ 2,487.7 | 14.9% | 0.8% |
| Stock awards | \$ 8,249.3 | 46.5% | \$ 7,319.1 | 44.0% | 12.7% |
| Option awards | 2,267.4 | 12.8 | 2,371.0 | 14.2 | −4.4 |
| Equity instrument pay | \$10,516.7 | 59.3% | \$ 9,690.1 | 58.2% | 8.5% |
| Non-equity incentives | \$ 2,948.5 | 16.6% | \$ 2,959.5 | 17.8% | −0.4% |
| Pension/deferred pay | 897.7 | 5.1 | 671.6 | 4.0 | 33.7 |
| Other | 854.3 | 4.8 | 832.1 | 5.0 | 2.7 |
| Total | \$17,723.6 | 100.0% | \$16,641.1 | 100.0% | 6.5% |

Sources: S&P 500 companies; J. Ciesielski, “2016 S&P 500 Executive Pay: Why and How Much It Matters to Shareholders,” *The Analyst's Accounting Observer*, Volume 26, No. 9 (August 25, 2017).

Salaries and bonuses comprise only 14.1 percent of total compensation, whereas stock compensation is 59.3 percent of total compensation. Interestingly, the remaining 26.6 percent are primarily non-equity incentives and pension and deferred payments. These compensation amounts are particularly high when you compare the level of compensation to a company's pretax income. For example, **Illustration 16.4** shows the relationship of the top five officers' total pay in relationship to pretax income for five different industries.

ILLUSTRATION 16.4 Top Five Company Officers' Total Pay vs. Pretax Income

| (\$ in millions) | Number of Firms | Total Pay | | Pretax Income | | % of Pretax Income | |
|------------------------|-----------------|------------|------------|---------------|---------------|--------------------|------|
| | | 2016 | 2015 | 2016 | 2015 | 2016 | 2015 |
| Real estate | 31 | \$ 770.3 | \$ 754.4 | \$ 23,703.9 | \$ 17,619.8 | 3.2% | 4.3% |
| Utilities | 27 | 713.8 | 625.7 | 27,567.5 | 36,253.0 | 2.6 | 1.7 |
| Materials | 25 | 679.5 | 678.8 | 27,030.3 | 26,411.6 | 2.5 | 2.6 |
| Consumer discretionary | 77 | 3,221.3 | 2,756.6 | 164,423.9 | 155,627.0 | 2.0 | 1.8 |
| Industrials | 63 | 1,934.1 | 1,919.6 | 132,333.5 | 141,372.5 | 1.5 | 1.4 |
| Health care | 54 | 1,827.9 | 1,918.2 | 131,924.6 | 122,718.1 | 1.4 | 1.6 |
| Information technology | 61 | 2,483.7 | 2,439.0 | 221,970.5 | 232,275.3 | 1.1 | 1.1 |
| Consumer staples | 34 | 1,447.6 | 1,168.5 | 148,347.9 | 130,620.0 | 1.0 | 0.9 |
| Financials | 63 | 2,394.2 | 2,230.2 | 284,754.1 | 293,858.1 | 0.8 | 0.8 |
| Telecom | 4 | 178.6 | 168.6 | 42,660.0 | 50,531.0 | 0.4 | 0.3 |
| Energy | 31 | 997.5 | 969.4 | (31,835.3) | (80,089.5) | NM | NM |
| | 470 | \$16,648.4 | \$15,629.1 | \$1,172,880.8 | \$1,127,196.9 | 1.4 | 1.4 |

Sources: S&P 500 companies; J. Ciesielski, "2016 S&P 500 Executive Pay: Why and How Much It Matters to Shareholders," *The Analyst's Accounting Observer*, Volume 26, No. 9 (August 25, 2017).

As indicated by the above levels of compensation, compensation costs related to key executives is significant. Indeed, the pay of the five key executives for S&P 500 companies accounted for nearly 1.5 percent of the companies' pretax income, with executives in the real estate industry leading the way at 3.2 percent. Specific examples of companies' pay amounts to pretax income are **Under Armour** 6.3 percent, **Netflix** 25 percent, and **Caterpillar** and **Estee Lauder** 5.7 percent. As a result, even with the required expensing of stock options and other stock award plans (like restricted-stock awards), companies continue to use these plans as the primary component to compensate key personnel.

Measurement—Stock Compensation

Suppose that as an employee for Hurdle Inc., you receive options to purchase 10,000 shares of the firm's common stock as part of your compensation. The date you receive the options is referred to as the **grant date**. The options are good for 10 years. The market price and the exercise price for the stock are both \$20 at the grant date. **What is the value of the compensation you just received?**

Some believe that what you have received has no value. They reason that because the difference between the market price and the exercise price is zero, no compensation results. Others argue these options do have value. If the stock price goes above \$20 any time in the next 10 years and you exercise the options, you may earn substantial compensation. For example, if at the end of the fourth year, the market price of the stock is \$30 and you exercise your options, you earn \$100,000 [10,000 options × (\$30 – \$20)], ignoring income taxes.

The question for Hurdle is how to report the granting of these options. One approach measures compensation cost by the excess of the market price of the stock over its exercise price at the grant date. This approach is referred to as the **intrinsic-value method**. It measures what the holder would receive today if the option was immediately exercised. That intrinsic value **is the difference between the market price of the stock and the exercise price of the options at the grant date**. Using the intrinsic-value method, Hurdle would not recognize any compensation expense related to your options because at the grant date the market price equaled the exercise price. (In the preceding paragraph, those who answered that the options had no value were looking at the question from the intrinsic-value approach.)

The second way to look at the question of how to report the granting of these options bases the cost of employee stock options on the **fair value** of the stock options granted. Under this **fair value method**, companies use acceptable option-pricing models to value the options at the date of grant. These models take into account the many factors that determine an option's underlying value.⁷

GAAP requires that companies recognize compensation cost using the fair value method (see **Global View**). [4] The FASB position is that companies should base the accounting for the cost of employee services on the fair value of compensation paid. This amount is presumed to be a measure of the value of the services received. The concept of fair value therefore applies to stock options as well as restricted-stock plans.

Many in corporate America resisted the fair value method. Many small high-technology companies were especially vocal in their opposition, arguing that only through offering stock options can they attract top professional management. They contended that recognizing large amounts of compensation expense under these plans places them at a competitive disadvantage against larger companies that can withstand higher compensation charges. As one high-tech executive stated, "If your goal is to attack fat-cat executive compensation in multi-billion dollar firms, then please do so! But not at the expense of the people who are 'running lean and mean,' trying to build businesses and creating jobs in the process."

The stock-option saga is a classic example of the difficulty the FASB faces in issuing new accounting guidance. Many powerful interests aligned against the Board. Even some who initially appeared to support the Board's actions later reversed themselves. These efforts undermine the authority of the FASB, which in turn damages confidence in our financial reporting system.

Transparent financial reporting—including recognition of stock-based expense—should not be criticized because companies will report lower income. We may not like what the financial statements say, but we are always better off when the statements are representationally faithful to the underlying economic substance of transactions (see **Underlying Concepts**).

Global View

IFRS follows the same model as GAAP for recognizing share-based compensation.

Underlying Concepts

The stock-option controversy involves economic-consequence issues. The FASB believes companies should follow the neutrality concept. Others disagree, noting that factors other than accounting theory should be considered.

What Do the Numbers Mean? What's the Debate About?

A look at the history of accounting for stock options indicates that the FASB faced considerable opposition when it proposed the fair value method for accounting for stock options. This is not surprising, given that the fair value method results in greater compensation costs relative to the intrinsic-value model. **Merrill Lynch** estimated that if all S&P 500 companies were to expense options, reported profits would fall by as much as 10 percent. Nevertheless, some companies, such as **Coca-Cola**, **General Electric**, **Wachovia**, and **Bank One**, decided to use the fair value method.

You might think investors would punish companies that decided to expense stock options. After all, most of corporate America has been battling for years to avoid having to expense them, worried that accounting for those perks would destroy earnings. Yet, for this small band of big-name companies that voluntarily made the switch to expensing, investors for the most part showered them with love. As shown in the following table, with a few exceptions, the stock prices of the "expensers," from **Cinergy** to **The Washington Post**, outpaced the market after they announced the change.

| Company | Estimated EPS | | % Change Since Announcement |
|-----------------------------|-----------------|-----------------------|-----------------------------|
| | Without Options | With Options Expensed | |
| Cinergy | \$ 2.80 | \$ 2.77 | 22.4% |
| The Washington Post | 20.48 | 20.10 | 16.4 |
| Computer Associates | -0.46 | -0.62 | 11.1 |
| Fannie Mae | 6.15 | 6.02 | 6.7 |
| Bank One | 2.77 | 2.61 | 2.6 |
| General Motors | 5.84 | 5.45 | 2.6 |
| Procter & Gamble | 3.57 | 3.35 | -2.3 |
| Coca-Cola | 1.79 | 1.70 | -6.2 |
| General Electric | 1.65 | 1.61 | -6.2 |
| Amazon.com | 0.04 | -0.99 | -11.4 |

Sources: Merrill Lynch; company reports.

⁷These factors include the volatility of the underlying stock, the expected life of the options, the risk-free rate during the option life, and expected dividends during the option life.

So what's the fuss? As the CFO of Coca-Cola stated, "There is no doubt that stock options are compensation. If they weren't, none of us would want them." It is puzzling why some companies continued to fight implementation of the expensing rule. Indeed, the market's general positive reaction to the expensing of stock options provides a good case study supporting

the value that investors place on transparent accounting and earnings.

Recognition—Stock Compensation

Stock-option plans involve two main accounting issues:

1. How to determine compensation expense.
2. Over what periods to allocate compensation expense.

Determining Expense

Under the fair value method, companies compute total compensation expense based on the fair value of the options expected to vest on the date they grant the options to the employee(s) (i.e., the **grant date**).⁸ Public companies estimate fair value by using an option-pricing model, with some adjustments for the unique factors of employee stock options. No adjustments occur after the grant date in response to subsequent changes in the stock price—either up or down.

Allocating Compensation Expense

In general, a company recognizes compensation expense in the periods in which its employees perform the service—the **service period**. Unless otherwise specified, the service period is the vesting period—the time between the grant date and the vesting date. Thus, the company determines total compensation cost at the grant date and allocates it to the periods benefited by its employees' services.

Stock Compensation Example

An example will help show the accounting for a stock-option plan. Assume that on November 1, 2019, the stockholders of Chen Company approve a plan that grants the company's five executives options to purchase 2,000 shares each of the company's \$1 par value common stock. The company grants the options on January 1, 2020. The executives may exercise the options at any time within the next 10 years. The option price per share is \$60, and the market price of the stock at the date of grant is \$70 per share.

Under the fair value method, the company computes total compensation expense by applying an acceptable fair value option-pricing model (such as the Black-Scholes option-pricing model). To keep this illustration simple, we assume that the fair value option-pricing model determines Chen's total compensation expense to be \$220,000.

Basic Entries Under the fair value method, a company recognizes the value of the options as an expense in the periods in which the employee performs services. In the case of Chen Company, assume that the expected period of benefit is two years, starting with the grant date. Chen would record the transactions related to this option contract as shown in **Illustration 16.5**.

⁸"To vest" means "to earn the rights to." An employee's award becomes vested at the date that the employee's right to receive or retain shares of stock or cash under the award is no longer contingent on remaining in the service of the employer.

ILLUSTRATION 16.5
Option Contract Entries

| At date of grant (January 1, 2020) | | |
|---|---------|---------|
| No entry. | | |
| To record compensation expense for 2020 (December 31, 2020) | | |
| Compensation Expense | 110,000 | |
| Paid-in Capital—Stock Options ($\$220,000 \div 2$) | | 110,000 |
| To record compensation expense for 2021 (December 31, 2021) | | |
| Compensation Expense | 110,000 | |
| Paid-in Capital—Stock Options | | 110,000 |

As indicated, Chen allocates compensation expense evenly over the two-year service period.

Exercise If Chen's executives exercise 2,000 of the 10,000 options (20 percent of the options) on June 1, 2023 (three years and five months after date of grant), the company records the following journal entry.

| June 1, 2023 | | |
|--|---------|---------|
| Cash ($2,000 \times \$60$) | 120,000 | |
| Paid-in Capital—Stock Options ($.20 \times \$220,000$) | 44,000 | |
| Common Stock ($2,000 \times \$1.00$) | | 2,000 |
| Paid-in Capital in Excess of Par—Common Stock | | 162,000 |

Expiration If Chen's executives fail to exercise the remaining stock options before their expiration date, the company transfers the balance in the Paid-in Capital—Stock Options account to a more properly titled paid-in capital account, such as Paid-in Capital—Expired Stock Options. Chen records this transaction at the date of expiration as follows.

| January 1, 2030 (expiration date) | | |
|---|---------|---------|
| Paid-in Capital—Stock Options | 176,000 | |
| Paid-in Capital—Expired Stock Options ($.80 \times \$220,000$) | | 176,000 |

Adjustment An unexercised stock option does not nullify the need to record the costs of services received from executives and attributable to the stock option plan. Under GAAP, a company therefore does not adjust compensation expense upon expiration of the options.

However, if an employee forfeits a stock option because **the employee fails to satisfy a service requirement** (e.g., leaves employment), the company should adjust the estimate of compensation expense recorded in the current period (as a change in estimate). A company records this change in estimate by debiting Paid-in Capital—Stock Options and crediting Compensation Expense for the amount of cumulative compensation expense recorded to date (thus decreasing compensation expense in the period of forfeiture).

Restricted Stock

As indicated earlier, many companies also use restricted stock (in some cases, replacing options altogether) to compensate employees. **Restricted-stock plans** transfer shares of stock to employees, subject to an agreement that the shares cannot be sold, transferred, or pledged until vesting occurs. Similar to stock options, these shares are subject to forfeiture if the conditions for vesting are not met.⁹

Major advantages of restricted-stock plans are:

1. **Restricted stock never becomes completely worthless.** In contrast, if the stock price does not exceed the exercise price for a stock option, the options are worthless. The restricted stock, however, still has value.

⁹Most companies base vesting on future service for a period of generally three to five years. Vesting may also be conditioned on some performance target such as revenue, net income, cash flows, or some combination of these three factors. The employee also collects dividends on the restricted stock, and these dividends generally must be repaid if forfeiture occurs.

2. **Restricted stock generally results in less dilution to existing stockholders.** Restricted-stock awards are usually one-half to one-third the size of stock options. For example, if a company issues stock options on 1,000 shares, an equivalent restricted-stock offering might be 333 to 500 shares. The reason for the difference is that at the end of the vesting period, the restricted stock will have value, whereas the stock options may not. As a result, fewer shares are involved in restricted-stock plans, and therefore less dilution results if the stock price rises.
3. **Restricted stock better aligns the employee incentives with the companies' incentives.** The holder of restricted stock is essentially a stockholder and should be more interested in the long-term objectives of the company. In contrast, the recipients of stock options often have a short-run focus which leads to taking risks to hype the stock price for short-term gain to the detriment of the long-term.¹⁰

The accounting for restricted stock follows the same general principles as accounting for stock options at the date of grant. That is, the company determines the fair value of the restricted stock at the date of grant (usually the fair value of a share of stock) and then expenses that amount over the service period. Subsequent changes in the fair value of the stock are ignored for purposes of computing compensation expense.

Restricted Stock Example

Assume that on January 1, 2020, Ogden Company issues 1,000 shares of restricted stock to its CEO, Christie DeGeorge. Ogden's stock has a fair value of \$20 per share on January 1, 2020. Additional information is as follows.

1. The service period related to the restricted stock is five years.
2. Vesting occurs if DeGeorge stays with the company for a five-year period.
3. The par value of the stock is \$1 per share.

Ogden makes the following entry on the grant date (January 1, 2020).

| | | |
|---|--------|--------|
| Unearned Compensation | 20,000 | |
| Common Stock (1,000 × \$1) | | 1,000 |
| Paid-in Capital in Excess of Par—Common Stock (1,000 × \$19) | | 19,000 |

The credits to Common Stock and Paid-in Capital in Excess of Par—Common Stock indicate that Ogden has issued shares of stock. The debit to Unearned Compensation (often referred to as Deferred Compensation Expense) identifies the total compensation expense the company will recognize over the five-year period. **Unearned Compensation represents the cost of services yet to be performed, which is not an asset.** Consequently, the company reports Unearned Compensation in stockholders' equity in the balance sheet, as a contra equity account (similar to the reporting of treasury stock at cost).

At December 31, 2020, Ogden records compensation expense of \$4,000 (1,000 shares × \$20 × .20) as follows.

| | | |
|-----------------------|-------|-------|
| Compensation Expense | 4,000 | |
| Unearned Compensation | | 4,000 |

Ogden records compensation expense of \$4,000 for each of the next four years (2021, 2022, 2023, and 2024).

What happens if DeGeorge leaves the company before the five years has elapsed? In this situation, DeGeorge forfeits her rights to the stock, and Ogden reverses the compensation expense already recorded.

¹⁰One important rationale for moving away from options to restricted stock is summarized by Bill Gates of **Microsoft**: "When you win [with options], you win the lottery. And when you don't win, you still want it. I can imagine an employee going home at night and considering two wildly different possibilities with his compensation program. Either he can buy six summer homes or no summer homes. Either he can send his kids to college 50 times, or no times. The variation is huge; much greater than most employees have an appetite for. And so as soon as they saw that options could go both ways, we proposed an economic equivalent. So what we do now is give shares, not options." See <http://www.mystockoptions.com/pdfs/Restricted%20Stock.pdf>.

For example, assume that DeGeorge leaves on February 3, 2022 (before any expense has been recorded during 2022). The entry to record this forfeiture is as follows.

| | | |
|---|--------|--------|
| Common Stock (1,000 × \$1) | 1,000 | |
| Paid-in Capital in Excess of Par—Common Stock | 19,000 | |
| Compensation Expense (\$4,000 × 2) | | 8,000 |
| Unearned Compensation | | 12,000 |

In this situation, Ogden reverses the compensation expense of \$8,000 recorded through 2021. In addition, the company debits Common Stock and Paid-in Capital in Excess of Par—Common Stock, reflecting DeGeorge's forfeiture. It credits the balance of Unearned Compensation since none remains when DeGeorge leaves Ogden.

This accounting is similar to accounting for stock options when employees do not fulfill vesting requirements. Recall that once compensation expense is recorded for stock options, it is not reversed. The only exception is if the employee does not fulfill the vesting requirement, by leaving the company before vesting occurs.

In Ogden's restricted-stock plan, vesting never occurred because DeGeorge left the company before she met the service requirement. Because DeGeorge was never vested, she had to forfeit her shares. Therefore, the company must reverse compensation expense recorded to date.¹¹

Employee Stock-Purchase Plans

Employee stock-purchase plans (ESPPs) generally permit all employees to purchase stock at a discounted price for a short period of time. The company often uses such plans to secure equity capital or to induce widespread ownership of its common stock among employees. These plans are considered compensatory unless they satisfy **all three** conditions presented below.

1. Substantially all full-time employees may participate on an equitable basis.
2. The discount from market is small. That is, the discount does not exceed the per share amount of costs avoided by not having to raise cash in a public offering. If the amount of the discount is 5 percent or less, no compensation needs to be recorded.
3. The plan offers no substantive option feature.

For example, Masthead Company's stock-purchase plan allowed employees who met minimal employment qualifications to purchase its stock at a 5 percent reduction from market price for a short period of time. The reduction from market price is not considered compensatory. Why? Because the per share amount of the costs avoided by not having to raise the cash in a public offering equals 5 percent.

Companies that offer their employees a compensatory ESPP should record the compensation expense over the service life of the employees (see **Global View**). It will be difficult for some companies to claim that their ESPPs are non-compensatory (and therefore not record compensation expense) unless they change their discount policy which in the past often was 15 percent. If they change their discount policy to 5 percent, participation in these plans will undoubtedly be lower. As a result, it is likely that some companies will not offer these plans.

Global View

IFRS requires that any discount from the market price in employee stock-purchase plans be recorded as compensation expense.

Disclosure of Compensation Plans

Companies must fully disclose the status of their compensation plans at the end of the periods presented. To meet these objectives, companies must make extensive disclosures. Specifically, a company with one or more share-based payment arrangements must disclose information that enables users of the financial statements to understand:

1. The nature and terms of such arrangements that existed during the period and the potential effects of those arrangements on shareholders.

¹¹There are numerous variations on restricted-stock plans, including restricted-stock units (for which the shares are issued at the end of the vesting period) and restricted-stock plans with performance targets, such as EPS or stock price growth.

- The effect on the income statement of compensation cost arising from share-based payment arrangements.
- The method of estimating the fair value of the goods or services received, or the fair value of the equity instruments granted (or offered to grant), during the period.
- The cash flow effects resulting from share-based payment arrangements.

Illustration 16.6 presents the type of information disclosed for compensation plans.

Stock-Option Plan

The Company has a share-based compensation plan. The compensation cost that has been charged against income for the plan was \$29.4 million, and \$28.7 million for 2020 and 2019, respectively.

The Company's 2020 Employee Share-Option Plan (the Plan), which is shareholder-approved, permits the grant of share options and shares to its employees for up to 8 million shares of common stock. The Company believes that such awards better align the interests of its employees with those of its shareholders. Option awards are generally granted with an exercise price equal to the market price of the Company's stock at the date of grant; those option awards generally vest based on 5 years of continuous service and have 10-year contractual terms. Share awards generally vest over five years. Certain option and share awards provide for accelerated vesting if there is a change in control (as defined by the Plan).

The fair value of each option award is estimated on the date of grant using an option valuation model based on the assumptions noted in the following table.

| | 2020 | 2019 |
|-----------------------------|------------|------------|
| Expected volatility | 25%–40% | 24%–38% |
| Weighted-average volatility | 33% | 30% |
| Expected dividends | 1.5% | 1.5% |
| Expected term (in years) | 5.3–7.8 | 5.5–8.0 |
| Risk-free rate | 6.3%–11.2% | 6.0%–10.0% |

A summary of option activity under the Plan as of December 31, 2020, and changes during the year then ended are presented below.

| Options | Shares (000) | Weighted- Average Exercise Price | Weighted- Average Remaining Contractual Term | Aggregate Intrinsic Value (\$000) |
|----------------------------------|-----------------|---|--|--|
| Outstanding at January 1, 2020 | 4,660 | 42 | | |
| Granted | 950 | 60 | | |
| Exercised | (800) | 36 | | |
| Forfeited or expired | (80) | 59 | | |
| Outstanding at December 31, 2020 | <u>4,730</u> | <u>47</u> | <u>6.5</u> | <u>85,140</u> |
| Exercisable at December 31, 2020 | <u>3,159</u> | <u>41</u> | <u>4.0</u> | <u>75,816</u> |

The weighted-average grant-date fair value of options granted during the years 2020 and 2019 was \$19.57 and \$17.46, respectively. The total intrinsic value of options exercised during the years ended December 31, 2020 and 2019, was \$25.2 million, and \$20.9 million, respectively.

As of December 31, 2020, there was \$25.9 million of total unrecognized compensation cost related to nonvested share-based compensation arrangements granted under the Plan. That cost is expected to be recognized over a weighted-average period of 4.9 years. The total fair value of shares vested during the years ended December 31, 2020 and 2019, was \$22.8 million and \$21 million, respectively.

Restricted-Stock Awards

The Company also has a restricted-stock plan. The Plan is intended to retain and motivate the Company's Chief Executive Officer over the term of the award and to bring his total compensation package closer to median levels for Chief Executive Officers of comparable companies. The fair value of grants during the year was \$1,889,000, or \$35.68 per share, equivalent to 92% of the market price of a share of the Company's Common Stock on the date the award was granted.

Restricted-stock activity for the year ended 2020 is as follows.

| | Shares | Price |
|----------------------------------|----------------|---------|
| Outstanding at December 31, 2019 | 57,990 | — |
| Granted | 149,000 | \$12.68 |
| Vested | (19,330) | — |
| Forfeited | — | — |
| Outstanding at December 31, 2020 | <u>187,660</u> | |

Description of plan

Valuation model assumptions

Option plan activity and balances

Option expense

Restricted-stock plan details

Required expense recognition of compensation related to stock options and restricted stock represents a significant improvement in financial reporting. By leaving stock-based compensation expense out of income, reported income is biased. Biased reporting not only raises concerns about the credibility of companies' reports, but also of financial reporting in general. Even good companies get tainted by the biased reporting of a few "bad apples." If we write standards to achieve some social, economic, or public policy goal, financial reporting loses its credibility.

Basic Earnings per Share

LEARNING OBJECTIVE 4

Compute basic earnings per share.

As indicated earlier, stockholders and potential investors widely use earnings per share in evaluating the profitability of a company. As a result, much attention is given to earnings per share by the financial press. **Earnings per share** indicates the income earned by each share of common stock. Thus, **companies report earnings per share only for common stock**. For example, if Oscar Co. has net income of \$300,000 and a weighted average of 100,000 shares of common stock outstanding for the year, earnings per share is \$3 ($\$300,000 \div 100,000$). Because of the importance of earnings per share information, most companies must report this information on the face of the income statement.¹² [5] The exception, due to cost-benefit considerations, is nonpublic companies.¹³ Generally, companies report earnings per share information below net income in the income statement. **Illustration 16.7** shows Oscar Co.'s income statement presentation of earnings per share.

ILLUSTRATION 16.7
Income Statement
Presentation of EPS

| | |
|--------------------|---------------|
| Net income | \$300,000 |
| Earnings per share | <u>\$3.00</u> |

When the income statement contains intermediate components of income (such as discontinued operations), companies should disclose earnings per share for each component. The presentation in **Illustration 16.8** is representative.

ILLUSTRATION 16.8
Income Statement
Presentation of EPS
Components

| | |
|---|---------------|
| Earnings per share: | |
| Income from continuing operations | \$4.00 |
| Loss from discontinued operations, net of tax | <u>0.60</u> |
| Net income | <u>\$3.40</u> |

These disclosures enable the user of the financial statements to recognize the effects on EPS of income from continuing operations, as distinguished from income or loss from discontinued operations.¹⁴

¹²For articles on the usefulness of reported EPS data and the application of the qualitative characteristics of accounting information to EPS data, see Lola W. Dudley, "A Critical Look at EPS," *Journal of Accountancy* (August 1985), pp. 102-111; and R. Jennings, M.J. LeClere, and R.B. Thompson, "Evidence on the Usefulness of Alternative Earnings per Share Measures," *Financial Analysts Journal*, Vol. 53, No. 6 (1997), pp. 24-33.

¹³A nonpublic enterprise is an enterprise (1) whose debt or equity securities are not traded in a public market on a foreign or domestic stock exchange or in the over-the-counter market (including securities quoted locally or regionally), or (2) that is not required to file financial statements with the SEC. An enterprise is not considered a nonpublic enterprise when its financial statements are issued in preparation for the sale of any class of securities in a public market.

¹⁴Companies should present, either on the face of the income statement or in the notes to the financial statements, per share amounts for discontinued operations.

Earnings per Share—Simple Capital Structure

A corporation's capital structure is **simple** if it consists only of common stock or includes no **potential common stock** that upon conversion or exercise could dilute earnings per common share. A capital structure is **complex** if it includes securities that could have a dilutive effect on earnings per common share.

The computation of earnings per share for a simple capital structure involves two items (other than net income)—(1) preferred stock dividends and (2) weighted-average number of shares outstanding.

Preferred Stock Dividends

As we indicated earlier, earnings per share relates to earnings per *common share*. When a company has both common and preferred stock outstanding, **it subtracts the current-year preferred stock dividend from net income to arrive at income available to common stockholders**. **Illustration 16.9** shows the formula for computing earnings per share.

$$\text{Earnings per Share} = \frac{\text{Net Income} - \text{Preferred Dividends}}{\text{Weighted-Average Common Shares Outstanding}}$$

ILLUSTRATION 16.9

Formula for Computing Earnings per Share

In reporting earnings per share information, a company must calculate income available to common stockholders. To do so, the company subtracts dividends on preferred stock from each of the intermediate components of income (income from continuing operations) and finally from net income. If a company declares dividends on preferred stock and a net loss occurs, **the company adds the preferred dividend to the loss** (thus increasing the amount of the loss) for purposes of computing the loss per share.

If the preferred stock is cumulative and the company has net income but declares no dividend in the current year, it subtracts **an amount equal to the dividend that it should have declared for the current year only**. If the stock is cumulative and the company reports a net loss, but declares no dividend in the current year, it **adds** an amount equal to the dividend to the net loss. The company should have included dividends in arrears for previous years in the previous years' computations (see **Global View**).

Global View

The FASB and the IASB have worked on a project to improve EPS accounting by simplifying the computational guidance and thereby increasing the comparability of EPS data on an international basis.

Weighted-Average Number of Shares Outstanding

In all computations of earnings per share, the **weighted-average number of shares outstanding** during the period constitutes the basis for the per share amounts reported. Shares issued or purchased during the period affect the amount outstanding. Companies must **weight the shares by the fraction of the period they are outstanding**. The rationale for this approach is to find the equivalent number of whole shares outstanding for the year.

To illustrate, assume that Franks Inc. has changes in its common stock shares outstanding for the period as shown in **Illustration 16.10**.

| Date | Share Changes | Shares Outstanding |
|-------------|-------------------------------|-----------------------|
| January 1 | Beginning balance | 90,000 |
| April 1 | Issued 30,000 shares for cash | <u>30,000</u> |
| | | 120,000 |
| July 1 | Purchased 39,000 shares | <u>(39,000)</u> |
| | | 81,000 |
| November 1 | Issued 60,000 shares for cash | <u>60,000</u> |
| December 31 | Ending balance | <u><u>141,000</u></u> |

ILLUSTRATION 16.10

Shares Outstanding, Ending Balance—Franks Inc.

Franks computes the weighted-average number of shares outstanding as shown in **Illustration 16.11**.

ILLUSTRATION 16.11
Weighted-Average Number of Shares Outstanding

| Dates Outstanding | (A) Shares Outstanding | (B) Fraction of Year | (C) Weighted Shares (A × B) |
|-------------------|--|-------------------------|--------------------------------|
| Jan. 1–Apr. 1 | 90,000 | 3/12 | 22,500 |
| Apr. 1–July 1 | 120,000 | 3/12 | 30,000 |
| July 1–Nov. 1 | 81,000 | 4/12 | 27,000 |
| Nov. 1–Dec. 31 | 141,000 | 2/12 | 23,500 |
| | Weighted-average number of shares outstanding | | 103,000 |

As Illustration 16.11 shows, 90,000 shares were outstanding for three months, which is equivalent to 22,500 whole shares for the entire year. Because Franks issued additional shares on April 1, it must weight these shares for the time outstanding. When the company purchased 39,000 shares on July 1, it reduced the shares outstanding. Therefore, from July 1 to November 1, only 81,000 shares were outstanding, which is equivalent to 27,000 shares. The issuance of 60,000 shares increases shares outstanding for the last two months of the year. Franks then makes a new computation to determine the proper weighted shares outstanding.

Stock Dividends and Stock Splits When **stock dividends** or **stock splits** occur, companies need to restate the shares outstanding before the stock dividend or split, in order to compute the weighted-average number of shares. For example, assume that Vijay Corporation had 100,000 shares outstanding on January 1 and issued a 25 percent stock dividend on June 30. For purposes of computing a weighted-average for the current year, it assumes the additional 25,000 shares outstanding as a result of the stock dividend to be **outstanding since the beginning of the year**. Thus, the weighted-average for the year for Vijay is 125,000 shares.

Companies restate the issuance of a stock dividend or stock split, but not the issuance or repurchase of stock for cash. Why? Because stock splits and stock dividends do not increase or decrease the net assets of the company. The company merely issues additional shares of stock. Because of the added shares, it must restate the weighted-average shares. Restating allows valid comparisons of earnings per share between periods before and after the stock split or stock dividend. Conversely, the issuance or purchase of stock for cash **changes the amount of net assets**. As a result, the company either earns more or less in the future as a result of this change in net assets. Stated another way, **a stock dividend or split does not change the shareholders' total investment**—it only increases (unless it is a reverse stock split) the number of common shares representing this investment.

To illustrate how a stock dividend affects the computation of the weighted-average number of shares outstanding, assume that Sabrina Company has the changes in its common stock shares during the year as shown in **Illustration 16.12**.

ILLUSTRATION 16.12
Shares Outstanding, Ending Balance—Sabrina Company

| Date | Share Changes | Shares Outstanding |
|-------------|--|-----------------------|
| January 1 | Beginning balance | 100,000 |
| March 1 | Issued 20,000 shares for cash | 20,000 |
| | | <u>120,000</u> |
| June 1 | 60,000 additional shares (50% stock dividend) | 60,000 |
| | | <u>180,000</u> |
| November 1 | Issued 30,000 shares for cash | 30,000 |
| December 31 | Ending balance | <u>210,000</u> |

Sabrina computes the weighted-average number of shares outstanding as shown in **Illustration 16.13**.

| Dates Outstanding | (A) Shares Outstanding | (B) Restatement | (C) Fraction of Year | (D) Weighted Shares (A × B × C) |
|-------------------|---------------------------|--------------------|-------------------------|---------------------------------------|
| Jan. 1–Mar. 1 | 100,000 | 1.50 | 2/12 | 25,000 |
| Mar. 1–June 1 | 120,000 | 1.50 | 3/12 | 45,000 |
| June 1–Nov. 1 | 180,000 | | 5/12 | 75,000 |
| Nov. 1–Dec. 31 | 210,000 | | 2/12 | 35,000 |
| | | | | <u>180,000</u> |

Weighted-average number of shares outstanding

ILLUSTRATION 16.13**Weighted-Average Number of Shares Outstanding—Stock Issue and Stock Dividend**

Sabrina must restate the shares outstanding prior to the stock dividend. The company adjusts the shares outstanding from January 1 to June 1 for the stock dividend, so that it now states these shares on the same basis as shares issued subsequent to the stock dividend. Sabrina does not restate shares issued after the stock dividend because they are on the new basis. The stock dividend simply restates existing shares. **The same type of treatment applies to a stock split.**

If a stock dividend or stock split occurs after the end of the year but before issuing the financial statements, a company must restate the weighted-average number of shares outstanding for the year (and any other years presented in comparative form). For example, assume that Hendricks Company computes its weighted-average number of shares as 100,000 for the year ended December 31, 2020. On January 15, 2021, before issuing the financial statements, the company splits its stock 3 for 1. In this case, the weighted-average number of shares used in computing earnings per share for 2020 is now 300,000 shares. If providing earnings per share information for 2019 as comparative information, Hendricks must also adjust it for the stock split.

Comprehensive Example

Let's study a comprehensive illustration for a simple capital structure. Darin Corporation has income from continuing items of \$580,000 and a gain on discontinued operations, net of tax, of \$240,000. In addition, it has declared preferred dividends of \$1 per share on 100,000 shares of preferred stock outstanding. **Illustration 16.14** shows the changes in Darin's common stock shares outstanding during 2020.

| Date | Share Changes | Shares Outstanding |
|-------------|--|--------------------|
| January 1 | Beginning balance | 180,000 |
| May 1 | Purchased 30,000 treasury shares | (30,000) |
| | | <u>150,000</u> |
| July 1 | 300,000 additional shares (3-for-1 stock split) | 300,000 |
| | | <u>450,000</u> |
| December 31 | Issued 50,000 shares for cash | 50,000 |
| December 31 | Ending balance | <u>500,000</u> |

ILLUSTRATION 16.14**Shares Outstanding, Ending Balance—Darin Corp.**

To compute the earnings per share information, Darin determines the weighted-average number of shares outstanding as shown in **Illustration 16.15**.

| Dates Outstanding | (A) Shares Outstanding | (B) Restatement | (C) Fraction of Year | (D) Weighted Shares (A × B × C) |
|-------------------|---------------------------|--------------------|-------------------------|---------------------------------------|
| Jan. 1–May 1 | 180,000 | 3 | 4/12 | 180,000 |
| May 1–July 1 | 150,000 | 3 | 2/12 | 75,000 |
| July 1–Dec. 31 | 450,000 | | 6/12 | 225,000 |
| | | | | <u>480,000</u> |

Weighted-average number of shares outstanding

ILLUSTRATION 16.15**Weighted-Average Number of Shares Outstanding**

In computing the weighted-average number of shares, the company ignores the shares sold on December 31, 2020, because they have not been outstanding during the year. Darin then divides the weighted-average number of shares into income from continuing operations and net income to determine earnings per share. It subtracts its preferred dividends of \$100,000 from income from continuing operations (\$580,000) to arrive at income from continuing operations available to common stockholders of \$480,000 (\$580,000 – \$100,000).

Deducting the preferred dividends from the income from continuing operations also reduces net income without affecting the gain on discontinued operations. The final amount is referred to as **income available to common stockholders**, as shown in **Illustration 16.16**.

ILLUSTRATION 16.16**Computation of Income Available to Common Stockholders**

| | (A) Income Information | (B) Weighted Shares | (C) Earnings per Share (A ÷ B) |
|--|------------------------------|---------------------------|---|
| Income from continuing operations available to common stockholders | \$480,000* | 480,000 | \$1.00 |
| Gain on discontinued operations, net of tax | 240,000 | 480,000 | 0.50 |
| Income available to common stockholders | \$720,000 | 480,000 | \$1.50 |
| *\$580,000 – \$100,000 | | | |

Darin must disclose the per share amount for the discontinued operations (net of tax) either on the face of the income statement or in the notes to the financial statements. **Illustration 16.17** shows the income and per share information reported on the face of Darin's income statement.

ILLUSTRATION 16.17**Earnings per Share, with Discontinued Operations**

| | |
|---|---------------|
| Income from continuing operations | \$580,000 |
| Gain on discontinued operations, net of tax | 240,000 |
| Net income | \$820,000 |
| Earnings per share: | |
| Income from continuing operations | \$1.00 |
| Discontinued operations, net of tax | 0.50 |
| Net income | \$1.50 |

Diluted Earnings per Share

LEARNING OBJECTIVE 5

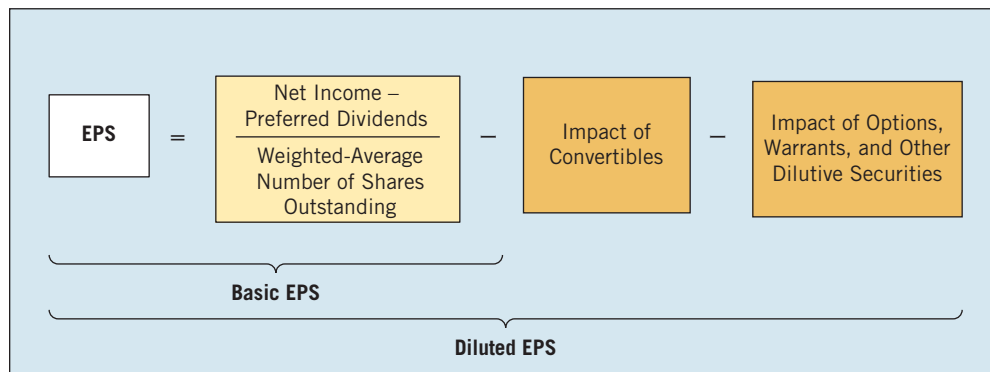

Compute diluted earnings per share.

The EPS discussion to this point applies to **basic EPS** for a simple capital structure. One problem with a **basic EPS** computation is that it fails to recognize the potential impact of a corporation's dilutive securities. As discussed at the beginning of the chapter, **dilutive securities** are securities that can be converted to common stock.¹⁵ Upon conversion or exercise by the holder, the dilutive securities reduce (dilute) earnings per share. This adverse effect on EPS can be significant and, more importantly, *unexpected* unless financial statements call attention to their potential dilutive effect.

As indicated earlier, a complex capital structure exists when a corporation has convertible securities, options, warrants, or other rights that upon conversion or exercise could dilute earnings per share. When a company has a complex capital structure, **it generally reports both basic and diluted earnings per share**.

¹⁵Issuance of these types of securities is typical in mergers and compensation plans.

Computing **diluted EPS** is similar to computing basic EPS. The difference is that diluted EPS includes the effect of all potentially dilutive common shares that were outstanding during the period. The formula in **Illustration 16.18** shows the relationship between basic EPS and diluted EPS.

**ILLUSTRATION 16.18****Relationship Between Basic and Diluted EPS**

Some securities are antidilutive. **Antidilutive securities** are securities that upon conversion or exercise **increase** earnings per share (or reduce the loss per share). Companies with complex capital structures will not report diluted EPS if the securities in their capital structure are antidilutive. The purpose of presenting both basic and diluted EPS is to inform financial statement users of situations that will likely occur (basic EPS) and also to provide “worst case” dilutive situations (dilutive EPS). If the securities are antidilutive, the likelihood of conversion or exercise is considered remote. Thus, companies that have only antidilutive securities must report only the basic EPS number (see **Global View**). We illustrated the computation of basic EPS in the prior section. In the following sections, we address the effects of convertible and other dilutive securities on EPS calculations.

Global View

The provisions in GAAP are substantially the same as those in *International Accounting Standard No. 33*, “Earnings per Share,” issued by the IASB.

Diluted EPS—Convertible Securities

At conversion, companies exchange convertible securities for common stock. Companies measure the dilutive effects of potential conversion on EPS using the **if-converted method**. This method for a convertible bond assumes (1) the conversion of the convertible securities at the beginning of the period (or at the time of issuance of the security, if issued during the period), and (2) the elimination of related interest, net of tax. Thus, the additional shares assumed issued increase the **denominator**—the weighted-average number of shares outstanding. The amount of interest expense, net of tax associated with those potential common shares, increases the **numerator**—net income.

Comprehensive Example—If-Converted Method

As an example, Mayfield Corporation has net income of \$210,000 for the year and a weighted-average number of common shares outstanding during the period of 100,000 shares. The basic earnings per share is therefore \$2.10 ($\$210,000 \div 100,000$). The company has two convertible debenture bond issues outstanding. One is a 6 percent issue sold at 100 (total \$1,000,000) in a prior year and convertible into 30,000 common shares. The other is a 10 percent issue sold at 100 (total \$1,000,000) on April 1 of the current year and convertible into 36,000 common shares. The tax rate is 20 percent.

As **Illustration 16.19** shows, to determine the numerator for diluted earnings per share, Mayfield adds back the interest on the if-converted securities, less the related tax effect.

| | |
|--|--------------------------------|
| Net income for the year | \$210,000 |
| Add: Adjustment for interest (net of tax) | |
| 6% debentures ($\$60,000 \times [1 - 0.20]$) | 48,000 |
| 10% debentures ($\$100,000 \times 9/12 \times [1 - 0.20]$) | 60,000 |
| Adjusted net income | <u><u>\$318,000</u></u> |

ILLUSTRATION 16.19**Computation of Adjusted Net Income**

Because the if-converted method assumes conversion as of the beginning of the year, Mayfield assumes that it pays no interest on the convertible bonds during the year. The interest on the 6 percent convertibles is \$60,000 for the year ($\$1,000,000 \times .06$). The increased tax expense is \$12,000 ($\$60,000 \times 0.20$). The interest added back net of taxes is \$48,000 [$\$60,000 - \$12,000$, or simply $\$60,000 \times (1 - 0.20)$].

Continuing with the information in Illustration 16.19, because Mayfield issues 10 percent convertibles subsequent to the beginning of the year, it weights the shares. In other words, it considers these shares to have been outstanding from April 1 to the end of the year. As a result, the interest adjustment to the numerator for these bonds reflects the interest for only nine months. Thus, the interest added back on the 10 percent convertible is \$60,000 [$\$1,000,000 \times .10 \times 9/12 \text{ year} \times (1 - 0.20)$]. The final item in Illustration 16.19 shows the adjusted net income. This amount becomes the numerator for Mayfield's computation of diluted earnings per share.

Mayfield then calculates the weighted-average number of shares outstanding, as shown in **Illustration 16.20**. This number of shares becomes the denominator for Mayfield's computation of diluted earnings per share.

ILLUSTRATION 16.20
Computation of Weighted-Average Number of Shares

| | |
|---|-----------------------|
| Weighted-average number of shares outstanding | 100,000 |
| Add: Shares assumed to be issued: | |
| 6% debentures (as of beginning of year) | 30,000 |
| 10% debentures (as of date of issue, April 1; $9/12 \times 36,000$) | <u>27,000</u> |
| Weighted-average number of shares adjusted for dilutive securities | <u>157,000</u> |

In its income statement, Mayfield reports basic and diluted earnings per share.¹⁶ **Illustration 16.21** shows this dual presentation.

ILLUSTRATION 16.20
Earnings per Share Disclosure

| | |
|---|------------------|
| Net income for the year | <u>\$210,000</u> |
| Earnings per Share (Note X) | |
| Basic earnings per share ($\$210,000 \div 100,000$) | <u>\$2.10</u> |
| Diluted earnings per share ($\$318,000 \div 157,000$) | <u>\$2.03</u> |

Other Factors

The example above assumed that Mayfield sold its bonds at the face amount. If it instead sold the bonds at a premium or discount, the company must adjust the interest expense each period to account for this occurrence. Therefore, the interest expense reported on the income statement is the amount of interest expense, net of tax, added back to net income. (It is not the interest paid in cash during the period.)

In addition, the conversion rate on a dilutive security may change during the period in which the security is outstanding. For the diluted EPS computation in such a situation, the **company uses the most dilutive conversion rate available**. For example, assume that a company issued a convertible bond on January 1, 2019, with a conversion rate of 10 common shares for each bond starting January 1, 2021. Beginning January 1, 2024, the conversion rate is 12 common shares for each bond, and beginning January 1, 2028, it is 15 common shares for each bond. In computing diluted EPS in 2019, the company uses the conversion rate of 15 shares to one bond.

¹⁶Conversion of bonds is dilutive because EPS with conversion (\$2.03) is less than basic EPS (\$2.10). See Appendix 16B for a comprehensive evaluation of antidilution with multiple securities.

A final issue relates to preferred stock. For example, assume that Mayfield's 6 percent convertible debentures were instead 6 percent convertible *preferred stock*. In that case, Mayfield considers the convertible preferred as potential common shares. Thus, it includes them in its diluted EPS calculations as shares outstanding. The company does not subtract preferred dividends from net income in computing the numerator. Why not? Because for purposes of computing EPS, it assumes conversion of the convertible preferreds to outstanding common stock. The company uses net income as the numerator—it computes **no tax effect** because preferred dividends generally are not tax-deductible.

Diluted EPS—Options and Warrants

A company includes in diluted earnings per share stock options and warrants outstanding (whether or not presently exercisable), unless they are antidilutive. Companies use the **treasury-stock method** to include options and warrants and their equivalents in EPS computations.

The treasury-stock method assumes that the options or warrants are exercised at the beginning of the year (or date of issue if later), and that the company uses those proceeds to purchase common stock for the treasury. If the exercise price is lower than the market price of the stock, then the proceeds from exercise are insufficient to buy back all the shares. The company then adds the incremental shares remaining to the weighted-average number of shares outstanding for purposes of computing diluted earnings per share.

For example, if the exercise price of a warrant is \$5 and the market price of the stock is \$15, the treasury-stock method increases the shares outstanding. Exercise of the warrant results in one additional share outstanding, but the \$5 received for the one share issued is insufficient to purchase one share in the market at \$15. The company needs to exercise three warrants (and issue three additional shares) to produce enough money (\$15) to acquire one share in the market. Thus, a net increase of two shares outstanding results.

To see this computation using larger numbers, assume 1,500 options outstanding at an exercise price of \$30 for a common share and a common stock market price per share of \$50. Through application of the treasury-stock method, the company would have 600 incremental shares outstanding, computed as shown in **Illustration 16.22**.¹⁷

| | |
|---|------------|
| Proceeds from exercise of 1,500 options (1,500 × \$30) | \$45,000 |
| Shares issued upon exercise of options | 1,500 |
| Treasury shares purchasable with proceeds (\$45,000 ÷ \$50) | (900) |
| Incremental shares outstanding (potential common shares) | 600 |

ILLUSTRATION 16.22

Computation of Incremental Shares

Thus, if the exercise price of the option or warrant is **lower** than the market price of the stock, dilution occurs. An exercise price of the option or warrant **higher** than the market price of the stock reduces common shares. In this case, the options or warrants are **antidilutive** because their assumed exercise leads to an increase in earnings per share.

For both options and warrants, exercise is assumed only if the average market price of the stock exceeds the exercise price during the reported period.¹⁸ As a practical matter, a simple average of the weekly or monthly prices is adequate, so long as the prices do not fluctuate significantly.

¹⁷The incremental number of shares may be more simply computed:

$$\frac{\text{Market price} - \text{Option price}}{\text{Market price}} \times \text{Number of options} = \text{Number of shares}$$

$$\frac{\$50 - \$30}{\$50} \times 1,500 \text{ option} = 600 \text{ shares}$$

¹⁸Options and warrants have essentially the same assumptions and computational problems, although the warrants may allow or require the tendering of some other security, such as debt, in lieu of cash upon exercise. In such situations, the accounting becomes quite complex and is beyond the scope of this text.

Comprehensive Example—Treasury-Stock Method

To illustrate application of the treasury-stock method, assume that Kubitz Industries, Inc. has net income for the period of \$220,000. The average number of shares outstanding for the period was 100,000 shares. Hence, basic EPS—ignoring all dilutive securities—is \$2.20. The average number of shares related to options outstanding (although not exercisable at this time), at an option price of \$20 per share, is 5,000 shares. The average market price of the common stock during the year was \$28. **Illustration 16.23** shows the computation of EPS using the treasury-stock method.

ILLUSTRATION 16.23
Computation of Earnings per Share—Treasury-Stock Method

| | Basic Earnings per Share | Diluted Earnings per Share |
|--|-----------------------------|-------------------------------|
| Average number of shares related to options outstanding | | 5,000 |
| Option price per share | | × \$20 |
| Proceeds upon exercise of options | | <u>\$100,000</u> |
| Average market price of common stock | | <u>\$28</u> |
| Treasury shares that could be repurchased with proceeds (\$100,000 ÷ \$28) | | <u>3,571</u> |
| Excess of shares under option over the treasury shares that could be repurchased (5,000 – 3,571)—potential common incremental shares | | 1,429 |
| Average number of common shares outstanding | <u>100,000</u> | <u>100,000</u> |
| Total average number of common shares outstanding and potential common shares | <u>100,000 (A)</u> | <u>101,429 (C)</u> |
| Net income for the year | <u>\$220,000 (B)</u> | <u>\$220,000 (D)</u> |
| Earnings per share | <u>\$2.20 (B ÷ A)</u> | <u>\$2.17 (D ÷ C)</u> |

Contingent Issue Agreement

In business combinations, the acquirer may promise to issue additional shares—referred to as **contingent shares**—under certain conditions. Sometimes the company issues these contingent shares as a result of a **passage-of-time condition** or upon the attainment of a **certain earnings or market price level**. If this passage-of-time condition occurs during the current year, or if the company meets the earnings or market price **by the end of the year**, the company considers the contingent shares as outstanding for the computation of diluted earnings per share.¹⁹

For example, assume that Watts Corporation purchased Cardoza Company and agreed to give Cardoza's stockholders 20,000 additional shares in 2023 if Cardoza's net income in 2022 is \$90,000. In 2021, Cardoza's net income is \$100,000. Because Cardoza has already attained the 2022 stipulated earnings of \$90,000, in computing diluted earnings per share for 2021, Watts would include the 20,000 contingent shares in the shares-outstanding computation.

Antidilution Revisited

In computing diluted EPS, a company must consider the aggregate of all dilutive securities. But first it must determine which potentially dilutive securities are in fact individually dilutive and which are antidilutive. **A company should exclude any security that is antidilutive**, nor can the company use such a security to offset dilutive securities.

¹⁹In addition to contingent issuances of stock, other situations that might lead to dilution are the issuance of participating securities and two-class common shares. The reporting of these types of securities in EPS computations is beyond the scope of this text.

Recall that including antidilutive securities in earnings per share computations increases earnings per share (or reduces net loss per share). With options or warrants, whenever the exercise price exceeds the market price, the security is antidilutive. Convertible debt is antidilutive if the addition to income of the interest (net of tax) causes a greater percentage increase in income (numerator) than conversion of the bonds causes a percentage increase in common and potentially dilutive shares (denominator). In other words, convertible debt is antidilutive if conversion of the security causes common stock earnings to increase by a greater amount per additional common share than earnings per share was before the conversion.

To illustrate, assume that Martin Corporation has a 6 percent, \$1,000,000 debt issue that is convertible into 10,000 common shares. Net income for the year is \$210,000, the weighted-average number of common shares outstanding is 100,000 shares, and the tax rate is 20 percent. In this case, assumed conversion of the debt into common stock at the beginning of the year requires adjustments of net income and the weighted-average number of shares outstanding as shown in **Illustration 16.24**.

| | | | |
|--|------------------|--|------------------------------|
| Net income for the year | \$210,000 | Average number of shares outstanding | 100,000 |
| Add: Adjustment for interest (net of tax) on 6% debentures | | Add: Shares issued upon assumed conversion of debt | 10,000 |
| \$60,000 × (1 – 0.20) | 48,000 | Average number of common and potential common shares outstanding | 110,000 |
| Adjusted net income | <u>\$258,000</u> | | |
| | | Basic EPS = \$210,000 ÷ 100,000 = | <u>\$2.10</u> |
| | | Diluted EPS = \$258,000 ÷ 110,000 = | <u>\$2.35 = Antidilutive</u> |

ILLUSTRATION 16.24**Test for Antidilution**

As a shortcut, Martin can also identify the convertible debt as antidilutive by comparing the EPS resulting from conversion, \$4.80 (\$48,000 additional earnings ÷ 10,000 additional shares), with EPS before inclusion of the convertible debt, \$2.10.

Companies should ignore antidilutive securities in all calculations and in computing diluted earnings per share. This approach is reasonable. The profession's intent was to inform the investor of the possible dilution that might occur in reported earnings per share and not to be concerned with securities that, if converted or exercised, would result in an increase in earnings per share. Appendix 16B to this chapter provides an extended example of how companies consider antidilution in a complex situation with multiple securities.

EPS Presentation and Disclosure

Illustration 16.25 shows how a company with a complex capital structure would present its EPS information.

| | |
|----------------------------|---------------|
| Earnings per common share | |
| Basic earnings per share | <u>\$3.30</u> |
| Diluted earnings per share | <u>\$2.70</u> |

ILLUSTRATION 16.25**EPS Presentation—Complex Capital Structure**

When the earnings of a period include discontinued operations, a company should show per share amounts (where applicable) for the following: income from continuing operations, discontinued operations, and net income. Companies that report a discontinued operation should present per share amounts **for this line item** either on the face of the income statement or in the notes to the financial statements. **Illustration 16.26** shows a presentation reporting discontinued operations.

ILLUSTRATION 16.26**EPS Presentation, with Discontinued Operations**

| | |
|-----------------------------------|---------------|
| Basic earnings per share | |
| Income from continuing operations | \$3.80 |
| Discontinued operations (loss) | <u>(0.80)</u> |
| Net income | <u>\$3.00</u> |
| Diluted earnings per share | |
| Income from continuing operations | \$3.35 |
| Discontinued operations (loss) | <u>(0.65)</u> |
| Net income | <u>\$2.70</u> |

A company must show earnings per share amounts for all periods presented. Also, the company should restate all prior period earnings per share amounts presented for stock dividends and stock splits. If it reports diluted EPS data for at least one period, the company should report such data for all periods presented, even if it is the same as basic EPS. When a company restates results of operations of a prior period as a result of an error or a change in accounting principle, it should also restate the earnings per share data shown for the prior periods. Complex capital structures and dual presentation of earnings per share require the following additional disclosures in note form.

1. Description of pertinent rights and privileges of the various securities outstanding.
2. A reconciliation of the numerators and denominators of the basic and diluted per share computations, including individual income and share amount effects of all securities that affect EPS.
3. The effect given preferred dividends in determining income available to common stockholders in computing basic EPS.
4. Securities that could potentially dilute basic EPS in the future that were excluded in the computation because they would be antidilutive.
5. Effect of conversions subsequent to year-end, but before issuing statements.

Illustration 16.27 presents the reconciliation and the related disclosure to meet the requirements of this standard.²⁰ [6]

ILLUSTRATION 16.27**Reconciliation for Basic and Diluted EPS**

| | For the Year Ended 2020 | | |
|-----------------------------------|-------------------------|-------------------------|---------------------|
| | Income (Numerator) | Shares (Denominator) | Per Share Amount |
| Income from continuing operations | \$ 7,500,000 | | |
| Less: Preferred stock dividends | <u>45,000</u> | | |
| Basic EPS | 7,455,000 | 3,991,666 | \$1.87 |
| Warrants | | 30,768 | |
| Convertible preferred stock | 45,000 | 308,333 | |
| 4% convertible bonds (net of tax) | <u>60,000</u> | <u>50,000</u> | |
| Diluted EPS | \$7,560,000 | 4,380,767 | \$1.73 |

Stock options to purchase 1,000,000 shares of common stock at \$85 per share were outstanding during the second half of 2020 but were not included in the computation of diluted EPS because the options' exercise price was greater than the average market price of the common shares. The options were still outstanding at the end of year 2020 and expire on June 30, 2030.

²⁰Note that GAAP has specific disclosure requirements regarding stock-based compensation plans and earnings per share disclosures as well. The earnings per share effects of noncontrolling interest (discussed in Chapter 4) should also be presented, with the amounts of income from continuing operations and discontinued operations (if present), attributable to the controlling interest disclosed. However, only the net income attributable to the controlling interest should be used in computing earnings per share.

Summary of EPS Computation

As you can see, computation of earnings per share is a complex issue. It is a controversial area because many securities, although technically not common stock, have many of its basic characteristics. Indeed, some companies have issued these other securities rather than common stock in order to avoid an adverse dilutive effect on earnings per share. **Illustrations 16.28** and **16.29** display the elementary points of calculating earnings per share in a simple capital structure and in a complex capital structure.

Capital Structure

What Do the Numbers Mean? Pro Forma EPS Confusion

As discussed in Chapter 4, many companies are reporting pro forma (non-GAAP) EPS numbers along with GAAP-based EPS numbers in the financial information provided to investors. Pro forma earnings generally exceed GAAP earnings because the non-GAAP numbers exclude such items as restructuring charges, impairments of assets, R&D expenditures, and stock compensation expense. In some industries such as high-tech, the major item excluded is stock compensation expense. The following table lists some examples.

| Company | EPS | | Stock-Based Compensation (in billions) | |
|----------------------|---------|----------|--|-------|
| | GAAP | Non-GAAP | 2014 | 2015 |
| Google | \$22.70 | \$28.35 | \$4.2 | \$4.4 |
| Facebook | 1.01 | 2.00 | 1.8 | 3.2 |
| Amazon.com | 0.37 | 4.14 | 1.5 | 2.0 |
| Cisco Systems | 1.79 | 2.17 | 1.3 | 1.4 |
| Qualcomm | 3.64 | 4.79 | 1.1 | 1.1 |
| Oracle | 2.23 | 2.75 | 0.8 | 0.9 |
| Twitter | -0.90 | 0.34 | 0.6 | 0.8 |

Sources: FactSet; Thomson Reuters; company reports (Credit Suisse, Wedbush Securities, Piper Jaffray, Cantor Fitzgerald).

Google is a classic example. As indicated by one analyst, Google at one time paid out huge, share-laden compensation packages totaling more than \$300 million to three key executives. Only a small amount of this compensation will be reported in the non-GAAP income measures.

Another case of possibly misleading reporting is social gaming company **Zynga**. It reported so much stock-compensation expense (\$600 million) that it overwhelmed its operating profit; these expenses took operating profit negative to the tune of \$406 million. The accounting? Zynga “window dressed” the expense by encouraging Wall Street analysts to use a non-GAAP accounting figure—“adjusted earnings before interest, taxes, depreciation and amortization”—that ignores the stock compensation.

LinkedIn and **Groupon** also use non-GAAP metrics that exclude stock compensation. LinkedIn’s \$30 million stock-compensation expense roughly halved its operating profit, while Groupon’s \$94 million took operating profit \$203 million into the red. Wall Street analysts tend to go along with the accounting hocus-pocus, as it allows them to justify higher valuations for stocks. Investors should remember, however, that employee equity awards are real costs.

As discussed in Chapter 4, SEC Regulation G requires companies to provide a clear reconciliation between pro forma and GAAP information. And this applies to EPS measures as well. This reconciliation is especially important, given the spike in pro forma reporting by companies adding back employee stock-option expense.

APPENDIX 16A

Accounting for Stock-Appreciation Rights

LEARNING OBJECTIVE *6

Explain the accounting for stock-appreciation rights plans.

A major disadvantage of many stock-option plans is that an executive must pay income tax on the difference between the market price of the stock and the option price at the **date of exercise**. This feature of stock-option plans (those referred to as **nonqualified**) can be a financial hardship for an executive who wishes to keep the stock (rather than sell it immediately) because he or she would have to pay not only income tax but the option price as well. In another type of plan (an **incentive plan**), the executive pays no taxes at exercise but may need to borrow to finance the exercise price, which leads to related interest cost.

One solution to this problem was the creation of **stock-appreciation rights (SARs)**. In this type of plan, the company gives an executive the right to receive compensation equal to the share appreciation. **Share appreciation** is the excess of the market price of the stock at the date of exercise over a pre-established price. The company may pay the share appreciation in cash, shares, or a combination of both.

The major advantage of SARs is that the executive often does not have to make a cash outlay at the date of exercise, but receives a payment for the share appreciation. Unlike shares acquired under a stock-option plan, the company does not issue the shares that constitute the basis for computing the appreciation in a SARs plan. Rather, the company simply awards the executive cash or stock having a fair value equivalent to the appreciation. The accounting for

stock-appreciation rights depends on whether the company classifies the rights as equity or as a liability.

SARs—Share-Based Equity Awards

Companies classify SARs as **equity awards** if at the date of exercise, the holder receives shares of stock from the company upon exercise. In essence, SARs are essentially equivalent to a stock option. The major difference relates to the form of payment. With the stock option, the holder pays the exercise price and then receives the stock. In an equity SAR, the holder receives shares in an amount equal to the **share-price appreciation** (the difference between the market price and the pre-established price). The accounting for SARs when they are equity awards follows the accounting used for stock options. At the date of grant, the company determines a fair value for the SAR and then allocates this amount to compensation expense over the service period of the employees.

SARs—Share-Based Liability Awards

Companies classify SARs as liability awards if at the date of exercise, the holder receives a cash payment. In this case the holder is not receiving additional shares of stock but a cash payment equal to the amount of share-price appreciation. The company's compensation expense therefore changes as the value of the liability changes.

A company uses the following approach to record share-based liability awards:

1. Measure the fair value of the award at the grant date and accrue compensation over the service period.
2. Remeasure the fair value each reporting period, until the award is settled. Adjust the compensation cost each period for changes in fair value prorated for the portion of the service period completed.
3. Once the service period is completed, determine compensation expense each subsequent period by reporting the full change in market price as an adjustment to compensation expense.

For liability awards, the company estimates the fair value of the SARs, using an option-pricing model. The company then allocates this total estimated compensation cost over the service period, recording expense (or a decrease in expense if fair value declines) in each period. At the end of each period, total compensation expense reported to date should equal the percentage of the total service period that has elapsed, multiplied by the total estimated compensation cost.

For example, assume that the service period is 20 percent complete and total estimated compensation is \$100,000. The company reports cumulative compensation expense to date of \$20,000 ($\$100,000 \times 0.20$).

The method of allocating compensation expense is called the **percentage approach**. In this method, in the first year of, say, a four-year plan, the company charges one-fourth of the estimated cost to date. In the second year, it charges off two-fourths, or 50 percent, of the estimated cost to date, less the amount already recognized in the first year. In the third year, it charges off three-fourths of the estimated cost to date, less the amount recognized previously. In the fourth year, it charges off the remaining compensation expense.

A special problem arises when the exercise date is later than the service period. In the previous example, if the stock-appreciation rights were not exercised at the end of four years, in the fifth year the company would have to account for the difference in the market price and the pre-established price. In this case, the company adjusts compensation expense whenever a change in the market price of the stock **occurs in subsequent reporting periods, until the rights expire or are exercised, whichever comes first**.

Increases or decreases in the fair value of the SAR between the date of grant and the exercise date, therefore, result in a change in the measure of compensation. Some periods will have credits to compensation expense if the fair value decreases from one period to the next. The credit to compensation expense, however, cannot exceed previously recognized compensation expense. In other words, **cumulative compensation expense cannot be negative**.

Stock-Appreciation Rights Example

Assume that American Hotels, Inc. establishes a stock-appreciation rights plan on January 1, 2020. The plan entitles executives to receive cash at the date of exercise for the difference between the market price of the stock and the pre-established price of \$10 on 10,000 SARs. The fair value of the SARs on December 31, 2020, is \$3, and the service period runs for two years (2020–2021). **Illustration 16A.1** indicates the amount of compensation expense to be recorded each period, assuming that the executives hold the SARs for three years, at which time they exercise the rights.

ILLUSTRATION 16A.1 Compensation Expense, Stock-Appreciation Rights

| Stock-Appreciation Rights Schedule of Compensation Expense | | | | | | | |
|---|------------|---|---------------------------------|---|--------------|--------------|--------------|
| (1) | (2) | (3) | (4) | (5) | | | |
| Date | Fair Value | Cumulative Compensation Recognizable ^a | Percentage Accrued ^b | Cumulative Compensation Accrued to Date | Expense 2020 | Expense 2021 | Expense 2022 |
| 12/31/20 | \$3 | \$30,000 | 50% | \$ 15,000 | \$15,000 | | |
| 12/31/21 | 7 | 70,000 | 100% | 55,000 | | \$55,000 | |
| 12/31/22 | 5 | 50,000 | 100% | 70,000 | | | |
| | | | | (20,000) | | | |
| | | | | \$ 50,000 | | | \$(20,000) |

^aCumulative compensation for unexercised SARs to be allocated to periods of service.
^bThe percentage accrued is based upon a two-year service period (2020–2021).

In 2020, American Hotels records compensation expense of \$15,000 because 50 percent of the \$30,000 total compensation cost estimated at December 31, 2020, is allocable to 2020. In 2021, the fair value increased to \$7 per right (\$70,000 total). The company recorded additional compensation expense of \$55,000 (\$70,000 minus \$15,000).

The executives held the SARs through 2022, during which time the fair value declined to \$5 (and the obligation to the executives equals \$50,000). American Hotels recognizes the decrease by recording a \$20,000 credit to compensation expense and a debit to Liability under Stock-Appreciation Plan. Note that after the service period ends, since the rights are still outstanding, the company adjusts the rights to market at December 31, 2022. Any such credit to compensation expense cannot exceed previous charges to expense attributable to that plan.

As the company records the compensation expense each period, the corresponding credit is to a liability account, because the company will pay the stock appreciation in cash. American Hotels records compensation expense in the first year as follows.

| | | |
|---|--------|--------|
| Compensation Expense | 15,000 | |
| Liability under Stock-Appreciation Plan | | 15,000 |

The company makes a similar entry in 2021 to credit the liability account for \$55,000. In 2022, when it records negative compensation expense, American would debit the account for \$20,000. The entry to record the negative compensation expense is as follows.

| | | |
|---|--------|--------|
| Liability under Stock-Appreciation Plan | 20,000 | |
| Compensation Expense | | 20,000 |

At December 31, 2022, the executives receive \$50,000 (which equals the market price of the shares less the pre-established price). American would remove the liability with the following entry.

| | | |
|---|--------|--------|
| Liability under Stock-Appreciation Plan | 50,000 | |
| Cash | | 50,000 |

Compensation expense can increase or decrease substantially from one period to the next. The reason is that compensation expense is remeasured each year, which can lead to large swings in compensation expense.

APPENDIX 16B

Comprehensive Earnings per Share Example

LEARNING OBJECTIVE *7

Compute earnings per share in a complex situation.

This appendix illustrates the method of computing dilution when many securities are involved. **Illustration 16B.1** presents the section of the balance sheet of Webster Corporation for analysis. Assumptions related to the capital structure follow the balance sheet.

| Webster Corporation | |
|---|---------------------|
| Balance Sheet (partial) | |
| At December 31, 2020 | |
| Long-term debt | |
| Notes payable, 14% | \$ 1,000,000 |
| 8% convertible bonds payable | 2,500,000 |
| 10% convertible bonds payable | <u>2,500,000</u> |
| Total long-term debt | <u>\$ 6,000,000</u> |
| Stockholders' equity | |
| 7% cumulative, convertible preferred stock, par value \$100, 100,000 shares authorized, 25,000 shares issued and outstanding | \$ 2,500,000 |
| Common stock, par value \$1, 5,000,000 shares authorized, 500,000 shares issued and outstanding | 500,000 |
| Additional paid-in capital | 2,000,000 |
| Retained earnings | <u>9,000,000</u> |
| Total stockholders' equity | <u>\$14,000,000</u> |
| Notes and Assumptions | |
| December 31, 2020 | |
| <ol style="list-style-type: none"> Options were granted in July 2018 to purchase 50,000 shares of common stock at \$20 per share. The average market price of Webster's common stock during 2020 was \$30 per share. All options are still outstanding at the end of 2020. Both the 8 percent and 10 percent convertible bonds were issued in 2019 at face value. Each convertible bond is convertible into 40 shares of common stock. (Each bond has a face value of \$1,000.) The 7 percent cumulative, convertible preferred stock was issued at the beginning of 2020 at par. Each share of preferred is convertible into two shares of common stock. The average income tax rate is 20 percent. The 500,000 shares of common stock were outstanding during the entire year. Preferred dividends were not declared in 2020. Net income was \$1,750,000 in 2020. No bonds or preferred stock were converted during 2020. | |

ILLUSTRATION 16B.1**Balance Sheet for Comprehensive Illustration**

The computation of basic earnings per share for 2020 starts with the amount based upon the weighted-average number of shares outstanding, as shown in **Illustration 16B.2**.

ILLUSTRATION 16B.2**Computation of Earnings per Share—Simple Capital Structure**

| | |
|---|--------------------|
| Net income | \$1,750,000 |
| Less: 7% cumulative, convertible preferred stock dividend requirements (.07 × \$2,500,000) | <u>175,000</u> |
| Income applicable to common stockholders | <u>\$1,575,000</u> |
| Weighted-average number of shares outstanding | <u>500,000</u> |
| Earnings per common share (\$1,575,000 ÷ 500,000) | <u>\$3.15</u> |

Note the following points concerning this calculation.

1. When preferred stock is cumulative, the company subtracts the preferred dividend to arrive at income applicable to common stock, whether the dividend is declared or not.
2. The company must compute earnings per share of \$3.15 as a starting point, because it is the per share amount that is subject to reduction due to the existence of convertible securities and options.

Diluted Earnings per Share

The steps for computing diluted earnings per share are:

1. Determine, for each dilutive security, the per share effect assuming exercise/conversion.
2. Rank the results from Step 1 from smallest to largest earnings effect per share. That is, rank the results from most dilutive to least dilutive.
3. Beginning with the earnings per share based upon the weighted-average number of shares outstanding (\$3.15), recalculate earnings per share by adding the smallest per share effects from Step 2. If the results from this recalculation are less than \$3.15, proceed to the next smallest per share effect and recalculate earnings per share. Continue this process so long as each recalculated earnings per share is smaller than the previous amount. The process will end either because there are no more securities to test or a particular security maintains or increases earnings per share (is antidilutive).

We'll now apply the three steps to Webster Corporation. (Note that net income and income available to common stockholders are not the same if preferred dividends are declared or cumulative.) Webster Corporation has four securities that could reduce EPS: options, 8 percent convertible bonds, 10 percent convertible bonds, and the convertible preferred stock.

The first step in the computation of diluted earnings per share is to determine a per share effect for each potentially dilutive security. **Illustrations 16B.3** through **16B.6** show these computations.

ILLUSTRATION 16B.3**Per Share Effect of Options (Treasury-Stock Method), Diluted Earnings per Share**

| | |
|---|--------------------|
| Number of shares under option | 50,000 |
| Option price per share | × \$20 |
| Proceeds upon assumed exercise of options | <u>\$1,000,000</u> |
| Average 2020 market price of common | <u>\$30</u> |
| Treasury shares that could be acquired with proceeds (\$1,000,000 ÷ \$30) | <u>33,333</u> |
| Excess of shares under option over treasury shares that could be repurchased (50,000 – 33,333) | <u>16,667</u> |
| Per share effect: | |
| $\frac{\text{Incremental Numerator Effect}}{\text{Incremental Denominator Effect}} = \frac{\text{None}}{16,667 \text{ shares}} =$ | <u>\$0</u> |

| | |
|--|-----------------------|
| Interest expense for year (.08 × \$2,500,000) | \$200,000 |
| Income tax reduction due to interest (.20 × \$200,000) | 40,000 |
| Interest expense avoided (net of tax) | <u>\$160,000</u> |
| Number of common shares issued assuming conversion of bonds (2,500 bonds × 40 shares) | <u>100,000</u> |
| Per share effect: | |
| Incremental Numerator Effect | \$160,000 |
| Incremental Denominator Effect | 100,000 shares |
| | <u><u>\$1.60</u></u> |

ILLUSTRATION 16B.4

Per Share Effect of 8% Bonds (If-Converted Method), Diluted Earnings per Share

| | |
|--|-----------------------|
| Interest expense for year (.10 × \$2,500,000) | \$250,000 |
| Income tax reduction due to interest (.20 × \$250,000) | 50,000 |
| Interest expense avoided (net of tax) | <u>\$200,000</u> |
| Number of common shares issued assuming conversion of bonds (2,500 bonds × 40 shares) | <u>100,000</u> |
| Per share effect: | |
| Incremental Numerator Effect | \$200,000 |
| Incremental Denominator Effect | 100,000 shares |
| | <u><u>\$2.00</u></u> |

ILLUSTRATION 16B.5

Per Share Effect of 10% Bonds (If-Converted Method), Diluted Earnings per Share

| | |
|--|----------------------|
| Dividend requirement on cumulative preferred (25,000 shares × \$7) | \$175,000 |
| Income tax effect (dividends not a tax deduction) | none |
| Dividend requirement avoided (\$2,500,000 × .07) | <u>\$175,000</u> |
| Number of common shares issued assuming conversion of preferred (2 × 25,000 shares) | <u>50,000</u> |
| Per share effect: | |
| Incremental Numerator Effect | \$175,000 |
| Incremental Denominator Effect | 50,000 shares |
| | <u><u>\$3.50</u></u> |

ILLUSTRATION 16B.6

Per Share Effect of 7% Convertible Preferred (If-Converted Method), Diluted Earnings per Share

Illustration 16B.7 shows the ranking of all four potentially dilutive securities.

| | Effect per Share |
|-----------------------------|---------------------|
| 1. Options | \$ 0 |
| 2. 8% convertible bonds | 1.60 |
| 3. 10% convertible bonds | 2.00 |
| 4. 7% convertible preferred | 3.50 |

ILLUSTRATION 16B.7

Ranking of per Share Effects (Smallest to Largest), Diluted Earnings per Share

The next step is to determine earnings per share giving effect to the ranking in Illustration 16B.7. Starting with the earnings per share of \$3.15 computed previously, add the incremental effects of the options to the original calculation, as shown in **Illustration 16B.8**.

| Options | |
|---|----------------------|
| Income applicable to common stockholders | \$1,575,000 |
| Add: Incremental numerator effect of options | none |
| Total | <u>\$1,575,000</u> |
| Weighted-average number of shares outstanding | 500,000 |
| Add: Incremental denominator effect of options (Illustration 16B.3) | 16,667 |
| Total | <u>516,667</u> |
| Recomputed earnings per share (\$1,575,000 ÷ 516,667 shares) | <u><u>\$3.05</u></u> |

ILLUSTRATION 16B.8

Recomputation of EPS Using Incremental Effect of Options

Since the recomputed earnings per share is reduced (from \$3.15 to \$3.05), the effect of the options is dilutive. Again, we could have anticipated this effect because the average market price (\$30) exceeded the option price (\$20).

Assuming that Webster converts the 8 percent bonds, recomputed earnings per share is as shown in **Illustration 16B.9**.

ILLUSTRATION 16B.9**Recomputation of EPS Using Incremental Effect of 8% Convertible Bonds**

| 8% Convertible Bonds | |
|--|----------------------|
| Numerator from previous calculation | \$1,575,000 |
| Add: Interest expense avoided (net of tax) | <u>160,000</u> |
| Total | <u>\$1,735,000</u> |
| Denominator from previous calculation (shares) | 516,667 |
| Add: Number of common shares assumed issued upon conversion of bonds | <u>100,000</u> |
| Total | <u>616,667</u> |
| Recomputed earnings per share (\$1,735,000 ÷ 616,667 shares) | <u><u>\$2.81</u></u> |

Since the recomputed earnings per share is reduced (from \$3.05 to \$2.81), the effect of the 8 percent bonds is dilutive.

Next, assuming Webster converts the 10 percent bonds, the company recomputes earnings per share as shown in **Illustration 16B.10**.

ILLUSTRATION 16B.10**Recomputation of EPS Using Incremental Effect of 10% Convertible Bonds**

| 10% Convertible Bonds | |
|--|----------------------|
| Numerator from previous calculation | \$1,735,000 |
| Add: Interest expense avoided (net of tax) | <u>200,000</u> |
| Total | <u>\$1,935,000</u> |
| Denominator from previous calculation (shares) | 616,667 |
| Add: Number of common shares assumed issued upon conversion of bonds | <u>100,000</u> |
| Total | <u>716,667</u> |
| Recomputed earnings per share (\$1,935,000 ÷ 716,667 shares) | <u><u>\$2.70</u></u> |

Since the recomputed earnings per share is reduced (from \$2.81 to \$2.70), the effect of the 10 percent convertible bonds is dilutive.

The final step is the recomputation that includes the 7 percent preferred stock. This is shown in **Illustration 16B.11**.

ILLUSTRATION 16B.11**Recomputation of EPS Using Incremental Effect of 7% Convertible Preferred**

| 7% Convertible Preferred | |
|--|----------------------|
| Numerator from previous calculation | \$1,935,000 |
| Add: Dividend requirement avoided | <u>175,000</u> |
| Total | <u>\$2,110,000</u> |
| Denominator from previous calculation (shares) | 716,667 |
| Add: Number of common shares assumed issued upon conversion of preferred | <u>50,000</u> |
| Total | <u>766,667</u> |
| Recomputed earnings per share (\$2,110,000 ÷ 766,667 shares) | <u><u>\$2.75</u></u> |

Since the recomputed earnings per share is not reduced, the effect of the 7 percent convertible preferred is not dilutive. Diluted earnings per share is \$2.70. The per share effects of the preferred are not used in the computation.

Finally, **Illustration 16B.12** shows Webster Corporation's disclosure of earnings per share on its income statement.

| | |
|--|---------------|
| Net income | \$1,750,000 |
| Basic earnings per common share (Note X) | <u>\$3.15</u> |
| Diluted earnings per common share | <u>\$2.70</u> |

ILLUSTRATION 16B.12**Income Statement
Presentation, EPS**

A company uses income from continuing operations (adjusted for preferred dividends) to determine whether potential common stock is dilutive or antidilutive. Some refer to this measure as the **control number**. To illustrate, assume that Barton Company provides the information shown in **Illustration 16B.13**.

| | |
|---|--------------------|
| Income from continuing operations | \$2,400,000 |
| Loss from discontinued operations | <u>3,600,000</u> |
| Net loss | <u>\$1,200,000</u> |
| Weighted-average number of shares outstanding | 1,000,000 |
| Potential common stock | 200,000 |

ILLUSTRATION 16B.13**Barton Company Data**

Barton reports basic and diluted earnings per share as shown in **Illustration 16B.14**.

| | |
|--|---------------|
| Basic earnings per share | |
| Income from continuing operations ($\$2,400,000 \div 1,000,000$) | \$2.40 |
| Loss from discontinued operations ($\$3,600,000 \div 1,000,000$) | <u>3.60</u> |
| Net loss | <u>\$1.20</u> |
| Diluted earnings per share | |
| Income from continuing operations ($\$2,400,000 \div 1,200,000$) | \$2.00 |
| Loss from discontinued operations ($\$3,600,000 \div 1,200,000$) | <u>3.00</u> |
| Net loss | <u>\$1.00</u> |

ILLUSTRATION 16B.14**Basic and Diluted EPS**

As Illustration 16B.14 shows, basic earnings per share from continuing operations is higher than the diluted earnings per share from continuing operations. The reason: The diluted earnings per share from continuing operations includes an additional 200,000 shares of potential common stock in its denominator.

Companies use income from continuing operations as the control number because many of them show income from continuing operations (or a similar line item above net income if it appears on the income statement) but report a final net loss due to a loss on discontinued operations. If a company uses final net loss as the control number, basic and diluted earnings per share would be the same because the potential common shares are antidilutive.²¹

²¹If a company reports a loss from continuing operations, basic and diluted earnings per share will be the same because potential common stock will be antidilutive, even if the company reports final net income. The FASB believes that comparability of EPS information will be improved by using income from continuing operations as the control number.

Learning Objectives Review

1 Describe the accounting for the issuance, conversion, and retirement of convertible securities.

The method for **recording convertible bonds at the date of issuance follows that used to record straight debt issues**. Companies amortize any discount or premium that results from the issuance of convertible bonds, assuming the bonds will be held to maturity. If companies **convert bonds into other securities**, the principal accounting problem is to determine the amount at which to record the securities exchanged for the bonds. The book value method is considered GAAP. The **retirement of convertible debt** is considered a debt retirement, and the difference between the carrying amount of the retired convertible debt and the cash paid should result in a gain or loss.

When convertible preferred stock is converted, a company uses the book value method. It debits Preferred Stock, along with any related Paid-in Capital in Excess of Par—Preferred Stock, and credits Common Stock and Paid-in Capital in Excess of Par—Common Stock (if an excess exists).

2 Contrast the accounting for stock warrants with stock warrants issued with other securities.

Stock warrants: Companies should allocate the proceeds from the sale of debt with detachable warrants between the two securities. Warrants that are detachable can be traded separately from the debt, and therefore companies can determine their fair value. Two methods of allocation are available: the proportional method and the incremental method. Nondetachable warrants do not require an allocation of the proceeds between the bonds and the warrants; companies record the entire proceeds as debt. **Stock rights:** No entry is required when a company issues rights to existing stockholders. The company needs only to make a memorandum entry to indicate the number of rights issued to existing stockholders and to ensure that the company has additional unissued stock registered for issuance in case the stockholders exercise the rights.

3 Describe the accounting and reporting for stock compensation plans.

Companies must use the **fair value approach** to account for stock-based compensation. Under this approach, a company computes total compensation expense based on the fair value of the options that it expects to vest on the grant date. Companies recognize compensation expense in the periods in which the employee performs the services. Restricted-stock plans follow the same general accounting principles

as those for stock options. Companies estimate total compensation cost at the grant date based on the fair value of the restricted stock; they expense that cost over the service period. If vesting does not occur, companies reverse the compensation expense.

When first proposed, there was considerable opposition to the recognition provisions contained in the fair value approach. The reason: that approach could result in substantial, previously unrecognized compensation expense. Corporate America, particularly the high-technology sector, vocally opposed the proposed standard. They believed that the standard would place them at a competitive disadvantage with larger companies that can withstand higher compensation charges. Offsetting such opposition is the need for greater transparency in financial reporting, on which our capital markets depend.

4 Compute basic earnings per share.

When a company has both common and preferred stock outstanding, it subtracts the current-year preferred stock dividend from net income to arrive at income available to common stockholders. The formula for computing earnings per share is **net income less preferred stock dividends, divided by the weighted-average common shares outstanding**.

5 Compute diluted earnings per share.

A complex capital structure requires a dual presentation of earnings per share, each with equal prominence on the face of the income statement. These two presentations are referred to as basic earnings per share and diluted earnings per share. Basic earnings per share relies on the number of weighted-average common shares outstanding (i.e., equivalent to EPS for a simple capital structure). Diluted earnings per share indicates the dilution of earnings per share that will occur if all potential issuances of common stock that would reduce earnings per share takes place. Companies with complex capital structures should exclude antidilutive securities when computing earnings per share.

*6 Explain the accounting for stock-appreciation rights plans.

The accounting for stock-appreciation rights depends on whether the rights are classified as equity- or liability-based. If equity-based, the accounting is similar to that used for stock options. If liability-based, companies remeasure compensation expense each period and allocate it over the service period using the percentage approach.

***7 Compute earnings per share in a complex situation.**

For diluted EPS, make the following computations. (1) For each potentially dilutive security, determine the per share effect assuming exercise/conversion. (2) Rank the results from most dilutive to least dilutive. (3) Recalculate EPS starting with the most dilutive, and continue adding securities until EPS does not change or becomes larger.

Enhanced Review and Practice

Go online for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Practice Problem

On January 1, 2019, Scutaro Company issued 10-year, \$200,000 face value, 6% bonds at par (payable annually on January 1). Each \$1,000 bond is convertible into 30 shares of Scutaro \$2 par value common stock. The company has had 10,000 shares of common stock (and no preferred stock) outstanding throughout its life. None of the bonds have been converted as of the end of 2020.

Scutaro also has adopted a stock-option plan that granted options to key executives to purchase 4,000 shares of the company's common stock. The options were granted on January 2, 2019, and were exercisable 2 years after the date of grant if the grantee was still an employee of the company (the service period is 2 years). The options expired 6 years from the date of grant. The option price was set at \$4, and the fair value option-pricing model determines the total compensation expense to be \$18,000. All of the options were exercised during the year 2021: 3,000 on January 3 when the market price was \$6, and 1,000 on May 1 when the market price was \$7 a share. (Ignore all tax effects.)

Instructions

- Prepare the journal entry Scutaro would have made on January 1, 2019, to record the issuance of the bonds.
- Prepare the journal entry to record interest expense and compensation expense in 2020.
- Scutaro's net income in 2020 was \$30,000 and was \$27,000 in 2019. Compute basic and diluted earnings per share for Scutaro for 2020 and 2019. Scutaro's average stock price was \$4.40 in 2019 and \$5 in 2020.
- Assume that 75 percent of the holders of Scutaro's convertible bonds convert their bonds to stock on June 30, 2021, when Scutaro's stock is trading at \$8 per share. Scutaro pays \$2 per bond to induce bondholders to convert. Prepare the journal entry to record the conversion.

Solution

- a. Under GAAP, proceeds from the issuance of convertible debt are recorded entirely as debt.

| | | |
|---------------|---------|---------|
| Cash | 200,000 | |
| Bonds Payable | | 200,000 |

- b. **December 31, 2020**

| | | |
|---|--------|--------|
| Interest Expense | 12,000 | |
| Interest Payable | | 12,000 |
| [To record interest expense for 2020 (\$200,000 × .06)] | | |
| Compensation Expense | 9,000 | |
| Paid-in Capital—Stock Options | | 9,000 |
| [To record compensation expense for 2020 (1/2 × \$18,000)] | | |

| | <u>2020</u> | <u>2019</u> |
|---|-----------------|-----------------|
| c. Basic EPS | | |
| Net income (a) | \$30,000 | \$27,000 |
| Outstanding shares (b) | 10,000 | 10,000 |
| Basic EPS (a ÷ b) | <u>\$ 3.00</u> | <u>\$ 2.70</u> |
| Diluted EPS | | |
| Net income | \$30,000 | \$27,000 |
| Add: Interest savings (\$200,000 × .06) | <u>12,000</u> | <u>12,000</u> |
| Adjusted net income (a) | <u>\$42,000</u> | <u>\$39,000</u> |

(continued)

| | 2020 | 2019 |
|--|----------------|----------------|
| Outstanding shares | 10,000 | 10,000 |
| Shares upon conversion (200×30) | 6,000 | 6,000 |
| Options (treasury-stock method) | 800* | 364* |
| Total shares for diluted EPS (b) | <u>16,800</u> | <u>16,364</u> |
| Diluted EPS (a \div b) | <u>\$ 2.50</u> | <u>\$ 2.38</u> |

*Treasury-stock method:

| | 2020 | | 2019 | |
|--------------------|-----------------------|----------|--------------------------|----------|
| Cash proceeds | (\$4 \times 4,000) | \$16,000 | | \$16,000 |
| Shares repurchased | (\$16,000 \div \$5) | 3,200 | (\$16,000 \div \$4.40) | 3,636 |
| Net shares issued | (4,000 $-$ 3,200) | 800 | (4,000 $-$ 3,636) | 364 |

| | | | |
|----|--|---------|---------|
| d. | Bond Conversion Expense** | 300 | |
| | Bonds Payable | 150,000 | |
| | Common Stock* | | 9,000 |
| | Paid-in Capital in Excess of Par—Common Stock* | | 141,000 |
| | Cash | | 300 |

*\$200,000 \times .75 = \$150,000 of bonds converted

\$150,000 \div \$1,000 per bond = 150 bonds

150 bonds \times 30 shares per bond = 4,500 new shares issued

4,500 shares \times \$2 par value = \$9,000 increase in common stock account

\$150,000 $-$ \$9,000 = \$141,000 increase in paid-in capital account

**150 bonds \times \$2 per bond = \$300 bond conversion expense

WileyPLUS

Exercises, Problems, Problem Solution Walkthrough Videos, and many more assessment tools and resources are available for practice in WileyPLUS.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

Questions

1. What is meant by a dilutive security?
2. Briefly explain why corporations issue convertible securities.
3. Discuss the similarities and the differences between convertible debt and debt issued with stock warrants.
4. Bridgewater Corp. offered holders of its 1,000 convertible bonds a premium of \$160 per bond to induce conversion into shares of its common stock. Upon conversion of all the bonds, Bridgewater Corp. recorded the \$160,000 premium as a reduction of paid-in capital. Comment on Bridgewater's treatment of the \$160,000 "sweetener."
5. Explain how the conversion feature of convertible debt has a value (a) to the issuer and (b) to the purchaser.
6. What are the arguments for giving separate accounting recognition to the conversion feature of debentures?
7. Four years after issue, debentures with a face value of \$1,000,000 and book value of \$960,000 are tendered for conversion into 80,000 shares of common stock immediately after an interest payment date. At that time, the market price of the debentures is 104, and the common stock is selling at \$14 per share (par value \$10). The company records the conversion as follows.

| | | |
|---|-----------|---------|
| Bonds Payable | 1,000,000 | |
| Discount on Bonds Payable | | 40,000 |
| Common Stock | | 800,000 |
| Paid-in Capital in Excess of Par—Common Stock | | 160,000 |

Discuss the propriety of this accounting treatment.

8. On July 1, 2020, Roberts Corporation issued \$3,000,000 of 9% bonds payable in 20 years. The bonds include detachable warrants giving the bondholder the right to purchase for \$30 one share of \$1 par value common stock at any time during the next 10 years. The bonds were sold for \$3,000,000. The value of the warrants at the time of issuance was \$100,000. Prepare the journal entry to record this transaction.
9. What are stock rights? How does the issuing company account for them?
10. Briefly explain the accounting requirements for stock compensation plans under GAAP.
11. Cordero Corporation has an employee stock-purchase plan which permits all full-time employees to purchase 10 shares of common stock on the third anniversary of their employment and an additional 15 shares

on each subsequent anniversary date. The purchase price is set at the market price on the date purchased and no commission is charged. Discuss whether this plan would be considered compensatory.

12. What date or event does the profession believe should be used in determining the value of a stock option? What arguments support this position?
13. Over what period of time should compensation cost be allocated?
14. How is compensation expense computed using the fair value approach?
15. What are the advantages of using restricted stock to compensate employees?
16. At December 31, 2020, Reid Company had 600,000 shares of common stock issued and outstanding, 400,000 of which had been issued and outstanding throughout the year and 200,000 of which were issued on October 1, 2020. Net income for 2020 was \$2,000,000, and dividends declared on preferred stock were \$400,000. Compute Reid's earnings per common share. (Round to the nearest penny.)
17. What effect do stock dividends or stock splits have on the computation of the weighted-average number of shares outstanding?
18. Define the following terms.
 - a. Basic earnings per share.
 - b. Potentially dilutive security.
 - c. Diluted earnings per share.
 - d. Complex capital structure.
 - e. Potential common stock.
19. What are the computational guidelines for determining whether a convertible security is to be reported as part of diluted earnings per share?
20. Discuss why options and warrants may be considered potentially dilutive common shares for the computation of diluted earnings per share.
21. Explain how convertible securities are determined to be potentially dilutive common shares and how those convertible securities that are not considered to be potentially dilutive common shares enter into the determination of earnings per share data.
22. Explain the treasury-stock method as it applies to options and warrants in computing dilutive earnings per share data.
23. Earnings per share can affect market prices of common stock. Can market prices affect earnings per share? Explain.
24. What is meant by the term antidilution? Give an example.
25. What type of earnings per share presentation is required in a complex capital structure?
- *26. How is antidilution determined when multiple securities are involved?

Brief Exercises

BE16.1 (LO 1) Archer Inc. issued \$4,000,000 par value, 7% convertible bonds at 99 for cash. If the bonds had not included the conversion feature, they would have sold for 95. Prepare the journal entry to record the issuance of the bonds.

BE16.2 (LO 1) Petrenko Corporation has outstanding 2,000 \$1,000 bonds, each convertible into 50 shares of \$10 par value common stock. The bonds are converted on December 31, 2020, when the unamortized discount is \$30,000 and the market price of the stock is \$21 per share. Record the conversion using the book value approach.

BE16.3 (LO 1) Pechstein Corporation issued 2,000 shares of \$10 par value common stock upon conversion of 1,000 shares of \$50 par value preferred stock. The preferred stock was originally issued at \$60 per share. The common stock is trading at \$26 per share at the time of conversion. Record the conversion of the preferred stock.

BE16.4 (LO 2) Eisler Corporation issued 2,000 \$1,000 bonds at 101. Each bond was issued with one detachable stock warrant. After issuance, the bonds were selling in the market at 98, and the warrants had a market price of \$40. Use the proportional method to record the issuance of the bonds and warrants.

BE16.5 (LO 2) McIntyre Corporation issued 2,000 \$1,000 bonds at 101. Each bond was issued with one detachable stock warrant. After issuance, the bonds were selling separately at 98. The market price of the warrants without the bonds cannot be determined. Use the incremental method to record the issuance of the bonds and warrants.

BE16.6 (LO 3) On January 1, 2020, Barwood Corporation granted 5,000 options to executives. Each option entitles the holder to purchase one share of Barwood's \$5 par value common stock at \$50 per share at any time during the next 5 years. The market price of the stock is \$65 per share on the date of grant. The fair value of the options at the grant date is \$150,000. The period of benefit is 2 years. Prepare Barwood's journal entries for January 1, 2020, and December 31, 2020 and 2021.

BE16.7 (LO 3) Refer to the data for Barwood Corporation in BE16.6. Repeat the requirements assuming that instead of options, Barwood granted 2,000 shares of restricted stock.

BE16.8 (LO 3) On January 1, 2020 (the date of grant), Lutz Corporation issues 2,000 shares of restricted stock to its executives. The fair value of these shares is \$75,000, and their par value is \$10,000. The stock is forfeited if the executives do not complete 3 years of employment with the company. Prepare the journal entry (if any) on January 1, 2020, and on December 31, 2020, assuming the service period is 3 years.

BE16.9 (LO 4) Kalin Corporation had 2020 net income of \$1,000,000. During 2020, Kalin paid a dividend of \$2 per share on 100,000 shares of preferred stock. During 2020, Kalin had outstanding 250,000 shares of common stock. Compute Kalin's 2020 earnings per share.

BE16.10 (LO 4) Douglas Corporation had 120,000 shares of stock outstanding on January 1, 2020. On May 1, 2020, Douglas issued 60,000 shares. On July 1, Douglas purchased 10,000 treasury shares, which were reissued on October 1. Compute Douglas's weighted-average number of shares outstanding for 2020.

BE16.11 (LO 4) Tomba Corporation had 300,000 shares of common stock outstanding on January 1, 2020. On May 1, Tomba issued 30,000 shares. (a) Compute the weighted-average number of shares outstanding if the 30,000 shares were issued for cash. (b) Compute the weighted-average number of shares outstanding if the 30,000 shares were issued in a stock dividend.

BE16.12 (LO 4) The 2020 income statement of Wasmeier Corporation showed net income of \$480,000 and a loss from discontinued operations of \$120,000. Wasmeier had 100,000 shares of common stock outstanding all year. Prepare Wasmeier's income statement presentation of earnings per share.

BE16.13 (LO 5) Rockland Corporation earned net income of \$300,000 in 2020 and had 100,000 shares of common stock outstanding throughout the year. Also outstanding all year was \$800,000 of 9% bonds, which are convertible into 16,000 shares of common. Rockland's tax rate is 20%. Compute Rockland's 2020 diluted earnings per share.

BE16.14 (LO 5) DiCenta Corporation reported net income of \$270,000 in 2020 and had 50,000 shares of common stock outstanding throughout the year. Also outstanding all year were 5,000 shares of cumulative preferred stock, each convertible into 2 shares of common. The preferred stock pays an annual dividend of \$5 per share. DiCenta's tax rate is 20%. Compute DiCenta's 2020 diluted earnings per share.

BE16.15 (LO 5) Bedard Corporation reported net income of \$300,000 in 2020 and had 200,000 shares of common stock outstanding throughout the year. Also outstanding all year were 45,000 options to purchase common stock at \$10 per share. The average market price of the stock during the year was \$15. Compute diluted earnings per share.

***BE16.16 (LO 6)** Ferraro, Inc. established a stock-appreciation rights (SARs) program on January 1, 2020, which entitles executives to receive cash at the date of exercise for the difference between the market price of the stock and the pre-established price of \$20 on 5,000 SARs. The required service period is 2 years. The fair value of the SARs are determined to be \$4 on December 31, 2020, and \$9 on December 31, 2021. Compute Ferraro's compensation expense for 2020 and 2021.

Exercises

E16.1 (LO 1, 2) Excel (Issuance and Conversion of Bonds) For each of the unrelated transactions described below, present the entry(ies) required to record each transaction.

- Grand Corp. issued \$20,000,000 par value 10% convertible bonds at 99. If the bonds had not been convertible, the company's investment banker estimates they would have been sold at 95.
- Hoosier Company issued \$20,000,000 par value 10% bonds at 98. One detachable stock purchase warrant was issued with each \$100 par value bond. At the time of issuance, the warrants were selling for \$4.
- Suppose **Sepracor, Inc.** called its convertible debt in 2020. Assume the following related to the transaction. The 11%, \$10,000,000 par value bonds were converted into 1,000,000 shares of \$1 par value common stock on July 1, 2020. On July 1, there was \$55,000 of unamortized discount applicable to the bonds, and the company paid an additional \$75,000 to the bondholders to induce conversion of all the bonds. The company records the conversion using the book value method.

E16.2 (LO 1) (Conversion of Bonds) Aubrey Inc. issued \$4,000,000 of 10%, 10-year convertible bonds on June 1, 2020, at 98 plus accrued interest. The bonds were dated April 1, 2020, with interest payable April 1 and October 1. Bond discount is amortized semiannually on a straight-line basis.

On April 1, 2021, \$1,500,000 of these bonds were converted into 30,000 shares of \$20 par value common stock. Accrued interest was paid in cash at the time of conversion.

Instructions

- Prepare the entry to record the interest expense at October 1, 2020. Assume that accrued interest payable was credited when the bonds were issued. (Round to nearest dollar.)
- Prepare the entry(ies) to record the conversion on April 1, 2021. (Book value method is used.) Assume that the entry to record amortization of the bond discount and interest payment has been made.

E16.3 (LO 1) (Conversion of Bonds) Vargo Company has bonds payable outstanding in the amount of \$500,000, and the Premium on Bonds Payable account has a balance of \$7,500. Each \$1,000 bond is convertible into 20 shares of preferred stock of par value of \$50 per share. All bonds are converted into preferred stock.

Instructions

Assuming that the book value method was used, what entry would be made?

E16.4 (LO 1) (Conversion of Bonds) On January 1, 2019, when its \$30 par value common stock was selling for \$80 per share, Plato Corp. issued \$10,000,000 of 8% convertible debentures due in 20 years. The conversion option allowed the holder of each \$1,000 bond to convert the bond into five shares of the corporation's common stock. The debentures were issued for \$10,800,000. The present value of the bond payments at the time of issuance was \$8,500,000, and the corporation believes the difference between the present value and the amount paid is attributable to the conversion feature. On January 1, 2020, the corporation's \$30 par value common stock was split 2 for 1, and the conversion rate for the bonds was adjusted accordingly. On January 1, 2021, when the corporation's \$15 par value common stock was selling for \$135 per share, holders of 30% of the convertible debentures exercised their conversion options. The corporation uses the straight-line method for amortizing any bond discounts or premiums.

Instructions

- Prepare in general journal form the entry to record the original issuance of the convertible debentures.
- Prepare in general journal form the entry to record the exercise of the conversion option, using the book value method. Show supporting computations in good form.

E16.5 (LO 1) (Conversion of Bonds) The December 31, 2020, balance sheet of Kepler Corp. is as follows.

| | | |
|---|---------------|-----------|
| 10% callable, convertible bonds payable (semiannual interest dates April 30 and October 31; convertible into 6 shares of \$25 par value common stock per \$1,000 of bond principal; maturity date April 30, 2026) | \$500,000 | |
| Discount on bonds payable | <u>10,240</u> | \$489,760 |

On March 5, 2021, Kepler Corp. called all of the bonds as of April 30 for the principal plus interest through April 30. By April 30, all bondholders had exercised their conversion to common stock as of the interest payment date. Consequently, on April 30, Kepler Corp. paid the semiannual interest and issued shares of common stock for the bonds. The discount is amortized on a straight-line basis. Kepler uses the book value method.

Instructions

Prepare the entry(ies) to record the interest expense and conversion on April 30, 2021. Reversing entries were made on January 1, 2021. (Round to the nearest dollar.)

E16.6 (LO 1) (Conversion of Bonds) On January 1, 2020, Gottlieb Corporation issued \$4,000,000 of 10-year, 8% convertible debentures at 102. Interest is to be paid semiannually on June 30 and December 31. Each \$1,000 debenture can be converted into eight shares of Gottlieb Corporation \$100 par value common stock after December 31, 2021.

On January 1, 2022, \$400,000 of debentures are converted into common stock, which is then selling at \$110. An additional \$400,000 of debentures are converted on March 31, 2022. The market price of the common stock is then \$115. Accrued interest at March 31 will be paid on the next interest date.

Bond premium is amortized on a straight-line basis.

Instructions

Make the necessary journal entries for:

- December 31, 2021.
- January 1, 2022.
- March 31, 2022.
- June 30, 2022.

Record the conversions using the book value method.

E16.7 (LO 2) (Issuance of Bonds with Warrants) Illiad Inc. has decided to raise additional capital by issuing \$170,000 face value of bonds with a coupon rate of 10%. In discussions with investment bankers, it was determined that to help the sale of the bonds, detachable stock warrants should be issued at the rate of one warrant for each \$100 bond sold. The value of the bonds without the warrants is considered to be \$136,000, and the value of the warrants in the market is \$24,000. The bonds sold in the market at issuance for \$152,000.

Instructions

- a. What entry should be made at the time of the issuance of the bonds and warrants?
- b. If the warrants were nondetachable, would the entries be different? Discuss.

E16.8 (LO 2) (Issuance of Bonds with Detachable Warrants) On September 1, 2020, Sands Company sold at 104 (plus accrued interest) 4,000 of its 9%, 10-year, \$1,000 face value, nonconvertible bonds with detachable stock warrants. Each bond carried two detachable warrants. Each warrant was for one share of common stock at a specified option price of \$15 per share. Shortly after issuance, the warrants were quoted on the market for \$3 each. No fair value can be determined for the Sands Company bonds. Interest is payable on December 1 and June 1.

Instructions

Prepare in general journal format the entry to record the issuance of the bonds.

(AICPA adapted)

E16.9 (LO 2) (Issuance of Bonds with Stock Warrants) On May 1, 2020, Friendly Company issued 2,000 \$1,000 bonds at 102. Each bond was issued with one detachable stock warrant. Shortly after issuance, the bonds were selling at 98, but the fair value of the warrants cannot be determined.

Instructions

- a. Prepare the entry to record the issuance of the bonds and warrants.
- b. Assume the same facts as part (a), except that the warrants had a fair value of \$30. Prepare the entry to record the issuance of the bonds and warrants.

E16.10 (LO 3) (Issuance and Exercise of Stock Options) On November 1, 2020, Columbo Company adopted a stock-option plan that granted options to key executives to purchase 30,000 shares of the company's \$10 par value common stock. The options were granted on January 2, 2021, and were exercisable 2 years after the date of grant if the grantee was still an employee of the company. The options expired 6 years from date of grant. The option price was set at \$40, and the fair value option-pricing model determines the total compensation expense to be \$450,000.

All of the options were exercised during the year 2023: 20,000 on January 3 when the market price was \$67, and 10,000 on May 1 when the market price was \$77 a share.

Instructions

Prepare journal entries relating to the stock option plan for the years 2021, 2022, and 2023. Assume that the employee performs services equally in 2021 and 2022.

E16.11 (LO 3) (Issuance, Exercise, and Termination of Stock Options) On January 1, 2021, Titania Inc. granted stock options to officers and key employees for the purchase of 20,000 shares of the company's \$10 par common stock at \$25 per share. The options were exercisable within a 5-year period beginning January 1, 2023, by grantees still in the employ of the company, and expiring December 31, 2027. The service period for this award is 2 years. Assume that the fair value option-pricing model determines total compensation expense to be \$350,000.

On April 1, 2022, 2,000 options were terminated when the employees resigned from the company. The market price of the common stock was \$35 per share on this date.

On March 31, 2023, 12,000 options were exercised when the market price of the common stock was \$40 per share.

Instructions

Prepare journal entries to record issuance of the stock options, termination of the stock options, exercise of the stock options, and charges to compensation expense, for the years ended December 31, 2021, 2022, and 2023.

E16.12 (LO 3) (Issuance, Exercise, and Termination of Stock Options) On January 1, 2019, Nichols Corporation granted 10,000 options to key executives. Each option allows the executive to purchase one share of Nichols' \$5 par value common stock at a price of \$20 per share. The options were exercisable within a 2-year period beginning January 1, 2021, if the grantee is still employed by the company at the time of the exercise. On the grant date, Nichols' stock was trading at \$25 per share, and a fair value option-pricing model determines total compensation to be \$400,000.

On May 1, 2021, 8,000 options were exercised when the market price of Nichols' stock was \$30 per share. The remaining options lapsed in 2023 because executives decided not to exercise their options.

Instructions

Prepare the necessary journal entries related to the stock option plan for the years 2019 through 2023.

E16.13 (LO 3) (Accounting for Restricted Stock) Derrick Company issues 4,000 shares of restricted stock to its CFO, Dane Yaping, on January 1, 2020. The stock has a fair value of \$120,000 on this date. The service period related to this restricted stock is 4 years. Vesting occurs if Yaping stays with the company for 4 years. The par value of the stock is \$5. At December 31, 2021, the fair value of the stock is \$145,000.

Instructions

- Prepare the journal entries to record the restricted stock on January 1, 2020 (the date of grant), and December 31, 2021.
- On March 4, 2022, Yaping leaves the company. Prepare the journal entry (if any) to account for this forfeiture.

E16.14 (LO 3) (Accounting for Restricted Stock) Tweedie Company issues 10,000 shares of restricted stock to its CFO, Mary Tokar, on January 1, 2020. The stock has a fair value of \$500,000 on this date. The service period related to this restricted stock is 5 years. Vesting occurs if Tokar stays with the company until December 31, 2024. The par value of the stock is \$10. At December 31, 2020, the fair value of the stock is \$450,000.

Instructions

- Prepare the journal entries to record the restricted stock on January 1, 2020 (the date of grant), and December 31, 2021.
- On July 25, 2024, Tokar leaves the company. Prepare the journal entry (if any) to account for this forfeiture.

E16.15 (LO 4) Excel (Weighted-Average Number of Shares) Newton Inc. uses a calendar year for financial reporting. The company is authorized to issue 9,000,000 shares of \$10 par common stock. At no time has Newton issued any potentially dilutive securities. Listed below is a summary of Newton's common stock activities.

| | |
|--|------------------|
| 1. Number of common shares issued and outstanding at December 31, 2018 | 2,000,000 |
| 2. Shares issued as a result of a 10% stock dividend on September 30, 2019 | 200,000 |
| 3. Shares issued for cash on March 31, 2020 | <u>2,000,000</u> |
| Number of common shares issued and outstanding at December 31, 2020 | <u>4,200,000</u> |
| 4. A 2-for-1 stock split of Newton's common stock took place on March 31, 2021 | |

Instructions

- Compute the weighted-average number of common shares used in computing earnings per common share for 2019 on the 2020 comparative income statement.
- Compute the weighted-average number of common shares used in computing earnings per common share for 2020 on the 2020 comparative income statement.
- Compute the weighted-average number of common shares to be used in computing earnings per common share for 2020 on the 2021 comparative income statement.
- Compute the weighted-average number of common shares to be used in computing earnings per common share for 2021 on the 2021 comparative income statement.

(CMA adapted)

E16.16 (LO 4) (EPS: Simple Capital Structure) On January 1, 2021, Wilke Corp. had 480,000 shares of common stock outstanding. During 2021, it had the following transactions that affected the common stock account.

| | |
|------------|---|
| February 1 | Issued 120,000 shares |
| March 1 | Issued a 10% stock dividend |
| May 1 | Acquired 100,000 shares of treasury stock |
| June 1 | Issued a 3-for-1 stock split |
| October 1 | Reissued 60,000 shares of treasury stock |

Instructions

- Determine the weighted-average number of shares outstanding as of December 31, 2021.
- Assume that Wilke Corp. earned net income of \$3,456,000 during 2021. In addition, it had 100,000 shares of 9%, \$100 par nonconvertible, noncumulative preferred stock outstanding for the entire year. Because of liquidity considerations, however, the company did not declare and pay a preferred dividend in 2021. Compute earnings per share for 2021, using the weighted-average number of shares determined in part (a).
- Assume the same facts as in part (b), except that the preferred stock was cumulative. Compute earnings per share for 2021.
- Assume the same facts as in part (b), except that net income included a loss from discontinued operations of \$432,000 (net of tax). Compute earnings per share for 2021.

E16.17 (LO 4) (EPS: Simple Capital Structure) Ace Company had 200,000 shares of common stock outstanding on December 31, 2021. During the year 2022, the company issued 8,000 shares on May 1 and retired 14,000 shares on October 31. For the year 2022, Ace Company reported net income of \$249,690 after a loss from discontinued operations of \$40,600 (net of tax).

Instructions

What earnings per share data should be reported at the bottom of its income statement?

E16.18 (LO 4) (EPS: Simple Capital Structure) Flagstad Inc. presented the following data.

| | |
|--|-------------|
| Net income | \$2,500,000 |
| Preferred stock: 50,000 shares outstanding, \$100 par, 8% cumulative, not convertible | 5,000,000 |
| Common stock: Shares outstanding 1/1 | 750,000 |
| Issued for cash, 5/1 | 300,000 |
| Acquired treasury stock for cash, 8/1 | 150,000 |
| 2-for-1 stock split, 10/1 | |

Instructions

Compute earnings per share.

E16.19 (LO 4) (EPS: Simple Capital Structure) A portion of the combined statement of income and retained earnings of Seminole Inc. for the current year follows.

| | |
|---|--------------|
| Income from continuing operations | \$15,000,000 |
| Loss from discontinued operations, net of applicable income tax (Note 1) | 1,340,000 |
| Net income | 13,660,000 |
| Retained earnings at the beginning of the year | 83,250,000 |
| | 96,910,000 |
| Dividends declared: | |
| On preferred stock—\$6.00 per share | \$ 300,000 |
| On common stock—\$1.75 per share | 14,875,000 |
| Retained earnings at the end of the year | \$81,735,000 |

Note 1. During the year, Seminole Inc. suffered a major loss from discontinued operations of \$1,340,000 after applicable income tax reduction of \$1,200,000.

At the end of the current year, Seminole Inc. has outstanding 8,500,000 shares of \$10 par common stock and 50,000 shares of 6% preferred. On April 1 of the current year, Seminole Inc. issued 1,000,000 shares of common stock for \$32 per share to help finance the loss from discontinued operations.

Instructions

Compute the earnings per share on common stock for the current year as it should be reported to stockholders.

E16.20 (LO 4) (EPS: Simple Capital Structure) On January 1, 2020, Lennon Industries had stock outstanding as follows.

| | |
|---|-------------|
| 6% Cumulative preferred stock, \$100 par value, issued and outstanding 10,000 shares | \$1,000,000 |
| Common stock, \$10 par value, issued and outstanding 200,000 shares | 2,000,000 |

To acquire the net assets of three smaller companies, Lennon authorized the issuance of an additional 160,000 common shares. The acquisitions took place as shown below.

| Date of Acquisition | Shares Issued |
|---------------------------|---------------|
| Company A April 1, 2020 | 50,000 |
| Company B July 1, 2020 | 80,000 |
| Company C October 1, 2020 | 30,000 |

On May 14, 2020, Lennon realized a \$90,000 (before taxes) gain on discontinued operations. On December 31, 2020, Lennon recorded income of \$300,000 from continuing operations.

Instructions

Assuming a 20% tax rate, compute the earnings per share data that should appear on the financial statements of Lennon Industries as of December 31, 2020.

E16.21 (LO 4) (EPS: Simple Capital Structure) At January 1, 2020, Langley Company's outstanding shares included the following.

- 280,000 shares of \$50 par value, 7% cumulative preferred stock
- 900,000 shares of \$1 par value common stock

Net income for 2020 was \$2,530,000. No cash dividends were declared or paid during 2020. On February 15, 2021, however, all preferred dividends in arrears were paid, together with a 5% stock dividend on common shares. There were no dividends in arrears prior to 2020.

On April 1, 2020, 450,000 shares of common stock were sold for \$10 per share, and on October 1, 2020, 110,000 shares of common stock were purchased for \$20 per share and held as treasury stock.

Instructions

Compute earnings per share for 2020. Assume that financial statements for 2020 were issued in March 2021.

E16.22 (LO 5) (EPS with Convertible Bonds, Various Situations) In 2019, Chirac Enterprises issued, at par, 60 \$1,000, 8% bonds, each convertible into 100 shares of common stock. Chirac had revenues of \$17,500 and expenses other than interest and taxes of \$8,400 for 2020. (Assume that the tax rate is 20%.) Throughout 2020, 2,000 shares of common stock were outstanding; none of the bonds was converted or redeemed.

Instructions

- a. Compute diluted earnings per share for 2020.
- b. Assume the same facts as those assumed for part (a), except that the 60 bonds were issued on September 1, 2020 (rather than in 2019), and none have been converted or redeemed. Compute diluted earnings per share for 2020.
- c. Assume the same facts as assumed for part (a), except that 20 of the 60 bonds were actually converted on July 1, 2020. Compute diluted earnings per share for 2020.

E16.23 (LO 5) (EPS with Convertible Bonds) On June 1, 2018, Andre Company and Agassi Company merged to form Lancaster Inc. A total of 800,000 shares were issued to complete the merger. The new corporation reports on a calendar-year basis.

On April 1, 2020, the company issued an additional 400,000 shares of stock for cash. All 1,200,000 shares were outstanding on December 31, 2020.

Lancaster Inc. also issued \$600,000 of 20-year, 8% convertible bonds at par on July 1, 2020. Each \$1,000 bond converts to 40 shares of common at any interest date. None of the bonds have been converted to date.

Lancaster Inc. is preparing its annual report for the fiscal year ending December 31, 2020. The annual report will show earnings per share figures based upon a reported after-tax net income of \$1,540,000. (The tax rate is 20%.)

Instructions

Determine the following for 2020.

- a. The number of shares to be used for calculating:
 1. Basic earnings per share.
 2. Diluted earnings per share.
- b. The earnings figures to be used for calculating:
 1. Basic earnings per share.
 2. Diluted earnings per share.

(CMA adapted)

E16.24 (LO 5) (EPS with Convertible Bonds and Preferred Stock) The Simon Corporation issued 10-year, \$5,000,000 par, 7% callable convertible subordinated debentures on January 2, 2020. The bonds have a par value of \$1,000, with interest payable annually. The current conversion ratio is 14:1, and in 2 years it will increase to 18:1. At the date of issue, the bonds were sold at 98. Bond discount is amortized on a straight-line basis. Simon's effective tax was 20%. Net income in 2020 was \$9,500,000, and the company had 2,000,000 shares outstanding during the entire year.

Instructions

- a. Prepare a schedule to compute both basic and diluted earnings per share.
- b. Discuss how the schedule would differ if the security was convertible preferred stock.

E16.25 (LO 5) (EPS with Convertible Bonds and Preferred Stock) On January 1, 2020, Crocker Company issued 10-year, \$2,000,000 face value, 6% bonds, at par. Each \$1,000 bond is convertible into 15 shares of Crocker common stock. Crocker's net income in 2020 was \$400,000, and its tax rate was 20%. The company had 100,000 shares of common stock outstanding throughout 2020. None of the bonds were converted in 2020.

Instructions

- a. Compute diluted earnings per share for 2020.
- b. Compute diluted earnings per share for 2020, assuming the same facts as above, except that \$1,000,000 of 6% convertible preferred stock was issued instead of the bonds. Each \$100 preferred share is convertible into 5 shares of Crocker common stock.

E16.26 (LO 5) (EPS with Options, Various Situations) Venezuela Company's net income for 2020 is \$50,000. The only potentially dilutive securities outstanding were 1,000 options issued during 2019, each exercisable for one share at \$6. None has been exercised, and 10,000 shares of common were outstanding during 2020. The average market price of Venezuela's stock during 2020 was \$20.

Instructions

- a. Compute diluted earnings per share. (Round to nearest cent.)
- b. Assume the same facts as those assumed for part (a), except that the 1,000 options were issued on October 1, 2020 (rather than in 2019). The average market price during the last 3 months of 2020 was \$20.

E16.27 (LO 5) (EPS with Contingent Issuance Agreement) Winsor Inc. recently purchased Holiday Corp., a large midwestern home painting corporation. One of the terms of the merger was that if Holiday's income for 2020 was \$110,000 or more, 10,000 additional shares would be issued to Holiday's stockholders in 2021. Holiday's income for 2019 was \$120,000.

Instructions

- a. Would the contingent shares have to be considered in Winsor's 2019 earnings per share computations?
- b. Assume the same facts, except that the 10,000 shares are contingent on Holiday's achieving a net income of \$130,000 in 2020. Would the contingent shares have to be considered in Winsor's earnings per share computations for 2019?

E16.28 (LO 5) (EPS with Warrants) Howat Corporation earned \$360,000 during a period when it had an average of 100,000 shares of common stock outstanding. The common stock sold at an average market price of \$15 per share during the period. Also outstanding were 15,000 warrants that could be exercised to purchase one share of common stock for \$10 for each warrant exercised.

Instructions

- a. Are the warrants dilutive?
- b. Compute basic earnings per share.
- c. Compute diluted earnings per share.

***E16.29 (LO 6) (Stock-Appreciation Rights)** On December 31, 2016, Beckford Company issues 150,000 stock-appreciation rights to its officers entitling them to receive cash for the difference between the market price of its stock and a pre-established price of \$10. The fair value of the SARs is estimated to be \$4 per SAR on December 31, 2017; \$1 on December 31, 2018; \$10 on December 31, 2019; and \$9 on December 31, 2020. The service period is 4 years, and the exercise period is 7 years.

Instructions

- a. Prepare a schedule that shows the amount of compensation expense allocable to each year affected by the stock-appreciation rights plan.
- b. Prepare the entry at December 31, 2020, to record compensation expense, if any, in 2020.
- c. Prepare the entry on December 31, 2020, assuming that all 150,000 SARs are exercised.

***E16.30 (LO 6) (Stock-Appreciation Rights)** Capulet Company establishes a stock-appreciation rights program that entitles its new president Ben Davis to receive cash for the difference between the market price of the stock and a pre-established price of \$30 (also market price) on December 31, 2016, on 30,000 SARs. The date of grant is December 31, 2016, and the required employment (service) period is 4 years. President Davis exercises all of the SARs in 2022. The fair value of the SARs is estimated to be \$6 per SAR on December 31, 2017; \$9 on December 31, 2018; \$15 on December 31, 2019; \$6 on December 31, 2020; and \$18 on December 31, 2021.

Instructions

- a. Prepare a 5-year (2017–2021) schedule of compensation expense pertaining to the 30,000 SARs granted president Davis.
- b. Prepare the journal entry for compensation expense in 2017, 2020, and 2021 relative to the 30,000 SARs.

Problems

P16.1 (LO 1, 2, 3) Groupwork (Entries for Various Dilutive Securities) The stockholders' equity section of Martino Inc. at the beginning of the current year appears below.

| | |
|---|-------------|
| Common stock, \$10 par value, authorized 1,000,000 shares, 300,000 shares issued and outstanding | \$3,000,000 |
| Paid-in capital in excess of par—common stock | 600,000 |
| Retained earnings | 570,000 |

During the current year, the following transactions occurred.

- The company issued to the stockholders 100,000 rights. Ten rights are needed to buy one share of stock at \$32. The rights were void after 30 days. The market price of the stock at this time was \$34 per share.
- The company sold to the public a \$200,000, 10% bond issue at 104. The company also issued with each \$100 bond one detachable stock purchase warrant, which provided for the purchase of common stock at \$30 per share. Shortly after issuance, similar bonds without warrants were selling at 96 and the warrants at \$8.
- All but 5,000 of the rights issued in (1) were exercised in 30 days.
- At the end of the year, 80% of the warrants in (2) had been exercised, and the remaining were outstanding and in good standing.
- During the current year, the company granted stock options for 10,000 shares of common stock to company executives. The company, using a fair value option-pricing model, determines that each option is worth \$10. The option price is \$30. The options were to expire at year-end and were considered compensation for the current year.
- All but 1,000 shares related to the stock-option plan were exercised by year-end. The expiration resulted because one of the executives failed to fulfill an obligation related to the employment contract.

Instructions

- Prepare general journal entries for the current year to record the transactions listed above.
- Prepare the stockholders' equity section of the balance sheet at the end of the current year. Assume that retained earnings at the end of the current year is \$750,000.

P16.2 (LO 1) Excel (Entries for Conversion, Amortization, and Interest of Bonds) Volker Inc. issued \$2,500,000 of convertible 10-year bonds on July 1, 2020. The bonds provide for 12% interest payable semiannually on January 1 and July 1. The discount in connection with the issue was \$54,000, which is being amortized monthly on a straight-line basis.

The bonds are convertible after one year into 8 shares of Volker Inc.'s \$100 par value common stock for each \$1,000 of bonds.

On August 1, 2021, \$250,000 of bonds were turned in for conversion into common stock. Interest has been accrued monthly and paid as due. At the time of conversion, any accrued interest on bonds being converted is paid in cash.

Instructions

Prepare the journal entries to record the conversion, amortization, and interest in connection with the bonds as of the following dates. (Round to the nearest dollar.)

- August 1, 2021. (Assume the book value method is used.)
- August 31, 2021.
- December 31, 2021, including closing entries for end-of-year.

(AICPA adapted)

P16.3 (LO 3) Excel (Stock-Option Plan) Berg Company adopted a stock-option plan on November 30, 2019, that provided that 70,000 shares of \$5 par value stock be designated as available for the granting of options to officers of the corporation at a price of \$9 a share. The market price was \$12 a share on November 30, 2020.

On January 2, 2020, options to purchase 28,000 shares were granted to president Tom Winter—15,000 for services to be rendered in 2020 and 13,000 for services to be rendered in 2021. Also on that date, options to purchase 14,000 shares were granted to vice president Michelle Bennett—7,000 for services to be rendered in 2020 and 7,000 for services to be rendered in 2021. The market price of the stock was \$14 a share on January 2, 2020. The options were exercisable for a period of one year following the year in which the services were rendered. The fair value of the options on the grant date was \$4 per option.

In 2021, neither the president nor the vice president exercised their options because the market price of the stock was below the exercise price. The market price of the stock was \$8 a share on December 31, 2021, when the options for 2020 services lapsed.

On December 31, 2022, both president Winter and vice president Bennett exercised their options for 13,000 and 7,000 shares, respectively, when the market price was \$16 a share.

Instructions

Prepare the necessary journal entries in 2019 when the stock-option plan was adopted, in 2020 when options were granted, in 2021 when options lapsed, and in 2022 when options were exercised.

P16.4 (LO 3) (Stock-Based Compensation) Assume that **Amazon.com** has a stock-option plan for top management. Each stock option represents the right to purchase a share of Amazon \$1 par value common stock in the future at a price equal to the fair value of the stock at the date of the grant. Amazon has 5,000 stock options outstanding, which were granted at the beginning of 2020. The following data relate to the option grant.

| | |
|---|---------|
| Exercise price for options | \$40 |
| Market price at grant date (January 1, 2020) | \$40 |
| Fair value of options at grant date (January 1, 2020) | \$6 |
| Service period | 5 years |

Instructions

- Prepare the journal entry(ies) for the first year of the stock-option plan.
- Prepare the journal entry(ies) for the first year of the plan assuming that, rather than options, 700 shares of restricted stock were granted at the beginning of 2020.
- Now assume that the market price of Amazon stock on the grant date was \$45 per share. Repeat the requirements for (a) and (b).
- Amazon would like to implement an employee stock-purchase plan for rank-and-file employees, but it would like to avoid recording expense related to this plan. Which of the following provisions must be in place for the plan to avoid recording compensation expense?
 - Substantially all employees may participate.
 - The discount from market is small (less than 5%).
 - The plan offers no substantive option feature.
 - There is no preferred stock outstanding.

P16.5 (LO 5) Groupwork (EPS with Complex Capital Structure) Amy Dyken, controller at Fitzgerald Pharmaceutical Industries, a public company, is currently preparing the calculation for basic and diluted earnings per share and the related disclosure for Fitzgerald's financial statements. Below is selected financial information for the fiscal year ended June 30, 2020.

| Fitzgerald Pharmaceutical Industries | |
|---|---------------------|
| Selected Balance Sheet Information | |
| June 30, 2020 | |
| <hr/> | |
| Long-term debt | |
| Notes payable, 10% | \$ 1,000,000 |
| 8% convertible bonds payable | 5,000,000 |
| 10% bonds payable | 6,000,000 |
| Total long-term debt | <u>\$12,000,000</u> |
| Shareholders' equity | |
| Preferred stock, 6% cumulative, \$50 par value, 100,000 shares authorized, 25,000 shares issued and outstanding | \$ 1,250,000 |
| Common stock, \$1 par, 10,000,000 shares authorized, 1,000,000 shares issued and outstanding | 1,000,000 |
| Additional paid-in capital | 4,000,000 |
| Retained earnings | 6,000,000 |
| Total shareholders' equity | <u>\$12,250,000</u> |
| <hr/> | |

The following transactions have also occurred at Fitzgerald.

- Options were granted on July 1, 2019, to purchase 200,000 shares at \$15 per share. Although no options were exercised during fiscal year 2020, the average price per common share during fiscal year 2020 was \$20 per share.

2. Each bond was issued at face value. The 8% convertible bonds will convert into common stock at 50 shares per \$1,000 bond. The bonds are exercisable after 5 years and were issued in fiscal year 2019.
3. The preferred stock was issued in 2019.
4. There are no preferred dividends in arrears; however, preferred dividends were not declared in fiscal year 2020.
5. The 1,000,000 shares of common stock were outstanding for the entire 2020 fiscal year.
6. Net income for fiscal year 2020 was \$1,500,000, and the average income tax rate is 20%.

Instructions

For the fiscal year ended June 30, 2020, calculate the following for Fitzgerald Pharmaceutical Industries.

- a. Basic earnings per share.
- b. Diluted earnings per share.

P16.6 (LO 4) (Basic EPS: Two-Year Presentation) Melton Corporation is preparing the comparative financial statements for the annual report to its shareholders for fiscal years ended May 31, 2020, and May 31, 2021. The income from operations for the fiscal year ended May 31, 2020, was \$1,800,000 and income from continuing operations for the fiscal year ended May 31, 2021, was \$2,500,000. In both years, the company incurred a 10% interest expense on \$2,400,000 of debt, an obligation that requires interest-only payments for 5 years. The company experienced a loss from discontinued operations of \$600,000 on February 2021. The company uses a 20% effective tax rate for income taxes.

The capital structure of Melton Corporation on June 1, 2019, consisted of 1 million shares of common stock outstanding and 20,000 shares of \$50 par value, 6%, cumulative preferred stock. There were no preferred dividends in arrears, and the company had not issued any convertible securities, options, or warrants.

On October 1, 2019, Melton sold an additional 500,000 shares of the common stock at \$20 per share. Melton distributed a 20% stock dividend on the common shares outstanding on January 1, 2020. On December 1, 2020, Melton was able to sell an additional 800,000 shares of the common stock at \$22 per share. These were the only common stock transactions that occurred during the two fiscal years.

Instructions

- a. Identify whether the capital structure at Melton Corporation is a simple or complex capital structure, and explain why.
- b. Determine the weighted-average number of shares that Melton Corporation would use in calculating earnings per share for the fiscal year ended:
 1. May 31, 2020.
 2. May 31, 2021.
- c. Prepare, in good form, a comparative income statement, beginning with income from operations, for Melton Corporation for the fiscal years ended May 31, 2020, and May 31, 2021. This statement will be included in Melton's annual report and should display the appropriate earnings per share presentations.

(CMA adapted)

P16.7 (LO 4, 5) Groupwork (Computation of Basic and Diluted EPS) Charles Austin of the controller's office of Thompson Corporation was given the assignment of determining the basic and diluted earnings per share values for the year ending December 31, 2021. Austin has compiled the information listed below.

1. The company is authorized to issue 8,000,000 shares of \$10 par value common stock. As of December 31, 2020, 2,000,000 shares had been issued and were outstanding.
2. The per share market prices of the common stock on selected dates were as follows.

| | Price per Share |
|-------------------|-----------------|
| July 1, 2020 | \$20.00 |
| January 1, 2021 | 21.00 |
| April 1, 2021 | 25.00 |
| July 1, 2021 | 11.00 |
| August 1, 2021 | 10.50 |
| November 1, 2021 | 9.00 |
| December 31, 2021 | 10.00 |

3. A total of 700,000 shares of an authorized 1,200,000 shares of convertible preferred stock had been issued on July 1, 2020. The stock was issued at its par value of \$25, and it has a cumulative dividend of \$3 per share. The stock is convertible into common stock at the rate of one share of convertible

preferred for one share of common. The rate of conversion is to be automatically adjusted for stock splits and stock dividends. Dividends are paid quarterly on September 30, December 31, March 31, and June 30.

4. Thompson Corporation is subject to a 20% income tax rate.
5. The after-tax net income for the year ended December 31, 2021, was \$11,550,000.

The following specific activities took place during 2021.

1. January 1—A 5% common stock dividend was issued. The dividend had been declared on December 1, 2020, to all stockholders of record on December 29, 2020.
2. April 1—A total of 400,000 shares of the \$3 convertible preferred stock was converted into common stock. The company issued new common stock and retired the preferred stock. This was the only conversion of the preferred stock during 2021.
3. July 1—A 2-for-1 split of the common stock became effective on this date. The board of directors had authorized the split on June 1.
4. August 1—A total of 300,000 shares of common stock were issued to acquire a factory building.
5. November 1—A total of 24,000 shares of common stock were purchased on the open market at \$9 per share. These shares were to be held as treasury stock and were still in the treasury as of December 31, 2021.
6. Common stock cash dividends—Cash dividends to common stockholders were declared and paid as follows.

April 15—\$0.30 per share

October 15—\$0.20 per share

7. Preferred stock cash dividends—Cash dividends to preferred stockholders were declared and paid as scheduled.

Instructions

- a. Determine the number of shares used to compute basic earnings per share for the year ended December 31, 2021.
- b. Determine the number of shares used to compute diluted earnings per share for the year ended December 31, 2021.
- c. Compute the adjusted net income to be used as the numerator in the basic earnings per share calculation for the year ended December 31, 2021.

P16.8 (LO 5) (Computation of Basic and Diluted EPS) The information below pertains to Barkley Company for 2021.

| | |
|--|----------------|
| Net income for the year | \$1,200,000 |
| 7% convertible bonds issued at par (\$1,000 per bond); each bond is convertible into 30 shares of common stock | 2,000,000 |
| 6% convertible, cumulative preferred stock, \$100 par value; each share is convertible into 3 shares of common stock | 4,000,000 |
| Common stock, \$10 par value | 6,000,000 |
| Tax rate for 2021 | 20% |
| Average market price of common stock | \$25 per share |

There were no changes during 2021 in the number of common shares, preferred shares, or convertible bonds outstanding. There is no treasury stock. The company also has common stock options (granted in a prior year) to purchase 75,000 shares of common stock at \$20 per share.

Instructions

- a. Compute basic earnings per share for 2021.
- b. Compute diluted earnings per share for 2021.

P16.9 (LO 4) (EPS with Stock Dividend and Discontinued Operations) Christina Corporation is preparing the comparative financial statements to be included in the annual report to stockholders. Christina employs a fiscal year ending May 31.

Income from operations before income taxes for Christina was \$1,400,000 and \$660,000, respectively, for fiscal years ended May 31, 2021 and 2020. Christina experienced a loss from discontinued operations of \$400,000 on March 3, 2021. A 20% combined income tax rate pertains to any and all of Christina Corporation's profits, gains, and losses.

Christina's capital structure consists of preferred stock and common stock. The company has not issued any convertible securities or warrants and there are no outstanding stock options.

Christina issued 40,000 shares of \$100 par value, 6% cumulative preferred stock in 2017. All of this stock is outstanding, and no preferred dividends are in arrears.

There were 1,000,000 shares of \$1 par common stock outstanding on June 1, 2019. On September 1, 2019, Christina sold an additional 400,000 shares of the common stock at \$17 per share. Christina distributed a 20% stock dividend on the common shares outstanding on December 1, 2020. These were the only common stock transactions during the past 2 fiscal years.

Instructions

- a. Determine the weighted-average number of common shares that would be used in computing earnings per share on the current comparative income statement for:
 1. The year ended May 31, 2020.
 2. The year ended May 31, 2021.
- b. Starting with income from operations before income taxes, prepare a comparative income statement for the years ended May 31, 2021 and 2020. The statement will be part of Christina Corporation's annual report to stockholders and should include appropriate earnings per share presentation.
- c. The capital structure of a corporation is the result of its past financing decisions. Furthermore, the earnings per share data presented on a corporation's financial statements is dependent upon the capital structure.
 1. Explain why Christina Corporation is considered to have a simple capital structure.
 2. Describe how earnings per share data would be presented for a corporation that has a complex capital structure.

(CMA adapted)

Concepts for Analysis

CA16.1 (LO 2) (Warrants Issued with Bonds and Convertible Bonds) Incurring long-term debt with an arrangement whereby lenders receive an option to buy common stock during all or a portion of the time the debt is outstanding is a frequent corporate financing practice. In some situations, the result is achieved through the issuance of convertible bonds; in others, the debt instruments and the warrants to buy stock are separate.

Instructions

- a.
 1. Describe the differences that exist in current accounting for original proceeds of the issuance of convertible bonds and of debt instruments with separate warrants to purchase common stock.
 2. Discuss the underlying rationale for the differences described in (a)(1) above.
 3. Summarize the arguments that have been presented in favor of accounting for convertible bonds in the same manner as accounting for debt with separate warrants.
- b. At the start of the year, Huish Company issued \$18,000,000 of 12% bonds along with detachable warrants to buy 1,200,000 shares of its \$10 par value common stock at \$18 per share. The bonds mature over the next 10 years, starting one year from date of issuance, with annual maturities of \$1,800,000. At the time, Huish had 9,600,000 shares of common stock outstanding. The company received \$20,040,000 for the bonds and the warrants. For Huish Company, 12% was a relatively low borrowing rate. If offered alone, at this time, the bonds would have sold in the market at a 22% discount. Prepare the journal entry (or entries) for the issuance of the bonds and warrants for the cash consideration received.

(AICPA adapted)

CA16.2 (LO 3) Ethics (Ethical Issues—Compensation Plan) The executive officers of Rouse Corporation have a performance-based compensation plan. The performance criteria of this plan is linked to growth in earnings per share. When annual EPS growth is 12%, the Rouse executives earn 100% of the shares; if growth is 16%, they earn 125%. If EPS growth is lower than 8%, the executives receive no additional compensation.

In 2020, Joan Devers, the controller of Rouse, reviews year-end estimates of bad debt expense and warranty expense. She calculates the EPS growth at 15%. Kurt Adkins, a member of the executive group, remarks over lunch one day that the estimate of bad debt expense might be decreased, increasing EPS growth to 16.1%. Devers is not sure she should do this because she believes that the current estimate of bad debts is sound. On the other hand, she recognizes that a great deal of subjectivity is involved in the computation.

Instructions

Answer the following questions.

- What, if any, is the ethical dilemma for Devers?
- Should Devers's knowledge of the compensation plan be a factor that influences her estimate?
- How should Devers respond to Adkins's request?

CA16.3 (LO 2, 3) Writing (Stock Warrants—Various Types) For various reasons a corporation may issue warrants to purchase shares of its common stock at specified prices that, depending on the circumstances, may be less than, equal to, or greater than the current market price. For example, warrants may be issued:

- To existing stockholders on a pro rata basis.
- To certain key employees under an incentive stock-option plan.
- To purchasers of the corporation's bonds.

Instructions

For each of the three examples of how stock warrants are used:

- Explain why they are used.
- Discuss the significance of the price (or prices) at which the warrants are issued (or granted) in relation to (1) the current market price of the company's stock, and (2) the length of time over which they can be exercised.
- Describe the information that should be disclosed in financial statements, or notes thereto, that are prepared when stock warrants are outstanding in the hands of the three groups listed above.

(AICPA adapted)

CA16.4 (LO 3) Writing (Stock Compensation Plans) The following two items appeared on the Internet concerning the GAAP requirement to expense stock options.

WASHINGTON, D.C.—February 17, 2005 Congressman David Dreier (R-CA), Chairman of the House Rules Committee, and Congresswoman Anna Eshoo (D-CA) reintroduced legislation today that will preserve broad-based employee stock option plans and give investors critical information they need to understand how employee stock options impact the value of their shares.

"Last year, the U.S. House of Representatives overwhelmingly voted for legislation that would have ensured the continued ability of innovative companies to offer stock options to rank-and-file employees," Dreier stated. "Both the Financial Accounting Standards Board (FASB) and the Securities and Exchange Commission (SEC) continue to ignore our calls to address legitimate concerns about the impact of FASB's new standard on workers' ability to have an ownership stake in the New Economy, and its failure to address the real need of shareholders: accurate and meaningful information about a company's use of stock options."

"In December 2004, FASB issued a stock option expensing standard that will render a huge blow to the 21st century economy," Dreier said. "Their action and the SEC's apparent lack of concern for protecting shareholders, requires us to once again take a firm stand on the side of investors and economic growth. Giving investors the ability to understand how stock options impact the value of their shares is critical. And equally important is preserving the ability of companies to use this innovative tool to attract talented employees."

"Here We Go Again!" by Jack Ciesielski (2/21/2005, <http://www.accountingobserver.com/blog/2005/02/here-we-go-again>) On February 17, Congressman David Dreier (R-CA), and Congresswoman Anna Eshoo (D-CA), officially entered Silicon Valley's bid to gum up the launch of honest reporting of stock option compensation: They co-sponsored a bill to "preserve broad-based employee stock option plans and give investors critical information they need to understand how employee stock options impact the value of their shares." You know what "critical information" they mean: stuff like the stock compensation for the top five officers in a company, with a rigged value set as close to zero as possible. Investors *crave* this kind of information. Other ways the good Congresspersons want to "help" investors: The bill "also requires the SEC to study the effectiveness of those disclosures over three years, during which time, no new accounting standard related to the treatment of stock options could be recognized. Finally, the bill requires the Secretary of Commerce to conduct a study and report to Congress on the impact of broad-based employee stock option plans on expanding employee corporate ownership, skilled worker recruitment and retention, research and innovation, economic growth, and international competitiveness."

It's the old "four corners" basketball strategy: stall, stall, stall. In the meantime, hope for regime change at your opponent, the FASB.

Instructions

- What are the major recommendations of the stock-based compensation pronouncement?
- How do the provisions of GAAP in this area differ from the bill introduced by members of Congress (Dreier and Eshoo), which would require expensing for options issued to only the top five officers in a company? Which approach do you think would result in more useful information? (Focus on comparability.)
- The bill in Congress urges the FASB to develop a rule that preserves “the ability of companies to use this innovative tool to attract talented employees.” Write a response to these Congress-people explaining the importance of neutrality in financial accounting and reporting.

CA16.5 (LO 4, 5) (EPS: Preferred Dividends, Options, and Convertible Debt) “Earnings per share” (EPS) is the most featured, single financial statistic about modern corporations. Daily published quotations of stock prices have recently been expanded to include for many securities a “times earnings” figure that is based on EPS. Stock analysts often focus their discussions on the EPS of the corporations they study.

Instructions

- Explain how dividends or dividend requirements on any class of preferred stock that may be outstanding affect the computation of EPS.
- One of the technical procedures applicable in EPS computations is the “treasury-stock method.” Briefly describe the circumstances under which it might be appropriate to apply the treasury-stock method.
- Convertible debentures are considered potentially dilutive common shares. Explain how convertible debentures are handled for purposes of EPS computations.

(AICPA adapted)

CA16.6 (LO 4, 5) Writing (EPS, Antidilution) Brad Dolan, a stockholder of Rhode Corporation, has asked you, the firm’s accountant, to explain why his stock warrants were not included in diluted EPS. In order to explain this situation, you must briefly explain what dilutive securities are, why they are included in the EPS calculation, and why some securities are antidilutive and thus not included in this calculation.

Rhode Corporation earned \$228,000 during the period, when it had an average of 100,000 shares of common stock outstanding. The common stock sold at an average market price of \$25 per share during the period. Also outstanding were 30,000 warrants that could be exercised to purchase one share of common stock at \$30 per warrant.

Instructions

Write Mr. Dolan a 1–1.5-page letter explaining why the warrants are not included in the calculation.

Using Your Judgment

Financial Reporting Problem

The Procter & Gamble Company (P&G)

The financial statements of **P&G** are presented in Appendix B. The company’s complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G’s financial statements and accompanying notes to answer the following questions.

- Under P&G’s stock-based compensation plan, stock options are granted annually to key managers and directors.
 - How many options were granted during 2017 under the plan?
 - How many options were exercisable at June 30, 2017?
 - How many options were exercised in 2017, and what was the average price of those exercised?
 - What is the total stock-based compensation expense for stock options and the total compensation expense for restricted stock, restricted stock units (RSUs), and performance stock units (PSUs) for 2017, 2016, and 2015?
 - To what accounts are the proceeds from these option exercises credited?
 - What was the number of outstanding options at June 30, 2017, and at what average exercise price?

- b. What number of diluted weighted-average common shares outstanding was used by P&G in computing earnings per share for 2017, 2016, and 2015? What was P&G's diluted earnings per share in 2017, 2016, and 2015?
- c. What other stock-based compensation plans does P&G have?

Comparative Analysis Case

The Coca-Cola Company and PepsiCo, Inc.

The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- a. What employee stock-option compensation plans are offered by Coca-Cola and PepsiCo?
- b. How many options are outstanding at year-end 2017 for both Coca-Cola and PepsiCo?
- c. How many options were granted by Coca-Cola and PepsiCo to officers and employees during 2017?
- d. How many options were exercised during 2017?
- e. What was the average exercise price for Coca-Cola and PepsiCo employees at December 31, 2017?
- f. What was the diluted net income per share for Coca-Cola and PepsiCo for 2017, 2016, and 2015?

Financial Statement Analysis Case

Ragatz, Inc.

Ragatz, Inc., a drug company, reported the following information. The company prepares its financial statements in accordance with GAAP.

| | 2020 (,000) |
|-------------------------------|-------------|
| Current liabilities | \$ 554,114 |
| Convertible subordinated debt | 648,020 |
| Total liabilities | 1,228,313 |
| Stockholders' equity | 176,413 |
| Net income | 58,333 |

Analysts attempting to compare Ragatz to drug companies that issue debt with detachable warrants may face a challenge due to differences in accounting for convertible debt.

Instructions

- a. Compute the following ratios for Ragatz, Inc. (Assume that year-end balances approximate annual averages.)
 1. Return on assets.
 2. Return on common stock equity.
 3. Debt to assets ratio.
- b. Briefly discuss the operating performance and financial position of Ragatz. Industry averages for these ratios in 2020 were ROA 3.5%, return on equity 16%, and debt to assets 75%. Based on this analysis, would you make an investment in the company's 5% convertible bonds? Explain.
- c. Assume you want to compare Ragatz to an IFRS company like **Merck** (which issues nonconvertible debt with detachable warrants). Assuming that the fair value of the equity component of Ragatz's convertible bonds is \$150,000, how would you adjust the analysis above to make valid comparisons between Ragatz and Merck?

Accounting, Analysis, and Principles

On January 1, 2019, Garner issued 10-year, \$200,000 face value, 6% bonds at par. Each \$1,000 bond is convertible into 30 shares of Garner \$2 par value common stock. The company has had 10,000 shares of common stock (and no preferred stock) outstanding throughout its life. None of the bonds have been converted as of the end of 2020. (Ignore all tax effects.)

Accounting

- a. Prepare the journal entry Garner would have made on January 1, 2019, to record the issuance of the bonds.

- b. Garner's net income in 2020 was \$30,000 and was \$27,000 in 2019. Compute basic and diluted earnings per share for Garner for 2020 and 2019.
- c. Assume that 75% of the holders of Garner's convertible bonds convert their bonds to stock on June 30, 2021, when Garner's stock is trading at \$32 per share. Garner pays \$50 per bond to induce bondholders to convert. Prepare the journal entry to record the conversion.

Analysis

Show how Garner will report income and EPS for 2020 and 2019. Briefly discuss the importance of GAAP for EPS to analysts evaluating companies based on price-earnings ratios. Consider comparisons for a company over time, as well as comparisons between companies at a point in time.

Principles

In order to converge GAAP and IFRS, the FASB is considering whether the equity element of a convertible bond should be reported as equity. Describe how the journal entry you made in part (a) above would differ under IFRS. In terms of the accounting principles discussed in Chapter 2, what does IFRS for convertible debt accomplish that GAAP potentially sacrifices? What does GAAP for convertible debt accomplish that IFRS potentially sacrifices?

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

CE16.1 Access the glossary ("Master Glossary") to answer the following.

- a. What is the definition of "basic earnings per share"?
- b. What is "dilution"?
- c. What is a "warrant"?
- d. What is a "grant date"?

CE16.2 For how many periods must a company present EPS data?

CE16.3 For each period that an income statement is presented, what must a company disclose about its EPS?

CE16.4 If a company's outstanding shares are increased through a stock dividend or a stock split, how would that alter the presentation of its EPS data?

Codification Research Case

Richardson Company is contemplating the establishment of a share-based compensation plan to provide long-run incentives for its top management. However, members of the compensation committee of the board of directors have voiced some concerns about adopting these plans, based on news accounts related to a recent accounting standard in this area. They would like you to conduct some research on this recent standard so they can be better informed about the accounting for these plans.

Instructions

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

- a. Identify the authoritative literature that addresses the accounting for share-based payment compensation plans.
- b. Briefly discuss the objectives for the accounting for stock compensation. What is the role of fair value measurement?
- c. The Richardson Company board is also considering an employee share-purchase plan, but the Board does not want to record expense related to the plan. What criteria must be met to avoid recording expense on an employee stock-purchase plan?

IFRS Insights

LEARNING OBJECTIVE 8

Compare the accounting for dilutive securities and earnings per share under GAAP and IFRS.

The primary IFRS related to financial instruments, including dilutive securities, is *IAS 39*, “Financial Instruments: Recognition and Measurement.” The accounting for various forms of stock-based compensation under IFRS is found in *IFRS 2*, “Share-Based Payment.” This standard was recently amended, resulting in significant convergence between IFRS and GAAP in this area. The IFRS addressing accounting and reporting for earnings per share computations is *IAS 33*, “Earnings per Share.”

Relevant Facts

Following are the key similarities and differences between GAAP and IFRS related to dilutive securities and earnings per share.

Similarities

- IFRS and GAAP follow the same model for recognizing stock-based compensation: The fair value of shares and options awarded to employees is recognized over the period to which the employees’ services relate.
- Although the calculation of basic and diluted earnings per share is similar between IFRS and GAAP, the Boards have worked to resolve the few minor differences in EPS reporting. One proposal in the FASB project concerns contracts that can be settled in either cash or shares. IFRS requires that share settlement must be used, while GAAP gives companies a choice. If the FASB adopts the IFRS approach, GAAP and IFRS would be converged in this regard.

Differences

- A significant difference between IFRS and GAAP is the accounting for securities with characteristics of debt and equity, such as convertible debt. Under GAAP, all of the proceeds of convertible debt are recorded as long-term debt. Under IFRS, convertible bonds are “bifurcated”—separated into the equity component (the value of the conversion option) of the bond issue and the debt component.
- Related to employee share-purchase plans, under IFRS, all employee share-purchase plans are deemed to be compensatory; that is, compensation expense is recorded for the amount of the discount. Under GAAP, these plans are often considered noncompensatory and therefore no compensation is recorded. Certain conditions must exist before a plan can be considered noncompensatory—the most important being that the discount generally cannot exceed 5 percent.
- Modification of a share option results in the recognition of any incremental fair value under both IFRS and GAAP. However, if the modification leads to a reduction, IFRS does not permit the reduction but GAAP does.
- Other EPS differences relate to (1) the treasury-stock method and how the proceeds from extinguishment of a liability should be accounted for, and (2) how to compute the weighted average of contingently issuable shares.

About the Numbers

Accounting for Convertible Debt

Convertible debt is accounted for as a **compound instrument** because it contains both a liability and an equity component. IFRS requires that compound instruments be separated into their liability and equity components for purposes of accounting. Companies use the “**with-and-without**” method to value compound instruments. **Illustration IFRS16.1** identifies the components used in the with-and-without method.

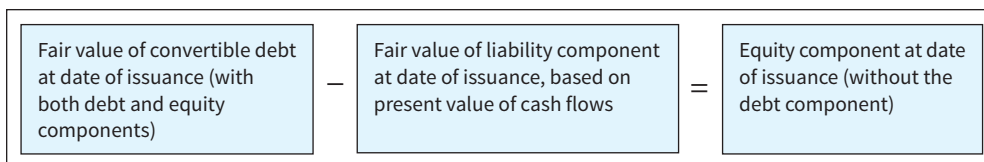

ILLUSTRATION IFRS16.1

Convertible Debt Components

As indicated, the equity component is the residual amount after subtracting the liability component. IFRS does not permit companies to assign a value to the equity amount first and then determine the liability component. To do so would be inconsistent with the definition of equity, which is considered a residual amount. To implement the with-and-without approach, companies do the following.

1. First, the company determines the total fair value of the convertible debt *with* both the liability and equity component. **This is straightforward, as this amount is the proceeds received upon issuance.**
2. The company then determines the liability component by computing the net present value of all contractual future cash flows discounted at the market rate of interest. This market rate is the rate the company would pay on similar nonconvertible debt.
3. In the final step, the company subtracts the liability component estimated in the second step from the fair value of the convertible debt (issue proceeds) to arrive at the equity component. That is, the equity component is the fair value of the convertible debt *without* the liability component.

Accounting at Time of Issuance To illustrate the accounting for convertible debt, assume that **Roche Group** issues 2,000 convertible bonds at the beginning of 2019. The bonds have a four-year term with a stated rate of interest of 6 percent, and are issued at par with a face value of \$1,000 per bond (the total proceeds received from issuance of the bonds are \$2,000,000). Interest is payable annually at December 31. Each bond is convertible into 250 ordinary shares with a par value of \$1. The market rate of interest on similar nonconvertible debt is 9 percent. The time diagram in **Illustration IFRS16.2** depicts both the interest and principal cash flows.

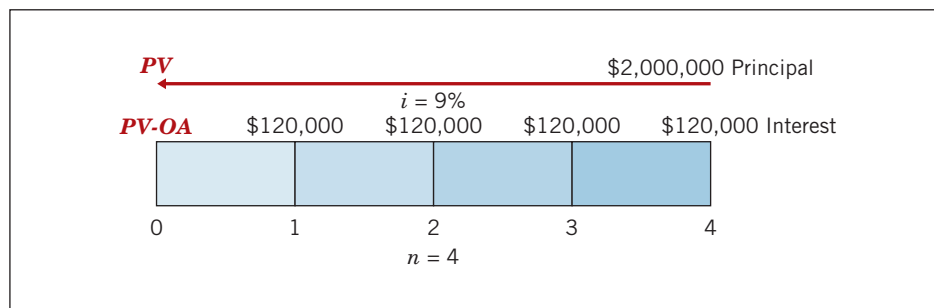

ILLUSTRATION IFRS16.2

Time Diagram for Convertible Bond

The liability component of the convertible debt is computed as shown in **Illustration IFRS16.3**.

| | |
|--|---------------------------|
| Present value of principal: \$2,000,000 × .70843 (Table 6.2; n = 4, i = 9%) | \$1,416,860 |
| Present value of the interest payments: \$120,000 × 3.23972 (Table 6.4; n = 4, i = 9%) | 388,766 |
| Present value of the liability component | <u>\$1,805,626</u> |

ILLUSTRATION IFRS16.3

Fair Value of Liability Component of Convertible Bond

The equity component of Roche's convertible debt is then computed as shown in **Illustration IFRS16.4**.

| | |
|---|--------------------------|
| Fair value of convertible debt at date of issuance | \$2,000,000 |
| Less: Fair value of liability component at date of issuance | <u>1,805,626</u> |
| Fair value of equity component at date of issuance | <u>\$ 194,374</u> |

ILLUSTRATION IFRS16.4

Equity Component of Convertible Bond

The journal entry to record this transaction is as follows.

| | | |
|---------------------------------|-----------|-----------|
| Cash | 2,000,000 | |
| Bonds Payable | | 1,805,626 |
| Share Premium—Conversion Equity | | 194,374 |

The liability component of Roche's convertible debt issue is recorded as Bonds Payable. As shown in Chapter 14, the amount of the discount relative to the face value of the bond is amortized at each reporting

period so at maturity, the Bonds Payable account is reported at \$2,000,000 (face value). The equity component of the convertible bond is recorded in the Share Premium—Conversion Equity account and is reported in the equity section of the statement of financial position. Because this amount is considered part of contributed capital, it does not change over the life of the convertible. **Transaction costs related to the liability and equity components are allocated in proportion to the proceeds received from the two components.** For purposes of homework, use the Share Premium—Conversion Equity account to record the equity component. **In practice, there may be considerable variation in the accounts used to record this component.**

Settlement of Convertible Bonds We illustrate four settlement situations: (1) repurchase at maturity, (2) conversion at maturity, (3) conversion before maturity, and (4) repurchase before maturity.

Repurchase at Maturity If the bonds are not converted at maturity, Roche makes the following entry to pay off the convertible debtholders.

| | | |
|---|-----------|-----------|
| Bonds Payable | 2,000,000 | |
| Cash | | 2,000,000 |
| (To record the purchase of bonds at maturity) | | |

Because the carrying value of the bonds equals the face value, there is no gain or loss on repurchase at maturity. The amount originally allocated to equity of \$194,374 either remains in the Share Premium—Conversion Equity account or is transferred to Share Premium—Ordinary.

Conversion of Bonds at Maturity If the bonds are converted at maturity, Roche makes the following entry.

| | | |
|---|-----------|-----------|
| Share Premium—Conversion Equity | 194,374 | |
| Bonds Payable | 2,000,000 | |
| Share Capital—Ordinary | | 500,000 |
| Share Premium—Ordinary | | 1,694,374 |
| (To record the conversion of bonds at maturity) | | |

As indicated, Roche records a credit to Share Capital—Ordinary for \$500,000 (2,000 bonds \times 250 shares \times \$1 par) and the remainder to Share Premium—Ordinary for \$1,694,374. There is no gain or loss on conversion at maturity. The original amount allocated to equity (\$194,374) is transferred to the Share Premium—Ordinary account. As a result, Roche's equity has increased by a total of \$2,000,000 through issuance and conversion of the convertible bonds. This accounting approach is often referred to as the **book value method** in that the carrying amount (book value) of the bond and related conversion equity determines the amount in the ordinary equity accounts.

Conversion of Bonds Before Maturity What happens if bonds are converted before maturity? To understand the accounting, we again use the Roche Group example. A schedule of bond amortization related to Roche's convertible bonds is shown in **Illustration IFRS16.5**.

ILLUSTRATION IFRS16.5

Convertible Bond Amortization Schedule

| Schedule of Bond Amortization Effective-Interest Method 6% Bond Discounted at 9% | | | | |
|--|-----------|-----------------------|--------------------|--------------------------|
| Date | Cash Paid | Interest Expense (9%) | Discount Amortized | Carrying Amount of Bonds |
| 1/1/19 | | | | \$1,805,626 |
| 12/31/19 | \$120,000 | \$162,506 | \$42,506 | 1,848,132 |
| 12/31/20 | 120,000 | 166,332 | 46,332 | 1,894,464 |
| 12/31/21 | 120,000 | 170,502 | 50,502 | 1,944,966 |
| 12/31/22 | 120,000 | 175,034* | 55,034 | 2,000,000 |
| * \$13 difference due to rounding. | | | | |

Assuming that Roche converts its bonds into ordinary shares on December 31, 2020, Roche debits the Bonds Payable account for its carrying value of \$1,894,464 (see Illustration IFRS16.5). In addition, Roche credits Share Capital—Ordinary for \$500,000 (2,000 \times 250 \times \$1) and credits Share Premium—Ordinary for \$1,588,838. The entry to record this conversion is as follows.

| | | |
|---|-----------|-----------|
| Share Premium—Conversion Equity | 194,374 | |
| Bonds Payable | 1,894,464 | |
| Share Capital—Ordinary | | 500,000 |
| Share Premium—Ordinary | | 1,588,838 |
| (To record the conversion of bonds before maturity) | | |

There is no gain or loss on conversion before maturity: The original amount allocated to equity (\$194,374) is transferred to the Share Premium—Ordinary account.

Repurchase Before Maturity In some cases, companies decide to repurchase the convertible debt before maturity. The approach used for allocating the amount paid upon repurchase follows the approach used when the convertible bond was originally issued. That is, Roche determines the fair value of the liability component of the convertible bonds at December 31, 2020, and then subtracts this amount from the fair value of the convertible bond issue (including the equity component) to arrive at the value for the equity. After this allocation is completed:

1. The difference between the consideration allocated to the liability component and the carrying amount of the liability is recognized as a gain or loss, and
2. The amount of consideration relating to the equity component is recognized (as a reduction) in equity.

To illustrate, instead of converting the bonds on December 31, 2020, assume that Roche repurchases the convertible bonds from the bondholders. Pertinent information related to this conversion is as follows.

- Fair value of the convertible debt (including both liability and equity components), based on market prices at December 31, 2020, is \$1,965,000.
- The fair value of the liability component is \$1,904,900. This amount is based on computing the present value of a nonconvertible bond with a two-year term (which corresponds to the shortened time to maturity of the repurchased bonds).

We first determine the gain or loss on the liability component, as computed in **Illustration IFRS16.6**.

| | |
|--|------------------|
| Present value of liability component at December 31, 2020 (given above) | \$ 1,904,900 |
| Carrying value of liability component at December 31, 2020 (per Illustration IFRS16.5) | (1,894,464) |
| Loss on repurchase | \$ 10,436 |

ILLUSTRATION IFRS16.6

Gain or Loss on Debt Repurchase

Roche has a loss on this repurchase because the value of the debt extinguished is greater than its carrying amount. To determine any adjustment to equity, we compute the value of the equity as shown in **Illustration IFRS16.7**.

| | |
|---|------------------|
| Fair value of convertible debt at December 31, 2020 (with equity component) | \$1,965,000 |
| Less: Fair value of liability component at December 31, 2020 (similar 2-year nonconvertible debt) | 1,904,900 |
| Fair value of equity component at December 31, 2020 (without debt component) | \$ 60,100 |

ILLUSTRATION IFRS16.7

Equity Adjustment on Repurchase of Convertible Bonds

Roche makes the following compound journal entry to record the entire repurchase transaction.

| | | |
|---|-----------|-----------|
| Bonds Payable | 1,894,464 | |
| Share Premium—Conversion Equity | 60,100 | |
| Loss on Repurchase | 10,436 | |
| Cash | | 1,965,000 |
| (To record the repurchase of convertible bonds) | | |

In summary, the repurchase results in a loss related to the liability component and a reduction in Share Premium—Conversion Equity. The remaining balance in Share Premium—Conversion Equity of \$134,274 (\$194,374 – \$60,100) is often transferred to Share Premium—Ordinary upon the repurchase.

Employee Share-Purchase Plans

Employee share-purchase plans (ESPPs) generally permit all employees to purchase shares at a discounted price for a short period of time. The company often uses such plans to secure equity capital or to induce widespread ownership of its ordinary shares among employees. **These plans are considered compensatory and should be recorded as expense over the service period.**

To illustrate, assume that Masthead Company offers all its 1,000 employees the opportunity to participate in an employee share-purchase plan. Under the terms of the plan, the employees are entitled to purchase 100 ordinary shares (par value \$1 per share) at a 20 percent discount. The purchase price must be paid immediately upon acceptance of the offer. In total, 800 employees accept the offer, and each employee purchases on average 80 shares. That is, the employees purchase a total of 64,000 shares. The weighted-average market price of the shares at the purchase date is \$30 per share, and the weighted-average purchase price is \$24 per share. The entry to record this transaction is as follows.

| | | |
|---|-----------|-----------|
| Cash (64,000 × \$24) | 1,536,000 | |
| Compensation Expense [64,000 × (\$30 – \$24)] | 384,000 | |
| Share Capital—Ordinary (64,000 × \$1) | | 64,000 |
| Share Premium—Ordinary (Issue shares in an employee share-purchase plan) | | 1,856,000 |

The IASB indicates that there is no reason to treat broad-based employee share plans differently from other employee share plans. Some have argued that because these plans are used to raise capital, they should not be compensatory. However, IFRS requires recording expense for these arrangements. The Board notes that because these arrangements are available only to employees, it is sufficient to conclude that the benefits provided represent employee compensation.

On the Horizon

As discussed in the chapter, the FASB is working on a standard that will likely converge to IFRS in the accounting for convertible debt. Similar to the FASB, the IASB is examining the classification of hybrid securities; the IASB is also examining *Financial Instruments with Characteristics of Equity*. While GAAP and IFRS are similar as to the presentation of EPS, the Boards have worked together to resolve remaining differences related to earnings per share computations.

IFRS Self-Test Questions

- All of the following are key similarities between GAAP and IFRS with respect to accounting for dilutive securities and EPS **except**:
 - the model for recognizing stock-based compensation.
 - the calculation of basic and diluted EPS.
 - the accounting for convertible debt.
 - the accounting for modifications of share options, when the value increases.
- Which of the following statements is **correct**?
 - IFRS separates the proceeds of a convertible bond between debt and equity by determining the fair value of the debt component before the equity component.
 - Both IFRS and GAAP assume that when there is choice of settlement of an option for cash or shares, share settlement is assumed.
 - IFRS separates the proceeds of a convertible bond between debt and equity, based on relative fair values.
 - Both GAAP and IFRS separate the proceeds of convertible bonds between debt and equity.
- Under IFRS, convertible bonds:
 - are separated into the bond component and the expense component.
 - are separated into debt and equity components.
 - are separated into their components based on relative fair values.
 - All of the above.
- Mae Jong Corp. issues \$1,000,000 of 10% bonds payable which may be converted into 10,000 shares of \$2 par value ordinary shares. The market rate of interest on similar bonds is 12%. Interest is payable annually on December 31, and the bonds were issued for total proceeds of \$1,000,000. In accounting for these bonds, Mae Jong Corp. will:
 - first assign a value to the equity component, then determine the liability component.
 - assign no value to the equity component since the conversion privilege is not separable from the bond.
 - first assign a value to the liability component based on the face amount of the bond.
 - use the “with-and-without” method to value the compound instrument.
- Anazazi Co. offers all its 10,000 employees the opportunity to participate in an employee share-purchase plan. Under the terms of the plan, the employees are entitled to purchase 100 ordinary shares (par value \$1 per share) at a 20% discount. The purchase price must be paid immediately upon acceptance of the offer. In total, 8,500 employees accept the offer, and each employee purchases on average 80 shares at \$22 per share (market price \$27.50). Under IFRS, Anazazi Co. will record:
 - no compensation since the plan is used to raise capital, not compensate employees.
 - compensation expense of \$5,500,000.
 - compensation expense of \$18,700,000.
 - compensation expense of \$3,740,000.

IFRS Concepts and Application

IFRS16.1 Where can authoritative IFRS be found related to dilutive securities, stock-based compensation, and earnings per share?

IFRS16.2 Briefly describe some of the similarities and differences between GAAP and IFRS with respect to the accounting for dilutive securities, stock-based compensation, and earnings per share.

IFRS16.3 Norman Co., a fast-growing golf equipment company, uses GAAP. It is considering the issuance of convertible bonds. The bonds mature in 10 years, have a face value of \$400,000, and pay interest annually at a rate of 4%. The equity component of the bond issue has a fair value of \$35,000. Greg Shark is curious as to the difference in accounting for these bonds if the company were to use IFRS. (a) Prepare the entry to record issuance of the bonds at par under GAAP. (b) Repeat the requirement for part (a), assuming application of IFRS to the bond issuance. (c) Which approach provides the better accounting? Explain.

IFRS16.4 Briefly discuss the convergence efforts that are under way by the IASB and FASB in the area of dilutive securities and earnings per share.

IFRS16.5 Explain how the conversion feature of convertible debt has a value (a) to the issuer and (b) to the purchaser.

IFRS16.6 What are the arguments for giving separate accounting recognition to the conversion feature of debentures?

IFRS16.7 Four years after issue, debentures with a face value of \$1,000,000 and book value of \$960,000 are tendered for conversion into 80,000 ordinary shares immediately after an interest payment date. At that time, the market price of the debentures is 104, and the ordinary shares are selling at \$14 per share (par value \$10). At date of issue, the company recorded Share Premium—Conversion Equity of \$50,000. The company records the conversion as follows.

| | | |
|---------------------------------|---------|---------|
| Bonds Payable | 960,000 | |
| Share Premium—Conversion Equity | 50,000 | |
| Share Capital—Ordinary | | 800,000 |
| Share Premium—Ordinary | | 210,000 |

Discuss the propriety of this accounting treatment.

IFRS16.8 Cordero Corporation has an employee share-purchase plan which permits all full-time employees to purchase 10 ordinary shares on the third anniversary of their employment and an additional 15 shares on each subsequent anniversary date. The purchase price is set at the market price on the date purchased less a 10% discount. How is this discount accounted for by Cordero?

IFRS16.9 Archer Company issued \$4,000,000 par value, 7% convertible bonds at 99 for cash. The net present value of the debt without the conversion feature is \$3,800,000. Prepare the journal entry to record the issuance of the convertible bonds.

IFRS16.10 Petrenko Corporation has outstanding 2,000 \$1,000 bonds, each convertible into 50 shares of \$10 par value ordinary shares. The bonds are converted on December 31, 2020. The bonds payable has a carrying value of \$1,950,000 and conversion equity of \$20,000. Record the conversion using the book value method.

IFRS16.11 Angela Corporation issues 2,000 convertible bonds at January 1, 2019. The bonds have a 3-year life, and are issued at par with a face value of \$1,000 per bond, giving total proceeds of \$2,000,000. Interest is payable annually at 6%. Each bond is convertible into 250 ordinary shares (par value of \$1). When the bonds are issued, the market rate of interest for similar debt without the conversion option is 8%.

Instructions

- Compute the liability and equity component of the convertible bond on January 1, 2019.
- Prepare the journal entry to record the issuance of the convertible bond on January 1, 2019.
- Prepare the journal entry to record the repurchase of the convertible bond for cash at January 1, 2022, its maturity date.

IFRS16.12 Assume the same information in IFRS16.11, except that Angela Corporation converts its convertible bonds on January 1, 2020.

Instructions

- Compute the carrying value of the bond payable on January 1, 2020.
- Prepare the journal entry to record the conversion on January 1, 2020.
- Assume that the bonds were repurchased on January 1, 2020, for \$1,940,000 cash instead of being converted. The net present value of the liability component of the convertible bonds on January 1, 2020, is \$1,900,000. Prepare the journal entry to record the repurchase on January 1, 2020.

IFRS16.13 Assume that Sarazan Company has a share-option plan for top management. Each share option represents the right to purchase a \$1 par value ordinary share in the future at a price equal to the fair value of the shares at the date of the grant. Sarazan has 5,000 share options outstanding, which were granted at the beginning of 2020. The following data relate to the option grant.

| | |
|---|---------|
| Exercise price for options | \$40 |
| Market price at grant date (January 1, 2020) | \$40 |
| Fair value of options at grant date (January 1, 2020) | \$6 |
| Service period | 5 years |

Instructions

- Prepare the journal entry(ies) for the first year of the share-option plan.
- Prepare the journal entry(ies) for the first year of the plan assuming that, rather than options, 700 shares of restricted shares were granted at the beginning of 2020.
- Now assume that the market price of Sarazan shares on the grant date was \$45 per share. Repeat the requirements for (a) and (b).
- Sarazan would like to implement an employee share-purchase plan for rank-and-file employees, but it would like to avoid recording expense related to this plan. Explain how employee share-purchase plans are recorded.

Professional Research

IFRS16.14 Richardson Company is contemplating the establishment of a share-based compensation plan to provide long-run incentives for its top management. However, members of the compensation committee of the board of directors have voiced some concerns about adopting these plans, based on news accounts related to a recent accounting standard in this area. They would like you to conduct some research on this recent standard so they can be better informed about the accounting for these plans.

Instructions

Access the IFRS authoritative literature at the IASB website. (Click on the IFRS tab and then register for free eIFRS access if necessary.) When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- Identify the authoritative literature that addresses the accounting for share-based payment compensation plans.
- Briefly discuss the objectives for the accounting for share-based compensation. What is the role of fair value measurement?
- The Richardson Company board is also considering an employee share-purchase plan, but the Board does not want to record expense related to the plan. What are the IFRS requirements for the accounting for an employee share-purchase plan?

International Financial Reporting Problem

Marks and Spencer plc (M&S)

IFRS16.15 The financial statements of **M&S** are presented in Appendix E. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- Under M&S's share-based compensation plan, share options are granted annually to key managers and directors.
 - What is M&S's accounting policies related to share-based payments?
 - How many options were granted during 2017 under the plan?
 - How many options were exercisable at 1 April 2017?
 - How many options were exercised in 2017, and what was the average price of those exercised?
 - To what accounts are the proceeds from these option exercises credited?
 - What was the number of outstanding options at 1 April 2017, and at what average exercise price?
- What number of diluted weighted-average shares outstanding was used by M&S in computing earnings per share for 2017 and 2016?
- What was M&S's diluted earnings per share in 2017 and 2016?

Investments

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

1. Describe the accounting for investments in debt securities.
2. Describe the accounting for investments in equity securities.
3. Explain the equity and consolidation methods of accounting.
4. Evaluate other major issues related to investments in debt and equity securities.

PREVIEW OF CHAPTER 17 As indicated in the following opening story, the accounting for financial assets is highly controversial. How to measure, recognize, and disclose this information is being debated and discussed extensively. In this chapter, we address the accounting for debt and equity investments. Appendices to this chapter discuss the accounting for derivative instruments and fair value disclosures. The content and organization of this chapter are as follows.

This chapter also includes numerous conceptual and global discussions that are integral to the topics presented here.

INVESTMENTS

Investments in Debt Securities

- Debt investment classifications
- Held-to-maturity securities
- Available-for-sale securities
- Trading securities

Investments in Equity Securities

- Holdings of less than 20%
- Holdings between 20% and 50%
- Holdings of more than 50%

Other Financial Reporting Issues

- Fair value option
- Impairment of value
- Reclassification adjustments
- Transfers related to debt securities
- Summary

Winners and Losers

Valuing financial assets such as loans, derivatives, and other debt investments as well as equity investments is a challenge. The fundamental question is: Should financial instruments be valued at amortized cost, fair value, or some other measure(s)? As one writer noted, the opinion that fair value accounting weakens financial and economic stability has persisted among many companies, regulators, and politicians. On the other hand, investors and others believe that fair value is the right answer because it is more transparent information. Ok, so what to do?

Recently, the FASB issued a new standard in this area. This new standard lets companies report loans at amortized cost. This decision means that banks will continue to value loans

as they do today. The continued use of amortized cost for these debt securities is a big victory for the banking industry, which argued that the fair value approach would hurt lending and provide unnecessary volatility in the financial statements.

However, the FASB took a different approach with respect to equity investments. It now requires that most equity investments should be reported at fair value. And some companies are not happy with this new requirement. For example, Warren Buffett's **Berkshire Hathaway** posted a \$1.14 billion first quarter loss in 2018 because of \$6.2 billion losses on equity investments that the company must now count in income as a result of the new standard. These losses resulted because of the following equity investments: shares of **Wells Fargo** lost 13.6 percent during the quarter, **Coca-Cola** shares lost 5.3 percent, and **American Express** was down 6.1 percent.

Buffett was not happy to have to report these losses, indicating that this new measurement distorts Berkshire's earnings. Specifically, "these investment gains and losses are often meaningless in terms of understanding our reported results or evaluating our periodic economic performance." He went on to note: "If you look at the figure of operating earnings—which we look at—we actually earned a record amount in any quarter we've ever had."

At the same time, other companies benefited from the change in accounting for equity investments. For example, **Alphabet** (Google's parent) reported a \$3 billion gain as a result of equity investments in **Uber Technologies** and other hot technology companies that are closely held.

Sources: "Financial Instruments—Overall Recognition and Measurement of Financial Assets and Financial Liabilities," *Accounting Standards Update No. 2016-1* (Norwalk, Conn.: FASB, 2016); and M. Rapoport, "Warren Buffett's New Target: Rule That Cut \$6.2 Billion from Berkshire Earnings," *Wall Street Journal* (May 7, 2018).

Review and Practice

Go to the **Review and Practice** section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions as well as additional exercises and practice problem with solutions are also available online.

Investments in Debt Securities

LEARNING OBJECTIVE 1

Describe the accounting for investments in debt securities.

In Chapter 7, we discussed two types of financial assets—cash and receivables (primarily short-term). In this chapter, we discuss two other financial assets—debt investments and stock investments.¹ Companies have different motivations for investing in debt or equity securities issued by other companies. **One motivation is to earn a high rate of return.** For example, companies like **Coca-Cola** and **PepsiCo** can receive interest revenue from a debt investment or dividend revenue from an equity investment. In addition, they can realize capital gains on both types of securities. **Another motivation for investing (in equity securities) is to secure certain operating or financing arrangements with another company.** For example, Coca-Cola and PepsiCo are able to exercise some control over bottler companies based on their significant (but not controlling) equity investments.

¹ A financial asset is an asset whose value comes from a contractual claim to cash flows. Examples of financial assets (in addition to cash and receivables) are equity investments in another company (e.g., common or preferred stock) or a contractual right to receive cash from another party (e.g., loans and bonds). In contrast, the value of physical assets such as land and buildings comes from their use in the business and is not from a contractual claim.

To provide useful information, companies account for investments based on the type of security (debt or equity) and their intent with respect to the investment. As indicated in **Illustration 17.1**, we organize our study of investments by type of security. Within this section, we explain the accounting for investments in debt. We address equity securities later in the chapter.

| Type of Security | Management Intent | Valuation Approach |
|------------------|-----------------------|--------------------|
| Debt | No plans to sell | Amortized cost |
| | Plan to sell | Fair value |
| Equity | Plan to sell | Fair value |
| | Exercise some control | Equity method |

ILLUSTRATION 17.1**Summary of Investment Accounting Approaches**

Debt Investment Classifications

Debt securities represent a creditor relationship with another entity. Debt securities include U.S. government securities, municipal securities, corporate bonds, convertible debt, and commercial paper. Trade accounts receivable and loans receivable are not debt securities because they do not meet the definition of a security.²

Companies group investments in debt securities into three separate categories for accounting and reporting purposes (see **Global View**):

- **Held-to-maturity:** Debt securities that the company has the positive intent and ability to hold to maturity.
- **Trading:** Debt securities bought and held primarily for sale in the near term to generate income on short-term price differences.
- **Available-for-sale:** Debt securities not classified as held-to-maturity or trading securities.

Illustration 17.2 identifies these categories, along with the accounting and reporting treatments required for each.

| Category | Valuation | Unrealized Holding Gains or Losses | Other Income Effects |
|--------------------|----------------|--|---|
| Held-to-maturity | Amortized cost | Not recognized | Interest when earned; gains and losses from sale. |
| Trading securities | Fair value | Recognized in net income | Interest when earned; gains and losses from sale. |
| Available-for-sale | Fair value | Recognized as other comprehensive income and as separate component of stockholders' equity | Interest when earned; gains and losses from sale. |

ILLUSTRATION 17.2**Accounting for Debt Securities by Category**

Amortized cost is the acquisition cost adjusted for the amortization of discount or premium, if appropriate. **Fair value** is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date (see **Global View**). [2]

Global View

Under IFRS, held-for-collection debt investments are valued at amortized cost; all other investments are measured at fair value.

²A **security** is a share, participation, or other interest in property or in an enterprise of the issuer or an obligation of the issuer that has the following three characteristics. (1) It either is represented by an instrument issued in bearer or registered form or, if not represented by an instrument, is registered in books maintained to record transfers by or on behalf of the issuer. (2) It is commonly traded on securities exchanges or markets or, when represented by an instrument, is commonly recognized in any area in which it is issued or dealt in as a medium for investment. (3) It either is one of a class or series or by its terms is divisible into a class or series of shares, participations, interests, or obligations. [1] (See the FASB Codification Reference near the end of the chapter.)

Held-to-Maturity Securities (Amortized Cost)

Only debt securities can be classified as held-to-maturity. By definition, equity securities have no maturity date. A company like **Starbucks** should classify a debt security as **held-to-maturity** only if it has **both (1) the positive intent and (2) the ability to hold those securities to maturity**. It should not classify a debt security as held-to-maturity if it intends to hold the security for an indefinite period of time. Likewise, if Starbucks anticipates that a sale may be necessary due to changes in interest rates, foreign currency risk, liquidity needs, or other asset-liability management reasons, it should not classify the security as held-to-maturity.³

Companies account for held-to-maturity securities **at amortized cost**, not fair value. If management intends to hold certain investment securities to maturity and has no plans to sell them, fair values (selling prices) are not relevant for measuring and evaluating the cash flows associated with these securities. Finally, because companies do not adjust held-to-maturity securities to fair value, these securities do not increase the volatility of either reported earnings or reported capital as do trading securities and available-for-sale securities.

To illustrate the accounting for held-to-maturity debt securities, assume that Robinson Company purchased \$100,000 of 8 percent bonds of Evermaster Corporation on January 1, 2019, at a discount, paying \$92,278. The bonds mature January 1, 2024, and yield 10%. Interest is payable each July 1 and January 1. Robinson records the investment as follows.

| Calculator Solution for Bond Price | | |
|------------------------------------|---------|---------|
| | Inputs | Answer |
| N | 10 | |
| I | 5 | |
| PV | ? | -92,278 |
| PMT | 4,000 | |
| FV | 100,000 | |

Underlying Concepts

The use of some simpler method that yields results similar to the effective-interest method is an application of the materiality concept.

| January 1, 2019 | | |
|------------------|--------|--------|
| Debt Investments | 92,278 | |
| Cash | | 92,278 |

Robinson uses a Debt Investments account to indicate the type of security purchased.⁴

As indicated in Chapter 14, companies must amortize a premium or discount using the **effective-interest method** unless some other method—such as the straight-line method—yields a similar result (see **Underlying Concepts**). They apply the effective-interest method to bond investments in a way similar to that for bonds payable. To compute interest revenue, companies compute the effective-interest rate or yield at the time of investment and apply that rate to the beginning carrying amount (book value) for each interest period. The investment carrying amount is increased by the amortized discount or decreased by the amortized premium in each period.

Illustration 17.3 shows the effect of the discount amortization on the interest revenue that Robinson records each period for its investment in Evermaster bonds.

Robinson records the receipt of the first semiannual interest payment on July 1, 2019 (using the data in Illustration 17.3), as follows.

| July 1, 2019 | | |
|------------------|-------|-------|
| Cash | 4,000 | |
| Debt Investments | 614 | |
| Interest Revenue | | 4,614 |

³The FASB defines situations where, even though a company sells a security before maturity, it has constructively held the security to maturity, and thus does not violate the held-to-maturity requirement. These include selling a security close enough to maturity (such as three months) so that interest rate risk is no longer an important pricing factor.

However, companies must be extremely careful with debt securities held to maturity. If a company prematurely sells a debt security in this category, the sale may “taint” the entire held-to-maturity portfolio. That is, a management’s statement regarding “intent” is no longer credible. Therefore, the company may have to reclassify the securities. This could lead to unfortunate consequences. An interesting by-product of this situation is that companies that wish to retire their debt securities early are finding it difficult to do so. The holder will not sell because the securities are classified as held-to-maturity.

⁴Companies generally record investments acquired at par, at a discount, or at a premium in the accounts at cost, including brokerage and other fees but excluding the accrued interest. They generally do not record investments at maturity value. The use of a separate discount or premium account as a valuation account is acceptable procedure for investments, but in practice companies do not widely use it.

| 8% Bonds Purchased to Yield 10% | | | | |
|---------------------------------|-----------------------|-----------------------|----------------------------|--------------------------|
| Date | Cash Received | Interest Revenue | Bond Discount Amortization | Carrying Amount of Bonds |
| 1/1/19 | | | | \$ 92,278 |
| 7/1/19 | \$ 4,000 ^a | \$ 4,614 ^b | \$ 614 ^c | 92,892 ^d |
| 1/1/20 | 4,000 | 4,645 | 645 | 93,537 |
| 7/1/20 | 4,000 | 4,677 | 677 | 94,214 |
| 1/1/21 | 4,000 | 4,711 | 711 | 94,925 |
| 7/1/21 | 4,000 | 4,746 | 746 | 95,671 |
| 1/1/22 | 4,000 | 4,783 | 783 | 96,454 |
| 7/1/22 | 4,000 | 4,823 | 823 | 97,277 |
| 1/1/23 | 4,000 | 4,864 | 864 | 98,141 |
| 7/1/23 | 4,000 | 4,907 | 907 | 99,048 |
| 1/1/24 | 4,000 | 4,952 | 952 | 100,000 |
| | <u>\$40,000</u> | <u>\$47,722</u> | <u>\$7,722</u> | |

^a\$4,000 = \$100,000 × .08 × ½
^b\$4,614 = \$92,278 × .10 × ½
^c\$614 = \$4,614 – \$4,000
^d\$92,892 = \$92,278 + \$614

ILLUSTRATION 17.3**Schedule of Interest Revenue and Bond Discount Amortization—Effective-Interest Method**

Because Robinson is on a calendar-year basis, it accrues interest and amortizes the discount at December 31, 2019, as follows.

| December 31, 2019 | | |
|---------------------|-------|-------|
| Interest Receivable | 4,000 | |
| Debt Investments | 645 | |
| Interest Revenue | | 4,645 |

Again, Illustration 17.3 shows the interest and amortization amounts.

Robinson reports its investment in Evermaster bonds in its December 31, 2019, financial statements as shown in **Illustration 17.4**.

| Balance Sheet | |
|--------------------------------------|----------|
| Current assets | |
| Interest receivable | \$ 4,000 |
| Long-term investments | |
| Debt investments (held-to-maturity) | \$93,537 |
| Income Statement | |
| Other revenues and gains | |
| Interest revenue (\$4,614 + \$4,645) | \$ 9,259 |

ILLUSTRATION 17.4**Reporting of Held-to-Maturity Securities**

Sometimes, a company sells a held-to-maturity debt security so close to its maturity date that a change in the market interest rate would not significantly affect the security's fair value. Such a sale may be considered a sale at maturity and would not call into question the company's original intent to hold the investment to maturity. Let's assume, as an example, that Robinson Company sells its investment in Evermaster bonds on November 1, 2023, at 99¾ plus accrued interest. The discount amortization from July 1, 2023, to November 1, 2023, is \$635 ($\frac{1}{4} \times \952). Robinson records this discount amortization as follows.

| November 1, 2023 | | |
|------------------|-----|-----|
| Debt Investments | 635 | |
| Interest Revenue | | 635 |

Illustration 17.5 shows the computation of the realized gain on the sale.

ILLUSTRATION 17.5**Computation of Gain on Sale of Bonds**

| | | |
|--|------------|---------------|
| Selling price of bonds (exclusive of accrued interest) | | \$99,750 |
| Less: Book value of bonds on November 1, 2023: | | |
| Amortized cost, July 1, 2023 | \$99,048 | |
| Add: Discount amortized for the period July 1, 2023, to November 1, 2023 | <u>635</u> | <u>99,683</u> |
| Gain on sale of bonds | | \$ 67 |

Robinson records the sale of the bonds as:

| November 1, 2023 | | |
|----------------------------------|---------|--------|
| Cash | 102,417 | |
| Interest Revenue (4/6 × \$4,000) | | 2,667 |
| Debt Investments | | 99,683 |
| Gain on Sale of Investments | | 67 |

The credit to Interest Revenue represents accrued interest for four months, for which the purchaser pays cash. The debit to Cash represents the selling price of the bonds plus accrued interest (\$99,750 + \$2,667). The credit to Debt Investments represents the book value of the bonds on the date of sale. The credit to Gain on Sale of Investments represents the excess of the selling price over the book value of the bonds.

Available-for-Sale Securities (Fair Value Through Other Comprehensive Income)

Underlying Concepts

Recognizing unrealized gains and losses is an application of the concept of comprehensive income.

Companies like **Amazon.com** report **available-for-sale** debt securities at fair value. It records the unrealized gains and losses related to changes in the fair value of available-for-sale debt securities in an unrealized holding gain or loss account. Amazon reports these unrealized gains and losses in other comprehensive income for the period (see **Underlying Concepts**). Other comprehensive income is then added to (subtracted from) accumulated other comprehensive income, which is shown as a separate component of stockholders' equity until realized. Thus, **companies report available-for-sale securities at fair value on the balance sheet but do not report changes in fair value as part of net income until after selling the security**. This approach reduces the volatility of net income.

Example: Single Security

To illustrate the accounting for available-for-sale securities, assume that Graff Corporation purchases \$100,000, 10 percent, five-year bonds on January 1, 2019, with interest payable on July 1 and January 1. The bonds sell for \$108,111, which results in a bond premium of \$8,111 and an effective-interest rate of 8 percent.

Graff records the purchase of the bonds as follows.

| January 1, 2019 | | |
|------------------|---------|---------|
| Debt Investments | 108,111 | |
| Cash | | 108,111 |

Illustration 17.6 discloses the effect of the premium amortization on the interest revenue Graff records each period using the effective-interest method.

The entry to record interest revenue on July 1, 2019, is as follows.

| July 1, 2019 | | |
|------------------|-------|-------|
| Cash | 5,000 | |
| Debt Investments | | 676 |
| Interest Revenue | | 4,324 |

Calculator Solution for Bond Price

| | Inputs | Answer |
|-----|---------|----------|
| N | 10 | |
| I | 4 | |
| PV | ? | -108,111 |
| PMT | 5,000 | |
| FV | 100,000 | |

ILLUSTRATION 17.6**Schedule of Interest Revenue and Bond Premium Amortization—Effective-Interest Method**

| 10% Bonds Purchased to Yield 8% | | | | |
|---------------------------------|-----------------------|-----------------------|---------------------------|--------------------------|
| Date | Cash Received | Interest Revenue | Bond Premium Amortization | Carrying Amount of Bonds |
| 1/1/19 | | | | \$108,111 |
| 7/1/19 | \$ 5,000 ^a | \$ 4,324 ^b | \$ 676 ^c | 107,435 ^d |
| 1/1/20 | 5,000 | 4,297 | 703 | 106,732 |
| 7/1/20 | 5,000 | 4,269 | 731 | 106,001 |
| 1/1/21 | 5,000 | 4,240 | 760 | 105,241 |
| 7/1/21 | 5,000 | 4,210 | 790 | 104,451 |
| 1/1/22 | 5,000 | 4,178 | 822 | 103,629 |
| 7/1/22 | 5,000 | 4,145 | 855 | 102,774 |
| 1/1/23 | 5,000 | 4,111 | 889 | 101,885 |
| 7/1/23 | 5,000 | 4,075 | 925 | 100,960 |
| 1/1/24 | 5,000 | 4,040 | 960 | 100,000 |
| | <u>\$50,000</u> | <u>\$41,889</u> | <u>\$8,111</u> | |

^a\$5,000 = \$100,000 × .10 × ½
^b\$4,324 = \$108,111 × .08 × ½
^c\$676 = \$5,000 – \$4,324
^d\$107,435 = \$108,111 – \$676

At December 31, 2019, Graff makes the following entry to recognize interest revenue.

| December 31, 2019 | | |
|---------------------|--|-------|
| Interest Receivable | | 5,000 |
| Debt Investments | | 703 |
| Interest Revenue | | 4,297 |

As a result, Graff reports interest revenue for 2019 of \$8,621 (\$4,324 + \$4,297).

To apply the fair value method to these debt investments, assume that at year-end the fair value of the bonds is \$105,000 and that the carrying amount of the investments is \$106,732. Comparing this fair value with the carrying amount (amortized cost) of the bonds at December 31, 2019, Graff recognizes an unrealized holding loss of \$1,732 (\$106,732 – \$105,000). It reports this loss as other comprehensive income. Graff makes the following entry.

| December 31, 2019 | | |
|--|-------|-------|
| Unrealized Holding Gain or Loss—Equity | 1,732 | |
| Fair Value Adjustment | | 1,732 |

Graff uses a valuation account instead of crediting the Debt Investments account. The use of the **Fair Value Adjustment**⁵ account enables the company to maintain a record of its amortized cost (see **Underlying Concepts**). Because the adjustment account has a credit balance in this case, Graff subtracts it from the balance of the Debt Investments account to determine fair value. Graff reports this fair value amount on the balance sheet. At each reporting date, Graff reports the bonds at fair value with an adjustment to the Unrealized Holding Gain or Loss—Equity account.

Underlying Concepts

Companies report some debt securities at fair value not only because the information is relevant but also because it is representationally faithful.

Example: Portfolio of Securities

To illustrate the accounting for a portfolio of securities, assume that Webb Corporation has two debt securities classified as available-for-sale. **Illustration 17.7** identifies the amortized cost, fair value, and the amount of the unrealized gain or loss.

⁵Various account titles might be used instead of Fair Value Adjustment, such as Fair Value Allowance or Valuation Allowance for Debt Investments. For homework problems, use the account title Fair Value Adjustment.

ILLUSTRATION 17.7**Computation of Fair Value Adjustment—Available-for-Sale Securities (2020)**

| Available-for-Sale Debt Security Portfolio | | | |
|---|-------------------|------------------|------------------------|
| December 31, 2020 | | | |
| Investments | Amortized Cost | Fair Value | Unrealized Gain (Loss) |
| Watson Corporation 8% bonds | \$ 93,537 | \$103,600 | \$10,063 |
| Anacomp Corporation 10% bonds | <u>200,000</u> | <u>180,400</u> | <u>(19,600)</u> |
| Total of portfolio | <u>\$293,537</u> | <u>\$284,000</u> | <u>(9,537)</u> |
| Previous fair value adjustment balance | | | <u>-0-</u> |
| Fair value adjustment—Cr. | | | <u>\$ (9,537)</u> |

The fair value of Webb's available-for-sale portfolio totals \$284,000. The gross unrealized gains are \$10,063, and the gross unrealized losses are \$19,600, resulting in a net unrealized loss of \$9,537. That is, the fair value of available-for-sale securities is \$9,537 lower than its amortized cost. Webb makes an adjusting entry to a valuation allowance to record the decrease in value and to record the loss as follows.

| December 31, 2020 | | |
|--|-------|-------|
| Unrealized Holding Gain or Loss—Equity | 9,537 | |
| Fair Value Adjustment | | 9,537 |

Webb reports the unrealized holding loss of \$9,537 as other comprehensive income and a reduction of stockholders' equity. Recall that companies exclude from net income any unrealized holding gains and losses related to available-for-sale securities.

Sale of Available-for-Sale Securities

If a company sells bonds carried as investments in available-for-sale securities before the maturity date, it must make entries to remove from the Debt Investments account the amortized cost of bonds sold. To illustrate, assume that Webb Corporation sold the Watson bonds (from Illustration 17.7) on July 1, 2021, for \$90,000, at which time it had an amortized cost of \$94,214. **Illustration 17.8** shows the computation of the realized loss.

ILLUSTRATION 17.8**Computation of Loss on Sale of Bonds**

| | |
|-------------------------------|-----------------|
| Amortized cost (Watson bonds) | \$94,214 |
| Less: Selling price of bonds | <u>90,000</u> |
| Loss on sale of bonds | <u>\$ 4,214</u> |

Webb records the sale of the Watson bonds as follows.

| July 1, 2021 | | |
|-----------------------------|--------|--------|
| Cash | 90,000 | |
| Loss on Sale of Investments | 4,214 | |
| Debt Investments | | 94,214 |

Webb reports this realized loss in the "Other expenses and losses" section of the income statement.⁶ Assuming no other purchases and sales of bonds in 2021, Webb on December 31, 2021, prepares the information shown in **Illustration 17.9**.

⁶On the date of sale, any unrealized gains or losses on the sold security is not adjusted in accumulated other comprehensive income. This adjustment occurs at year-end when the entire portfolio is evaluated for fair value adjustment.

| Available-for-Sale Debt Security Portfolio December 31, 2021 | | | |
|---|-------------------|---------------|------------------------|
| Investments | Amortized Cost | Fair Value | Unrealized Gain (Loss) |
| Anacomp Corporation 10% bonds (total portfolio) | \$200,000 | \$195,000 | \$(5,000) |
| Previous fair value adjustment balance—Cr. | | | (9,537) |
| Fair value adjustment—Dr. | | | \$ 4,537 |

ILLUSTRATION 17.9**Computation of Fair Value Adjustment—Available-for-Sale (2021)**

Webb has an unrealized holding loss of \$5,000. However, the Fair Value Adjustment account already has a credit balance of \$9,537. To reduce the adjustment account balance to \$5,000, Webb debits it for \$4,537, as follows.

| December 31, 2021 | | |
|--|-------|-------|
| Fair Value Adjustment | 4,537 | |
| Unrealized Holding Gain or Loss—Equity | | 4,537 |

Financial Statement Presentation

Webb's December 31, 2021, balance sheet and the 2021 income statement include the items and amounts shown in **Illustration 17.10** (the Anacomp bonds are long-term investments but are not intended to be held to maturity).

| Balance Sheet | |
|---------------------------------------|-----------|
| Current assets | |
| Interest receivable | \$ xxx |
| Investments | |
| Debt investments (available-for-sale) | \$195,000 |
| Stockholders' equity | |
| Accumulated other comprehensive loss | \$ 5,000 |
| Income Statement | |
| Other revenues and gains | |
| Interest revenue | \$ xxx |
| Other expenses and losses | |
| Loss on sale of investments | \$ 4,214 |

ILLUSTRATION 17.10**Reporting of Available-for-Sale Securities**

Some favor including the unrealized holding gain or loss in net income rather than showing it as other comprehensive income.⁷ However, some companies, particularly financial institutions, note that recognizing gains and losses on assets, but not liabilities, introduces substantial volatility in net income. They argue that hedges often exist between assets and liabilities so that gains in assets are offset by losses in liabilities, and vice versa. In short, to recognize gains and losses only on the asset side is unfair and not representative of the economic activities of the company.

This argument convinced the FASB. As a result, companies **do not include in net income** these unrealized gains and losses. [3] However, even this approach solves only some of the problems because **volatility of capital** still results. This is of concern to financial institutions because regulators restrict financial institutions' operations based on their level of capital. However, companies can still manage their net income by engaging in **gains trading** (i.e., selling the winners and holding the losers).

⁷In Chapter 4, we discussed the concept of, and reporting for, other comprehensive income.

Trading Securities (Fair Value Through Net Income)

Companies hold **trading securities** with the intention of selling them in a short period of time. “Trading” in this context means frequent buying and selling. Companies thus use trading securities to generate profits from short-term differences in price. Companies generally hold these securities for less than three months, some for merely days or hours.

Companies report trading securities at fair value, with unrealized holding gains and losses reported as part of net income. Similar to held-to-maturity or available-for-sale investments, companies are required to amortize any discount or premium. A **holding gain or loss** is the net change in the fair value of a security from one period to another, exclusive of dividend or interest revenue recognized but not received. In short, the FASB says to adjust the trading securities to fair value, at each reporting date. In addition, companies report the change in value as part of net income, not other comprehensive income.

For example, assume that on December 31, 2020, Western Publishing Corporation determined its trading securities portfolio to be as shown in **Illustration 17.11**. (Assume that 2020 is the first year that Western Publishing held trading securities.) At the date of acquisition, Western Publishing recorded these trading securities at cost, including brokerage commissions and taxes, in the account entitled Debt Investments. This is the first valuation of this recently purchased portfolio.

ILLUSTRATION 17.11

Computation of Fair Value Adjustment—Trading Securities Portfolio (2020)

| Trading Debt Security Portfolio December 31, 2020 | | | |
|--|------------------|------------------|------------------------|
| Investments | Amortized Cost | Fair Value | Unrealized Gain (Loss) |
| Burlington Northern 6% bonds | \$ 43,860 | \$ 51,500 | \$ 7,640 |
| GM Corporation 7% bonds | 184,230 | 175,200 | (9,030) |
| Time Warner 8% bonds | 86,360 | 91,500 | 5,140 |
| Total of portfolio | <u>\$314,450</u> | <u>\$318,200</u> | 3,750 |
| Previous fair value adjustment balance | | | -0- |
| Fair value adjustment—Dr. | | | <u>\$ 3,750</u> |

The total cost of Western Publishing’s trading portfolio is \$314,450. The gross unrealized gains are \$12,780 (\$7,640 + \$5,140), and the gross unrealized losses are \$9,030, resulting in a net unrealized gain of \$3,750. The fair value of trading securities is \$3,750 greater than its cost.

At December 31, Western Publishing makes an adjusting entry to the Fair Value Adjustment account, to record both the increase in value and the unrealized holding gain.

| December 31, 2020 | | |
|--|-------|-------|
| Fair Value Adjustment | 3,750 | |
| Unrealized Holding Gain or Loss—Income | | 3,750 |

Because the Fair Value Adjustment account balance is a debit, Western Publishing adds it to the cost of the Debt Investments account to arrive at a fair value for the trading securities. Western Publishing reports this fair value amount on the balance sheet.

As with other debt investments, when a trading investment is sold, the Debt Investments account is reduced by the amount of the amortized cost of the bonds. Any realized gain or loss is recorded in the “Other revenues and gains” or the “Other expenses and losses” section of the income statement. The Unrealized Holding Gain or Loss—Income account is reported in the income statement under “Other revenues and gains” or “Other expenses or losses.” The Fair Value Adjustment account is then adjusted at year-end for the unrealized gains or losses on the remaining securities in the trading investment portfolio.

When securities are actively traded, the FASB believes that the investments should be reported at fair value on the balance sheet. In addition, changes in fair value (unrealized gains and losses) should be reported in income. Such reporting on trading securities provides more relevant information to existing and prospective stockholders.

What Do the Numbers Mean? To Have and to Hold

Wall Street is a romantic place these days. Recently, many banks, especially big ones, entered into long-term relationships with their securities portfolios, promising that hundreds of billions of dollars of assets will be “held-to-maturity.” As a result, the banks may appear to have higher book values and be better capitalized in the eyes of regulators even if the value of these securities declines.

In fact, many banks, especially the large ones, have recently shifted their debt investments portfolios into the “held-to-maturity” category from trading or available-for-sale. For example, in a recent 18-month period, banks have moved \$293 billion of their investments to the held-to-maturity category. That means that about \$640 billion, or one in five dollars in the banks’ portfolios, cannot be sold easily, as shown in the chart to the right.

Why the shift? One major reason is that banks recognize when securities are classified as held-to-maturity, they are carried at their original cost, typically face value. As you have learned, declines in market values hit neither book value nor earnings. Their value is written down only if they are considered to be permanently impaired. If long-term interest rates are expected to rise (which appears to be the consensus today), then bond prices will drop. And if bond prices drop, banks that hold trading or available-for-sale securities will have their earnings and capital drop. As a result, the shift to held-to-maturity portfolios provides protection from this level of volatility.

But banks should be careful. For example, if the bank has liquidity problems, it may have to sell these held-to-maturity securities for a large loss at inopportune times. And given the financial crisis of 2008, the process of trying to hype capital and maintain less volatile earnings may backfire if investors believe that shenanigans are taking place in the financial institution area.

Investments in Equity Securities

LEARNING OBJECTIVE 2

Describe the accounting for investments in equity securities.

Equity securities represent ownership interests such as common, preferred, or other capital stock. They also include rights to acquire or dispose of ownership interests at an agreed-upon or determinable price, such as in warrants, rights, and call or put options. Companies do not treat convertible debt securities as equity securities. Nor do they treat as equity securities redeemable preferred stock (which must be redeemed for common stock or cash). The cost of equity securities includes the purchase price of the security plus broker’s commissions and other fees incidental to the purchase.

The degree to which one corporation (**investor**) acquires an interest in the common stock of another corporation (**investee**) generally determines the accounting treatment for the investment subsequent to acquisition. The classification of such investments depends on the percentage of the investee voting stock that is held by the investor:

1. Holdings of less than 20 percent (**fair value method**)—investor has passive interest.
2. Holdings between 20 percent and 50 percent (**equity method**)—investor has significant influence.
3. Holdings of more than 50 percent (**consolidated statements**)—investor has controlling interest.

Illustration 17.12 lists these levels of interest or influence and the corresponding valuation and reporting method that companies must apply to the investment.

ILLUSTRATION 17.12
Levels of Influence Determine Accounting Methods

| | |
|-------------------------|---|
| Percentage of Ownership | 0% ← → 20% ← → 50% ← → 100% |
| Level of Influence | Little or None Significant Control |
| Valuation Method | Fair Value Method Equity Method Consolidation |

The accounting and reporting for equity securities therefore depend on the level of influence and the type of security involved, as shown in **Illustration 17.13**.

ILLUSTRATION 17.13
Accounting and Reporting for Equity Securities by Category

| Category | Valuation | Unrealized Holding Gains or Losses | Other Income Effects |
|------------------------------|---------------|------------------------------------|--|
| Holdings less than 20% | Fair value* | Recognized in net income | Dividends declared; gains and losses from sale |
| Holdings between 20% and 50% | Equity | Not recognized | Proportionate share of investee's net income |
| Holdings more than 50% | Consolidation | Not recognized | Not applicable |

*Companies report equity holdings of less than 20% at fair value and record unrealized gains and losses through net income. The only exception would be for practicability reasons for determining fair value.

Holdings of Less Than 20%

When an investor has an interest of less than 20 percent, it is presumed that the investor has little or no influence over the investee. In such cases, if market prices are available subsequent to acquisition, the company values and reports the investment using the **fair value method**. Because equity securities have no maturity date, companies cannot classify them as held-to-maturity.

In some cases, companies can use a practicability exception when measuring equity securities that do not have a readily determinable fair value, often referred to as nonmarketable equity securities. If the practicability exception is elected, companies record investments at cost, less impairment. Companies recognize dividends when received and generally recognize gains and losses when selling the securities.⁸

Illustration

Upon acquisition, companies record equity securities at cost.⁹ To illustrate, assume that on November 3, 2020, Republic Corporation purchased common stock of three companies, each investment representing less than a 20 percent interest.

| | Cost |
|-----------------------------------|------------------|
| Northwest Industries, Inc. | \$259,700 |
| Campbell Soup Co. | 317,500 |
| St. Regis Pulp Co. | 141,350 |
| Total cost | <u>\$718,550</u> |

⁸A company is encouraged to adjust for observable price changes subsequent to recording the investment at cost if it can determine prices in orderly transactions for identical investments or from similar investments of the same issuer.

⁹Companies should record equity securities acquired in **exchange for noncash consideration** (property or services) at (1) the fair value of the consideration given, or (2) the fair value of the security received, whichever is more clearly determinable. Accounting for numerous purchases of securities requires the preservation of information regarding the cost of individual purchases, as well as the dates of purchases and sales. If specific identification is not possible, companies may use average-cost for multiple purchases of the same class of security. The **first-in, first-out method (FIFO)** of assigning costs to investments at the time of sale is also acceptable and normally employed.

Republic records these investments as follows.

| November 3, 2020 | | | |
|--------------------|--|---------|---------|
| Equity Investments | | 718,550 | |
| Cash | | | 718,550 |

On December 6, 2020, Republic receives a cash dividend of \$4,200 on its investment in the common stock of Campbell Soup Co. It records the cash dividend as follows.

| December 6, 2020 | | | |
|------------------|--|-------|-------|
| Cash | | 4,200 | |
| Dividend Revenue | | | 4,200 |

All three of the investee companies reported net income for the year, but only Campbell Soup declared and paid a dividend to Republic. But recall that when an investor owns less than 20 percent of the common stock of another corporation, it is presumed that the investor has relatively little influence on the investee. As a result, **net income of the investee is not a proper basis for recognizing income from the investment by the investor.** Why? Because the increased net assets resulting from profitable operations may be permanently retained for use in the investee's business. Therefore, **the investor recognizes net income only when the investee declares cash dividends.**

At December 31, 2020, Republic's equity security portfolio has the cost and fair value shown in **Illustration 17.14**.

| Equity Security Portfolio December 31, 2020 | | | |
|--|------------------|------------------|--------------------------|
| Investments | Cost | Fair Value | Unrealized Gain (Loss) |
| Northwest Industries, Inc. | \$259,700 | \$275,000 | \$ 15,300 |
| Campbell Soup Co. | 317,500 | 304,000 | (13,500) |
| St. Regis Pulp Co. | 141,350 | 104,000 | (37,350) |
| Total of portfolio | <u>\$718,550</u> | <u>\$683,000</u> | (35,550) |
| Previous fair value adjustment balance | | | -0- |
| Fair value adjustment—Cr. | | | <u><u>\$(35,550)</u></u> |

ILLUSTRATION 17.14

Computation of Fair Value Adjustment—Equity Security Portfolio (2020)

For Republic's equity securities portfolio, the gross unrealized gains are \$15,300, and the gross unrealized losses are \$50,850 (\$13,500 + \$37,350), resulting in a net unrealized loss of \$35,550. That is, the fair value of the equity securities portfolio is below cost by \$35,550.

Republic records the net unrealized gains and losses related to changes in the fair value of **equity** securities in an Unrealized Holding Gain or Loss—Income account. In this case, Republic prepares an adjusting entry debiting the Unrealized Holding Gain or Loss—Income account and crediting the Fair Value Adjustment account to record the decrease in fair value and to record the loss as follows.

| December 31, 2020 | | | |
|--|--|--------|--------|
| Unrealized Holding Gain or Loss—Income | | 35,550 | |
| Fair Value Adjustment | | | 35,550 |

On January 23, 2021, Republic sold all of its Northwest Industries, Inc. common stock receiving net proceeds of \$287,220. **Illustration 17.15** shows the computation of the realized gain on the sale.

| | |
|---------------------------------|-------------------------|
| Net proceeds from sale | \$287,220 |
| Cost of Northwest shares | 259,700 |
| Gain on sale of stock | <u><u>\$ 27,520</u></u> |

ILLUSTRATION 17.15

Computation of Gain on Sale of Stock

Republic records the sale as follows.

| January 23, 2021 | | |
|-----------------------------|---------|---------|
| Cash | 287,220 | |
| Equity Investments | | 259,700 |
| Gain on Sale of Investments | | 27,520 |

In addition, assume that on February 10, 2021, Republic purchased 20,000 shares of Continental Trucking at a market price of \$12.75 per share plus brokerage commissions of \$1,850 (total cost, \$256,850).

Illustration 17.16 lists Republic's portfolio of equity securities as of December 31, 2021.

ILLUSTRATION 17.16
**Computation of Fair Value
 Adjustment—Equity Security
 Portfolio (2021)**

| Equity Security Portfolio December 31, 2021 | | | |
|--|------------------|------------------|---------------------------|
| Investments | Cost | Fair Value | Unrealized Gain (Loss) |
| Continental Trucking | \$256,850 | \$278,350 | \$ 21,500 |
| Campbell Soup Co. | 317,500 | 362,550 | 45,050 |
| St. Regis Pulp Co. | 141,350 | 139,050 | (2,300) |
| Total of portfolio | <u>\$715,700</u> | <u>\$779,950</u> | 64,250 |
| Previous fair value adjustment balance—Cr. | | | (35,550) |
| Fair value adjustment—Dr. | | | <u>\$ 99,800</u> |

At December 31, 2021, the fair value of Republic's equity securities portfolio exceeds cost by \$64,250 (unrealized gain). The Fair Value Adjustment account had a credit balance of \$35,550 at December 31, 2021. To adjust its December 31, 2021, equity portfolio to fair value, the company debits the Fair Value Adjustment account for \$99,800 (\$35,550 + \$64,250). Republic records this adjustment as follows.

| December 31, 2021 | | |
|--|--------|--------|
| Fair Value Adjustment | 99,800 | |
| Unrealized Holding Gain or Loss—Income | | 99,800 |

Holdings Between 20% and 50% (Equity Method)

LEARNING OBJECTIVE 3

Explain the equity and consolidation methods of accounting.

An investor corporation may hold an interest of less than 50 percent in an investee corporation and thus not possess legal control. However, an investment in voting stock of less than 50 percent can still give the investor the ability to exercise significant influence over the operating and financial policies of an investee. [4] For example, **Siemens AG** owns 34 percent of **Areva** (which constructs power plants). Areva is very important to Siemens because the power industry is a key customer for its generators and other power-related products. Thus, Siemens has a significant (but not controlling) ownership stake in a power plant construction company, which helps Siemens push its products into the market. **Significant influence** may be indicated in several ways. Examples include representation on the board of directors, participation in policy-making processes, material intercompany transactions, interchange of managerial personnel, or technological dependency.

Another important consideration is the extent of ownership by an investor in relation to the concentration of other shareholdings. To achieve a reasonable degree of uniformity in application of the "significant influence" criterion, the profession concluded that an investment

(direct or indirect) of 20 percent or more of the voting stock of an investee should lead to a presumption, that in the absence of evidence to the contrary, an investor has the ability to exercise significant influence over an investee.¹⁰

In instances of “significant influence” (generally an investment of 20 percent or more), the investor must account for the investment using the **equity method**.

Comparison of Equity Method to Fair Value

Under the **equity method**, the investor and the investee acknowledge a substantive economic relationship. The company originally records the investment at the cost of the shares acquired but subsequently adjusts the amount each period for changes in the investee’s net assets. That is, **the investor’s proportionate share of the earnings (losses) of the investee periodically increases (decreases) the investment’s carrying amount. All cash dividends received by the investor from the investee also decrease the investment’s carrying amount.** The equity method recognizes that investee’s earnings increase investee’s net assets, and that investee’s losses and dividends decrease these net assets.

To illustrate the equity method and compare it with the fair value method, assume that Maxi Company purchases a 20 percent interest in Mini Company. To apply the fair value method in this example, assume that Maxi does not have the ability to exercise significant influence. Where this example applies the equity method, assume that the 20 percent interest permits Maxi to exercise significant influence. **Illustration 17.17** shows the entries.

ILLUSTRATION 17.17 Comparison of Fair Value Method and Equity Method

| Entries by Maxi Company | | | | |
|---|----------|---------|--------------------|---------|
| Fair Value Method | | | Equity Method | |
| On January 2, 2020, Maxi Company acquired 48,000 shares (20% of Mini Company common stock) at a cost of \$10 a share. | | | | |
| Equity Investments | 480,000 | | Equity Investments | 480,000 |
| Cash | | 480,000 | Cash | 480,000 |
| For the year 2020, Mini Company reported net income of \$200,000; Maxi Company’s share is 20%, or \$40,000. | | | | |
| | No entry | | Equity Investments | 40,000 |
| | | | Investment Income | 40,000 |
| At December 31, 2020, the 48,000 shares of Mini Company have a fair value (market price) of \$12 a share, or \$576,000. | | | | |
| Fair Value Adjustment | 96,000 | | No entry | |
| Unrealized Holding Gain or Loss—Income | | 96,000 | | |
| On January 28, 2021, Mini Company announced and paid a cash dividend of \$100,000; Maxi Company received 20%, or \$20,000. | | | | |
| Cash | 20,000 | | Cash | 20,000 |
| Dividend Revenue | | 20,000 | Equity Investments | 20,000 |
| For the year 2021, Mini reported a net loss of \$50,000; Maxi Company’s share is 20%, or \$10,000. | | | | |
| | No entry | | Investment Loss | 10,000 |
| | | | Equity Investments | 10,000 |
| At December 31, 2021, the Mini Company 48,000 shares have a fair value (market price) of \$11 a share, or \$528,000. | | | | |
| Unrealized Holding Gain or Loss—Income | 48,000 | | No entry | |
| Fair Value Adjustment | | 48,000 | | |

¹⁰Cases in which an investment of 20 percent or more might not enable an investor to exercise significant influence include (1) the investee opposes the investor’s acquisition of its stock, (2) the investor and investee sign an agreement under which the investor surrenders significant shareholder rights, (3) the investor’s ownership share does not result in “significant influence” because majority ownership of the investee is concentrated among a small group of shareholders who operate the investee without regard to the views of the investor, and (4) the investor tries and fails to obtain representation on the investee’s board of directors. [5]

Note that under the fair value method, Maxi reports as revenue only the cash dividends received from Mini. **The earning of net income by Mini (the investee) is not considered a proper basis for recognition of income from the investment by Maxi (the investor).** Why? Mini may permanently retain in the business any increased net assets resulting from its profitable operation. Therefore, Maxi only recognizes revenue when it receives dividends from Mini.

Global View

IFRS has similar accounting rules for significant influence equity investments.

Under the equity method, Maxi reports as revenue its share of the net income reported by Mini. Maxi records the cash dividends received from Mini as a decrease in the investment carrying value. As a result, Maxi records its share of the net income of Mini in the year when it is recognized. With significant influence, Maxi can ensure that Mini will pay dividends, if desired, on any net asset increases resulting from net income. To wait until receiving a dividend ignores the fact that Maxi is better off if the investee has earned income (see **Global View**).

Using dividends as a basis for recognizing income poses an additional problem. For example, assume that the investee reports a net loss. However, the investor exerts influence to force a dividend payment from the investee. In this case, the investor reports income, even though the investee is experiencing a loss. **In other words, using dividends as a basis for recognizing income fails to report properly the economics of the situation.**

For some companies, equity accounting can be a real pain to the bottom line. For example, **Amazon.com**, the pioneer of Internet retailing, at one time struggled to turn a profit. Furthermore, some of Amazon's equity investments had resulted in Amazon's earnings performance going from bad to worse. At one time, Amazon disclosed equity stakes in such companies as **Altera International, Basis Technology, Drugstore.com, and Eziba.com**. These equity investees reported losses that made Amazon's already bad bottom line even worse, accounting for up to 22 percent of its reported loss in one year alone.

Investee Losses Exceed Carrying Amount

If an investor's share of the investee's losses exceeds the carrying amount of the investment, should the investor recognize additional losses? Ordinarily, the investor should discontinue applying the equity method and not recognize additional losses.

If the investor's potential loss is not limited to the amount of its original investment (by guarantee of the investee's obligations or other commitment to provide further financial support) or if imminent return to profitable operations by the investee appears to be assured, the investor should recognize additional losses. [6]

Holdings of More Than 50% (Consolidation)

When one corporation acquires a voting interest of more than 50 percent in another corporation, it is said to have a **controlling interest**. In such a relationship, the investor corporation is referred to as the **parent** and the investee corporation as the **subsidiary**. Companies present the investment in the common stock of the subsidiary as a long-term investment on the separate financial statements of the parent.

When the parent treats the investment as a subsidiary, the parent generally prepares **consolidated financial statements**. Consolidated financial statements treat the parent and subsidiary corporations as a single economic entity. (Advanced accounting courses extensively discuss the subject of when and how to prepare consolidated financial statements.) Whether or not consolidated financial statements are prepared, the parent company generally accounts for the investment in the subsidiary **using the equity method** as explained in the previous section of this chapter (see **Global View**).

Global View

In contrast to U.S. firms, financial statements of non-U.S. companies often include both consolidated (group) statements and parent company financial statements.

What Do the Numbers Mean? Who's in Control Here?

Lenovo Group owns a significant percentage (45 percent) of the shares of **Beijing Lenovo Parasaga Information Technology Co.** (which develops and distributes computer software). Beijing Lenovo is important to Lenovo because it develops and sells the

software that is used with Lenovo computers. In return, Beijing Lenovo depends on Lenovo to provide the products that make its software and services valuable, as well as perform significant customer and market support. Indeed, it can be said that to some

extent Lenovo controls Beijing Lenovo, which would likely not exist without the support of Lenovo.

As you have learned, because a company like Lenovo owns less than 50 percent of the shares, it does not consolidate Beijing Lenovo but instead accounts for its investment using the **equity method**. Under the equity method, Lenovo reports a single income item for its profits from Beijing Lenovo and only the net amount of its investment in the statement of financial position. Equity method accounting gives Lenovo a pristine statement of financial position and income statement, by separating the assets

and liabilities and the profit margins of the related companies from its laptop-computer businesses.

Some are critical of equity method accounting. They argue that some investees, like Beijing Lenovo, should be consolidated. The FASB has issued rules to consider other factors, in addition to voting interests, when determining whether an entity should be consolidated. The FASB has tightened up consolidation rules, so that companies will be more likely to consolidate more of their 20–50-percent-owned investments. Consolidation of entities, such as Beijing Lenovo, is warranted if Lenovo effectively controls its equity method investments.

Other Financial Reporting Issues

LEARNING OBJECTIVE 4

Evaluate other major issues related to investments in debt and equity securities.

Fair Value Option

As indicated in earlier chapters, companies have the option to report most financial instruments at **fair value, with all gains and losses related to changes in fair value reported in the income statement**. This option is applied on an instrument-by-instrument basis. The fair value option is generally available only at the time a company first purchases the financial asset or incurs a financial liability. If a company chooses to use the fair value option, it must measure this instrument at fair value until the company no longer has ownership.

For example, assume that **Abbott Laboratories** purchased debt securities in 2020 that it classified as held-to-maturity. Abbott does not choose to report this security using the fair value option. In 2021, Abbott buys another held-to-maturity debt security. Abbott decides to report this security using the fair value option. Once it chooses the fair value option for the security bought in 2021, the decision is irrevocable (may not be changed). In addition, Abbott does not have the option to value the held-to-maturity security purchased in 2020 at fair value in 2021 or in subsequent periods.

Many support the use of the fair value option as a step closer to total fair value reporting for financial instruments. They believe this treatment leads to an improvement in financial reporting. Others argue that the fair value option is confusing. A company can choose from period to period whether to use the fair value option for any new investment in a financial instrument. By permitting an instrument-by-instrument approach, companies are able to report some financial instruments at fair value but not others. To illustrate the accounting issues related to the fair value option, we discuss two different situations.

Available-for-Sale Debt Securities Illustration

Available-for-sale debt securities are presently reported at fair value, with any unrealized gains and losses recorded as part of other comprehensive income. Assume that Hardy Company purchases bonds in Fielder Company during 2020 that it classifies as available-for-sale. At December 31, 2020, the cost of this security is \$100,000; its fair value at December 31, 2020, is \$125,000. If Hardy chooses the fair value option to account for the Fielder Company stock, it makes the following entry at December 31, 2020.

| | | |
|--|--------|--------|
| Debt Investments | 25,000 | |
| Unrealized Holding Gain or Loss—Income | | 25,000 |

In this situation, Hardy uses the Debt Investments account to record the change in fair value at December 31. It does not use a Fair Value Adjustment account because the accounting

for a fair value option is on an investment-by-investment basis rather than on a portfolio basis. **Because Hardy selected the fair value option, the unrealized gain or loss is recorded as part of net income.** Hardy must continue to use the fair value option to record this investment until it no longer has ownership of the security.

Equity Method Investments Illustration

Companies may also use the fair value option for investments that otherwise follow the equity method of accounting. To illustrate, assume that Durham Company holds a 28 percent stake in Suppan Inc. Durham purchased the investment in 2020 for \$930,000. At December 31, 2020, the fair value of the investment is \$900,000. Durham elects to report the investment in Suppan using the fair value option. The entry to record this investment is as follows.

| | | |
|--|--------|--------|
| Unrealized Holding Gain or Loss—Income | 30,000 | |
| Equity Investments | | 30,000 |

In contrast to equity method accounting, if the fair value option is chosen, Durham does not report its pro rata share of the income or loss from Suppan. In addition, any dividend payments are credited to Dividend Revenue and therefore do not reduce the Equity Investments account.

One major advantage of using the fair value option for this type of investment is that it addresses confusion about the equity method of accounting. In other words, what exactly does the one-line consolidation related to the equity method of accounting on the balance sheet tell investors? Many believe it does not provide information about liquidity or solvency, nor does it provide an indication of the worth of the company (see **Global View**).

Global View

IFRS does not allow the use of the fair value option for equity method investments.

Evolving Issue Fair Value Controversy

As discussed in the opening story, the reporting of investment securities is controversial. Some believe that all securities should be reported at fair value with the unrealized gain or loss reported in net income. Others believe the unrealized gain or loss should be reported in other comprehensive income. A third group believes all debt securities should be stated at amortized cost, and still others favor the present approach. Here are some of the major unresolved issues:

- **Measurement based on intent.** Companies classify debt securities as held-to-maturity, available-for-sale, or trading. As a result, companies can report three identical debt securities in three different ways in the financial statements. Some argue such treatment is confusing. Furthermore, the held-to-maturity category relies on intent, a subjective evaluation. What is not subjective is the fair value of the debt instrument. In other words, the three classifications are subjective, resulting in arbitrary classifications.
- **Gains trading.** Companies can classify certain debt securities as held-to-maturity and therefore report them at amortized cost. Companies can classify other debt securities as available-for-sale and report them at fair value, with the unrealized gain or loss reported as other comprehensive income. In either case, a company can become involved in “gains trading” (also referred to as “cherry picking,” “snacking,” or “sell the best and keep the rest”). In **gains trading**, companies sell their “winners,” reporting the gains in income, and hold on to the losers.
- **Liabilities not fairly valued.** Many argue that if companies report investment securities at fair value, they also should report liabilities at fair value. Why? By recognizing changes in value on only one side of the balance sheet (the asset side), a high degree of volatility can occur in the income and stockholders’ equity amounts. Further, financial institutions are involved in asset and liability management (not just asset management). Viewing only one side may lead managers to make uneconomic decisions as a result of the accounting. The fair value option may address this concern to some extent. However, there is debate on the usefulness of fair value estimates for liabilities.

Impairment of Value

Receivables

As indicated in Chapter 7 for receivables, companies use the current expected credit loss (CECL) model to measure impairment of receivables. To recognize the impairment, an entry is made to increase Bad Debt Expense and credit Allowance for Doubtful Accounts for the amount of the impairment. When it is probable that a company will be unable to collect all

amounts due under the terms of the transaction, the receivable is permanently written off by a debit to Allowance for Doubtful Accounts and a credit to Accounts Receivable.

Debt Investments: Held-to-Maturity

The rules for debt investments (debt securities and loans) reported at **amortized cost** follow the same approach as discussed in Chapter 7. That is, companies should use the CECL model to record the impairment of debt investments similar to receivables. To illustrate, assume that Strickler Company holds held-to-maturity bond securities with a par value and amortized cost of \$1 million. The fair value of these securities is \$800,000. In evaluating the securities, Strickler now determines that it is probable that it will not collect all amounts due. In this case, it records a debit to Allowance for Doubtful Accounts of \$200,000. Strickler includes this amount in income and records the impairment as follows.

| | | |
|---------------------------------|---------|---------|
| Allowance for Doubtful Accounts | 200,000 | |
| Debt Investments | | 200,000 |

The new cost basis of the investment in debt securities is \$800,000 and will not change unless additional impairment occurs.

Debt Investments: Available-for-Sale

Companies holding available-for-sale debt investments follow a different approach in accounting for impairments than the current expected credit loss (CECL) model. The reason is that the CECL model is designed to estimate credit losses over the contractual term of the debt investment, such as is the case with held-to-maturity debt investments. However, if companies hold available-for-sale debt investments, they may choose to sell the securities before the contractual term ends. Thus, companies have two choices with available-for-sale securities. They may realize the value of these securities either (1) through collection of the cash flows or (2) by sale of the securities.

As a result, the amount of credit losses that can be realized on available-for-sale debt securities is limited to the amount that the fair value is less than amortized cost. In other words, if the credit loss exceeds the amount that the fair value is below amortized cost of these securities, the company can sell the securities and thereby avoid the higher credit loss. To illustrate, assume Acular Company has an available-for-sale security with an amortized cost of \$100,000; its fair value is \$90,000, and its expected credit losses on this security is \$15,000. In this case, Acular would sell the security and have a loss of only \$10,000 rather than hold the security and have a loss of \$15,000.¹¹

Illustration 17.18 provides data for an impairment analysis for available-for-sale impairment guidelines for Alexander Company.

| Facts | Situation A | Situation B | Situation C |
|---|-------------|-------------|-------------|
| Amortized cost | \$1,000,000 | \$1,000,000 | \$1,000,000 |
| Fair value | 1,100,000 | 960,000 | 860,000 |
| Expected credit loss | 110,000 | 110,000 | 110,000 |
| Expected credit loss recognized in net income | -0- | 40,000 | 110,000 |
| Unrealized Holding Gain or (Loss)—Equity | 100,000 | -0- | 30,000 |

ILLUSTRATION 17.18

Impairment Analysis, Available-for-Sale Investments

- **Situation A.** Alexander does not recognize an impairment loss because the fair value of \$1,100,000 is higher than the amortized cost of \$1,000,000. The entry Alexander makes is to record an unrealized holding gain of \$100,000 (\$1,100,000 – \$1,000,000) in other comprehensive income.

¹¹In our earlier discussion related to available-for-sale investments, we assumed that these securities did not have any credit losses associated with them. As a result, unrealized gains and losses were reported in other comprehensive income. If available-for-sale investments have credit losses, they must be analyzed on an individual basis. These securities therefore cannot be combined with other available-for-sale securities to determine whether credit losses have occurred.

| | | |
|--|---------|---------|
| Fair Value Adjustment | 100,000 | |
| Unrealized Holding Gain or Loss—Equity | | 100,000 |

In this situation, Alexander does not recognize any impairment even though it has an expected credit loss of \$110,000 because the fair value of its security is above its amortized cost.¹²

- **Situation B.** Alexander recognizes an impairment loss of \$40,000 (\$1,000,000 – \$960,000) even though the expected credit loss is \$110,000. In other words, Alexander’s impairment loss is limited to the amount that fair value is less than amortized cost. Alexander makes the following entry to record this loss.

| | | |
|---------------------------------|--------|--------|
| Bad Debt Expense | 40,000 | |
| Allowance for Doubtful Accounts | | 40,000 |

The Allowance for Doubtful Accounts account is reported on the balance sheet as an adjustment to the carrying value of the available-for-sale debt investments. An allowance account is used because subsequent to recording an impairment, events or economic conditions may change such that the extent of the impairment loss decreases (e.g., due to an improvement in the debtor’s credit rating). In this situation, for available-for-sale investments, some or all of the previously recognized impairment loss is reversed with a debit to the allowance account (which increases the carrying value of the investment) and a credit to Bad Debt Expense. The reversal of impairment losses must not result in a carrying amount of the investment that exceeds the amortized cost that would have been reported had the impairment not been recognized.

- **Situation C.** Alexander recognizes an impairment loss of \$110,000 and an unrealized holding loss through other comprehensive income of \$30,000. In other words, Alexander separates the total loss of \$140,000 (\$1,000,000 – \$860,000) into the following two components.
 1. The credit loss or the amount representing the decrease in cash flows expected to be collected of \$110,000.
 2. The noncredit-related factors, such as changes in interest rates, market volatility, and liquidity concerns, of \$30,000.

Alexander makes the following entry to record this transaction.

| | | |
|---|---------|---------|
| Bad Debt Expense | 110,000 | |
| Unrealized Holding Gain or Loss—Equity | 30,000 | |
| Allowance for Impaired Debt Investments | | 110,000 |
| Fair Value Adjustment | | 30,000 |

In summary, companies recognize credit losses on an available-for-sale security when the security’s fair value is less than amortized cost. For held-to-maturity securities, a company can still report a credit loss even when fair value is higher than amortized cost.

Equity Investments

The accounting for impairments related to equity securities with holdings of less than 20 percent, **which are recorded at fair value with unrealized gains and losses through net income**, is straightforward. That is, if fair value is less than cost, the decline in value is reported through net income. As a consequence, it is not necessary to write off the individual stock investment unless a permanent impairment occurs. This same treatment applies to trading debt investments.

Illustration 17.19 provides a summary of the guidelines related to impairments.

¹²Such an adjustment—an unrealized gain—is more likely in a decreasing-rate environment. The inverse is true in an increasing-rate environment.

| Asset Measurement Basis | Impairment Model |
|---|--|
| Loans, receivables, and debt securities measured at amortized cost. | Expected losses recognized in net income. |
| Debt securities measured at fair value with gains and losses recorded in other comprehensive income (available-for-sale). | No expected credit losses recognized if fair value is greater than or equal to amortized cost. If fair value is less than amortized cost, the expected credit loss is recognized in net income. Credit losses are limited to the difference between fair value and amortized cost. |
| Debt and equity securities measured at fair value with gains and losses recorded in net income (trading). | Impairment measured as the difference between the lower of amortized cost or fair value (debt securities) or lower of cost or fair value (equity securities). |

ILLUSTRATION 17.19**Impairment Model Summary**

Reclassification Adjustments

As we indicated in Chapter 4, companies may display the components of other comprehensive income in one of two ways: (1) in a combined statement of income and comprehensive income, or (2) in a separate statement of comprehensive income that begins with net income.

Reporting Issues

Single-Period Example To provide a single-period example of the reporting of investment securities and related gain or loss on available-for-sale debt securities, assume that on January 1, 2020, Hinges Co. had cash and common stock of \$50,000.¹³ At that date, the company had no other asset, liability, or equity balance. On January 2, Hinges purchased for cash \$50,000 of debt securities classified as available-for-sale. On June 30, Hinges sold part of the available-for-sale security debt portfolio, realizing a gain as shown in **Illustration 17.20**.

| | |
|-------------------------------|------------------------|
| Fair value of securities sold | \$22,000 |
| Less: Cost of securities sold | <u>20,000</u> |
| Realized gain | <u>\$ 2,000</u> |

ILLUSTRATION 17.20**Computation of Realized Gain**

Hinges did not purchase or sell any other securities during 2020. It received \$3,000 in interest during the year. At December 31, 2020, the remaining portfolio is as shown in **Illustration 17.21**.

| | |
|-------------------------|------------------------|
| Fair value of portfolio | \$34,000 |
| Less: Cost of portfolio | <u>30,000</u> |
| Unrealized gain | <u>\$ 4,000</u> |

ILLUSTRATION 17.21**Computation of Unrealized Gain**

Illustration 17.22 shows the company's income statement for 2020.

| Hinges Co. Income Statement For the Year Ended December 31, 2020 | |
|--|-----------------------|
| Interest revenue | \$3,000 |
| Realized gains on investment in securities | <u>2,000</u> |
| Net income | <u>\$5,000</u> |

ILLUSTRATION 17.22**Income Statement**

¹³We adapted this example from Dennis R. Beresford, L. Todd Johnson, and Cheri L. Reither, "Is a Second Income Statement Needed?" *Journal of Accountancy* (April 1996), p. 71.

The company reports its change in the unrealized holding gain in a statement of comprehensive income as shown in **Illustration 17.23**.

ILLUSTRATION 17.23
Statement of Comprehensive Income

| Hinges Co. Statement of Comprehensive Income For the Year Ended December 31, 2020 | |

| Stockholders' equity | | | |
| Common stock | \$50,000 | \$50,000 | |
| Retained earnings | | 5,000 | |
| Accumulated other comprehensive income | | 4,000 | |
| Total stockholders' equity | <u>\$50,000</u> | <u>\$59,000</u> | |

This example indicates how an unrealized gain or loss on available-for-sale debt securities affects all the financial statements. Note that a company must disclose the components that comprise accumulated other comprehensive income.

Multi-Period Example When a company sells securities during the year, double-counting of the realized gains or losses in comprehensive income can occur. This double-counting results when a company reports unrealized gains or losses in other comprehensive income in a *prior period* and reports these gains or losses as part of net income in the *current period*.

To ensure that gains and losses are not counted twice when a sale occurs, a **reclassification adjustment** is necessary. To illustrate, assume that Open Company has the two available-for-sale debt securities in its portfolio at the end of 2020 (its first year of operations) shown in **Illustration 17.26**.

| Investments | Amortized Cost | Fair Value | Unrealized Holding Gain (Loss) |
|---|-------------------|------------------|-----------------------------------|
| Lehman Inc. bonds 6% | \$ 80,000 | \$105,000 | \$25,000 |
| Woods Co. bonds 7% | 120,000 | 135,000 | 15,000 |
| Total of portfolio | <u>\$200,000</u> | <u>\$240,000</u> | <u>40,000</u> |
| Previous fair value adjustment balance | | | -0- |
| Fair value adjustment—Dr. | | | <u>\$40,000</u> |

ILLUSTRATION 17.26**Available-for-Sale Security
Portfolio (2020)**

The entry to record the unrealized holding gain in 2020 is as follows.

| December 31, 2020 | | | |
|--|--|--------|--------|
| Fair Value Adjustment | | 40,000 | |
| Unrealized Holding Gain or Loss—Equity | | | 40,000 |

If Open Company reports net income in 2020 of \$350,000, it presents a statement of comprehensive income as shown in **Illustration 17.27**.

| Open Company Statement of Comprehensive Income For the Year Ended December 31, 2020 | |
|--|------------------|
| Net income | \$350,000 |
| Other comprehensive income | |
| Unrealized holding gain | <u>40,000</u> |
| Comprehensive income | <u>\$390,000</u> |

ILLUSTRATION 17.27**Statement of Comprehensive
Income (2020)**

At December 31, 2020, Open Company reports on its balance sheet debt investments of \$240,000 (cost \$200,000 plus fair value adjustment of \$40,000) and accumulated other comprehensive income in stockholders' equity of \$40,000. The entry to transfer the unrealized holding gain—equity to accumulated other comprehensive income is as follows.

| December 31, 2020 (Closing Entry) | | | |
|--|--|--------|--------|
| Unrealized Holding Gain or Loss—Equity | | 40,000 | |
| Accumulated Other Comprehensive Income | | | 40,000 |

On August 10, 2021, Open Company sells its Lehman Inc. bonds for \$105,000 and realizes a gain on the sale of \$25,000 (\$105,000 – \$80,000). The journal entry to record this transaction is as follows.

| August 10, 2021 | | | |
|-----------------------------|--|---------|--------|
| Cash | | 105,000 | |
| Debt Investments | | | 80,000 |
| Gain on Sale of Investments | | | 25,000 |

At the end of 2021, the fair value of the Woods Co. bonds increased an additional \$20,000 (\$155,000 – \$135,000), to \$155,000. **Illustration 17.28** shows the computation of the change in the Fair Value Adjustment account (based on only the Woods Co. investment as the Lehman bonds have been sold).

| Investments | Cost | Fair Value | Unrealized Holding Gain (Loss) |
|---|------------------|------------------|-----------------------------------|
| Woods Co. bonds 7% | <u>\$120,000</u> | <u>\$155,000</u> | \$35,000 |
| Previous fair value adjustment balance—Dr. | | | (40,000) |
| Fair value adjustment—Cr. | | | <u>\$ (5,000)</u> |

ILLUSTRATION 17.28**Available-for-Sale Security
Portfolio (2021)**

The entry to record the unrealized holding gain or loss in 2021 is as follows.

| December 31, 2021 | | |
|--|-------|-------|
| Unrealized Holding Gain or Loss—Equity | 5,000 | |
| Fair Value Adjustment | | 5,000 |

If we assume that Open Company reports net income of \$720,000 in 2021, including the realized sale on the Lehman bonds, its statement of comprehensive income is presented as shown in **Illustration 17.29**.

ILLUSTRATION 17.29**Statement of Comprehensive Income (2021)**

| Open Company | |
|--|------------------|
| Statement of Comprehensive Income | |
| For the Year Ended December 31, 2021 | |
| Net income (includes \$25,000 realized gain on Lehman bonds) | \$720,000 |
| Other comprehensive income | |
| Unrealized holding loss | (5,000) |
| Comprehensive income | <u>\$715,000</u> |

At December 31, 2021, Open Company reports on its balance sheet debt investments of \$155,000 (cost \$120,000 plus a fair value adjustment of \$35,000) and accumulated other comprehensive income in stockholders' equity of \$35,000 (\$40,000 – \$5,000). The entry to transfer the unrealized holding loss—equity to accumulated other comprehensive income is as follows.

| December 31, 2021 (Closing Entry) | | |
|--|-------|-------|
| Accumulated Other Comprehensive Income | 5,000 | |
| Unrealized Holding Gain or Loss—Equity | | 5,000 |

In 2020, Open included the unrealized gain on the Lehman Co. bonds in comprehensive income. In 2021, Open sold the bonds. It reported the realized gain (\$25,000) in net income, which increased comprehensive income again. To avoid double-counting this gain, Open makes a **reclassification adjustment** to eliminate the realized gain from the computation of comprehensive income in 2021.

This reclassification adjustment may be made in the income statement, in accumulated other comprehensive income or in a note to the financial statements. The FASB prefers to show the reclassification amount in accumulated other comprehensive income in the notes to the financial statements. For Open Company, this presentation is as shown in **Illustration 17.30**.

ILLUSTRATION 17.30**Note Disclosure of Reclassification Adjustments**

| Open Company | | |
|---|-----------------|-----------------|
| Notes to Financial Statements | | |
| Changes in Accumulated Other Comprehensive Income | | |
| Beginning balance, January 1, 2021 | | \$40,000 |
| Current-period other comprehensive income (\$155,000 – \$135,000) | \$ 20,000 | |
| Amount reclassified from accumulated other comprehensive income | <u>(25,000)</u> | |
| Unrealized holding loss | | (5,000) |
| Ending balance, December 31, 2021 | | <u>\$35,000</u> |

Transfers Related to Debt Securities

Companies account for transfers between any of the categories at fair value. Thus, if a company transfers available-for-sale debt securities to held-to-maturity investments, it records the new investments (held-to-maturity) at the date of transfer at **fair value** in the new category. Similarly, if it transfers held-to-maturity investments to available-for-sale debt investments, it records the new investments (available-for-sale) at **fair value**. This **fair value** rule assures that a company cannot omit recognition of fair value simply by transferring securities to the held-to-maturity category. **Illustration 17.31** summarizes the accounting treatment for transfers.

ILLUSTRATION 17.31 Accounting for Transfers

| Type of Transfer | Measurement Basis | Impact of Transfer on Stockholders' Equity* | Impact of Transfer on Net Income* |
|--|--|---|--|
| Transfer from trading to available-for-sale | Security transferred at fair value at the date of transfer, which is the new cost basis of the security. | The unrealized gain or loss at the date of transfer increases or decreases stockholders' equity. | The unrealized gain or loss at the date of transfer is recognized in income. |
| Transfer from available-for-sale to trading | Security transferred at fair value at the date of transfer, which is the new cost basis of the security. | The unrealized gain or loss at the date of transfer increases or decreases stockholders' equity. | The unrealized gain or loss at the date of transfer is recognized in income. |
| Transfer from held-to-maturity to available-for-sale** | Security transferred at fair value at the date of transfer. | The separate component of stockholders' equity is increased or decreased by the unrealized gain or loss at the date of transfer. | None. |
| Transfer from available-for-sale to held-to-maturity | Security transferred at fair value at the date of transfer. | The unrealized gain or loss at the date of transfer carried as a separate component of stockholders' equity is amortized over the remaining life of the security. | None. |

*Assumes that adjusting entries to report changes in fair value for the current period are not yet recorded.
**According to GAAP, these types of transfers should be rare.

Summary of Reporting Treatment of Securities

Illustration 17.32 summarizes the major debt and equity securities and their reporting treatment.¹⁴

| Classification* | Valuation Approach and Balance Sheet Reporting | Income Effects |
|-------------------------------|---|--|
| Debt Classifications | | |
| Trading | Fair value. Current assets. | Interest is recognized as revenue. Unrealized holding gains and losses are recognized in income. |
| Available-for-sale | Fair value. Current or noncurrent assets. | Interest is recognized as revenue. Unrealized holding gains and losses are not recognized in income but in other comprehensive income. |
| Held-to-maturity | Amortized cost. Current or noncurrent assets. | Interest is recognized as revenue. |
| Equity Classifications | | |
| Holdings less 20% | Fair value. Current or noncurrent assets. | Dividends are recognized as revenue. Unrealized gains and losses are included in income. |
| Holdings between 20% and 50% | Equity method. Investments originally recorded at cost with periodic adjustment for the investor's share of the investee's income or loss, and decreased by all dividends received from the investee, subsequent to the date of the investment. | Revenue is recognized to the extent of the investee's income or loss. |
| Holdings more than 50% | Consolidation of financial statements. | Parent and subsidiary company income or loss combined. |
| Nonmarketable | Cost. | Dividends are recognized as revenue. |

*Companies have the option to report financial instruments at fair value with all gains and losses related to changes in fair value reported in the income statement. If a company chooses to use the fair option for some of its financial instruments, these assets or liabilities should be reported separately from other financial instruments that use a different valuation basis.

ILLUSTRATION 17.32

Summary of Treatment of Major Debt and Equity Securities

¹⁴Not surprisingly, the disclosure requirements for investments and other financial assets and liabilities are extensive. We provide an expanded discussion with examples of these disclosure requirements in Appendix 17B.

What Do the Numbers Mean? So You Think It Is Easy?

Millions of Americans own a piece of some of the hottest private technology companies through their mutual funds. The managers of these mutual funds face a difficult task—how to assign a current value to these securities every day so investors can better understand the value of their holdings. It appears that no one is quite sure what those investments are actually worth. Take **Uber Technologies**,

the ride-hailing king, whose stock on June 30, 2015, was valued by BlackRock Global Allocation Fund at \$40.02 a share, Vanguard U.S. Growth Fund at \$39.64 a share, and Fidelity Contrafund Investments at \$33.32 a share. The graphs below show similar examples for **Cloudera** and **Dropbox**, and illustrate again how values of these private technology companies can deviate among investment funds.

Some experts say the rising popularity of investing in private technology stocks is hazardous simply because the shares are hard to sell, lack a broad secondary market, and could react wildly if the overall market drops. So what to do? Everyone seems to agree that determining the worth of these investments is a time-consuming process that must be monitored. For investors, it is important to understand the composition of the mutual fund

they purchase. The amount of hard-to-sell shares is an indicator of how easily mutual fund investors would be able to recover their investment.

APPENDIX 17A

Accounting for Derivative Instruments

LEARNING OBJECTIVE *5

Describe the uses of and accounting for derivatives.

Until the early 1970s, most financial managers worked in a cozy, if unthrilling, world. Since then, constant change caused by volatile markets, new technology, and deregulation has increased the risks to businesses. In response, the financial community developed products to manage these risks.

These products—called **derivative financial instruments** or simply **derivatives**—are useful for managing risk. Companies use the fair values or cash flows of these instruments to offset the changes in fair values or cash flows of the at-risk assets. The development of powerful computing and communication technology has aided the growth in derivative use. This technology provides new ways to analyze information about markets as well as the power to process high volumes of payments.

Defining Derivatives

In order to understand derivatives, consider the following examples.

- **Example 1—Forward Contract.** Assume that a company like **Dell** believes that the price of **Google**'s stock will increase substantially in the next 3 months. Unfortunately, it does not have the cash resources to purchase the stock today. Dell therefore enters into a contract with a broker for delivery of 10,000 shares of Google stock in 3 months at the price of \$110 per share.

Dell has entered into a **forward contract**, a type of derivative. As a result of the contract, Dell **has received the right** to receive 10,000 shares of Google stock in 3 months. Further, it **has an obligation** to pay \$110 per share at that time. What is the benefit of this derivative contract? Dell can buy Google stock today and take delivery (and make payment) in 3 months. If the price goes up, as it expects, Dell profits. If the price goes down, Dell loses.

- **Example 2—Option Contract.** Now suppose that Dell needs 2 weeks to decide whether to purchase Google stock. It therefore enters into a different type of contract, one that gives it the right to purchase Google stock at its current price any time within the next 2 weeks. As part of the contract, the broker charges \$3,000 for holding the contract open for 2 weeks at a set price.

Dell has now entered into an **option contract**, another type of derivative. As a result of this contract, **it has received the right but not the obligation** to purchase this stock. If the price of the Google stock increases in the next 2 weeks, Dell exercises its option. In this case, the cost of the stock is the price of the stock stated in the contract, plus the cost of the option contract. If the price does not increase, Dell does not exercise the contract but still incurs the cost for the option.

The forward contract and the option contract both involve a future delivery of stock. The value of the contract relies on the underlying asset—the Google stock. Thus, these financial instruments are known as derivatives because they **derive their value from** values of other assets (e.g., stocks, bonds, or commodities). Or, put another way, their value relates to a market-determined indicator (e.g., stock price, interest rates, or the Standard and Poor's 500 stock composite index).

In this appendix, we discuss the accounting for three different types of derivatives:

1. Financial forwards or financial futures.
2. Options.
3. Swaps.

Who Uses Derivatives, and Why?

Whether to protect for changes in interest rates, the weather, stock prices, oil prices, or foreign currencies, derivative contracts help to smooth the fluctuations caused by various types of risks. A company that wants to ensure against certain types of business risks often uses derivative contracts to achieve this objective.¹⁵

Producers and Consumers

To illustrate, assume that Heartland Ag is a large producer of potatoes for the consumer market. The present price for potatoes is excellent. Unfortunately, Heartland needs two months

¹⁵Derivatives are traded on many exchanges throughout the world. In addition, many derivative contracts (primarily interest rate swaps) are privately negotiated.

to harvest its potatoes and deliver them to the market. Because Heartland expects the price of potatoes to drop in the coming months, it signs a forward contract. It agrees to sell its potatoes today at the current market price for delivery in 2 months.

Who would buy this contract? Suppose on the other side of the contract is **McDonald's Corporation**. McDonald's wants to have potatoes (for French fries) in 2 months and believes that prices will increase. McDonald's is therefore agreeable to accepting delivery in 2 months at current prices. It knows that it will need potatoes in 2 months and that it can make an acceptable profit at this price level.

In this situation, if the price of potatoes increases before delivery, Heartland loses and McDonald's wins. Conversely, if the price decreases, Heartland wins and McDonald's loses. However, the objective is not to gamble on the outcome. Regardless of which way the price moves, both Heartland and McDonald's have received a price at which they obtain an acceptable profit. In this case, although Heartland is a **producer** and McDonald's is a **consumer**, both companies are **hedgers**. They both **hedge their positions** to ensure an acceptable financial result.

Commodity prices are volatile. They depend on weather, crop production, and general economic conditions. For the producer and the consumer to plan effectively, it makes good sense to lock in specific future revenues or costs in order to run their businesses successfully.

Speculators and Arbitrageurs

In some cases, instead of McDonald's taking a position in the forward contract, a speculator may purchase the contract from Heartland. The **speculator** bets that the price of potatoes will rise, thereby increasing the value of the forward contract. The speculator, who may be in the market for only a few hours, will then sell the forward contract to another speculator or to a company like McDonald's.

Arbitrageurs also use derivatives. These market players attempt to exploit inefficiencies in markets. They seek to lock in profits by simultaneously entering into transactions in two or more markets. For example, an arbitrageur might trade in a futures contract. At the same time, the arbitrageur will also trade in the commodity underlying the futures contract, hoping to achieve small price gains on the difference between the two. Markets rely on speculators and arbitrageurs to keep the market liquid on a daily basis.

In these illustrations, we explained why Heartland (the producer) and McDonald's (the consumer) would become involved in a derivative contract. Consider other types of situations that companies face.

1. Airlines, like **Delta**, **Southwest**, and **United**, are affected by changes in the price of jet fuel.
2. Financial institutions, such as **Citigroup**, **Bankers Trust**, and **BMO Harris**, are involved in borrowing and lending funds that are affected by changes in interest rates.
3. Multinational corporations, like **Cisco Systems**, **Coca-Cola**, and **General Electric**, are subject to changes in foreign exchange rates.

In fact, most corporations are involved in some form of derivatives transactions. Companies give these reasons (in their annual reports) as to why they use derivatives:

1. **ExxonMobil** uses derivatives to hedge its exposure to fluctuations in interest rates, foreign currency exchange rates, and hydrocarbon prices.
2. **Caterpillar** uses derivatives to manage foreign currency exchange rates, interest rates, and commodity price exposure.
3. **Johnson & Johnson** uses derivatives to manage the impact of interest rate and foreign exchange rate changes on earnings and cash flows.

Many corporations use derivatives extensively and successfully. However, derivatives can be dangerous. All parties involved must understand the risks and rewards associated with these contracts.¹⁶

¹⁶There are some well-publicized examples of companies that have suffered considerable losses using derivatives. For example, companies such as **Fannie Mae** (U.S.), **Enron** (U.S.), **Showa Shell Sekiyu** (Japan), **Metallgesellschaft** (Germany), **Procter & Gamble** (U.S.), and **Air Products & Chemicals** (U.S.) incurred significant losses from investments in derivative instruments.

Basic Principles in Accounting for Derivatives

The FASB concluded that derivatives such as forwards and options are assets and liabilities. It also concluded that companies should report them in the balance sheet **at fair value**.¹⁷ The Board believes that fair value will provide statement users the best information about derivatives. Relying on some other basis of valuation for derivatives, such as historical cost, does not make sense. Why? Because many derivatives have a historical cost of zero. Furthermore, the markets for derivatives, and the assets upon which derivatives' values rely, are well developed. As a result, the Board believes that companies can determine reliable fair value amounts for derivatives.¹⁸

On the income statement, a company should recognize any unrealized gain or loss in income, if it uses the derivative for speculation purposes. If using the derivative for hedging purposes, the accounting for any gain or loss depends on the type of hedge used. We discuss the accounting for hedged transactions later in the appendix.

In summary, companies follow these guidelines in accounting for derivatives.

1. Recognize derivatives in the financial statements as assets and liabilities.
2. Report derivatives at fair value.
3. Recognize gains and losses resulting from speculation in derivatives immediately in income.
4. Report gains and losses resulting from hedge transactions differently, depending on the type of hedge.

Example of Derivative Financial Instrument— Speculation

To illustrate the measurement and reporting of a derivative for speculative purposes, we examine a derivative whose value depends on the market price of Laredo Inc. common stock. A company can realize a gain from the increase in the value of the Laredo shares with the use of a derivative, such as a call option.¹⁹ A **call option** gives the holder the right, but not the obligation, to buy shares at a preset price. This price is often referred to as the **strike price** or the **exercise price**.

For example, assume a company enters into a call option contract with Baird Investment Co., which gives it the option to purchase Laredo stock at \$100 per share.²⁰ If the price of Laredo stock increases above \$100, the company can exercise this option and purchase the shares for \$100 per share. If Laredo's stock never increases above \$100 per share, the call option is worthless.

¹⁷GAAP covers accounting and reporting for all derivative instruments, whether financial or not. In this appendix, we place greater focus on derivative financial instruments because of their widespread use in practice. [7]

¹⁸As discussed in earlier chapters, fair value is defined as "the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date." Fair value is therefore a market-based measure. As discussed in Chapter 2, the FASB has also developed a fair value hierarchy, which indicates the priority of valuation techniques to use to determine fair value. *Level 1* fair value measures are based on observable inputs that reflect quoted prices for identical assets or liabilities in active markets. *Level 2* measures are based on inputs other than quoted prices included in Level 1 but that can be corroborated with observable data. *Level 3* fair values are based on unobservable inputs (for example, a company's own data or assumptions). Thus, Level 1 is the most reliable because it is based on quoted prices, like a closing stock price in the *Wall Street Journal*. Level 2 is the next most reliable and would rely on evaluating similar assets or liabilities in active markets. For Level 3 (the least reliable), much judgment is needed, based on the best information available, to arrive at a relevant and reliable fair value measurement. [8]

¹⁹Investors can use a different type of option contract—a **put option**—to realize a gain if anticipating a decline in the Laredo stock value. A put option gives the holder the option to sell shares at a preset price. Thus, a put option **increases** in value when the underlying asset **decreases** in value.

²⁰Baird Investment Co. is referred to as the **counterparty**. Counterparties frequently are investment bankers or other companies that hold inventories of financial instruments.

Accounting Entries

To illustrate the accounting for a call option, assume that the company purchases a call option contract on January 2, 2020, when Laredo shares are trading at \$100 per share. The contract gives it the option to purchase 1,000 shares (referred to as the **notional amount**) of Laredo stock at an option price of \$100 per share. The option expires on April 30, 2020. The company purchases the call option for \$400 and makes the following entry.

| January 2, 2020 | | | |
|------------------------|--|-----|-----|
| Call Option | | 400 | |
| Cash | | | 400 |

This payment is referred to as the **option premium**. It is generally much less than the cost of purchasing the shares directly. The option premium consists of two amounts: (1) intrinsic value and (2) time value. **Illustration 17A.1** shows the formula to compute the option premium.

ILLUSTRATION 17A.1

Option Premium Formula

$$\text{Option Premium} = \text{Intrinsic Value} + \text{Time Value}$$

Intrinsic value is the difference between the market price and the preset strike price at any point in time. It represents the amount realized by the option holder, if exercising the option immediately. On January 2, 2020, the intrinsic value is zero because the market price equals the preset strike price.

Time value refers to the option's value over and above its intrinsic value. Time value reflects the possibility that the option has a fair value greater than zero. How? Because there is some expectation that the price of Laredo shares will increase above the strike price during the option term. As indicated, the time value for the option is \$400.²¹

The following additional data are available with respect to the call option.

| Date | Market Price of Laredo Shares | Time Value of Call Option |
|----------------|-------------------------------|---------------------------|
| March 31, 2020 | \$120 per share | \$100 |
| April 16, 2020 | 115 per share | 60 |

As indicated, on March 31, 2020, the price of Laredo shares increases to \$120 per share. The intrinsic value of the call option contract is now \$20,000. That is, the company can exercise the call option and purchase 1,000 shares from Baird Investment for \$100 per share. It can then sell the shares in the market for \$120 per share. This gives the company a gain of \$20,000 (\$120,000 – \$100,000) on the option contract.²² It records the increase in the intrinsic value of the option as follows.

| March 31, 2020 | | | |
|--|--|--------|--------|
| Call Option | | 20,000 | |
| Unrealized Holding Gain or Loss—Income | | | 20,000 |

A market appraisal indicates that the time value of the option at March 31, 2020, is \$100.²³ The company records this change in value of the option as follows.

²¹This cost is estimated using option-pricing models, such as the Black-Scholes equation. The volatility of the underlying stock, the expected life of the option, the risk-free rate of interest, and expected dividends on the underlying stock during the option term affect the Black-Scholes fair value estimate.

²²In practice, investors generally do not have to actually buy and sell the Laredo shares to settle the option and realize the gain. This is referred to as the **net settlement feature of option contracts**.

²³The decline in value reflects both the decreased likelihood that the Laredo shares will continue to increase in value over the option period and the shorter time to maturity of the option contract.

March 31, 2020

| | | |
|--|-----|-----|
| Unrealized Holding Gain or Loss—Income | 300 | |
| Call Option (\$400 – \$100) | | 300 |

At March 31, 2020, the company reports the call option in its balance sheet at fair value of \$20,100.²⁴ The unrealized holding gain increases net income for the period. The loss on the time value of the option decreases net income.

On April 16, 2020, the company settles the option before it expires. To properly record the settlement, it updates the value of the option for the decrease in the intrinsic value of \$5,000 [(\$120 – \$115) × 1,000] as follows.

April 16, 2020

| | | |
|--|-------|-------|
| Unrealized Holding Gain or Loss—Income | 5,000 | |
| Call Option | | 5,000 |

The decrease in the time value of the option of \$40 (\$100 – \$60) is recorded as follows.

April 16, 2020

| | | |
|--|----|----|
| Unrealized Holding Gain or Loss—Income | 40 | |
| Call Option | | 40 |

Thus, at the time of the settlement, the call option's carrying value is as follows.

Call Option

| | | | |
|-------------------------|--------|----------------|-------|
| January 2, 2020 | 400 | March 31, 2020 | 300 |
| March 31, 2020 | 20,000 | April 16, 2020 | 5,000 |
| | | April 16, 2020 | 40 |
| Balance, April 16, 2020 | 15,060 | | |

The company records the settlement of the option contract with Baird as follows.

April 16, 2020

| | | |
|-----------------------------------|--------|--------|
| Cash | 15,000 | |
| Loss on Settlement of Call Option | 60 | |
| Call Option | | 15,060 |

Illustration 17A.2 summarizes the effects of the call option contract on net income.

| Date | Transaction | Income (Loss) Effect |
|----------------|---|----------------------|
| March 31, 2020 | Net increase in value of call option (\$20,000 – \$300) | \$19,700 |
| April 16, 2020 | Decrease in value of call option (\$5,000 + \$40) | (5,040) |
| April 16, 2020 | Settle call option | (60) |
| | Total net income | \$14,600 |

ILLUSTRATION 17A.2**Effect on Income—Derivative Financial Instrument**

The accounting summarized in Illustration 17A.2 is in accord with GAAP. That is, because the call option meets the definition of an asset, the company records it in the balance sheet on March 31, 2020. Furthermore, it reports the call option at fair value, with any gains or losses reported in income.

Differences Between Traditional and Derivative Financial Instruments

How does a traditional financial instrument differ from a derivative one? A derivative financial instrument has the following three basic characteristics. [9]

²⁴As indicated earlier, the total value of the option at any point in time equals the intrinsic value plus the time value.

1. **The instrument has (1) one or more underlyings and (2) an identified payment provision.** An **underlying** is a specified interest rate, security price, commodity price, index of prices or rates, or other market-related variable. The interaction of the underlying, with the face amount or the number of units specified in the derivative contract (the notional amounts), determines payment. For example, the value of the call option increased in value when the value of the Laredo stock increased. In this case, the underlying is the stock price. To arrive at the payment provision, multiply the change in the stock price by the number of shares (notional amount).
2. **The instrument requires little or no investment at the inception of the contract.** To illustrate, the company paid a small premium to purchase the call option—an amount much less than if purchasing the Laredo shares as a direct investment.
3. **The instrument requires or permits net settlement.** As indicated in the call option example, the company could realize a profit on the call option without taking possession of the shares. This **net settlement** feature reduces the transaction costs associated with derivatives.

Illustration 17A.3 summarizes the differences between traditional and derivative financial instruments. Here, we use a trading security for the traditional financial instrument and a call option as an example of a derivative one.

ILLUSTRATION 17A.3
Features of Traditional and Derivative Financial Instruments

| Feature | Traditional Financial Instrument (Trading Security) | Derivative Financial Instrument (Call Option) |
|--------------------|--|--|
| Payment provision | Stock price times the number of shares. | Change in stock price (underlying) times number of shares (notional amount). |
| Initial investment | Investor pays full cost. | Initial investment is much less than full cost. |
| Settlement | Deliver stock to receive cash. | Receive cash equivalent, based on changes in stock price times the number of shares. |

Derivatives Used for Hedging

LEARNING OBJECTIVE *6

Explain the accounting for hedges.

Flexibility in use and the low-cost features of derivatives relative to traditional financial instruments explain the popularity of derivatives. An additional use for derivatives is in risk management. For example, companies such as **Coca-Cola**, **ExxonMobil**, and **General Electric** borrow and lend substantial amounts in credit markets. In doing so, they are exposed to significant **interest rate risk**. That is, they face substantial risk that the fair values or cash flows of interest-sensitive assets or liabilities will change if interest rates increase or decrease. These same companies also have significant international operations. As such, they are also exposed to **exchange rate risk**—the risk that changes in foreign currency exchange rates will negatively impact the profitability of their international businesses.

Companies can use derivatives to offset the negative impacts of changes in interest rates or foreign currency exchange rates. This use of derivatives is referred to as **hedging**. GAAP established accounting and reporting standards for derivative financial instruments used in hedging activities. The FASB allows special accounting for two types of hedges—fair value and cash flow hedges.²⁵

²⁵GAAP also addresses the accounting for certain foreign currency hedging transactions. In general, these transactions are special cases of the two hedges we discuss here. [10] Understanding of foreign currency hedging transactions requires knowledge related to consolidation of multinational entities, which is beyond the scope of this text.

What Do the Numbers Mean? Risky Business

As shown in the following graph, use of derivatives has grown substantially in recent years. In fact, nearly *\$550 trillion* (in notional amounts) in derivative contracts were in play at the end of 2017.

The primary players in the market for derivatives are large companies and various financial institutions, which continue to find new uses for derivatives for speculation and risk management.

Financial engineers continue to develop new uses for derivatives, many times through the use of increasingly complex webs of transactions, spanning a number of markets. As new uses for derivatives appear, the financial system as a whole can be dramatically affected. As a result, some market-watchers are concerned about the risk that a crisis in one company or sector could bring the entire financial system to its knees.

This was the case recently when credit default swaps were used to facilitate the sales of mortgage-backed securities (MBS). However, when the real estate market went south, the MBS

defaulted, exposing large international financial institutions, like **Barclays**, **AIG**, and **Bank of America**, to massive losses. The losses were so widespread that government bailouts were required to prevent international securities markets from collapsing. In response, market regulators are proposing new rules to mitigate risks to broader markets from derivatives trading.

Source: P. Eavis, "Bill on Derivatives Overhaul Is Long Overdue," *Wall Street Journal* (April 14, 2010).

Fair Value Hedge

In a **fair value hedge**, a company uses a derivative to hedge (offset) the exposure to changes in the fair value of a recognized asset or liability or of an unrecognized commitment. In a perfectly hedged position, the gain or loss on the fair value of the derivative equals and offsets that of the hedged asset or liability.

To illustrate a fair value hedge, assume that on December 1, 2020, Hayward Tire Fabricators, Inc. holds an inventory of 1,000 tractor tires, with a cost of \$200 per tire. Hayward has been building an inventory of tractor tires in anticipation of demand for these tires in the upcoming spring planting season. Hayward records the inventory on its balance sheet at \$200,000 ($1,000 \times \200), using lower-of-FIFO-cost-or-net realizable value.

Illustration 17A.4 indicates how Hayward reports the tire inventory in its balance sheet at December 31, 2020, assuming none of the tires have been sold.

ILLUSTRATION 17A.4
Balance Sheet Presentation
of Inventory

| Hayward Tire Fabricators, Inc. Balance Sheet (partial) December 31, 2020 | |
|--|-----------|
| Current assets | |
| Inventory | \$200,000 |

Hayward could benefit from an increase in the price of tires (based on realized gross profit on tire sales). But until it sells the tires, the company is exposed to the risk that the value of the tire inventory will decline. Hayward wishes to hedge its exposure to fair value declines for its tire inventory (the inventory is pledged as collateral for one of its bank loans).

To hedge this risk, Hayward locks in the value of its tire inventory on January 2, 2021, by purchasing a put option to sell rubber at a fixed price. Hayward designates the option as a fair value hedge of the tire inventory. This put option (which expires in two years) gives Hayward the option to sell 4,000 pounds of rubber at a price of \$50 per pound, which is the current spot price for rubber in the market. Since the exercise price equals the current market price, no entry is necessary at inception of the put option.²⁶

January 2, 2021

No entry required. A memorandum indicates the signing of the put option contract and its designation as a fair value hedge for the tire inventory.

At March 31, 2021, the fair value of the inventory has declined by 10 percent. Hayward records the following entry for the tire inventory.

March 31, 2021

| | | |
|---|--------|--------|
| Unrealized Holding Gain or Loss—Income | | |
| (\$200,000 × .10) | 20,000 | |
| Allowance to Reduce Inventory to Fair Value | | 20,000 |

Note that upon designation of the hedge, the accounting for the inventory fair value change deviates from regular GAAP.²⁷ That is, Hayward records an unrealized holding loss in income, even though it has not yet sold the inventory. **If Hayward had not followed this accounting, a mismatch of gains and losses in the income statement would result.** Thus, special accounting for the hedged item (in this case, the tire inventory) is necessary in a fair value hedge.

The following journal entry records the increase in value of the put option to sell rubber, assuming that the spot price for rubber declined by 10 percent.

March 31, 2021

| | | |
|--|--------|--------|
| Put Option | 20,000 | |
| Unrealized Holding Gain or Loss—Income | | 20,000 |

The decline in the spot price of rubber results in an increase in the fair value of the put option. That is, Hayward could realize a gain on the put option, by purchasing 4,000 pounds of rubber in the open market for \$45 (.90 × \$50), and then exercise the put option, selling the rubber for \$50 per pound. This results in a gain to Hayward of \$20,000 (4,000 pounds × \$5).²⁸

Illustration 17A.5 indicates how Hayward reports the amounts related to the Inventory and the put option.

²⁶ To simplify the example, we assume no premium is paid for the option. A put option on rubber is a good candidate for this hedge because the rubber raw material is the primary driver of fair value changes on tires.

²⁷ The accounting for inventory is discussed in Chapters 8 and 9. In this example, the inventory is not subject to a lower-of-cost-or-net realizable value assessment.

²⁸ In practice, Hayward generally does not have to actually buy and sell the rubber in the commodity market to realize this gain. Rather, unless the counterparty wants to hold the rubber, Hayward can “close out” the contract by having the counterparty pay it \$20,000 in cash. This is an example of the net settlement feature of derivatives.

| Hayward Tire Fabricators, Inc. Balance Sheet (partial) March 31, 2021 | |
|---|-----------|
| Current assets | |
| Inventory (net of the allowance of \$20,000) | \$180,000 |
| Put option | 20,000 |

ILLUSTRATION 17A.5**Balance Sheet Presentation
of Fair Value Hedge**

As indicated, the increase in fair value on the option offsets or hedges the decline in value of Hayward's tire inventory. By using fair value accounting for both the inventory and the put option, the financial statements reflect the underlying substance of Hayward's net exposure to the risks of holding the inventory. That is, the balance sheet reports the amount that Hayward would receive for the inventory and the put option contract if Hayward sold and settled them, respectively.

Illustration 17A.6 indicates the reporting of the effects of the hedging transaction on income for the year ended December 31, 2021.

| Hayward Tire Fabricators, Inc. Income Statement (partial) For the Quarter Ended March 31, 2021 | |
|--|----------|
| Other income | |
| Unrealized holding gain—put option | \$20,000 |
| Unrealized holding loss—inventory | (20,000) |

ILLUSTRATION 17A.6**Income Statement Presentation
of Fair Value Hedge**

The income statement indicates that the gain on the put option offsets the loss on the inventory.²⁹ The reporting for these financial instruments, even when they reflect a hedging relationship, illustrates why the FASB argues that fair value accounting provides the most relevant information about financial instruments, including derivatives.

Cash Flow Hedge

Companies use **cash flow hedges** to hedge exposures to **cash flow risk**, which results from the variability in cash flows. The FASB allows special accounting for cash flow hedges. Generally, companies measure and report derivatives at fair value on the balance sheet. They report gains and losses directly in net income. However, companies account for derivatives used in cash flow hedges at fair value on the balance sheet, but they **record gains or losses in equity, as part of other comprehensive income**.

To illustrate, assume that in September 2020, Allied Can Co. anticipates purchasing 1,000 metric tons of aluminum in January 2021. Concerned that prices for aluminum will increase in the next few months, Allied wants to hedge the risk that it might pay higher prices for inventory in January 2021. As a result, Allied enters into an aluminum futures contract.

A **futures contract** gives the holder the right and the obligation to purchase an asset at a preset price for a specified period of time.³⁰ In this case, the aluminum futures contract gives Allied the right and the obligation to purchase 1,000 metric tons of aluminum for \$1,550 per ton. This contract price is good until the contract expires in January 2021. The underlying for this derivative is the price of aluminum. If the price of aluminum rises above \$1,550, the value

²⁹Note that the fair value changes in the option contract will not offset *increases* in the value of the Hayward inventory. Should the price of rubber increase above \$50 per pound, Hayward would have no incentive to exercise the put option.

³⁰A **futures contract** is a firm contractual agreement between a buyer and seller for a specified asset on a fixed date in the future which also trades on an exchange. The contract also has a standard specification so both parties know exactly what is being traded. A **forward** is similar but is not traded on an exchange and does not have standardized conditions.

of the futures contract to Allied increases. Why? Because Allied will be able to purchase the aluminum at the lower price of \$1,550 per ton.³¹

Allied enters into the futures contract on September 1, 2020. Assume that the price to be paid today for inventory to be delivered in January—the **spot price**—equals the contract price. With the two prices equal, the futures contract has no value. Therefore, no entry is necessary.

September 2020

No entry required. A memorandum indicates the signing of the futures contract.

At December 31, 2020, the price for January delivery of aluminum increases to \$1,575 per metric ton. Allied makes the following entry to record the increase in the value of the futures contract.

| December 31, 2020 | | |
|--|--------|--------|
| Futures Contract | 25,000 | |
| Unrealized Holding Gain or Loss—Equity | | |
| [(\$1,575 – \$1,550) × 1,000 tons] | | 25,000 |

Allied reports the futures contract in the balance sheet as a current asset. It reports the gain on the futures contract as part of other comprehensive income.

Since Allied has not yet purchased and sold the inventory, this gain arises from an **anticipated transaction**. In this type of transaction, a **company accumulates in equity gains or losses on the futures contract as part of other comprehensive income until the period in which it sells the inventory, thereby affecting earnings**.

In January 2021, Allied purchases 1,000 metric tons of aluminum for \$1,575 and makes the following entry.³²

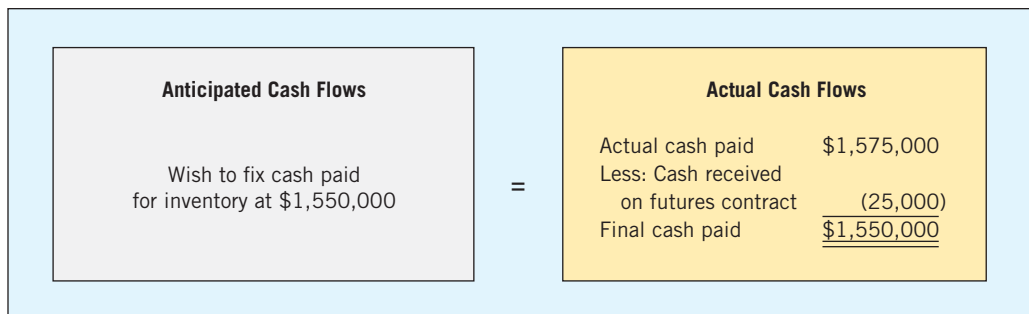

| January 2021 | | |
|-----------------------------|-----------|-----------|
| Aluminum Inventory | 1,575,000 | |
| Cash (\$1,575 × 1,000 tons) | | 1,575,000 |

At the same time, Allied makes final settlement on the futures contract. It records the following entry.

| January 2021 | | |
|--|--------|--------|
| Cash | 25,000 | |
| Futures Contract (\$1,575,000 – \$1,550,000) | | 25,000 |

Through use of the futures contract derivative, Allied fixes the cost of its inventory. The \$25,000 futures contract settlement offsets the amount paid to purchase the inventory at the prevailing market price of \$1,575,000. The result: net cash outflow of \$1,550 per metric ton, as desired. As **Illustration 17A.7** shows, Allied has therefore effectively hedged the cash flow for the purchase of inventory.

ILLUSTRATION 17A.7 Effect of Hedge on Cash Flows

³¹As with the earlier call option example, the actual aluminum does not have to be exchanged. Rather, the parties to the futures contract settle by paying the cash difference between the futures price and the price of aluminum on each settlement date.

³²In practice, futures contracts are settled on a daily basis. For our purposes, we show only one settlement for the entire amount.

There are no income effects at this point. Allied accumulates in equity the gain on the futures contract as part of other comprehensive income until the period when it sells the inventory, affecting earnings through cost of goods sold.

For example, assume that Allied processes the aluminum into finished goods (cans). The total cost of the cans (including the aluminum purchases in January 2021) is \$1,700,000. Allied sells the cans in July 2021 for \$2,000,000, and records this sale as follows.

| July 2021 | | | |
|--------------------|-----------|-----------|-----------|
| Cash | | 2,000,000 | |
| Sales Revenue | | | 2,000,000 |
| Cost of Goods Sold | 1,700,000 | | |
| Inventory (cans) | | | 1,700,000 |

Since the effect of the anticipated transaction has now affected earnings, Allied makes the following entry related to the hedging transaction.

| July 2021 | | | |
|--|--------|--|--------|
| Unrealized Holding Gain or Loss—Equity | 25,000 | | |
| Cost of Goods Sold | | | 25,000 |

The gain on the futures contract, which Allied reported as part of other comprehensive income, now reduces cost of goods sold. As a result, the cost of aluminum included in the overall cost of goods sold is \$1,550,000. The futures contract has worked as planned. Allied has managed the cash paid for aluminum inventory and the amount of cost of goods sold.

Other Reporting Issues

LEARNING OBJECTIVE *7

Identify special reporting issues related to derivative financial instruments that cause unique accounting problems.

The preceding examples illustrate the basic reporting issues related to the accounting for derivatives. Next, we discuss the following additional issues:

1. The accounting for embedded derivatives.
2. Qualifying hedge criteria.

Embedded Derivatives

As we indicated at the beginning of this appendix, rapid innovation in the development of complex financial instruments drove efforts toward unifying and improving the accounting standards for derivatives. In recent years, this innovation has led to the development of **hybrid securities**. These securities have characteristics of both debt and equity. They often combine traditional and derivative financial instruments.

For example, a convertible bond (discussed in Chapter 16) is a hybrid instrument. It consists of two parts: (1) a debt security, referred to as the **host security**, combined with (2) an option to convert the bond to shares of common stock, the **embedded derivative**.

To provide consistency in accounting for similar derivatives, a company must account for embedded derivatives similarly to other derivatives. Therefore, to account for an embedded derivative, a company **should separate it from the host security** and then account for it using the accounting for derivatives. This separation process is referred to as **bifurcation**.³³

³³A company can also designate such a derivative as a hedging instrument. The company would apply the hedge accounting provisions outlined earlier in the chapter.

Thus, a company investing in a convertible bond must separate the stock option component of the instrument. It then accounts for the derivative (the stock option) at fair value and the host instrument (the debt) according to GAAP, as if there were no embedded derivative.³⁴

Qualifying Hedge Criteria

Global View

IFRS qualifying hedge criteria are similar to those used in GAAP.

The FASB identified certain criteria that hedging transactions must meet before requiring the special accounting for hedges (see **Global View**). The FASB designed these criteria to ensure the use of hedge accounting in a consistent manner across different hedge transactions. The general criteria relate to the following areas.

1. **Documentation, risk management, and designation.** At inception of the hedge, there must be formal **documentation** of the hedging relationship, the company's **risk management** objective, and the strategy for undertaking the hedge. **Designation** refers to identifying the hedging instrument, the hedged item or transaction, the nature of the risk being hedged, and how the hedging instrument will offset changes in the fair value or cash flows attributable to the hedged risk.

The FASB decided that documentation and designation are critical to the implementation of the special accounting for hedges. Without these requirements, companies might try to apply the hedge accounting provisions retroactively, only in response to negative changes in market conditions, to offset the negative impact of a transaction on the financial statements. Allowing special hedge accounting in such a setting could mask the speculative nature of the original transaction.

2. **Effectiveness of the hedging relationship.** At inception and on an ongoing basis, the hedging relationship should be **highly effective** in achieving offsetting changes in fair value or cash flows. Companies must assess effectiveness whenever preparing financial statements.

The general guideline for effectiveness is that the fair values or cash flows of the hedging instrument (the derivative) and the hedged item exhibit a high degree of correlation. In practice, high effectiveness is assumed when the correlation is close to one (e.g., within plus or minus 10%). In our earlier hedging examples (put option and the futures contract on aluminum inventory), the fair values and cash flows are perfectly correlated. That is, when the cash payment for the inventory purchase increased, it offset, dollar for dollar, the cash received on the futures contract.

If the effectiveness criterion is not met, either at inception or because of changes following inception of the hedging relationship, the FASB no longer allows special hedge accounting. The company should then account for the derivative as a free-standing derivative.³⁵

3. **Effect on reported earnings of changes in fair values or cash flows.** A change in the fair value of a hedged item or variation in the cash flow of a hedged forecasted transaction must have the potential to change the amount recognized in reported earnings.³⁶ There is no need for special hedge accounting if a company accounts for both the hedging instrument and the hedged item at fair value under existing GAAP. In this case, earnings will properly reflect the offsetting gains and losses.

³⁴The issuer of the convertible bonds would not bifurcate the option component of the convertible bonds payable. GAAP explicitly precludes embedded derivative accounting for an embedded derivative that is indexed to a company's own common stock. If the conversion feature was tied to **another company's** stock, then the derivative would be bifurcated.

³⁵That is, the accounting for the part of a derivative that is not effective in a hedge is at fair value, with gains and losses recorded in income.

³⁶GAAP gives companies the option to measure most types of financial instruments—from equity investments to debt issued by the company—at fair value. Changes in fair value are recognized in net income each reporting period. Thus, GAAP provides companies with the opportunity to hedge their financial instruments without the complexity inherent in applying hedge accounting provisions. For example, if the fair value option is used, bifurcation of an embedded derivative is not required. [11]

For example, special accounting is not needed for a fair value hedge of a trading security, because a company accounts for both the investment and the derivative at fair value on the balance sheet with gains or losses reported in earnings. Thus, “special” hedge accounting is necessary only when there is a mismatch of the accounting effects for the hedging instrument and the hedged item under GAAP.³⁷

Summary of Derivatives Accounting

Illustration 17A.8 summarizes the accounting provisions for derivatives and hedging transactions.

| Derivative Use | Accounting for Derivative | Accounting for Hedged Item | Common Example |
|-----------------------|--|---|--|
| Speculation | At fair value with unrealized holding gains and losses recorded in income. | Not applicable. | Call or put option on an equity security. |
| Hedging Fair value | At fair value with holding gains and losses recorded in income. | At fair value with gains and losses recorded in income. | Put option to hedge inventory. |
| Cash flow | At fair value with unrealized holding gains and losses from the hedge recorded in other comprehensive income, and reclassified in income when the hedged transaction's cash flows affect earnings. | Use other generally accepted accounting principles for the hedged item. | Use of a futures contract to hedge a forecasted purchase of inventory. |

ILLUSTRATION 17A.8

Summary of Derivative Accounting under GAAP

As indicated, the general accounting for derivatives relies on fair values. GAAP also establishes special accounting guidance when companies use derivatives **for hedging purposes**. For example, when a company uses a put option to hedge price changes in inventory in a fair value hedge (see the Hayward example earlier), it records unrealized gains on the investment in earnings, which is not GAAP for inventory without such a hedge. This special accounting is justified in order to accurately report the nature of the hedging relationship in the balance sheet (recording both the put option and the inventory at fair value) and in the income statement (reporting offsetting gains and losses in the same period).

Special accounting also is used for cash flow hedges. Companies account for derivatives used in qualifying cash flow hedges at fair value on the balance sheet, but record unrealized holding gains or losses in other comprehensive income until selling or settling the hedged item. In a cash flow hedge, a company continues to record the hedged item at its historical cost.

Disclosure requirements for derivatives are complex. Recent pronouncements on fair value information and financial instruments provide a helpful disclosure framework for reporting derivative instruments. Appendix 17B illustrates many of these disclosures, except for discussion of hedging issues. In general, companies that have derivatives are required to disclose the objectives for holding or issuing those instruments (speculation or hedging), the hedging context (fair value or cash flow), and the strategies for achieving risk-management objectives.

³⁷An important criterion specific to cash flow hedges is that the forecasted transaction in a cash flow hedge “is likely to occur.” A company should support this probability (defined as significantly greater than the term “more likely than not”) by observable facts such as frequency of similar past transactions and its financial and operational ability to carry out the transaction.

Comprehensive Hedge Accounting Example

To provide a comprehensive example of hedge accounting, we examine the use of an interest rate swap. First, let's consider how swaps work and why companies use them.

Options and futures trade on organized securities exchanges. Because of this, options and futures have standardized terms. Although that standardization makes the trading easier, it limits the flexibility needed to tailor contracts to specific circumstances. In addition, most types of derivatives have relatively short time horizons, thereby excluding their use for reducing long-term risk exposure.

As a result, many corporations instead turn to the swap, a very popular type of derivative. A **swap** is a transaction between two parties in which the first party promises to make a payment to the second party. Similarly, the second party promises to make a simultaneous payment to the first party.

The most common type of swap is the **interest rate swap**. In this type, one party makes payments based on a fixed or floating rate, and the second party does just the opposite. In most cases, large money-center banks bring together the two parties. These banks handle the flow of payments between the parties, as shown in **Illustration 17A.9**.

ILLUSTRATION 17A.9 Swap Transaction

Fair Value Hedge

To illustrate the use of a swap in a fair value hedge, assume that Jones Company issues \$1,000,000 of five-year, 8 percent bonds on January 2, 2020. Jones records this transaction as follows.

| January 2, 2020 | |
|-----------------|-----------|
| Cash | 1,000,000 |
| Bonds Payable | 1,000,000 |

Jones offered a fixed interest rate to appeal to investors. But Jones is concerned that if market interest rates decline, the fair value of the liability will increase. The company will then suffer an economic loss.³⁸ To protect against the risk of loss, Jones hedges the risk of a decline in interest rates by entering into a five-year interest rate swap contract. Jones agrees to the following terms:

1. Jones will receive fixed payments at 8 percent (based on the \$1,000,000 amount).
2. Jones will pay variable rates, based on the market rate in effect for the life of the swap contract. The variable rate at the inception of the contract is 6.8 percent.

As **Illustration 17A.10** shows, this swap allows Jones to change the interest on the bonds payable from a fixed rate to a variable rate.

³⁸This economic loss arises because Jones is locked into the 8 percent interest payments even if rates decline.

ILLUSTRATION 17A.10 Interest Rate Swap

The settlement dates for the swap correspond to the interest payment dates on the debt (December 31). On each interest payment (settlement) date, Jones and the counterparty compute the difference between current market interest rates and the fixed rate of 8 percent, and determine the value of the swap.³⁹ If interest rates decline, the value of the swap contract to Jones increases (Jones has a gain), while at the same time Jones's fixed-rate debt obligation increases (Jones has an economic loss).

The swap is an effective risk-management tool in this setting. Its value relates to the same underlying (interest rates) that will affect the value of the fixed-rate bond payable. Thus, if the value of the swap goes up, it offsets the loss related to the debt obligation.

Assuming that Jones enters into the swap on January 2, 2020 (the same date as the issuance of the debt), the swap at this time has no value. Therefore, no entry is necessary.

January 2, 2020

No entry required. A memorandum indicates the signing of the swap contract.

At the end of 2020, Jones makes the interest payment on the bonds. It records this transaction as follows.

| December 31, 2020 | | |
|--------------------------|--------|--------|
| Interest Expense | 80,000 | |
| Cash (.08 × \$1,000,000) | | 80,000 |

At the end of 2020, market interest rates have declined substantially. Therefore, the value of the swap contract increases. Recall (see Illustration 17A.9) that in the swap, Jones receives a fixed rate of 8 percent, or \$80,000 ($\$1,000,000 \times .08$), and pays a variable rate (6.8%), or \$68,000. Jones therefore receives \$12,000 ($\$80,000 - \$68,000$) as a settlement payment on the swap contract on the first interest payment date. Jones records this transaction as follows.

| December 31, 2020 | | |
|--------------------------|--------|--------|
| Cash | 12,000 | |
| Interest Expense | | 12,000 |

In addition, a market appraisal indicates that the value of the interest rate swap has increased \$40,000. Jones records this increase in value as follows.⁴⁰

| December 31, 2020 | | |
|--|--------|--------|
| Swap Contract | 40,000 | |
| Unrealized Holding Gain or Loss—Income | | 40,000 |

Jones reports this swap contract in the balance sheet. It reports the gain on the hedging transaction in the income statement. Because interest rates have declined, the company records a loss and a related increase in its liability as follows.

³⁹The underlying for an interest rate swap is some index of market interest rates. The most commonly used index is the London Interbank Offer Rate, or LIBOR. In this example, we assume the LIBOR is 6.8 percent.

⁴⁰Theoretically, this fair value change reflects the present value of expected future differences in variable and fixed interest rates.

| | | |
|--|--------|--------|
| December 31, 2020 | | |
| Unrealized Holding Gain or Loss—Income | 40,000 | |
| Bonds Payable | | 40,000 |

Jones reports the loss on the hedging activity in net income. It adjusts bonds payable in the balance sheet to fair value (which deviates from normal accounting at amortized cost).

Financial Statement Presentation of an Interest Rate Swap

Illustration 17A.11 indicates how Jones reports the asset and liability related to this hedging transaction on the balance sheet.

ILLUSTRATION 17A.11
Balance Sheet Presentation of Fair Value Hedge

| Jones Company | |
|--------------------------------|-------------|
| Balance Sheet (partial) | |
| December 31, 2020 | |
| | |
| Current assets | |
| Swap contract | \$40,000 |
| Long-term liabilities | |
| Bonds payable | \$1,040,000 |

The effect on Jones’s balance sheet is the addition of the swap asset and an increase in the carrying value of the bonds payable. **Illustration 17A.12** indicates how Jones reports the effects of this swap transaction in the income statement.

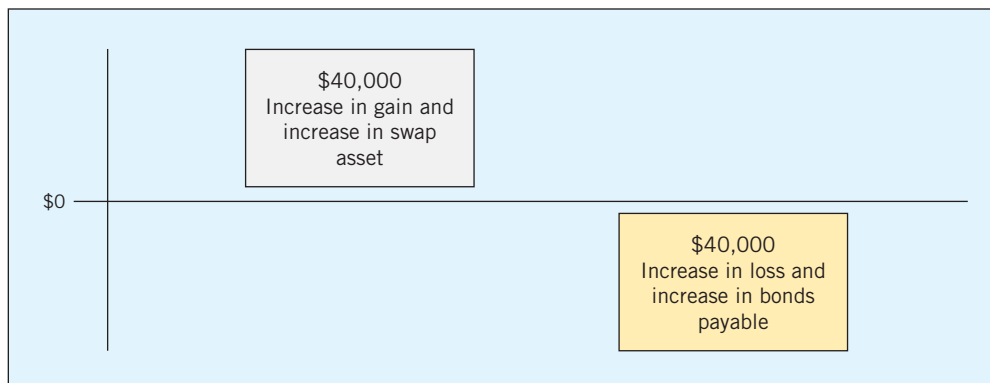

ILLUSTRATION 17A.12
Income Statement Presentation of Fair Value Hedge

| Jones Company | |
|---|-----------------|
| Income Statement (partial) | |
| For the Year Ended December 31, 2020 | |
| | |
| Interest expense (\$80,000 – \$12,000) | \$68,000 |
| Other income | |
| Unrealized holding gain—swap contract | \$40,000 |
| Unrealized holding loss—bonds payable | <u>(40,000)</u> |
| Net gain (loss) | –0– |

On the income statement, Jones reports interest expense of \$68,000. Jones has effectively changed the debt’s interest rate from fixed to variable. That is, by receiving a fixed rate and paying a variable rate on the swap, the company converts the fixed rate on the bond payable to variable. This results in an effective-interest rate of 6.8 percent in 2020.⁴¹ Also, the gain on the swap offsets the loss related to the debt obligation. Therefore, the net gain or loss on the hedging activity is zero.

Illustration 17A.13 shows the overall impact of the swap transaction on the financial statements.

ILLUSTRATION 17A.13
Impact on Financial Statements of Fair Value Hedge

⁴¹Jones will apply similar accounting and measurement at future interest payment dates. Thus, if interest rates increase, Jones will continue to receive 8 percent on the swap (records a loss) but will also be locked into the fixed payments to the bondholders at an 8 percent rate (records a gain).

In summary, to account for fair value hedges (as illustrated in the Jones example) **record the derivative at its fair value in the balance sheet, and record any gains and losses in income**. Thus, the gain on the swap offsets or hedges the loss on the bond payable, due to the decline in interest rates (see **Global View**).

By adjusting the hedged item (the bond payable in the Jones case) to fair value, with the gain or loss recorded in earnings, the accounting for the Jones bond payable deviates from amortized cost. This special accounting is justified in order to report accurately the nature of the hedging relationship between the swap and the bond payable in the balance sheet (both the swap and the debt obligation are recorded at fair value) and in the income statement (offsetting gains and losses are reported in the same period).⁴²

Global View

International accounting for hedges (*IFRS 9*) is similar to the provisions of GAAP.

Controversy and Concluding Remarks

Companies need rules to properly measure and report derivatives in financial statements. However, some argue that reporting derivatives at fair value results in unrealized gains and losses that are difficult to interpret. Others raise concerns about the complexity and cost of implementing GAAP in this area.

However, we believe that the long-term benefits of reporting derivatives at fair value far outweigh any implementation costs. As the volume and complexity of derivatives and hedging transactions continue to grow, so does the risk that investors and creditors will be exposed to unexpected losses arising from derivative transactions. Statement readers must have comprehensive information concerning many derivative financial instruments and the effects of hedging transactions using derivatives.

APPENDIX 17B

Fair Value Disclosures

LEARNING OBJECTIVE *8

Describe required fair value disclosures.

As indicated in the chapter, the FASB believes that fair value information is relevant for making effective business decisions. However, others express concern about fair value measurements for two reasons: (1) the lack of reliability related to the fair value measurement in certain cases, and (2) the ability to manipulate fair value measurements to achieve financial results inconsistent with the underlying economics of the situation.

The Board recognizes these concerns and has attempted to develop a sound conceptual basis for measuring and reporting fair value information. In addition, it has placed emphasis on developing guidelines for reporting fair value information for financial instruments because many of these instruments have relatively active markets for which valuations can be reliably determined. The purpose of this appendix is to explain the disclosure requirements for financial instruments related to fair value information.

⁴²An interest rate swap can also be used in a cash flow hedge. A common setting is the cash flow risk inherent in having variable rate debt as part of a company's debt structure. In this situation, the variable debt issuer can hedge the cash flow risk by entering into a swap contract to receive variable rate cash flows but pay fixed rate. The cash received on the swap contract will offset the variable cash flows to be paid on the debt obligation.

Disclosure of Fair Value Information: Financial Instruments

One requirement related to fair value disclosure is that both the cost and the fair value of all financial instruments be reported in the notes to the financial statements. [12] This enables readers of the financial statements to understand the fair value of the company's financial instruments and the potential gains and losses that might occur in the future as a result of these instruments.

The Board also decided that companies should disclose information that enables users to determine the extent of usage of fair value and the inputs used to implement fair value measurement. Two reasons for additional disclosure beyond the simple itemization of fair values are:

1. **Differing levels of reliability exist in the measurement of fair value information.** It therefore is important to understand the varying risks involved in measurement. It is difficult to incorporate these levels of uncertainty into the financial statements. Disclosure provides a framework for addressing the qualitative aspects related to risk and measurement.
2. **Changes in the fair value of financial instruments are reported differently in the financial statements, depending on the type of financial instrument involved and whether the fair value option is employed.** Note disclosure provides an opportunity to explain more precisely the impact that changes in the value of financial instruments have on financial results. In assessing the inputs, the Board recognizes that the reliability of the fair value measurement is of extreme importance. Many financial instruments are traded in active markets, and their valuation is not difficult. Other instruments are complex/illiquid, and their valuation is difficult.

To highlight these levels of reliability in valuation, the FASB established a fair value hierarchy. As discussed in Chapter 2, this hierarchy identifies three broad levels—1, 2, and 3—related to the measurement of fair values. Level 1 is the most reliable measurement because fair value is based on quoted prices in active markets for identical assets or liabilities. Level 2 is less reliable; it is not based on quoted market prices for identical assets and liabilities but instead may be based on similar assets or liabilities. Level 3 is least reliable; it uses unobservable inputs that reflect the company's assumption as to the value of the financial instrument.

Illustration 17B.1 is an example of a fair value note disclosure for Sabathia Company. It includes both the fair value amounts and the reliability level. (A similar disclosure would be presented for liabilities.)

ILLUSTRATION 17B.1
Example of Fair Value Hierarchy

| Sabathia Company | | | | |
|--|---|--|---|--|
| Notes to the Financial Statements | | | | |
| (\$ in 000s) | Fair Value Measurements at Reporting Data Using | | | |
| | Fair Value 12/31/20 | Quoted Prices in Active Markets for Identical Assets (Level 1) | Significant Other Observable Inputs (Level 2) | Significant Unobservable Inputs (Level 3) |
| Description | | | | |
| Trading securities | \$115 | \$105 | \$10 | |
| Available-for-sale securities | 75 | 75 | | |
| Derivatives | 60 | 25 | 15 | \$20 |
| Venture capital investments | 10 | | | 10 |
| Total | <u>\$260</u> | <u>\$205</u> | <u>\$25</u> | <u>\$30</u> |

For assets and liabilities measured at fair value and classified as Level 3, a reconciliation of Level 3 changes for the period is required. In addition, companies should report an analysis of how Level 3 changes in fair value affect total gains and losses and their impact on net income. **Illustration 17B.2** is an example of this disclosure.

ILLUSTRATION 17B.2**Reconciliation of Level 3
Inputs**

| Sabathia Company Notes to the Financial Statements | | | |
|--|---|--------------------------------|-------------------|
| (\$ in 000s) | Fair Value Measurements Using Significant Unobservable Inputs (Level 3) | | |
| | Derivatives | Venture Capital Investments | Total |
| | Beginning balance | \$14 | \$11 |
| Total gains or losses (realized/unrealized) | | | |
| Included in earnings (or changes in net assets) | 11 | (3) | 8 |
| Included in other comprehensive income | 4 | | 4 |
| Purchases, issuances, and settlements | (7) | 2 | (5) |
| Transfers in and/or out of Level 3 | (2) | | (2) |
| Ending balance | <u>\$20</u> | <u>\$10</u> | <u>\$30</u> |
| The amount of total gains or losses for the period included in earnings (or changes in net assets) attributable to the change in unrealized gains or losses relating to assets still held at the reporting date | <u>\$7</u> | <u>\$2</u> | <u>\$9</u> |
| Gains and losses (realized and unrealized) included in earnings (or changes in net assets) for the period (above) are reported in trading revenues and in other revenues as follows. | | | |
| | | Trading Revenues | Other Revenues |
| Total gains or losses included in earnings (or changes in net assets) for the period (as shown in the table above) | | <u>\$11</u> | <u>\$(3)</u> |
| Change in unrealized gains or losses relating to assets still held at reporting date | | <u>\$7</u> | <u>\$2</u> |

Sabathia Company's disclosure provides to the user of the financial statements an understanding of the following:

1. The carrying amount and the fair value of the company's financial instruments segregated by level of reliability. Thus, the reader of the financial statements has a basis for judging what credence should be given to the fair value amounts.
2. For Level 3 financial instruments, a reconciliation of the balance from the beginning to the end of the period. This reconciliation enables the reader to understand the composition of the change. It is important because these calculations are most affected by subjective estimates and could be subject to manipulation.
3. The impact of changes in fair value on the net assets of the company from one period to the next.

For companies that choose to use the fair value option for some or all of their financial instruments [13], they are permitted to incorporate the entire guidelines related to fair value measurement into one master schedule, or they can provide in a separate schedule information related solely to the fair value option.

Finally, companies must provide the following (with special emphasis on Level 3 measurements):

1. Quantitative information about significant unobservable inputs used for all Level 3 measurements.
2. A qualitative discussion about the sensitivity of recurring Level 3 measurements to changes in the unobservable inputs disclosed, including interrelationships between inputs.
3. Any transfers between Levels 1 and 2 of the fair value hierarchy.
4. Information about nonfinancial assets measured at fair value at amounts that differ from the assets' highest and best use.

5. The proper hierarchy classification for items that are not recognized on the balance sheet but are disclosed in the notes to the financial statements.

A typical disclosure related to Level 3 fair value measurements is presented in **Illustration 17B.3**.

ILLUSTRATION 17B.3 Quantitative Information about Level 3 Fair Value Measurements

| (\$ in millions) | Fair Value at 12/31/2020 | Valuation Technique(s) | Unobservable Input | Range (Weighted-Average) |
|--|--------------------------|-----------------------------|---|---|
| Residential mortgage-backed securities | 125 | Discounted cash flow | Constant prepayment rate Probability of default Loss severity | 3.5%–5.5% (4.5%) 5%–50% (10%) 40%–100% (60%) |
| Collateralized debt obligations | 35 | Consensus pricing | Offered quotes Comparability adjustments (%) | 20–45 –10%–+15% (+5%) |
| Direct venture capital investments: Healthcare | 53 | Discounted cash flow | Weighted-average cost of capital Long-term revenue growth rate Long-term pretax operating margin Discount for lack of marketability ^a Control premium ^a | 7%–16% (12.1%) 2%–5% (4.2%) 3%–20% (10.3%) 5%–20% (17%) 10%–30% (20%) |
| | | Market-comparable companies | EBITDA multiple ^b Revenue multiple ^b Discount for lack of marketability ^a Control premium ^a | 6.5–12 (9.5) 1.0–3.0 (2.0) 5%–20% (10%) 10%–20% (12%) |
| Credit contracts | 38 | Option model | Annualized volatility of credit ^c Counterparty credit risk ^d Own credit risk ^d | 10%–20% 0.5–3.5% 0.3–2.0% |

^aRepresents amounts used when the reporting entity has determined that market participants would take into account these premiums and discounts when pricing the investments.

^bRepresents amounts used when the reporting entity has determined that market participants would use such multiples when pricing the investments.

^cRepresents the range of the volatility curves used in the valuation analysis that the reporting entity has determined market participants would use when pricing the contracts.

^dRepresents the range of the credit default swap spread curves used in the valuation analysis that the reporting entity has determined market participants would use when pricing the contracts.

(Note: For liabilities, a similar table should be presented.)

Disclosure of Fair Values: Impaired Assets or Liabilities

In addition to financial instruments, companies often have assets or liabilities that are remeasured on a nonrecurring basis due to impairment. In this case, the fair value hierarchy can highlight the reliability of the measurement, coupled with the related gain or loss for the period. **Illustration 17B.4** highlights this disclosure for McClung Company.

ILLUSTRATION 17B.4

Disclosure of Fair Value, with Impairment

| McClung Company Notes to the Financial Statements | | | | |
|--|-------------------------------|--|---|---|
| (\$ in millions) | Fair Value Measurements Using | | | |
| | Year Ended 12/31/20 | Quoted Prices in Active Markets for Identical Assets (Level 1) | Significant Other Observable Inputs (Level 2) | Significant Unobservable Inputs (Level 3) |
| Description | | | | |
| Long-lived assets held and used | \$75 | — | \$75 | — |
| Goodwill | 30 | — | — | \$30 |
| Long-lived assets held for sale | 26 | — | 26 | — |

(continued)

Long-lived assets held and used with a carrying amount of \$100 million were written down to their fair value of \$75 million, resulting in an impairment charge of \$25 million, which was included in earnings for the period.

Goodwill with a carrying amount of \$65 million was written down, resulting in an impairment charge of \$35 million, which was included in earnings for the period.

In accordance with the provisions of the Impairment or Disposal of Long-Lived Assets Subsections of FASB Codification Subtopic 360-10, long-lived assets held for sale with a carrying amount of \$35 million were written down to their fair value of \$26 million, less cost to sell of \$6 million (or \$20 million), resulting in a loss of \$15 million, which was included in earnings for the period.

ILLUSTRATION 17B.4*(continued)*

Conclusion

With recent joint FASB and IASB standard-setting efforts, we now have convergence with respect to fair value measurement, both in terms of the definition and measurement guidelines when fair value is the measurement approach in GAAP and IFRS. In addition, GAAP and IFRS have similar fair value disclosure requirements, as illustrated in this appendix. As the former chair of the IASB noted, this “marks the completion of a major convergence project and is a fundamentally important element of our joint response to the global crisis. The result is clearer and more consistent guidance on measuring fair value, where its use is already required.”⁴³

⁴³The FASB continues to evaluate standards to improve existing disclosure requirements related to fair value measurement. For example, in its recent Accounting Standards Update (ASU 2016-01), the FASB requires separate presentation of financial assets and financial liabilities by measurement category and form of financial asset (e.g., securities or loans and receivables) on the balance sheet or in the accompanying notes to the financial statements.

Learning Objectives Review

1 Describe the accounting for investments in debt securities.

(1) Carry and report *held-to-maturity debt securities* at amortized cost. (2) Value *trading debt securities* for reporting purposes at fair value, with unrealized holding gains or losses included in net income. (3) Value *available-for-sale debt securities* for reporting purposes at fair value, with unrealized holding gains or losses reported as other comprehensive income and as a separate component of stockholders' equity.

2 Describe the accounting for investments in equity securities.

The degree to which one corporation (investor) acquires an interest in the common stock of another corporation (investee) generally determines the accounting treatment for the investment. Long-term investments by one corporation in the common stock of another can be classified according to the percentage of the voting stock of the investee held by the investor.

3 Explain the equity and consolidation methods of accounting.

Under the **equity method**, the investor and the investee acknowledge a substantive economic relationship. The company originally records the investment at cost but subsequently adjusts the amount each period for changes in the net assets of the investee. That is, the investor's proportionate share of the earnings (losses) of the investee periodically increases (decreases) the investment's carrying amount. All dividends received by the investor from the investee decrease the investment's carrying amount. Under the **fair value method**, a company reports the equity investment at fair value each reporting period irrespective of the investee's earnings or dividends paid to it. A company applies the equity method to investment holdings between 20 percent and 50 percent of ownership. It applies the fair value method to holdings below 20 percent. Equity investments with holdings greater than 50 percent are accounted for using consolidation procedures.

4 Evaluate other major issues related to investments in debt and equity securities.

Fair Value Option. Companies have the option to report most financial instruments at fair value, with all gains and losses related to changes in fair value reported in the income statement. This option is applied on an instrument-by-instrument basis. The fair value option is generally available only at the time a company first purchases the financial asset or incurs a financial liability. If a company chooses to use the fair value option, it must measure this instrument at fair value until the company no longer has ownership.

Impairments. Refer to Illustration 17.19 for a summary of the guidelines related to impairments.

Reclassifications. A company needs a reclassification adjustment when it reports realized gains or losses as part of net income but also shows the amounts as part of other comprehensive income in the current or in previous periods. Companies should report unrealized

holding gains or losses related to available-for-sale securities in other comprehensive income and the aggregate balance as accumulated comprehensive income on the balance sheet.

Transfers. Transfers of securities between categories of investments should be accounted for at fair value, with unrealized holding gains or losses treated in accordance with the nature of the transfer.

*5 Describe the uses of and accounting for derivatives.

Any company or individual that wants to ensure against different types of business risks may use derivative contracts to achieve this objective. In general, these transactions involve some type of hedge. Speculators also use derivatives, attempting to find an enhanced return. Speculators are very important to the derivatives market because they keep it liquid on a daily basis. Arbitrageurs attempt to exploit inefficiencies in various derivative contracts. A company primarily uses derivatives for purposes of hedging its exposure to fluctuations in interest rates, foreign currency exchange rates, and commodity prices.

Companies should recognize derivatives in the financial statements as assets and liabilities, and report them at fair value. Companies should recognize gains and losses resulting from speculation immediately in income. They report gains and losses resulting from hedge transactions in different ways, depending on the type of hedge.

Companies report derivative financial instruments in the balance sheet and record them at fair value. Except for derivatives used in cash flow hedges, companies record realized and unrealized gains and losses on derivative financial instruments in income.

*6 Explain the accounting for hedges.

Fair Value Hedges. A company records the derivative used in a qualifying fair value hedge at its fair value in the balance sheet, recording any gains and losses in income. In addition, the company also accounts for the item being hedged with the derivative at fair value. By adjusting the hedged item to fair value, with the gain or loss recorded in earnings, the accounting for the hedged item may deviate from GAAP in the absence of a hedge relationship. This special accounting is justified in order to report accurately the nature of the hedging relationship between the derivative hedging instruments and the hedged item. A company reports both in the balance sheet, reporting offsetting gains and losses in income in the same period.

Cash Flow Hedge. Companies account for derivatives used in qualifying cash flow hedges at fair value on the balance sheet, but record gains or losses in equity as part of other comprehensive income. Companies accumulate these gains or losses, and reclassify them in income when the hedged transaction's cash flows affect earnings. Accounting is according to GAAP for the hedged item.

*7 Identify special reporting issues related to derivative financial instruments that cause unique accounting problems.

A company should separate a derivative that is embedded in a hybrid security from the host security and account for it using the accounting for derivatives. This separation process is referred to as **bifurcation**. Special hedge accounting is allowed only for hedging relationships that meet certain criteria. The main criteria are as follows. (1) There

is formal documentation of the hedging relationship, the company's risk-management objective, and the strategy for undertaking the hedge, and the company designates the derivative as either a cash flow or fair value hedge. (2) The company expects the hedging relationship to be highly effective in achieving offsetting changes in fair value or cash flows. (3) "Special" hedge accounting is necessary only when there is a mismatch of the accounting effects for the hedging instrument and the hedged item under GAAP.

***8 Describe required fair value disclosures.**

The FASB has developed required fair value disclosures in response to concerns about the reliability of fair value measures. Disclosure

elements include fair value amounts and reliability levels as well as impaired assets or liabilities.

Enhanced Review and Practice

Go online for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Practice Problem

Rogers Corporation carries an account in its general ledger called Investments, which contained the following debits for investment purchases and no credits.

| | | |
|--------------|---|-----------|
| Feb. 1, 2020 | Jordy Company common stock, \$100 par, 200 shares | \$ 37,400 |
| April 1 | U.S. government bonds, 5%, due April 1, 2030, interest payable April 1 and October 1, 100 bonds at \$1,000 each | 100,000 |
| July 1 | Driver Company 6% bonds, par \$50,000, dated March 1, 2016, purchased at par plus accrued interest, interest payable annually on March 1, due March 1, 2040 | 51,000 |

Instructions

- Prepare entries necessary to classify the amounts into proper accounts, assuming that all the bonds are classified as available-for-sale.
- Prepare the entry to record the accrued interest on December 31, 2020.
- The fair values of the securities on December 31, 2020, were:

| | |
|----------------------------|--------------------------------|
| Jordy Company common stock | \$ 33,800 (1% of total shares) |
| U.S. government bonds | 124,700 |
| Driver Company bonds | 58,600 |

What entry or entries, if any, would you recommend be made?

- The U.S. government bonds were sold on July 1, 2021, for \$119,200 plus accrued interest. Give the proper entry.
- Now assume Rogers' investment in Jordy Company represents 30% of Jordy's shares. Prepare the 2020 entries for the investment in Jordy stock. In 2020, Jordy declared and paid dividends of \$9,000 (on September 30) and reported net income of \$30,000.

Solution

| | | | |
|----|--|---------|---------|
| a. | Equity Investments | 37,400 | |
| | Debt Investments (available-for-sale) | 150,000 | |
| | (\$100,000 + \$50,000) | | |
| | Interest Revenue ($\$50,000 \times .06 \times 4/12$) | 1,000 | |
| | Investments | | 188,400 |

December 31, 2020

| | | | |
|----|---|--------|--------|
| b. | Interest Receivable | 3,750 | |
| | Interest Revenue | | 3,750* |
| | * $(\$100,000 \times .05 \times 3/12 = \$1,250; \$50,000 \times .06 \times 10/12 = \$2,500; \$1,250 + \$2,500 = \$3,750)$ | | |

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

Questions

- Distinguish between a debt security and an equity security.
- What purpose does the variety in bond features (types and characteristics) serve?
- What is the cost of a long-term investment in bonds?
- Identify and explain the three types of classifications for investments in debt securities.
- When should a debt security be classified as held-to-maturity?
- Explain how trading debt securities are accounted for and reported.
- At what amount should trading, available-for-sale, and held-to-maturity debt securities be reported on the balance sheet?
- On July 1, 2020, Wheeler Company purchased \$4,000,000 of Duggen Company's 8% bonds, due on July 1, 2027. The bonds, which pay interest semiannually on January 1 and July 1, were purchased for \$3,500,000 to yield 10%. Determine the amount of interest revenue Wheeler should report on its income statement for the year ended December 31, 2020.
- If the bonds in Question 8 are classified as available-for-sale and they have a fair value at December 31, 2020, of \$3,604,000, prepare the journal entry (if any) at December 31, 2020, to record this transaction.
- Indicate how unrealized holding gains and losses should be reported for debt investments classified as trading, available-for-sale, and held-to-maturity.
- (a) Assuming no Fair Value Adjustment account balance at the beginning of the year, prepare the adjusting entry at the end of the year if Laura Company's available-for-sale debt securities have a fair value \$60,000 below cost. (b) Assume the same information as part (a), except that Laura Company has a debit balance in its Fair Value Adjustment account of \$10,000 at the beginning of the year. Prepare the adjusting entry at year-end.

12. Identify and explain the different types of classifications for investments in equity securities.
13. Why are held-to-maturity investments applicable only to debt securities?
14. Hayes Company sold 10,000 shares of Kenyon Co. common stock for \$27.50 per share, incurring \$1,770 in brokerage commissions. These securities originally cost \$260,000. Prepare the entry to record the sale of these securities.
15. Distinguish between the accounting treatment for marketable versus nonmarketable equity securities.
16. What constitutes “significant influence” when an investor’s financial interest is below the 50% level?
17. Explain how the investment account is affected by investee activities under the equity method.
18. Your classmate Kate believes that the equity method is applied with a strict application of the “20%” rule. Do you agree? Explain.
19. Hiram Co. uses the equity method to account for investments in common stock. What accounting should be made for dividends received from these investments subsequent to the date of investment?
20. Raleigh Corp. has an investment with a carrying value (equity method) on its books of \$170,000 representing a 30% interest in Borg Company, which suffered a \$620,000 loss this year. How should Raleigh Corp. handle its proportionate share of Borg’s loss?
21. Where on the asset side of the balance sheet are debt investments classified as trading securities, available-for-sale securities, and held-to-maturity securities reported? Explain.
22. Explain why reclassification adjustments are necessary.
23. Briefly discuss how a transfer of securities from the available-for-sale category to the trading category affects stockholders’ equity and income.
24. Explain how to account for the impairment of a held-to-maturity debt security.
25. Explain how to account for the impairment of an available-for-sale debt investment.
26. What is the GAAP definition of fair value?
27. What is the fair value option?
28. Franklin Corp. has a debt investment that it has held for several years. When it purchased the debt investment, Franklin classified and accounted for it as available-for-sale. Can Franklin use the fair value option for this investment? Explain.
- *29. What is meant by the term “underlying” as it relates to derivative financial instruments?
- *30. What are the main distinctions between a traditional financial instrument and a derivative financial instrument?
- *31. What is the purpose of a fair value hedge?
- *32. In what situation will the unrealized holding gain or loss on inventory be reported in income?
- *33. Why might a company become involved in an interest rate swap contract to receive fixed interest payments and pay variable?
- *34. What is the purpose of a cash flow hedge?
- *35. Where are gains and losses related to cash flow hedges involving anticipated transactions reported?
- *36. What are hybrid securities? Give an example of a hybrid security.

Brief Exercises

BE17.1 (LO 1) Garfield Company purchased, on January 1, 2020, as a held-to-maturity investment, \$80,000 of the 9%, 5-year bonds of Chester Corporation for \$74,086, which provides an 11% return. Prepare Garfield’s journal entries for (a) the purchase of the investment, and (b) the receipt of annual interest and discount amortization. Assume effective-interest amortization is used.

BE17.2 (LO 1) Use the information from BE17.1 but assume the bonds are purchased as an available-for-sale security. Prepare Garfield’s journal entries for (a) the purchase of the investment, (b) the receipt of annual interest and discount amortization, and (c) the year-end fair value adjustment. (Assume a zero balance in the Fair Value Adjustment account.) The bonds have a year-end fair value of \$75,500.

BE17.3 (LO 1) Carow Corporation purchased on January 1, 2020, as a held-to-maturity investment, \$60,000 of the 8%, 5-year bonds of Harrison, Inc. for \$65,118, which provides a 6% return. The bonds pay interest semiannually. Prepare Carow’s journal entries for (a) the purchase of the investment, and (b) the receipt of semiannual interest and premium amortization. Assume effective-interest amortization is used.

BE17.4 (LO 1) Hendricks Corporation purchased trading investment bonds for \$50,000 at par. At December 31, Hendricks received annual interest of \$2,000, and the fair value of the bonds was \$47,400. Prepare Hendricks’ journal entries for (a) the purchase of the investment, (b) the interest received, and (c) the fair value adjustment. (Assume a zero balance in the Fair Value Adjustment account.)

BE17.5 (LO 2) Fairbanks Corporation purchased 400 shares of Sherman Inc. common stock for \$13,200 (Fairbanks does not have significant influence). During the year, Sherman paid a cash dividend of \$3.25 per share. At year-end, Sherman stock was selling for \$34.50 per share. Prepare Fairbanks’ journal entries to record (a) the purchase of the investment, (b) the dividends received, and (c) the fair value adjustment. (Assume a zero balance in the Fair Value Adjustment account.)

BE17.6 (LO 2) Use the information from BE17.5 but assume the stock is nonmarketable. Prepare Fairbanks’ journal entries to record (a) the purchase of the investment, (b) the dividends received, and (c) the fair value adjustment, if any.

BE17.7 (LO 3) Zoop Corporation purchased for \$300,000 a 30% interest in Murphy, Inc. This investment enables Zoop to exert significant influence over Murphy. During the year, Murphy earned net income of \$180,000 and paid dividends of \$60,000. Prepare Zoop's journal entries related to this investment.

BE17.8 (LO 2) Cleveland Company has a stock portfolio valued at \$4,000. Its cost was \$3,300. If the Fair Value Adjustment account has a debit balance of \$200, prepare the journal entry at year-end.

BE17.9 (LO 2, 4) The following information relates to Moran Co. for the year ended December 31, 2020: net income \$1,245.7 million; unrealized holding loss of \$10.9 million related to available-for-sale debt securities during the year; accumulated other comprehensive income of \$57.2 million on December 31, 2019. Assuming no other changes in accumulated other comprehensive income, determine (a) other comprehensive income for 2020, (b) comprehensive income for 2020, and (c) accumulated other comprehensive income at December 31, 2020.

BE17.10 (LO 4) Hillsborough Co. has a held-to-maturity investment in the bonds of Schuyler Corp. with a carrying value of \$70,000. Hillsborough determined that due to poor economic prospects for Schuyler, the bonds have decreased in value to \$60,000. It is determined that this loss in value is uncollectible. Prepare the journal entry, if any, to record the reduction in value.

BE17.11 (LO 4) Presented below are two independent cases related to available-for-sale debt investments.

| | Case 1 | Case 2 |
|------------------------|----------|-----------|
| Amortized cost | \$40,000 | \$100,000 |
| Fair value | 30,000 | 110,000 |
| Expected credit losses | 25,000 | 92,000 |

For each case, determine the amount of impairment loss, if any.

BE17.12 (LO 4) Stave Company invests \$10,000,000 in 5% fixed rate corporate bonds on January 1, 2020. All the bonds are classified as available-for-sale and are purchased at par. At year-end, market interest rates have declined, and the fair value of the bonds is now \$10,600,000. Interest is paid on January 1. Prepare journal entries for Stave Company to (a) record the transactions related to these bonds in 2020, assuming Stave does not elect the fair option; and (b) record the transactions related to these bonds in 2020, assuming that Stave Company elects the fair value option to account for these bonds.

BE17.13 (LO 4) Michek Company loans Sarasota Company \$2,000,000 at 6% for 3 years on January 1, 2020. Michek intends to hold this loan to maturity and has the financial ability to do so. The fair value of the loan at the end of each reporting period is as follows.

| | |
|-------------------|-------------|
| December 31, 2020 | \$2,050,000 |
| December 31, 2021 | 2,020,000 |
| December 31, 2022 | 2,000,000 |

Prepare the journal entry(ies) at December 31, 2020, and December 31, 2022, for Michek related to these bonds, assuming (a) it does not use the fair value option, and (b) it uses the fair value option. Interest is paid on January 1.

Exercises

E17.1 (LO 1, 2) (Investment Classifications) For the following investments, identify whether they are:

- Trading debt securities.
- Available-for-sale debt securities.
- Held-to-maturity debt securities.
- None of the above.

Each case is independent of the other.

- A bond that will mature in 4 years was bought 1 month ago when the price dropped. As soon as the value increases, which is expected next month, it will be sold.
- 10% of the outstanding stock of Farm-Co was purchased. The company is planning on eventually getting a total of 30% of its outstanding stock.
- Bonds were purchased in December of this year. The bonds are expected to be sold in January of next year.
- Bonds that will mature in 5 years are purchased. The company would like to hold them until they mature, but money has been tight recently and they may need to be sold.

- e. Preferred stock was purchased for its constant dividend. The company is planning to hold the preferred stock for a long time.
- f. A bond that matures in 10 years was purchased. The company has committed the money for an expansion project planned 10 years from now.

E17.2 (LO 1) Excel (Entries for Held-to-Maturity Securities) On January 1, 2020, Dagwood Company purchased at par 6% bonds having a maturity value of \$300,000. They are dated January 1, 2020, and mature January 1, 2025, with interest received on January 1 of each year. The bonds are classified in the held-to-maturity category.

Instructions

- a. Prepare the journal entry at the date of the bond purchase.
- b. Prepare the journal entry to record the interest revenue on December 31, 2020.
- c. Prepare the journal entry to record the interest received on January 1, 2021.

E17.3 (LO 1) (Entries for Held-to-Maturity Securities) On January 1, 2020, Hi and Lois Company purchased 12% bonds having a maturity value of \$300,000 for \$322,744.44. The bonds provide the bondholders with a 10% yield. They are dated January 1, 2020, and mature January 1, 2025, with interest received on January 1 of each year. Hi and Lois Company uses the effective-interest method to allocate unamortized discount or premium. The bonds are classified in the held-to-maturity category.

Instructions

- a. Prepare the journal entry at the date of the bond purchase.
- b. Prepare a bond amortization schedule.
- c. Prepare the journal entry to record the interest revenue and the amortization at December 31, 2020.
- d. Prepare the journal entry to record the interest revenue and the amortization at December 31, 2021.

E17.4 (LO 1) (Entries for Available-for-Sale Securities) Assume the same information as in E17.3 except that the securities are classified as available-for-sale. The fair value of the bonds at December 31 of each year-end is as follows.

| | | | |
|------|-----------|------|-----------|
| 2020 | \$320,500 | 2023 | \$310,000 |
| 2021 | \$309,000 | 2024 | \$300,000 |
| 2022 | \$308,000 | | |

Instructions

- a. Prepare the journal entry at the date of the bond purchase.
- b. Prepare the journal entries to record the interest revenue and recognition of fair value for 2020.
- c. Prepare the journal entry to record the recognition of fair value for 2021.

E17.5 (LO 1) Excel (Effective-Interest versus Straight-Line Bond Amortization) On January 1, 2020, Phantom Company acquires \$200,000 of Spiderman Products, Inc., 9% bonds at a price of \$185,589. Interest is received on January 1 of each year, and the bonds mature on January 1, 2023. The investment will provide Phantom Company a 12% yield. The bonds are classified as held-to-maturity.

Instructions

- a. Prepare a 3-year schedule of interest revenue and bond discount amortization, applying the straight-line method.
- b. Prepare a 3-year schedule of interest revenue and bond discount amortization, applying the effective-interest method.
- c. Prepare the journal entry for the interest revenue and discount amortization under the straight-line method at December 31, 2021.
- d. Prepare the journal entry for the interest revenue and discount amortization under the effective-interest method at December 31, 2021.

E17.6 (LO 2) (Entries for Equity Securities) The following information is available for Barkley Company at December 31, 2020, regarding its investments.

| Securities | Cost | Fair Value |
|---|----------|------------|
| 3,000 shares of Myers Corporation common stock | \$40,000 | \$48,000 |
| 1,000 shares of Cole Incorporated preferred stock | 25,000 | 22,000 |
| | \$65,000 | \$70,000 |

Instructions

- Prepare the adjusting entry (if any) for 2020, assuming no balance in the Fair Value Adjustment account at January 1, 2020. Neither of Barkley's investments result in significant influence.
- Discuss how the amounts reported in the financial statements are affected by the entries in (a).

E17.7 (LO 2) (Equity Securities Entries) On December 21, 2020, Bucky Katt Company provided you with the following information regarding its equity investments.

| December 31, 2020 | | | |
|--|----------|------------|------------------------|
| Investments | Cost | Fair Value | Unrealized Gain (Loss) |
| Clemson Corp. stock | \$20,000 | \$19,000 | \$(1,000) |
| Colorado Co. stock | 10,000 | 9,000 | (1,000) |
| Buffaloes Co. stock | 20,000 | 20,600 | 600 |
| Total of portfolio | \$50,000 | \$48,600 | (1,400) |
| Previous fair value adjustment balance | | | -0- |
| Fair value adjustment—Cr. | | | \$(1,400) |

During 2021, Colorado Co. stock was sold for \$9,400. The fair value of the stock on December 31, 2021, was Clemson Corp. stock—\$19,100; Buffaloes Co. stock—\$20,500. None of the equity investments result in significant influence.

Instructions

- Prepare the adjusting journal entry needed on December 31, 2020.
- Prepare the journal entry to record the sale of the Colorado Co. stock during 2021.
- Prepare the adjusting journal entry needed on December 31, 2021.

E17.8 (LO 2) (Equity Securities Entries and Reporting) Satchel Corporation purchases equity securities costing \$73,000. At December 31, the fair value of the portfolio is \$65,000.

Instructions

Prepare the adjusting entry to report the securities properly, assuming that the investments purchased represent less than a 5% interest in the other companies. Indicate the statement presentation of the accounts in your entry.

E17.9 (LO 1) (Available-for-Sale Debt Securities Entries and Financial Statement Presentation) At December 31, 2020, the available-for-sale debt portfolio for Steffi Graf, Inc. is as follows.

| Security | Cost | Fair Value | Unrealized Gain (Loss) |
|--|----------|------------|------------------------|
| A | \$17,500 | \$15,000 | (\$2,500) |
| B | 12,500 | 14,000 | 1,500 |
| C | 23,000 | 25,500 | 2,500 |
| Total | \$53,000 | \$54,500 | 1,500 |
| Previous fair value adjustment balance—Dr. | | | 400 |
| Fair value adjustment—Dr. | | | \$1,100 |

On January 20, 2021, Steffi Graf, Inc. sold security A for \$15,100. The sale proceeds are net of brokerage fees.

Instructions

- Prepare the adjusting entry at December 31, 2020, to report the portfolio at fair value.
- Show the balance sheet presentation of the investment-related accounts at December 31, 2020. (Ignore notes presentation.)
- Prepare the journal entry for the 2021 sale of security A.

E17.10 (LO 4) (Comprehensive Income Disclosure) Assume the same information as E17.9 and that Steffi Graf, Inc. reports net income in 2020 of \$120,000 and in 2021 of \$140,000. Total holding gains (including any realized holding gain or loss) equal \$40,000 in 2021.

Instructions

- Prepare a statement of comprehensive income for 2020, starting with net income.
- Prepare a statement of comprehensive income for 2021, starting with net income.

E17.11 (LO 2) (Equity Securities Entries) Aranda Corporation made the following cash purchases of securities during 2020, which is the first year in which Aranda invested in securities.

- On January 15, purchased 10,000 shares of Sanchez Company's common stock at \$33.50 per share plus commission \$1,980.
- On April 1, purchased 5,000 shares of Vicario Co.'s common stock at \$52.00 per share plus commission \$3,370.
- On September 10, purchased 7,000 shares of WTA Co.'s preferred stock at \$26.50 per share plus commission \$4,910.

On May 20, 2020, Aranda sold 4,000 shares of Sanchez Company's common stock at a market price of \$35 per share less brokerage commissions, taxes, and fees of \$3,850. The year-end fair values per share were Sanchez \$30, Vicario \$55, and WTA \$28. In addition, the chief accountant of Aranda told you that the corporation plans to hold these securities for the long-term but may sell them in order to earn profits from appreciation in prices. The equity method of accounting is not appropriate for these stock purchases.

Instructions

- Prepare the journal entries to record the above three security purchases.
- Prepare the journal entry for the security sale on May 20.
- Compute the unrealized gains or losses and prepare the adjusting entries for Aranda on December 31, 2020.

E17.12 (LO 2, 3) (Journal Entries for Fair Value and Equity Methods) The following are independent situations.

Situation 1: Conchita Cosmetics acquired 10% of the 200,000 shares of common stock of Martinez Fashion at a total cost of \$13 per share on March 18, 2020. On June 30, Martinez declared and paid \$75,000 cash dividends to all stockholders. On December 31, Martinez reported net income of \$122,000 for the year. At December 31, the market price of Martinez Fashion was \$15 per share.

Situation 2: Monica, Inc. obtained significant influence over Seles Corporation by buying 30% of Seles's 30,000 outstanding shares of common stock at a total cost of \$9 per share on January 1, 2020. On June 15, Seles declared and paid cash dividends of \$36,000 to all stockholders. On December 31, Seles reported a net income of \$85,000 for the year.

Instructions

Prepare all necessary journal entries in 2020 for both situations.

E17.13 (LO 3) (Equity Method) Parent Co. invested \$1,000,000 in Sub Co. for 25% of its outstanding stock. Sub Co. pays out 40% of net income in dividends each year.

Instructions

Use the information in the following T-account for the investment in Sub to answer the following questions.

| Investment in Sub Co. | |
|-----------------------|--------|
| 1,000,000 | |
| 110,000 | |
| | 44,000 |

- How much was Parent Co.'s share of Sub Co.'s net income for the year?
- What was Sub Co.'s total net income for the year?
- What was Sub Co.'s total dividends for the year?
- How much was Parent Co.'s share of Sub Co.'s dividends for the year?

E17.14 (LO 2) (Equity Investment) Oregon Co. had purchased 200 shares of Washington Co. for \$40 each this year (Oregon Co. does not have significant influence). Oregon Co. sold 100 shares of Washington Co. stock for \$45 each. At year-end, the price per share of the Washington Co. stock had dropped to \$35.

Instructions

Prepare the journal entries for these transactions and any year-end adjustments.

E17.15 (LO 2) (Equity Investments) Kenseth Company has the following securities in its portfolio on December 31, 2020. None of these investments are accounted for under the equity method.

| Investments | Cost | Fair Value |
|---------------------------------------|-----------|------------|
| 1,500 shares of Gordon, Inc., common | \$ 73,500 | \$ 69,000 |
| 5,000 shares of Wallace Corp., common | 180,000 | 175,000 |
| 400 shares of Martin, Inc., preferred | 60,000 | 61,600 |
| | \$313,500 | \$305,600 |

All of the securities were purchased in 2020.

In 2021, Kenseth completed the following securities transactions.

- March 1 Sold the 1,500 shares of Gordon, Inc., common, @ \$45 less fees of \$1,200.
- April 1 Bought 700 shares of Earnhart Corp., common, @ \$75 plus fees of \$1,300.

Kenseth's portfolio of equity securities appeared as follows on December 31, 2021.

| Investments | Cost | Fair Value |
|---------------------------------------|------------------|------------------|
| 5,000 shares of Wallace Corp., common | \$180,000 | \$175,000 |
| 700 shares of Earnhart Corp., common | 53,800 | 50,400 |
| 400 shares of Martin, Inc., preferred | 60,000 | 58,000 |
| | <u>\$293,800</u> | <u>\$283,400</u> |

Instructions

Prepare the general journal entries for Kenseth Company for:

- a. The 2020 adjusting entry.
- b. The sale of the Gordon stock.
- c. The purchase of the Earnhart stock.
- d. The 2021 adjusting entry for the portfolio.

E17.16 (LO 2, 3) (Fair Value and Equity Method Compared) Jaycie Phelps Inc. acquired 20% of the outstanding common stock of Theresa Kulikowski Inc. on December 31, 2020. The purchase price was \$1,200,000 for 50,000 shares. Kulikowski Inc. declared and paid an \$0.85 per share cash dividend on June 30 and on December 31, 2021. Kulikowski reported net income of \$730,000 for 2021. The fair value of Kulikowski's stock was \$27 per share at December 31, 2021.

Instructions

- a. Prepare the journal entries for Jaycie Phelps Inc. for 2020 and 2021, assuming that Phelps cannot exercise significant influence over Kulikowski.
- b. Prepare the journal entries for Jaycie Phelps Inc. for 2020 and 2021, assuming that Phelps can exercise significant influence over Kulikowski.
- c. At what amount is the investment in securities reported on the balance sheet under each of these methods at December 31, 2021? What is the total net income reported in 2021 under each of these methods?

E17.17 (LO 3) (Equity Method) On January 1, 2020, Pennington Corporation purchased 30% of the common shares of Edwards Company for \$180,000. During the year, Edwards earned net income of \$80,000 and paid dividends of \$20,000.

Instructions

Prepare the entries for Pennington to record the purchase and any additional entries related to this investment in Edwards Company in 2020.

E17.18 (LO 4) (Impairment of Debt Securities) Hagar Corporation has municipal bonds classified as a held-to-maturity at December 31, 2020. These bonds have a par value of \$800,000, an amortized cost of \$800,000, and a fair value of \$720,000. The company believes that impairment accounting is now appropriate for these bonds.

Instructions

- a. Prepare the journal entry to recognize the impairment.
- b. What is the new cost basis of the municipal bonds? Given that the maturity value of the bonds is \$800,000, should Hagar Corporation amortize the difference between the carrying amount and the maturity value over the life of the bonds?
- c. At December 31, 2021, the fair value of the municipal bonds is \$760,000. Prepare the entry (if any) to record this information.

E17.19 (LO 2, 4) (Fair Value Measurement) Presented below is information related to the purchases of common stock by Lilly Company during 2020.

| | Cost (at purchase date) | Fair Value (at December 31) |
|-------------------------------------|----------------------------|--------------------------------|
| Investment in Arroyo Company stock | \$100,000 | \$ 80,000 |
| Investment in Lee Corporation stock | 250,000 | 300,000 |
| Investment in Woods Inc. stock | 180,000 | 190,000 |
| Total | <u>\$530,000</u> | <u>\$570,000</u> |

Instructions

(Assume a zero balance for any Fair Value Adjustment account.)

- What entry would Lilly make at December 31, 2020, to record the investment in Arroyo Company stock if it chooses to report this security using the fair value option?
- What entry(ies) would Lilly make at December 31, 2020, to record the investments in the Lee and Woods corporations, assuming that Lilly did not select the fair value option for these investments?

E17.20 (LO 2, 4) (Fair Value Measurement Issues) Assume the same information as in E17.19 for Lilly Company. In addition, assume that the investment in the Woods Inc. stock was sold during 2021 for \$195,000. At December 31, 2021, the following information relates to its two remaining investments of common stock.

| | Cost (at purchase date) | Fair Value (at December 31) |
|-------------------------------------|----------------------------|--------------------------------|
| Investment in Arroyo Company stock | \$100,000 | \$140,000 |
| Investment in Lee Corporation stock | 250,000 | 310,000 |
| Total | <u>\$350,000</u> | <u>\$450,000</u> |

Net income before any security gains and losses for 2021 was \$905,000.

Instructions

- Compute the amount of net income or net loss that Lilly should report for 2021, taking into consideration Lilly's security transactions for 2021.
- Prepare the journal entry to record unrealized gain or loss related to the investment in Arroyo Company stock at December 31, 2021.

E17.21 (LO 1, 2, 4) (Fair Value Option) Presented below is selected information related to the financial instruments of Dawson Company at December 31, 2020. This is Dawson Company's first year of operations.

| | Carrying Amount | Fair Value (at December 31) |
|---|--------------------|--------------------------------|
| Investment in debt securities (intent is to hold to maturity) | \$ 40,000 | \$ 41,000 |
| Investment in Chen Company stock | 800,000 | 910,000 |
| Bonds payable | 220,000 | 195,000 |

Instructions

- Dawson elects to use the fair value option for these investments. Assuming that Dawson's net income is \$100,000 in 2020 before reporting any securities gains or losses, determine Dawson's net income for 2020. Assume that the difference between the carrying value and fair value is due to credit deterioration.
- Record the journal entry, if any, necessary at December 31, 2020, to record the fair value option for the bonds payable.

E17.22 (LO 4) (Impairment) Elaina Company has the following investments as of December 31, 2020:

| | |
|---|-------------|
| Investments in common stock of Laser Company | \$1,500,000 |
| Investment in debt securities of FourSquare Company | \$3,300,000 |

In both investments, the carrying value and the fair value of these two investments are the same at December 31, 2020. Elaina's stock investments does not result in significant influence on the operations of Laser Company. Elaina's debt investment is considered held-to-maturity. At December 31, 2021, the shares in Laser Company are valued at \$1,100,000; the debt investment securities of FourSquare are valued at \$2,500,000 and are considered impaired.

Instructions

- Prepare the journal entry to record the impairment of the debt securities at December 31, 2021.
- Assuming the fair value of the Laser shares is \$1,400,000 and the value of its debt investment is \$2,950,000, what entries, if any, should be recorded in 2022 related to impairment?
- Assume that the debt investment in FourSquare Company was available-for-sale and the expected credit loss was \$900,000. Prepare the journal entry to record this impairment on December 31, 2021.

E17.23 (LO 4) (Impairment) Morley Company in its first year of operations provides the following information related to one of its available-for-sale debt securities at December 31, 2020.

| | |
|----------------------|----------|
| Amortized cost | \$50,000 |
| Fair value | 40,000 |
| Expected credit loss | 12,000 |

- What is the amount of the credit loss that Morley should report on this available-for-sale security at December 31, 2020?
- Prepare the journal entry to record the credit loss, if any (and any other adjustment needed), at December 31, 2020.
- Assume that the fair value of the available-for-sale security is \$53,000 at December 31, 2020, instead of \$40,000. What is the amount of the credit loss that Morley should report at December 31, 2020?
- Assume the same information as for part (c). Prepare the journal entry to record the credit loss, if necessary (and any other adjustment needed), at December 31, 2020.

***E17.24 (LO 5) (Derivative Transaction)** On January 2, 2020, Jones Company purchases a call option for \$300 on Merchant common stock. The call option gives Jones the option to buy 1,000 shares of Merchant at a strike price of \$50 per share. The market price of a Merchant share is \$50 on January 2, 2020 (the intrinsic value is therefore \$0). On March 31, 2020, the market price for Merchant stock is \$53 per share, and the time value of the option is \$200.

Instructions

- Prepare the journal entry to record the purchase of the call option on January 2, 2020.
- Prepare the journal entry(ies) to recognize the change in the fair value of the call option as of March 31, 2020.
- What was the effect on net income of entering into the derivative transaction for the period January 2 to March 31, 2020?

***E17.25 (LO 6) (Fair Value Hedge)** On January 2, 2020, MacCloud Co. issued a 4-year, \$100,000 note at 6% fixed interest, interest payable semiannually. MacCloud now wants to change the note to a variable-rate note.

As a result, on January 2, 2020, MacCloud Co. enters into an interest rate swap where it agrees to receive 6% fixed and pay LIBOR of 5.7% for the first 6 months on \$100,000. At each 6-month period, the variable rate will be reset. The variable rate is reset to 6.7% on June 30, 2020.

Instructions

- Compute the net interest expense to be reported for this note and related swap transaction as of June 30, 2020.
- Compute the net interest expense to be reported for this note and related swap transaction as of December 31, 2020.

***E17.26 (LO 6) (Cash Flow Hedge)** On January 2, 2020, Parton Company issues a 5-year, \$10,000,000 note at LIBOR, with interest paid annually. The variable rate is reset at the end of each year. The LIBOR rate for the first year is 5.8%.

Parton Company decides it prefers fixed-rate financing and wants to lock in a rate of 6%. As a result, Parton enters into an interest rate swap to pay 6% fixed and receive LIBOR based on \$10 million. The variable rate is reset to 6.6% on January 2, 2021.

Instructions

- Compute the net interest expense to be reported for this note and related swap transactions as of December 31, 2020.
- Compute the net interest expense to be reported for this note and related swap transactions as of December 31, 2021.

***E17.27 (LO 6) (Fair Value Hedge)** Sarazan Company issues a 4-year, 7.5% fixed-rate interest only, nonprepayable \$1,000,000 note payable on December 31, 2019. It decides to change the interest rate from a fixed rate to variable rate and enters into a swap agreement with M&S Corp. The swap agreement specifies that Sarazan will receive a fixed rate at 7.5% and pay variable with settlement dates that match the interest payments on the debt. Assume that interest rates have declined during 2020 and that Sarazan received \$13,000 as an adjustment to interest expense for the settlement at December 31, 2020. The loss

related to the debt (due to interest rate changes) was \$48,000. The value of the swap contract increased \$48,000.

Instructions

- Prepare the journal entry to record the payment of interest expense on December 31, 2020.
- Prepare the journal entry to record the receipt of the swap settlement on December 31, 2020.
- Prepare the journal entry to record the change in the fair value of the swap contract on December 31, 2020.
- Prepare the journal entry to record the change in the fair value of the debt on December 31, 2020.

***E17.28 (LO 5) (Call Option)** On August 15, 2019, Outkast Co. invested idle cash by purchasing a call option on Counting Crows Inc. common shares for \$360. The notional value of the call option is 400 shares, and the option price is \$40. The option expires on January 31, 2020. The following data are available with respect to the call option.

| Date | Market Price of Counting Crows Shares | Time Value of Call Option |
|--------------------|--|------------------------------|
| September 30, 2019 | \$48 per share | \$180 |
| December 31, 2019 | 46 per share | 65 |
| January 15, 2020 | 47 per share | 30 |

Instructions

Prepare the journal entries for Outkast for the following dates.

- Investment in call option on Counting Crows shares on August 15, 2019.
- September 30, 2019—Outkast prepares financial statements.
- December 31, 2019—Outkast prepares financial statements.
- January 15, 2020—Outkast settles the call option on the Counting Crows shares.

***E17.29 (LO 6) (Cash Flow Hedge)** Hart Golf Co. uses titanium in the production of its specialty drivers. Hart anticipates that it will need to purchase 200 ounces of titanium in November 2020, for clubs that will be sold in advance of the spring and summer of 2021. However, if the price of titanium increases, this will increase the cost to produce the clubs, which will result in lower profit margins.

To hedge the risk of increased titanium prices, on May 1, 2020, Hart enters into a titanium futures contract and designates this futures contract as a cash flow hedge of the anticipated titanium purchase. The notional amount of the contract is 200 ounces, and the terms of the contract give Hart the right and obligation to purchase titanium at a price of \$500 per ounce. The price will be good until the contract expires on November 30, 2020.

Assume the following data with respect to the price of the futures contract and the titanium inventory purchase.

| Date | Spot Price for November Delivery |
|--------------------|-------------------------------------|
| May 1, 2020 | \$500 per ounce |
| June 30, 2020 | 520 per ounce |
| September 30, 2020 | 525 per ounce |

Instructions

Present the journal entries for the following dates/transactions.

- May 1, 2020—Inception of futures contract, no premium paid.
- June 30, 2020—Hart prepares financial statements.
- September 30, 2020—Hart prepares financial statements.
- October 5, 2020—Hart purchases 200 ounces of titanium at \$525 per ounce and settles the futures contract.
- December 15, 2020—Hart sells clubs containing titanium purchased in October 2020 for \$250,000. The cost of the finished goods inventory is \$140,000.
- Indicate the amount(s) reported in the income statement related to the futures contract and the inventory transactions on December 31, 2020.

Problems

P17.1 (LO 1) (Debt Securities) Presented below is an amortization schedule related to Spangler Company's 5-year, \$100,000 bond with a 7% interest rate and a 5% yield, purchased on December 31, 2018, for \$108,660.

| Date | Cash Received | Interest Revenue | Bond Premium Amortization | Carrying Amount of Bonds |
|----------|---------------|------------------|---------------------------|--------------------------|
| 12/31/18 | | | | \$108,660 |
| 12/31/19 | \$7,000 | \$5,433 | \$1,567 | 107,093 |
| 12/31/20 | 7,000 | 5,354 | 1,646 | 105,447 |
| 12/31/21 | 7,000 | 5,272 | 1,728 | 103,719 |
| 12/31/22 | 7,000 | 5,186 | 1,814 | 101,905 |
| 12/31/23 | 7,000 | 5,095 | 1,905 | 100,000 |

The following schedule presents a comparison of the amortized cost and fair value of the bonds at year-end.

| | 12/31/19 | 12/31/20 | 12/31/21 | 12/31/22 | 12/31/23 |
|----------------|-----------|-----------|-----------|-----------|-----------|
| Amortized cost | \$107,093 | \$105,447 | \$103,719 | \$101,905 | \$100,000 |
| Fair value | 106,500 | 107,500 | 105,650 | 103,000 | 100,000 |

Instructions

- Prepare the journal entry to record the purchase of these bonds on December 31, 2018, assuming the bonds are classified as held-to-maturity securities.
- Prepare the journal entry(ies) related to the held-to-maturity bonds for 2019.
- Prepare the journal entry(ies) related to the held-to-maturity bonds for 2021.
- Prepare the journal entry(ies) to record the purchase of these bonds, assuming they are classified as available-for-sale.
- Prepare the journal entry(ies) related to the available-for-sale bonds for 2019.
- Prepare the journal entry(ies) related to the available-for-sale bonds for 2021.

P17.2 (LO 1) (Available-for-Sale Debt Securities) On January 1, 2020, Novotna Company purchased \$400,000, 8% bonds of Aguirre Co. for \$369,114. The bonds were purchased to yield 10% interest. Interest is payable semiannually on July 1 and January 1. The bonds mature on January 1, 2025. Novotna Company uses the effective-interest method to amortize discount or premium. On January 1, 2022, Novotna Company sold the bonds for \$370,726 after receiving interest to meet its liquidity needs.

Instructions

- Prepare the journal entry to record the purchase of bonds on January 1. Assume that the bonds are classified as available-for-sale.
- Prepare the amortization schedule for the bonds.
- Prepare the journal entries to record the semiannual interest on July 1, 2020, and December 31, 2020.
- If the fair value of Aguirre bonds is \$372,726 on December 31, 2021, prepare the necessary adjusting entry. (Assume the fair value adjustment balance on December 31, 2020, is a debit of \$3,375.)
- Prepare the journal entry to record the sale of the bonds on January 1, 2022.

P17.3 (LO 1, 2) (Debt and Equity Investments) Cardinal Paz Corp. carries an account in its general ledger called Investments, which contained debits for investment purchases, and no credits, with the following descriptions.

| | | |
|--------------|---|-----------|
| Feb. 1, 2020 | Sharapova Company common stock, \$100 par, 200 shares | \$ 37,400 |
| April 1 | U.S. government bonds, 11%, due April 1, 2030, interest payable April 1 and October 1, 110 bonds of \$1,000 par each | 110,000 |
| July 1 | McGrath Company 12% bonds, par \$50,000, dated March 1, 2020, purchased at 104 plus accrued interest, interest payable annually on March 1, due March 1, 2040 | 54,000 |

Instructions

(Round all computations to the nearest dollar.)

- Prepare entries necessary to classify the amounts into proper accounts, assuming that the debt securities are classified as available-for-sale.

- b. Prepare the entry to record the accrued interest and the amortization of premium on December 31, 2020, using the straight-line method.
- c. The fair values of the investments on December 31, 2020, were:

| | |
|--------------------------------|-----------|
| Sharapova Company common stock | \$ 31,800 |
| U.S. government bonds | 124,700 |
| McGrath Company bonds | 58,600 |

What entry or entries, if any, would you recommend be made?

- d. The U.S. government bonds were sold on July 1, 2021, for \$119,200 plus accrued interest. Give the proper entry.

P17.4 (LO 1) (Debt Investments) Presented below is information taken from a bond investment amortization schedule with related fair values provided. These bonds are classified as available-for-sale.

| | 12/31/20 | 12/31/21 | 12/31/22 |
|----------------|-----------|-----------|-----------|
| Amortized cost | \$491,150 | \$519,442 | \$550,000 |
| Fair value | 497,000 | 509,000 | 550,000 |

Instructions

- Indicate whether the bonds were purchased at a discount or at a premium.
- Prepare the adjusting entry to record the bonds at fair value at December 31, 2020. The Fair Value Adjustment account has a debit balance of \$1,000 prior to adjustment.
- Prepare the adjusting entry to record the bonds at fair value at December 31, 2021.

P17.5 (LO 2) Excel (Equity Securities Entries and Disclosures) Parnevik Company has the following securities in its investment portfolio on December 31, 2020 (all securities were purchased in 2020): (1) 3,000 shares of Anderson Co. common stock which cost \$58,500, (2) 10,000 shares of Munter Ltd. common stock which cost \$580,000, and (3) 6,000 shares of King Company preferred stock which cost \$255,000. The Fair Value Adjustment account shows a credit of \$10,100 at the end of 2020.

In 2021, Parnevik completed the following securities transactions.

- On January 15, sold 3,000 shares of Anderson's common stock at \$22 per share less fees of \$2,150.
- On April 17, purchased 1,000 shares of Castle's common stock at \$33.50 per share plus fees of \$1,980.

On December 31, 2021, the market prices per share of these securities were Munter \$61, King \$40, and Castle \$29. In addition, the accounting supervisor of Parnevik told you that, even though all these securities have readily determinable fair values, Parnevik will not actively trade these securities because the top management intends to hold them for more than one year.

Instructions

- Prepare the entry for the security sale on January 15, 2021.
- Prepare the journal entry to record the security purchase on April 17, 2021.
- Compute the unrealized gains or losses and prepare the adjusting entry for Parnevik on December 31, 2021.
- How should the unrealized gains or losses be reported on Parnevik's income statement and balance sheet?

P17.6 (LO 2) (Equity Securities Entries) McElroy Company has the following portfolio of investment securities at September 30, 2020, its most recent reporting date.

| Investment Securities | Cost | Fair Value |
|--------------------------------------|-----------|------------|
| Horton, Inc. common (5,000 shares) | \$215,000 | \$200,000 |
| Monty, Inc. preferred (3,500 shares) | 133,000 | 140,000 |
| Oakwood Corp. common (1,000 shares) | 180,000 | 179,000 |

On October 10, 2020, the Horton shares were sold at a price of \$54 per share. In addition, 3,000 shares of Patriot common stock were acquired at \$54.50 per share on November 2, 2020. The December 31, 2020, fair values were Monty \$106,000, Patriot \$132,000, and Oakwood \$193,000.

Instructions

Prepare the journal entries to record the sale, purchase, and adjusting entries related to the equity securities in the last quarter of 2020.

P17.7 (LO 1) (Available-for-Sale and Held-to-Maturity Debt Securities Entries) The following information relates to the debt securities investments of Wildcat Company.

1. On February 1, the company purchased 10% bonds of Gibbons Co. having a par value of \$300,000 at 100 plus accrued interest. Interest is payable April 1 and October 1.
2. On April 1, semiannual interest is received.
3. On July 1, 9% bonds of Sampson, Inc. were purchased. These bonds with a par value of \$200,000 were purchased at 100 plus accrued interest. Interest dates are June 1 and December 1.
4. On September 1, bonds with a par value of \$60,000, purchased on February 1, are sold at 99 plus accrued interest.
5. On October 1, semiannual interest is received.
6. On December 1, semiannual interest is received.
7. On December 31, the fair value of the bonds purchased February 1 and July 1 are 95 and 93, respectively.

Instructions

- a. Prepare any journal entries you consider necessary, including year-end entries (December 31), assuming these are available-for-sale securities.
- b. If Wildcat classified these as held-to-maturity investments, explain how the journal entries would differ from those in part (a).

P17.8 (LO 2, 3) (Fair Value and Equity Methods) Brooks Corp. is a medium-sized corporation specializing in quarrying stone for building construction. The company has long dominated the market, at one time achieving a 70% market penetration. During prosperous years, the company's profits, coupled with a conservative dividend policy, resulted in funds available for outside investment. Over the years, Brooks has had a policy of investing idle cash in equity securities. In particular, Brooks has made periodic investments in the company's principal vendor of mining equipment, Norton Industries. Although the firm currently owns 12% of the outstanding common stock of Norton Industries, Brooks does not have significant influence over the operations of Norton Industries.

Cheryl Thomas has recently joined Brooks as assistant controller, and her first assignment is to prepare the 2020 year-end adjusting entries for the accounts that are valued by the "fair value" rule for financial reporting purposes. Thomas has gathered the following information about Brooks' pertinent accounts.

1. Brooks has equity securities related to Delaney Motors and Patrick Electric. During 2020, Brooks purchased 100,000 shares of Delaney Motors for \$1,400,000; these shares currently have a fair value of \$1,600,000. Brooks' investment in Patrick Electric has not been profitable; the company acquired 50,000 shares of Patrick in April 2020 at \$20 per share, a purchase that currently has a value of \$720,000.
2. Prior to 2020, Brooks invested \$22,500,000 in Norton Industries and has not changed its holdings this year. This investment in Norton Industries was valued at \$21,500,000 on December 31, 2019. Brooks' 12% ownership of Norton Industries has a current fair value of \$22,225,000 on December 2020.

Instructions

- a. Prepare the appropriate adjusting entries for Brooks as of December 31, 2020, to reflect the application of the "fair value" rule for the securities described above.
- b. For the securities presented above, describe how the results of the valuation adjustments made in (a) would be reflected in the body of Brooks' 2020 financial statements.
- c. Prepare the entries for the Norton investment, assuming that Brooks owns 25% of Norton's shares. Norton reported income of \$500,000 in 2020 and paid cash dividends of \$100,000.

P17.9 (LO 2, 4) (Gain on Sale of Investments and Comprehensive Income) On January 1, 2020, Acker Inc. had the following balance sheet.

| Acker Inc. | | | |
|---------------------------------------|------------------|--|------------------|
| Balance Sheet | | | |
| As of January 1, 2020 | | | |
| Assets | | Equity | |
| Cash | \$ 50,000 | Common stock | \$260,000 |
| Debt investments (available-for-sale) | 240,000 | Accumulated other comprehensive income | 30,000 |
| Total | <u>\$290,000</u> | Total | <u>\$290,000</u> |

The accumulated other comprehensive income related to unrealized holding gains on available-for-sale debt securities. The fair value of Acker Inc.'s available-for-sale debt securities at December 31, 2020, was \$190,000; its cost was \$140,000. No securities were purchased during the year. Acker Inc.'s income statement for 2020 was as follows. (Ignore income taxes.)

Acker Inc.
Income Statement
For the Year Ended December 31, 2020

| | |
|-----------------------------|-----------------|
| Dividend revenue | \$ 5,000 |
| Gain on sale of investments | <u>30,000</u> |
| Net income | <u>\$35,000</u> |

Instructions

(Assume all transactions during the year were for cash.)

- a. Prepare the journal entry to record the sale of the available-for-sale debt securities in 2020.
- b. Prepare the journal entry to record the Unrealized Holding Gain or Loss for 2020.
- c. Prepare a statement of comprehensive income for 2020.
- d. Prepare a balance sheet as of December 31, 2020.

P17.10 (LO 2) Excel (Equity Investments) Castleman Holdings, Inc. had the following equity investment portfolio at January 1, 2020.

| | | |
|---------------------------------|--------------------------|-----------------|
| Evers Company | 1,000 shares @ \$15 each | \$15,000 |
| Rogers Company | 900 shares @ \$20 each | 18,000 |
| Chance Company | 500 shares @ \$9 each | <u>4,500</u> |
| Equity investments @ cost | | 37,500 |
| Fair value adjustment | | <u>(7,500)</u> |
| Equity investments @ fair value | | <u>\$30,000</u> |

During 2020, the following transactions took place.

1. On March 1, Rogers Company paid a \$2 per share dividend.
2. On April 30, Castleman Holdings, Inc. sold 300 shares of Chance Company for \$11 per share.
3. On May 15, Castleman Holdings, Inc. purchased 100 more shares of Evers Company stock at \$16 per share.
4. At December 31, 2020, the stocks had the following price per share values: Evers \$17, Rogers \$19, and Chance \$8.

During 2021, the following transactions took place.

5. On February 1, Castleman Holdings, Inc. sold the remaining Chance shares for \$8 per share.
6. On March 1, Rogers Company paid a \$2 per share dividend.
7. On December 21, Evers Company declared a cash dividend of \$3 per share to be paid in the next month.
8. At December 31, 2021, the stocks had the following price per share values: Evers \$19 and Rogers \$21.

Instructions

- a. Prepare journal entries for each of the above transactions.
- b. Prepare a partial balance sheet showing the investment-related amounts to be reported at December 31, 2020 and 2021.

P17.11 (LO 2, 4) (Equity Securities—Statement Presentation) Fernandez Corp. invested its excess cash in securities during 2020. As of December 31, 2020, the securities portfolio consisted of the following common stocks.

| Security | Quantity | Cost | Fair Value |
|---------------------|--------------|------------------|------------------|
| Lindsay Jones, Inc. | 1,000 shares | \$ 15,000 | \$ 21,000 |
| Poley Corp. | 2,000 shares | 40,000 | 42,000 |
| Arnold Aircraft | 2,000 shares | <u>72,000</u> | <u>60,000</u> |
| Totals | | <u>\$127,000</u> | <u>\$123,000</u> |

Instructions

- a. What should be reported on Fernandez's December 31, 2020, balance sheet relative to these securities? What should be reported on Fernandez's 2020 income statement?

On December 31, 2021, Fernandez's securities portfolio consisted of the following common stocks.

| Security | Quantity | Cost | Fair Value |
|---------------------|--------------|------------------|------------|
| Lindsay Jones, Inc. | 1,000 shares | \$ 15,000 | \$20,000 |
| Lindsay Jones, Inc. | 2,000 shares | 33,000 | 40,000 |
| Duff Company | 1,000 shares | 16,000 | 12,000 |
| Arnold Aircraft | 2,000 shares | 72,000 | 22,000 |
| | | Totals \$136,000 | \$94,000 |

During the year 2021, Fernandez Corp. sold 2,000 shares of Poley Corp. for \$38,200 and purchased 2,000 more shares of Lindsay Jones, Inc. and 1,000 shares of Duff Company.

- b. What should be reported on Fernandez's December 31, 2021, balance sheet? What should be reported on Fernandez's 2021 income statement?

On December 31, 2022, Fernandez's securities portfolio consisted of the following common stocks.

| Security | Quantity | Cost | Fair Value |
|-----------------|--------------|-----------------|------------|
| Arnold Aircraft | 2,000 shares | \$72,000 | \$82,000 |
| Duff Company | 500 shares | 8,000 | 6,000 |
| | | Totals \$80,000 | \$88,000 |

During the year 2022, Fernandez Corp. sold 3,000 shares of Lindsay Jones, Inc. for \$39,900 and 500 shares of Duff Company at a loss of \$2,700.

- c. What should be reported on the face of Fernandez's December 31, 2022, balance sheet? What should be reported on Fernandez's 2022 income statement?

***P17.12 (LO 5) Excel (Derivative Financial Instrument)** The treasurer of Miller Co. has read on the Internet that the stock price of Wade Inc. is about to take off. In order to profit from this potential development, Miller Co. purchased a call option on Wade common shares on July 7, 2020, for \$240. The call option is for 200 shares (notional value), and the strike price is \$70. (The market price of a share of Wade stock on that date is \$70.) The option expires on January 31, 2021. The following data are available with respect to the call option.

| Date | Market Price of Wade Shares | Time Value of Call Option |
|--------------------|-----------------------------|---------------------------|
| September 30, 2020 | \$77 per share | \$180 |
| December 31, 2020 | 75 per share | 65 |
| January 4, 2021 | 76 per share | 30 |

Instructions

Prepare the journal entries for Miller Co. for the following dates.

- July 7, 2020—Investment in call option on Wade shares.
- September 30, 2020—Miller prepares financial statements.
- December 31, 2020—Miller prepares financial statements.
- January 4, 2021—Miller settles the call option on the Wade shares.

***P17.13 (LO 5) (Derivative Financial Instrument)** Johnstone Co. purchased a put option on Ewing common shares on July 7, 2020, for \$240. The put option is for 200 shares, and the strike price is \$70. (The market price of a share of Ewing stock on that date is \$70.) The option expires on January 31, 2021. The following data are available with respect to the put option.

| Date | Market Price of Ewing Shares | Time Value of Put Option |
|--------------------|------------------------------|--------------------------|
| September 30, 2020 | \$77 per share | \$125 |
| December 31, 2020 | 75 per share | 50 |
| January 31, 2021 | 78 per share | 0 |

Instructions

Prepare the journal entries for Johnstone Co. for the following dates.

- July 7, 2020—Investment in put option on Ewing shares.
- September 30, 2020—Johnstone prepares financial statements.

- c. December 31, 2020—Johnstone prepares financial statements.
- d. January 31, 2021—Put option expires.

***P17.14 (LO 5) (Free-Standing Derivative)** Warren Co. purchased a put option on Echo common shares on January 7, 2020, for \$360. The put option is for 400 shares, and the strike price is \$85 (which equals the price of an Echo share on the purchase date). The option expires on July 31, 2020. The following data are available with respect to the put option.

| Date | Market Price of Echo Shares | Time Value of Put Option |
|----------------|-----------------------------|--------------------------|
| March 31, 2020 | \$80 per share | \$200 |
| June 30, 2020 | 82 per share | 90 |
| July 6, 2020 | 77 per share | 25 |

Instructions

Prepare the journal entries for Warren Co. for the following dates.

- a. January 7, 2020—Investment in put option on Echo shares.
- b. March 31, 2020—Warren prepares financial statements.
- c. June 30, 2020—Warren prepares financial statements.
- d. July 6, 2020—Warren settles the put option on the Echo shares.

***P17.15 (LO 6) Excel (Fair Value Hedge Interest Rate Swap)** On December 31, 2020, Mercantile Corp. had a \$10,000,000, 8% fixed-rate note outstanding, payable in 2 years. It decides to enter into a 2-year swap with Chicago First Bank to convert the fixed-rate debt to variable-rate debt. The terms of the swap indicate that Mercantile will receive interest at a fixed rate of 8% and will pay a variable rate equal to the 6-month LIBOR rate, based on the \$10,000,000 amount. The LIBOR rate on December 31, 2020, is 7%. The LIBOR rate will be reset every 6 months and will be used to determine the variable rate to be paid for the following 6-month period.

Mercantile Corp. designates the swap as a fair value hedge. Assume that the hedging relationship meets all the conditions necessary for hedge accounting. The 6-month LIBOR rate and the swap and debt fair values are as follows.

| Date | 6-Month LIBOR Rate | Swap Fair Value | Debt Fair Value |
|-------------------|--------------------|-----------------|-----------------|
| December 31, 2020 | 7.0% | — | \$10,000,000 |
| June 30, 2021 | 7.5% | (200,000) | 9,800,000 |
| December 31, 2021 | 6.0% | 60,000 | 10,060,000 |

Instructions

- a. Present the journal entries to record the following transactions.
 1. The entry, if any, to record the swap on December 31, 2020.
 2. The entry to record the semiannual debt interest payment on June 30, 2021.
 3. The entry to record the settlement of the semiannual swap amount receivables at 8%, less amount payable at LIBOR, 7%.
 4. The entry to record the change in the fair value of the debt on June 30, 2021.
 5. The entry to record the change in the fair value of the swap at June 30, 2021.
- b. Indicate the amount(s) reported on the balance sheet and income statement related to the debt and swap on December 31, 2020.
- c. Indicate the amount(s) reported on the balance sheet and income statement related to the debt and swap on June 30, 2021.
- d. Indicate the amount(s) reported on the balance sheet and income statement related to the debt and swap on December 31, 2021.

***P17.16 (LO 6) (Cash Flow Hedge)** LEW Jewelry Co. uses gold in the manufacture of its products. LEW anticipates that it will need to purchase 500 ounces of gold in October 2020, for jewelry that will be shipped for the holiday shopping season. However, if the price of gold increases, LEW's cost to produce its jewelry will increase, which would reduce its profit margins.

To hedge the risk of increased gold prices, on April 1, 2020, LEW enters into a gold futures contract and designates this futures contract as a cash flow hedge of the anticipated gold purchase. The notional amount of the contract is 500 ounces, and the terms of the contract give LEW the right and the obligation to purchase gold at a price of \$300 per ounce. The price will be good until the contract expires on October 31, 2020.

Assume the following data with respect to the price of the futures contract and the gold inventory purchase:

| Date | Spot Price for October Delivery |
|--------------------|---------------------------------|
| April 1, 2020 | \$300 per ounce |
| June 30, 2020 | 310 per ounce |
| September 30, 2020 | 315 per ounce |

Instructions

Prepare the journal entries for the following transactions.

- a. April 1, 2020—Inception of the futures contract, no premium paid.
- b. June 30, 2020—LEW Co. prepares financial statements.
- c. September 30, 2020—LEW Co. prepares financial statements.
- d. October 10, 2020—LEW Co. purchases 500 ounces of gold at \$315 per ounce and settles the futures contract.
- e. December 20, 2020—LEW sells jewelry containing gold purchased in October 2020 for \$350,000. The cost of the finished goods inventory is \$200,000.
- f. Indicate the amount(s) reported on the balance sheet and income statement related to the futures contract on June 30, 2020.
- g. Indicate the amount(s) reported in the income statement related to the futures contract and the inventory transactions on December 31, 2020.

***P17.17 (LO 6) (Fair Value Hedge)** On October 15, 2020, Oil Products Co. purchased 4,000 barrels of fuel oil with a cost of \$240,000 (\$60 per barrel). Oil Products is holding this inventory in anticipation of the winter 2021 heating season. Oil Products accounts for its inventory at the lower-of-FIFO-cost-or-net realizable value. To hedge against potential declines in the value of the inventory, Oil Products also purchased a put option on the fuel oil. Oil Products paid an option premium of \$300 for the put option, which gives Oil Products the option to sell 4,000 barrels of fuel oil at a strike price of \$60 per gallon. The option expires on March 1, 2021. The following data are available with respect to the values of the fuel of inventory and the put option.

| Date | Market Price of Fuel Oil | Time Value of Put Option |
|-------------------|--------------------------|--------------------------|
| October 31, 2020 | \$58 per gallon | \$175 |
| November 30, 2020 | 57 per gallon | 105 |
| December 31, 2020 | 54 per gallon | 40 |

Instructions

- a. Prepare the journal entries of Oil Products for the following dates.
 1. October 15, 2020—Oil Products purchases fuel oil and the put option on fuel oil.
 2. October 31, 2020—Oil Products prepares financial statements.
 3. November 30, 2020—Oil Products prepares financial statements.
 4. December 31, 2020—Oil Products prepares financial statements.
- b. Indicate the amount(s) reported on the balance sheet and income statement related to the fuel oil inventory and the put option on November 30, 2020.
- c. Indicate the amount(s) reported on the balance sheet and income statement related to the fuel oil and the put option on December 31, 2020.

Concepts for Analysis

CA17.1 (LO 1) (Issues Raised About Investment Securities) You have just started work for Warren Co. as part of the controller's group involved in current financial reporting problems. Jane Henshaw, controller for Warren, is interested in your accounting background because the company has experienced a series of financial reporting surprises over the last few years. Recently, the controller has learned from the company's auditors that there is authoritative literature that may apply to its investment in securities. She assumes that you are familiar with this pronouncement and asks how the following situations should be reported in the financial statements.

Situation 1: Trading debt securities in the current assets section have a fair value that is \$4,200 lower than cost.

Situation 2: A trading debt security whose fair value is currently less than cost is transferred to the available-for-sale category.

Situation 3: An available-for-sale debt security whose fair value is currently less than cost is classified as noncurrent but is to be reclassified as current.

Situation 4: The company's portfolio of held-to-maturity debt securities consists of the bonds of one company. At the end of the prior year, the fair value of the security was 50% of original cost, and this reduction in fair value was reported as an impairment. However, at the end of the current year, the fair value of the security had appreciated to twice the original cost.

Situation 5: The company has purchased some equity securities that it plans to hold for less than a year. The fair value of the securities is \$7,700 below its cost.

Instructions

What is the effect upon carrying value and earnings for each of the situations above? Assume that these situations are unrelated.

CA17.2 (LO 2) (Equity Securities) Lexington Co. has the following securities outstanding on December 31, 2020 (its first year of operations).

| | Cost | Fair Value |
|-------------------------|-----------------|-----------------|
| Greenspan Corp. stock | \$20,000 | \$19,000 |
| Summerset Company stock | 9,500 | 8,800 |
| Tinkers Company stock | 20,000 | 20,600 |
| | <u>\$49,500</u> | <u>\$48,400</u> |

During 2021, Summerset Company stock was sold for \$9,200, the difference between the \$9,200 and the "fair value" of \$8,800 being recorded as a "Gain on Sale of Investments." The market price of the stock on December 31, 2021, was Greenspan Corp. stock \$19,900; Tinkers Company stock \$20,500.

Instructions

- What justification is there for valuing equity securities at fair value and reporting the unrealized gain or loss as part of net income?
- How should Lexington Co. report this information in its financial statements at December 31, 2020? Explain.
- Did Lexington Co. properly account for the sale of the Summerset Company stock? Explain.
- Are there any additional entries necessary for Lexington Co. at December 31, 2021, to reflect the facts on the financial statements in accordance with generally accepted accounting principles? Explain.

(AICPA adapted)

CA17.3 (LO 1) (Financial Statement Effect of Securities) Presented below are three unrelated situations involving equity securities.

Situation 1: A debt security, whose fair value is currently less than cost, is classified as available-for-sale but is to be reclassified as trading.

Situation 2: A noncurrent held-to-maturity portfolio with an aggregate fair value in excess of cost includes one particular debt security whose fair value has declined to less than one-half of the original cost. The decline in value is considered to be permanent.

Situation 3: The portfolio of trading debt securities has a cost in excess of fair value of \$13,500. The available-for-sale debt portfolio has a fair value in excess of cost of \$28,600.

Instructions

What is the effect upon carrying value and earnings for each of the situations above?

CA17.4 (LO 3) (Investment Accounted for Under the Equity Method) On July 1, 2021, Fontaine Company purchased for cash 40% of the outstanding common stock of Knoblett Company. Both Fontaine Company and Knoblett Company have a December 31 year-end. Knoblett Company, whose common stock is actively traded in the over-the-counter market, reported its total net income for the year to Fontaine Company and also paid cash dividends on November 15, 2021, to Fontaine Company and its other stockholders.

Instructions

How should Fontaine Company report the above facts in its December 31, 2021, balance sheet and its income statement for the year then ended? Discuss the rationale for your answer.

(AICPA adapted)

CA17.5 (LO 3) Writing (Equity Investment) On July 1, 2020, Selig Company purchased for cash 30% of the outstanding common stock of Spoor Corporation. Both Selig and Spoor have a December 31

year-end. Spoor Corporation, whose common stock is actively traded on the NASDAQ exchange, paid a cash dividend on November 15, 2020, to Selig Company and its other stockholders. It also reported its total net income for the year of \$920,000 to Selig Company.

Instructions

Prepare a one-page memorandum of instructions on how Selig Company should report the above facts in its December 31, 2020, balance sheet and its 2020 income statement. In your memo, identify and describe the method of valuation you recommend. Provide rationale where you can. Address your memo to the chief accountant at Selig Company.

CA17.6 (LO 4) Ethics (Fair Value) Addison Manufacturing holds a large portfolio of debt securities as an investment. The fair value of the portfolio is greater than its original cost, even though some debt securities have decreased in value. Sam Beresford, the financial vice president, and Angie Nielson, the controller, are near year-end in the process of classifying for the first time this securities portfolio in accordance with GAAP. Beresford wants to classify those securities that have increased in value during the period as trading securities in order to increase net income this year. He wants to classify all the securities that have decreased in value as held-to-maturity.

Nielson disagrees. She wants to classify those debt securities that have decreased in value as trading securities and those that have increased in value as held-to-maturity. She contends that the company is having a good earnings year and that recognizing the losses will help to smooth the income this year. As a result, the company will have built-in gains for future periods when the company may not be as profitable.

Instructions

Answer the following questions.

- Will classifying the portfolio as each proposes actually have the effect on earnings that each says it will?
- Is there anything unethical in what each of them proposes? Who are the stakeholders affected by their proposals?
- Assume that Beresford and Nielson properly classify the entire portfolio into trading, available-for-sale, and held-to-maturity categories. But then each proposes to sell just before year-end the securities with gains or with losses, as the case may be, to accomplish their effect on earnings. Is this unethical?

Using Your Judgment

Financial Reporting Problem

The Procter & Gamble Company (P&G)

The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

- What investments does P&G report in 2017, and how are these investments accounted for in its financial statements?
- How are P&G's investments valued? How does P&G determine fair value?
- How does P&G use derivative financial instruments?

Comparative Analysis Case

The Coca-Cola Company and PepsiCo, Inc.

The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- Based on the information contained in these financial statements, determine each of the following for each company.

1. Cash used in (for) investing activities during 2017 (from the statement of cash flows).
 2. What was the total other comprehensive income for the year 2017?
 3. What was the unrealized gains or losses reported as part of other comprehensive income?
- b. Identify from Coca-Cola's December 31, 2017, balance sheet the investments it reported as being accounted for under the equity method.
- c. In Note 3, what is Coca-Cola's policy regarding its cost method investments?

Financial Statement Analysis Case

Union Planters

Union Planters is a Tennessee bank holding company (that is, a corporation that owns banks). (Union Planters is now part of **Regions Bank**.) Union Planters manages \$32 billion in assets, the largest of which is its loan portfolio of \$19 billion. In addition to its loan portfolio, however, like other banks it has significant debt investments. The nature of these investments varies from short-term to long-term. As a consequence, consistent with the requirements of accounting rules, Union Planters reports its investments in two different categories—trading and available-for-sale. The following facts were found in a recent Union Planters' annual report.

| (all dollars in millions) | Amortized Cost | Gross Unrealized Gains | Gross Unrealized Losses | Fair Value |
|-------------------------------|-------------------|---------------------------|----------------------------|---------------|
| Trading account assets | \$ 275 | — | — | \$ 275 |
| Securities available for sale | 8,209 | \$108 | \$15 | 8,302 |
| Net income | | | | 224 |
| Net securities gains (losses) | | | | (9) |

Instructions

- a. Why do you suppose Union Planters purchases investments, rather than simply making loans? Why does it purchase investments that vary in nature both in terms of their maturities and in type (debt versus stock)?
- b. How must Union Planters account for its investments in each of the two categories?
- c. In what ways does classifying investments into two different categories assist investors in evaluating the profitability of a company like Union Planters?
- d. Suppose that the management of Union Planters was not happy with its net income for the year. What step could it have taken with its investment portfolio that would have definitely increased reported profit? How much could it have increased reported profit? Why do you suppose it chose not to do this?

Accounting, Analysis, and Principles

Instar Company has several investments in the securities of other companies. The following information regarding these investments is available at December 31, 2020.

1. Instar holds bonds issued by Dorsel Corp. The bonds have an amortized cost of \$320,000 and their fair value at December 31, 2020, is \$400,000. Instar intends to hold the bonds until they mature on December 31, 2028.
2. Instar has invested idle cash in the equity securities of several publicly traded companies. Instar intends to sell these securities during the first quarter of 2021, when it will need the cash to acquire seasonal inventory. These equity securities have a cost basis of \$800,000 and a fair value of \$920,000 at December 31, 2020.
3. Instar has an ownership stake in one of the companies that supplies Instar with various components Instar uses in its products. Instar owns 6% of the common stock of the supplier, does not have any representation on the supplier's board of directors, does not exchange any personnel with the supplier, and does not consult with the supplier on any of the supplier's operating, financial, or strategic decisions. The cost basis of the investment in the supplier is \$1,200,000 and the fair value of the investment at December 31, 2020, is \$1,550,000. Instar does not intend to sell the investment in the foreseeable future. The supplier reported net income of \$80,000 for 2020 and paid no dividends.
4. Instar purchased 25% of the stock of Slobbaer Co. for \$900,000. Instar has significant influence over the operating activities of Slobbaer Co. During 2020, Slobbaer Co. reported net income of \$300,000 and paid a dividend of \$100,000.

Accounting

- a. Determine how each of the investments described above should be classified and accounted for.
- b. Prepare any December 31, 2020, journal entries needed for Instar relating to Instar's various investments in other companies. Assume 2020 is Instar's first year of operations.

Analysis

What is the effect on Instar's 2020 net income (as reported on Instar's income statement) of Instar's investments in other companies?

Principles

Briefly explain the different rationales for the different accounting and reporting rules for different types of investments in the securities of other companies.

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

- CE17.1** Access the glossary ("Master Glossary") to answer the following.
- a. What are trading securities?
 - b. What is the definition of "holding gain or loss"?
 - c. What is a cash flow hedge?
 - d. What is a fair value hedge?
- CE17.2** What guidance does the SEC give for disclosures regarding accounting policies used for derivatives?
- CE17.3** When would an investor discontinue applying the equity method in an investment? Are there any exceptions to this rule?
- CE17.4** For balance sheet purposes, can the fair value of a derivative in a loss position be netted against the fair value of a derivative in a gain position?

Codification Research Case

Your client, Cascade Company, is planning to invest some of its excess cash in 5-year revenue bonds issued by the county and in the

stock of one of its suppliers, Teton Co. Teton's shares trade on the over-the-counter market. The company would like you to conduct some research on the accounting for these investments.

Instructions

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

- Since the Teton shares do not trade on one of the large stock markets, Cascade argues that the fair value of this investment is not readily available. According to the authoritative literature, when is the fair value of a security "readily determinable"?
- To avoid volatility in their financial statements due to fair value adjustments, Cascade debated whether the bond investment

could be classified as held-to-maturity; Cascade is pretty sure it will hold the bonds for 5 years. How close to maturity could Cascade sell an investment and still classify it as held-to-maturity?

- What disclosures must be made for any sale or transfer from securities classified as held-to-maturity?

IFRS Insights

LEARNING OBJECTIVE 9

Compare the accounting for investments under GAAP and IFRS.

The accounting for investments is discussed in *IAS 27* ("Consolidated and Separate Financial Statements"), *IAS 28* ("Accounting for Investments in Associates"), *IAS 39* ("Financial Instruments: Recognition and Measurement"), and *IFRS 9* ("Financial Instruments"). Until recently, when the IASB issued *IFRS 9*, the accounting and reporting for investments under IFRS and GAAP were for the most part very similar. However, *IFRS 9* introduces new investment classifications and increases the situations when investments are accounted for at fair value, with gains and losses recorded in income.

Relevant Facts

Following are the key similarities and differences between GAAP and IFRS related to investments.

Similarities

- GAAP and IFRS use similar classifications for financial assets: cash, loans and receivables, investments, and derivatives.
- Both IFRS and GAAP require that financial assets be sorted into specific categories for measurement and classification purposes.
- Held-to-maturity (GAAP) and held-for-collection (IFRS) investments are accounted for at amortized cost. Gains and losses on some investments are reported in other comprehensive income.
- Amortized cost or fair value is used depending upon the classification of the financial instrument.
- The definitions of amortized cost and fair value are the same.
- Both GAAP and IFRS use the same test to determine whether the equity method of accounting should be used, that is, significant influence with a general guideline of over 20 percent ownership.
- GAAP and IFRS are similar in the accounting for the fair value option. That is, the option to use the fair value method must be made at initial recognition, the selection is irrevocable, and gains and losses are reported as part of income.

Differences

- While GAAP classifies debt investments as trading, available-for-sale, and held-to-maturity, IFRS classifies debt investments as held-for-collection (debt investments) and trading.
- GAAP requires that all changes in fair value for **all equity securities** be reported as part of income. IFRS requires that changes in fair value for **non-trading equity securities** be reported as part of other comprehensive income.

- While the measurement of impairments is similar under GAAP and IFRS, GAAP does not permit the reversal of an impairment charge related to held-to-maturity debt investments and equity investments. IFRS allows reversals of impairments of held-for-collection investments.
- While GAAP and IFRS are similar in the accounting for the fair value option, one difference is that GAAP permits the fair value option for equity method investments; IFRS does not.

About the Numbers

Accounting for Financial Assets

A **financial asset** is cash, an equity investment of another company (e.g., ordinary or preference shares), or a contractual right to receive cash from another party (e.g., loans, receivables, and bonds). The accounting for cash is relatively straightforward and is discussed in Chapter 7. The accounting and reporting for equity and debt investments, as discussed in the opening story, is extremely contentious, particularly in light of the credit crisis in the latter part of 2008.

IFRS requires that companies determine how to measure their financial assets based on two criteria:

- The company's business model for managing its financial assets; and
- The contractual cash flow characteristics of the financial asset.

If a company has (1) a business model whose objective is to hold assets in order to collect contractual cash flows and (2) the contractual terms of the financial asset provides specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding, then the company should use amortized cost.

For example, assume that **Mitsubishi** purchases a bond investment that it intends to hold to maturity. Its business model for this type of investment is to collect interest and then principal at maturity. The payment dates for the interest rate and principal are stated on the bond. In this case, Mitsubishi accounts for the investment at amortized cost. If, on the other hand, Mitsubishi purchased the bonds as part of a trading strategy to speculate on interest rate changes (a trading investment), then the debt investment is reported at fair value. As a result, only debt investments such as receivables, loans, and bond investments that meet the two criteria above are recorded at amortized cost. All other debt investments are recorded and reported at fair value.

Equity investments are generally recorded and reported at fair value. Equity investments do not have a fixed interest or principal payment schedule and therefore cannot be accounted for at amortized cost. In summary, companies account for investments based on the type of security, as indicated in **Illustration IFRS17.1**.

ILLUSTRATION IFRS17.1 Summary of Investment Accounting Approaches

| Type of Investment | Assessment of Accounting Criteria | Valuation Approach |
|--------------------|---|--------------------|
| Debt | Meets business model (held-for-collection) and contractual cash flow tests. | Amortized cost |
| | Does not meet the business model test (not held-for-collection). | Fair value |
| Equity | Does not meet contractual cash flow test. | Fair value |
| | Exercises some control. | Equity method |

Debt Investments

Debt Investments—Amortized Cost Only debt investments can be measured at amortized cost. If a company like **Carrefour** makes an investment in the bonds of **Nokia**, it will receive contractual cash flows of interest over the life of the bonds and repayment of the principal at maturity. If it is Carrefour's strategy to hold this investment in order to receive these cash flows over the life of the bond, it has a held-for-collection strategy and it will measure the investment at amortized cost.⁴⁴

⁴⁴Classification as held-for-collection does not mean the security must be held to maturity. For example, a company may sell an investment before maturity if (1) the security does not meet the company's investment strategy (e.g., the company has a policy to invest in only AAA-rated bonds but the bond investment has a decline in its credit rating), (2) a company changes its strategy to invest only in securities within a certain maturity range, or (3) the company needs to sell a security to fund certain capital expenditures. However, if a company begins trading held-for-collection investments on a regular basis, it should assess whether such trading is consistent with the held-for-collection classification.

Example: Debt Investment at Amortized Cost. To illustrate the accounting for a debt investment at amortized cost, assume that Robinson Company purchased \$100,000 of 8 percent bonds of Evermaster Corporation on January 1, 2020, at a discount, paying \$92,278. The bonds mature January 1, 2025, and yield 10 percent; interest is payable each July 1 and January 1. Robinson records the investment as follows.

| January 1, 2020 | | |
|------------------|--|--------|
| Debt Investments | | 92,278 |
| Cash | | 92,278 |

As indicated in Chapter 14, companies must amortize premiums or discounts using the **effective-interest method**. They apply the effective-interest method to bond investments in a way similar to that for bonds payable. To compute interest revenue, companies compute the effective-interest rate or yield at the time of investment and apply that rate to the beginning carrying amount (book value) for each interest period. The investment carrying amount is increased by the amortized discount or decreased by the amortized premium in each period.

Illustration IFRS17.2 shows the effect of the discount amortization on the interest revenue that Robinson records each period for its investment in Evermaster bonds.

| 8% Bonds Purchased to Yield 10% | | | | |
|---------------------------------|-----------------------|-----------------------|----------------------------------|--------------------------------|
| Date | Cash Received | Interest Revenue | Bond Discount Amortization | Carrying Amount of Bonds |
| 1/1/20 | | | | \$ 92,278 |
| 7/1/20 | \$ 4,000 ^a | \$ 4,614 ^b | \$ 614 ^c | 92,892 ^d |
| 1/1/21 | 4,000 | 4,645 | 645 | 93,537 |
| 7/1/21 | 4,000 | 4,677 | 677 | 94,214 |
| 1/1/22 | 4,000 | 4,711 | 711 | 94,925 |
| 7/1/22 | 4,000 | 4,746 | 746 | 95,671 |
| 1/1/23 | 4,000 | 4,783 | 783 | 96,454 |
| 7/1/23 | 4,000 | 4,823 | 823 | 97,277 |
| 1/1/24 | 4,000 | 4,864 | 864 | 98,141 |
| 7/1/24 | 4,000 | 4,907 | 907 | 99,048 |
| 1/1/25 | 4,000 | 4,952 | 952 | 100,000 |
| | \$40,000 | \$47,722 | \$7,722 | |

^a\$4,000 = \$100,000 × .08 × ½
^b\$4,614 = \$92,278 × .10 × ½
^c\$614 = \$4,614 – \$4,000
^d\$92,892 = \$92,278 + \$614

ILLUSTRATION IFRS17.2

Schedule of Interest Revenue and Bond Discount Amortization—Effective- Interest Method

Robinson records the receipt of the first semiannual interest payment on July 1, 2020 (using the data in Illustration IFRS17.2), as follows.

| July 1, 2020 | | |
|------------------|--|-------|
| Cash | | 4,000 |
| Debt Investments | | 614 |
| Interest Revenue | | 4,614 |

Because Robinson is on a calendar-year basis, it accrues interest and amortizes the discount at December 31, 2020, as follows.

| December 31, 2020 | | |
|---------------------|--|-------|
| Interest Receivable | | 4,000 |
| Debt Investments | | 645 |
| Interest Revenue | | 4,645 |

Again, Illustration IFRS17.2 shows the interest and amortization amounts. Thus, the accounting for held-for-collection investments in IFRS is the same as held-to-maturity investments under GAAP.

Debt Investments—Fair Value In some cases, companies both manage and evaluate investment performance on a fair value basis. In these situations, these investments are managed and evaluated based on a documented risk-management or investment strategy based on fair value information. For example, some companies often hold debt investments with the intention of selling them in a short period of time.

These debt investments are often referred to as **trading investments** because companies frequently buy and sell these investments to generate profits in short-term differences in price.

Companies that account for and report debt investments at fair value follow the same accounting entries as debt investments held-for-collection during the reporting period. That is, they are recorded at amortized cost. However, **at each reporting date, companies adjust the amortized cost to fair value, with any unrealized holding gain or loss reported as part of net income (fair value method)**. An **unrealized holding gain or loss** is the net change in the fair value of a debt investment from one period to another.

Example: Debt Investment at Fair Value. To illustrate the accounting for debt investments using the fair value approach, assume the same information as in our previous illustration for Robinson Company. Recall that Robinson Company purchased \$100,000 of 8 percent bonds of Evermaster Corporation on January 1, 2020, at a discount, paying \$92,278.⁴⁵ The bonds mature January 1, 2025, and yield 10 percent; interest is payable each July 1 and January 1.

The journal entries in 2020 are exactly the same as those for amortized cost. These entries are as follows.

| | | |
|--------------------------|--------|--------|
| January 1, 2020 | | |
| Debt Investments | 92,278 | |
| Cash | | 92,278 |
| July 1, 2020 | | |
| Cash | 4,000 | |
| Debt Investments | 614 | |
| Interest Revenue | | 4,614 |
| December 31, 2020 | | |
| Interest Receivable | 4,000 | |
| Debt Investments | 645 | |
| Interest Revenue | | 4,645 |

Again, Illustration IFRS17.2 shows the interest and amortization amounts. If the debt investment is held-for-collection, no further entries are necessary. To apply the fair value approach, Robinson determines that, due to a decrease in interest rates, the fair value of the debt investment increased to \$95,000 at December 31, 2020. Comparing the fair value with the carrying amount of these bonds at December 31, 2020, Robinson has an unrealized holding gain of \$1,463, as shown in **Illustration IFRS17.3**.

ILLUSTRATION IFRS17.3
Computation of Unrealized Gain on Fair Value Debt Investment (2020)

| | |
|---|-----------------|
| Fair value at December 31, 2020 | \$95,000 |
| Amortized cost at December 31, 2020 (per Illustration IFRS17.2) | <u>93,537</u> |
| Unrealized holding gain or (loss) | <u>\$ 1,463</u> |

Robinson therefore makes the following entry to record the adjustment of the debt investment to fair value at December 31, 2020.

| | | |
|--|-------|-------|
| Fair Value Adjustment | 1,463 | |
| Unrealized Holding Gain or Loss—Income | | 1,463 |

Robinson uses a valuation account (**Fair Value Adjustment**) instead of debiting Debt Investments to record the investment at fair value. The use of the Fair Value Adjustment account enables Robinson to maintain a record at amortized cost in the accounts. Because the valuation account has a debit balance, in this case the fair value of Robinson’s debt investment is higher than its amortized cost.

The Unrealized Holding Gain or Loss—Income account is reported in the other income and expense section of the income statement as part of net income. This account is closed to net income each period. The Fair Value Adjustment account is not closed each period and is simply adjusted each period to its proper valuation. The Fair Value Adjustment balance is not shown on the statement of financial position but is simply used to restate the debt investment account to fair value.

⁴⁵Companies may incur brokerage and transaction costs in purchasing securities. For investments accounted for at fair value (both debt and equity), IFRS requires that these costs be recorded in net income as other income and expense and not as an adjustment to the carrying value of the investment.

Robinson reports its investment in Evermaster bonds in its December 31, 2020, financial statements as shown in **Illustration IFRS17.4**.

| Statement of Financial Position | |
|--|----------|
| Current assets | |
| Interest receivable | \$ 4,000 |
| Debt investments (trading) | 95,000 |
| Income Statement | |
| Other income and expense | |
| Interest revenue (\$4,614 + \$4,645) | \$ 9,259 |
| Unrealized holding gain or (loss) | 1,463 |

ILLUSTRATION IFRS17.4**Financial Statement Presentation of Debt Investments at Fair Value**

As you can see from this example, the accounting for trading debt investments under IFRS is the same as GAAP.

Equity Investments

As in GAAP, under IFRS, the degree to which one corporation (**investor**) acquires an interest in the shares of another corporation (**investee**) generally determines the accounting treatment for the investment subsequent to acquisition. To review, the classification of such investments depends on the percentage of the investee voting shares that is held by the investor:

1. Holdings of less than 20 percent (**fair value method**)—investor has passive interest.
2. Holdings between 20 percent and 50 percent (**equity method**)—investor has significant influence.
3. Holdings of more than 50 percent (**consolidated statements**)—investor has controlling interest.

The accounting and reporting for equity investments therefore depend on the level of influence and the type of security involved, as shown in **Illustration IFRS17.5**.

| Category | Valuation | Unrealized Holding Gains or Losses | Other Income Effects |
|-------------------------------------|---------------|--|---|
| Holdings less than 20% | | | |
| 1. Trading | Fair value | Recognized in net income | Dividends declared; gains and losses from sale. |
| 2. Non-Trading | Fair value | Recognized in “Other comprehensive income” (OCI) and as separate component of equity | Dividends declared; gains and losses from sale. |
| Holdings between 20% and 50% | Equity | Not recognized | Proportionate share of investee’s net income. |
| Holdings more than 50% | Consolidation | Not recognized | Not applicable. |

ILLUSTRATION IFRS17.5**Accounting and Reporting for Equity Investments by Category**

Equity Investments at Fair Value When an investor has an interest of less than 20 percent, it is presumed that the investor has little or no influence over the investee. As indicated in Illustration IFRS17.5, there are two classifications for holdings less than 20 percent. Under IFRS, the presumption is that equity investments are held-for-trading. That is, companies hold these securities to profit from price changes. As with debt investments that are held-for trading, the general accounting and reporting rule for these investments is to value the securities at fair value and record unrealized gains and losses in net income (**fair value method**).⁴⁶

⁴⁶Fair value at initial recognition is the transaction price (exclusive of brokerage and other transaction costs).

Subsequent fair value measurements should be based on market prices, if available. For non-traded investments, a valuation technique based on discounted expected cash flows can be used to develop a fair value estimate. While IFRS requires that all equity investments be measured at fair value, in certain limited cases, cost may be an appropriate estimate of fair value for an equity investment.

However, some equity investments are held for purposes other than trading. For example, a company may be required to hold an equity investment in order to sell its products in a particular area. In this situation, the recording of unrealized gains and losses in income, as is required for trading investments, is not indicative of the company's performance with respect to this investment. As a result, IFRS allows companies to classify some equity investments as non-trading. **Non-trading equity investments** are recorded at fair value on the statement of financial position, with unrealized gains and losses reported in other comprehensive income.

Example: Equity Investment (Income). Upon acquisition, companies record equity investments at fair value. To illustrate, assume that on November 3, 2020, Republic Corporation purchased ordinary shares of three companies, each investment representing less than a 20 percent interest.

| | Cost |
|---------------------------|------------------|
| Burberry | \$259,700 |
| Nestlé | 317,500 |
| St. Regis Pulp Co. | 141,350 |
| Total cost | <u>\$718,550</u> |

Republic records these investments as follows.

| November 3, 2020 | | |
|--------------------|---------|---------|
| Equity Investments | 718,550 | |
| Cash | | 718,550 |

On December 6, 2020, Republic receives a cash dividend of \$4,200 on its investment in the ordinary shares of Nestlé. It records the cash dividend as follows.

| December 6, 2020 | | |
|------------------|-------|-------|
| Cash | 4,200 | |
| Dividend Revenue | | 4,200 |

All three of the investee companies reported net income for the year, but only Nestlé declared and paid a dividend to Republic. But, recall that when an investor owns less than 20 percent of the shares of another corporation, it is presumed that the investor has relatively little influence on the investee. As a result, **net income of the investee is not a proper basis for recognizing income from the investment by the investor.** Why? Because the increased net assets resulting from profitable operations may be permanently retained for use in the investee's business. Therefore, **the investor recognizes net income only when the investee declares cash dividends.**

At December 31, 2020, Republic's equity investment portfolio has the carrying value and fair value shown in **Illustration IFRS17.6**.

ILLUSTRATION IFRS17.6
Computation of Fair Value Adjustment—Equity Investment Portfolio (2020)

| Equity Investment Portfolio December 31, 2020 | | | |
|--|------------------|------------------|--------------------------|
| Investments | Carrying Value | Fair Value | Unrealized Gain (Loss) |
| Burberry | \$259,700 | \$275,000 | \$ 15,300 |
| Nestlé | 317,500 | 304,000 | (13,500) |
| St. Regis Pulp Co. | 141,350 | 104,000 | (37,350) |
| Total of portfolio | <u>\$718,550</u> | <u>\$683,000</u> | (35,550) |
| Previous fair value adjustment balance | | | -0- |
| Fair value adjustment—Cr. | | | <u><u>\$(35,550)</u></u> |

For Republic's equity investment portfolio, the gross unrealized gains are \$15,300, and the gross unrealized losses are \$50,850 (\$13,500 + \$37,350), resulting in a net unrealized loss of \$35,550. The fair value of the equity investment portfolio is below cost by \$35,550.

As with **debt** investments, Republic records the net unrealized gains and losses related to changes in the fair value of **equity** investments in an Unrealized Holding Gain or Loss—Income account. Republic

reports this amount as other income and expense. In this case, Republic prepares an adjusting entry debiting the Unrealized Holding Gain or Loss—Income account and crediting the Fair Value Adjustment account to record the decrease in fair value and to record the loss as follows.

| December 31, 2020 | | |
|--|--------|--------|
| Unrealized Holding Gain or Loss—Income | 35,550 | |
| Fair Value Adjustment | | 35,550 |

On January 23, 2021, Republic sold all of its Burberry ordinary shares, receiving \$287,220. **Illustration IFRS17.7** shows the computation of the realized gain on the sale.

| | |
|--------------------------------|-------------------------|
| Net proceeds from sale | \$287,220 |
| Cost of Burberry shares | <u>259,700</u> |
| Gain on sale of shares | <u>\$ 27,520</u> |

ILLUSTRATION IFRS17.7
Computation of Gain on Sale
of Burberry Shares

Republic records the sale as follows.

| January 23, 2021 | | |
|-----------------------------------|---------|---------|
| Cash | 287,220 | |
| Equity Investments | | 259,700 |
| Gain on Sale of Equity Investment | | 27,520 |

As indicated in this example, the fair value method accounting for trading equity investments under IFRS is the same as GAAP for trading equity investments.

Example: Equity Investments (OCI). The accounting entries to record non-trading equity investments are the same as for trading equity investments, except for recording the unrealized holding gain or loss. For non-trading equity investments, companies **report the unrealized holding gain or loss as other comprehensive income (OCI)**. Thus, the account titled Unrealized Holding Gain or Loss—Equity is used.

To illustrate, assume that on December 10, 2020, Republic Corporation purchased \$20,750 of 1,000 ordinary shares of Hawthorne Company for \$20.75 per share (which represents less than a 20 percent interest). Hawthorne is a distributor for Republic products in certain locales, the laws of which require a minimum level of share ownership of a company in that region. The investment in Hawthorne meets this regulatory requirement. As a result, Republic accounts for this investment at fair value, with unrealized gains and losses recorded in OCI.⁴⁷ Republic records this investment as follows.

| December 10, 2020 | | |
|--------------------|--------|--------|
| Equity Investments | 20,750 | |
| Cash | | 20,750 |

On December 27, 2020, Republic receives a cash dividend of \$450 on its investment in the ordinary shares of Hawthorne Company. It records the cash dividend as follows.

| December 27, 2020 | | |
|-------------------|-----|-----|
| Cash | 450 | |
| Dividend Revenue | | 450 |

Similar to the accounting for trading investments, when an investor owns less than 20 percent of the ordinary shares of another corporation, it is presumed that the investor has relatively little influence on the investee. Therefore, **the investor earns income when the investee declares cash dividends.**

At December 31, 2020, Republic's investment in Hawthorne has the carrying value and fair value shown in **Illustration IFRS17.8**.

⁴⁷The classification of an equity investment as non-trading is irrevocable. This approach is designed to provide some discipline to the application of the non-trading classification, which allows unrealized gains and losses to bypass net income.

ILLUSTRATION IFRS17.8**Computation of Fair Value Adjustment—Non-Trading Equity Investment (2020)**

| Non-Trading Equity Investment | Carrying Value | Fair Value | Unrealized Gain (Loss) |
|--|----------------|------------|------------------------|
| Hawthorne Company | \$20,750 | \$24,000 | \$3,250 |
| Previous fair value adjustment balance | | | <u>0</u> |
| Fair value adjustment (Dr.) | | | <u>\$3,250</u> |

For Republic's non-trading investment, the unrealized gain is \$3,250. That is, the fair value of the Hawthorne investment exceeds cost by \$3,250. Because Republic has classified this investment as non-trading, Republic records the unrealized gains and losses related to changes in the fair value of this non-trading **equity** investment in an Unrealized Holding Gain or Loss—Equity account. Republic reports this amount as **a part of other comprehensive income and as a component of accumulated other comprehensive income (reported in equity) until realized**. In this case, Republic prepares an adjusting entry crediting the Unrealized Holding Gain or Loss—Equity account and debiting the Fair Value Adjustment account to record the decrease in fair value and to record the loss as follows.

| December 31, 2020 | | |
|--|-------|-------|
| Fair Value Adjustment | 3,250 | |
| Unrealized Holding Gain or Loss—Equity | | 3,250 |

Republic reports its equity investments in its December 31, 2020, financial statements as shown in **Illustration IFRS17.9**.

ILLUSTRATION IFRS17.9**Financial Statement Presentation of Equity Investments at Fair Value (2020)**

| Statement of Financial Position | |
|--|----------|
| Investments | |
| Equity investments (non-trading) | \$24,000 |
| Equity | |
| Accumulated other comprehensive gain | \$ 3,250 |
| Statement of Comprehensive Income | |
| Other income and expense | |
| Dividend revenue | \$ 450 |
| Other comprehensive income | |
| Unrealized holding gain | \$ 3,250 |

During 2021, sales of Republic products through Hawthorne as a distributor did not meet management's goals. As a result, Republic withdrew from these markets and on December 20, 2021, Republic sold all of its Hawthorne Company ordinary shares, receiving net proceeds of \$22,500. **Illustration IFRS17.10** shows the computation of the realized gain on the sale.

ILLUSTRATION IFRS17.10**Computation of Gain on Sale of Shares**

| | |
|-------------------------------|------------------------|
| Net proceeds from sale | \$22,500 |
| Cost of Hawthorne shares | <u>20,750</u> |
| Gain on sale of shares | <u>\$ 1,750</u> |

Republic records the sale as follows.

| December 20, 2021 | | |
|-----------------------------------|--------|--------|
| Cash | 22,500 | |
| Equity Investments | | 20,750 |
| Gain on Sale of Equity Investment | | 1,750 |

Because Republic no longer holds any equity investments, it makes the following entry to eliminate the Fair Value Adjustment account.

| December 31, 2021 | | |
|--|-------|-------|
| Unrealized Holding Gain or Loss—Equity | 3,250 | |
| Fair Value Adjustment | | 3,250 |

In summary, the accounting for non-trading equity investments deviates from the general provisions for equity investments. The IASB noted that while fair value provides the most useful information about investments in equity investments, recording unrealized gains or losses in other comprehensive income is more representative for non-trading equity investments.

Impairments

A company should evaluate every held-for-collection investment, at each reporting date, to determine if it has suffered **impairment**—a loss in value such that the fair value of the investment is below its carrying value.⁴⁸ For example, if an investee experiences a bankruptcy or a significant liquidity crisis, the investor may suffer a permanent loss. **If the company determines that an investment is impaired, it writes down the amortized cost basis of the individual security to reflect this loss in value.** The company accounts for the write-down as a realized loss, and it includes the amount in net income.

For debt investments, a company uses the impairment test to determine whether “it is probable that the investor will be unable to collect all amounts due according to the contractual terms.” If an investment is impaired, the company should measure the loss due to the **impairment**. This impairment loss is calculated as the difference between the carrying amount plus accrued interest and the expected future cash flows discounted at the investment’s historical effective-interest rate.

Example: Impairment Loss At December 31, 2019, Mayhew Company has a debt investment in Bellovary Inc., purchased at par for \$200,000. The investment has a term of four years, with annual interest payments at 10 percent, paid at the end of each year (the historical effective-interest rate is 10 percent). This debt investment is classified as held-for-collection. Unfortunately, Bellovary is experiencing significant financial difficulty and indicates that it will be unable to make all payments according to the contractual terms. Mayhew uses the present value method for measuring the required impairment loss. **Illustration IFRS17.11** shows the cash flow schedule prepared for this analysis.

| Dec. 31 | Contractual Cash Flows | Expected Cash Flows | Loss of Cash Flows |
|------------------|---------------------------|------------------------|-----------------------|
| 2020 | \$ 20,000 | \$ 16,000 | \$ 4,000 |
| 2021 | 20,000 | 16,000 | 4,000 |
| 2022 | 20,000 | 16,000 | 4,000 |
| 2023 | 220,000 | 216,000 | 4,000 |
| Total cash flows | <u>\$280,000</u> | <u>\$264,000</u> | <u>\$16,000</u> |

ILLUSTRATION IFRS17.11
Investment Cash Flows

As indicated, the expected cash flows of \$264,000 are less than the contractual cash flows of \$280,000. The amount of the impairment to be recorded equals the difference between the recorded investment of \$200,000 and the present value of the expected cash flows, as shown in **Illustration IFRS17.12**.

| | | |
|---|---------------|-------------------------|
| Recorded investment | | \$200,000 |
| Less: Present value of \$200,000 due in 4 years at 10% (Table 6.2); $FV(PVF_{4,10\%})$; $(\$200,000 \times .68301)$ | \$136,602 | |
| Present value of \$16,000 interest receivable annually for 4 years at 10% (Table 6.4); $R(PVF-OA_{4,10\%})$; $(\$16,000 \times 3.16986)$ | <u>50,718</u> | <u>187,320</u> |
| Loss on impairment | | <u>\$ 12,680</u> |

ILLUSTRATION IFRS17.12
Computation of Impairment
Loss

The loss due to the impairment is \$12,680. Why isn't it \$16,000 ($\$280,000 - \$264,000$)? A loss of \$12,680 is recorded because Mayhew must measure the loss at a present value amount, not at an undiscounted amount. Mayhew recognizes an impairment loss of \$12,680 by debiting Loss on Impairment for the expected loss. At the same time, it reduces the overall value of the investment. The journal entry to record the loss is therefore as follows.

| | | |
|--------------------|--------|--------|
| Loss on Impairment | 12,680 | |
| Debt Investments | | 12,680 |

⁴⁸Note that impairments tests are conducted only for debt investments that are held-for-collection (which are accounted for at amortized cost). Other debt and equity investments are measured at fair value each period; thus, an impairment test is not needed.

Recovery of Impairment Loss Subsequent to recording an impairment, events or economic conditions may change such that the extent of the impairment loss decreases (e.g., due to an improvement in the debtor's credit rating). In this situation, some or all of the previously recognized impairment loss shall be reversed with a debit to the Debt Investments account and a credit to Recovery of Impairment Loss. Similar to the accounting for impairments of receivables shown in Chapter 7, the reversal of impairment losses shall not result in a carrying amount of the investment that exceeds the amortized cost that would have been reported had the impairment not been recognized.

On the Horizon

At one time, both the FASB and IASB indicated that they believe that all financial instruments should be reported at fair value and that changes in fair value should be reported as part of net income. Through recent standards in this area, the Boards continue to move toward that goal. GAAP and IFRS are substantially converged, except for non-trading equity investments.

IFRS Self-Test Questions

- All of the following are key similarities between GAAP and IFRS with respect to accounting for investments **except**:
 - IFRS and GAAP require the same accounting for equity securities.
 - IFRS and GAAP apply the equity method to significant influence equity investments.
 - IFRS and GAAP have a fair value option for financial instruments.
 - the accounting for impairment of investments is similar, although IFRS allows recovery of impairment losses.
- Which of the following statements is **correct**?
 - IFRS permits the fair value option for the equity method of accounting.
 - GAAP permits recovery of impairment losses.
 - Under IFRS, non-trading equity investments are accounted for at amortized cost.
 - IFRS and GAAP both have a trading investment classification.
- IFRS requires companies to measure their financial assets at fair value **except** when based on:
 - whether the equity method of accounting is used.
 - whether the financial asset is a debt investment.
 - whether the financial asset is an equity investment.
 - whether an investment is classified as trading.
- Select the investment accounting approach with the correct valuation approach:

| <u>Not Held-for-Collection</u> | <u>Held-for-Collection</u> |
|--------------------------------|----------------------------|
| a. Amortized cost | Amortized cost |
| b. Fair value | Fair value |
| c. Fair value | Amortized cost |
| d. Amortized cost | Fair value |
- Under IFRS, a company:
 - should evaluate only equity investments for impairment.
 - accounts for an impairment as an unrealized loss, and includes it as a part of other comprehensive income and as a component of other accumulated comprehensive income until realized.
 - calculates the impairment loss on debt investments as the difference between the carrying amount plus accrued interest and the expected future cash flows discounted at the investment's historical effective-interest rate.
 - All of the above.

IFRS Concepts and Application

IFRS17.1 Where can authoritative IFRS be found related to investments?

IFRS17.2 Briefly describe some of the similarities and differences between GAAP and IFRS with respect to the accounting for investments.

IFRS17.3 Describe the two criteria for determining the valuation of financial assets.

IFRS17.4 Which types of investments are valued at amortized cost? Explain the rationale for this accounting.

IFRS17.5 Lady Gaga Co. recently made an investment in the bonds issued by Chili Peppers Inc. Lady Gaga's business model for this investment is to profit from trading in response to changes in market interest rates. How should this investment be classified by Lady Gaga? Explain.

IFRS17.6 Consider the bond investment by Lady Gaga in IFRS17.5. Discuss the accounting for this investment if Lady Gaga's business model is to hold the investment to collect interest while outstanding and to receive the principal at maturity.

IFRS17.7 Indicate how unrealized holding gains and losses should be reported for investments classified as trading and held-for-collection.

IFRS17.8 Ramirez Company has a held-for-collection investment in the 6%, 20-year bonds of Soto Company. The investment was originally purchased for \$1,200,000 in 2019. Early in 2020, Ramirez recorded an impairment of \$300,000 on the Soto investment, due to Soto's financial distress. In 2021, Soto returned to profitability and the Soto investment was no longer impaired. What entry does Ramirez make in 2021 under (a) GAAP and (b) IFRS?

IFRS17.9 Carow Corporation purchased, as a held-for-collection investment, \$60,000 of the 8%, 5-year bonds of Harrison, Inc. for \$65,118, which provides a 6% return. The bonds pay interest semiannually. Prepare Carow's journal entries for (a) the purchase of the investment, and (b) the receipt of semiannual interest and premium amortization.

IFRS17.10 Fairbanks Corporation purchased 400 ordinary shares of Sherman Inc. as a trading investment for \$13,200. During the year, Sherman paid a cash dividend of \$3.25 per share. At year-end, Sherman shares were selling for \$34.50 per share. Prepare Fairbanks' journal entries to record (a) the purchase of the investment, (b) the dividends received, and (c) the fair value adjustment.

IFRS17.11 Use the information from IFRS17.10 but assume the shares were purchased to meet a non-trading regulatory requirement. Prepare Fairbanks' journal entries to record (a) the purchase of the investment, (b) the dividends received, and (c) the fair value adjustment.

IFRS17.12 On January 1, 2020, Roosevelt Company purchased 12% bonds, having a maturity value of \$500,000, for \$537,907.40. The bonds provide the bondholders with a 10% yield. They are dated January 1, 2020, and mature January 1, 2025, with interest received January 1 of each year. Roosevelt's business model is to hold these bonds to collect contractual cash flows.

Instructions

- Prepare the journal entry at the date of the bond purchase.
- Prepare a bond amortization schedule.
- Prepare the journal entry to record the interest revenue and the amortization for 2020.
- Prepare the journal entry to record the interest revenue and the amortization for 2021.

IFRS17.13 Assume the same information as in IFRS17.12 except that Roosevelt has an active trading strategy for these bonds. The fair value of the bonds at December 31 of each year-end is as follows.

| | | | |
|------|-----------|------|-----------|
| 2020 | \$534,200 | 2023 | \$517,000 |
| 2021 | \$515,000 | 2024 | \$500,000 |
| 2022 | \$513,000 | | |

Instructions

- Prepare the journal entry at the date of the bond purchase.
- Prepare the journal entries to record the interest revenue and recognition of fair value for 2020.
- Prepare the journal entry to record the recognition of fair value for 2021.

IFRS17.14 On December 21, 2020, Zurich Company provided you with the following information regarding its trading investments.

| Investments (Trading) | December 31, 2020 | | |
|--|-------------------|------------|------------------------|
| | Cost | Fair Value | Unrealized Gain (Loss) |
| Stargate Corp. shares | \$20,000 | \$19,000 | \$(1,000) |
| Carolina Co. shares | 10,000 | 9,000 | (1,000) |
| Vectorman Co. shares | 20,000 | 20,600 | 600 |
| Total of portfolio | \$50,000 | \$48,600 | \$(1,400) |
| Previous fair value adjustment balance | | | -0- |
| Fair value adjustment—Cr. | | | \$(1,400) |

During 2021, Carolina Co. shares were sold for \$9,500. The fair value of the shares on December 31, 2021, was Stargate Corp. shares—\$19,300; Vectorman Co. shares—\$20,500.

Instructions

- Prepare the adjusting journal entry needed on December 31, 2020.
- Prepare the journal entry to record the sale of the Carolina Co. shares during 2021.
- Prepare the adjusting journal entry needed on December 31, 2021.

IFRS17.15 Komissarov Company has a debt investment in the bonds issued by Keune Inc. The bonds were purchased at par for \$400,000 and, at the end of 2020, have a remaining life of 3 years with annual interest payments at 10%, paid at the end of each year. This debt investment is classified as held-for-collection. Keune is facing a tough economic environment and informs all of its investors that it will be unable to make all payments according to the contractual terms. The controller of Komissarov has prepared the following revised expected cash flow forecast for this bond investment.

| Dec. 31 | Expected Cash Flows |
|------------------|-------------------------|
| 2021 | \$ 35,000 |
| 2022 | 35,000 |
| 2023 | <u>385,000</u> |
| Total cash flows | <u><u>\$455,000</u></u> |

Instructions

- Determine the impairment loss for Komissarov at December 31, 2020.
- Prepare the entry to record the impairment loss for Komissarov at December 31, 2020.
- On January 15, 2021, Keune receives a major capital infusion from a private equity investor. It informs Komissarov that the bonds now will be paid according to the contractual terms. Briefly describe how Komissarov would account for the bond investment in light of this new information.

Professional Research

IFRS17.16 Your client, Cascade Company, is planning to invest some of its excess cash in 5-year revenue bonds issued by the county and in the shares of one of its suppliers, Teton Co. Teton's shares trade on the over-the-counter market. Cascade plans to classify these investments as trading. The company would like you to conduct some research on the accounting for these investments.

Instructions

Access the IFRS authoritative literature at the IASB website. (Click on the IFRS tab and then register for free eIFRS access if necessary.) When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- Since the Teton shares do not trade on one of the large securities exchanges, Cascade argues that the fair value of this investment is not readily available. According to the authoritative literature, when is the fair value of a security "readily determinable"?
- To avoid volatility in their financial statements due to fair value adjustments, Cascade debated whether the bond investment could be classified as held-for-collection; Cascade is pretty sure it will hold the bonds for 5 years. What criteria must be met for Cascade to classify it as held-for-collection?

International Financial Reporting Problem

Marks and Spencer plc (M&S)

IFRS17.17 The financial statements of **M&S** are presented in Appendix E. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- What investments does M&S report in 2017, and where are these investments reported in its financial statements?
- How are M&S's investments valued? How does M&S determine fair value?
- How does M&S use derivative financial instruments?

Revenue Recognition

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

1. Discuss the fundamental concepts related to revenue recognition and measurement.
2. Explain and apply the five-step revenue recognition process.
3. Apply the five-step process to major revenue recognition issues.
4. Describe presentation and disclosure regarding revenue.

PREVIEW OF CHAPTER 18 As the following opening story indicates, the issue of when revenue should be recognized is complex. The many methods of marketing products and services make it difficult to develop guidelines that will apply to all situations. This chapter provides you with general guidelines used in most business transactions. The content and organization of the chapter are as follows.

This chapter also includes numerous conceptual discussions. Because of the converged FASB/IASB standard on revenue recognition, there is no *IFRS Insights* in this chapter.

REVENUE RECOGNITION

Fundamentals of Revenue Recognition

- Background
- New revenue recognition standard
- Overview of five-step process: Boeing example
- Extended example of five-step process: BEAN

The Five-Step Process Revisited

- Identifying the contract with customers
- Identifying separate performance obligations
- Determining the transaction price
- Allocating the transaction price
- Satisfying performance obligations

Revenue Recognition Issues

- Sales returns and allowances
- Repurchase agreements
- Bill-and-hold arrangements
- Principal-agent relationships
- Consignments
- Warranties
- Nonrefundable upfront fees

Presentation and Disclosure

- Presentation
- Disclosure

It's Back

A number of years after passage, the accounting world continues to be preoccupied with the Sarbanes-Oxley Act of 2002 (SOX). Unfortunately, SOX did not solve one of the classic accounting issues—how to properly account for revenue. In fact, revenue recognition practices are the most prevalent reason for accounting restatements. A number of revenue recognition issues relate to possible fraudulent behavior by company executives and employees.

As a result of such revenue recognition problems, the SEC has increased its enforcement actions in this area. In some of these cases, companies made significant adjustments to

previously issued financial statements. As Lynn Turner, a former chief accountant of the SEC, indicated, “When people cross over the boundaries of legitimate reporting, the Commission will take appropriate action to ensure the fairness and integrity that investors need and depend on every day.”

Consider some SEC actions:

- The SEC charged the former co-chairman and CEO of **Qwest Communications International Inc.** and eight other former Qwest officers and employees with fraud and other violations of the federal securities laws. Three of these people fraudulently characterized nonrecurring revenue from one-time sales as revenue from recurring data and Internet services. The SEC release notes that internal correspondence likened Qwest’s dependence on these transactions to fill the gap between actual and projected revenue to an addiction.
- The SEC filed a complaint against three former senior officers of **iGo Corp.**, alleging that the defendants collectively caused iGo to improperly recognize revenue on consignment sales and products that were not shipped or that were shipped after the end of a fiscal quarter.
- The SEC filed a complaint against the former CEO and chairman of **Homestore Inc.** and its former executive vice president of business development, alleging that they engaged in a fraudulent scheme to overstate advertising and subscription revenues. The scheme involved a complex structure of “round-trip” transactions using various third-party companies that, in essence, allowed Homestore to recognize its own cash as revenue.
- The SEC claims that **Lantronix** deliberately sent excessive product to distributors and granted them generous return rights and extended payment terms. In addition, as part of its alleged channel stuffing and to prevent product returns, Lantronix loaned funds to a third party to purchase Lantronix products from one of its distributors. The third party later returned the products. The SEC also asserted that Lantronix engaged in other improper revenue recognition practices, including shipping without a purchase order and recognizing revenue on a contingent sale.
- The SEC issued an order finding that a subsidiary of **Alere Inc.** improperly inflated revenues by prematurely recording sales for products that were still being stored at warehouses or otherwise not yet delivered to customers. The SEC also cited Alere for engaging in similar improper revenue recognition practices at several other subsidiaries.

Revenue numbers are attracting more attention from investors these days. In a recent survey, financial executives noted that the revenue recognition process is increasingly more complex to manage, more prone to error, and more material to financial statements compared to any other area in financial reporting. The report went on to note that revenue recognition is a top fraud risk and that regardless of the accounting rules followed (GAAP or IFRS), the risk of errors and inaccuracies in revenue reporting is significant.

In response, the FASB and IASB issued a new standard on revenue recognition to improve the reporting of revenue transactions. This new standard provides a set of guidelines to follow in determining when revenue should be reported and how it should be measured. The new standard is comprehensive and applies to all companies. As a result, comparability and consistency in reporting revenue should be enhanced. After studying this chapter, you should have a good understanding of the new revenue recognition concepts.

Review and Practice

Go to the **Review and Practice** section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions as well as additional exercises and practice problem with solutions are also available online.

Fundamentals of Revenue Recognition

LEARNING OBJECTIVE 1

Discuss the fundamental concepts related to revenue recognition and measurement.

Background

Revenue is one of, if not the most, important measures of financial performance that a company reports. Revenue provides insights into a company's past and future performance and is a significant driver of other performance measures, such as EBITDA, net income, and earnings per share. Therefore, establishing robust guidelines for recognizing revenue is a standard-setting priority.

Most revenue transactions pose few problems for revenue recognition. That is, most companies initiate and complete transactions at the same time. However, not all transactions are that simple. For example, consider a cell phone contract between a company such as **Verizon** and a customer. Verizon often provides a customer with a package that may include a handset, free minutes of talk time, data downloads, and text messaging service. In addition, some providers will bundle that with a fixed-line broadband service. At the same time, the customer may pay for these services in a variety of ways, possibly receiving a discount on the handset and then paying higher prices for connection fees and so forth. In some cases, depending on the package purchased, the company may provide free upgrades in subsequent periods. How, then, should Verizon report the various pieces of this sale? The answer is not obvious.

Both the FASB and the IASB indicated that the state of reporting for revenue was unsatisfactory. IFRS was criticized because it lacked guidance in a number of areas. For example, IFRS had one general standard on revenue recognition—*IAS 18*—plus some limited guidance related to certain minor topics. In contrast, GAAP had numerous standards related to revenue recognition (by some counts, well over 100), but many believed the standards were often inconsistent with one another. Thus, the accounting for revenue provided a most fitting contrast of the principles-based (IFRS) and rules-based (GAAP) approaches.¹

Recently, the FASB and IASB issued a converged standard on revenue recognition entitled *Revenue from Contracts with Customers* (see **Global View**). [1] (See the FASB Codification References near the end of the chapter.) To address the inconsistencies and weaknesses of the previous approaches, a comprehensive revenue recognition standard now applies to a wide range of transactions and industries. The Boards believe this new standard will improve GAAP and IFRS by:

- a. Providing a more robust framework for addressing revenue recognition issues.
- b. Improving comparability of revenue recognition practices across entities, industries, jurisdictions, and capital markets.
- c. Simplifying the preparation of financial statements by reducing the number of requirements to which companies must refer.
- d. Requiring enhanced disclosures to help financial statement users better understand the amount, timing, and uncertainty of revenue that is recognized. [2]

Global View

The converged revenue recognition standard represents a significant milestone in the FASB/IASB convergence project.

¹See, for example, "Preliminary Views on Revenue Recognition in Contracts with Customers," *IASB/FASB Discussion Paper* (December 19, 2008). Some noted that GAAP has so many standards that at times they are inconsistent with each other in applying basic principles. In addition, even with the many standards, no comprehensive guidance was provided for service transactions. Conversely, IFRS lacked guidance in certain fundamental areas such as multiple-deliverable arrangements. In addition, there were inconsistencies in applying revenue recognition principles to long-term contracts versus other elements of revenue recognition.

New Revenue Recognition Standard

The new standard, *Revenue from Contracts with Customers*, adopts an **asset-liability approach** as the basis for revenue recognition. The asset-liability approach recognizes and measures revenue based on changes in assets and liabilities. The Boards decided that focusing on (a) the recognition and measurement of assets and liabilities and (b) changes in those assets or liabilities over the life of the contract brings more discipline to the measurement of revenue, compared to the “earned and realized” criteria in prior standards.

Under the asset-liability approach, companies account for revenue based on the asset or liability arising from contracts with customers. Companies analyze contracts with customers because contracts initiate revenue transactions. Contracts indicate the terms of the transaction, provide the measurement of the consideration, and specify the promises that must be met by each party (see **Underlying Concepts**).

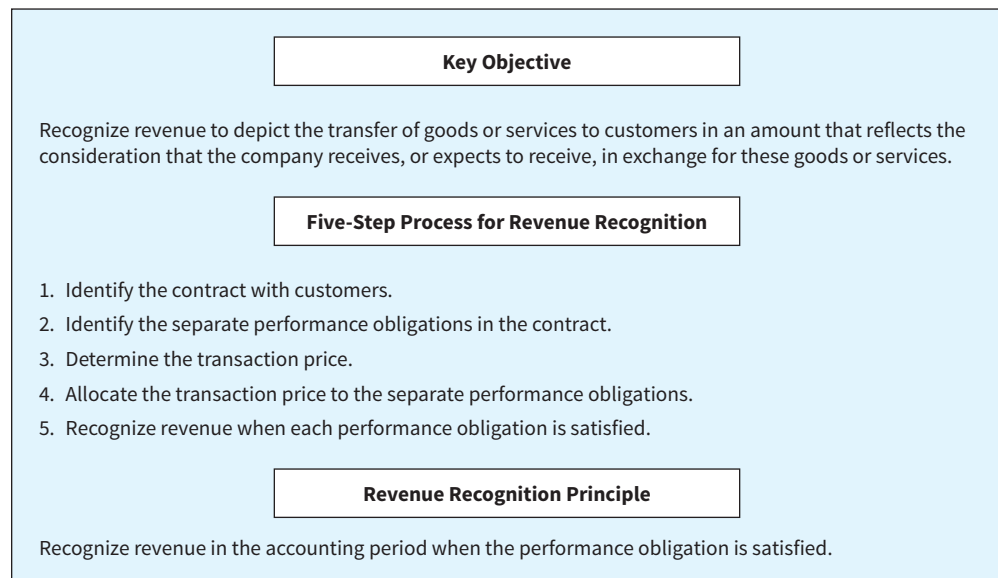

Illustration 18.1 shows the key concepts related to this new standard on revenue recognition. The new standard first identifies the key objective of revenue recognition, followed by a five-step process that companies should use to ensure that revenue is measured and reported correctly.

Underlying Concepts

The asset-liability approach is consistent with the conceptual framework approach to recognition.

ILLUSTRATION 18.1

Key Concepts of Revenue Recognition

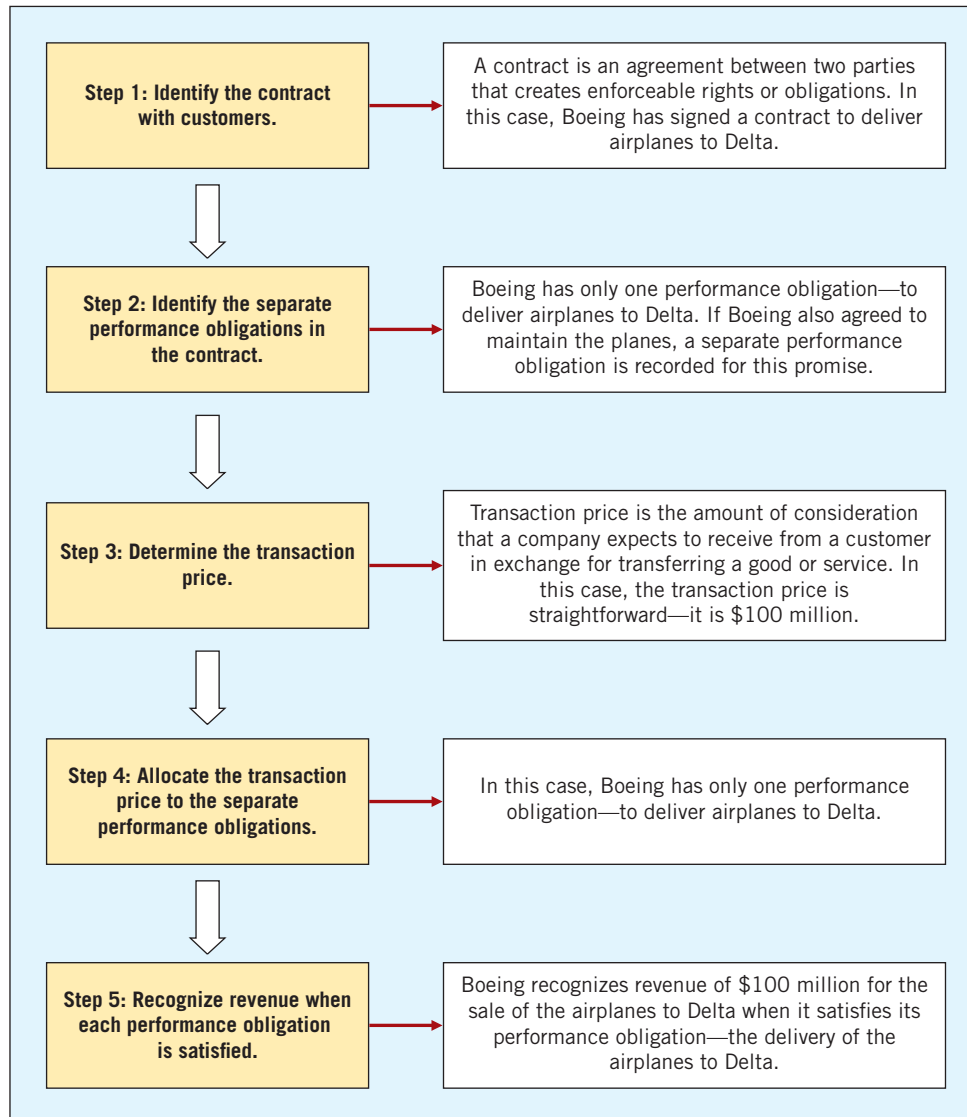

The culmination of the process is the **revenue recognition principle**, which states that revenue is recognized when the performance obligation is satisfied. We examine all steps in more detail in the following section.

Overview of the Five-Step Process: Boeing Example

Assume that **Boeing Corporation** signs a contract to sell airplanes to **Delta Air Lines** for \$100 million. **Illustration 18.2** shows the five steps that Boeing follows to recognize revenue.

As indicated, Step 5 is when Boeing recognizes revenue related to the sale of the airplanes to Delta. At this point, Boeing delivers the airplanes to Delta and satisfies its performance obligation. In essence, a change in control from Boeing to Delta occurs. Delta now controls the

assets because it has the ability to direct the use of and obtain substantially all the remaining benefits from the airplanes. Control also includes Delta's ability to prevent other companies from directing the use of, or receiving the benefits from, the airplanes.

**ILLUSTRATION 18.2****Five Steps of Revenue Recognition**

Extended Example of the Five-Step Process: BEAN

To provide another application of the basic principles of the five-step revenue recognition model, we use a coffee and wine business called BEAN. BEAN is located in the Midwest and serves gourmet coffee, espresso, lattes, teas, and smoothies. It also sells pastries, coffee beans, other food products, wine, and beer.

Identifying the Contract with Customers—Step 1

Assume that Tyler Angler orders a large cup of black coffee costing \$3 from BEAN. Tyler gives \$3 to a BEAN barista, who pours the coffee into a large cup and gives it to Tyler.

Question: How much revenue should BEAN recognize on this transaction?

Step 1 We first must determine whether a valid contract exists between BEAN and Tyler. Here are the components of a valid contract and how it affects BEAN and Tyler.

1. **The contract has commercial substance:** Tyler gives cash for the coffee.
2. **The parties have approved the contract:** Tyler agrees to purchase the coffee and BEAN agrees to sell it.
3. **Identification of the rights of the parties is established:** Tyler has the right to the coffee and BEAN has the right to receive \$3.
4. **Payment terms are identified:** Tyler agrees to pay \$3 for the coffee.
5. **It is probable that the consideration will be collected:** BEAN received \$3 before it delivered the coffee. [3]²

From this information, it appears that BEAN and Tyler have a valid contract with one another.

Step 2 The next step is to identify BEAN's performance obligation(s), if any. The answer is straightforward—BEAN has a performance obligation to provide a large cup of coffee to Tyler. BEAN has no other performance obligation for any other good or service.

Step 3 BEAN must determine the transaction price related to the sale of the coffee. The price of the coffee is \$3, and no discounts or other adjustments are available. Therefore, the transaction price is \$3.

Step 4 BEAN must allocate the transaction price to all performance obligations. Given that BEAN has only one performance obligation, no allocation is necessary.

Step 5 Revenue is recognized when the performance obligation is satisfied. BEAN satisfies its performance obligation when Tyler obtains control of the coffee. The following conditions are indicators that control of the coffee has passed to Tyler:

- a. BEAN has the right to payment for the coffee.
- b. BEAN has transferred legal title to the coffee.
- c. BEAN has transferred physical possession of the coffee.
- d. Tyler has significant risks (e.g., he might spill the coffee) and rewards of ownership (he gets to drink the coffee).
- e. Tyler has accepted the asset.

Solution: BEAN should recognize \$3 in revenue from this transaction when Tyler receives the coffee.

Identifying Separate Performance Obligations—Step 2

The following day, Tyler orders another large cup of coffee for \$3 and also purchases two bagels at a price of \$5. The barista provides these products and Tyler pays \$8.

Question: How much revenue should BEAN recognize on the purchase of these two items?

Step 1 A valid contract exists as it meets the five conditions necessary for a contract to be enforceable as discussed in the previous example.

Step 2 BEAN must determine whether the sale of the coffee and the sale of the two bagels involve one or two performance obligations. In the previous transaction between BEAN and Tyler, this determination was straightforward because BEAN provided a single distinct product (a large cup of coffee) and therefore only one performance obligation existed. However, an arrangement to purchase coffee and bagels may have more than one performance obligation. Multiple performance obligations exist when the following two conditions are satisfied:

1. BEAN must provide a distinct product or service. In other words, BEAN must be able to sell the coffee and the bagels separately from one another.
2. BEAN's products are distinct within the contract. In other words, if the performance obligation is not highly dependent on, or interrelated with, other promises in the contract, then each performance obligation should be accounted for separately. Conversely, if each of these products is interdependent and interrelated, these products are combined and reported as one performance obligation. [4]

²BEAN disregards revenue guidance for a contract that is wholly unperformed and for which each party can unilaterally terminate the contract without compensation.

The large cup of coffee and the two bagels appear to be distinct from one another and are not highly dependent or interrelated. That is, BEAN can sell the coffee and the two bagels separately, and Tyler benefits separately from the coffee and the bagels.

BEAN should therefore record two performance obligations—one for the sale of the coffee and one for the sale of the bagels.

Step 3 The transaction price is \$8 (\$3 + \$5).

Step 4 BEAN has two performance obligations: to provide (1) a large cup of coffee and (2) the two bagels. Each of these obligations is distinct and not interrelated (and priced separately); no allocation of the transaction price is necessary. That is, the coffee sale is recorded at \$3 and the sale of the bagels is priced at \$5.

Step 5 BEAN has satisfied both performance obligations when the coffee and bagels are given to Tyler (control of the product has passed to the customer).

Solution: BEAN should recognize \$8 (\$3 + \$5) of revenue when Tyler receives the coffee and bagels.

Determining the Transaction Price—Step 3

BEAN decides to provide an additional incentive to its customers to shop at its store. BEAN roasts its own coffee beans and sells the beans wholesale to grocery stores, restaurants, and other commercial companies. In addition, it sells the coffee beans at its retail location. BEAN is interested in stimulating sales of its Smoke Jumper coffee beans on Tuesdays, a slow business day for the store. Normally, these beans sell for \$10 for a 12-ounce bag, but BEAN decides to cut the price by \$1 when customers buy them on Tuesdays (the discounted price is now \$9 per bag). Tyler has come to the store on a Tuesday, decides to purchase a bag of Smoke Jumper beans, and pays BEAN \$9.

Question: How much revenue should BEAN recognize on this transaction?

Step 1 As in our previous examples, with the sale of a large cup of coffee or the sale of a large cup of coffee and two bagels, a valid contract exists. The same is true for the sale of Smoke Jumper beans as well.

Step 2 The identification of the performance obligation is straightforward. BEAN has a performance obligation to provide a bag of Smoke Jumper coffee beans to Tyler. BEAN has no other performance obligation to provide a product or service.

Step 3 The transaction price for a bag of Smoke Jumper beans sold to Tyler is \$9, not \$10. The transaction price is the amount that a company expects to receive from a customer in exchange for transferring goods and services. **[5]** The transaction price in a contract is often easily determined because the customer agrees to pay a fixed amount to the company over a short period of time. In other contracts, companies must consider adjustments such as when they make payments or provide some other consideration to their customers (e.g., a coupon) as part of a revenue arrangement.³

Step 4 BEAN allocates the transaction price to the performance obligations. Given that there is only one performance obligation, no allocation is necessary.

Step 5 BEAN has satisfied the performance obligation as control of the product has passed to Tyler.

Solution: BEAN should recognize \$9 of revenue when Tyler receives the Smoke Jumper coffee beans.

Allocating the Transaction Price to Separate Performance Obligations—Step 4

For revenue arrangements with multiple performance obligations, BEAN might be required to allocate the transaction price to more than one performance obligation in the contract. If an allocation is needed, the transaction price is allocated to the various performance obligations

³We provide expanded discussion and examples of variation in transaction price, including variable consideration, later in the chapter.

based on their relative standalone selling prices. If this information is not available, companies should use their best estimate of what the good or service might sell for as a standalone unit. [6]

BEAN wants to provide even more incentive for customers to buy its coffee beans, as well as purchase a cup of coffee. BEAN therefore offers customers a \$2 discount on the purchase of a large cup of coffee when they buy a bag of its premium Motor Moka beans (which normally sell for \$12) at the same time. Tyler decides this offer is too good to pass up and buys a bag of Motor Moka beans for \$12 and a large cup of coffee for \$1. As indicated earlier, a large cup of coffee normally retails for \$3 at BEAN.

Question: How much revenue should BEAN recognize on the purchase of these two items?

Step 1 In our previous situations, valid contracts have existed. The same is also true for the sale of a bag of Motor Moka beans and the large cup of coffee.

Step 2 The bag of Motor Moka beans and the large cup of coffee are distinct from one another and are not highly dependent on or highly interrelated with the other. BEAN can sell a bag of the Motor Moka beans and a large cup of coffee separately. Furthermore, Tyler benefits separately from both the large cup of coffee and the Motor Moka coffee beans.

Step 3 BEAN's transaction price is \$13 (\$12 for the bag of Motor Moka beans and \$1 for the large cup of coffee).

Step 4 BEAN allocates the transaction price to the two performance obligations based on their relative standalone selling prices. The standalone selling price of a bag of Motor Moka beans is \$12 and the large cup of coffee is \$3. The allocation of the transaction price of \$13 is as follows.

| Product | Standalone Selling Price | Percentage | Allocated Amount |
|----------------------------|--------------------------|-------------------|----------------------|
| Motor Moka beans (one bag) | \$12 | 80% (\$12 ÷ \$15) | \$10.40 (\$13 × .80) |
| Large cup of coffee | 3 | 20 (\$3 ÷ \$15) | 2.60 (\$13 × .20) |
| Total | <u>\$15</u> | <u>100%</u> | <u>\$13.00</u> |

As indicated, the total transaction price (\$13) is allocated \$10.40 to the bag of Motor Moka beans and \$2.60 to the large cup of coffee.

Step 5 BEAN has satisfied both performance obligations as control of the bag of Motor Moka beans and the large cup of coffee has passed to Tyler.

Solution: BEAN should recognize revenue of \$13, comprised of revenue from the sale of the Motor Moka beans at \$10.40 and the sale of the large cup of coffee at \$2.60.

Recognizing Revenue When (or as) Each Performance Obligation Is Satisfied—Step 5

As indicated in the examples presented, BEAN satisfied its performance obligation(s) when Tyler obtained control of the product(s). Change in control is the deciding factor in determining when a performance obligation is satisfied. A customer controls the product or service when the customer has the ability to direct the use of and obtain substantially all the remaining benefits from the product. Control also includes Tyler's ability to prevent other companies from directing the use of, or receiving benefits from, the coffee or coffee beans. As discussed earlier, the indicators that Tyler has obtained control are as follows:

- BEAN has the right to payment for the coffee.
- BEAN has transferred legal title to the coffee.
- BEAN has transferred physical possession of the coffee.
- Tyler has significant risks and rewards of ownership.
- Tyler has accepted the asset.⁴

⁴While in the BEAN example recognition occurred at a point in time, in certain cases, companies satisfy performance obligations over a period of time. We address the criteria for determining point-in-time versus over-time recognition later in the chapter.

The Five-Step Process Revisited

LEARNING OBJECTIVE 2

Explain and apply the five-step revenue recognition process.

The **Boeing** and BEAN examples provide a basic understanding of the five-step process used to recognize revenue. We now discuss more technical issues related to the implementation of these five steps.

Identifying the Contract with Customers—Step 1

A **contract** is an agreement between two or more parties that creates enforceable rights or obligations. Contracts can be written, oral, or implied from customary business practice (such as the BEAN contract with Tyler). Revenue is recognized only when a valid contract exists. On entering into a contract with a customer, a company obtains rights to receive consideration from the customer and assumes obligations to transfer goods or services to the customer (performance obligations). The combination of those rights and performance obligations gives rise to an (net) asset or (net) liability.

In some cases, there are multiple contracts related to an arrangement; accounting for each contract may or may not occur, depending upon the circumstances. These situations often develop when not only a product is provided but some type of service is performed as well. To be valid, a contract must meet the five conditions illustrated in the BEAN example. If the contract is wholly unperformed and each party can unilaterally terminate the contract without compensation, then revenue should not be recognized until one or both of the parties have performed. A basic contract in which these issues are discussed is presented in **Illustration 18.3**.

Contracts and Recognition

Facts: On March 1, 2020, Margo Company enters into a contract to transfer a product to Soon Yoon on July 31, 2020. The contract is structured such that Soon Yoon is required to pay the full contract price of \$5,000 on August 31, 2020. The cost of the goods transferred is \$3,000. Either party can unilaterally terminate the contract without compensation. Margo delivers the product to Soon Yoon on July 31, 2020.

Question: What journal entries should Margo Company make in regards to this contract in 2020?

Solution: No entry is required on March 1, 2020, because neither party has performed on the contract. On July 31, 2020, Margo delivers the product and therefore should recognize revenue on that date as it satisfies its performance obligation by delivering the product to Soon Yoon.

The journal entry to record the sale and related cost of goods sold is as follows.

| July 31, 2020 | | |
|----------------------|-------|-------|
| Accounts Receivable | 5,000 | |
| Sales Revenue | | 5,000 |
| Cost of Goods Sold | 3,000 | |
| Inventory | | 3,000 |

After receiving the cash payment on August 31, 2020, Margo makes the following entry.

| August 31, 2020 | | |
|------------------------|-------|-------|
| Cash | 5,000 | |
| Accounts Receivable | | 5,000 |

ILLUSTRATION 18.3

Basic Revenue Transaction

A key feature of the revenue arrangement is that the contract between the two parties is not recorded (does not result in a journal entry) until one or both of the parties *perform under the contract*. **Until performance occurs, no net asset or net liability exists.**⁵

Identifying Separate Performance Obligations—Step 2

A **performance obligation** is a promise to provide a product or service to a customer. This promise may be explicit, implicit, or possibly based on customary business practice. To determine whether a performance obligation exists, the company must provide a distinct product or service to the customer.

A product or service is distinct when a customer is able to benefit from a good or service on its own or together with other readily available resources. This situation typically occurs when the company can sell a good or service on a standalone basis (can be sold separately). For example, BEAN provided a good (a large cup of coffee) on a standalone basis to Tyler. Tyler benefited from this cup of coffee by consuming it.

To determine whether a company has to account for multiple performance obligations, the company's promise to sell the good or service to the customer must be separately identifiable from other promises within the contract (that is, the good or service must be distinct within the contract). In other words, the **objective is to determine whether the nature of a company's promise is to transfer individual goods and services to the customer or to transfer a combined item (or items) for which individual goods or services are inputs**.

For example, when BEAN sold Tyler a large cup of coffee and two bagels, two performance obligations occurred. In that case, the large cup of coffee had a standalone selling price and the two bagels had a standalone selling price—even though the two promises may be part of one contract.

Conversely, assume that BEAN sold a large latte (comprised of coffee and milk) to Tyler. In this case, BEAN sold two distinct products (coffee and milk), but these two goods are not distinct within the contract. That is, the coffee and milk in the latte are highly interdependent or interrelated within the contract. As a result, the products are combined and reported as one performance obligation.

To illustrate another situation, assume that **General Motors** sells an automobile to Marquart Auto Dealers at a price that includes six months of telematics services such as navigation and remote diagnostics. These telematics services are regularly sold on a standalone basis by General Motors for a monthly fee. After the six-month period, the consumer can renew these services on a fee basis with General Motors. The question is whether General Motors sold one or two products. If we look at General Motors' objective, it appears that it is to sell two goods, the automobile and the telematic services. **Both are distinct (they can be sold separately) and are not interdependent.**

As another example, SoftTech Inc. licenses customer-relationship software to Lopez Company. In addition to providing the software itself, SoftTech promises to perform consulting services by extensively customizing the software to Lopez's information technology environment, for total consideration of \$600,000. In this case, the objective of SoftTech appears to be to transfer a combined product and service for which individual goods and services are inputs. In other words, SoftTech is providing a significant service by integrating the goods and services (the license and the consulting service) into one combined item for which Lopez

⁵Recall a valid contract exists when (1) the contract has commercial substance, (2) the parties have approved the contract, (3) the contract identifies the rights of the parties, (4) payment terms are identified, and (5) it is probable that the consideration will be collected. The FASB included this last criterion (which acts like a collectibility threshold) because the Board concluded that the assessment of a customer's credit risk was important to determine whether a contract is valid. That is, under the revenue standard (and discussed later in the chapter), collectibility is not a consideration for determining whether revenue is recognized. However, collectibility may be a consideration in assessing whether parties to the contract are committed to perform. In determining whether it is probable that a company will collect the amount of consideration to which it is entitled, the company assesses both the customer's ability and intent to pay as amounts become due. [7]

has contracted. In addition, the software is significantly customized by SoftTech in accordance with specifications negotiated by Lopez. As a result, **the license and the consulting services are distinct but interdependent, and therefore should be accounted for as one performance obligation.**⁶

Determining the Transaction Price—Step 3

The **transaction price** is the amount of consideration that a company expects to receive from a customer in exchange for transferring goods and services. The transaction price in a contract is often easily determined because the customer agrees to pay a fixed amount to the company over a short period of time. In other contracts, companies must consider the following factors. [8]

- Variable consideration.
- Time value of money.
- Noncash consideration.
- Consideration paid or payable to the customer.

Variable Consideration

In some cases, the price of a good or service is dependent on future events. These future events might include price increases, volume discounts, rebates, credits, performance bonuses, or royalties. In these cases, the company estimates the amount of variable consideration it will receive from the contract to determine the amount of revenue to recognize. Companies use either the **expected value**, which is a probability-weighted amount, or the **most likely amount** in a range of possible amounts to estimate variable consideration (see **Underlying Concepts**). Companies select among these two methods based on which approach better predicts the amount of consideration to which a company is entitled. [9] **Illustration 18.4** highlights the issues to be considered in selecting the appropriate method.

Underlying Concepts

The expected value approach is also illustrated in Chapter 6 to determine the liability for warranties.

| | |
|---|---|
| <p>Expected Value: Probability-weighted amount in a range of possible consideration amounts.</p> <ul style="list-style-type: none"> • May be appropriate if a company has a large number of contracts with similar characteristics. • Can be based on a limited number of discrete outcomes and probabilities. | <p>Most Likely Amount: The single most likely amount in a range of possible consideration outcomes.</p> <ul style="list-style-type: none"> • May be appropriate if the contract has only two possible outcomes. |
|---|---|

Illustration 18.5 provides an application of the two estimation methods.

Estimating Variable Consideration

Facts: Peabody Construction Company enters into a contract with a customer to build a warehouse for \$100,000, with a performance bonus of \$50,000 that will be paid based on the timing of completion. The amount of the performance bonus decreases by 10% per week for every week beyond the agreed-upon completion date. The contract requirements are similar to contracts that Peabody has performed previously, and management believes that such experience is predictive for this contract. Management estimates that there is a 60% probability that the contract will be completed by the agreed-upon completion date, a 30% probability that it will be completed 1 week late, and only a 10% probability that it will be completed 2 weeks late.

(continued)

ILLUSTRATION 18.4

Estimating Variable Consideration

ILLUSTRATION 18.5

Transaction Price—Variable Consideration

⁶In practice, determining whether multiple performance obligations exist can be complex. For homework purposes, you need to determine the objective of the transaction. If the objective is to transfer individual goods or services, then account for these performance obligations separately. As discussed, indicators that help to understand whether performance obligations should be accounted for separately are (1) the performance obligations have a standalone selling price and (2) the goods or services are not highly interdependent or interrelated.

ILLUSTRATION 18.5

(continued)

Question: How should Peabody account for this revenue arrangement?

Solution: The transaction price should include management's estimate of the amount of consideration to which Peabody will be entitled. Management has concluded that the **probability-weighted method** is the most predictive approach for estimating the variable consideration in this situation:

| | | |
|---------------------------------------|----------------------------------|------------------|
| On time: 60% chance of \$150,000 | [\$100,000 + (\$50,000 × 1.0)] = | \$ 90,000 |
| 1 week late: 30% chance of \$145,000 | [\$100,000 + (\$50,000 × .90)] = | 43,500 |
| 2 weeks late: 10% chance of \$140,000 | [\$100,000 + (\$50,000 × .80)] = | 14,000 |
| | | <u>\$147,500</u> |

Thus, the total transaction price is \$147,500 based on the probability-weighted estimate. Management should update its estimate at each reporting date. Using a most likely outcome approach may be more predictive if a performance bonus is binary (Peabody either will or will not earn the performance bonus), such that Peabody earns either the \$50,000 bonus for completion on the agreed-upon date or nothing for completion after the agreed-upon date. In this scenario, if management believes that Peabody will meet the deadline and estimates the consideration using the **most likely outcome**, the total transaction price would be \$150,000 (the outcome with 60% probability).

A word of caution—a company only **allocates variable consideration if it is reasonably assured that it will be entitled to that amount**. Companies therefore may only recognize variable consideration if (1) they have experience with similar contracts and are able to estimate the cumulative amount of revenue, and (2) based on experience, it is highly probable that there will not be a significant reversal of revenue previously recognized.⁷ If these criteria are not met, revenue recognition is constrained. [11] **Illustration 18.6** provides an example of how the revenue constraint works.

ILLUSTRATION 18.6**Transaction Price—
Revenue Constraint****Revenue Constraint**

Facts: On January 1, Shera Company enters into a contract with Hornung Inc. to perform asset-management services for 1 year. Shera receives a quarterly management fee based on a percentage of Hornung's assets under management at the end of each quarter. In addition, Shera receives a performance-based incentive fee of 20% of the fund's return in excess of the return of an observable index at the end of the year.

Shera accounts for the contract as a single performance obligation to perform investment-management services for 1 year because the services are interdependent and interrelated. To recognize revenue for satisfying the performance obligation over time, Shera selects an output method of measuring progress toward complete satisfaction of the performance obligation. Shera has had a number of these types of contracts with customers in the past.

Question: At what point should Shera recognize the management fee and the performance-based incentive fee related to Hornung?

Solution: Shera should record the management fee each quarter as it performs the management of the fund. However, Shera should not record the incentive fee until the end of the year. Although Shera has experience with similar contracts, that experience is not predictive of the outcome of the current contract because the amount of consideration is highly susceptible to volatility in the market. In addition, the incentive fee has a large number and high variability of possible consideration amounts. Thus, revenue related to the incentive fee is constrained (not recognized) until the incentive fee is known at the end of the year.

⁷Conditions such as one of the following would indicate that the revenue is constrained (or not recognized):

1. The amount of consideration is highly susceptible to factors outside the company's influence. Factors include volatility in a market, the judgment of third parties, weather conditions, and a high risk of obsolescence of the promised good or service.
2. The uncertainty about the amount of consideration is not expected to be resolved for a long period of time.
3. The company's experience (or other evidence) with similar types of performance obligations is limited.
4. The contract has a large number and broad range of possible consideration amounts. [10]

Time Value of Money

Timing of payment to the company sometimes does not match the transfer of the goods or services to the customer. In most situations, companies receive consideration after the product is provided or the service performed. In essence, the company provides financing for the customer.

Companies account for the time value of money if the contract **involves a significant financing component**. When a sales transaction involves a significant financing component (i.e., interest is accrued on consideration to be paid over time), the fair value should be determined by discounting the payment using an imputed interest rate. The imputed interest rate is the more clearly determinable of either (1) the prevailing rate for a similar instrument of an issuer with a similar credit rating, or (2) a rate of interest that discounts the nominal amount of the instrument to the current sales price of the goods or services. The company will report the effects of the financing as interest revenue. **Illustration 18.7** provides an example of a financing transaction.

Extended Payment Terms

Facts: On July 1, 2020, SEK Company sold goods to Grant Company for \$900,000 in exchange for a 4-year, zero-interest-bearing note with a face amount of \$1,416,163. The goods have an inventory cost on SEK's books of \$590,000. SEK uses the perpetual inventory method.

Questions: (a) How much revenue should SEK Company record on July 1, 2020? (b) How much revenue should it report related to this transaction on December 31, 2020?

Solution:

- (a) SEK should record revenue of \$900,000 on July 1, 2020, which is the fair value of the inventory in this case.
- (b) SEK is also financing this purchase and records interest revenue on the note over the 4-year period. In this case, the interest rate is imputed and is determined to be 12%. SEK records interest revenue of \$54,000 ($.12 \times \frac{6}{12} \times \$900,000$) at December 31, 2020.

The entry to record SEK's sale to Grant Company is as follows.

| July 1, 2020 | | |
|------------------------------|-----------|---------|
| Notes Receivable | 1,416,163 | |
| Discount on Notes Receivable | | 516,163 |
| Sales Revenue | | 900,000 |
| Cost of Goods Sold | 590,000 | |
| Inventory | | 590,000 |

SEK makes the following entry to record (accrue) interest revenue at the end of the year.

| December 31, 2020 | | |
|---|--------|--------|
| Discount on Notes Receivable | 54,000 | |
| Interest Revenue ($.12 \times \frac{6}{12} \times \$900,000$) | | 54,000 |

ILLUSTRATION 18.7

Transaction Price— Extended Payment Terms

As a practical expedient, companies are not required to reflect the time value of money to determine the transaction price if the time period for payment is less than a year. [12]

Noncash Consideration

Companies sometimes receive consideration in the form of goods, services, or other noncash consideration. When these situations occur, **companies generally recognize revenue on the basis of the fair value of what is received**. For example, assume that Raylin Company

receives common stock of Monroe Company in payment for consulting services. In that case, Raylin Company recognizes revenue in the amount of the fair value of the common stock received. If Raylin cannot determine this amount, then it should estimate the selling price of the services performed and recognize this amount as revenue.

In addition, companies sometimes receive contributions (e.g., donations and gifts). A contribution is often some type of asset (e.g., securities, land, buildings, or use of facilities) but it could be the forgiveness of debt. In these cases, companies recognize revenue for the fair value of the consideration received. Similarly, customers sometimes contribute goods or services, such as equipment or labor, as consideration for goods provided or services performed. This consideration should be recognized as revenue based on the fair value of the consideration received (see Chapter 10).

Consideration Paid or Payable to Customers

Companies often make payments to their customers as part of a revenue arrangement. Consideration paid or payable may include discounts, volume rebates, coupons, free products, or services. In general, these elements reduce the consideration received and the revenue to be recognized. **Illustration 18.8** provides an example of this type of transaction.

ILLUSTRATION 18.8

Transaction Price— Volume Discount

Volume Discount

Facts: Samsung Company offers its customers a 3% volume discount if they purchase at least \$2 million of its product during the calendar year. On March 31, 2020, Samsung has made sales of \$700,000 to Artic Co. In the previous 2 years, Samsung sold over \$3,000,000 to Artic in the period April 1 to December 31. Assume that Samsung prepares financial statements quarterly.

Question: How much revenue should Samsung recognize for the first 3 months of 2020?

Solution: In this case, Samsung should reduce its revenue by \$21,000 ($\$700,000 \times .03$) because it is probable that it will provide this rebate. Revenue is therefore \$679,000 ($\$700,000 - \$21,000$). To not recognize this volume discount overstates Samsung's revenue for the first 3 months of 2020. In other words, the appropriate revenue to be recognized is \$679,000, not \$700,000.

Given these facts, Samsung makes the following entry on March 31, 2020, to recognize revenue.

| | | |
|---------------------|---------|---------|
| Accounts Receivable | 679,000 | |
| Sales Revenue | | 679,000 |

Assuming that Samsung's customer **meets the discount threshold**, Samsung makes the following entry to record collection of accounts receivable.

| | | |
|---------------------|---------|---------|
| Cash | 679,000 | |
| Accounts Receivable | | 679,000 |

If Samsung's customer **fails to meet the discount threshold**, Samsung makes the following entry to record collection of accounts receivable.

| | | |
|---------------------------|---------|---------|
| Cash | 700,000 | |
| Accounts Receivable | | 679,000 |
| Sales Discounts Forfeited | | 21,000 |

As indicated in Chapter 7, Sales Discounts Forfeited is reported in the "Other revenues and gains" section of the income statement.

In many cases, companies provide cash discounts to customers for a short period of time (often referred to as prompt settlement discounts). For example, assume that terms are payment due in 60 days, but if payment is made within five days, a two percent discount is given (referred to as 2/5, net 60). These prompt settlement discounts should reduce revenues, if material. In most cases, companies record the revenue at full price (gross) and record a sales discount if payment is made within the discount period.

Allocating the Transaction Price to Separate Performance Obligations—Step 4

Companies often have to allocate the transaction price to more than one performance obligation in a contract. If an allocation is needed, the transaction price allocated to the various performance obligations is based on their relative fair values. The best measure of fair value is what the company could sell the good or service for on a standalone basis, referred to as the **standalone selling price**. If this information is not available, companies should use their best estimate of what the good or service might sell for as a standalone unit. **Illustration 18.9** summarizes the approaches that companies follow (in preferred order of use).

| Allocation Approach | Implementation |
|--------------------------------------|---|
| Adjusted market assessment approach | Evaluate the market in which the company sells goods or services and estimate the price that customers in that market are willing to pay for those goods or services. That approach also might include referring to prices from the company's competitors for similar goods or services and adjusting those prices as necessary to reflect the company's costs and margins. |
| Expected cost plus a margin approach | Forecast expected costs of satisfying a performance obligation and then add an appropriate margin for that good or service. |
| Residual approach | If the standalone selling price of a good or service is highly variable or uncertain, then a company may estimate the standalone selling price by reference to the total transaction price less the sum of the observable standalone selling prices of other goods or services promised in the contract. ⁸ |

ILLUSTRATION 18.9

Transaction Price—Allocation

To illustrate, Travis Company enters into a contract with a customer to sell Products A, B, and C in exchange for \$100,000. Travis Company regularly sells Product A separately, and therefore the standalone selling price is directly observable at \$50,000. The standalone selling price of Product B is estimated using the adjusted market assessment approach and is determined to be \$30,000. Travis Company decides to use the residual approach to value Product C as it has confidence that Products A and B are valued correctly. The selling price for the products is allocated as shown in **Illustration 18.10**.

| Product | Price | Rationale |
|-------------------------|------------------|---|
| A | \$ 50,000 | Directly observable using standalone selling price. |
| B | 30,000 | Directly observable using adjusted market assessment approach. |
| C | 20,000 | [\$100,000 – (\$50,000 + \$30,000)]; using the residual approach given reliability of the two above measurements. |
| Total transaction price | <u>\$100,000</u> | |

ILLUSTRATION 18.10

Residual Value Allocation

Illustrations 18.11 and **18.12** are additional examples of the measurement issues involved in allocating the transaction price.

⁸A selling price is highly variable when a company sells the same good or service to different customers (at or near the same time) for a broad range of amounts. A selling price is uncertain when a company has not yet established a price for a good or service and the good or service has not previously been sold. [13]

ILLUSTRATION 18.11**Allocation—Multiple Performance Obligations****Multiple Performance Obligations—Example 1**

Facts: Lonnie Company enters into a contract to build, run, and maintain a highly complex piece of electronic equipment for a period of 5 years, commencing upon delivery of the equipment. There is a fixed fee for each of the build, run, and maintenance deliverables, and any progress payments made are nonrefundable. It is determined that the transaction price must be allocated to the three performance obligations: building, running, and maintaining the equipment. There is verifiable evidence of the selling price for the building and maintenance but not for running the equipment.

Question: What procedure should Lonnie Company use to allocate the transaction price to the three performance obligations?

Solution: The performance obligations relate to building the equipment, running the equipment, and maintaining the equipment. As indicated, Lonnie can determine verifiable standalone selling prices for the equipment and the maintenance agreements. The company then can make a best estimate of the selling price for running the equipment, using the adjusted market assessment approach or expected cost plus a margin approach. Lonnie next applies the proportional standalone selling price method at the inception of the transaction to determine the proper allocation to each performance obligation. Once the allocation is performed, Lonnie recognizes revenue independently for each performance obligation using regular revenue recognition criteria.

If, on the other hand, Lonnie is unable to estimate the standalone selling price for running the equipment because such an estimate is highly variable or uncertain, Lonnie may use a residual approach. In this case, Lonnie uses the standalone selling prices of the equipment and maintenance agreements and subtracts these prices from the total transaction price to arrive at a residual value for running the equipment.

ILLUSTRATION 18.12**Multiple Performance Obligations—Product, Installation, and Service****Multiple Performance Obligations—Example 2**

Facts: Handler Company is an established manufacturer of equipment used in the construction industry. Handler's products range from small to large individual pieces of automated machinery to complex systems containing numerous components. Unit selling prices range from \$600,000 to \$4,000,000 and are quoted inclusive of installation and training. The installation process does not involve changes to the features of the equipment and does not require proprietary information about the equipment in order for the installed equipment to perform to specifications. Handler has the following arrangement with Chai Company.

- Chai purchases equipment from Handler for a price of \$2,000,000 and chooses Handler to do the installation. Handler charges the same price for the equipment irrespective of whether it does the installation or not. (Some companies do the installation themselves because they either prefer their own employees to do the work or because of relationships with other customers.) The installation service included in the arrangement is estimated to have a standalone selling price of \$20,000.
- The standalone selling price of the training sessions is estimated at \$50,000. Other companies can also perform these training services.
- Chai is obligated to pay Handler the \$2,000,000 upon the delivery and installation of the equipment.
- Handler delivers the equipment on September 1, 2020, and completes the installation of the equipment on November 1, 2020 (transfer of control is complete after installation). Training related to the equipment starts once the installation is completed and lasts for 1 year. The equipment has a useful life of 10 years.

Questions: (a) What are the performance obligations for purposes of accounting for the sale of the equipment? (b) If there is more than one performance obligation, how should the payment of \$2,000,000 be allocated to various components?

Solution:

- (a) Handler's primary objective is to sell equipment. The other services (installation and training) can be performed by other parties if necessary. As a result, the equipment, installation, and training are three separate products or services. Each of these items has a standalone selling price and is not interdependent.
- (b) The total revenue of \$2,000,000 should be allocated to the three components based on their relative standalone selling prices. In this case, the standalone selling price of the equipment is \$2,000,000, the installation fee is \$20,000, and the training is \$50,000. The total standalone selling price therefore is \$2,070,000 (\$2,000,000 + \$20,000 + \$50,000). The allocation is as follows.

| | |
|--------------|---|
| Equipment | \$1,932,367 [(\$2,000,000 ÷ \$2,070,000) × \$2,000,000] |
| Installation | 19,324 [(\$20,000 ÷ \$2,070,000) × \$2,000,000] |
| Training | 48,309 [(\$50,000 ÷ \$2,070,000) × \$2,000,000] |
| | <u>\$2,000,000</u> |

(continued)

ILLUSTRATION 18.12*(continued)*

Handler makes the following entry on November 1, 2020, to record both sales revenue and service revenue on the installation, as well as unearned service revenue.

| November 1, 2020 | | |
|--------------------------------|-----------|-----------|
| Cash | 2,000,000 | |
| Service Revenue (installation) | | 19,324 |
| Unearned Service Revenue | | 48,309 |
| Sales Revenue | | 1,932,367 |

Assuming the cost of the equipment is \$1,500,000, the entry to record cost of goods sold is as follows.

| November 1, 2020 | | |
|-------------------------|-----------|-----------|
| Cost of Goods Sold | 1,500,000 | |
| Inventory | | 1,500,000 |

As indicated by these entries, Handler recognizes revenue from the sale of the equipment once the installation is completed on November 1, 2020. In addition, it recognizes revenue for the installation fee because these services have been performed.

Handler recognizes the training revenues on a straight-line basis starting on November 1, 2020, or \$4,026 ($\$48,309 \div 12$) per month for 1 year (unless a more appropriate method such as the percentage-of-completion method—discussed in the next section—is warranted). The journal entry to recognize the training revenue for 2 months in 2020 is as follows.

| December 31, 2020 | | |
|---|-------|-------|
| Unearned Service Revenue | 8,052 | |
| Service Revenue (training) ($\$4,026 \times 2$) | | 8,052 |

Therefore, Handler recognizes revenue at December 31, 2020, in the amount of \$1,959,743 ($\$1,932,367 + \$19,324 + \$8,052$). Handler makes the following journal entry to recognize the remaining training revenue in 2021, assuming adjusting entries are made at year-end.

| December 31, 2021 | | |
|---|--------|--------|
| Unearned Service Revenue | 40,257 | |
| Service Revenue (training) ($\$48,309 - \$8,052$) | | 40,257 |

Recognizing Revenue When (or as) Each Performance Obligation Is Satisfied—Step 5

A company satisfies its performance obligation when the customer obtains control of the good or service. As indicated in the Handler example (in Illustration 18.12) and the BEAN example, the concept of change in control is the deciding factor in determining when a performance obligation is satisfied. The customer controls the product or service when it has the ability to direct the use of and obtain substantially all the remaining benefits from the asset or service. Control also includes the customer's ability to prevent other companies from directing the use of, or receiving the benefits, from the asset or service. **Illustration 18.13** summarizes the indicators that the customer has obtained control. [14]

1. The company has a right to payment for the asset.
2. The company has transferred legal title to the asset.
3. The company has transferred physical possession of the asset.
4. The customer has significant risks and rewards of ownership.
5. The customer has accepted the asset.

ILLUSTRATION 18.13**Change in Control Indicators**

This is a list of indicators, not requirements or criteria. Not all of the indicators need to be met for management to conclude that control has transferred and revenue can be recognized. Management must use judgment to determine whether the factors collectively indicate that the customer has obtained control. This assessment should be focused primarily on the customer's perspective.

Companies satisfy performance obligations either at a point in time or over a period of time. Companies recognize revenue over a period of time if one of the following three criteria is met.

1. The customer receives and consumes the benefits as the seller performs.
2. The customer controls the asset as it is created or enhanced (e.g., a builder constructs a building on a customer's property).
3. The company does not have an alternative use for the asset created or enhanced (e.g., an aircraft manufacturer builds specialty jets to a customer's specifications) and either (a) the customer receives benefits as the company performs and therefore the task would not need to be re-performed, or (b) the company has a right to payment and this right is enforceable.

Illustration 18.14 provides an example of the point in time when revenue should be recognized.

ILLUSTRATION 18.14

Satisfying a Performance Obligation

Timing of Revenue Recognition

Facts: Gomez Software Company enters into a contract with Hurly Company to develop and install customer relationship management (CRM) software. Progress payments are made upon completion of each stage of the contract. If the contract is terminated, then the partly completed CRM software passes to Hurly Company. Gomez Software is prohibited from redirecting the software to another customer.

Question: At what point should Gomez Software Company recognize revenue related to its contract with Hurly Company?

Solution: Gomez Software does not create an asset with an alternative use because it is prohibited from redirecting the software to another customer. In addition, Gomez Software is entitled to payments for performance to date and expects to complete the project. Therefore, Gomez Software concludes that the contract meets the criteria for recognizing revenue over time.

A company recognizes revenue from a performance obligation over time by measuring the progress toward completion. The method selected for measuring progress should depict the transfer of control from the company to the customer. **For many service arrangements, revenue is recognized on a straight-line basis because the performance obligation is being satisfied ratably over the contract period.** In other settings (e.g., long-term construction contracts), companies use various methods to determine the extent of progress toward completion. The most common are the cost-to-cost and units-of-delivery methods. The objective of all these methods is to measure the extent of progress in terms of costs, units, or value added. Companies identify the various measures (costs incurred, labor hours worked, tons produced, floors completed, etc.) and classify them as input or output measures.

Input measures (e.g., costs incurred and labor hours worked) are efforts devoted to a contract. Output measures (with units of delivery measured as tons produced, floors of a building completed, miles of a highway completed, etc.) track results. Neither is universally applicable to all long-term projects. Their use requires the exercise of judgment and careful tailoring to the circumstances.

The most popular input measure used to determine the progress toward completion is the cost-to-cost basis. Under this basis, a company measures the percentage of completion by comparing costs incurred to date with the most recent estimate of the total costs required to complete the contract. The percentage-of-completion method is discussed more fully in Appendix 18A, which examines the accounting for long-term contracts.

Summary

Illustration 18.15 provides a summary of the five-step revenue recognition process.

ILLUSTRATION 18.15 Summary of the Five-Step Revenue Recognition Process

| Step in Process | Description | Implementation |
|--|---|---|
| 1. Identify the contract with customers. | A contract is an agreement that creates enforceable rights or obligations. | A company applies the revenue guidance to contracts with customers. |
| 2. Identify the separate performance obligations in the contract. | A performance obligation is a promise in a contract to provide a product or service to a customer. A performance obligation exists if the customer can benefit from the good or service on its own or together with other readily available resources. | A contract may be comprised of multiple performance obligations. The accounting for multiple performance obligations is based on evaluation of whether the product or service is distinct within the contract. If each of the goods or services is distinct, but is interdependent and interrelated, these goods and services are combined and reported as one performance obligation. |
| 3. Determine the transaction price. | The transaction price is the amount of consideration that a company expects to receive from a customer in exchange for transferring goods and services. | In determining the transaction price, companies must consider the following factors: (1) variable consideration, (2) time value of money, (3) noncash consideration, and (4) consideration paid or payable to customer. |
| 4. Allocate the transaction price to the separate performance obligations. | If more than one performance obligation exists, allocate the transaction price based on relative fair values. | The best measure of fair value is what the good or service could be sold for on a standalone basis (standalone selling price). Estimates of standalone selling price can be based on (1) adjusted market assessment, (2) expected cost plus a margin approach, or (3) a residual approach. |
| 5. Recognize revenue when each performance obligation is satisfied. | A company satisfies its performance obligation when the customer obtains control of the good or service. | Companies satisfy performance obligations either at a point in time or over a period of time. Companies recognize revenue over a period of time if one of the following criteria is met: (1) the customer receives and consumes the benefits as the seller performs, (2) the customer controls the asset as it is created, or (3) the company does not have an alternative use for the asset. |

Accounting for Revenue Recognition Issues

LEARNING OBJECTIVE 3

Apply the five-step process to major revenue recognition issues.

This section addresses revenue recognition issues found in practice. Most of these issues relate to determining the transaction price (Step 3) and evaluating when control of the product or service passes to the customer (Step 5). The revenue recognition principle and the concept of control are illustrated for the following situations.

- Sales returns and allowances.
- Repurchase agreements.
- Bill and hold.
- Principal-agent relationships.
- Consignments.
- Warranties.
- Nonrefundable upfront fees.

Sales Returns and Allowances

Sales returns and allowances are very common for many companies that sell goods to customers. For example, assume that Fafco Solar sells solar panels to customers on account. Fafco

grants customers the right of return for these panels for various reasons (e.g., dissatisfaction with the product). Customers may receive any combination of the following.

1. A full or partial refund of any consideration paid.
2. A credit that can be applied against amounts owed, or that will be owed, to the seller.
3. Another product in exchange.

To account for these sales returns and allowances, Fafco should recognize the following:

- a. Revenue for the transferred solar panels in the amount of consideration to which Fafco is reasonably assured to be entitled (considering the products to be returned or allowance granted).
- b. An asset (and corresponding adjustment to cost of goods sold) for the goods returned from customers.

Credit Sales with Returns and Allowances

To illustrate the accounting for a return situation in more detail, assume that on January 12, 2020, Venden Company sells 100 cameras for \$100 each on **account** to Amaya Inc. Venden allows Amaya to return any unused cameras within 45 days of purchase. The cost of each product is \$60. Venden estimates that:

1. Three products will be returned.
2. The cost of recovering the products will be immaterial.
3. The returned products are expected to be resold at a profit.

On January 24, Amaya returns two of the cameras because they were the wrong color. On January 31, Venden prepares financial statements and determines that it is likely that only one more camera will be returned. Venden makes the following entries related to these transactions.

| To record the sale of the cameras and related cost of goods sold on January 12, 2020 | | |
|--|--------|--------|
| Accounts Receivable | 10,000 | |
| Sales Revenue (100 × \$100) | | 10,000 |
| Cost of Goods Sold | 6,000 | |
| Inventory (100 × \$60) | | 6,000 |
| To record the return of the two cameras on January 24, 2020 | | |
| Sales Returns and Allowances | 200 | |
| Accounts Receivable (2 × \$100) | | 200 |
| Returned Inventory | 120 | |
| Cost of Goods Sold (2 × \$60) | | 120 |

The Sales Returns and Allowances account is a contra-account to Sales Revenue. The Returned Inventory account is used to separate returned inventory from regular inventory.

On January 31, 2020, Venden prepares financial statements. As indicated earlier, Venden originally estimated that the most likely outcome was that three cameras would be returned. Venden believes the original estimate is correct and makes the following adjusting entries to account for expected returns at January 31, 2020.

| To record expected sales returns on January 31, 2020 | | |
|---|-----|-----|
| Sales Returns and Allowances | 100 | |
| Allowance for Sales Returns and Allowances (1 × \$100) | | 100 |
| To record the expected return of the one camera and related reduction in Cost of Goods Sold | | |
| Estimated Inventory Returns | 60 | |
| Cost of Goods Sold (1 × \$60) | | 60 |

The Allowance for Sales Returns and Allowances account is a contra-account to Accounts Receivable. The Estimated Inventory Returns account will generally be added to the Returned Inventory account at the end of the reporting period.⁹

For the month of January, Venden's income statement reports the information presented in **Illustration 18.16**.

| | |
|--|----------|
| Sales revenue (100 × \$100) | \$10,000 |
| Less: Sales returns and allowances (\$200 + \$100) | 300 |
| Net sales | 9,700 |
| Cost of goods sold (97 × \$60) | 5,820 |
| Gross profit | \$ 3,880 |

ILLUSTRATION 18.16**Income Statement Reporting**

As a result, at the end of the reporting period, the net sales reflects the amount that Venden expects to be entitled to collect.

Venden reports the following information in the balance sheet as of January 31, 2020, as shown in **Illustration 18.17**.

| | |
|---|---------|
| Accounts receivable (\$10,000 – \$200) | \$9,800 |
| Less: Allowance for sales returns and allowances | 100 |
| Accounts receivable (net) | \$9,700 |
| Returned inventory (including estimated) (3 × \$60) | \$ 180 |

ILLUSTRATION 18.17**Balance Sheet Reporting**

Cash Sales with Returns and Allowances

Assume now that Venden sold the cameras to Amaya **for cash** instead of on account. In this situation, Venden makes the following entries related to these transactions.

To record the sale of the cameras and related cost of goods sold on January 12, 2020

| | | |
|-----------------------------|--------|--------|
| Cash | 10,000 | |
| Sales Revenue (100 × \$100) | | 10,000 |
| Cost of Goods Sold | 6,000 | |
| Inventory (100 × \$60) | | 6,000 |

Assuming that Venden did not pay cash at the time of the return of the two cameras to Amaya on January 24, 2020, the entries to record the return of the two cameras and related cost of goods sold are as follows.

⁹As indicated, at the date of sale, both sales revenue and accounts receivable are recorded at their gross amounts without consideration of sales returns and allowances. Then, at the end of the reporting period, adjusting entries are made, resulting in both sales revenues and accounts receivable being reported at net amounts and which reflect actual and estimated returns and allowances. As discussed in Chapter 7, most companies follow this adjusting entry approach because estimating net sales at the date of sale is often difficult and time-consuming. In addition, recording accounts receivables net at the sale date may lead to a lack of correspondence between the control account and the subsidiary ledger related to accounts receivable. By waiting to make the necessary adjusting entries at the end of the reporting period, information related to actual sales returns and allowances is available, and a company still achieves the FASB's objective of reflecting accounts receivable and sales revenue at the amount the company is entitled to receive (and inventories and cost of goods sold at cost).

To record the return of two cameras on January 24, 2020

| | | |
|-------------------------------|-----|-----|
| Sales Returns and Allowances | 200 | |
| Accounts Payable (2 × \$100) | | 200 |
| Returned Inventory | 120 | |
| Cost of Goods Sold (2 × \$60) | | 120 |

Venden records an accounts payable to Amaya to recognize that it owes Amaya for the return of two cameras. As indicated earlier, the Sales Returns and Allowances account is a contra-revenue account. The Returned Inventory account is used to separate returned inventory from regular inventory.

On January 31, 2020, Venden prepares financial statements. As indicated earlier, Venden estimates that the most likely outcome is that one more camera will be returned. Venden therefore makes the following adjusting entries.

To record expected sales returns on January 31, 2020

| | | |
|------------------------------|-----|-----|
| Sales Returns and Allowances | 100 | |
| Accounts Payable (1 × \$100) | | 100 |

To record the expected return of the one camera and related Cost of Goods Sold

| | | |
|-------------------------------|----|----|
| Estimated Inventory Returns | 60 | |
| Cost of Goods Sold (1 × \$60) | | 60 |

At January 31, 2020, Venden records an accounts payable to recognize its estimated additional liability to Amaya for expected future returns. The Estimated Inventory Returns account will generally be added to the Returned Inventory account at the end of the reporting period to identify returned and estimated inventory returns.

Illustration 18.18 presents the information related to these sales that will be reported on Venden's income statement for the month of January.

ILLUSTRATION 18.18**Income Statement
Reporting Sales Returns
and Allowances**

| | |
|--|----------|
| Sales revenue (100 × \$100) | \$10,000 |
| Less: Sales returns and allowances (3 × \$100) | 300 |
| Net sales | 9,700 |
| Cost of goods sold (97 × \$60) | 5,820 |
| Gross profit | \$ 3,880 |

On Venden's balance sheet as of January 31, 2020, the information shown in **Illustration 18.19** is reported.

ILLUSTRATION 18.19**Balance Sheet Reporting Sales
Returns and Allowances**

| | |
|---|----------|
| Cash (assuming no cash payments to date to Amaya) | \$10,000 |
| Returned inventory (including estimated) (3 × \$60) | 180 |
| Accounts payable (\$200 + \$100) | 300 |

Companies record the returned asset in a separate account from inventory to provide transparency. The carrying value of the returned asset is subject to impairment testing, separate from the inventory. If a company is unable to estimate the level of returns with any reliability, it should not report any revenue until the returns become predictive.

Repurchase Agreements

In some cases, companies enter into **repurchase agreements**, which allow them to transfer an asset to a customer but have an unconditional (forward) obligation or unconditional right (call option) to repurchase the asset at a later date. In these situations, the question is whether

the company sold the asset.¹⁰ Generally, companies report these transactions as a financing (borrowing). That is, if the company has a forward obligation or call option to repurchase the asset for an amount **greater than or equal to its selling price**, then the transaction is a financing transaction by the company.¹¹ **Illustration 18.20** examines the issues related to a repurchase agreement.

Repurchase Agreement

Facts: Morgan Inc., an equipment dealer, sells equipment on January 1, 2020, to Lane Company for \$100,000. It agrees to repurchase this equipment (an unconditional obligation) from Lane Company on December 31, 2021, for a price of \$121,000.

Question: Should Morgan Inc. record a sale for this transaction?

Solution: For a sale and repurchase agreement, the terms of the agreement need to be analyzed to determine whether Morgan Inc. has transferred control to the customer, Lane Company. As indicated earlier, control of an asset refers to the ability to direct the use of and obtain substantially all the benefits from the asset. Control also includes the ability to prevent other companies from directing the use of and receiving the benefit from a good or service. In this case, Morgan Inc. continues to have control of the asset because it has agreed to repurchase the asset at an amount greater than the selling price. Therefore, this agreement is a financing transaction and not a sale. Thus, the asset is not removed from the books of Morgan Inc.

Assuming that an interest rate of 10% is imputed from the agreement, Morgan Inc. makes the following entries to record this agreement. Morgan Inc. records the financing on January 1, 2020, as follows.

| January 1, 2020 | | |
|---------------------------|---------|---------|
| Cash | 100,000 | |
| Liability to Lane Company | | 100,000 |

Morgan Inc. records interest on December 31, 2020, as follows.

| December 31, 2020 | | |
|---|--------|--------|
| Interest Expense | 10,000 | |
| Liability to Lane Company (\$100,000 × .10) | | 10,000 |

Morgan Inc. records interest and retirement of its liability to Lane Company as follows.

| December 31, 2021 | | |
|---|---------|---------|
| Interest Expense | 11,000 | |
| Liability to Lane Company (\$110,000 × .10) | | 11,000 |
| Liability to Lane Company | 121,000 | |
| Cash (\$100,000 + \$10,000 + \$11,000) | | 121,000 |

ILLUSTRATION 18.20

Recognition—Repurchase Agreement

Rather than Morgan Inc. having a forward or call option to repurchase the asset, assume that Lane Company **has the option** to require Morgan Inc. to repurchase the asset at December 31, 2021. This option is a put option; that is, Lane Company has the option to put the asset back to Morgan Inc. In this situation, Lane Company has control of the asset as it can keep the equipment or sell it to Morgan Inc. or to some other third party. The value of a put option increases when the value of the underlying asset (in this case, the equipment) decreases. In determining how to account for this transaction, Morgan Inc. has to determine whether Lane Company will have an economic incentive to exercise this put option at the end of 2021.

Specifically, Lane Company has a significant economic incentive to exercise its put option if the value of the equipment declines. In this case, the transaction is generally reported as a financing transaction as shown in Illustration 18.20. That is, Lane Company will return (put)

¹⁰Beyond financing motivations, a company may transfer inventory to another party on a short-term basis to avoid inventory taxes. If the counterparty is able to use the inventory during the transfer period, the transaction may more appropriately be accounted for as a rental agreement.

¹¹If the repurchase price is less than the selling price, then the transaction is accounted for as a lease. [15] The accounting for leases is discussed in Chapter 21.

the equipment back to Morgan Inc. if the repurchase price exceeds the fair value of the equipment. For example, if the repurchase price of the equipment is \$150,000 but its fair value is \$125,000, Lane Company is better off returning the equipment to Morgan Inc.

Conversely, if Lane Company does not have a significant economic incentive to exercise its put option, then the transaction should be reported as a sale of a product with a right of return.

Bill-and-Hold Arrangements

A **bill-and-hold arrangement** is a contract under which an entity bills a customer for a product but the entity retains physical possession of the product until it is transferred to the customer at a point in time in the future. Bill-and-hold sales result when the buyer is not yet ready to take delivery but does take title and accepts billing. For example, a customer may request a company to enter into such an arrangement because of (1) lack of available space for the product, (2) delays in its production schedule, or (3) more than sufficient inventory in its distribution channel. [16] **Illustration 18.21** provides an example of a bill-and-hold arrangement.

ILLUSTRATION 18.21

Recognition—Bill and Hold

Bill and Hold

Facts: Butler Company sells \$450,000 (cost \$280,000) of fireplaces on March 1, 2020, to a local coffee shop, Baristo, which is planning to expand its locations around the city. Under the agreement, Baristo asks Butler to retain these fireplaces in its warehouses until the new coffee shops that will house the fireplaces are ready. Title passes to Baristo at the time the agreement is signed.

Question: When should Butler recognize the revenue from this bill-and-hold arrangement?

Solution: When to recognize revenue in a bill-and-hold arrangement depends on the circumstances. Butler determines when it has satisfied its performance obligation to transfer a product by evaluating when Baristo obtains control of that product. For Baristo to have obtained control of a product in a bill-and-hold arrangement, it must meet all of the conditions for change in control plus all of the following criteria:

- The reason for the bill-and-hold arrangement must be substantive.
- The product must be identified separately as belonging to Baristo.
- The product currently must be ready for physical transfer to Baristo.
- Butler cannot have the ability to use the product or to direct it to another customer.

In this case, assuming that the above criteria were met in the contract, revenue recognition should be permitted at the time the contract is signed. Butler has transferred control to Baristo; that is, Butler has a right to payment for the fireplaces and legal title has transferred.

Butler makes the following entry to record the bill-and-hold sale and related cost of goods sold.

| March 1, 2020 | | | |
|---------------------|---------|---------|--|
| Accounts Receivable | 450,000 | | |
| Sales Revenue | | 450,000 | |
| Cost of Goods Sold | 280,000 | | |
| Inventory | | 280,000 | |

Principal-Agent Relationships

In a **principal-agent relationship**, the principal's performance obligation is to provide goods or perform services for a customer. The agent's performance obligation is to arrange for the principal to provide these goods or services to a customer. Examples of principal-agent relationships are as follows.

- Preferred Travel Company (agent) facilitates the booking of cruise excursions by finding customers for Regency Cruise Company (principal).
- Priceline** (agent) facilitates the sale of various services such as car rentals for **Hertz** (principal).

In these types of situations, amounts collected on behalf of the principal are not revenue of the agent. Instead, revenue for the agent is the amount of the commission it receives (usually a percentage of total revenue). **Illustration 18.22** provides an example of the issues related to principal-agent relationships.

Principal-Agent Relationship

Facts: Fly-Away Travel sells airplane tickets for **British Airways (BA)** to various customers.

Question: What are the performance obligations in this situation and how should revenue be recognized for both the principal and agent?

Solution: The principal in this case is BA and the agent is Fly-Away Travel. Because BA has the performance obligation to provide air transportation to the customer, it is the principal. Fly-Away Travel facilitates the sale of the airline ticket to the customer in exchange for a fee or commission. Its performance obligation is to arrange for BA to provide air transportation to the customer.

Although Fly-Away collects the full airfare from the customer, it then remits this amount to BA less the commission. Fly-Away therefore should not record the full amount of the fare as revenue on its books—to do so overstates revenue. Its revenue is the commission, not the full price. Control of performing the air transportation is with BA, not Fly-Away Travel.

ILLUSTRATION 18.22

Recognition—Principal-Agent Relationship

Some might argue that there is no harm in letting Fly-Away record revenue for the full price of the ticket and then charging the cost of the ticket against the revenue (often referred to as the **gross method** of recognizing revenue). Others note that this approach overstates the agent's revenue and is misleading. The revenue received is the commission for providing the travel services, not the full fare price (often referred to as the **net approach**). The profession believes the net approach is the correct method for recognizing revenue in a principal-agent relationship. As a result, the FASB has developed specific criteria to determine when a principal-agent relationship exists.¹² An important feature in deciding whether Fly-Away is acting as an agent is whether the amount it earns is predetermined, being either a fixed fee per transaction or a stated percentage of the amount billed to the customer.

Consignments

A common principal-agent relationship involves consignments. In these cases, manufacturers (or wholesalers) deliver goods but retain title to the goods until they are sold. This specialized method of marketing certain types of products makes use of an agreement known as a **consignment**. Under this arrangement, the **consignor** (manufacturer or wholesaler) ships merchandise to the **consignee** (dealer), who is to act as an agent for the consignor in selling the merchandise. Both consignor and consignee are interested in selling—the former to make a profit or develop a market, the latter to make a commission on the sale.

The consignee accepts the merchandise and agrees to exercise due diligence in caring for and selling it. The consignee remits to the consignor cash received from customers, after deducting a sales commission and any chargeable expenses. In consignment sales, the consignor uses a modified version of the point-of-sale basis of revenue recognition. That is, the consignor recognizes revenue only after receiving notification of the sale.

¹²Indicators that the company's performance obligation is to arrange for the providing of goods or the performing of services by another party (i.e., the company is an agent and should recognize revenue in the net amount) include the following: (a) the other party is primarily responsible for fulfilling the contract; (b) the company does not have inventory risk before or after the customer order, during shipping, or on return; (c) the company does not have latitude in establishing prices for the other party's goods or services and, hence, the benefit that the company can receive from those goods or services is constrained; (d) the company's consideration is in the form of a commission; and (e) the company does not have customer credit risk for the amount receivable in exchange for the other party's goods or services. [17]

The consignor carries the merchandise as inventory throughout the consignment, separately classified as Inventory (consignments). **The consignee does not record the merchandise as an asset on its books.** Upon sale of the merchandise, the consignee has **a liability for the net amount due the consignor.** The consignor periodically receives from the consignee a report called **account sales** that shows the merchandise received, merchandise sold, expenses chargeable to the consignment, and the cash remitted. Revenue is then recognized by the consignor. Analysis of a consignment arrangement is provided in **Illustration 18.23.**

ILLUSTRATION 18.23**Recognition—Sales on Consignment****Sales on Consignment**

Facts: Nelba Manufacturing Co. ships merchandise costing \$36,000 on consignment to Best Value Stores. Nelba pays \$3,750 of freight costs, and Best Value pays \$2,250 for local advertising costs that are reimbursable from Nelba. By the end of the period, Best Value has sold two-thirds of the consigned merchandise for \$40,000 cash. Best Value notifies Nelba of the sales, retains a 10% commission, and remits the cash due Nelba.

Question: What are the journal entries that the consignor (Nelba) and the consignee (Best Value) make to record this transaction?

Solution:

| Nelba Mfg. Co. (Consignor) | | Best Value Stores (Consignee) | |
|--|--------|---|--------|
| Shipment of consigned merchandise | | | |
| Inventory (consignments) | 36,000 | No entry (record memo of merchandise received). | |
| Finished Goods Inventory | 36,000 | | |
| Payment of freight costs by consignor | | | |
| Inventory (consignments) | 3,750 | No entry. | |
| Cash | 3,750 | | |
| Payment of advertising by consignee | | | |
| No entry until notified. | | Receivable from Consignor | 2,250 |
| | | Cash | 2,250 |
| Sales of consigned merchandise | | | |
| No entry until notified. | | Cash | 40,000 |
| | | Payable to Consignor | 40,000 |
| Notification of sales and expenses and remittance of amount due | | | |
| Cash | 33,750 | Payable to Consignor | 40,000 |
| Advertising Expense | 2,250 | Receivable from | |
| Commission Expense | 4,000 | Consignor | 2,250 |
| Revenue from | | Commission Revenue | 4,000 |
| Consignment Sales | 40,000 | Cash | 33,750 |
| Adjustment of inventory on consignment for cost of sales | | | |
| Cost of Goods Sold | 26,500 | No entry. | |
| Inventory (consignments) | 26,500 | | |
| [2/3 (\$36,000 + \$3,750) = \$26,500] | | | |

Under the consignment arrangement, the consignor accepts the risk that the merchandise might not sell and relieves the consignee of the need to commit part of its working capital to inventory. Consignors use a variety of systems and account titles to record consignments, but they all share the common goal of postponing the recognition of revenue until it is known that a sale to a third party has occurred. **Consignees only recognize commission revenue.**

What Do the Numbers Mean? Grossed Out

As you learned in Chapter 4, many corporate executives obsess over the bottom line. However, analysts on the outside look at the big picture, which includes examination of both the top line and the important subtotals in the income statement, such as gross profit. Not too long ago, the top line caused some concern, with nearly all companies in the S&P 500 reporting a 2 percent decline in the bottom line while the top line saw revenue decline by 1 percent. This was troubling because it was the first decline in revenues since we crawled out of the recession following the financial crisis.

What about income subtotals like gross margin? These metrics too have been under pressure. There is concern that struggling companies may employ a number of manipulations to mask the impact of gross margin declines on the bottom line. In fact, **Rite Aid** prepares an income statement that omits the gross margin subtotal. Rite Aid has used a number of suspect accounting adjustments related to tax allowances and inventory gains to offset its weak gross margin.

Or, consider the classic case of **Priceline.com**. In one quarter, Priceline reported that it earned \$152 million in revenues. But, that included the full amount customers paid for tickets, hotel rooms, and rental cars. Traditional travel agencies call that amount “gross bookings,” not revenues. And, much like regular

travel agencies, Priceline keeps only a small portion of gross bookings—namely, the spread between the customers’ payments and the price the company paid for the merchandise. The rest, which Priceline calls “product costs,” it pays to the airlines and hotels that supply the tickets and rooms.

However, Priceline’s product costs came to \$134 million, leaving Priceline just \$18 million of what it calls “gross profit” and what most other companies would call revenues. And that’s before all of Priceline’s other costs—like advertising and salaries—which netted out to a loss of \$102 million. The difference isn’t academic. Priceline shares traded at about 23 times its reported revenues but at a mind-boggling 214 times its “gross profit.” This and other aggressive recognition practices explain the stricter revenue recognition guidance, indicating that if a company performs as an agent or broker without assuming the risks and rewards of ownership of the goods, the company should report sales on a net (fee) basis.

Ketz, “RITE AID: Is Management Selling Drugs or Using Them?” *Grumpy Old Accountants* (August 22, 2011); and S. Jakob, “Weak Revenue Is New Worry for Investors,” *Wall Street Journal* (November 25, 2012).

Warranties

As discussed in Chapter 13, companies often provide one of two types of **warranties** to customers:

1. Warranties that the product **meets agreed-upon specifications in the contract at the time the product is sold**. This type of warranty is included in the sales price of a company’s product and is often referred to as an **assurance-type warranty**.
2. Warranties that provide an **additional service beyond the assurance-type warranty**. This warranty is not included in the sales price of the product and is referred to as a **service-type warranty**. As a consequence, it is recorded as a separate performance obligation.

Companies do not record a separate performance obligation for assurance-type warranties. This type of warranty is nothing more than a quality guarantee that the good or service is free from defects at the point of sale. In this case, the sale of the product and the related assurance warranty are one performance obligation as they are interdependent of and interrelated with each other. The objective for companies that issue an assurance warranty is to provide a combined item (product and a warranty).

These types of obligations should be expensed in the period the goods are provided or services performed. In addition, the company should record a warranty liability. The estimated amount of the liability includes all the costs that the company is expected to incur after sale due to the correction of defects or deficiencies required under the warranty provisions.

In addition, companies sometimes provide customers with an option to purchase a warranty separately. In most cases, these extended warranties provide the customer a service beyond fixing defects that existed at the time of sale. For example, when you purchase a TV, you are entitled to the company’s warranty. You will also undoubtedly be offered an extended warranty on the product at an additional cost. These service-type warranties represent a **separate service and are an additional performance obligation**. The service-type warranty is sold separately and therefore has a standalone selling price. In this case, the objective of the company is to sell an additional service to customers. As a result, companies should allocate a portion of the transaction price to this performance obligation, if provided. The company recognizes revenue in the period that the service-type warranty is in effect. **Illustration 18.24** presents an example of both an assurance-type and a service-type warranty.

ILLUSTRATION 18.24

Recognition—Performance Obligations and Warranties

Warranties

Facts: Maverick Company sold 1,000 Rollomatics on October 1, 2020, at total price of \$6,000,000, with a warranty guarantee that the product was free of defects. The cost of the Rollomatics is \$4,000,000. The term of this assurance warranty is 2 years, which Maverick estimates will cost \$80,000. In addition, Maverick sold extended warranties related to 400 Rollomatics for 3 years beyond the 2-year period for \$18,000. On November 22, 2020, Maverick incurred labor costs of \$3,000 and part costs of \$25,000 related to the assurance warranties. Maverick prepares financial statements on December 31, 2020. It estimates that its future assurance warranty costs will total \$44,000 at December 31, 2020.

Question: What are the journal entries that Maverick Company should make in 2020 related to the sale of the Rollomatics and the assurance and extended warranties?

Solution: Maverick makes the following entries in 2020 related to Rollomatics sold with warranties.

October 1, 2020

To record the sale of the Rollomatics and the related extended warranties:

| | | |
|-------------------------------|-----------|-----------|
| Cash (\$6,000,000 + \$18,000) | 6,018,000 | |
| Sales Revenue | | 6,000,000 |
| Unearned Warranty Revenue | | 18,000 |

To record the cost of goods sold and reduce the inventory of Rollomatics:

| | | |
|--------------------|-----------|-----------|
| Cost of Goods Sold | 4,000,000 | |
| Inventory | | 4,000,000 |

November 22, 2020

To record the warranty costs incurred:

| | | |
|----------------------------|--------|--------|
| Warranty Expense | 28,000 | |
| Salaries and Wages Payable | | 3,000 |
| Inventory (parts) | | 25,000 |

December 31, 2020

To record the adjusting entry related to its assurance warranty at the end of the year:

| | | |
|--------------------|--------|--------|
| Warranty Expense | 44,000 | |
| Warranty Liability | | 44,000 |

Maverick Company makes an adjusting entry on December 31, 2020, to record a liability for the expected warranty costs related to the sale of the Rollomatics. When actual warranty costs are incurred in 2021, the Warranty Liability account is reduced.

In most cases, Unearned Warranty Revenue (related to the service-type warranty) is recognized on a straight-line basis as Warranty Revenue over the three-year period to which it applies. Revenue related to the extended warranty is not recognized until the warranty becomes effective on October 1, 2022. If financial statements are prepared on December 31, 2022, Maverick makes the following entry to recognize revenue:

| | | |
|--------------------------------------|-------|-------|
| Unearned Warranty Revenue | 1,500 | |
| Warranty Revenue [(18,000 ÷ 36) × 3] | | 1,500 |

Similar to that illustrated in Chapter 13, Maverick Company reduces the Warranty Liability account over the warranty period as the actual warranty costs are incurred.¹³ The company

¹³As with the accounting for sales returns and allowances, the entries shown here reflect a gross (as opposed to net) treatment of the warranty obligation. That is, at the date of sale, Maverick recorded sales with an assurance warranty at the gross amount, without adjustment for expected warranty costs (sometimes referred to as the expense warranty approach). Then at the end of the accounting period when financial statements are prepared, Maverick prepares adjusting entries to record a liability for any remaining estimated warranty expenses (after accounting for actual warranty expenditures). Companies generally do not use the net method because it requires additional analysis and bookkeeping to adjust the warranty liability for unused warranty claims.

also recognizes revenue related to the service-type warranty over the three-year period that extends beyond the assurance warranty period (two years). In most cases, the unearned warranty revenue is recognized on a straight-line basis. The costs associated with the service-type warranty are expensed as incurred.

Nonrefundable Upfront Fees

Companies sometimes receive payments (**upfront fees**) from customers before they deliver a product or perform a service. Upfront payments generally relate to the initiation, activation, or setup of a good or service to be provided or performed in the future. In most cases, these upfront payments are nonrefundable. Examples include fees paid for membership in a health club or buying club, and activation fees for phone, Internet, or cable.

Companies must determine whether these nonrefundable advance payments are for products or services in the current period. In most situations, these payments are for future delivery of products and services and should therefore not be recorded as revenue at the time of payment. In some cases, the upfront fee is viewed similar to a renewal option for future products and services at a reduced price. An example would be a health club where once the initiation fee is paid, no additional fee is necessary upon renewal. **Illustration 18.25** provides an example of an upfront fee payment.

Upfront Fee Considerations

Facts: Erica Felise signs a 1-year contract with Bigelow Health Club. The terms of the contract are that Erica is required to pay a nonrefundable initiation fee of \$200 and a membership fee of \$50 per month. Bigelow determines that its customers, on average, renew their annual membership two times before terminating their membership.

Question: What is the amount of revenue Bigelow Health Club should recognize in the first year?

Solution: In this case, the membership fee arrangement may be viewed as a single performance obligation (similar services are provided in all periods). That is, Bigelow is providing a discounted price in the second and third years for the same services, and this should be reflected in the revenue recognized in those periods. Bigelow determines the total transaction price to be \$2,000—the upfront fee of \$200 and the three years of monthly fees of \$1,800 ($\50×36)—and allocates it over the three years. In this case, Bigelow would report revenue of \$55.56 ($\$2,000 \div 36$) each month for three years. *Unless otherwise instructed, use this approach for homework problems.*¹⁴

ILLUSTRATION 18.25

Transaction Price— Upfront Fee Considerations

Summary

Illustration 18.26 provides a summary of the additional issues related to transfer of control and revenue recognition.

¹⁴The initiation fee might be viewed as a separate performance obligation (it provides a renewal option at a lower price than normally charged, perhaps with different services). In this situation, in the first period, Bigelow would report revenue of \$600 ($\50×12). The initiation fee would then be allocated to years two and three (\$100 in each year) unless forfeited earlier.

ILLUSTRATION 18.26 Summary—Other Revenue Recognition Issues

| Issue | Description | Implementation |
|------------------------------|--|---|
| Sales returns and allowances | Return of product by customer (e.g., due to dissatisfaction with the product) in exchange for refunds, a credit against amounts owed or that will be owed, and/or another product in exchange. | Seller may recognize (a) an adjustment to revenue for products expected to be returned, and (b) an asset (and corresponding adjustment to cost of goods sold) for the goods returned from customers. |
| Repurchase agreements | Seller has an obligation or right to repurchase the asset at a later date. | Generally, if the company has an obligation or right to repurchase the asset for an amount greater than its selling price, then the transaction is a financing transaction. |
| Bill-and-hold | Result when the buyer is not yet ready to take delivery but does take title and accept billing. | Revenue is recognized depending on when the customer obtains control of that product. |
| Principal-agent | Arrangement in which the principal's performance obligation is to provide goods or perform services for a customer. The agent's performance obligation is to arrange for the principal to provide these goods or services to a customer. | Amounts collected on behalf of the principal are not revenue of the agent. Instead, revenue for the agent is the amount of the commission it receives. The principal recognizes revenue when the goods or services are sold to a third-party customer. |
| Consignments | A principal-agent relationship in which the consignor (manufacturer or wholesaler) ships merchandise to the consignee (dealer), who is to act as an agent for the consignor in selling the merchandise. | The consignor recognizes revenue only after receiving notification of the sale and the cash remittance from the consignee (consignor carries the merchandise as inventory throughout the consignment). The consignee records commission revenue (usually some percentage of the selling price). |
| Warranties | Warranties can be assurance-type (product meets agreed-upon specifications) or service-type (provides additional service beyond the assurance-type warranty). | A separate performance obligation is not recorded for assurance-type warranties (considered part of the product). Service-type warranties are recorded as a separate performance obligation. Companies should allocate a portion of the transaction price to service type-warranties, when present. |
| Nonrefundable upfront fees | Upfront payments generally relate to initiation, activation, or setup activities for a good or service to be delivered in the future. | The upfront payment should be allocated over the periods benefited. |

Presentation and Disclosure

LEARNING OBJECTIVE 4

Describe presentation and disclosure regarding revenue.

Presentation

As discussed earlier, companies use an asset-liability approach to recognize revenue. For example, when **General Mills** delivers cereal to **Whole Foods Market** (satisfying its performance obligation), it has a right to consideration from Whole Foods and therefore has a contract asset. If, on the other hand, Whole Foods Market performs first, by prepaying for this cereal, General Mills has a contract liability. Companies must present these contract assets and contract liabilities on their balance sheets.

Contract Assets and Liabilities

Contract assets are of two types: (1) unconditional rights to receive consideration because the company has satisfied its performance obligation with a customer, and (2) conditional

rights to receive consideration because the company has satisfied one performance obligation but must satisfy another performance obligation in the contract before it can bill the customer. Companies should report unconditional rights to receive consideration as a receivable on the balance sheet. Conditional rights on the balance sheet should be reported separately as contract assets. **Illustration 18.27** provides an example of the accounting and reporting for a contract asset.

Contract Asset

Facts: On January 1, 2020, Finn Company enters into a contract to transfer Product A and Product B to Obermine Co. for \$100,000. The contract specifies that payment of Product A will not occur until Product B is also delivered. In other words, payment will not occur until both Product A and Product B are transferred to Obermine. Finn determines that standalone selling prices are \$30,000 for Product A and \$70,000 for Product B. Finn delivers Product A to Obermine on February 1, 2020. On March 1, 2020, Finn delivers Product B to Obermine.

Question: What journal entries should Finn Company make in regards to this contract in 2020?

Solution: No entry is required on January 1, 2020, because neither party has performed on the contract. On February 1, 2020, Finn records the following entry.

| February 1, 2020 | | | |
|-------------------------|--|--------|--------|
| Contract Asset | | 30,000 | |
| Sales Revenue | | | 30,000 |

On February 1, Finn has satisfied its performance obligation and therefore reports revenue of \$30,000. However, it does not record an accounts receivable at this point because it does not have an unconditional right to receive the \$100,000 unless it also transfers Product B to Obermine. In other words, a contract asset occurs generally when a company must satisfy another performance obligation before it is entitled to bill the customer. When Finn transfers Product B on March 1, 2020, it makes the following entry.

| March 1, 2020 | | | |
|----------------------|--|---------|--------|
| Accounts Receivable | | 100,000 | |
| Contract Asset | | | 30,000 |
| Sales Revenue | | | 70,000 |

ILLUSTRATION 18.27

Contract Asset Recognition and Presentation

As indicated above, a **contract liability** is a company’s obligation to transfer goods or services to a customer for which the company has received consideration from the customer. A contract liability is generally referred to as Unearned Sales Revenue, Unearned Service Revenue, or another appropriate account title. **Illustration 18.28** provides an example of the recognition and presentation of a contract liability.

Contract Liability

Facts: On March 1, 2020, Henly Company enters into a contract to transfer a product to Propel Inc. on July 31, 2020. It is agreed that Propel will pay the full price of \$10,000 in advance on April 15, 2020. Henly delivers the product on July 31, 2020. The cost of the product is \$7,500.

Question: What journal entries are required in 2020?

Solution: No entry is required on March 1, 2020, because neither party has performed on the contract. On receiving the cash on April 15, 2020, Henly records the following entry.

| April 15, 2020 | | | |
|------------------------|--|--------|--------|
| Cash | | 10,000 | |
| Unearned Sales Revenue | | | 10,000 |

ILLUSTRATION 18.28

Contract Liability Recognition and Presentation

(continued)

ILLUSTRATION 18.28*(continued)*

On satisfying the performance obligation on July 31, 2020, Henly records the following entry to record the sale.

| July 31, 2020 | | |
|---|--------|--------|
| Unearned Sales Revenue | 10,000 | |
| Sales Revenue | | 10,000 |
| In addition, Henly records cost of goods sold as follows. | | |
| Cost of Goods Sold | 7,500 | |
| Inventory | | 7,500 |

Companies are not required to use the terms “contract assets” and “contract liabilities” on the balance sheet. For example, contract liabilities are performance obligations and therefore more descriptive titles (as noted earlier) such as unearned service revenue, unearned sales revenue, repurchase liability, and return liability may be used where appropriate. For contract assets, it is important that financial statement users can differentiate between unconditional and conditional rights through appropriate account presentation.

Contract Modifications

Companies sometimes change the contract terms while it is ongoing; this is referred to as a **contract modification**. When a contract modification occurs, companies determine whether a new contract (and performance obligations) results or whether it is a modification of the existing contract.

Separate Performance Obligation A company accounts for a contract modification as a new contract if **both** of the following conditions are satisfied:

- The promised **goods or services are distinct** (i.e., the company sells them separately and they are not interdependent with other goods and services), and
- The company has the right to receive an amount of **consideration that reflects the standalone selling price** of the promised goods or services. [18]

For example, Crandall Co. has a contract to sell 100 products to a customer for \$10,000 (\$100 per product) at various points in time over a six-month period. After 60 products have been delivered, Crandall modifies the contract by promising to deliver 20 more products for an additional \$1,900, or \$95 per product (which is the standalone selling price of the products at the time of the contract modification). Crandall regularly sells the products separately. In this situation, the contract modification for the additional 20 products is, in effect, a **new and separate contract** because it meets both of the conditions above. That is, it does not affect the accounting for the original contract.

Given a new contract, Crandall recognizes an additional \$4,000 [(100 units – 60 units) × \$100] related to the original contract terms and \$1,900 (20 units × \$95) related to the new products. Total revenue after the modification is therefore \$5,900 (\$4,000 + \$1,900).

Prospective Modification What if Crandall Co. determines that the additional products are not a separate performance obligation? This might arise if the new products are not priced at the proper standalone selling price or if they are not distinct. In this situation, companies generally account for the modification using a prospective approach.

Under the prospective approach, Crandall should account for the effect of the change in the period of change as well as future periods if the change affects both. Crandall should not change previously reported results. Thus, for Crandall, the amount recognized as revenue for each of the remaining products would be a blended price of \$98.33, computed as shown in **Illustration 18.29**.

ILLUSTRATION 18.29**Revenue Under Prospective Modification**

| | |
|--|---------|
| Consideration for products not yet delivered under original contract (\$100 × 40) | \$4,000 |
| Consideration for products to be delivered under the contract modification (\$95 × 20) | 1,900 |
| Total remaining revenue | \$5,900 |
| Revenue per remaining unit (\$5,900 ÷ 60) = | \$98.33 |

Therefore, under the prospective approach, this computation differs from that in the separate performance obligation approach in that revenue on the remaining units is recognized at the blended price. Total revenue after the modification is therefore \$5,900 (60 units × \$98.33). **Illustration 18.30** shows the revenue reported under the two contract modification approaches for Crandall Co.

| | Revenue Recognized Prior to Modification | Revenue Recognized After Modification | Total Revenue Recognized |
|--|---|--|-----------------------------|
| Separate performance obligation | \$6,000 | \$5,900 | \$11,900 |
| No separate performance obligation—prospectively | \$6,000 | \$5,900 | \$11,900 |

ILLUSTRATION 18.30
Comparison of Contract
Modification Approaches

As indicated, whether a modification is treated as a separate performance obligation or prospectively, the same amount of revenue is recognized before and after the modification. However, under the prospective approach, a blended price (\$98.33) is used for sales in the periods after the modification.¹⁵

Costs to Fulfill a Contract

Companies may also report assets associated with fulfillment costs related to a revenue arrangement. Companies divide fulfillment costs (contract acquisition costs) into two categories:

1. Those that give rise to an asset.
2. Those that are expensed as incurred.

Companies recognize an asset for the incremental costs if these costs are incurred to obtain a contract with a customer. In other words, incremental costs are those that a company would not incur if the contract had not been obtained (e.g., selling commissions). Additional examples that give rise to an asset are as follows.

- a. Direct labor, direct materials, and allocation of costs that relate directly to the contract (e.g., costs of contract management and supervision, insurance, and depreciation of tools and equipment).
- b. Costs that generate or enhance resources of the company that will be used in satisfying performance obligations in the future. Such costs include intangible design or engineering costs that will continue to give rise to benefits in the future.

Other costs that are expensed as incurred include general and administrative costs (unless those costs are explicitly chargeable to the customer under the contract) as well as costs of wasted materials, labor, or other resources to fulfill the contract that were not reflected in the price of the contract. That is, **companies only capitalize costs that are direct, incremental, and recoverable** (assuming that the contract period is more than one year). **Illustration 18.31** provides an example of costs capitalized to fulfill a contract.

As a practical expedient, a company recognizes the incremental costs of obtaining a contract as an expense when incurred if the amortization period of the asset that the company otherwise would have recognized is one year or less.

¹⁵Another approach to account for a contract modification is to report the information in a cumulative catch-up manner. In other words, assuming that these new products are part of the original contract, companies adjust the revenue account to reflect the cumulative effect for periods prior to when the modification occurred. An example of a catch-up situation is a long-term construction contract, which is discussed in more detail in Appendix 18A. Use of the prospective approach avoids the complexity of opening up the accounting for previously satisfied performance obligations. However, it ignores any adjustments to revenue that have already been recognized. [19] *For homework purposes, unless instructed otherwise, use the prospective approach for modifications that do not result in a separate performance obligation.* Expanded discussion of the prospective and cumulative catch-up (retrospective) approaches to accounting changes is provided in Chapter 22.

ILLUSTRATION 18.31**Recognition—Contract Costs****Contract Costs**

Facts: Rock Integrators enters into a contract to operate Dello Company's information technology data center for 5 years. Rock Integrators incurs selling commission costs of \$10,000 to obtain the contract. Before performing the services, Rock Integrators designs and builds a technology platform that interfaces with Dello's systems. That platform is not transferred to Dello. Dello promises to pay a fixed fee of \$20,000 per month. Rock Integrators incurs the following additional costs: design services for the platform \$40,000, hardware for the platform \$120,000, software \$90,000, and testing of data center \$100,000.

Question: What are Rock Integrators' costs for fulfilling the contract to Dello Company?

Solution: The \$10,000 selling commission cost related to obtaining the contract is recognized as an asset. The design services cost of \$40,000 and the hardware for the platform of \$120,000 are also capitalized. As the technology platform is independent of the contract, the pattern of amortization of this platform may not be related to the terms of the contract. The testing costs are expensed as incurred; in general, these costs are not recoverable.

Collectibility

As indicated earlier, if it is probable that the transaction price will not be collected, this is an indication that the parties are not committed to their obligations. As a result, one of the criteria for the existence of a contract is not met and therefore revenue is not recognized.

Any time a company sells a product or performs a service on account, a collectibility issue occurs. **Collectibility** refers to a customer's credit risk, that is, the risk that a customer will be unable to pay the amount of consideration in accordance with the contract. Under the revenue guidance—as long as a contract exists (it is probable that the customer will pay)—the amount recognized as revenue is not adjusted for customer credit risk.

Thus, companies report the revenue gross (without consideration of credit risk) and then present an allowance for any impairment due to bad debts (recognized initially and subsequently in accordance with the respective bad debt guidance). An impairment related to bad debts is reported as an operating expense in the income statement. As a result, whether a company will get paid for satisfying a performance obligation is not a consideration in determining revenue recognition. [20]

Disclosure

The disclosure requirements for revenue recognition are designed to help financial statement users understand the nature, amount, timing, and uncertainty of revenue and cash flows arising from contracts with customers. To achieve that objective, companies disclose qualitative and quantitative information about all of the following:

- **Contracts with customers.** These disclosures include the disaggregation of revenue, presentation of opening and closing balances in contract assets and contract liabilities, and significant information related to their performance obligations.
- **Significant judgments.** These disclosures include judgments and changes in these judgments that affect the determination of the transaction price, the allocation of the transaction price, and the determination of the timing of revenue.
- **Assets recognized from costs incurred to fulfill a contract.** These disclosures include the closing balances of assets recognized to obtain or fulfill a contract, the amount of amortization recognized, and the method used for amortization.

To implement these requirements and meet the disclosure objectives, companies provide a range of disclosures, as summarized in **Illustration 18.32**. [21]¹⁶

¹⁶See PricewaterhouseCoopers Dataline 2013–2014.

ILLUSTRATION 18.32 Revenue Disclosures

| Disclosure Type | Requirements |
|--------------------------------------|--|
| Disaggregation of revenue | Disclose disaggregated revenue information in categories that depict how the nature, amount, timing, and uncertainty of revenue and cash flows are affected by economic factors. Reconcile disaggregated revenue to revenue for reportable segments. |
| Reconciliation of contract balances | Disclose opening and closing balances of contract assets (e.g., unbilled receivables) and liabilities (e.g., deferred revenue) and provide a qualitative description of significant changes in these amounts. Disclose the amount of revenue recognized in the current period relating to performance obligations satisfied in a prior period (e.g., from contracts with variable consideration). Disclose the opening and closing balances of trade receivables if not presented elsewhere. |
| Remaining performance obligations | Disclose the amount of the transaction price allocated to remaining performance obligations not subject to significant revenue reversal. Provide a narrative discussion of potential additional revenue in constrained arrangements. |
| Costs to obtain or fulfill contracts | Disclose the closing balances of capitalized costs to obtain and fulfill a contract and the amount of amortization in the period. Disclose the method used to determine amortization for each reporting period. |
| Other qualitative disclosures | Disclose significant judgments and changes in judgments that affect the amount and timing of revenue from contracts with customers. Disclose how management determines the minimum amount of revenue not subject to the variable consideration constraint. |

Evolving Issue Revenue: “It’s Like an Octopus”

As you have learned in this chapter, the revenue recognition standard provides a comprehensive and general framework for recognizing revenue and should result in improvements in the reporting of revenue. However, these new rules reflect significant change relative to the prior revenue guidance. As one senior accountant noted, “Revenue touches everything . . . It’s like an octopus . . . It has tentacles all over the income statement.” The new rules—to be adopted by most companies in 2018—are expected to create implementation challenges, especially for companies that:

- Currently recognize revenue using industry-specific guidance.
- Have customer contracts with diverse terms and conditions.
- Have arrangements with goods or services delivered over long periods.
- Have systems or processes that do not easily provide new data requirements.

Among the companies that are likely to experience significant changes are those in the telecommunications, aerospace, construction, asset management, real estate, and software industries.

In the months after issuance of the new guidance, the FASB and IASB issued documents that addressed common questions posed by these industries. In addition, the Boards created a joint transition resource group that is responsible for informing the FASB and IASB about interpretive issues that could arise as companies, institutions, and other organizations implement the revenue recognition standard. The transition group is comprised of specialists representing financial statement preparers, auditors, regulators, users, and other stakeholders, as well as members of the FASB and IASB.

The resource group solicits, analyzes, and discusses stakeholder issues that apply to common transactions that could reasonably create diversity in practice. In addition to providing a forum to discuss the application of the requirements, the transition group provides information that will help the Boards determine what, if any, action will be needed to resolve that diversity. The group itself will not issue guidance.

As noted by Russ Golden, chairman of the FASB:

“Effective implementation of the revenue recognition standard is critical to its success in providing financial statement users with the information they need to make the right decisions about how to allocate their capital. The Boards are committed to ensuring a smooth transition to the new standard, and the transition resource group is an important tool for determining any areas that will need additional guidance before the standard becomes effective.”

Thus, change is necessary to achieve improvements in revenue recognition accounting. Hopefully, the extended transition period and expanded support by the transition group will make the change a bit less painful.

Chasen, “Revenue Recognition Accounting Changes Could Have Long Tentacles,” *Wall Street Journal* (November 16, 2015).

Long-Term Construction Contracts

LEARNING OBJECTIVE *5

Apply the percentage-of-completion method for long-term contracts.

Revenue Recognition over Time

For the most part, companies recognize revenue at the point of sale because that is when the performance obligation is satisfied. However, as indicated in the chapter, under certain circumstances companies recognize revenue over time. The most notable context in which revenue is recognized over time is long-term construction contract accounting.

Long-term contracts frequently provide that the seller (builder) may bill the purchaser at intervals, as it reaches various points in the project. Examples of long-term contracts are construction-type contracts, development of military and commercial aircraft, weapons-delivery systems, and space exploration hardware. When the project consists of separable units, such as a group of buildings or miles of roadway, contract provisions may provide for delivery in installments. In that case, the seller would bill the buyer and transfer title at stated stages of completion, such as the completion of each building unit or every 10 miles of road. The accounting records should record sales when installments are “delivered.”

A company satisfies a performance obligation and recognizes revenue over time if at least one of the following three criteria is met: [22]

1. The customer simultaneously receives and consumes the benefits of the seller’s performance as the seller performs.
2. The company’s performance creates or enhances an asset (for example, work in process) that the customer controls as the asset is created or enhanced; or
3. The company’s performance does not create an asset with an alternative use. For example, the asset cannot be used by another customer. In addition to this alternative use element, at least *one* of the following criteria must be met:
 - a. Another company would not need to substantially re-perform the work the company has completed to date if that other company were to fulfill the remaining obligation to the customer.
 - b. The company has a right to payment for its performance completed to date, and it expects to fulfill the contract as promised.¹⁷

Therefore, if criterion 1, 2, or 3 is met, then a company recognizes revenue over time *if it can reasonably estimate its progress toward satisfaction of the performance obligations*. That is, it recognizes revenues and gross profits each period based upon the progress of the construction—referred to as the **percentage-of-completion method**. The company accumulates construction costs plus gross profit recognized to date in an inventory account (Construction in Process), and it accumulates progress billings in a contra inventory account (Billings on Construction in Process).

¹⁷The right to payment for performance completed to date does not need to be for a fixed amount. However, the company must be entitled to an amount that would compensate the company for performance completed to date (even if the customer can terminate the contract for reasons other than the company’s failure to perform as promised). Compensation for performance completed to date includes payment that approximates the selling price of the goods or services transferred to date (for example, recovery of the company’s costs plus a reasonable profit margin).

The rationale for using percentage-of-completion accounting is that under most of these contracts the buyer and seller have enforceable rights. The buyer has the legal right to require specific performance on the contract. The seller has the right to require progress payments that provide evidence of the buyer's ownership interest. As a result, a continuous sale occurs as the work progresses. Companies should recognize revenue according to that progression.

Alternatively, if the criteria for recognition over time are not met (e.g., the company does not have a right to payment for work completed to date), the company recognizes revenues and gross profit at a point in time, that is, when the contract is completed. This approach is referred to as the **completed-contract method**.¹⁸ The company accumulates construction costs in an inventory account (Construction in Process), and it accumulates progress billings in a contra inventory account (Billings on Construction in Process).

Percentage-of-Completion Method

The **percentage-of-completion method** recognizes revenues, costs, and gross profit as a company makes progress toward completion on a long-term contract. To defer recognition of these items until completion of the entire contract is to misrepresent the efforts (costs) and accomplishments (revenues) of the accounting periods during the contract. In order to apply the percentage-of-completion method, a company must have some basis or standard for measuring the progress toward completion at particular interim dates.

Measuring the Progress Toward Completion

As one practicing accountant wrote, "The big problem in applying the percentage-of-completion method . . . has to do with the ability to make reasonably accurate estimates of completion and the final gross profit." Companies use various methods to determine the **extent of progress toward completion**. The most common are the *cost-to-cost* and *units-of-delivery* methods.

As indicated in the chapter, the objective of all these methods is to measure the extent of progress in terms of costs, units, or value added. Companies identify the various measures (costs incurred, labor hours worked, tons produced, floors completed, etc.) and classify them as input or output measures. **Input measures** (costs incurred, labor hours worked) are efforts devoted to a contract. **Output measures** (with units of delivery measured as tons produced, floors of a building completed, miles of a highway completed) track results. Neither measure is universally applicable to all long-term projects. Their use requires the exercise of judgment and careful tailoring to the circumstances.

Both input and output measures have disadvantages. The input measure is based on an established relationship between a unit of input and productivity. If inefficiencies cause the productivity relationship to change, inaccurate measurements result. Another potential problem is front-end loading, in which significant upfront costs result in higher estimates of completion. To avoid this problem, companies should disregard some early-stage construction costs—for example, costs of uninstalled materials or costs of subcontracts not yet performed—if they do not relate to contract performance.

Similarly, output measures can produce inaccurate results if the units used are not comparable in time, effort, or cost to complete. For example, using floors (stories) completed can be deceiving. Completing the first floor of an eight-story building may require more than one-eighth the total cost because of the substructure and foundation construction.

The most popular input measure used to determine the progress toward completion is the **cost-to-cost basis**. Under this basis, a company like **Halliburton** measures the percentage of completion by comparing costs incurred to date with the most recent estimate of the total costs required to complete the contract. **Illustration 18A.1** shows the formula for the cost-to-cost basis.

¹⁸*Accounting Trends and Techniques* reports that of the 83 of its 500 sample companies that referred to long-term construction contracts, 75 used the percentage-of-completion method and 8 used the completed-contract method. In some circumstances (e.g., in the early stages of a contract), a company may not be able to reasonably measure the outcome of a performance obligation, but it expects to recover the costs incurred in satisfying the performance obligation. In these situations, companies recognize revenue only to the extent of the costs incurred until such time that they can reasonably measure the outcome of the performance obligation. This is referred to as the **cost-recovery method**. [23]

ILLUSTRATION 18A.1

Formula for Percentage-of-Completion, Cost-to-Cost Basis

$$\frac{\text{Costs Incurred to Date}}{\text{Most Recent Estimate of Total Costs}} = \text{Percent Complete}$$

Once Halliburton knows the percentage that costs incurred bear to total estimated costs, it applies that percentage to the total revenue or the estimated total gross profit on the contract. The resulting amount is the revenue or the gross profit to be recognized to date. **Illustration 18A.2** shows this computation.

ILLUSTRATION 18A.2

Formula for Total Revenue (or Gross Profit) to Be Recognized to Date

$$\text{Percent Complete} \times \text{Estimated Total Revenue (or Gross Profit)} = \text{Revenue (or Gross Profit) to Be Recognized to Date}$$

To find the amounts of revenue and gross profit recognized each period, Halliburton subtracts total revenue or gross profit recognized in prior periods, as shown in **Illustration 18A.3**.

ILLUSTRATION 18A.3

Formula for Amount of Current-Period Revenue (or Gross Profit) Cost-to-Cost Basis

$$\text{Revenue (or Gross Profit) to Be Recognized to Date} - \text{Revenue (or Gross Profit) Recognized in Prior Periods} = \text{Current-Period Revenue (or Gross Profit)}$$

Because **the cost-to-cost method is widely used** (without excluding other bases for measuring progress toward completion), we have adopted it for use in our examples.

Example of Percentage-of-Completion Method—Cost-to-Cost Basis

To illustrate the percentage-of-completion method, assume that Hardhat Construction Company has a contract to construct a \$4,500,000 bridge at an estimated cost of \$4,000,000. The contract is to start in July 2020, and the bridge is to be completed in October 2022. The following data pertain to the construction period. (Note that by the end of 2021, Hardhat has revised the estimated total cost from \$4,000,000 to \$4,050,000.)

| | 2020 | 2021 | 2022 |
|-----------------------------------|-------------|-------------|-------------|
| Costs to date | \$1,000,000 | \$2,916,000 | \$4,050,000 |
| Estimated costs to complete | 3,000,000 | 1,134,000 | — |
| Progress billings during the year | 900,000 | 2,400,000 | 1,200,000 |
| Cash collected during the year | 750,000 | 1,750,000 | 2,000,000 |

Hardhat would compute the percent complete as shown in **Illustration 18A.4**.

ILLUSTRATION 18A.4

Application of Percentage-of-Completion Method, Cost-to-Cost Basis

| | 2020 | 2021 | 2022 |
|------------------------------|--|--|--|
| Contract price | \$4,500,000 | \$4,500,000 | \$4,500,000 |
| Less estimated cost: | | | |
| Costs to date | 1,000,000 | 2,916,000 | 4,050,000 |
| Estimated costs to complete | 3,000,000 | 1,134,000 | — |
| Estimated total costs | 4,000,000 | 4,050,000 | 4,050,000 |
| Estimated total gross profit | \$ 500,000 | \$ 450,000 | \$ 450,000 |
| Percent complete | 25% | 72% | 100% |
| | $\left(\frac{\$1,000,000}{\$4,000,000} \right)$ | $\left(\frac{\$2,916,000}{\$4,050,000} \right)$ | $\left(\frac{\$4,050,000}{\$4,050,000} \right)$ |

On the basis of the data above, Hardhat would make the entries shown in **Illustration 18A.5** to record (1) the costs of construction, (2) progress billings, and (3) collections. These entries appear as summaries of the many transactions that would be entered individually as they occur during the year.

| | 2020 | 2021 | 2022 |
|---|-----------|-----------|-----------|
| To record costs of construction: | | | |
| Construction in Process | 1,000,000 | 1,916,000 | 1,134,000 |
| Materials, Cash, Payables, etc. | 1,000,000 | 1,916,000 | 1,134,000 |
| To record progress billings: | | | |
| Accounts Receivable | 900,000 | 2,400,000 | 1,200,000 |
| Billings on Construction in Process | 900,000 | 2,400,000 | 1,200,000 |
| To record collections: | | | |
| Cash | 750,000 | 1,750,000 | 2,000,000 |
| Accounts Receivable | 750,000 | 1,750,000 | 2,000,000 |

ILLUSTRATION 18A.5**Journal Entries—
Percentage-of-Completion
Method, Cost-to-Cost Basis**

In this example, the costs incurred to date are a measure of the extent of progress toward completion. To determine this, Hardhat evaluates the costs incurred to date as a proportion of the estimated total costs to be incurred on the project. The estimated revenue and gross profit that Hardhat will recognize for each year are calculated as shown in **Illustration 18A.6**.

| | To Date | Recognized in Prior Years | Recognized in Current Year |
|-------------------------------|-------------|------------------------------|-------------------------------|
| 2020 | | | |
| Revenues (\$4,500,000 × .25) | \$1,125,000 | | \$1,125,000 |
| Costs | 1,000,000 | | 1,000,000 |
| Gross profit | \$ 125,000 | | \$ 125,000 |
| 2021 | | | |
| Revenues (\$4,500,000 × .72) | \$3,240,000 | \$1,125,000 | \$2,115,000 |
| Costs | 2,916,000 | 1,000,000 | 1,916,000 |
| Gross profit | \$ 324,000 | \$ 125,000 | \$ 199,000 |
| 2022 | | | |
| Revenues (\$4,500,000 × 1.00) | \$4,500,000 | \$3,240,000 | \$1,260,000 |
| Costs | 4,050,000 | 2,916,000 | 1,134,000 |
| Gross profit | \$ 450,000 | \$ 324,000 | \$ 126,000 |

ILLUSTRATION 18A.6**Percentage-of-Completion
Revenue, Costs, and Gross
Profit by Year**

Illustration 18A.7 shows Hardhat's entries to recognize revenue and gross profit each year and to record completion and final approval of the contract.

| | 2020 | 2021 | 2022 |
|---|-----------|-----------|-----------|
| To recognize revenue and gross profit: | | | |
| Construction in Process (gross profit) | 125,000 | 199,000 | 126,000 |
| Construction Expenses | 1,000,000 | 1,916,000 | 1,134,000 |
| Revenue from Long-Term Contracts | 1,125,000 | 2,115,000 | 1,260,000 |
| To record completion of the contract: | | | |
| Billings on Construction in Process | | | 4,500,000 |
| Construction in Process | | | 4,500,000 |

ILLUSTRATION 18A.7**Journal Entries to
Recognize Revenue and
Gross Profit and to Record
Contract Completion—
Percentage-of-Completion
Method, Cost-to-Cost Basis**

Note that **Hardhat debits gross profit (as computed in Illustration 18A.6) to Construction in Process**. Similarly, it credits Revenue from Long-Term Contracts for the amounts computed. Hardhat then debits the difference between the amounts recognized each year for revenue and gross profit to a nominal account, Construction Expenses (similar to Cost of Goods Sold in a manufacturing company). It reports that amount in the income statement as the actual cost of construction incurred in that period. For example, in 2020 Hardhat uses

the actual costs of \$1,000,000 to compute both the gross profit of \$125,000 and the percent complete (25 percent).

Hardhat continues to accumulate costs in the Construction in Process account, in order to maintain a record of total costs incurred (plus recognized gross profit) to date. Although theoretically a series of “sales” takes place using the percentage-of-completion method, the selling company cannot remove the inventory cost until the construction is completed and transferred to the new owner. Hardhat’s Construction in Process account for the bridge would include the summarized entries shown in **Illustration 18A.8** over the term of the construction project.

ILLUSTRATION 18A.8
Content of Construction in Process Account—Percentage-of-Completion Method

| Construction in Process | | | |
|------------------------------|--------------------|----------|--------------------|
| 2020 construction costs | \$1,000,000 | 12/31/22 | To close |
| 2020 recognized gross profit | 125,000 | | completed |
| 2021 construction costs | 1,916,000 | | project |
| 2021 recognized gross profit | 199,000 | | |
| 2022 construction costs | 1,134,000 | | |
| 2022 recognized gross profit | 126,000 | | |
| Total | <u>\$4,500,000</u> | Total | <u>\$4,500,000</u> |

Recall that the Hardhat Construction Company example contained a **change in estimated costs**: In the second year, 2021, it increased the estimated total costs from \$4,000,000 to \$4,050,000. The change in estimate is accounted for in a **cumulative catch-up manner**, as indicated in the chapter. This is done by first adjusting the percent completed to the new estimate of total costs. Next, Hardhat deducts the amount of revenues and gross profit recognized in prior periods from revenues and gross profit computed for progress to date. That is, it accounts for the change in estimate in the period of change. That way, the balance sheet at the end of the period of change and the accounting in subsequent periods are as they would have been if the revised estimate had been the original estimate.

Financial Statement Presentation—Percentage-of-Completion

Generally, when a company records a receivable from a sale, it reduces the Inventory account. Under the percentage-of-completion method, however, the company continues to carry both the receivable and the inventory. Subtracting the balance in the **Billings account** from Construction in Process avoids double-counting the inventory. During the life of the contract, Hardhat reports in the balance sheet the difference between the Construction in Process and the Billings on Construction in Process accounts. If that amount is a debit, Hardhat reports it **as a current asset**; if it is a credit, it reports it **as a current liability**.

At times, the costs incurred plus the gross profit recognized to date (the balance in Construction in Process) exceed the billings. In that case, Hardhat reports this excess as a current asset entitled “Costs and recognized profit in excess of billings.” Hardhat can at any time calculate the unbilled portion of revenue recognized to date by subtracting the billings to date from the revenue recognized to date, as illustrated for 2020 for Hardhat Construction in **Illustration 18A.9**.

ILLUSTRATION 18A.9
Computation of Unbilled Contract Price at 12/31/20

| | |
|---|-------------------|
| Contract revenue recognized to date: $\$4,500,000 \times \frac{\$1,000,000}{\$4,000,000}$ | \$1,125,000 |
| Billings to date | (900,000) |
| Unbilled revenue | <u>\$ 225,000</u> |

At other times, the billings exceed costs incurred and gross profit to date. In that case, Hardhat reports this excess as a current liability entitled “Billings in excess of costs and recognized profit.”

What happens, as is usually the case, when companies have more than one project going at a time? When a company has a number of projects, costs exceed billings on some contracts

and billings exceed costs on others. In such a case, the company segregates the contracts. The asset side includes only those contracts on which costs and recognized profit exceed billings. The liability side includes only those on which billings exceed costs and recognized profit. Separate disclosures of the dollar volume of billings and costs are preferable to a summary presentation of the net difference.

Using data from the bridge example, Hardhat Construction Company would report the status and results of its long-term construction activities in 2020 under the percentage-of-completion method as shown in **Illustration 18A.10**.

| Hardhat Construction Company | |
|--|-------------------|
| Income Statement (from Illustration 18A.6) | |
| | 2020 |
| Revenue from long-term contracts | \$1,125,000 |
| Costs of construction | 1,000,000 |
| Gross profit | <u>\$ 125,000</u> |
| Balance Sheet (12/31) | |
| | 2020 |
| Current assets | |
| Accounts receivable (\$900,000 – \$750,000) | \$ 150,000 |
| Inventory | |
| Construction in process | \$1,125,000 |
| Less: Billings | <u>900,000</u> |
| Costs and recognized profit in excess of billings | 225,000 |

In addition, **Illustration 18A.13** shows the information that Hardhat should disclose in each year.

ILLUSTRATION 18A.13
Percentage-of-Completion
Method Note Disclosure

Note 1. Summary of significant accounting policies.

Long-Term Construction Contracts. The company recognizes revenues and reports profits from long-term construction contracts, its principal business, under the percentage-of-completion method of accounting. These contracts generally extend for periods in excess of one year. The amounts of revenues and profits recognized each year are based on the ratio of costs incurred to the total estimated costs. Costs included in construction in process include direct materials, direct labor, and project-related overhead. Corporate general and administrative expenses are charged to the periods as incurred and are not allocated to construction contracts.

Completed-Contract Method

LEARNING OBJECTIVE *6

Apply the completed-contract method for long-term contracts.

Under the **completed-contract method**, companies recognize revenue and gross profit only at point of sale—that is, when the contract is completed. Under this method, companies accumulate costs of long-term contracts in process, but they make no interim charges or credits to income statement accounts for revenues, costs, or gross profit.

The principal advantage of the completed-contract method is that reported revenue reflects final results rather than *estimates* of unperformed work. Its major disadvantage is that it does not reflect current performance when the period of a contract extends into more than one accounting period. Although operations may be fairly uniform during the period of the contract, the company will not report revenue until the year of completion, creating a distortion of earnings.

Under the completed-contract method, the company would make the same **annual entries** to record costs of construction, progress billings, and collections from customers as those illustrated under the percentage-of-completion method (see Illustration 18A.5). The significant difference is that the company **would not make entries to recognize revenue and gross profit**.

For example, under the completed-contract method for the bridge project previously illustrated, Hardhat Construction Company would make the following entries in 2022 to recognize revenue and costs and to close out the inventory and billing accounts.

| | | |
|-------------------------------------|-----------|-----------|
| Billings on Construction in Process | 4,500,000 | |
| Revenue from Long-Term Contracts | | 4,500,000 |
| Costs of Construction | 4,050,000 | |
| Construction in Process | | 4,050,000 |

Illustration 18A.14 compares the amount of gross profit that Hardhat Construction Company would recognize for the bridge project under the two revenue recognition methods.

ILLUSTRATION 18A.14
Comparison of Gross
Profit Recognized under
Different Methods

| | Percentage-of-Completion | Completed-Contract |
|------|--------------------------|--------------------|
| 2020 | \$125,000 | \$ 0 |
| 2021 | 199,000 | 0 |
| 2022 | 126,000 | 450,000 |

Under the completed-contract method, Hardhat Construction would report its long-term construction activities as shown in **Illustration 18A.15**.

| Note 1. Summary of significant accounting policies. | | | |
| Long-Term Construction Contracts. The company recognizes revenues and reports profits from long-term construction contracts, its principal business, under the completed-contract method. These contracts generally extend for periods in excess of one year. Contract costs and billings are accumulated during the periods of construction, but no revenues or profits are recognized until completion of the contract. Costs included in construction in process include direct material, direct labor, and project-related overhead. Corporate general and administrative expenses are charged to the periods as incurred. | | | |

Long-Term Contract Losses

LEARNING OBJECTIVE *7

Identify the proper accounting for losses on long-term contracts.

Two types of losses can become evident under long-term contracts:

- 1. Loss in the current period on a profitable contract.** This condition arises when, during construction, there is a significant increase in the estimated total contract costs but the increase does not eliminate all profit on the contract. Under the percentage-of-completion method only, the estimated cost increase requires a current-period adjustment of excess gross profit recognized on the project in prior periods. The company records this adjustment as a loss in the current period because it is a change in accounting estimate (discussed in Chapter 22).
- 2. Loss on an unprofitable contract.** Cost estimates at the end of the current period may indicate that a loss will result on completion of the *entire* contract. Under both the percentage-of-completion and the completed-contract methods, the company must recognize in the current period the entire expected contract loss.

The treatment described for unprofitable contracts is consistent with the accounting custom of anticipating foreseeable losses to avoid overstatement of current and future income (conservatism). [24]

Loss in Current Period

To illustrate a loss in the current period on a contract expected to be profitable upon completion, we'll continue with the Hardhat Construction Company bridge project. Assume that on December 31, 2021, Hardhat estimates the costs to complete the bridge contract at \$1,468,962 instead of \$1,134,000. Assuming all other data are the same as before, Hardhat would compute the percent complete and recognize the loss as shown in **Illustration 18A.16**. Compare these

computations with those for 2021 in Illustration 18A.4. The “percent complete” has dropped, from 72 percent to 66½ percent, due to the increase in estimated future costs to complete the contract.

ILLUSTRATION 18A.16**Computation of Recognizable Loss, 2021—Loss in Current Period**

| | |
|---|--------------------|
| Cost to date (12/31/21) | \$2,916,000 |
| Estimated costs to complete (revised) | <u>1,468,962</u> |
| Estimated total costs | <u>\$4,384,962</u> |
| Percent complete ($\$2,916,000 \div \$4,384,962$) | 66½% |
| Revenue recognized in 2021 | |
| ($\$4,500,000 \times .665$) – \$1,125,000 | \$1,867,500 |
| Costs incurred in 2021 | <u>1,916,000</u> |
| Loss recognized in 2021 | \$ (48,500) |

The 2021 loss of \$48,500 is a cumulative adjustment of the “excessive” gross profit recognized on the contract in 2020. Instead of restating the prior period, the company absorbs the prior period misstatement entirely in the current period. In this illustration, the adjustment was large enough to result in recognition of a loss.

Hardhat Construction would record the loss in 2021 as follows.

| | | |
|----------------------------------|-----------|------------------|
| Construction Expenses | 1,916,000 | |
| Construction in Process (loss) | | 48,500 |
| Revenue from Long-Term Contracts | | <u>1,867,500</u> |

Hardhat will report the loss of \$48,500 on the 2021 income statement as the difference between the reported revenue of \$1,867,500 and the costs of \$1,916,000.¹⁹ **Under the completed-contract method, the company does not recognize a loss in 2021.** Why not? Because the company still expects the contract to result in a profit, to be recognized in the year of completion.

Loss on an Unprofitable Contract

To illustrate the accounting for an **overall loss on a long-term contract**, assume that at December 31, 2021, Hardhat Construction Company estimates the costs to complete the bridge contract at \$1,640,250 instead of \$1,134,000. Revised estimates for the bridge contract are as follows.

| | 2020 | 2021 |
|------------------------------|-----------------------|----------------------|
| | Original Estimates | Revised Estimates |
| Contract price | \$4,500,000 | \$4,500,000 |
| Estimated total cost | <u>4,000,000</u> | <u>4,556,250*</u> |
| Estimated gross profit | <u>\$ 500,000</u> | |
| Estimated loss | | <u>\$ (56,250)</u> |
| *(\$2,916,000 + \$1,640,250) | | |

Under the percentage-of-completion method, Hardhat recognized \$125,000 of gross profit in 2020 (see Illustration 18A.6). This amount must be offset in 2021 because it is no longer expected to be realized. In addition, since losses must be recognized as soon as estimable, the company must recognize the total estimated loss of \$56,250 in 2021. Therefore, Hardhat must recognize a total loss of \$181,250 (\$125,000 + \$56,250) in 2021.

¹⁹In 2022, Hardhat Construction will recognize the remaining 33½ percent of the revenue (\$1,507,500), with costs of \$1,468,962 as expected, and will report a gross profit of \$38,538. The total gross profit over the three years of the contract would be \$115,038 [$\$125,000$ (2020) – \$48,500 (2021) + \$38,538 (2022)]. This amount is the difference between the total contract revenue of \$4,500,000 and the total contract costs of \$4,384,962.

Illustration 18A.17 shows Hardhat's computation of the revenue to be recognized in 2021.

| | |
|---|---------------------------|
| Revenue recognized in 2021: | |
| Contract price | \$4,500,000 |
| Percent complete | × .64* |
| Revenue recognizable to date | 2,880,000 |
| Less: Revenue recognized prior to 2021 | 1,125,000 |
| Revenue recognized in 2021 | <u>\$1,755,000</u> |
| *Cost to date (12/31/21) \$2,916,000 | |
| Estimated cost to complete | 1,640,250 |
| Estimated total costs | <u>\$4,556,250</u> |
| Percent complete: \$2,916,000 ÷ \$4,556,250 = 64% | |

ILLUSTRATION 18A.17

Computation of Revenue Recognizable, 2021—Unprofitable Contract

To compute the construction costs to be expensed in 2021, Hardhat adds the total loss to be recognized in 2021 (\$125,000 + \$56,250) to the revenue to be recognized in 2021. **Illustration 18A.18** shows this computation.

| | |
|---|---------------------------|
| Revenue recognized in 2021 (computed above) | \$1,755,000 |
| Total loss recognized in 2021: | |
| Reversal of 2020 gross profit | \$125,000 |
| Total estimated loss on the contract | 56,250 |
| | <u>181,250</u> |
| Construction cost expensed in 2021 | <u>\$1,936,250</u> |

ILLUSTRATION 18A.18

Computation of Construction Expense, 2021—Unprofitable Contract

Hardhat Construction would record the long-term contract revenues, expenses, and loss in 2021 as follows.

| | | |
|----------------------------------|-----------|-----------|
| Construction Expenses | 1,936,250 | |
| Construction in Process (loss) | | 181,250 |
| Revenue from Long-Term Contracts | | 1,755,000 |

At the end of 2021, Construction in Process has a balance of \$2,859,750 as shown in **Illustration 18A.19**.²⁰

| Construction in Process | | | |
|------------------------------|------------------|----------------------|---------|
| 2020 Construction costs | 1,000,000 | | |
| 2020 Recognized gross profit | 125,000 | | |
| 2021 Construction costs | 1,916,000 | 2021 Recognized loss | 181,250 |
| Balance | 2,859,750 | | |

ILLUSTRATION 18A.19

Content of Construction in Process Account at End of 2021—Unprofitable Contract

Under the completed-contract method, Hardhat also would recognize the contract loss of \$56,250 through the following entry in 2021 (the year in which the loss first became evident).

| | | |
|--------------------------------|--------|--------|
| Loss from Long-Term Contracts | 56,250 | |
| Construction in Process (loss) | | 56,250 |

Just as the Billings account balance cannot exceed the contract price, neither can the balance in Construction in Process exceed the contract price. In circumstances where the Construction in Process balance exceeds the billings, the company can deduct the recognized loss from such accumulated costs on the balance sheet. That is, under both the percentage-of-completion and the completed-contract methods, the provision for the loss (the credit) may be combined

²⁰If the costs in 2022 are \$1,640,250 as projected, at the end of 2022 the Construction in Process account will have a balance of \$1,640,250 + \$2,859,750, or \$4,500,000, equal to the contract price. When the company matches the revenue remaining to be recognized in 2022 of \$1,620,000 [\$4,500,000 (total contract price) – \$1,125,000 (2020) – \$1,755,000 (2021)] with the construction expense to be recognized in 2022 of \$1,620,000 [total costs of \$4,556,250 less the total costs recognized in prior years of \$2,936,250 (2020, \$1,000,000; 2021, \$1,936,250)], a zero profit results. Thus, the total loss has been recognized in 2021, the year in which it first became evident.

with Construction in Process, thereby reducing the inventory balance. In those circumstances, however (as in the 2021 example above), where the billings exceed the accumulated costs, Hardhat must report separately on the balance sheet, as a current liability, the amount of the estimated loss. That is, under both the percentage-of-completion and the completed-contract methods, Hardhat would take the \$56,250 loss, as estimated in 2021, from the Construction in Process account and report it separately as a current liability titled “Estimated liability from long-term contracts.”

APPENDIX 18B

Revenue Recognition for Franchises

LEARNING OBJECTIVE *8

Explain revenue recognition for franchises.

In this appendix, we cover a common yet unique type of business transaction—franchises. As indicated throughout this chapter, companies recognize revenue when performance obligations in a revenue arrangement are satisfied. **Franchises** represent a challenging area because a variety of performance obligations may exist in a given franchise agreement. As a result, companies must carefully analyze franchise agreements to identify the separate performance obligations, determine when performance obligations are satisfied, and, therefore, when revenue should be recognized.²¹

Four types of franchising arrangements have evolved: (1) manufacturer-retailer, (2) manufacturer-wholesaler, (3) service sponsor-retailer, and (4) wholesaler-retailer. The fastest-growing category of franchising, and the one that has given rise to accounting challenges, is the third category, **service sponsor-retailer**. Included in this category are such industries and businesses as:

- Soft ice cream/frozen yogurt stores (**Tastee Freez, TCBY, Dairy Queen**).
- Food drive-ins (**McDonald’s, KFC, Burger King**).
- Restaurants (**TGI Friday’s, Pizza Hut, Denny’s**).
- Motels (**Holiday Inn, Marriott, Best Western**).
- Auto rentals (**Avis, Hertz, National**).
- Others (**H & R Block, Meineke Mufflers, 7-Eleven Stores, Kelly Services**).

Franchise companies derive their revenue from one or both of two sources: (1) from the sale of initial franchises and related assets or services, and (2) from continuing fees based on the operations of franchises. The **franchisor** (the party who grants business rights under the franchise) normally provides the **franchisee** (the party who operates the franchised business) with the following services.

1. Assistance in site selection: (a) analyzing location and (b) negotiating lease.
2. Evaluation of potential income.
3. Supervision of construction activity: (a) obtaining financing, (b) designing building, and (c) supervising contractor while building.
4. Assistance in the acquisition of signs, fixtures, and equipment.

²¹Franchises are an example of a license or similar rights to use intellectual property. In such arrangements, a company grants a customer the right to use, but not own, intellectual property of the company. Other examples of intellectual property include (1) software and technology; (2) motion pictures, music, and other forms of media and entertainment; and (3) patents, trademarks, and copyrights. Generally, revenue is recognized in these situations when the customer obtains control of the rights. In some cases, a license is a promise to provide a right, which transfers to the customer at a point in time. In other cases, a license is a promise to provide access to an entity’s intellectual property, which transfers benefits to the customer over time. [25]

5. Bookkeeping and advisory services: (a) setting up franchisee's records; (b) advising on income, real estate, and other taxes; and (c) advising on local regulations of the franchisee's business.
6. Employee and management training.
7. Quality control.
8. Advertising and promotion.

In the past, it was standard practice for franchisors to recognize the entire franchise fee at the date of sale, whether the fee was received then or was collectible over a long period of time. Frequently, franchisors recorded the entire amount as revenue in the year of sale, even though many of the services were yet to be performed and uncertainty existed regarding the collection of the entire fee. (In effect, the franchisors were counting their fried chickens before they were hatched.) However, a **franchise agreement** may provide for refunds to the franchisee if certain conditions are not met, and franchise fee profit can be reduced sharply by future costs of obligations and services to be rendered by the franchisor.

Franchise Accounting

As indicated, the performance obligations in a franchise arrangement relate to the right to open a business, use of the trade name or other intellectual property of the franchisor, and continuing services, such as marketing help, training, and in some cases supplying inventory and inventory management. Franchisors commonly charge an initial franchise fee as well as continuing franchise fees. The **initial franchise fee** is payment for establishing the franchise relationship and providing some initial services. **Continuing franchise fees** are received in return for the continuing rights granted by the franchise agreement and for providing such services as management training, advertising and promotion, legal assistance, and other support. **Illustration 18B.1** provides an example of a franchise arrangement.

Franchise

Facts: Tum's Pizza Inc. enters into a franchise agreement on December 31, 2020, giving Food Fight Corp. the right to operate as a franchisee of Tum's Pizza for 5 years. Tum's charges Food Fight an initial franchise fee of \$50,000 for the right to operate as a franchisee. Of this amount, \$20,000 is payable when Food Fight signs the agreement, and the note balance is payable in five annual payments of \$6,000 each on December 31. As part of the arrangement, Tum's helps locate the site, negotiate the lease or purchase of the site, supervise the construction activity, and provide employee training and the equipment necessary to be a distributor of its products. Similar training services and equipment are sold separately.

Food Fight also promises to pay ongoing royalty payments of 1% of its annual sales (payable each January 31 of the following year) and is obliged to purchase products from Tum's at its current standalone selling prices at the time of purchase. The credit rating of Food Fight indicates that money can be borrowed at 8%. The present value of an ordinary annuity of five annual receipts of \$6,000 each discounted at 8% is \$23,957. The discount of \$6,043 represents the interest revenue to be accrued by Tum's over the payment period.

Question: What are the performance obligations in this arrangement and the point in time at which the performance obligations for Tum's are satisfied and revenue is recognized?

Solution: To identify the performance obligations, Tum's must determine whether the promised rights, site selection and construction services, training services, and equipment are distinct.

- Rights to the trade name, market area, and proprietary know-how for 5 years are not individually distinct because each one is not sold separately and cannot be used with other goods or services that are readily available to the franchisee. Therefore, those combined rights give rise to a single performance obligation. Tum's satisfies the performance obligation to grant those rights at the point in time when Food Fight obtains control of the rights. That is, once Food Fight begins operating the store, Tum's has no further obligation with respect to these rights.

ILLUSTRATION 18B.1

Recognition—Franchise Arrangement

(continued)

ILLUSTRATION 18B.1*(continued)*

- Training services and equipment are distinct because similar services and equipment are sold separately. Tum's satisfies those performance obligations when it transfers the services and equipment to Food Fight.
- Tum's cannot recognize revenue for the royalty payments because it is not reasonably assured to be entitled to those sales-based royalty amounts. That is, these payments represent variable consideration. Therefore, Tum's recognizes revenue for the royalties when (or as) the uncertainty is resolved.

Tum's promise to stand ready to provide products to the franchisee in the future at standalone selling prices is not accounted for as a separate performance obligation in the contract because it does not provide Food Fight with a material right. Thus, revenue from those sales is recorded in the future when the sales are made.

To illustrate the accounting for this franchise, consider the following values for allocation of the transaction price at December 31, 2020.

| | |
|--|-----------------|
| Rights to the trade name, market area, and proprietary know-how | \$20,000 |
| Training services | 9,957 |
| Equipment (cost of \$10,000) | <u>14,000</u> |
| Total transaction price | <u>\$43,957</u> |

Training is completed in January 2021, the equipment is installed in January 2021, and Food Fight holds a grand opening on February 2, 2021. The entries for the Tum's franchise arrangement are summarized in **Illustration 18B.2**.

ILLUSTRATION 18B.2

**Franchise Entries—Inception
and Commencement of
Operations**

| Tum's signs the agreement and receives upfront payment and note on December 31, 2020 | | |
|---|--------|--------|
| Cash | 20,000 | |
| Notes Receivable (\$50,000 – \$20,000) | 30,000 | |
| Discount on Notes Receivable | | 6,043 |
| Unearned Franchise Revenue | | 20,000 |
| Unearned Service Revenue (training) | | 9,957 |
| Unearned Sales Revenue (equipment) | | 14,000 |
| Franchise opens; Tum's satisfies the performance obligations related to the franchise rights, training, and equipment (that is, Tum's has no further obligations related to these elements of the franchise) on February 2, 2021 | | |
| Unearned Franchise Revenue | 20,000 | |
| Franchise Revenue | | 20,000 |
| Unearned Service Revenue (training) | 9,957 | |
| Service Revenue (training) | | 9,957 |
| Unearned Sales Revenue (equipment) | 14,000 | |
| Sales Revenue | | 14,000 |
| Cost of Goods Sold | 10,000 | |
| Inventory | | 10,000 |

As indicated, when Food Fight begins operations, Tum's satisfies the performance obligations related to the franchise rights, training, and equipment under the franchise agreement. That is, Tum's has no further obligations related to these elements of the franchise.

During 2021, Food Fight does well, recording \$525,000 of sales in its first year of operations. The entries for Tum's related to the first year of operations of the franchise are summarized in **Illustration 18B.3**.

| To record continuing franchise fees on December 31, 2021 | | |
|--|-------|-------|
| Accounts Receivable ($\$525,000 \times .01$) | 5,250 | |
| Franchise Revenue | | 5,250 |
| To record payment received and interest revenue on note on December 31, 2021 | | |
| Cash | 6,000 | |
| Notes Receivable | | 6,000 |
| Discount on Notes Receivable ($\$23,957 \times .08$) | 1,917 | |
| Interest Revenue | | 1,917 |

ILLUSTRATION 18B.3**Franchise Entries—First Year of Franchise Operations**

Tum's will make similar entries in subsequent years of the franchise agreement.

Recognition of Franchise Rights Revenue over Time

In the franchise example presented in Illustration 18B.1, Tum's transferred control of the franchise rights at a point in time—that is, when the franchisee began operations and could benefit from control of the rights—with no further involvement by Tum's. In other situations, depending on the economic substance of the rights, the franchisor may be providing **access to the right** rather than transferring control of the franchise rights. In this case, **the franchise revenue is recognized over time**, rather than at a point in time. The franchise arrangement presented in **Illustration 18B.4** provides an example of a franchise agreement with revenue recognized over time.

Franchise Revenue over Time

Facts: Tech Solvers Corp. is a franchisor in the emerging technology consulting service business. Tech Solvers' stores provide a range of computing services (hardware/software installation, repairs, data backup, device syncing, and network solutions) on popular Apple and PC devices. Each franchise agreement gives a franchisee the right to open a Tech Solvers store and sell Tech Solvers' products and services in the area for 5 years. Under the contract, Tech Solvers also provides the franchisee with a number of services to support and enhance the franchise brand, including (a) advising and consulting on the operations of the store; (b) communicating new hardware and software developments, and service techniques; (c) providing business and training manuals; and (d) advertising programs and training. As an almost entirely service operation (all parts and other supplies are purchased as needed by customers), Tech Solvers provides few upfront services to franchisees. Instead, the franchisee recruits service technicians, who are given Tech Solvers' training materials (online manuals and tutorials), which are updated for technology changes, on a monthly basis at a minimum.

Tech Solvers enters into a franchise agreement on December 15, 2020, giving a franchisee the rights to operate a Tech Solvers franchise in eastern Indiana for 5 years. Tech Solvers charges an initial franchise fee of \$5,000 for the right to operate as a franchisee, payable upon signing the contract. Tech Solvers also receives ongoing royalty payments of 7% of the franchisee's annual sales (payable each January 15 of the following year). The franchise began operations in January 2021 and recognized \$85,000 of revenue in 2021.

Question: What are the performance obligations in this arrangement and the point in time at which the performance obligations will be satisfied and revenue will be recognized?

Solution: To identify the performance obligations, Tech Solvers must determine whether the promised rights and the ongoing franchisee technology support and training services are distinct.

- Rights to the trade name, market area, and proprietary know-how for 5 years are not individually distinct because each one is not sold separately and cannot be used with other goods or services that are readily available to the franchisee. In addition, these licensed rights have a close connection with the underlying Tech Solvers' intellectual property (its ability to keep its service and training materials up-to-date).

ILLUSTRATION 18B.4**Revenue Recognition over Time—Franchise**

(continued)

ILLUSTRATION 18B.4*(continued)*

Therefore, those combined rights and the ongoing training materials are a single performance obligation. Tech Solvers satisfies the performance obligation over time. That is, once the franchisee begins operating a Tech Solvers franchise, Tech Solvers is providing access to the rights and must continue to perform updates and services.

- Tech Solvers cannot recognize revenue for the royalty payments because it is not reasonably assured to be entitled to those revenue-based royalty amounts. That is, these payments represent variable consideration. Therefore, Tech Solvers recognizes revenue for the royalties when (or as) the uncertainty is resolved.

The entries for Tech Solvers related to the franchise are summarized in **Illustration 18B.5**.

ILLUSTRATION 18B.5

Franchise Entries—Revenue Recognized over Time

| Franchise agreement signed and receipt of upfront payment and note on December 15, 2020 | | |
|--|-------|-------|
| Cash | 5,000 | |
| Unearned Franchise Revenue | | 5,000 |
| Franchise begins operations in January 2021 and records \$85,000 of revenue for the year ended December 31, 2021 on December 31, 2021 | | |
| Unearned Franchise Revenue | 1,000 | |
| Franchise Revenue (\$5,000 ÷ 5) | | 1,000 |
| Accounts Receivable | 5,950 | |
| Franchise Revenue (\$85,000 × .07) | | 5,950 |
| To record payment received from franchisee on January 15, 2022 | | |
| Cash | 5,950 | |
| Accounts Receivable | | 5,950 |

As indicated, Tech Solvers satisfies the performance obligation related to the franchise rights and training materials over time (in this case, on a straight-line basis). Continuing franchise fees are recognized when uncertainty related to the variable consideration is resolved.

In summary, analysis of the characteristics of the Tech Solvers franchise indicates that it does not reflect a right that is transferred at a point in time. That is, Tech Solvers has a continuing obligation to provide updated materials and ongoing support, suggesting the control of the right has not been transferred to the franchisee. Thus, revenue from the franchise rights is recognized over time.

Learning Objectives Review

1 Discuss the fundamental concepts related to revenue recognition and measurement.

Most revenue transactions pose few problems for revenue recognition. This is because, in many cases, the transaction is initiated and completed at the same time. Increasing complexity of business and revenue arrangements have resulted in revenue recognition practices being identified as the most prevalent reasons for accounting restatements. A number of the revenue recognition issues relate to possible fraudulent behavior by company executives and employees, but are also due to sometimes incomplete and inconsistent accounting guidelines for revenue recognition. A recent standard provides a set of guidelines to follow in determining when revenue should be reported and how it should be measured. The standard is comprehensive and applies to all companies. As a result, comparability and consistency in reporting revenue should be enhanced.

The five steps in the revenue recognition process are (1) identify the contract with customers, (2) identify the separate performance obligations in the contract, (3) determine the transaction price, (4) allocate the transaction price to the separate performance obligations, and (5) recognize revenue when each performance obligation is satisfied.

2 Explain and apply the five-step revenue recognition process.

1. Identify the contract with customers. A contract is an agreement that creates enforceable rights or obligations. A company applies the revenue guidance to contracts with customers.

2. Identify the separate performance obligations in the contract. A performance obligation is a promise in a contract to provide a product or service to a customer. A contract may be comprised of multiple performance obligations. The accounting for multiple performance obligations is based on evaluation of whether the product or service is distinct within the contract. If each of the goods or services is distinct, but is interdependent and interrelated, these goods and services are combined and reported as one performance obligation.

3. Determine the transaction price. The transaction price is the amount of consideration that a company expects to receive from a customer in exchange for transferring goods and services. In determining the transaction price, companies must consider the following factors: (1) variable consideration, (2) time value of money, (3) noncash consideration, and (4) consideration paid or payable to a customer.

4. Allocate the transaction price to the separate performance obligations. If more than one performance obligation exists in a contract, allocate the transaction price based on relative standalone selling prices. Estimates of standalone selling price can be based on (1) adjusted market assessment, (2) expected cost plus a margin approach, or (3) a residual approach.

5. Recognize revenue when the company satisfies its performance obligation. A company satisfies its performance obligation when the customer obtains control of the good or service. Companies satisfy performance obligations either at a point in time or over a period of time. Companies recognize revenue over a period of time if one of the following criteria is met: (1) the customer receives and consumes the benefits as the seller performs, (2) the customer controls the asset as it is created, or (3) the company does not have an alternative use for the asset.

3 Apply the five-step process to major revenue recognition issues.

Refer to Illustration 18.26 for a summary of the accounting for (a) sales returns and allowances, (b) repurchase agreements, (c) bill-and-hold sales, (d) principal-agent relationships, (e) consignments, (f) warranties, and (g) nonrefundable upfront fees.

4 Describe presentation and disclosure regarding revenue.

Under the asset-liability approach to recognize revenue, companies present contract assets and contract liabilities on their balance sheets. Contract assets are rights to receive consideration. A contract liability is a company's obligation to transfer goods or services to a customer for which the company has received consideration from the customer. Companies must determine if new performance obligations are created by a contract modification and may also report assets associated with fulfillment costs and contract acquisition costs related to a revenue arrangement. Companies disclose qualitative and quantitative information about (a) contracts with customers with disaggregation of revenue, presentation of opening and closing balances in contract assets and contract liabilities, and significant information related to their performance obligations; (b) significant judgments that affect the determination of the transaction price, the allocation of the transaction price, and the determination of the timing of revenue; and (c) assets recognized from costs incurred to fulfill a contract.

*5 Apply the percentage-of-completion method for long-term contracts.

To apply the percentage-of-completion method to long-term contracts, a company must have some basis for measuring the progress toward completion at particular interim dates. One of the most popular input measures used to determine the progress toward completion is the cost-to-cost basis. Using this basis, a company measures the percentage of completion by comparing costs incurred to date with the most recent estimate of the total costs to complete the contract. The company applies that percentage to the total revenue or the estimated total gross profit on the contract to arrive at the amount of revenue or gross profit to be recognized to date.

*6 Apply the completed-contract method for long-term contracts.

Under the completed-contract method, companies recognize revenue and gross profit only at a point in time—that is, when the company completes the contract. The company accumulates costs of long-term contracts in process and current billings. It makes no interim charges or credits to income statement accounts for revenues, costs, and gross profit. The annual journal entries to record costs of construction, progress billings, and collections from customers would be identical to those for the percentage-of-completion method—with the significant exclusion of the recognition of revenue and gross profit.

***7 Identify the proper accounting for losses on long-term contracts.**

Two types of losses can become evident under long-term contracts. (1) *Loss in current period on a profitable contract:* Under the percentage-of-completion method only, the estimated cost increase requires a current-period adjustment of excess gross profit recognized on the project in prior periods. The company records this adjustment as a loss in the current period because it is a change in accounting estimate. (2) *Loss on an unprofitable contract:* Under both the percentage-of-completion and the completed-contract methods, the company must recognize the entire expected contract loss in the current period.

***8 Explain revenue recognition for franchises.**

In a franchise arrangement, the franchisor satisfies its performance obligation for a franchise license when control of the franchise

rights is transferred, generally when the franchisee begins operations of the franchise. In situations where the franchisor provides *access to the rights* rather than transferring control of the franchise rights, the franchise rights' revenue is recognized over time rather than at a point in time. Franchisors recognize continuing franchise fees over time (as uncertainty related to the variable consideration is resolved).

Practice Problem

Outback Industries manufactures emergency power equipment. Its most popular generator is a model called the E-Booster, which has a retail price of \$1,500 and costs Outback \$740 to manufacture. It sells the E-Booster on a standalone basis directly to businesses, as well as provides installation services. Outback also distributes the E-Booster through a consignment agreement with **Home Depot**. Income data for Outback's first quarter of 2020 from operations other than the E-Booster generator are as follows.

| | |
|----------|-------------|
| Revenues | \$6,500,000 |
| Expenses | 4,350,000 |

Outback has the following information related to four E-Booster revenue arrangements during the first quarter of 2020.

1. Outback entered into an arrangement with the Grocers Co-op in eastern Minnesota to deliver E-Boosters for the meat lockers in the grocers' stores. Outback provides a 5% volume discount for E-Boosters purchased by Grocers Co-op if at least \$450,000 of E-Boosters are purchased during 2020. By March 31, 2020, Outback has made sales of \$360,000 ($\$1,500 \times 240$ generators) to Grocers Co-op. Based on prior experience with this promotion in two neighboring states, the discount threshold is met for the year if more than one-half of the target had been met by mid-year.
2. On January 1, 2020, Outback sells 20 E-Boosters to Nick's Liquors. Nick's signs a 6-month note due in 6 months at an annual interest rate of 12%. Outback allows Nick's to return any E-Boosters that it cannot use within 120 days and receive a full refund. Based on prior experience, Outback estimates that three units will be returned (using the most likely outcome approach). Outback's costs to recover the products will be immaterial, and the returned generators are expected to be resold at a profit. No E-Boosters have been returned as of March 31, 2020, and Outback still estimates that three units will be returned in the future.
3. Outback sells 30 E-Boosters to a community bank in the Florida Keys to provide uninterrupted power for bank branches with ATMs for a total contract price of \$50,000. In addition to the E-Boosters, Outback also provides installation at a standalone selling price of \$200 per E-Booster; the cost to Outback to install is \$150 per E-Booster. The E-Boosters are delivered and installed on March 1, 2020, and full payment is made to Outback.
4. Outback ships 300 E-Boosters to Home Depot on consignment. By March 31, 2020, Home Depot has sold three-fourths of the consigned merchandise at the listed price of \$1,500 per unit. Home Depot notifies Outback of the sales, retains an 8% commission, and remits the cash due to Outback.

Instructions

- a. Determine net income for Outback Industries for the first quarter of 2020. (Ignore taxes.)
- b. In reviewing the credit history of Nick's Liquors, Outback has some concerns about the collectibility of the full amount due on the note. Briefly discuss how collectibility of the note affects revenue recognition and income measurement for Outback.

Solution

a. The amount of revenue and expense recognized on each of the arrangements is as follows.

| | | |
|--|----------------|-----------|
| 1. Sales revenue [$.95 \times (\$1,500 \times 240)$] | \$342,000 | |
| Cost of goods sold ($\$740 \times 240$) | <u>177,600</u> | |
| Gross profit (income effect of this arrangement) | | \$164,400 |
| 2. Sales revenue ($20 \times \$1,500$) | 30,000 | |
| Less: Estimated returns ($3 \times \$1,500$) | <u>4,500</u> | |
| Net sales | 25,500 | |
| Cost of goods sold ($17 \times \$740$) | <u>12,580</u> | |
| Gross profit | 12,920 | |
| Interest revenue ($\$30,000 \times .12 \times 3/12$) | <u>900</u> | |
| Net income on this arrangement | | 13,820 |

3. The total transaction price of \$50,000 is allocated between the equipment and installation. The transaction price for the equipment and installation is allocated based on relative standalone selling prices:

Equipment: $\$44,118 = (\$45,000 \div \$51,000^*) \times \$50,000$

Installation: $\$5,882 = (\$6,000 \div \$51,000) \times \$50,000$

$^*\$45,000 + \$6,000$

| | | |
|--|---------------|--------------|
| Sales revenue | \$44,118 | |
| Cost of goods sold ($30 \times \$740$) | <u>22,200</u> | |
| Gross profit | | 21,918 |
| Installation revenue | 5,882 | |
| Installation expense ($30 \times \$150$) | <u>4,500</u> | |
| Net profit | | <u>1,382</u> |
| Net income on this arrangement | | 23,300 |

| | | |
|---|----------------|------------------|
| 4. Sales revenue ($225^* \times \$1,500$) | 337,500 | |
| Cost of goods sold ($225^* \times \$740$) | <u>166,500</u> | |
| Gross profit | 171,000 | |
| Commission expense ($\$337,500 \times .08$) | <u>27,000</u> | |
| Net income on this arrangement | | <u>144,000</u> |
| Net income on E-Booster | | <u>\$345,520</u> |

$^*300 \times 3/4$

Outback Industries' net income for the quarter: $\$6,500,000 - \$4,350,000 + \$345,520 = \$2,495,520$.

b. Whether a company will get paid for satisfying a performance obligation is not a consideration in determining revenue recognition. That is, the amount recognized is not adjusted for customer credit risk. If significant doubt exists at contract inception about collectibility, Outback reports the revenue gross and then presents an allowance for any impairment due to bad debts, which will reduce net income and which is reported as an operating expense in the income statement.

WileyPLUS

Exercises, Problems, Problem Solution Walkthrough Videos, and many more assessment tools and resources are available for practice in WileyPLUS.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

Questions

1. Explain the current environment regarding revenue recognition.
2. What was viewed as a major criticism of GAAP as it relates to revenue recognition?
3. Describe the revenue recognition principle.
4. Identify the five steps in the revenue recognition process.
5. Describe the critical factor in evaluating whether a performance obligation is satisfied.
6. When is revenue recognized in the following situations? (a) Revenue from selling products, (b) revenue from services performed, (c) revenue from permitting others to use company assets, and (d) revenue from disposing of assets other than products.
7. Explain the importance of a contract in the revenue recognition process.
8. On October 10, 2020, Executor Co. entered into a contract with Belisle Inc. to transfer Executor's specialty products (sales value of

\$10,000, cost of \$6,500) on December 15, 2020. Belisle agrees to make a payment of \$5,000 upon delivery and signs a promissory note to pay the remaining balance on January 15, 2021. What entries does Executor make in 2020 on this contract? Ignore time value of money considerations.

9. What is a performance obligation? Under what conditions does a performance obligation exist?

10. When must multiple performance obligations in a revenue arrangement be accounted for separately?

11. Engelhart Implements Inc. sells tractors to area farmers. The price for each tractor includes GPS positioning service for 9 months (which facilitates field settings for planting and harvesting equipment). The GPS service is regularly sold on a standalone basis by Engelhart for a monthly fee. After the 9-month period, the consumer can renew the service on a fee basis. Does Engelhart have one or multiple performance obligations? Explain.

12. What is the transaction price? What additional factors related to the transaction price must be considered in determining the transaction price?

13. What are some examples of variable consideration? What are the two approaches for estimating variable consideration?

14. Allee Corp. is evaluating a revenue arrangement to determine proper revenue recognition. The contract is for construction of 10 speedboats for a contract price of \$400,000. The customer needs the boats in its showrooms by February 1, 2021, for the boat purchase season; the customer provides a bonus payment of \$21,000 if all boats are delivered by the February 1 deadline. The bonus is reduced by \$7,000 each week that the boats are delivered after the deadline until no bonus is paid if the boats are delivered after February 15, 2021. Allee frequently includes such bonus terms in its contracts and thus has good historical data for estimating the probabilities of completion at different dates. It estimates an equal probability (25%) for each full delivery outcome. What approach should Allee use to determine the transaction price for this contract? Explain.

15. Refer to the information in Question 14. Assume that Allee has limited experience with a construction project on the same scale as the 10 speedboats. How does this affect the accounting for the variable consideration?

16. In measuring the transaction price, explain the accounting for (a) time value of money, and (b) noncash consideration.

17. What is the proper accounting for volume discounts on sales of products?

18. On what basis should the transaction price be allocated to various performance obligations? Identify the approaches for allocating the transaction price.

19. Fuhremann Co. is a full-service manufacturer of surveillance equipment. Customers can purchase any combination of equipment, installation services, and training as part of Fuhremann's security services. Thus, each of these performance obligations are separate with individual standalone selling prices. Laplante Inc. purchased cameras, installation, and training at a total price of \$80,000. Estimated

standalone selling prices of the equipment, installation, and training are \$90,000, \$7,000, and \$3,000, respectively. How should the transaction price be allocated to the equipment, installation, and training?

20. When does a company satisfy a performance obligation? Identify the indicators of satisfaction of a performance obligation.

21. Under what conditions does a company recognize revenue over a period of time?

22. How do companies recognize revenue from a performance obligation over time?

23. Explain the accounting for sales with right of return.

24. What are the reporting issues in a sale with a repurchase agreement?

25. Explain a bill-and-hold sale. When is revenue recognized in these situations?

26. Explain a principal-agent relationship and its significance to revenue recognition.

27. What is the nature of a sale on consignment?

28. What are the two types of warranties? Explain the accounting for each type.

29. Campus Cellular provides cell phones and 1 year of cell service to students for an upfront, nonrefundable fee of \$300 and a usage fee of \$5 per month. Students may renew the service without paying another upfront fee for each year they are on campus (on average, students renew their service one time). What amount of revenue should Campus Cellular recognize in the first year of the contract?

30. Describe the conditions when contract assets and liabilities are recognized and presented in financial statements.

31. Explain the accounting for contract modifications.

32. Explain the reporting for (a) costs to fulfill a contract and (b) collectibility.

33. What qualitative and quantitative disclosures are required related to revenue recognition?

*34. What are the two basic methods of accounting for long-term construction contracts? Indicate the circumstances that determine when one or the other of these methods should be used.

*35. For what reasons should the percentage-of-completion method be used over the completed-contract method whenever possible?

*36. What methods are used in practice to determine the extent of progress toward completion? Identify some "input measures" and some "output measures" that might be used to determine the extent of progress.

*37. What are the two types of losses that can become evident in accounting for long-term contracts? What is the nature of each type of loss? How is each type accounted for?

*38. Why in franchise arrangements may it be improper to recognize the entire franchise fee as revenue at the date of sale?

*39. How should a franchisor account for continuing franchise fees and routine sales of equipment and supplies to franchisees?

Brief Exercises

BE18.1 (LO 1) Leno Computers manufactures tablet computers for sale to retailers such as Fallon Electronics. Recently, Leno sold and delivered 200 tablet computers to Fallon for \$20,000 on January 5, 2020. Fallon has agreed to pay for the 200 tablet computers within 30 days. Fallon has a good credit rating and should have no difficulty in making payment to Leno. (a) Explain whether a valid contract exists between

Leno Computers and Fallon Electronics. (b) Assuming that Leno Computers has not yet delivered the tablet computers to Fallon Electronics, what might cause a valid contract not to exist between Leno and Fallon?

BE18.2 (LO 1) On May 10, 2020, Cosmo Co. enters into a contract to deliver a product to Greig Inc. on June 15, 2020. Greig agrees to pay the full contract price of \$2,000 on July 15, 2020. The cost of the goods is \$1,300. Cosmo delivers the product to Greig on June 15, 2020, and receives payment on July 15, 2020. Prepare the journal entries for Cosmo related to this contract. Either party may terminate the contract without compensation until one of the parties performs.

BE18.3 (LO 2) Hillside Company enters into a contract with Sanchez Inc. to provide a software license and 3 years of customer support. The customer-support services require specialized knowledge that only Hillside Company's employees can perform. How many performance obligations are in the contract?

BE18.4 (LO 2) Destin Company signs a contract to manufacture a new 3D printer for \$80,000. The contract includes installation which costs \$4,000 and a maintenance agreement over the life of the printer at a cost of \$10,000. The printer cannot be operated without the installation. Destin Company as well as other companies could provide the installation and maintenance agreement. What are Destin Company's performance obligations in this contract?

BE18.5 (LO 2) Ismail Construction enters into a contract to design and build a hospital. Ismail is responsible for the overall management of the project and identifies various goods and services to be provided, including engineering, site clearance, foundation, procurement, construction of the structure, piping and wiring, installation of equipment, and finishing. Does Ismail have a single performance obligation to the customer in this revenue arrangement? Explain.

BE18.6 (LO 2) Nair Corp. enters into a contract with a customer to build an apartment building for \$1,000,000. The customer hopes to rent apartments at the beginning of the school year and provides a performance bonus of \$150,000 to be paid if the building is ready for rental beginning August 1, 2021. The bonus is reduced by \$50,000 each week that completion is delayed. Nair commonly includes these completion bonuses in its contracts and, based on prior experience, estimates the following completion outcomes:

| Completed by | Probability |
|-----------------------|-------------|
| August 1, 2021 | 70% |
| August 8, 2021 | 20 |
| August 15, 2021 | 5 |
| After August 15, 2021 | 5 |

Determine the transaction price for this contract.

BE18.7 (LO 2) Referring to the revenue arrangement in BE18.6, determine the transaction price for the contract, assuming (a) Nair is only able to estimate whether the building can be completed by August 1, 2021, or not (Nair estimates that there is a 70% chance that the building will be completed by August 1, 2021), and (b) Nair has limited information with which to develop a reliable estimate of completion by the August 1, 2021, deadline.

BE18.8 (LO 2) Presented below are three revenue recognition situations.

- a. Groupo sells goods to MTN for \$1,000,000, payment due at delivery.
- b. Groupo sells goods on account to Grifols for \$800,000, payment due in 30 days.
- c. Groupo sells goods to Magnus for \$500,000, payment due in two installments, the first installment payable in 18 months and the second payment due 6 months later. The present value of the future payments is \$464,000.

Indicate the transaction price for each of these situations and when revenue will be recognized.

BE18.9 (LO 2) On January 2, 2020, Adani Inc. sells goods to Geo Company in exchange for a zero-interest-bearing note with face value of \$11,000, with payment due in 12 months. The fair value of the goods at the date of sale is \$10,000 (cost \$6,000). Prepare the journal entry to record this transaction on January 2, 2020. How much total revenue should be recognized in 2020?

BE18.10 (LO 2) On March 1, 2020, Parnevik Company sold goods to Goosen Inc. for \$660,000 in exchange for a 5-year, zero-interest-bearing note in the face amount of \$1,062,937 (an imputed rate of 10%). The goods have an inventory cost on Parnevik's books of \$400,000. Prepare the journal entries for Parnevik on (a) March 1, 2020, and (b) December 31, 2020.

BE18.11 (LO 2, 3) Telephone Sellers Inc. sells prepaid telephone cards to customers. Telephone Sellers then pays the telecommunications company, TeleExpress, for the actual use of its telephone lines related to the prepaid telephone cards. Assume that Telephone Sellers sells \$4,000 of prepaid cards in January 2020. It then pays TeleExpress based on usage, which turns out to be 50% in February, 30%

in March, and 20% in April. The total payment by Telephone Sellers for TeleExpress lines over the 3 months is \$3,000. Indicate how much income Telephone Sellers should recognize in January, February, March, and April.

BE18.12 (LO 2, 3) Manual Company sells goods to Nolan Company during 2020. It offers Nolan the following rebates based on total sales to Nolan. If total sales to Nolan are 10,000 units, it will grant a rebate of 2%. If it sells up to 20,000 units, it will grant a rebate of 4%. If it sells up to 30,000 units, it will grant a rebate of 6%. In the first quarter of the year, Manual sells 11,000 units to Nolan at a sales price of \$110,000. Manual, based on past experience, has sold over 40,000 units to Nolan, and these sales normally take place in the third quarter of the year. What amount of revenue should Manual report for the sale of the 11,000 units in the first quarter of the year?

BE18.13 (LO 3) On July 10, 2020, Amodt Music sold CDs to retailers on account and recorded sales revenue of \$700,000 (cost \$560,000). Amodt grants the right to return CDs that do not sell in 3 months following delivery. Past experience indicates that the normal return rate is 15%. By October 11, 2020, retailers returned CDs to Amodt and were granted credit of \$78,000. Prepare Amodt's journal entries to record (a) the sale on July 10, 2020, and (b) \$78,000 of returns on October 11, 2020, and on October 31, 2020. Assume that Amodt prepares financial statement on October 31, 2020.

BE18.14 (LO 3) Kristin Company sells 300 units of its products for \$20 each to Logan Inc. for cash. Kristin allows Logan to return any unused product within 30 days and receive a full refund. The cost of each product is \$12. To determine the transaction price, Kristin decides that the approach that is most predictive of the amount of consideration to which it will be entitled is the probability-weighted amount. Using the probability-weighted amount, Kristin estimates that (1) 10 products will be returned and (2) the returned products are expected to be resold at a profit. Indicate the amount of (a) net sales, (b) estimated liability for refunds, and (c) cost of goods sold that Kristen should report in its financial statements (assume that none of the products have been returned at the financial statement date).

BE18.15 (LO 3) On June 1, 2020, Mills Company sells \$200,000 of shelving units to a local retailer, ShopBarb, which is planning to expand its stores in the area. Under the agreement, ShopBarb asks Mills to retain the shelving units at its factory until the new stores are ready for installation. Title passes to ShopBarb at the time the agreement is signed. The shelving units are delivered to the stores on September 1, 2020, and ShopBarb pays in full. Prepare the journal entries for this bill-and-hold arrangement (assuming that conditions for recognizing the sale as a bill-and-hold sale have been met) for Mills on June 1 and September 1, 2020. The cost of the shelving units to Mills is \$110,000.

BE18.16 (LO 3) Travel Inc. sells tickets for a Caribbean cruise on ShipAway Cruise Lines to Carmel Company employees. The total cruise package price to Carmel Company employees is \$70,000. Travel Inc. receives a commission of 6% of the total price. Travel Inc. therefore remits \$65,800 to ShipAway. Prepare the journal entry to record (1) the receipt of payment of \$70,000 from employees for the cruise packages and (2) the remittance and revenue recognized by Travel Inc. on this transaction.

BE18.17 (LO 3) Jansen Corporation shipped \$20,000 of merchandise on consignment to Gooch Company. Jansen paid freight costs of \$2,000. Gooch Company paid \$500 for local advertising, which is reimbursable from Jansen. By year-end, 60% of the merchandise had been sold for \$21,500. Gooch notified Jansen, retained a 10% commission, and remitted the cash due to Jansen. Prepare Jansen's journal entry when the cash is received.

BE18.18 (LO 3) Talarczyk Company sold 10,000 Super-Spreaders on December 31, 2020, at a total price of \$1,000,000, with a warranty guarantee that the product was free of any defects. The cost of the spreaders sold is \$550,000. The assurance warranties extend for a 2-year period and are estimated to cost \$40,000. Talarczyk also sold extended warranties (service-type warranties) related to 2,000 spreaders for 2 years beyond the 2-year period for \$12,000. Given this information, determine the amounts to report for the following at December 31, 2020: sales revenue, warranty expense, unearned warranty revenue, warranty liability, and cash.

BE18.19 (LO 4) On May 1, 2020, Mount Company enters into a contract to transfer a product to Eric Company on September 30, 2020. It is agreed that Eric will pay the full price of \$25,000 in advance on June 15, 2020. Eric pays on June 15, 2020, and Mount delivers the product on September 30, 2020. Prepare the journal entries required for Mount in 2020.

BE18.20 (LO 3) Nate Beggs signs a 1-year contract with BlueBox Video. The terms of the contract are that Nate is required to pay a nonrefundable initiation fee of \$100. No annual membership fee is charged in the first year. After the first year, membership can be renewed by paying an annual membership fee of \$5 per month. BlueBox determines that its customers, on average, renew their annual membership three times after the first year before terminating their membership. What amount of revenue should BlueBox recognize in its first year?

BE18.21 (LO 4) Stengel Co. enters into a 3-year contract to perform maintenance service for Laplante Inc. Laplante promises to pay \$100,000 at the beginning of each year (the standalone selling price of the service at contract inception is \$100,000 per year). At the end of the second year, the contract is modified and the fee for the third year of service, which reflects a reduced menu of maintenance services to be performed at Laplante locations, is reduced to \$80,000 (the standalone selling price of the services at the beginning of the third year is \$80,000 per year). Briefly describe the accounting for this contract modification.

***BE18.22 (LO 5)** Turner, Inc. began work on a \$7,000,000 contract in 2020 to construct an office building. During 2020, Turner, Inc. incurred costs of \$1,700,000, billed its customers for \$1,200,000, and collected \$960,000. At December 31, 2020, the estimated additional costs to complete the project total \$3,300,000. Prepare Turner's 2020 journal entries using the percentage-of-completion method.

***BE18.23 (LO 6)** Guillen, Inc. began work on a \$7,000,000 contract in 2020 to construct an office building. Guillen uses the completed-contract method. At December 31, 2020, the balances in certain accounts were Construction in Process \$1,715,000, Accounts Receivable \$240,000, and Billings on Construction in Process \$1,000,000. Indicate how these accounts would be reported in Guillen's December 31, 2020, balance sheet.

***BE18.24 (LO 7)** Archer Construction Company began work on a \$420,000 construction contract in 2020. During 2020, Archer incurred costs of \$278,000, billed its customer for \$215,000, and collected \$175,000. At December 31, 2020, the estimated additional costs to complete the project total \$162,000. Prepare Archer's journal entry to record profit or loss, if any, using (a) the percentage-of-completion method and (b) the completed-contract method.

***BE18.25 (LO 8)** Frozen Delight, Inc. charges an initial franchise fee of \$75,000 for the right to operate as a franchisee of Frozen Delight. Of this amount, \$25,000 is collected immediately. The remainder is collected in four equal annual installments of \$12,500 each. These installments have a present value of \$41,402. As part of the total franchise fee, Frozen Delight also provides training (with a fair value of \$2,000) to help franchisees get the store ready to open. The franchise agreement is signed on April 1, 2020, training is completed, and the store opens on July 1, 2020. Prepare the journal entries required by Frozen Delight on April 1 and July 1, 2020.

Exercises

E18.1 (LO 1) (Fundamentals of Revenue Recognition) Presented below are five different situations. Provide an answer to each of these questions.

1. The Kawaski Jeep dealership sells both new and used Jeeps. Some of the Jeeps are used for demonstration purposes; after 6 months, these Jeeps are then sold as used vehicles. Should Kawaski Jeep record these sales of used Jeeps as revenue or as a gain?
2. One of the main indicators of whether control has passed to the customer is whether revenue has been earned. Is this statement correct?
3. One of the five steps in determining whether revenue should be recognized is whether the sale has been realized. Do you agree?
4. One of the criteria that contracts must meet to apply the revenue standard is that collectibility of the sales price must be reasonably possible. Is this correct?
5. Many believe the distinction between revenue and gains is important in the financial statements. Given that both revenues and gains increase net income, why is the distinction important?

E18.2 (LO 1) (Fundamentals of Revenue Recognition) Respond to the questions related to the following statements.

1. A wholly unperformed contract is one in which the company has neither transferred the promised goods or services to the customer nor received, or become entitled to receive, any consideration. Why are these contracts not recorded in the accounts?
2. Performance obligations are the unit of account for purposes of applying the revenue recognition standard and therefore determine when and how revenue is recognized. Is this statement correct?
3. Elaina Company contracts with a customer and provides the customer with an option to purchase additional goods for free or at a discount. Should Elaina Company account for this option?

4. The transaction price is generally not adjusted to reflect the customer's credit risk, meaning the risk that the customer will not pay the amount to which the entity is entitled to under the contract. Comment on this statement.

E18.3 (LO 1, 2) (Existence of a Contract) On May 1, 2020, Richardson Inc. entered into a contract to deliver one of its specialty mowers to Kickapoo Landscaping Co. The contract requires Kickapoo to pay the contract price of \$900 in advance on May 15, 2020. Kickapoo pays Richardson on May 15, 2020, and Richardson delivers the mower (with cost of \$575) on May 31, 2020.

Instructions

- Prepare the journal entry on May 1, 2020, for Richardson.
- Prepare the journal entry on May 15, 2020, for Richardson.
- Prepare the journal entry on May 31, 2020, for Richardson.

E18.4 (LO 2) (Determine Transaction Price) Jupiter Company sells goods to Danone Inc. by accepting a note receivable on January 2, 2020. The goods have a sales price of \$610,000 (cost of \$500,000). The terms are net 30. If Danone pays within 5 days, however, it receives a cash discount of \$10,000. Past history indicates that the cash discount will be taken. On January 28, 2020, Danone makes payment to Jupiter for the full sales price.

Instructions

- Prepare the journal entry(ies) to record the sale and related cost of goods sold for Jupiter Company on January 2, 2020, and the payment on January 28, 2020. Assume that Jupiter Company records the January 2, 2020, transaction using the net method.
- Prepare the journal entry(ies) to record the sale and related cost of goods sold for Jupiter Company on January 2, 2020, and the payment on January 28, 2020. Assume that Jupiter Company records the January 2, 2020, transaction using the gross method.

E18.5 (LO 2) (Determine Transaction Price) Jeff Heun, president of Concrete Always, agrees to construct a concrete cart path at Dakota Golf Club. Concrete Always enters into a contract with Dakota to construct the path for \$200,000. In addition, as part of the contract, a performance bonus of \$40,000 will be paid based on the timing of completion. The performance bonus will be paid fully if completed by the agreed-upon date. The performance bonus decreases by \$10,000 per week for every week beyond the agreed-upon completion date. Jeff has been involved in a number of contracts that had performance bonuses as part of the agreement in the past. As a result, he is fairly confident that he will receive a good portion of the performance bonus. Jeff estimates, given the constraints of his schedule related to other jobs, that there is 55% probability that he will complete the project on time, a 30% probability that he will be 1 week late, and a 15% probability that he will be 2 weeks late.

Instructions

- Determine the transaction price that Concrete Always should compute for this agreement.
- Assume that Jeff Heun has reviewed his work schedule and decided that it makes sense to complete this project on time. Assuming that he now believes that the probability for completing the project on time is 90% and otherwise it will be finished 1 week late, determine the transaction price.

E18.6 (LO 2) (Determine Transaction Price) Bill Amends, owner of Real Estate Inc., buys and sells commercial properties. Recently, he sold land for \$3,000,000 to the Blackhawk Group, a developer that plans to build a new shopping mall. In addition to the \$3,000,000 sales price, Blackhawk Group agrees to pay Real Estate Inc. 1% of the retail sales of the mall for 10 years. Blackhawk estimates that retail sales in a typical mall project is \$1,000,000 a year. Given the substantial increase in online sales that are occurring in the retail market, Bill had originally indicated that he would prefer a higher price for the land instead of the 1% royalty arrangement and suggested a price of \$3,250,000. However, Blackhawk would not agree to those terms.

Instructions

What is the transaction price for the land and related royalty payment that Real Estate Inc. should record?

E18.7 (LO 2) (Determine Transaction Price) Blair Biotech enters into a licensing agreement with Pang Pharmaceutical for a drug under development. Blair will receive a payment of \$10,000,000 if the drug receives regulatory approval. Based on prior experience in the drug-approval process, Blair determines it is 90% likely that the drug will gain approval and a 10% chance of denial.

Instructions

- a. Determine the transaction price of the arrangement for Blair Biotech.
- b. Assuming that regulatory approval was granted on December 20, 2020, and that Blair received the payment from Pang on January 15, 2021, prepare the journal entries for Blair. The license meets the criteria for point-in-time revenue recognition.

E18.8 (LO 2, 3) (Determine Transaction Price) Aaron's Agency sells an insurance policy offered by Capital Insurance Company for a commission of \$100 on January 2, 2020. In addition, Aaron will receive an additional commission of \$10 each year for as long as the policyholder does not cancel the policy. After selling the policy, Aaron does not have any remaining performance obligations. Based on Aaron's significant experience with these types of policies, it estimates that policyholders on average renew the policy for 4.5 years. It has no evidence to suggest that previous policyholder behavior will change.

Instructions

- a. Determine the transaction price of the arrangement for Aaron, assuming 100 policies are sold.
- b. Determine the revenue that Aaron will recognize in 2020.

E18.9 (LO 2, 3) (Determine Transaction Price) Taylor Marina has 300 available slips that rent for \$800 per season. Payments must be made in full by the start of the boating season, April 1, 2021. The boating season ends October 31, and the marina has a December 31 year-end. Slips for future seasons may be reserved if paid for by December 31, 2021. Under a new policy, if payment for 2022 season slips is made by December 31, 2021, a 5% discount is allowed. If payment for 2023 season slips is made by December 31, 2021, renters get a 20% discount (this promotion hopefully will provide cash flow for major dock repairs).

On December 31, 2020, all 300 slips for the 2021 season were rented at full price. On December 31, 2021, 200 slips were reserved and paid for the 2022 boating season, and 60 slips were reserved and paid for the 2023 boating season.

Instructions

- a. Prepare the appropriate journal entries for December 31, 2020, and December 31, 2021.
- b. Assume the marina operator is unsophisticated in business. Explain the managerial significance of the above accounting to this person.

E18.10 (LO 2, 3) (Allocate Transaction Price) Geraths Windows manufactures and sells custom storm windows for three-season porches. Geraths also provides installation service for the windows. The installation process does not involve changes in the windows, so this service can be performed by other vendors. Geraths enters into the following contract on July 1, 2020, with a local homeowner. The customer purchases windows for a price of \$2,400 and chooses Geraths to do the installation. Geraths charges the same price for the windows irrespective of whether it does the installation or not. The installation service is estimated to have a standalone selling price of \$600. The customer pays Geraths \$2,000 (which equals the standalone selling price of the windows, which have a cost of \$1,100) upon delivery and the remaining balance upon installation of the windows. The windows are delivered on September 1, 2020, Geraths completes installation on October 15, 2020, and the customer pays the balance due. Prepare the journal entries for Geraths in 2020. (Round amounts to nearest dollar.)

E18.11 (LO 2, 3) (Allocate Transaction Price) Refer to the revenue arrangement in E18.10. Repeat the requirements, assuming (a) Geraths estimates the standalone selling price of the installation based on an estimated cost of \$400 plus a margin of 20% on cost, and (b) given uncertainty of finding skilled labor, Geraths is unable to develop a reliable estimate for the standalone selling price of the installation. (Round amounts to nearest dollar.)

E18.12 (LO 3) (Allocate Transaction Price) Shaw Company sells goods that cost \$300,000 to Ricard Company for \$410,000 on January 2, 2020. The sales price includes an installation fee, which has a standalone selling price of \$40,000. The standalone selling price of the goods is \$370,000. The installation is considered a separate performance obligation and is expected to take 6 months to complete.

Instructions

- a. Prepare the journal entries (if any) to record the sale on January 2, 2020.
- b. Shaw prepares an income statement for the first quarter of 2020, ending on March 31, 2020 (installation was completed on June 18, 2020). How much revenue should Shaw recognize related to its sale to Ricard?

E18.13 (LO 3) (Allocate Transaction Price) Crankshaft Company manufactures equipment. Crankshaft's products range from simple automated machinery to complex systems containing numerous components. Unit selling prices range from \$200,000 to \$1,500,000 and are quoted inclusive of installation. The installation process does not involve changes to the features of the equipment and does not require proprietary information about the equipment in order for the installed equipment to perform to specifications. Crankshaft has the following arrangement with Winkerbean Inc.

- Winkerbean purchases equipment from Crankshaft for a price of \$1,000,000 and contracts with Crankshaft to install the equipment. Crankshaft charges the same price for the equipment irrespective of whether it does the installation or not. Using market data, Crankshaft determines installation service is estimated to have a standalone selling price of \$50,000. The cost of the equipment is \$600,000.
- Winkerbean is obligated to pay Crankshaft the \$1,000,000 upon the delivery and installation of the equipment.

Crankshaft delivers the equipment on June 1, 2020, and completes the installation of the equipment on September 30, 2020. The equipment has a useful life of 10 years. Assume that the equipment and the installation are two distinct performance obligations which should be accounted for separately.

Instructions

- How should the transaction price of \$1,000,000 be allocated among the service obligations?
- Prepare the journal entries for Crankshaft for this revenue arrangement on June 1, 2020 and September 30, 2020, assuming Crankshaft receives payment when installation is completed.

E18.14 (LO 3) (Allocate Transaction Price) Refer to the revenue arrangement in E18.13.

Instructions

Repeat requirements (a) and (b) assuming Crankshaft does not have market data with which to determine the standalone selling price of the installation services. As a result, an expected cost plus margin approach is used. The cost of installation is \$36,000; Crankshaft prices these services with a 25% margin relative to cost.

E18.15 (LO 3) (Allocate Transaction Price) Appliance Center is an experienced home appliance dealer. Appliance Center also offers a number of services for the home appliances that it sells. Assume that Appliance Center sells ovens on a standalone basis. Appliance Center also sells installation services and maintenance services for ovens. However, Appliance Center does not offer installation or maintenance services to customers who buy ovens from other vendors. Pricing for ovens is as follows.

| | |
|---|--------|
| Oven only | \$ 800 |
| Oven with installation service | 850 |
| Oven with maintenance services | 975 |
| Oven with installation and maintenance services | 1,000 |

In each instance in which maintenance services are provided, the maintenance service is separately priced within the arrangement at \$175. Additionally, the incremental amount charged by Appliance Center for installation approximates the amount charged by independent third parties. Ovens are sold subject to a general right of return. If a customer purchases an oven with installation and/or maintenance services, in the event Appliance Center does not complete the service satisfactorily, the customer is only entitled to a refund of the portion of the fee that exceeds \$800.

Instructions

- Assume that a customer purchases an oven with both installation and maintenance services for \$1,000. Based on its experience, Appliance Center believes that it is probable that the installation of the equipment will be performed satisfactorily to the customer. Assume that the maintenance services are priced separately (i.e., the three components are distinct). Identify the separate performance obligations related to the Appliance Center revenue arrangement.
- Indicate the amount of revenue that should be allocated to the oven, the installation, and to the maintenance contract.

E18.16 (LO 3) Excel (Sales with Returns) On March 10, 2020, Steele Company sold to Barr Hardware 200 tool sets at a price of \$50 each (cost \$30 per set) with terms of n/60, f.o.b. shipping point. Steele allows Barr to return any unused tool sets within 60 days of purchase. Steele estimates that (1) 10 sets will be returned, (2) the cost of recovering the products will be immaterial, and (3) the returned tools sets can be resold at a profit. On March 25, 2020, Barr returned six tool sets and received a credit to its account.

Instructions

- Prepare journal entries for Steele to record (1) the sale on March 10, 2020, (2) the return on March 25, 2020, and (c) any adjusting entries required on March 31, 2020 (when Steele prepares financial statements). Steele believes the original estimate of returns is correct.
- Indicate the income statement and balance sheet reporting by Steele at March 31, 2020, of the information related to the Barr sales transaction.

E18.17 (LO 3) Excel (Sales with Returns) Refer to the revenue arrangement in E18.16. Assume that instead of selling the tool sets on credit, that Steele sold them for cash.

Instructions

- Prepare journal entries for Steele to record (1) the sale on March 10, 2020, (2) the return on March 25, 2020, and (c) any adjusting entries required on March 31, 2020 (when Steele prepares financial statements). Steele believes the original estimate of returns is correct.
- Indicate the income statement and balance sheet reporting by Steele at March 31, 2020, of the information related to the Barr sale.

E18.18 (LO 3) Excel (Sales with Allowances) On October 2, 2020, Laplante Company sold \$6,000 of its elite camping gear (with a cost of \$3,600) to Lynch Outfitters. As part of the sales agreement, Laplante includes a provision that if Lynch is dissatisfied with the product, Laplante will grant an allowance on the sales price or agree to take the product back (although returns are rare, given the long-term relationship between Laplante and Lynch). Lynch expects total allowances to Lynch to be \$800. On October 16, 2020, Laplante grants an allowance of \$400 to Lynch because the color for some of the items delivered was a bit different than what appeared in the catalog.

Instructions

- Prepare journal entries for Laplante to record (1) the sale on October 2, 2020, (2) the granting of the allowance on October 16, 2020, and, (c) any adjusting required on October 31, 2020 (when Laplante prepares financial statements). Laplante now estimates additional allowances of \$250 will be granted to Lynch in the future.
- Indicate the income statement and balance sheet reporting by Laplante at October 31, 2020, of the information related to the Lynch transaction.

E18.19 (LO 3) Excel (Sales with Returns) On June 3, 2020, Hunt Company sold to Ann Mount merchandise having a sales price of \$8,000 (cost \$6,000) with terms of n/60, f.o.b. shipping point. Hunt estimates that merchandise with a sales value of \$800 will be returned. An invoice totaling \$120 was received by Mount on June 8 from Olympic Transport Service for the freight cost. Upon receipt of the goods, on June 8, Mount returned to Hunt \$300 of merchandise containing flaws. Hunt estimates the returned items are expected to be resold at a profit. The freight on the returned merchandise was \$24, paid by Hunt on June 8. On July 16, the company received a check for the balance due from Mount.

Instructions

Prepare journal entries for Hunt Company to record all the events in June and July.

E18.20 (LO 3) (Sales with Returns) Organic Growth Company is presently testing a number of new agricultural seed planters that it has recently developed. To stimulate interest, it has decided to grant to five of its largest customers the unconditional right of return to these products if not fully satisfied. The right of return extends for 4 months. Organic Growth estimates returns of 20%. Organic Growth sells these planters on account for \$1,500,000 (cost \$750,000) on January 2, 2020. Customers are required to pay the full amount due by March 15, 2020.

Instructions

- Prepare the journal entry for Organic Growth at January 2, 2020.
- Assume that one customer returns planters on March 1, 2020, due to unsatisfactory performance. Prepare the journal entry to record this transaction, assuming this customer purchased \$100,000 of planters from Organic Growth.
- Assume Organic Growth prepares financial statements quarterly. Prepare the necessary entries (if any) to adjust Organic Growth's financial results for the above transactions on March 31, 2020, assuming remaining expected returns of \$200,000.

E18.21 (LO 3) (Sales with Returns) Uddin Publishing Co. publishes college textbooks that are sold to bookstores on the following terms. Each title has a fixed wholesale price, terms f.o.b. shipping point, and payment is due 60 days after shipment. The retailer may return a maximum of 30% of an order at the retailer's expense. Sales are made only to retailers who have good credit ratings. Past experience indicates that the normal return rate is 12%. The costs of recovery are expected to be immaterial, and the textbooks are expected to be resold at a profit.

Instructions

- Identify the revenue recognition criteria that Uddin could employ concerning textbook sales.
- Briefly discuss the reasoning for your answers in (a) above.
- On July 1, 2020, Uddin shipped books invoiced at \$15,000,000 (cost \$12,000,000). Prepare the journal entry to record this transaction.
- On October 3, 2020, \$1.5 million of the invoiced July sales were returned according to the return policy, and the remaining \$13.5 million was paid. Prepare the journal entries for the return and payment.
- Assume Uddin prepares financial statements on October 31, 2020, the close of the fiscal year. No other returns are anticipated. Indicate the amounts reported on the income statement and balance related to the above transactions.

E18.22 (LO 3) (Sales with Repurchase) Cramer Corp. sells idle machinery to Enyart Company on July 1, 2020, for \$40,000. Cramer agrees to repurchase this equipment from Enyart on June 30, 2021, for a price of \$42,400 (an imputed interest rate of 6%).

Instructions

- Prepare the journal entry for Cramer for the transfer of the asset to Enyart on July 1, 2020.
- Prepare any other necessary journal entries for Cramer in 2020.
- Prepare the journal entry for Cramer when the machinery is repurchased on June 30, 2021.

E18.23 (LO 3) (Repurchase Agreement) Zagat Inc. enters into an agreement on March 1, 2020, to sell Werner Metal Company aluminum ingots. As part of the agreement, Zagat also agrees to repurchase the ingots on May 1, 2020, at the original sales price of \$200,000 plus 2%.

Instructions

- Prepare Zagat's journal entry necessary on March 1, 2020.
- Prepare Zagat's journal entry for the repurchase of the ingots on May 1, 2020.

E18.24 (LO 3) (Bill and Hold) Wood-Mode Company is involved in the design, manufacture, and installation of various types of wood products for large construction projects. Wood-Mode recently completed a large contract for Stadium Inc., which consisted of building 35 different types of concession counters for a new soccer arena under construction. The terms of the contract are that upon completion of the counters, Stadium would pay \$2,000,000. Unfortunately, due to the depressed economy, the completion of the new soccer arena is now delayed. Stadium has therefore asked Wood-Mode to hold the counters for 2 months at its manufacturing plant until the arena is completed. Stadium acknowledges in writing that it ordered the counters and that they now have ownership. The time that Wood-Mode Company must hold the counters is totally dependent on when the arena is completed. Because Wood-Mode has not received additional progress payments for the counters due to the delay, Stadium has provided a deposit of \$300,000.

Instructions

- Explain this type of revenue recognition transaction.
- What factors should be considered in determining when to recognize revenue in this transaction?
- Prepare the journal entry(ies) that Wood-Mode should make, assuming it signed a valid sales contract to sell the counters and received at the time the \$300,000 deposit.

E18.25 (LO 3) (Consignment Sales) On May 3, 2020, Eisler Company consigned 80 freezers, costing \$500 each, to Remmers Company. The cost of shipping the freezers amounted to \$840 and was paid by Eisler Company. On December 30, 2020, a report was received from the consignee, indicating that 40 freezers had been sold for \$750 each. Remittance was made by the consignee for the amount due after deducting a commission of 6%, advertising of \$200, and total installation costs of \$320 on the freezers sold.

Instructions

- Compute the inventory value of the units unsold in the hands of the consignee.
- Compute the profit for the consignor for the units sold.
- Compute the amount of cash that will be remitted by the consignee.

E18.26 (LO 3) (Warranty Arrangement) On January 2, 2020, Grando Company sells production equipment to Fargo Inc. for \$50,000. Grando includes a 2-year assurance warranty service with the sale of all its equipment. The customer receives and pays for the equipment on January 2, 2020. During 2020, Grando incurs costs related to warranties of \$900. At December 31, 2020, Grando estimates that \$650 of warranty costs will be incurred in the second year of the warranty.

Instructions

- Prepare the journal entry to record this transaction on January 2, 2020, and on December 31, 2020 (assuming financial statements are prepared on December 31, 2020).
- Repeat the requirements for (a), assuming that in addition to the assurance warranty, Grando sold an extended warranty (service-type warranty) for an additional 2 years (2022–2023) for \$800.

E18.27 (LO 3) (Warranties) Celic Inc. manufactures and sells computers that include an assurance-type warranty for the first 90 days. Celic offers an optional extended coverage plan under which it will repair or replace any defective part for 3 years from the expiration of the assurance-type warranty. Because the optional extended coverage plan is sold separately, Celic determines that the 3 years of extended coverage represents a separate performance obligation. The total transaction price for the sale of a computer and the extended warranty is \$3,600 on October 1, 2020, and Celic determines the standalone selling price of each is \$3,200 and \$400, respectively. Further, Celic estimates, based on historical experience, it will incur \$200 in costs to repair defects that arise within the 90-day coverage period for the assurance-type warranty. The cost of the equipment is \$1,440. Assume that the \$200 in costs to repair defects in the computers occurred on October 25, 2020.

Instructions

- Prepare the journal entry(ies) to record the October transactions related to sale of the computers.
- Briefly describe the accounting for the service-type warranty after the 90-day assurance-type warranty period.

E18.28 (LO 4) (Existence of a Contract) On January 1, 2020, Gordon Co. enters into a contract to sell a customer a wiring base and shelving unit that sits on the base in exchange for \$3,000. The contract requires delivery of the base first but states that payment for the base will not be made until the shelving unit is delivered. Gordon identifies two performance obligations and allocates \$1,200 of the transaction price to the wiring base and the remainder to the shelving unit. The cost of the wiring base is \$700; the shelves have a cost of \$320.

Instructions

- Prepare the journal entry on January 1, 2020, for Gordon.
- Prepare the journal entry on February 5, 2020, for Gordon when the wiring base is delivered to the customer.
- Prepare the journal entry on February 25, 2020, for Gordon when the shelving unit is delivered to the customer and Gordon receives full payment.

E18.29 (LO 4) (Contract Modification) In September 2020, Gaertner Corp. commits to selling 150 of its iPhone-compatible docking stations to Better Buy Co. for \$15,000 (\$100 per product). The stations are delivered to Better Buy over the next 6 months. After 90 stations are delivered, the contract is modified and Gaertner promises to deliver an additional 45 products for an additional \$4,275 (\$95 per station). All sales are cash on delivery.

Instructions

- Prepare the journal entry for Gaertner for the sale of the first 90 stations. The cost of each station is \$54.
- Prepare the journal entry for the sale of 10 more stations after the contract modification, assuming that the price for the additional stations reflects the standalone selling price at the time of the contract modification. In addition, the additional stations are distinct from the original products as Gaertner regularly sells the products separately.

- c. Prepare the journal entry for the sale of 10 more stations (as in (b)), assuming that the pricing for the additional products *does not* reflect the standalone selling price of the additional products and the prospective method is used.

E18.30 (LO 4) (Contract Modification) Tyler Financial Services performs bookkeeping and tax-reporting services to startup companies in the Oconomowoc area. On January 1, 2020, Tyler entered into a 3-year service contract with Walleye Tech. Walleye promises to pay \$10,000 at the beginning of each year, which at contract inception is the standalone selling price for these services. At the end of the second year, the contract is modified and the fee for the third year of services is reduced to \$8,000. In addition, Walleye agrees to pay an additional \$20,000 at the beginning of the third year to cover the contract for 3 additional years (i.e., 4 years remain after the modification). The extended contract services are similar to those provided in the first 2 years of the contract.

Instructions

- Prepare the journal entries for Tyler in 2020 and 2021 related to this service contract.
- Prepare the journal entries for Tyler in 2022 related to the modified service contract, assuming a prospective approach.
- Repeat the requirements for part (b), assuming Tyler and Walleye agree on a revised set of services (fewer bookkeeping services but more tax services) in the extended contract period and the modification results in a separate performance obligation.

E18.31 (LO 4) (Contract Costs) Rex's Reclaimers entered into a contract with Dan's Demolition to manage the processing of recycled materials on Dan's various demolition projects. Services for the 3-year contract include collecting, sorting, and transporting reclaimed materials to recycling centers or contractors who will reuse them. Rex's incurs selling commission costs of \$2,000 to obtain the contract. Before performing the services, Rex's also designs and builds receptacles and loading equipment that interfaces with Dan's demolition equipment at a cost of \$27,000. These receptacles and equipment are retained by Rex's and can be used for other projects. Dan's promises to pay a fixed fee of \$12,000 per year, payable every 6 months for the services under the contract. Rex's incurs the following costs: design services for the receptacles to interface with Dan's equipment \$3,000, loading equipment controllers \$6,000, and special testing and OSHA inspection fees \$2,000 (some of Dan's projects are on government property).

Instructions

- Determine the costs that should be capitalized as part of Rex's Reclaimers revenue arrangement with Dan's Demolition.
- Dan's also expects to incur general and administrative costs related to this contract, as well as costs of wasted materials and labor that likely cannot be factored into the contract price. Can these costs be capitalized? Explain.

E18.32 (LO 4) (Contract Costs, Collectibility) Refer to the information in E18.31.

Instructions

- Does the accounting for capitalized costs change if the contract is for 1 year rather than 3 years? Explain.
- Dan's Demolition is a startup company; as a result, there is more than insignificant uncertainty about Dan's ability to make the 6-month payments on time. Does this uncertainty affect the amount of revenue to be recognized under the contract? Explain.

***E18.33 (LO 5, 6) (Recognition of Profit on Long-Term Contracts)** During 2020, Nilsen Company started a construction job with a contract price of \$1,600,000. The job was completed in 2022. The following information is available.

| | 2020 | 2021 | 2022 |
|-----------------------------|-----------|-----------|-------------|
| Costs incurred to date | \$400,000 | \$825,000 | \$1,070,000 |
| Estimated costs to complete | 600,000 | 275,000 | –0– |
| Billings to date | 300,000 | 900,000 | 1,600,000 |
| Collections to date | 270,000 | 810,000 | 1,425,000 |

Instructions

- Compute the amount of gross profit to be recognized each year, assuming the percentage-of-completion method is used.

- Prepare all necessary journal entries for 2021.
- Compute the amount of gross profit to be recognized each year, assuming the completed-contract method is used.

***E18.34 (LO 5) (Analysis of Percentage-of-Completion Financial Statements)** In 2020, Steinrotter Construction Corp. began construction work under a 3-year contract. The contract price was \$1,000,000. Steinrotter uses the percentage-of-completion method for financial accounting purposes. The income to be recognized each year is based on the proportion of cost incurred to total estimated costs for completing the contract. The financial statement presentations relating to this contract at December 31, 2020, are shown below.

Balance Sheet

| | | |
|---|---------------|----------|
| Accounts receivable | | \$18,000 |
| Construction in process | \$65,000 | |
| Less: Billings | <u>61,500</u> | |
| Costs and recognized profit in excess of billings | | 3,500 |

Income Statement

| | |
|--|----------|
| Income (before tax) on the contract recognized in 2020 | \$19,500 |
|--|----------|

Instructions

- How much cash was collected in 2020 on this contract?
- What was the initial estimated total income before tax on this contract?

(AICPA adapted)

***E18.35 (LO 5) Excel (Gross Profit on Uncompleted Contract)** On April 1, 2020, Dougherty Inc. entered into a cost plus fixed fee contract to construct an electric generator for Altom Corporation. At the contract date, Dougherty estimated that it would take 2 years to complete the project at a cost of \$2,000,000. The fixed fee stipulated in the contract is \$450,000. Dougherty appropriately accounts for this contract under the percentage-of-completion method. During 2020, Dougherty incurred costs of \$800,000 related to the project. The estimated cost at December 31, 2020, to complete the contract is \$1,200,000. Altom was billed \$600,000 under the contract.

Instructions

Prepare a schedule to compute the amount of gross profit to be recognized by Dougherty under the contract for the year ended December 31, 2020. Show supporting computations in good form.

(AICPA adapted)

***E18.36 (LO 5, 6) (Recognition of Revenue on Long-Term Contract and Entries)** Hamilton Construction Company uses the percentage-of-completion method of accounting. In 2020, Hamilton began work under contract #E2-D2, which provided for a contract price of \$2,200,000. Other details follow:

| | <u>2020</u> | <u>2021</u> |
|--|-------------|-------------|
| Costs incurred during the year | \$640,000 | \$1,425,000 |
| Estimated costs to complete, as of December 31 | 960,000 | -0- |
| Billings during the year | 420,000 | 1,680,000 |
| Collections during the year | 350,000 | 1,500,000 |

Instructions

- What portion of the total contract price would be recognized as revenue in 2020? In 2021?
- Assuming the same facts as those above except that Hamilton uses the completed-contract method of accounting, what portion of the total contract price would be recognized as revenue in 2021?
- Prepare a complete set of journal entries for 2020 (using the percentage-of-completion method).

***E18.37 (LO 5, 6) (Recognition of Profit and Balance Sheet Amounts for Long-Term Contracts)** Yanmei Construction Company began operations on January 1, 2020. During the year, Yanmei Construction entered into a contract with Lundquist Corp. to construct a manufacturing facility. At that time, Yanmei estimated that it would take 5 years to complete the facility at a total cost of \$4,500,000. The total contract price for construction of the facility is \$6,000,000. During the year, Yanmei incurred \$1,185,800 in construction costs related to the construction project. The estimated cost to complete the contract is \$4,204,200. Lundquist Corp. was billed and paid 25% of the contract price.

Instructions

Prepare schedules to compute the amount of gross profit to be recognized for the year ended December 31, 2020, and the amount to be shown as “costs and recognized profit in excess of billings” or “billings in excess of costs and recognized profit” at December 31, 2020, under each of the following methods. Show supporting computations in good form.

- a. Completed-contract method.
- b. Percentage-of-completion method.

(AICPA adapted)

***E18.38 (LO 8) (Franchise Entries)** Pacific Crossburgers Inc. charges an initial franchise fee of \$70,000. Upon the signing of the agreement (which covers 3 years), a payment of \$28,000 is due. Thereafter, three annual payments of \$14,000 are required. The credit rating of the franchisee is such that it would have to pay interest at 10% to borrow money. The franchise agreement is signed on May 1, 2020, and the franchise commences operation on July 1, 2020.

Instructions

Prepare the journal entries in 2020 for the franchisor under the following assumptions. (Round to the nearest dollar.)

- a. No future services are required by the franchisor once the franchise starts operations.
- b. The franchisor has substantial services to perform, once the franchise begins operations, to maintain the value of the franchise.
- c. The total franchise fee includes training services (with a value of \$2,400) for the period leading up to the franchise opening and for 2 months following opening.

***E18.39 (LO 8) (Franchise Fee, Initial Down Payment)** On January 1, 2020, Lesley Benjamin signed an agreement, covering 5 years, to operate as a franchisee of Campbell Inc. for an initial franchise fee of \$50,000. The amount of \$10,000 was paid when the agreement was signed, and the balance is payable in five annual payments of \$8,000 each, beginning January 1, 2021. The agreement provides that the down payment is nonrefundable and that no future services are required of the franchisor once the franchise commences operations on April 1, 2020. Lesley Benjamin’s credit rating indicates that she can borrow money at 11% for a loan of this type.

Instructions

- a. Prepare journal entries for Campbell for 2020-related revenue for this franchise arrangement.
- b. Prepare journal entries for Campbell for 2020-related revenue for this franchise arrangement, assuming that in addition to the franchise rights, Campbell also provides 1 year of operational consulting and training services, beginning on the signing date. These services have a value of \$3,600.
- c. Repeat the requirements for part (a), assuming that Campbell must provide services to Benjamin throughout the franchise period to maintain the franchise value.

Problems

P18.1 (LO 2, 3) (Allocate Transaction Price, Upfront Fees) Tablet Tailors sells tablet PCs combined with Internet service, which permits the tablet to connect to the Internet anywhere and set up a Wi-Fi hot spot. It offers two bundles with the following terms.

1. Tablet Bundle A sells a tablet with 3 years of Internet service. The price for the tablet and a 3-year Internet connection service contract is \$500. The standalone selling price of the tablet is \$250 (the cost to Tablet Tailors is \$175). Tablet Tailors sells the Internet access service independently for an upfront payment of \$300. On January 2, 2020, Tablet Tailors signed 100 contracts, receiving a total of \$50,000 in cash.
2. Tablet Bundle B includes the tablet and Internet service plus a service plan for the tablet PC (for any repairs or upgrades to the tablet or the Internet connections) during the 3-year contract period.

That product bundle sells for \$600. Tablet Tailors provides the 3-year tablet service plan as a separate product with a standalone selling price of \$150. Tablet Tailors signed 200 contracts for Tablet Bundle B on July 1, 2020, receiving a total of \$120,000 in cash.

Instructions

- Prepare any journal entries to record the revenue arrangement for Tablet Bundle A on January 2, 2020, and December 31, 2020.
- Prepare any journal entries to record the revenue arrangement for Tablet Bundle B on July 1, 2020, and December 31, 2020.
- Repeat the requirements for part (a), assuming that Tablet Tailors has no reliable data with which to estimate the standalone selling price for the Internet service.

P18.2 (LO 2, 3, 4) (Allocate Transaction Price, Modification of Contract) Refer to the Tablet Bundle A revenue arrangement in P18.1. In response to competitive pressure for Internet access for Tablet Bundle A, after 2 years of the 3-year contract, Tablet Tailors offers a modified contract and extension incentive. The extended contract services are similar to those provided in the first 2 years of the contract. Signing the extension and paying \$90 (which equals the standalone selling of the revised Internet service package) extends access for 2 more years of Internet connection. Forty Tablet Bundle A customers sign up for this offer.

Instructions

- Prepare the journal entries when the contract is signed on January 2, 2022, for the 40 extended contracts. Assume the modification does not result in a separate performance obligation.
- Prepare the journal entries on December 31, 2022, for the 40 extended contracts (the first year of the revised 3-year contract).

P18.3 (LO 2, 3, 4) (Allocate Transaction Price, Discounts, Time Value) Grill Master Company sells total outdoor grilling solutions, providing gas and charcoal grills, accessories, and installation services for custom patio grilling stations.

Instructions

Respond to the requirements related to the following independent revenue arrangements for Grill Master products and services.

- Grill Master offers contract GM205, which is comprised of a free-standing gas grill for small patio use plus installation to a customer's gas line for a total price \$800. On a standalone basis, the grill sells for \$700 (cost \$425), and Grill Master estimates that the standalone selling price of the installation service (based on cost-plus estimation) is \$150. (The selling of the grill and the installation services should be considered two performance obligations.) Grill Master signed 10 GM205 contracts on April 20, 2020, and customers paid the contract price in cash. The grills were delivered and installed on May 15, 2020. Prepare journal entries for Grill Master for GM205 in April and May 2020.
- The State of Kentucky is planning major renovations in its parks during 2020 and enters into a contract with Grill Master to purchase 400 durable, easy maintenance, standard charcoal grills during 2020. The grills are priced at \$200 each (with a cost of \$160 each), and Grill Master provides a 6% volume discount if Kentucky purchases at least 300 grills during 2020. On April 17, 2020, Grill Master delivered and received payment for 280 grills. Based on prior experience with the State of Kentucky renovation projects, the delivery of this many grills makes it certain that Kentucky will meet the discount threshold. Prepare the journal entries for Grill Master for grills sold on April 17, 2020. Assume the company records sales transaction net.
- Grill Master sells its specialty combination gas/wood-fired grills to local restaurants. Each grill is sold for \$1,000 (cost \$550) on credit with terms 3/30, net/90. Prepare the journal entries for the sale of 20 grills on September 1, 2020, and upon payment, assuming the customer paid on (1) September 25, 2020, and (2) October 15, 2020. Assume the company records sales net.
- On October 1, 2020, Grill Master sold one of its super deluxe combination gas/charcoal grills to a local builder. The builder plans to install it in one of its "Parade of Homes" houses. Grill Master accepted a 3-year, zero-interest-bearing note with face amount of \$5,324. The grill has an inventory cost of \$2,700. An interest rate of 10% is an appropriate market rate of interest for this customer. Prepare the journal entries on October 1, 2020, and December 31, 2020.

P18.4 (LO 2, 3, 4) (Allocate Transaction Price, Discounts, Time Value) Economy Appliance Co. manufactures low-price, no-frills appliances that are in great demand for rental units. Pricing and cost information on Economy's main products are as follows.

| Item | Standalone Selling Price (Cost) |
|-----------------------------|------------------------------------|
| Refrigerator | \$500 (\$260) |
| Range | 560 (275) |
| Stackable washer/dryer unit | 700 (400) |

Customers can contract to purchase either individually at the stated prices or a three-item bundle with a price of \$1,800. The bundle price includes delivery and installation. Economy also provides installation (not a separate performance obligation).

Instructions

Respond to the requirements related to the following independent revenue arrangements for Economy Appliance Co.

- a. On June 1, 2020, Economy sold 100 washer/dryer units without installation to Laplante Rentals for \$70,000. Laplante is a newer customer and is unsure how this product will work in its older rental units. Economy offers a 60-day return privilege and estimates, based on prior experience with sales on this product, 4% of the units will be returned. Prepare the journal entries for the sale and related cost of goods sold on June 1, 2020.
- b. YellowCard Property Managers operates upscale student apartment buildings. On May 1, 2020, Economy signs a contract with YellowCard for 300 appliance bundles to be delivered and installed in one of its new buildings. YellowCard pays 20% cash at contract signing and will pay the balance upon installation no later than August 1, 2020. Prepare journal entries for Economy on (1) May 1, 2020, and (2) August 1, 2020, when all appliances are installed.
- c. Refer to the arrangement in part (b). It would help YellowCard secure lease agreements with students if the installation of the appliance bundles can be completed by July 1, 2020. YellowCard offers a 10% bonus payment if Economy can complete installation by July 1, 2020. Economy estimates its chances of meeting the bonus deadline to be 90%, based on a number of prior contracts of similar scale. Repeat the requirement for part (b), given this bonus provision. Assume installation is completed by July 1, 2020.
- d. Epic Rentals would like to take advantage of the bundle price for its 400-unit project; on February 1, 2020, Economy signs a contract with Epic for 400 bundles. Under the agreement, Economy will hold the appliance bundles in its warehouses until the new rental units are ready for installation. Epic pays 10% cash at contract signing. On April 1, 2020, Economy completes manufacture of the appliances in the Epic bundle order and places them in the warehouse. Economy and Epic have documented the warehouse arrangement and identified the units designated for Epic. The units are ready to ship, and Economy may not sell these units to other customers. Prepare journal entries for Economy on (1) February 1, 2020, and (2) April 1, 2020.

P18.5 (LO 2, 3, 4) (Allocate Transaction Price, Returns, and Consignments) Ritt Ranch & Farm is a distributor of ranch and farm equipment. Its products range from small tools, power equipment for trench-digging and fencing, grain dryers, and barn winches. Most products are sold direct via its company catalog and Internet site. However, given some of its specialty products, select farm implement stores carry Ritt's products. Pricing and cost information on three of Ritt's most popular products are as follows.

| Item | Standalone Selling Price (Cost) |
|------------------------|------------------------------------|
| Mini-trencher | \$ 3,600 (\$2,000) |
| Power fence hole auger | 1,200 (800) |
| Grain/hay dryer | 14,000 (11,000) |

Instructions

Respond to the requirements related to the following independent revenue arrangements for Ritt Ranch & Farm.

- a. On January 1, 2020, Ritt sells 40 augers to Mills Farm & Fleet for \$48,000. Mills signs a 6-month note at an annual interest rate of 12%. Ritt allows Mills to return any auger that it cannot use within 60 days and receive a full refund. Based on prior experience, Ritt estimates that 5% of units sold to customers like Mills will be returned (using the most likely outcome approach). Ritt's costs to

recover the products will be immaterial, and the returned augers are expected to be resold at a profit. Prepare the journal entry for Ritt on January 1, 2020.

- b. On August 10, 2020, Ritt sells 16 mini-trenchers to a farm co-op in western Minnesota on account. Ritt provides a 4% volume discount on the mini-trenchers if the co-op has a 15% increase in purchases from Ritt compared to the prior year. Given the slowdown in the farm economy, sales to the co-op have been flat, and it is highly uncertain that the benchmark will be met. Prepare the journal entry for Ritt on August 10, 2020.
- c. Ritt sells three grain/hay dryers to a local farmer at a total contract price of \$45,200. In addition to the dryers, Ritt provides installation, which has a standalone selling price of \$1,000 per unit installed. The contract payment also includes a \$1,200 maintenance plan for the dryers for 3 years after installation. Ritt signs the contract on June 20, 2020, and receives a 20% down payment from the farmer. The dryers are delivered and installed on October 1, 2020, and full payment is made to Ritt. Prepare the journal entries for Ritt in 2020 related to this arrangement.
- d. On April 25, 2020, Ritt ships 100 augers to Farm Depot, a farm supply dealer in Nebraska, on consignment. By June 30, 2020, Farm Depot has sold 60 of the consigned augers at the listed price of \$1,200 per unit. Farm Depot notifies Ritt of the sales, retains a 10% commission, and remits the cash due Ritt. Prepare the journal entries for Ritt and Farm Depot for the consignment arrangement.

P18.6 (LO 3) (Warranty, Customer Loyalty Program) Hale Hardware takes pride as the “shop around the corner” that can compete with the big-box home improvement stores by providing good service from knowledgeable sales associates (many of whom are retired local handymen). Hale has developed the following two revenue arrangements to enhance its relationships with customers and increase its bottom line.

1. Hale sells a specialty portable winch that is popular with many of the local customers for use at their lake homes (putting docks in and out, launching boats, etc.). The Hale winch is a standard manufacture winch that Hale modifies so the winch can be used for a variety of tasks. Hale sold 70 of these winches during 2020 at a total price of \$21,000, with a warranty guarantee that the product was free of any defects. The cost of winches sold is \$16,000. The assurance warranties extend for a 3-year period with an estimated cost of \$2,100. In addition, Hale sold extended warranties related to 20 Hale winches for 2 years beyond the 3-year period for \$400 each.
2. To bolster its already strong customer base, Hale implemented a customer loyalty program that rewards a customer with 1 loyalty point for every \$10 of purchases on a select group of Hale products. Each point is redeemable for a \$1 discount on any purchases of Hale merchandise in the following 2 years. During 2020, customers purchased select group products for \$100,000 (all products are sold to provide a 45% gross profit) and earned 10,000 points redeemable for future purchases. The standalone selling price of the purchased products is \$100,000. Based on prior experience with incentives programs like this, Hale expects 9,500 points to be redeemed related to these sales (Hale appropriately uses this experience to estimate the value of future consideration related to bonus points).

Instructions

- a. Identify the separate performance obligations in the Hale warranty and bonus point programs, and briefly explain the point in time when the performance obligations are satisfied.
- b. Prepare the journal entries for Hale related to the sales of Hale winches with warranties.
- c. Prepare the journal entries for the bonus point sales for Hale in 2020.
- d. How much additional sales revenue is recognized by Hale in 2021, assuming 4,500 bonus points are redeemed?

P18.7 (LO 3) (Customer Loyalty Program) Martz Inc. has a customer loyalty program that rewards a customer with 1 customer loyalty point for every \$10 of purchases. Each point is redeemable for a \$3 discount on any future purchases. On July 2, 2020, customers purchase products for \$300,000 (with a cost of \$171,000) and earn 30,000 points redeemable for future purchases. Martz expects 25,000 points to be redeemed. Martz estimates a standalone selling price of \$2.50 per point (or \$75,000 total) on the basis of the likelihood of redemption. The points provide a material right to customers that they would not receive without entering into a contract. As a result, Martz concludes that the points are a separate performance obligation.

Instructions

- a. Determine the transaction price for the product and the customer loyalty points.
- b. Prepare the journal entries to record the sale of the product and related points on July 2, 2020.

- c. At the end of the first reporting period (July 31, 2020), 10,000 loyalty points are redeemed. Martz continues to expect 25,000 loyalty points to be redeemed in total. Determine the amount of loyalty point revenue to be recognized at July 31, 2020.

P18.8 (LO 2, 3) (Time Value, Gift Cards, Discounts) Presented below are two independent revenue arrangements for Colbert Company.

Instructions

Respond to the requirements related to each revenue arrangement.

- a. Colbert sells 3D printer systems. Recently, Colbert provided a special promotion of zero-interest financing for 2 years on any new 3D printer system. Assume that Colbert sells Lyle Cartright a 3D system, receiving a \$5,000 zero-interest-bearing note on January 1, 2020. The cost of the 3D printer system is \$4,000. Colbert imputes a 6% interest rate on this zero-interest note transaction. Prepare the journal entry to record the sale on January 1, 2020, and compute the total amount of revenue to be recognized in 2020.
- b. Colbert sells 20 nonrefundable \$100 gift cards for 3D printer paper on March 1, 2020. The paper has a standalone selling price of \$100 (cost \$80). The gift cards expiration date is June 30, 2020. Colbert estimates that customers will not redeem 10% of these gift cards. The pattern of redemption is as follows.

| | Redemption Total |
|----------|------------------|
| March 31 | 50% |
| April 30 | 80 |
| June 30 | 85 |

Prepare the 2020 journal entries related to the gift cards at March 1, March 31, April 30, and June 30.

***P18.9 (LO 5, 6) Excel (Recognition of Profit on Long-Term Contract)** Shanahan Construction Company has entered into a contract beginning January 1, 2020, to build a parking complex. It has been estimated that the complex will cost \$600,000 and will take 3 years to construct. The complex will be billed to the purchasing company at \$900,000. The following data pertain to the construction period.

| | 2020 | 2021 | 2022 |
|-----------------------------|-----------|-----------|-----------|
| Costs to date | \$270,000 | \$450,000 | \$610,000 |
| Estimated costs to complete | 330,000 | 150,000 | –0– |
| Progress billings to date | 270,000 | 550,000 | 900,000 |
| Cash collected to date | 240,000 | 500,000 | 900,000 |

Instructions

- a. Using the percentage-of-completion method, compute the estimated gross profit that would be recognized during each year of the construction period.
- b. Using the completed-contract method, compute the estimated gross profit that would be recognized during each year of the construction period.

***P18.10 (LO 5, 6, 7) (Long-Term Contract with Interim Loss)** On March 1, 2020, Pechstein Construction Company contracted to construct a factory building for Fabrik Manufacturing Inc. for a total contract price of \$8,400,000. The building was completed by October 31, 2022. The annual contract costs incurred, estimated costs to complete the contract, and accumulated billings to Fabrik for 2020, 2021, and 2022 are given below.

| | 2020 | 2021 | 2022 |
|---|-------------|-------------|-------------|
| Contract costs incurred during the year | \$2,880,000 | \$2,230,000 | \$2,190,000 |
| Estimated costs to complete the contract at 12/31 | 3,520,000 | 2,190,000 | –0– |
| Billings to Fabrik during the year | 3,200,000 | 3,500,000 | 1,700,000 |

Instructions

- a. Using the percentage-of-completion method, prepare schedules to compute the profit or loss to be recognized as a result of this contract for the years ended December 31, 2020, 2021, and 2022. (Ignore income taxes.)

- b. Using the completed-contract method, prepare schedules to compute the profit or loss to be recognized as a result of this contract for the years ended December 31, 2020, 2021, and 2022. (Ignore incomes taxes.)

***P18.11 (LO 5, 6, 7) Excel (Long-Term Contract with an Overall Loss)** On July 1, 2020, Torvill Construction Company Inc. contracted to build an office building for Gumbel Corp. for a total contract price of \$1,900,000. On July 1, Torvill estimated that it would take between 2 and 3 years to complete the building. On December 31, 2022, the building was deemed substantially completed. Following are accumulated contract costs incurred, estimated costs to complete the contract, and accumulated billings to Gumbel for 2020, 2021, and 2022.

| | At 12/31/20 | At 12/31/21 | At 12/31/22 |
|--|-------------|-------------|-------------|
| Contract costs incurred to date | \$ 300,000 | \$1,200,000 | \$2,100,000 |
| Estimated costs to complete the contract | 1,200,000 | 800,000 | –0– |
| Billings to Gumbel | 300,000 | 1,100,000 | 1,850,000 |

Instructions

- a. Using the percentage-of-completion method, prepare schedules to compute the profit or loss to be recognized as a result of this contract for the years ended December 31, 2020, 2021, and 2022. (Ignore income taxes.)
- b. Using the completed-contract method, prepare schedules to compute the profit or loss to be recognized as a result of this contract for the years ended December 31, 2020, 2021, and 2022. (Ignore income taxes.)

***P18.12 (LO 8) (Franchise Revenue)** Amigos Burrito Inc. sells franchises to independent operators throughout the northwestern part of the United States. The contract with the franchisee includes the following provisions.

- The franchisee is charged an initial fee of \$120,000. Of this amount, \$20,000 is payable when the agreement is signed, and a \$100,000 zero-interest-bearing note is payable with a \$20,000 payment at the end of each of the 5 subsequent years. The present value of an ordinary annuity of five annual receipts of \$20,000, each discounted at 10%, is \$75,816.
- All of the initial franchise fee collected by Amigos is to be refunded and the remaining obligation canceled if, for any reason, the franchisee fails to open his or her franchise.
- In return for the initial franchise fee, Amigos agrees to (a) assist the franchisee in selecting the location for the business, (b) negotiate the lease for the land, (c) obtain financing and assist with building design, (d) supervise construction, (e) establish accounting and tax records, and (f) provide expert advice over a 5-year period relating to such matters as employee and management training, quality control, and promotion. This continuing involvement by Amigos helps maintain the brand value of the franchise.
- In addition to the initial franchise fee, the franchisee is required to pay to Amigos a monthly fee of 2% of sales for menu planning, recipe innovations, and the privilege of purchasing ingredients from Amigos at or below prevailing market prices.

Management of Amigos Burrito estimates that the value of the services rendered to the franchisee at the time the contract is signed amounts to at least \$20,000. All franchisees to date have opened their locations at the scheduled time, and none have defaulted on any of the notes receivable. The credit ratings of all franchisees would entitle them to borrow at the current interest rate of 10%.

Instructions

- a. Discuss the alternatives that Amigos Burrito Inc. might use to account for the franchise fees.
- b. Prepare the journal entries for the initial and continuing franchise fees, assuming:
- Franchise agreement is signed on January 5, 2020.
 - Amigos completes franchise startup tasks and the franchise opens on July 1, 2020.
 - The franchisee records \$260,000 in sales in the first 6 months of operations and remits the monthly franchise fee on December 31, 2020.
- c. Briefly describe the accounting for unearned franchise fees, assuming that Amigos has little or no involvement with the franchisee related to expert advice on employee and management training, quality control, and promotion, once the franchise opens.

Concepts for Analysis

CA18.1 (LO 2, 3) (Five-Step Revenue Process) Revenue is recognized based on a five-step process that is applied to a company's revenue arrangements.

Instructions

- Briefly describe the five-step process.
- Explain the importance of contracts when analyzing revenue arrangements.
- How are fair value measurement concepts applied in implementation of the five-step process?
- How does the five-step process reflect application of the definitions of assets and liabilities?

CA18.2 (LO 1, 2, 3) (Satisfying Performance Obligations) Judy Schaeffer is getting up to speed on the new guidance on revenue recognition. She is trying to understand the revenue recognition principle as it relates to the five-step revenue recognition process.

Instructions

- Describe the revenue recognition principle.
- Briefly discuss how the revenue recognition principle relates to the definitions of assets and liabilities. What is the importance of control?
- Judy recalls that previous revenue recognition guidance required that revenue not be recognized unless the revenue was realized or realizable (also referred to as collectibility). Is collectibility a consideration in the recognition of revenue? Explain.

CA18.3 (LO 1, 2, 3) (Recognition of Revenue—Theory) Revenue is usually recognized at the point of sale (a point in time). Under special circumstances, however, bases other than the point of sale are used for the timing of revenue recognition.

Instructions

- Why is the point of sale usually used as the basis for the timing of revenue recognition?
- Disregarding the special circumstances when bases other than the point of sale are used, discuss the merits of each of the following objections to the point-of-sale basis of revenue recognition:
 - It is too conservative because revenue is earned throughout the entire process of production.
 - It is not conservative enough because accounts receivable do not represent disposable funds, sales returns and allowances may be made, and collection and bad debt expenses may be incurred in a later period.
- Revenue may also be recognized over time. Give an example of the circumstances in which revenue is recognized over time and accounting merits of its use instead of the point-of-sale basis.

(AICPA adapted)

CA18.4 (LO 1, 2, 3) (Recognition of Revenue—Theory) Revenue is recognized for accounting purposes when a performance obligation is satisfied. In some situations, revenue is recognized over time as the fair values of assets and liabilities change. In other situations, however, accountants have developed guidelines for recognizing revenue at the point of sale.

Instructions

(Ignore income taxes.)

- Explain and justify why revenue is often recognized at time of sale.
- Explain in what situations it would be appropriate to recognize revenue over time.

CA18.5 (LO 2, 3) (Discounts) Fahey Company sells Stairmasters to a retailer, Physical Fitness, Inc., for \$2,000,000. Fahey has a history of providing price concessions on this product if the retailer has difficulty selling the Stairmasters to customers. Fahey has experience with sales like these in the past and estimates that the maximum amount of price concessions is \$300,000.

Instructions

- Determine the amount of revenue that Fahey should recognize for the sale of Stairmasters to Physical Fitness, Inc.

- b. According to GAAP, in some situations, the amount of revenue recognized may be constrained. Explain how the accounting for the Stairmasters sales might be affected by the revenue constraint due to variable consideration or returns.
- c. Some believe that revenue recognition should be constrained by collectibility. Is such a view consistent with GAAP? Explain.

CA18.6 (LO 1, 2, 3) (Recognition of Revenue from Subscriptions) *Cutting Edge* is a monthly magazine that has been on the market for 18 months. It currently has a circulation of 1.4 million copies. Negotiations are underway to obtain a bank loan in order to update the magazine's facilities. *Cutting Edge* is producing close to capacity and expects to grow at an average of 20% per year over the next 3 years.

After reviewing the financial statements of *Cutting Edge*, Andy Rich, the bank loan officer, had indicated that a loan could be offered to *Cutting Edge* only if it could increase its current ratio and decrease its debt to equity ratio to a specified level. Jonathan Embry, the marketing manager of *Cutting Edge*, has devised a plan to meet these requirements. Embry indicates that an advertising campaign can be initiated to immediately increase circulation. The potential customers would be contacted after the purchase of another magazine's mailing list. The campaign would include:

1. An offer to subscribe to *Cutting Edge* at three-fourths the normal price.
2. A special offer to all new subscribers to receive the most current world atlas whenever requested at a guaranteed price of \$2.
3. An unconditional guarantee that any subscriber will receive a full refund if dissatisfied with the magazine.

Although the offer of a full refund is risky, Embry claims that few people will ask for a refund after receiving half of their subscription issues. Embry notes that other magazine companies have tried this sales promotion technique and experienced great success. Their average cancellation rate was 25%. On average, each company increased its initial circulation threefold and in the long run increased circulation to twice that which existed before the promotion. In addition, 60% of the new subscribers are expected to take advantage of the atlas premium. Embry feels confident that the increased subscriptions from the advertising campaign will increase the current ratio and decrease the debt to equity ratio.

You are the controller of *Cutting Edge* and must give your opinion of the proposed plan.

Instructions

- a. When should revenue from the new subscriptions be recognized?
- b. How would you classify the estimated sales returns stemming from the unconditional guarantee?
- c. How should the atlas premium be recorded? Is the estimated premium claims a liability? Explain.
- d. Does the proposed plan achieve the goals of increasing the current ratio and decreasing the debt to equity ratio?

CA18.7 (LO 2, 3) (Recognition of Revenue—Bonus Points) Griseta & Dubel Inc. was formed early this year to sell merchandise credits to merchants, who distribute the credits free to their customers. For example, customers can earn additional credits based on the dollars they spend with a merchant (e.g., airlines and hotels). Accounts for accumulating the credits and catalogs illustrating the merchandise for which the credits may be exchanged are maintained online. Centers with inventories of merchandise premiums have been established for redemption of the credits. Merchants may not return unused credits to Griseta & Dubel.

The following schedule expresses Griseta & Dubel's expectations as to the percentages of a normal month's activity that will be attained. For this purpose, a "normal month's activity" is defined as the level of operations expected when expansion of activities ceases or tapers off to a stable rate. The company expects that this level will be attained in the third year and that sales of credits will average \$6,000,000 per month throughout the third year.

| Month | Actual | Merchandise | Credit |
|-------|-------------------------|------------------------------|------------------------|
| | Credit Sales Percent | Premium Purchases Percent | Redemptions Percent |
| 6th | 30% | 40% | 10% |
| 12th | 60 | 60 | 45 |
| 18th | 80 | 80 | 70 |
| 24th | 90 | 90 | 80 |
| 30th | 100 | 100 | 95 |

Griseta & Dubel plans to adopt an annual closing date at the end of each 12 months of operation.

Instructions

- Discuss the factors to be considered in determining when revenue should be recognized.
- Apply the revenue recognition factors to the Griseta & Dubel Inc. revenue arrangement.
- Provide balance sheet accounts that should be used and indicate how each should be classified.

(AICPA adapted)

CA18.8 (LO 2, 3) Ethics (Revenue Recognition—Membership Fees) Midwest Health Club (MHC) offers 1-year memberships. Membership fees are due in full at the beginning of the individual membership period. As an incentive to new customers, MHC advertised that any customers not satisfied for any reason could receive a refund of the remaining portion of unused membership fees. As a result of this policy, Richard Nies, corporate controller, recognized revenue ratably over the life of the membership. MHC is in the process of preparing its year-end financial statements. Rachel Avery, MHC's treasurer, is concerned about the company's lackluster performance this year. She reviews the financial statements Nies prepared and tells Nies to recognize membership revenue when the fees are received.

Instructions

Answer the following questions.

- What are the ethical issues involved?
- What should Nies do?

***CA18.9 (LO5) Writing (Long-Term Contract—Percentage-of-Completion)** Widjaja Company is accounting for a long-term construction contract using the percentage-of-completion method. It is a 4-year contract that is currently in its second year. The latest estimates of total contract costs indicate that the contract will be completed at a profit to Widjaja Company.

Instructions

- What theoretical justification is there for Widjaja Company's use of the percentage-of-completion method?
- How would progress billings be accounted for? Include in your discussion the classification of progress billings in Widjaja Company financial statements.
- How would the income recognized in the second year of the 4-year contract be determined using the cost-to-cost method of determining percentage of completion?
- What would be the effect on earnings per share in the second year of the 4-year contract of using the percentage-of-completion method instead of the completed-contract method? Discuss.

(AICPA adapted)

Using Your Judgment

*As the new revenue recognition guidance is not yet implemented, note that the financial statements and notes for **Procter & Gamble**, **Coca-Cola**, **PepsiCo**, and **Westinghouse** reflect revenue recognition under prior standards.*

Financial Reporting Problem**The Procter & Gamble Company (P&G)**

The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

- What were P&G's net sales for 2017?
- What was the percentage of increase or decrease in P&G's net sales from 2016 to 2017? From 2015 to 2016? From 2015 to 2017?
- In its notes to the financial statements, what criteria does P&G use to recognize revenue?
- How does P&G account for trade promotions? Does the accounting conform to accrual accounting concepts? Explain.

Comparative Analysis Case

The Coca-Cola Company and PepsiCo, Inc.

The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- What were Coca-Cola's and PepsiCo's net revenues (sales) for the year 2017? Which company increased its revenue more (dollars and percentage) from 2016 to 2017?
- Are the revenue recognition policies of Coca-Cola and PepsiCo similar? Explain.
- In which foreign countries (geographic areas) did Coca-Cola and PepsiCo experience significant revenues in 2017? Compare the amounts of foreign revenues to U.S. revenues for both Coca-Cola and PepsiCo.

Financial Statement Analysis Case

Westinghouse Electric Corporation

The following note appears in the "Summary of Significant Accounting Policies" section of the Annual Report of **Westinghouse Electric Corporation**.

Note 1 (in part): Revenue Recognition. Sales are primarily recorded as products are shipped and services are rendered. The percentage-of-completion method of accounting is used for nuclear steam supply system orders with delivery schedules generally in excess of five years and for certain construction projects where this method of accounting is consistent with industry practice.

WFSI revenues are generally recognized on the accrual method. When accounts become delinquent for more than two payment periods, usually 60 days, income is recognized only as payments are received. Such delinquent accounts for which no payments are received in the current month, and other accounts on which income is not being recognized because the receipt of either principal or interest is questionable, are classified as nonearning receivables.

Instructions

- Identify the revenue recognition methods used by Westinghouse Electric as discussed in its note on significant accounting policies.
- Under what conditions are the revenue recognition methods identified in the first paragraph of Westinghouse's note above acceptable?
- From the information provided in the second paragraph of Westinghouse's note, identify the type of operation being described and defend the acceptability of the revenue recognition method.

Accounting, Analysis, and Principles

Diversified Industries manufactures sump-pumps. Its most popular product is called the Super Soaker, which has a retail price of \$1,200 and costs \$540 to manufacture. It sells the Super Soaker on a standalone basis directly to businesses. Diversified also provides installation services for these commercial customers, who want an emergency pumping capability (with regular and back-up generator power) at their businesses. Diversified also distributes the Super Soaker through a consignment agreement with Menards. Income data for the first quarter of 2020 from operations other than the Super Soaker are as follows.

| | |
|----------|-------------|
| Revenues | \$9,500,000 |
| Expenses | 7,750,000 |

Diversified has the following information related to two Super Soaker revenue arrangements during the first quarter of 2020.

- Diversified sells 30 Super Soakers to businesses in flood-prone areas for a total contract price of \$54,600. In addition to the pumps, Diversified also provides installation (at a cost of \$150 per pump). On a standalone basis, the fair value of this service is \$200 per unit installed. The contract payment also includes a \$10 per month service plan for the pumps for 3 years after installation (Diversified's cost to provide this service is \$7 per month). The Super Soakers are delivered and installed on March 1, 2020, and full payment is made to Diversified. Any discount is applied to the pump/installation bundle.

2. Diversified ships 300 Super Soakers to Menards on consignment. By March 31, 2020, Menards has sold two-thirds of the consigned merchandise at the listed price of \$1,200 per unit. Menards notifies Diversified of the sales, retains a 5% commission, and remits the cash due Diversified.

Accounting

Determine Diversified Industries' 2020 first-quarter net income. (Ignore taxes.)

Analysis

Determine free cash flow (see Chapter 5) for Diversified Industries for the first quarter of 2020. In the first quarter, Diversified had depreciation expense of \$175,000 and a net increase in working capital (change in accounts receivable and accounts payable) of \$250,000. In the first quarter, capital expenditures were \$500,000; Diversified paid dividends of \$120,000.

Principles

Explain how the five-step revenue recognition process, when applied to Diversified's two revenue arrangements, reflects the concept of control in the definition of an asset and trade-offs between relevance and faithful representation.

Codification Research Case

Employees at your company disagree about the accounting for sales returns. The sales manager believes that granting more generous return provisions can give the company a competitive edge and increase sales revenue. The controller cautions that, depending on the terms granted, loose return provisions might lead to non-GAAP revenue recognition. The company CFO would like you to research the issue to provide an authoritative answer.

Instructions

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses. (Provide paragraph citations.)

- a. What is the authoritative literature addressing revenue recognition when right of return exists?
 b. What is meant by “right of return”? “Bill and hold”?
 c. Describe the accounting when there is a right of return.
 d. When goods are sold on a bill-and-hold basis, what conditions must be met to recognize revenue upon receipt of the order?

Codification Exercises

Accounting for Income Taxes

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

1. Describe the fundamentals of accounting for income taxes.
2. Identify additional issues in accounting for income taxes.
3. Explain the accounting for loss carryforwards.
4. Describe the presentation of deferred income taxes in financial statements.

PREVIEW OF CHAPTER 19 As the following opening story indicates, changes in the tax code can lead to significant accounting adjustments. Therefore, it is important that companies present financial information to the investment community that provides a clear picture of present and potential tax obligations and tax benefits. In this chapter, we discuss the basic guidelines that companies must follow in reporting income taxes. The content and organization of the chapter are as follows.

This chapter also includes numerous conceptual and global discussions that are integral to the topics presented here.

ACCOUNTING FOR INCOME TAXES

Fundamentals of Accounting for Income Taxes

- Future taxable amounts and deferred taxes
- Future deductible amounts and deferred taxes
- Valuation allowance

Additional Considerations

- Income statement presentation
- Specific differences
- Tax rate considerations

Accounting for Net Operating Losses

- Loss carryforward
- Loss carryforward example

Financial Statement Presentation

- Balance sheet
- Note disclosure
- Income statement
- Asset-liability method

Taxes Are A-Changing

Corporate America received an early holiday present in 2017 in the form of the Tax Cuts and Jobs Act (TCJA). Here are some of the important provisions relevant to the accounting for income taxes.

- **Decreased corporate tax rate.** The most far-reaching change in the TCJA is the change in the corporate tax rate, which moves from a graduated rate of up to 35 percent to a flat rate of 21 percent. To illustrate, more than half of the combined net-income growth reported by the largest 200 companies for the first quarter of 2018 stem from a decline in companies' effective tax rates. As an example, **JPMorgan** plans to invest \$20 billion to expand growth across its businesses due to the change in tax law. As shown in the

adjacent chart, in 2018 its effective tax rate has dropped substantially, which should save JPMorgan \$3.6 billion in taxes.

- **Remeasurement of deferred tax assets and deferred tax liabilities.** Deferred tax assets are past tax deductions and credits that companies can use to defray future tax bills. However, when tax rates are lowered, these deferred tax assets are no longer as valuable. As an example, **Citigroup** has a very large deferred asset balance for which the company has to take a \$19 billion write-off. On the other hand, deferred tax liabilities are amounts that the company will have to pay to the government in the future. If tax rates are lower, the companies have a smaller liability. Fortunately for many companies, deferred tax liabilities are generally greater than deferred tax assets. The dollar amount of the deferred tax liabilities for calendar year-end companies at the end of 2016 was nearly twice the dollar amount of deferred tax assets. That's a net benefit for corporate America—one-time gains that will effectively transfer a liability into equity.

- **Carryforward of net operating losses.** When a company suffers a net operating loss (NOL), it can generally offset this loss against future income. In the past, companies could use these present losses to offset taxable income in the previous two years. The company filed amended tax returns (reducing taxable income) and received tax refunds from the government. No more—under new rules, NOLs cannot be carried back to any previous years. That means no more consolation prizes for money-losers. However, under the TCJA, NOLs can be carried forward indefinitely.
- **Bonus depreciation and interest.** Using bonus depreciation, companies may record tax depreciation at a higher rate compared to GAAP depreciation. Under the TCJA, that write-off can be up to 100 percent in order to write off the total cost of new and used qualifying property. One bit of bad news for highly leveraged companies is the TCJA limit on the deduction for interest expense to 30 percent of positive “adjusted taxable income” (calculated similarly to earnings before interest, taxes, depreciation, and amortization). However, if a company cannot completely use its interest expense deduction in a year, it may carry it forward indefinitely (which may create a deferred tax asset for interest expense, similar to NOLs).

In summary, the TCJA made significant changes in corporate tax rules. And while the FASB made no changes in GAAP (except for a very narrow update of accounting rules for deferred tax effects recorded on other comprehensive income), the TCJA changes could result in significant remeasurement of deferred tax assets and liabilities, and may change firms' plans for capital spending and financing for years to come. Read on to learn more about the accounting for taxes.

Review and Practice

Go to the **Review and Practice** section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions as well as additional exercises and practice problem with solutions are also available online.

Fundamentals of Accounting for Income Taxes

LEARNING OBJECTIVE 1

Describe the fundamentals of accounting for income taxes.

Up to this point, you have learned the basic guidelines that corporations use to report information to investors and creditors. Corporations also must file income tax returns following the guidelines developed by the Internal Revenue Service (IRS). Because GAAP and tax regulations differ in a number of ways, so frequently do pretax financial income and taxable income. Consequently, the amount that a company reports as tax expense will differ from the amount of taxes payable to the IRS. **Illustration 19.1** highlights these differences.

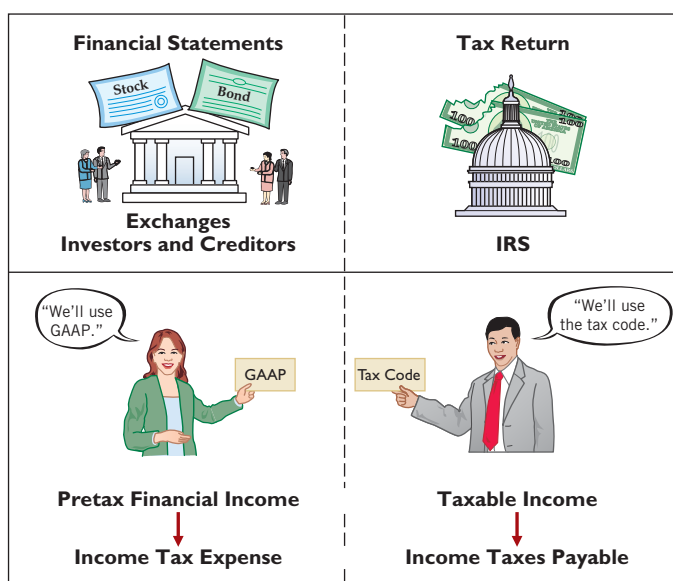

ILLUSTRATION 19.1
Fundamental Differences Between Financial and Tax Reporting

Pretax financial income is a **financial reporting** term. It also is often referred to as income before taxes, income for financial reporting purposes, or income for book purposes. Companies determine pretax financial income according to GAAP. They measure it with the objective of providing useful information to investors and creditors.

Taxable income (income for tax purposes) is a **tax accounting** term. It indicates the amount used to compute income taxes payable. Companies determine taxable income according to the Internal Revenue Code (the tax code). Income taxes provide money to support government operations.

To illustrate how differences in GAAP and IRS rules affect financial reporting and taxable income, assume that Chelsea Inc. reported revenues of \$130,000 and expenses of \$60,000 in each of its first three years of operations. **Illustration 19.2** shows the (partial) income statement over these three years.

| Chelsea Inc. GAAP Reporting | | | | |
|---------------------------------|------------------|------------------|------------------|------------------|
| | 2020 | 2021 | 2022 | Total |
| Revenues | \$130,000 | \$130,000 | \$130,000 | |
| Expenses | 60,000 | 60,000 | 60,000 | |
| Pretax financial income | \$ 70,000 | \$ 70,000 | \$ 70,000 | \$210,000 |
| Income tax expense (20%) | \$ 14,000 | \$ 14,000 | \$ 14,000 | \$ 42,000 |

ILLUSTRATION 19.2
Financial Reporting Income

For tax purposes (following the tax code), Chelsea reported the same expenses to the IRS in each of the years. But, as **Illustration 19.3** shows, Chelsea reported taxable revenues of \$100,000 in 2020, \$150,000 in 2021, and \$140,000 in 2022.

ILLUSTRATION 19.3
Tax Reporting Income

| Chelsea Inc. | | | | |
|-----------------------------------|------------------|------------------|------------------|------------------|
| Tax Reporting | | | | |
| | 2020 | 2021 | 2022 | Total |
| Revenues | \$100,000 | \$150,000 | \$140,000 | |
| Expenses | 60,000 | 60,000 | 60,000 | |
| Taxable income | \$ 40,000 | \$ 90,000 | \$ 80,000 | \$210,000 |
| Income taxes payable (20%) | \$ 8,000 | \$ 18,000 | \$ 16,000 | \$ 42,000 |

Income tax expense and income taxes payable differed over the three years but were equal **in total**, as **Illustration 19.4** shows.

ILLUSTRATION 19.4
Comparison of Income
Tax Expense to Income Taxes
Payable

| Chelsea Inc. | | | | |
|--|-----------------|-------------------|-------------------|---------------|
| Income Tax Expense and Income Taxes Payable | | | | |
| | 2020 | 2021 | 2022 | Total |
| Income tax expense | \$14,000 | \$14,000 | \$14,000 | \$42,000 |
| Income taxes payable | 8,000 | 18,000 | 16,000 | 42,000 |
| Difference | \$ 6,000 | \$ (4,000) | \$ (2,000) | \$ -0- |

The differences between income tax expense and income taxes payable in this example arise for a simple reason. For financial reporting, companies use the full accrual method to report revenues. For tax purposes, they use a modified cash basis. As a result, Chelsea reports pretax financial income of \$70,000 and income tax expense of \$14,000 for each of the three years. However, taxable income fluctuates. For example, in 2020 taxable income is only \$40,000, so Chelsea owes just \$8,000 to the IRS that year. Chelsea classifies the income taxes payable as a current liability on the balance sheet.

As Illustration 19.4 indicates, for Chelsea the \$6,000 (\$14,000 – \$8,000) difference between income tax expense and income taxes payable in 2020 reflects taxes that it will pay in future periods. This \$6,000 difference is often referred to as a **deferred tax amount**. In this case, it is a **deferred tax liability**. In cases where taxes will be lower in the future, Chelsea records a **deferred tax asset**. We explain the measurement and accounting for deferred tax liabilities and assets in the following two sections.¹

Future Taxable Amounts and Deferred Taxes

The example summarized in Illustration 19.4 shows how income taxes payable can differ from income tax expense. This can happen when there are temporary differences between

¹Determining the amount of tax to pay the IRS is a costly exercise for both individuals and companies. Individuals and businesses must pay not only the taxes owed but also the costs of their own time spent filing and complying with the tax code, including (1) the tax collection costs of the IRS, and (2) the tax compliance outlays that individuals and businesses pay to help them file their taxes. One recent study found that compliance with the federal income tax cost the economy over \$230 billion annually. Another study noted how big the tax compliance industry has become. According to the research, the tax compliance industry employs more people than all the workers at **Wal-Mart, UPS, McDonald's, IBM, and Citigroup** combined. While it was hoped that the TCJA (2017) might reduce complexity—with a postcard-size tax return for some individual taxpayers—some complexity remains. See Michael Tasselmyer, “A Complex Problem: The Compliance Burdens of the Tax Code,” National Taxpayers Union Foundation (April 8, 2015); A. El-Sibaie, “Tax Compliance Burden Could Cost America as Much as 1.2 Percent of Its GDP,” <https://taxfoundation.org/tax-compliance-cost/> (February 21, 2018); and J. Tankersley, “The New Tax Form Is Postcard-Size, but More Complicated Than Ever,” *The New York Times* (June 25, 2018).

the amounts reported for tax purposes and those reported for book purposes (see **Global View**). A **temporary difference** is the difference between the tax basis of an asset or liability and its reported (carrying or book) amount in the financial statements, which will result in taxable amounts or deductible amounts in future years. **Taxable amounts** increase taxable income in future years. **Deductible amounts** decrease taxable income in future years.

In Chelsea's situation, the only difference between the book basis and tax basis of the assets and liabilities relates to accounts receivable that arose from revenue recognized for book purposes. **Illustration 19.5** indicates that Chelsea reports accounts receivable at \$30,000 in the December 31, 2020, GAAP-basis balance sheet. However, the receivables have a zero tax basis.

Global View

In some countries, taxable income equals pretax financial income. As a consequence, accounting for differences between tax and book income is insignificant.

| <u>Per Books</u> | <u>12/31/20</u> | <u>Per Tax Return</u> | <u>12/31/20</u> |
|---------------------|-----------------|-----------------------|-----------------|
| Accounts receivable | <u>\$30,000</u> | Accounts receivable | <u>\$-0-</u> |

ILLUSTRATION 19.5

Temporary Difference, Sales Revenue

What will happen to the \$30,000 temporary difference that originated in 2020 for Chelsea? Assuming that Chelsea expects to collect \$20,000 of the receivables in 2021 and \$10,000 in 2022, this collection results in future taxable amounts of \$20,000 in 2021 and \$10,000 in 2022. These future taxable amounts will cause taxable income to exceed pretax financial income in both 2021 and 2022.

An assumption inherent in a company's GAAP balance sheet is that companies recover and settle the assets and liabilities at their reported amounts (carrying amounts). This assumption creates a requirement under accrual accounting to recognize **currently** the deferred tax consequences of temporary differences. That is, companies recognize the amount of income taxes that are payable (or refundable) when they recover and settle the reported amounts of the assets and liabilities, respectively. **Illustration 19.6** shows the reversal of the temporary difference described in Illustration 19.5 and the resulting taxable amounts in future periods.

ILLUSTRATION 19.6

Reversal of Temporary Difference, Chelsea Inc.

Chelsea assumes that it will collect the accounts receivable and report the \$30,000 collection as taxable revenues in future tax returns. A payment of income tax in both 2021 and 2022 will occur. Chelsea should therefore record in its books in 2020 the deferred tax consequences of the revenue and related receivables reflected in the 2020 financial statements. Chelsea does this by recording a deferred tax liability.

Deferred Tax Liability

A **deferred tax liability** is the deferred tax consequences attributable to taxable temporary differences. In other words, **a deferred tax liability represents the increase in taxes payable in future years as a result of taxable temporary differences existing at the end of the current year.**

Recall from the Chelsea example that income taxes payable is \$8,000 (\$40,000 × .20) in 2020 (Illustration 19.4). In addition, a temporary difference exists at year-end because Chelsea reports the revenue and related accounts receivable differently for book and tax purposes. The book basis of accounts receivable is \$30,000, and the tax basis is zero. Thus, the total deferred tax liability at the end of 2020 is \$6,000, computed as shown in **Illustration 19.7**.

ILLUSTRATION 19.7
Computation of Deferred Tax Liability, End of 2020

| | |
|--|------------------------|
| Book basis of accounts receivable | \$30,000 |
| Tax basis of accounts receivable | -0- |
| Cumulative temporary difference at the end of 2020 | 30,000 |
| Tax rate | 20% |
| Deferred tax liability at the end of 2020 | <u>\$ 6,000</u> |

Companies may also compute the deferred tax liability by preparing a schedule that indicates the future taxable amounts due to existing temporary differences. Such a schedule, as shown in **Illustration 19.8**, is particularly useful when the computations become more complex.

ILLUSTRATION 19.8
Schedule of Future Taxable Amounts

| | Future Years | | Total |
|--|------------------------|------------------------|------------------------|
| | 2021 | 2022 | |
| Future taxable amounts | \$20,000 | \$10,000 | \$30,000 |
| Tax rate | 20% | 20% | |
| Deferred tax liability at the end of 2020 | <u>\$ 4,000</u> | <u>\$ 2,000</u> | <u>\$ 6,000</u> |

Because it is the first year of operations for Chelsea, there is no deferred tax liability at the beginning of the year. Chelsea computes the income tax expense for 2020 as shown in **Illustration 19.9**.

ILLUSTRATION 19.9
Computation of Income Tax Expense, 2020

| | |
|---|------------------------|
| Deferred tax liability at end of 2020 | \$ 6,000 |
| Deferred tax liability at beginning of 2020 | -0- |
| Deferred tax expense for 2020 | 6,000 |
| Current tax expense for 2020 (income taxes payable) | 8,000 |
| Income tax expense (total) for 2020 | <u>\$14,000</u> |

This computation indicates that income tax expense has two components—**current tax expense** (the amount of income taxes payable for the period) and **deferred tax expense**. Deferred tax expense is the increase in the deferred tax liability balance from the beginning to the end of the accounting period.

Companies credit taxes due and payable to Income Taxes Payable, and credit the increase in deferred taxes to Deferred Tax Liability. They then debit the sum of those two items to Income Tax Expense. For Chelsea, it makes the following entry at the end of 2020.

| | | |
|------------------------|--------|-------|
| Income Tax Expense | 14,000 | |
| Income Taxes Payable | | 8,000 |
| Deferred Tax Liability | | 6,000 |

At the end of 2021 (the second year), the difference between the book basis and the tax basis of the accounts receivable is \$10,000. Chelsea multiplies this difference by the applicable tax rate to arrive at the deferred tax liability of \$2,000 ($\$10,000 \times .20$), which it reports at the end of 2021. Income taxes payable for 2021 is \$18,000 (Illustration 19.3), and the income tax expense for 2021 is as shown in **Illustration 19.10**.

ILLUSTRATION 19.10
Computation of Income Tax Expense, 2021

| | |
|---|------------------------|
| Deferred tax liability at end of 2021 | \$ 2,000 |
| Deferred tax liability at beginning of 2021 | 6,000 |
| Deferred tax expense (benefit) for 2021 | (4,000) |
| Current tax expense for 2021 (income taxes payable) | 18,000 |
| Income tax expense (total) for 2021 | <u>\$14,000</u> |

Chelsea records income tax expense, the change in the deferred tax liability, and income taxes payable for 2021 as follows.

| | | |
|------------------------|--------|--------|
| Income Tax Expense | 14,000 | |
| Deferred Tax Liability | 4,000 | |
| Income Taxes Payable | | 18,000 |

At the end of 2022 (the third and final year), the difference between the book basis and the tax basis of the receivable is zero. Income taxes payable for 2022 is \$16,000 (Illustration 19.3), and the income tax expense for 2022 is \$14,000 as shown in **Illustration 19.11**.

| | |
|---|-----------------|
| Deferred tax liability at end of 2022 | \$ -0- |
| Deferred tax liability at beginning of 2022 | 2,000 |
| Deferred tax expense (benefit) for 2022 | (2,000) |
| Current tax expense for 2022 (income taxes payable) | 16,000 |
| Income tax expense (total) for 2022 | \$14,000 |

ILLUSTRATION 19.11**Computation of Income Tax Expense, 2022**

Chelsea records the income tax expense, the change in deferred tax liability, and income taxes payable for 2022 as follows.

| | | |
|------------------------|--------|--------|
| Income Tax Expense | 14,000 | |
| Deferred Tax Liability | 2,000 | |
| Income Taxes Payable | | 16,000 |

The Deferred Tax Liability account appears as follows at the end of 2022.

| Deferred Tax Liability | | | |
|------------------------|-------|------|-------|
| 2021 | 4,000 | 2020 | 6,000 |
| 2022 | 2,000 | | |

ILLUSTRATION 19.12**Deferred Tax Liability Account after Reversals**

As indicated the Deferred Tax Liability account has a zero balance at the end of 2022.

Financial Statement Effects

Chelsea reports the information on its balance sheets for 2020–2022 as shown in **Illustration 19.13**.

| Year-End | Income Taxes Payable | Deferred Tax Liability |
|----------|----------------------|------------------------|
| 2020 | \$ 8,000 | \$6,000 |
| 2021 | 18,000 | 2,000 |
| 2022 | 16,000 | -0- |

ILLUSTRATION 19.13**Balance Sheet Presentation, Deferred Tax Liabilities**

Income taxes payable is reported as a current liability, and the deferred tax liability is reported as a noncurrent liability.²

On its income statement, Chelsea reports the information as shown in **Illustration 19.14**, from information taken from Illustration 19.2.

| For the Year Ended | 2020 | 2021 | 2022 |
|----------------------------|-----------------|-----------------|-----------------|
| Income before income taxes | \$70,000 | \$70,000 | \$70,000 |
| Income tax expense | 14,000 | 14,000 | 14,000 |
| Net income | <u>\$56,000</u> | <u>\$56,000</u> | <u>\$56,000</u> |

ILLUSTRATION 19.14**Income Statement Presentation, Income Tax Expense**

²As a result of a recent Accounting Standards Update (FASB ASU 2015-17), all deferred tax assets and liabilities are classified as noncurrent. [1] (See the FASB Codification References near the end of the chapter.) Expanded discussion of this provision is provided later in the chapter.

Companies also are required to show the components of income tax expense either in the income statement or in the notes to the financial statements. For example, if Chelsea reported this information in the income statement for 2020, the presentation is as shown in **Illustration 19.15**.

ILLUSTRATION 19.15**Components of Income Tax Expense**

| Income Statement (partial) | | | |
|----------------------------|----------------------------|-----------------|-----------------|
| | Income before income taxes | | \$70,000 |
| | Income tax expense | | |
| | Current | \$8,000 | |
| | Deferred | 6,000 | 14,000 |
| | | <u> </u> | <u> </u> |
| | Net income | | <u>\$56,000</u> |

What Do the Numbers Mean? “Real Liabilities”

Some analysts dismiss deferred tax liabilities when assessing the financial strength of a company. But the FASB indicates that the deferred tax liability meets the definition of a liability established in *Statement of Financial Accounting Concepts No. 6*, “Elements of Financial Statements” because:

- 1. It results from a past transaction.** In the Chelsea example, the company performed services for customers and recognized revenue in 2020 for financial reporting purposes but deferred it for tax purposes.
- 2. It is a present obligation.** Taxable income in future periods will exceed pretax financial income as a result of this temporary difference. Thus, a present obligation exists.

- 3. It represents a future sacrifice.** Taxable income and taxes due in future periods will result from past events. The payment of these taxes when they come due is the future sacrifice.

A set of studies indicates that deferred taxes do provide incremental information about future tax payments and that the market views deferred tax assets and liabilities similarly to other assets and liabilities.

Sources: B. Ayers, “Deferred Tax Accounting Under SFAS No. 109: An Empirical Investigation of Its Incremental Value-Relevance Relative to APB No. 11,” *The Accounting Review* (April 1998); and R. Laux, “The Association Between Deferred Tax Assets and Liabilities and Future Tax Payments,” *The Accounting Review* (February 2013).

Future Deductible Amounts and Deferred Taxes

Assume that during 2020, Cunningham Inc. estimated its warranty costs related to the sale of microwave ovens to be \$500,000, paid evenly over the next two years. For book purposes, in 2020 Cunningham reported warranty expense and a related estimated liability for warranties of \$500,000 in its financial statements. For tax purposes, **the warranty tax deduction is not allowed until paid**. Therefore, Cunningham recognizes no warranty liability on a tax-basis balance sheet. **Illustration 19.16** shows the balance sheet difference at the end of 2020.

ILLUSTRATION 19.16**Temporary Difference, Warranty Liability**

| Per Books | 12/31/20 | Per Tax Return | 12/31/20 |
|------------------------------------|------------------|------------------------------------|--------------|
| Estimated liability for warranties | <u>\$500,000</u> | Estimated liability for warranties | <u>\$-0-</u> |

When Cunningham pays the warranty liability, it reports an expense (deductible amount) for tax purposes. Because of this temporary difference, Cunningham should recognize in 2020 the tax benefits (positive tax consequences) for the tax deductions that will result from the future settlement of the liability. Cunningham reports this future tax benefit in the December 31, 2020, balance sheet as a **deferred tax asset**.

We can think about this situation another way. Deductible amounts occur in future tax returns. These **future deductible amounts** cause taxable income to be less than pretax financial income in the future as a result of an existing temporary difference. Cunningham’s temporary difference originates (arises) in one period (2020) and reverses over two periods (2021 and 2022). **Illustration 19.17** diagrams this situation.

ILLUSTRATION 19.17

Reversal of Temporary Difference, Cunningham Inc.

Deferred Tax Asset

A **deferred tax asset** is the deferred tax consequence attributable to deductible temporary differences. In other words, a **deferred tax asset represents the increase in taxes refundable (or saved) in future years as a result of deductible temporary differences existing at the end of the current year.**

To illustrate, assume that Hunt Company has revenues of \$900,000 for both 2020 and 2021. It also has operating expenses of \$400,000 for each of these years. In addition, Hunt accrues a loss and related liability of \$50,000 for financial reporting purposes because of pending litigation. Hunt cannot deduct this amount for tax purposes until it pays the liability, expected in 2021. As a result, a deductible amount will occur in 2021 when Hunt settles the liability, causing taxable income to be lower than pretax financial information.

Illustration 19.18 shows the GAAP and tax reporting over the two years.

| GAAP Reporting | | |
|-----------------------------|------------------|------------------|
| | 2020 | 2021 |
| Revenues | \$900,000 | \$900,000 |
| Expenses (operating) | 400,000 | 400,000 |
| Litigation loss | 50,000 | —0— |
| Pretax financial income | \$450,000 | \$500,000 |
| Tax rate | 20% | 20% |
| Income tax expense | \$ 90,000 | \$100,000 |
| Tax Reporting | | |
| | 2020 | 2021 |
| Revenues | \$900,000 | \$900,000 |
| Expenses (operating) | 400,000 | 400,000 |
| Litigation loss | —0— | 50,000 |
| Taxable income | \$500,000 | \$450,000 |
| Tax rate | 20% | 20% |
| Income taxes payable | \$100,000 | \$ 90,000 |

ILLUSTRATION 19.18

GAAP and Tax Reporting, Hunt Company

Illustration 19.19 shows the computation of the deferred tax asset at the end of 2020 (assuming a 20 percent tax rate).

| | |
|--|-----------------|
| Book basis of litigation liability | \$50,000 |
| Tax basis of litigation liability | —0— |
| Cumulative temporary difference at the end of 2020 | 50,000 |
| Tax rate | 20% |
| Deferred tax asset at the end of 2020 | \$10,000 |

ILLUSTRATION 19.19

Computation of Deferred Tax Asset, End of 2020

In this case, Hunt records a deferred tax asset of \$10,000 at the end of 2020 because it represents taxes that will be saved in future periods as a result of a deductible temporary difference existing at the end of 2020.

Hunt can also compute the deferred tax asset by preparing a schedule that indicates the future deductible amounts due to deductible temporary differences. **Illustration 19.20** shows this schedule.

ILLUSTRATION 19.20**Schedule of Future Deductible Amounts**

| | |
|--|-----------------|
| | Future Years |
| Future deductible amounts | \$50,000 |
| Tax rate | 20% |
| Deferred tax asset at the end of 2020 | \$10,000 |

Assuming that 2020 is Hunt's first year of operations and income taxes payable is \$100,000, Hunt computes its income tax expense as shown in **Illustration 19.21**.

ILLUSTRATION 19.21**Computation of Income Tax Expense, 2020**

| | |
|---|------------------|
| Deferred tax asset at end of 2020 | \$ 10,000 |
| Deferred tax asset at beginning of 2020 | -0- |
| Deferred tax expense (benefit) for 2020 | (10,000) |
| Current tax expense for 2020 (income taxes payable) | 100,000 |
| Income tax expense (total) for 2020 | \$ 90,000 |

The **deferred tax benefit** results from the increase in the deferred tax asset from the beginning to the end of the accounting period (similar to the Chelsea example earlier). The deferred tax benefit is a negative component of income tax expense. The total income tax expense of \$90,000 on the income statement for 2020 thus consists of two elements—current tax expense of \$100,000 and a deferred tax benefit of \$10,000. Hunt makes the following journal entry at the end of 2020 to record income tax expense, deferred income taxes, and income taxes payable.

| | | |
|----------------------|--------|---------|
| Income Tax Expense | 90,000 | |
| Deferred Tax Asset | 10,000 | |
| Income Taxes Payable | | 100,000 |

At the end of 2021 (the second year), the difference between the book value and the tax basis of the litigation liability is zero. Therefore, there is no deferred tax asset at this date. Assuming that income taxes payable for 2021 is \$90,000, Hunt computes income tax expense for 2021 as shown in **Illustration 19.22**.

ILLUSTRATION 19.22**Computation of Income Tax Expense, 2021**

| | |
|---|------------------|
| Deferred tax asset at the end of 2021 | \$ -0- |
| Deferred tax asset at the beginning of 2021 | 10,000 |
| Deferred tax expense (benefit) for 2021 | 10,000 |
| Current tax expense for 2021 (income taxes payable) | 90,000 |
| Income tax expense (total) for 2021 | \$100,000 |

The company records income taxes for 2021 as follows.

| | | |
|----------------------|---------|--------|
| Income Tax Expense | 100,000 | |
| Deferred Tax Asset | 10,000 | |
| Income Taxes Payable | | 90,000 |

The total income tax expense of \$100,000 on the income statement for 2021 thus consists of two elements—current tax expense of \$90,000 and deferred tax expense of \$10,000.

Financial Statement Effects

Hunt Company reports the following information on its balance sheets for 2020 and 2021 as shown in **Illustration 19.23**.

ILLUSTRATION 19.23**Balance Sheet Presentation, Deferred Tax Asset**

| | | | |
|--|----------|----------------------|--------------------|
| | Year-End | Income Taxes Payable | Deferred Tax Asset |
| | 2020 | \$100,000 | \$10,000 |
| | 2021 | 90,000 | -0- |

Income taxes payable is reported as a current liability, and the deferred tax asset is reported as a noncurrent asset. On its income statement, Hunt Company reports the information as shown in **Illustration 19.24**.

| Hunt Company Income Statement For the Year Ending December 31, 2020 | | |
|---|-----------|------------------|
| Revenues | | \$900,000 |
| Expenses (operating) | | 400,000 |
| Litigation loss | | 50,000 |
| Income before income taxes | | 450,000 |
| Income tax expense | | |
| Current | \$100,000 | |
| Deferred | 10,000 | 90,000 |
| Net income | | <u>\$360,000</u> |

ILLUSTRATION 19.24**Income Statement
Presentation, Deferred
Tax Asset**

As illustrated, Hunt reports both the current portion (the amount of income taxes payable for the period) and the deferred portion of the income tax expense. In this case, the deferred amount is subtracted from the current portion to arrive at the proper income tax expense.

Illustration 19.25 shows the Deferred Tax Asset account at the end of 2021.

| Deferred Tax Asset | | | |
|--------------------|--------|------|--------|
| 2020 | 10,000 | 2021 | 10,000 |

ILLUSTRATION 19.25**Deferred Tax Asset Account
after Reversals**

What Do the Numbers Mean? “Real Assets”

A key issue in accounting for income taxes is whether a company should recognize a deferred tax asset in the financial records. Based on the conceptual definition of an asset, a deferred tax asset meets the three main conditions for an item to be recognized as an asset:

- 1. It results from a past transaction.** In the Hunt example, the accrual of the loss contingency is the past event that gives rise to a future deductible temporary difference.
- 2. It gives rise to a probable benefit in the future.** Taxable income exceeds pretax financial income in the current year (2020). However, in the next year the exact opposite occurs. That is, taxable income is lower than pretax financial income. Because this deductible temporary difference reduces taxes payable in the future, a probable future benefit exists at the end of the current period.

- 3. The entity controls access to the benefits.** Hunt can obtain the benefit of existing deductible temporary differences by reducing its taxes payable in the future. Hunt has the exclusive right to that benefit and can control others' access to it.

Market analysts' reactions to the **write-off** of deferred tax assets also supports their treatment as assets. When **Twitter** reported that it was writing off its net U.S. deferred assets, analysts believed that Twitter was signaling that it would not realize the future benefits of these tax deductions. Thus, Twitter should write down these assets like other assets.

Sources: J. Weil and S. Liesman, “Stock Gurus Disregard Most Big Write-Offs but They Often Hold Vital Clues to Outlook,” *Wall Street Journal Online* (December 31, 2001); and V. Fleisher, “Why Twitter May Have to Pay Income Taxes One Day,” *The New York Times* (November 6, 2013).

Deferred Tax Asset—Valuation Allowance

Companies recognize a deferred tax asset for all deductible temporary differences. However, a company should reduce a deferred tax asset by a **valuation allowance** if, based on available evidence, **it is more likely than not** that it **will not realize** some portion or all of the deferred tax asset. “**More likely than not**” means a level of likelihood of at least slightly more than 50 percent.

Assume that Jensen Co. has a deductible temporary difference of \$1,000,000 at the end of its first year of operations. Its tax rate is 20 percent, which means it records a deferred tax asset of

\$200,000 ($\$1,000,000 \times .20$). Assuming \$900,000 of income taxes payable, Jensen records income tax expense, the deferred tax asset, and income taxes payable as follows.

| | | |
|----------------------|---------|---------|
| Income Tax Expense | 700,000 | |
| Deferred Tax Asset | 200,000 | |
| Income Taxes Payable | | 900,000 |

After careful review of all available evidence, Jensen determines that it is more likely than not that it will not realize \$80,000 of this deferred tax asset. Jensen records this reduction in asset value as follows.

| | | |
|--|--------|--------|
| Income Tax Expense | 80,000 | |
| Allowance to Reduce Deferred Tax Asset to Expected Realizable Value | | 80,000 |

This journal entry increases income tax expense in the current period because Jensen does not expect to realize a favorable tax benefit for a portion of the deductible temporary difference. Jensen **simultaneously establishes a valuation allowance to recognize the reduction in the carrying amount of the deferred tax asset**. This valuation account is a contra account. Jensen reports it on the financial statements as shown in **Illustration 19.26**.

ILLUSTRATION 19.26

Balance Sheet Presentation of Valuation Allowance Account

| | |
|--|---------------|
| Deferred tax asset | \$200,000 |
| Less: Allowance to reduce deferred tax asset to expected realizable value | <u>80,000</u> |
| Deferred tax asset (net) | \$120,000 |

Jensen then evaluates this allowance account at the end of each accounting period. Jensen determines that it is more likely than not that it will not realize \$50,000 of the deferred tax asset. Therefore, Jensen makes the following entry to adjust the valuation allowance at 2021.

| | | |
|--|--------|--------|
| Allowance to Reduce Deferred Tax Asset to Expected Realizable Value ($\$80,000 - \$50,000$) | 30,000 | 30,000 |
| Income Tax Expense | | 30,000 |

Jensen should consider all available evidence, both positive and negative, to determine whether, based on the weight of available evidence, it needs a valuation allowance. For example, if Jensen has been experiencing a series of loss years, it reasonably assumes that these losses will continue. Therefore, Jensen will lose the benefit of the future deductible amounts. We discuss the use of a valuation account under other conditions later in the chapter.

Additional Considerations

LEARNING OBJECTIVE 2

Identify additional issues in accounting for income taxes.

Income Statement Presentation

Circumstances dictate whether a company should add or subtract the change in deferred income taxes to or from income taxes payable in computing income tax expense. For example, a company adds an increase in a deferred tax liability to income taxes payable. On the other hand, it subtracts an increase in a deferred tax asset from income taxes payable. The formula in **Illustration 19.27** is used to compute income tax expense (benefit).

ILLUSTRATION 19.27

Formula to Compute Income Tax Expense

| | | | | |
|--|---|---------------------------------------|---|--|
| Income Taxes Payable or Refundable | ± | Change in Deferred Income Taxes | = | Total Income Tax Expense or Benefit |
|--|---|---------------------------------------|---|--|

In the income statement or in the notes to the financial statements, a company should disclose the significant components of income tax expense attributable to continuing operations. Given the information related to Chelsea in Illustrations 19.2 to 19.4, Chelsea reports its income statement as shown in **Illustration 19.28**.

| Chelsea Inc. | | |
|--|--------------|------------------|
| Income Statement | | |
| For the Year Ending December 31, 2020 | | |
| Revenues | | \$130,000 |
| Expenses | | <u>60,000</u> |
| Income before income taxes | | 70,000 |
| Income tax expense | | |
| Current | \$8,000 | |
| Deferred | <u>6,000</u> | <u>14,000</u> |
| Net income | | <u>\$ 56,000</u> |

ILLUSTRATION 19.28**Income Statement
Presentation of Income
Tax Expense**

As illustrated, Chelsea reports both the current portion (amount of income taxes payable for the period) and the deferred portion of income tax expense. Another option is to simply report the total income tax expense on the income statement and then indicate in the notes to the financial statements the current and deferred portions. Income tax expense is often referred to as “Provision for income taxes.” Using this terminology, the current provision is \$8,000, and the provision for deferred taxes is \$6,000.

Specific Differences

Numerous items create differences between pretax financial income and taxable income. For purposes of accounting recognition, these differences are (1) temporary and (2) permanent.

Temporary Differences

Taxable temporary differences are temporary differences that will result in taxable amounts in future years when the related assets are recovered. **Deductible temporary differences** are temporary differences that will result in deductible amounts in future years, when the related book liabilities are settled. As discussed earlier, taxable temporary differences give rise to recording deferred tax liabilities. Deductible temporary differences give rise to recording deferred tax assets. **Illustration 19.29** provides examples of temporary differences.

ILLUSTRATION 19.29 Examples of Temporary Differences
Revenues or gains are taxable after they are recognized in financial income.

An asset (e.g., accounts receivable or investment) may be recognized for revenues or gains that will result in **taxable amounts in future years (deferred tax liability)** when the asset is recovered. Examples:

1. Sales accounted for on the accrual basis for financial reporting purposes and on the installment (cash) basis for tax purposes.
2. Contracts accounted for under the percentage-of-completion method for financial reporting purposes and a portion of related gross profit deferred for tax purposes.
3. Investments accounted for under the equity method for financial reporting purposes and under the cost method for tax purposes.
4. Gain on involuntary conversion of a nonmonetary asset which is recognized for financial reporting purposes but deferred for tax purposes.
5. Unrealized holding gains for financial reporting purposes (including use of the fair value option), but deferred for tax purposes.

Expenses or losses are deductible after they are recognized in financial income.

A liability (or contra asset) may be recognized for expenses or losses that will result in **deductible amounts in future years (deferred tax asset)** when the liability is settled. Examples:

1. Product warranty liabilities.
2. Estimated liabilities related to discontinued operations or restructurings.
3. Litigation accruals.
4. Bad debt expense recognized using the allowance method for financial reporting purposes; direct write-off method used for tax purposes.
5. Stock-based compensation expense.
6. Unrealized holding losses for financial reporting purposes (including use of the fair value option) but deferred for tax purposes.

(continued)

ILLUSTRATION 19.29 (continued)

Revenues or gains are taxable before they are recognized in financial income.

A liability may be recognized for an advance payment for goods or services to be provided in future years. For tax purposes, the advance payment is included in taxable income upon the receipt of cash. Future sacrifices to provide goods or services (or future refunds to those who cancel their orders) that settle the liability will result in **deductible amounts in future years (deferred tax asset)**. Examples:

1. Subscriptions received in advance.
2. Advance rental receipts.
3. Sales and leasebacks for financial reporting purposes (income deferral) but reported as sales for tax purposes.
4. Prepaid contracts and royalties received in advance.

Expenses or losses are deductible before they are recognized in financial income.

The cost of an asset may have been deducted for tax purposes faster than it was expensed for financial reporting purposes. Amounts received upon future recovery of the amount of the asset for financial reporting (through use or sale) will exceed the remaining tax basis of the asset and thereby result in **taxable amounts in future years (deferred tax liability)**. Examples:

1. Depreciable property, depletable resources, and intangibles.
2. Deductible pension funding exceeding expense.
3. Prepaid expenses that are deducted on the tax return in the period paid.

Determining a company's temporary differences may prove difficult. A company should prepare a balance sheet for tax purposes that it can compare with its GAAP balance sheet. Many of the differences between the two balance sheets are temporary differences.

Originating and Reversing Aspects of Temporary Differences An **originating temporary difference** is the initial difference between the book basis and the tax basis of an asset or liability, regardless of whether the tax basis of the asset or liability exceeds or is exceeded by the book basis of the asset or liability. A **reversing difference**, on the other hand, occurs when eliminating a temporary difference that originated in prior periods and then removing the related tax effect from the deferred tax account.

For example, assume that Sharp Co. has tax depreciation in excess of book depreciation of \$4,000 in 2018, 2019, and 2020. Further, it has an excess of book depreciation over tax depreciation of \$6,000 in 2021 and 2022 for the same asset. Assuming a tax rate of 15 percent for all years involved, the Deferred Tax Liability account is as shown in **Illustration 19.30**.

ILLUSTRATION 19.30

Tax Effects of Originating and Reversing Differences

| | | Deferred Tax Liability | | | | | | |
|-----------------------|---|------------------------|-----|------|------|---|-------------|-------------------------|
| Tax effects | } | 2021 | 900 | 2018 | 600 | } | Tax effects | |
| of | | 2022 | 900 | 2019 | 600 | | of | |
| reversing differences | | | | | 2020 | | 600 | originating differences |
| | | | | | | | | |

The originating differences for Sharp in each of the first three years are \$4,000. The related tax effect of each originating difference is \$600 ($\$4,000 \times .15$). The reversing differences in 2021 and 2022 are each \$6,000. The related tax effect of each is \$900 ($\$6,000 \times .15$).

Global View

If companies switch to IFRS, the impact on tax accounting methods will require consideration. For example, in cases in which GAAP and tax rules are the same, what happens if IFRS is different from GAAP? Should the tax method change to IFRS? And what might happen at the state level, due to changes in the financial reporting rules?

Permanent Differences

Some differences between taxable income and pretax financial income are permanent. **Permanent differences** result from items that (1) enter into pretax financial income but **never** into taxable income, or (2) enter into taxable income but **never** into pretax financial income.

Congress has enacted a variety of tax law provisions to attain certain political, economic, and social objectives. Some of these provisions exclude certain revenues from taxation, limit the deductibility of certain expenses, and permit the deduction of certain other expenses in excess of costs incurred. A corporation that has tax-free income, nondeductible expenses, or allowable deductions in excess of cost has an effective tax rate that differs from its statutory (regular) tax rate (see **Global View**).

Since permanent differences affect only the period in which they occur, they do not give rise to future taxable or deductible amounts. As a result, **companies recognize no deferred tax consequences**. **Illustration 19.31** shows examples of permanent differences.

Items are recognized for financial reporting purposes but not for tax purposes.

Examples:

1. Interest received on state and municipal obligations.
2. Expenses incurred in obtaining tax-exempt income.
3. Proceeds from life insurance carried by the company on key officers or employees.
4. Premiums paid for life insurance carried by the company on key officers or employees (company is beneficiary).
5. Fines and expenses resulting from a violation of law.

Items are recognized for tax purposes but not for financial reporting purposes.

Examples:

1. "Percentage depletion" of natural resources in excess of their cost.
2. The deduction for dividends received from U.S. corporations, generally 70% or 80%.

ILLUSTRATION 19.31**Examples of Permanent Differences****Examples of Temporary and Permanent Differences**

To illustrate the computations used when both temporary and permanent differences exist, assume that Bio-Tech Company reports pretax financial income of \$200,000 in each of the years 2018, 2019, and 2020. The company is subject to a 20 percent tax rate and has the following differences between pretax financial income and taxable income.

1. Bio-Tech reports gross profit of \$18,000 from an installment sale in 2018. For tax purposes, it will recognize revenue over an 18-month period at a constant amount of \$1,000 per month beginning January 1, 2019. It recognizes the entire amount for book purposes in 2018.
2. It pays life insurance premiums for its key officers of \$5,000 in 2019 and 2020. Although not tax-deductible, Bio-Tech expenses the premiums for book purposes.

The installment sale is a temporary difference, whereas the life insurance premium is a permanent difference. **Illustration 19.32** shows the reconciliation of Bio-Tech's pretax financial income to taxable income and the computation of income taxes payable.

| | 2018 | 2019 | 2020 |
|-----------------------------|-----------|-----------|-----------|
| Pretax financial income | \$200,000 | \$200,000 | \$200,000 |
| Permanent difference | | | |
| Nondeductible expense | | 5,000 | 5,000 |
| Temporary difference | | | |
| Installment sale | (18,000) | 12,000 | 6,000 |
| Taxable income | 182,000 | 217,000 | 211,000 |
| Tax rate | 20% | 20% | 20% |
| Income taxes payable | \$ 36,400 | \$ 43,400 | \$ 42,200 |

ILLUSTRATION 19.32**Reconciliation and Computation of Income Taxes Payable**

Note that Bio-Tech **deducts** the installment-sales gross profit from pretax financial income to arrive at taxable income. The reason: Pretax financial income includes the installment-sales gross profit; taxable income does not. Conversely, it **adds** the \$5,000 insurance premium to pretax financial income to arrive at taxable income. The reason: Pretax financial income records an expense for this premium, but for tax purposes the premium is not deductible. As a result, pretax financial income is lower than taxable income. Therefore, the life insurance premium must be added back to pretax financial income to reconcile to taxable income.

Bio-Tech records income taxes for 2018, 2019, and 2020 as follows.

| December 31, 2018 | |
|---|--------|
| Income Tax Expense (\$36,400 + \$3,600) | 40,000 |
| Deferred Tax Liability (\$18,000 × .20) | 3,600 |
| Income Taxes Payable (\$182,000 × .20) | 36,400 |

(continued)

| December 31, 2019 | | |
|---|--------|--------|
| Income Tax Expense (\$43,400 – \$2,400) | 41,000 | |
| Deferred Tax Liability (\$12,000 × .20) | 2,400 | |
| Income Taxes Payable (\$217,000 × .20) | | 43,400 |
| December 31, 2020 | | |
| Income Tax Expense (\$42,200 – \$1,200) | 41,000 | |
| Deferred Tax Liability (\$6,000 × .20) | 1,200 | |
| Income Taxes Payable (\$211,000 × .20) | | 42,200 |

Bio-Tech has one temporary difference, which originates in 2018 and reverses in 2019 and 2020. It recognizes a deferred tax liability at the end of 2018 because the temporary difference causes future taxable amounts. As the temporary difference reverses, Bio-Tech reduces the deferred tax liability. There is no deferred tax amount associated with the difference caused by the nondeductible insurance expense because it is a permanent difference.

Although an enacted tax rate of 20 percent applies for all three years, the effective rate differs from the enacted rate in 2019 and 2020. Bio-Tech computes the **effective tax rate** by dividing total income tax expense for the period by pretax financial income. The effective rate is 20 percent for 2018 ($\$40,000 \div \$200,000 = 20\%$) and 20.5 percent for 2019 and 2020 ($\$41,000 \div \$200,000 = 20.5\%$).

Tax Rate Considerations

In our previous illustrations, the enacted tax rate did not change from one year to the next. Thus, to compute the deferred income tax amount to report on the balance sheet, a company simply multiplies the cumulative temporary difference by the current tax rate. Using Bio-Tech as an example, it multiplies the cumulative temporary difference of \$18,000 by the enacted tax rate, 20 percent in this case, to arrive at a deferred tax liability of \$3,600 ($\$18,000 \times .20$) at the end of 2018.

Future Tax Rates

What happens if tax rates are expected to change in the future? In this case, a company should use the **enacted tax rate** expected to apply. Therefore, a company must consider presently enacted changes in the tax rate that become effective for a particular future year(s) when determining the tax rate to apply to existing temporary differences. For example, assume that Warlen Co. at the end of 2017 has the following cumulative temporary difference of \$300,000, computed as shown in **Illustration 19.33**.

ILLUSTRATION 19.33

Computation of Cumulative Temporary Difference

| | |
|--|--------------------------|
| Book basis of depreciable assets | \$1,000,000 |
| Tax basis of depreciable assets | <u>700,000</u> |
| Cumulative temporary difference | \$ <u>300,000</u> |

Furthermore, assume that the \$300,000 will reverse and result in taxable amounts in the future, with the enacted tax rates shown in **Illustration 19.34**.

ILLUSTRATION 19.34

Deferred Tax Liability Based on Future Rates

| | 2018 | 2019 | 2020 | 2021 | 2022 | Total |
|-------------------------------|-----------------|-----------------|-----------------|-----------------|-----------------|------------------|
| Future taxable amounts | \$80,000 | \$70,000 | \$60,000 | \$50,000 | \$40,000 | \$300,000 |
| Tax rate | 20% | 20% | 18% | 15% | 15% | |
| Deferred tax liability | \$16,000 | \$14,000 | \$10,800 | \$ 7,500 | \$ 6,000 | \$ 54,300 |

The total deferred tax liability at the end of 2017 is \$54,300. Warlen may only use tax rates other than the current rate when the future tax rates have been enacted, as is

the case in this example. **If new rates are not yet enacted for future years, Warlen should use the current rate.**³

What Do the Numbers Mean? Global Tax Rates

If you are concerned about your tax rate and the taxes you pay, you might want to consider moving to Switzerland, which has a personal tax rate of anywhere from zero percent to 18 percent. You don't want to move to Denmark though. Yes, the people of Denmark are regularly voted to be the happiest people on Earth but it's uncertain how many of these polls take place at tax time. The government in Denmark charges income tax rates ranging from zero percent to 52 percent. So, taxes are a major item to many individuals, wherever they reside.

Taxes are also a big deal to corporations. For example, the Organisation for Economic Co-operation and Development (OECD) is an international organization of 30 countries that accepts the principles of a free-market economy. Most OECD members are high-income economies and are regarded as developed countries. However, companies in the OECD can be subject to significant tax levies, as indicated in the following list of the ten highest corporate income tax rates for the OECD countries in 2014 and 2018.

| | 2014 | 2018 | Percent Change |
|---------------|-------|-------|----------------|
| France | 33.3% | 33.3% | 0.0% |
| Japan | 35.6 | 30.9 | -13.2 |
| Australia | 30.0 | 30.0 | 0.0 |
| Germany | 29.6 | 30.0 | 1.4 |
| Belgium | 33.9 | 29.0 | -14.5 |
| New Zealand | 28.0 | 28.0 | 0.0 |
| Canada | 26.5 | 26.5 | 0.0 |
| Luxembourg | 29.2 | 26.0 | -11.0 |
| Spain | 30.0 | 25.0 | -16.7 |
| United States | 40.0 | 21.0 | -47.5 |
| OECD average | 25.0 | 23.5 | -5.9 |

As indicated, over the past four years, tax rates in the OECD have been on the decline. Only Germany had an increase in tax rates over this period. With the recent tax law, the United States fell from the highest rate in 2014 to the lowest on this list. Indeed, corporate tax rates have been dropping around the world as countries attempt to encourage capital investment, which in turn spurs international tax competition. Even lower on the tax rate spectrum are Iceland and Ireland, with tax rates of 20 percent and 12.5 percent, respectively.

On the other hand, with slowing global economic growth, there is concern that governments will target increases in corporate tax rates as a source of revenues to address budget shortfalls. In addition, further expansion of value-added taxes (VAT) is being considered a tax charged on the consumption of goods and services, which is much more stable than the corporate tax. If these tax proposals result in changes in the tax rates applied to future deductible and taxable amounts, be prepared for significant remeasurement of deferred tax assets and liabilities.

Source: The rates reported reflect the base corporate rate in effect in 2017. Effective rates paid may vary depending on country-specific additional levies for such items as unemployment and local taxes, and, in the case of Japan, earthquake damage assessments. Effective rates may be lower due to credits for investments and capital gains. See <https://home.kpmg.com/xx/en/home/services/tax/tax-tools-and-resources/tax-rates-online.html>.

Revision of Future Tax Rates

When a change in the tax rate is enacted, companies should record its effect on the existing deferred income tax accounts immediately. **A company reports the effect as an adjustment to income tax expense in the period of the change.**

Assume that on December 10, 2020, a new income tax act is signed into law that lowers the corporate tax rate from 40 percent to 20 percent, effective January 1, 2022. If Hostel Co. has one temporary difference at the beginning of 2020 related to \$3 million of excess tax depreciation, then it has a Deferred Tax Liability account with a balance of \$1,200,000 ($\$3,000,000 \times .40$) at January 1, 2020. If taxable amounts related to this difference are scheduled to occur equally in 2021, 2022, and 2023, the deferred tax liability at the end of 2020 is \$1,100,000, computed as shown in **Illustration 19.35**.

| | 2021 | 2022 | 2023 | Total |
|------------------------|-------------------|-------------------|-------------------|-------------------|
| Future taxable amounts | \$1,000,000 | \$1,000,000 | \$1,000,000 | \$3,000,000 |
| Tax rate | 40% | 20% | 20% | |
| Deferred tax liability | <u>\$ 400,000</u> | <u>\$ 200,000</u> | <u>\$ 200,000</u> | <u>\$ 800,000</u> |

ILLUSTRATION 19.35

Schedule of Future Taxable Amounts and Related Tax Rates

³As indicated in the opening story, the Tax Cuts and Jobs Act of 2017 (TCJA) enacted a flat corporate federal tax rate of 21 percent. The tax rate for an individual company may be higher or lower than 21 percent, depending on state and international taxes, as well as various provisions in the tax code, which usually reduce the rate. Prior to the TCJA, the Internal Revenue Service (IRS) and other taxing jurisdictions taxed income on a graduated tax basis. For example, the IRS taxed the first \$50,000 of taxable income at 15 percent, the next \$25,000 at 25 percent, with higher incremental levels of income at rates as high as 39 percent. As a result, in computing deferred income taxes, companies for which graduated tax rates were a significant factor had to determine and then use the **average tax rate**.

Hostel, therefore, recognizes the decrease of \$400,000 (\$1,200,000 – \$800,000) at the end of 2020 in the deferred tax liability as follows.

| | | |
|------------------------|---------|---------|
| Deferred Tax Liability | 400,000 | |
| Income Tax Expense | | 400,000 |

Corporate tax rates do not change often. Therefore, companies usually employ the current rate. However, state and foreign tax rates change more frequently, and they require adjustments in deferred income taxes accordingly.

What Do the Numbers Mean? Lower Tax Rate—Good or Bad?

Tax rate changes nearly always will substantially impact income numbers and the reporting of deferred income taxes on the balance sheet. As a result, you can expect to hear an economic-consequences argument every time that Congress decides to change the tax rates. For example, when Congress raised the corporate rate from 34 percent to 35 percent in 1993, companies took an additional “hit” to earnings if they were in a deferred tax liability position. What if tax rates decline? Depending on a company’s deferred tax position, a change in tax rates can have a positive or negative effect on net income. As indicated in the opening story, the most recent tax rate change from 35 percent to 21 percent resulted in serious losses for companies with significant deferred tax asset balances, as indicated in the following list.

| Company (\$ millions) | Net Deferred Tax Assets | 2017 Profit Hit |
|--------------------------|-------------------------------|--------------------|
| Citigroup | \$49,690 | \$15,005 |
| General Motors | 35,320 | 7,300 |
| Bank of America | 28,371 | 8,747 |
| IBM | 10,990 | 2,380 |
| Hewlett Packard | 8,394 | 1,347 |

Source: 2017 annual reports.

The news is not all bad. A number of companies are in deferred tax liability positions in the period leading up to the tax rate cut. The table in the adjacent column shows the sector distribution of deferred tax assets and liabilities for December year-end firms at the end of the year before the tax act was enacted, with the table sorted in decreasing order by the ratio of deferred tax liabilities to deferred tax assets.

| (\$ in billions) | No. of Firms | Deferred Tax | | DTLs ÷ DTAs |
|------------------------|-----------------|--------------|-------------|----------------|
| | | Assets | Liabilities | |
| Utilities | 28 | \$ 53.6 | \$ 232.3 | 4.3 |
| Telecom services | 3 | 16.7 | 66.1 | 4.0 |
| Consumer staples | 16 | 20.1 | 72.8 | 3.6 |
| Real estate | 32 | 1.6 | 4.4 | 2.8 |
| Health care | 46 | 55.0 | 126.3 | 2.3 |
| Energy | 31 | 94.4 | 169.9 | 1.8 |
| Industrials | 55 | 82.4 | 147.7 | 1.8 |
| Consumer discretionary | 47 | 81.1 | 116.7 | 1.4 |
| Materials | 22 | 24.8 | 34.2 | 1.4 |
| Financials | 64 | 273.4 | 271.1 | 1.0 |
| Information technology | 28 | 43.9 | 32.8 | 0.7 |
| | 372 | \$747.0 | \$1,274.2 | 1.7 |

Asset-heavy utilities, which generate plenty of accelerated depreciation-driven deferred tax liabilities, rank highest. Similarly, asset-heavy telecom services are close behind. These companies will report a positive income effect when these liabilities are remeasured at the lower tax rate. Not so for the information technology sector—like **IBM** and **HP** in the list above. Tech companies show significantly lower deferred tax liabilities than deferred tax assets. One reason is that unlike utilities and telecoms, the information technology sector is not capital-intensive and will not generate much in the way of accelerated depreciation, which in turn is a major driver of deferred tax liabilities. So the effect of a tax rate change could be good or bad—it depends on your deferred tax asset/liability position.

Ciesielski, “The Tax Cuts & Jobs Act: What Analysts Need To Know,” *The Analyst’s Accounting Observer*, Volume 27, No. 2 (February 14, 2018).

Accounting for Net Operating Losses

LEARNING OBJECTIVE 3

Explain the accounting for loss carryforwards.

Every management hopes its company will be profitable. But hopes and profits may not materialize. For a start-up company, it is common to accumulate operating losses while expanding its customer base but before realizing economies of scale. For an established company, a major event such as a labor strike, rapidly changing regulatory and competitive forces, a disaster

such as 9/11, or a general economic recession such as that experienced in the wake of the financial crisis can cause expenses to exceed revenues—a net operating loss.

A **net operating loss (NOL)** occurs for tax purposes in a year when tax-deductible expenses exceed taxable revenues. An inequitable tax burden would result if companies were taxed during profitable periods without receiving any tax relief during periods of net operating losses. Under certain circumstances, therefore, the federal tax laws permit taxpayers to use the losses of one year to offset the profits of other years.

Companies accomplish this income-averaging provision through the **carryforward of net operating losses**. Under this provision, a company pays no income taxes for a year in which it incurs a net operating loss. In addition, it can reduce future taxes payable as discussed on the following pages.

Loss Carryforward

Through use of a **loss carryforward**, a company may carry the net operating loss forward indefinitely to offset future taxable income and reduce taxes payable in future years.⁴ **Illustration 19.36** shows this approach.

ILLUSTRATION 19.36

Loss Carryforward Procedure

Operating losses can be substantial. For example, **Yahoo!** at one time had net operating losses of approximately \$5.4 billion. That amount translates into tax savings of \$1.4 billion if Yahoo! is able to generate taxable income in the future.

Loss Carryforward Example

Because companies use carryforwards to offset future taxable income, the **tax effect of a loss carryforward** represents **future tax savings**. However, realization of a future tax benefit depends on future earnings, an uncertain prospect.

The key accounting issue is whether there should be different requirements for recognition of a deferred tax asset for (a) deductible temporary differences and (b) operating loss carryforwards. The FASB's position is that in substance these items are the same—both are tax-deductible amounts in future years. As a result, the Board concluded that there **should not be different requirements** for recognition of a deferred tax asset from deductible temporary differences and operating loss carryforwards.⁵

Carryforward without Valuation Allowance

To illustrate the accounting procedures for a net operating loss carryforward, assume that Groh Inc. has no temporary or permanent differences. Groh experiences the net operating

⁴The length of carryforward periods has varied. The carryforward period has increased from seven years to 20 years over a period of time. As mentioned in the opening story, the indefinite carryforward period was enacted as part of the Tax Cuts and Jobs Act of 2017 (TCJA). The TCJA also eliminated carryback provisions, which permitted companies to carry back NOLs against prior taxable income and get a tax refund. We discuss the accounting for carrybacks in Appendix 19B.

⁵This requirement is controversial because many believe it is inappropriate to recognize deferred tax assets except when assured beyond a reasonable doubt. Others argue that companies should never recognize deferred tax assets for loss carryforwards until realizing the income in the future.

loss of \$200,000 in 2020 and takes advantage of the carryforward provision. In 2020, the company records the tax effect of the \$200,000 loss carryforward as a deferred tax asset of \$40,000 ($\$200,000 \times .20$), assuming that the enacted future tax rate is 20 percent. Groh records the benefit of the carryforward in 2020 as follows.

| | | |
|--|--------|--------|
| Deferred Tax Asset | 40,000 | |
| Income Tax Expense (Loss Carryforward) | | 40,000 |

Groh establishes a Deferred Tax Asset account for the benefits of future tax savings. The account credited [Income Tax Expense (Loss Carryforward)] is a contra income tax expense item, which Groh presents on the 2020 income statement shown in **Illustration 19.37**. The \$40,000 is the **deferred tax benefit** for 2020, which results from an increase in the deferred tax asset.

ILLUSTRATION 19.37**Recognition of the Benefit of the Loss Carryforward in the Loss Year**

| Groh Inc. Income Statement (partial) for 2020 | |
|--|-------------|
| Operating loss before income taxes | \$(200,000) |
| Income tax benefit | |
| Deferred | 40,000* |
| Net loss | \$(160,000) |
| *Carryforward ($\$200,000 \times .20$) | |

For 2021, assume that Groh returns to profitable operations and has taxable income of \$250,000 (prior to adjustment for the NOL carryforward), subject to a 20 percent tax rate. Groh then realizes the benefits of the carryforward for tax purposes in 2021, which it recognized for accounting purposes in 2020. Groh computes the income taxes payable for 2021 as shown in **Illustration 19.38**.

ILLUSTRATION 19.38**Computation of Income Taxes Payable with Realized Loss Carryforward**

| | |
|---|------------|
| Taxable income prior to loss carryforward | \$ 250,000 |
| Loss carryforward deduction | (200,000) |
| Taxable income for 2021 | 50,000 |
| Tax rate | 20% |
| Income taxes payable for 2021 | \$ 10,000 |

Groh records income taxes in 2021 as follows.

| | | |
|----------------------|--------|--------|
| Income Tax Expense | 50,000 | |
| Deferred Tax Asset | | 40,000 |
| Income Taxes Payable | | 10,000 |

The benefits of the NOL carryforward, realized in 2021, reduce the Deferred Tax Asset account to zero.

The 2021 income statement that appears in **Illustration 19.39** does **not report** the tax effects of the loss carryforward because Groh had reported both previously.

ILLUSTRATION 19.39**Presentation of the Benefit of Loss Carryforward Realized in 2021, Recognized in 2020**

| Groh Inc. Income Statement (partial) for 2021 | |
|--|-----------|
| Income before income taxes | \$250,000 |
| Income tax expense | |
| Current | \$10,000 |
| Deferred | 40,000 |
| Net income | \$200,000 |

Carryforward with Valuation Allowance

Let us return to the Groh example. Assume that it is more likely than not that Groh will *not* realize the entire NOL carryforward in future years. In this situation, Groh records a

Deferred Tax Asset of \$40,000 ($\$200,000 \times .20$) for the potential benefits related to the loss carryforward, and an allowance to reduce the deferred tax asset by the same amount. Groh makes the following journal entries in 2020.

| To recognize benefit of loss carryforward | | |
|---|--------|--------|
| Deferred Tax Asset | 40,000 | |
| Income Tax Expense (Loss Carryforward) | | 40,000 |
| To record allowance amount | | |
| Income Tax Expense (Allowance) | 40,000 | |
| Allowance to Reduce Deferred Tax Asset to Expected Realizable Value | | 40,000 |

The latter entry indicates that because positive evidence of sufficient quality and quantity is unavailable to counteract the negative evidence, Groh needs a valuation allowance.

Illustration 19.40 shows Groh's 2020 income statement presentation.

| Groh Inc. Income Statement (partial) for 2020 | | |
|--|--|--------------------|
| Operating loss before income taxes | | \$(200,000) |
| Income tax expense | | |
| Deferred | | -0-* |
| Net loss | | <u>\$(200,000)</u> |
| *Allowance (\$40,000) – Carryforward (\$40,000) | | |

ILLUSTRATION 19.40

Recognition of Benefit of Loss Carryforward Only

In 2021, assuming that Groh has taxable income of \$250,000 (before considering the carryforward) subject to a tax rate of 20 percent, it realizes the deferred tax asset. It thus no longer needs the allowance. Groh records the following entries.

| To record current and deferred income taxes | | |
|---|--------|--------|
| Income Tax Expense | 50,000 | |
| Deferred Tax Asset | | 40,000 |
| Income Taxes Payable | | 10,000 |
| To eliminate allowance and recognize loss carryforward | | |
| Allowance to Reduce Deferred Tax Asset to Expected Realizable Value | 40,000 | |
| Income Tax Expense (Allowance) | | 40,000 |

Groh reports the \$40,000 Income Tax Expense (Loss Carryforward) on the 2021 income statement. The company did not recognize it in 2020 because it was more likely than not that it would not be realized. Assuming that Groh derives the income for 2021 from continuing operations, it prepares the income statement as shown in **Illustration 19.41**.

| Groh Inc. Income Statement (partial) for 2021 | | |
|--|-----------|------------------|
| Income before income taxes | | \$250,000 |
| Income tax expense | | |
| Current | \$ 10,000 | |
| Deferred | -0-* | 10,000 |
| Net income | | <u>\$240,000</u> |
| *Loss carryforward (\$40,000) – Allowance (\$40,000) | | |

ILLUSTRATION 19.41

Recognition of Benefit of Loss Carryforward When Realized

Another method is to report only one line for total income tax expense of \$10,000 on the face of the income statement and disclose the components of income tax expense in the notes to the financial statements.

Valuation Allowance Revisited

A company should consider all positive and negative information in determining whether it needs a valuation allowance. Whether the company will realize a deferred tax asset depends on whether sufficient taxable income exists or will exist within the carryforward period available under tax law. **Illustration 19.42** shows possible sources of taxable income that may be available under the tax law to realize a tax benefit for deductible temporary differences and carryforwards.⁶

ILLUSTRATION 19.42

Possible Sources of Taxable Income

| Taxable Income Sources |
|--|
| <ul style="list-style-type: none"> a. Future reversals of existing taxable temporary differences. b. Future taxable income exclusive of reversing temporary differences and carryforwards. c. Tax-planning strategies that would, if necessary, be implemented to: <ul style="list-style-type: none"> (1) Accelerate taxable amounts to utilize expiring carryforwards. (2) Change the character of taxable or deductible amounts from ordinary income or loss to capital gain or loss. (3) Switch from tax-exempt to taxable investments. [2] |

If any one of these sources is sufficient to support a conclusion that a valuation allowance is unnecessary, a company need not consider other sources.

Forming a conclusion that a valuation allowance is not needed is difficult when there is negative evidence such as cumulative losses in recent years. Companies may also cite positive evidence indicating that a valuation allowance is not needed. **Illustration 19.43** presents examples (not prerequisites) of evidence to consider when determining the need for a valuation allowance.

ILLUSTRATION 19.43

Evidence to Consider in Evaluating the Need for a Valuation Account

| Negative Evidence |
|---|
| <ul style="list-style-type: none"> a. A history of operating loss or tax credit carryforwards expiring unused. b. Losses expected in early future years (by a presently profitable entity). c. Unsettled circumstances that, if unfavorably resolved, would adversely affect future operations and profit levels on a continuing basis in future years. d. A carryforward period that is so brief that it would limit realization of tax benefits if (1) a significant deductible temporary difference is expected to reverse in a single year or (2) the enterprise operates in a traditionally cyclical business. |
| Positive Evidence |
| <ul style="list-style-type: none"> a. Existing contracts or firm sales backlog that will produce more than enough taxable income to realize the deferred tax asset based on existing sale prices and cost structures. b. An excess of appreciated asset value over the tax basis of the entity's net assets in an amount sufficient to realize the deferred tax asset. c. A strong earnings history exclusive of the loss that created the future deductible amount (tax loss carryforward or deductible temporary difference) coupled with evidence indicating that the loss is an aberration rather than a continuing condition (for example, the result of an unusual or infrequent item, or both). [3] |

⁶Companies implement a tax-planning strategy to realize a tax benefit for an operating loss or tax credit carryforward before it expires. Companies consider tax-planning strategies when assessing the need for and amount of a valuation allowance for deferred tax assets.

The use of a valuation allowance provides a company with an opportunity to manage its earnings. As one accounting expert notes, “The ‘more likely than not’ provision is perhaps the most judgmental clause in accounting.” Some companies may set up a valuation account and then use it to increase income as needed. Others may take the income immediately to increase capital or to offset large negative charges to income (see **Global View**).

Global View

Under IFRS (*IAS 12*), a company may not recognize a deferred tax asset unless realization is “probable.” However, “probable” is not defined in the standard, leading to diversity in the recognition of deferred tax assets.

What Do the Numbers Mean? NOLs: Good News or Bad?

Here are some net operating loss numbers reported by several notable companies.

NOLs (\$ in millions)

| Company | Income (Loss) | Operating Loss Carryforward | Tax Deferred (Tax Asset) |
|------------------------|---------------|-----------------------------|--------------------------|
| Delta Air Lines | \$3,577 | \$1,440 | \$6,134 |
| Goodyear | 365 | 1,515 | 2,344 |
| Kodak | 94 | 307 | 1,066 |
| General Mills | 1,701.1 | 109.5 | 1,205.2 |

All of these companies are using the carryforward provisions of the tax code for their NOLs. For many of them, the NOL is an amount far exceeding their reported profits. (Carryforwards can be claimed indefinitely into the future.) In some cases, management expects the tax rates in the future to be higher. This difference in expected rates provides a bigger tax benefit if the losses are carried forward and matched against future income.

Is there a downside? To realize the benefits of carryforwards, a company must have future taxable income in order to

claim the NOL deductions. As we learned, if it is more likely than not that a company will not have taxable income, it must record a valuation allowance (and increased tax expense). As the data above indicate, recording a valuation allowance to reflect the uncertainty of realizing the tax benefits has merit.

A good example is **Sony Corp.**, which announced a \$3.2 billion net loss, blaming a \$4.4 billion write-off on a certain portion of deferred tax assets in Japan, in what would be the company’s third straight year of red ink. The write-off was an admission that the March 2011 earthquake and tsunami shattered its expectations for a robust current fiscal year. Like other Japanese auto and electronics makers, Sony faced uncertainties because its recovery prospects were partially dependent on parts and materials suppliers, many of which were also affected by the quake. Thus, the post-quake outlook put Sony in a position where it had to set aside reserves of ¥360 billion on certain deferred tax assets due to uncertainty about future taxable income.

Sources: Company annual reports; and J. Osawa, “Sony Expects Hefty Loss: Electronics Giant Reverses Prediction for Full-Year Profit, Blaming Earthquake,” *Wall Street Journal* (May 24, 2011).

Financial Statement Presentation

LEARNING OBJECTIVE 4

Describe the presentation of deferred income taxes in financial statements.

Balance Sheet

Income taxes payable and income tax refund receivable are reported as a current liability and current asset, respectively, on the balance sheet. In addition, companies often make estimated payments to taxing authorities quarterly; these payments are reported as prepaid income taxes in the current assets section. Companies are generally permitted to offset any balances in income taxes payable against related income tax refund receivable or prepaid income taxes balances.

Deferred tax accounts are also reported as assets and liabilities. Companies should classify deferred tax accounts as a net noncurrent amount on the balance sheet. That is, deferred tax assets and deferred tax liabilities are separately recognized and measured and then offset on the balance sheet. The net deferred tax asset or net deferred tax liability is therefore reported in the noncurrent section of the balance sheet.

To illustrate, assume that Scott Company has four deferred tax items at December 31, 2020, as shown in the following table.

| Temporary Difference | Amount | |
|---|-------------------|--------------------------|
| | (Asset) | Liability |
| 1. Rent collected in advance: recognized when a performance obligation is satisfied for accounting purposes and when received for tax purposes. | \$(42,000) | |
| 2. Use of straight-line depreciation for accounting purposes and accelerated depreciation for tax purposes. | | \$ 214,000 |
| 3. Recognition of income on installment sales at the time of sale for accounting purposes and during period of collection for tax purposes. | | 45,000 |
| 4. Warranty liabilities: recognized at time of sale for accounting purposes and at time paid for tax purposes. | (12,000) | |
| Totals | <u>\$(54,000)</u> | <u>\$ 259,000</u> |
| Net liability | | <u><u>\$ 205,000</u></u> |

As indicated, Scott Company has total deferred tax assets of \$54,000 and total deferred tax liabilities of \$259,000. Scott therefore reports a deferred tax liability of \$205,000 (\$259,000 – \$54,000) in the noncurrent section of the balance sheet.

Some argue that the use of the noncurrent section for classification of deferred taxes on the balance sheet is incorrect. That is, the classification should be based on when the temporary difference reverses. For example, a temporary difference that reverses in the next period should be classified as current rather than noncurrent. The FASB recognizes that classifying all deferred tax items as noncurrent is conceptually deficient. However, it notes that determining when a temporary difference reverses is often difficult (such as with a loss carryforward). In addition, the scheduling of the reversals to determine current versus noncurrent is complex and costly, and provides limited usefulness to the financial statement reader. As a result, the Board decided to classify all deferred taxes as noncurrent.

Note Disclosure

Companies are required to disclose the total of all deferred tax liabilities, the total of all deferred assets, and the total valuation allowance in the notes to the financial statements. In addition, companies should disclose (1) any change during the year in the total valuation allowance, and (2) the types of temporary differences or carryforwards that give rise to significant portions of deferred tax liabilities and assets. For example, **PepsiCo** reported the information shown in **Illustration 19.44** related to its deferred tax assets, deferred tax liabilities, and valuation allowance account.

This disclosure of gross deferred tax assets, deferred tax liabilities, and changes in the valuation allowance helps users make better predictions of future cash flows. Examination of the deferred portion of income tax expense provides information as to whether taxes payable are likely to be higher or lower in the future. In PepsiCo's case, analysts expect future taxable amounts and higher tax payments, primarily from lower depreciation and amortization in the future. PepsiCo expects future deductible amounts and lower tax payments due to deductions for carryforwards, employee benefits, and state taxes. These deferred tax items indicate that actual tax payments for PepsiCo will be higher than the tax expense reported on the income statement in the future.⁷

⁷See R. P. Weber and J. E. Wheeler, "Using Income Tax Disclosures to Explore Significant Economic Transactions," *Accounting Horizons* (September 1992), for a discussion of how analysts use deferred tax disclosures to assess the quality of earnings and to predict future cash flows.

ILLUSTRATION 19.44**PepsiCo Tax Note****What Do the Numbers Mean? Imagination at Work**

Here's one thing you can say that's true about U.S. corporate taxes: The statutory rate in effect before the recent tax act (35 percent at the federal level, around 40 percent when you average in state rates) was the highest on earth. Here's another thing you can say that's true about U.S. corporate taxes: The average effective tax rate is less—sometimes much less—than the statutory rate.

How do they do it? Take **Apple**, for example. It uses a tax structure known as the “Double Irish with a Dutch Sandwich,” which reduces taxes by routing profits through Irish subsidiaries and the Netherlands and then to the Caribbean. As a result of using this tactic, Apple paid cash taxes of \$3.3 billion around the world on its reported profits of \$34.2 billion in a recent year, a tax rate of just 9.8 percent. **Google** used the same strategy to reduce its overseas tax rate to 2.4 percent, the lowest of the top five U.S. technology companies by market capitalization, according to regulatory filings in six countries.

General Electric (GE) is generally viewed as the most skilled at reducing its tax burden. GE uses a maze of shelters, tax credits, and subsidiaries to pay far less than the stated tax rate. In a recent year, it reported worldwide profits of \$14.2 billion, and said \$5.1 billion of the total came from its operations in the United States. Its American tax bill? Zero. In fact, GE claimed a tax benefit of \$3.2 billion. GE's giant tax department is viewed by some as the world's best tax law firm. Indeed, the company's slogan, “Imagination at Work,” fits this department well. The team includes former officials not just from the Treasury, but also from the IRS and virtually all the tax-writing committees in Congress.

The strategies employed by Apple, Google, and GE, as well as changes in tax laws that encouraged some businesses and professionals to file as individuals, have pushed down the corporate share of the nation's tax receipts from 30 percent of all federal revenue in the mid-1950s to a much lower rate today. As many as two-thirds of U.S. and foreign corporations paid no federal income taxes from 1998–2005. Many citizens and public-interest groups cite corporate avoidance of income taxes as a reason for more tax reform.

There is ongoing debate as to whether the recently enacted tax reform with lower tax rates will lead to less-aggressive tax structuring in order to reduce corporate taxes. The lower rate—much closer to the rate in other countries—will certainly reduce the incentive to locate business headquarters and some intangible assets overseas (as Apple and Google did) because the tax savings will not be as large. However, other tax dodges, like those employed by GE tax engineers, are still in place. So the tax department at GE will still be busy trying to lower GE's effective tax rate below the 21 percent maximum.

Income Statement

Companies are required to report income before income taxes and income tax expense on the income statement. **Illustration 19.45** shows the amounts that PepsiCo reported related to tax expense.

ILLUSTRATION 19.45
Tax Expense Disclosures

| PepsiCo (in millions) | | <u>2017</u> | <u>2016</u> | <u>2015</u> |
|---------------------------------|--|----------------|-------------|-------------|
| Income before income taxes | | \$9,602 | \$8,553 | \$7,442 |
| Provision for income taxes | | 4,694 | 2,174 | 1,941 |
| Net income | | 4,908 | 6,379 | 5,501 |

Income tax expense (or benefit) generally equals the sum of income taxes payable (or refundable) and the change in the deferred tax expense or benefit. The formula in **Illustration 19.46** is used to compute income tax expense (benefit).

ILLUSTRATION 19.46
Formula to Compute Income
Tax Expense or Benefit

| | | | | |
|---|-------|--|---|--|
| Income Taxes Payable or Refundable | \pm | Change in Deferred Income Taxes | = | Total Income Tax Expense or Benefit |
|---|-------|--|---|--|

As indicated, the total deferred tax expense (or benefit) equals the sum of the changes in the deferred tax assets, deferred tax liabilities, and the valuation allowance for the year. For example, a company adds an increase in a deferred tax liability to income taxes payable. On the other hand, it subtracts an increase in a deferred tax asset from income taxes payable.

PepsiCo provided the disclosure shown in **Illustration 19.47** in the notes to the financial statements providing additional explanation related to income before income taxes and deferred income taxes.

ILLUSTRATION 19.47
Components of Income
Tax Expense

| PepsiCo (in millions) | | <u>2017</u> | <u>2016</u> | <u>2015</u> |
|--|--------------|----------------|-------------|-------------|
| The components of income before income taxes are as follows: | | | | |
| | | \$3,452 | \$2,630 | \$2,879 |
| U.S. | | | | |
| Foreign | | 6,150 | 5,923 | 4,563 |
| | | \$9,602 | \$8,553 | \$7,442 |
| The provision for income taxes consisted of the following: | | | | |
| | | \$4,925 | \$1,219 | \$1,143 |
| Current: | U.S. Federal | | | |
| | Foreign | 724 | 824 | 773 |
| | State | 136 | 77 | 65 |
| | | 5,785 | 2,120 | 1,981 |
| Deferred: | U.S. Federal | (1,159) | 109 | (14) |
| | Foreign | (9) | (33) | (32) |
| | State | 77 | (22) | 6 |
| | | (1,091) | 54 | (40) |
| | | \$4,694 | \$2,174 | \$1,941 |

Although companies generally report only the change in the deferred portion on the income statement, it is important to recognize that the change can involve many of the following items:

1. Current tax expense or benefit.
2. Deferred tax expense or benefit, exclusive of other components listed below.

3. Government grants (if recognized as a reduction of income tax expense).
4. The benefits of operating loss carryforwards (resulting in a reduction of income tax expense).
5. Tax expense that results from allocating tax benefits either directly to paid-in capital or to reduce goodwill or other noncurrent intangible assets of an acquired entity.
6. Adjustments of a deferred tax liability or asset for enacted changes in tax laws or rates or a change in the tax status of a company.
7. Adjustments of the beginning-of-the-year balance of a valuation allowance because of a change in circumstances that causes a change in judgment about the realizability of the related deferred tax asset in future years.

In the notes, companies must also reconcile (using percentages or dollar amounts) income tax expense attributable to continuing operations with the amount that results from applying domestic or federal statutory tax rates to pretax income from continuing operations. Companies should disclose the estimated amount and the nature of significant reconciling items. **Illustration 19.48** presents an example from the 2017 annual report of PepsiCo.

|  PepsiCo | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

ILLUSTRATION 19.48**Tax Rate Reconciliation**

This disclosure helps users assess the quality of earnings. Many investors seeking to assess the quality of a company's earnings are interested in the reconciliation of pretax financial income to taxable income. Analysts carefully examine earnings that are enhanced by a favorable tax effect, particularly if the tax effect is non-recurring.

For example, the tax rate reconciliation schedule indicates that PepsiCo's tax rate is approximately 14 percent higher than its statutory rate in 2017. The reason for this difference is primarily due to one-time adjustments for the recent enactment of the Tax Cuts and Jobs Act (remeasuring deferred taxes and taxes on foreign earnings). As indicated, in prior years PepsiCo's tax rate was lower than the statutory rate. In 2018 and beyond, this is likely to be the case but beginning with a statutory rate of 21 percent.

Companies should also disclose the nature of their tax loss carryforward. PepsiCo, for example, provides the information shown in **Illustration 19.49**.

|  PepsiCo | |
|---|--|
| Carryforwards and Allowances (partial) | |
| Operating loss carryforwards totaling \$12.6 billion at year-end 2017 are being carried forward in a number of foreign and state jurisdictions where we are permitted to use tax operating losses from prior periods to reduce future taxable income. These operating losses may be carried forward indefinitely. We establish valuation allowances for our deferred tax assets if, based on the available evidence, it is more likely than not that some portion or all of the deferred tax assets will not be realized. | |

ILLUSTRATION 19.49**Disclosure of Carryforwards and Allowances**

This disclosure helps users predict future cash flows for operating loss carryforwards. From this disclosure, analysts determine the amount of income that the company may

recognize in the future on which it will pay no income tax. For example, the PepsiCo disclosure in Illustration 19.49 indicates that PepsiCo has \$12.6 billion in net operating loss carryforwards that it can use to reduce future taxes. However, the valuation allowance indicates that \$1,163 million (see Illustration 19.44) of deferred tax assets may not be realized in the future.

Loss carryforwards can be valuable to a potential acquirer. For example, as mentioned earlier, **Yahoo!** has a substantial net operating loss carryforward. A potential acquirer would find Yahoo! more valuable as a result of these carryforwards. That is, the acquirer may be able to use these carryforwards to shield future income. However the acquiring company has to be careful because the structure of the deal may lead to a situation where the deductions will be severely limited.

Much the same issue arises in companies emerging from bankruptcy. In many cases, these companies have large NOLs but the value of the losses may be limited. This is because any gains related to the cancellation of liabilities in bankruptcy must be offset against the NOLs. For example, when **Kmart Holding Corp.** emerged from bankruptcy, it disclosed NOL carryforwards approximating \$3.8 billion. At the same time, Kmart disclosed cancellation of debt gains that reduced the value of the NOL carryforward. These reductions soured the merger between Kmart and **Sears Roebuck** because the cancellation of the indebtedness gains reduced the value of the Kmart carryforwards to the merged company by \$3.74 billion.⁸

Evolving Issue Uncertain Tax Positions

Whenever there is a contingency, companies determine if the contingency is **probable** and can be reasonably estimated. If both of these criteria are met, the company records the contingency in the financial statements. These guidelines also apply to uncertain tax positions. **Uncertain tax positions** are tax positions for which the tax authorities may disallow a deduction in whole or in part. Uncertain tax positions often arise when a company takes an aggressive approach in its tax planning. Examples are instances in which the tax law is unclear or the company may believe that the risk of audit is low. Uncertain tax positions give rise to tax benefits either by reducing income tax expense or related payables or by increasing an income tax refund receivable or deferred tax asset.

Unfortunately, companies have not applied these provisions consistently in accounting and reporting of uncertain tax positions. Some companies have not recognized a tax benefit unless it is probable that the benefit will be realized and can be reasonably estimated. Other companies have used a lower threshold, such as that found in the existing authoritative literature. As we have learned, the lower threshold—described as “**more likely than not**”—means that the company believes it has at least a 51 percent chance that the uncertain tax position will pass muster

with the taxing authorities. Thus, there has been diversity in practice concerning the accounting and reporting of uncertain tax positions.

As a result, the FASB has issued rules for companies to follow to determine whether it is “more likely than not” that tax positions will be sustained upon audit. [4] If the probability is more than 50 percent, companies may reduce their liability or increase their assets. If the probability is less than 50 percent, companies may not record the tax benefit. In determining “more likely than not,” companies must assume that they will be audited by the tax authorities. If the recognition threshold is passed, companies must then estimate the amount to record as an adjustment to their tax assets and liabilities. (This estimation process is complex and is beyond the scope of this text.)

Companies will experience varying financial statement effects upon adoption of these rules. Those with a history of conservative tax strategies may have their tax liabilities decrease or their tax assets increase. For example, **PepsiCo** recorded a \$7 million increase to retained earnings upon adoption of the guidelines. Others that followed more aggressive tax planning may have to increase their liabilities or reduce their assets, with a resulting negative effect on net income.

The Asset-Liability Method

The FASB believes that the **asset-liability method** (sometimes referred to as the **liability approach**) is the most consistent method for accounting for income taxes. One objective of this approach is to recognize the amount of taxes payable or refundable for the current year.

⁸The IRS frowns on acquisitions done solely to obtain operating loss carryforwards. If it determines that the merger is solely tax-motivated, the IRS disallows the deductions. But because it is very difficult to determine whether a merger is or is not tax-motivated, the “purchase of operating loss carryforwards” continues.

A second objective is to recognize **deferred tax liabilities and assets** for the **future tax consequences** of events that have been recognized in the financial statements or tax returns.

To implement the objectives, companies apply some basic principles in accounting for income taxes at the date of the financial statements, as listed in **Illustration 19.50**. [5]

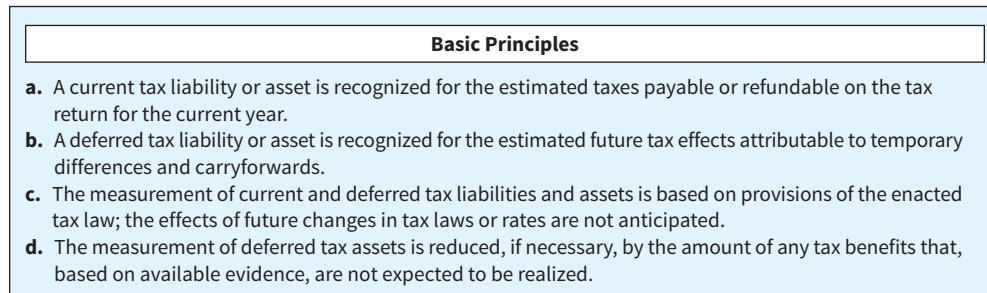

ILLUSTRATION 19.50

Basic Principles of the Asset-Liability Method

Illustration 19.51 diagrams the procedures for implementing the asset-liability method.

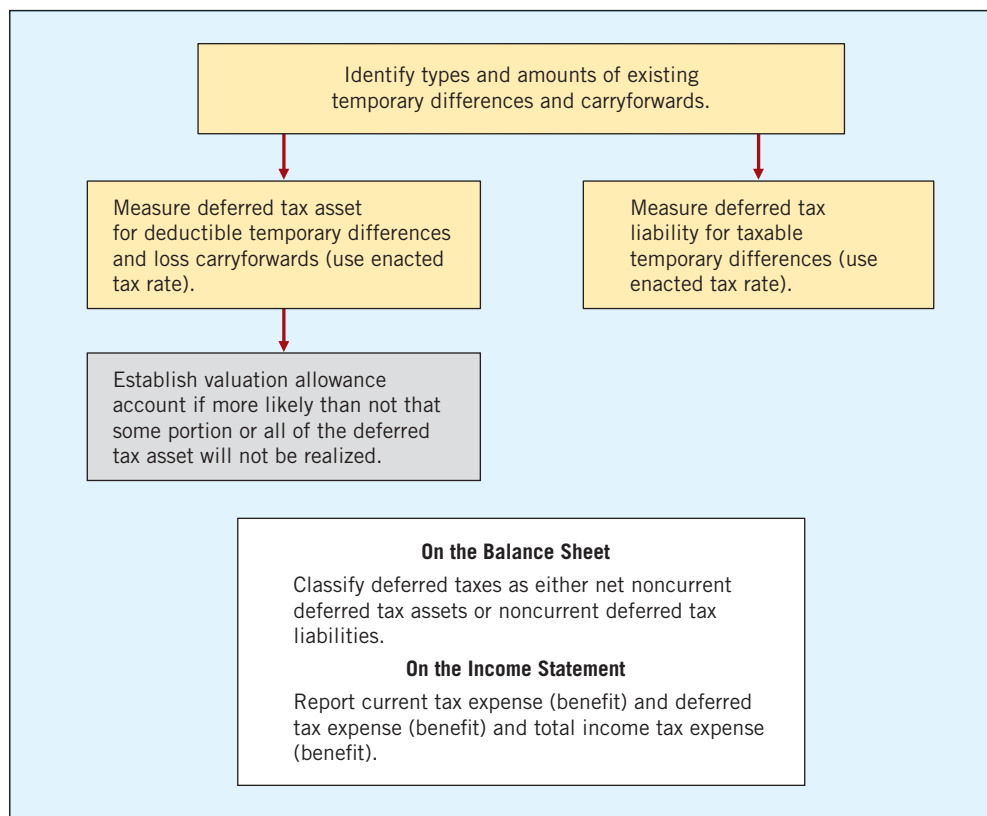

ILLUSTRATION 19.51

Procedures for Computing and Reporting Deferred Income Taxes

As an aid to understanding deferred income taxes, we provide the following glossary (see **Global View**).

Global View

IFRS on income taxes is based on the same principles as GAAP—comprehensive recognition of deferred tax assets and liabilities.

Key Deferred Income Tax Terms

Carryforwards. Deductions or credits that cannot be utilized on the tax return during a year and that may be carried forward to reduce taxable income or taxes payable in a future year. An **operating loss carryforward** is an excess of tax deductions over gross income in a year. A **tax credit carryforward** is the amount by which tax credits available for utilization exceed statutory limitations.

Current Tax Expense (Benefit). The amount of income taxes paid or payable (or refundable) for a year as determined by applying the provisions of the enacted tax law to the taxable income or excess of deductions over revenues for that year.

Deductible Temporary Difference. Temporary differences that result in deductible amounts in future years when recovering or settling the related asset or liability, respectively.

Deferred Tax Asset. The deferred tax consequences attributable to deductible temporary differences and carryforwards.

Deferred Tax Consequences. The future effects on income taxes as measured by the enacted tax rate and provisions of the enacted tax law resulting from temporary differences and carryforwards at the end of the current year.

Deferred Tax Expense (Benefit). The change during the year in a company's deferred tax liabilities and assets.

Deferred Tax Liability. The deferred tax consequences attributable to taxable temporary differences.

Income Taxes. Domestic and foreign federal (national), state, and local (including franchise) taxes based on income.

Income Taxes Currently Payable (Refundable). Refer to current tax expense (benefit).

Income Tax Expense (Benefit). The sum of current tax expense (benefit) and deferred tax expense (benefit).

Taxable Income. The excess of taxable revenues over tax-deductible expenses and exemptions for the year as defined by the governmental taxing authority.

Taxable Temporary Difference. Temporary differences that result in taxable amounts in future years when recovering or settling the related asset or liability, respectively.

Tax-Planning Strategy. An action that meets certain criteria and that a company implements to realize a tax benefit for an operating loss or tax credit carryforward. Companies consider tax-planning strategies when assessing the need for and amount of a valuation allowance for deferred tax assets.

Temporary Difference. A difference between the tax basis of an asset or liability and its reported amount in the financial statements that will result in taxable or deductible amounts in future years when recovering or settling the reported amount of the asset or liability, respectively.

Valuation Allowance. The portion of a deferred tax asset for which it is more likely than not that a company will not realize a tax benefit.

APPENDIX 19A

Comprehensive Example of Interperiod Tax Allocation

LEARNING OBJECTIVE *5

Apply the concepts and procedures of interperiod tax allocation.

This appendix presents a comprehensive illustration of a deferred income tax problem with several temporary and permanent differences. The example follows one company through two complete years (2019 and 2020). **Study it carefully.** It should help you understand the concepts and procedures presented in the chapter.

First Year—2019

Allman Company, which began operations at the beginning of 2019, produces various products on a contract basis. Each contract generates a gross profit of \$80,000. Some of Allman's contracts provide for the customer to pay on an installment basis. Under these contracts, Allman collects one-fifth of the contract revenue evenly over the current year and in each of the following four years. For financial reporting purposes, the company recognizes gross profit in the year of completion (accrual basis); for tax purposes, Allman recognizes gross profit in the year cash is collected (installment basis).

Presented below is information related to Allman's operations for 2019.

1. In 2019, the company completed seven contracts that allow for the customer to pay on an installment basis. Allman recognized the related gross profit of \$560,000 for financial reporting purposes. It reported only \$112,000 of gross profit on installment sales on the 2019 tax return. The company expects future collections on the related installment receivables to result in taxable amounts of \$112,000 in each of the next four years.
2. At the beginning of 2019, Allman Company purchased depreciable assets with a cost of \$540,000. For financial reporting purposes, Allman depreciates these assets using the

straight-line method over a six-year service life. For tax purposes, the assets fall in the five-year recovery class, and Allman uses the MACRS system. The depreciation schedules for both financial reporting and tax purposes are as follows.

| Year | Depreciation for Financial Reporting Purposes | Depreciation for Tax Purposes | Difference |
|------|--|----------------------------------|---------------|
| 2019 | \$ 90,000 | \$108,000 | \$(18,000) |
| 2020 | 90,000 | 172,800 | (82,800) |
| 2021 | 90,000 | 103,680 | (13,680) |
| 2022 | 90,000 | 62,208 | 27,792 |
| 2023 | 90,000 | 62,208 | 27,792 |
| 2024 | 90,000 | 31,104 | 58,896 |
| | <u>\$540,000</u> | <u>\$540,000</u> | <u>\$ -0-</u> |
