- The company warrants its product for two years from the date of completion of a contract. During 2019, the product warranty liability accrued for financial reporting purposes was \$200,000, and the amount paid for the satisfaction of warranty liability was \$44,000. Allman expects to settle the remaining \$156,000 by expenditures of \$56,000 in 2020 and \$100,000 in 2021.
- In 2019, nontaxable municipal bond interest revenue was \$28,000.
- During 2019, nondeductible fines and penalties of \$26,000 were paid.
- Pretax financial income for 2019 amounts to \$412,000.
- Tax rates enacted before the end of 2019 were:

| | |
|----------------------|-----|
| 2019 | 30% |
| 2020 and later years | 20% |
- The accounting period is the calendar year.
- The company is expected to have taxable income in all future years.

Taxable Income and Income Taxes Payable—2019

The first step is to determine Allman Company's income taxes payable for 2019 by calculating its taxable income. **Illustration 19A.1** shows this computation.

| | |
|--|-------------------------|
| Pretax financial income for 2019 | \$412,000 |
| Permanent differences: | |
| Nontaxable revenue—municipal bond interest | (28,000) |
| Nondeductible expenses—fines and penalties | 26,000 |
| Temporary differences: | |
| Excess gross profit per books (\$560,000 – \$112,000) | (448,000) |
| Excess depreciation per tax (\$108,000 – \$90,000) | (18,000) |
| Excess warranty expense per books (\$200,000 – \$44,000) | 156,000 |
| Taxable income for 2019 | <u>\$100,000</u> |

ILLUSTRATION 19A.1

Computation of Taxable Income, 2019

Allman computes income taxes payable on taxable income for \$100,000 as shown in **Illustration 19A.2**.

| | |
|--|-------------------------|
| Taxable income for 2019 | \$100,000 |
| Tax rate | 30% |
| Income taxes payable (current tax expense) for 2019 | <u>\$ 30,000</u> |

ILLUSTRATION 19A.2

Computation of Income Taxes Payable, End of 2019

Computing Deferred Income Taxes—End of 2019

The schedule in **Illustration 19A.3** summarizes the temporary differences and the resulting future taxable and deductible amounts.

ILLUSTRATION 19A.3**Schedule of Future Taxable and Deductible Amounts, End of 2019**

| | Future Years | | | | | Total |
|--------------------------------------|--------------|-----------|-----------|-----------|----------|-----------|
| | 2020 | 2021 | 2022 | 2023 | 2024 | |
| Future taxable (deductible) amounts: | | | | | | |
| Installment sales | \$112,000 | \$112,000 | \$112,000 | \$112,000 | | \$448,000 |
| Depreciation | (82,800) | (13,680) | 27,792 | 27,792 | \$58,896 | 18,000 |
| Warranty costs | (56,000) | (100,000) | | | | (156,000) |

Allman computes the amounts of deferred income taxes to be reported at the end of 2019 as shown in **Illustration 19A.4**.

ILLUSTRATION 19A.4**Computation of Deferred Income Taxes, End of 2019**

| Temporary Difference | Future Taxable (Deductible) Amounts | Tax Rate | Deferred Tax | |
|----------------------|-------------------------------------|----------|--------------|-----------|
| | | | (Asset) | Liability |
| Installment sales | \$448,000 | 20% | | \$89,600 |
| Depreciation | 18,000 | 20 | | 3,600 |
| Warranty costs | (156,000) | 20 | \$(31,200) | |
| Totals | \$310,000 | | \$(31,200) | \$93,200* |

*Because only a single tax rate is involved in all relevant years, these totals can be reconciled:
 $\$310,000 \times .20 = (\$31,200) + \$93,200$.

A temporary difference is caused by the use of the accrual basis for financial reporting purposes and the installment method for tax purposes. This temporary difference will result in future taxable amounts and hence a deferred tax liability. Because of the installment contracts completed in 2019, a temporary difference of \$448,000 originates that will reverse in equal amounts over the next four years. The company expects to have taxable income in all future years, and there is only one enacted tax rate applicable to all future years. Allman uses that rate (20 percent) to compute the entire deferred tax liability resulting from this temporary difference.

The temporary difference caused by different depreciation policies for books and for tax purposes originates over three years and then reverses over three years. This difference will cause deductible amounts in 2020 and 2021 and taxable amounts in 2022, 2023, and 2024. These amounts sum to a net future taxable amount of \$18,000 (which is the cumulative temporary difference at the end of 2019). Because the company expects to have taxable income in all future years and because there is only one tax rate enacted for all of the relevant future years, Allman applies that rate to the net future taxable amount to determine the related net deferred tax liability.

The third temporary difference is caused by different methods of accounting for warranties. This difference will result in deductible amounts in each of the two future years it takes to reverse. Because the company expects to report a positive income on all future tax returns and because there is only one tax rate enacted for each of the relevant future years, Allman uses the 20 percent rate to calculate the resulting deferred tax asset.

Deferred Tax Expense (Benefit) and the Journal Entry to Record Income Taxes—2019

To determine the deferred tax expense (benefit), we need to compare the beginning and ending balances of the deferred income tax accounts. **Illustration 19A.5** shows that computation.

ILLUSTRATION 19A.5**Computation of Deferred Tax Expense (Benefit), 2019**

| | |
|---|-------------------|
| Deferred tax asset at the end of 2019 | \$ 31,200 |
| Deferred tax asset at the beginning of 2019 | —0— |
| Deferred tax expense (benefit) | \$(31,200) |
| Deferred tax liability at the end of 2019 | \$ 93,200 |
| Deferred tax liability at the beginning of 2019 | —0— |
| Deferred tax expense (benefit) | \$ 93,200 |

The \$31,200 increase in the deferred tax asset causes a deferred tax benefit to be reported in the income statement. The \$93,200 increase in the deferred tax liability during 2019 results in a deferred tax expense. As **Illustration 19A.6** shows, these two amounts **net** to a deferred tax expense of \$62,000 for 2019.

| | |
|--|-------------------------|
| Deferred tax expense (benefit) | \$ (31,200) |
| Deferred tax expense (benefit) | <u>93,200</u> |
| Net deferred tax expense for 2019 | <u>\$ 62,000</u> |

ILLUSTRATION 19A.6

Computation of Net Deferred Tax Expense, 2019

Allman then computes the total income tax expense as shown in **Illustration 19A.7**.

| | |
|--|------------------------|
| Current tax expense for 2019 | \$30,000 |
| Deferred tax expense for 2019 | <u>62,000</u> |
| Income tax expense (total) for 2019 | <u>\$92,000</u> |

ILLUSTRATION 19A.7

Computation of Total Income Tax Expense, 2019

Allman records income taxes payable, deferred income taxes, and income tax expense as follows.

| | | |
|------------------------|--------|--------|
| Income Tax Expense | 92,000 | |
| Deferred Tax Asset | 31,200 | |
| Income Taxes Payable | | 30,000 |
| Deferred Tax Liability | | 93,200 |

Financial Statement Presentation—2019

Companies should classify deferred tax assets and liabilities as noncurrent on the balance sheet. Multiple categories of deferred taxes are classified into a net noncurrent amount. **Illustration 19A.8** shows the classification of Allman's deferred tax accounts at the end of 2019.

| Temporary Difference | Resulting Deferred Tax | |
|----------------------|---------------------------|------------------------|
| | (Asset) | Liability |
| Installment sales | | \$89,600 |
| Depreciation | | 3,600 |
| Warranty costs | <u>\$ (31,200)</u> | |
| Totals | <u>\$ (31,200)</u> | <u>\$93,200</u> |

ILLUSTRATION 19A.8

Classification of Deferred Tax Accounts, End of 2019

Thus, Allman reports a net noncurrent deferred tax liability of \$62,000 (\$93,200 – \$31,200). The balance sheet at the end of 2019 reports the amounts shown in **Illustration 19A.9**.

| | |
|--|----------|
| <u>Current liabilities</u> | |
| Income taxes payable | \$30,000 |
| <u>Long-term liabilities</u> | |
| Deferred tax liability (\$93,200 – \$31,200) | \$62,000 |

ILLUSTRATION 19A.9

Balance Sheet Presentation of Deferred Taxes, 2019

| | | |
|----------------------------|----------------------|-------------------------|
| Income before income taxes | | \$412,000 |
| Income tax expense | | |
| Current | \$30,000 | |
| Deferred | <u>62,000</u> | <u>92,000</u> |
| Net income | | <u>\$320,000</u> |

ILLUSTRATION 19A.10

Income Statement Presentation of Income Tax Expense, 2019

Second Year—2020

1. During 2020, Allman collected \$112,000 from customers for the receivables arising from contracts completed in 2019. The company expects recovery of the remaining receivables to result in taxable amounts of \$112,000 in each of the following three years.
2. In 2020, the company completed four new contracts that allow for the customer to pay on an installment basis. These installment sales created new installment receivables. Future collections of these receivables will result in reporting gross profit of \$64,000 for tax purposes in each of the next four years.
3. During 2020, Allman continued to depreciate the assets acquired in 2019 according to the depreciation schedules presented earlier. Thus, depreciation amounted to \$90,000 for financial reporting purposes and \$172,800 for tax purposes.
4. An analysis at the end of 2020, of the product warranty liability account, showed the following details.

| | |
|---|------------------|
| Balance of liability at beginning of 2020 | \$156,000 |
| Expense for 2020 income statement purposes | 180,000 |
| Amount paid for contracts completed in 2019 | (56,000) |
| Amount paid for contracts completed in 2020 | (50,000) |
| Balance of liability at end of 2020 | <u>\$230,000</u> |

The balance of the liability is expected to require expenditures in the future as follows.

| |
|--|
| \$100,000 in 2021 due to 2019 contracts |
| \$ 50,000 in 2021 due to 2020 contracts |
| <u>\$ 80,000 in 2022 due to 2020 contracts</u> |
| <u>\$230,000</u> |

5. During 2020, nontaxable municipal bond interest revenue was \$24,000.
6. Allman accrued a loss of \$172,000 for financial reporting purposes because of pending litigation. This amount is not tax-deductible until the period the loss is realized, which the company estimates to be 2028.
7. Pretax financial income for 2020 amounts to \$504,800.
8. The enacted tax rates still in effect are:

| | |
|----------------------|-----|
| 2019 | 30% |
| 2020 and later years | 20% |

Taxable Income and Income Taxes Payable—2020

Allman computes taxable income for 2020 as shown in [Illustration 19A.11](#).

ILLUSTRATION 19A.11

Computation of Taxable Income, 2020

| | |
|--|-------------------------|
| Pretax financial income for 2020 | \$504,800 |
| Permanent difference: | |
| Nontaxable revenue—municipal bond interest | (24,000) |
| Reversing temporary differences: | |
| Collection on 2019 installment sales | 112,000 |
| Payments on warranties from 2019 contracts | (56,000) |
| Originating temporary differences: | |
| Excess gross profit per books—2020 contracts | (256,000) |
| Excess depreciation per tax | (82,800) |
| Excess warranty expense per books—2020 contracts | 130,000 |
| Loss accrual per books | 172,000 |
| Taxable income for 2020 | <u>\$500,000</u> |

Income taxes payable for 2020 are as shown in **Illustration 19A.12**.

| | |
|--|-------------------------|
| Taxable income for 2020 | \$500,000 |
| Tax rate | 20% |
| Income taxes payable (current tax expense) for 2020 | <u>\$100,000</u> |

ILLUSTRATION 19A.12

Computation of Income Taxes Payable, End of 2020

Computing Deferred Income Taxes—End of 2020

The schedule in **Illustration 19A.13** summarizes the temporary differences existing at the end of 2020 and the resulting future taxable and deductible amounts.

ILLUSTRATION 19A.13 Schedule of Future Taxable and Deductible Amounts, End of 2020

| | Future Years | | | | | Total |
|--------------------------------------|--------------|-----------|-----------|----------|-------------|-----------|
| | 2021 | 2022 | 2023 | 2024 | 2028 | |
| Future taxable (deductible) amounts: | | | | | | |
| Installment sales—2019 | \$112,000 | \$112,000 | \$112,000 | | | \$336,000 |
| Installment sales—2020 | 64,000 | 64,000 | 64,000 | \$64,000 | | 256,000 |
| Depreciation | (13,680) | 27,792 | 27,792 | 58,896 | | 100,800 |
| Warranty costs | (150,000) | (80,000) | | | | (230,000) |
| Loss accrual | | | | | \$(172,000) | (172,000) |

Allman computes the amounts of deferred income taxes to be reported at the end of 2020 as shown in **Illustration 19A.14**.

| Temporary Difference | Future Taxable (Deductible) Amounts | Tax Rate | Deferred Tax | |
|----------------------|-------------------------------------|----------|----------------------------|---------------------------|
| | | | (Asset) | Liability |
| Installment sales | \$592,000* | 20% | | \$118,400 |
| Depreciation | 100,800 | 20 | | 20,160 |
| Warranty costs | (230,000) | 20 | \$(46,000) | |
| Loss accrual | (172,000) | 20 | (34,400) | |
| Totals | <u>\$290,800</u> | | <u>\$(80,400)**</u> | <u>\$138,560**</u> |

*Cumulative temporary difference = \$336,000 + \$256,000
 **Because of a flat tax rate, these totals can be reconciled: \$290,800 × .20 = \$(80,400) + \$138,560

ILLUSTRATION 19A.14

Computation of Deferred Income Taxes, End of 2020

Deferred Tax Expense (Benefit) and the Journal Entry to Record Income Taxes—2020

To determine the deferred tax expense (benefit), Allman must compare the beginning and ending balances of the deferred income tax accounts, as shown in **Illustration 19A.15**.

| | |
|---|---------------------------|
| Deferred tax asset at the end of 2020 | \$ 80,400 |
| Deferred tax asset at the beginning of 2020 | 31,200 |
| Deferred tax expense (benefit) | <u>\$ (49,200)</u> |
| Deferred tax liability at the end of 2020 | \$138,560 |
| Deferred tax liability at the beginning of 2020 | 93,200 |
| Deferred tax expense (benefit) | <u>\$ 45,360</u> |

ILLUSTRATION 19A.15

Computation of Deferred Tax Expense (Benefit) 2020

The deferred tax expense (benefit) and the total income tax expense for 2020 are, therefore, as shown in **Illustration 19A.16**.

ILLUSTRATION 19A.16**Computation of Total Income Tax Expense, 2020**

| | |
|--|-------------------------|
| Deferred tax expense (benefit) | \$ (49,200) |
| Deferred tax expense (benefit) | <u>45,360</u> |
| Deferred tax benefit for 2020 | (3,840) |
| Current tax expense for 2020 | <u>100,000</u> |
| Income tax expense (total) for 2020 | <u>\$ 96,160</u> |

The deferred tax expense of \$45,360 and the deferred tax benefit of \$49,200 net to a deferred tax benefit of \$3,840 for 2020.

Allman records income taxes for 2020 with the following journal entry.

| | | |
|------------------------|--------|---------|
| Income Tax Expense | 96,160 | |
| Deferred Tax Asset | 49,200 | |
| Income Taxes Payable | | 100,000 |
| Deferred Tax Liability | | 45,360 |

Financial Statement Presentation—2020

APPENDIX 19B

Accounting for Net Operating Loss Carrybacks

LEARNING OBJECTIVE *6

Explain the accounting for loss carrybacks.

As discussed in the opening story, the Tax Cuts and Jobs Act of 2017 (TCJA) permits the carryforward of current net operating losses to offset future taxable income. Prior rules for net operating losses permitted net operating losses to be carried back for two years and carried

forward for 20 years. Under the TCJA, companies have indefinite carryforward periods. However, the TCJA eliminated carryback provisions for NOLs. The carryback provision was sort of a reprieve for money-losing companies that generated an NOL. That is, by carrying the NOL back to two profitable years on amended tax returns, net-loss companies could free up some cash in the year of the loss. In this appendix, we present the accounting for loss carrybacks as future tax laws may reinstitute carryback provisions.

Loss Carryback

Through use of a **loss carryback**, a company may carry the net operating loss back two years and receive refunds for income taxes paid in those years. The company must apply the loss to the earlier year first and then to the second year. It may **carry forward** any loss remaining after the two-year carryback to offset future taxable income.⁹ **Illustration 19B.1** diagrams the loss carryback procedure, assuming a loss in 2020.

ILLUSTRATION 19B.1

Loss Carryback Procedure

Loss Carryback Example

To illustrate the accounting procedures for a net operating loss carryback, assume that Groh Inc. has no temporary or permanent differences. Groh experiences the following.

| Year | Taxable Income or Loss | Tax Rate | Tax Paid |
|------|---------------------------|----------|----------|
| 2017 | \$ 50,000 | 20% | \$10,000 |
| 2018 | 100,000 | 15% | 15,000 |
| 2019 | 200,000 | 25% | 50,000 |
| 2020 | (500,000) | — | —0— |

In 2020, Groh incurs a net operating loss that it decides to carry back. Generally, Groh must apply the carryback first to the **second year preceding the loss year**. Therefore, it carries the loss back first to 2018. Then, Groh carries back any unused loss to 2019. Accordingly, Groh files amended tax returns for 2018 and 2019, receiving refunds for the \$65,000 (\$15,000 + \$50,000) of taxes paid in those years.

For accounting as well as tax purposes, the \$65,000 represents the **tax effect (tax benefit)** of the loss carryback. Groh should recognize this tax effect in 2020, the loss year. Since the tax loss gives rise to a refund that is both measurable and currently realizable, Groh should recognize the associated tax benefit in this loss period.

⁹As with carryforwards, carryback periods have varied over time. Indeed, as part of the Economic Recovery Act of 2009, Congress enacted a temporary extension of the carryback period from two to five years for operating losses incurred in 2008 and 2009 (during the financial crisis). It is estimated that the companies in the S&P 500 reaped a refund of \$5 billion due to this change. See D. Zion, A. Varshney, and C. Cornett, “Spinning Losses into Gold,” *Equity Research—Accounting and Tax*, Credit Suisse (November 12, 2009).

Groh makes the following journal entry for 2020.

| | | |
|-------------------------------------|--------|--------|
| Income Tax Refund Receivable | 65,000 | |
| Income Tax Expense (Loss Carryback) | | 65,000 |

Groh reports the account debited, **Income Tax Refund Receivable**, on the balance sheet as a current asset at December 31, 2020. It reports the account credited on the income statement for 2020 as shown in **Illustration 19B.2**.

ILLUSTRATION 19B.2

Recognition of the Benefit of the Loss Carryback in the Loss Year

| Groh Inc. | |
|-------------------------------------|---------------------------|
| Income Statement (partial) for 2020 | |
| Operating loss before income taxes | \$(500,000) |
| Income tax benefit | |
| Income tax expense (loss carryback) | <u>65,000</u> |
| Net loss | <u><u>\$(435,000)</u></u> |

Since the \$500,000 net operating loss for 2020 exceeds the \$300,000 total taxable income from the two preceding years, Groh carries forward the remaining \$200,000 loss.

Loss Carryback with Carryforward

If a carryback fails to fully absorb a net operating loss (as in the Groh example) or if the company decides not to carry the loss back, then it can carry forward the loss. To illustrate, return to the Groh example from the preceding section. In 2020, the company records the tax effect of the \$200,000 loss carryforward as a deferred tax asset of \$50,000 ($\$200,000 \times .25$), assuming that the enacted future tax rate is 25 percent. Groh records the benefits of the carryback and the carryforward in 2020 as follows.

| To recognize benefit of loss carryback | | |
|---|--------|--------|
| Income Tax Refund Receivable | 65,000 | |
| Income Tax Expense (Loss Carryback) | | 65,000 |
| To recognize benefit of loss carryforward | | |
| Deferred Tax Asset | 50,000 | |
| Income Tax Expense (Loss Carryforward) | | 50,000 |

Groh realizes the income tax refund receivable of \$65,000 immediately as a refund of taxes paid in the past. It establishes a Deferred Tax Asset account for the benefits of future tax savings. The two accounts credited are contra income tax expense items, which Groh presents on the 2020 income statement shown in **Illustration 19B.3**.

ILLUSTRATION 19B.3

Recognition of the Benefit of the Loss Carryback and Carryforward in the Loss Year

| Groh Inc. | |
|--|---------------------------|
| Income Statement (partial) for 2020 | |
| Operating loss before income taxes | \$(500,000) |
| Income tax benefit | |
| Income tax expense (loss carryback) | <u>\$65,000</u> |
| Income tax expense (loss carryforward) | <u>50,000</u> |
| | <u>115,000</u> |
| Net loss | <u><u>\$(385,000)</u></u> |

The **current tax benefit** of \$65,000 is the income tax refundable for the year. As shown earlier, Groh determines this amount by applying the carryback provisions of the tax law to the taxable loss for 2020. The \$50,000 is the **deferred tax benefit** for the year, which results from an increase in the deferred tax asset, as discussed in the chapter.

Learning Objectives Review

1 Describe the fundamentals of accounting for income taxes.

Companies compute pretax financial income (or income for book purposes) in accordance with generally accepted accounting principles. They compute taxable income (or income for tax purposes) in accordance with prescribed tax regulations. Because tax regulations and GAAP differ in many ways, so frequently do pretax financial income and taxable income. Differences may exist, for example, in the timing of revenue recognition and the timing of expense recognition.

Deferred tax liability. Revenue recognized for book purposes in the period earned but deferred and reported as revenue for tax purposes when collected results in future taxable amounts. The future taxable amounts will occur in the periods the company recovers the receivable and reports the collections as revenue for tax purposes. This results in a deferred tax liability.

Deferred tax asset. An accrued warranty expense that a company pays for and deducts for tax purposes, in a period later than the period in which it incurs and recognizes it for book purposes, results in future deductible amounts. The future deductible amounts will occur in the periods during which the company settles the related liability for book purposes. This results in a deferred tax asset.

Valuation allowance. A deferred tax asset should be reduced by a valuation allowance if, based on all available evidence, it is more likely than not (a level of likelihood that is at least slightly more than 50 percent) that it will not realize some portion or all of the deferred tax asset. The company should carefully consider all available evidence, both positive and negative, to determine whether, based on the weight of available evidence, it needs a valuation allowance.

2 Identify additional issues in accounting for income taxes.

Significant components of income tax expense should be disclosed in the income statement or in the notes to the financial statements. The most commonly encountered components are the current expense (or benefit) and the deferred expense (or benefit).

Examples of temporary differences are (1) revenues or gains that are taxable after recognition in financial income, (2) expenses or losses that are deductible after recognition in financial income, (3) revenues or gains that are taxable before recognition in financial income, and (4) expenses or losses that are deductible before recognition in financial income.

Examples of permanent differences are (1) items recognized for financial reporting purposes but not for tax purposes, and (2) items recognized for tax purposes but not for financial reporting purposes.

Companies may use tax rates other than the current rate only after enactment of the future tax rates. When a change in the tax rate is enacted, a company should immediately recognize its effect on the deferred income tax accounts. The company reports the effects as an adjustment to income tax expense in the period of the change.

3 Explain the accounting for loss carryforwards.

A company may carry a net operating loss forward indefinitely. A valuation allowance may be established for the deferred tax asset that arises from the carryforward, depending on uncertainty about future taxable income.

4 Describe the presentation of deferred income taxes in financial statements.

Companies report deferred tax accounts on the balance sheet as assets and liabilities. These deferred tax accounts are classified as a net noncurrent amount.

Companies apply the following basic principles in accounting for income taxes at the date of the financial statements. (1) Recognize a current tax liability or asset for the estimated taxes payable or refundable on the tax return for the current year. (2) Recognize a deferred tax liability or asset for the estimated future tax effects attributable to temporary differences and carryforwards using the enacted tax rate. (3) Base the measurement of current and deferred tax liabilities and assets on provisions of the enacted tax law.

(4) Reduce the measurement of deferred tax assets, if necessary, by the amount of any tax benefits that, based on available evidence, companies do not expect to realize.

***5 Apply the concepts and procedures of interperiod tax allocation.**

Accounting for deferred taxes involves the following steps. (1) Calculate taxable income and income taxes payable for the year. (2) Compute deferred income taxes at the end of the year. (3) Determine deferred tax expense (benefit) and make the journal entry to record income taxes. (4) Classify the net deferred tax asset or liability as non-current in the financial statements.

***6 Explain the accounting for loss carrybacks.**

When permitted by law, a company may carry a net operating loss back two years and receive refunds for taxes paid in those years. Any loss remaining after the two-year carryback may be carried forward to offset future taxable income.

Enhanced Review and Practice

Practice Problem

Johnny Bravo Company began operations in 2020 and has provided the following information.

1. Pretax financial income for 2020 is \$100,000.
2. The tax rate enacted for 2020 and future years is 20%.
3. Differences between the 2020 income statement and tax return are listed below.
 - a. Warranty expense accrued for financial reporting purposes amounts to \$5,000. Warranty deductions per the tax return amount to \$2,000.
 - b. Gross profit on construction contracts using the percentage-of-completion method for books amounts to \$92,000. Gross profit on construction contracts for tax purposes amounts to \$62,000.
 - c. Depreciation of property, plant, and equipment for financial reporting purposes amounts to \$60,000. Depreciation of these assets amounts to \$80,000 for the tax return.
 - d. A \$3,500 fine paid for violation of pollution laws was deducted in computing pretax financial income.
 - e. Interest revenue earned on an investment in tax-exempt municipal bonds amounts to \$1,400.
4. Taxable income is expected for the next few years.

Instructions

- a. Compute taxable income for 2020.
- b. Compute the deferred taxes at December 31, 2020, that relate to the temporary differences described above.
- c. Prepare the journal entry to record income tax expense, deferred taxes, and income taxes payable for 2020.
- d. Draft the income tax expense section of the income statement, beginning with "Income before income taxes."
- e. Assume that in 2021 Johnny Bravo reported a pretax operating loss of \$44,900. There were no other temporary or permanent differences in tax and book income for 2021. Prepare the journal entry to record income tax expense for 2021. Johnny Bravo expects to return to profitability in 2022.

Solution

| | | |
|-----------|---|-----------|
| a. | Pretax financial income | \$100,000 |
| | Permanent differences | |
| | Fine for pollution | 3,500 |
| | Tax-exempt interest | (1,400) |
| | Originating temporary differences | |
| | Excess warranty expense per books (\$5,000 – \$2,000) | 3,000 |
| | Excess construction profits per books (\$92,000 – \$62,000) | (30,000) |
| | Excess depreciation per tax (\$80,000 – \$60,000) | (20,000) |
| | Taxable income | \$ 55,100 |

b.

| Temporary Difference | Future Taxable (Deductible) Amounts | Tax Rate | Deferred Tax | |
|------------------------|--|----------|----------------|-----------------|
| | | | (Asset) | Liability |
| Warranty costs | \$ (3,000) | 20% | \$(600) | |
| Construction contracts | 30,000 | 20 | | \$ 6,000 |
| Depreciation | 20,000 | 20 | | 4,000 |
| Totals | <u>\$47,000</u> | | <u>\$(600)</u> | <u>\$10,000</u> |

c.

| | | |
|---|--------|-----------------|
| Income Tax Expense | 20,420 | |
| Deferred Tax Asset | 600 | |
| Deferred Tax Liability | | 10,000 |
| Income Taxes Payable | | 11,020 |
| Taxable income for 2020 [from part (a)] | | \$55,100 |
| Tax rate | | <u>20%</u> |
| Income taxes payable for 2020 | | <u>\$11,020</u> |
| Deferred tax liability at the end of 2020 [from part (b)] | | \$10,000 |
| Deferred tax liability at the beginning of 2020 | | <u>-0-</u> |
| Deferred tax expense for 2020 | | <u>\$10,000</u> |
| Deferred tax asset at the end of 2020 [from part (b)] | | \$ 600 |
| Deferred tax asset at the beginning of 2020 | | <u>-0-</u> |
| Deferred tax benefit for 2020 | | <u>\$ (600)</u> |

d.

| | | |
|-----------------------------|--------------|------------------|
| Income before income taxes | | \$100,000 |
| Income tax expense | | |
| Current | \$11,020 | |
| Deferred (\$10,000 – \$600) | <u>9,400</u> | <u>20,420</u> |
| Net income | | <u>\$ 79,580</u> |

e.

| 2021 | |
|--|-------|
| Deferred Tax Asset* | 8,980 |
| Income Tax Expense (Loss Carryforward) | 8,980 |

*Carryforward ($\$44,900 \times .20 = \$8,980$ deferred tax asset)

No valuation allowance is needed since Johnny Bravo is expected to return to profitability in 2022. This is positive evidence that the deferred tax asset will be realized.

WileyPLUS

Exercises, Problems, Problem Solution Walkthrough Videos, and many more assessment tools and resources are available for practice in WileyPLUS.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

Questions

1. Explain the difference between pretax financial income and taxable income.
2. What are the two objectives of accounting for income taxes?
3. Explain the meaning of a temporary difference as it relates to deferred tax computations, and give three examples.
4. Differentiate between an originating temporary difference and a reversing difference.
5. The book basis of depreciable assets for Erwin Co. is \$900,000, and the tax basis is \$700,000 at the end of 2021. The enacted tax rate is 17% for all periods. Determine the amount of deferred taxes to be reported on the balance sheet at the end of 2021.

6. Roth Inc. has a deferred tax liability of \$68,000 at the beginning of 2021. At the end of 2021, it reports accounts receivable on the books at \$90,000 and the tax basis at zero (its only temporary difference). If the enacted tax rate is 17% for all periods, and income taxes payable for the period is \$230,000, determine the amount of total income tax expense to report for 2021.

7. What is the difference between a future taxable amount and a future deductible amount? When is it appropriate to record a valuation account for a deferred tax asset?

8. Pretax financial income for Lake Inc. is \$300,000, and its taxable income is \$100,000 for 2021. Its only temporary difference at the end of the period relates to a \$70,000 difference due to excess depreciation for tax purposes. If the tax rate is 20% for all periods, compute the amount of income tax expense to report in 2021. No deferred income taxes existed at the beginning of the year.

9. Feagler Company's current income taxes payable related to its taxable income for 2020 is \$460,000. In addition, Feagler's deferred tax asset decreased \$20,000 during 2020. What is Feagler's income tax expense for 2020?

10. Lee Company's current income taxes payable related to its taxable income for 2020 is \$320,000. In addition, Lee's deferred tax liability increased \$40,000 and its deferred tax asset increased \$10,000 during 2020. What is Lee's income tax expense for 2020?

11. How are deferred tax assets and deferred tax liabilities reported on the balance sheet?

12. Interest on municipal bonds is referred to as a permanent difference when determining the proper amount to report for deferred

taxes. Explain the meaning of permanent differences, and give two other examples.

13. At the end of the year, Falabella Co. has pretax financial income of \$550,000. Included in the \$550,000 is \$70,000 interest income on municipal bonds, \$25,000 fine for dumping hazardous waste, and depreciation of \$60,000. Depreciation for tax purposes is \$45,000. Compute income taxes payable, assuming the tax rate is 30% for all periods.

14. Addison Co. has one temporary difference at the beginning of 2020 of \$500,000. The deferred tax liability established for this amount is \$150,000, based on a tax rate of 30%. The temporary difference will provide the following taxable amounts: \$100,000 in 2021, \$200,000 in 2022, and \$200,000 in 2023. If a new tax rate for 2023 of 20% is enacted into law at the end of 2020, what is the journal entry necessary in 2020 (if any) to adjust deferred taxes?

15. What are some of the reasons that the components of income tax expense should be disclosed and a reconciliation between the effective tax rate and the statutory tax rate be provided?

16. Describe a "loss carryforward." Discuss the uncertainty when it arises.

17. What is the possible treatment for tax purposes of a net operating loss? What is the proper treatment of a net operating loss for financial reporting purposes?

18. What controversy relates to the accounting for net operating loss carryforwards?

19. What is an uncertain tax position, and what are the general guidelines for accounting for uncertain tax positions?

Brief Exercises

BE19.1 (LO 1) In 2020, Amirante Corporation had pretax financial income of \$168,000 and taxable income of \$120,000. The difference is due to the use of different depreciation methods for tax and accounting purposes. The effective tax rate is 20%. Compute the amount to be reported as income taxes payable at December 31, 2020.

BE19.2 (LO 1) Oxford Corporation began operations in 2020 and reported pretax financial income of \$225,000 for the year. Oxford's tax depreciation exceeded its book depreciation by \$40,000. Oxford's tax rate for 2020 and years thereafter is 30%. In its December 31, 2020, balance sheet, what amount of deferred tax liability should be reported?

BE19.3 (LO 1, 2) Using the information from BE19.2, assume this is the only difference between Oxford's pretax financial income and taxable income. Prepare the journal entry to record the income tax expense, deferred income taxes, and income taxes payable, and show how the deferred tax liability will be classified on the December 31, 2020, balance sheet.

BE19.4 (LO 1, 2) At December 31, 2020, Appaloosa Corporation had a deferred tax liability of \$25,000. At December 31, 2021, the deferred tax liability is \$42,000. The corporation's 2021 current tax expense is \$48,000. What amount should Appaloosa report as total 2021 income tax expense?

BE19.5 (LO 1, 2) At December 31, 2020, Suffolk Corporation had an estimated warranty liability of \$105,000 for accounting purposes and \$0 for tax purposes. (The warranty costs are not deductible until paid.) The effective tax rate is 20%. Compute the amount Suffolk should report as a deferred tax asset at December 31, 2020.

BE19.6 (LO 1, 2) At December 31, 2020, Percheron Inc. had a deferred tax asset of \$30,000. At December 31, 2021, the deferred tax asset is \$59,000. The corporation's 2021 current tax expense is \$61,000. What amount should Percheron report as total 2021 income tax expense?

BE19.7 (LO 1, 2) At December 31, 2020, Hillyard Corporation has a deferred tax asset of \$200,000. After a careful review of all available evidence, it is determined that it is more likely than not that \$60,000 of this deferred tax asset will not be realized. Prepare the necessary journal entry.

BE19.8 (LO 1, 2) Mitchell Corporation had income before income taxes of \$195,000 in 2020. Mitchell's current income tax expense is \$24,000, and deferred income tax expense is \$15,000. Prepare Mitchell's 2020 income statement, beginning with "Income before income taxes."

BE19.9 (LO 1, 2) Shetland Inc. had pretax financial income of \$154,000 in 2020. Included in the computation of that amount is insurance expense of \$4,000 which is not deductible for tax purposes. In addition, depreciation for tax purposes exceeds accounting depreciation by \$10,000. Prepare Shetland's journal entry to record 2020 taxes, assuming a tax rate of 25%.

BE19.10 (LO 1, 2) Clydesdale Corporation has a cumulative temporary difference related to depreciation of \$580,000 at December 31, 2020. This difference will reverse as follows: 2021, \$42,000; 2022, \$244,000; and 2023, \$294,000. Enacted tax rates are 17% for 2021 and 2022, and 20% for 2023. Compute the amount Clydesdale should report as a deferred tax liability at December 31, 2020.

BE19.11 (LO 2) At December 31, 2020, Fell Corporation had a deferred tax liability of \$340,000, resulting from future taxable amounts of \$2,000,000 and an enacted tax rate of 17%. In May 2021, a new income tax act is signed into law that raises the tax rate to 20% for 2021 and future years. Prepare the journal entry for Fell to adjust the deferred tax liability.

BE19.12 (LO 3) Rode Inc. incurred a net operating loss of \$500,000 in 2020. The tax rate for all years is 20%. Prepare the journal entries to record the benefits of the loss carryforward. Rode expects to return to profitability in 2021.

BE19.13 (LO 3) Use the information for Rode Inc. given in BE19.12. Assume that it is more likely than not that the entire net operating loss carryforward will not be realized in future years. Prepare all the journal entries necessary at the end of 2020.

BE19.14 (LO 4) Youngman Corporation has temporary differences at December 31, 2020, that result in the following deferred taxes.

| | |
|---|----------|
| Deferred tax liability related to depreciation difference | \$38,000 |
| Deferred tax asset related to warranty liability | 62,000 |
| Deferred tax liability related to revenue recognition | 96,000 |
| Deferred tax asset related to litigation accruals | 27,000 |

Indicate how these balances would be presented in Youngman's December 31, 2020, balance sheet.

***BE19.15 (LO 6)** Nolan Corporation had the following tax information.

| Year | Taxable Income | Tax Rate | Taxes Paid |
|------|----------------|----------|------------|
| 2018 | \$300,000 | 35% | \$105,000 |
| 2019 | 325,000 | 30 | 97,500 |
| 2020 | 400,000 | 30 | 120,000 |

In 2021, Nolan suffered a net operating loss of \$480,000, which it elected to carryback. The 2021 enacted tax rate is 29%. Prepare Nolan's entry to record the effect of the loss carryback.

***BE19.16 (LO 6)** Sylvie Inc. incurred a net operating loss of \$500,000 in 2020. Combined income for 2018 and 2019 was \$350,000. The tax rate for all years is 20%. Sylvie elects the carryback option. Prepare the journal entries to record the benefits of the loss carryback and the loss carryforward. Sylvie expects to return to profitability in 2021.

Exercises

E19.1 (LO 1, 2) **Excel** (One Temporary Difference, Future Taxable Amounts, One Rate, No Beginning Deferred Taxes) South Carolina Corporation has one temporary difference at the end of 2020 that will reverse and cause taxable amounts of \$55,000 in 2021, \$60,000 in 2022, and \$65,000 in 2023. South Carolina's pretax financial income for 2020 is \$300,000, and the tax rate is 30% for all years. There are no deferred taxes at the beginning of 2020.

Instructions

- Compute taxable income and income taxes payable for 2020.
- Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2020.
- Prepare the income tax expense section of the income statement for 2020, beginning with the line "Income before income taxes."

E19.2 (LO 1, 2) (Two Differences, No Beginning Deferred Taxes, Tracked through 2 Years) The following information is available for Wenger Corporation for 2019 (its first year of operations).

1. Excess of tax depreciation over book depreciation, \$40,000. This \$40,000 difference will reverse equally over the years 2020–2023.
2. Deferral, for book purposes, of \$20,000 of rent received in advance. The rent will be recognized in 2020.
3. Pretax financial income, \$300,000.
4. Tax rate for all years, 20%.

Instructions

- a. Compute taxable income for 2019.
- b. Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2019.
- c. Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2020, assuming taxable income of \$325,000.

E19.3 (LO 1, 2) Excel (One Temporary Difference, Future Taxable Amounts, One Rate, Beginning Deferred Taxes) Bandung Corporation began 2020 with a \$46,000 balance in the Deferred Tax Liability account. At the end of 2020, the related cumulative temporary difference amounts to \$350,000, and it will reverse evenly over the next 2 years. Pretax accounting income for 2020 is \$525,000, the tax rate for all years is 20%, and taxable income for 2020 is \$405,000.

Instructions

- a. Compute income taxes payable for 2020.
- b. Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2020.
- c. Prepare the income tax expense section of the income statement for 2020 beginning with the line “Income before income taxes.”

E19.4 (LO 1, 2) (Three Differences, Compute Taxable Income, Entry for Taxes) Zurich Company reports pretax financial income of \$70,000 for 2020. The following items cause taxable income to be different than pretax financial income.

1. Depreciation on the tax return is greater than depreciation on the income statement by \$16,000.
2. Rent collected on the tax return is greater than rent recognized on the income statement by \$22,000.
3. Fines for pollution appear as an expense of \$11,000 on the income statement.

Zurich’s tax rate is 30% for all years, and the company expects to report taxable income in all future years. There are no deferred taxes at the beginning of 2020.

Instructions

- a. Compute taxable income and income taxes payable for 2020.
- b. Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2020.
- c. Prepare the income tax expense section of the income statement for 2020, beginning with the line “Income before income taxes.”
- d. Compute the effective income tax rate for 2020.

E19.5 (LO 1, 2) (Two Temporary Differences, One Rate, Beginning Deferred Taxes) The following facts relate to Krung Thep Corporation.

1. Deferred tax liability, January 1, 2020, \$20,000.
2. Deferred tax asset, January 1, 2020, \$0.
3. Taxable income for 2020, \$95,000.
4. Pretax financial income for 2020, \$200,000.
5. Cumulative temporary difference at December 31, 2020, giving rise to future taxable amounts, \$240,000.
6. Cumulative temporary difference at December 31, 2020, giving rise to future deductible amounts, \$35,000.
7. Tax rate for all years, 20%.
8. The company is expected to operate profitably in the future.

Instructions

- Compute income taxes payable for 2020.
- Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2020.
- Prepare the income tax expense section of the income statement for 2020, beginning with the line "Income before income taxes."

E19.6 (LO 1, 2) (Identify Temporary or Permanent Differences) Listed below are items that are commonly accounted for differently for financial reporting purposes than they are for tax purposes.

Instructions

For each item below, indicate whether it involves:

- A temporary difference that will result in future deductible amounts and, therefore, will usually give rise to a deferred income tax asset.
- A temporary difference that will result in future taxable amounts and, therefore, will usually give rise to a deferred income tax liability.
- A permanent difference.

Use the appropriate number to indicate your answer for each.

- _____ The MACRS depreciation system is used for tax purposes, and the straight-line depreciation method is used for financial reporting purposes for some plant assets.
- _____ A landlord collects some rents in advance. Rents received are taxable in the period when they are received.
- _____ Expenses are incurred in obtaining tax-exempt income.
- _____ Costs of guarantees and warranties are estimated and accrued for financial reporting purposes.
- _____ Installment sales of investments are accounted for by the accrual method for financial reporting purposes and the installment method for tax purposes.
- _____ For some assets, straight-line depreciation is used for both financial reporting purposes and tax purposes, but the assets' lives are shorter for tax purposes.
- _____ Interest is received on an investment in tax-exempt municipal obligations.
- _____ Proceeds are received from a life insurance company because of the death of a key officer. (The company carries a policy on key officers.)
- _____ The tax return reports a deduction for 80% of the dividends received from U.S. corporations. The cost method is used in accounting for the related investments for financial reporting purposes.
- _____ Estimated losses on pending lawsuits and claims are accrued for books. These losses are tax-deductible in the period(s) when the related liabilities are settled.
- _____ Expenses on stock options are accrued for financial reporting purposes.

E19.7 (LO 1, 2) (Terminology, Relationships, Computations, Entries)

Instructions

Complete the following statements by filling in the blanks.

- In a period in which a taxable temporary difference reverses, the reversal will cause taxable income to be _____ (less than, greater than) pretax financial income.
- If a \$38,000 balance in Deferred Tax Asset was computed by use of a 20% rate, the underlying cumulative temporary difference amounts to \$_____.
- Deferred taxes _____ (are, are not) recorded to account for permanent differences.
- If a taxable temporary difference originates in 2020, it will cause taxable income for 2020 to be _____ (less than, greater than) pretax financial income for 2020.
- If total tax expense is \$50,000 and deferred tax expense is \$65,000, then the current portion of the expense computation is referred to as current tax _____ (expense, benefit) of \$_____.
- If a corporation's tax return shows taxable income of \$100,000 for Year 2 and a tax rate of 20%, how much will appear on the December 31, Year 2, balance sheet for "Income taxes payable" if the company has made estimated tax payments of \$18,250 for Year 2? \$_____.
- An increase in the Deferred Tax Liability account on the balance sheet is recorded by a _____ (debit, credit) to the Income Tax Expense account.

- h. An income statement that reports current tax expense of \$82,000 and deferred tax benefit of \$23,000 will report total income tax expense of \$_____.
- i. A valuation account is needed whenever it is judged to be _____ that a portion of a deferred tax asset _____ (will be, will not be) realized.
- j. If the tax return shows total taxes due for the period of \$75,000 but the income statement shows total income tax expense of \$55,000, the difference of \$20,000 is referred to as deferred tax _____ (expense, benefit).

E19.8 (LO 1, 2) (Two Temporary Differences, One Rate, 3 Years) Button Company has the following two temporary differences between its income tax expense and income taxes payable.

| | 2020 | 2021 | 2022 |
|---|------------------|------------------|------------------|
| Pretax financial income | \$840,000 | \$910,000 | \$945,000 |
| Excess depreciation expense on tax return | (30,000) | (40,000) | (10,000) |
| Excess warranty expense in financial income | 20,000 | 10,000 | 8,000 |
| Taxable income | <u>\$830,000</u> | <u>\$880,000</u> | <u>\$943,000</u> |

The income tax rate for all years is 20%.

Instructions

- Assuming there were no temporary differences prior to 2020, prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2020, 2021, and 2022.
- Indicate how deferred taxes will be reported on the 2022 balance sheet. Button's product warranty is for 12 months.
- Prepare the income tax expense section of the income statement for 2022, beginning with the line "Pretax financial income."

E19.9 (LO 4) (Three Differences, Classify Deferred Taxes) At December 31, 2019, Belmont Company had a net deferred tax liability of \$375,000. An explanation of the items that compose this balance is as follows.

| Temporary Differences | Resulting Balances in Deferred Taxes |
|--|---|
| 1. Excess of tax depreciation over book depreciation | \$200,000 |
| 2. Accrual, for book purposes, of estimated loss contingency from pending lawsuit that is expected to be settled in 2020. The loss will be deducted on the tax return when paid. | (50,000) |
| 3. Accrual method used for book purposes and installment method used for tax purposes for an isolated installment sale of an investment. | <u>225,000</u> |
| | <u>\$375,000</u> |

In analyzing the temporary differences, you find that \$30,000 of the depreciation temporary difference will reverse in 2020, and \$120,000 of the temporary difference due to the installment sale will reverse in 2020. The tax rate for all years is 20%.

Instructions

Indicate the manner in which deferred taxes should be presented on Belmont Company's December 31, 2019, balance sheet.

E19.10 (LO 1, 2) (Two Temporary Differences, One Rate, Beginning Deferred Taxes, Compute Pretax Financial Income) The following facts relate to Duncan Corporation.

- Deferred tax liability, January 1, 2020, \$30,000.
- Deferred tax asset, January 1, 2020, \$10,000.
- Taxable income for 2020, \$105,000.
- Cumulative temporary difference at December 31, 2020, giving rise to future taxable amounts, \$230,000.
- Cumulative temporary difference at December 31, 2020, giving rise to future deductible amounts, \$95,000.
- Tax rate for all years, 20%. No permanent differences exist.
- The company is expected to operate profitably in the future.

Instructions

- Compute the amount of pretax financial income for 2020.
- Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2020.
- Prepare the income tax expense section of the income statement for 2020, beginning with the line "Income before income taxes."
- Compute the effective tax rate for 2020.

E19.11 (LO 1, 2) (One Difference, Multiple Rates, Effect of Beginning Balance versus No Beginning Deferred Taxes) At the end of 2019, Lucretia McEvil Company has \$180,000 of cumulative temporary differences that will result in reporting the following future taxable amounts.

| | |
|------|------------------|
| 2020 | \$ 60,000 |
| 2021 | 50,000 |
| 2022 | 40,000 |
| 2023 | 30,000 |
| | <u>\$180,000</u> |

Tax rates enacted as of the beginning of 2018 are:

| | |
|----------------|-----|
| 2018 and 2019 | 40% |
| 2020 and 2021 | 30% |
| 2022 and later | 25% |

McEvil's taxable income for 2019 is \$320,000. Taxable income is expected in all future years.

Instructions

- Prepare the journal entry for McEvil to record income taxes payable, deferred income taxes, and income tax expense for 2019, assuming that there were no deferred taxes at the end of 2018.
- Prepare the journal entry for McEvil to record income taxes payable, deferred income taxes, and income tax expense for 2019, assuming that there was a balance of \$22,000 in a Deferred Tax Liability account at the end of 2018.

E19.12 (LO 1, 2) (Deferred Tax Asset with and without Valuation Account) Jennifer Capriati Corp. has a deferred tax asset account with a balance of \$75,000 at the end of 2019 due to a single cumulative temporary difference of \$375,000. At the end of 2020, this same temporary difference has increased to a cumulative amount of \$450,000. Taxable income for 2020 is \$820,000. The tax rate is 20% for all years. No valuation account related to the deferred tax asset is in existence at the end of 2019.

Instructions

- Record income tax expense, deferred income taxes, and income taxes payable for 2020, assuming that it is more likely than not that the deferred tax asset will be realized.
- Assuming that it is more likely than not that \$15,000 of the deferred tax asset will not be realized, prepare the journal entry at the end of 2020 to record the valuation account.

E19.13 (LO 1, 2) (Deferred Tax Asset with Previous Valuation Account) Assume the same information as E19.12, except that at the end of 2019, Jennifer Capriati Corp. had a valuation account related to its deferred tax asset of \$22,500.

Instructions

- Record income tax expense, deferred income taxes, and income taxes payable for 2020, assuming that it is more likely than not that the deferred tax asset will be realized in full.
- Record income tax expense, deferred income taxes, and income taxes payable for 2020, assuming that it is more likely than not that none of the deferred tax asset will be realized.

E19.14 (LO 1, 2, 4) (Deferred Tax Liability, Change in Tax Rate, Prepare Section of Income Statement) Novotna Inc.'s only temporary difference at the beginning and end of 2019 is caused by a \$3 million deferred gain for tax purposes for an installment sale of a plant asset, and the related receivable (only one-half of which is classified as a current asset) is due in equal installments in 2020 and 2021. The related deferred tax liability at the beginning of the year is \$900,000. In the third quarter of 2019, a new tax rate of 20% is enacted into law and is scheduled to become effective for 2021. Taxable income for 2019 is \$5,000,000, and taxable income is expected in all future years.

Instructions

- Determine the amount reported as a deferred tax liability at the end of 2019. Indicate proper classification(s).
- Prepare the journal entry (if any) necessary to adjust the deferred tax liability when the new tax rate is enacted into law.
- Draft the income tax expense portion of the income statement for 2019. Begin with the line "Income before income taxes." Assume no permanent differences exist.

E19.15 (LO 1, 2) (Two Temporary Differences, Tracked through 3 Years, Multiple Rates) Taxable income and pretax financial income would be identical for Huber Co. except for its treatments of gross profit on installment sales and estimated costs of warranties. The following income computations have been prepared.

| | 2019 | 2020 | 2021 |
|---|------------------|------------------|-----------------|
| <u>Taxable Income</u> | | | |
| Excess of revenues over expenses (excluding two temporary differences) | \$160,000 | \$210,000 | \$90,000 |
| Installment gross profit collected | 8,000 | 8,000 | 8,000 |
| Expenditures for warranties | (5,000) | (5,000) | (5,000) |
| Taxable income | <u>\$163,000</u> | <u>\$213,000</u> | <u>\$93,000</u> |
| <u>Pretax Financial Income</u> | | | |
| Excess of revenues over expenses (excluding two temporary differences) | \$160,000 | \$210,000 | \$90,000 |
| Installment gross profit recognized | 24,000 | –0– | –0– |
| Estimated cost of warranties | (15,000) | –0– | –0– |
| Income before taxes | <u>\$169,000</u> | <u>\$210,000</u> | <u>\$90,000</u> |

The tax rates in effect are 2019, 20%; 2020 and 2021, 25%. All tax rates were enacted into law on January 1, 2019. No deferred income taxes existed at the beginning of 2019. Taxable income is expected in all future years.

Instructions

Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2019, 2020, and 2021.

E19.16 (LO 1, 2) (Three Differences, Multiple Rates, Future Taxable Income) During 2020, Kate Holmes Co.'s first year of operations, the company reports pretax financial income at \$250,000. Holmes's enacted tax rate is 45% for 2020 and 20% for all later years. Holmes expects to have taxable income in each of the next 5 years. The effects on future tax returns of temporary differences existing at December 31, 2020, are summarized as follows.

| | Future Years | | | | | Total |
|--------------------------------------|--------------|----------|----------|-------|-------|-----------|
| | 2021 | 2022 | 2023 | 2024 | 2025 | |
| Future taxable (deductible) amounts: | | | | | | |
| Installment sales | \$32,000 | \$32,000 | \$32,000 | | | \$ 96,000 |
| Depreciation | 6,000 | 6,000 | 6,000 | 6,000 | 6,000 | 30,000 |
| Unearned rent | (50,000) | (50,000) | | | | (100,000) |

Instructions

- Complete the schedule below to compute deferred taxes at December 31, 2020.
- Compute taxable income for 2020.
- Prepare the journal entry to record income taxes payable, deferred taxes, and income tax expense for 2020.

| Temporary Difference | Future Taxable (Deductible) Amounts | Tax Rate | December 31, 2020 Deferred Tax | |
|----------------------|---|-------------|-----------------------------------|-------------|
| | | | (Asset) | Liability |
| Installment sales | \$ 96,000 | | | |
| Depreciation | 30,000 | | | |
| Unearned rent | \$(100,000) | | | |
| Totals | <u>\$</u> | | <u> </u> | <u> </u> |

E19.17 (LO 1, 2) (Two Differences, One Rate, Beginning Deferred Balance, Compute Pretax Financial Income) Andy McDowell Co. establishes a \$100 million liability at the end of 2020 for the estimated site-cleanup costs at two of its manufacturing facilities. All related closing costs will be paid and deducted on the tax return in 2021. Also, at the end of 2020, the company has \$50 million of temporary differences due to excess depreciation for tax purposes, \$7 million of which will reverse in 2021.

The enacted tax rate for all years is 20%, and the company pays taxes of \$32 million on \$160 million of taxable income in 2020. McDowell expects to have taxable income in 2021.

Instructions

- Determine the deferred taxes to be reported at the end of 2020.
- Indicate how the deferred taxes computed in (a) are to be reported on the balance sheet.
- Assuming that the only deferred tax account at the beginning of 2020 was a deferred tax liability of \$5,000,000, draft the income tax expense portion of the income statement for 2020, beginning with the line "Income before income taxes." (*Hint:* You must first compute (1) the amount of temporary difference underlying the beginning \$5,000,000 deferred tax liability, then (2) the amount of temporary differences originating or reversing during the year, and then (3) the amount of pretax financial income.)

E19.18 (LO 1, 2) (Two Differences, No Beginning Deferred Taxes, Multiple Rates) Teri Hatcher Inc., in its first year of operations, has the following differences between the book basis and tax basis of its assets and liabilities at the end of 2019.

| | <u>Book Basis</u> | <u>Tax Basis</u> |
|------------------------------|-------------------|------------------|
| Equipment (net) | \$400,000 | \$340,000 |
| Estimated warranty liability | \$200,000 | \$ -0- |

It is estimated that the warranty liability will be settled in 2020. The difference in equipment (net) will result in taxable amounts of \$20,000 in 2020, \$30,000 in 2021, and \$10,000 in 2022. The company has taxable income of \$520,000 in 2019. As of the beginning of 2019, the enacted tax rate is 34% for 2019–2021, and 30% for 2022. Hatcher expects to report taxable income through 2022.

Instructions

- Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2019.
- Indicate how deferred income taxes will be reported on the balance sheet at the end of 2019.

E19.19 (LO 1, 2, 4) (Two Temporary Differences, Multiple Rates, Future Taxable Income) Nadal Inc. has two temporary differences at the end of 2019. The first difference stems from installment sales, and the second one results from the accrual of a loss contingency. Nadal's accounting department has developed a schedule of future taxable and deductible amounts related to these temporary differences as follows.

| | <u>2020</u> | <u>2021</u> | <u>2022</u> | <u>2023</u> |
|--------------------|-----------------|-----------------|-----------------|-----------------|
| Taxable amounts | \$40,000 | \$50,000 | \$60,000 | \$80,000 |
| Deductible amounts | | (15,000) | (19,000) | |
| | <u>\$40,000</u> | <u>\$35,000</u> | <u>\$41,000</u> | <u>\$80,000</u> |

As of the beginning of 2019, the enacted tax rate is 34% for 2019 and 2020, and 20% for 2021–2024. At the beginning of 2019, the company had no deferred income taxes on its balance sheet. Taxable income for 2019 is \$500,000. Taxable income is expected in all future years.

Instructions

- Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2019.
- Indicate how deferred income taxes would be classified on the balance sheet at the end of 2019.

E19.20 (LO 1, 2, 4) (Two Differences, One Rate, First Year) The differences between the book basis and tax basis of the assets and liabilities of Castle Corporation at the end of 2019 are presented below.

| | <u>Book Basis</u> | <u>Tax Basis</u> |
|----------------------|-------------------|------------------|
| Accounts receivable | \$50,000 | \$-0- |
| Litigation liability | 30,000 | -0- |

It is estimated that the litigation liability will be settled in 2020. The difference in accounts receivable will result in taxable amounts of \$30,000 in 2020 and \$20,000 in 2021. The company has taxable income of \$350,000 in 2019 and is expected to have taxable income in each of the following 2 years. Its enacted tax rate is 34% for all years. This is the company's first year of operations. The operating cycle of the business is 2 years.

Instructions

- Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2019.
- Indicate how deferred income taxes will be reported on the balance sheet at the end of 2019.

E19.21 (LO 3) (Carryforward of NOL, No Valuation Account, No Temporary Differences) The pretax financial income (or loss) figures for Jenny Spangler Company are as follows.

| | |
|------|-----------|
| 2017 | \$ 80,000 |
| 2018 | (160,000) |
| 2019 | (380,000) |
| 2020 | 120,000 |
| 2021 | 100,000 |

Pretax financial income (or loss) and taxable income (loss) were the same for all years involved. Assume a 25% tax rate for 2015 and 2016, and a 20% tax rate for the remaining years.

Instructions

Prepare the journal entries for the years 2017 to 2021 to record income tax expense and the effects of the net operating loss carryforwards. All income and losses relate to normal operations. (In recording the benefits of a loss carryforward, assume that no valuation account is deemed necessary.)

E19.22 (LO 3) (Two NOLs, No Temporary Differences, No Valuation Account, Entries and Income Statement) Felicia Rashad Corporation has pretax financial income (or loss) from 2015 through 2021 as follows.

| | Income (Loss) | Tax Rate |
|------|---------------|----------|
| 2015 | \$ 48,000 | 25% |
| 2016 | (150,000) | 20 |
| 2017 | 90,000 | 20 |
| 2018 | 30,000 | 20 |
| 2019 | 105,000 | 20 |
| 2020 | (60,000) | 25 |
| 2021 | 130,000 | 25 |

Pretax financial income (loss) and taxable income (loss) were the same for all years since Rashad has been in business. In recording the benefits of a loss carryforward, assume that it is more likely than not that the related benefits will be realized.

Instructions

- What entry(ies) for income taxes should be recorded for 2016?
- Indicate what the income tax expense portion of the income statement for 2016 should look like. Assume all income (loss) relates to continuing operations.
- What entry for income taxes should be recorded in 2017?
- How should the income tax expense section of the income statement for 2017 appear?
- What entry for income taxes should be recorded in 2020?
- How should the income tax expense section of the income statement for 2020 appear?

E19.23 (LO 3) (NOL Carryforward, Valuation Account versus No Valuation Account) Spamela Hamderson Inc. reports the following pretax income (loss) for both financial reporting purposes and tax purposes.

| Year | Pretax Income (Loss) | Tax Rate |
|------|----------------------|----------|
| 2018 | \$120,000 | 17% |
| 2019 | 90,000 | 17 |
| 2020 | (280,000) | 19 |
| 2021 | 300,000 | 19 |

The tax rates listed were all enacted by the beginning of 2018.

Instructions

- Prepare the journal entries for the years 2018–2021 to record income tax expense (benefit) and income taxes payable (refundable) and the tax effects of the loss carryforward, assuming that at the end of 2020 the benefits of the loss carryforward are judged more likely than not to be realized in the future.
- Using the assumption in (a), prepare the income tax section of the 2020 income statement beginning with the line “Operating loss before income taxes.”
- Prepare the journal entries for 2020 and 2021, assuming that based on the weight of available evidence, it is more likely than not that one-fourth of the benefits of the loss carryforward will not be realized.
- Using the assumption in (c), prepare the income tax section of the 2020 income statement beginning with the line “Operating loss before income taxes.”

E19.24 (LO 3) (NOL Carryforward, Valuation Account Needed) Beilman Inc. reports the following pretax income (loss) for both book and tax purposes.

| Year | Pretax Income (Loss) | Tax Rate |
|------|----------------------|----------|
| 2018 | \$120,000 | 20% |
| 2019 | 90,000 | 20 |
| 2020 | (280,000) | 25 |
| 2021 | 120,000 | 25 |

The tax rates listed were all enacted by the beginning of 2018.

Instructions

- Prepare the journal entries for years 2018–2021 to record income tax expense (benefit) and income taxes payable (refundable), and the tax effects of the loss carryforward, assuming that based on the weight of available evidence, it is more likely than not that one-half of the benefits of the loss carryforward will not be realized.
- Prepare the income tax section of the 2020 income statement beginning with the line “Operating loss before income taxes.”
- Prepare the income tax section of the 2021 income statement beginning with the line “Income before income taxes.”

E19.25 (LO 3) (NOL Carryforward, Valuation Account Needed) Meyer reported the following pretax financial income (loss) for the years 2020–2022.

| | |
|------|-----------|
| 2020 | \$120,000 |
| 2021 | (150,000) |
| 2022 | 180,000 |

Pretax financial income (loss) and taxable income (loss) were the same for all years involved. The enacted tax rate was 20% for 2020–2022.

Instructions

- Prepare the journal entries for the years 2020–2022 to record income tax expense, income taxes payable, and the tax effects of the loss carryforward, assuming that based on the weight of available evidence, it is more likely than not that one-fifth of the benefits of the loss carryforward will not be realized.
- Prepare the income tax section of the 2021 income statement beginning with the line “Income (loss) before income taxes.”

***E19.26 (LO 6) (Carryback and Carryforward of NOL, No Valuation Account, No Temporary Differences)** The pretax financial income (or loss) figures for Dan Lynch Company are as follows.

| | |
|------|-----------|
| 2015 | \$160,000 |
| 2016 | 250,000 |
| 2017 | 80,000 |
| 2018 | (160,000) |
| 2019 | (380,000) |
| 2020 | 120,000 |
| 2021 | 100,000 |

Pretax financial income (or loss) and taxable income (loss) were the same for all years involved. Assume a 45% tax rate for 2015 and 2016, and a 20% tax rate for the remaining years.

Instructions

Prepare the journal entries for the years 2017 to 2021 to record income tax expense and the effects of the net operating loss carrybacks and carryforwards assuming Dan Lynch Company uses the carryback provision. All income and losses relate to normal operations. (In recording the benefits of a loss carryforward, assume that no valuation account is deemed necessary.)

***E19.27 (LO 6) (NOL Carryback and Carryforward, Valuation Account Needed)** Wangerin Company reported the following pretax financial income (loss) for the years 2018–2022.

| | |
|------|-----------|
| 2018 | \$240,000 |
| 2019 | 350,000 |
| 2020 | 120,000 |
| 2021 | (570,000) |
| 2022 | 180,000 |

Pretax financial income (loss) and taxable income (loss) were the same for all years involved. The enacted tax rate was 34% for 2018 and 2019, and 20% for 2020–2022. Assume the carryback provision is used first for net operating losses.

Instructions

- Prepare the journal entries for the years 2020–2022 to record income tax expense, income taxes payable (refundable), and the tax effects of the loss carryback and loss carryforward, assuming no valuation allowance is needed.
- Prepare the income tax section of the 2021 income statement beginning with the line “Income (loss) before income taxes.”

Problems

P19.1 (LO 1, 2, 4) Excel (Three Differences, No Beginning Deferred Taxes, Multiple Rates) The following information is available for Remmers Corporation for 2020.

- Depreciation reported on the tax return exceeded depreciation reported on the income statement by \$120,000. This difference will reverse in equal amounts of \$30,000 over the years 2021–2024.
- Interest received on municipal bonds was \$10,000.
- Rent collected in advance on January 1, 2020, totaled \$60,000 for a 3-year period. Of this amount, \$40,000 was reported as unearned at December 31, 2020, for book purposes.
- The tax rates are 20% for 2020 and 17% for 2021 and subsequent years.
- Income taxes of \$160,000 are due per the tax return for 2020.
- No deferred taxes existed at the beginning of 2020.

Instructions

- Compute taxable income for 2020.
- Compute pretax financial income for 2020.
- Prepare the journal entries to record income tax expense, deferred income taxes, and income taxes payable for 2020 and 2021. Assume taxable income was \$480,000 in 2021.
- Prepare the income tax expense section of the income statement for 2020, beginning with “Income before income taxes.”

P19.2 (LO 1, 2) (One Temporary Difference, Tracked for 4 Years, One Permanent Difference, Change in Rate) The pretax financial income of Truttman Company differs from its taxable income throughout each of 4 years as follows.

| Year | Pretax Financial Income | Taxable Income | Tax Rate |
|------|----------------------------|-------------------|----------|
| 2020 | \$290,000 | \$180,000 | 35% |
| 2021 | 320,000 | 225,000 | 20 |
| 2022 | 350,000 | 260,000 | 20 |
| 2023 | 420,000 | 560,000 | 20 |

Pretax financial income for each year includes a nondeductible expense of \$30,000 (never deductible for tax purposes). The remainder of the difference between pretax financial income and taxable income in each period is due to one depreciation temporary difference. No deferred income taxes existed at the beginning of 2020.

Instructions

- Prepare journal entries to record income taxes in all 4 years. Assume that the change in the tax rate to 20% was not enacted until the beginning of 2021.
- Prepare the income statement for 2021, beginning with Income before income taxes.

P19.3 (LO 1, 2, 4) (Second Year of Depreciation Difference, Two Differences, Single Rate, Discontinued Operation) The following information has been obtained for Gocker Corporation.

- Prior to 2020, taxable income and pretax financial income were identical.
- Pretax financial income is \$1,700,000 in 2020 and \$1,400,000 in 2021.
- On January 1, 2020, equipment costing \$1,200,000 is purchased. It is to be depreciated on a straight-line basis over 5 years for tax purposes and over 8 years for financial reporting purposes. (*Hint:* Use the half-year convention for tax purposes, as discussed in Appendix 11A.)
- Interest of \$60,000 was earned on tax-exempt municipal obligations in 2021.
- Included in 2021 pretax financial income is a gain on discontinued operations of \$200,000, which is fully taxable.
- The tax rate is 20% for all periods.
- Taxable income is expected in all future years.

Instructions

- Compute taxable income and income taxes payable for 2021.
- Prepare the journal entry to record 2021 income tax expense, income taxes payable, and deferred taxes.
- Prepare the bottom portion of Gocker's 2021 income statement, beginning with "Income from continuing operations before income taxes."
- Indicate how deferred income taxes should be presented on the December 31, 2021, balance sheet.

P19.4 (LO 1, 2, 4) (Permanent and Temporary Differences, One Rate) The accounting records of Shinault Inc. show the following data for 2020 (its first year of operations).

- Life insurance expense on officers was \$9,000.
- Equipment was acquired in early January for \$300,000. Straight-line depreciation over a 5-year life is used, with no salvage value. For tax purposes, Shinault used a 30% rate to calculate depreciation.
- Interest revenue on State of New York bonds totaled \$4,000.
- Product warranties were estimated to be \$50,000 in 2020. Actual repair and labor costs related to the warranties in 2020 were \$10,000. The remainder is estimated to be paid evenly in 2021 and 2022.
- Gross profit on an accrual basis was \$100,000. For tax purposes, \$75,000 was recorded on the installment-sales method.
- Fines incurred for pollution violations were \$4,200.
- Pretax financial income was \$750,000. The tax rate is 30%.

Instructions

- Prepare a schedule starting with pretax financial income in 2020 and ending with taxable income in 2020.
- Prepare the journal entry for 2020 to record income taxes payable, income tax expense, and deferred income taxes.

P19.5 (LO 3) Excel Groupwork (NOL without Valuation Account) Jennings Inc. reported the following pretax income (loss) and related tax rates during the years 2019–2022.

| | <u>Pretax Income (Loss)</u> | <u>Tax Rate</u> |
|------|-----------------------------|-----------------|
| 2019 | 80,000 | 40% |
| 2020 | (180,000) | 40% |
| 2021 | 200,000 | 20% |
| 2022 | 100,000 | 20% |

Pretax financial income (loss) and taxable income (loss) were the same for all years since Jennings began business. The tax rates from 2019–2022 were enacted in 2019.

Instructions

- Prepare the journal entries for the years 2020–2022 to record income taxes payable (refundable), income tax expense (benefit), and the tax effects of the loss carryforward. Assume that Jennings expects to realize the benefits of any loss carryforward in the year that immediately follows the loss year.
- Indicate the effect the 2020 entry(ies) has on the December 31, 2020, balance sheet.
- Prepare the portion of the income statement, starting with “Operating loss before income taxes,” for 2020.
- Prepare the portion of the income statement, starting with “Income before income taxes,” for 2021.

P19.6 (LO 1, 4) (Two Differences, Two Rates, Future Income Expected) Presented below are two independent situations related to future taxable and deductible amounts resulting from temporary differences existing at December 31, 2020.

- Mooney Co. has developed the following schedule of future taxable and deductible amounts.

| | 2021 | 2022 | 2023 | 2024 | 2025 |
|-------------------|-------|-------|-------|---------|-------|
| Taxable amounts | \$300 | \$300 | \$300 | \$ 300 | \$300 |
| Deductible amount | — | — | — | (1,600) | — |

- Roesch Co. has the following schedule of future taxable and deductible amounts.

| | 2021 | 2022 | 2023 | 2024 |
|-------------------|-------|-------|---------|-------|
| Taxable amounts | \$300 | \$300 | \$ 300 | \$300 |
| Deductible amount | — | — | (2,300) | — |

Both Mooney Co. and Roesch Co. have taxable income of \$4,000 in 2020 and expect to have taxable income in all future years. The tax rates enacted as of the beginning of 2020 are 30% for 2020–2023 and 35% for years thereafter. All of the underlying temporary differences relate to noncurrent assets and liabilities.

Instructions

For each of these two situations, compute the net amount of deferred income taxes to be reported at the end of 2020, and indicate how it should be classified on the balance sheet.

P19.7 (LO 1, 2, 4) Groupwork (One Temporary Difference, Tracked 3 Years, Change in Rates, Income Statement Presentation) Crosley Corp. sold an investment on an installment basis. The total gain of \$60,000 was reported for financial reporting purposes in the period of sale. The company qualifies to use the installment-sales method for tax purposes. The installment period is 3 years; one-third of the sale price is collected in the period of sale. The tax rate was 40% in 2020, and 20% in 2021 and 2022. The 20% tax rate was not enacted in law until 2021. The accounting and tax data for the 3 years is shown below.

| | Financial Accounting | Tax Return |
|------------------------------------|-------------------------|-----------------|
| <u>2020 (40% tax rate)</u> | | |
| Income before temporary difference | \$ 70,000 | \$70,000 |
| Temporary difference | 60,000 | 20,000 |
| Income | <u>\$130,000</u> | <u>\$90,000</u> |
| <u>2021 (20% tax rate)</u> | | |
| Income before temporary difference | \$ 70,000 | \$70,000 |
| Temporary difference | –0– | 20,000 |
| Income | <u>\$ 70,000</u> | <u>\$90,000</u> |
| <u>2022 (20% tax rate)</u> | | |
| Income before temporary difference | \$ 70,000 | \$70,000 |
| Temporary difference | –0– | 20,000 |
| Income | <u>\$ 70,000</u> | <u>\$90,000</u> |

Instructions

- Prepare the journal entries to record the income tax expense, deferred income taxes, and the income taxes payable at the end of each year. No deferred income taxes existed at the beginning of 2020.
- Explain how the deferred taxes will appear on the balance sheet at the end of each year.
- Draft the income tax expense section of the income statement for each year, beginning with “Income before income taxes.”

P19.8 (LO 1, 2, 4) (Two Differences, 2 Years, Compute Taxable Income and Pretax Financial Income) The following information was disclosed during the audit of Elbert Inc.

1.

| Year | Amount Due per Tax Return |
|------|------------------------------|
| 2020 | \$130,000 |
| 2021 | 104,000 |
2. On January 1, 2020, equipment costing \$600,000 is purchased. For financial reporting purposes, the company uses straight-line depreciation over a 5-year life. For tax purposes, the company uses the elective straight-line method over a 5-year life. (*Hint:* For tax purposes, the half-year convention as discussed in Appendix 11A must be used.)
3. In January 2021, \$225,000 is collected in advance rental of a building for a 3-year period. The entire \$225,000 is reported as taxable income in 2021, but \$150,000 of the \$225,000 is reported as unearned revenue in 2021 for financial reporting purposes. The remaining amount of unearned revenue is to be recognized equally in 2022 and 2023.
4. The tax rate is 20% in 2020 and all subsequent periods. (*Hint:* To find taxable income in 2020 and 2021, the related income taxes payable amounts will have to be “grossed up.”)
5. No temporary differences existed at the end of 2019. Elbert expects to report taxable income in each of the next 5 years.

Instructions

- a. Determine the amount to report for deferred income taxes at the end of 2020, and indicate how it should be classified on the balance sheet.
- b. Prepare the journal entry to record income taxes for 2020.
- c. Draft the income tax section of the income statement for 2020, beginning with “Income before income taxes.” (*Hint:* You must compute taxable income and then combine that with changes in cumulative temporary differences to arrive at pretax financial income.)
- d. Determine the deferred income taxes at the end of 2021, and indicate how they should be classified on the balance sheet.
- e. Prepare the journal entry to record income taxes for 2021.
- f. Draft the income tax section of the income statement for 2021, beginning with “Income before income taxes.”

P19.9 (LO 1, 2, 4) Groupwork (Five Differences, Compute Taxable Income and Deferred Taxes, Draft Income Statement) Wise Company began operations at the beginning of 2021. The following information pertains to this company.

1. Pretax financial income for 2021 is \$100,000.
2. The tax rate enacted for 2021 and future years is 20%.
3. Differences between the 2021 income statement and tax return are listed below:
 - a. Warranty expense accrued for financial reporting purposes amounts to \$7,000. Warranty deductions per the tax return amount to \$2,000.
 - b. Gross profit on construction contracts using the percentage-of-completion method per books amounts to \$92,000. Gross profit on construction contracts for tax purposes amounts to \$67,000.
 - c. Depreciation of property, plant, and equipment for financial reporting purposes amounts to \$60,000. Depreciation of these assets amounts to \$80,000 for the tax return.
 - d. A \$3,500 fine paid for violation of pollution laws was deducted in computing pretax financial income.
 - e. Interest revenue recognized on an investment in tax-exempt municipal bonds amounts to \$1,500.
4. Taxable income is expected for the next few years. (Assume (a) is short-term in nature; assume (b) and (c) are long-term in nature.)

Instructions

- a. Compute taxable income for 2021.
- b. Compute the deferred taxes at December 31, 2021, that relate to the temporary differences described above. Clearly label them as deferred tax asset or liability.
- c. Prepare the journal entry to record income tax expense, deferred taxes, and income taxes payable for 2021.
- d. Draft the income tax expense section of the income statement, beginning with “Income before income taxes.”

Concepts for Analysis

CA19.1 (LO 1) Writing (Objectives and Principles for Accounting for Income Taxes) The amount of income taxes due to the government for a period of time is rarely the amount reported on the income statement for that period as income tax expense.

Instructions

- Explain the objectives of accounting for income taxes in general-purpose financial statements.
- Explain the basic principles that are applied in accounting for income taxes at the date of the financial statements to meet the objectives discussed in (a).
- List the steps in the annual computation of deferred tax liabilities and assets.

CA19.2 (LO 1) Writing (Basic Accounting for Temporary Differences) Dexter Company appropriately uses the asset-liability method to record deferred income taxes. Dexter reports depreciation expense for certain machinery purchased this year using the modified accelerated cost recovery system (MACRS) for income tax purposes and the straight-line basis for financial reporting purposes. The tax deduction is the larger amount this year.

Dexter received rent revenues in advance this year. These revenues are included in this year's taxable income. However, for financial reporting purposes, these revenues are reported as unearned revenues, a current liability.

Instructions

- What are the principles of the asset-liability approach?
- How would Dexter account for the temporary differences?
- How should Dexter classify the deferred tax consequences of the temporary differences on its balance sheet?

CA19.3 (LO 1, 2) (Identify Temporary Differences and Classification Criteria) The asset-liability approach for recording deferred income taxes is an integral part of generally accepted accounting principles.

Instructions

- Indicate whether each of the following independent situations should be treated as a temporary difference or as a permanent difference, and explain why.
 - Estimated warranty costs (covering a 3-year warranty) are expensed for financial reporting purposes at the time of sale but deducted for income tax purposes when paid.
 - Depreciation for book and income tax purposes differs because of different bases of carrying the related property, which was acquired in a trade-in. The different bases are a result of different rules used for book and tax purposes to compute the basis of property acquired in a trade-in.
 - A company properly uses the equity method to account for its 30% investment in another company. The investee pays dividends that are about 10% of its annual earnings.
 - A company reports a gain on an involuntary conversion of a nonmonetary asset to a monetary asset. The company elects to replace the property within the statutory period using the total proceeds so the gain is not reported on the current year's tax return.
- Discuss the nature of the deferred income tax accounts and the manner in which these accounts are to be reported on the balance sheet.

CA19.4 (LO 1, 2) (Accounting and Classification of Deferred Income Taxes)

Part A: This year, Gumowski Company has each of the following items in its income statement.

- Gross profits on installment sales.
- Revenues on long-term construction contracts.
- Estimated costs of product warranty contracts.
- Premiums on officers' life insurance policies with Gumowski as beneficiary.

Instructions

- Indicate where deferred income taxes are reported in the financial statements.
- Specify when deferred income taxes would need to be recognized for each of the items above, and indicate the rationale for such recognition.

Part B: Gumowski Company's president has heard that deferred income taxes can be classified in different ways in the balance sheet.

Instructions

Identify the conditions under which deferred income taxes would be classified as a noncurrent item in the balance sheet. What justification exists for such classification?

(AICPA adapted)

CA19.5 (LO 1, 2) (Explain Computation of Deferred Tax Liability for Multiple Tax Rates) At December 31, 2020, Higley Corporation has one temporary difference which will reverse and cause taxable amounts in 2021. In 2020, a new tax act set taxes equal to 35% for 2020, 30% for 2021, and 20% for 2022 and years thereafter.

Instructions

Explain what circumstances would call for Higley to compute its deferred tax liability at the end of 2020 by multiplying the cumulative temporary difference by:

- 35%.
- 30%.
- 20%.

CA19.6 (LO 1, 2, 3) (Explain Future Taxable and Deductible Amounts, How Carryforward Affects Deferred Taxes) Maria Rodriguez and Lynette Kingston are discussing accounting for income taxes. They are currently studying a schedule of taxable and deductible amounts that will arise in the future as a result of existing temporary differences. The schedule is as follows.

| | Future Years | | | | |
|--------------------|--------------|-----------|-----------|-------------|-----------|
| | 2020 | 2021 | 2022 | 2023 | 2024 |
| Taxable income | \$850,000 | | | | |
| Taxable amounts | | \$375,000 | \$375,000 | \$375,000 | \$375,000 |
| Deductible amounts | | | | (2,400,000) | |
| Enacted tax rate | 50% | 45% | 40% | 35% | 30% |

Instructions

- Explain the concept of future taxable amounts and future deductible amounts as illustrated in the schedule.
- How does the carryforward provision affect the reporting of deferred tax assets and deferred tax liabilities?

CA19.7 (LO 1, 2) Ethics (Deferred Taxes, Income Effects) Stephanie Delaney, CPA, is the newly hired director of corporate taxation for Acme Incorporated, which is a publicly traded corporation. Ms. Delaney's first job with Acme was the review of the company's accounting practices on deferred income taxes. In doing her review, she noted differences between tax and book depreciation methods that permitted Acme to realize a sizable deferred tax liability on its balance sheet. As a result, Acme paid very little in income taxes at that time.

Delaney also discovered that Acme has an explicit policy of selling off plant assets before they reversed in the deferred tax liability account. This policy, coupled with the rapid expansion of its plant asset base, allowed Acme to "defer" all income taxes payable for several years, even though it always has reported positive earnings and an increasing EPS. Delaney checked with the legal department and found the policy to be legal, but she's uncomfortable with the ethics of it.

Instructions

Answer the following questions.

- Why would Acme have an explicit policy of selling plant assets before the temporary differences reversed in the deferred tax liability account?
- What are the ethical implications of Acme's "deferral" of income taxes?
- Who could be harmed by Acme's ability to "defer" income taxes payable for several years, despite positive earnings?
- In a situation such as this, what are Ms. Delaney's professional responsibilities as a CPA?

Using Your Judgment

Financial Reporting Problem

The Procter & Gamble Company (P&G)

The financial statements of P&G are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

- a. What amounts relative to income taxes does P&G report in its:
 1. 2017 income statement?
 2. June 30, 2017, balance sheet?
 3. 2017 statement of cash flows?
- b. P&G's income taxes in 2015, 2016, and 2017 were computed at what effective tax rates? (See the notes to the financial statements.)
- c. How much of P&G's 2017 total income taxes was current tax expense, and how much was deferred tax expense?
- d. What did P&G report as the significant components (the details) of its June 30, 2017, deferred tax assets and liabilities?

Comparative Analysis Case**The Coca-Cola Company and PepsiCo, Inc.**

The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- a. What are the amounts of Coca-Cola's and PepsiCo's provision for income taxes for the year 2017? Of each company's 2017 provision for income taxes, what portion is current expense and what portion is deferred expense?
- b. What amount of cash was paid in 2017 for income taxes by Coca-Cola and by PepsiCo?
- c. What was the U.S. federal statutory tax rate in 2017? What was the effective tax rate in 2017 for Coca-Cola and PepsiCo? Why might their effective tax rates differ?
- d. For year-end 2017, what amounts were reported by Coca-Cola and PepsiCo as (1) gross deferred tax assets and (2) gross deferred tax liabilities?
- e. Do either Coca-Cola or PepsiCo disclose any net operating loss carrybacks and/or carryforwards at year-end 2017? What are the amounts, and when do the carryforwards expire?

Financial Statement Analysis Case**Homestake Mining Company**

Homestake Mining Company is a 120-year-old international gold mining company with substantial gold mining operations and exploration in the United States, Canada, and Australia. At year-end, Homestake reported the following items related to income taxes (thousands of dollars).

| | |
|--|--------------------|
| Total current taxes | \$ 26,349 |
| Total deferred taxes | (39,436) |
| Total income and mining taxes (the provision for taxes per its income statement) | <u>\$ (13,087)</u> |
| Deferred tax liabilities | \$303,050 |
| Deferred tax assets, net of valuation allowance of \$207,175 | 95,275 |
| Net deferred tax liability | <u>\$207,775</u> |

Note 6: The classification of deferred tax assets and liabilities is based on the related asset or liability creating the deferred tax. Deferred taxes not related to a specific asset or liability are classified based on the estimated period of reversal.

| | |
|---|----------|
| Tax loss carryforwards (U.S., Canada, Australia, and Chile) | \$71,151 |
| Tax credit carryforwards | \$12,007 |

Instructions

- a. What is the significance of Homestake's disclosure of "Current taxes" of \$26,349 and "Deferred taxes" of \$(39,436)?

- b. Explain the concept behind Homestake's disclosure of gross deferred tax liabilities (future taxable amounts) and gross deferred tax assets (future deductible amounts).
- c. Homestake reported tax loss carryforwards of \$71,151 and tax credit carryforwards of \$12,007. How do the carryforward provisions affect the reporting of deferred tax assets and deferred tax liabilities?

Accounting, Analysis, and Principles

DeJohn Company, which began operations at the beginning of 2018, produces various products on a contract basis. Each contract generates a gross profit of \$80,000. Some of DeJohn's contracts provide for the customer to pay on an installment basis. Under these contracts, DeJohn collects one-fifth of the contract revenue in each of the following four years. For financial reporting purposes, the company recognizes gross profit in the year of completion (accrual basis). For tax purposes, DeJohn recognizes gross profit in the year cash is collected (installment basis).

Presented below is information related to DeJohn's operations for 2020:

1. In 2020, the company completed seven contracts that allow for the customer to pay on an installment basis. DeJohn recognized the related gross profit of \$560,000 for financial reporting purposes. It reported only \$112,000 of gross profit on installment sales on the 2020 tax return. The company expects future collections on the related installment receivables to result in taxable amounts of \$112,000 in each of the next four years.
2. In 2020, nontaxable municipal bond interest revenue was \$28,000.
3. During 2020, nondeductible fines and penalties of \$26,000 were paid.
4. Pretax financial income for 2020 amounts to \$500,000.
5. Tax rates (enacted before the end of 2020) are 30% for 2020 and 20% for 2021 and later.
6. The accounting period is the calendar year.
7. The company is expected to have taxable income in all future years.
8. The company has no deferred tax assets or liabilities at the end of 2019.

Accounting

Prepare the journal entry to record income taxes for 2020.

Analysis

Classify deferred income taxes on the balance sheet at December 31, 2020, and indicate, starting with the line "Income before income taxes," how income taxes are reported on the income statement. What is DeJohn's effective tax rate?

Principles

Explain how the conceptual framework is used as a basis for determining the proper accounting for deferred income taxes.

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

- CE19.1** Access the glossary ("Master Glossary") to answer the following.
 - a. What is a deferred tax asset?
 - b. What is taxable income?
 - c. What is the definition of valuation allowance?
 - d. What is a deferred tax liability?
- CE19.2** What are the two basic requirements applied to the measurement of current and deferred income taxes at the date of the financial statements?
- CE19.3** A company wishes to conduct business in a foreign country that attracts businesses by granting "holidays" from income taxes for

a certain period of time. Would the company have to disclose this “holiday” to the SEC? If so, what information must be disclosed?

CE19.4 When is a company allowed to initially recognize the financial statement effects of a tax position?

Codification Research Case

Kleckner Company started operations in 2016. Although it has grown steadily, the company reported accumulated operating losses of \$450,000 in its first four years in business. In the most recent year (2020), Kleckner appears to have turned the corner and reported modest taxable income of \$30,000. In addition to a deferred tax asset related to its net operating loss, Kleckner has recorded a deferred tax asset related to product warranties and a deferred tax liability related to accelerated depreciation.

Given its past operating results, Kleckner has established a full valuation allowance for its deferred tax assets. However, given its improved performance, Kleckner management wonders whether the company can now reduce or eliminate the valuation allowance. They would like you to conduct some research on the accounting for its valuation allowance.

Instructions

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

- Briefly explain to Kleckner management the importance of future taxable income as it relates to the valuation allowance for deferred tax assets.
- What are the sources of income that may be relied upon to remove the need for a valuation allowance?
- What are tax-planning strategies? From the information provided, does it appear that Kleckner could employ a tax-planning strategy to support reducing its valuation allowance?

IFRS Insights

LEARNING OBJECTIVE 7

Compare the accounting for income taxes under GAAP and IFRS.

The accounting for income taxes in IFRS is covered in *IAS 12* (“Income Taxes”), which is based on an asset-liability approach to measurement of deferred taxes.

Relevant Facts

Following are the key similarities and differences between GAAP and IFRS related to accounting for taxes.

Similarities

- Similar to GAAP, IFRS uses the asset and liability approach for recording deferred taxes.
- The classification of deferred taxes under both IFRS and GAAP is always non-current.

Differences

- Under IFRS, an affirmative judgment approach is used, by which a deferred tax asset is recognized up to the amount that is probable to be realized. GAAP uses an impairment approach. In this approach, the deferred tax asset is recognized in full. It is then reduced by a valuation account if it is more likely than not that all or a portion of the deferred tax asset will not be realized.
- IFRS uses the enacted tax rate or substantially enacted tax rate. (“Substantially enacted” means virtually certain.) For GAAP, the enacted tax rate must be used.
- The tax effects related to certain items are reported in equity under IFRS. That is not the case under GAAP, which charges or credits the tax effects to income.
- GAAP requires companies to assess the likelihood of uncertain tax positions being sustainable upon audit. Potential liabilities must be accrued and disclosed if the position is “more likely than not” to be disallowed. Under IFRS, all potential liabilities must be recognized. With respect to measurement, IFRS uses an expected-value approach to measure the tax liability, which differs from GAAP.

About the Numbers

Deferred Tax Asset (Non-Recognition)

Under IFRS, companies recognize a deferred tax asset for all deductible temporary differences. However, based on available evidence, a company should reduce a deferred tax asset if it is probable that it **will not realize** some portion or all of the deferred tax asset. “**Probable**” means a level of likelihood of at least slightly more than 50 percent.

Assume that Jensen Co. has a deductible temporary difference of \$1,000,000 at the end of its first year of operations. Its tax rate is 40 percent, which means it records a deferred tax asset of \$400,000 ($\$1,000,000 \times .40$). Assuming \$900,000 of income taxes payable, Jensen records income tax expense, the deferred tax asset, and income taxes payable as follows.

| | | |
|----------------------|---------|---------|
| Income Tax Expense | 500,000 | |
| Deferred Tax Asset | 400,000 | |
| Income Taxes Payable | | 900,000 |

After careful review of all available evidence, Jensen determines that it is probable that it will not realize \$100,000 of this deferred tax asset. Jensen records this reduction in asset value as follows.

| | | |
|--------------------|---------|---------|
| Income Tax Expense | 100,000 | |
| Deferred Tax Asset | | 100,000 |

This journal entry increases income tax expense in the current period because Jensen does not expect to realize a favorable tax benefit for a portion of the deductible temporary difference. Jensen **simultaneously recognizes a reduction in the carrying amount of the deferred tax asset**. Jensen then reports a deferred tax asset of \$300,000 ($\$400,000 - \$100,000$) in its statement of financial position.

Jensen evaluates the deferred tax asset account at the end of each accounting period. If, at the end of the next period, it expects to realize \$350,000 of this deferred tax asset, Jensen makes the following entry to adjust this account.

| | | |
|--|--------|--------|
| Deferred Tax Asset ($\$350,000 - \$300,000$) | 50,000 | |
| Income Tax Expense | | 50,000 |

Jensen should consider all available evidence, both positive and negative, to determine whether, based on the weight of available evidence, it needs to adjust the deferred tax asset. For example, if Jensen has been experiencing a series of loss years, it reasonably assumes that these losses will continue. Therefore, Jensen will lose the benefit of the future deductible amounts.

Generally, sufficient taxable income arises from temporary taxable differences that will reverse in the future or from a tax-planning strategy that will generate taxable income in the future. **Illustration IFRS19.1** shows how **Ahold** describes its reporting of deferred assets.

Ahold

Note 11. Significant judgment is required in determining whether deferred tax assets are realizable. Ahold determines this on the basis of expected taxable profits arising from recognized deferred tax liabilities and on the basis of budgets, cash flow forecasts, and impairment models. Where utilization is not considered probable, deferred taxes are not recognized.

ILLUSTRATION IFRS19.1 Deferred Tax Asset Disclosure

Carryforward (Non-Recognition) To illustrate non-recognition of a loss carryforward, assume that Groh Inc. has tax benefits of \$110,000 associated with a NOL carryback (as discussed in Appendix 19B) and a potential deferred tax asset of \$80,000 associated with an operating loss carryforward of \$200,000, assuming a future tax rate of 40% ($\$200,000 \times .40$). However, if it is probable that Groh will *not* realize the entire NOL carryforward in future years, it does not recognize this deferred tax asset. To illustrate, Groh makes the following journal entry in 2020 to record only the tax refund receivable.

| To recognize benefit of loss carryback | | |
|--|---------|---------|
| Income Tax Refund Receivable | 110,000 | |
| Income Tax Expense (Loss Carryback) | | 110,000 |

ILLUSTRATION IFRS19.2
**Recognition of Benefit
of Loss Carryback Only**

Illustration IFRS19.2 shows Groh's 2020 income statement presentation.

| Groh Inc. | |
|--|---------------------------|
| Income Statement (partial) for 2020 | |
| Operating loss before income taxes | \$(500,000) |
| Income tax benefit | |
| Income tax expense (loss carryback) | <u>110,000</u> |
| Net loss | <u><u>\$(390,000)</u></u> |

In 2021, assuming that Groh has taxable income of \$250,000 (before considering the carryforward), subject to a tax rate of 40 percent, it realizes the deferred tax asset. Groh records the following entries.

| | | |
|--|---------|--------|
| To recognize deferred tax asset and loss carryforward | | |
| Deferred Tax Asset | 80,000 | |
| Income Tax Expense (Loss Carryforward) | | 80,000 |
| To record current and deferred income taxes | | |
| Income Tax Expense | 100,000 | |
| Deferred Tax Asset | | 80,000 |
| Income Taxes Payable | | 20,000 |

Groh reports the \$80,000 Benefit Due to the Loss Carryforward on the 2021 income statement. The company did not recognize it in 2020 because it was probable that it would not be realized. Assuming that Groh derives the income for 2021 from continuing operations, it prepares the income statement as shown in **Illustration IFRS19.3**.

ILLUSTRATION IFRS19.3
**Recognition of Benefit
of Loss Carryforward When
Realized**

| Groh Inc. | |
|---|-------------------------|
| Income Statement (partial) for 2021 | |
| Income before income taxes | \$250,000 |
| Income tax expense | |
| Current | \$ 20,000 |
| Deferred | <u>-0-*</u> |
| Net income | <u><u>\$230,000</u></u> |
| *Carryforward (\$80,000) – Allowance (\$80,000) | |

Another method is to report only one line for total income tax expense of \$20,000 on the face of the income statement and disclose the components of income tax expense in the notes to the financial statements.

Statement of Financial Position Classification

Companies classify taxes receivable or payable as current assets or current liabilities. Although current tax assets and liabilities are separately recognized and measured, they are often offset in the statement of financial position. The offset occurs because companies normally have a legally enforceable right to offset a current tax asset (Taxes Receivable) against a current tax liability (Taxes Payable) when they relate to income taxes levied by the same taxation authority. Deferred tax assets and deferred tax liabilities are also separately recognized and measured but may be offset in the statement of financial position. Companies are permitted to offset deferred tax assets and deferred tax liabilities if, and only if (1) the company has a legally enforceable right to offset current tax assets against current tax liabilities, and (2) the deferred tax assets and the deferred tax liabilities relate to income taxes levied by the same tax authority and for the same company.

Similar to GAAP, the net deferred tax asset or net deferred tax liability is reported in the non-current section of the statement of financial position. Deferred tax amounts should not be discounted. The IASB apparently considers discounting to be an unnecessary complication even if the effects are material. To illustrate, assume that K. Scott Company has four deferred tax items at December 31, 2020, as shown in **Illustration IFRS19.4**.

ILLUSTRATION IFRS19.4

Classification of Temporary Differences

| Temporary Difference | Resulting Deferred Tax | |
|---|------------------------|-------------------|
| | (Asset) | Liability |
| 1. Rent collected in advance: recognized when a performance obligation is satisfied for accounting purposes and when received for tax purposes. | \$ (42,000) | |
| 2. Use of straight-line depreciation for accounting purposes and accelerated depreciation for tax purposes. | | \$ 214,000 |
| 3. Recognition of income on installment sales at the time of sale for accounting purposes and during period of collection for tax purposes. | | 45,000 |
| 4. Warranty liabilities: recognized for accounting purposes at time of sale for tax purposes at time paid. | (12,000) | |
| Totals | <u>\$ (54,000)</u> | <u>\$ 259,000</u> |

As indicated, K. Scott has a total deferred tax asset of \$54,000 and a total deferred tax liability of \$259,000. Assuming these two items can be offset, K. Scott reports a deferred tax liability of \$205,000 (\$259,000 – \$54,000) in the non-current liability section of its statement of financial position.

On the Horizon

The IASB and the FASB have worked to address some of the differences in the accounting for income taxes. Some of the issues under discussion are the term “probable” under IFRS for recognition of a deferred tax asset, which might be interpreted to mean “more likely than not.” If the term is changed, the reporting for impairments of deferred tax assets will be essentially the same between GAAP and IFRS. In addition, the FASB recently adopted the IFRS classification approach for deferred tax assets and liabilities. Also, GAAP will likely continue to use the enacted tax rate in computing deferred taxes, except in situations where the taxing jurisdiction is not involved. In that case, companies should use IFRS, which is based on enacted rates or substantially enacted tax rates. Finally, the issue of allocation of deferred income taxes to equity for certain transactions under IFRS must be addressed in order to converge with GAAP, which allocates the effects to income. At the time of this printing, deliberations on the income tax project have been suspended indefinitely.

IFRS Self-Test Questions

- Which of the following is **false**?
 - Under GAAP, deferred taxes are reported based on the classification of the asset or liability to which it relates.
 - Under IFRS, all potential liabilities must be recognized.
 - Under GAAP, the enacted tax rate is used to measure deferred tax assets and liabilities.
 - Under IFRS, all deferred tax assets and liabilities are classified as non-current.
- Which of the following statements is **correct** with regard to IFRS and GAAP?
 - Under GAAP, all potential liabilities related to uncertain tax positions must be recognized.
 - The tax effects related to certain items are reported in equity under GAAP; under IFRS, the tax effects are charged or credited to income.
 - IFRS uses an affirmative judgment approach for deferred tax assets, whereas GAAP uses an impairment approach for deferred tax assets.
 - IFRS classifies deferred taxes based on the classification of the asset or liability to which it relates.
- Under IFRS:
 - “probable” is defined as a level of likelihood of at least slightly more than 60%.
 - a company should reduce a deferred tax asset when it is likely that some or all of it will not be realized by using a valuation allowance.
 - a company considers only positive evidence when determining whether to recognize a deferred tax asset.
 - deferred tax assets must be evaluated at the end of each accounting period.
- Stephens Company has a deductible temporary difference of \$2,000,000 at the end of its first year of operations. Its tax rate is 40 percent. Stephens has \$1,800,000 of income taxes payable. After a careful review of all available evidence, Stephens determines that it is probable that it will not realize \$200,000 of this deferred tax asset. On Stephens Company’s statement of financial position at the end of its first year of operations, what is the amount of deferred tax asset?
 - \$2,000,000.
 - \$1,800,000.
 - \$800,000.
 - \$600,000.
- Lincoln Company has the following four deferred tax items at December 31, 2020. The deferred tax assets and the deferred tax liabilities relate to income taxes levied by the same tax authority.

| Temporary Difference | Deferred Tax Asset | Deferred Tax Liability |
|--|-----------------------|---------------------------|
| Rent collected in advance: recognized when a performance obligation is satisfied for accounting purposes and when received for tax purposes. | \$652,000 | |
| Use of straight-line depreciation for accounting purposes and accelerated depreciation for tax purposes. | | \$330,000 |
| Recognition of income on installment sales at the time of sale for accounting purposes and during period of collection for tax purposes. | | 64,000 |
| Warranty liabilities: recognized for accounting purposes at time of sale for tax purposes at time paid. | 37,000 | |

On Lincoln's December 31, 2020, statement of financial position, it will report:

| | |
|--|---|
| <p>a. \$394,000 non-current deferred tax liability and \$689,000 non-current deferred tax asset.</p> | <p>b. \$330,000 non-current liability and \$625,000 current deferred tax asset.</p> <p>c. \$295,000 non-current deferred tax asset.</p> <p>d. \$295,000 current tax receivable.</p> |
|--|---|

IFRS Concepts and Application

IFRS19.1 Where can authoritative IFRS related to the accounting for taxes be found?

IFRS19.2 Briefly describe some of the similarities and differences between GAAP and IFRS with respect to income tax accounting.

IFRS19.3 Describe the current convergence efforts of the FASB and IASB in the area of accounting for taxes.

IFRS19.4 How are deferred tax assets and deferred tax liabilities reported on the statement of financial position under IFRS?

IFRS19.5 Describe the procedure(s) involved in classifying deferred tax amounts on the statement of financial position under IFRS.

IFRS19.6 At December 31, 2020, Hillyard Corporation has a deferred tax asset of \$200,000. After a careful review of all available evidence, it is determined that it is probable that \$60,000 of this deferred tax asset will not be realized. Prepare the necessary journal entry.

IFRS19.7 Rode Inc. incurred a net operating loss of \$500,000 in 2020. Combined income for 2018 and 2019 was \$350,000. The tax rate for all years is 20%. Prepare the journal entries to record the benefits of the loss carryforward.

IFRS19.8 Use the information for Rode Inc. given in IFRS19.7. Assume that it is probable that the entire net operating loss carryforward will not be realized in future years. Prepare the journal entry(ies) necessary at the end of 2020.

IFRS19.9 Youngman Corporation has temporary differences at December 31, 2020, that result in the following deferred taxes.

| | |
|------------------------|----------|
| Deferred tax asset | \$24,000 |
| Deferred tax liability | 69,000 |

Indicate how these balances would be presented in Youngman's December 31, 2020, statement of financial position.

IFRS19.10 At December 31, 2020, Cascade Company had a net deferred tax liability of \$450,000. An explanation of the items that compose this balance is as follows.

| Temporary Differences in Deferred Taxes | Resulting Balances |
|--|--------------------|
| 1. Excess of tax depreciation over book depreciation. | \$200,000 |
| 2. Accrual, for book purposes, of estimated loss contingency from pending lawsuit that is expected to be settled in 2021. The loss will be deducted on the tax return when paid. | \$ (50,000) |
| 3. Accrual method used for book purposes and installment method used for tax purposes for an isolated installment sale of an investment. | \$300,000 |

In analyzing the temporary differences, you find that \$30,000 of the depreciation temporary difference will reverse in 2021, and \$120,000 of the temporary difference due to the installment sale will reverse in 2021. The tax rate for all years is 40%.

Instructions

Indicate the manner in which deferred taxes should be presented on Cascade Company's December 31, 2020, statement of financial position.

IFRS19.11 Callaway Corp. has a deferred tax asset account with a balance of \$112,500 at the end of 2020 due to a single cumulative temporary difference of \$375,000. At the end of 2021, this same temporary difference has increased to a cumulative amount of \$500,000. Taxable income for 2021 is \$850,000. The tax rate is 30% for all years.

Instructions

- Record income tax expense, deferred income taxes, and income taxes payable for 2021, assuming that it is probable that the deferred tax asset will be realized.
- Assuming that it is probable that \$30,000 of the deferred tax asset will not be realized, prepare the journal entry at the end of 2021 to recognize this probability.

Professional Research

IFRS19.12 Kleckner Company started operations in 2016. Although it has grown steadily, the company reported accumulated operating losses of \$450,000 in its first four years in business. In the most recent year (2020), Kleckner appears to have turned the corner and reported modest taxable income of \$30,000. In addition to a deferred tax asset related to its net operating loss, Kleckner has recorded a deferred tax asset related to product warranties and a deferred tax liability related to accelerated depreciation. Given its past operating results, Kleckner has determined that it is not probable that it will realize any of the deferred tax assets. However, given its improved performance, Kleckner management wonders whether there are any accounting consequences for its deferred tax assets. They would like you to conduct some research on the accounting for recognition of its deferred tax asset.

Instructions

Access the IFRS authoritative literature at the IASB website. (Click on the IFRS tab and then register for free eIFRS access if necessary.) When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- Briefly explain to Kleckner management the importance of future taxable income as it relates to the recognition of deferred tax assets.
- What are the sources of income that may be relied upon in assessing realization of a deferred tax asset?
- What are tax-planning strategies? From the information provided, does it appear that Kleckner could employ a tax-planning strategy in evaluating its deferred tax asset?

International Financial Reporting Problem

Marks and Spencer plc (M&S)

IFRS19.13 The financial statements of **M&S** are presented in Appendix E. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- What amounts relative to income taxes does M&S report in its:
 - 2017 income statement?
 - 1 April 2017 statement of financial position?
 - 2017 statement of cash flows?
- M&S's provision for income taxes in 2016 and 2017 was computed at what effective tax rates? (See the notes to the financial statements.)
- How much of M&S's 2017 total provision for income taxes was current tax expense, and how much was deferred tax expense?
- What did M&S report as the significant components (the details) of its 1 April 2017 deferred tax assets and liabilities?

Accounting for Pensions and Postretirement Benefits

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

1. Discuss the fundamentals of pension plan accounting.
2. Use a worksheet for employer's pension plan entries.
3. Describe the accounting and amortization of prior service costs.
4. Explain the accounting and amortization for unexpected gains and losses.
5. Describe the requirements for reporting pension plans in financial statements.

PREVIEW OF CHAPTER 20 As the following opening story indicates, the cost of retirement benefits is steep. For example, **British Airways'** pension and healthcare costs for retirees in a recent year totaled \$195 million, or approximately \$6 per passenger carried. Many other companies are also facing substantial pension and other postretirement expenses and obligations. In this chapter, we discuss the accounting issues related to these benefit plans. The content and organization of the chapter are as follows.

This chapter also includes numerous conceptual and global discussions that are integral to the topics presented here.

ACCOUNTING FOR PENSIONS AND POSTRETIREMENT BENEFITS

Fundamentals of Pension Plan Accounting

- Defined contribution plan
- Defined benefit plan
- Role of actuaries
- Measures of the liability
- Components of pension expense

Using a Pension Worksheet

- 2020 entries and worksheet
- Funded status

Prior Service Cost (PSC)

- Amortization
- 2021 entries and worksheet

Gains and Losses

- Unexpected gains and losses (assets)
- Unexpected gains and losses (liabilities)
- Corridor amortization
- 2022 entries and worksheet
- 2023 entries and worksheet—a comprehensive example

Reporting Pension Plans in Financial Statements

- Assets and liabilities
- Net income
- Comprehensive income
- Note disclosure
- Special issues

Where Have All the Pensions Gone?

Many companies have benefit plans that promise income and other benefits to retired employees in exchange for services during their working years. However, a shift is on from traditional defined benefit plans, in which employers bear the risk of meeting the benefit promises, to plans in which employees bear more of the risk. In some cases, employers are dropping retirement plans altogether. Here are some of the reasons for the shift.

- **Competition.** Newer and foreign competitors do not have the same retiree costs that older U.S. companies do. **Southwest Airlines** does not offer a traditional pension plan, but **United** has a pension deficit exceeding \$100,000 per employee.
- **Cost.** Retirees are living longer, and the costs of retirement are higher. Combined with annual retiree healthcare costs, retirement benefits are costing the S&P 500 companies over \$25 billion a year and are rising at double-digit rates.
- **Insurance.** Pensions are backed by premiums paid to the **Pension Benefit Guarantee Corporation (PBGC)**. When a company fails, the PBGC takes over the plan. But due to a number of significant company failures, the PBGC has run a deficit, with healthy companies subsidizing the weak.
- **Accounting.** To bring U.S. standards in line with international rules, accounting rule-makers are considering rules that will require companies to “mark their pensions to market” (value them at market rates). Such a move would increase the reported volatility of the retirement plan and of company financial statements. When Great Britain made this shift, 25 percent of British companies closed their plans to new entrants.

As a result of such factors, it is understandable that experts can think of no major company that has instituted a traditional pension plan in the past decade. What does this mean for you as you evaluate job offers and benefit packages? To start, you should begin building *your own* retirement nest egg, rather than relying on your employer to provide postretirement income and healthcare benefits. Recently, a sample of Americans was asked the following question: When you retire, do you think you will have enough money to live comfortably, or not? The following graph shows a change in responses from nonretired adults from 2005 to 2018.

Prior to 2008, a majority of nonretired Americans consistently thought they would be able to live comfortably in retirement. But this dropped to 46 percent early during the U.S. recession in 2008 and stayed below 50 percent until 2014. Most recent data indicate that just over 50 percent of nonretirees thought they would have enough money to live comfortably in retirement. Furthermore, a rising percentage of nonretirees are pessimistic about having enough stashed away when they retire (46 percent in 2018 compared to 42 percent in 2016).

General economic conditions affect how Americans look at retirement. Americans are generally more positive about retirement when the economy is growing. However, the continuing political discussion about the fragility of the country’s Social Security and Medicare programs may reduce nonretired Americans’ comfort with projections of their monetary resources in their retirement. In addition, many are beginning to realize that retirement at the age of 65 may no longer be possible given the possible extension of social benefits to later ages.

This means that retirement accounts, including individual retirement accounts and defined contribution pensions such as 401(k) plans, will need to become a bigger piece of the pie to fill the gap left by smaller government and employer-sponsored benefits. So get started now with a personal savings strategy to ensure an adequate nest egg at your retirement.

Mauldin, “Angst in America, Part 4: Disappearing Pensions,” *Thoughts for the Frontline* (April 16, 2017); and T. Riffkin, “More Americans Think They Will Retire Comfortably,” <http://www.gallup.com/poll/168959/americans-think-retire-comfortably.aspx> (May 9, 2018).

Review and Practice

Go to the **Review and Practice** section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions as well as additional exercises and practice problem with solutions are also available online.

Fundamentals of Pension Plan Accounting

LEARNING OBJECTIVE 1

Discuss the fundamentals of pension plan accounting.

A **pension plan** is an arrangement whereby an employer provides benefits (payments) to retired employees for services they provided in their working years. Pension accounting may be divided and separately treated as **accounting for the employer** and **accounting for the pension fund**. The *company* or *employer* is the organization sponsoring the pension plan. It incurs the cost and makes contributions to the pension fund. The *fund* or *plan* is the entity that receives the contributions from the employer, administers the pension assets, and makes the benefit payments to the retired employees (pension recipients). **Illustration 20.1** shows the three entities involved in a pension plan and indicates the flow of cash among them.

ILLUSTRATION 20.1

Flow of Cash among Pension Plan Participants

A pension plan is **funded** when the employer makes payments to a funding agency.¹ That agency accumulates the assets of the pension fund and makes payments to the recipients as the benefits come due.

¹When used as a verb, **fund** means to pay to a funding agency (as to fund future pension benefits or to fund pension cost). Used as a noun, it refers to assets accumulated in the hands of a funding agency (trustee) for the purpose of meeting pension benefits when they become due.

Some pension plans are **contributory**. In these, the employees bear part of the cost of the stated benefits or voluntarily make payments to increase their benefits. Other plans are **non-contributory**. In these plans, the employer bears the entire cost. Companies generally design their pension plans so as to take advantage of federal income tax benefits. Plans that offer tax benefits are called **qualified pension plans**. They permit **deductibility of the employer's contributions to the pension fund and tax-free status of earnings from pension fund assets**.

The pension fund should be a separate legal and accounting entity. The pension fund, as a separate entity, maintains a set of books and prepares financial statements. Maintaining records and preparing financial statements for the fund, an activity known as “accounting for employee benefit plans,” is not the subject of this chapter.² Instead, this chapter explains the pension accounting and reporting problems **of the employer** as the sponsor of a pension plan.

The need to properly administer and account for pension funds becomes apparent when you understand the size of these funds. Listed in **Illustration 20.2** are the pension fund assets and pension expenses of six major companies.

ILLUSTRATION 20.2

Pension Funds and Pension Expense

| Company (\$ in millions) | Size of Pension Fund | 2017 Pension Expense (Income) | Pension Expense as % of Pretax Income |
|------------------------------|----------------------------|-------------------------------------|---|
| General Motors | \$74,421 | \$(1,173) | −9.89% |
| Hewlett-Packard | 10,176 | (132) | −4.03 |
| Deere & Company | 11,137 | 106 | 3.36 |
| Merck | 17,560 | 201 | 3.08 |
| The Coca-Cola Company | 8,371 | 368 | 5.46 |
| Molson Coors Brewing | 5,946 | (68) | −4.91 |

As Illustration 20.2 indicates, pension expense (income) is a substantial percentage of total pretax income for many companies.³ The two most common types of pension plans are **defined contribution plans** and **defined benefit plans**, and we look at each of them in the following sections.

Defined Contribution Plan

In a **defined contribution plan**, the employer agrees to contribute to a pension trust a certain sum each period, based on a formula. This formula may consider such factors as age, length of employee service, employer's profits, and compensation level. **The plan defines only the employer's contribution.** It makes no promise regarding the ultimate benefits paid out to the employees. A common form of this plan is a **401(k) plan**.

The size of the pension benefits that the employee finally collects under the plan depends on several factors: the amounts originally contributed to the pension trust, the income accumulated in the trust, and the treatment of forfeitures of funds caused by early

²The FASB issued separate guidance covering the accounting and reporting for employee benefit plans. [1] (See the FASB Codification References near the end of the chapter.)

³Retirement assets in the 22 major global markets increased 13.1 percent to a record \$41.4 trillion in 2017 compared to end-of-year 2016. Pension assets for these 22 markets reached 67 percent of GDP, which represents a 5 percent increase from the 2016 ratio of 62 percent. The largest pension markets are the United States, the United Kingdom, and Japan with 61.4 percent, 7.5 percent, and 7.4 percent, respectively, of total pension assets in the study. The asset growth rate for the United States, United Kingdom, and Japan over 2016 were 12.7 percent, 16.9 percent and 9.7 percent, respectively. See “Global Pension Asset Study—2017,” www.towerswatson.com.

terminations of other employees. A company usually turns over to an **independent third-party trustee** the amounts originally contributed. The trustee, acting on behalf of the beneficiaries (the participating employees), assumes ownership of the pension assets and is accountable for their investment and distribution. The trust is separate and distinct from the employer.

The accounting for a defined contribution plan is straightforward. The employee gets the benefit of gain (or the risk of loss) from the assets contributed to the pension plan. The employer simply contributes each year based on the formula established in the plan. As a result, the employer's annual cost (pension expense) is simply the amount that it is obligated to contribute to the pension trust. The employer reports a liability on its balance sheet only if it does not make the contribution in full. The employer reports an asset only if it contributes more than the required amount.

In addition to pension expense, the employer must disclose the following for a defined contribution plan: a plan description, including employee groups covered; the basis for determining contributions; and the nature and effect of significant matters affecting comparability from period to period. [2]

Defined Benefit Plan

A **defined benefit plan** outlines the benefits that employees will receive when they retire. These benefits typically are a function of an employee's years of service and of the compensation level in the years approaching retirement.

To meet the defined benefit commitments that will arise at retirement, a company must determine what the contribution should be today (a time value of money computation). Companies may use many different contribution approaches. However, the funding method should provide enough money at retirement to meet the benefits defined by the plan.

The **employees** are the beneficiaries of a defined **contribution** trust, but the **employer** is the beneficiary of a defined **benefit** trust. Under a defined benefit plan, the trust's primary purpose is to safeguard and invest assets so that there will be enough to pay the employer's obligation to the employees. **In form**, the trust is a separate entity. **In substance**, the trust assets and liabilities belong to the employer. That is, **as long as the plan continues, the employer is responsible for the payment of the defined benefits (without regard to what happens in the trust)**. The employer must make up any shortfall in the accumulated assets held by the trust. On the other hand, the employer can recapture any excess accumulated in the trust, either through reduced future funding or through a reversion of funds.

Because a defined benefit plan specifies benefits in terms of uncertain future variables, a company must establish an appropriate funding pattern to ensure the availability of funds at retirement in order to provide the benefits promised. This funding level depends on a number of factors such as turnover, mortality, length of employee service, compensation levels, and interest earnings.

Employers are at risk with defined benefit plans because they must contribute enough to meet the cost of benefits that the plan defines. The expense recognized each period is not necessarily equal to the cash contribution. Similarly, the liability is controversial because its measurement and recognition relate to unknown future variables. Thus, the accounting issues related to this type of plan are complex (see **Global View**). **Our discussion in the following sections deals primarily with defined benefit plans.**⁴

Global View

Outside the United States, private pension plans are less common because many other nations rely on government-sponsored pension plans. Consequently, accounting for defined benefit pension plans is typically a less important issue elsewhere in the world.

⁴A recent federal law requires employees to participate in an employer-sponsored defined contribution plan unless they explicitly opt out of it. This should help employees build their own nest eggs (as suggested in the opening story) and will contribute to further growth in defined contribution plans. However, note the following three warnings: (1) low-income workers will still not be able to stash enough away, (2) it leaves each participant alone to manage risk, and (3) companies establish a minimum contribution, which too many participants choose to use, instead of a larger contribution.

What Do the Numbers Mean? Which Plan Is Right for You?

Defined contribution plans have become much more popular with employers than defined benefit plans, as indicated in the following chart. One reason is that they are cheaper. Defined contribution

plans often cost no more than 3 percent of payroll, whereas defined benefit plans can cost 5 to 6 percent of payroll.

Recent data indicate the total amount of pension assets held by pension plans is \$8.1 trillion, which is 67 percent of gross domestic product. In 2015, 35 percent of these assets were in defined contribution plans and 65 percent in defined benefit plans. Pension plan assets have grown approximately 6 percent per year over the period 2004–2015.

Finally, while the chart gives the impression that defined benefit plans are going away, a closer look at the data indicate that, at

least for companies in the Russell 3000, more companies reported defined benefit plans over the last 5- to 10-year period. The bottom line is that defined benefit plans have quite a bit of staying power.

Source: U.S. Department of Labor, “Private Pension Plan Bulletin” (February 2018); and J. Ciesielski, “Pension Priorities: Why the Accounting Belongs on FASB’s Agenda,” *Analyst’s Accounting Observer Blog* (February 16, 2017).

The Role of Actuaries in Pension Accounting

The problems associated with pension plans involve complicated mathematical considerations. Therefore, companies engage **actuaries** to ensure that a pension plan is appropriate for the employee group covered.⁵ Actuaries are individuals trained through a long and rigorous certification program to assign probabilities to future events and their financial effects. The insurance industry employs actuaries to assess risks and to advise on the setting of premiums and other aspects of insurance policies. Employers rely heavily on actuaries for assistance in developing, implementing, and funding pension funds.

Actuaries make predictions (called *actuarial assumptions*) of mortality rates, employee turnover, interest and earnings rates, early retirement frequency, future salaries, and any other factors necessary to operate a pension plan. They also compute the various pension measures that affect the financial statements, such as the pension obligation, the annual cost of servicing the plan, and the cost of amendments to the plan. In summary, accounting for defined benefit pension plans relies heavily upon information and measurements provided by actuaries.

⁵An actuary’s primary purpose is to ensure that the company has established an appropriate funding pattern to meet its pension obligations. This computation involves developing a set of assumptions and continued monitoring of these assumptions to ensure their realism. That the general public has little understanding of what an actuary does is illustrated by the following excerpt from the *Wall Street Journal*: “A polling organization once asked the general public what an actuary was, and received among its more coherent responses the opinion that it was a place where you put dead actors.”

Measures of the Liability

In accounting for a company's pension plan, two questions arise. (1) What is the pension obligation that a company should report in the financial statements? (2) What is the pension expense for the period? Attempting to answer the first question has produced much controversy.

Alternative Approaches

Most agree that an employer's **pension obligation** is the deferred compensation obligation it has to its employees for their service under the terms of the pension plan. Measuring that obligation is not so simple, though, because there are alternative ways of measuring it.⁶

One measure of the pension obligation is to base it only on the benefits vested to the employees. **Vested benefits** are those that the employee is entitled to receive even if he or she renders no additional services to the company. Most pension plans require a certain minimum number of years of service to the employer before an employee achieves vested benefits status. Companies compute the **vested benefit obligation** using only vested benefits, at current salary levels.

Another way to measure the obligation uses both vested and nonvested years of service. On this basis, the company computes the deferred compensation amount on all years of employees' service—**both vested and nonvested**—using current salary levels. This measurement of the pension obligation is called the **accumulated benefit obligation**.

A third measure bases the deferred compensation amount on both vested and nonvested service **using future salaries**. This measurement of the pension obligation is called the **projected benefit obligation**. Because future salaries are expected to be higher than current salaries, this approach results in the largest measurement of the pension obligation.

The choice between these measures is critical. The choice affects the amount of a company's pension liability and the annual pension expense reported. **Illustration 20.3** presents the differences in these three measurements.

ILLUSTRATION 20.3

Different Measures of the Pension Obligation

Which of these alternative measures of the pension liability does the profession favor? **The profession adopted the projected benefit obligation—the present value of vested and nonvested benefits accrued to date, based on employees' future**

⁶One measure of the pension obligation is to determine the amount that the **Pension Benefit Guaranty Corporation** would require the employer to pay if it defaulted. (This amount is limited to 30 percent of the employer's net worth.) The accounting profession rejected this approach for financial reporting because it is too hypothetical and ignores the going concern concept.

salary levels.⁷ Those in favor of the projected benefit obligation contend that a promise by an employer to pay benefits based on a percentage of the employees' future salaries is far greater than a promise to pay a percentage of their current salary, and such a difference should be reflected in the pension liability and pension expense.

Moreover, companies discount to present value the estimated future benefits to be paid. Minor changes in the interest rate used to discount pension benefits can dramatically affect the measurement of the employer's obligation. For example, a 1 percent decrease in the discount rate can increase pension liabilities 15 percent. Accounting rules require that at each measurement date, a company must determine the appropriate discount rate used to measure the pension liability, based on current interest rates.

Recognition of the Net Funded Status of the Pension Plan

Companies must recognize on their balance sheet the full overfunded or underfunded status of their defined benefit pension plan. [3]⁸ The **overfunded** or **underfunded status** is measured as the difference between the fair value of the plan assets and the projected benefit obligation.

To illustrate, assume that Coker Company has a projected benefit obligation of \$300,000, and the fair value of its plan assets is \$210,000. In this case, Coker Company's pension plan is underfunded, and therefore it reports a pension liability of \$90,000 ($\$300,000 - \$210,000$) on its balance sheet. If instead the fair value of Coker's plan assets were \$430,000, it would report a pension asset of \$130,000 ($\$430,000 - \$300,000$).

What Do the Numbers Mean? Roller Coaster

The chart below shows what has happened to the financial health of pension plans over the last few years. It is a real roller coaster. In 2010, by slowing the growth of pension liabilities and increasing contributions to pension funds, the S&P 500 companies reported a funded status of about 87 percent in 2010, dips in 2012 and 2014, and a climb to about 87 percent again in 2017.

At the turn of the century, when the stock market was strong, pension plans were overfunded. However, the bubble burst, and by 2002 companies in the S&P 1500 saw their pension plans funded at less than reported liabilities. Then, plans bounced back, and by 2007 pension plans were overfunded again. However, due to

recent downturns in the wake of the financial crisis, plans are now underfunded again and the future is highly uncertain.

A number of factors cause a fund to change from being overfunded to underfunded. First, low interest rates decimate returns on pension plan assets. Second, using low interest rates to discount the projected benefit payments leads to a higher pension liability. Similarly, as was observed recently, actuaries may revise estimates related to mortality rates or expected salary levels, which could lead to an increase in the projected benefit obligation and more underfunded plans. Finally, more individuals are retiring and living longer, which leads to a depletion of the pension plan assets.

Source: V. Monga, "Longer Lives Cut Premium to Offload Pensions," *Wall Street Journal* (February 3, 2015).

⁷When we use the term "present value of benefits" throughout this chapter, we really mean the *actuarial* present value of benefits. **Actuarial present value** is the amount payable adjusted to reflect the time value of money and the probability of payment (by means of decrements for events such as death, disability, withdrawals, or retirement) between the present date and the expected date of payment. For simplicity, though, we use the term "present value" instead of "actuarial present value" in our discussion.

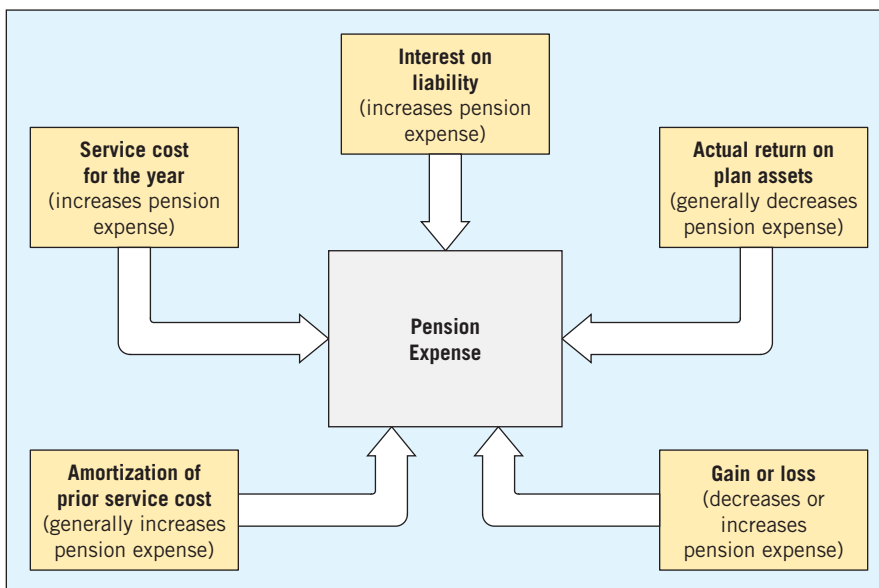

⁸Recognize that GAAP applies to pensions as well as other postretirement benefit plans (OPEBs). Appendix 20A addresses the accounting for OPEBs.

Components of Pension Expense

There is broad agreement that companies should account for pension cost on the **accrual basis**.⁹ The profession recognizes that **accounting for pension plans requires measurement of the cost and its identification with the appropriate time periods**. The determination of pension expense, however, is extremely complicated because it is a function of the following components.

- 1. Service cost.** Service cost is the expense caused by the increase in pension benefits payable (the **projected benefit obligation**) to employees because of their services rendered during the current year. Actuaries compute **service cost** as the present value of the new benefits earned by employees during the year (see **Underlying Concepts**).
- 2. Interest on the liability.** Because a pension is a deferred compensation arrangement, there is a time value of money factor. As a result, companies record the pension liability on a discounted basis. **Interest expense accrues each year on the projected benefit obligation just as it does on any discounted debt**. The actuary helps to select the interest rate, referred to as the **settlement rate**.
- 3. Actual return on plan assets.** The return earned by the accumulated pension fund assets in a particular year is relevant in measuring the net cost to the employer of sponsoring an employee pension plan. Therefore, **a company should adjust annual pension expense for interest and dividends that accumulate within the fund, as well as increases and decreases in the fair value of the fund assets**.
- 4. Amortization of prior service cost.** Pension plan amendments (including initiation of a pension plan) often include provisions to increase benefits (or in rare situations, to decrease benefits) for employee service provided in prior years. A company grants plan amendments with the expectation that it will realize economic benefits in future periods. Thus, **it allocates the cost (prior service cost) of providing these retroactive benefits to pension expense in the future, specifically to the remaining service-years of the affected employees**.
- 5. Gain or loss.** Volatility in pension expense can result from sudden and large changes in the fair value of plan assets (resulting in differences between the actual return and the expected return on plan assets) and by changes in the projected benefit obligation (which changes when actuaries modify assumptions or when actual experience differs from expected experience). We will discuss this complex computation later in the chapter.

Illustration 20.4 shows the **components of pension expense** and their effect on total pension expense (increase or decrease).

Underlying Concepts

The expense recognition principle and the definition of a liability justify accounting for pension cost on the accrual basis. This requires recording an expense when employees earn the future benefits, and recognizing an existing obligation to pay pensions later based on current services received.

ILLUSTRATION 20.4

Components of Annual Pension Expense

⁹At one time, companies applied the **cash basis** of accounting to pension plans by recognizing the amount paid in a particular accounting period as the pension expense for the period. The problem was that the amount paid or funded in a fiscal period depended on financial management and was too often discretionary. For example, funding could depend on the availability of cash, the level of earnings, or other factors unrelated to the requirements of the plan. Application of the cash basis made it possible to manipulate the amount of pension expense appearing in the income statement simply by varying the cash paid to the pension fund.

Service Cost

The **service cost** is the **actuarial present value of benefits attributed by the pension benefit formula to employee service during the period**. That is, the actuary predicts the additional benefits that an employer must pay under the plan's benefit formula as a result of the employees' current year's service, and then discounts the cost of those future benefits back to their present value.

The Board concluded that **companies must consider future compensation levels in measuring the present obligation and periodic pension expense if the plan benefit formula incorporates them**. In other words, the present obligation resulting from a promise to pay a benefit of 1 percent of an employee's **final pay** differs from the promise to pay 1 percent of **current pay**. To overlook this fact is to ignore an important aspect of pension expense. Thus, the FASB adopts the **benefits/years-of-service actuarial method, which determines pension expense based on future salary levels**.

Some object to this determination, arguing that a company should have more freedom to select an expense recognition pattern. Others believe that incorporating future salary increases into current pension expense is accounting for events that have not yet happened. They argue that if a company terminates the plan today, it pays only liabilities for accumulated benefits. **Nevertheless, the FASB indicates that the projected benefit obligation provides a more realistic measure of the employer's obligation under the plan on a going concern basis and, therefore, companies should use it as the basis for determining service cost.**

Interest on the Liability

The second component of pension expense is **interest on the liability**, or **interest expense**. Because a company defers paying the liability until maturity, the company records it on a discounted basis. The liability then accrues interest over the life of the employee. **The interest component is the interest for the period on the projected benefit obligation outstanding during the period**. The FASB did not address the question of how often to compound the interest cost. To simplify our illustrations and problem materials, we use a simple interest computation, applying the interest rate to the beginning-of-the-year balance of the projected benefit liability.

How do companies determine the interest rate to apply to the pension liability? The Board states that the assumed discount rate should **reflect the rates at which companies can effectively settle pension benefits**. In determining these **settlement rates**, companies should look to rates of return on high-quality fixed-income investments currently available, whose cash flows match the timing and amount of the expected benefit payments. The objective of selecting the assumed discount rates is to measure a single amount that, if invested in a portfolio of high-quality debt instruments, would provide the necessary future cash flows to pay the pension benefits when due.

Actual Return on Plan Assets

Pension plan assets are usually investments in stocks, bonds, other securities, and real estate that a company holds to earn a reasonable return, generally at minimum risk. Employer contributions and actual returns on pension plan assets increase pension plan assets. Benefits paid to retired employees decrease them. As indicated, the actual return earned on these assets increases the fund balance and correspondingly reduces the employer's net cost of providing employees' pension benefits. That is, the higher the actual return on the pension plan assets, the less the employer has to contribute eventually and, therefore, the less pension expense that it needs to report.

The actual return on the plan assets is the increase in pension funds from interest, dividends, and realized and unrealized changes in the fair value of the plan assets. Companies compute the actual return by adjusting the change in the plan assets for the effects of contributions during the year and benefits paid out during the year. The equation in **Illustration 20.5**, or a variation thereof, can be used to compute the actual return.

ILLUSTRATION 20.5

Equation for Computing Actual Return

$$\text{Actual Return} = \left(\begin{array}{c} \text{Plan} \\ \text{Assets} \\ \text{Ending} \\ \text{Balance} \end{array} - \begin{array}{c} \text{Plan} \\ \text{Assets} \\ \text{Beginning} \\ \text{Balance} \end{array} \right) - (\text{Contributions} - \text{Benefits Paid})$$

Stated another way, the actual return on plan assets is the difference between the **fair value of the plan assets** at the beginning of the period and at the end of the period, adjusted for contributions and benefit payments. **Illustration 20.6** uses the equation in Illustration 20.5 to compute the actual return, using some assumed amounts.

| | | | |
|--|----------------|------------------|--------------------------|
| Fair value of plan assets at end of period | | \$5,000,000 | |
| Deduct: Fair value of plan assets at beginning of period | | <u>4,200,000</u> | |
| Increase in fair value of plan assets | | | 800,000 |
| Deduct: Contributions to plan during period | \$500,000 | | |
| Less benefits paid during period | <u>300,000</u> | | <u>200,000</u> |
| Actual return on plan assets | | | <u>\$ 600,000</u> |

ILLUSTRATION 20.6**Computation of Actual Return on Plan Assets**

If the actual return on the plan assets is positive (a gain) during the period, a company subtracts it when computing pension expense. If the actual return is negative (a loss) during the period, the company adds it when computing pension expense.¹⁰

Using a Pension Worksheet

LEARNING OBJECTIVE 2

Use a worksheet for employer's pension plan entries.

We will now illustrate the basic computation of pension expense using the first three components: (1) service cost, (2) interest on the liability, and (3) actual return on plan assets. We discuss the other pension expense components (amortization of prior service cost, and gains and losses) in later sections.

Companies often use a worksheet to record pension-related information. As its name suggests, the worksheet is a working tool. A worksheet is **not** a permanent accounting record. It is neither a journal nor part of the general ledger. The worksheet is merely a device to make it easier to prepare entries and the financial statements.¹¹ **Illustration 20.7** shows the format of the **pension worksheet**.

| Pension Worksheet | | | | | | |
|---|--------------------------------|------------------------|------|--------------------------|------------------------------|-------------|
| Home Insert Page Layout Formulas Data Review View | | | | | | |
| P18 fx | | | | | | |

| 1 | General Journal Entries | | | | Memo Record | |
| 2 | | Annual Pension Expense | Cash | Pension Asset/ Liability | Projected Benefit Obligation | Plan Assets |
| 3 | | | | | | |
| 4 | Items | | | | | |
| 5 | | | | | | |
| 6 | | | | | | |
| 7 | | | | | | |
| 8 | | | | | | |
| 9 | | | | | | |

ILLUSTRATION 20.7**Basic Format of Pension Worksheet**

¹⁰At this point, we use the actual rate of return. Later, for purposes of computing pension expense, we use the expected rate of return.

¹¹The use of a pension entry worksheet is recommended and illustrated by Paul B. W. Miller, "The New Pension Accounting (Part 2)," *Journal of Accountancy* (February 1987), pp. 86–94.

The “General Journal Entries” columns of the worksheet (near the center) determine the entries to record in the formal general ledger accounts. The “Memo Record” columns (on the right side) maintain balances in the projected benefit obligation and the plan assets. The difference between the projected benefit obligation and the fair value of the plan assets is the **pension asset/liability**, which is reported in the balance sheet. If the projected benefit obligation is greater than the plan assets, a pension liability occurs. If the projected benefit obligation is less than the plan assets, a pension asset occurs.

On the first line of the worksheet, a company records the beginning balances (if any). It then records subsequent transactions and events related to the pension plan using debits and credits, using both sets of columns as if they were one. For each transaction or event, the debits must equal the credits. **The ending balance in the Pension Asset/Liability column should equal the net balance in the memo record.**

2020 Entries and Worksheet

To illustrate the use of a worksheet and how it helps in accounting for a pension plan, assume that on January 1, 2020, Zarle Company provides the following information related to its pension plan for the year 2020.

- Plan assets, January 1, 2020, are \$100,000.
- Projected benefit obligation, January 1, 2020, is \$100,000.
- Annual service cost is \$9,000.
- Settlement rate is 10 percent.
- Actual return on plan assets is \$10,000.
- Funding contributions are \$8,000.
- Benefits paid to retirees during the year are \$7,000.

Using this data, the worksheet in **Illustration 20.8** presents the beginning balances and all of the pension entries recorded by Zarle in 2020. Zarle records the beginning balances for the projected benefit obligation and the pension plan assets on the first line of the worksheet in the memo record. Because the projected benefit obligation and the plan assets are the same at January 1, 2020, the Pension Asset/Liability account has a zero balance at January 1, 2020.

ILLUSTRATION 20.8
Pension Worksheet—2020

| Pension Worksheet—2020 | | | | | | |

| 11 | | | | | | |
| 12 | | | | | | |
| 13 | | | | | | |
| 14 | Journal entry for 2020 | 9,000 Dr. | 8,000 Cr. | 1,000 Cr.* | | |
| 15 | Balance, Dec. 31, 2020 | | | 1,000 Cr.** | 112,000 Cr. | 111,000 Dr. |
| 16 | | | | | | |
| 17 | *\$9,000 – \$8,000 = \$1,000 | | | | | |
| 18 | **\$112,000 – \$111,000 = \$1,000 | | | | | |

Entry (a) in Illustration 20.8 records the service cost component, which increases pension expense by \$9,000 and increases the liability (projected benefit obligation) by \$9,000. Entry (b) accrues the interest expense component, which increases both the liability and the pension expense by \$10,000 (the beginning projected benefit obligation multiplied by the settlement rate of 10 percent). Entry (c) records the actual return on the plan assets, which increases the plan assets and decreases the pension expense. Entry (d) records Zarle’s contribution (funding) of assets to the pension fund, thereby decreasing cash by \$8,000 and increasing plan assets by \$8,000. Entry (e) records the benefit payments made to retirees, which results in equal \$7,000 decreases to the plan assets and the projected benefit obligation.

Zarle makes the “formal journal entry” on December 31, which records the pension expense in 2020, as follows.

| 2020 | |
|-------------------------|-------|
| Pension Expense | 9,000 |
| Cash | 8,000 |
| Pension Asset/Liability | 1,000 |

Funded Status

The credit to Pension Asset/Liability for \$1,000 represents the difference between the 2020 pension expense of \$9,000 and the amount funded of \$8,000. Pension Asset/Liability (credit) is a liability because Zarle underfunds the plan by \$1,000. The Pension Asset/Liability account balance of \$1,000 also equals the net of the balances in the memo accounts. **Illustration 20.9** shows that the projected benefit obligation exceeds the plan assets by \$1,000, which reconciles to the pension liability reported in the balance sheet.

| | |
|---|--------------------------|
| Projected benefit obligation (Credit) | \$(112,000) |
| Plan assets at fair value (Debit) | <u>111,000</u> |
| Pension asset/liability (Credit) | <u>\$ (1,000)</u> |

ILLUSTRATION 20.9
Pension Reconciliation
 Schedule—December 31, 2020

If the net of the memo record balances is a credit, the reconciling amount in the pension asset/liability column will be a credit equal in amount. If the net of the memo record balances is a debit, the pension asset/liability amount will be a debit equal in amount. The worksheet is designed to produce this reconciling feature, which is useful later in the preparation of the financial statements and required note disclosure related to pensions.

In this illustration (for 2020), the debit to Pension Expense exceeds the credit to Cash, resulting in a credit to Pension Asset/Liability—the recognition of a liability. If the credit to Cash exceeded the debit to Pension Expense, Zarle would debit Pension Asset/Liability—the recognition of an asset.

Prior Service Cost (PSC)

LEARNING OBJECTIVE 3

Describe the accounting and amortization of prior service costs.

When either initiating (adopting) or amending a defined benefit plan, a company often provides benefits to employees for years of service before the date of initiation or amendment. As a result of this prior service cost, the projected benefit obligation is increased to recognize this additional liability. In many cases, the increase in the projected benefit obligation is substantial.

Amortization

Should a company report an expense for these **prior service costs (PSC)** at the time it initiates or amends a plan? The FASB says no. The Board's rationale is that the employer would not provide credit for past years of service unless it expects to receive benefits in the future. As a result, a company should not recognize the **retroactive benefits** as pension expense in the year of amendment. Instead, **the employer initially records the prior service cost as an adjustment to other comprehensive income. The employer then recognizes the prior service cost as a component of pension expense over the remaining service lives of the employees who are expected to benefit from the change in the plan.**

The cost of the retroactive benefits (including any benefits provided to existing retirees) is the increase in the projected benefit obligation at the date of the amendment. An actuary computes the amount of the prior service cost. Amortization of the prior service cost is also an accounting function performed with the assistance of an actuary.

The Board prefers a **years-of-service method** that is similar to a units-of-production computation. First, the company computes the total number of service-years to be worked by all of the participating employees. Second, it divides the prior service cost by the total number of service-years, to obtain a cost per service-year (the unit cost). Third, the company multiplies the number of service-years consumed each year by the cost per service-year, to obtain the annual amortization charge.

To illustrate the amortization of the prior service cost under the years-of-service method, assume that Zarle Company's defined benefit pension plan covers 170 employees. In its negotiations with the employees, Zarle Company amends its pension plan on January 1, 2021, and grants \$80,000 of prior service costs to its employees. The employees are grouped according to expected years of retirement, as follows.

| Group | Number of Employees | Expected Retirement on Dec. 31 |
|-------|---------------------|--------------------------------|
| A | 40 | 2021 |
| B | 20 | 2022 |
| C | 40 | 2023 |
| D | 50 | 2024 |
| E | 20 | 2025 |
| | <u>170</u> | |

Illustration 20.10 shows computation of the service-years per year and the total service-years.

ILLUSTRATION 20.10

Computation of Service-Years

| Year | Service-Years | | | | | Total |
|------|---------------|-----------|------------|------------|------------|------------|
| | A | B | C | D | E | |
| 2021 | 40 | 20 | 40 | 50 | 20 | 170 |
| 2022 | | 20 | 40 | 50 | 20 | 130 |
| 2023 | | | 40 | 50 | 20 | 110 |
| 2024 | | | | 50 | 20 | 70 |
| 2025 | | | | | 20 | 20 |
| | <u>40</u> | <u>40</u> | <u>120</u> | <u>200</u> | <u>100</u> | <u>500</u> |

Computed on the basis of a prior service cost of \$80,000 and a total of 500 service-years for all years, the cost per service-year is \$160 ($\$80,000 \div 500$). The annual amount of amortization based on a \$160 cost per service-year is computed as shown in **Illustration 20.11**.

| Year | Total Service-Years | × | Cost per Service-Year | = | Annual Amortization |
|------|---------------------|---|-----------------------|---|---------------------|
| 2021 | 170 | | \$160 | | \$27,200 |
| 2022 | 130 | | 160 | | 20,800 |
| 2023 | 110 | | 160 | | 17,600 |
| 2024 | 70 | | 160 | | 11,200 |
| 2025 | 20 | | 160 | | 3,200 |
| | <u>500</u> | | | | <u>\$80,000</u> |

ILLUSTRATION 20.11

Computation of Annual Prior Service Cost Amortization

An alternative method of computing amortization of **prior service cost is permitted**. **Employers may use straight-line amortization over the average remaining service life of the employees.** In this case, with 500 service-years and 170 employees, the average would be 2.94 years ($500 \div 170$). The annual expense would be \$27,211 ($\$80,000 \div 2.94$). Using this method, Zarle Company would record expense in 2021, 2022, and 2023 as follows.

| Year | Expense |
|------|-----------------|
| 2021 | \$27,211 |
| 2022 | 27,211 |
| 2023 | 25,578* |
| | <u>\$80,000</u> |

*.94 × \$27,211

2021 Entries and Worksheet

Continuing the Zarle Company illustration into 2021, we note that the company amends the pension plan on January 1, 2021, to grant employees prior service benefits with a present value of \$80,000. Zarle uses the annual amortization amounts, as computed in the previous section using the years-of-service approach (\$27,200 for 2021). The following additional facts apply to the pension plan for the year 2021.

- Annual service cost is \$9,500.
- Settlement rate is 10 percent.
- Actual return on plan assets is \$11,100.
- Annual funding contributions are \$20,000.
- Benefits paid to retirees during the year are \$8,000.
- Amortization of prior service cost (PSC) using the years-of-service method is \$27,200.
- Accumulated other comprehensive income (hereafter referred to as accumulated OCI) on December 31, 2020, is zero.

Illustration 20.12 presents a worksheet of all the pension entries and information recorded by Zarle in 2021. We now add an additional column to the worksheet to record the prior service cost adjustment to other comprehensive income. In addition, as shown in rows 19, 21, and 22, the other comprehensive income amount related to prior service cost is added to accumulated other comprehensive income (“Accumulated OCI”) to arrive at a debit balance of \$52,800 at December 31, 2021.

The first line of the worksheet shows the beginning balances of the Pension Asset/Liability account and the memo accounts. Entry (f) records Zarle's granting of prior service cost, by adding \$80,000 to the projected benefit obligation and decreasing other comprehensive income—prior service cost by the same amount. Entries (g), (h), (i), (k), and (l) are similar to the corresponding entries in 2020. To compute the interest cost on the projected benefit obligation for entry (h), we use the beginning projected benefit balance of \$192,000, which has been adjusted for the prior service cost amendment on January 1, 2021. Entry (j) records the 2021 amortization of prior service cost by debiting Pension Expense for \$27,200 and crediting **Other Comprehensive Income (PSC)** for the same amount.

Zarle makes the following journal entry on December 31 to formally record the 2021 pension expense (the sum of the annual pension expense column), and related pension information.

| 2021 | | | |
|----------------------------------|--|--------|--------|
| Pension Expense | | 44,800 | |
| Other Comprehensive Income (PSC) | | 52,800 | |
| Cash | | | 20,000 |
| Pension Asset/Liability | | | 77,600 |

Because the debits to Pension Expense and to Other Comprehensive Income (PSC) exceed the funding, Zarle credits the Pension Asset/Liability account for the \$77,600 difference. That account is a liability. In 2021, as in 2020, the balance of the Pension Asset/Liability account (\$78,600) is equal to the net of the balances in the memo accounts, as shown in **Illustration 20.13**.

ILLUSTRATION 20.13
Pension Reconciliation
Schedule—December 31, 2021

| | |
|---|---------------------------|
| Projected benefit obligation (Credit) | \$(212,700) |
| Plan assets at fair value (Debit) | 134,100 |
| Pension asset/liability (Credit) | <u>\$ (78,600)</u> |

The reconciliation is the formula that makes the worksheet work. It relates the components of pension accounting, recorded and unrecorded, to one another.

Gains and Losses

LEARNING OBJECTIVE 4

Explain the accounting and amortization for unexpected gains and losses.

Of great concern to companies that have pension plans are the uncontrollable and unexpected swings in pension expense that can result from (1) sudden and large changes in the fair value of plan assets, and (2) changes in actuarial assumptions that affect the amount of the projected benefit obligation. If these gains or losses impact fully the financial statements in the period of realization or incurrence, substantial fluctuations in pension expense result.

Therefore, the FASB decided to reduce the volatility associated with pension expense by using **smoothing techniques** that dampen and in some cases fully eliminate the fluctuations.

Smoothing Unexpected Gains and Losses on Plan Assets

One component of pension expense, actual return on plan assets, reduces pension expense (assuming the actual return is positive). A large change in the actual return can substantially affect pension expense for a year. Assume a company has a 40 percent return in the stock market for the year. Should this substantial, and perhaps one-time, event affect current pension expense?

Actuaries ignore current fluctuations when they develop a funding pattern to pay expected benefits in the future. They develop an **expected rate of return** and multiply it by an asset value weighted over a reasonable period of time to arrive at an **expected return on plan assets**. They then use this return to determine a company's funding pattern.

The FASB adopted the actuary's approach to dampen wide swings that might occur in the actual return. That is, a company includes the **expected return** on the plan assets as a component of pension expense, not the actual return in a given year. To achieve this goal, the company multiplies the expected rate of return by the market-related value of the plan assets. The **market-related asset value** of the plan assets is either the fair value of plan assets or a calculated value that recognizes changes in fair value in a systematic and rational manner. [4]¹²

The difference between the expected return and the actual return is referred to as the **unexpected gain or loss**; the FASB uses the term **asset gains and losses**. **Asset gains** occur when actual return exceeds expected return; **asset losses** occur when actual return is less than expected return.

What happens to unexpected gains or losses in the accounting for pensions? Companies record asset gains and asset losses in an account, **Other Comprehensive Income (G/L)**, combining them with gains and losses accumulated in prior years. This treatment is similar to prior service cost. The Board believes this treatment is consistent with the practice of including in

¹²Companies may use different ways of determining the calculated market-related value for different classes of assets. For example, an employer might use fair value for bonds and a five-year moving-average for equities. But companies should consistently apply the manner of determining market-related value from year to year for each asset class. Throughout our Zarle illustrations, we assume that market-related values based on a calculated value and the fair value of plan assets are equal. *For homework purposes, use the fair value of plan assets as the measure for the market-related value.*

other comprehensive income certain changes in value that have not been recognized in net income (for example, unrealized gains and losses on available-for-sale debt securities). [5] In addition, the accounting is simple, transparent, and symmetrical.

To illustrate the computation of an unexpected gain or loss and its related accounting, assume that in 2022, Zarle Company has an actual return on plan assets of \$12,000 when the expected return is \$13,410 (the expected rate of return of 10% on plan assets times the beginning-of-the-year plan assets). The unexpected asset loss of \$1,410 (\$12,000 – \$13,410) is debited to Other Comprehensive Income (G/L) and credited to Pension Expense. We show treatment of this loss in the worksheet in Illustration 20.18.

What Do the Numbers Mean? Pension Costs Ups and Downs

For some companies, pension plans generate real profits. The plans not only pay for themselves but also increase earnings. This happens when the expected return on pension assets exceed the company's annual costs. At **MeadWestvaco**, pension income amounted to approximately 27 percent of operating profit. It tallied 11 percent of operating profit at **CenturyTel** and 9.5 percent at **Sun Trust Banks**. The issue is important because in these cases management is not driving the operating

income—pension income is. And as a result, income can change quickly.

Unfortunately, when the stock market stops booming, pension expense substantially increases for many companies. The reason: Expected return on a smaller asset base no longer offsets pension service costs and interest on the projected benefit obligation. As a result, many companies find it difficult to meet their earnings targets, at a time when meeting such targets is crucial to maintaining the stock price.

Smoothing Unexpected Gains and Losses on the Pension Liability

In estimating the projected benefit obligation (the liability), actuaries make assumptions about such items as mortality rate, retirement rate, turnover rate, disability rate, and salary amounts. Any change in these actuarial assumptions affects the amount of the projected benefit obligation. Seldom does actual experience coincide exactly with actuarial predictions. These unexpected gains or losses from changes in the projected benefit obligation are called **liability gains and losses**.

Companies report liability gains (resulting from unexpected decreases in the liability balance) and liability losses (resulting from unexpected increases) in Other Comprehensive Income (G/L). Companies combine the liability gains and losses in the same Other Comprehensive Income (G/L) account used for asset gains and losses. They accumulate the asset and liability gains and losses from year to year that are not amortized in Accumulated Other Comprehensive Income. This amount is reported on the balance sheet in the stockholders' equity section.

Corridor Amortization

The asset gains and losses and the liability gains and losses can offset each other. As a result, the Accumulated OCI account related to gains and losses may not grow very large. But, it is possible that no offsetting will occur and that the balance in the Accumulated OCI account related to gains and losses will continue to grow.

To limit the growth of the Accumulated OCI account, the FASB invented the **corridor approach** for amortizing the account's accumulated balance when it gets too large. How large is too large? The FASB set a limit of 10 percent of the larger of the beginning balances of the projected benefit obligation or the market-related value of the plan assets. **Above that size, the Accumulated OCI account related to gains and losses is considered too large and must be amortized.**

To illustrate the corridor approach, data for Callaway Co.'s projected benefit obligation and plan assets over a period of six years are shown in **Illustration 20.14**.

ILLUSTRATION 20.14

Computation of the Corridor

| Beginning-of-the-Year Balances | Projected Benefit Obligation | Market-Related Asset Value | Corridor* +/- 10% |
|--------------------------------|------------------------------|----------------------------|----------------------|
| 2019 | \$1,000,000 | \$ 900,000 | \$100,000 |
| 2020 | 1,200,000 | 1,100,000 | 120,000 |
| 2021 | 1,300,000 | 1,700,000 | 170,000 |
| 2022 | 1,500,000 | 2,250,000 | 225,000 |
| 2023 | 1,700,000 | 1,750,000 | 175,000 |
| 2024 | 1,800,000 | 1,700,000 | 180,000 |

*The corridor becomes 10% of the larger (in red type) of the projected benefit obligation or the market-related plan asset value.

How the corridor works becomes apparent when we portray the data graphically, as in **Illustration 20.15**.

ILLUSTRATION 20.15

Graphic Illustration of the Corridor

If the balance in the Accumulated OCI account related to gains and losses stays within the upper and lower limits of the corridor, no amortization is required. In that case, Callaway carries forward unchanged the accumulated OCI related to gains and losses.

If amortization is required, the minimum amortization is the excess (of the accumulated OCI account above the corridor amount) divided by the average remaining service period of active employees who are expected to receive benefits under the plan. Callaway may use any systematic method of amortization of gains and losses in lieu of the minimum, provided it is greater than the minimum. It must use the method consistently for both gains and losses, and must disclose the amortization method used.

Example of Gains/Losses

In applying the corridor, companies should include amortization of the net gain or loss as a component of pension expense only if, at the **beginning of the year**, the net gain or loss in Accumulated OCI exceeded the corridor. That is, if no net gain or loss exists in Accumulated OCI at the beginning of the period, the company cannot recognize pension expense gains or losses in that period.

To illustrate the amortization of net gains and losses, assume the following information for Soft-White, Inc.

| | Beginning of the Year | | |
|------------------------------|-----------------------|-------------|-------------|
| | 2020 | 2021 | 2022 |
| Projected benefit obligation | \$2,100,000 | \$2,600,000 | \$2,900,000 |
| Market-related asset value | 2,600,000 | 2,800,000 | 2,700,000 |

Soft-White recorded in Other Comprehensive Income actuarial losses of \$400,000 in 2020 and \$300,000 in 2021.

If the average remaining service life of all active employees is 5.5 years, the schedule to amortize the net gain or loss is as shown in **Illustration 20.16**.

ILLUSTRATION 20.16**Corridor Test and Gain/Loss Amortization Schedule**

| Year | Projected Benefit Obligation ^a | Plan Assets ^a | Corridor ^b | Accumulated OCI (G/L) ^a | Minimum Amortization of Loss (For Current Year) |
|------|---|--------------------------|-----------------------|------------------------------------|---|
| 2020 | \$2,100,000 | \$2,600,000 | \$260,000 | \$ -0- | \$ -0- |
| 2021 | 2,600,000 | 2,800,000 | 280,000 | 400,000 | 21,818 ^c |
| 2022 | 2,900,000 | 2,700,000 | 290,000 | 678,182 ^d | 70,579 ^d |

^aAll as of the beginning of the period.
^b10% of the greater of projected benefit obligation or plan assets' market-related value.
^c\$400,000 - \$280,000 = \$120,000; \$120,000 ÷ 5.5 = \$21,818.
^d\$400,000 - \$21,818 + \$300,000 = \$678,182; \$678,182 - \$290,000 = \$388,182; \$388,182 ÷ 5.5 = \$70,579.

As Illustration 20.16 indicates, the loss recognized in 2021 increased pension expense by \$21,818. This amount is small in comparison with the total loss of \$400,000. It indicates that the corridor approach dampens the effects (reduces volatility) of these gains and losses on pension expense.

The rationale for the corridor is that gains and losses result from refinements in estimates as well as real changes in economic value. Over time, some of these gains and losses will offset one another. It therefore seems reasonable that Soft-White should not fully recognize gains and losses as a component of pension expense in the period in which they arise.

However, Soft-White should immediately recognize in net income certain gains and losses—if they arise from a single occurrence not directly related to the operation of the pension plan and not in the ordinary course of the employer's business. For example, a gain or loss that is directly related to a plant closing, a disposal of a business component, or a similar event that greatly affects the size of the employee work force should be recognized as a part of the gain or loss associated with that event.

For example, at one time, **Bethlehem Steel** reported a quarterly loss of \$477 million. A great deal of this loss was attributable to future estimated benefits payable to workers who were permanently laid off. In this situation, the loss should be treated as an adjustment to the gain or loss on the plant closing and should not affect pension cost for the current or future periods.

Summary of Calculations for Asset Gain or Loss

The difference between the actual return on plan assets and the expected return on plan assets is the **unexpected asset gain or loss** component. This component defers the difference between the actual return and expected return on plan assets in computing current-year pension expense. Thus, after considering this component, **it is really the expected return on plan assets (not the actual return) that determines current pension expense.**

Companies determine the amortized net gain or loss by amortizing the Accumulated OCI amount related to net gain or loss at the beginning of the year subject to the corridor limitation. In other words, **if the accumulated gain or loss is greater than the corridor, these net gains and losses are subject to amortization.** Soft-White computed this minimum amortization by dividing the net gains or losses subject to amortization by the average remaining service period. When the current-year unexpected gain or loss is combined with the amortized net gain or loss, we determine the current-year gain or loss. **Illustration 20.17** summarizes these gain and loss computations.

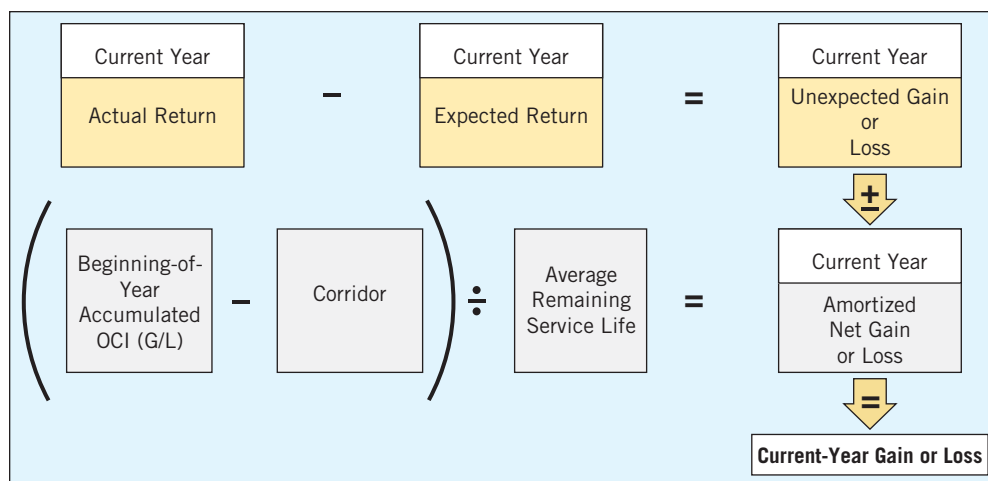

ILLUSTRATION 20.17

Graphic Summary of Gain or Loss Computation

In essence, these gains and losses are subject to *triple* smoothing. That is, companies first smooth the asset gain or loss by using the expected return. Second, they do not amortize the accumulated gain or loss at the beginning of the year unless it is greater than the corridor. Finally, they spread the excess over the remaining service life of existing employees.

Evolving Issue Bye Bye Corridor

Many companies have significant actuarial losses in their pension plans, which are presently deferred through use of the corridor approach. However, companies do have a choice—they may select any method of accounting for these deferred losses as long as it is systematic, rational, and consistently applied, and meets a minimum for recognition in the income statement.

Some companies have shifted away from the corridor approach and recognizing actuarial losses immediately. For example, **AT&T**, **Verizon Communications**, and **Honeywell International** have changed accounting principles from smoothing these losses to recognizing them in the year incurred.

Companies argue this approach provides more transparency for these losses that will directly affect pension expense in the current period (and this accounting is also more similar to IFRS). However, there is a silver lining for these companies—they can charge many of these deferred losses to past years. For example, the table in the adjacent column indicates deferred losses as of 2009 for three major companies.

When AT&T changed to immediate recognition in 2010, it restated its previous years. In 2008, for example, AT&T increased its pension cost by \$24.9 billion, which led to a net loss of \$2.6 billion instead of a profit of \$12.9 billion. As a result, in 2010 it recognized a much smaller pension cost of \$3 billion. Skeptics suggest that

| | Deferred Losses (in billions) | Losses as % of Pension Assets |
|------------------|----------------------------------|----------------------------------|
| AT&T | \$23.04 | 49% |
| Verizon | \$12.20 | 43 |
| Honeywell | \$7.57 | 55 |

AT&T made this change to charge these losses to prior periods. In other words, does anyone in 2016 care that the profit in 2008 was changed to a loss? In addition, once these losses are charged to prior periods, they no longer affect current and future earnings. **Ford** got on the mark-to-market bandwagon in 2016, taking a \$2 billion earnings hit upon adoption.

Although earnings in the future will probably be more volatile due to fluctuations in pension expense, more companies are willing to move in the direction of immediate expensing to eliminate large deferred losses which would be a drag on future income.

Snively, "Ford Earnings to Take \$2 Billion Hit on Accounting Change," *Detroit Free Press* (January 20, 2017).

2022 Entries and Worksheet

Continuing the Zarle Company illustration, the following facts apply to the pension plan for 2022.

- Annual service cost is \$13,000.
- Settlement rate is 10 percent; expected earnings rate is 10 percent.

- Actual return on plan assets is \$12,000.
- Amortization of prior service cost (PSC) is \$20,800.
- Annual funding contributions are \$24,000.
- Benefits paid to retirees during the year are \$10,500.
- Changes in actuarial assumptions resulted in an end-of-year projected benefit obligation of \$265,000.

The worksheet in **Illustration 20.18** presents all of Zarle's 2022 pension entries and related information. The first line of the worksheet records the beginning balances that relate to the pension plan. In this case, Zarle's beginning balances are the ending balances from its 2021 pension worksheet in Illustration 20.12.

| 23 | *Accumulated OCI (PSC) | \$32,000 Dr. | | | | | | |
| 24 | Accumulated OCI (G/L) | 29,940 Dr. | | | | | | |
| 25 | Accumulated OCI, Dec. 31, 2022 | \$61,940 Dr. | | | | | | |

Entries (m), (n), (o), (q), (r), and (s) are similar to the corresponding entries in 2020 or 2021.

Entries (o) and (p) are related. We explained the recording of the actual return in entry (o) in both 2020 and 2021; it is recorded similarly in 2022. In both 2020 and 2021, Zarle assumed that the actual return on plan assets was equal to the expected return on plan assets. In 2022, the expected return of \$13,410 (the expected rate of return of 10 percent times the beginning-of-the-year plan assets' balance of \$134,100) is higher than the actual return of \$12,000. To smooth pension expense, Zarle defers the unexpected loss of \$1,410 (\$13,410 – \$12,000) by debiting the Other Comprehensive Income (G/L) account and crediting Pension Expense. **As a result of this adjustment, the expected return on the plan assets is the amount actually used to compute pension expense.**

Entry (t) records the change in the projected benefit obligation resulting from the change in the actuarial assumptions. As indicated, the actuary has now computed the ending balance to be \$265,000. Given the PBO balance at December 31, 2021, and the related transactions during 2022, the PBO balance to date is computed as shown in **Illustration 20.19**.

| | |
|---|------------------|
| December 31, 2021, PBO balance | \$212,700 |
| Service cost [entry (m)] | 13,000 |
| Interest cost [entry (n)] | 21,270 |
| Benefits paid [entry (s)] | <u>(10,500)</u> |
| December 31, 2022, PBO balance (before liability increases) | <u>\$236,470</u> |

ILLUSTRATION 20.19**Projected Benefit Obligation Balance (Unadjusted)**

The difference between the ending balance of \$265,000 and the balance of \$236,470 before the liability increase is \$28,530 (\$265,000 – \$236,470). This \$28,530 increase in the employer's liability is an unexpected loss. The journal entry on December 31, 2022, to record the pension information is as follows.

| | | |
|----------------------------------|--------|--------|
| Pension Expense | 41,660 | |
| Other Comprehensive Income (G/L) | 29,940 | |
| Cash | | 24,000 |
| Other Comprehensive Income (PSC) | | 20,800 |
| Pension Asset/Liability | | 26,800 |

As the 2022 worksheet indicates, the \$105,400 balance in the Pension Asset/Liability account at December 31, 2022, is equal to the net of the balances in the memo accounts. **Illustration 20.20** shows this computation.

| | |
|---------------------------------------|------------------|
| Projected benefit obligation (Credit) | \$265,000 |
| Plan assets at fair value (Debit) | <u>159,600</u> |
| Pension asset/liability | <u>\$105,400</u> |

ILLUSTRATION 20.20**Pension Reconciliation Schedule—December 31, 2022**

2023 Entries and Worksheet—A Comprehensive Example

Incorporating the corridor computation, we continue the Zarle Company pension plan accounting based on the following facts for 2023.

- Service cost is \$16,000.
- Settlement rate is 10 percent; expected rate of return is 10 percent.
- Actual return on plan assets is \$22,000.
- Amortization of prior service cost is \$17,600.
- Annual funding contributions are \$27,000.
- Benefits paid to retirees during the year are \$18,000.
- Average service life of all covered employees is 20 years.

Zarle prepares a worksheet to facilitate accumulation and recording of the components of pension expense and maintenance of amounts related to the pension plan. **Illustration 20.21** shows that worksheet, which uses the basic data presented above. Beginning-of-the-year 2023 account balances are the December 31, 2022, balances from Zarle's 2022 pension worksheet in **Illustration 20.18**.

Worksheet Explanations and Entries

Entries (aa) through (gg) are similar to the corresponding entries previously explained in the prior years' worksheets, with the exception of entry (dd). In 2022, the expected return on plan assets exceeded the actual return, producing an unexpected loss. In 2023, the actual return of \$22,000 exceeds the expected return of \$15,960 ($\$159,600 \times 10\%$), resulting in an unexpected gain of \$6,040, entry (dd). By netting the gain of \$6,040 against the actual return of \$22,000, pension expense is affected only by the expected return of \$15,960.

A new entry (hh) in Zarle's worksheet results from application of the corridor test on the accumulated balance of net gain or loss in accumulated other comprehensive income. Zarle Company begins 2023 with a balance in the net loss account of \$29,940. The company applies the corridor test in 2023 to determine whether the balance is excessive and should be amortized. In 2023, the corridor is 10 percent of the larger of the beginning-of-the-year projected benefit obligation of \$265,000 or the plan asset's \$159,600 market-related asset value (assumed to be fair value). The corridor for 2023 is \$26,500 ($\$265,000 \times 10\%$). Because the balance in Accumulated OCI is a net loss of \$29,940, the excess (outside the corridor) is \$3,440 ($\$29,940 - \$26,500$). Zarle amortizes the \$3,440 excess over the average remaining service life of all employees. Given an average remaining service life of 20 years, the amortization in 2023 is \$172 ($\$3,440 \div 20$). In the 2023 pension worksheet, Zarle debits Pension Expense for \$172 and credits that amount to Other Comprehensive Income (G/L). **Illustration 20.22** shows the computation of the \$172 amortization charge.

ILLUSTRATION 20.22

Computation of 2023 Amortization Charge (Corridor Test)

| 2023 Corridor Test | |
|---|-----------------|
| Net (gain) or loss at beginning of year in accumulated OCI | \$29,940 |
| 10% of larger of PBO or market-related asset value of plan assets | (26,500) |
| Amortizable amount | <u>\$ 3,440</u> |
| Average service life of all employees | 20 years |
| 2023 amortization ($\$3,440 \div 20$ years) | <u>\$172</u> |

Zarle formally records pension expense for 2023 as follows.

| | 2023 | |
|----------------------------------|--------|--------|
| Pension Expense | 44,312 | |
| Pension Asset/Liability | 6,500 | |
| Cash | | 27,000 |
| Other Comprehensive Income (G/L) | | 6,212 |
| Other Comprehensive Income (PSC) | | 17,600 |

Reporting Pension Plans in Financial Statements

LEARNING OBJECTIVE 5

Describe the requirements for reporting pension plans in financial statements.

As you might suspect, a phenomenon as significant and complex as pensions involves extensive reporting and disclosure requirements. We will cover these requirements in four categories: (1) assets and liabilities, (2) net income, (3) comprehensive income, and (4) the notes to the financial statements.

Assets and Liabilities

Companies must recognize on their balance sheet the overfunded (pension asset) or underfunded (pension liability) status of their defined benefit pension plan. The overfunded or underfunded status is measured as the difference between the fair value of the plan assets and the projected benefit obligation.¹³ In Zarle's case, the projected benefit obligation is

¹³Some companies have two or more pension plans. The Board takes the position that **all overfunded plans should be combined** and shown as a pension asset on the balance sheet. Similarly, if the company has two or more underfunded plans, the **underfunded plans are combined and shown as one amount** on the balance sheet.

The FASB rejected the alternative of combining *all* plans and representing the net amount as a single net asset or net liability. The rationale: A company does not have the ability to offset excess assets of one plan against underfunded obligations of another plan. Furthermore, netting all plans is inappropriate because offsetting assets and liabilities is not permitted under GAAP unless a right of offset exists.

greater than the plan assets at December 31, 2023. As a result, Zarle reports a net pension liability. The current portion of a net pension liability represents the amount of benefit payments to be paid in the next 12 months (or operating cycle, if longer), if that amount cannot be funded from existing plan assets. Otherwise, the pension liability is classified as a noncurrent liability.¹⁴

In the event that the fair value of plan assets exceeds the projected benefit obligation (the plan is overfunded), companies will report a net pension asset. However, no portion of a pension asset is reported as a current asset. That is, the excess of the fair value of the plan assets over the benefit obligation is classified as a noncurrent asset. The rationale for noncurrent classification is that the pension plan assets are restricted. That is, these assets are used to fund the projected benefit obligation, and therefore noncurrent classification is appropriate.

Net Income

Pension expense includes multiple components (service cost, interest cost, return on assets, and amortization of various amounts such as prior service cost and gains and losses) deferred from prior periods. The FASB requires presentation of the components of pension expense as follows.

1. Service cost component is reported as pension expense in income from operations (often as part of compensation expense).
2. Other components of pension expense are generally reported as one net amount in the “Other expenses and losses” section below income from operations. [7]

The rationale for this segregation is that presentation of pension expense as one amount combines amounts that are different in their predictive value, resulting in a presentation that is of limited value to financial statement users. The FASB indicated that service cost is the component that originates from employee service during the current period and has a significantly different effect in terms of information-usefulness compared to other pension expense components.

To illustrate the reporting of pension expense on the income statement, information from Zarle Company’s 2023 worksheet (Illustration 20.21) is used. Zarle’s worksheet indicates that service cost component of pension expense is \$16,000, and other components of pension expense are \$28,312 (\$44,312 – \$16,000). Assuming the following additional information for Zarle Company (sales revenue \$2,000,000; cost of goods sold \$1,500,000; other operating expenses, excluding pension expense related to service cost \$110,000), **Illustration 20.23** presents Zarle’s income statement for 2023.

ILLUSTRATION 20.23
Income Statement—2023

| Zarle Company | |
|---|-------------------|
| Income Statement | |
| For the Year Ended December 31, 2023 | |
| Sales revenue | \$2,000,000 |
| Cost of goods sold | 1,500,000 |
| Gross profit | <u>500,000</u> |
| Pension expense (service cost) | 16,000 |
| Other operating expenses | 110,000 |
| Income from operations | <u>374,000</u> |
| Other expenses and losses | |
| Pension expense (other components) | 28,312 |
| Net income | <u>\$ 345,688</u> |

¹⁴At a minimum, companies must disclose the amount of assets allocated to equities, government and corporate bonds, mortgage-backed securities, derivatives, and real estate. Also, information on concentrations of risk must be explained. Finally, fair value disclosures would be required, including classification of amounts into levels of the fair value hierarchy. [6]

If Zarle does not report income from operations, it then has the discretion to report the other components of pension expense wherever it is appropriate. Such presentation should convey the underlying nature of these components and be separated from the service cost component. *For homework purposes, assume that the income statement includes an operating income subtotal.*

Comprehensive Income

In addition to the pension expense reported on the income statement, companies are also required to recognize actuarial gains and losses and prior service costs that originate in the current period in other comprehensive income. Actuarial gains and losses not recognized as part of pension expense are recognized as increases and decreases in other comprehensive income. The same type of accounting is also used for prior service cost. The Board requires that the prior service cost arising in the year of the amendment (which increases the projected benefit obligation) be recognized by an offsetting debit to other comprehensive income. By recognizing both actuarial gains and losses and prior service cost as part of other comprehensive income, the Board believes that the usefulness of financial statements is enhanced.

To illustrate, Zarle Company's 2023 worksheet is used. Zarle's worksheet indicates that both prior service cost of \$17,600 and actuarial gains of \$6,212 are amortized to pension expense in 2023. The increase in other comprehensive income of \$23,812 is computed as shown in **Illustration 20.24**.

| | |
|-----------------------------------|------------------------|
| Prior service cost amortization | \$17,600 |
| Gains and losses amortization | 6,212 |
| Other comprehensive income | <u>\$23,812</u> |

ILLUSTRATION 20.24

Computation of Other Comprehensive Income

Illustration 20.25 shows the computation of comprehensive income for 2023 for Zarle Company.

| | |
|-----------------------------------|-------------------------|
| Net income | \$345,688 |
| Other comprehensive income | <u>23,812</u> |
| Comprehensive income | <u>\$369,500</u> |

ILLUSTRATION 20.25

Computation of Comprehensive Income

As discussed in Chapter 4, the components of other comprehensive income must be reported in one of two ways: (1) in a second income statement, or (2) in a combined statement of comprehensive income. Regardless of the format used, net income must be added to other comprehensive income to arrive at comprehensive income. *For homework purposes, use the second income statement approach unless stated otherwise.* Earnings per share information related to comprehensive income is not required.

To illustrate the second income statement approach, assume that Zarle Company has reported a **traditional income statement**. The comprehensive income statement is then shown in **Illustration 20.26**.

| Zarle Company Comprehensive Income Statement For the Year Ended December 31, 2023 | | |
|---|---------------|-------------------------|
| Net income | | \$345,688 |
| Other comprehensive loss | | |
| Actuarial liability loss | \$6,212 | |
| Prior service cost | <u>17,600</u> | <u>23,812</u> |
| Comprehensive income | | <u>\$369,500</u> |

ILLUSTRATION 20.26

Comprehensive Income Reporting

Illustration 20.27 shows the computation of “Accumulated other comprehensive loss” as reported in stockholders’ equity at December 31, 2023.

ILLUSTRATION 20.27**Computation of Accumulated Other Comprehensive Income**

| | |
|---|------------------------|
| Accumulated other comprehensive loss, January 1, 2023 | \$61,940 |
| Other comprehensive income | <u>23,812</u> |
| Accumulated other comprehensive loss, December 31, 2023 | <u><u>\$38,128</u></u> |

Regardless of the display format for the income statement, the accumulated other comprehensive loss is reported in the stockholders’ equity section of the balance sheet of Zarle Company as shown in **Illustration 20.28**. (Illustration 20.28 uses assumed data for the common stock and retained earnings information.)

ILLUSTRATION 20.28**Reporting of Accumulated OCI**

| Zarle Company Balance Sheet As of December 31, 2023 (Stockholders’ Equity Section) | |
|---|-------------------------|
| Stockholders’ equity | |
| Common stock | \$100,000 |
| Retained earnings | 60,000 |
| Accumulated other comprehensive loss | <u>38,128</u> |
| Total stockholders’ equity | <u><u>\$121,872</u></u> |

By providing information on the components of comprehensive income as well as total accumulated other comprehensive income, the company communicates all changes in net assets.

In this illustration, it is assumed that the accumulated other comprehensive income at January 1, 2023, is not adjusted for the amortization of any prior service cost or actuarial gains and losses that would change pension expense. As discussed in the earlier examples, these items will be amortized into pension expense in future periods.

Underlying Concepts

Does it make a difference to users of financial statements whether companies recognize pension information in the financial statements or disclose it only in the notes? The FASB was unsure, so in accord with the full disclosure principle, it decided to provide extensive pension plan disclosures.

Within the Notes to the Financial Statements

Pension plans are frequently important to understanding a company’s financial position, results of operations, and cash flows. Therefore, a company discloses the following information, either in the body of the financial statements or in the notes (see **Underlying Concepts**). [8]

1. A schedule showing all the major components of pension expense. **Rationale:** Information provided about the components of pension expense helps users better understand how a company determines pension expense. It also is useful in forecasting a company’s net income.
2. A **reconciliation** showing how the projected benefit obligation and the fair value of the plan assets changed from the beginning to the end of the period. **Rationale:** Disclosing

the projected benefit obligation, the fair value of the plan assets, and changes in them should help users understand the economics underlying the obligations and resources of these plans. Explaining the changes in the projected benefit obligation and fair value of plan assets in the form of a reconciliation provides a more complete disclosure and makes the financial statements more understandable.

3. A disclosure of the rates used in measuring the benefit amounts (discount rate, expected return on plan assets, rate of compensation). **Rationale:** Disclosure of these rates permits users to determine the reasonableness of the assumptions applied in measuring the pension liability and pension expense.
4. A table indicating the allocation of pension plan assets by category (equity securities, debt securities, real estate, and other assets), and showing the percentage of the fair value to total plan assets. In addition, a company must include a narrative description of investment policies and strategies, including the target allocation percentages (if used by the company). **Rationale:** Such information helps financial statement users evaluate the pension plan's exposure to market risk and possible cash flow demands on the company. It also will help users better assess the reasonableness of the company's expected rate of return assumption.
5. The **expected benefit payments** to be paid to current plan participants for each of the next five fiscal years and in the aggregate for the five fiscal years thereafter. Also required is disclosure of a company's best **estimate of expected contributions** to be paid to the plan during the next year. **Rationale:** These disclosures provide information related to the cash outflows of the company. With this information, financial statement users can better understand the potential cash outflows related to the pension plan. They can better assess the liquidity and solvency of the company, which helps in assessing the company's overall financial flexibility.
6. The nature and amount of changes in plan assets and benefit obligations recognized in net income and in other comprehensive income of each period. **Rationale:** This disclosure provides information on pension elements affecting the projected benefit obligation and plan assets and on whether those amounts have been recognized in income or deferred to future periods.
7. The accumulated amount of changes in plan assets and benefit obligations that have been recognized in other comprehensive income. **Rationale:** This information indicates the pension-related balances recognized in stockholders' equity, which could affect future income.

In summary, the disclosure requirements are extensive, and purposely so (see **Global View**). One factor that has been a challenge for useful pension reporting has been the lack of consistent terminology. Furthermore, a substantial amount of offsetting is inherent in the measurement of pension expense and the pension liability. These disclosure requirements are designed to address these concerns and take some of the mystery out of pension reporting.¹⁵

Illustration 20.29 shows the note disclosure of Zarle's pension plan for 2023. Note that this example assumes that the pension liability is noncurrent and that the 2024 adjustment for amortization of the net gain or loss and amortization of prior service cost are the same as 2023.

Global View

The FASB's proposed Accounting Standards Update on presentation of pension expense, if adopted, will align GAAP with IFRS.

¹⁵As part of its Disclosure Framework project, the FASB has issued Accounting Standards Update (ASU) 2018-14 (August 2018) to improve financial reporting of pensions and other postretirement benefits (discussed in Appendix 20A). This ASU makes defined benefit plan disclosures more useful by adding disclosure requirements (e.g., descriptions of plan benefits and the reasons for significant gains and losses) as requested by users. The ASU also eliminates less-useful disclosures as indicated by users (e.g., the amount of the accumulated benefit obligation).

| | | Total recognized in other comprehensive income | <u>(23,812)</u> |
| | | Total recognized in pension expense and other comprehensive income | <u>\$20,500</u> |
| | | <p>The estimated net actuarial loss and prior service cost for the defined benefit pension plan that will be amortized from accumulated other comprehensive income into pension expense over the next year are estimated to be the same as this year.</p> <p>The amount recognized as a long-term liability in the balance sheet is as follows:</p> | |
| | | <p>Noncurrent liability</p> | |
| Amounts recognized in the balance sheet | | Pension liability | <u>\$98,900</u> |
| | | The amounts recognized in accumulated other comprehensive income related to pensions consist of: | |
| | | Net actuarial loss | \$23,728 |
| | | Prior service cost | <u>14,400</u> |
| | | Total | <u>\$38,128</u> |
| | | <p>Change in benefit obligation</p> | |
| Reconciliations of pension liability and plan assets | | Benefit obligation at beginning of year | \$265,000 |
| | | Service cost | 16,000 |
| | | Interest cost | 26,500 |
| | | Amendments (Prior service cost) | -0- |
| | | Actuarial gain | -0- |
| | | Benefits paid | <u>(18,000)</u> |
| | | Benefit obligation at end of year | <u>289,500</u> |
| | | <p>Change in plan assets</p> | |
| Funded status of plan | | Fair value of plan assets at beginning of year | 159,600 |
| | | Actual return on plan assets | 22,000 |
| | | Contributions | 27,000 |
| | | Benefits paid | <u>(18,000)</u> |
| | | Fair value of plan assets at end of year | <u>190,600</u> |
| | | Funded status (liability) | <u>\$ 98,900</u> |
| Rates used to estimate plan elements | | <p>The weighted-average discount rate used in determining the 2023 projected benefit obligation was 10 percent. The rate of increase in future compensation levels used in computing the 2023 projected benefit obligation was 4.5 percent. The weighted-average expected long-term rate of return on the plan's assets was 10 percent.</p> | |

Illustrations 20.30 and 20.31 present four-year summaries for the Zarle example related to the key disclosures of pension expense and the funded status of the pension plan (based on the information from the worksheets in Illustrations 20.8, 20.12, 20.18, and 20.21).

| Zarle Company | | | | |
|--------------------------------------|-----------------|-----------------|-----------------|-----------------|
| | 2020 | 2021 | 2022 | 2023 |
| Components of pension expense | | | | |
| Service cost | \$ 9,000 | \$ 9,500 | \$13,000 | \$16,000 |
| Interest cost | 10,000 | 19,200 | 21,270 | 26,500 |
| Expected return on plan assets | (10,000) | (11,100) | (13,410)* | (15,960)* |
| Amortization of prior service cost | -0- | 27,200 | 20,800 | 17,600 |
| Amortization of loss | -0- | -0- | -0- | 172 |
| Pension expense | <u>\$ 9,000</u> | <u>\$44,800</u> | <u>\$41,660</u> | <u>\$44,312</u> |

*Note that the expected return must be disclosed, not the actual return. In 2022, the expected return is \$13,410, which is the actual gain (\$12,000) adjusted by the unrecognized loss (\$1,410). In 2023, the expected return is \$15,960, which is the actual gain (\$22,000) adjusted by the unrecognized gain (\$6,040).

ILLUSTRATION 20.31**Pension Reconciliation for Zarle Company—2020, 2021, 2022, 2023**

Special Issues

The Pension Reform Act of 1974

A classic example of the unfortunate consequences of an underfunded pension plan is the 1963 shutdown of the **Studebaker Automobile** operations in South Bend, Indiana, in which 4,500 workers lost 85 percent of their vested benefits. As a result of such situations, the Employee Retirement Income Security Act of 1974—**ERISA**—was passed. The legislation affects virtually every private retirement plan in the United States. It attempts to safeguard employees' pension rights by mandating many pension plan requirements, including minimum funding, participation, and vesting (see **Underlying Concepts**).

These requirements can influence the employers' cash flows significantly. Under this legislation, annual funding is no longer discretionary. An employer now must fund the plan in accordance with an actuarial funding method that over time will be sufficient to pay for all

Underlying Concepts

Many plans are underfunded but still quite viable. For example, at one time **Loews Corp.** had a \$159 million shortfall, but also had earnings of \$594 million and a good net worth. Thus, the going concern assumption permits us to ignore pension underfundings in some cases because in the long run they are not significant.

pension obligations. If companies do not fund their plans in a reasonable manner, they may be subject to fines and/or loss of tax deductions.¹⁶

The law requires plan administrators to publish a comprehensive description and summary of their plans, along with detailed annual reports that include many supplementary schedules and statements.

Another important provision of the act is the creation of the **Pension Benefit Guaranty Corporation (PBGC)**. The PBGC's purpose is to administer terminated plans and to impose liens on an employer's assets for certain unfunded pension liabilities. If a company terminates its pension plan, the PBGC can effectively impose a lien against the employer's assets for the excess of the present value of guaranteed vested benefits over the pension fund assets. This lien generally has had the status of a tax lien; it takes priority over most other creditorship claims. This section of the act gives the PBGC the power to force an involuntary termination of a pension plan whenever the risks related to nonpayment of the pension obligation seem too great. Because ERISA restricts to 30 percent of net worth the lien that the PBGC can impose, the PBGC must monitor all plans to ensure that net worth is sufficient to meet the pension benefit obligations.

A large number of terminated plans have caused the PBGC to pay out substantial benefits. Currently the PBGC receives its funding from employers, who contribute a certain dollar amount for each employee covered under the plan.¹⁷

What Do the Numbers Mean? Who Guarantees the Guarantor?

The **Pension Benefit Guaranty Corporation (PBGC)** in a recent annual report indicates that its primary mission is to encourage the continuation and maintenance of voluntary private pension plans. It's an obligation which the PBGC takes seriously. However, the trends are ominous:

- Americans today are spending more years in retirement. They're healthier and more active, which is great news. Unfortunately, pensions haven't kept up.
- Many businesses, for competitive and other reasons, continue to reduce their support for retirement plans. Some have switched from a defined benefit plan to a defined contribution plan which costs less and comes with fewer obligations. Others offer lump-sum cash payments to employees or retirees to settle the employer's obligations.

- Left on their own, many people save less, as well as invest and plan less well. They also pay higher fees and they get lower returns.
- Many people defer retirement but still don't have enough money for retirement—and they're worried. One poll cited by the Senate Health, Education, Labor, and Pensions Committee says that 92 percent of people think there's a retirement crisis. They're right to be concerned.

Add to these concerns that obligations in pension plans today greatly exceed pension assets. Finally, the PBGC has a problem as well—a large deficit in its accounts. The following chart indicates that downward spiral in the net worth of the PBGC over the last 15 years as pension payments have exceeded premiums received.

¹⁶In 2006, Congress passed the Pension Protection Act. This law has many provisions. One important aspect of the act is that it forced many companies to expedite their contributions to their pension plans. One group estimates that companies in the S&P 500 had to contribute \$47 billion to their pension plans when the new rules were fully phased in for 2006. That amount is about 57 percent more than the \$30 billion that companies were expecting to contribute to their plans that year. Subsequently, Congress continues to provide pension funding relief. For example, in the "Moving Ahead for Progress in the 21st Century" Act (enacted July 6, 2012), companies can use a higher discount rate based on high-grade bond yields averaged over 25 years, which helps reduce the pension liability and required contributions.

¹⁷**Pan American Airlines** is a good illustration of how difficult it is to assess when to terminate. When Pan Am filed for bankruptcy in 1991, it had a pension liability of \$900 million. From 1983 to 1991, the IRS gave it six waivers so it did not have to make contributions. When Pan Am terminated the plan, there was little net worth left upon which to impose a lien. An additional accounting problem relates to the manner of disclosing the possible termination of a plan. For example, should Pan Am have disclosed a contingent liability for its struggling plan? At present this issue is unresolved, and considerable judgment is needed to analyze a company with these contingent liabilities.

Source: <http://www.pbgc.gov/about/reports/ar2017.html>.

Pension Terminations

A congressman at one time noted, “Employers are simply treating their employee pension plans like company piggy banks, to be raided at will.” What this congressman was referring to is the practice of paying off the projected benefit obligation and pocketing any excess. ERISA prevents companies from recapturing excess assets unless they pay participants what is owed to them and then terminate the plan. As a result, companies were buying *annuities* to pay off the pension claimants and then used the excess funds for other corporate purposes.¹⁸

For example, at one time, pension plan terminations netted \$363 million for **Occidental Petroleum Corp.**, \$95 million for **Stroh’s Brewery Co.**, \$58 million for **Kellogg Co.**, and \$938 million for **Avaya** (a spinoff of **Lucent Technologies**). Recently, many large companies have terminated their pension plans and captured billions in surplus assets. The U.S. Treasury also benefits: Federal legislation requires companies to pay an excise tax of anywhere from 20 percent to 50 percent on the gains. All of this is quite legal.¹⁹

The accounting issue that arises from these terminations is whether a company should recognize a gain when pension plan assets revert back to the company (often called **asset reversion** transactions). The issue is complex. In some cases, a company starts a new defined benefit plan after it eliminates the old one. Thus, some contend that there has been no change in substance but merely a change in form. However, the FASB disagrees. It requires recognition

¹⁸A question exists as to whose money it is. Some argue that the excess funds belong to the employees, not the employer. In addition, given that the funds have been reverting to the employer, critics charge that cost-of-living increases and the possibility of other increased benefits are reduced because companies will be reluctant to use those remaining funds to pay for such increases.

¹⁹Another way that companies have reduced their pension obligations is through adoption of **cash-balance plans**. These are *hybrid* plans combining features of defined benefit and defined contribution plans. Although these plans permit employees to transfer their pension benefits when they change employers (like a defined contribution plan), they are controversial because the change to a cash-balance plan often reduces benefits to older workers.

The accounting for cash-balance plans is similar to that for defined benefit plans, because employers bear the investment risk in cash-balance plans. However, when an employer adopts a cash-balance plan, the measurement of the future benefit obligation to employees generally is lower, compared to a traditional defined benefit plan. See A. T. Arady and F. Mellors, “Cash-Balance Conversions,” *Journal of Accountancy* (February 2000), pp. 22–28.

in earnings of a gain or loss when the employer settles a pension obligation either by lump-sum cash payments to participants or by purchasing nonparticipating annuity contracts. [9]²⁰

Concluding Observations

Hardly a day goes by without the financial press analyzing in depth some issue related to pension plans in the United States. This is not surprising, since pension funds exceed over \$40 trillion in assets globally. As you have seen, the accounting issues related to pension plans are complex. The FASB has clarified many of these issues which should help users understand the financial implications of a company's pension plans on its financial position, results of operations, and cash flows.

APPENDIX 20A

Accounting for Postretirement Benefits

LEARNING OBJECTIVE *6

Identify the differences between pensions and postretirement healthcare benefits.

IBM's adoption of the GAAP requirements on postretirement benefits resulted in a \$2.3 billion charge and a historical curiosity—IBM's first-ever quarterly loss. **General Electric** disclosed that its charge for adoption of the same GAAP rules would be \$2.7 billion. **AT&T** absorbed a \$2.1 billion pretax hit for postretirement benefits upon adoption. What is GAAP in this area, and how could its adoption have so grave an impact on companies' earnings?

Accounting Guidance

After a decade of study, the FASB in December 1990 issued GAAP for "Employers' Accounting for Postretirement Benefits Other Than Pensions." [10] It alone was the cause for the large charges to income cited above. These rules cover healthcare and other "welfare benefits" provided to retirees, their spouses, dependents, and beneficiaries.²¹ These other welfare benefits include life insurance offered outside a pension plan; medical, dental, and eye care; legal and tax services; tuition assistance; day care; and housing assistance.²² Because healthcare benefits are the largest of the other postretirement benefits, we use this item to illustrate accounting for postretirement benefits.

For many employers (about 95 percent), these GAAP rules required a change from the predominant practice of accounting for postretirement benefits on a pay-as-you-go (cash) basis to an accrual basis. Similar to pension accounting, the accrual basis necessitates measuring the employer's obligation to provide future benefits and accrual of the cost during the years that the employee provides service.

²⁰Some companies have established *pension poison pills* as an anti-takeover measure. These plans require asset reversions from termination of a plan to benefit employees and retirees rather than the acquiring company. For a discussion of pension poison pills, see Eugene E. Comiskey and Charles W. Mulford, "Interpreting Pension Disclosures: A Guide for Lending Officers," *Commercial Lending Review* (Winter 1993–94), Vol. 9, No. 1.

²¹*Accounting Trends and Techniques* indicates that of its 500 surveyed companies, 317 reported benefit plans that provide postretirement healthcare benefits. In response to rising healthcare costs and higher premiums on healthcare insurance, companies are working to get their postretirement benefit costs under control.

²²"OPEB" is the acronym frequently used to describe postretirement benefits other than pensions. This term came into being before the scope of guidance was narrowed from "other postemployment benefits" to "other postretirement benefits," thereby excluding postemployment benefits related to severance pay or wage continuation to disabled, terminated, or laid-off employees.

One of the reasons companies had not prefunded these benefit plans was that payments to prefund healthcare costs, unlike contributions to a pension trust, are not tax-deductible. Another reason was that postretirement healthcare benefits were once perceived to be a low-cost employee benefit that could be changed or eliminated at will and therefore were not a legal liability. Now, the accounting definition of a liability goes beyond the notion of a legally enforceable claim; the definition now encompasses equitable or constructive obligations as well, making it clear that the postretirement benefit promise is a liability.²³

Differences Between Pension Benefits and Healthcare Benefits

The FASB used the GAAP rules on pensions as a reference for the accounting prescribed for healthcare and other nonpension postretirement benefits.²⁴ Why didn't the FASB cover these other types of postretirement benefits in the earlier pension accounting statement? Because the apparent similarities between the two benefits mask some significant differences. **Illustration 20A.1** shows these differences.²⁵

| Item | Pensions | Healthcare Benefits |
|------------------------|---|---|
| Funding | Generally funded. | Generally not funded. |
| Benefit | Well-defined and level dollar amount. | Generally uncapped and great variability. |
| Beneficiary | Retiree (maybe some benefit to surviving spouse). | Retiree, spouse, and other dependents. |
| Benefit payable | Monthly. | As needed and used. |
| Predictability | Variables are reasonably predictable. | Utilization difficult to predict. Level of cost varies geographically and fluctuates over time. |

ILLUSTRATION 20A.1

Differences Between Pensions and Postretirement Healthcare Benefits

Two of the differences in Illustration 20A.1 highlight why measuring the future payments for healthcare benefit plans is so much more difficult than for pension plans.

1. Many postretirement plans do not set a limit on healthcare benefits. No matter how serious the illness or how long it lasts, the benefits continue to flow. (Even if the employer uses an insurance company plan, the premiums will escalate according to the increased benefits provided.)
2. The levels of healthcare benefit use and healthcare costs are difficult to predict. Increased longevity, unexpected illnesses (e.g., AIDS, SARS, and avian flu), along with new medical technologies and cures, cause changes in healthcare utilization.

Additionally, although the fiduciary and reporting standards for employee benefit funds under government regulations generally cover healthcare benefits, the stringent minimum vesting, participation, and funding standards that apply to pensions do not apply to healthcare benefits. Nevertheless, as you will learn, many of the basic concepts of pensions, and much of the related accounting terminology and measurement methodology, do apply to other postretirement benefits. Therefore, in the following discussion and illustrations, we point out the similarities and differences in the accounting and reporting for these two types of postretirement benefits.

²³"Elements of Financial Statements," *Statement of Financial Accounting Concepts No. 6* (Stamford, Conn.: 1985), p. 13, footnote 21.

²⁴Other postemployment (but before retirement) benefits include, but are not limited to, salary continuation, disability-related benefits, severance benefits, and continuance of healthcare benefits and life insurance for inactive or former (e.g., terminated, disabled, or deceased) employees or their beneficiaries. These benefits are accounted for similar to accounting for compensated absences (see Chapter 13). [11]

²⁵D. Gerald Searfoss and Naomi Erickson, "The Big Unfunded Liability: Postretirement Health-Care Benefits," *Journal of Accountancy* (November 1988), pp. 28–39.

What Do the Numbers Mean? OPEBs—How Big Are They?

For many companies, *other postretirement benefit obligations* (OPEBs) are substantial. Generally, OPEBs are not well funded because companies are not permitted a tax deduction for contributions to the plan assets, as is the case with pensions. That is, the

company may not claim a tax deduction until it makes a payment to the participant (pay-as-you-go).

The following are companies with the largest OPEB obligations, indicating their relationship with other financial items.

| For Year Ended 12/31/2017 | Benefit Obligation (in millions) | % Underfunded | Obligation as a % of Stockholders' Equity |
|-------------------------------|-------------------------------------|------------------|--|
| General Motors | \$ 6,374 | 100.00% | 17.61% |
| Ford Motor | 6,169 | 100.00 | 17.67 |
| AT&T | 24,059 | 75.17 | 16.94 |
| Verizon Communications | 19,460 | 94.25 | 43.55 |
| Boeing | 6,085 | 97.65 | 1,476.94 |

So, how big are OPEB obligations? REALLY big.

Postretirement Benefits Accounting Provisions

Healthcare and other postretirement benefits for current and future retirees and their dependents are forms of deferred compensation. They are earned through employee service and are subject to accrual during the years an employee is working.

The period of time over which the postretirement benefit cost accrues is called the **attribution period**. It is the period of service during which the employee earns the benefits under the terms of the plan. The attribution period, shown in **Illustration 20A.2** for a hypothetical employee, generally begins when an employee is hired and ends on the date the employee is eligible to receive the benefits and ceases to earn additional benefits by performing service, the vesting date.²⁶

ILLUSTRATION 20A.2

Range of Possible Attribution Periods

Obligations Under Postretirement Benefits

In defining the obligation for postretirement benefits, the FASB maintained many concepts similar to pension accounting. It also designed some new and modified terms specifically for

²⁶This is a benefit-years-of-service approach (the projected unit credit actuarial cost method). The FASB found no compelling reason to switch from the traditional pension accounting approach. It rejected the employee's full service period (i.e., to the estimated retirement date) because it was unable to identify any approach that would appropriately attribute benefits beyond the date when an employee attains full eligibility for those benefits. Employees attain full eligibility by meeting specified age, service, or age and service requirements of the plan.

postretirement benefits. Two of the most important of these specialized terms are (a) expected postretirement benefit obligation and (b) accumulated postretirement benefit obligation.

The **expected postretirement benefit obligation (EPBO)** is the actuarial present value as of a particular date of **all benefits a company expects to pay after retirement to employees and their dependents**. Companies do not record the EPBO in the financial statements, but they do use it in measuring periodic expense.

The **accumulated postretirement benefit obligation (APBO)** is the actuarial present value of **future benefits attributed to employees' services rendered to a particular date**. The APBO is equal to the EPBO for retirees and active employees fully eligible for benefits. Before the date an employee achieves full eligibility, the APBO is only a portion of the EPBO. Or stated another way, the difference between the APBO and the EPBO is the future service costs of active employees who are not yet fully eligible.

Illustration 20A.3 contrasts the EPBO and the APBO. At the date an employee is fully eligible (the end of the attribution period), the APBO and the EPBO for that employee are equal.

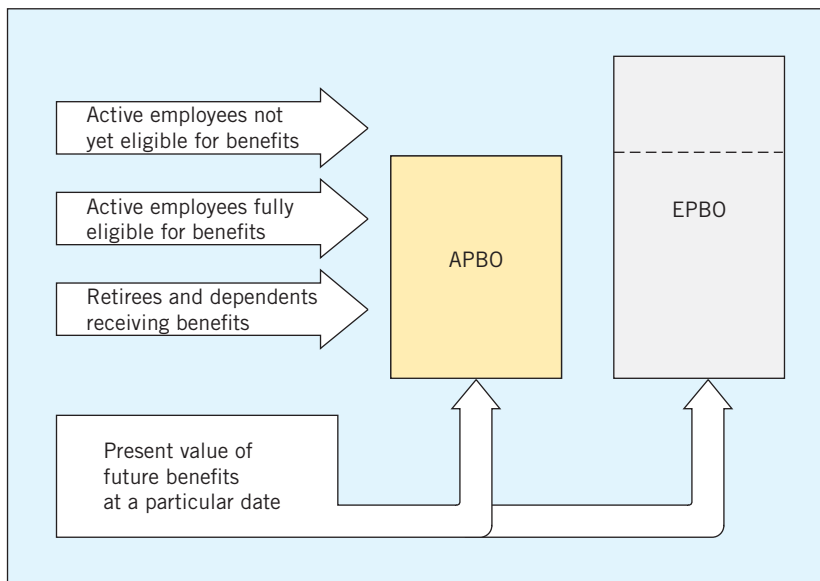

ILLUSTRATION 20A.3

APBO and EPBO Contrasted

Postretirement Expense

Postretirement expense is the employer's annual expense for postretirement benefits. Also called **net periodic postretirement benefit cost**, this expense consists of many of the familiar components used to compute annual pension expense. The components of net periodic postretirement benefit cost are as follows. [12]²⁷

1. **Service cost.** The portion of the EPBO attributed to employee service during the period.
2. **Interest cost.** The increase in the APBO attributable to the passage of time. Companies compute interest cost by applying the beginning-of-the-year discount rate to the beginning-of-the-year APBO, adjusted for benefit payments to be made during the period. The discount rate is based on the rates of return on high-quality, fixed-income investments that are currently available.²⁸

²⁷See James R. Wilbert and Kenneth E. Dakdduk, "The New FASB 106: How to Account for Postretirement Benefits," *Journal of Accountancy* (August 1991), pp. 36–41.

²⁸The FASB concluded that the discount rate for measuring the present value of the postretirement benefit obligation and the service cost component should be the same as that applied to pension measurements. It chose not to label it the *settlement rate*, in order to clarify that the objective of the discount rate is to measure the time value of money.

3. **Actual return on plan assets.** The change in the fair value of the plan's assets adjusted for contributions and benefit payments made during the period. Because companies charge or credit the postretirement expense for the gain or loss on plan assets (the difference between the actual and the expected return), this component is actually the expected return.
4. **Amortization of prior service cost.** The amortization of the cost of retroactive benefits resulting from plan amendments. The typical amortization period, beginning at the date of the plan amendment, is the remaining service periods through the full eligibility date.
5. **Gains and losses.** In general, changes in the APBO resulting from changes in assumptions or from experience different from that assumed. For funded plans, this component also includes the difference between actual return and expected return on plan assets.

Illustrative Accounting Entries

LEARNING OBJECTIVE *7

Contrast accounting for pensions to accounting for other postretirement benefits.

Like pension accounting, the accounting for postretirement plans must recognize in the accounts and in the financial statements effects of several significant items. These items are:

1. Expected postretirement benefit obligation (EPBO).
2. Accumulated postretirement benefit obligation (APBO).
3. Postretirement benefit plan assets.
4. Prior service cost.
5. Net gain or loss.

The EPBO is not recognized in the financial statements or disclosed in the notes. Companies recompute it each year, and the actuary uses it in measuring the annual service cost. Because of the numerous assumptions and actuarial complexity involved in measuring annual service cost, we have omitted these computations of the EPBO.

Similar to pensions, companies must recognize in the financial statements items 2 through 5 listed above. In addition, as in pension accounting, companies must know the exact amount of these items in order to compute postretirement expense. Therefore, companies use the worksheet like that for pension accounting to record both the formal general journal entries and the memo entries.

2020 Entries and Worksheet

To illustrate the use of a worksheet in accounting for a postretirement benefits plan, assume that on January 1, 2020, Quest Company adopts a healthcare benefit plan. The following facts apply to the postretirement benefits plan for the year 2020.

- Plan assets at fair value on January 1, 2020, are zero.
- Actual and expected returns on plan assets are zero.
- Accumulated postretirement benefit obligation (APBO), January 1, 2020, is zero.
- Service cost is \$54,000.
- No prior service cost exists.
- Interest cost on the APBO is zero.
- Funding contributions during the year are \$38,000.
- Benefit payments to employees from plan are \$28,000.

Using that data, the worksheet in **Illustration 20A.4** presents the postretirement entries for 2020.

ILLUSTRATION 20A.4

Postretirement
Worksheet—2020

| 2 | General Journal Entries | | | | Memo Record | |
| 3 | | Annual | | | | |
| 4 | | Postretirement | | Postretirement | | |
| 5 | Items | Expense | Cash | Asset/Liability | APBO | Plan Assets |
| 6 | Balance, Jan. 1, 2020 | | | | | |
| 7 | (a) Service cost | 54,000 Dr. | | | 54,000 Cr. | |
| 8 | (b) Contributions | | 38,000 Cr. | | | 38,000 Dr. |
| 9 | (c) Benefits | | | | 28,000 Dr. | 28,000 Cr. |
| 10 | | | | | | |
| 11 | Journal entry for 2020 | 54,000 Dr. | 38,000 Cr. | 16,000 Cr.* | | |
| 12 | Balance, Dec. 31, 2020 | | | 16,000 Cr.** | 26,000 Cr. | 10,000 Dr. |
| 13 | | | | | | |
| 14 | *\$54,000 – \$38,000 = \$16,000 | | | | | |
| 15 | **\$26,000 – \$10,000 = \$16,000 | | | | | |
| 16 | | | | | | |

Entry (a) records the service cost component, which increases postretirement expense \$54,000 and increases the liability (APBO) \$54,000. Entry (b) records Quest's funding of assets to the postretirement fund. The funding decreases cash \$38,000 and increases plan assets \$38,000. Entry (c) records the benefit payments made to retirees, which results in equal \$28,000 decreases to the plan assets and the liability (APBO).

Quest's December 31 adjusting entry formally records the postretirement expense in 2020, as follows.

| December 31, 2020 | | |
|--------------------------------|--------|--------|
| Postretirement Expense | 54,000 | |
| Cash | | 38,000 |
| Postretirement Asset/Liability | | 16,000 |

The credit to Postretirement Asset/Liability for \$16,000 represents the difference between the APBO and the plan assets. The \$16,000 credit balance is a liability because the plan is underfunded. The Postretirement Asset/Liability account balance of \$16,000 also equals the net of the balances in the memo accounts.

Illustration 20A.5 shows the funded status reported in the balance sheet. (Notice its similarity to the pension schedule.)

| | |
|--|-----------------|
| Accumulated postretirement benefit obligation (Credit) | \$(26,000) |
| Plan assets at fair value (Debit) | 10,000 |
| Postretirement asset/liability (Credit) | <u>\$16,000</u> |

ILLUSTRATION 20A.5

Postretirement Reconciliation
Schedule—December 31, 2020

Recognition of Gains and Losses

Gains and losses represent changes in the APBO or the value of plan assets. These changes result either from actual experience different from that expected or from changes in actuarial assumptions. The amortization of these gains and losses follows the approach used for pensions. That is, the gains and losses are recorded in other comprehensive income.

The Corridor Approach

Consistent with pension accounting, companies amortize the gains and losses in accumulated other comprehensive income as a component of postretirement expense if, at the beginning of the period, they exceed a "corridor" limit. The corridor is measured as the greater of 10 percent of the APBO or 10 percent of the market-related value of plan assets.

The intent of the **corridor approach** is to reduce volatility of postretirement expense by providing a reasonable opportunity for gains and losses to offset over time without affecting net periodic expense.

Amortization Methods

If the company must amortize gains and losses (beyond the corridor) on postretirement benefit plans, the **minimum amortization amount** is the excess gain or loss—in excess of the corridor—divided by the average remaining service life to expected retirement of all active employees. Companies may use any systematic method of amortization provided that: (1) the amount amortized in any period is equal to or greater than the minimum amount, (2) the company applies the method consistently, and (3) the company applies the method similarly for gains and losses.

The company must recompute the amount of gain or loss in accumulated other comprehensive income each year and amortize the gain or loss over the average remaining service life if the net amount exceeds the “corridor.”

2021 Entries and Worksheet

Continuing the Quest Company illustration into 2021, the following facts apply to the postretirement benefits plan for the year 2021.

- Actual return on plan assets is \$600.
- Expected return on plan assets is \$800.
- Discount rate is 8 percent.
- Increase in APBO due to change in actuarial assumptions is \$60,000.
- Service cost is \$26,000.
- Funding contributions during the year are \$18,000.
- Benefit payments to employees during the year are \$5,000.
- Average remaining service to expected retirement: 25 years.

The worksheet in **Illustration 20A.6** presents all of Quest’s postretirement benefit entries and information for 2021. The beginning balances on the first line of the

| 17 | Balance, Dec. 31, 2021 | | | <u>60,200 Dr.</u> | <u>85,480 Cr.</u> | <u>109,080 Cr.</u> | <u>23,600 Dr.</u> |
| 18 | | | | | | | |

worksheet are the ending balances from Quest's 2020 postretirement benefits worksheet in Illustration 20A.4.

Entries (d), (h), and (i) are similar to the corresponding entries previously explained for 2020. Entry (e) accrues the interest expense component, which increases both the liability and the postretirement expense by \$2,080 (the beginning APBO multiplied by the discount rate of 8%). Entries (f) and (g) are related. The expected return of \$800 is higher than the actual return of \$600. To smooth postretirement expense, Quest defers the unexpected loss of \$200 (\$800 – \$600) by debiting Other Comprehensive Income (G/L) and crediting Postretirement Expense. As a result of this adjustment, the expected return on the plan assets is the amount actually used to compute postretirement expense.

Entry (j) records the change in the APBO resulting from a change in actuarial assumptions. This \$60,000 increase in the employer's accumulated liability is an unexpected loss. Quest debits this loss to Other Comprehensive Income (G/L).

On December 31, Quest formally records net periodic expense for 2021 as follows.

| December 31, 2021 | | |
|----------------------------------|--------|--------|
| Postretirement Expense | 27,280 | |
| Other Comprehensive Income (G/L) | 60,200 | |
| Cash | | 18,000 |
| Postretirement Asset/Liability | | 69,480 |

The balance of the Postretirement Asset/Liability account at December 31, 2021, is \$85,480. This balance is equal to the net of the balances in the memo accounts as shown in the reconciliation schedule in [Illustration 20A.7](#).

| | |
|--|--------------------|
| Accumulated postretirement benefit obligation (Credit) | \$(109,080) |
| Plan assets at fair value (Debit) | 23,600 |
| Postretirement asset/liability (Credit) | \$ (85,480) |

ILLUSTRATION 20A.7

**Postretirement Benefits
Reconciliation Schedule—
December 31, 2021**

Amortization of Net Gain or Loss in 2022

Quest has a beginning balance in Accumulated OCI related to losses of \$60,200. Therefore, Quest must apply the corridor test for amortization of the balance for 2022. [Illustration 20A.8](#) shows the computation of the amortization charge for the loss.

| 2022 Corridor Test | |
|--|----------------|
| Accumulated OCI at beginning of year | \$60,200 |
| 10% of greater of APBO or market-related value of plan assets (\$109,080 × .10) | (10,908) |
| Amortizable amount | \$49,292 |
| Average remaining service to expected retirement | 25 years |
| 2022 amortization of loss (\$49,292 ÷ 25) | \$1,972 |

ILLUSTRATION 20A.8

Charge (Corridor Test)—2022**

Disclosures in Notes to the Financial Statements

The disclosures required for other postretirement benefit plans are similar to and just as detailed and extensive as those required for pensions. The note disclosure for **Tootsie Roll, Inc.** in [Illustration 20A.9](#) provides a good example of the extensive disclosure required for other postretirement benefit plans.

ILLUSTRATION 20A.9

Postretirement Benefit Disclosure

Tootsie Roll Industries, Inc.

Notes to Financial Statements

Note 7 Employee Benefit Plans (partial)

Postretirement health care benefit plans:

The Company maintains a post-retirement health benefits plan for a group of “grandfathered” corporate employees. The plan as amended in 2013, generally limited future annual cost increases in health benefits to 3%, restricted this benefit to current employees and retirees with long-term service with the Company, and eliminated all post-retirement benefits for future employees effective April 1, 2014. Post-retirement benefits liabilities (as amended) were \$13,497 and \$12,128 at December 31, 2017 and 2016, respectively.

Amounts recognized in accumulated other comprehensive loss (pre-tax) at December 31, 2017 are as follows:

| | |
|--|-------------------------|
| Prior service credit | \$(5,519) |
| Net actuarial loss | <u>(713)</u> |
| Net amount recognized in accumulated other comprehensive (gain) loss | <u><u>\$(6,232)</u></u> |

Amounts recognized in other comprehensive income

The estimated actuarial loss (gain) and prior service credit (gain) to be amortized from accumulated other comprehensive loss (gain) into net periodic benefit cost during 2018 are \$(97) and \$(1,226), respectively.

The changes in the accumulated postretirement benefit obligation at December 31, 2017 and 2016 consist of the following:

| | December 31 | |
|---------------------------------------|------------------------|------------------------|
| | 2017 | 2016 |
| Benefit obligation, beginning of year | \$12,128 | \$11,400 |
| Service cost | 323 | 331 |
| Interest cost | 468 | 462 |
| Actuarial (gain)/loss | 897 | 235 |
| Benefits paid | <u>(319)</u> | <u>(300)</u> |
| Benefit obligation, end of year | <u><u>\$13,497</u></u> | <u><u>\$12,128</u></u> |

Reconciliation of OPEB liability

Net periodic postretirement benefit cost included the following components:

| | 2017 | 2016 | 2015 |
|--|------------------------|------------------------|------------------------|
| Service cost—benefits attributed to service during the period | \$ 323 | \$ 331 | \$ 441 |
| Interest cost on the accumulated postretirement benefit obligation | 468 | 462 | 465 |
| Net amortization | <u>(1,462)</u> | <u>(1,642)</u> | <u>(1,451)</u> |
| Net periodic postretirement benefit cost (income) | <u><u>\$ (671)</u></u> | <u><u>\$ (849)</u></u> | <u><u>\$ (545)</u></u> |

Components of OPEB expense

Expected benefit payments

The Company estimates future benefit payments will be \$603, \$525, \$556, \$598 and \$632 in 2018 through 2022, respectively, and a total of \$3,647 in 2023 through 2027.

As indicated in Illustration 20A.9, Tootsie Roll shows the impact of the postretirement benefit plan on income, the balance sheet, and the cash flow statement, and it provides information on important assumptions used in the measurement of the postretirement benefit obligation. Also note that given no tax incentives for funding, Tootsie Roll (like many companies) does not have any assets set aside for its other postretirement benefit obligations.

While Tootsie Roll has only an other postretirement benefit plan, many companies sponsor both defined benefit pension and other postretirement plans. Given the similarities in accounting for these plans, companies can combine pension and other postretirement benefit disclosures.²⁹

²⁹Companies also report assets, liabilities, net income, and comprehensive income elements related to other postretirement plans similar to pensions.

Actuarial Assumptions and Conceptual Issues

Measurement of the EPBO, the APBO, and the net periodic postretirement benefit cost is involved and complex. Due to the uncertainties in forecasting healthcare costs, rates of use, changes in government health programs, and the differences employed in nonmedical assumptions (e.g., discount rate, employee turnover, rate of pre-65 retirement, spouse-age difference), estimates of postretirement benefit costs may have a large margin of error. Is the information relevant, reliable, or verifiable? The FASB concluded that “the obligation to provide postretirement benefits meets the definition of a liability, is representationally faithful, is relevant to financial statement users, and can be measured with sufficient reliability at a justifiable cost.” [13] Failure to accrue an obligation and an expense prior to payment of benefits would result in an unfaithful representation of what financial statements should represent.

The FASB took a momentous step by requiring recognition of a postretirement liability. Many opposed the requirement, warning that the GAAP rules would devastate earnings. Others argued that putting these numbers on the balance sheet was inappropriate. Others noted that the requirement would force companies to curtail postretirement benefits to employees.

The authors believe that the FASB deserves special praise. Because the Board addressed this issue, companies now recognize the magnitude of these costs. This recognition has led to efforts to control escalating healthcare costs. As John Ruffle, a former president of the Financial Accounting Foundation noted, “The Board has done American industry a gigantic favor. Over the long term, industry will look back and say thanks.”

What Do the Numbers Mean? Want Some Bad News?

Many companies have underfunded pension and other postretirement plans. Unfortunately, many governmental entities also have the same problem but on a much larger scale. Here are some examples.

- The actual liabilities of the federal government—including Social Security, Medicare, and federal employees’ future retirement benefits—is estimated to be over \$100 trillion. When the accrued expenses of the government’s entitled programs are counted, we need to collect well over \$8 trillion in tax revenues annually. Even if you take all the taxable income of corporations and of individuals earning over approximately \$66,000, that still falls short of the \$8 trillion.
- A State Budget Crisis Task Force declared underfunded retirement promises as one of the six major threats to states’ “fiscal sustainability.”
- The annual report from the PEW Charitable Trusts finds that public worker pension funds with heavy state government involvement owed retirees and current workers \$4 trillion as of 2016. These funds had about \$2.6 trillion in assets, creating a gap of about one-third, or a record \$1.4 trillion.

So what does all this have to do with accounting? Similar to the FASB, there is an organization called the Governmental Accounting Standards Board (GASB), which establishes standards of financial accounting and reporting for state and local governmental agencies.

Until recently, the GASB went about its work in relative obscurity. How did the GASB get everyone’s attention? It issued new rules [GASB No. 68, *Accounting and Financial Reporting for Pensions—An Amendment of GASB Statement No. 27* (June 2012) and GASB No 74, *Financial Reporting for Postemployment Benefit Plans Other Than Pension Plans* (June 2015)], which requires that governmental units recognize postretirement benefits on their balance sheets on an accrual basis. Some states do not like this requirement and have proposed legislation that will allow them to ignore GASB standards. However, the GASB, with the support of users of government reports, has pushed for the change. They are concerned that without the new requirements, governments will continue to misrepresent the true cost of their retirement-related promises to public employees. In their view, the new accounting rules are in the best interests of municipal bondholders and the public in general. Thus, it appears that the FASB is not the only standard-setter subject to political pressure.

Learning Objectives Review

1 Discuss the fundamentals of pension plan accounting.

The company or employer is the organization sponsoring the pension plan. It incurs the cost and makes contributions to the pension fund. The fund or plan is the entity that receives the contributions from the employer, administers the pension assets, and makes the benefit payments to the pension recipients (retired employees). The fund should be a separate legal and accounting entity; it maintains a set of books and prepares financial statements.

The two most common types of pension arrangements are as follows. **(1) Defined contribution plans:** The employer agrees to contribute to a pension trust a certain sum each period based on a formula. This formula may consider such factors as age, length of employee service, employer's profits, and compensation level. Only the employer's contribution is defined; no promise is made regarding the ultimate benefits paid out to the employees. **(2) Defined benefit plans:** These plans define the benefits that the employee will receive at the time of retirement. The formula typically provides for the benefits to be a function of the employee's years of service and the compensation level when he or she nears retirement.

Alternative measures for valuing the pension obligation may be used. One measure bases the pension obligation only on the benefits vested to the employees. Vested benefits are those that the employee is entitled to receive even if he or she renders no additional services under the plan. Companies compute the **vested benefit pension obligation** using current salary levels; this obligation includes only vested benefits. Another measure of the obligation, called the **accumulated benefit obligation**, computes the deferred compensation amount based on all years of service performed by employees under the plan—both vested and nonvested—using

current salary levels. A third measure, called the **projected benefit obligation**, bases the computation of the deferred compensation amount on both vested and nonvested service using future salaries.

Pension expense is a function of the following components: (1) service cost, (2) interest on the liability, (3) return on plan assets, (4) amortization of prior service cost, and (5) gain or loss.

2 Use a worksheet for employer's pension plan entries.

Companies may use a worksheet unique to pension accounting. This worksheet records both the formal entries and the memo entries to keep track of all the employer's relevant pension plan items and components.

3 Describe the accounting and amortization of prior service costs.

An actuary computes the amount of the prior service cost, and the company then records it as an adjustment to the projected benefit obligation and other comprehensive income. It then amortizes it, generally using a "years-of-service" amortization method, similar to a units-of-production computation. First, the company computes total estimated number of service-years to be worked by all of the participating employees. Second, it divides the accumulated prior service cost by the total number of service-years, to obtain a cost per service-year (the unit cost). Third, the company multiplies the number of service-years consumed each year times the cost per service-year, to obtain the annual amortization charge.

4 Explain the accounting and amortization for unexpected gains and losses.

In estimating the projected benefit obligation (the liability), actuaries make assumptions about such items as mortality rate, retirement rate, turnover rate, disability rate, and salary amounts. Any change in these actuarial assumptions affects the amount of the projected benefit obligation. These unexpected gains or losses from changes in the projected benefit obligation are liability gains and losses. Liability gains result from unexpected decreases in the liability balance; liability losses result from unexpected increases. Companies also incur asset gains or losses. Both types of actuarial gains and losses are recorded in other comprehensive income and adjust either the projected benefit obligation or the plan assets.

The FASB set a limit for the size of an accumulated net gain or loss balance. That arbitrarily selected limit (called a **corridor**) is 10 percent of the larger of the beginning balances of the projected benefit obligation or the market-related value of the plan assets. Beyond that limit, an accumulated net gain or loss balance is considered too large and must be amortized. If the balance of the accumulated net gain or loss account stays within the upper and lower limits of the corridor, no amortization is required.

5 Describe the requirements for reporting pension plans in financial statements.

Currently, companies must disclose the following pension plan information in their financial statements. (1) The components of pension expense for the period. (2) A schedule showing changes in the benefit obligation and plan assets during the year. (3) The amount of prior service cost and net gains and losses in accumulated OCI, including the estimated prior service cost and gains and losses that will affect net income in the next year. (4) The weighted-average assumed discount rate, the rate of compensation increase used to measure the projected benefit obligation, and the weighted-average expected

long-term rate of return on plan assets. (5) A table showing the allocation of pension plan assets by category and the percentage of the fair value to total plan assets. (6) The expected benefit payments for current plan participants for each of the next five fiscal years and for the following five years in aggregate, along with an estimate of expected contributions to the plan during the next year.

*6 Identify the differences between pensions and postretirement healthcare benefits.

Pension plans are generally funded, but healthcare benefit plans are not. Pension benefits are generally well-defined and level in amount; healthcare benefits are generally uncapped and variable. Pension benefits are payable monthly; healthcare benefits are paid as needed and used. Pension plan variables are reasonably predictable, whereas healthcare plan variables are difficult to predict.

*7 Contrast accounting for pensions to accounting for other postretirement benefits.

Many of the basic concepts, accounting terminology, and measurement methodology that apply to pensions also apply to other postretirement benefit accounting. Because other postretirement benefit plans are unfunded, large obligations can occur. Two significant concepts peculiar to accounting for other postretirement benefits are (1) expected postretirement benefit obligation (EPBO) and (2) accumulated postretirement benefit obligation (APBO).

Enhanced Review and Practice

Go online for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Practice Problem

Jablonski Corp. sponsors a defined benefit pension plan for its employees. On January 1, 2020, the following balances related to this plan.

| | |
|------------------------------------|-------------|
| Plan assets (market-related value) | \$170,000 |
| Projected benefit obligation | 340,000 |
| Pension asset/liability | 170,000 Cr. |
| Prior service cost | 100,000 |
| OCI—Loss | 39,000 |

As a result of the operation of the plan during 2020, the actuary provided the following additional data at December 31, 2020.

| | |
|--|----------|
| Service cost for 2020 | \$45,000 |
| Actual return on plan assets in 2020 | 27,000 |
| Amortization of prior service cost | 20,000 |
| Contributions in 2020 | 85,000 |
| Benefits paid retirees in 2020 | 51,000 |
| Settlement rate | 7% |
| Expected return on plan assets | 8% |
| Average remaining service life of active employees | 10 years |

Instructions

- a. Compute pension expense for Jablonski Corp. for the year 2020 by preparing a pension worksheet that shows the journal entry for pension expense.
- b. Indicate the pension amounts reported in the financial statements.

Solution

a.

| Jablonski Corp. | | | | | | | |
|--|------------------------|--------------|--------------------|--------------------------------------|--------------------------|------------------------------|-------------|
| Pension Worksheet—2020 | | | | | | | |
| General Journal Entries | | | | | | Memo Record | |

| Journal entry for 2020 | 75,700 Dr. | 85,000 Cr. | 20,000 Cr. | 13,900 Cr. | 43,200 Dr. | | |
| Accumulated OCI, Dec. 31, 2019 | | | 100,000 Dr. | 39,000 Dr. | | | |
| Balance, Dec. 31, 2020 | | | 80,000 Dr. | 25,100 Dr. | 126,800 Cr. | 357,800 Cr. | 231,000 Dr. |
| * $\$23,800 = \$340,000 \times .07$ | | | | | | | |
| ** $\$13,400 = (\$170,000 \times .08) - \$27,000$ | | | | | | | |
| *** 1/1 Projected | | | | | | | |
| Benefit | | Value of 1/1 | 10% | Accumulated | Minimum | | |
| Year | Obligation | Plan Assets | Corridor | OCI (G/L), 1/1 | Amortization of Loss for | | |
| 2020 | \$340,000 | \$170,000 | \$34,000 | \$39,000 | 2020 | | |
| **** $(\$39,000 - \$34,000) = \$5,000 \div 10 = \500 | | | | | | | |

2020

| | | |
|----------------------------------|--------|--------|
| Pension Expense | 75,700 | |
| Pension Asset/Liability | 43,200 | |
| Other Comprehensive Income (PSC) | | 20,000 |
| Other Comprehensive Income (G/L) | | 13,900 |
| Cash | | 85,000 |

b. The pension amounts reported in the 2020 financial statements are as follows.

Income Statement

| | |
|------------------------------------|------------|
| Operating expenses | |
| Pension expense (service cost) | \$45,000 |
| Other income (expenses) | |
| Pension expense (other components) | \$(30,700) |

Comprehensive Income Statement

| | | |
|---------------------------------|----------|----------------|
| Net income | | \$ XXXX |
| Other comprehensive income | | |
| Asset gain | \$13,400 | |
| Amortization of loss | 500 | |
| Prior service cost amortization | 20,000 | 33,900 |
| Comprehensive income | | <u>\$ XXXX</u> |

Balance Sheet

| | | |
|--|--|-----------|
| Liabilities | | |
| Pension liability | | \$126,800 |
| Stockholders' equity | | |
| Accumulated other comprehensive loss (PSC) | | 80,000 |
| Accumulated other comprehensive loss (G/L) | | 25,100 |

WileyPLUS

Exercises, Problems, Problem Solution Walkthrough Videos, and many more assessment tools and resources are available for practice in WileyPLUS.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

Questions

1. What is a private pension plan? How does a contributory pension plan differ from a noncontributory plan?
2. Differentiate between a defined contribution pension plan and a defined benefit pension plan. Explain how the employer's obligation differs between the two types of plans.
3. Differentiate between "accounting for the employer" and "accounting for the pension fund."
4. The meaning of the term "fund" depends on the context in which it is used. Explain its meaning when used as a noun. Explain its meaning when it is used as a verb.
5. What is the role of an actuary relative to pension plans? What are actuarial assumptions?
6. What factors must be considered by the actuary in measuring the amount of pension benefits under a defined benefit plan?
7. Name three approaches to measuring benefit obligations from a pension plan and explain how they differ.
8. Explain how cash-basis accounting for pension plans differs from accrual-basis accounting for pension plans. Why is cash-basis accounting generally considered unacceptable for pension plan accounting?
9. Identify the five components that comprise pension expense. Briefly explain the nature of each component.
10. What is service cost, and what is the basis of its measurement?
11. In computing the interest component of pension expense, what interest rates may be used?
12. Explain the difference between service cost and prior service cost.
13. What is meant by "prior service cost"? When is prior service cost recognized as pension expense?
14. What are "liability gains and losses," and how are they accounted for?
15. If pension expense recognized in a period exceeds the current amount funded by the employer, what kind of account arises, and how should it be reported in the financial statements? If the reverse occurs—that is, current funding by the employer exceeds the amount recognized as pension expense—what kind of account arises, and how should it be reported?
16. Given the following items and amounts, compute the actual return on plan assets: fair value of plan assets at the beginning of the period \$9,500,000, benefits paid during the period \$1,400,000, contributions made during the period \$1,000,000, and fair value of the plan assets at the end of the period \$10,150,000.
17. How does an "asset gain or loss" develop in pension accounting? How does a "liability gain or loss" develop in pension accounting?
18. What is the meaning of "corridor amortization"?
19. At the end of the current period, Agler Inc. had a projected benefit obligation of \$400,000 and pension plan assets (at fair value) of \$350,000. What are the accounts and amounts that will be reported on the company's balance sheet as pension assets or pension liabilities?
20. At the end of the current year, Pociak Co. has prior service cost of \$9,150,000. Where should the prior service cost be reported on the balance sheet?
21. Describe the accounting for actuarial gains and losses.

22. Boey Company reported net income of \$25,000 in 2021. It had the following amounts related to its pension plan in 2021: actuarial liability gain \$10,000, unexpected asset loss \$14,000, accumulated other comprehensive income (G/L) (beginning balance), zero. Determine for 2021 (a) Boey's other comprehensive income, and (b) comprehensive income.

23. Describe the reporting of pension plans for a company with multiple plans, some of which are underfunded and some of which are overfunded.

24. Determine the meaning of the following terms.

- a. Contributory plan.
- b. Vested benefits.

c. Retroactive benefits.

d. Years-of-service method.

25. A headline in the *Wall Street Journal* stated, "Firms Increasingly Tap Their Pension Funds to Use Excess Assets." What is the accounting issue related to the use of these "excess assets" through plan terminations?

*26. What are postretirement benefits other than pensions?

*27. Why didn't the FASB cover both types of postretirement benefits—pensions and healthcare—in the earlier pension accounting rules?

*28. What are the major differences between postretirement health-care benefits and pension benefits?

*29. What is the difference between the APBO and the EPBO? What are the components of postretirement expense?

Brief Exercises

BE20.1 (LO 1) AMR Corporation (parent company of **American Airlines**) reported the following (in millions).

| | |
|------------------------------------|-------|
| Service cost | \$366 |
| Interest on P.B.O. | 737 |
| Return on plan assets | 593 |
| Amortization of prior service cost | 13 |
| Amortization of net loss | 154 |

Compute AMR Corporation's pension expense.

BE20.2 (LO 1) For Warren Corporation, year-end plan assets were \$2,000,000. At the beginning of the year, plan assets were \$1,780,000. During the year, contributions to the pension fund were \$120,000, and benefits paid were \$200,000. Compute Warren's actual return on plan assets.

BE20.3 (LO 2) At January 1, 2020, Hennein Company had plan assets of \$280,000 and a projected benefit obligation of the same amount. During 2020, service cost was \$27,500, the settlement rate was 10%, actual and expected return on plan assets were \$25,000, contributions were \$20,000, and benefits paid were \$17,500. Prepare a pension worksheet for Hennein Company for 2020.

BE20.4 (LO 2) Campbell Soup Company reported pension expense of \$73 million and contributed \$71 million to the pension fund. Prepare Campbell Soup Company's journal entry to record pension expense and funding, assuming Campbell has no OCI amounts.

BE20.5 (LO 3) Mancuso Corporation amended its pension plan on January 1, 2020, and granted \$160,000 of prior service costs to its employees. The employees are expected to provide 2,000 service years in the future, with 350 service years in 2020. Compute prior service cost amortization for 2020.

BE20.6 (LO 3) At December 31, 2020, Besler Corporation had a projected benefit obligation of \$560,000, plan assets of \$322,000, and prior service cost of \$127,000 in accumulated other comprehensive income. Determine the pension asset/liability at December 31, 2020.

BE20.7 (LO 4) Shin Corporation had a projected benefit obligation of \$3,100,000 and plan assets of \$3,300,000 at January 1, 2020. Shin also had a net actuarial loss of \$465,000 in accumulated OCI at January 1, 2020. The average remaining service period of Shin's employees is 7.5 years. Compute Shin's minimum amortization of the actuarial loss.

BE20.8 (LO 5) Hawkins Corporation has the following balances at December 31, 2020.

| | |
|------------------------------|-------------|
| Projected benefit obligation | \$2,600,000 |
| Plan assets at fair value | 2,000,000 |
| Accumulated OCI (PSC) | 1,100,000 |

How should these balances be reported on Hawkins' balance sheet at December 31, 2020?

BE20.9 (LO 5) Norton Co. had the following amounts related to its pension plan in 2020.

| | |
|--|-----------|
| Actuarial liability loss for 2020 | \$28,000 |
| Unexpected asset gain for 2020 | 18,000 |
| Accumulated other comprehensive income (G/L) (beginning balance) | 7,000 Cr. |

Determine for 2020 (a) Norton's other comprehensive income (loss) and (b) comprehensive income. Net income for 2020 is \$26,000; no amortization of gain or loss is necessary in 2020.

***BE20.10 (LO 6, 7)** Manno Corporation has the following information available concerning its postretirement benefit plan for 2020.

| | |
|---|----------|
| Service cost | \$40,000 |
| Interest cost | 47,400 |
| Actual and expected return on plan assets | 26,900 |

Compute Manno's 2020 postretirement expense.

***BE20.11 (LO 6, 7)** For 2020, Sampsell Inc. computed its annual postretirement expense as \$240,900. Sampsell's contribution to the plan during 2020 was \$180,000. Prepare Sampsell's 2020 entry to record postretirement expense, assuming Sampsell has no OCI amounts.

Exercises

E20.1 (LO 1, 2) Excel (Pension Expense, Journal Entries) The following information is available for the pension plan of Radcliffe Company for the year 2020.

| | |
|---|-----------|
| Actual and expected return on plan assets | \$ 15,000 |
| Benefits paid to retirees | 40,000 |
| Contributions (funding) | 90,000 |
| Interest/discount rate | 10% |
| Prior service cost amortization | 8,000 |
| Projected benefit obligation, January 1, 2020 | 500,000 |
| Service cost | 60,000 |

Instructions

- Compute pension expense for the year 2020.
- Prepare the journal entry to record pension expense and the employer's contribution to the pension plan in 2020.

E20.2 (LO 1, 2, 3) (Computation of Pension Expense) Veldre Company provides the following information about its defined benefit pension plan for the year 2020.

| | |
|---|-----------|
| Service cost | \$ 90,000 |
| Contribution to the plan | 105,000 |
| Prior service cost amortization | 10,000 |
| Actual and expected return on plan assets | 64,000 |
| Benefits paid | 40,000 |
| Plan assets at January 1, 2020 | 640,000 |
| Projected benefit obligation at January 1, 2020 | 700,000 |
| Accumulated OCI (PSC) at January 1, 2020 | 150,000 |
| Interest/discount (settlement) rate | 10% |

Instructions

Compute the pension expense for the year 2020.

E20.3 (LO 1, 2, 3) (Preparation of Pension Worksheet) Using the information in E20.2, prepare a pension worksheet inserting January 1, 2020, balances, showing December 31, 2020, balances, and the journal entry recording pension expense.

E20.4 (LO 1, 2) (Basic Pension Worksheet) The following facts apply to the pension plan of Boudreau Inc. for the year 2020.

| | |
|---|-----------|
| Plan assets, January 1, 2020 | \$490,000 |
| Projected benefit obligation, January 1, 2020 | 490,000 |
| Settlement rate | 8% |
| Service cost | 40,000 |
| Contributions (funding) | 25,000 |
| Actual and expected return on plan assets | 49,700 |
| Benefits paid to retirees | 33,400 |

Instructions

Using the preceding data, compute pension expense for the year 2020. As part of your solution, prepare a pension worksheet that shows the journal entry for pension expense for 2020 and the year-end balances in the related pension accounts.

E20.5 (LO 3) (Application of Years-of-Service Method) Andrews Company has five employees participating in its defined benefit pension plan. Expected years of future service for these employees at the beginning of 2020 are as follows.

| Employee | Future Years of Service |
|----------|----------------------------|
| Jim | 3 |
| Paul | 4 |
| Nancy | 5 |
| Dave | 6 |
| Kathy | 6 |

On January 1, 2020, the company amended its pension plan, increasing its projected benefit obligation by \$72,000.

Instructions

Compute the amount of prior service cost amortization for the years 2020 through 2025 using the years-of-service method, setting up appropriate schedules.

E20.6 (LO 1) (Computation of Actual Return) Gingrich Importers provides the following pension plan information.

| | |
|--|-------------|
| Fair value of pension plan assets, January 1, 2020 | \$2,400,000 |
| Fair value of pension plan assets, December 31, 2020 | 2,725,000 |
| Contributions to the plan in 2020 | 280,000 |
| Benefits paid retirees in 2020 | 350,000 |

Instructions

From the data above, compute the actual return on the plan assets for 2020.

E20.7 (LO 1, 2, 3) Excel (Basic Pension Worksheet) The following defined pension data of Rydell Corp. apply to the year 2020.

| | |
|--|-----------|
| Projected benefit obligation, 1/1/20 (before amendment) | \$560,000 |
| Plan assets, 1/1/20 | 546,200 |
| Pension liability, 1/1/20 | 13,800 |
| On January 1, 2020, Rydell Corp., through plan amendment, grants prior service benefits having a present value of | 120,000 |
| Settlement rate | 9% |
| Service cost | 58,000 |
| Contributions (funding) | 65,000 |
| Actual (expected) return on plan assets | 52,280 |
| Benefits paid to retirees | 40,000 |
| Prior service cost amortization for 2020 | 17,000 |

Instructions

For 2020, prepare a pension worksheet for Rydell Corp. that shows the journal entry for pension expense and the year-end balances in the related pension accounts.

E20.8 (LO 4) (Application of the Corridor Approach) Kenseth Corp. has the following beginning-of-the-year present values for its projected benefit obligation and market-related values for its pension plan assets.

| | Projected Benefit Obligation | Plan Assets Value |
|------|------------------------------------|-------------------------|
| 2019 | \$2,000,000 | \$1,900,000 |
| 2020 | 2,400,000 | 2,500,000 |
| 2021 | 2,950,000 | 2,600,000 |
| 2022 | 3,600,000 | 3,000,000 |

The average remaining service life per employee in 2019 and 2020 is 10 years and in 2021 and 2022 is 12 years. The net gain or loss that occurred during each year is as follows: 2019, \$280,000 loss; 2020, \$90,000 loss; 2021, \$11,000 loss; and 2022, \$25,000 gain. (In working the solution, the gains and losses must be aggregated to arrive at year-end balances.)

Instructions

Using the corridor approach, compute the amount of net gain or loss amortized and charged to pension expense in each of the four years, setting up an appropriate schedule.

E20.9 (LO 5) (Disclosures: Pension Expense and Other Comprehensive Income) Taveras Enterprises provides the following information relative to its defined benefit pension plan.

| <u>Balances or Values at December 31, 2020</u> | |
|---|-------------|
| Projected benefit obligation | \$2,737,000 |
| Accumulated benefit obligation | 1,980,000 |
| Fair value of plan assets | 2,278,329 |
| Accumulated OCI (PSC) | 210,000 |
| Accumulated OCI—Net loss (1/1/20 balance, –0–) | 45,680 |
| Pension liability | 458,671 |
| Other pension plan data for 2020: | |
| Service cost | 94,000 |
| Prior service cost amortization | 42,000 |
| Actual return on plan assets | 130,000 |
| Expected return on plan assets | 175,680 |
| Interest on January 1, 2020, projected benefit obligation | 253,000 |
| Contributions to plan | 93,329 |
| Benefits paid | 140,000 |

Instructions

- Prepare the note disclosing the components of pension expense for the year 2020.
- Determine the amounts of other comprehensive income and comprehensive income for 2020. Net income for 2020 is \$35,000.
- Compute the amount of accumulated other comprehensive income reported at December 31, 2020.

E20.10 (LO 1, 2, 3, 4) (Pension Worksheet) Webb Corp. sponsors a defined benefit pension plan for its employees. On January 1, 2020, the following balances relate to this plan.

| | |
|------------------------------|-------------|
| Plan assets | \$480,000 |
| Projected benefit obligation | 600,000 |
| Pension asset/liability | 120,000 |
| Accumulated OCI (PSC) | 100,000 Dr. |

As a result of the operation of the plan during 2020, the following additional data are provided by the actuary.

| | |
|--|----------|
| Service cost | \$90,000 |
| Settlement rate, 9% | |
| Actual return on plan assets | 55,000 |
| Amortization of prior service cost | 19,000 |
| Expected return on plan assets | 52,000 |
| Unexpected loss from change in projected benefit obligation, due to change in actuarial predictions | 76,000 |
| Contributions | 99,000 |
| Benefits paid retirees | 85,000 |

Instructions

- Using the data above, compute pension expense for Webb Corp. for the year 2020 by preparing a pension worksheet.
- Prepare the journal entry for pension expense for 2020.

E20.11 (LO 1, 2, 3, 4, 5) (Pension Expense, Journal Entries, Statement Presentation) Henning Company sponsors a defined benefit pension plan for its employees. The following data relate to the operation of the plan for the year 2020 in which no benefits were paid.

- The actuarial present value of future benefits earned by employees for services rendered in 2020 amounted to \$56,000.
- The company's funding policy requires a contribution to the pension trustee amounting to \$145,000 for 2020.
- As of January 1, 2020, the company had a projected benefit obligation of \$900,000, an accumulated benefit obligation of \$800,000, and a debit balance of \$400,000 in accumulated OCI (PSC). The fair value of pension plan assets amounted to \$600,000 at the beginning of the year. The actual and expected return on plan assets was \$54,000. The settlement rate was 9%. No gains or losses occurred in 2020 and no benefits were paid.
- Amortization of prior service cost was \$50,000 in 2020. Amortization of net gain or loss was not required in 2020.

Instructions

- Determine the amounts of the components of pension expense that should be recognized by the company in 2020.
- Prepare the journal entry or entries to record pension expense and the employer's contribution to the pension trustee in 2020.
- Indicate the amounts that would be reported on the income statement and the balance sheet for the year 2020.

E20.12 (LO 1, 2, 3, 4, 5) (Pension Expense, Journal Entries, Statement Presentation) Ferreri Company received the following selected information from its pension plan trustee concerning the operation of the company's defined benefit pension plan for the year ended December 31, 2020.

| | January 1, 2020 | December 31, 2020 |
|--|--------------------|----------------------|
| Projected benefit obligation | \$1,500,000 | \$1,527,000 |
| Market-related and fair value of plan assets | 800,000 | 1,130,000 |
| Accumulated benefit obligation | 1,600,000 | 1,720,000 |
| Accumulated OCI (G/L)—Net gain | –0– | (200,000) |

The service cost component of pension expense for employee services rendered in the current year amounted to \$77,000 and the amortization of prior service cost was \$120,000. The company's actual funding (contributions) of the plan in 2020 amounted to \$250,000. The expected return on plan assets and the actual rate were both 10%; the interest/discount (settlement) rate was 10%. Accumulated other comprehensive income (PSC) had a balance of \$1,200,000 on January 1, 2020. Assume no benefits paid in 2020.

Instructions

- Determine the amounts of the components of pension expense that should be recognized by the company in 2020.
- Prepare the journal entry to record pension expense and the employer's contribution to the pension plan in 2020.
- Indicate the pension-related amounts that would be reported on the income statement and the balance sheet for Ferreri Company for the year 2020.

E20.13 (LO 1, 2, 4) (Computation of Actual Return, Gains and Losses, Corridor Test, and Pension Expense) Erickson Company sponsors a defined benefit pension plan. The corporation's actuary provides the following information about the plan.

| | January 1, 2020 | December 31, 2020 |
|--------------------------------|--------------------|----------------------|
| Vested benefit obligation | \$1,500 | \$1,900 |
| Accumulated benefit obligation | 1,900 | 2,730 |
| Projected benefit obligation | 2,500 | 3,300 |
| Plan assets (fair value) | 1,700 | 2,620 |

| | January 1, 2020 | December 31, 2020 |
|---|--------------------|----------------------|
| Settlement rate and expected rate of return | | 10% |
| Pension asset/liability | \$ 800 | \$? |
| Service cost for the year 2020 | | 400 |
| Contributions (funding in 2020) | | 700 |
| Benefits paid in 2020 | | 200 |

Instructions

- Compute the actual return on the plan assets in 2020.
- Compute the amount of the other comprehensive income (G/L) as of December 31, 2020. (Assume the January 1, 2020, balance was zero.)
- Compute the amount of net gain or loss amortization for 2020 (corridor approach).
- Compute pension expense for 2020.

E20.14 (LO 1, 2, 4) (Worksheet for E20.13) Using the information in E20.13 about Erickson Company's defined benefit pension plan, prepare a 2020 pension worksheet with supplementary schedules of computations. Prepare the journal entries at December 31, 2020, to record pension expense and related pension transactions. Also, indicate the pension amounts reported in the balance sheet.

E20.15 (LO 1, 2, 5) (Pension Expense, Journal Entries) Latoya Company provides the following selected information related to its defined benefit pension plan for 2020.

| | |
|--|---------------|
| Pension asset/liability (January 1) | \$ 25,000 Cr. |
| Accumulated benefit obligation (December 31) | 400,000 |
| Actual and expected return on plan assets | 10,000 |
| Contributions (funding) in 2020 | 150,000 |
| Fair value of plan assets (December 31) | 800,000 |
| Settlement rate | 10% |
| Projected benefit obligation (January 1) | 700,000 |
| Service cost | 80,000 |

Instructions

- Compute pension expense and prepare the journal entry to record pension expense and the employer's contribution to the pension plan in 2020. Preparation of a pension worksheet is not required. Benefits paid in 2020 were \$35,000.
- Indicate the pension-related amounts that would be reported in the company's income statement and balance sheet for 2020.

E20.16 (LO 4) (Amortization of Accumulated OCI (G/L), Corridor Approach, Pension Expense Computation) The actuary for the pension plan of Gustafson Inc. calculated the following net gains and losses.

| Incurred During the Year | (Gain) or Loss |
|-----------------------------|----------------|
| 2020 | \$300,000 |
| 2021 | 480,000 |
| 2022 | (210,000) |
| 2023 | (290,000) |

Other information about the company's pension obligation and plan assets is as follows.

| As of January 1, | Projected Benefit Obligation | Plan Assets (market-related asset value) |
|------------------|---------------------------------|---|
| 2020 | \$4,000,000 | \$2,400,000 |
| 2021 | 4,520,000 | 2,200,000 |
| 2022 | 5,000,000 | 2,600,000 |
| 2023 | 4,240,000 | 3,040,000 |

Gustafson Inc. has a stable labor force of 400 employees who are expected to receive benefits under the plan. The total service-years for all participating employees is 5,600. The beginning balance of accumulated OCI (G/L) is zero on January 1, 2020. The market-related value and the fair value of plan assets are the same for the 4-year period. Use the average remaining service life per employee as the basis for amortization.

Instructions

- Determine the missing amounts in the 2020 pension worksheet, indicating whether the amounts are debits or credits.
- Prepare the journal entry to record 2020 pension expense for Usher Inc.
- The accounting staff has heard of a pension accounting procedure called “corridor amortization.” Is Usher required to record any amounts for corridor amortization in (1) 2020? In (2) 2021? Explain.

***E20.19 (LO 6, 7) (Postretirement Benefit Expense Computation)** Kreter Co. provides the following information about its postretirement benefit plan for the year 2020.

| | |
|--|-----------|
| Service cost | \$ 45,000 |
| Contribution to the plan | 10,000 |
| Actual and expected return on plan assets | 11,000 |
| Benefits paid | 20,000 |
| Plan assets at January 1, 2020 | 110,000 |
| Accumulated postretirement benefit obligation at January 1, 2020 | 330,000 |
| Discount rate | 8% |

Instructions

Compute the postretirement benefit expense for 2020.

***E20.20 (LO 6, 7) (Postretirement Benefit Worksheet)** Using the information in E20.19, prepare a worksheet inserting January 1, 2020, balances, and showing December 31, 2020, balances. Prepare the journal entry recording postretirement benefit expense.

***E20.21 (LO 6, 7) (Postretirement Benefit Expense Computation)** Garner Inc. provides the following information related to its postretirement benefits for the year 2020.

| | |
|--|-----------|
| Accumulated postretirement benefit obligation at January 1, 2020 | \$710,000 |
| Actual and expected return on plan assets | 34,000 |
| Prior service cost amortization | 21,000 |
| Discount rate | 10% |
| Service cost | 83,000 |

Instructions

Compute postretirement benefit expense for 2020.

***E20.22 (LO 6, 7) (Postretirement Benefit Expense Computation)** Englehart Co. provides the following information about its postretirement benefit plan for the year 2020.

| | |
|--|-------------|
| Service cost | \$ 90,000 |
| Prior service cost amortization | 3,000 |
| Contribution to the plan | 56,000 |
| Actual and expected return on plan assets | 62,000 |
| Benefits paid | 40,000 |
| Plan assets at January 1, 2020 | 710,000 |
| Accumulated postretirement benefit obligation at January 1, 2020 | 760,000 |
| Accumulated OCI (PSC) at January 1, 2020 | 100,000 Dr. |
| Discount rate | 9% |

Instructions

Compute the postretirement benefit expense for 2020.

***E20.23 (LO 6, 7) (Postretirement Benefit Worksheet)** Using the information in E20.22, prepare a worksheet inserting January 1, 2020, balances, showing December 31, 2020, balances, and the journal entry recording postretirement benefit expense.

***E20.24 (LO 6, 7) (Postretirement Benefit Worksheet—Missing Amounts)** The accounting staff of Holder Inc. has prepared the following postretirement benefit worksheet. Unfortunately, several entries in the worksheet are not decipherable. The company has asked your assistance in completing the worksheet and completing the accounting tasks related to the pension plan for 2020.

| Postretirement Benefit Worksheet—Holder Inc. | | | | | | |

| 17 | | | | | | |

Instructions

- Determine the missing amounts in the 2020 postretirement worksheet, indicating whether the amounts are debits or credits.
- Prepare the journal entry to record 2020 postretirement expense for Holder Inc.
- What discount rate is Holder using in accounting for the interest on its other postretirement benefit plan? Explain.

Problems

P20.1 (LO 1, 2, 3, 4) Excel (2-Year Worksheet) On January 1, 2020, Harrington Company has the following defined benefit pension plan balances.

| | |
|------------------------------|-------------|
| Projected benefit obligation | \$4,500,000 |
| Fair value of plan assets | 4,200,000 |

The interest (settlement) rate applicable to the plan is 10%. On January 1, 2021, the company amends its pension agreement so that prior service costs of \$500,000 are created. Other data related to the pension plan are as follows.

| | 2020 | 2021 |
|-------------------------------------|-----------|-----------|
| Service cost | \$150,000 | \$180,000 |
| Prior service cost amortization | –0– | 90,000 |
| Contributions (funding) to the plan | 240,000 | 285,000 |
| Benefits paid | 200,000 | 280,000 |
| Actual return on plan assets | 252,000 | 260,000 |
| Expected rate of return on assets | 6% | 8% |

Instructions

- Prepare a pension worksheet for the pension plan for 2020 and 2021.
- For 2021, prepare the journal entry to record pension-related amounts.

P20.2 (LO 1, 2, 3, 4, 5) Groupwork (3-Year Worksheet, Journal Entries, and Reporting) Jackson Company adopts acceptable accounting for its defined benefit pension plan on January 1, 2019, with

the following beginning balances: plan assets \$200,000; projected benefit obligation \$250,000. Other data relating to 3 years' operation of the plan are as follows.

| | 2019 | 2020 | 2021 |
|---|----------|-----------|-----------|
| Annual service cost | \$16,000 | \$ 19,000 | \$ 26,000 |
| Settlement rate and expected rate of return | 10% | 10% | 10% |
| Actual return on plan assets | 18,000 | 22,000 | 24,000 |
| Annual funding (contributions) | 16,000 | 40,000 | 48,000 |
| Benefits paid | 14,000 | 16,400 | 21,000 |
| Prior service cost (plan amended, 1/1/20) | | 160,000 | |
| Amortization of prior service cost | | 54,400 | 41,600 |
| Change in actuarial assumptions establishes | | | |
| a December 31, 2021, projected benefit obligation of: | | | 520,000 |

Instructions

- Prepare a pension worksheet presenting all 3 years' pension balances and activities.
- Prepare the journal entries (from the worksheet) to reflect all pension plan transactions and events at December 31 of each year.
- Indicate the pension-related amounts reported in the financial statements for 2021.

P20.3 (LO 1, 2, 3, 4, 5) (Pension Expense, Journal Entries, Amortization of Loss) Gottschalk Company sponsors a defined benefit plan for its 100 employees. On January 1, 2020, the company's actuary provided the following information.

| | |
|---|-----------|
| Accumulated other comprehensive loss (PSC) | \$150,000 |
| Pension plan assets (fair value and market-related asset value) | 200,000 |
| Accumulated benefit obligation | 260,000 |
| Projected benefit obligation | 380,000 |

The average remaining service period for the participating employees is 10 years. All employees are expected to receive benefits under the plan. On December 31, 2020, the actuary calculated that the present value of future benefits earned for employee services rendered in the current year amounted to \$52,000; the projected benefit obligation was \$490,000; fair value of pension assets was \$276,000; the accumulated benefit obligation amounted to \$365,000. The expected return on plan assets and the discount rate on the projected benefit obligation were both 10%. The actual return on plan assets is \$11,000. The company's current year's contribution to the pension plan amounted to \$65,000. No benefits were paid during the year.

Instructions

- Determine the components of pension expense that the company would recognize in 2020. (With only one year involved, you need not prepare a worksheet.)
- Prepare the journal entry to record the pension expense and the company's funding of the pension plan in 2020.
- Compute the amount of the 2020 increase/decrease in gains or losses and the amount to be amortized in 2020 and 2021.
- Indicate the pension amounts reported in the financial statement as of December 31, 2020.

P20.4 (LO 1, 2, 3, 4) Excel (Pension Expense, Journal Entries for 2 Years) Gordon Company sponsors a defined benefit pension plan. The following information related to the pension plan is available for 2020 and 2021.

| | 2020 | 2021 |
|---|-------------|-----------|
| Plan assets (fair value), December 31 | \$699,000 | \$849,000 |
| Projected benefit obligation, January 1 | 700,000 | 800,000 |
| Pension asset/liability, January 1 | 140,000 Cr. | ? |
| Prior service cost, January 1 | 250,000 | 240,000 |
| Service cost | 60,000 | 90,000 |
| Actual and expected return on plan assets | 24,000 | 30,000 |
| Amortization of prior service cost | 10,000 | 12,000 |
| Contributions (funding) | 115,000 | 120,000 |
| Accumulated benefit obligation, December 31 | 500,000 | 550,000 |
| Interest/settlement rate | 9% | 9% |

Instructions

- Compute pension expense for 2020 and 2021.
- Prepare the journal entries to record the pension expense and the company's funding of the pension plan for both years.

P20.5 (LO 2, 3, 4) (Computation of Pension Expense, Amortization of Net Gain or Loss—Corridor Approach, Journal Entries for 3 Years) Hiatt Toothpaste Company initiates a defined benefit pension plan for its 50 employees on January 1, 2020. The insurance company which administers the pension plan provided the following selected information for the years 2020, 2021, and 2022.

| | For Year Ended December 31, | | |
|--|-----------------------------|-----------|-----------|
| | 2020 | 2021 | 2022 |
| Plan assets (fair value) | \$50,000 | \$ 85,000 | \$180,000 |
| Accumulated benefit obligation | 45,000 | 165,000 | 292,000 |
| Projected benefit obligation | 60,000 | 200,000 | 324,000 |
| Net (gain) loss (for purposes of corridor calculation) | –0– | 78,400 | 81,033 |
| Employer's funding contribution (made at end of year) | 50,000 | 60,000 | 105,000 |

There were no balances as of January 1, 2020, when the plan was initiated. The actual and expected return on plan assets was 10% over the 3-year period, but the settlement rate used to discount the company's pension obligation was 13% in 2020, 11% in 2021, and 8% in 2022. The service cost component of net periodic pension expense amounted to the following: 2020, \$60,000; 2021, \$85,000; and 2022, \$119,000. The average remaining service life per employee is 12 years. No benefits were paid in 2020, \$30,000 of benefits were paid in 2021, and \$18,500 of benefits were paid in 2022 (all benefits paid at end of year).

Instructions

(Round to the nearest dollar.)

- Calculate the amount of net periodic pension expense that the company would recognize in 2020, 2021, and 2022.
- Prepare the journal entries to record net periodic pension expense, employer's funding contribution, and related pension amounts for the years 2020, 2021, and 2022.

P20.6 (LO 3, 4) Groupwork (Computation of Prior Service Cost Amortization, Pension Expense, Journal Entries, and Net Gain or Loss) Aykroyd Inc. has sponsored a noncontributory, defined benefit pension plan for its employees since 1997. Prior to 2020, cumulative net pension expense recognized equaled cumulative contributions to the plan. Other relevant information about the pension plan on January 1, 2020, is as follows.

- The company has 200 employees. All these employees are expected to receive benefits under the plan. The average remaining service life per employee is 12 years.
- The projected benefit obligation amounted to \$5,000,000 and the fair value of pension plan assets was \$3,000,000. The market-related asset value was also \$3,000,000. Unrecognized prior service cost was \$2,000,000.

On December 31, 2020, the projected benefit obligation and the accumulated benefit obligation were \$4,850,000 and \$4,025,000, respectively. The fair value of the pension plan assets amounted to \$4,100,000 at the end of the year. A 10% settlement rate and a 10% expected asset return rate were used in the actuarial present value computations in the pension plan. The present value of benefits attributed by the pension benefit formula to employee service in 2020 amounted to \$200,000. The employer's contribution to the plan assets amounted to \$775,000 in 2020. This problem assumes no payment of pension benefits.

Instructions

(Round all amounts to the nearest dollar.)

- Prepare a schedule, based on the average remaining life per employee, showing the prior service cost that would be amortized as a component of pension expense for 2020, 2021, and 2022.
- Compute pension expense for the year 2020.

- c. Compute the amount of the 2020 increase/decrease in net gains or losses and the amount to be amortized in 2020 and 2021.
- d. Prepare the journal entries required to report the accounting for the company's pension plan for 2020.

P20.7 (LO 2, 3, 4) (Pension Worksheet) Hanson Corp. sponsors a defined benefit pension plan for its employees. On January 1, 2020, the following balances related to this plan.

| | |
|------------------------------------|-------------|
| Plan assets (market-related value) | \$520,000 |
| Projected benefit obligation | 700,000 |
| Pension asset/liability | 180,000 Cr. |
| Prior service cost | 81,000 |
| Net gain or loss (debit) | 91,000 |

As a result of the operation of the plan during 2020, the actuary provided the following additional data for 2020.

| | |
|--|-----------|
| Service cost | \$108,000 |
| Settlement rate, 9%; expected return rate, 10% | |
| Actual return on plan assets | 48,000 |
| Amortization of prior service cost | 25,000 |
| Contributions | 133,000 |
| Benefits paid retirees | 85,000 |
| Average remaining service life of active employees | 10 years |

Instructions

Using the preceding data, compute pension expense for Hanson Corp. for the year 2020 by preparing a pension worksheet that shows the journal entry for pension expense. Use the market-related asset value to compute the expected return and for corridor amortization.

P20.8 (LO 1, 2, 3, 4, 5) Groupwork (Comprehensive 2-Year Worksheet) Lemke Company sponsors a defined benefit pension plan for its employees. The following data relate to the operation of the plan for the years 2020 and 2021.

| | 2020 | 2021 |
|--|-------------|-----------|
| Projected benefit obligation, January 1 | \$600,000 | |
| Plan assets (fair value and market-related value), January 1 | 410,000 | |
| Pension asset/liability, January 1 | 190,000 Cr. | |
| Prior service cost, January 1 | 160,000 | |
| Service cost | 40,000 | \$ 59,000 |
| Settlement rate | 10% | 10% |
| Expected rate of return | 10% | 10% |
| Actual return on plan assets | 36,000 | 61,000 |
| Amortization of prior service cost | 70,000 | 50,000 |
| Annual contributions | 97,000 | 81,000 |
| Benefits paid retirees | 31,500 | 54,000 |
| Increase in projected benefit obligation due to changes in actuarial assumptions | 87,000 | -0- |
| Accumulated benefit obligation at December 31 | 721,800 | 789,000 |
| Average service life of all employees | | 20 years |
| Vested benefit obligation at December 31 | | 464,000 |

Instructions

- Prepare a pension worksheet presenting both years 2020 and 2021 and accompanying computations and amortization of the loss (2021) using the corridor approach.
- Prepare the journal entries (from the worksheet) to reflect all pension plan transactions and events at December 31 of each year.
- For 2021, indicate the pension amounts reported in the financial statements.

P20.9 (LO 1, 2, 3, 4, 5) Groupwork (Comprehensive 2-Year Worksheet) Hobbs Co. has the following defined benefit pension plan balances on January 1, 2020.

| | |
|------------------------------|-------------|
| Projected benefit obligation | \$4,600,000 |
| Fair value of plan assets | 4,600,000 |

The interest (settlement) rate applicable to the plan is 10%. On January 1, 2021, the company amends its pension agreement so that prior service costs of \$600,000 are created. Other data related to the pension plan are:

| | 2020 | 2021 |
|-------------------------------------|-----------|-----------|
| Service cost | \$150,000 | \$170,000 |
| Prior service cost amortization | –0– | 90,000 |
| Contributions (funding) to the plan | 200,000 | 184,658 |
| Benefits paid | 220,000 | 280,000 |
| Actual return on plan assets | 252,000 | 350,000 |
| Expected rate of return on assets | 6% | 8% |

Instructions

- Prepare a pension worksheet for the pension plan in 2020.
- Prepare any journal entries related to the pension plan that would be needed at December 31, 2020.
- Prepare a pension worksheet for 2021 and any journal entries related to the pension plan as of December 31, 2021.
- Indicate the pension-related amounts reported in the 2021 financial statements.

P20.10 (LO 1, 2, 3, 4) (Pension Worksheet—Missing Amounts) Kramer Co. has prepared the following pension worksheet. Unfortunately, several entries in the worksheet are not decipherable. The company has asked your assistance in completing the worksheet and completing the accounting tasks related to the pension plan for 2020.

| Pension Worksheet—Kramer Co. | | | | | | | | |
|---|--------------------------------|------------------------|--------|------------------------|---------------|-------------------------|------------------------------|-------------|
| Home Insert Page Layout Formulas Data Review View | | | | | | | | |
| P18 | fx | | | | | | | |
| | A | B | C | D | E | F | G | H |
| 1 | General Journal Entries | | | | | Memo Record | | |
| 2 | | Annual Pension Expense | Cash | OCI—Prior Service Cost | OCI—Gain/Loss | Pension Asset/Liability | Projected Benefit Obligation | Plan Assets |
| 3 | Items | | | | | | | |
| 4 | | | | | | | | |
| 5 | | | | | | | | |
| 6 | Balance, Jan. 1, 2020 | | | | | 120,000 | 325,000 | 205,000 Dr. |
| 7 | Service cost | (1) | | | | | 20,000 | |
| 8 | Interest cost | (2) | | | | | 26,000 | |
| 9 | Actual return | (3) | | | | | | 18,000 Dr. |
| 10 | Unexpected loss | 2,500 | | | (4) | | | |
| 11 | Amortization of PSC | (5) | | 35,000 | | | | |
| 12 | Contributions | | 41,000 | | | | | 41,000 Dr. |
| 13 | Benefits | | | | | | 15,000 | 15,000 Cr. |
| 14 | Increase in PBO | | | | (6) | | 43,500 | |
| 15 | Journal entry for 2020 | (7) | (8) | (9) | (10) | (11) | | |
| 16 | Accumulated OCI, Dec. 31, 2019 | | | 80,000 | 0 | | | |
| 17 | Balance, Dec. 31, 2020 | | | 45,000 | 46,000 | 150,500 Cr. | 399,500 Cr. | 249,000 Dr. |
| 18 | | | | | | | | |

Instructions

- Determine the missing amounts in the 2020 pension worksheet, indicating whether the amounts are debits or credits.
- Prepare the journal entry to record 2020 pension expense for Kramer Co.
- Determine the following for Kramer for 2020: (1) settlement rate used to measure the interest on the liability and (2) expected return on plan assets.

P20.11 (LO 1, 2, 3, 4, 5) (Pension Worksheet) The following data relate to the operation of Kramer Co.'s pension plan in 2021. The pension worksheet for 2020 is provided in P20.10.

| | |
|---------------------------------------|----------|
| Service cost | \$59,000 |
| Actual return on plan assets | 32,000 |
| Amortization of prior service cost | 28,000 |
| Annual contributions | 51,000 |
| Benefits paid retirees | 27,000 |
| Average service life of all employees | 25 years |

For 2021, Kramer will use the same assumptions as 2020 for the expected rate of returns on plan assets. The settlement rate for 2021 is 10%.

Instructions

- Prepare a pension worksheet for 2021 and accompanying computations and amortization of the loss, if any, in 2021 using the corridor approach.
- Prepare the journal entries (from the worksheet) to reflect all pension plan transactions and events at December 31.
- Indicate the pension amounts reported in the financial statements.

P20.12 (LO 1, 2, 3, 4, 5) (Pension Worksheet) Larson Corp. sponsors a defined benefit pension plan for its employees. On January 1, 2021, the following balances related to this plan.

| | |
|------------------------------------|------------|
| Plan assets (market-related value) | \$270,000 |
| Projected benefit obligation | 340,000 |
| Pension asset/liability | 70,000 Cr. |
| Prior service cost | 90,000 |
| OCI—Loss | 39,000 |

As a result of the operation of the plan during 2021, the actuary provided the following additional data for 2021.

| | |
|--|----------|
| Service cost | \$45,000 |
| Actual return on plan assets | 27,000 |
| Amortization of prior service cost | 12,000 |
| Contributions | 65,000 |
| Benefits paid retirees | 41,000 |
| Settlement rate | 7% |
| Expected return on plan assets | 8% |
| Average remaining service life of active employees | 10 years |

Instructions

- Compute pension expense for Larson Corp. for the year 2021 by preparing a pension worksheet that shows the journal entry for pension expense.
- Indicate the pension amounts reported in the financial statements.

***P20.13 (LO 6, 7) Groupwork (Postretirement Benefit Worksheet)** Hollenbeck Foods Inc. sponsors a postretirement medical and dental benefit plan for its employees. The following balances relate to this plan on January 1, 2020.

| | |
|---|-----------|
| Plan assets | \$200,000 |
| Expected postretirement benefit obligation | 820,000 |
| Accumulated postretirement benefit obligation | 200,000 |
| No prior service costs or OCI balances exist. | |

As a result of the plan's operation during 2020, the following additional data are provided by the actuary.

| |
|---|
| Service cost is \$70,000 |
| Discount rate is 10% |
| Contributions to plan are \$65,000 |
| Expected return on plan assets is \$10,000 |
| Actual return on plan assets is \$15,000 |
| Benefits paid to employees are \$44,000 |
| Average remaining service to full eligibility: 20 years |

Instructions

- Using the preceding data, compute the net periodic postretirement benefit cost for 2020 by preparing a worksheet that shows the journal entry for postretirement expense and the year-end balances in the related postretirement benefit memo accounts. (Assume that contributions and benefits are paid at the end of the year.)
- Prepare any journal entries related to the postretirement plan for 2020 and indicate the postretirement amounts reported in the financial statements for 2020.

***P20.14 (LO 6, 7) (Postretirement Benefit Worksheet—2 Years)** Elton Co. has the following postretirement benefit plan balances on January 1, 2020.

| | |
|---|-------------|
| Accumulated postretirement benefit obligation | \$2,250,000 |
| Fair value of plan assets | 2,250,000 |

The interest (settlement) rate applicable to the plan is 10%. On January 1, 2021, the company amends the plan so that prior service costs of \$175,000 are created. Other data related to the plan are:

| | 2020 | 2021 |
|-------------------------------------|-----------|-----------|
| Service costs | \$ 75,000 | \$ 85,000 |
| Prior service costs amortization | –0– | 12,000 |
| Contributions (funding) to the plan | 45,000 | 35,000 |
| Benefits paid | 40,000 | 45,000 |
| Actual return on plan assets | 140,000 | 120,000 |
| Expected rate of return on assets | 8% | 6% |

Instructions

- Prepare a worksheet for the postretirement plan in 2020.
- Prepare any journal entries related to the postretirement plan that would be needed at December 31, 2020.
- Prepare a worksheet for 2021 and any journal entries related to the postretirement plan as of December 31, 2021.
- Indicate the postretirement-benefit-related amounts reported in the 2021 financial statements.

Concepts for Analysis

CA20.1 (LO 1) (Pension Terminology and Theory) Many business organizations have been concerned with providing for the retirement of employees since the late 1800s. Increase in this concern resulted in the establishment of private pension plans in most large companies and in many medium- and small-sized ones.

The substantial growth of these plans, both in numbers of employees covered and in amounts of retirement benefits, has increased the significance of pension costs in relation to the financial position, results of operations, and cash flows of many companies. In examining the costs of pension plans, a CPA encounters certain terms. The components of pension costs that the terms represent must be dealt with appropriately if generally accepted accounting principles are to be reflected in the financial statements of entities with pension plans.

Instructions

- Define a private pension plan. How does a contributory pension plan differ from a noncontributory plan?
- Differentiate between “accounting for the employer” and “accounting for the pension fund.”
- Explain the terms “funded” and “pension liability” as they relate to:
 - The pension fund.
 - The employer.
- Discuss the theoretical justification for accrual recognition of pension costs.
 - Discuss the relative objectivity of the measurement process of accrual versus cash (pay-as-you-go) accounting for annual pension costs.

- e. Distinguish among the following as they relate to pension plans.
1. Service cost.
 2. Prior service costs.
 3. Vested benefits.

CA20.2 (LO 1) Writing (Pension Terminology) The following items appear on Brueggen Company's financial statements.

1. Under the caption Assets:
Pension asset/liability.
2. Under the caption Liabilities:
Pension asset/liability.
3. Under the caption Stockholders' Equity:
Prior service cost as a component of Accumulated Other Comprehensive Income.
4. On the income statement:
Pension expense.

Instructions

Explain the significance of each of the items above on corporate financial statements. (*Note:* All items set forth above are not necessarily to be found on the statements of a single company.)

CA20.3 (LO 1) (Basic Terminology) In examining the costs of pension plans, Helen Kaufman, CPA, encounters certain terms. The components of pension costs that the terms represent must be dealt with appropriately if generally accepted accounting principles are to be reflected in the financial statements of entities with pension plans.

Instructions

1. Discuss the theoretical justification for accrual recognition of pension costs.
 2. Discuss the relative objectivity of the measurement process of accrual versus cash (pay-as-you-go) accounting for annual pension costs.
- b. Explain the following terms as they apply to accounting for pension plans.
1. Market-related asset value.
 2. Projected benefit obligation.
 3. Corridor approach.
- c. What information should be disclosed about a company's pension plans in its financial statements and its notes?

(AICPA adapted)

CA20.4 (LO 1) Writing (Major Pension Concepts) Davis Corporation is a medium-sized manufacturer of paperboard containers and boxes. The corporation sponsors a noncontributory, defined benefit pension plan that covers its 250 employees. Sid Cole has recently been hired as president of Davis Corporation. While reviewing last year's financial statements with Carol Dilbeck, controller, Cole expressed confusion about several of the items in the footnote to the financial statements relating to the pension plan. In part, the footnote reads as follows.

Note J. The company has a defined benefit pension plan covering substantially all of its employees. The benefits are based on years of service and the employee's compensation during the last four years of employment. The company's funding policy is to contribute annually the maximum amount allowed under the federal tax code. Contributions are intended to provide for benefits expected to be earned in the future as well as those earned to date.

The net periodic pension expense on Davis Corporation's comparative income statement was \$72,000 in 2020 and \$57,680 in 2019.

The following are selected figures from the plan's funded status and amounts recognized in the Davis Corporation's Statement of Financial Position at December 31, 2020 (\$000 omitted).

| | |
|--|-----------|
| Actuarial present value of benefit obligations: | |
| Accumulated benefit obligation (including vested benefits of \$636) | \$ (870) |
| Projected benefit obligation | \$(1,200) |
| Plan assets at fair value | 1,050 |
| Projected benefit obligation in excess of plan assets | \$ (150) |

Given that Davis Corporation's work force has been stable for the last 6 years, Cole could not understand the increase in the net periodic pension expense. Dilbeck explained that the net periodic pension expense consists of several elements, some of which may increase or decrease the net expense.

Instructions

- a. The determination of the net periodic pension expense is a function of five elements. List and briefly describe each of the elements.
- b. Describe the major difference and the major similarity between the accumulated benefit obligation and the projected benefit obligation.
- c.
 1. Explain why pension gains and losses are not recognized on the income statement in the period in which they arise.
 2. Briefly describe how pension gains and losses are recognized.

(AICPA adapted)

CA20.5 (LO 5) Writing (Implications of GAAP Rules on Pensions) Jill Vogel and Pete Dell have to do a class presentation on GAAP rules for reporting pension information. In developing the class presentation, they decided to provide the class with a series of questions related to pensions and then discuss the answers in class. Given that the class has all read the rules related to pension accounting and reporting, they felt this approach would provide a lively discussion. Here are the questions:

1. In an article in *Businessweek* related to pensions, it was reported that the discount rates used by the largest 200 companies for pension reporting ranged from 5% to 11%. How can such a situation exist, and does GAAP alleviate this problem?
2. An article indicated that when GAAP rules were issued related to pensions, it caused an increase in the liability for pensions for approximately 20% of companies. Why might this situation occur?
3. A recent article noted that while "smoothing" is not necessarily an accounting virtue, pension accounting has long been recognized as an exception—an area of accounting in which at least some dampening of market swings is appropriate. This is because pension funds are managed so that their performance is insulated from the extremes of short-term market swings. A pension expense that reflects the volatility of market swings might, for that reason, convey information of little relevance. Are these statements true?
4. Understanding the impact of the changes required in pension reporting requires detailed information about its pension plan(s) and an analysis of the relationship of many factors, particularly the:
 - a. Type of plan(s) and any significant amendments.
 - b. Plan participants.
 - c. Funding status.
 - d. Actuarial funding method and assumptions currently used.

What impact does each of these items have on financial statement presentation?

5. An article noted "You also need to decide whether to amortize gains and losses using the corridor method, or to use some other systematic method. Under the corridor approach, only gains and losses in excess of 10% of the greater of the projected benefit obligation or the plan assets would have to be amortized." What is the corridor method and what is its purpose?

Instructions

What answers do you believe Jill and Pete gave to each of these questions?

CA20.6 (LO 4) Writing (Gains and Losses, Corridor Amortization) Vickie Plato, accounting clerk in the personnel office of Streisand Corp., has begun to compute pension expense for 2022 but is not sure whether or not she should include the amortization of unrecognized gains/losses. She is currently working with the following beginning-of-the-year present values for the projected benefit obligation and market-related values for the pension plan:

| | Projected Benefit Obligation | Plan Assets Value |
|------|------------------------------------|-------------------------|
| 2019 | \$2,200,000 | \$1,900,000 |
| 2020 | 2,400,000 | 2,500,000 |
| 2021 | 2,900,000 | 2,600,000 |
| 2022 | 3,900,000 | 3,000,000 |

The average remaining service life per employee in 2019 and 2020 is 10 years and in 2021 and 2022 is 12 years. The net gain or loss that occurred during each year is as follows.

| | |
|------|----------------|
| 2019 | \$280,000 loss |
| 2020 | 85,000 loss |
| 2021 | 12,000 loss |
| 2022 | 25,000 gain |

(In working the solution, you must aggregate the unrecognized gains and losses to arrive at year-end balances.)

Instructions

You are the manager in charge of accounting. Write a memo to Vickie Plato, explaining why in some years she must amortize some of the net gains and losses and in other years she does not need to. In order to explain this situation fully, you must compute the amount of net gain or loss that is amortized and charged to pension expense in each of the 4 years listed above. Include an appropriate amortization schedule, referring to it whenever necessary.

CA20.7 (LO 4) Ethics (Nonvested Employees—An Ethical Dilemma) Thinken Technology recently merged with College Electronix (CE), a computer graphics company. In performing a comprehensive audit of CE's accounting system, Gerald Ott, internal audit manager for Thinken Technology, discovered that the new subsidiary did not record pension assets and liabilities, subject to GAAP.

The net present value of CE's pension assets was \$15.5 million, the vested benefit obligation was \$12.9 million, and the projected benefit obligation was \$17.4 million. Ott reported this audit finding to Julie Habbe, the newly appointed controller of CE. A few days later, Habbe called Ott for his advice on what to do. Habbe started her conversation by asking, "Can't we eliminate the negative income effect of our pension dilemma simply by terminating the employment of nonvested employees before the end of our fiscal year?"

Instructions

How should Ott respond to Habbe's remark about firing nonvested employees?

Using Your Judgment

Financial Reporting Problem

The Procter & Gamble Company (P&G)

The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

- What kinds of pension plans does P&G provide its employees?
- What was P&G's pension expense for 2017, 2016, and 2015 related to its defined benefit plan?
- What is the impact of P&G's pension plans for 2017 on its financial statements?
- What information does P&G provide on the target allocation of its pension assets? (Compare the asset allocation for "Pensions and Other Retiree Benefits.") How do the allocations relate to the expected returns on these assets?

Comparative Analysis Case

The Coca-Cola Company and PepsiCo, Inc.

The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- What kind of pension plans do Coca-Cola and PepsiCo provide their employees?
- What net periodic pension expense (cost) did Coca-Cola and PepsiCo report in 2017?
- What is the year-end 2017 funded status of Coca-Cola's and PepsiCo's plans (include international)?
- What relevant rates were used by Coca-Cola and PepsiCo in computing their pension amounts?
- Compare the expected benefit payments and contributions for Coca-Cola and PepsiCo.

*Financial Statement Analysis Case

General Electric

A *Wall Street Journal* article discussed a \$1.8 billion charge to income made by **General Electric** for postretirement benefit costs. It was attributed to previously unrecognized healthcare and life insurance cost. As financial vice president and controller for Peake, Inc., you found this article interesting because the president recently expressed interest in adopting a postemployment benefit program for Peake's employees, to complement the company's existing defined benefit plan. The president, Martha Beyerlein, wants to know how the expense on the new plan will be determined and what impact the accounting for the plan will have on Peake's financial statements.

Instructions

- As financial vice president and controller of Peake, Inc., explain the calculation of postemployment benefit expense under GAAP, and indicate how the accounting for the plan will affect Peake's financial statements.
- Discuss the similarities and differences in the accounting for the other postemployment benefit plan relative to the accounting for the defined benefit plan.

Accounting, Analysis, and Principles

PENCOMP's balance sheet at December 31, 2020, is as follows.

| PENCOMP, Inc. Balance Sheet As of December 31, 2020 | | | |
|---|---------|--|---------|
| <i>Assets</i> | | <i>Liabilities</i> | |
| Cash | \$ 438 | Notes payable | \$1,000 |
| Inventory | 1,800 | Pension liability | 344 |
| Total current assets | 2,238 | Total liabilities | 1,344 |
| Plant and equipment | 2,000 | <i>Stockholders' equity</i> | |
| Accumulated depreciation | (240) | Common stock | 2,000 |
| | 1,760 | Retained earnings | 896 |
| Total assets | \$3,998 | Accumulated other comprehensive income | (242) |
| | | Total stockholders' equity | 2,654 |
| | | Total liabilities and stockholders' equity | \$3,998 |

Additional information concerning PENCOMP's defined benefit pension plan is as follows.

| | |
|--|----------|
| Projected benefit obligation at 12/31/20 | \$ 820.5 |
| Plan assets (fair value) at 12/31/20 | 476.5 |
| Unamortized past service cost at 12/31/20 | 150.0 |
| Amortization of past service cost during 2021 | 15.0 |
| Service cost for 2021 | 42.0 |
| Discount rate | 10% |
| Expected rate of return on plan assets in 2021 | 12% |
| Actual return on plan assets in 2021 | 10.4 |
| Contributions to pension fund in 2021 | 70.0 |
| Benefits paid during 2021 | 40.0 |
| Expected remaining service life of employees | 15.0 |
| Average period to vesting of prior service costs | 10.0 |
| Unamortized net loss due to changes in actuarial assumptions and deferred net losses on plan assets at 12/31/20 | 92.0 |

Other information about PENCOMP is as follows.

| | |
|--|----------|
| Salary expense, all paid with cash during 2021 | \$ 700.0 |
| Sales, all for cash | 3,000.0 |
| Purchases, all for cash | 2,000.0 |
| Inventory at 12/31/21 | 1,800.0 |

Property originally cost \$2,000 and is depreciated on a straight-line basis over 25 years with no residual value.

Interest on the note payable is 10% annually and is paid in cash on 12/31 of each year.

Dividends declared and paid are \$200 in 2021.

Accounting

Prepare an income statement for 2021 and a balance sheet as of December 31, 2021. Also, prepare the pension expense journal entry for the year ended December 31, 2021. Round to the nearest tenth (e.g., round 2.87 to 2.9).

Analysis

Compute return on equity for PENCOMP for 2021 (assume stockholders' equity is equal to year-end average stockholders' equity). Do you think an argument can be made for including some or even all of the change in accumulated other comprehensive income (due to pensions) in the numerator of return on equity? Illustrate that calculation.

Principles

Explain a rationale for why the FASB has (so far) decided to exclude from the current period income statement the effects of pension plan amendments and gains and losses due to changes in actuarial assumptions.

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

CE20.1 Access the glossary ("Master Glossary") to answer the following.

- a. What is an accumulated benefit obligation?
- b. What is a defined benefit postretirement plan?
- c. What is the definition of "actuarial present value"?
- d. What is a prior service cost?

CE20.2 In general, how can an employer choose an appropriate discount rate for its pension plan? What information could an employer use in choosing a discount rate?

CE20.3 If an employer has a defined benefit pension plan, what components would make up its net periodic pension cost?

CE20.4 What information about its pension plan must a publicly traded company disclose in its interim financial statements?

Codification Research Case

Monat Company has grown rapidly since its founding in 2004. To instill loyalty in its employees, Monat is contemplating establishment of a defined benefit plan. Monat knows that lenders and potential investors will pay close attention to the impact of the pension plan on the company's financial statements, particularly any gains or losses that

develop in the plan. Monat has asked you to conduct some research on the accounting for gains and losses in a defined benefit plan.

Instructions

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

- Briefly describe how pension gains and losses are accounted for.
- Explain the rationale behind the accounting method described in part (a).

- What is the related pension asset or liability that will show up on the balance sheet? When will each of these situations occur?

IFRS Insights

LEARNING OBJECTIVE 8

Compare the accounting for pensions under GAAP and IFRS.

The accounting for various forms of compensation plans under IFRS is found in *IAS 19* (“Employee Benefits”) and *IFRS 2* (“Share-Based Payment”). *IAS 19* addresses the accounting for a wide range of compensation elements—wages, bonuses, postretirement benefits, and compensated absences. The underlying concepts for the accounting for postretirement benefits are similar between GAAP and IFRS—both GAAP and IFRS view pensions and other postretirement benefits as forms of deferred compensation. At present, there are significant differences in the specific accounting provisions as applied to these plans.

Relevant Facts

Following are the key similarities and differences between GAAP and IFRS related to pensions.

Similarities

- IFRS and GAAP separate pension plans into defined contribution plans and defined benefit plans. The accounting for defined contribution plans is similar.
- IFRS and GAAP recognize a pension asset or liability as the funded status of the plan (i.e., defined benefit obligation minus the fair value of plan assets). (Note that defined benefit obligation is referred to as the projected benefit obligation in GAAP.)
- IFRS and GAAP compute unrecognized past service cost (PSC) (referred to as prior service cost in GAAP) in the same manner. However, IFRS recognizes past service cost as a component of pension expense in income immediately. GAAP amortizes PSC over the remaining service lives of employees.

Differences

- IFRS and GAAP include interest expense on the liability in pension expense. Regarding asset returns, IFRS reduces pension expense by the amount of interest revenue (based on the discount rate times the beginning value of pension assets). GAAP includes an asset return component based on the expected return on plan assets.
- Under IFRS, companies recognize both liability and asset gains and losses (referred to as remeasurements) in other comprehensive income. These gains and losses are not “recycled” into income in subsequent periods. GAAP recognizes liability and asset gains and losses in “Accumulated other comprehensive income” and amortizes these amounts to income over remaining service lives, using the “corridor approach.”
- The accounting for pensions and other postretirement benefit plans is the same under IFRS. GAAP has separate standards for these types of benefits, and significant differences exist in the accounting.

About the Numbers

Accounting for Pensions

Net Defined Benefit Obligation (Asset) As in GAAP, under IFRS the **net defined benefit liability** (asset) is the deficit or surplus related to a defined benefit pension plan. The deficit or surplus is measured as follows.

Defined Benefit Obligation – Fair Value of Plan Assets (if any)

The deficit or surplus is often referred to as the **funded status** of the plan.

If the defined benefit obligation is greater than the plan assets, the pension plan has a deficit. Conversely, if the defined pension obligation is less than the plan assets, the pension plan has a surplus.

Illustration IFRS20.1 shows these relationships.

| Deficit | | Surplus | |
|---------------------------------------|-------------------|----------------------------------|------------------|
| Defined benefit obligation | \$1,000,000 | Defined benefit obligation | \$150,000 |
| Plan assets | 900,000 | Plan assets | 200,000 |
| Net defined benefit obligation | \$ 100,000 | Net defined benefit asset | \$ 50,000 |

ILLUSTRATION IFRS20.1

Presentation of Funded Status

The net defined benefit obligation (asset) is often referred to simply as the pension liability or the pension asset on the statement of financial position.

As indicated, companies should report either a pension asset or pension liability related to a pension plan on the statement of financial position (often referred to as the **net approach**). To illustrate, assume that at year-end Acer Company has a defined pension obligation of \$4,000,000 and plan assets of \$3,700,000. In this case, Acer reports \$300,000 (\$4,000,000 – \$3,700,000) as a pension liability on its statement of financial position.

Some believe that companies should report separately both the defined benefit obligation and the plan assets on the statement of financial position. This approach (often referred to as the **gross approach**) would report Acer's defined benefit obligation of \$4,000,000 and its plan assets of \$3,700,000 on the statement of financial position. The IASB disagrees, indicating that offsetting these amounts is consistent with its standard on when assets and liabilities should be netted.³⁰

Reporting Changes in the Defined Benefit Obligation (Asset) The IASB requires that all changes in the defined benefit obligation and plan assets in the current period be recognized in comprehensive income. The Board believes that immediate recognition of the effects of these changes in the statement of comprehensive income provides the most understandable and useful information to financial statement users. The IASB requires that companies report changes arising from different elements of pension liabilities and assets in different sections of the statement of comprehensive income, depending on their nature.

In the past, companies often reported only a single pension expense number in the comprehensive income statement. Providing additional segmentation of the **components of pension cost** provides additional transparency about the nature of these costs. The three components are as follows.

- **Service cost.** Service cost is either current service cost or past service cost. Current service cost is the increase in the present value of the defined benefit obligation from employee service in the current period. Past service cost is the change in the present value of the defined benefit obligation for employee service for prior periods—generally resulting from a plan amendment (e.g., changes to the plan). This component is reported in the statement of comprehensive income in the operating section of the statement and affects net income.

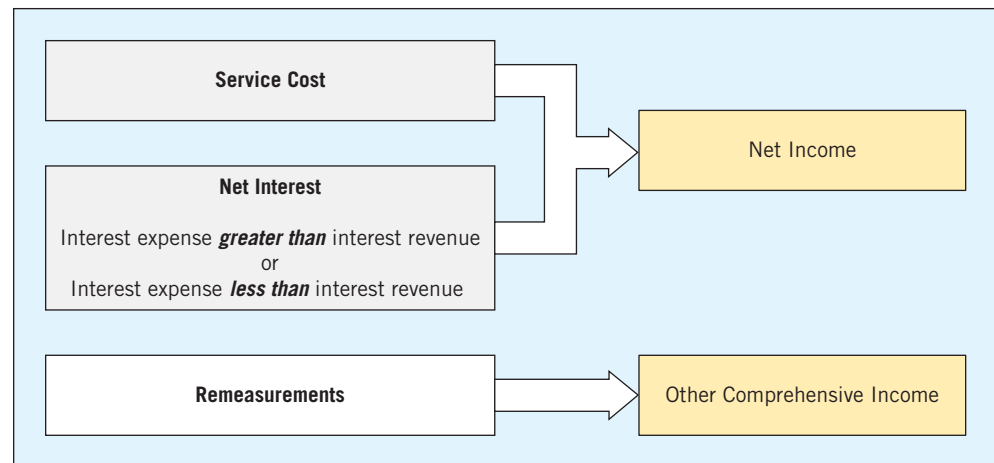

³⁰IAS 32 states that a financial asset and a financial liability should be offset and the net amount reported in the statement of financial position when a company (a) has a legally enforceable right to set off the recognized amounts and (b) intends either to settle on a net basis, or to realize the asset and settle it simultaneously.

- **Net interest.** Net interest is computed by multiplying the discount rate by the funded status of the plan (defined benefit obligation minus plan assets). If the plan has a net defined benefit obligation, the company reports interest expense. Conversely, if it has a net defined benefit asset, it reports interest revenue. This approach is justified on the basis of its simplicity and that any financing costs should be based on the funded status of the plan. This amount is often shown below the operating section of the income statement in the financing section and affects net income.
- **Remeasurements.** Remeasurements are gains and losses related to the defined benefit obligation (changes in discount rate or other actuarial assumptions) and gains or losses on the fair value of the plan assets (actual rate of return less interest revenue included in the finance component). This component is reported in other comprehensive income, net of tax. **These remeasurement gains or losses therefore affect comprehensive income but not net income.**

Illustration IFRS20.2 shows the components of changes in the pension liability (asset) and their placement on the statement of comprehensive income.

ILLUSTRATION IFRS20.2

Reporting Changes in the Pension Obligation (Assets)

As indicated in Illustration IFRS20.2, service cost and net interest are reported in net income. We discuss determination of each of these components in the following section. Remeasurements, which are reported in other comprehensive income, are discussed in a later section.

Service Cost. To determine current service cost and the related increase in the defined benefit obligation, companies must:

1. Apply an actuarial valuation method.
2. Assign benefits to period of service.
3. Make actuarial assumptions.³¹

In applying an actuarial valuation method, the IASB concluded that **companies must consider future compensation levels in measuring the present obligation and periodic pension expense if the plan benefit formula incorporates them.** In other words, the present obligation resulting from a promise to pay a benefit of 1 percent of an employee's **final pay** differs from the promise to pay 1 percent of **current pay**. To overlook this fact is to ignore an important aspect of pension expense. Thus, the Board adopts the **projected unit credit method (often referred to as the benefits/years-of-service method), which determines pension expense based on future salary levels.**

Some object to this determination, arguing that a company should have more freedom to select an expense recognition pattern. Others believe that incorporating future salary increases into current pension expense is accounting for events that have not yet happened. They argue that if a company terminates the plan today, it pays only liabilities for accumulated benefits. **Nevertheless, the IASB indicates that the defined benefit obligation provides a more realistic measure of the employer's obligation under the plan on a going concern basis and, therefore, companies should use it as the basis for determining service cost.**

³¹As indicated earlier, service cost is comprised of current and past service cost. Determination of past service cost is based on the same actuarial valuation model as that used for current service cost. We discuss recognition of past service cost in a later section.

The assignment of benefits to periods of service is based on the actuarial valuation method. The actuary then allocates the cost of the pension benefits over the expected service life of the company's employees. In determining the proper service cost for a period, the actuary makes actuarial assumptions related to such factors as mortality; rates of employee turnover, disability, and early retirement; discount rate; benefit levels; and future salary levels. While *IAS 19* does not require use of an actuary, given the complexity of these estimates, just about all companies rely on an actuary to determine service cost and related other defined benefit measures.

Net Interest. In computing net interest, companies assume that the discount rate, the net defined benefit obligation, and the pension asset are determined at the beginning of the year.³² The **discount rate** is based on the yields of high-quality bonds with terms consistent with the company's pension obligation. Net interest is then computed as indicated in the following equation.

$$\text{Net Interest} = (\text{Defined Benefit Obligation} \times \text{Discount Rate}) - (\text{Plan Assets} \times \text{Discount Rate})$$

That is, net interest is determined by multiplying the net defined pension obligation (asset) by the discount rate.

Because payment of the pension obligation is deferred, companies record the pension liability on a discounted basis. As a result, the liability accrues interest over the service life of the employee (passage of time), which is essentially interest expense (**interest on the liability**). Similarly, companies earn a return on their plan assets. That is, a company assumes that it earns interest based on multiplying the discount rate by the plan assets. While the IASB recognizes that the actual return on plan assets may differ from the assumed interest revenue computed, it believes that the change in plan assets can be divided into an amount that arises from the passage of time and amounts that arise from other changes. As we discuss in the next section, changes not related to the passage of time are reported in other comprehensive income as remeasurements. Thus, the growth in the plan assets should mirror the growth in the defined benefit obligation. In other words, the assumed interest revenue on the plan assets based on the passage of time offsets the interest expense on the defined benefit obligation.

In summary, pension expense is comprised of two components: (1) service cost and (2) net interest. Companies report each of these components in the statement of comprehensive income. In some cases, companies may choose to report these components in one section of the statement of comprehensive income and report total pension expense. Other companies may choose to report the service cost component in operating income and the net interest in a separate section related to financing.³³

Plan Assets and Actual Return Pension **plan assets** are usually investments in shares, bonds, other securities, and real estate that a company holds to earn a reasonable rate of return. Plan assets are reported at fair value. Companies generally hold these assets in a separate legal entity (a pension fund) that exists only to administer the employee benefit plan. These assets held by the pension fund are therefore not available to the company's own creditors (even in bankruptcy). Employer contributions and the actual return on plan assets increase pension plan assets. **Actual return on plan assets** is the increase in the pension fund assets arising from interest, dividends, and realized and unrealized changes in the fair value of the plan. Benefits paid to retired employees decrease plan assets.

To illustrate, assume that Hasbro Company has pension plan assets of \$4,200,000 on January 1, 2020. During 2020, Hasbro contributed \$300,000 to the plan and paid out retirement benefits of \$250,000. Its actual return on plan assets was \$210,000 for the year. Hasbro's plan assets at December 31, 2020, are \$4,460,000, computed as shown in **Illustration IFRS20.3**.

| | |
|---------------------------------|--------------------|
| Plan assets, January 1, 2020 | \$4,200,000 |
| Contributions by Hasbro to plan | 300,000 |
| Actual return | 210,000 |
| Benefits paid to employees | (250,000) |
| Plan assets, December 31, 2020 | <u>\$4,460,000</u> |

ILLUSTRATION IFRS20.3

Determination of Pension Assets

³²The IASB indicates that if the beginning of the year amount changes materially (due to contributions to or payments out of the plan), an adjustment to the beginning balances should be made. *For homework purposes, unless information indicates that balances have changed materially, use the beginning of the year balances.*

³³The IASB does not provide guidance on which of these two approaches is preferred. *For homework purposes, report pension expense as a single total in income from operations in the statement of comprehensive income.*

In some cases, companies compute the actual return by adjusting the change in plan assets for the effect of contributions during the year and benefits paid during the year. The equation in **Illustration IFRS20.4**, or a variation thereof, can be used to compute the actual return.

ILLUSTRATION IFRS20.4
Equation for Computing Actual Return

$$\text{Actual Return} = \left(\begin{array}{c} \text{Plan Assets} \\ \text{Ending} \\ \text{Balance} \end{array} - \begin{array}{c} \text{Plan Assets} \\ \text{Beginning} \\ \text{Balance} \end{array} \right) - (\text{Contributions} - \text{Benefits Paid})$$

Stated another way, the actual return on plan assets is the difference between the fair value of the plan assets at the beginning of the period and at the end of the period, adjusted for contributions and benefit payments. **Illustration IFRS20.5** uses the equation above to compute actual return, using the information provided in Illustration IFRS20.3.

ILLUSTRATION IFRS20.5
Computation of Actual Return on Plan Assets

| | | |
|---------------------------------------|-----------|-------------------|
| Plan assets, December 31, 2020 | | \$4,460,000 |
| Plan assets, January 1, 2020 | | (4,200,000) |
| Increase in fair value of plan assets | | 260,000 |
| Deduct: Contributions to plan | \$300,000 | |
| Add: Benefit payments to employees | 250,000 | (50,000) |
| Actual return | | <u>\$ 210,000</u> |

In this case, Hasbro has a positive actual return on plan assets. Recently, some pension plans have experienced negative actual returns due to the increased volatility in global securities markets.

Using a Pension Worksheet

We will now illustrate the basic computation of pension expense using the first two components: (1) service cost and (2) net interest. We discuss remeasurements in later sections.

Companies often use a worksheet to record pension-related information. As its name suggests, the worksheet is a working tool. A worksheet is **not** a permanent accounting record: It is neither a journal nor part of the general ledger. The worksheet is merely a device to make it easier to prepare entries and the financial statements.³⁴ **Illustration IFRS20.6** shows the format of the **pension worksheet**.

ILLUSTRATION IFRS20.6
Basic Format of Pension Worksheet

| Pension Worksheet | | | | | | |
|---|--------------------------------|------------------------|------|-------------------------|----------------------------|-------------|
| Home Insert Page Layout Formulas Data Review View | | | | | | |
| P18 fx | | | | | | |
| | A | B | C | D | E | F |
| 1 | General Journal Entries | | | | Memo Record | |
| 2 | | Annual Pension Expense | Cash | Pension Asset/Liability | Defined Benefit Obligation | Plan Assets |
| 3 | | | | | | |
| 4 | Items | | | | | |
| 5 | | | | | | |
| 6 | | | | | | |
| 7 | | | | | | |
| 8 | | | | | | |
| 9 | | | | | | |
| 10 | | | | | | |

The “General Journal Entries” columns of the worksheet (near the middle) determine the entries to record in the formal general ledger accounts. The “Memo Record” columns (on the right side) maintain balances in the defined benefit obligation and the plan assets. The difference between the defined benefit obligation and the fair value of the plan assets is the **pension asset/liability**, which is shown in the statement of financial position. If the defined benefit obligation is greater than the plan assets, a pension liability occurs. If the defined benefit obligation is less than the plan assets, a pension asset occurs.

³⁴The use of a pension entry worksheet is recommended and illustrated by Paul B. W. Miller, “The New Pension Accounting (Part 2),” *Journal of Accountancy* (February 1987), pp. 86–94.

On the first line of the worksheet, a company enters the beginning balances (if any). It then records subsequent transactions and events related to the pension plan using debits and credits, using both sets of columns as if they were one. For each transaction or event, the debits must equal the credits. **The ending balance in the Pension Asset/Liability column should equal the net balance in the memo record.**

2020 Entries and Worksheet To illustrate the use of a worksheet and how it helps in accounting for a pension plan, assume that on January 1, 2020, Zarle Company provides the following information related to its pension plan for the year 2020.

- Plan assets, January 1, 2020, are \$100,000.
- Defined benefit obligation, January 1, 2020, is \$100,000.
- Annual service cost is \$9,000.
- Discount rate is 10 percent.
- Funding contributions are \$8,000.
- Benefits paid to retirees during the year are \$7,000.

Using the data presented above, the worksheet in **Illustration IFRS20.7** presents the beginning balances and all of the pension entries recorded by Zarle in 2020. Zarle records the beginning balances for the defined benefit obligation and the pension plan assets on the first line of the worksheet in the memo record. Because the defined benefit obligation and the plan assets are the same at January 1, 2020, the Pension Asset/Liability account has a zero balance at January 1, 2020.

| 13 | | | | | | |
| 14 | *\$9,000 – \$8,000 = \$1,000 | | | | | |
| 15 | **\$112,000 – \$111,000 = \$1,000 | | | | | |

ILLUSTRATION IFRS20.7
Pension Worksheet—2020

Entry (a) in Illustration IFRS20.7 records the service cost component, which increases pension expense by \$9,000 and increases the liability (defined benefit obligation) by \$9,000. Entry (b) accrues the interest expense component, which increases both the liability and the pension expense by \$10,000 (the beginning defined benefit obligation multiplied by the discount rate of 10 percent). Entry (c) records the interest revenue component, which increases plan assets and decreases pension expense by \$10,000. This is computed by multiplying the beginning plan assets by the discount rate of 10 percent. As a result, net interest expense (income) is zero in 2020. Entry (d) records Zarle's contribution (funding) of assets to the pension fund, thereby decreasing cash by \$8,000 and increasing plan assets by \$8,000. Entry (e) records the benefit payments made to retirees, which results in equal \$7,000 decreases to the plan assets and the defined benefit obligation.

Zarle makes the "formal journal entry" on December 31, which records the pension expense in 2020, as follows.

| 2020 | |
|-------------------------|-------|
| Pension Expense | 9,000 |
| Cash | 8,000 |
| Pension Asset/Liability | 1,000 |

The credit to Pension Asset/Liability for \$1,000 represents the difference between the 2020 pension expense of \$9,000 and the amount funded of \$8,000. Pension Asset/Liability (credit) is a liability because Zarle underfunds the plan by \$1,000. The Pension Asset/Liability account balance of \$1,000 also equals the net of the balances in the memo accounts. **Illustration IFRS20.8** shows that the defined benefit obligation exceeds the plan assets by \$1,000, which reconciles to the pension liability reported in the statement of financial position.

ILLUSTRATION IFRS20.8
Pension Reconciliation
Schedule—December 31, 2020

| | |
|---|--------------------------|
| Defined benefit obligation (Credit) | \$(112,000) |
| Plan assets at fair value (Debit) | <u>111,000</u> |
| Pension asset/liability (Credit) | <u>\$ (1,000)</u> |

If the net of the memo record balances is a credit, the reconciling amount in the Pension Asset/Liability column will be a credit equal in amount. If the net of the memo record balances is a debit, the Pension Asset/Liability amount will be a debit equal in amount. The worksheet is designed to produce this reconciling feature, which is useful later in the preparation of the financial statements and required note disclosure related to pensions.

In this illustration (for 2020), the debit to Pension Expense exceeds the credit to Cash, resulting in a credit to Pension Asset/Liability—the recognition of a liability. If the credit to Cash exceeded the debit to Pension Expense, Zarle would debit Pension Asset/Liability—the recognition of an asset.³⁵

Past Service Cost **Past service cost** is the change in the present value of the defined benefit obligation resulting from a plan amendment or a curtailment.³⁶ For example, a plan amendment arises when a company decides to provide additional benefits to existing employees for past service. Conversely, the company may decide that it is necessary to reduce its benefit package retroactively for existing employees, thereby reducing their pension benefit. A **curtailment** occurs when the company has a significant reduction in the number of employees covered by the plan. Because a curtailment has the same effect as a reduction in benefits due to an amendment to the plan, these situations are accounted for in the same way. **Illustration IFRS20.9** summarizes the nature of past service costs.

ILLUSTRATION IFRS20.9
Types of Past Service Costs

| Past Service Costs (Expense in Current Period) | |
|--|---|
| <u>Plan Amendments</u> | <u>Curtailments</u> |
| <ul style="list-style-type: none"> • Introduction of a plan. • Withdrawal of a plan. • Changes to a plan. | <ul style="list-style-type: none"> • Significant reduction in the number of employees covered by the plan. |

The accounting for past service cost is straightforward—expense past service cost in the period of the amendment or curtailment. As a result, a substantial increase (decrease) in pension expense and the defined benefit obligation often results when a plan amendment or curtailment occurs. Because current and past service costs relate directly to employment, they are reported in the operating section of the statement of comprehensive income.

Some disagree with the IASB position of expensing these costs in the year a plan is amended or curtailed. They argue that a company would not provide these additional benefits for past years of service unless it expects to receive benefits in the future. According to this reasoning, a company should not recognize the full past service cost in the year of the amendment. Instead, the past service cost should be spread out over the remaining service life of employees who are expected to benefit from the changes in the plan. Others believe that if they are truly past service costs, they should be treated retroactively as an adjustment made to prior periods.

³⁵The IASB in *IAS 19* limits the amount of a pension asset that is recognized, based on a recoverability test. This test, which has been further clarified in *IFRIC 14*, limits the amount of the pension asset to the sum of unrecognized actuarial gains and losses (discussed later) and amounts that will be received by the company in the form of refunds or reduction of future contributions. *For purposes of homework, assume that a pension asset, if present, meets the criteria for full recognition.*

³⁶The IASB also indicates that gains and losses on non-routine settlements are considered past service costs. A **settlement** is a payment of benefits that is not set out in the terms of the plan.

However, the IASB decided that any changes in the defined benefit obligation or plan assets should be recognized in the current period. To do otherwise is not informative and leads to delayed recognition of costs or reduced benefits which are neither assets nor liabilities.

It is also possible to decrease past service costs by decreasing the defined benefit obligation (referred to as negative past service cost). Negative past service cost arises when an entity changes the benefits attributable to past service cost so that the present value of the defined benefit obligation decreases. In that case, pension expense is decreased. Both positive (increased pension expense) and negative (decreased pension expense) past service cost adjustments are handled in the same manner; that is, adjust pension expense immediately.

2021 Entries and Worksheet Continuing the Zarle Company illustration into 2021, we note that the company amends the pension plan on January 1, 2021, to grant employees past service benefits with a present value of \$81,600. The following additional facts apply to the pension plan for the year 2021.

- Annual service cost is \$9,500.
- Discount rate is 10 percent.
- Annual funding contributions are \$20,000.
- Benefits paid to retirees during the year are \$8,000.

Illustration IFRS20.10 presents a worksheet of all the pension entries and information recorded by Zarle in 2021.

ILLUSTRATION IFRS20.10

Pension Worksheet—2021

The first line of the worksheet shows the beginning balances of the Pension Asset/Liability account and the memo accounts. Entry (f) records Zarle's granting of past service cost, by adding \$81,600 to the defined benefit obligation and to Pension Expense. Entry (g) records the current service cost; entry (h) records interest expense for the period. Because the past service cost occurred at the beginning of the year, interest is computed on the January 1, 2021, balance of the defined benefit obligation, adjusted for the past service cost. Interest expense is therefore \$19,360 (\$193,600 × 10%). Entry (i) records interest revenue for the period of \$11,100 (\$111,000 × 10%). Entries (j) and (k) are similar to the corresponding entries in 2020.

Zarle makes the following journal entry on December 31 to formally record the 2021 pension expense—the sum of the annual pension expense column.

| 2021 | | |
|-------------------------|--------|--------|
| Pension Expense | 99,360 | |
| Cash | | 20,000 |
| Pension Asset/Liability | | 79,360 |

Because the expense exceeds the funding, Zarle credits the Pension Asset/Liability account for the \$79,360 difference. That account is a liability. In 2021, as in 2020, the balance of the Pension

Asset/Liability account (\$80,360) is equal to the net of the balances in the memo accounts, as shown in **Illustration IFRS20.11**.

ILLUSTRATION IFRS20.11
Pension Reconciliation
Schedule—December 31, 2021

| | |
|---|---------------------------|
| Defined benefit obligation (Credit) | \$(214,460) |
| Plan assets at fair value (Debit) | 134,100 |
| Pension asset/liability (Credit) | <u>\$ (80,360)</u> |

The **reconciliation** is the formula that makes the worksheet work. It relates the components of pension accounting, recorded and unrecorded, to one another.

Remeasurements Of great concern to companies that have pension plans are the uncontrollable and unexpected swings that can result from (1) sudden and large changes in the fair value of plan assets and (2) changes in actuarial assumptions that affect the amount of the defined benefit obligation. How should these changes (referred to as **remeasurements**) affect the financial statements, most notably pension expense? The IASB believes that the most informative way is to recognize the remeasurement in other comprehensive income. The rationale for this reporting is that the predictive nature of remeasurements is much different than the other two components of pension benefit cost—service cost and net interest.

Remeasurements are generally of two types:

1. Gains and losses on plan assets.
2. Gains and losses on the defined benefit obligation.

Asset Gains and Losses. The gains and losses on plan assets (referred to as **asset gains and losses**) is the difference between the actual return and the interest revenue computed in determining net interest. Asset gains occur when actual returns exceed the interest revenue. Asset losses occur when the actual returns are less than interest revenue. To illustrate, assume that Shopbob Company has plan assets at January 1, 2020, of \$100,000. The discount rate for the year is 6 percent, and the actual return on the plan assets for 2020 is \$8,000. In 2020, Shopbob should record an asset gain of \$2,000, computed as shown in **Illustration IFRS20.12**.

ILLUSTRATION IFRS20.12
Computation of Asset Gain

| | |
|---|-----------------------|
| Actual return | \$8,000 |
| Less: Interest revenue (\$100,000 × 6%) | <u>6,000</u> |
| Asset gain | <u>\$2,000</u> |

Shopbob therefore debits plan assets for the asset gain of \$2,000 and credits Other Comprehensive Income (G/L) for the same amount. If interest revenue exceeds the actual return, Shopbob debits Other Comprehensive Income (G/L) for the asset loss and credits plan assets.

Liability Gains and Losses. In estimating the defined benefit obligation (the liability), actuaries make assumptions about such items as mortality rate, retirement rate, turnover rate, disability rate, and salary amounts. Any change in these actuarial assumptions affects the amount of the defined benefit obligation. Seldom does actual experience coincide exactly with actuarial predictions. These gains or losses from changes in the defined benefit obligation are called **liability gains and losses**.

Companies report liability gains (resulting from unexpected decreases in the liability balance) and liability losses (resulting from unexpected increases in the liability balance) in Other Comprehensive Income (G/L). Companies combine the liability gains and losses in the same Other Comprehensive Income (G/L) account used for asset gains and losses. They accumulate the asset and liability gains and losses from year to year in Accumulated Other Comprehensive Income.³⁷ This amount is reported on the statement of financial position in the equity section.

³⁷The IASB is silent as to whether the account “Accumulated Other Comprehensive Income” should be used instead of another equity account, like Retained Earnings. *For homework purposes, use an Accumulated Other Comprehensive Income account.* The IASB also permits the transfer of the balance in the Accumulated Other Comprehensive Income account to other equity accounts at a later date.

2022 Entries and Worksheet Continuing the Zarle Company illustration, the following facts apply to the pension plan for 2022.

- Annual service cost is \$13,000.
- Discount rate is 10 percent.
- Actual return on plan assets is \$12,000.
- Annual funding contributions are \$24,000.
- Benefits paid to retirees during the year are \$10,500.
- Changes in actuarial assumptions establish the end-of-year defined benefit obligation at \$265,000.

The worksheet in **Illustration IFRS20.13** presents all of Zarle's 2022 pension entries and related information. The first line of the worksheet records the beginning balances that relate to the pension plan. In this case, Zarle's beginning balances are the ending balances from its 2021 pension worksheet in Illustration IFRS20.10.

ILLUSTRATION IFRS20.13

Pension Worksheet—2022

Entries (l), (m), (n), (o), and (p) are similar to the corresponding entries in 2020 or 2021. Entries (m) and (n) are related. Entry (m) records the interest expense of \$21,446 ($\$214,460 \times 10\%$). Entry (n) records interest revenue of \$13,410 ($\$134,100 \times 10\%$). Therefore, net interest expense is \$8,036 ($\$21,446 - \$13,410$). Entries (o) and (p) are recorded similarly in 2022 as those in 2020 and 2021.

Entries (q) and (r) need additional explanation. As indicated, the actual return on plan assets for 2022 was \$12,000. However, as indicated in entry (n), pension expense was decreased \$13,410 as a result of multiplying the beginning plan assets by the discount rate to arrive at an assumed interest revenue of \$13,410. As a result, Zarle has an asset loss of \$1,410 ($\$13,410 - \$12,000$) because the assumed interest revenue is greater than the actual return. This asset loss is debited to Other Comprehensive Income (G/L) and credited to plan assets. Pension plan assets are then properly stated at their fair value.

Entry (r) records the change in the defined benefit obligation resulting from the changes in the actuarial assumptions related to this obligation. As indicated in the facts above, the actuary has determined that the ending balance in the defined benefit obligation should be \$265,000 at December 31, 2022. However, the balance at December 31, 2022, before any adjustment for actuarial gains and losses related to the defined benefit obligation is \$238,406, as shown in **Illustration IFRS20.14**.

| | |
|---|------------------|
| December 31, 2021, DBO balance | \$214,460 |
| Service cost [entry (l)] | 13,000 |
| Interest expense [entry (m)] | 21,446 |
| Benefits paid [entry (p)] | (10,500) |
| December 31, 2022, DBO balance (before liability increases) | <u>\$238,406</u> |

ILLUSTRATION IFRS20.14

Defined Benefit Obligation Balance (Unadjusted)

The difference between the ending balance of \$265,000 as determined by the actuary and the present balance of \$238,406 is \$26,594 (a liability loss on the defined benefit liability). This liability loss is debited to Other Comprehensive Income (G/L) and credited to the defined benefit obligation. After this worksheet adjustment, the defined benefit obligation is stated at its actuarial value of \$265,000. The journal entry to record the information related to the pension plan at December 31, 2022, based on the pension worksheet in Illustration IFRS20.13, is as follows.

| | | |
|----------------------------------|--------|--------|
| Pension Expense | 21,036 | |
| Other Comprehensive Income (G/L) | 28,004 | |
| Cash | | 24,000 |
| Pension Asset/Liability | | 25,040 |

As the 2022 worksheet indicates, the \$105,400 balance in the Pension Asset/Liability account at December 31, 2022, is equal to the net of the balances in the memo accounts. **Illustration IFRS20.15** shows this computation.

ILLUSTRATION IFRS20.15
Pension Reconciliation
Schedule—December 31, 2022

| | |
|-------------------------------------|----------------------------|
| Defined benefit obligation (Credit) | \$ (265,000) |
| Plan assets at fair value (Debit) | <u>159,600</u> |
| Pension asset/liability | <u>\$ (105,400)</u> |

Zarle carries the 2022 ending balances for Pension Asset/Liability and Accumulated Other Comprehensive Income forward as the beginning balances for pension plan accounting in 2023. These balances will be adjusted by changes in the defined benefit obligation and plan assets as shown in the prior examples. For example, assume that Zarle’s pension plan had the following activity in 2023:

| | | | |
|-----------------|----------|-------------------------------------|----------|
| Service cost | \$10,072 | Contributions | \$32,000 |
| Pension expense | 17,450 | Benefits | 11,000 |
| Asset gain | 13,150 | Decrease in Pension Asset/Liability | 27,700 |
| Discount rate | 7% | | |

The ending balances for the defined benefit obligation and plan assets are \$282,622 and \$204,922, respectively. These elements are summarized in the partial 2023 pension worksheet shown in **Illustration IFRS20.16**.

ILLUSTRATION IFRS20.16 Partial Pension Worksheet—2023

| 16 | Accumulated OCI, Jan. 1, 2023 | | | 28,004 Dr. | | | |
| 17 | Balance, Dec. 31, 2023 | | | 14,854 Dr. | 77,700 Cr. | 282,622 Cr. | 204,922 Dr. |
| 18 | | | | | | | |

Focusing on the “Journal Entry” row, in 2023 Zarle records pension expense of \$17,450 and a decrease in Pension Asset/Liability of \$27,700. The reduction in Pension Asset/Liability is due in part to the asset gain of \$13,150 recorded in 2023. As a result, Zarle’s 2023 ending balances (which become the 2024 beginning balances) are \$77,700 for Pension Asset/Liability and Accumulated Other Comprehensive Income \$14,854 (beginning Accumulated OCI of \$28,004 – gain of \$13,150).

On The Horizon

The IASB and the FASB have worked collaboratively on a postretirement benefit project. The recent amendments issued by the IASB moves IFRS closer to GAAP with respect to recognition of the funded status on the statement of financial position. However, as illustrated in the *About the Numbers* section above, significant differences remain in the components of pension expense. While the FASB may consider the recent IASB amendments, which could lead to a converged standard, the FASB does not have a pension project on its technical agenda.

IFRS Self-Test Questions

1. At the end of the current period, Oxford Ltd. has a defined benefit obligation of \$195,000 and pension plan assets with a fair value of \$110,000. The amount of the vested benefits for the plan is \$105,000. What amount related to its pension plan will be reported on the company’s statement of financial position?

- a. \$5,000. c. \$85,000.
b. \$90,000. d. \$20,000.

2. At the end of the current year, Kennedy Co. has a defined benefit obligation of \$335,000 and pension plan assets with a fair value of \$245,000. The amount of the vested benefits for the plan is \$225,000. Kennedy has an actuarial gain of \$8,300. What account and amount(s) related to its pension plan will be reported on the company’s statement of financial position?

- a. Pension Liability and \$74,300.
b. Pension Liability and \$90,000.
c. Pension Asset and \$233,300.
d. Pension Asset and \$110,000.

3. For 2020, Carson Majors Inc. had pension expense of \$77 million and contributed \$55 million to the pension fund. Which of the following is the journal entry that Carson Majors would make to record pension expense and funding?

- | | | | |
|----|-------------------------|------------|------------|
| a. | Pension Expense | 77,000,000 | |
| | Pension Asset/Liability | | 22,000,000 |
| | Cash | | 55,000,000 |
| b. | Pension Expense | 77,000,000 | |
| | Pension Asset/Liability | 22,000,000 | |
| | Cash | | 99,000,000 |

- | | | | |
|----|-------------------------|------------|------------|
| c. | Pension Expense | 55,000,000 | |
| | Pension Asset/Liability | 22,000,000 | |
| | Cash | | 77,000,000 |

- | | | | |
|----|-------------------------|------------|------------|
| d. | Pension Expense | 22,000,000 | |
| | Pension Asset/Liability | 55,000,000 | |
| | Cash | | 77,000,000 |

4. At January 1, 2020, Wembley Company had plan assets of \$250,000 and a defined benefit obligation of the same amount. During 2020, service cost was \$27,500, the discount rate was 10%, actual return on plan assets was \$25,000, contributions were \$20,000, and benefits paid were \$17,500. Based on this information, what would be the defined benefit obligation for Wembley Company at December 31, 2020?

- a. \$277,500. c. \$27,500.
b. \$285,000. d. \$302,500.

5. Towson Company has experienced tough competition for its talented workforce, leading it to enhance the pension benefits provided to employees. As a result, Towson amended its pension plan on January 1, 2020, and granted past service costs of \$250,000. Current service cost for 2020 is \$52,000. Interest expense is \$18,000, and interest revenue is \$5,000. Actual return on assets in 2020 is \$3,000. What is Towson’s pension expense for 2020?

- a. \$65,000. c. \$317,000.
b. \$302,000. d. \$315,000.

IFRS Concepts and Application

IFRS20.1 What is net interest? Identify the elements of net interest and explain how they are computed.

IFRS20.2 What is service cost, and what is the basis of its measurement?

IFRS20.3 What is meant by “past service cost”? When is past service cost recognized as pension expense?

IFRS20.4 Bill Haley is learning about pension accounting. He is convinced that in years when companies record liability gains and losses, total comprehensive income will not be affected. Is Bill correct? Explain.

IFRS20.5 At the end of the current year, Joshua Co. has a defined benefit obligation of \$335,000 and pension plan assets with a fair value of \$345,000. The amount of the vested benefits for the plan is \$225,000. Joshua has a liability gain of \$8,300 (beginning accumulated OCI is zero). What amount and account(s) related to its pension plan will be reported on the company's statement of financial position?

IFRS20.6 Villa Company has experienced tough competition, leading it to seek concessions from its employees in the company's pension plan. In exchange for promises to avoid layoffs and wage cuts, the employees agreed to receive lower pension benefits in the future. As a result, Villa amended its pension plan on January 1, 2020, and recorded negative past service cost of \$125,000. Current service cost for 2020 is \$26,000. Interest expense is \$9,000, and interest revenue is \$2,500. Actual return on assets in 2020 is \$1,500. Compute Villa's pension expense in 2020.

IFRS20.7 Tevez Company experienced an actuarial loss of \$750 in its defined benefit plan in 2020. For 2020, Tevez's revenues are \$125,000, and expenses (excluding pension expense of \$14,000, which does not include the actuarial loss) are \$85,000. Prepare Tevez's statement of comprehensive income for 2020.

IFRS20.8 The following defined pension data of Doreen Corp. apply to the year 2020.

| | |
|---|------------|
| Defined benefit obligation, 1/1/20 (before amendment) | \$560,000 |
| Plan assets, 1/1/20 | 546,200 |
| Pension asset/liability | 13,800 Cr. |
| On January 1, 2020, Doreen Corp., through plan amendment, grants past service benefits having a present value of | 120,000 |
| Discount rate | 9% |
| Service cost | 58,000 |
| Contributions (funding) | 65,000 |
| Actual return on plan assets | 49,158 |
| Benefits paid to retirees | 40,000 |

Instructions

For 2020, prepare a pension worksheet for Doreen Corp. that shows the journal entry for pension expense and the year-end balances in the related pension accounts.

IFRS20.9 Buhl Corp. sponsors a defined benefit pension plan for its employees. On January 1, 2020, the following balances relate to this plan.

| | |
|----------------------------|-----------|
| Plan assets | \$480,000 |
| Defined benefit obligation | 600,000 |
| Pension asset/liability | 120,000 |

As a result of the operation of the plan during 2020, the following additional data are provided by the actuary.

| | |
|--|----------|
| Service cost for 2020 | \$90,000 |
| Discount rate, 6% | |
| Actual return on plan assets in 2020 | 55,000 |
| Unexpected loss from change in defined benefit obligation, due to change in actuarial predictions | 76,000 |
| Contributions in 2020 | 99,000 |
| Benefits paid retirees in 2020 | 85,000 |

Instructions

- Using the data above, compute pension expense for Buhl Corp. for the year 2020 by preparing a pension worksheet.
- Prepare the journal entry for pension expense for 2020.

IFRS20.10 Linda Berstler Company sponsors a defined benefit pension plan. The corporation's actuary provides the following information about the plan.

| | January 1, 2020 | December 31, 2020 |
|---------------------------------|--------------------|----------------------|
| Defined benefit obligation | \$2,500 | \$3,300 |
| Plan assets (fair value) | 1,700 | 2,620 |
| Discount rate | | 10% |
| Pension asset/liability | 800 | ? |
| Service cost for the year 2020 | | 400 |
| Contributions (funding in 2020) | | 700 |
| Benefits paid in 2020 | | 200 |

Instructions

- a. Compute the actual return on the plan assets in 2020.
- b. Compute the amount of other comprehensive income (G/L) as of December 31, 2020. (Assume the January 1, 2020, balance was zero.)

Professional Research

IFRS20.11 Jack Kelly Company has grown rapidly since its founding in 2007. To instill loyalty in its employees, Kelly is contemplating establishment of a defined benefit plan. Kelly knows that lenders and potential investors will pay close attention to the impact of the pension plan on the company's financial statements, particularly any gains or losses that develop in the plan. Kelly has asked you to conduct some research on the accounting for gains and losses in a defined benefit plan.

Instructions

Access the IFRS authoritative literature at the IASB website. (Click on the IFRS tab and then register for free eIFRS access if necessary.) When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- a. Briefly describe how pension gains and losses are accounted for.
- b. Explain the rationale behind the accounting method described in part (a).
- c. What is the related pension asset or liability that may show up on the statement of financial position? When will each of these situations occur?

International Financial Reporting Problem**Marks and Spencer plc (M&S)**

IFRS20.12 The financial statements of **M&S** are presented in Appendix E. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- a. What kind of pension plan does M&S provide its employees?
- b. What was M&S's pension expense for 2017 and 2016?
- c. What is the impact of M&S's pension plans for 2017 on its financial statements?
- d. What information does M&S provide on the target allocation of its pension assets? How do the allocations relate to the expected returns on these assets?

Accounting for Leases

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

1. Describe the environment related to leasing transactions.
2. Explain the accounting for finance leases.
3. Explain the accounting for operating leases.
4. Discuss the accounting and reporting for special features of lease arrangements.

PREVIEW OF CHAPTER 21 The following opening story indicates the increased significance and prevalence of lease arrangements. As a result, the need for uniform accounting and informative reporting of these transactions has intensified. In this chapter, we look at the accounting issues related to leasing. The content and organization of this chapter are as follows.

This chapter also includes numerous conceptual and global discussions that are integral to the topics presented here.

ACCOUNTING FOR LEASES

The Leasing Environment

- Lessees
- Lessee lease advantages
- Lessors
- Lessor lease advantages
- Conceptual nature of a lease
- Finance and operating leases
- Lease classification

Finance Leases

- Lessee accounting and finance lease example
- Lessor accounting
- Sales-type lease example

Operating Leases

- Lessee accounting
- Lessor accounting

Special Lease Accounting Problems

- Residual values
- Other lease adjustments
- Bargain purchase options
- Short-term leases
- Presentation, disclosure, and analysis

Times Are A-Changing

Sir David Tweedie, a former IFRS chairperson, is known for making the following observation about airline accounting. He noted that one day he would like to fly on an airplane that appears on a company's balance sheet. What Sir David was referring to is that many of the airlines such as **United**, **Delta**, and **Southwest** sometimes do not own their aircraft. The airlines lease many of their airplanes due to the favorable accounting treatment they received

when they leased rather than purchased. Presented below are the lease percentages for major U.S. airlines in a recent year.

The same held true for many other industries as well. What was this favorable accounting treatment? The previous FASB standard on leasing depended on whether a lease qualified as an operating lease or a finance lease. In an operating lease, companies did not report an asset on their balance sheet for the item they leased, nor did they report a related liability for their lease obligation. Only if the company had a finance lease would companies have to report an asset and a related liability on the balance sheet. However, the FASB has recently issued a standard on leasing that mandates that all companies will have to report both assets and related liabilities for practically all lease arrangements.

The accounting change will have significant impact on many companies' balance sheets. The top 1,000 U.S. public companies alone have nearly \$1 trillion in operating lease liabilities. Companies with large off-balance-sheet operating leases will be most affected. For example, here is a list of companies that will have to capitalize a significant number of operating leases.

| Balance Sheet Impact | | | |
|--|----------|------------------------------------|----------|
| Assets and Liabilities Increases (in millions) | | | |
| Walgreens Boots Alliance | \$32,811 | FedEx | \$17,874 |
| CVS Health | 27,151 | United Continental Holdings | 16,251 |
| AT&T | 25,928 | Delta Air Lines | 16,236 |
| Amazon | 22,848 | Walmart | 15,366 |
| Verizon Communications | 20,734 | Bank of America | 14,500 |

So Sir David Tweedie, what we can now say is get ready as your wish is about to come true.

.....

Review and Practice

Go to the **Review and Practice** section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions as well as additional exercises and practice problem with solutions are also available online.

The Leasing Environment

LEARNING OBJECTIVE 1

Describe the environment related to leasing transactions.

A lease is a contractual agreement between a lessor and a lessee. This arrangement gives the **lessee** the right to use specific property, which is owned by the **lessor**, for a specified period of time. In return for the use of the property, the lessee makes rental payments over the lease term to the lessor.

A Look at the Lessee

Aristotle once said, “Wealth does not lie in ownership but in the use of things!” Clearly, many U.S. companies have decided that Aristotle is right, as they have become heavily involved in leasing assets rather than owning them. For example, according to the Equipment Leasing Association (ELA), the global equipment-leasing market is a \$900 billion business, with the United States accounting for about one-third of the global market. The ELA estimates that of the \$1.5 trillion in total fixed investment expected from domestic businesses in a recent year, \$946 billion (63 percent) was financed through leasing. Remember that these statistics are just for equipment leasing. Add in real estate leasing, which is probably larger, and we are talking about a very large and growing business, one that was at least in part driven by the accounting.

What types of assets are being leased? As the opening story indicated, any type of equipment can be leased, such as railcars, helicopters, bulldozers, barges, CT scanners, computers, and so on. **Illustration 21.1** summarizes what several major companies are leasing.

| Company (Ticker) | Description |
|-------------------------------|--|
| Gap (GPS) | “We lease most of our store premises and some of our headquarters facilities and distribution centers.” |
| ExxonMobil Corp. (XOM) | “Minimum commitments for operating leases, shown on an undiscounted basis, cover drilling equipment, tankers, service stations, and other properties.” |
| JPMorgan Chase (JPM) | “JPMorgan Chase and its subsidiaries were obligated under a number of noncancelable operating leases for premises and equipment used primarily for banking purposes.” |
| Maytag Corp. (MYG) | “The Company leases real estate, machinery, equipment, and automobiles under operating leases, some of which have renewal options.” |
| McDonald’s Corp. (MCD) | “The Company was the lessee at 15,235 restaurant locations through ground leases (the Company leases the land and the Company or franchisee owns the building) and through improved leases (the Company leases land and buildings).” |
| Starbucks Corp. (SBUX) | “Starbucks leases retail stores, roasting and distribution facilities, and office space under operating leases.” |
| TXU Corp. (TXU) | “TXU Energy Holdings and TXU Electric Delivery have entered into operating leases covering various facilities and properties including generation plant facilities, combustion turbines, transportation equipment, mining equipment, data processing equipment, and office space.” |
| Viacom Inc. (VIA.B) | “The Company has long-term non-cancelable operating lease commitments for office space and equipment, transponders, studio facilities, and vehicles. The Company also enters into leases for satellite transponders.” |

ILLUSTRATION 21.1

What Do Companies Lease?

The largest group of leased equipment involves information technology equipment, followed by assets in the transportation area (trucks, aircraft, rail), and then construction and agriculture.

Advantages of Leasing—Lessees

From the perspective of the lessee, leasing can provide significant advantages, such as the following:

1. **100% financing at fixed rates.** Leases are often signed without requiring any money down from the lessee. This helps the lessee conserve scarce cash—an especially desirable feature for new and developing companies. In addition, lease payments often remain fixed, which protects the lessee against inflation and increases in the cost of money. The following comment explains why companies choose a lease instead of a conventional loan: “Our local bank finally came up to 80 percent of the purchase price but wouldn’t go any higher, and they wanted a floating interest rate. We just couldn’t afford the down payment, and we needed to lock in a final payment rate we knew we could live with.”
2. **Protection against obsolescence.** Leasing equipment reduces risk of obsolescence to the lessee and in many cases passes the risk of residual value to the lessor. For example, **Merck** (a pharmaceutical maker) leases computers. Under the lease agreement, Merck may turn in an old computer for a new model at any time, canceling the old lease and writing a new one. The lessor adds the cost of the new lease to the balance due on the old lease, less the old computer’s trade-in value. As one treasurer remarked, “Our instinct is to purchase.” But if a new computer is likely to come along in a short time, “then leasing is just a heck of a lot more convenient than purchasing.” Naturally, the lessor also protects itself by requiring the lessee to pay higher rental payments or provide additional payments if the lessee does not maintain the asset.
3. **Flexibility.** Lease agreements may contain less restrictive provisions than other debt agreements. Innovative lessors can tailor a lease agreement to the lessee’s special needs. For instance, the duration of the lease—the **lease term**—may be anything from a short period of time to the entire expected economic life of the asset. The rental payments may be level from year to year, or they may increase or decrease in amount. The payment amount may be predetermined or may vary with sales, the prime interest rate, the Consumer Price Index, or some other factor. In most cases, the rent is set to enable the lessor to recover the cost of the asset plus a fair return over the life of the lease.
4. **Less costly financing.** Some companies find leasing cheaper than other forms of financing. For example, start-up companies in depressed industries or companies in low tax brackets may lease to claim tax benefits that they might otherwise lose. Depreciation deductions offer no benefit to companies that have little if any taxable income. Through leasing, the leasing companies or financial institutions use these tax benefits. They can then pass some of these tax benefits back to the user of the asset in the form of lower rental payments.

A Look at the Lessor

Who are the lessors that own this property? They generally fall into one of three categories:

1. Banks.
2. Captive leasing companies.
3. Independents.

Banks

Banks are the largest players in the leasing business. They have low-cost funds, which give them the advantage of being able to purchase assets at less cost than their competitors. Banks have been aggressive in the leasing markets. Deciding that there is money to be made in leasing, banks have expanded their product lines in this area. Finally, leasing transactions are now quite standardized, which gives banks an advantage because they do not have to be as innovative in structuring lease arrangements. Thus, banks like **Wells Fargo**, **Chase**, **Citigroup**, and **PNC** have substantial leasing subsidiaries.

Captive Leasing Companies

Captive leasing companies are subsidiaries whose primary business is to perform leasing operations for the parent company. Companies like **Caterpillar Financial Services Corp.** (for Caterpillar), **Ford Motor Credit** (for Ford), and **IBM Global Financing** (for IBM) facilitate the sale of products to consumers. For example, suppose that **Sterling Construction Co.** wants to acquire a number of earthmovers from Caterpillar. In this case, Caterpillar Financial Services Corp. will offer to structure the transaction as a lease rather than as a purchase. Thus, Caterpillar Financial provides the financing rather than an outside financial institution.

Captive leasing companies have the point-of-sale advantage in finding leasing customers. That is, as soon as Caterpillar receives a possible equipment order, its leasing subsidiary can quickly develop a lease-financing arrangement. Furthermore, the captive lessor has product knowledge that gives it an advantage when financing the parent's product. The current trend is for captives to focus primarily on their companies' products rather than execute general lease financing. For example, **Boeing Capital** and **UPS Capital** are two captives that have left the general finance business to focus exclusively on their parent companies' products.

Independents

Independents are the final category of lessors. Their market share has dropped fairly dramatically as banks and captive leasing companies have become more aggressive in the lease-financing area. Independents do not have point-of-sale access, nor do they have a low cost of funds advantage. What they are often good at is developing innovative contracts for lessees. In addition, they are starting to act as captive finance companies for some companies that do not have leasing subsidiaries. For example, **International Lease Finance Corp.** is one of the world's largest independent lessors. According to recent data from the *Equipment Leasing and Finance Foundation 2015 Annual Report* on new business volume by lessor type, banks hold about 55 percent of the market, followed by captives at 31 percent. Independents had the remaining 14 percent of new business.

Advantages of Leasing—Lessors

Lessors find leasing attractive because:

1. It often provides **profitable interest margins**.
2. It can **stimulate sales** of a lessor's product whether it be from a dealer (lessor) or a manufacturer (lessor).
3. It often provides **tax benefits** to various parties in the lease, which enhances the return to all the parties involved, including the lessor (see **Global View**). To illustrate, **Boeing Aircraft** might sell one of its 737 jet planes to a wealthy investor who does not need a plane but could use the tax benefit. The investor (the lessor) then leases the plane to a foreign airline, for which the tax benefit is of no use. Everyone gains. Boeing sells its airplane, the investor receives the tax benefit, and the foreign airline receives a lower rental rate because the lessor is able to use the tax benefit.
4. It can provide a **high residual value to the lessor** upon the return of the property at the end of the lease term. Residual values can sometimes provide large profits. **Citigroup** at one time estimated that the commercial aircraft it was leasing to the airline industry would have a residual value of 5 percent of their purchase price. It turned out that they were worth 150 percent of their cost—a handsome profit. At the same time, if residual values decline, lessors can suffer losses when less-valuable leased assets are returned at the conclusion of the lease. At one time, automaker **Ford** took a \$2.1 billion write-down on its lease portfolio, when rising gas prices spurred dramatic declines in the resale values of leased trucks and SUVs. Such residual value losses led **Chrysler** to get out of the leasing business altogether.

Global View

Some companies “double dip” on the international level too. The leasing rules of the lessor's and lessee's countries may differ, permitting both parties to own the asset. Thus, both lessor and lessee receive the tax benefits related to depreciation.

What Do the Numbers Mean? Residual Value Regret

As you have learned, residual value profits are an important driver for the popularity of leasing for lessors, especially for leases of equipment and vehicles. However, the profitability of equipment leasing hinges on the lessors' ability to accurately estimate the residual value of the leased asset at the end of the lease so as to resell the asset at a profit when returned by the lessee. However, **General Motors (GM)** has learned that residual value profits are not guaranteed. Here is what happened.

GM took advantage of a government subsidy for electric vehicles of \$7,500 to help drive down the cost of a lease for its electric car, the Chevy Volt. The taxpayer subsidies along with other GM incentives provided for low monthly lease payments, given the estimated residual value, and led to a full two-thirds of all Volt "sales" being attributed to leases. That's about three times the

lease rate for the overall industry. The problems for GM started when the Volts came back at the end of the lease. Unfortunately for GM and other electric car enthusiasts, demand for electric cars without the incentives (which expired) were not sustained, and resale values for Volts plummeted.

As a result, rather than reaping residual value profits, GM sustained losses for the Volt lease returns that sold for less than the original expected residual values. It was a double whammy for GM as the already low sales numbers for new Volts were further hurt by the supply of low-priced Volts on the used car lot.

Source: M. Modica, "Chevy Volt Resale Values Plunge as Lease Returns Hit Market," <http://nlpc.org/stories/2014/08/07/chevy-volt-resale-values-plunge-lease-returns-hit-market>.

Conceptual Nature of a Lease

A **lease** is defined as a "contract, or part of a contract, that conveys the right to control the use of identified property, plant or equipment (an identified asset) for a period of time in exchange for consideration." [1] (See the FASB Codification References near the end of the chapter.) A lease therefore conveys the use of an asset from one party (the lessor) to another (the lessee) without transferring ownership. Accounting for lease transactions is controversial, as the following example illustrates.

If **Delta** borrows \$47 million on a 10-year note from **Bank of America** to purchase a Boeing 737 jet plane, Delta should report an asset and related liability at that amount on its balance sheet. Similarly if Delta purchases the 737 for \$47 million directly from Boeing through an installment purchase over 10 years, it should report an asset and related liability (i.e., it should "capitalize" the installment transaction).

However, what if Delta **leases** the Boeing 737 for 10 years from **International Lease Finance Corp. (ILFC)**—the world's largest lessor of airplanes—through a non-cancelable lease transaction with payments of the same amount as the installment purchase transaction? In that case, opinion differs over how to report this transaction. The various views on **capitalization of leases** are as follows.

1. **Do not capitalize any leased assets.** This view considers capitalization inappropriate because Delta does not own the property. Furthermore, a lease is an "**executory contract**" requiring continuing performance by both parties. Because companies do not currently capitalize other executory contracts (such as purchase commitments and employment contracts), they should not capitalize leases either.
2. **Capitalize leases that are similar to installment purchases.** This view holds that companies should report transactions in accordance with their economic substance. Therefore, if companies capitalize installment purchases, they should also capitalize leases that have similar characteristics. For example, Delta makes the same payments over a 10-year period for either a lease or an installment purchase. Lessees make rental payments, whereas owners make mortgage payments.
3. **Capitalize all long-term leases.** This approach requires only the long-term right to use the property in order to capitalize. This property-rights approach capitalizes all long-term leases.
4. **Capitalize firm leases where the penalty for nonperformance is substantial.** A final approach advocates capitalizing only "firm" (non-cancelable) contractual rights and obligations. "Firm" means that it is unlikely to avoid performance under the lease without a severe penalty.

In short, the viewpoints range from no capitalization to capitalization of all long-term leases (see **Underlying Concepts**). The FASB has recently adopted the third approach, which requires companies to capitalize all long-term leases. The only exception to capitalization is that leases covering a term of less than one year do not have to be capitalized. The FASB indicates that the right to use property under the terms of the lease is an asset, and the lessee's commitment to make payments under the lease is a liability.¹ As a result, Delta records the right-of-use of the airplane as an asset on its balance sheet. It also records a liability for its obligation to make payments under the lease.

Underlying Concepts

The issue of how to report leases is the classic case of substance versus form. Although legal title does not technically pass in lease transactions, the benefits from the use of the property do transfer.

Finance and Operating Leases (Lessee)

As you will learn, companies classify lease arrangements as either finance or operating. In either case, **companies capitalize all leased assets and liabilities**. Therefore, the balance sheet for a company that uses either a finance lease or an operating lease will be the same. However, for income statement purposes, the reporting of financial information depends on whether the lease is classified as a finance lease or operating lease.

For a **finance lease**, the lessee recognizes interest expense on the lease liability over the life of the lease using the effective-interest method and records amortization expense on the right-of-use asset generally on a straight-line basis. A lessee therefore reports both interest expense and amortization of the right-of-use asset on the income statement. As a result, the total expense for the lease transaction is generally higher in the earlier years of the lease arrangement under a finance lease arrangement.

In an **operating lease**, the lessee also measures interest expense using the effective-interest method. However, the lessee amortizes the right-of-use asset such that the total reported lease expense is the same from period to period. In other words, for operating leases, only a single lease expense (comprised of interest on the liability and amortization of the right-of-use asset) is recognized on the income statement, typically on a straight-line basis. Illustrations of both these approaches are shown in the following sections.

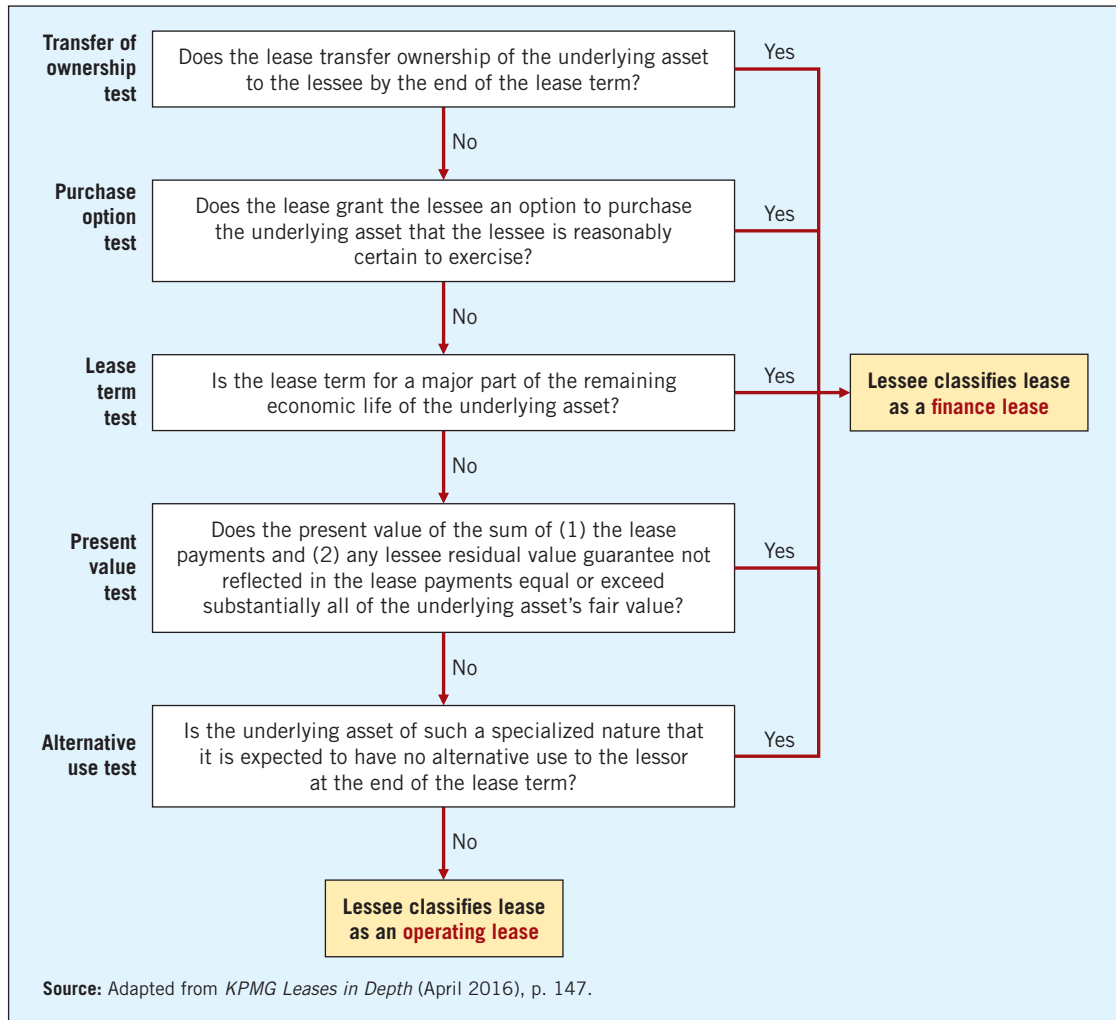

Lease Classification

How do companies determine whether to use the finance method or the operating method? From the lessee's perspective, a lessee should classify a lease based on whether the arrangement is effectively a purchase of the underlying asset. If the lease transfers control (or ownership) of the underlying asset to a lessee, then the lease is classified as a **finance lease**. In this situation, the lessee takes ownership or consumes the substantial portion of the underlying asset over the lease term. All leases that do not meet any of the finance lease tests are classified as operating leases. In an **operating lease**, a lessee **obtains the right to use the underlying asset** but not ownership of the asset itself.

For example, a lease may convey use of one floor of an office building for five years. At the end of the lease, the lessee vacates the floor and the lessor can then lease the floor to another tenant. So this lease (an operating lease) conveys right-of-use but not ownership; the lessee controls the leased asset only during the five-year lease. As we will see, the accounting for a lease classified as a finance lease (transfer of control or ownership) or an operating lease (transfer of right-of-use) reflects differences in control conveyed in a lease arrangement.

Illustration 21.2 presents the **lease classification tests**, which are used to determine whether a company should use the finance lease approach or the operating lease approach.

¹The FASB believes that the reporting of an asset and liability for a lease arrangement is consistent with its conceptual framework definition of assets and liabilities. That is, assets are probable future economic benefits obtained or controlled by a particular entity as a result of past transactions or events. Liabilities are probable future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or provide services to other entities in the future as a result of past transactions or events. See "Elements of Financial Statements," *Statement of Financial Accounting Concepts No. 6* (Stamford, Conn.: FASB, December 1985), pp. ix and x.

ILLUSTRATION 21.2 Lease Classification Tests

For a lease to be a finance lease, it must be non-cancelable and **meet at least one of the five tests** listed in Illustration 21.2. [2] Otherwise, the lease is an operating lease. Additional explanation of each of the lease classification tests follows.

Transfer of Ownership Test

If the lease transfers ownership of the asset to the lessee, it is a finance lease. This test is not controversial and easily implemented in practice.

Purchase Option Test

A purchase option test is met if it is reasonably certain that the lessee will exercise the option. In other words, the lease purchase option allows the lessee to purchase the property for a price that is significantly lower than the underlying asset's expected fair value at the date the option becomes exercisable (hereafter referred to as a **bargain purchase option**).

For example, assume that Brett's Delivery Service leases a **Honda** Accord for \$499 per month for 40 months, with an option to purchase the Accord for \$100 at that end of the lease. If the estimated fair value of the Honda Accord is \$3,000 at the end of the 40 months, the \$100 option is clearly a bargain purchase option. Therefore, Brett's accounts for this lease as a finance lease.

Lease Term Test

When the lease term is a major part of the remaining economic life of the leased asset, companies should use the finance method in accounting for the lease transaction. The question is, what is

a major part of the economic life of a leased asset? Although the FASB indicates that companies should use judgment in evaluating the lease term test, it recognizes that additional implementation guidance would be helpful. As a result, the Board establishes an implementation guideline that companies might use. That is, if the lease term is 75 percent or greater of the economic life of the leased asset, the lease meets the **lease term test** and finance lease treatment is appropriate (often referred to as the 75% test).² *This guideline should be used for homework purposes.*

Another factor to consider in the lease term test is a bargain renewal option. For example, a lease term is generally considered to be the fixed, non-cancelable term of the lease. However, a **bargain renewal option** allows the lessee to renew the lease for a rental that is lower than the expected fair rental at the time the option becomes exercisable. At the commencement of the lease, the difference between the renewal rental and the expected fair rental must be great enough to make exercise of the option to renew reasonably certain.³ Thus, companies should include in the lease term any bargain renewal periods.

For example, assume that **Home Depot** leases **Dell** PCs for two years at a rental of \$100 per month per computer. In addition, Home Depot can lease these computers for \$10 per month per computer for another two years. The lease clearly offers a bargain renewal option, and Home Depot should consider the lease term for these computers to be four years, not two.

Present Value Test

If the present value of the lease payments is reasonably close to the fair value of the asset, a company is effectively purchasing the asset and should therefore use the finance method to account for the lease. Again, the FASB recognizes that determining what is reasonably close often involves significant judgment and therefore provides an implementation guideline (hereafter referred to as the 90% test). This guideline states that if the present value of the lease payments equals or exceeds 90 percent of the fair value of the asset, then a lessee should use the finance method to record the lease. *This guideline should be used for homework purposes.* To apply the present value test, a lessee must determine the amount of lease payments and the appropriate discount rate.

Lease Payments The lease payments generally include the following:

1. **Fixed payments.** These are the rental payments that are specified in the lease agreement and fixed over the lease term.
2. **Variable payments that are based on an index or a rate.** The lessee should include variable lease payments in the value of the lease liability at the level of the index/rate at the commencement date. When valuing the lease liability, no increases or decreases to future lease payments should be assumed based on increases or decreases in the index or rate. Instead, any difference in the payments due to changes in the index or rate is expensed in the period incurred. **Illustrations 21.3** and **21.4** provide an analysis of variable lease payments.

Including Variable Lease Payments

Facts: On January 1, 2020, Jose Company leases an airplane for 6 years. The annual lease payments are \$1,000,000 per year, payable at the beginning of each year (annuity-due basis). In addition, the lease agreement specifies that the lease payment increases by \$30,000 every year.

Question: What are the lease payments in 2021?

Solution: On January 1, 2021, the lease payment is \$1,030,000 ($\$1,000,000 + \$30,000$), which is considered a variable payment. Given that the amount of the variable payment is known from year to year (the rate is set at commencement of the lease and in substance fixed), such variable payments are included in calculating the present value of the lease liability.

ILLUSTRATION 21.3

Variable Lease Payments

²Companies may lease a used asset in the last 25 percent of its economic life, which raises the question of applying the lease term test for classification of the lease. The FASB's position is that it is inconsistent to require that a lease covering the last few years be recorded as a finance lease by a lessee (or as a sales-type lease by a lessor) when a similar lease of that asset earlier in its economic life would have been classified as an operating lease. This conclusion is debatable because a lessee can direct the use of and obtain substantially all the remaining benefits from a significantly used asset just the same as it can a new or slightly used asset. [3].

³Reasonably certain is a high threshold of probability. The FASB intended that parties to a lease account for options only when the lessee has a compelling economic reason to exercise a purchase, renewal, or termination option. [4]

ILLUSTRATION 21.4**Variable Lease Payments****Expensing Variable Lease Payments**

Facts: Assume the same information as in Illustration 21.3, except that the lease payments are adjusted each year by a change in the Consumer Price Index (CPI).

Question: If the CPI is 100 at January 1, 2020, and increases to 104 on January 1, 2021, what is the payment on January 1, 2021?

Solution: The variable payment on January 1, 2021, is \$1,040,000 ($\$1,000,000 \times 1.04$). Because the amount of the variable payment from year to year is not known at the lease commencement date, this payment is not included in determining the present value of the lease liability. This additional payment (\$40,000) is recognized as an expense in the period it is incurred. Similarly, when lease payments vary with a performance measure (e.g., sales at a store location, asset usage), the variable amounts will be expensed in the period incurred.

3. **Amounts guaranteed by a lessee under a residual value guarantee.** **Residual value** is the expected value of the leased asset at the end of the lease term. A residual value can be guaranteed or unguaranteed. In a **guaranteed residual value**, the lessee has an obligation to not only return the leased asset at the end of the lease term but also to guarantee that the residual value will be a certain amount. If the lease involves an **unguaranteed residual value**, the lessee does not have any obligation to the lessor at the end of the lease, except to return the leased asset to the lessor. [5] For classification purposes, the lessee includes the full amount of the residual value guarantee at the end of the lease term in the present value test. The lessee does not consider unguaranteed residual value as part of the present value test.⁴
4. **Payments related to purchase or termination options that the lessee is reasonably certain to exercise.** As indicated earlier, if the lease contains a bargain purchase option, the cost of that option should be considered part of the lease payments. Analysis of a termination option is indicated in **Illustration 21.5**.

ILLUSTRATION 21.5**Termination Option****Analyzing a Termination Option**

Facts: Cabrera Company leases a building and land from Worldwide Leasing for 6 years with monthly payments of \$10,000. The lease contract allows Cabrera to terminate the lease after 2 years for a total payment of \$140,000. At the commencement of the lease, it is reasonably certain that Cabrera will not continue the lease beyond 2 years.

Question: What are Cabrera's lease payments?

Solution: In this case, Cabrera should include the cost of the termination option in its calculation of the present value of its lease liability. The total lease payments are therefore \$380,000 [$(\$10,000 \times 24) + \$140,000$].

Discount Rate To determine whether the present value of the payments equals or exceeds 90 percent of the fair value of the leased asset, a lessee (like the **Delta** example presented earlier) should compute the present value of the lease payments using the **implicit interest rate**. [6] This rate is defined as the discount rate that, at commencement of the lease, causes the aggregate present value of the lease payments and unguaranteed residual value to be equal to the fair value of the leased asset. [7]

⁴As discussed in more detail later, consideration of the guaranteed residual values differs for classification of the lease and measurement of the lease liability.

Delta (a lessee) may find that it is impracticable to determine the implicit rate of the lessor. In the event that it is impracticable to determine the implicit rate, Delta uses its incremental borrowing rate. The **incremental borrowing rate** is the rate of interest the lessee would have to pay on a similar lease or the rate that, at commencement of the lease, the lessee would incur to borrow over a similar term the funds necessary to purchase the asset. The implicit rate of the lessor is generally a more realistic rate to use in determining the amount to report as the asset and related liability for Delta. However, given the difficulty the lessee may have in determining the implicit rate, it is likely that the lessee will use the incremental borrowing rate.⁵

Alternative Use Test

If at the end of the lease term the lessor does not have an alternative use for the asset, the lessee classifies the lease as a finance lease. In this situation, the assumption is that the lessee uses all the benefits from the leased asset and therefore the lessee has essentially purchased the asset.

Lessors sometimes build an asset to meet specifications set by the lessee (referred to as “build-to-suit” arrangements). For example, an equipment manufacturer might build hydraulic lifts to meet unique loading dock configurations of a lessee, like **Amazon.com**. Given the specialty nature of the equipment, only Amazon can use the lifts and it receives substantially all of the benefits of the leased asset, such that the alternative use test is met.

Accounting for Finance Leases

LEARNING OBJECTIVE 2

Explain the accounting for finance leases.

As indicated, the accounting for a lease arrangement by lessees and lessors depends on classification of the lease as a sale of the underlying asset. If the lease is in substance a sale, the lease is classified as a finance lease.

Lessee Accounting for Finance Leases: An Example

To illustrate the accounting for a finance lease, assume that **Caterpillar Financial Services Corp.** (a subsidiary of **Caterpillar**) and **Sterling Construction** sign a lease agreement dated January 1, 2020, that calls for Caterpillar to lease a backhoe to Sterling beginning January 1, 2020. The terms and provisions of the lease agreement and other pertinent data are as follows.

- The term of the lease is five years. The lease agreement is non-cancelable, requiring equal rental payments of \$20,711.11 at the beginning of each year (annuity-due basis).
- The backhoe has a fair value at the commencement of the lease of \$100,000, an estimated economic life of five years, and a guaranteed residual value of \$5,000. (Sterling expects that it is probable that the expected value of the residual value at the end of the lease will be greater than the guaranteed amount of \$5,000.)
- The lease contains no renewal options. The backhoe reverts to Caterpillar at the termination of the lease.
- Sterling’s incremental borrowing rate is 5 percent per year.

⁵This difficulty arises because, for example, the lessee may not know the residual value used by the lessor, nor the initial direct costs that the lessor incurs.

- Sterling depreciates, on a straight-line basis, similar equipment that it owns.
- Caterpillar sets the annual rental rate to earn a rate of return of 4 percent per year; Sterling is aware of this rate.

Sterling evaluates the lease classification tests as indicated in **Illustration 21.6**.

ILLUSTRATION 21.6
Lease Classification Tests

| Test | Assessment | | | | | | |
|---|---|--|---------------------------|---|----------|--|--------------|
| 1. Transfer of ownership test | Transfer of ownership does not occur; the asset reverts to Caterpillar at the end of the lease. | | | | | | |
| 2. Purchase option test | There is no purchase option in the lease. | | | | | | |
| 3. Lease term test | The lease term is equal to the economic life of the asset (100 percent). Therefore, the lease meets the lease term test. | | | | | | |
| 4. Present value test | The present value of the lease payments is \$100,000*, which is 100 percent (greater than or equal to 90 percent) of the fair value of the backhoe. Therefore, the lease meets the present value test. | | | | | | |
| 5. Alternative use test | Since the asset is returned to Caterpillar with some residual value, the alternative use test is not met. | | | | | | |
| <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 60%;">*Present value of payments (\$20,711.11 × 4.62990 (PVF-AD_{5,4%}))</td> <td style="text-align: right;">\$ 95,890.35⁶</td> </tr> <tr> <td>Present value of the residual value (\$5,000 × .82193 (PVF_{5,4%}))</td> <td style="text-align: right;">4,109.65</td> </tr> <tr> <td></td> <td style="text-align: right; border-top: 1px solid black; border-bottom: 3px double black;">\$100,000.00</td> </tr> </table> | | *Present value of payments (\$20,711.11 × 4.62990 (PVF-AD _{5,4%})) | \$ 95,890.35 ⁶ | Present value of the residual value (\$5,000 × .82193 (PVF _{5,4%})) | 4,109.65 | | \$100,000.00 |
| *Present value of payments (\$20,711.11 × 4.62990 (PVF-AD _{5,4%})) | \$ 95,890.35 ⁶ | | | | | | |
| Present value of the residual value (\$5,000 × .82193 (PVF _{5,4%})) | 4,109.65 | | | | | | |
| | \$100,000.00 | | | | | | |

Thus, the lease is classified as a finance lease due to meeting the lease term and present value tests (meeting either one of these tests would suffice). Note that the present value test includes the full amount of the residual value guarantee to determine whether the lease is classified as a financing or operating lease. However, for measurement of the lease liability, Sterling includes **only the expected residual value probable of being owed by the lessee under the residual value guarantee.** [8] Because Sterling believes that it is probable that the expected residual value will be greater than the guaranteed residual value, the guaranteed residual value is not included in the measurement of the lease liability.⁷

Sterling computes the lease liability and the amount capitalized as a right-of-use asset as the present value of the lease payments, as shown in **Illustration 21.7**.

ILLUSTRATION 21.7
Present Value of Lease Payments

| |
|---|
| Capitalized amount = \$20,711.11 × Present value of an annuity due of 1 for 5 periods at 4% = \$20,711.11 × 4.62990 (PVF-OA _{5,4%}) = \$95,890.35* |
| *Rounded by \$0.02. |

Sterling uses Caterpillar’s implicit interest rate of 4 percent instead of its incremental borrowing rate of 5 percent because the implicit rate is known to Sterling.⁸ Sterling records the lease on its books as follows.

| January 1, 2020 | |
|------------------------|-----------|
| Right-of-Use Asset | 95,890.35 |
| Lease Liability | 95,890.35 |

⁶The computation of the present value is rounded by \$0.02. The rounding occurs because the tables from Chapter 6 are used to determine the amounts shown. *For homework and other computations in the text, we use the tables which may lead to small rounding differences.* In practice, a financial calculator is often used to avoid these rounding differences.

⁷Later in the chapter, we provide an expanded discussion of the relationship between the expected residual value and the guaranteed residual value, and its effect on the measurement of the lease liability.

⁸If Sterling had not known Caterpillar’s implicit rate, it would have used its incremental borrowing rate of 5 percent to compute the present value of the lease liability.

Note that Sterling records the obligation at the net amount of \$95,890.35 (the present value of the lease payments) rather than at the gross amount of \$103,555.55 ($\$20,711.11 \times 5$).⁹ Sterling then records the **first lease payment** as follows.

| January 1, 2020 | | | |
|------------------------|--|-----------|-----------|
| Lease Liability | | 20,711.11 | |
| Cash | | | 20,711.11 |

The annual interest expense, applying the effective-interest method, is a function of the outstanding liability as shown in the lease amortization schedule in **Illustration 21.8**.

| Sterling Construction Lease Amortization Schedule Annuity-Due Basis | | | | |
|--|-----------------------------------|--------------------------------------|---|---------------------------|
| Date | Annual Lease Payment (a) | Interest (4%) on Liability (b) | Reduction of Lease Liability (c) | Lease Liability (d) |
| 1/1/20 | | | | \$95,890.35 |
| 1/1/20 | \$ 20,711.11 | \$ -0- | \$20,711.11 | 75,179.24 |
| 1/1/21 | 20,711.11 | 3,007.17 | 17,703.94 | 57,475.30 |
| 1/1/22 | 20,711.11 | 2,299.01 | 18,412.10 | 39,063.20 |
| 1/1/23 | 20,711.11 | 1,562.53 | 19,148.58 | 19,914.62 |
| 1/1/24 | 20,711.11 | 796.49* | 19,914.62 | 0.00 |
| | <u>\$103,555.55</u> | <u>\$7,665.20</u> | <u>\$95,890.35</u> | |

(a) Lease payment as required by lease.
 (b) Four percent of the preceding balance of (d) except for 1/1/20; since this is an annuity due, no time has elapsed at the date of the first payment and therefore no interest has accrued.
 (c) (a) minus (b).
 (d) Preceding balance minus (c).
 *Rounded by \$0.09.

ILLUSTRATION 21.8**Lease Amortization Schedule**

Each lease payment of \$20,711.11 consists of two elements: (1) a reduction of the lease liability and (2) a financing cost (interest expense).¹⁰ The total financing cost (interest expense) over the term of the lease is \$7,665.20. This amount is the difference between the present value of the lease payments (\$95,890.35) and the actual cash disbursed (\$103,555.55). Sterling records **interest expense** for the first year of the lease as follows.

| December 31, 2020 | | | |
|--------------------------|--|----------|----------|
| Interest Expense | | 3,007.17 | |
| Lease Liability | | | 3,007.17 |

Amortization of the right-of-use asset over the five-year lease term, applying Sterling's normal depreciation policy (straight-line method), results in the following entry at December 31, 2020.

| December 31, 2020 | | | |
|--|--|-----------|-----------|
| Amortization Expense | | 19,178.07 | |
| Right-of-Use Asset ($\$95,890.35 \div 5$ years) | | | 19,178.07 |

At December 31, 2020, Sterling reports right-of-use assets and related lease liabilities separately from other assets and liabilities on its balance sheet, or discloses these assets and liabilities in the notes to its financial statements.

⁹As discussed, in measuring the liability and right-of-use asset, Sterling does not include the present value of the residual value because the guaranteed amount is not greater than the expected amount. We discuss residual value considerations in more detail in a later section of the chapter.

¹⁰Because it occurs at the lease commencement date, the first payment does not contain an interest component.

Sterling classifies the portion of the liability due within one year or the operating cycle, whichever is longer, with current liabilities, and the rest with noncurrent liabilities. For example, the current portion of the December 31, 2020, total obligation of \$75,179.24 in Sterling's amortization schedule is the amount payable in 2021, or \$20,711.11. Note that this current portion is composed of two components: (1) accrued interest on the liability outstanding throughout the year (\$3,007.17) and (2) reduction of the initial lease liability (\$17,703.94). **Illustration 21.9** shows the presentation of the lease assets and liabilities sections as they relate to lease transactions at December 31, 2020, assuming Sterling chose to present right-of-use assets and lease liabilities separately from other assets and liabilities on the balance sheet.

ILLUSTRATION 21.9
Balance Sheet Presentation

| | |
|---|-------------|
| <u>Noncurrent assets</u> | |
| Right-of-use assets (\$95,890.35 – \$19,178.07) | \$76,712.28 |
| <u>Current liabilities</u> | |
| Lease liability (\$3,007.17 + \$17,703.94) | \$20,711.11 |
| <u>Noncurrent liabilities</u> | |
| Lease liability | 57,475.30 |

On its December 31, 2020, income statement, Sterling reports interest expense on the liability and amortization expense related to right-of-use assets, as shown in **Illustration 21.10**.

ILLUSTRATION 21.10
Income Statement Presentation

| | |
|--|-------------|
| <u>Expenses</u> | |
| Interest expense (lease liabilities) | \$ 3,007.17 |
| Amortization expense (right-of-use assets) | 19,178.07 |

Sterling records the second lease payment as follows.

| January 1, 2021 | | |
|--|-----------|-----------|
| Lease Liability (\$3,007.17 + \$17,703.94) | 20,711.11 | |
| Cash | | 20,711.11 |

Entries through 2024 follow the pattern above. **Upon expiration of the lease**, Sterling has fully amortized the amount capitalized as a right-of-use asset. It also has fully discharged its lease obligation. At the date the lease expires, both the right-of-use asset account and lease liability account related to Sterling's lease of the backhoe have zero balances. If Sterling does not purchase the backhoe, it returns the equipment to Caterpillar.¹¹

If Sterling purchases the equipment from Caterpillar at the termination of the lease at a price of \$5,000 and the estimated remaining life of the equipment is two years at that time, it makes the following entry.

| January 1, 2025 | | |
|-----------------|-------|-------|
| Equipment | 5,000 | |
| Cash | | 5,000 |

Lessor Accounting for Sales-Type Leases

We now turn our attention to the other party involved in the Caterpillar/Sterling lease arrangement—Caterpillar (the lessor). The **lease classification tests for the lessor are**

¹¹If Sterling purchases the backhoe during the term of the lease, it accounts for the transaction as a termination of the lease and a purchase of an asset. Thus, it would record any difference between the purchase price and the carrying amount of the lease liability as an adjustment of the carrying amount of the asset. [9]

identical to the tests used by the lessee to determine classification of a lease as a financing or operating lease, as shown in Illustration 21.6. Why use the same criteria for both the lessee and the lessor? The reason is that the tests are used to determine whether the lessee and the lessor have an agreement to transfer control of the asset from one party to the other. If the lessee receives control, then the lessor must have given up control.

The FASB concluded that by meeting any of the lease classification tests in Illustration 21.6, the lessor transfers control of the leased asset and therefore satisfies a performance obligation, which is required for revenue recognition under the FASB's recent standard on revenue. [10] That is, the lessor has, in substance, transferred control of the right-of-use asset and therefore has a **sales-type lease** if the lessee takes ownership or consumes a substantial portion of the underlying asset over the lease term. On the other hand, if the lease does not transfer control (and ownership) of the asset over the lease term, the lessor will generally use the operating approach in accounting for the lease. [11] Although not part of the classification tests, the lessor must also determine whether the collectibility of payments from the lessee is probable. If payments are not probable, the lessor does not record a receivable and does not derecognize the leased asset. Instead, receipt of any lease payments is recorded as a deposit liability. [12]¹²

What Do the Numbers Mean? Not So Fast

As an illustration of the importance of the control criteria, consider the case of computer leasing companies, which at one time bought **IBM** equipment, leased the equipment to their customers, and removed the leased assets from their balance sheets. In leasing the assets, the computer lessors stated that they would substitute new IBM equipment if obsolescence occurred (a sales return provision). However, when IBM introduced a new computer line, IBM refused

to sell it to the computer leasing companies. As a result, a number of the lessors could not meet their contracts with their customers and had to take back the old equipment. Thus, control had not been fully transferred and the computer leasing companies therefore had to reinstate the assets they had taken off the books. Such a case demonstrates one reason why the lessor classification tests must be aligned with those for revenue recognition.

Accounting Measurement and Presentation

Classification of the lease as either a sales-type or operating lease determines the subsequent accounting by the lessor.¹³ For a sales-type lease, the lessor accounts for the lease in a manner similar to the sale of an asset. Under a sales-type lease, the lessor generally records a **Lease Receivable** and eliminates the leased asset. The lease receivable for Sterling is computed as shown in **Illustration 21.11**.¹⁴

$$\text{Lease Receivable} = \text{Present Value of Rental Payments} + \text{Present Value of Guaranteed and Unguaranteed Residual Values}$$

ILLUSTRATION 21.11

Lease Receivable

Any selling profit on the transfer of the leased asset is recognized by recording sales revenue and related cost of goods sold at the commencement of the lease. The lessor recognizes

¹²If classified as an operating lease and collectibility is not probable, recognition of lease income is limited to cash received.

¹³We call it a sales-type lease because there is another type of lease for a lessor that uses the finance method, called a "direct financing lease." Direct financing leases are not that common in practice; we discuss this exception in Appendix 21B.

¹⁴Lease Receivable is often defined as only the present value of the rental payments plus the present value of the guaranteed residual value. In the case in which the lessor has an unguaranteed residual value, the total amount is often referred to as the **net investment** in the lease. Another approach is to report the unguaranteed residual value separately when making the journal entry. We use the definition in Illustration 21.11 for pedagogical reasons; this definition (including both guaranteed and unguaranteed residual values) should be used in the homework.

interest revenue on the lease receivable over the life of the lease using the effective-interest method.¹⁵

Sales-Type Lease Example

To illustrate lessor accounting for a sales-type lease, refer to the preceding Caterpillar/Sterling example. We repeat here the information relevant to Caterpillar in accounting for this lease transaction.

- The term of the lease is five years. The lease agreement is non-cancelable, requiring equal rental payments at the beginning of each year (annuity-due basis).
- The backhoe has a fair value at the commencement of the lease of \$100,000, an estimated economic life of five years, and a guaranteed residual value of \$5,000. Further, assume the underlying asset (the backhoe) has an \$85,000 cost to the dealer, Caterpillar.
- The lease contains no renewal options. The backhoe reverts to Caterpillar at the termination of the lease.
- Collectibility of payments by Caterpillar is probable.
- Caterpillar sets the annual rental payment to earn a rate of return of 4 percent per year (implicit rate) on its investment as shown in **Illustration 21.12**.

ILLUSTRATION 21.12

Lease Payment Calculation

| | |
|---|--------------------------------|
| Fair value of leased equipment | \$100,000.00 |
| Less: Present value of the residual value ($\$5,000 \times .82193$ ($PVF_{5,4\%}$)) | <u>4,109.65</u> |
| Amount to be recovered by lessor through lease payments | <u>\$ 95,890.35</u> |
| Five beginning-of-year lease payments to earn a 4% return ($\$95,890.35 \div 4.62990$ ($PVF-AD_{5,4\%}$)) | <u><u>\$ 20,711.11</u></u> |

Caterpillar determines the lease payments based on the implicit rate (rate of return) needed to justify leasing the asset. In establishing this rate of return, Caterpillar considers the credit standing of Sterling, the term of the lease, and whether the residual value is guaranteed or unguaranteed. In the Caterpillar/Sterling example, when a residual value is involved (whether guaranteed or not), Caterpillar does not have to recover as much from the rental payments and therefore the rental payments are less.

The lease meets the criteria for classification as a finance (sales-type) lease because (1) the present value of the lease payments is equal to the fair value of the asset, and (2) the lease term is equal to the economic life of the asset. That is, Sterling will consume substantially the entire underlying asset over the lease term. Caterpillar computes the lease receivable as shown in **Illustration 21.13**.

ILLUSTRATION 21.13

Lease Receivable Calculation

| | |
|---|--|
| Lease receivable = Present value of the rental payment + Present value of the guaranteed residual value | |
| = $\$95,890.35$ ($\$20,711.11 \times 4.62990$ ($PVF-OA_{5,4\%}$)) + $\$4,109.65$ ($\$5,000.00 \times .82193$ ($PVF_{5,4\%}$)) | |
| = $\$100,000.00$ | |

Caterpillar then records the lease receivable, cost of goods sold, and sales revenue and removes the leased asset (which prior to the lease was included in Caterpillar's inventory). The journal entry to record this transaction on January 1, 2020, is as follows.

¹⁵Even if the selling profit is zero (or a net loss), the lessor recognizes sales and cost of goods sold. For a lease classified as operating, the lessor continues to recognize the asset on its books and records lease revenue for payments received from the lease over the lease term.

| January 1, 2020 | |
|--------------------|---------|
| Lease Receivable | 100,000 |
| Cost of Goods Sold | 85,000 |
| Sales Revenue | 100,000 |
| Inventory | 85,000 |

As a result, Caterpillar reports a gross profit of \$15,000 (\$100,000 – \$85,000) on its income statement. Caterpillar then prepares a lease amortization schedule, as shown in **Illustration 21.14**, applying the effective-interest method and recognizing interest revenue as a function of the lease receivable balance.

| Caterpillar Financial Lease Amortization Schedule Annuity-Due Basis | | | | |
|--|-----------------------------------|--|--|----------------------------|
| Date | Annual Lease Payment (a) | Interest (4%) on Lease Receivable (b) | Reduction of Lease Receivable (c) | Lease Receivable (d) |
| 1/1/20 | | | | \$100,000.00 |
| 1/1/20 | \$ 20,711.11 | \$ -0- | \$ 20,711.11 | 79,288.89 |
| 1/1/21 | 20,711.11 | 3,171.56 | 17,539.55 | 61,749.34 |
| 1/1/22 | 20,711.11 | 2,469.97 | 18,241.14 | 43,508.20 |
| 1/1/23 | 20,711.11 | 1,740.33 | 18,970.78 | 24,537.42 |
| 1/1/24 | 20,711.11 | 981.50 | 19,729.61 | 4,807.81 |
| 1/1/25 | 5,000.00 | 192.19* | 4,807.81 | 0.00 |
| | <u>\$108,555.55</u> | <u>\$8,555.55</u> | <u>\$100,000.00</u> | |

(a) Lease payment as required by lease.
 (b) Four percent of the preceding balance of (d) except for 1/1/20; since this is an annuity due, no time has elapsed at the date of the first payment and therefore no interest has accrued.
 (c) (a) minus (b).
 (d) Preceding balance minus (c).
 *Rounded by \$0.12.

ILLUSTRATION 21.14
Lease Amortization Schedule

On January 1, 2020, Caterpillar records receipt of the first year's lease payment as follows.

| January 1, 2020 | |
|------------------|-----------|
| Cash | 20,711.11 |
| Lease Receivable | 20,711.11 |

On December 31, 2020, Caterpillar recognizes the interest revenue on the lease receivable during the first year through the following entry (see **Underlying Concepts**).

| December 31, 2020 | |
|-------------------|----------|
| Lease Receivable | 3,171.56 |
| Interest Revenue | 3,171.56 |

At December 31, 2020, Caterpillar reports the lease receivable in its balance sheet among current assets and noncurrent assets. It classifies the portion due within one year or the operating cycle, whichever is longer, as a current asset, and the rest with noncurrent assets.

Illustration 21.15 shows Caterpillar's assets section as it relates to the Sterling lease transactions at December 31, 2020.

| | |
|---|-------------|
| <u>Current assets</u> | |
| Lease receivable (\$3,171.56 + \$17,539.55) | \$20,711.11 |
| <u>Noncurrent assets (investments)</u> | |
| Lease receivable | 61,749.34 |

ILLUSTRATION 21.15
Balance Sheet Presentation

Underlying Concepts

Interest revenue for the lessor may differ from interest expense for the lessee because the lease receivable amount is different than that for the lease liability.

In its income statement for 2020, Caterpillar presents the revenue and expense items shown in **Illustration 21.16**.

ILLUSTRATION 21.16
Income Statement
Presentation

| | | | |
|--------------------------|--|--------------|--|
| <u>Sales</u> | | | |
| Sales revenue | | \$100,000.00 | |
| Less: Cost of goods sold | | 85,000.00 | |
| <u>Other revenue</u> | | | |
| Interest revenue | | 3,171.56 | |

The following entries record receipt of the second year's lease payment and recognition of the interest revenue in 2021.

| | | | |
|--------------------------|--|-----------|-----------|
| January 1, 2021 | | | |
| Cash | | 20,711.11 | |
| Lease Receivable | | | 20,711.11 |
| December 31, 2021 | | | |
| Lease Receivable | | 2,469.97 | |
| Interest Revenue | | | 2,469.97 |

Journal entries through 2024 follow the same pattern, except for the year 2024. In 2024, the final lease payment is made on January 1, 2024, but the asset is not returned to Caterpillar until January 1, 2025.

Caterpillar makes the following entry on December 31, 2024.

| | | | |
|--------------------------|--|--------|--------|
| December 31, 2024 | | | |
| Lease Receivable | | 192.19 | |
| Lease Revenue | | | 192.19 |

As a result, interest revenue of \$192.19 is recognized for the year 2024 as the residual value accretes up to \$5,000 at the end of the lease. At January 1, 2025, when the leased asset is returned to Caterpillar, the Lease Receivable account is reduced to zero and the asset returned is recorded in inventory, as follows.

| | | | |
|------------------------|--|-------|-------|
| January 1, 2025 | | | |
| Inventory | | 5,000 | |
| Lease Receivable | | | 5,000 |

Accounting for Operating Leases

LEARNING OBJECTIVE 3

Explain the accounting for operating leases.

Lessee Accounting for Operating Leases

If a lease does not meet any of the lease classification tests for a finance lease, a lessee should classify it as an operating lease. For leases classified as operating, the lessee records a right-of-use asset and lease liability at commencement of the lease, similar to the finance lease approach. However, unlike a finance lease, the lessee records the same amount for lease expense each period over the lease term (often referred to as the straight-line method for expense measurement).

Companies continue to use the effective-interest method for amortizing the lease liability. However, instead of reporting interest expense, a lessee reports interest on the lease liability as part of Lease Expense. In addition, the lessee no longer reports amortization expense related to the right-of-use asset. Instead, it “plugs” in an amount that increases the Lease Expense account so that it is the same amount from period to period. This plugged amount then

reduces the right-of-use asset, such that both the right-of-use asset and the lease liability are amortized to zero at the end of the lease.¹⁶

To illustrate operating lease accounting for a lessee, assume that Josway Disposal Inc. (lessor) and Traylor Stores Inc. (lessee) sign a lease agreement dated January 1, 2020. The lease agreement specifies that Josway will grant right-of-use of one of its standard cardboard compactors (is not of a specialized nature) at one of Traylor's locations. Information relevant to the lease is as follows.

- The lease agreement is non-cancelable with a term of three years.
- The compactor has a cost and fair value at commencement of the lease of \$60,000, an estimated economic life of five years, and a residual value at **the end of the lease** of \$12,000 (unguaranteed).
- The lease contains no renewal options. The compactor reverts to Josway at the termination of the lease.
- The implicit rate of Josway (the lessor) is 6 percent and is known by Traylor.

Josway determines the rental payments such that it earns rate of return of 6 percent per year on its investment, as shown in **Illustration 21.17**.

| | |
|--|--------------------|
| Fair value of leased equipment | \$60,000.00 |
| Less: Present value of the residual value (\$12,000 × .83962 (PVF _{3,6%})) | <u>10,075.44</u> |
| Amount to be recovered by lessor through lease payments | <u>\$49,924.56</u> |
| Three beginning-of-year lease payments to earn a 6% return (\$49,924.56 ÷ 2.83339 (PVF-AD _{3,6%})) | <u>\$17,620.08</u> |

ILLUSTRATION 21.17
Computation of Lease Payments

Traylor classifies the lease as an operating lease because none of the finance lease tests are met, as shown in **Illustration 21.18**.

| Test | Assessment |
|-------------------------------|---|
| 1. Transfer of ownership test | Transfer of ownership does not occur; the asset reverts to Josway at the end of the lease. |
| 2. Purchase option test | There is no purchase option in the lease. |
| 3. Lease term test | The lease term is 60 percent (3 ÷ 5) of the economic life of the asset, which is less than a major part of the life of the asset (75 percent). |
| 4. Present value test | The present value of the lease payments is \$49,924.56*, which is 83.2% (\$49,924.56 ÷ \$60,000) of the fair value of the compactor. Therefore, the lease does not meet the present value test. |
| 5. Alternative use test | As indicated, the equipment is not of a specialized nature and is expected to have use to Josway when returned at the end of the lease. |

*\$17,620.08 × 2.83339 (PVF-AD_{3,6%})

ILLUSTRATION 21.18
Lease Classification Tests

Traylor makes the following entry to record this operating lease.

| January 1, 2020 | |
|--------------------|-----------|
| Right-of-Use Asset | 49,924.56 |
| Lease Liability | 49,924.56 |

¹⁶The FASB indicates that reporting a single operating cost in the income statement more appropriately reflects the economics of an operating lease than the separate recognition of interest and amortization used in a finance lease. The rationale for this approach is that an operating lease grants different rights to the lessee. The different rights are that in an operating lease, the lessee is not exposed to nor benefits from any value changes in the right-of-use asset over the term of the lease. [13]

In addition, Traylor records the first payment, as follows.

| January 1, 2020 | | | |
|-----------------|--|-----------|-----------|
| Lease Liability | | 17,620.08 | |
| Cash | | | 17,620.08 |

Traylor then prepares a lease amortization schedule, as shown in **Illustration 21.19**, applying the effective-interest method and measuring interest on the liability as a function of the lease liability balance, with related amortization of the lease liability.

ILLUSTRATION 21.19
Lease Amortization Schedule

| Traylor Stores Inc. Lease Amortization Schedule Annuity-Due Basis | | | | |
|---|-----------------------------------|--------------------------------------|---|---------------------------|
| Date | Annual Lease Payment (a) | Interest (6%) on Liability (b) | Reduction of Lease Liability (c) | Lease Liability (d) |
| 1/1/20 | | | | \$49,924.56 |
| 1/1/20 | \$17,620.08 | \$ -0- | \$17,620.08 | 32,304.48 |
| 1/1/21 | 17,620.08 | 1,938.27 | 15,681.81 | 16,622.67 |
| 1/1/22 | 17,620.08 | 997.41* | 16,622.67 | 0.00 |
| | \$52,860.24 | \$2,935.68 | \$49,924.56 | |

(a) Lease payment as required by lease.
 (b) Six percent of the preceding balance of (d) except for 1/1/20; since this is an annuity due, no time has elapsed at the date of the first payment and therefore no interest has accrued.
 (c) (a) minus (b).
 (d) Preceding balance minus (c).
 *Rounded by \$0.05.

To record equal amounts of lease expense each period under the straight-line approach, the lessee computes interest on the lease liability (as shown in Illustration 21.19) and then amortizes the right-of-use asset in a manner that results in equal amounts of lease expense in each period. Traylor computes the straight-line lease expense each year as presented in the lease expense schedule in **Illustration 21.20**.

ILLUSTRATION 21.20
Lease Expense Schedule

| Traylor Stores Inc. Lease Expense Schedule | | | | |
|---|--|---|---|---|
| Date | (A) Lease Expense (Straight-Line) | (B) Interest (6%) on Liability | (C) Amortization of ROU Asset (A – B) | (D) Carrying Value of ROU Asset (D – C) |
| 1/1/20 | | | | \$49,924.56 |
| 12/31/20 | \$17,620.08 | \$1,938.27 | \$15,681.81 | 34,242.75 |
| 12/31/21 | 17,620.08 | 997.41 | 16,622.67 | 17,620.08 |
| 12/31/22 | 17,620.08 | | 17,620.08 | 0.00 |
| | \$52,860.24 | \$2,935.68 | \$49,924.56 | |

As shown in Illustration 21.20, Traylor does the following to record straight-line expense related to its operating lease.

1. Traylor makes lease payments totaling \$52,860.24 to Josway. Traylor divides the \$52,860.24 by the lease term of three years to compute its straight-line annual lease expense of \$17,620.08 (Column A).
2. Traylor records part of its annual lease expense based on interest related to amortizing its lease liability according to the lease amortization schedule provided in Illustration 21.19 [Column (b)].

3. Traylor deducts that amount of interest on the liability from the straight-line lease expense to arrive at the amount of amortization of the right-of-use asset (Column C).
4. Traylor determines the carrying value of the right-of-use asset by deducting the amortization of the right-of-use asset each reporting period (Column D).

Traylor prepares journal entries during the lease term to record lease expense, which is comprised of interest on the lease liability and the amortization of the right-of-use asset. Traylor makes the following entry to record lease expense in 2020 on December 31, 2020.

| December 31, 2020 | | |
|---|-----------|-----------|
| Lease Expense | 17,620.08 | |
| Right-of-Use Asset (\$17,620.08 – \$1,938.27) | | 15,681.81 |
| Lease Liability | | 1,938.27 |

As indicated in Illustration 21.20, Traylor accrues interest (\$1,938.27) and amortizes the right-of-use asset (\$15,681.81). As a result, Traylor records a single lease expense amount of \$17,620.08 for the year 2020. The second lease payment on January 1, 2021, is as follows.

| January 1, 2021 | | |
|--|-----------|-----------|
| Lease Liability (\$1,938.27 + \$15,681.81) | 17,620.08 | |
| Cash | | 17,620.08 |

Journal entries in subsequent periods follow the same pattern, using the amounts presented in Illustration 21.20. The entry to record lease expense in the second year of the lease is as follows.

| December 31, 2021 | | |
|---|-----------|-----------|
| Lease Expense | 17,620.08 | |
| Right-of-Use Asset (\$17,620.08 – \$997.41) | | 16,622.67 |
| Lease Liability | | 997.41 |

Traylor records a single lease expense amount of \$17,620.08, comprised of interest on the lease liability (\$997.41 in 2021) and amortization of the right-of-use asset (\$16,622.67 in 2021). The third and final lease payment is made on January 1, 2022, as follows.

| January 1, 2022 | | |
|--|-----------|-----------|
| Lease Liability (\$997.41 + \$16,622.67) | 17,620.08 | |
| Cash | | 17,620.08 |

Traylor makes the following entry to record lease expense for 2022, the third year of the lease.

| December 31, 2022 | | |
|--------------------------|-----------|-----------|
| Lease Expense | 17,620.08 | |
| Right-of-Use Asset | | 17,620.08 |

Following this entry, the right-of-use asset has been fully amortized. As summarized in the lease expense schedule in Illustration 21.20, the total lease expense for the three years is comprised of the amortization of the right-of-use asset of \$49,924.56 plus interest related to the lease liability of \$2,935.68, for a total lease expense of \$52,860.24. Traylor presents the interest and right-of-use asset amortization related to the lease as a **single lease (operating) expense** in the income statement each year.

Lessor Accounting for Operating Leases

To illustrate lessor accounting for an operating lease, refer to the previously discussed lease agreement between Josway Disposal Inc. and Traylor Stores Inc. for the use of one of Josway's standard cardboard compactors. Information relevant to the lease is as follows.

- The term of the lease is three years. The lease agreement is non-cancelable, requiring three annual rental payments of \$17,620.08, with the first payment on January 1, 2020 (annuity-due basis).

- The compactor has a cost and fair value at commencement of the lease of \$60,000, an estimated economic life of five years, and a residual value at the end of the lease of \$12,000 (unguaranteed). Josway depreciates assets, such as this compactor, using double-declining-balance.
- The lease contains no renewal options. The compactor reverts to Josway at the termination of the lease.
- The implicit rate of the lessor is known by Traylor. Traylor's incremental borrowing rate is 6 percent. Josway sets the annual rental rate to earn a rate of return of 6 percent per year (implicit rate) on its investment, as shown in Illustration 21.17.

Applying the same classification tests used by Traylor (see Illustration 21.18), Josway classifies the lease as an operating lease because none of the finance lease tests are met. Under the operating method, Josway (the lessor) continues to recognize the asset on its balance sheet and recognizes lease revenue (generally on a straight-line basis) in each period.

To illustrate the operating method for the Josway/Traylor lease, Josway records the lease payment on a straight-line basis on January 1, 2020, 2021, and 2022, as follows.

| January 1, 2020, 2021, and 2022 | | |
|--|-----------|-----------|
| Cash | 17,620.08 | |
| Unearned Lease Revenue | | 17,620.08 |

On December 31, 2020, 2021, and 2022, Josway records the recognition of the revenue each period as follows.

| | | |
|------------------------|-----------|-----------|
| Unearned Lease Revenue | 17,620.08 | |
| Lease Revenue | | 17,620.08 |

Josway also records depreciation expense on the leased equipment (assuming double-declining-balance, given a cost basis of \$60,000, and a five-year economic life), as follows (see **Underlying Concepts**).

| | | |
|---------------------------------------|-----------|-----------|
| Depreciation Expense (\$60,000 × .40) | 24,000.00 | |
| Accumulated Depreciation—Equipment | | 24,000.00 |

In addition to depreciation expense, Josway records other costs related to the lease arrangement, such as insurance, maintenance, and taxes in the period incurred. Josway classifies the leased equipment and accompanying accumulated depreciation as Leased Assets.

Underlying Concepts

Since the lessor owns the underlying asset, it depreciates the compactor over its entire useful life.

Special Lease Accounting Problems

LEARNING OBJECTIVE 4

Discuss the accounting and reporting for special features of lease arrangements.

The features of lease arrangements that cause unique accounting problems are:

1. Residual values.
2. Other lease adjustments.
3. Bargain purchase options.
4. Short-term leases.
5. Presentation, disclosure, and analysis.

Residual Values

Lessee Perspective—Guaranteed Residual Value

In the Caterpillar/Sterling lease discussed earlier, the residual value was guaranteed by the lessee. This guaranteed residual value did not affect the computation of the lease liability, however, because it was probable that the expected residual value was greater than the guaranteed residual value. In other words, Sterling did not report a liability related to this guarantee because Sterling expects that it will not have to make a cash payment at the end of the lease. Sterling will simply return the backhoe to Caterpillar at the end of the lease.

The guidelines for accounting for a guaranteed residual value are as follows. [14]

1. If it is probable that the expected residual value is equal to or greater than the guaranteed residual value, the lessee should not include the guaranteed residual value in the computation of the lease liability.
2. If it is probable that the expected residual value is less than the guaranteed residual value, the difference between the expected and guaranteed residual values should be included in computation of the lease liability.

To illustrate a situation where the expected residual value is below the guaranteed residual value, assume in the earlier Caterpillar/Sterling example that it is probable that the residual value will be \$3,000 instead of the guaranteed amount of \$5,000. If Sterling estimates the residual value of the backhoe at the end of the lease to be \$3,000, Sterling includes \$2,000 (\$5,000 – \$3,000) as an additional lease payment in determining the lease liability and right-of-use asset. **Illustration 21.21** shows the computation of the lease liability/right-of-use asset for Sterling in this situation.

| Sterling's Capitalized Amount (4% Rate) | |
|--|---------------------------|
| Annuity-Due Basis, Including Guaranteed Residual Value | |
| Present value of five annual rental payments ($\$20,711.11 \times 4.62990$ ($PVF-AD_{5,4\%}$)) | \$95,890.35* |
| Present value of probable residual value payment of \$2,000 due five years after date of commencement ($\$2,000 \times .82193$ ($PVF_{5,4\%}$)) | 1,643.86 |
| Lessee's lease liability/right-of use asset | <u>\$97,534.21</u> |
| *Rounded by \$0.02. | |

ILLUSTRATION 21.21

Computation of Lessee's Capitalized Amount—Guaranteed Residual Value

Sterling makes the following entries to record the lease and the first payment.

| January 1, 2020 | |
|---|-----------|
| Right-of-Use Asset | 97,534.21 |
| Lease Liability | 97,534.21 |
| (To record the right-of-use asset and related liability at commencement of the lease) | |
| Lease Liability | 20,711.11 |
| Cash | 20,711.11 |
| (To record first lease payment) | |

Sterling prepares a lease amortization schedule to show interest expense and related amortization of the lease liability over the five-year period. The schedule, shown in **Illustration 21.22**, is based on an expected residual value payment of \$2,000 (\$5,000 – \$3,000) at the end of five years.

ILLUSTRATION 21.22
Lease Amortization Schedule
for Lessee—Guaranteed
Residual Value

| Sterling Construction | | | | |
|--|----------------------------|-------------------------------|------------------------------------|--------------------|
| Lease Amortization Schedule—Guaranteed Residual Value | | | | |
| Annuity-Due Basis | | | | |
| Date | Annual Lease Payment | Interest (4%) on Liability | Reduction of Lease Liability | Lease Liability |
| | (a) | (b) | (c) | (d) |
| 1/1/20 | | | | \$97,534.21 |
| 1/1/20 | \$ 20,711.11 | \$ -0- | \$20,711.11 | 76,823.10 |
| 1/1/21 | 20,711.11 | 3,072.92 | 17,638.19 | 59,184.91 |
| 1/1/22 | 20,711.11 | 2,367.40 | 18,343.71 | 40,841.20 |
| 1/1/23 | 20,711.11 | 1,633.65 | 19,077.46 | 21,763.74 |
| 1/1/24 | 20,711.11 | 870.55 | 19,840.56 | 1,923.18 |
| 1/1/25 | 2,000.00 | 76.82* | 1,923.18 | 0.00 |
| | <u>\$105,555.55</u> | <u>\$8,021.34</u> | <u>\$97,534.21</u> | |

(a) Lease payment as required by lease.
(b) Four percent of the preceding balance of (d) except for 1/1/20; since this is an annuity due, no time has elapsed at the date of the first payment and therefore no interest has accrued.
(c) (a) minus (b).
(d) Preceding balance minus (c).
*Rounded by \$0.11.

Illustration 21.23 shows, in comparative form, Sterling's entries for the first two years of the lease when:

1. Sterling expects to pay \$2,000 at the end of the lease related to the guaranteed residual value (see Illustration 21.22).
2. Sterling does not expect to owe an additional payment for the guaranteed residual value (see Illustration 21.8).

ILLUSTRATION 21.23 **Journal Entries—Guaranteed Residual Value**

| Guaranteed Residual Value (\$2,000 expected payment) | | Guaranteed Residual Value (no expected payment) | |
|---|-----------|--|-----------|
| Capitalization of lease (January 1, 2020): | | | |
| Right-of-Use Asset | 97,534.21 | Right-of-Use Asset | 95,890.35 |
| Lease Liability | 97,534.21 | Lease Liability | 95,890.35 |
| First payment (January 1, 2020): | | | |
| Lease Liability | 20,711.11 | Lease Liability | 20,711.11 |
| Cash | 20,711.11 | Cash | 20,711.11 |
| Adjusting entry for accrued interest (December 31, 2020): | | | |
| Interest Expense | 3,072.92 | Interest Expense | 3,007.17 |
| Lease Liability | 3,072.92 | Lease Liability | 3,007.17 |
| Entry to record amortization of the ROU asset (December 31, 2020): | | | |
| Amortization Expense | 19,506.84 | Amortization Expense | 19,178.07 |
| Right-of-Use Asset | 19,506.84 | Right-of-Use Asset | 19,178.07 |
| (\$97,534.21 ÷ 5 years) | | (\$95,890.35 ÷ 5 years) | |
| Second payment (January 1, 2021): | | | |
| Lease Liability | 20,711.11 | Lease Liability | 20,711.11 |
| (\$3,072.92 + \$17,638.19) | | (\$3,007.17 + \$17,703.94) | |
| Cash | 20,711.11 | Cash | 20,711.11 |

Following similar entries in subsequent years of the lease and using the amounts in Illustration 21.22, at the end of the lease term (January 1, 2025), Sterling returns the asset to Caterpillar and makes the entries shown in **Illustration 21.24** under the two situations.

ILLUSTRATION 21.24 Final Payments—Guaranteed and Unguaranteed Residual Value

| Guaranteed Residual Value (\$2,000 expected payment) | | Guaranteed Residual Value (no expected payment) | |
|---|----------|--|----------|
| Final payment (January 1, 2025): | | | |
| Lease Liability | 2,000.00 | | |
| Cash | | 2,000.00 | No entry |

Following the entries summarized in Illustrations 21.23 and 21.24, the Right-of-Use Asset and the Lease Liability accounts have been fully amortized and have zero balances. If at the end of the lease (January 1, 2025) Sterling has no additional obligations under the residual value guarantee, no further entries are needed.

However, if the fair value of the underlying asset is less than the expected residual value, such that Sterling will have to further compensate Caterpillar under the residual value guarantee, Sterling will record a loss. For example, assume that due to poor maintenance of the backhoe, Sterling and Caterpillar agree that the fair value of the asset is sufficiently below the expected fair value such that Sterling must pay an additional \$1,000 upon returning the backhoe to Caterpillar on January 1, 2025. In this case, Sterling reports a loss of \$1,000, as reflected in the following journal entry.

| January 1, 2025 | | | |
|--|--|-------|-------|
| Lease Liability | | 2,000 | |
| Loss on Lease (Residual Value Guarantee) | | 1,000 | |
| Cash | | | 3,000 |

Lessee Perspective—Unguaranteed Residual Value

A lessee does not include an unguaranteed residual value in the computation of the lease liability, whether it is a finance lease or an operating lease. At the end of the lease, the lessee simply returns the leased asset to the lessor without any other payment. The Josway/Traylor operating lease example illustrates the lessee accounting for an unguaranteed residual value.

Lessor Perspective—Guaranteed Residual Value

In the Sterling/Caterpillar example, Sterling guaranteed a residual value of \$5,000. In computing the amount to be recovered from the rental payments, the present value of the residual value was subtracted from the fair value of the backhoe to arrive at the amount to be recovered by the lessor. **Illustration 21.25** shows this computation.

| | |
|---|-------------|
| Amount to be recovered by lessor through lease payments | \$95,890.35 |
| Five beginning-of-year lease payments to earn a 4% return ($\$95,890.35 \div 4.62990$ (PVF-AD _{5,4%})) | \$20,711.11 |

ILLUSTRATION 21.25
Lease Payment Calculation

The computation in Illustration 21.25 is the same whether the residual value is guaranteed or unguaranteed.

The Caterpillar/Sterling lease agreement accounted for the lease as a sales-type lease. Caterpillar therefore recorded sales revenue and related cost of goods sold at lease commencement. Caterpillar accounts for the guaranteed residual value as part of sales revenue because the lessor receives this amount at the end of the lease either in cash or in the residual value returned.

Lessor Perspective—Unguaranteed Residual Value

What happens if the residual value for Caterpillar is unguaranteed? In this case, there is less certainty that the unguaranteed residual portion of the asset has been “sold.” Therefore, the lessor recognizes sales revenue and cost of goods sold only for the portion of the asset for which recovery is assured. To account for this uncertainty, both sales revenue and cost of goods sold are reduced by the present value of the unguaranteed residual value. Given that the amount subtracted from sales revenue and cost of goods sold are the same, the gross profit computed will still be the same amount as when a guaranteed residual value exists.

To compare a sales-type lease with a guaranteed residual value to one with an unguaranteed residual value, assume the same facts as in the Caterpillar/Sterling lease situation. That is:

1. The sales price is \$100,000.
2. The expected residual value is \$5,000 (the present value of which is \$4,109.65).
3. The leased equipment has an \$85,000 cost to the dealer, Caterpillar.

Illustration 21.26 shows the computation of the amounts relevant to a sales-type lease, under both a guaranteed and unguaranteed residual value situation.

ILLUSTRATION 21.26
Computation of Lease
Amounts by Caterpillar
Financial—Sales-Type Lease

| | Guaranteed Residual Value | Unguaranteed Residual Value |
|---------------------------------|---|---|
| Lease receivable | \$100,000 [\$20,711.11 × 4.62990 (PVF-AD _{5,4%}) + \$5,000 × .82193 (PVF _{5,4%})] | Same |
| Sales price of the asset | \$100,000 | \$95,890.35 (\$100,000 – \$4,109.65) |
| Cost of goods sold | \$85,000 | \$80,890.35 (\$85,000.00 – \$4,109.65) |
| Gross profit | \$15,000 (\$100,000 – \$85,000) | \$15,000 (\$95,890.35 – \$80,890.35) |

Caterpillar records the same gross profit (\$15,000) at the point of sale whether the residual value is guaranteed or unguaranteed. However, the amounts recorded for sales revenue and the cost of goods sold are different between the guaranteed and unguaranteed situations. The reason for the difference is the uncertainty surrounding the realization of the unguaranteed residual value. Unlike the guaranteed residual value situation, where the lessor knows that it will receive the full amount of the guarantee at the end of the lease, in an unguaranteed residual value situation the lessor is not sure what it will receive at the end of the lease regarding the residual value. That is, due to the uncertainty surrounding the realization of the unguaranteed residual value, sales revenue and related cost of goods sold are reduced by the present value of the residual value. This results in **the sales revenue and cost of goods sold amounts being reported at different amounts under an unguaranteed residual value situation.**

Caterpillar makes the entries with respect to the lease arrangement under guaranteed and unguaranteed residual value situations as shown in **Illustration 21.27.**

ILLUSTRATION 21.27 Entries for Guaranteed and Unguaranteed Residual Values—Sales-Type Lease

| | <u>Guaranteed Residual Value</u> | | <u>Unguaranteed Residual Value</u> | |
|--|--|------------|--|------------|
| | To record sales-type lease at commencement (January 1, 2020): | | | |
| Sales and cost of goods sold differ; gross profit the same | Cost of Goods Sold | 85,000.00 | Cost of Goods Sold | 80,890.35 |
| | Lease Receivable | 100,000.00 | Lease Receivable | 100,000.00 |
| | Sales Revenue | 100,000.00 | Sales Revenue | 95,890.35 |
| | Inventory | 85,000.00 | Inventory | 85,000.00 |
| | To record receipt of the first lease payment (January 1, 2020): | | | |
| Lease receipt the same | Cash | 20,711.11 | Cash | 20,711.11 |
| | Lease Receivable | 20,711.11 | Lease Receivable | 20,711.11 |
| | To recognize interest revenue during the first year (December 31, 2020): | | | |
| Accrual of interest the same | Lease Receivable | 3,171.56 | Lease Receivable | 3,171.56 |
| | Interest Revenue | 3,171.56 | Interest Revenue | 3,171.56 |
| | To record receipt of the second lease payment (January 1, 2021): | | | |
| Lease receipt the same | Cash | 20,711.11 | Cash | 20,711.11 |
| | Lease Receivable (\$3,171.56 + \$17,539.56) | 20,711.11 | Lease Receivable (\$3,171.56 + \$17,539.56) | 20,711.11 |
| | To recognize interest revenue during the second year (December 31, 2021): | | | |
| Accrual of interest the same | Lease Receivable | 2,469.97 | Lease Receivable | 2,469.97 |
| | Interest Revenue | 2,469.97 | Interest Revenue | 2,469.97 |
| | To record receipt of residual value at \$3,000 end of lease term (January 1, 2025): | | | |
| Guaranteed does not result in loss; unguaranteed does | Inventory | 3,000.00 | Inventory | 3,000.00 |
| | Cash | 2,000.00 | Loss on Lease | 2,000.00 |
| | Lease Receivable | 5,000.00 | Lease Receivable | 5,000.00 |

Illustration 21.28 provides a summary of the accounting treatment for guaranteed and unguaranteed residual values by lessees and lessors related to the present value classification test and the measurement of the lease liability and receivable.

ILLUSTRATION 21.28 Summary of Treatment of Residual Values

| | Unguaranteed Residual Value | Guaranteed Residual Value |
|---------------------------|-----------------------------|---|
| LESSEE | | |
| Classification Test | Ignore | Include full amount of residual value in present value test |
| Measurement of Liability | Ignore | <ul style="list-style-type: none"> • If expected value of residual value \geq to guaranteed residual value, ignore • If expected value of residual value $< \leq$ to guaranteed residual value, include the present value of the difference between the expected and guaranteed residual value in computation of lease liability |
| LESSOR | | |
| Classification Test | Ignore | Include |
| Measurement of Receivable | Include | Include |

Note: When residual value is not guaranteed in a sales-type lease, lessor reduces Sales Revenue and Cost of Goods Sold by the present value of the unguaranteed residual value.

Other Lease Adjustments

Additional lease adjustments that affect the measurement of lease assets and liabilities relate to the following:

1. Executory costs.
2. Lease prepayments and incentives.
3. Initial direct costs.

Executory Costs

Executory costs are normal expenses associated with owning a leased asset, such as property insurance and property taxes. The accounting for executory costs depends on how the lease is structured, that is, whether the lease is a gross lease or a net lease. In a gross lease, the payments to the lessor are fixed as part of the rental payments in the contract. In a net lease, the lessee makes variable payments to a third party or to the lessor directly for the executory costs. **Illustration 21.29** provides examples of these two situations.

Gross versus Net Leases

Facts: Ortiz Company enters into a lease arrangement to lease a retail space in a shopping mall from Bryant Inc. The lease term is 2 years with monthly payments of \$15,000 per month. Ortiz does not have any obligation to pay any of the property taxes or property insurance on the retail space. Ortiz estimates that Bryant is paying approximately \$1,500 per month related to these executory costs.

Question: How should Ortiz account for the executory costs in this situation?

Solution: Ortiz and Bryant have a gross lease arrangement in that the property taxes and property insurance are included in the rental payments made by Ortiz. In this arrangement, the payment for the executory costs are fixed (per the rental agreement) and should be included in the computation of the lease liability.

Now assume that Ortiz agrees to a lease arrangement in which it must reimburse the lessor for the property taxes and property insurance, or pay a relevant third party directly. In this case, Ortiz and Bryant have a net lease arrangement because the lessee makes variable payments to a third party or to the lessor for the executory costs. In this case, Ortiz is responsible for paying directly the executory costs and therefore it is a variable payment which is expensed in the period incurred (not included in the lease liability and right-of-use assets).

ILLUSTRATION 21.29

Executory Cost Example

Note that including executory costs in the measurement of the lease liability and related right-of-use asset may lead to inflated values on the balance sheet in comparison to lessees who do not capitalize these costs. Thus, the way parties structure the payment of executory costs (i.e., variable or fixed) can have potentially material implications with regard to the values that appear on the balance sheet.

In summary, executory costs included in the fixed payments required by the lessor should be included in lease payments for purposes of measuring the lease liability. Payments by the lessee made directly to the taxing authority or insurance provider are considered variable payments and are expensed as incurred. [15]

Lease Prepayments and Incentives

For all leases at the commencement date, the lease liability is the starting point to determine the amount to record for the right-of-use asset. Companies adjust the right-of-use asset for any lease prepayments, lease incentives, and initial direct costs made prior to or at the commencement date. These adjustments determine the amount to report as the right-of-use asset at the lease commencement date as follows.

1. Lease prepayments made by the lessee **increase** the right-of-use asset.
2. Lease incentive payments made by the lessor to the lessee **reduce** the right-of-use asset.
3. Initial direct costs incurred by the lessee (discussed in the next section) **increase** the right-of-use asset.

Illustration 21.30 identifies the adjustments made to the lease liability balance to determine the proper amount to report for the right-of-use asset.

ILLUSTRATION 21.30

Right-of-Use Asset Adjustments

| | | | | | | | | |
|--|---|------------------------------|---|---------------------------------|---|-------------------------|---|------------------------|
| Initial Measurement of Lease Liability | + | Prepaid Lease Payments | - | Lease Incentives Received | + | Initial Direct Costs | = | Right-of- Use Asset |
|--|---|------------------------------|---|---------------------------------|---|-------------------------|---|------------------------|

Initial Direct Costs

Initial direct costs are incremental costs of a lease that would not have been incurred had the lease not been executed. [16] Costs directly or indirectly attributable to negotiating and arranging the lease (e.g., external legal costs to draft or negotiate a lease or an allocation of internal legal costs) are not considered initial direct costs. **Illustration 21.31** provides examples of costs included and excluded from initial direct costs from the lessee and lessor side.¹⁷

ILLUSTRATION 21.31

Initial Direct Costs

| Included | Excluded |
|--|---|
| <ul style="list-style-type: none"> • Commissions (including payments to employees acting as selling agents) • Legal fees resulting from the execution of the lease • Lease document preparation costs incurred after the execution of the lease • Consideration paid for a guarantee of residual value by an unrelated third party | <ul style="list-style-type: none"> • Employee salaries • Internal engineering costs • Legal fees for services rendered before the execution of the lease • Negotiating lease term and conditions • Advertising • Depreciation • Costs related to an idle asset |

Initial direct costs incurred by the lessee are included in the cost of the right-of-use asset but are not recorded as part of the lease liability.

Illustration 21.32 provides an example of the computation of the right-of-use asset with initial direct costs.

¹⁷Adapted from PricewaterhouseCoopers, *Leases—2016* (www.pwc.com), p. 4-4.

Right-of-Use Cost Analysis

Facts: Mangan Company leases from DeMallie Co. solar equipment for 8 years starting on January 1, 2020. The lease is a finance/sales-type lease. The terms of the lease are as follows.

1. DeMallie will pay Mangan \$30,000 as a cash incentive for entering the lease by January 1, 2020.
2. DeMallie pays initial direct costs of \$5,000 for legal fees related to the execution of the lease.
3. Mangan incurred \$1,500 of initial direct costs (commission paid to lease negotiator) which are payable by January 1, 2020.
4. Mangan must pay not only the first rental payment of \$10,000 on January 1, 2021, but has to prepay the last month's rental payment on December 31, 2020.
5. The initial measurement of the liability is \$400,000.

Question: What is the amount to be reported for Mangan's right-of-use asset at the commencement date?

Solution: The measurement of the right-of-use asset for Mangan is as follows.

| | |
|--|------------------|
| Initial measurement of the lease liability | \$400,000 |
| Cash incentive received from DeMallie (lessor) | (30,000) |
| Initial direct costs (commission paid to lease negotiator) | 1,500 |
| Prepayments made by Mangan to DeMallie before the lease commencement | <u>10,000</u> |
| Measurement of right-of-use asset at January 1, 2020 | <u>\$381,500</u> |

Mangan therefore reports the right-of-use asset at \$381,500.

DeMallie (the lessor) expenses its initial direct costs in the period incurred, given DeMallie reported a gross profit related to its sale-type lease.

ILLUSTRATION 21.32

Computation of Right-of-Use Asset

For lessors, initial direct costs often are more significant because they are usually the party that solicits lessees as part of their sales activities. As a result, lessors often engage attorneys to prepare the legal documents, as well as pay commissions incurred in connection with the execution of a lease.

Lessor accounting for initial direct costs depends on the type of lease. [17]

- For **operating leases**, a lessor defers the initial direct costs and amortizes them as expenses over the term of the lease.
- For **sales-type leases**, the lessor expenses initial direct costs at lease commencement (in **the period** in which it recognizes the profit on the sale). An exception is when there is no selling profit or loss on the transaction. If there is no selling profit or loss, the initial direct costs are deferred and recognized over the lease term.

Lessors commonly also incur **internal costs** related to leasing activities. Examples are activities the lessor performs for advertising, servicing existing leases, and establishing and monitoring credit policies, as well as the costs for supervision and administration or for expenses such as rent and depreciation. **Internal direct costs should not be included in initial direct costs.** Such costs would have been incurred regardless of whether a lease was executed. As a result, internal direct costs are generally expensed as incurred.

Bargain Purchase Options

As stated earlier, a **bargain purchase option** allows the lessee to purchase the leased property for a future price that is substantially lower than the asset's expected future fair value. This price is so favorable at the lease's commencement that the future exercise of the option appears to be reasonably certain. If a bargain purchase option exists, **the lessee must increase the present value of the lease payments by the present value of the option price.**

For example, assume that Sterling Construction (see Illustration 21.22) had an option to buy the leased equipment for \$2,000 at the end of the five-year lease term. At that point, Sterling and Caterpillar expect the fair value to be \$18,000. The significant difference between the option price and the fair value creates a bargain purchase option as the exercise of that option is reasonably certain.

A bargain purchase option affects the accounting for leases in the same way as a guaranteed residual value with a probable amount to be owed. In other words, with a guaranteed residual value, the lessee is expected to make an additional payment related to the residual value at the end of the lease. Similarly, the cost of a bargain purchase option is expected to be paid by the lessee. Therefore, the computations, amortization schedule, and entries prepared for this \$2,000 bargain purchase option are identical to those shown for the \$2,000 probable amount to be owed under the guaranteed residual value (see Illustrations 21.22, 21.23, and 21.24).

The only difference between the accounting treatment for a bargain purchase option and a guaranteed residual value of identical amounts and circumstances is in the **computation of the annual amortization**. In the case of a guaranteed residual value, Sterling amortizes the right-of-use asset over the lease term. In the case of a bargain purchase option, it uses the **economic life** of the underlying asset, given that the lessee takes ownership of the asset.

Short-Term Leases

A **short-term lease** is a **lease** that, at the **commencement date**, has a **lease term** of 12 months or less. Rather than recording a right-of-use asset and lease liability, lessees may elect to expense the lease payments as incurred. [18]

Leases may include options to either extend the term of the lease (a renewal option) or to terminate the lease prior to the contractually defined lease expiration date (a termination option). In these situations, renewal or termination options that are reasonably certain of exercise by the lessee are included in the lease term. Therefore, a one-year lease with a renewal option that the lessee is reasonably certain to exercise is not a short-term lease. **Illustration 21.33** provides an example of two short-term lease situations.¹⁸

ILLUSTRATION 21.33

Short-Term Lease Examples

Short-Term Leases

Facts:

- a. Thomas Company (lessee) enters into an arrangement to lease a crane for a 6-month period, with the option to extend the term for up to 9 additional months (in 3-month increments). After considering the nature of the project, Thomas determines that it expects to use the crane for only 9 months and is therefore reasonably certain that it will exercise only one of the 3-month renewal options.
- b. Thomas Company enters into the same arrangement as in part (a) but the project for which the crane is being used is now expected to take 15 months to complete. After considering the nature of the project, Thomas determines that it expects to use the crane for 15 months and is therefore reasonably certain that it will exercise all three renewal options.

Question: How would Thomas report these two situations?

Solutions:

- a. Since the lease term is not more than 12 months, Thomas is able to elect the short-term lease exception because the lease term is not more than 12 months as it does not expect to exercise the renewal option.
- b. The expected lease term is greater than 12 months because Thomas expects to exercise all three renewal options. Thus, Thomas is not able to apply the short-term lease exception and must record a right-of-use asset and related lease liability.

Presentation, Disclosure, and Analysis

Presentation

Presented in **Illustration 21.34** is a summary of how the **lessee** reports the information related to finance and operating leases in the financial statements.

¹⁸Adapted from PricewaterhouseCoopers, *Leases –2016* (www.pwc.com), Chapter 4.

| | Balance Sheet | Income Statement |
|------------------------|---------------------------------------|--|
| Finance Lease | Right-of-use asset Lease liability | Amortization expense Interest expense |
| Operating Lease | Right-of-use asset Lease liability | Lease expense |

ILLUSTRATION 21.34

Presentation in Financial Statements—Lessee

Presented in **Illustration 21.35** is a summary of **lessor** presentation of lease information in the financial statements.

| | Balance Sheet | Income Statement |
|-------------------------|--|---|
| Sales-Type Lease | Lease receivable presented separate from other assets Derecognize the leased asset | Interest revenue Selling profit or loss |
| Operating Lease | Continue to recognize assets subject to operating leases as property, plant, and equipment | Revenue generally recognized on a straight-line basis Depreciation expense on the leased asset |

Disclosure

Lessees and lessors must also provide additional qualitative and quantitative disclosures to help financial statement users assess the amount, timing, and uncertainty of future cash flows. These disclosures are intended to supplement the amounts provided in the financial statements. Qualitative disclosures to be provided by both lessees and lessors are summarized in **Illustration 21.36**. [19]

- Nature of its leases, including general description of those leases.
- How variable lease payments are determined.
- Existence and terms and conditions for options to extend or terminate the lease and for residual value guarantees.
- Information about significant assumptions and judgments (e.g., discount rates).

ILLUSTRATION 21.36

Qualitative Lease Disclosures

Illustration 21.37 presents the type of quantitative information that should be disclosed for **the lessee**.

- Total lease cost.
- Finance lease cost, segregated between the amortization of the right-of-use assets and interest on the lease liabilities.
- Operating and short-term lease cost.
- Weighted-average remaining lease term and weighted-average discount rate (segregated between finance and operating leases).
- Maturity analysis of finance and operating lease liabilities, on an annual basis for a minimum of each of the next five years, the sum of the undiscounted cash flows for all years thereafter.

ILLUSTRATION 21.37

Lessee Quantitative Disclosures

Illustration 21.38 presents a sample disclosure typical of a lessee having both finance leases and operating leases.

| Amounts due after one year, net | | <u>\$3,613</u> | | <u>\$3,878</u> | | | | |
| As of December 31, 2021, scheduled maturities of lease payments receivable were as follows for the following fiscal years ended December 31: | | | | | | | | |
| | | <u>2022</u> | <u>2023</u> | <u>2024</u> | <u>2025</u> | <u>2026</u> | <u>Thereafter</u> | <u>Total</u> |
| Scheduled maturities of lease payments receivable | | \$3,220 | \$1,959 | \$1,112 | \$483 | \$174 | \$34 | \$6,982 |
| Equipment leased to customers under operating leases was \$4.0 billion at December 31, 2021, and \$3.8 billion at December 31, 2020, and is included in machinery and equipment. Accumulated depreciation on equipment under lease was \$1.4 billion at December 31, 2021, and \$1.5 billion at December 31, 2020. As of December 31, 2021, future rentals on non-cancelable operating leases related to leased equipment were as follows for the following fiscal years ended December 31: | | | | | | | | |
| | | <u>2022</u> | <u>2023</u> | <u>2024</u> | <u>2025</u> | <u>2026</u> | <u>Thereafter</u> | <u>Total</u> |
| Minimum future rentals on non-cancelable operating leases | | \$1,487 | \$958 | \$467 | \$156 | \$50 | \$6 | \$3,124 |

Analysis

Many companies that lease are likely to see their balance sheets grow substantially over the next few years as a result of implementing the new standard on leasing. Estimates as to its dollar impact on the assets and liabilities of companies vary, but it will be in the trillions of dollars. For example, here are the possible effects on the assets and liabilities for the following five companies (in millions) as a result of capitalizing lease assets and related liabilities: (1) **Walgreens**, \$33,721; (2) **AT&T**, \$31,047; (3) **CVS Health**, \$27,282; (4) **Wal-Mart Stores**, \$17,910; and **FedEx Corporation**, \$16,385.

Some contend that “grossing up” the assets and liabilities on companies’ balance sheets will not have any significant impact on analysis, based on information in the financial statements. Their rationale is that stockholders’ equity does not change substantially, nor will net income. In addition, it is argued that users can determine the obligations that lessees are incurring by examining the notes to the financial statements.

These assertions are debatable. With the increase in the assets and liabilities as a result of the new standard, a number of financial metrics used to measure the profitability and solvency of companies will change, which could create challenges when performing financial analysis. On the profitability side, return on assets will decrease because a company’s assets will increase, but net income will often be the same. Furthermore, analysts commonly focus on income subtotals, such as earnings before interest, taxes, and depreciation and amortization (EBIDTA), which likely will require some adjustments as companies amortize right-of-use

assets. On the solvency side, the debt to equity ratio will increase, and the interest coverage ratio will decrease. In addition, recent studies indicate that using only note disclosures to determine lease obligations have understated their numerical impact.¹⁹

One thing is certain—the grossing up of the assets and liabilities related to lease arrangements will have significant consequences on the organizational, operational, and contractual side. Examples are:

1. States often levy taxes based on property amounts, which will now be higher.
2. Performance metrics to evaluate management may have to change for companies, particularly when growth rates in assets are used or returns on assets are used to measure performance.
3. Companies may have contracts with the government for which reimbursement is based on rent expense, which may change the compensation agreement.
4. Debt covenants might require revisions.

Given the pervasiveness and magnitude of the changes, it is not surprising that the FASB is permitting an extended implementation window to allow companies and users of financial statements to adapt to the new standard.

Evolving Issue Bring It On!

As discussed in the opening story, the lease accounting rules will bring a significant amount of lease-related assets and liabilities onto lessee balance sheets. Recent estimates for the largest 100 U.S. companies put the number at over \$539 billion. Most agree this is a good result—applying the “right-of-use” model will result in reporting more relevant and representationally faithful information about leasing arrangements, which is a big win for investors and creditors. As the chairperson of the IASB remarked, “. . . a financing, in the

form of a loan to purchase an asset . . . then is recorded. Call it a lease and miraculously it does not show up in your books. In my book, if it looks like a duck, swims like a duck, and quacks like a duck, then it probably is a duck. So is the case with debt—leasing or otherwise.”

At the same time, an analysis of the new rules and how they might impact the advantages of leasing presented in the following table suggests that many of the advantages of leases will remain after implementation of the new rules.

| Reason for Leasing | Details | Status After Proposed New Rules Implemented |
|---|--|---|
| Funding source | Additional capital source, 100% financing, fixed rate, level payments, longer terms. | Still a major benefit versus a purchase—fixed rate, level payments—especially for smaller companies with limited sources of capital. |
| Low-cost capital | Low payments/rate due to tax benefits, residual and lessor's comparatively low cost of funds. | Still a benefit versus a loan. |
| Tax benefits | Lessee cannot use tax benefits and lease versus buy shows lease option offers lowest after tax cost. | Still a benefit. |
| Manage need for assets/ residual risk transfer | Lessee has flexibility to return asset. | Still a benefit. |
| Convenience | Quick and convenient financing process often available at point-of-sale. | Still a benefit. |
| Regulatory | Can help in meeting capital requirements. | Still a partial benefit if the capitalized amount is less than the cost of the asset as it is in many leases due to residuals assumed and tax benefits. |
| Accounting | Asset and liability off-balance-sheet. | Still a partial benefit if the capitalized amount is less than the cost of the asset as it is in many leases due to residuals assumed and tax benefits. |

Fernandes, “Leases on B/S from 2017? Retailers and Transport Will Be Hit Hard in Leverage Terms,” *Global Equity Research*, J.P. Morgan Securities (May 17, 2013).

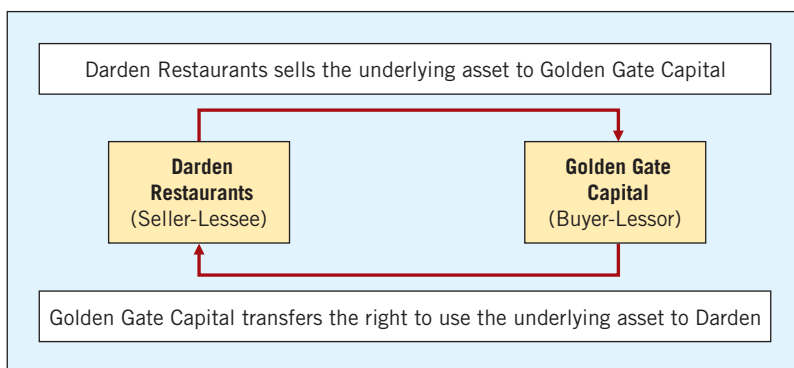

APPENDIX 21A

Sale-Leasebacks

LEARNING OBJECTIVE *5

Describe the lessee's accounting for sale-leaseback transactions.

In a **sale-leaseback** arrangement, a company (the seller-lessee) transfers an asset to another company (the buyer-lessor) and then leases that asset back from the buyer-lessor. For example, **Darden Restaurants** sold off its Red Lobster division to **Golden Gate Capital** (a private equity firm) for \$2.1 billion recently and then leased these restaurants back from Golden Gate Capital. This transaction is shown in **Illustration 21A.1**.

**ILLUSTRATION 21A.1**

Sale-Leaseback

Why do companies like Darden Restaurants engage in sale-leaseback transactions? Some major reasons are:

1. Darden can use the cash that otherwise would be tied up in property to expand its operations. At the same time, it continues to use the property through the lease term.
2. Darden can structure the lease arrangement so issues such as repurchase provisions, refinancing issues, and conventional financing costs are minimized.
3. Darden may receive a tax advantage because entire rental payments are tax-deductible, whereas under a conventional financing, only interest and depreciation can be deducted. If the lease has a significant land component (land is not depreciable) or if the fair value of the property is much greater than the carrying value of the property (depreciation limited to cost of property), then the sale lease-back arrangement generally reduces tax payments.

The advantages to Golden Gate Capital (buyer-lessor) are that it generally can earn a higher rate of return under a sale-leaseback than under traditional financing. In addition, during the lease term, Golden Gate is protected from a downturn in the real estate market and may have an inflation hedge, provided the property appreciates in value.

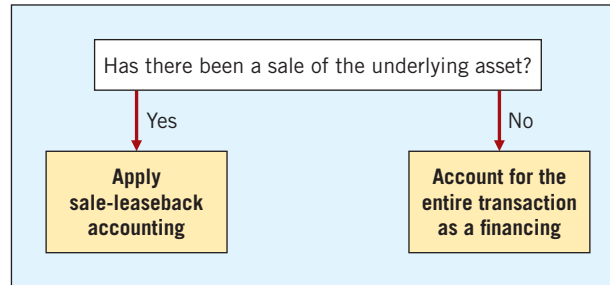

Sale-leasebacks are common and the dollar amounts related to these transactions are significant (approximately \$15 billion per year). Financial institutions (e.g., **Bank of America** and **First Chicago**) have used this technique for their administrative offices, public utilities (e.g., **Ohio Edison** and **Pinnacle West Corporation**) for their generating plants, and airlines (such as **Alaska Air Group**) for their aircraft.

Accounting Issues in Sale-Leaseback Transactions

When Darden transferred the Red Lobster restaurants to Golden Gate Capital and then leased them back, the accounting issue is whether the transaction is a sale or a financing. To determine whether it is a sale, revenue recognition guidelines are used. That is, if control has

passed from seller to buyer, then a sale has occurred. Conversely, if control has not passed from seller to buyer, the transaction is recorded as a financing (often referred to as a failed sale). [20] **Illustration 21A.2** highlights these two approaches.

ILLUSTRATION 21A.2
Sale-Leaseback Accounting

Sale Transaction

As indicated, if Darden (seller-lessee) **gives up control** of the Red Lobster restaurants, the transaction is a sale. In a sale, **gain or loss recognition** is appropriate. Darden then records the transaction as follows.

1. Increases cash and reduces the carrying value of the asset to zero (referred to as derecognizing the asset).
2. Recognizes a gain or loss as appropriate.
3. Accounts for the leaseback in accordance with lease accounting guidance used in this chapter.

For example, assume that **Scott Paper** sells one of its buildings having a carrying value of \$580,000 (building \$800,000 less accumulated depreciation \$220,000) to **General Electric** for \$623,110. It then leases the building back from General Electric for \$50,000 a year, for eight of the building's 15 years of remaining economic life. Assume that the present value of these lease payments is equal to \$310,000, such that the lease is classified as an operating lease. Scott Paper makes the following entries to record the sale-leaseback.

| | | |
|---|---------|---------|
| Cash | 623,110 | |
| Accumulated Depreciation—Buildings | 220,000 | |
| Buildings | | 800,000 |
| Gain on Disposal of Plant Assets ($\$623,110 - \$580,000$) | | 43,110 |

In addition, Scott makes an entry to record the operating lease from General Electric as follows.

| | | |
|--------------------|---------|---------|
| Right-of-Use Asset | 310,000 | |
| Lease Liability | | 310,000 |

Underlying Concepts

A sale-leaseback under a financing transaction is similar in substance to the parking of inventories (discussed in Chapter 8). The ultimate economic benefits remain under the control of the “seller-lessee,” so revenue (gain) should not be recognized.

Financing Transaction (Failed Sale)

Scott Paper does not record a sale in the above transaction if the lease from General Electric is classified as a finance lease. The reason: if any of the lease classification tests are met, Scott, not General Electric, controls (owns) the asset. If Scott **continues to control the building, it should not record a sale nor recognize a gain or loss** on the transaction (see **Underlying Concepts**). In essence, Scott Paper is borrowing money from General Electric (often referred to as a financing or a **failed sale**). In a financing (failed sale), Scott:

- Does not reduce the carrying value of the building.
- Continues to depreciate the building as if it was the legal owner.
- Recognizes the sale proceeds from General Electric as a financial liability.

The entry to record the financing is as follows.

| | | |
|---------------|---------|---------|
| Cash | 623,110 | |
| Notes Payable | | 623,110 |

Sale-Leaseback Example

To illustrate the accounting treatment accorded a sale-leaseback transaction over the lease term, assume that **American Airlines** on January 1, 2020, sells a used, standard-design Boeing 757 having a carrying amount on its books of \$30,000,000 to **CitiCapital** for \$33,000,000. American immediately leases the aircraft back under the following conditions.

- The term of the lease is seven years. The lease agreement is non-cancelable, requiring equal rental payments of \$4,881,448 at the end of each year (ordinary annuity basis), beginning December 31, 2020.
- The lease contains no renewal or purchase options. The plane reverts to CitiCapital at the termination of the lease.
- The aircraft has a fair value of \$33,000,000 on January 1, 2020, and an estimated remaining economic life of 10 years. The residual value (unguaranteed) at the end of the lease is \$13,000,000.
- The annual payments assure the lessor an 8 percent return (which is the same as American's incremental borrowing rate).

Applying the classification tests, the lease-back of the airplane is classified as an operating lease because none of the sales-type lease criteria are met, as indicated in **Illustration 21A.3**.

| Test | Assessment |
|---|---|
| 1. Transfer of ownership test | Transfer of ownership does not occur; the asset reverts to CitiCapital at the end of the lease. |
| 2. Purchase option test | There is no purchase option in the lease. |
| 3. Lease term test | The lease term is 70 percent ($7 \div 10$) of the remaining economic life of the asset, which is less than the major part of the life of the asset (75 percent). |
| 4. Present value test | The present value of the lease payments is \$25,414,625*, which is 77 percent ($\$25,414,625 \div \$33,000,000$) of the fair value of the aircraft, or less than 90 percent. Therefore, the lease does not meet the present value test. |
| 5. Alternative use test | As indicated, the equipment is not of a specialized nature and is expected to have use to CitiCapital when returned at the end of the lease. |
| * $\$4,881,448 \times 5.20637$ ($PVF-OA_{7,8\%}$) | |

ILLUSTRATION 21A.3

Lease Classification Tests

Thus, this arrangement is accounted for as a sale, rather than a failed sale, because the leaseback does not transfer control of the asset back to American; that is, only the right-of-use for seven years is granted through the lease. **Illustration 21A.4** presents the typical journal entries to record the sale-leaseback transactions for American and CitiCapital for the first two years of the lease.

ILLUSTRATION 21A.4 Comparative Entries for Sale-Leaseback for Lessee and Lessor

| <u>American Airlines (Lessee)</u> | | <u>CitiCapital (Lessor)</u> | | |
|---|--|--|--|--|
| Sale of aircraft by American to CitiCapital (January 1, 2020): | | | | |
| Cash | 33,000,000 | Aircraft | 33,000,000 | |
| Gain on Disposal of Plant Assets | 3,000,000 | Cash | 33,000,000 | |

| Jan. 2020 | | | | \$25,414,625 |
| Dec. 2020 | \$4,881,448 | \$ 2,033,170 | \$2,848,278 | 22,566,347 |
| Dec. 2021 | 4,881,448 | 1,805,308 | 3,076,140 | 19,490,207 |

As indicated, under the operating method, American amortizes the lease liability and right-of-use asset, resulting in straight-line expense recognition. CitiCapital (the buyer-lessor) continues to recognize the asset on its balance sheet and recognizes equal amounts of rental revenue (straight-line basis) in each period. It **depreciates the leased asset generally on a straight-line basis.**

APPENDIX 21B

Direct Financing Lease (Lessor)

LEARNING OBJECTIVE *6

Describe the lessor's accounting for a direct financing lease.

Lessors account for a lease as a sales-type lease if the lease transfers control of the underlying asset to the lessee, based on meeting one of the lease classification tests presented in Illustration 21.2. Leases that do not meet any of the classification tests are generally recorded as operating leases. However, lessors use a third lease classification—a **direct financing lease**—in one special situation. This situation occurs when the lessor **relinquishes control of the asset** to the lessee but there is also involvement of a third party. [21] This situation is common when a third-party residual value guarantee is involved. **Illustration 21B.1** illustrates the decision process for direct financing lease classification.

ILLUSTRATION 21B.1 Direct Financing Lease Classification

For example, in the Josway/Traylor compactor lease, both parties classified the lease as an operating lease because none of the transfer of control criteria were met. A condition of that agreement was that the residual value was not guaranteed by the lessee. It turns out that if the residual value was guaranteed by Traylor, the 90% test would be met and Josway and Traylor would account for this lease as a finance (sales-type) lease. However if Josway (the lessor) obtains the **residual value guarantee from a third party, Josway (the lessor) classifies the lease as a direct financing lease, not a sales-type lease.**²⁰

Direct Financing Lease Accounting

The basic difference between a direct financing lease and a sales-type lease relates to the profit on the sale. In a sales-type lease, the profit is recognized immediately. **In a direct financing lease, the profit is deferred and recognized over the life of the lease.**²¹

²⁰For classification as a direct financing lease, it must be probable that the lessor will collect the lease payments and any amounts related to the residual value guarantee(s).

²¹Losses at commencement of a direct financing lease are recognized immediately. [22]

This accounting—with no selling profit recognized at the commencement of a direct financing lease—aligns with revenue recognition criteria because the lease does not transfer complete control of the underlying asset to the lessee. However, the lessor transfers substantially all the risks and rewards of ownership through the right-of-use of the underlying asset to one or more third parties. That is, in a direct financing lease, **the presence of a third-party guarantee effectively converts the lessor’s risk arising from the underlying asset into a credit risk**. Given that the lessor now has credit risk, the FASB concluded that the lessor should not be permitted to recognize gross profit on the lease at the commencement of the lease. Instead, the lessor should defer the profit and recognize this profit over the life of the lease arrangement.²² [23]

Direct Financing Lease Example

Assume that Ormand Company (the lessor) enters into a lease agreement with **Amazon.com** for the use of one of Ormand’s standard motorized warehouse package pickers. Information relevant to the lease is as follows.

- The lease commencement date is January 1, 2020, with a term of three years. The lease agreement is non-cancelable, requiring equal rental payments at the end of each year (ordinary annuity).
- The picker has a fair value at commencement of the lease of \$30,000 and a carrying value of \$28,000, with an estimated residual value of \$6,000 at the end of the lease. The picker has an estimated economic life of five years. Amazon provides a **guarantee that the residual value of the picker will be at least \$6,000 at the end of the lease**.
- The lease contains no renewal options, and the picker reverts to Ormand at the termination of the lease.
- Ormand sets the annual rental rate to earn a rate of return of 6 percent per year (implicit rate) on its investment, as shown in **Illustration 21B.2**.

ILLUSTRATION 21B.2 Computation of Lease Payments

| | |
|---|---------------------------|
| Fair value of leased equipment | \$30,000.00 |
| Less: Present value of the residual value (\$6,000 × .83962 (PVF _{3,6%})) | 5,037.72 |
| Amount to be recovered by lessor through lease payments | <u>\$24,962.28</u> |
| Three end-of-year lease payments to earn a 6% return (\$24,962.28 ÷ 2.67301 (PVF-OA_{3,6%})) | <u><u>\$ 9,338.64</u></u> |

Evaluation of the classification tests, based on these facts, indicates that this lease is classified as a sales-type lease for Ormand because the present value test is met, as indicated in **Illustration 21B.3**.

Note that the residual value guarantee is provided by the lessee and therefore is included in the lease payments used in the present value test for classification purposes. Ormand accounts for the lease as a sale-type lease, recording a lease receivable and reducing the carrying value of the underlying asset (Inventory) to zero.

For a sales-type lease, Ormand makes the following journal entry at the beginning of the lease.

| | | |
|--------------------|--------|--------|
| Lease Receivable | 30,000 | |
| Cost of Goods Sold | 28,000 | |
| Sales Revenue | | 30,000 |
| Inventory | | 28,000 |

²²In addition, lessor initial direct costs are deferred and amortized over the life of the lease.

ILLUSTRATION 21B.3**Lease Classification Tests**

| Test | Assessment |
|--------------------------------------|---|
| 1. Transfer of ownership test | Transfer of ownership does not occur; the asset reverts to Ormand at the end of the lease. |
| 2. Purchase option test | There is no purchase option in the lease. |
| 3. Lease term test | The lease term is 60 percent ($3 \div 5$) of the economic life of the asset, which is less than the major part of the life of the asset (75 percent). |
| 4. Present value test | The present value of the lease payments is \$30,000.00*, which is 100 percent ($\$30,000 \div \$30,000$, which is greater than or equal to 90 percent) of the fair value of the picker. Therefore, the lease meets the present value test. |
| 5. Alternative use test | As indicated, the equipment is not of a specialized nature and is expected to have use to Ormand when returned at the end of the lease. |

| | |
|--|--------------------|
| *Present value of rental payments plus residual value guarantee discounted at 6%: | |
| Present value of five annual rental payments ($\$9,338.64 \times 2.67301$ ($PVF_{3,6\%}$)) | \$24,962.28 |
| Present value of guaranteed residual value of \$6,000 at end of the lease ($\$6,000 \times .83962$ ($PVF_{3,6\%}$)) | 5,037.72 |
| | <u>\$30,000.00</u> |

On January 1, 2020, Ormand therefore reports gross profit on the sale of the package picker of \$2,000 ($\$30,000 - \$28,000$). In subsequent periods, Ormond reduces the lease receivable by the payments received and recognizes interest revenue using the 6 percent implicit rate.

On the other hand, if the residual value is **guaranteed by an unrelated third party, the lessor classifies the lease as a direct financing lease.** Ormond uses the direct financing method because, as discussed earlier, the lessor still maintains some control of the asset. That is, as a result of a third-party guarantee, the lessor does not effectively transfer all risks and rewards (control) of the underlying asset (until all residual value guarantees are satisfied). In this situation, and consistent with other revenue recognition concepts, sales revenue and related cost of goods sold are not recognized. Instead Ormond recognizes a deferred gross profit of \$2,000, which is the difference between the fair value of the property (\$30,000) and the carrying amount of the asset (\$28,000). This deferred gross profit reduces the lease receivable in the lease, as shown in **Illustration 21B.4** for the Ormand/Amazon lease.

| | | | | |
|--|---|---------|---|-----------------|
| Lease Receivable – Deferred Gross Profit = Net Lease Receivable | | | | |
| \$30,000 | – | \$2,000 | = | \$28,000 |

ILLUSTRATION 21B.4**Net Investment, Direct Financing Lease**

On January 1, 2020, Ormond makes the following entry to record the direct financing lease.

| January 1, 2020 | | | |
|-----------------------|--|--------|--------|
| Lease Receivable | | 30,000 | |
| Deferred Gross Profit | | | 2,000 |
| Inventory | | | 28,000 |

Subsequent accounting for the direct financing lease is based on a discount rate that will amortize the net lease receivable to zero over the life of the lease. That is, in a direct financing lease, the rate used to amortize the lower net lease receivable (lease receivable less deferred gross profit) will be higher. This results because the rate includes interest revenue on the lease receivable and revenue from amortizing deferred gross profit. In other words, consider the following.

1. In a normal sale, Ormand would receive lease payments over the life of the lease which, on a present value basis, equals the lease receivable of \$30,000 (a 6% rate of return). Interest on the lease receivable over the life of the lease is therefore \$4,015.92. This computation is shown in **Illustration 21B.5.**

ILLUSTRATION 21B.5
Sale-Type Lease Amortization

| Ormand Company | | | | |
|---|----------------------------|--------------------------------|-------------------------------------|---------------------|
| Sales-Type Lease Amortization Schedule | | | | |
| Ordinary Annuity Basis | | | | |
| Date | Annual Lease Payment | Interest (6%) on Receivable | Reduction of Lease Receivable | Lease Receivable |
| | (a) | (b) | (c) | (d) |
| 1/1/20 | | | | \$30,000.00 |
| 12/31/20 | \$ 9,338.64 | \$1,800.00 | \$ 7,538.64 | 22,461.36 |
| 12/31/21 | 9,338.64 | 1,347.68 | 7,990.96 | 14,470.40 |
| 12/31/22 | 9,338.64 | 868.24* | 8,470.40 | 6,000.00 |
| 12/31/23 | 6,000.00 | 0- | 6,000.00 | 0.00 |
| | <u>\$34,015.92</u> | <u>\$4,015.92</u> | <u>\$30,000.00</u> | |

(a) Lease payment as required by lease.
 (b) 6 percent of the preceding balance of (d).
 (c) (a) minus (b).
 *Rounded by \$0.02.

2. In a direct financing arrangement, Ormand receives the same lease payments, which on a present value basis equals \$28,000 (a 9.5% rate of return).²³ This computation is shown in **Illustration 21B.6**.

ILLUSTRATION 21B.6
Direct Financing Lease Amortization

| Ormand Company | | | | |
|---|----------------------------|----------------------------------|---|----------------------------|
| Direct Financing Lease Amortization Schedule | | | | |
| Ordinary Annuity Basis | | | | |
| Date | Annual Lease Payment | Interest (9.5%) on Receivable | Reduction of Net Lease Receivable | Net Lease Receivable |
| | (a) | (b) | (c) | (d) |
| 1/1/20 | | | | \$28,000.00 |
| 12/31/20 | \$ 9,338.64 | \$2,660.00 | \$ 6,678.64 | 21,321.36 |
| 12/31/21 | 9,338.64 | 2,025.53 | 7,313.11 | 14,008.25 |
| 12/31/22 | 9,338.64 | 1,330.39* | 8,008.25 | 6,000.00 |
| 12/31/23 | 6,000.00 | | 6,000.00 | 0.00 |
| | <u>\$34,015.92</u> | <u>\$6,015.92</u> | <u>\$28,000.00</u> | |

(a) Lease payment as required by lease.
 (b) 9.5 percent of the preceding balance of (d).
 (c) (a) minus (b).
 (d) Preceding balance minus (c).
 *Rounded by \$0.39

As shown in Illustration 21B.6, Ormand then records Lease Revenue based on a discount rate of 9.5 percent applied to the net lease receivable balance. In this case, the revenue on the lease receivable is \$6,015.92, which is \$2,000 (\$6,015.92 – \$4,015.92) higher than under Illustration 21B.5. The difference results because the total lease revenue each year of the lease is comprised of interest revenue on the lease receivable plus the recognition of a portion of

²³The 9.5% rate is determined through trial and error or with a financial calculator to arrive at a discount rate for present values of the residual value (single sum) and payments (annuity), such that the net lease receivable, including the deferred gross profit, is amortized to zero (given the lease payments, as computed on the lease receivable of \$30,000 and a 6% rate).

deferred gross profit. Ormand makes the following entry in 2020, based on the amounts presented in Illustration 21B.6.²⁴

| December 31, 2020 | | |
|---|--|----------|
| Cash | | 9,338.64 |
| Deferred Gross Profit (\$2,660 – \$1,800) | | 860.00 |
| Lease Revenue | | 2,660.00 |
| Lease Receivable | | 7,538.64 |

Ormand reports the following information related to the direct financing lease at December 31, 2020, either in the balance sheet or notes to the financial statements, as shown in **Illustration 21B.7**.

| <u>Leases</u> | |
|---|-------------|
| Lease receivable (\$30,000.00 – \$7,538.64) | \$22,461.36 |
| Less: Deferred gross profit (\$2,000 – \$860) | 1,140.00 |
| Net lease receivable | \$21,321.36 |

ILLUSTRATION 21B.7

Direct Financing Lease Balances

Ormand makes the following entries for payments in 2021 and 2022.

| December 31, 2021 | | |
|---|--|----------|
| Cash | | 9,338.64 |
| Deferred Gross Profit (\$2,025.53 – \$1,347.68) | | 677.85 |
| Lease Revenue | | 2,025.53 |
| Lease Receivable | | 7,990.96 |

| December 31, 2022 | | |
|---|--|----------|
| Cash | | 9,338.64 |
| Deferred Gross Profit (\$1,330.39 – \$868.24) | | 462.15 |
| Lease Revenue | | 1,330.39 |
| Lease Receivable | | 8,470.40 |

After the entry on December 31, 2022, to recognize interest revenue, Lease Receivable has a balance of \$6,000, which equals the guaranteed residual value (the deferred gross profit has been fully amortized).

Assuming the underlying asset has a fair value of \$6,000 at the end of the lease, Ormand makes the following entry.²⁵

| December 31, 2022 | | |
|--------------------------|--|----------|
| Inventory | | 6,000.00 |
| Lease Receivable | | 6,000.00 |

²⁴The reduction in deferred gross profit each year equals the difference in yearly amounts of interest revenue at 6% and 9.5%, as shown in column (b) of Illustrations 21B.5 and Illustration 21B.6, as indicated in the following table.

| Date | Interest (6%) on Receivable | Lease Revenue (9.5%) | Reduction in Deferred Gross Profit | Deferred Gross Profit Balance |
|----------|--------------------------------|-------------------------|---------------------------------------|-------------------------------------|
| | (a) | (b) | (b) – (a) | |
| 1/1/20 | | | | \$2,000.00 |
| 12/31/20 | \$1,800.00 | \$2,660.00 | \$860.00 | 1,140.00 |
| 12/31/21 | 1,347.68 | 2,025.53 | 677.85 | 462.15 |
| 12/31/22 | 868.24 | 1,330.39 | 462.15 | 0 |

A Lease Revenue account is used because both deferred gross profit and interest are recognized.

²⁵If the fair value of the leased asset is less than \$6,000—e.g., \$5,000 upon return—Ormand receives \$1,000 from the third-party guarantor to compensate for the decline in the value of the asset below the guaranteed residual value. If the asset returned has a fair value in excess of \$6,000, Ormand records the asset at the carrying amount of the residual value, and the gain is unrealized until the asset is sold.

APPENDIX 21C

Comprehensive Examples

LEARNING OBJECTIVE *7

Apply lessee and lessor accounting to finance and operating leases.

This appendix presents a comprehensive illustration of lessee and lessor accounting for a lease arrangement when classified as a finance/sales-type or operating lease.

Lease Terms: Scenario 1

Parker Shipping Co. (lessee) leases a standard hydraulic lift from Stoughton Trailers Inc. (the lessor) that will be installed at one of Parker's loading docks. The lease, signed on January 1, 2020, specifies that Stoughton grants right-of-use of the lift to Parker under the following terms:

- The lease agreement is non-cancelable with a term of four years, requiring equal rental payments of \$11,182.24 at the beginning of each year of the lease (annuity-due basis).
- The lift has a fair value at commencement of the lease of \$40,000, an **estimated economic life of four years, and no residual value**. The cost of the lift on Stoughton's books is \$30,000.
- The lease contains no renewal options. The lift reverts to Stoughton at the termination of the lease.
- The implicit rate of the lessor is 8 percent and is known by Parker. Stoughton sets the annual rental as shown in **Illustration 21C.1**.

ILLUSTRATION 21C.1

Lease Payment Calculation

| | |
|--|--------------------|
| Fair value of leased equipment | \$40,000.00 |
| Less—present value of the residual value | 0.00 |
| Amount to be recovered by lessor through lease payments | <u>\$40,000.00</u> |
| Four beginning-of-year lease payments to earn an 8% return ($\$40,000 \div 3.57710$ (PVF-AD _{4,8%})) | <u>\$11,182.24</u> |

Lease Classification

The lease is classified as a finance/sales-type lease by Parker/Stoughton, as indicated by the analysis in **Illustration 21C.2**.

ILLUSTRATION 21C.2

Lease Classification Tests

| Test | Assessment |
|--------------------------------------|--|
| 1. Transfer of ownership test | Transfer of ownership does not occur; the asset reverts to Stoughton at the end of the lease. |
| 2. Purchase option test | There is no bargain purchase option in the lease. |
| 3. Lease term test | The lease term is equal to the economic life of the asset (100 percent). Therefore, the lease meets the lease term test . |
| 4. Present value test | The present value of the lease payments is \$40,000*, which is 100 percent (greater than or equal to 90 percent) of the fair value of the hydraulic lift. Therefore, the lease meets the present value test . |
| 5. Alternative use test | As indicated, the hydraulic lift will be completely used up at the end of the lease; it will not have use to Stoughton at the end of the lease. |

* $\$11,182.24 \times 3.57710$ (PVF-AD_{4,8%}) = \$40,000.00

Thus, the lease is classified as a finance/sales-type lease due to meeting the lease term, present value, and alternative use tests (any one is sufficient).

Accounting for Finance Lease

The accounting for the lease liability (Parker) and lease receivable (Stoughton) is based on the amounts reported in the amortization schedule presented in **Illustration 21C.3**.²⁶

| Parker Shipping/Stoughton Trailers | | | | |
|---|----------------------|---------------------------------------|---|----------------------------|
| Lease Amortization Schedule | | | | |
| Annuity-Due Basis | | | | |
| Date | Annual Lease Payment | Interest (8%) on Liability/Receivable | Reduction of Lease Liability/Receivable | Lease Liability/Receivable |
| | (a) | (b) | (c) | (d) |
| 1/1/20 | | | | \$40,000.00 |
| 1/1/20 | \$11,182.24 | \$ - | \$11,182.24 | 28,817.76 |
| 1/1/21 | 11,182.24 | 2,305.42 | 8,876.82 | 19,940.94 |
| 1/1/22 | 11,182.24 | 1,595.28 | 9,586.96 | 10,353.98 |
| 1/1/23 | 11,182.24 | 828.26* | 10,353.98 | 0.00 |
| | <u>\$44,728.96</u> | <u>\$4,728.96</u> | <u>\$40,000.00</u> | |

(a) Lease payment as required by lease.
 (b) 8 percent of the preceding balance of (d) except for 1/1/20; since this is an annuity due, no time has elapsed at the date of the first payment and therefore no interest has accrued.
 (c) (a) minus (b).
 (d) Preceding balance minus (c).
 *Rounded by \$0.06.

ILLUSTRATION 21C.3

Lease Liability Amortization Schedule

Entries for Parker (lessee) and Stoughton (lessor) over the life of the lease are presented in **Illustration 21C.4**, based on the amounts reported in the amortization schedule in Illustration 21C.3.

ILLUSTRATION 21C.4 Lessee/Lessor Entries for Finance/Sales-Type Lease

| Parker Shipping (Lessee) | | | | Stoughton Trailers (Lessor) | | | |
|---|-------------|----------------------|-------------|------------------------------------|-------------|--------------------|-------------|
| Lease commencement/first payment (January 1, 2020): | | | | | | | |
| Right-of-Use Asset | | 40,000.00 | | Lease Receivable | | 40,000.00 | |

Lease Terms: Scenario 2

Now consider the following revised terms of the lease between Parker Shipping Co. and Stoughton Trailers Inc. for the right-of-use of a hydraulic lift. The lease, signed on January 1, 2020, specifies that Stoughton grants right-of-use of the lift to Parker under the following terms.

- The lease agreement is non-cancelable with a term of four years, requiring equal rental payments of \$9,538.39 with the first payment on January 1, 2020 (annuity-due basis).
- The lift has a fair value at commencement of the lease of \$40,000, an estimated **economic life of six years**. The lift has a **residual value** at the end of the lease of **\$8,000 (unguaranteed)**. The cost of the lift on Stoughton's books is \$30,000.

- The lease contains no renewal options. The lift reverts to Stoughton at the termination of the lease.
- The implicit rate of Stoughton (the lessor) is 8 percent and is known by Parker.

Stoughton determines the rental payments such that it earns a rate of return of 8 percent per year (implicit rate) on its investment, as shown in **Illustration 21C.5**.

| | |
|---|--------------------|
| Fair value of leased equipment | \$40,000.00 |
| Less: Present value of the residual value (\$8,000 × .73503(PV _{4,8%})) | 5,880.24 |
| Amount to be recovered by lessor through lease payments | <u>\$34,119.76</u> |
| Four beginning-of-year lease payments to earn an 8% return ($\$34,119.76 \div 3.57710$ (PVF-AD _{4,8%})) | <u>\$ 9,538.39</u> |

ILLUSTRATION 21C.5
Computation of Lease Payments

Lease Classification

The lease is classified as an operating lease by Parker and Stoughton, as indicated by the analysis in **Illustration 21C.6**.

| Test | Assessment |
|--------------------------------------|---|
| 1. Transfer of ownership test | Transfer of ownership does not occur; the asset reverts to Stoughton at the end of the lease. |
| 2. Purchase option test | There is no bargain purchase option in the lease. |
| 3. Lease term test | The lease term is 66.67 percent (4 ÷ 6) of the economic life of the asset, which is less than the major part of the life of the asset (75 percent). |
| 4. Present value test | The present value of the lease payments is \$34,119.76*, which is 85.3 percent ($\$34,119.76 \div \$40,000$) of the fair value of the lift. Therefore, it does not meet the present value test. |
| 5. Alternative use test | As indicated, the equipment is not of a specialized nature and is expected to have use to Stoughton when returned at the end of the lease. |

* $\$9,538.39 \times 3.57710$ (PVF-AD_{4,8%})

ILLUSTRATION 21C.6
Lease Classification Tests

Thus, the lease is classified as an operating lease by both the lessee and lessor, as none of the classification tests are met.

Lessee Accounting—Operating Lease

Parker makes the following entry to record this operating lease and the first payment.

| January 1, 2020 | | |
|--|-----------|-----------|
| Right-of-Use Asset | 34,119.76 | |
| Lease Liability | | 34,119.76 |
| (To record right-of-use asset and related liability) | | |
| Lease Liability | 9,538.39 | |
| Cash | | 9,538.39 |
| (To record first payment) | | |

Illustration 21C.7 shows the interest expense and amortization of the lease liability, applying the effective-interest method.

ILLUSTRATION 21C.7
Lease Amortization Schedule

| Parker Shipping Co. | | | | |
|------------------------------------|-------------------------|-------------------------------|---------------------------------|--------------------|
| Lease Amortization Schedule | | | | |
| Annuity-Due Basis | | | | |
| Date | Annual Lease Payment | Interest (8%) on Liability | Reduction of Lease Liability | Lease Liability |
| | (a) | (b) | (c) | (d) |
| 1/1/20 | | | | \$34,119.76 |
| 1/1/20 | \$ 9,538.39 | \$ -0- | 9,538.39 | 24,581.37 |
| 1/1/21 | 9,538.39 | 1,966.51 | 7,571.88 | 17,009.49 |
| 1/1/22 | 9,538.39 | 1,360.76 | 8,177.63 | 8,831.86 |
| 1/1/23 | 9,538.39 | 706.53* | 8,831.86 | 0.00 |
| | <u>\$38,153.56</u> | <u>\$4,033.80</u> | <u>\$34,119.76</u> | |

(a) Lease payment as required by lease.
 (b) 8 percent of the preceding balance of (d) except for 1/1/20; since this is an annuity due, no time has elapsed at the date of the first payment and therefore no interest has accrued.
 (c) (a) minus (b).
 (d) Preceding balance minus (c).
 *Rounded by \$0.02.

Parker computes straight-line expense and amortization on its right-of-use asset for each year of the lease, as presented in **Illustration 21C.8**.

ILLUSTRATION 21C.8
Lease Expense Schedule

| Parker Shipping Co. | | | | |
|-------------------------------|---|---|--|--|
| Lease Expense Schedule | | | | |
| Date | (A) Lease Expense (Straight-Line) | (B) Interest (8%) on Liability | (C) Amortization of ROU Asset (A – B) | (D) Carrying Value of ROU Asset (D – C) |
| 12/31/19 | | | | \$34,119.76 |
| 12/31/20 | \$ 9,538.39 | \$1,966.51 | \$ 7,571.88 | 26,547.88 |
| 12/31/21 | 9,538.39 | 1,360.76 | 8,177.63 | 18,370.25 |
| 12/31/22 | 9,538.39 | 706.53 | 8,831.86 | 9,538.39 |
| 12/31/23 | 9,538.39 | | 9,538.39 | 0.00 |
| | <u>\$38,153.56</u> | <u>\$4,033.80</u> | <u>\$34,119.76</u> | |

As indicated, the annual lease expense equals interest related to amortizing its lease liability plus amortization of the right-of-use asset. Parker decreases the right-of-use asset's book value each year by an amount (a plug) such that total annual lease expense is \$9,538.39. The journal entries by Parker over the life of the lease are presented in **Illustration 21C.9**.

After the entry for the final payment on December 31, 2023, the lease liability and right-of-use asset are fully amortized. The lease expense for the four years (\$38,153.56) is comprised of amortization of the right of-use asset of \$34,119.76 plus interest associated with the amortization of the lease liability of \$4,033.80. Parker combines interest on the liability and amortization of the right-of-use asset to report lease expense on the income statement over the life of the lease.

Lessor Accounting—Operating Lease

As shown in the evaluation of the classification tests in Illustration 21C.6, Stoughton classifies the lease as an operating lease because none of the sales-type lease criteria are met. Stoughton's entries throughout the lease are presented in **Illustration 21C.10**.

ILLUSTRATION 21C.10

Lessor Entries for Operating Lease

| Stoughton Trailers (Lessor) | | |
|--|----------|----------|
| Lease payments (January 1, 2020, 2021, 2022, 2023): | | |
| Cash | 9,538.39 | |
| Unearned Revenue | | 9,538.39 |
| Recognize lease revenue, record depreciation (December 31, 2020, 2021, 2022, 2023): | | |
| Unearned Revenue (leases) | 9,538.39 | |
| Lease Revenue | | 9,538.39 |
| Depreciation Expense (\$30,000 ÷ 6) | 5,000 | |
| Accumulated Depreciation—Equipment | | 5,000 |

Under the operating method, Stoughton (the lessor) continues to recognize the asset on its balance sheet and recognizes equal amounts of rental revenue (straight-line basis) in each period. It depreciates the leased asset generally on a straight-line basis over the asset's remaining economic life. In addition to the depreciation charge, Stoughton reports lease revenue separately from other revenues in its income statement or notes to its financial statements. A lessor should classify the leased equipment and accompanying accumulated depreciation separately from plant assets it owns as Equipment Leased to Others or Investment in Leased Property.

Learning Objectives Review

1 Describe the environment related to leasing transactions.

A lease is a contract that conveys the right to control the use of identified property, plant, or equipment (an identified asset) for a period

of time in exchange for consideration. The advantages of lease transactions for lessees are (1) 100 percent financing, (2) protection against obsolescence, (3) flexibility, and (4) less costly financing. Lessors leasing benefits relate to (1) profitable interest margins, (2) stimulation of product sales, (3) tax benefits and efficient tax sharing, and (4) residual value profits. Lessees classify a lease as a finance lease if it meets one

or more of the following tests: (1) the lease transfers ownership of the property to the lessee, (2) the lease contains an option to purchase the underlying asset that the lessee is reasonably certain to exercise, (3) the lease term is a major part (75%) of the remaining economic life of the underlying asset, (4) the present value of the lease payments equals or exceeds substantially all (90%) of the underlying asset's fair value, and (5) the lessor does not have an alternative use for the asset at the end of the lease. Lessors evaluate the same tests as lessees to determine the classification of a lease as sales-type or operating.

2 Explain the accounting for finance leases.

For a finance/sales-type lease, the lessee records a right-of-use asset and related liability at the commencement of the lease. The lessee recognizes interest expense on the lease liability over the life of the lease using the effective-interest method and records amortization expense on the right-of-use asset. The lessor determines the lease payments, based on the rate of return—the implicit rate—needed to justify leasing the asset, taking into account the credit standing of the lessee, the length of the lease, and the status of the residual value (guaranteed versus unguaranteed). For a sales-type lease, the lessor accounts for the lease in a manner similar to the sale of an asset. At lease commencement, the lessor takes the asset off the books and records a receivable equal to the present value of the lease payments. Any dealer or manufacturer selling profit on the transfer of the leased asset is recognized in income at commencement of the lease. The lessor recognizes interest revenue on the lease receivable over the life of the lease using the effective-interest method.

3 Explain the accounting for operating leases.

In an operating lease, a lessee obtains control of only **the use of the underlying asset but not ownership of the underlying asset itself**. Lessees and lessors classify and account for all leases that fail to meet all of the five classification tests as operating leases. Lessees account for operating leases using the straight-line, single-lease cost approach. Lease expense is recorded using the straight-line approach for operating leases. To achieve a single operating cost that is constant from period to period, companies continue to use the effective-interest method for amortizing the lease liability. However, instead of reporting interest expense, a lessee reports interest on the lease liability as part of Lease Expense. In addition, the lessee no longer reports amortization expense related to the right-of-use asset. Instead, it “plugs” in an amount that increases the Lease Expense account so that it is the same amount from period to period. This plugged amount then reduces the right-of-use asset, such that both the right-of-use asset and the lease liability are amortized to zero at the end of the lease. Under the operating method, lessors continue to recognize the asset on the balance sheet and record equal amounts of lease revenue (straight-line basis) in each period. It depreciates the leased asset generally on a straight-line basis.

4 Discuss the accounting and reporting for special features of lease arrangements.

The features of lease arrangements that cause unique accounting problems are (1) residual values, (2) other lease adjustments (including initial direct costs), (3) bargain purchase options, (4) short-term leases (lessee), and (5) presentation, disclosure, and analysis.

The Effect of Residual Values, Guaranteed and Unguaranteed. In setting the lease payments, lessors work under the assumption that the residual value at the end of the lease term will be realized whether guaranteed or unguaranteed. This ensures that the lessor will recover the same net investment whether the residual value is guaranteed or unguaranteed. Whether the estimated residual value is guaranteed or unguaranteed is of both economic and accounting consequence to the lessee. The accounting consequence is that the lease payments, the basis for classification, include the guaranteed residual value but exclude the unguaranteed residual value. For measuring the lessee's lease liability and right-of-use asset, however, only the amount of the guaranteed residual value that is probable to be paid under the guarantee is included in the lease payments to be capitalized. In effect, the guaranteed residual value is an additional lease payment that the lessee will pay in property or cash, or both, at the end of the lease term. An unguaranteed residual value from the lessee's viewpoint is the same as no residual value in terms of its effect upon the lessee's method of computing the lease payments and the capitalization of the leased asset and the lease liability. See Illustration 21.28 for a summary.

Other Lease Adjustments. The lease liability is the starting point to determine the amount to record for the right-of-use asset. Companies adjust the measurement of the right-of-use asset as follows: (1) lease prepayments made by the lessee increase the right-of-use asset, (2) lease incentive payments made by the lessor to the lessee reduce the right-of-use asset, and (3) initial direct costs incurred by the lessee increase the right-of-use asset. Incremental costs of a lease that would not have been incurred had the lease not been executed are included in the cost of the right-of-use asset but should not be recorded as part of the lease liability. For operating leases, lessors defer initial direct costs and amortize them as expenses over the term of the lease. For sales-type leases, lessors generally expense initial direct costs at lease commencement. Lessor internal costs are not included in initial direct costs and are expensed as incurred.

Bargain Purchase Option. A bargain purchase option increases the present value of the lease payments by the present value of the option price for the lessee. In computing annual amortization of the right-of-use asset with this type of option, the lessee uses the economic life of the underlying asset.

Short-Term Leases. A short-term lease is a lease that, at the commencement date, has a lease term of 12 months or less. Rather than recording a right-of-use asset and lease liability, lessees may elect to forego recognition of a right-of-use asset and lease liability. If this election is taken, the lease payments are recognized in net income on a straight-line basis over the lease term. Variable lease payments for short-term leases should be recorded in the period in which the obligation for the payment is incurred.

Presentation, Disclosure, and Analysis. Presentation and disclosure by lessors and lessees of amounts related to leases vary depending on whether leases are classified as finance/sales-type or operating. See Illustrations 21.34 and 21.35 (presentation in the balance sheet and income statement) and Illustrations 21.36, 21.37, 21.38, and 21.39 (disclosures in the notes to the financial statements) for summaries of presentation and disclosure requirements. Expanded recognition of lease assets and liabilities under the new lease accounting rules have the potential to result in significant impacts on analysis, based on information in the financial statements. A number of financial metrics used to measure the profitability and solvency of companies (return on assets and debt to equity ratios) will change, which could create challenges when performing financial analysis.

***5 Describe the lessee's accounting for sale-leaseback transactions.**

In a sale-leaseback arrangement, a company (the seller-lessee) transfers an asset to another company (the buyer-lessor) and then leases that asset back from the buyer-lessor. If the leaseback is classified as a finance/sales-type lease, the sale is not recognized (referred to as a failed sale) because the seller-lessee continues to control the asset—the transaction is accounted for as a financing arrangement. If the leaseback is classified as an operating lease, sale-leaseback accounting is appropriate. Under sale-leaseback accounting, gross profit on the sale is recognized and the leaseback is accounted for as an operating lease with recognition of a right-of-use asset, lease liability, and subsequent amortization, resulting in straight-line expense recognition. The buyer-lessor continues to recognize the asset on its balance sheet and recognizes equal amounts of lease revenue (straight-line basis) in each period. It depreciates the leased asset generally on a straight-line basis.

***6 Describe the lessor's accounting for a direct financing lease.**

In a direct financing lease, the lessee does not **obtain ownership control** of the asset, but the lessor **relinquishes control**. That is, the

lessee controls use of the asset during the lease but will return the asset to the lessor at the end of the lease. However, the lessor will recover the value of the asset through lease payments **plus the third-party residual value guarantee**. In this situation, rather than following operating lease accounting: (1) the lessor derecognizes the underlying asset and recognizes a net investment in the lease (which consists of the lease receivable, unguaranteed residual asset, and deferred gross profit), and (2) the lessor gross profit is deferred and amortized into income over the lease term.

***7 Apply lessee and lessor accounting to finance and operating leases.**

Companies must understand and correctly apply the procedures for classifying and accounting for lease arrangements.

Enhanced Review and Practice

Go online for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Practice Problem

Morgan Bakeries is involved in four different lease situations. Each of these leases is non-cancelable, and in no case does Morgan receive title to the properties leased during or at the end of the lease term. All leases start on January 1, 2020, with the first rental due at the beginning of the year. For each lease, assume that the lessors have alternative use for the assets at the end of the lease unless ownership transfers to the lessee. Additional information is shown in the following table.

| | (a) <u>Harmon, Inc.</u> | (b) <u>Arden's Oven Co.</u> | (c) <u>Mendota Truck Co.</u> | (d) <u>Appleland Computer</u> |
|-------------------------------------|-------------------------|--|------------------------------|---|
| Type of property | Cabinets | Oven | Truck | Computer |
| Yearly rental | \$6,000 | \$12,000 | \$5,189.31 | \$2,640.35 |
| Lease term (years) | 20 | 10 | 3 | 3 |
| Estimated economic life | 30 | 25 | 4 | 5 |
| Purchase option | None | \$75,000 at end of 10 years \$4,000 at end of 15 years | None | \$3,000 at end of 3 years, which approximates fair value |
| Renewal option | None | 5-year renewal at \$12,000 per year after 10 years, reasonably certain to be exercised if the purchase option is not | None | 1 year at \$1,500; no penalty for nonrenewal; standard renewal clause |
| Fair value at commencement of lease | \$75,000 | \$120,000 | \$20,000 | \$10,000 |
| Cost of asset to lessor | \$60,000 | \$100,000 | \$15,000 | \$10,000 |

| | (a) <u>Harmon, Inc.</u> | (b) <u>Arden's Oven Co.</u> | (c) <u>Mendota Truck Co.</u> | (d) <u>Appleland Computer</u> |
|---|-------------------------|--|--|-------------------------------------|
| Residual value | | | | |

| Estimated fair value at end of lease term | \$35,000 | \$80,000 at end of 10 years \$60,000 at end of 15 years | Not available | \$3,000 |

Instructions

For each lease arrangement, determine the correct classification of the lease and prepare the journal entry at its commencement.

Solution

a. Analysis of the Harmon, Inc. lease:

- Transfer of title?** No.
- Bargain purchase option?** No.
- Economic life test (75% test):** The lease term is 20 years and the estimated economic life is 30 years. Thus, it **does not** meet the 75% test.
- Present value test (90% test):** No; the present value of the rental payments of \$63,621.60 is less than 90 percent of the fair value of the underlying asset as shown below.

| | | | |
|-------------------|-----------------|-----------------------|--------------------|
| Fair value | \$75,000 | Rental payments | \$ 6,000 |
| Rate | × .90 | PV of annuity due for | |
| 90% of fair value | <u>\$67,500</u> | 20 years at 8% | × 10.60360 |
| | | PV of rental payments | <u>\$63,621.60</u> |

Both Morgan and Harmon should account for this lease as an operating lease. They make the following January 1, 2020, entries.

| Morgan Bakeries (Lessee) | | Harmon, Inc. (Lessor) | |
|-----------------------------|-----------|--------------------------|-------|
| Right-of-Use Asset | 63,621.60 | Cash | 6,000 |
| Lease Liability | 63,621.60 | Rent Revenue | 6,000 |
| Lease Liability | 6,000.00 | | |
| Cash | 6,000.00 | | |

b. Analysis of the Arden's Oven Co. lease:

- Transfer of title?** No.
- Bargain purchase option?** The \$75,000 option at the end of 10 years does not appear to be sufficiently lower than the expected fair value of \$80,000 to make it reasonably assured that it will be exercised. However, given that the renewal option is reasonably certain to be exercised, the parties also consider the \$4,000 purchase option at the end of 15 years. Since the fair value

is expected to be \$60,000 at the end of 15 years, the \$4,000 option appears to be a bargain and test 2 (bargain purchase option) is therefore met. Note that both the guaranteed and the unguaranteed residual values are assigned zero values because the lessor does not expect to repossess the leased asset.

3. Economic life test (75% test): Given that the renewal option exists, the lease term is the initial lease period of 10 years plus the 5-year renewal option. Even though the lease term is now considered to be 15 years, the lease term test is still not met because 75 percent of the economic life of 25 years is 18.75 years.

4. Present value test (90% test):

| | | | |
|-------------------|------------------|-----------------------|---------------------|
| Fair value | \$120,000 | Rental payments | \$ 12,000 |
| Rate | <u>× .90</u> | PV of annuity due for | |
| 90% of fair value | <u>\$108,000</u> | 15 years at 8% | <u>× 9.24424</u> |
| | | PV of rental payments | <u>\$110,930.88</u> |

$$\text{PV of bargain purchase option} = \$4,000 \times (\text{PVF}_{15,8\%}) = \$4,000 \times .31524 = \$1,260.96$$

| | |
|-------------------------------|---------------------|
| PV of rental payments | \$110,930.88 |
| PV of bargain purchase option | 1,260.96 |
| PV of lease payments | <u>\$112,191.84</u> |

The present value of the lease payments is greater than 90 percent of the fair value. Therefore, the lease does meet the 90% test.

Morgan should account for this as a finance lease, and Arden as a sales-type lease, because the lease meets both tests 2 and 4. The following entries are made on January 1, 2020.

| Morgan Bakeries (Lessee) | | Arden's Oven Co. (Lessor) | |
|-----------------------------|------------|------------------------------|---------|
| Right-of Use Asset (oven) | 112,191.84 | Lease Receivable | 120,000 |
| Lease Liability | 112,191.84 | Cost of Goods Sold | 100,000 |
| Lease Liability | 12,000.00 | Inventory | 100,000 |
| Cash | 12,000.00 | Sales Revenue | 120,000 |
| | | Cash | 12,000 |
| | | Lease Receivable | 12,000 |

Morgan would amortize the right-of-use asset over its economic life of 25 years, given the bargain purchase option. The Lease Receivable amount of \$120,000 recorded by Arden is different than the Lease Liability amount of \$112,191.84 recorded by Morgan. The reason for this difference is that the implicit rate used by Arden is lower than the incremental borrowing rate of 8% used by Morgan.

c. Analysis of the Mendota Truck Co. lease:

1. Transfer of title? No.

2. Bargain purchase option? No.

3. Economic life test (75% test): The lease term is 3 years and the estimated economic life is 4 years. Thus, it **does** meet the 75% test ($3 \div 4 = 75\%$).

4. Present value test (90% test):

| | | | |
|-------------------|-----------------|-----------------------|---------------------|
| Fair value | \$20,000 | Rental payments | \$5,189.31 |
| Rate | <u>× .90</u> | PV of annuity due for | |
| 90% of fair value | <u>\$18,000</u> | 3 years at 8% | <u>× 2.78326</u> |
| | | PV of rental payments | <u>\$14,443.19*</u> |

*Adjusted for \$0.01 due to rounding.

$$\text{PV of guaranteed residual value} = \$7,000 \times (\text{PVF}_{3,8\%}) = \$7,000 \times .79383 = \$5,556.81$$

| | |
|---------------------------------|--------------------|
| PV of rental payments | \$14,443.19 |
| PV of guaranteed residual value | 5,556.81 |
| PV of lease payments | <u>\$20,000.00</u> |

The present value of the lease payments is greater than 90 percent of the fair value. Therefore, the lease meets the 90% test.

The following entries are made on January 1, 2020.

| Morgan Bakeries (Lessee) | | | Mendota Truck Co. (Lessor) | | |
|-----------------------------|-----------|-----------|-------------------------------|----------|----------|
| Right-of-Use Asset (truck) | 20,000.00 | | Lease Receivable | 20,000 | |
| Lease Liability | | 20,000.00 | Cost of Goods Sold | 15,000 | |
| Lease Liability | 5,189.31 | | Trucks | | 15,000 |
| Cash | | 5,189.31 | Sales Revenue | | 20,000 |
| | | | Cash | 5,189.31 | |
| | | | Lease Receivable | | 5,189.31 |

This is a sales-type lease for Mendota. Morgan amortizes the right-of-use asset over 3 years.

d. Analysis of the Appleland Computer lease:

- 1. Transfer of title?** No.
- 2. Bargain purchase option?** No. The option to purchase at the end of 3 years at approximate fair value is clearly not a bargain.
- 3. Economic life test (75% test):** The lease term is 3 years, and no bargain renewal period exists as it is simply a standard renewal clause which is not reasonably certain to be exercised. Therefore, the 75% test is not met ($3 \div 5 = 60\%$).
- 4. Recovery of investment test (90% test):**

| | | | |
|-------------------|-----------------|-------------------------------|-------------------|
| Fair value | \$10,000 | Rental payments | \$2,640.35 |
| Rate | <u>× .90</u> | PV of annuity-due factor for | |
| 90% of fair value | <u>\$ 9,000</u> | 3 years at 6% | <u>× 2.83339</u> |
| | | PV of lease payments | |
| | | using implicit borrowing rate | <u>\$7,481.14</u> |

The present value of the lease payments using the implicit borrowing rate is \$7,481.14. Because the present value of the lease payments is lower than 90 percent of the fair value, the lease does **not** meet the present value test.

The entries made for an operating lease on January 1, 2020, are as follows.

| Morgan Bakeries (Lessee) | | | Appleland Computer (Lessor) | | |
|-----------------------------|----------|----------|--------------------------------|----------|----------|
| Right-of-Use Asset (truck) | 7,481.14 | | Cash | 2,640.35 | |
| Lease Liability | | 7,481.14 | Lease Revenue | | 2,640.35 |
| Lease Liability | 2,640.35 | | | | |
| Cash | | 2,640.35 | | | |

WileyPLUS

Exercises, Problems, Problem Solution Walkthrough Videos, and many more assessment tools and resources are available for practice in WileyPLUS.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

Questions

1. What are the major lessor groups in the United States? What advantage does a captive leasing subsidiary have in a leasing arrangement?
2. Bradley Co. is expanding its operations and is in the process of selecting the method of financing this program. After some investigation, the company determines that it may (1) issue bonds and with

the proceeds purchase the needed assets, or (2) lease the assets on a long-term basis. Without knowing the comparative costs involved, answer these questions:

- a. What are the possible advantages of leasing the assets instead of owning them?

- b. What are the possible disadvantages of leasing the assets instead of owning them?
- c. How will the balance sheet be different if Bradley Co. leases the assets rather than purchasing them?
3. What are the major advantages to a lessor for becoming involved in a leasing arrangement?
4. From a lessee perspective, distinguish between a finance lease and an operating lease.
5. Identify the lease classification tests and how they are applied.
6. Morgan Handley and Tricia Holbrook are discussing the new leasing standard. Morgan believes the standard requires that the lessee use the implicit rate of the lessor in computing the present value of its lease liability. Tricia is not sure if Morgan is correct. Explain the discount rate that the lessee should use to compute its lease liability.
7. Explain which of following would result in the lessee classifying the lease as a finance lease.
- The lease is for a major part of the economic life of the asset.
 - The lease term is for 12 months or less.
 - The lease transfers ownership of the asset at the end of the lease.
8. Paul Singer indicated that “all leases must now be capitalized on the balance sheet.” Is this statement correct? Explain.
9. Describe the following terms: (a) residual value, (b) guaranteed residual value, and (c) initial direct costs.
10. Explain the following concepts: (a) bargain purchase option and (b) bargain renewal option.
11. What payments are included in the lease liability?
12. Wonda Stone read somewhere that a residual value guarantee is used for computing the present value of lease payments for lease classification purposes but is treated differently when measuring its lease liability. Is Wonda correct in her interpretation? Explain.
13. Identify the amounts included in the measurement of the right-of-use asset.
14. Harcourt Company enters into a lease agreement with Brunsell Inc. to lease office space for a term of 72 months. Lease payments during the first year are \$5,000 per month. Each year thereafter, the lease payments increase by an amount equivalent to the percentage increase in the Consumer Price Index (CPI). For example, if the CPI increases 2% in the second year, the monthly payment increases to \$5,100. In the second year, the CPI increases by 3%. What are the lease payment amounts used to record this lease in the second year?
15. Describe the accounting procedures involved in applying the operating lease method by a lessee.
16. Describe the accounting procedures involved in applying the finance lease method by a lessee.
17. Explain the difference in lessee income statement and balance sheet presentation for a finance versus an operating lease.
18. Dr. Alice Foyle (lessee) has a non-cancelable, 20-year lease with Brownback Realty Inc. (lessor) for the use of a medical building. Taxes, insurance, and maintenance are paid by the lessee in addition to the fixed annual payments, of which the present value is equal to the fair value of the leased property. At the end of the lease period, title becomes the lessee’s at a nominal price. Considering the terms of this lease, comment on the nature of the lease transaction and the accounting treatment that should be accorded it by the lessee.
19. Identify the lease classifications for lessors and the criteria that must be met for each classification. What is the relevance of revenue recognition criteria for lessor accounting for leases?
20. What is the difference between a lease receivable and a net investment in the lease?
21. Explain the accounting involved in applying the operating lease method by a lessor.
22. Explain the difference in lessor income statement presentation for a sales-type versus operating lease.
23. Walker Company is a manufacturer and lessor of computer equipment. What should be the nature of its lease arrangements with lessees if the company wishes to account for its lease transactions as sales-type leases?
24. Metheny Corporation’s lease arrangements qualify as sales-type leases at the time of entering into the transactions. How should the corporation recognize sales revenue and cost of goods sold in these situations?
25. Packer Company (the lessor) concludes that its lease meets one of the tests to be classified as a sales-type lease. However, collection of lease payments is not probable. In this case, how should Packer account for any lease payments received?
26. The residual value is the estimated fair value of the leased property at the end of the lease term.
- Of what significance is (1) an unguaranteed and (2) a guaranteed residual value in the lessee’s accounting for a finance lease transaction?
 - Distinguish between lease payments used to determine lease classification compared to lease payments for measuring the lease liability.
27. Of what significance is (a) an unguaranteed and (b) a guaranteed residual value in the lessor’s accounting for a sales-type lease transaction?
28. Describe the effect on the lessee of a “bargain purchase option” on accounting for a finance lease transaction.
29. What are “initial direct costs” and how are they accounted for by lessees and lessors?
30. What is a short-term lease? Describe lessee accounting for a short-term lease.
31. What disclosures should be made by lessees and lessors related to future lease payments?
- *32. What is the nature of a “sale-leaseback” transaction?
- *33. Sanchez Company (seller-lessee) enters into a sale-leaseback to sell its corporate headquarters for \$18 million to Harper Bank. The carrying value of the headquarters at the date of sale is \$14 million. Sanchez then leases back the headquarters in exchange for \$180,000 per year in rental payments. The leaseback is considered an operating lease. How should Sanchez account for this sale?
- *34. Explain the distinction between a direct financing lease and a sales-type lease for a lessor.
- *35. Explain the differences in revenue recognition for the lessor in a sales-type lease, a direct financing lease, and an operating lease.
- *36. Describe the accounting procedures involved in applying the direct financing method by a lessor.

Brief Exercises

BE21.1 (LO 2) Callaway Golf Co. leases telecommunications equipment from Photon Company. Assume the following data for equipment leased from Photon Company. The lease term is 5 years and requires equal rental payments of \$31,000 at the beginning of each year. The equipment has a fair value at the commencement of the lease of \$150,000, an estimated useful life of 8 years, and a guaranteed residual value at the end of the lease of \$15,500. Photon set the annual rental to earn a rate of return of 6%, and this fact is known to Callaway. The lease does not transfer title or contain a bargain purchase option, and is not a specialized asset. How should Callaway classify this lease?

BE21.2 (LO 2) Jelly Co. processes jam and sells it to the public. Jelly leases equipment used in its production processes from Squishy, Inc. This year, Jelly leases a new piece of equipment from Squishy. The lease term is 5 years and requires equal rental payments of \$15,000 at the beginning of each year. In addition, there is a renewal option to allow Jelly to keep the equipment one extra year for a payment at the end of the fifth year of \$10,000 (which Jelly is reasonably certain it will exercise). The equipment has a fair value at the commencement of the lease of \$76,024 and an estimated useful life of 7 years. Squishy set the annual rental to earn a rate of return of 5%, and this fact is known to Jelly. The lease does not transfer title, does not contain a bargain purchase option, and the equipment is not of a specialized nature. How should Jelly classify this lease?

BE21.3 (LO 2) Samson Company leases a building and land. The lease term is 6 years and the annual fixed payments are \$800,000. The lease arrangement gives Samson the right to purchase the building and land for \$11,000,000 at the end of the lease. Based on an economic analysis of the lease at the commencement date, Samson is reasonably certain that the fair value of the leased assets at the end of lease term will be much higher than \$11,000,000. What are the total lease payments in this lease arrangement?

BE21.4 (LO 2, 4) Fieger Company leases equipment for 8 years with an annual rental of \$2,000 per year or \$16,000 in total. General Leasing (the lessor) agrees to provide Fieger with \$300 for the first 2 years of the lease to defray needed repairs to the equipment. Determine the lease payments that Fieger will pay for the first 3 years of the lease agreement.

BE21.5 (LO 1) Sanders Fashion Company enters into a lease arrangement with Highpoint Leasing for 5 years. Sanders agrees to pay 4% of its net sales as a variable lease payment. Sanders does not pay any fixed payments. Sanders is a highly successful company that has achieved over \$1,000,000 in net sales over the last 7 years. Both Sanders and Highpoint forecast that net sales will be a much greater amount than \$1,000,000 in subsequent years. As a result, it is highly certain that Sanders will make payments of at least \$40,000 ($\$1,000,000 \times .04$) each year. What is the lease payment amount Sanders should use to record its right-of-use asset?

BE21.6 (LO 2) Waterworld Company leased equipment from Costner Company, beginning on December 31, 2019. The lease term is 4 years and requires equal rental payments of \$41,933 at the beginning of each year of the lease, starting on the commencement date (December 31, 2019). The equipment has a fair value at the commencement date of the lease of \$150,001, an estimated useful life of 4 years, and no estimated residual value. The appropriate interest rate is 8%. Prepare Waterworld's 2019 and 2020 journal entries, assuming Waterworld depreciates similar equipment it owns on a straight-line basis.

BE21.7 (LO 2) Rick Kleckner Corporation recorded a right-of-use asset for \$300,000 as a result of a finance lease on December 31, 2019. Kleckner's incremental borrowing rate is 8%, and the implicit rate of the lessor was not known at the commencement of the lease. Kleckner made the first lease payment of \$48,337 on December 31, 2019. The lease requires eight annual payments. The equipment has a useful life of 8 years with no residual value. Prepare Kleckner's December 31, 2020, entries.

BE21.8 (LO 2, 4) Cardinal Company is negotiating to lease a piece of equipment to MTBA, Inc. MTBA requests that the lease be for 9 years. The equipment has a useful life of 10 years. Cardinal wants a guarantee that the residual value of the equipment at the end of the lease is at least \$5,000. MTBA agrees to guarantee a residual value of this amount though it expects the residual value of the equipment to be only \$2,500 at the end of the lease term. If the fair value of the equipment at lease commencement is \$70,000, what would be the amount of the annual rental payments Cardinal demands of MTBA, assuming each payment will be made at the beginning of each year and Cardinal wishes to earn a rate of return on the lease of 8%?

BE21.9 (LO 1, 4) Mequon Inc. wishes to lease machinery to Thiensville Company. Thiensville wants the machinery for 4 years, although it has a useful life of 10 years. The machinery has a fair value at the

commencement of the lease of \$47,000, and Mequon expects the machinery to have a residual value at the end of the lease term of \$30,000. However, Thiensville does not guarantee any part of the residual value. Thiensville does expect that the residual value will be \$45,000 instead of \$30,000. What would be the amount of the annual rental payments Mequon demands of Thiensville, assuming each payment will be made at the end of each year and Mequon wishes to earn a rate of return on the lease of 6%?

BE21.10 (LO 2) Assume that **IBM** leased equipment that was carried at a cost of \$120,000 to Swander Company. The term of the lease is 6 years beginning December 31, 2019, with equal rental payments of \$30,044 beginning December 31, 2019. The fair value of the equipment at commencement of the lease is \$150,001. The equipment has a useful life of 6 years with no salvage value. The lease has an implicit interest rate of 8%, no bargain purchase option, and no transfer of title. Collectibility of lease payments for IBM is probable. Prepare Swander's December 31, 2019, journal entries at commencement of the lease.

BE21.11 (LO 2) Use the information for **IBM** from BE21.10. Assume the sales-type lease was recorded at a present value of \$150,000. Prepare IBM's December 31, 2020, entry to record the lease transaction with Swander Company.

BE21.12 (LO 2) Geiberger Corporation manufactures drones. On December 31, 2019, it leased to Althaus Company a drone that had cost \$120,000 to manufacture. The lease agreement covers the 5-year useful life of the drone and requires five equal annual rentals of \$40,800 payable each December 31, beginning December 31, 2019. An interest rate of 8% is implicit in the lease agreement. Collectibility of the rentals is probable. Prepare Geiberger's December 31, 2019, journal entries.

BE21.13 (LO 2) Use the information for Geiberger Corporation from BE21.12, except assume the collectibility of the rentals is not probable. Prepare any journal entries for Geiberger on December 31, 2019.

BE21.14 (LO 2) Kubby Company specializes in leasing large storage units to other businesses. Kubby entered a contract to lease a storage unit to Risky, Inc. for 4 years when that particular storage unit had a remaining useful life of 5 years. The fair value of the unit was \$10,000 at the commencement of the lease on January 1, 2020. The present value of the five equal rental payments of \$2,507 at the start of each year, plus the present value of a guaranteed residual value of \$1,000, equals the fair value of \$10,000, Kubby's implicit rate of return on the lease of 6%. The following is a correct, complete amortization schedule created by Kubby.

| Date | Lease Payment | Interest (6%) on Outstanding Lease Receivable | Reduction of Lease Receivable | Balance of Lease Receivable |
|----------|-----------------|---|-------------------------------|-----------------------------|
| 1/1/20 | | | | \$10,000 |
| 1/1/20 | \$ 2,507 | | \$ 2,507 | 7,493 |
| 1/1/21 | 2,507 | \$ 450 | 2,057 | 5,436 |
| 1/1/22 | 2,507 | 326 | 2,181 | 3,255 |
| 1/1/23 | 2,507 | 195 | 2,312 | 943 |
| 12/31/23 | 1,000 | 57 | 943 | 0 |
| | <u>\$11,028</u> | <u>\$1,028</u> | <u>\$10,000</u> | |

Given the above schedule, make the appropriate entries at December 31, 2023, to record the accrual of interest and the return of the storage unit to Kubby (assuming the unit is returned on December 31, 2023, at the expected and guaranteed residual value of \$1,000).

BE21.15 (LO 3) LeBron James (LBJ) Corporation agrees on January 1, 2020, to lease equipment from Cavaliers, Inc. for 3 years. The lease calls for annual lease payments of \$23,000 at the beginning of each year. The lease does not transfer ownership, nor does it contain a bargain purchase option, and is not a specialized asset. In addition, the useful life of the equipment is 10 years, and the present value of the lease payments is less than 90% of the fair value of the equipment. Prepare LBJ's journal entries on January 1, 2020 (commencement of the operating lease), and on December 31, 2020. Assume the implicit rate used by the lessor is unknown, and LBJ's incremental borrowing rate is 6%.

BE21.16 (LO 3) Kingston Corporation leases equipment from Falls Company on January 1, 2020. The lease agreement does not transfer ownership, contain a bargain purchase option, and is not a specialized asset. It covers 3 years of the equipment's 8-year useful life, and the present value of the lease payments is less than 90% of the fair value of the asset leased. Prepare Kingston's journal entries on January 1, 2020, and December 31, 2020. Assume the annual lease payment is \$35,000 at the beginning of each year, and Kingston's incremental borrowing rate is 6%, which is the same as the lessor's implicit rate.

BE21.17 (LO 3) Use the information for Kingston Corporation from BE21.16. Prepare all the necessary journal entries for Falls Company (the lessor) for 2020, assuming the equipment is carried at a cost of \$200,000.

BE21.18 (LO 3) Rodgers Corporation agrees on January 1, 2020, to lease equipment from Packers, Inc. for 3 years. The lease calls for annual lease payments of \$12,000 at the beginning of each year. The lease does not transfer ownership, contain a bargain purchase option, and is not a specialized asset. In addition, the economic life of the equipment is 10 years, and the present value of the lease payments is less than 90% of the fair value of the equipment. Prepare Rodgers' journal entries on January 1, 2020 (commencement of the operating lease), and on December 31, 2020. Assume the implicit rate used by the lessor is 8%, and this is known to Rodgers.

BE21.19 (LO 3) Use the information for Rodgers Corporation and Packers, Inc. from BE21.18. Assume that for Packers, Inc., the lessor, the collectibility of the lease payments is probable, and the fair value and cost of the equipment is \$60,000. Prepare Packers' 2020 journal entries, assuming the company uses straight-line depreciation and no salvage value.

BE21.20 (LO 4) On December 31, 2019, Escapee Company leased machinery from Terminator Corporation for an agreed-upon lease term of 3 years. Escapee agreed to make annual lease payments of \$17,000, beginning on December 31, 2019. The expected residual value of the machinery at the end of the lease term is \$9,000, though Escapee does not guarantee any residual value to Terminator. What amount will Escapee record as its lease liability on December 31, 2019, if its incremental borrowing rate is 6% and the implicit rate of the lease is unknown?

BE21.21 (LO 4) Use the information for Escapee Company from BE21.20. Assume the same facts, except Escapee guarantees a residual value of \$9,000 at the end of the lease term, which equals the expected residual value of the machinery. (a) Does this change your answer from BE21.20? (b) What if the expected residual value at the end of the lease term is \$5,000 and Escapee guarantees a residual of \$9,000?

BE21.22 (LO 4) Indiana Jones Corporation enters into a 6-year lease of equipment on December 31, 2019, which requires six annual payments of \$40,000 each, beginning December 31, 2019. In addition, Indiana Jones guarantees the lessor a residual value of \$20,000 at the end of the lease. However, Indiana Jones believes it is probable that the expected residual value at the end of the lease term will be \$10,000. The equipment has a useful life of 6 years. Prepare Indiana Jones' December 31, 2019, journal entries, assuming the implicit rate of the lease is 6% and this is known to Indiana Jones.

BE21.23 (LO 4) Use the information for Indiana Jones Corporation from BE21.22. Assume that for Lost Ark Company, the lessor, collectibility of lease payments is probable and the carrying amount of the equipment is \$180,000. Prepare Lost Ark's 2019 and 2020 journal entries.

BE21.24 (LO 4) Forrest, Inc. has entered an agreement to lease an old warehouse with a useful life of 5 years and a fair value of \$20,000 from United Corporation. The agreement stipulates the following.

- Rental payments of \$4,638 are to be made at the start of each year of the 5-year lease. No residual value is expected at the end of the lease.
- Forrest must reimburse United each year for any real estate taxes incurred for the year. Last year, the cost of real estate taxes was \$700, though these costs vary from year to year.
- Forrest must make a payment of \$500 with the rental payment each period to cover the insurance United has on the warehouse.
- Forrest paid legal fees of \$1,000 in executing the lease.

Assuming Forrest's incremental borrowing rate is 8% and the rate implicit in the lease is unknown, prepare the journal entry to record the initial lease liability and right-of-use asset for Forrest.

BE21.25 (LO 4) Bucky Corporation entered into an operating lease agreement to lease equipment from Badger, Inc. on January 1, 2020. The lease calls for annual lease payments of \$30,000, beginning on January 1, for each of the 3 years of the lease. In addition, Badger will pay Bucky \$5,000 as a cash incentive for entering the lease by January 1, 2020. In relation to the lease agreement, Bucky incurred the following costs.

| | |
|--|---------|
| Salaries of employees involved in the investigation of the lease | \$2,000 |
| Lease document preparation costs incurred after execution of the lease | 500 |

Bucky's incremental borrowing rate is 8%. If the value of the lease liability is \$83,498, what amount will Bucky record as the value of the right-of-use asset on January 1, 2020, at commencement of the operating lease?

BE21.26 (LO 4) Homestead Corporation entered into an operating lease to lease equipment from Highlander, Inc. on January 1, 2020. The lease calls for annual lease payments of \$10,000, beginning on December 31, for each of the 5 years of the lease. In addition, Highlander, Inc. will pay Homestead Corporation \$2,000 as a cash incentive for entering the lease by December 31. In relation to the lease agreement, Homestead incurred the following costs.

| | |
|--|--------|
| Commissions for selling agents | \$ 900 |
| Internal engineering costs | 500 |
| Legal fees resulting from the execution of the lease | 3,000 |

Homestead's incremental borrowing rate is 6%. If the value of the lease liability is \$44,651, what amount will Homestead record as the value of the right-of-use asset on January 1, 2020, at commencement of the operating lease?

BE21.27 (LO 4) Debbink Co. leased machinery from Young, Inc. on January 1, 2020. The lease term was for 8 years, with equal annual rental payments of \$5,300 at the beginning of each year. In addition, the lease provides an option to purchase the machinery at the end of the lease term for \$2,000, which Debbink is reasonably certain it will exercise as it believes the fair value of the machinery will be at least \$6,000. The machinery has a useful life of 10 years and a fair value of \$36,000. The implicit rate of the lease is not known to Debbink. Debbink's incremental borrowing rate is 8%. Prepare Debbink's 2020 journal entries.

BE21.28 (LO 4) Brent Corporation owns equipment that cost \$80,000 and has a useful life of 8 years with no salvage value. On January 1, 2020, Brent leases the equipment to Havaci Inc. for one year for one rental payment of \$15,000 on January 1. Assuming Havaci (lessee) elects to use the short-term lease exception, prepare Havaci's 2020 journal entries.

***BE21.29 (LO 5)** On January 1, 2020, Irwin Animation sold a truck to Peete Finance for \$35,000 and immediately leased it back. The truck was carried on Irwin's books at \$28,000. The term of the lease is 3 years, there is no bargain purchase option, and title does not transfer to Irwin at lease-end. The lease requires three equal rental payments of \$8,696 at the end of each year (first payment on January 1, 2021). The appropriate rate of interest is 6%, the truck has a useful life of 5 years, and the residual value at the end of the lease term is expected to be \$14,000, none of which is guaranteed. Prepare Irwin's 2020 journal entries.

***BE21.30 (LO 5)** Assume the same facts as BE21.29, except the lease term is now 5 years and the five annual rental payments are \$8,309, with no expected residual value at the end of the lease term. Prepare Irwin's 2020 journal entries assuming these new facts.

***BE21.31 (LO 6)** Bulls, Inc. leases a piece of equipment to Bucks Company on January 1, 2020. The contract stipulates a lease term of 5 years, with equal annual rental payments of \$4,523 at the end of each year. Ownership does not transfer at the end of the lease term, there is no bargain purchase option, and the asset is not of a specialized nature. The asset has a fair value of \$30,000, a book value of \$27,000, and a useful life of 8 years. At the end of the lease term, Bulls expects the residual value of the asset to be \$12,000, and this amount is guaranteed by a third party. Assuming Bulls wants to earn a 4% return on the lease and collectibility of the lease payments is probable, record its journal entry at the commencement of the lease on January 1, 2020.

***BE21.32 (LO 6)** Use the information for Bulls, Inc. from BE21.31. Assume that the lease receivable is \$30,000, deferred gross profit is \$3,000, and the rate of return to amortize the net lease receivable to zero is 7.11%. Prepare Bulls' journal entry at the end of the first year of the lease to record the receipt of the first lease payment.

Exercises

E21.1 (LO 1, 4) (Lessee Entries; Finance Lease with No Residual Value) DU Journeys enters into an agreement with Traveler Inc. to lease a car on December 31, 2019. The following information relates to this agreement.

1. The term of the non-cancelable lease is 3 years with no renewal or bargain purchase option. The remaining economic life of the car is 3 years, and it is expected to have no residual value at the end of the lease term.
2. The fair value of the car was \$15,000 at commencement of the lease.
3. Annual payments are required to be made on December 31 at the end of each year of the lease, beginning December 31, 2020. The first payment is to be of an amount of \$5,552.82, with each payment increasing by a constant rate of 5% from the previous payment (i.e., the second payment will be \$5,830.46 and the third and final payment will be \$6,121.98).
4. DU Journeys' incremental borrowing rate is 8%. The rate implicit in the lease is unknown.
5. DU Journeys uses straight-line depreciation for all similar cars.

Instructions

- a. Prepare DU Journeys' journal entries for 2019, 2020, and 2021.
- b. Assume, instead of a constant rate of increase, the annual lease payments will increase according to the Consumer Price Index (CPI). At its current level, the CPI stipulates that the first rental payment

should be \$5,820. What would be the impact on the journal entries made by DU Journeys at commencement of the lease, as well as for subsequent years?

E21.2 (LO 2, 4) (Lessee Entries; Finance Lease with Unguaranteed Residual Value) On December 31, 2019, Burke Corporation signed a 5-year, non-cancelable lease for a machine. The terms of the lease called for Burke to make annual payments of \$8,668 at the beginning of each year, starting December 31, 2019. The machine has an estimated useful life of 6 years and a \$5,000 unguaranteed residual value. The machine reverts back to the lessor at the end of the lease term. Burke uses the straight-line method of depreciation for all of its plant assets. Burke's incremental borrowing rate is 5%, and the lessor's implicit rate is unknown.

Instructions

- What type of lease is this? Explain.
- Compute the present value of the lease payments.
- Prepare all necessary journal entries for Burke for this lease through December 31, 2020.

E21.3 (LO 2, 4) (Lessee Computations and Entries; Finance Lease with Guaranteed Residual Value) Delaney Company leases an automobile with a fair value of \$10,000 from Simon Motors, Inc., on the following terms.

- Non-cancelable term of 50 months.
- Rental of \$200 per month (at the beginning of each month). (The present value at 0.5% per month is \$8,873.)
- Delaney guarantees a residual value of \$1,180 (the present value at 0.5% per month is \$920). Delaney expects the probable residual value to be \$1,180 at the end of the lease term.
- Estimated economic life of the automobile is 60 months.
- Delaney's incremental borrowing rate is 6% a year (0.5% a month). Simon's implicit rate is unknown.

Instructions

- What is the nature of this lease to Delaney?
- What is the present value of the lease payments to determine the lease liability?
- Based on the original fact pattern, record the lease on Delaney's books at the date of commencement.
- Record the first month's lease payment (at commencement of the lease).
- Record the second month's lease payment.
- Record the first month's amortization on Delaney's books (assume straight-line).
- Suppose that instead of \$1,180, Delaney expects the residual value to be only \$500 (the guaranteed amount is still \$1,180). How does the calculation of the present value of the lease payments change from part b?

E21.4 (LO 2, 4) Excel (Lessee Entries; Finance Lease and Unguaranteed Residual Value) Assume that on December 31, 2019, **Kimberly-Clark Corp.** signs a 10-year, non-cancelable lease agreement to lease a storage building from Sheffield Storage Company. The following information pertains to this lease agreement.

- The agreement requires equal rental payments of \$71,830 beginning on December 31, 2019.
- The fair value of the building on December 31, 2019, is \$525,176.
- The building has an estimated economic life of 12 years, a guaranteed residual value of \$10,000, and an expected residual value of \$7,000. Kimberly-Clark depreciates similar buildings on the straight-line method.
- The lease is nonrenewable. At the termination of the lease, the building reverts to the lessor.
- Kimberly-Clark's incremental borrowing rate is 8% per year. The lessor's implicit rate is not known by Kimberly-Clark.

Instructions

- Prepare the journal entries on the lessee's books to reflect the signing of the lease agreement and to record the payments and expenses related to this lease for the years 2019, 2020, and 2021. Kimberly-Clark's fiscal year-end is December 31.
- Suppose the same facts as above, except that Kimberly-Clark incurred legal fees resulting from the execution of the lease of \$5,000, and received a lease incentive from Sheffield to enter the lease of \$1,000. How would the initial measurement of the lease liability and right-of-use asset be affected under this situation?

- c. Suppose that in addition to the \$71,830 annual rental payments, Kimberly-Clark is also required to pay \$5,000 for insurance costs each year on the building directly to the lessor, Sheffield Storage. How would this executory cost affect the initial measurement of the lease liability and right-of-use asset?
- d. Return to the original facts in the problem. Now suppose that, at the end of the lease term, Kimberly-Clark took good care of the asset and Sheffield agrees that the fair value of the asset is actually \$10,000. Record the entry for Kimberly-Clark at the end of the lease to return control of the storage building to Sheffield (assuming the accrual of interest on the lease liability has already been made).

E21.5 (LO 2, 4) (Computation of Rental; Journal Entries for Lessor) Morgan Leasing Company signs an agreement on January 1, 2020, to lease equipment to Cole Company. The following information relates to this agreement.

1. The term of the non-cancelable lease is 6 years with no renewal option. The equipment has an estimated economic life of 6 years.
2. The cost of the asset to the lessor is \$245,000. The fair value of the asset at January 1, 2020, is \$245,000.
3. The asset will revert to the lessor at the end of the lease term, at which time the asset is expected to have a residual value of \$24,335, none of which is guaranteed.
4. The agreement requires equal annual rental payments, beginning on January 1, 2020.
5. Collectibility of the lease payments by Morgan is probable.

Instructions

(Round all numbers to the nearest cent.)

- a. Assuming the lessor desires an 8% rate of return on its investment, calculate the amount of the annual rental payment required. (Round to the nearest dollar.)
- b. Prepare an amortization schedule that is suitable for the lessor for the lease term.
- c. Prepare all of the journal entries for the lessor for 2020 and 2021 to record the lease agreement, the receipt of lease payments, and the recognition of revenue. Assume the lessor's annual accounting period ends on December 31, and it does not use reversing entries.

E21.6 (LO 2, 4) (Lessor Entries; Sales-Type Lease with Option to Purchase) Castle Leasing Company signs a lease agreement on January 1, 2020, to lease electronic equipment to Jan Way Company. The term of the non-cancelable lease is 2 years, and payments are required at the end of each year. The following information relates to this agreement.

1. Jan Way has the option to purchase the equipment for \$16,000 upon termination of the lease. It is not reasonably certain that Jan Way will exercise this option.
2. The equipment has a cost of \$120,000 and fair value of \$160,000 to Castle Leasing. The useful economic life is 2 years, with a residual value of \$16,000.
3. Castle Leasing desires to earn a return of 5% on its investment.
4. Collectibility of the payments by Castle Leasing is probable.

Instructions

- a. Prepare the journal entries on the books of Castle Leasing to reflect the payments received under the lease and to recognize income for the years 2020 and 2021.
- b. Assuming that Jan Way exercises its option to purchase the equipment on December 31, 2021, prepare the journal entry to record the sale on Castle Leasing's books.

E21.7 (LO 2, 4) (Type of Lease; Amortization Schedule) Macinski Leasing Company leases a new machine to Sharrer Corporation. The machine has a cost of \$70,000 and fair value of \$95,000. Under the 3-year, non-cancelable contract, Sharrer will receive title to the machine at the end of the lease. The machine has a 3-year useful life and no residual value. The lease was signed on January 1, 2020. Macinski expects to earn an 8% return on its investment, and this implicit rate is known by Sharrer. The annual rentals are payable on each December 31, beginning December 31, 2020.

Instructions

- a. Discuss the nature of the lease arrangement and the accounting method that each party to the lease should apply.
- b. Prepare an amortization schedule that would be suitable for both the lessor and the lessee and that covers all the years involved.
- c. Prepare the journal entry at commencement of the lease for Macinski.

- d. Prepare the journal entry at commencement of the lease for Sharrer.
- e. Prepare the journal entry at commencement of the lease for Sharrer, assuming (1) Sharrer does not know Macinski's implicit rate (Sharrer's incremental borrowing rate is 9%), and (2) Sharrer incurs initial direct costs of \$10,000.

E21.8 (LO 2, 4) Excel (Lessor Entries; Sales-Type Lease) Crosley Company, a machinery dealer, leased a machine to Dexter Corporation on January 1, 2020. The lease is for an 8-year period and requires equal annual payments of \$35,004 at the beginning of each year. The first payment is received on January 1, 2020. Crosley had purchased the machine during 2019 for \$160,000. Collectibility of lease payments by Crosley is probable. Crosley set the annual rental to ensure a 6% rate of return. The machine has an economic life of 10 years with no residual value and reverts to Crosley at the termination of the lease.

Instructions

- a. Compute the amount of the lease receivable.
- b. Prepare all necessary journal entries for Crosley for 2020.
- c. Suppose the collectibility of the lease payments was not probable for Crosley. Prepare all necessary journal entries for the company in 2020.
- d. Suppose at the end of the lease term, Crosley receives the asset and determines that it actually has a fair value of \$1,000 instead of the anticipated residual value of \$0. Record the entry to recognize the receipt of the asset for Crosley at the end of the lease term.

E21.9 (LO 2, 4) (Lessee Entries; Initial Direct Costs) Use the information for Crosley Company in E21.8. Assume that Dexter Corporation does not know the rate implicit in the lease used by Crosley, and Dexter's incremental borrowing rate is 8%. In addition, assume that Dexter incurs initial direct costs of \$15,000.

Instructions

- a. Compute the amount of the lease liability and right-of-use asset for Dexter.
- b. Prepare all necessary journal entries for Dexter for 2020.

E21.10 (LO 2, 4) (Lessee Entries with Bargain Purchase Option) The following facts pertain to a non-cancelable lease agreement between Mooney Leasing Company and Rode Company, a lessee.

| | |
|--|-------------|
| Commencement date | May 1, 2020 |
| Annual lease payment due at the beginning of each year, beginning with May 1, 2020 | \$20,471.94 |
| Bargain purchase option price at end of lease term | \$ 4,000.00 |
| Lease term | 5 years |
| Economic life of leased equipment | 10 years |
| Lessor's cost | \$65,000.00 |
| Fair value of asset at May 1, 2020 | \$91,000.00 |
| Lessor's implicit rate | 8% |
| Lessee's incremental borrowing rate | 8% |
| The collectibility of the lease payments by Mooney is probable. | |

Instructions

(Round all numbers to the nearest cent.)

- a. Discuss the nature of this lease to Rode.
- b. Discuss the nature of this lease to Mooney.
- c. Prepare a lease amortization schedule for Rode for the 5-year lease term.
- d. Prepare the journal entries on the lessee's books to reflect the signing of the lease agreement and to record the payments and expenses related to this lease for the years 2020 and 2021. Rode's annual accounting period ends on December 31. Reversing entries are used by Rode.

E21.11 (LO 2, 4) (Lessor Entries with Bargain Purchase Option) A lease agreement between Mooney Leasing Company and Rode Company is described in E21.10.

Instructions

Refer to the data in E21.10 and do the following for the lessor. (Round all numbers to the nearest cent.)

- a. Compute the amount of the lease receivable at commencement of the lease.
- b. Prepare a lease amortization schedule for Mooney for the 5-year lease term.

- c. Prepare the journal entries to reflect the signing of the lease agreement and to record the receipts and income related to this lease for the years 2020 and 2021. The lessor's accounting period ends on December 31. Reversing entries are not used by Mooney.
- d. Suppose the collectibility of the lease payments was not probable for Mooney. Prepare all necessary journal entries for the company in 2020.

E21.12 (LO 2, 4) (Lessee-Lessor Entries; Sales-Type Lease with Bargain Purchase Option) On January 1, 2020, Bensen Company leased equipment to Flynn Corporation. The following information pertains to this lease.

1. The term of the non-cancelable lease is 6 years. At the end of the lease term, Flynn has the option to purchase the equipment for \$1,000, while the expected residual value at the end of the lease is \$5,000.
2. Equal rental payments are due on January 1 of each year, beginning in 2020.
3. The fair value of the equipment on January 1, 2020, is \$150,000, and its cost is \$120,000.
4. The equipment has an economic life of 8 years. Flynn depreciates all of its equipment on a straight-line basis.
5. Bensen set the annual rental to ensure a 5% rate of return. Flynn's incremental borrowing rate is 6%, and the implicit rate of the lessor is unknown.
6. Collectibility of lease payments by the lessor is probable.

Instructions

(Both the lessor and the lessee's accounting periods end on December 31.)

- a. Discuss the nature of this lease to Bensen and Flynn.
- b. Calculate the amount of the annual rental payment.
- c. Prepare all the necessary journal entries for Bensen for 2020.
- d. Suppose the collectibility of the lease payments was not probable for Bensen. Prepare all necessary journal entries for the company in 2020.
- e. Prepare all the necessary journal entries for Flynn for 2020.
- f. Discuss the effect on the journal entry for Flynn at lease commencement, assuming initial direct costs of \$2,000 are incurred by Flynn to negotiate the lease.

E21.13 (LO 2, 4) (Lessee-Lessor Entries; Sales-Type Lease; Guaranteed Residual Value) Phelps Company leases a building to Walsh, Inc. on January 1, 2020. The following facts pertain to the lease agreement.

1. The lease term is 5 years, with equal annual rental payments of \$4,703 at the beginning of each year.
2. Ownership does not transfer at the end of the lease term, there is no bargain purchase option, and the asset is not of a specialized nature.
3. The building has a fair value of \$23,000, a book value to Phelps of \$16,000, and a useful life of 6 years.
4. At the end of the lease term, Phelps and Walsh expect there to be an unguaranteed residual value of \$4,000.
5. Phelps wants to earn a return of 8% on the lease, and collectibility of the payments is probable. This rate is known by Walsh.

Instructions

- a. How would Phelps (lessor) and Walsh (lessee) classify this lease? How would Phelps initially measure the lease receivable, and how would Walsh initially measure the lease liability and right-of-use asset?
- b. Using the original facts of the lease, show the journal entries to be made by both Phelps and Walsh in 2020.
- c. Suppose the entire expected residual value of \$4,000 is guaranteed by Walsh. How will this change your answer to part a?
- d. Assume the same facts as part c, except the expected residual value is \$3,000. Does your answer change?

E21.14 (LO 2, 4) (Lessee Entries; Initial Direct Costs) Use the information for the Phelps/Walsh lease in E21.13, except that Walsh was unaware of the implicit rate used in the lease by Phelps and has an incremental borrowing rate of 9%.

Instructions

How would your answer to E21.13(a) change?

E21.15 (LO 2, 4) (Amortization Schedule and Journal Entries for Lessee) Laura Leasing Company signs an agreement on January 1, 2020, to lease equipment to Plote Company. The following information relates to this agreement.

1. The term of the non-cancelable lease is 3 years with no renewal option. The equipment has an estimated economic life of 5 years.
2. The fair value of the asset at January 1, 2020, is \$80,000.
3. The asset will revert to the lessor at the end of the lease term, at which time the asset is expected to have a residual value of \$7,000, none of which is guaranteed.
4. The agreement requires equal annual rental payments of \$25,562.96 to the lessor, beginning on January 1, 2020.
5. The lessee's incremental borrowing rate is 5%. The lessor's implicit rate is 4% and is unknown to the lessee.
6. Plote uses the straight-line depreciation method for all equipment.

Instructions

(Round all numbers to the nearest cent.)

- a. Prepare an amortization schedule that would be suitable for the lessee for the lease term.
- b. Prepare all of the journal entries for the lessee for 2020 and 2021 to record the lease agreement, the lease payments, and all expenses related to this lease. Assume the lessee's annual accounting period ends on December 31.

E21.16 (LO 3, 4) (Amortization Schedule and Journal Entries for Lessee) Use the information pertaining to Laura Leasing Company and Plote Company from E21.15. Assume that the expected residual value at the end of the lease is \$10,000, such that the payments are \$24,638.87.

Instructions

Prepare all of the journal entries for the lessee for 2020 to record the lease agreement, the lease payments, and all expenses related to this lease. Assume the lessee's annual accounting period ends on December 31.

E21.17 (LO 3, 4) (Accounting for an Operating Lease) On January 1, 2020, Nelson Co. leased a building to Wise Inc. The relevant information related to the lease is as follows.

1. The lease arrangement is for 10 years. The building is expected to have a residual value at the end of the lease of \$3,500,000 (unguaranteed).
2. The leased building has a cost of \$4,000,000 and was purchased for cash on January 1, 2020.
3. The building is depreciated on a straight-line basis. Its estimated economic life is 50 years with no salvage value.
4. Lease payments are \$275,000 per year and are made at the beginning of the year.
5. Wise has an incremental borrowing rate of 8%, and the rate implicit in the lease is unknown to Wise.
6. Both the lessor and the lessee are on a calendar-year basis.

Instructions

- a. Prepare the journal entries that Nelson should make in 2020.
- b. Prepare the journal entries that Wise should make in 2020.
- c. If Wise paid \$30,000 to a real estate broker on January 1, 2020, as a fee for finding the lessor, what is the initial measurement of the right-of-use asset? Explain.

E21.18 (LO 3, 4) (Accounting for an Operating Lease) On January 1, 2020, a machine was purchased for \$900,000 by Young Co. The machine is expected to have an 8-year life with no salvage value. It is to be depreciated on a straight-line basis. The machine was leased to St. Leger Inc. for 3 years on January 1, 2020, with annual rent payments of \$150,955 due at the beginning of each year, starting January 1, 2020. The machine is expected to have a residual value at the end of the lease term of \$562,500, though this amount is unguaranteed.

Instructions

- a. How much should Young report as income before income tax on this lease for 2020?
- b. Record the journal entries St. Leger would record for 2020 on this lease, assuming its incremental borrowing rate is 6% and the rate implicit in the lease is unknown.
- c. Suppose the lease was only for one year (only one payment of the same amount at commencement of the lease), with a renewal option at market rates at the end of the lease, and St. Leger elects to use the short-term lease exception. Record the journal entries St. Leger would record for 2020 on this lease.

E21.19 (LO 3, 4) (Accounting for an Operating Lease) Kaluzniak Corporation leased equipment to Moeller, Inc. on January 1, 2020. The lease agreement called for annual rental payments of \$1,137 at the beginning of each year of the 3-year lease. The equipment has an economic useful life of 7 years, a fair value of \$7,000, a book value of \$5,000, and Kaluzniak expects a residual value of \$4,500 at the end of the lease term. Kaluzniak set the lease payments with the intent of earning a 6% return, though Moeller is unaware of the rate implicit in the lease and has an incremental borrowing rate of 8%. There is no bargain purchase option, ownership of the lease does not transfer at the end of the lease term, and the asset is not of a specialized nature.

Instructions

- Describe the nature of the lease to both Kaluzniak and Moeller.
- Prepare all necessary journal entries for Moeller in 2020. Moeller uses straight-line depreciation.
- How would the measurement of the lease liability and right-of-use asset be affected if, as a result of the lease contract, Moeller was also required to pay \$500 in commissions, prepay \$750 in addition to the first rental payment, and pay \$200 of insurance each year?
- Suppose, instead of a 3-year lease term, Moeller and Kaluzniak agree to a one-year lease with a payment of \$1,137 at the start of the lease. Prepare all necessary journal entries for Moeller in 2020.

E21.20 (LO 3, 4) (Accounting for an Operating Lease) Use the information for Kaluzniak Corporation and Moeller, Inc. from E21.19.

Instructions

- Explain (and show calculations) how Kaluzniak arrived at the amount of the rental payments used in the lease agreement.
- Prepare the entries for Kaluzniak for 2020.
- How would Kaluzniak's accounting in part a change if it incurred legal fees of \$700 to execute the lease documents and \$500 in advertising expenses for the year in connection with the lease?

E21.21 (LO 3, 4) (Accounting for an Operating Lease) Rauch Incorporated leases a piece of equipment to Donahue Corporation on January 1, 2020. The lease agreement called for annual rental payments of \$4,892 at the beginning of each year of the 4-year lease. The equipment has an economic useful life of 6 years, a fair value of \$25,000, a book value of \$20,000, and both parties expect a residual value of \$8,250 at the end of the lease term, though this amount is not guaranteed. Rauch set the lease payments with the intent of earning a 5% return, and Donahue is aware of this rate. There is no bargain purchase option, ownership of the lease does not transfer at the end of the lease term, and the asset is not of a specialized nature.

Instructions

- Describe the nature of the lease to both Rauch and Donahue.
- Prepare the lease amortization schedule(s) for Donahue for all 4 years of the lease.
- Prepare the journal entries for Donahue for 2020 and 2021.
- Suppose Donahue incurs initial direct costs of \$750 related to the lease. Prepare the journal entries for 2020.
- Explain how a fully guaranteed residual value by Donahue would change the accounting for the company. The expected residual value is \$9,000.
- Explain how a bargain renewal option for one extra year at the end of the lease term would change the accounting of the lease for Donahue.

E21.22 (LO 3, 4) (Accounting for an Operating Lease) Use the information for Rauch Incorporated and Donahue Corporation from E21.21.

Instructions

- Explain (and show calculations) how Rauch arrived at the amount of the rental payments used in the lease agreement.
- Prepare the entries for Rauch for 2020.
- Suppose that instead of \$8,250, Rauch expects the residual value at the end of the lease to be \$5,000, but Donahue agrees to guarantee a residual value of \$8,250. All other facts being equal, how would Rauch change the amount of the annual rental payments, if at all?
- Explain how a fully guaranteed residual value by Donahue would change the accounting for Rauch, the lessor.
- Explain how a bargain renewal option for one extra year at the end of the lease term would change the accounting of the lease for Rauch, the lessor.

***E21.23 (LO 5) (Sale-Leaseback)** Assume that on January 1, 2020, **Elmer's Restaurants** sells a computer system to Liquidity Finance Co. for \$680,000 and immediately leases back the computer system. The relevant information is as follows.

1. The computer was carried on Elmer's books at a value of \$600,000.
2. The term of the non-cancelable lease is 3 years; title will not transfer to Elmer's, and the expected residual value at the end of the lease is \$450,000, all of which is unguaranteed.
3. The lease agreement requires equal rental payments of \$115,970 at the beginning of each year.
4. The incremental borrowing rate for Elmer's is 8%. Elmer's is aware that Liquidity Finance set the annual rental to ensure a rate of return of 8%.
5. The computer has a fair value of \$680,000 on January 1, 2020, and an estimated economic life of 10 years.

Instructions

Prepare the journal entries for both the lessee and the lessor for 2020 to reflect the sale and leaseback agreement.

***E21.24 (LO 5) (Lessee-Lessor, Sale-Leaseback)** Respond to the requirements in each situation.

Instructions

- a. On January 1, 2020, Zarle Inc. sold computer equipment to Daniell Co. The sales price of the equipment was \$520,000 and its carrying amount is \$400,000. Record any journal entries necessary for Zarle from the sale of the computer equipment in 2020.
- b. Use the information from part a. Assume that, on the same day the sale occurred, Zarle enters into an agreement to lease the equipment from Daniell for 10 years with annual lease payments of \$67,342.42 at the end of each year, beginning on December 31, 2020. If Zarle has an incremental borrowing rate of 5% and the equipment has an economic useful life of 10 years, record any journal entries necessary for Zarle from the sale and leaseback of computer equipment in 2020.
- c. Use the information from part b. Now, instead of 10 years, the lease term is only 3 years with annual lease payments of \$67,342.42 at the beginning of each year. Record any journal entries necessary for Zarle from the sale and leaseback of computer equipment in 2020.

***E21.25 (LO 6) (Direct Financing Lease)** Giannis Corporation leases a building to Jabari, Inc. on January 1, 2020. The following facts pertain to the lease agreement.

1. The lease term is 10 years with equal annual rental payments of \$3,449 at the end of each year.
2. Ownership does not transfer at the end of the lease term, there is no bargain purchase option, and the asset is not of a specialized nature.
3. The building has a fair value of \$34,000, a book value to Giannis of \$22,000, and a useful life of 15 years.
4. At the end of the lease term, Giannis and Jabari expect the residual value of the building to be \$12,000, and this amount is guaranteed by Money, Inc., a third party.
5. Giannis wants to earn a 5% return on the lease, and collectibility of the payments is probable.

Instructions

- a. Describe the nature of this lease to both Giannis and Jabari.
- b. Assume the present value of lease payments and third-party guarantee is \$34,000 and the rate of return to amortize the net lease receivable to zero is 13.24%. Prepare the amortization schedules Giannis would use to amortize the net lease receivable to zero.
- c. Prepare the journal entries to record the entries for Giannis for 2020 and 2021.
- d. Prepare the journal entries for Jabari (the lessee) for 2020 and 2021, assuming the rate implicit in the lease is known to Jabari.
- e. Suppose the leased asset had a shorter economic life of 8 years, the lease agreement was only for 5 years, and the residual value of \$12,000 guaranteed by Money, Inc. remained the same. Would the rate of return required to amortize the net lease receivable to zero increase, decrease, or stay the same? Explain.
- f. Suppose, instead of Money, Inc., Jabari guarantees the residual value itself. How would this affect the classification of this lease agreement for both Giannis and Jabari? Describe the impact that any change in classification would have on revenue recognition for Giannis.

Problems

P21.1 (LO 2, 4) (Lessee Entries, Finance Lease) The following facts pertain to a non-cancelable lease agreement between Faldo Leasing Company and Vance Company, a lessee.

| | |
|--|-----------------|
| Commencement date | January 1, 2020 |
| Annual lease payment due at the beginning of each year, beginning with January 1, 2020 | \$113,864 |
| Residual value of equipment at end of lease term, guaranteed by the lessee | \$50,000 |
| Expected residual value of equipment at end of lease term | \$45,000 |
| Lease term | 6 years |
| Economic life of leased equipment | 6 years |
| Fair value of asset at January 1, 2020 | \$600,000 |
| Lessor's implicit rate | 8% |
| Lessee's incremental borrowing rate | 8% |

The asset will revert to the lessor at the end of the lease term. The lessee uses the straight-line amortization for all leased equipment.

Instructions

- Prepare an amortization schedule that would be suitable for the lessee for the lease term.
- Prepare all of the journal entries for the lessee for 2020 and 2021 to record the lease agreement, the lease payments, and all expenses related to this lease. Assume the lessee's annual accounting period ends on December 31.
- Suppose Vance received a lease incentive of \$5,000 from Faldo Leasing to enter the lease. How would the initial measurement of the lease liability and right-of-use asset be affected? What if Vance prepaid rent of \$5,000 to Faldo?

P21.2 (LO 2, 4) (Lessee Entries and Balance Sheet Presentation, Finance Lease) On January 1, 2020, Cage Company contracts to lease equipment for 5 years, agreeing to make a payment of \$120,987 at the beginning of each year, starting January 1, 2020. The leased equipment is to be capitalized at \$550,000. The asset is to be amortized on a double-declining-balance basis, and the obligation is to be reduced on an effective-interest basis. Cage's incremental borrowing rate is 6%, and the implicit rate in the lease is 5%, which is known by Cage. Title to the equipment transfers to Cage at the end of the lease. The asset has an estimated useful life of 5 years and no residual value.

Instructions

- Explain the probable relationship of the \$550,000 amount to the lease arrangement.
- Prepare the journal entry or entries that Cage should record on January 1, 2020.
- Prepare the journal entries to record amortization of the leased asset and interest expense for the year 2020.
- Prepare the journal entry to record the lease payment of January 1, 2021, assuming reversing entries are not made.
- What amounts will appear on the lessee's December 31, 2020, balance sheet relative to the lease contract?
- How would the value of the lease liability in part b change if Cage also agreed to pay the fixed annual insurance on the equipment of \$2,000 at the same time as the rental payments?

P21.3 (LO 2, 4) Groupwork (Lessee Entries and Balance Sheet Presentation, Finance Lease)

Ludwick Steel Company, as lessee, signed a lease agreement for equipment for 5 years, beginning December 31, 2020. Annual rental payments of \$40,000 are to be made at the beginning of each lease year (December 31). The interest rate used by the lessor in setting the payment schedule is 6%; Ludwick's incremental borrowing rate is 8%. Ludwick is unaware of the rate being used by the lessor. At the end of the lease, Ludwick has the option to buy the equipment for \$5,000, considerably below its estimated fair value at that time. The equipment has an estimated useful life of 7 years, with no salvage value. Ludwick uses the straight-line method of depreciation on similar owned equipment.

Instructions

- Prepare the journal entry or entries, with explanations, that Ludwick should record on December 31, 2020.

- b. Prepare the journal entry or entries, with explanations, that Ludwick should record on December 31, 2021. (Prepare the lease amortization schedule for all five payments.)
- c. Prepare the journal entry or entries, with explanations, that Ludwick should record on December 31, 2022.
- d. What amounts would appear on Ludwick's December 31, 2022, balance sheet relative to the lease arrangement?

P21.4 (LO 2) (Lessee Entries, Finance Lease with Monthly Payments) Shapiro Inc. was incorporated in 2019 to operate as a computer software service firm, with an accounting fiscal year ending August 31. Shapiro's primary product is a sophisticated online inventory-control system; its customers pay a fixed fee plus a usage charge for using the system.

Shapiro has leased a large, Alpha-3 computer system from the manufacturer. The lease calls for a monthly rental of \$40,000 for the 144 months (12 years) of the lease term. The estimated useful life of the computer is 15 years.

All rentals are payable on the first day of the month beginning with August 1, 2020, the date the computer was installed and the lease agreement was signed. The lease is non-cancelable for its 12-year term, and it is secured only by the manufacturer's chattel lien on the Alpha-3 system.

This lease is to be accounted for as a finance lease by Shapiro, and it will be amortized by the straight-line method. Borrowed funds for this type of transaction would cost Shapiro 6% per year (0.5% per month). Following is a schedule of the present value of an annuity due for selected periods discounted at 0.5% per period when payments are made at the beginning of each period.

| Periods (months) | Present Value of an Annuity Due Discounted at 0.5% per Period |
|---------------------|--|
| 1 | 1.000 |
| 2 | 1.995 |
| 3 | 2.985 |
| 143 | 102.497 |
| 144 | 102.987 |

Instructions

Prepare all entries Shapiro should make in its accounting records during August 2020 relating to this lease. Give full explanations and show supporting computations for each entry. Remember, August 31, 2020, is the end of Shapiro's fiscal accounting period, and it will be preparing financial statements on that date. Do not prepare closing entries.

P21.5 (LO 2, 4) (Basic Lessee Accounting with Difficult PV Calculation) In 2019, Grishell Trucking Company negotiated and closed a long-term lease contract for newly constructed truck terminals and freight storage facilities. The buildings were erected to the company's specifications on land owned by the company. On January 1, 2020, Grishell Trucking took possession of the lease properties.

Although the terminals have a composite useful life of 40 years, the non-cancelable lease runs for 20 years from January 1, 2020, with a bargain purchase option available upon expiration of the lease.

The 20-year lease is effective for the period January 1, 2020, through December 31, 2039. Rental payments of \$800,000 are payable to the lessor on January 1 of each of the first 10 years of the lease term. Advance rental payments of \$320,000 are due on January 1 for each of the last 10 years of the lease. The company has an option to purchase all of these leased facilities for \$1 on December 31, 2039. The lease was negotiated to assure the lessor a 6% rate of return.

Instructions

- a. Prepare a schedule to compute for Grishell Trucking the present value of the terminal facilities and related obligation at January 1, 2020.
- b. Assuming that the present value of terminal facilities and related obligation at January 1, 2020, was \$7,635,410, prepare journal entries for Grishell Trucking to record the:
 1. Cash payment to the lessor on January 1, 2022.
 2. Amortization of the cost of the leased properties for 2022, using the straight-line method and assuming a zero salvage value.
 3. Accrual of interest expense at December 31, 2022.

Selected present value factors are as follows.

| Periods | For an Ordinary Annuity of \$1 at 6% | For \$1 at 6% |
|---------|---|---------------|
| 1 | .943396 | .943396 |
| 2 | 1.833393 | .889996 |
| 8 | 6.209794 | .627412 |
| 9 | 6.801692 | .591898 |
| 10 | 7.360087 | .558395 |
| 19 | 11.158117 | .330513 |
| 20 | 11.469921 | .311805 |

P21.6 (LO 2, 4) (Lessee-Lessor Entries, Finance Lease with a Guaranteed Residual Value)

Glaus Leasing Company agrees to lease equipment to Jensen Corporation on January 1, 2020. The following information relates to the lease agreement.

1. The term of the lease is 7 years with no renewal option, and the machinery has an estimated economic life of 9 years.
2. The cost of the machinery is \$525,000, and the fair value of the asset on January 1, 2020, is \$700,000.
3. At the end of the lease term, the asset reverts to the lessor and has a guaranteed residual value of \$50,000. Jensen estimates that the expected residual value at the end of the lease term will be \$50,000. Jensen amortizes all of its leased equipment on a straight-line basis.
4. The lease agreement requires equal annual rental payments, beginning on January 1, 2020.
5. The collectibility of the lease payments is probable.
6. Glaus desires a 5% rate of return on its investments. Jensen's incremental borrowing rate is 6%, and the lessor's implicit rate is unknown.

Instructions

(Assume the accounting period ends on December 31.)

- a. Discuss the nature of this lease for both the lessee and the lessor.
- b. Calculate the amount of the annual rental payment required.
- c. Compute the value of the lease liability to the lessee.
- d. Prepare the journal entries Jensen would make in 2020 and 2021 related to the lease arrangement.
- e. Prepare the journal entries Glaus would make in 2020 and 2021 related to the lease arrangement.
- f. Suppose Jensen expects the residual value at the end of the lease term to be \$40,000 but still guarantees a residual of \$50,000. Compute the value of the lease liability at lease commencement.

P21.7 (LO 2, 4) (Lessor Computations and Entries, Sales-Type Lease with Guaranteed Residual Value)

Amirante Inc. manufactures an X-ray machine with an estimated life of 12 years and leases it to Chambers Medical Center for a period of 10 years. The normal selling price of the machine is \$495,678, and its guaranteed residual value at the end of the non-cancelable lease term is estimated to be \$15,000. The hospital will pay rents of \$60,000 at the beginning of each year. Amirante incurred costs of \$300,000 in manufacturing the machine and \$14,000 in legal fees directly related to the signing of the lease. Amirante has determined that the collectibility of the lease payments is probable and that the implicit interest rate is 5%.

Instructions

- a. Discuss the nature of this lease in relation to the lessor and compute the amount of each of the following items.
 1. Lease receivable at commencement of the lease.
 2. Sales price.
 3. Cost of sales.
- b. Prepare a 10-year lease amortization schedule for Amirante, the lessor.
- c. Prepare all of the lessor's journal entries for the first year.

P21.8 (LO 2, 4) (Lessee Computations and Entries, Finance Lease with Guaranteed Residual Value) Assume the same data as in P21.7 and that Chambers Medical Center has an incremental borrowing rate of 5% and an expected residual value at the end of the lease of \$10,000.

Instructions

- a. Discuss the nature of this lease in relation to the lessee, and compute the amount of the initial lease liability.
- b. Prepare a 10-year lease amortization schedule.
- c. Prepare all of the lessee's journal entries for the first year.
- d. Suppose Chambers Medical Center incurred \$7,000 of document preparation costs after the execution of the lease. How would the initial measurement of the lease liability and right-of-use asset be affected?

P21.9 (LO 2, 4) Groupwork (Lessor Computations and Entries, Sales-Type Lease with Unguaranteed Residual Value) George Company manufactures a check-in kiosk with an estimated economic life of 12 years and leases it to National Airlines for a period of 10 years. The normal selling price of the equipment is \$299,140, and its unguaranteed residual value at the end of the lease term is estimated to be \$20,000. National will pay annual payments of \$40,000 at the beginning of each year. George incurred costs of \$180,000 in manufacturing the equipment and \$4,000 in sales commissions in closing the lease. George has determined that the collectibility of the lease payments is probable and that the implicit interest rate is 8%.

Instructions

- a. Discuss the nature of this lease in relation to the lessor and compute the amount of each of the following items.
 1. Lease receivable.
 2. Sales price.
 3. Cost of goods sold.
- b. Prepare a 10-year lease amortization schedule for George, the lessor.
- c. Prepare all of the lessor's journal entries for the first year.

P21.10 (LO 2, 4) (Lessee Computations and Entries, Finance Lease with Unguaranteed Residual Value) Assume the same data as in P21.9, with National Airlines having an incremental borrowing rate of 8%.

Instructions

- a. Discuss the nature of this lease in relation to the lessee, and compute the amount of the initial lease liability.
- b. Prepare a 10-year lease amortization schedule.
- c. Prepare all of the lessee's journal entries for the first year. Assume straight-line depreciation.

P21.11 (LO 2, 4) Groupwork (Lessee-Lessor Accounting for Residual Values) Goring Dairy leases its milking equipment from King Finance Company under the following lease terms.

1. The lease term is 10 years, non-cancelable, and requires equal rental payments of \$30,300 due at the beginning of each year starting January 1, 2020.
2. The equipment has a fair value at the commencement of the lease (January 1, 2020) of \$242,741 and a cost of \$180,000 on King Finance's books. It also has an estimated economic life of 15 years and an expected residual value of \$45,000, though Goring Dairy has guaranteed a residual value of \$50,000 to King Finance.
3. The lease contains no renewal options, and the equipment reverts to King Finance upon termination of the lease. The equipment is not of a specialized use.
4. Goring Dairy's incremental borrowing rate is 8% per year. The implicit rate is also 8%.
5. Goring Dairy depreciates similar equipment that it owns on a straight-line basis.
6. Collectibility of the payments is probable.

Instructions

- a. Evaluate the criteria for classification of the lease, and describe the nature of the lease. In general, discuss how the lessee and lessor should account for the lease transaction.
- b. Prepare the journal entries for the lessee and lessor at January 1, 2020, and December 31, 2020 (the lessee's and lessor's year-end). Assume no reversing entries.
- c. What would have been the amount of the initial lease liability recorded by the lessee upon the commencement of the lease if:
 1. The residual value of \$50,000 had been guaranteed by a third party, not the lessee?
 2. The residual value of \$50,000 had not been guaranteed at all?

- d. On the lessor's books, what would be the amount recorded as the lease receivable at the commencement of the lease, assuming:
1. The residual value of \$50,000 had been guaranteed by a third party?
 2. The residual value of \$50,000 had not been guaranteed at all?

P21.12 (LO 2, 4) (Lessee-Lessor Entries, Balance Sheet Presentation, Finance and Sales-Type Lease) Winston Industries and Ewing Inc. enter into an agreement that requires Ewing Inc. to build three diesel-electric engines to Winston's specifications. Upon completion of the engines, Winston has agreed to lease them for a period of 10 years and to assume all costs and risks of ownership. The lease is non-cancelable, becomes effective on January 1, 2020, and requires annual rental payments of \$384,532 each January 1, starting January 1, 2020.

Winston's incremental borrowing rate is 8%. The implicit interest rate used by Ewing and known to Winston is 6%. The total cost of building the three engines is \$2,600,000. The economic life of the engines is estimated to be 10 years, with residual value set at zero. Winston depreciates similar equipment on a straight-line basis. At the end of the lease, Winston assumes title to the engines. Collectibility of the lease payments is probable.

Instructions

- a. Discuss the nature of this lease transaction from the viewpoints of both lessee and lessor.
- b. Prepare the journal entry or entries to record the transaction on January 1, 2020, on the books of Winston (the lessee).
- c. Prepare the journal entry or entries to record the transaction on January 1, 2020, on the books of Ewing (the lessor).
- d. Prepare the journal entries for both the lessee and lessor to record the first rental payment on January 1, 2020.
- e. Prepare the journal entries for both the lessee and lessor to record any entries needed in connection with the lease at December 31, 2020. (Prepare a lease amortization schedule for 2 years.)
- f. Show the items and amounts that would be reported on the balance sheet (not notes) at December 31, 2020, for both the lessee and the lessor.
- g. Assume that Winston incurs legal fees related to the execution of the lease of \$30,000. In addition, assume Winston receives a lease incentive from Ewing of \$50,000 to enter the lease. How will this affect your answer to part b?

P21.13 (LO 2, 4) Excel (Balance Sheet and Income Statement Disclosure—Lessee) The following facts pertain to a non-cancelable lease agreement between Alschuler Leasing Company and McKee Electronics, a lessee, for a computer system.

| | |
|--|-----------------|
| Commencement date | October 1, 2020 |
| Lease term | 6 years |
| Economic life of leased equipment | 6 years |
| Fair value of asset at October 1, 2020 | \$313,043 |
| Book value of asset at October 1, 2020 | \$280,000 |
| Residual value at end of lease term | –0– |
| Lessor's implicit rate | 8% |
| Lessee's incremental borrowing rate | 8% |
| Annual lease payment due at the beginning of each year, beginning with October 1, 2020 | \$62,700 |

The collectibility of the lease payments is probable by the lessor. The asset will revert to the lessor at the end of the lease term. The straight-line depreciation method is used for all equipment.

The following amortization schedule has been prepared correctly for use by both the lessor and the lessee in accounting for this lease. The lease is to be accounted for properly as a finance lease by the lessee and as a sales-type lease by the lessor.

| Date | Lease Payment/Receipt | Interest (8%) on Unpaid Liability/Receivable | Reduction of Lease Liability/Receivable | Balance of Lease Liability/Receivable |
|----------|-----------------------|--|---|---------------------------------------|
| 10/01/20 | | | | \$313,043 |
| 10/01/20 | \$ 62,700 | | \$ 62,700 | 250,343 |
| 10/01/21 | 62,700 | \$20,027 | 42,673 | 207,670 |
| 10/01/22 | 62,700 | 16,614 | 46,086 | 161,584 |
| 10/01/23 | 62,700 | 12,927 | 49,773 | 111,811 |
| 10/01/24 | 62,700 | 8,945 | 53,755 | 58,056 |
| 10/01/25 | 62,700 | 4,644 | 58,056 | –0– |
| | <u>\$376,200</u> | <u>\$63,157</u> | <u>\$313,043</u> | |

Instructions

- a. Assuming the lessee's accounting period ends on September 30, answer the following questions with respect to this lease agreement.
 1. What items and amounts will appear on the lessee's income statement for the year ending September 30, 2021?
 2. What items and amounts will appear on the lessee's balance sheet at September 30, 2021?
 3. What items and amounts will appear on the lessee's income statement for the year ending September 30, 2022?
 4. What items and amounts will appear on the lessee's balance sheet at September 30, 2022?
- b. Assuming the lessee's accounting period ends on December 31, answer the following questions with respect to this lease agreement.
 1. What items and amounts will appear on the lessee's income statement for the year ending December 31, 2020?
 2. What items and amounts will appear on the lessee's balance sheet at December 31, 2020?
 3. What items and amounts will appear on the lessee's income statement for the year ending December 31, 2021?
 4. What items and amounts will appear on the lessee's balance sheet at December 31, 2021?

P21.14 (LO 2, 4) Excel (Balance Sheet and Income Statement Disclosure—Lessor) Assume the same information as in P21.13.

Instructions

- a. Assuming the lessor's accounting period ends on September 30, answer the following questions with respect to this lease agreement.
 1. What items and amounts will appear on the lessor's income statement for the year ending September 30, 2021?
 2. What items and amounts will appear on the lessor's balance sheet at September 30, 2021?
 3. What items and amounts will appear on the lessor's income statement for the year ending September 30, 2022?
 4. What items and amounts will appear on the lessor's balance sheet at September 30, 2022?
- b. Assuming the lessor's accounting period ends on December 31, answer the following questions with respect to this lease agreement.
 1. What items and amounts will appear on the lessor's income statement for the year ending December 31, 2020?
 2. What items and amounts will appear on the lessor's balance sheet at December 31, 2020?
 3. What items and amounts will appear on the lessor's income statement for the year ending December 31, 2021?
 4. What items and amounts will appear on the lessor's balance sheet at December 31, 2021?

P21.15 (LO 2, 3) (Finance and Operating Lease) Anthony Incorporated leases a piece of machinery to Irving Company on January 1, 2020, under the following terms.

1. The lease is to be for 4 years with rental payments of \$12,471 to be made at the beginning of each year.
2. The machinery has a fair value of \$67,000, a book value of \$50,000, and an economic life of 10 years.
3. At the end of the lease term, both parties expect the machinery to have a residual value of \$25,000. To protect against a large loss, Anthony requests Irving to guarantee \$17,500 of the residual value, which Irving agrees to do.
4. The lease does not transfer ownership at the end of the lease term, does not have any bargain purchase options, and the asset is not of a specialized nature.
5. The implicit rate is 5%, which is known by Irving.
6. Collectibility of the payments is probable.

Instructions

- a. Evaluate the criteria for classification of the lease, and describe the nature of the lease.
- b. Prepare the journal entries for Irving for the year 2020.
- c. Prepare the journal entries for Anthony for the year 2020.
- d. Suppose Irving did not guarantee any amount of the expected residual value. How would your answers to parts a–c change?

P21.16 (LO 3) (Operating Lease) Lewis Corporation entered into a lease agreement on January 1, 2020, to provide Dawkins Company with a piece of machinery. The terms of the lease agreement were as follows.

1. The lease is to be for 3 years with rental payments of \$10,521 to be made at the beginning of each year.
2. The machinery has a fair value of \$55,000, a book value of \$40,000, and an economic life of 8 years.
3. At the end of the lease term, both parties expect the machinery to have a residual value of \$30,000, none of which is guaranteed.
4. The lease does not transfer ownership at the end of the lease term, does not have a bargain purchase option, and the asset is not of a specialized nature.
5. The implicit rate is 6%, which is known by Dawkins.
6. Collectibility of the payments is probable.

Instructions

- a. Evaluate the criteria for classification of the lease, and describe the nature of the lease.
- b. Prepare the amortization schedules Dawkins will use over the lease term.
- c. Prepare the 2020 journal entries for Dawkins.
- d. Prepare the 2020 journal entries for Lewis.
- e. Suppose the lease were only for one year instead of 3 years, with just one lease payment at the beginning of the lease term. Prepare any journal entries Dawkins would need, assuming it elects to use the short-term lease option.

P21.17 (LO 3) Groupwork (Lessee-Lessor Entries, Operating Lease with an Unguaranteed Residual Value) Cleveland Inc. leased a new crane to Abriendo Construction under a 5-year, non-cancelable contract starting January 1, 2020. Terms of the lease require payments of \$48,555 each January 1, starting January 1, 2020. The crane has an estimated life of 7 years, a fair value of \$240,000, and a cost to Cleveland of \$240,000. The estimated fair value of the crane is expected to be \$45,000 (unguaranteed) at the end of the lease term. No bargain purchase or renewal options are included in the contract, and it is not a specialized asset. Both Cleveland and Abriendo adjust and close books annually at December 31. Collectibility of the lease payments is probable. Abriendo's incremental borrowing rate is 8%, and Cleveland's implicit interest rate of 8% is known to Abriendo.

Instructions

- a. Identify the type of lease involved and give reasons for your classification. Discuss the accounting treatment that should be applied by both the lessee and the lessor.
- b. Prepare all the entries related to the lease contract and leased asset for the year 2020 for the lessee and lessor, assuming Abriendo uses straight-line amortization for all similar leased assets, and Cleveland depreciates the asset on a straight-line basis with a salvage value of \$15,000.
- c. Discuss what should be presented in the balance sheet, the income statement, and the related notes of both the lessee and the lessor at December 31, 2020.

Concepts for Analysis

CA21.1 (LO 2, 4) Writing (Lessee Accounting and Reporting) On January 1, 2020, Evans Company entered into a non-cancelable lease for a machine to be used in its manufacturing operations. The lease transfers control of the machine to Evans by the end of the lease term. The term of the lease is 8 years, which equals the useful life of the asset. The lease payment made by Evans on January 1, 2020, was one of eight equal annual payments. At the commencement of the lease, the criteria established for classification as a finance lease by the lessee were met.

Instructions

- a. What is the theoretical basis for the accounting standard that requires certain long-term leases to be capitalized by the lessee? Do not discuss the specific criteria for classifying a specific lease as a finance lease.
- b. How should Evans account for this lease at its commencement?

- c. What expenses directly related to lease liability and right-of-use asset will Evans incur during the first year of the lease, and how will these expenses be determined?
- d. How should Evans report the lease transaction on its December 31, 2020, balance sheet?

CA21.2 (LO 2, 4) (Lessor and Lessee Accounting and Disclosure) Sylvan Inc. entered into a non-cancelable lease arrangement with Breton Leasing Corporation for a certain machine. Breton's primary business is leasing. Sylvan will lease the machine for a period of 3 years, which is 50% of the machine's economic life. Breton will take possession of the machine at the end of the initial 3-year lease and lease it to another, smaller company that does not need the most current version of the machine. Sylvan does not guarantee any residual value for the machine and will not purchase the machine at the end of the lease term. Sylvan's incremental borrowing rate is 10%, and the implicit rate in the lease is 9%. Sylvan has no way of knowing the implicit rate used by Breton. Using either rate, the present value of the lease payments is between 90% and 100% of the fair value of the machine at the date of the lease agreement. Breton is reasonably certain that Sylvan will pay all lease payments.

Instructions

- a. With respect to Sylvan (the lessee), answer the following.
 1. What type of lease has been entered into? Explain the reason for your answer.
 2. How should Sylvan compute the appropriate amount to be recorded for the lease or asset acquired?
 3. What accounts will be created or affected by this transaction, and how will the lease or asset and other costs related to the transaction be recorded in earnings?
 4. What disclosures must Sylvan make regarding this leased asset?
- b. With respect to Breton (the lessor), answer the following.
 1. What type of leasing arrangement has been entered into? Explain the reason for your answer.
 2. How should this lease be recorded by Breton, and how are the appropriate amounts determined?
 3. How should Breton determine the appropriate amount of revenue to be recognized from each lease payment?
 4. What disclosures must Breton make regarding this lease?

CA21.3 (LO 2) (Lessee Capitalization Tests) On January 1, Santiago Company, a lessee, entered into three non-cancelable leases for new equipment, Lease L, Lease M, and Lease N. None of the three leases transfers ownership of the equipment to Santiago at the end of the lease term. For each of the three leases, the present value at the beginning of the lease term of the lease payments is 75% of the fair value of the equipment. The following information is specific to each lease.

1. Lease L does not contain a bargain purchase option. The lease term is equal to 80% of the estimated economic life of the equipment.
2. Lease M contains a bargain purchase option. The lease term is equal to 50% of the estimated economic life of the equipment.
3. Lease N does not contain a bargain purchase option. The lease term is equal to 50% of the estimated economic life of the equipment.

Instructions

- a. How should Santiago classify each of the three leases above, and why? Discuss the rationale for your answer.
- b. What amount, if any, should Santiago record as a liability at commencement of the lease for each of the three leases above?
- c. Assuming that the lease payments are made on a straight-line basis, how should Santiago record each lease payment for each of the three leases above?

CA21.4 (LO 2, 3) (Comparison of Different Types of Accounting by Lessee and Lessor)

Part 1: Finance leases and operating leases are the two classifications of leases described in FASB pronouncements from the standpoint of the **lessee**.

Instructions

- a. Describe how a finance lease would be accounted for by the lessee both at the commencement of the lease and during the first year of the lease, assuming the lease transfers ownership of the property to the lessee by the end of the lease.

- b. Describe how an operating lease would be accounted for by the lessee both at the commencement of the lease and during the first year of the lease, assuming equal monthly payments are made by the lessee at the beginning of each month of the lease.

Do **not** discuss the criteria for distinguishing between finance leases and operating leases.

Part 2: Sales-type leases and operating leases are two of the classifications of leases described in FASB pronouncements from the standpoint of the **lessor**.

Instructions

Compare and contrast a sales-type lease with an operating lease as follows.

- a. Lease receivable.
- b. Recognition of interest revenue.
- c. Gross profit.

Do **not** discuss the criteria for distinguishing between the leases described above and operating leases.

CA21.5 (LO 4) Ethics (Lease Capitalization, Bargain Purchase Option) Baden Corporation entered into a lease agreement for 100 photocopy machines for its corporate headquarters. The lease agreement qualifies as an operating lease except there is a bargain purchase option. After the 5-year lease term, the corporation can purchase each copier for \$1,000, when the anticipated fair value is \$2,500.

Jerry Suffolk, the financial vice president, thinks the financial statements must recognize the lease agreement as a finance lease because of the bargain purchase option. The controller, Diane Buchanan, disagrees: "Although I don't know much about the copiers themselves, there is a way to avoid recording the lease liability." She argues that the corporation might claim that copier technology advances rapidly and that by the end of the lease term, the machines will most likely not be worth the \$1,000 bargain price.

Instructions

- a. What ethical issue is at stake?
- b. Should the controller's argument be accepted if she does not really know much about copier technology? Would it make a difference if the controller were knowledgeable about the rate of change in copier technology?
- c. What should Suffolk do?

CA21.6 (LO 2, 4) Writing (Short-Term Lease vs. Finance Lease) You are auditing the December 31, 2020, financial statements of Hockney, Inc., manufacturer of novelties and party favors. During your inspection of the company garage, you discovered that a used automobile not listed in the equipment subsidiary ledger is parked there. You ask Stacy Reeder, plant manager, about the vehicle, and she tells you that the company did not list the automobile because the company was only leasing it and elected to use the short-term lease accounting option for the lease. The lease agreement was entered into on January 1, 2020, with Crown New and Used Cars.

You decide to review the lease agreement to ensure that the lease should be afforded short-term lease treatment, and you discover the following lease terms.

1. Non-cancelable term of 2 years.
2. Rental of \$3,240 per year (at the end of each year). (The present value at 8% per year is \$5,778.)
3. Expected residual value after 2 years is \$500. (The present value at 8% per year is \$429.) Hockney guarantees the residual value of \$500.
4. Estimated economic life of the automobile is 2.5 years.
5. Hockney's incremental borrowing rate is 8% per year.

Instructions

You are a senior auditor writing a memo to your supervisor, the audit partner in charge of this audit, to discuss the above situation. Be sure to include (a) why you inspected the lease agreement, (b) what you determined about the lease, and (c) how you advised your client to account for this lease. Explain every journal entry that you believe is necessary to record this lease properly on the client's books. (It is also necessary to include the fact that you communicated this information to your client.)

***CA21.7 (LO 5) (Sale-Leaseback)** On January 1, 2020, Perriman Company transferred equipment for cash and leased it back. As seller-lessee, Perriman retained the right to substantially all of the remaining use of the equipment. The term of the lease is 8 years.

Instructions

- a. What is the major issue related to sale-leaseback accounting?
- b. 1. How should Perriman account for the sale portion of the sale-leaseback transaction at January 1, 2020?
2. How should Perriman account for the leaseback portion of the sale-leaseback transaction at January 1, 2020?

Using Your Judgment

Note that P&G, Delta Air Lines, Southwest Airlines, and Wal-Mart have not yet adopted the new lease accounting rules. As a result, in the financial statements referred to below, finance leases are referred to as “capital,” and assets and liabilities related to operating leases are not recognized on the balance sheet.

Financial Reporting Problem

The Procter & Gamble Company (P&G)

The financial statements of **P&G** are presented in Appendix B. The company’s complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G’s financial statements, accompanying notes, and management’s discussion and analysis to answer the following questions.

- a. What types of leases are used by P&G?
- b. What amount of capital leases was reported by P&G in total and for less than one year?
- c. What minimum annual rental commitments under all non-cancelable leases at June 30, 2017, did P&G disclose?

Comparative Analysis Case

Delta Air Lines and Southwest Airlines

The financial statements and notes to the financial statements for **Delta Air Lines** and **Southwest Airlines** can be found online.

Instructions

Use information found in the companies’ financial reports to answer the following questions.

- a. What types of leases are used by Southwest and Delta and on what assets are these leases primarily used?
- b. How long-term are some of Southwest’s leases? What are some of the characteristics or provisions of Southwest’s (as lessee) leases?
- c. What did Southwest report in 2017 as its future minimum annual rental commitments under non-cancelable leases?
- d. At year-end 2017, what was the present value of the minimum rental payments under Southwest’s capital leases? How much imputed interest was deducted from the future minimum annual rental commitments to arrive at the present value?
- e. What were the amounts and details reported by Southwest for rental expense in 2017, 2016, and 2015?
- f. How does Delta’s use of leases compare with Southwest’s?

Financial Statement Analysis Case

Wal-Mart Stores, Inc.

The following are the financial statement disclosures from the January 31, 2018, annual report of **Wal-Mart Stores, Inc.**

|  Wal-Mart Stores, Inc. (dollar amounts in millions) | | <u>Jan. 31, 2018</u> | <u>Jan. 31, 2017</u> |
|--|--|-------------------------|--|
| Description and amount of lease obligations | <u>Current Liabilities</u> | | |
| | Capital lease and financing obligations due within one year | \$ 667 | \$ 565 |
| | <u>Noncurrent Liabilities</u> | | |
| | Long-term capital lease and financing obligations | \$6,780 | \$6,003 |
| General description and amount of lease rental expense | Note 11: Commitments | | |
| | The Company has long-term leases for stores and equipment. Rentals (including amounts applicable to taxes, insurance, maintenance, other operating expenses and contingent rentals) under operating leases and other short-term rental arrangements were \$2.9 billion, \$2.6 billion and \$2.5 billion in fiscal 2018, 2017 and 2016, respectively. Aggregate minimum annual rentals at January 31, 2018, under non-cancelable leases are as follows (dollar amounts in millions): | | |
| Description and amounts of leased assets | <u>Fiscal Year</u> | <u>Operating Leases</u> | <u>Capital Lease and Financial Obligations</u> |
| | 2019 | 1,933 | 1,039 |
| | 2020 | 1,718 | 987 |
| | 2021 | 1,532 | 942 |
| | 2022 | 1,381 | 843 |
| | 2023 | 1,158 | 696 |
| | Thereafter | <u>7,644</u> | <u>5,423</u> |
| | Total minimum rentals | 15,366 | 9,930 |
| | Less estimated executory costs | | <u>27</u> |
| | Net minimum lease payments | | 9,903 |
| Nature, timing, and amounts of cash outflows | Noncash gain on future termination of financing obligations | | 1,111 |
| | Less imputed interest | | -3,567 |
| | Present value of minimum lease payments | | <u>\$7,447</u> |
| | Certain of the Company's leases provide for the payment of contingent rentals based on a percentage of sales. Such contingent rentals were not material for fiscal 2018, 2017 and 2016. Substantially all of the Company's store leases have renewal options, some of which may trigger an escalation in rentals. | | |

Instructions

Answer the following questions related to these disclosures.

- What is the total obligation under capital leases and financial obligations at January 31, 2018, for Wal-Mart?
- What is the total rental expense reported for leasing activity for the year ended January 31, 2018, for Wal-Mart?
- What is the present value of minimum lease payments related to capital leases and financial obligations at January 31, 2018?

Accounting, Analysis, and Principles

Salaur Company, a risky start-up, is evaluating a lease arrangement being offered by TSP Company for use of a standard computer system. The lease is non-cancelable, and in no case does Salaur receive title to the computers during or at the end of the lease term. TSP will lease the returned computers to other customers. The lease starts on January 1, 2020, with the first rental payment due on January 1, 2020. Additional information related to the lease and the underlying leased asset is as follows.

| | |
|--|---|
| Yearly rental | \$3,057.25 |
| Lease term | 3 years |
| Estimated economic life | 5 years |
| Purchase option | \$3,000 at end of 3 years, which approximates fair value |
| Renewal option | 1 year at \$1,500; no penalty for nonrenewal; standard renewal clause |
| Fair value at commencement | \$10,000 |
| Cost of asset to lessor | \$8,000 |
| Residual value: | |
| Guaranteed | –0– |
| Unguaranteed | \$3,000 |
| Lessor's implicit rate (known by the lessee) | 12% |
| Estimated fair value at end of lease | \$3,000 |

Accounting

- Analyze the lease classification tests for this lease for Salaur. Prepare the journal entries for Salaur for 2020.
- Repeat the requirements in part a, assuming Salaur has the option to purchase the system at the end of the lease for \$100.

Analysis

Briefly discuss the impact of the accounting for this lease as a finance or operating lease for two common ratios: return on assets and debt to total assets.

Principles

What fundamental quality of useful information is being addressed when a company like Salaur capitalizes all leases with terms of one year or longer?

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

CE21.1 Access the glossary (“Master Glossary”) to answer the following.

- What is the “commencement date”?
- What is the definition of “incremental borrowing rate”?
- What is an unguaranteed residual asset?
- What are variable lease payments?

CE21.2 What comprises lease payments? What is excluded?

CE21.3 What information should a lessee disclose about its finance leases in its financial statements and footnotes?

CE21.4 How should a lessor measure its net investment in either a sales-type lease or a direct financing lease?

Codification Research Case

Daniel Hardware Co. is considering alternative financing arrangements for equipment used in its warehouses. Besides purchasing the equipment outright, Daniel is also considering a lease. Accounting for the outright purchase is fairly straightforward, but because Daniel has not used equipment leases in the past, the accounting staff is less informed about the specific accounting rules for leases. The staff is

aware of some general lease rules related to “right-of-use,” but they are unsure how the accounting rules apply to their situation. Daniel has asked you to conduct some research on these items related to lease capitalization criteria.

Instructions

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

- a. What is included in the measurement of (1) the lease liability and (2) the right-of-use asset?

- b. Besides the non-cancelable term of the lease, what other considerations determine the “lease term”?
- c. When should a lessee account for a lease modification? What procedures are followed?

IFRS Insights

LEARNING OBJECTIVE 8

Compare the accounting for leases under GAAP and IFRS.

Leasing is a global business. Lessors and lessees enter into arrangements with one another without regard to national boundaries. Although GAAP and IFRS for leasing are not identical, both the FASB and the IASB decided that prior lease accounting did not provide the most useful, transparent, and complete information about leasing transactions. In response, the FASB and IASB worked together on a lease accounting project. The IASB issued *IFRS 16, Leases* in January 2016. Many of the requirements in the new FASB standard are the same as those in *IFRS 16*. The main differences between GAAP and IFRS under the new rules are in relation to the lessee accounting model. Specifically, IFRS does not make a distinction between finance leases and operating leases in the financial statements. As a result, lessees account for all leases using the finance lease method.

Relevant Facts

Following are the key similarities and differences between GAAP and IFRS related to the accounting for leases.

Similarities

- Both GAAP and IFRS share the same objective of recording leases by lessees and lessors according to their economic substance—that is, according to the definitions of assets and liabilities.
- Much of the terminology for lease accounting in IFRS and GAAP is the same.
- Both GAAP and IFRS require lessees to recognize a right-of-use asset and related lease liability for leases with terms longer than one year.
- Under both IFRS and GAAP, lessors use the same general criteria (consistent with the recent standard on revenue) to determine if there is transfer of control of the underlying asset and if lessors classify leases as sales-type or operating.
- GAAP and IFRS have similar qualitative and quantitative disclosure requirements for lessees.

Differences

- There is no classification test for lessees under *IFRS 16*. Thus, lessees account for all leases using the finance lease method—that is, leases classified as operating leases under GAAP will be accounted for differently compared to IFRS (see example in About the Numbers section below).
- IFRS allows alternative measurement bases for the right-of-use asset (e.g., the revaluation model, in accordance with *IAS 16, Property, Plant and Equipment*).
- In addition to the short-term lease exception, IFRS has an additional lessee recognition and measurement exemption for leases of assets of low value (e.g., personal computers, small office furniture).

- IFRS does not include any explicit guidance on collectibility of the lease payments by lessors and amounts necessary to satisfy a residual value guarantee.
- IFRS does not distinguish between sales-type and direct financing leases for lessors. Therefore, *IFRS 16* permits recognition of selling profit on direct financing leases at lease commencement.
- IFRS applies to leases of any asset, whether tangible plant, property, or intangible assets. GAAP applies only to tangible plant property.
- IFRS uses the same model for leases for both lessees and lessors, whereas GAAP uses a different model for lessees and lessors.

About the Numbers

A **lease** is defined as “a contract, or part of a contract, that conveys the right to control the use of an identified property, plant or equipment (an identified asset) for a period of time in exchange for consideration.” A lease therefore conveys use of an asset from one party (the lessor) to another (the lessee) without transferring ownership. Accounting for lease transactions is controversial as the following example illustrates.

If **Air France** borrows \$47 million on a 10-year note from **Bank of America** to purchase a Boeing 737 jet plane, Air France should report an asset and related liability at that amount on its statement of financial position. Similarly, if Air France purchases the 737 for \$47 million directly from Boeing through an installment purchase over 10 years, it should report an asset and related liability (i.e., it should “capitalize” the installment transaction).

However, what if Air France **leases** the Boeing 737 for 10 years from **International Lease Finance Corp. (ILFC)**—the world’s largest lessor of airplanes—through a non-cancelable lease transaction with payments of the same amount as the installment purchase transaction? In that case, opinion differs over how to report this transaction. Views on the appropriate accounting range from no capitalization to capitalization of all long-term leases.

The IASB now requires companies to capitalize all leases. The only exceptions to this guideline are that leases covering a term of less than one year or leases under \$5,000 do not have to be capitalized. The IASB indicates that the right to use property under the terms of the lease is an asset, and the lessee’s obligation to make payments under the lease is a liability. As a result, Air France records the right-of-use of the airplane as an asset on its statement of financial position. It also records a liability for its obligation to make payments under the lease.

Lessee Accounting

Lessees use the finance lease method to account for all non-cancelable leases, by recording a right-of-use asset and related lease liability. The lessee recognizes interest expense on the lease liability over the life of the lease using the effective-interest method and records depreciation expense on the right-of-use asset. This accounting is applied whether the lease arrangement is effectively a purchase of the underlying asset (Air France’s lease with ILFC above) or the lessee **obtains control of only the use of the underlying asset**, but not the underlying asset itself. For example, a lease may convey use of one floor of an office building for five years. At the end of the lease, the lessee vacates the floor and the lessor can then lease the floor to another tenant. In this situation, the lease conveys right-of-use but not ownership. However, lessee accounting for leases that transfer ownership or transfer control is the same.

Lessee Accounting at Commencement

At commencement of the lease, lessees record a right-of-use asset and lease liability. The measurement of the right-of-use asset depends on the lease liability. The lease liability is computed as the present value of the lease payments. An asset for the right-of-use of the underlying asset (i.e., the right-of-use asset) is equal to the lease liability, adjusted for prepaid rent (less lease incentives received from the lessor), and any initial direct costs.²⁷

Subsequent Lessee Accounting

Throughout the term of the lease, a lessee, like Air France, uses the **effective-interest method** to allocate each lease payment between principal and interest on the lease liability. This method produces a periodic interest expense equal to a constant percentage of the carrying value of the lease obligation. When applying the effective-interest method to finance leases, Air France must use the same discount rate (the implicit rate) that determines the present value of the lease payments.

²⁷Determination of elements of the lease liability (lease payment, discounts, rate) and the right-of-use asset is the same under IFRS and GAAP.

Depreciation of the right-of-use asset is accounted for similar to other non-financial assets. That is, the lessee should depreciate the right-of-use asset using an approach that reflects the consumption of the economic benefits of the leased asset. Generally, companies use the straight-line method for recording the consumption of a right-of-use asset. One troublesome aspect of accounting for the depreciation of the right-of-use asset relates to the depreciable life. If the lease agreement transfers ownership of the asset to Air France or if the lease contains a bargain purchase option at the end of the lease, Air France depreciates the aircraft consistent with its normal depreciation policy for other aircraft, **using the economic life of the asset**. On the other hand, if the lease does not transfer ownership and does not contain a bargain purchase option at the end of the lease, then Air France depreciates it over the **term of the lease**. In this case, the aircraft reverts to ILFC after a certain period of time.

Recognizing the interest on the lease liability coupled with the depreciation of the right-of-use asset will **generally result in higher total expense in the earlier years and lower total expense in the later years of the lease**.

Lease Accounting Example

To illustrate lessee accounting for a lease that conveys right-of-use but not ownership, assume that Hathaway Disposal Inc. (lessor) and **Marks and Spencer plc (M&S)** (the lessee) sign a lease agreement dated January 1, 2020. The lease agreement specifies that Hathaway will grant right-of-use of one of its standard cardboard compactors for use at one of M&S's stores. Information relevant to the lease is as follows.

- The term of the lease is three years. The lease agreement is non-cancelable, requiring equal rental payments of \$17,620.08 at the beginning of each year of the lease (annuity-due basis).
- The compactor has a cost and fair value at commencement of the lease of \$60,000, an estimated economic life of seven years, and a residual value of \$12,000 (unguaranteed).
- The lease contains no renewal options, and the compactor reverts to Hathaway at the termination of the lease.
- The implicit rate of the lessor is not known by M&S. M&S's incremental borrowing rate is 6 percent.

Under this lease arrangement, M&S has right of use of the compactor for three years and will return the asset to Hathaway at the end of the lease; Hathaway retains ownership of the compactor. The present value of the lease payments for M&S in this situation is \$49,924.56 ($\$17,620.08 \times 2.83339$). M&S makes the following entries to record the lease and the first payment.

| January 1, 2020 | | | |
|---|-----------|-----------|--|
| Right-of-Use Asset | 49,924.56 | | |
| Lease Liability | | 49,924.56 | |
| (To record the right-of-use asset and related liability at commencement of the lease) | | | |
| Lease Liability | 17,620.08 | | |
| Cash | | 17,620.08 | |
| (To record first lease payment) | | | |

M&S prepares a lease amortization schedule to show interest expense and related amortization of the lease liability over the three-year period, as shown in **Illustration IFRS21.1**.

ILLUSTRATION IFRS21.1

Lease Amortization Schedule for Lessee

| Marks and Spencer plc | | | | |
|------------------------------------|----------------------|-----------------------------------|-------------------------------------|------------------------|
| Lease Amortization Schedule | | | | |
| Annuity-Due Basis | | | | |
| <u>Date</u> | <u>Lease Payment</u> | <u>Interest (6%) on Liability</u> | <u>Reduction of Lease Liability</u> | <u>Lease Liability</u> |
| | (a) | (b) | (c) | (d) |
| 1/1/20 | | | | \$49,924.56 |
| 1/1/20 | \$17,620.08 | \$ -0- | \$17,620.08 | 32,304.48 |
| 1/1/21 | 17,620.08 | 1,938.27 | 15,681.81 | 16,622.67 |
| 1/1/22 | 17,620.08 | 997.41* | 16,622.67 | 0.00 |
| | <u>\$52,860.24</u> | <u>\$2,935.68</u> | <u>\$49,924.56</u> | |

(a) Lease payment as required by lease.
 (b) 6 percent of the preceding balance of (d) except for 1/1/20; since this is an annuity due, no time has elapsed at the date of the first payment and therefore no interest has accrued.
 (c) (a) minus (b).
 (d) Preceding balance minus (c).
 *Rounded by \$0.05.

The journal entries to be prepared by M&S throughout the lease to record lease expense and amortization of the lease liability and depreciation of the right-of-use asset are as follows, using the amounts presented in **Illustration IFRS21.2**.

| Marks and Spencer plc (Lessee) | | |
|--|-----------|-----------|
| Recognize lease expense, record amortization (December 31, 2020): | | |
| Interest Expense | 1,938.27 | |
| Lease Liability | | 1,938.27 |
| Depreciation Expense | 16,641.52 | |
| Accumulated Depreciation (Right-of-Use Asset) | | |
| (\$49,924.56 ÷ 3) | | 16,641.52 |
| Record second lease payment (January 1, 2021): | | |
| Lease Liability (\$1,938.27 + \$15,681.81) | 17,620.08 | |
| Cash | | 17,620.08 |
| Recognize lease expense, record amortization (December 31, 2021): | | |
| Interest Expense | 997.41 | |
| Lease Liability | | 997.41 |
| Depreciation Expense | 16,641.52 | |
| Accumulated Depreciation (Right-of-Use Asset) | | |
| (\$49,924.56 ÷ 3) | | 16,641.52 |
| Record third lease payment (January 1, 2022): | | |
| Lease Liability (\$997.41 + \$16,622.67) | 17,620.08 | |
| Cash | | 17,620.08 |

| Depreciation Expense | 16,641.52 | |
| Accumulated Depreciation (Right-of-Use Asset) | | |
| (\$49,924.56 ÷ 3) | | 16,641.52 |

ILLUSTRATION IFRS21.2
Journal Entries by Lessee

Following these entries, as indicated in Illustration IFRS21.1, the lease liability and the right-of-use asset have zero balances.²⁸ M&S returns the asset to Hathaway.

On the Horizon

Lease accounting is one of the areas identified in the IASB/FASB Memorandum of Understanding. The Boards have developed rules based on “right-of-use” (ROU) which require that all leases with terms longer than one year be recorded on the statement of financial position/balance sheet. The IASB has decided on a single approach for lessee accounting. Under the IASB approach, a lessee accounts for all leases as finance leases, recognizing depreciation of the ROU asset separately from interest on the lease liability. The FASB reached a different conclusion on the expense recognition for operating-type leases. Under the FASB model, the income effects will reflect a straight-line expense pattern, reported as a single total lease expense. The Boards are generally converged with respect to lessor accounting.

IFRS Self-Test Questions

1. Which of the following is **false** with respect to lease accounting under IFRS?

- IFRS require lessees to recognize a right-of-use asset and related lease liability for leases with terms longer than one year.
- IFRS does not include any explicit guidance on collectibility of the lease payments by lessors and amounts necessary to satisfy a residual value guarantee.

- IFRS does not permit recognition of selling profit on direct financing leases at lease commencement.
- IFRS uses essentially the same lessor accounting model as GAAP for leases classified as sales-type or operating.

2. Under IFRS:

- lessees and lessors recognize right-of-use assets.
- lessees always use the operating method.

²⁸Under GAAP, this lease is classified as an operating lease and lease expense is recognized on a straight-line basis. Lessor accounting for an operating lease under IFRS and GAAP is essentially the same; that is, the lessor records Lease Revenue in each year of the lease on a straight-line basis.

- c. lessees always recognize a right-of-use asset and lease liability for leases with terms less than one year.
 - d. lessors do not distinguish between sales-type and direct financing leases.
3. All of the following are similarities with respect to the accounting for leases, under IFRS and GAAP, **except**:
- a. lessees recognize a right-of-use asset and related lease liability for leases with terms longer than one year.
 - b. lessees use the same general lease classification criteria to determine if lessees classify leases as finance or operating.
 - c. lessors under IFRS and GAAP use the same model to account for sales-type leases.
 - d. GAAP and IFRS have similar qualitative and quantitative disclosure requirements for lessees and lessors.
4. Under IFRS:
- a. lessees may use alternative measurement bases (e.g., revaluation accounting) for the right-of-use asset.
 - b. different measurement bases may be used for the right-of-use asset but only for leases with terms less than one year.
 - c. the same guidance on collectibility of the lease payments is used by lessors as in GAAP.
 - d. lessors are required to defer gross profit on direct financing leases.
5. All of the following are differences with respect to the accounting for leases, under IFRS and GAAP, **except**:
- a. IFRS has an additional lessee recognition and measurement exemption for leases of assets of low value (GAAP does not).
 - b. IFRS allows alternative measurement bases for the right-of-use asset (e.g., the revaluation model).
 - c. under IFRS, lessees use the same tests to determine if a lease should be classified as finance or operating.
 - d. IFRS permits recognition of selling profit on direct financing leases at lease commencement.

IFRS Concepts and Application

IFRS21.1 Where can authoritative IFRS related to the accounting for leases be found?

IFRS21.2 Briefly describe some of the similarities and differences between GAAP and IFRS with respect to the accounting for leases.

IFRS21.3 Outline the accounting procedures (the finance lease method) for a lease by a lessee.

IFRS21.4 Kleckner Corporation recorded a lease at \$300,000 on December 31, 2019. Kleckner's incremental borrowing rate is 8%, and the implicit rate of the lessor is not known. Kleckner made the first lease payment of \$48,337 on December 31, 2019. The lease requires eight annual payments. The equipment has a useful life of 8 years with no residual value. Prepare Kleckner's December 31, 2020, adjusting entries.

IFRS21.5 Use the information for Kleckner Corporation from IFRS21.4. Assume that at December 31, 2020, Kleckner made an adjusting entry to accrue interest expense of \$20,133 on the lease. Prepare Kleckner's January 1, 2021, journal entry to record the second lease payment of \$48,337.

IFRS21.6 Delaney Company leases an automobile with a fair value of \$10,000 from Simon Motors, Inc., on the following terms.

1. Non-cancelable term of 50 months.
2. Rental of \$200 per month at the beginning of each month. (The present value at 0.5% per month is \$8,873.)
3. Estimated economic life of the automobile is 60 months.
4. Delaney's incremental borrowing rate is 6% a year (0.5% a month). Simon's implicit rate is unknown.

Instructions

- a. What is the present value of the lease payments to determine the lease liability?
- b. Record the lease on Delaney's books at the commencement date.
- c. Record the first month's lease payment (at commencement of the lease).
- d. Record the second month's lease payment.
- e. Record the first month's depreciation on Delaney's books (assume straight-line).

IFRS21.7 On January 1, 2020, a machine was purchased for \$900,000 by Young Co. The machine is expected to have an 8-year life with no residual value. It is to be depreciated on a straight-line basis. The machine was leased to St. Ledger Inc. for 3 years on January 1, 2020, with annual rent payments of \$150,955 due each December 31, though St. Ledger was required to prepay the last year's rent on the commencement date. The machine is expected to have a residual value at the end of the lease term of \$562,500, though this amount is unguaranteed.

Instructions

- a. Record the journal entries St. Ledger would record for 2020 on this lease, assuming its incremental borrowing rate is 6% and the implicit rate is unknown.
- b. Suppose the lease was only for one year (only one payment of the same amount at the commencement of the lease), with a renewal option at market rates at the end of the lease, and St. Ledger elects to use the short-term lease exception. Record the journal entries St. Ledger would record for 2020 on this lease.
- c. How much should Young report as income before income tax on this operating lease for 2020?

Professional Research

IFRS21.8 Daniel Hardware Co. is considering alternative financing arrangements for equipment used in its warehouses. Besides purchasing the equipment outright, Daniel is also considering a lease. Accounting for the outright purchase is fairly straightforward, but because Daniel has not used equipment leases in the past, the accounting staff is less informed about the specific accounting rules for leases. The staff is aware of some general lease rules related to “right-of-use,” but they are unsure how the accounting rules apply to their situation. Daniel has asked you to conduct some research on these items related to lease capitalization criteria.

Instructions

Access the IFRS authoritative literature at the IASB website. (Click on the IFRS tab and then register for free eIFRS access if necessary.) When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- a. What is included in the measurement of (1) the lease liability and (2) the right-of-use asset?
- b. Besides the non-cancelable term of the lease, what are other considerations in determining the “lease term?”
- c. When should a lessee account for a lease modification? What procedures are followed?

International Financial Reporting Problem

Marks and Spencer plc (M&S)

IFRS21.9 The financial statements of **M&S** are presented in Appendix E. The company’s complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S’s financial statements and the accompanying notes to answer the following questions.

- a. What types of leases are used by M&S?
- b. What amount of finance leases was reported by M&S in total and for less than one year?
- c. What minimum annual rental commitments under all non-cancelable leases at 1 April 2017 did M&S disclose?

Accounting Changes and Error Analysis

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

1. Discuss the types of accounting changes and the accounting for changes in accounting principles.
2. Describe the accounting for changes in estimates and changes in the reporting entity.
3. Describe the accounting for correction of errors.
4. Analyze the effects of errors.

PREVIEW OF CHAPTER 22 As the following opening story indicates, changes in accounting principles and errors in financial information have persisted in recent years and can leave investors in the dark. When these changes occur, companies must follow specific accounting and reporting requirements. In addition, to ensure comparability among companies, the FASB has standardized reporting of accounting changes, accounting estimates, error corrections, and related earnings per share information. In this chapter, we discuss these reporting standards, which help investors better understand a company's financial condition. The content and organization of the chapter are as follows.

This chapter also includes numerous conceptual and global discussions that are integral to the topics presented here.

ACCOUNTING CHANGES AND ERROR ANALYSIS

Accounting Changes

- Background
- Changes in accounting principle
- Impracticability

Other Changes

- Changes in accounting estimates
- Changes in reporting entity

Accounting Errors

- Example
- Summary

Error Analysis

- Balance sheet errors
- Income statement errors
- Balance sheet and income statement errors
- Comprehensive example
- Preparation of statements with error corrections

In the Dark

The FASB’s conceptual framework describes comparability (including consistency) as one of the qualitative characteristics that contributes to the usefulness of accounting information. Unfortunately, companies are finding it difficult to maintain comparability and consistency due to the numerous changes in accounting principles mandated by the FASB. In addition, a number of companies have faced restatements due to errors in their financial statements. For example, the table below shows types and percentages of adjustments required for 300 material errors in a recent year.

| | | | |
|--|-------|---|------|
| Tax expense/benefit/deferral/other (<i>FAS 109</i>) | 19.9% | Acquisitions, mergers, disposals, and reorganization accounting | 4.8% |
| Revenue recognition | 13.4 | Consolidation and off-balance-sheet | 4.8 |
| Liabilities, payables, reserves, and accrual estimate failures | 7.1 | PPE, intangible or fixed asset (value/diminution) | 4.3 |
| Expense (payroll, SGA, other) recording | 6.3 | Depreciation, depletion, or amortization errors | 4.3 |
| Inventory, vendor, and/or cost of sales | 5.8 | Accounts/loans receivable, investments, and cash | 4.0 |
| Foreign, related-party, affiliated, or subsidiary | 5.6 | Other (e.g., leases, capitalization of expenditures, pensions, investments, derivatives, gain/loss recognition, debt/equity classifications, and cash flow statement classifications) | 8.8 |
| Deferred, stock-based, and/or executive compensation | 5.6 | | |
| Debt, quasi-debt, warrants, and equity (BCF) security | 5.3 | | |

Although the percentage of companies reporting material changes or errors is small, readers of financial statements still must be careful. The reason: The amounts in the financial statements may have changed due to changing accounting principles and/or restatements. The following chart indicates the recent trends in restatements.

There is much good news in the chart. Restatements took another downward dip in 2017, indicating another year of incremental improvement in the quality of financial reporting. The total number of restatements declined in 2017 for the fifth consecutive year, from 873 in 2013 to 553 in 2017. However, investors can be in the dark when a company has an error that requires restatement. It may take some time for companies to sort out the source of an error, prepare corrected statements, and get auditor sign-off.

This period—referred to as a “dark period”—is the length of time between a company’s discovery that it will need to restate financial data and the subsequent disclosure of the restatement’s effect on earnings. One study indicated that companies with financial experts on the audit committee have shorter dark periods but only when such financial expertise relates specifically to accounting. The study suggests that both the auditor and the audit committee expertise are associated with the timely disclosure of restatement details.

These dark periods have caught the attention of policy-setters and were a topic of discussion of the Committee for Improvements in Financial Reporting (CIFR). As one member of CIFR noted, “The dark period is bad for users.” As a result, the committee has proposed that for some errors, companies might not need to go through the pain of restatement, but enhanced disclosures about errors are needed.

Burks, “Accounting Restatements and the Timeliness of Disclosures,” *Accounting Horizons* (December 2011), pp. 609–629; and “2017 Financial Restatements: A Seventeen Year Comparison,” *Audit Analytics* (June 2018).

Review and Practice

Go to the **Review and Practice** section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions as well as additional exercises and practice problem with solutions are also available online.

Accounting Changes

LEARNING OBJECTIVE 1

Discuss the types of accounting changes and the accounting for changes in accounting principles.

Background

Accounting alternatives diminish the comparability of financial information between periods and between companies; they also obscure useful historical trend data. For example, if **Ford** revises its estimates for equipment useful lives, depreciation expense for the current year will not be comparable to depreciation expense reported by Ford in prior years. Similarly, if **OfficeMax** changes to FIFO inventory pricing while **Staples** uses LIFO, it will be difficult to compare these companies’ reported results. A reporting framework helps preserve comparability when there is an accounting change (see **Underlying Concepts**).

The FASB has established a reporting framework, which involves three types of accounting changes. [1] (See the FASB Codification References near the end of the chapter.) The three types of accounting changes are:

1. **Change in accounting principle.** A change from one generally accepted accounting principle to another one. For example, a company may change its inventory valuation method from LIFO to average-cost.
2. **Change in accounting estimate.** A change that occurs as the result of new information or additional experience. For example, a company may change its estimate of the useful lives of depreciable assets.
3. **Change in reporting entity.** A change from reporting as one type of entity to another type of entity. As an example, a company might change the subsidiaries for which it prepares consolidated financial statements.

A fourth category necessitates changes in accounting, though it is not classified as an accounting change.

4. **Errors in financial statements.** Errors result from mathematical mistakes, mistakes in applying accounting principles, or oversight or misuse of facts that existed when preparing the financial statements. For example, a company may incorrectly apply the retail inventory method for determining its final inventory value.

Underlying Concepts

While changes in accounting may enhance the qualitative characteristic of *usefulness*, these changes may adversely affect the enhancing characteristics of *comparability* and *consistency*.

The FASB classifies changes in these categories because each category involves different methods of recognizing changes in the financial statements. In this chapter, we discuss these classifications. We also explain how to report each item in the accounts and how to disclose the information in comparative statements.

Changes in Accounting Principle

By definition, a **change in accounting principle** involves a **change from one generally accepted accounting principle to another**. For example, a company might change the basis of inventory pricing from average-cost to LIFO. Or, it might change its method of revenue recognition for long-term construction contracts from the completed-contract to the percentage-of-completion method.

Companies must carefully examine each circumstance to ensure that a change in principle has actually occurred. **Adoption of a new principle** in recognition of events that have occurred for the first time or that were previously immaterial is not an accounting change. For example, a change in accounting principle has not occurred when a company adopts an inventory method (e.g., FIFO) for **newly** acquired items of inventory, even if FIFO differs from that used for **previously recorded** inventory. Another example is certain marketing expenditures that were previously immaterial and expensed in the period incurred. It would not be considered a change in accounting principle if they become material and so may be acceptably deferred and amortized.

Finally, what if a company previously followed an accounting principle that was not acceptable? Or what if the company applied a principle incorrectly? In such cases, the profession considers a change to a generally accepted accounting principle a **correction of an error**. For example, a switch from the cash (income tax) basis of accounting to the accrual basis is a correction of an error. Or, if a company deducted salvage value when computing double-declining depreciation on plant assets and later recomputed depreciation without deducting estimated salvage value, it has corrected an error.

There are three possible approaches for reporting changes in accounting principles:

1. **Report changes currently.** In this approach, companies report the cumulative effect of the change in the current year's income statement as an irregular item. The **cumulative effect** is the difference in prior years' income between the newly adopted and prior accounting method. Under this approach, the effect of the change on prior years' income appears only in the current-year income statement. The company does not change **prior year financial statements**.

Advocates of this position argue that changing prior years' financial statements results in a loss of confidence in financial reports. How do investors react when told that the earnings computed three years ago are now entirely different? Changing prior periods, if permitted, also might upset contractual arrangements based on the old figures. For example, profit-sharing arrangements computed on the old basis might have to be recomputed and completely new distributions made, creating numerous legal problems. Many practical difficulties also exist. The cost of changing prior period financial statements may be excessive, or determining the amount of the prior period effect may be impossible on the basis of available data.

2. **Report changes retrospectively.** **Retrospective application** refers to the application of a different accounting principle to recast previously issued financial statements—**as if the new principle had always been used**. In other words, the company “goes back” and adjusts **prior years' statements** on a basis consistent with the newly adopted principle. The company shows any cumulative effect of the change as an adjustment to beginning retained earnings of the earliest year presented.

Advocates of this position argue that retrospective application ensures comparability. Think for a moment what happens if this approach is not used. The year *previous* to the change will be on the old method, the year *of the change* will report the entire cumulative adjustment, and the *following* year will present financial statements on the new basis without the cumulative effect of the change. Such lack of consistency fails to provide meaningful earnings-trend data and other financial relationships necessary to evaluate the business.

3. **Report changes prospectively (in the future).** In this approach, previously reported results remain. As a result, companies do not adjust opening balances to reflect the change in principle. Advocates of this position argue that once management presents financial statements based on acceptable accounting principles, they are final. Management cannot change prior periods by adopting a new principle. According to this line of reasoning, the current-period cumulative adjustment is not appropriate because that approach includes amounts that have little or no relationship to the current year's income or economic events (see **Global View**).

Given these three possible approaches, which does the accounting profession prefer? The FASB **requires that companies use the retrospective approach**. Why? Because it provides financial statement users with more useful information than the cumulative-effect or prospective approaches. [2] The rationale is that changing the prior statements to be on the same basis as the newly adopted principle results in greater consistency across accounting periods. Users can then better compare results from one period to the next.¹

Global View

IFRS (IAS 8) generally requires retrospective application to prior years for accounting changes. However, IAS 8 permits the prospective method if a company cannot reasonably determine the amounts to which to restate prior periods.

What Do the Numbers Mean? Quite a Change

The cumulative-effect approach results in a loss of comparability. Also, reporting the cumulative adjustment in the period of the change can significantly affect net income, resulting in a misleading income figure. For example, at one time **Chrysler Corporation** changed its inventory accounting from LIFO to FIFO. If Chrysler had used the cumulative-effect approach, it would have reported a \$53,500,000 adjustment to net income. That adjustment would have resulted in net income of \$45,900,000, instead of a net loss of \$7,600,000.

A second case: In the early 1980s, the railroad industry switched from the retirement-replacement method of depreciating

railroad equipment to more generally used methods such as straight-line depreciation. Using cumulative treatment, railroad companies would have made substantial adjustments to income in the period of change. Many in the industry argued that including such large cumulative-effect adjustments in the current year would distort the information and make it less useful.

Such situations lend support to retrospective application so that comparability is maintained.

Retrospective Accounting Change Approach

A presumption exists that once a company adopts an accounting principle, it should not change. That presumption is understandable, given the idea that consistent use of an accounting principle enhances the usefulness of financial statements. However, the environment continually changes, and companies change in response. Recent standards on such subjects as stock options, exchanges of nonmonetary assets, and revenue recognition indicate that changes in accounting principle will continue to occur.

When a company changes an accounting principle, it should report the change using retrospective application (see **Underlying Concepts**). In general terms, here is what it must do:

1. **It adjusts its financial statements for each prior period presented.** Thus, financial statement information about prior periods is on the same basis as the new accounting principle.
2. **It adjusts the carrying amounts of assets and liabilities as of the beginning of the first year presented.** By doing so, these accounts reflect the cumulative effect on periods prior to those presented of the change to the new accounting principle. The company also makes an offsetting adjustment to the opening balance of retained earnings or other appropriate component of stockholders' equity or net assets as of the beginning of the first year presented.

Underlying Concepts

Retrospective application contributes to comparability.

¹Adoption of the retrospective approach contributes to international accounting convergence. As discussed throughout the text, the FASB and the IASB have collaborated to converge around high-quality solutions to resolve differences between GAAP and IFRS. By adopting the retrospective approach, which is the method used in IFRS, the FASB agreed that this approach is superior to the current approach.

For example, assume that **Target** decides to change its inventory valuation method in 2020 from the retail inventory method (FIFO) to the retail inventory method (average-cost). It provides comparative information for 2018 and 2019 based on the new method. Target also would adjust its assets, liabilities, and retained earnings for periods prior to 2018 and report these amounts in the 2018 financial statements, when it prepares comparative financial statements.

Retrospective Accounting Change: Long-Term Contracts To illustrate the retrospective approach, assume that Denson Company has accounted for its income from long-term construction contracts at a point in time using the completed-contract method. In 2020 as a result of adopting the new revenue standard, the company changed to recognizing revenue over time (percentage-of-completion method). Management believes this approach provides a more appropriate measure of the income earned. For tax purposes, the company uses the completed-contract method and plans to continue doing so in the future. (We assume a 20% enacted tax rate.)

Illustration 22.1 shows portions of three income statements for 2018–2020—for both the completed-contract and percentage-of-completion methods (2018 was Denson’s first year of operations in the construction business).

ILLUSTRATION 22.1

Comparative Income Statements for Completed-Contract versus Percentage-of-Completion Methods

| Completed-Contract Method Denson Company Income Statement (partial) For the Year Ended December 31 | | | |
|---|------------------|------------------|------------------|
| | 2018 | 2019 | 2020 |
| Income before income tax | \$400,000 | \$160,000 | \$190,000 |
| Income tax (20%) | 80,000 | 32,000 | 38,000 |
| Net income | <u>\$320,000</u> | <u>\$128,000</u> | <u>\$152,000</u> |

| Percentage-of-Completion Method Denson Company Income Statement (partial) For the Year Ended December 31 | | | |
|---|------------------|------------------|------------------|
| | 2018 | 2019 | 2020 |
| Income before income tax | \$600,000 | \$180,000 | \$200,000 |
| Income tax (20%) | 120,000 | 36,000 | 40,000 |
| Net income | <u>\$480,000</u> | <u>\$144,000</u> | <u>\$160,000</u> |

To record a change from the completed-contract to the percentage-of-completion method, we analyze the various effects, as **Illustration 22.2** shows.

ILLUSTRATION 22.2

Data for Retrospective Change Example

| Year | Pretax Income from | | Difference in Income | | |
|----------------------------|--------------------------|--------------------|----------------------|-----------------|----------------------------|
| | Percentage-of-Completion | Completed-Contract | Difference | Tax Effect 20% | Income Effect (net of tax) |
| Prior to 2019 | \$600,000 | \$400,000 | \$200,000 | \$40,000 | \$160,000 |
| In 2019 | 180,000 | 160,000 | 20,000 | 4,000 | 16,000 |
| Total at beginning of 2020 | <u>\$780,000</u> | <u>\$560,000</u> | <u>\$220,000</u> | <u>\$44,000</u> | <u>\$176,000</u> |
| Total in 2020 | <u>\$200,000</u> | <u>\$190,000</u> | <u>\$ 10,000</u> | <u>\$ 2,000</u> | <u>\$ 8,000</u> |

The entry to record the change at the beginning of 2020 would be:

| | | |
|-------------------------|---------|---------|
| Construction in Process | 220,000 | |
| Deferred Tax Liability | | 44,000 |
| Retained Earnings | | 176,000 |

The Construction in Process account increases by \$220,000 (as indicated in the first column under “Difference in Income” in Illustration 22.2). The credit to Retained Earnings of \$176,000 reflects the cumulative income effects prior to 2020 (third column under “Difference in Income” in Illustration 22.2). The company credits Retained Earnings because prior years’ income is closed to this account each year. The credit to Deferred Tax Liability represents the adjustment to prior years’ tax expense. The company now recognizes that amount, \$44,000, as a tax liability for future taxable amounts. That is, in future periods, taxable income will be higher than book income as a result of current temporary differences. Therefore, Denson must report a deferred tax liability in the current year.

What Do the Numbers Mean? Change Management

Halliburton offers a case study in the importance of good reporting of an accounting change. Note that Halliburton uses percentage-of-completion accounting for its long-term construction-services contracts. The SEC questioned the company about its change in accounting for disputed claims.

Prior to the year of the change, Halliburton took a very conservative approach to its accounting for disputed claims. That is, the company waited until all disputes were resolved before recognizing associated revenues. In contrast, in the year of the change, the company recognized revenue for disputed claims before their resolution, using estimates of amounts expected to be recovered. Such revenue and its related profit are more tentative and subject to possible later adjustment. The accounting method adopted is more aggressive than the company’s former policy but is within the boundaries of GAAP.

It appears that the problem with Halliburton’s accounting stems more from how the company handled its accounting change than from the new method itself. That is, Halliburton did not provide in its annual report in the year of the change an explicit reference to its change in accounting method. In fact, rather than stating its new policy, the company simply deleted the sentence

that described how it accounted for disputed claims. Then later, in its next year’s annual report, the company stated its new accounting policy. Similar transparency concerns were also raised when companies, like **Hawthorn Bancshares**, did not provide sufficient explanation about their changes to fair value accounting for their mortgage servicing rights. More recently, the SEC admonished companies to provide sufficient disclosure of judgments related to adoption of the revenue recognition standard.

When companies make such changes in accounting, investors need to be informed about the change and about its effects on the financial results. With such information, investors and analysts can compare current results with those of prior periods and can make a more informed assessment about the company’s future prospects.

Duggan, “Dealing with the Implications of Accounting Change,” *FEI Magazine* (November 2012); and Tatyana Shumsky, “SEC Spotlights Areas of Subjective Judgment in Letters to Early Adopters of Revenue Rules,” *Wall Street Journal* (November 5, 2018).

Reporting a Change in Principle The disclosure of accounting changes is particularly important. Financial statement readers want consistent information from one period to the next. Such consistency ensures the usefulness of financial statements. The major disclosure requirements are as follows.

1. The nature of and reason for the change in accounting principle. This must include an explanation of why the newly adopted accounting principle is preferable.
2. The method of applying the change, and:
 - a. A description of the prior period information that has been retrospectively adjusted, if any.
 - b. The effect of the change on income from continuing operations, net income (or other appropriate captions of changes in net assets or performance indicators), any other affected line item, and any affected per share amounts for the current period and for any prior periods retrospectively adjusted.
 - c. The cumulative effect of the change on retained earnings or other components of equity or net assets in the statement of financial position as of the beginning of the earliest period presented.²

²Presentation of the effect on financial statement subtotals and totals other than income from continuing operations and net income (or other appropriate captions of changes in the applicable net assets or performance indicator) is not required. [3]

To illustrate, Denson will prepare comparative financial statements for 2019 and 2020 using the percentage-of-completion method (the new construction accounting method). **Illustration 22.3** indicates how Denson presents this information.

ILLUSTRATION 22.3
Comparative Information
Related to Accounting Change
(Percentage-of-Completion)

| Denson Company | | | |
|-----------------------------------|------------------|----------------------|--|
| Income Statement (partial) | | | |
| For the Year Ended | | | |
| | 2020 | 2019 | |
| | | As Adjusted (Note A) | |
| Income before income tax | \$200,000 | \$180,000 | |
| Income tax (20%) | 40,000 | 36,000 | |
| Net income | <u>\$160,000</u> | <u>\$144,000</u> | |

Note A: Change in Method of Accounting for Long-Term Contracts. The company has accounted for revenue and costs for long-term construction contracts by the percentage-of-completion method in 2020, whereas in all prior years, revenue and costs were determined by the completed-contract method. The new method of accounting for long-term contracts was adopted to recognize . . . [state justification for change in accounting principle] . . . and financial statements of prior years have been restated to apply the new method retrospectively. For income tax purposes, the completed-contract method has been continued. The effect of the accounting change on income of 2020 was an increase of \$8,000 net of related taxes and on income of 2019 as previously reported was an increase of \$16,000 net of related taxes. The balances of retained earnings for 2019 and 2020 have been adjusted for the effect of applying retrospectively the new method of accounting. As a result of the accounting change, retained earnings as of January 1, 2019, increased by \$160,000 compared to that reported using the completed-contract method.

As Illustration 22.3 shows, Denson Company reports net income under the newly adopted percentage-of-completion method for both 2019 and 2020. The company retrospectively adjusted the 2019 income statement to report the information on a percentage-of-completion basis. Also, the note to the financial statements indicates the nature of the change, why the company made the change, and the years affected.

In addition, companies are required to provide data on important differences between the amounts reported under percentage-of-completion versus completed-contract. When identifying the significant differences, some companies show the *entire* financial statements and line-by-line differences between percentage-of-completion and completed-contract. However, most companies will show only line-by-line differences. For example, Denson would show the differences in construction in process, retained earnings, gross profit, and net income for 2019 and 2020 under the completed-contract and percentage-of-completion methods.

Retained Earnings Adjustment As indicated earlier, one of the disclosure requirements is to show the cumulative effect of the change on retained earnings as of the beginning of the earliest period presented. For Denson Company, that date is January 1, 2019. Denson disclosed that information by means of a narrative description (see Note A in Illustration 22.3). Denson also would disclose this information in its retained earnings statement. Assuming a retained earnings balance of \$1,360,000 at the beginning of 2018, **Illustration 22.4** shows Denson's retained earnings statement under the completed-contract method—that is, before giving effect to the change in accounting principle. (The income information comes from Illustration 22.1.)

ILLUSTRATION 22.4
Retained Earnings Statement
Before Retrospective Change

| Denson Company | | | |
|------------------------------------|--------------------|--------------------|--------------------|
| Retained Earnings Statement | | | |
| For the Year Ended | | | |
| | 2020 | 2019 | 2018 |
| Retained earnings, January 1 | \$1,808,000 | \$1,680,000 | \$1,360,000 |
| Net income | 152,000 | 128,000 | 320,000 |
| Retained earnings, December 31 | <u>\$1,960,000</u> | <u>\$1,808,000</u> | <u>\$1,680,000</u> |

If Denson presents comparative statements for 2019 and 2020 under percentage-of-completion, then it must change the beginning balance of retained earnings at January 1,

2019. The difference between the retained earnings balances under completed-contract and percentage-of-completion is computed as follows.

| | |
|---|-------------------|
| Retained earnings, January 1, 2019 (percentage-of-completion) | \$1,840,000 |
| Retained earnings, January 1, 2019 (completed-contract) | (1,680,000) |
| Cumulative-effect difference | <u>\$ 160,000</u> |

The \$160,000 difference is the cumulative effect. **Illustration 22.5** shows a comparative retained earnings statement for 2019 and 2020, giving effect to the change in accounting principle to percentage-of-completion.

| Denson Company | | |
|---|--------------------|--------------------|
| Retained Earnings Statement | | |
| For the Year Ended | | |
| | 2020 | 2019 |
| Retained earnings, January 1, as reported | — | \$1,680,000 |
| Add: Adjustment for the cumulative effect on prior years of applying retrospectively the new method of accounting for construction contracts | | <u>160,000</u> |
| Retained earnings, January 1, as adjusted | \$1,984,000 | 1,840,000 |
| Net income | <u>160,000</u> | <u>144,000</u> |
| Retained earnings, December 31 | <u>\$2,144,000</u> | <u>\$1,984,000</u> |

ILLUSTRATION 22.5**Retained Earnings Statement After Retrospective Application**

Denson adjusted the beginning balance of retained earnings on January 1, 2019, for the excess of percentage-of-completion net income over completed-contract net income in 2018. This comparative presentation indicates the type of adjustment that a company needs to make. It follows that this adjustment could be much larger if a number of prior periods were involved.

Retrospective Accounting Change: Inventory Methods As a second illustration of the retrospective approach, assume that Lancer Company has accounted for its inventory using the LIFO method. In 2020, the company changes to the FIFO method because management believes this approach provides a more appropriate reporting of its inventory costs. **Illustration 22.6** provides additional information related to Lancer Company.

- Lancer Company started its operations on January 1, 2018. At that time, stockholders invested \$100,000 in the business in exchange for common stock.
- All sales, purchases, and operating expenses for the period 2018–2020 are cash transactions. Lancer's cash flows over this period are as follows.

| | 2018 | 2019 | 2020 |
|---------------------------|------------------|------------------|------------------|
| Sales | \$300,000 | \$300,000 | \$300,000 |
| Purchases | 90,000 | 110,000 | 125,000 |
| Operating expenses | <u>100,000</u> | <u>100,000</u> | <u>100,000</u> |
| Cash flow from operations | <u>\$110,000</u> | <u>\$ 90,000</u> | <u>\$ 75,000</u> |

- Lancer has used the LIFO method for financial reporting since its inception.
- Inventory determined under LIFO and FIFO for the period 2018–2020 is as follows.

| | LIFO Method | FIFO Method | Difference |
|-------------------|-------------|-------------|------------|
| January 1, 2018 | \$ 0 | \$ 0 | \$ 0 |
| December 31, 2018 | 10,000 | 12,000 | 2,000 |
| December 31, 2019 | 20,000 | 25,000 | 5,000 |
| December 31, 2020 | 32,000 | 39,000 | 7,000 |

ILLUSTRATION 22.6**Lancer Company Information**

(continued)

ILLUSTRATION 22.6*(continued)*

5. Cost of goods sold under LIFO and FIFO for the period 2018–2020 are as follows.

| | Cost of Goods Sold | | Difference |
|------|--------------------|-----------|------------|
| | LIFO | FIFO | |
| 2018 | \$ 80,000 | \$ 78,000 | \$2,000 |
| 2019 | 100,000 | 97,000 | 3,000 |
| 2020 | 113,000 | 111,000 | 2,000 |

6. Earnings per share information is not required on the income statement.
7. All tax effects for this illustration should be ignored.

Given the information about Lancer Company, **Illustration 22.7** shows its income statement, retained earnings statement, balance sheet, and statement of cash flows for 2018–2020 under LIFO.

ILLUSTRATION 22.7**Lancer Financial Statements (LIFO)**

| Lancer Company Income Statement For the Year Ended December 31 | | | |
|---|------------------|------------------|------------------|
| | 2018 | 2019 | 2020 |
| Sales | \$300,000 | \$300,000 | \$300,000 |
| Cost of goods sold (LIFO) | 80,000 | 100,000 | 113,000 |
| Operating expenses | 100,000 | 100,000 | 100,000 |
| Net income | \$120,000 | \$100,000 | \$ 87,000 |

| Lancer Company Retained Earnings Statement For the Year Ended December 31 | | | |
|--|------------------|------------------|------------------|
| | 2018 | 2019 | 2020 |
| Retained earnings (beginning) | \$ 0 | \$120,000 | \$220,000 |
| Add: Net income | 120,000 | 100,000 | 87,000 |
| Retained earnings (ending) | \$120,000 | \$220,000 | \$307,000 |

| Lancer Company Balance Sheet At December 31 | | | |
|--|------------------|------------------|------------------|
| | 2018 | 2019 | 2020 |
| Cash | \$210,000 | \$300,000 | \$375,000 |
| Inventory (LIFO) | 10,000 | 20,000 | 32,000 |
| Total assets | \$220,000 | \$320,000 | \$407,000 |
| Common stock | \$100,000 | \$100,000 | \$100,000 |
| Retained earnings | 120,000 | 220,000 | 307,000 |
| Total liabilities and stockholders' equity | \$220,000 | \$320,000 | \$407,000 |

| Lancer Company Statement of Cash Flows For the Year Ended December 31 | | | |
|--|------------------|------------------|------------------|
| | 2018 | 2019 | 2020 |
| Cash flows from operating activities | | | |
| Sales | \$300,000 | \$300,000 | \$300,000 |
| Purchases | 90,000 | 110,000 | 125,000 |
| Operating expenses | 100,000 | 100,000 | 100,000 |
| Net cash provided by operating activities | 110,000 | 90,000 | 75,000 |
| Cash flows from financing activities | | | |
| Issuance of common stock | 100,000 | — | — |
| Net increase in cash | 210,000 | 90,000 | 75,000 |
| Cash at beginning of year | 0 | 210,000 | 300,000 |
| Cash at end of year | \$210,000 | \$300,000 | \$375,000 |

As Illustration 22.7 indicates, under LIFO Lancer Company reports \$120,000 net income in 2018, \$100,000 net income in 2019, and \$87,000 net income in 2020. The amount of inventory reported on Lancer's balance sheet reflects LIFO costing.

Illustration 22.8 shows Lancer's income statement, retained earnings statement, balance sheet, and statement of cash flows for 2018–2020 under **FIFO**. You can see that **the cash flow statement under FIFO is the same as under LIFO**. Although the net incomes are different in each period, there is no cash flow effect from these differences in net income. (If we considered income taxes, a cash flow effect would result.)

ILLUSTRATION 22.8**Lancer Financial Statements (FIFO)**

| Lancer Company Income Statement For the Year Ended December 31 | | | |
|--|------------------|------------------|------------------|
| | 2018 | 2019 | 2020 |
| Sales | \$300,000 | \$300,000 | \$300,000 |
| Cost of goods sold (FIFO) | 78,000 | 97,000 | 111,000 |
| Operating expenses | 100,000 | 100,000 | 100,000 |

| | 2018 | 2019 | 2020 |
| Retained earnings (beginning) | \$ 0 | \$122,000 | \$225,000 |
| Add: Net income | 122,000 | 103,000 | 89,000 |
| Retained earnings (ending) | \$122,000 | \$225,000 | \$314,000 |
| Lancer Company Balance Sheet At December 31 | | | |
| | 2018 | 2019 | 2020 |
| Cash | \$210,000 | \$300,000 | \$375,000 |
| Inventory (FIFO) | 12,000 | 25,000 | 39,000 |
| Total assets | \$222,000 | \$325,000 | \$414,000 |
| Common stock | \$100,000 | \$100,000 | \$100,000 |
| Retained earnings | 122,000 | 225,000 | 314,000 |
| Total liabilities and stockholders' equity | \$222,000 | \$325,000 | \$414,000 |
| Lancer Company Statement of Cash Flows For the Year Ended December 31 | | | |
| | 2018 | 2019 | 2020 |
| Cash flows from operating activities | | | |
| Sales | \$300,000 | \$300,000 | \$300,000 |
| Purchases | 90,000 | 110,000 | 125,000 |
| Operating expenses | 100,000 | 100,000 | 100,000 |
| Net cash provided by operating activities | 110,000 | 90,000 | 75,000 |
| Cash flows from financing activities | | | |
| Issuance of common stock | 100,000 | — | — |
| Net increase in cash | 210,000 | 90,000 | 75,000 |
| Cash at beginning of year | 0 | 210,000 | 300,000 |
| Cash at end of year | \$210,000 | \$300,000 | \$375,000 |

Compare the financial statements reported in Illustration 22.7 and Illustration 22.8. You can see that under retrospective application, the change to FIFO inventory valuation affects reported inventories, cost of goods sold, net income, and retained earnings. In the following sections, we discuss the accounting and reporting of Lancer's accounting change from LIFO to FIFO.

Given the information provided in Illustrations 22.6, 22.7, and 22.8, we now are ready to account for and report on the accounting change.

Our first step is to adjust the financial records for the change from LIFO to FIFO. To do so, we perform the analysis in **Illustration 22.9**.

ILLUSTRATION 22.9
Data for Recording Change in Accounting Principle

| Year | Net Income | | Difference in Income |
|----------------------------|------------|-----------|----------------------|
| | LIFO | FIFO | |
| 2018 | \$120,000 | \$122,000 | \$2,000 |
| 2019 | 100,000 | 103,000 | 3,000 |
| Total at beginning of 2020 | \$220,000 | \$225,000 | \$5,000 |
| Total in 2020 | \$ 87,000 | \$ 89,000 | \$2,000 |

The entry to record the change to the FIFO method at the beginning of 2020 is as follows.

| | | |
|-------------------|-------|-------|
| Inventory | 5,000 | |
| Retained Earnings | | 5,000 |

The change increases the Inventory account by \$5,000. This amount represents the difference between the ending inventory at December 31, 2019, under LIFO (\$20,000) and the ending inventory under FIFO (\$25,000). The credit to Retained Earnings indicates the amount needed to change the prior year's income, assuming that Lancer had used FIFO in previous periods.

Reporting a Change in Principle Lancer Company will prepare comparative financial statements for 2019 and 2020 using FIFO (the new inventory method). **Illustration 22.10** indicates how Lancer might present this information.

ILLUSTRATION 22.10
Comparative Information Related to Accounting Change (FIFO)

| Lancer Company Income Statement For the Year Ended December 31 | | | |
|--|-----------|------------------------------|--|
| | 2020 | 2019 As adjusted (Note A) | |
| Sales | \$300,000 | \$300,000 | |
| Cost of goods sold | 111,000 | 97,000 | |
| Operating expenses | 100,000 | 100,000 | |
| Net income | \$ 89,000 | \$103,000 | |

Note A

Change in Method of Accounting for Inventory Valuation On January 1, 2020, Lancer Company elected to change its method of valuing its inventory to the FIFO method; in all prior years, inventory was valued using the LIFO method. The Company adopted the new method of accounting for inventory to better report cost of goods sold in the year incurred. Comparative financial statements of prior years have been adjusted to apply the new method retrospectively. The following financial statement line items for years 2020 and 2019 were affected by the change in accounting principle.

| | 2020 | | | 2019 | | |
|-------------------------|-----------|-----------|------------|-----------|-----------|------------|
| | LIFO | FIFO | Difference | LIFO | FIFO | Difference |
| Balance Sheet | | | | | | |
| Inventory | \$ 32,000 | \$ 39,000 | \$7,000 | \$ 20,000 | \$ 25,000 | \$5,000 |
| Retained earnings | 307,000 | 314,000 | 7,000 | 220,000 | 225,000 | 5,000 |
| Income Statement | | | | | | |
| Cost of goods sold | \$113,000 | \$111,000 | \$2,000 | \$100,000 | \$ 97,000 | \$3,000 |
| Net income | 87,000 | 89,000 | 2,000 | 100,000 | 103,000 | 3,000 |

Statement of Cash Flows
(no effect)

As a result of the accounting change, retained earnings as of January 1, 2019, increased from \$120,000, as originally reported using the LIFO method, to \$122,000 using the FIFO method.

Nature and reason for change; description of prior period information adjusted

Effect of change on key performance indicators

Cumulative effect on retained earnings

As Illustration 22.10 shows, Lancer Company reports net income under the newly adopted FIFO method for both 2019 and 2020. The company retrospectively adjusted the 2019 income statement to report the information on a FIFO basis. In addition, the note to the financial statements indicates the nature of the change, why the company made the change, and the years affected. The note also provides data on important differences between the amounts reported under LIFO versus FIFO. (When identifying the significant differences, some companies show the *entire* financial statements and line-by-line differences between LIFO and FIFO.)

Retained Earnings Adjustment As indicated earlier, one of the disclosure requirements is to show the cumulative effect of the change on retained earnings as of the beginning of the earliest period presented. For Lancer Company, that date is January 1, 2019. Lancer disclosed that information by means of a narrative description (see Note A in Illustration 22.10). Lancer also would disclose this information in its retained earnings statement. **Illustration 22.11** shows Lancer's retained earnings statement under LIFO—that is, before giving effect to the change in accounting principle. (This information comes from Illustration 22.7.)

| | 2020 | 2019 | 2018 |
|--------------------------------|------------------|------------------|------------------|
| Retained earnings, January 1 | \$220,000 | \$120,000 | \$ 0 |
| Net income | <u>87,000</u> | <u>100,000</u> | <u>120,000</u> |
| Retained earnings, December 31 | <u>\$307,000</u> | <u>\$220,000</u> | <u>\$120,000</u> |

ILLUSTRATION 22.11**Retained Earnings Statements (LIFO)**

If Lancer presents comparative statements for 2019 and 2020 under FIFO, then it must change the beginning balance of retained earnings at January 1, 2019. The difference between the retained earnings balances under LIFO and FIFO is computed as follows.

| | |
|---|-----------------|
| Retained earnings, January 1, 2019 (FIFO) | \$122,000 |
| Retained earnings, January 1, 2019 (LIFO) | (120,000) |
| Cumulative effect difference | <u>\$ 2,000</u> |

The \$2,000 difference is the cumulative effect. **Illustration 22.12** shows a comparative retained earnings statement for 2019 and 2020, giving effect to the change in accounting principle to FIFO.

| | 2020 | 2019 |
|---|------------------|------------------|
| Retained earnings, January 1, as reported | | \$120,000 |
| Add: Adjustment for the cumulative effect on prior years of applying retrospectively the new method of accounting for inventory | | <u>2,000</u> |
| Retained earnings, January 1, as adjusted | \$225,000 | 122,000 |
| Net income | <u>89,000</u> | <u>103,000</u> |
| Retained earnings, December 31 | <u>\$314,000</u> | <u>\$225,000</u> |

ILLUSTRATION 22.12**Retained Earnings Statements After Retrospective Application**

Lancer adjusted the beginning balance of retained earnings on January 1, 2019, for the excess of FIFO net income over LIFO net income in 2018. This comparative presentation indicates the type of adjustment that a company needs to make. It follows that the amount of this adjustment could be much larger if a number of prior periods were involved.

Direct and Indirect Effects of Changes

Are there other effects that a company should report when it makes a change in accounting principle? For example, what happens when a company like Lancer has a bonus plan based on net income and the prior year's net income changes when FIFO is retrospectively applied? Should Lancer also change the reported amount of bonus expense? Or what happens if we had not ignored income taxes in the Lancer example? Should Lancer adjust net income, given that taxes will be different under LIFO and FIFO in prior periods? The answers depend on whether the effects are direct or indirect.

Direct Effects The FASB takes the position that companies should retrospectively apply the **direct effects of a change in accounting principle**. An example of a **direct effect** is an adjustment to an inventory balance as a result of a change in the inventory valuation method. For example, Lancer Company should change the inventory amounts in prior periods to indicate the change to the FIFO method of inventory valuation. Another inventory-related example would be an impairment adjustment resulting from applying the lower-of-cost-or-net realizable value or the lower-of-cost-or-market test to the adjusted inventory balance. Related changes, such as deferred income tax effects of the impairment adjustment, are also considered direct effects. This entry was illustrated in the Denson example, in which the change to percentage-of-completion accounting resulted in recording a deferred tax liability.

Indirect Effects In addition to direct effects, companies can have **indirect effects related to a change in accounting principle**. An **indirect effect** is any change to current or future cash flows of a company that results from making a change in accounting principle that is applied retrospectively (see **Global View**). An example of an indirect effect is a change in profit-sharing or royalty payment that is based on a reported amount such as revenue or net income. **Indirect effects do not change prior period amounts.**

For example, let's assume that Lancer has an employee profit-sharing plan based on net income. As Illustration 22.9 showed, Lancer would report higher income in 2018 and 2019 if it used the FIFO method. In addition, let's assume that the profit-sharing plan requires that Lancer pay the incremental amount due based on the FIFO income amounts. In this situation, Lancer reports this additional expense **in the current period**; it would not change prior periods for this expense. If the company prepares comparative financial statements, it follows that it does not recast the prior periods for this additional expense.³

If the terms of the profit-sharing plan indicate that *no payment is necessary* in the current period due to this change, then the company need not recognize additional profit-sharing expense in the current period. Neither does it change amounts reported for prior periods.

When a company recognizes the indirect effects of a change in accounting principle, it includes in the financial statements a description of the indirect effects. In doing so, it discloses the amounts recognized in the current period and related per share information.

Impracticability

It is not always possible for companies to determine how they would have reported prior periods' financial information under retrospective application of an accounting principle change. Retrospective application is considered **impracticable** if a company cannot determine the prior period effects using every reasonable effort to do so.

Global View

IFRS does not explicitly address the accounting and disclosure of indirect effects.

³The rationale for this approach is that companies should recognize, in the period the adoption occurs (not the prior period), the effect on the cash flows that is caused by the adoption of the new accounting principle. That is, the accounting change is a necessary "past event" in the definition of an asset or liability that gives rise to the accounting recognition of the indirect effect in the current period. [4]

Companies should not use retrospective application if one of the following conditions exists:

1. The company cannot determine the effects of the retrospective application.
2. Retrospective application requires assumptions about management's intent in a prior period.
3. Retrospective application requires significant estimates for a prior period, and the company cannot objectively verify the necessary information to develop these estimates.

If any of the above conditions exists, it is deemed impracticable to apply the retrospective approach. In this case, the company **prospectively applies** the new accounting principle as of the earliest date it is practicable to do so. [5]

For example, assume that Williams Company changed its inventory method from FIFO to LIFO, effective January 1, 2021. Williams prepares statements on a calendar-year basis and has used the FIFO method since its inception. Williams judges it impracticable to retrospectively apply the new method. This is generally the case for this change in principle because determining prior period effects would require subjective assumptions about the LIFO layers established in prior periods. These assumptions would ordinarily result in the computation of a number of different earnings figures.

As a result, the only adjustment necessary may be to restate the beginning inventory to a cost basis from a lower-of-cost-or-market approach (which establishes the beginning LIFO layer). Williams must disclose only the effect of the change on the results of operations in the period of change. Also, the company should explain the reasons for omitting the computations of the cumulative effect for prior years. Finally, it should disclose the justification for the change to LIFO. [6]⁴ **Illustration 22.13**, from the annual report of **The Quaker Oats Company**, shows the type of disclosure needed.

The Quaker Oats Company

Note 1 (In Part): Summary of Significant Accounting Policies

Inventories. Inventories are valued at the lower of cost or market, using various cost methods, and include the cost of raw materials, labor and overhead. The percentage of year-end inventories valued using each of the methods is as follows:

| June 30 | Current Year | Prior Year |
|----------------------------|--------------|------------|
| Average quarterly cost | 21% | 54% |
| Last-in, first-out (LIFO) | 65% | 29% |
| First-in, first-out (FIFO) | 14% | 17% |

Effective July 1, the Company adopted the LIFO cost flow assumption for valuing the majority of remaining U.S. Grocery Products inventories. The Company believes that the use of the LIFO method better matches current costs with current revenues. The cumulative effect of this change on retained earnings at the beginning of the year is not determinable, nor are the pro-forma effects of retroactive application of LIFO to prior years. The effect of this change on current-year fiscal results was to decrease net income by \$16.0 million, or \$.20 per share.

If the LIFO method of valuing certain inventories were not used, total inventories would have been \$60.1 million higher in the current year, and \$24.0 million higher in the prior year.

ILLUSTRATION 22.13

Disclosure of Change to LIFO

Other Accounting Changes

LEARNING OBJECTIVE 2

Describe the accounting for changes in estimates and changes in the reporting entity.

⁴In practice, many companies defer the formal adoption of LIFO until year-end. Management thus has an opportunity to assess the impact that a change to LIFO will have on the financial statements and to evaluate the desirability of a change for tax purposes. As indicated in Chapter 8, many companies use LIFO because of the advantages of this inventory valuation method in a period of inflation.

Changes in Accounting Estimates

To prepare financial statements, companies must estimate the effects of future conditions and events. For example, the following items require estimates.

1. Uncollectible receivables.
2. Inventory obsolescence.
3. Useful lives and salvage values of assets.
4. Periods benefited by deferred costs.
5. Liabilities for warranty costs and income taxes.
6. Recoverable mineral reserves.
7. Change in depreciation methods.

A company cannot perceive future conditions and events and their effects with certainty. Therefore, estimation requires the exercise of judgment. Accounting estimates will change as new events occur, as a company acquires more experience, or as it obtains additional information.

Prospective Reporting

Companies report prospectively changes in accounting estimates. That is, companies should not adjust previously reported results for changes in estimates. Instead, they account for the effects of all changes in estimates in (1) the period of change if the change affects that period only, or (2) the period of change and future periods if the change affects both. The FASB views changes in estimates as **normal recurring corrections and adjustments**, the natural result of the accounting process. It prohibits retrospective treatment.

The circumstances related to a change in estimate differ from those for a change in accounting principle. If companies reported changes in estimates retrospectively, continual adjustments of prior years' income would occur. It seems proper to accept the view that, because new conditions or circumstances exist, the revision fits the new situation (not the old one). Companies should therefore handle such a revision in the current and future periods.

To illustrate, Underwriters Labs Inc. purchased for \$300,000 a building that it originally estimated to have a useful life of 15 years and no salvage value. It recorded depreciation for 5 years on a straight-line basis. On January 1, 2020, Underwriters Labs revises the estimate of the useful life. It now considers the asset to have a total life of 25 years. (Assume that the useful life for financial reporting and tax purposes and depreciation method are the same.) **Illustration 22.14** shows the accounts at the beginning of the sixth year.

ILLUSTRATION 22.14

Book Value after Five Years' Depreciation

| | |
|---|------------------|
| Buildings | \$300,000 |
| Less: Accumulated depreciation—buildings (5 × \$20,000) | <u>100,000</u> |
| Book value of building | <u>\$200,000</u> |

Underwriters Labs records depreciation for the year 2020 as follows.

| | | |
|------------------------------------|--------|--------|
| Depreciation Expense | 10,000 | |
| Accumulated Depreciation—Buildings | | 10,000 |

The company computes the \$10,000 depreciation charge as shown in **Illustration 22.15**.

ILLUSTRATION 22.15

Depreciation after Change in Estimate

| |
|---|
| $\frac{\text{Book Value of Asset}}{\text{Remaining Service Life}} = \text{Depreciation Charge}$ |
| $\frac{\$200,000}{(25 \text{ years} - 5 \text{ years})} = \$10,000$ |

Companies sometime find it difficult to differentiate between a change in estimate and a change in accounting principle. Is it a change in principle or a change in estimate when a company changes from deferring and amortizing marketing costs to expensing them as incurred because future benefits of these costs have become doubtful? If it is impossible to determine whether a change in principle or a change in estimate has occurred, the rule is this: **Consider the change as a change in estimate.** This is often referred to as a **change in estimate effected by a change in accounting principle.**

Another example of a change in estimate effected by a change in principle is a change in depreciation (as well as amortization or depletion) methods. Because companies change depreciation methods based on changes in estimates about future benefits from long-lived assets, it is not possible to separate the effect of the accounting principle change from that of the estimates. **As a result, companies account for a change in depreciation methods as a change in estimate effected by a change in accounting principle. [7]**

A similar problem occurs in differentiating between a change in estimate and a correction of an error, although here the answer is more clear-cut. How does a company determine whether it overlooked the information in earlier periods (an error), or whether it obtained new information (a change in estimate)? Proper classification is important because the accounting treatment differs for corrections of errors versus changes in estimates. The general rule is this: **Companies should consider careful estimates that later prove to be incorrect as changes in estimate.** Only when a company obviously computed the estimate incorrectly because of lack of expertise or in bad faith should it consider the adjustment an error. There is no clear demarcation line here. Companies must use good judgment in light of all the circumstances.⁵

Disclosures

Illustration 22.16 shows disclosure of a change in estimated useful lives, which appeared in the annual report of **Ampco–Pittsburgh Corporation.**

Ampco–Pittsburgh Corporation

Note 11: Change in Accounting Estimate. The Corporation revised its estimate of the useful lives of certain machinery and equipment. Previously, all machinery and equipment, whether new when placed in use or not, were in one class and depreciated over 15 years. The change principally applies to assets purchased new when placed in use. Those lives are now extended to 20 years. These changes were made to better reflect the estimated periods during which such assets will remain in service. The change had the effect of reducing depreciation expense and increasing net income by approximately \$991,000 (\$.10 per share).

ILLUSTRATION 22.16

Disclosure of Change in Estimated Useful Lives

For the most part, companies need not disclose changes in accounting estimates made as part of normal operations, such as bad debt allowances or inventory obsolescence, unless such changes are material. However, for a change in estimate that affects several periods (such as a change in the service lives of depreciable assets), companies should disclose the effect on income from continuing operations and related per share amounts of the current period. When a company has a change in estimate effected by a change in accounting principle, it must indicate why the new method is preferable. In addition, companies are subject to all other disclosure guidelines established for changes in accounting principle.

⁵In evaluating reasonableness, the auditor should use one or a combination of the following approaches.

- a. Review and test the process used by management to develop the estimate.
- b. Develop an independent expectation of the estimate to corroborate the reasonableness of management's estimate.
- c. Review subsequent events or transactions occurring prior to completion of fieldwork.

See AU-C Section 540, "Auditing Accounting Estimates, Including Fair Value Accounting Estimates, and Related Disclosures," *Statement on Auditing Standards No. 122*. Effective for audits of financial statements for periods ending on or after December 15, 2012. [Predecessor literature: "Auditing Accounting Estimates," *Statement on Auditing Standards No. 57* (New York: AICPA, 1988).]

What Do the Numbers Mean? Why Now?

For many years, **Intel** has been the leader in innovation related to semiconductors. Recently, Intel said longer product cycles mean it will now depreciate its machinery and equipment more slowly, giving them a useful life of five years instead of four years. So, is this a big deal?

Looking at the issue from an accounting perspective, changing the useful life of its machinery and equipment means that Intel will record \$1.5 billion less in depreciation expense in the current period, which is approximately 10 percent of its pretax income from the previous year. The number is substantial as it is the largest depreciation-related change with a positive effect on income in many years. Therefore, it is not surprising that some express concern about the comparability of the financial information between the year of change and preceding years.

This is especially important when considering the effect of the depreciation charge on net income. That is, this change in accounting may signal trouble for the company and the semiconductor industry. In the last few years, many other semiconductor companies have lengthened the useful lives of their machinery and equipment—and financial statement readers must ask why. The answer is that it may signal that innovation is slowing in the industry, which some suggest is worrisome and not a sign of strength.

Sources: M. Murphy, “Moore’s Law Meets GAAP Accounting at Intel,” *Wall Street Journal* (April 5, 2015); and O. Usvyatsky and J. Pakaluk, “What Depreciation at Intel Says About Moore’s Law,” *Audit Analytics* (April 5, 2016).

Changes in Reporting Entity

Occasionally, companies make changes that result in different reporting entities. In such cases, companies report the change by **changing the financial statements of all prior periods presented**. The revised statements show the financial information for the **new reporting entity** for all periods.

Examples of a change in reporting entity are:

1. Presenting consolidated statements in place of statements of individual companies.
2. Changing specific subsidiaries that constitute the group of companies for which the entity presents consolidated financial statements.
3. Changing the companies included in combined financial statements.
4. Changing the cost, equity, or consolidation method of accounting for subsidiaries and investments.⁶ In this case, a change in the reporting entity does not result from creation, cessation, purchase, or disposition of a subsidiary or other business unit.

In the year in which a company changes a reporting entity, it should disclose in the financial statements the nature of the change and the reason for it. It also should report, for all periods presented, the effect of the change on income from continuing operations, net income, and earnings per share. These disclosures need not be repeated in subsequent periods’ financial statements.

Illustration 22.17 shows a note disclosing a change in reporting entity, from the annual report of **Hewlett-Packard Company**.

ILLUSTRATION 22.17

Disclosure of Change in Reporting Entity

Hewlett-Packard Company

Note: Accounting and Reporting Changes (In Part)

Consolidation of Hewlett-Packard Finance Company. The company implemented a new accounting pronouncement on consolidations. With the adoption of this new pronouncement, the company consolidated the accounts of Hewlett-Packard Finance Company (HPFC), a wholly owned subsidiary previously accounted for under the equity method, with those of the company. The change resulted in an increase in consolidated assets and liabilities but did not have a material effect on the company’s financial position. Since HPFC was previously accounted for under the equity method, the change did not affect net earnings. Prior years’ consolidated financial information has been restated to reflect this change for comparative purposes.

⁶An exception to retrospective application occurs when changing from the equity method. We provide an expanded illustration of the accounting for a change from or to the equity method in Appendix 22A.

Accounting Errors

LEARNING OBJECTIVE 3

Describe the accounting for correction of errors.

No business, large or small, is immune from errors. As the opening story discusses, the number of accounting errors that lead to restatement has stabilized in recent years. However, without accounting and disclosure guidelines for the reporting of errors, investors can be left in the dark about the effects of errors.

Certain errors, such as misclassifications of balances within a financial statement, are not as significant to investors as other errors. For example, significant errors would be those resulting in overstating assets or income. However, investors should know the potential impact of all errors. Even “harmless” misclassifications can affect important ratios. Also, some errors could signal important weaknesses in internal controls that could lead to more significant errors.

In general, accounting errors include the following types:

1. A change from an accounting principle that is **not** generally accepted to an accounting principle that is acceptable. The rationale is that the company incorrectly presented prior periods because of the application of an improper accounting principle. For example, a company may change from the cash (income tax) basis of accounting to the accrual basis.
2. Mathematical mistakes, such as incorrectly totaling the inventory count sheets when computing the inventory value.
3. Changes in estimates that occur because a company did not prepare the estimates in good faith. For example, a company may have adopted a clearly unrealistic depreciation rate.
4. An oversight, such as the failure to accrue or defer certain expenses and revenues at the end of the period.
5. A misuse of facts, such as the failure to use salvage value in computing the depreciation base for the straight-line approach.
6. The incorrect classification of a cost as an expense instead of an asset, and vice versa.

Accounting errors occur for a variety of reasons. **Illustration 22.18** indicates 11 major categories of accounting errors that drive restatements.

ILLUSTRATION 22.18 Accounting-Error Types

| Accounting Category | Type of Restatement |
|-----------------------------------|--|
| Expense recognition | Recording expenses in the incorrect period or for an incorrect amount. |
| Revenue recognition | Improper revenue accounting. This category includes instances in which revenue was improperly recognized, questionable revenues were recognized, or any other number of related errors that led to misreported revenue. |
| Misclassification | Misclassifying significant accounting items on the balance sheet, income statement, or statement of cash flows. These include restatements due to misclassification of short- or long-term accounts or those that impact cash flows from operations. |
| Equity—other | Improper accounting for EPS, restricted stock, warrants, and other equity instruments. |
| Allowances/contingencies | Errors involving bad debts related to accounts receivable, inventory reserves, income tax allowances, and loss contingencies. |
| Long-lived assets | Asset impairments of property, plant, and equipment; goodwill; or other related items. |
| Taxes | Errors involving correction of tax provision, improper treatment of tax liabilities, and other tax-related items. |
| Equity—other comprehensive income | Improper accounting for comprehensive income equity transactions including foreign currency items, unrealized gains and losses on certain investments in debt securities and derivatives. |
| Inventory | Inventory costing valuations, quantity issues, and cost of sales adjustments. |
| Equity—stock options | Improper accounting for employee stock options. |
| Other | Any restatement not covered by the listed categories including those related to improper accounting for acquisitions or mergers. |

Sources: T. Baldwin and D. Yoo, “Restatements—Traversing Shaky Ground,” *Trend Alert*, Glass Lewis & Co. (June 2, 2005), p. 8; and “2017 Financial Restatements Review,” *Audit Analytics* (June 2018).

As soon as a company discovers an error, it must correct the error. Companies record **corrections of errors** from prior periods as an adjustment to the beginning balance of retained earnings in the current period. Such corrections are called **prior period adjustments**.⁷ [8]

If it presents comparative statements, a company should restate the prior statements affected, to correct for the error.⁸ The company need not repeat the disclosures in the financial statements of subsequent periods.

What Do the Numbers Mean? Can I Get My Money Back?

When companies report restatements, investors usually lose money. What should investors do if a company misleads them by misstating its financial results? Join other investors in a class-action suit against the company and in some cases, the auditor.

Class-action activity has picked up in recent years, and settlements can be large. To find out about class actions, investors can go online to see if they are eligible to join any class actions. Below are some recent examples.

| Company | Settlement Amount |
|----------------------|-------------------|
| Takata | \$200 million |
| Facebook | \$ 10 million |
| Goldman Sachs | \$ 41 million |

The amounts reported are *before* attorney's fees, which can range from 15 to 30 percent of the total. Also, investors may owe taxes if the settlement results in a capital gain on the investment. Thus, investors can get back some of the money they lost due to restatements, but they should be prepared to pay an attorney and the government first.

Example of Error Correction

To illustrate, in 2021 the bookkeeper for Selectro Company discovered an error. In 2020, the company failed to record \$20,000 of depreciation expense on a newly constructed building. This building is the only depreciable asset Selectro owns. The company correctly included the depreciation expense in its tax return and correctly reported its income taxes payable. **Illustration 22.19** presents Selectro's income statement for 2020 (starting with income before depreciation expense) with and without the error.

ILLUSTRATION 22.19

Error Correction Comparison

| Selectro Company Income Statement For the Year Ended December 31, 2020 | | | | |
|--|----------|------------------|----------|------------------|
| | | Without Error | | With Error |
| Income before depreciation expense | | \$100,000 | | \$100,000 |
| Depreciation expense | | 20,000 | | –0– |
| Income before income tax | | 80,000 | | 100,000 |
| Current income tax expense | \$16,000 | | \$16,000 | |
| Deferred income tax expense | –0– | 16,000 | 4,000 | 20,000 |
| Net income | | <u>\$ 64,000</u> | | <u>\$ 80,000</u> |

Illustration 22.20 shows the entries that Selectro should have made and did make for recording depreciation expense and income taxes.

⁷See Mark L. Defond and James Jiambalvo, "Incidence and Circumstances of Accounting Errors," *The Accounting Review* (July 1991) for examples of different types of errors and why these errors might have occurred.

⁸The term **restatement** is used for the process of revising previously issued financial statements to reflect the correction of an error. This distinguishes an error correction from a change in accounting principle. [9] Some restatements—so-called "Little r" restatements—are distinguished from the restatements discussed here ("Big R" restatements), which require special reporting. Little r restatements arise when a company's *immaterial* errors accumulate to a material error in a given year. In a Little r restatement, the company must disclose the correction in the footnotes of the current-period financial statements (i.e., the financial statements that reflect the correction) but would not have to amend prior accounting reports. See C. Tan and S. Young, "An Analysis of 'Little r' Restatements," *Accounting Horizons* (September 2015).

| Entries Company Should Have Made (Without Error) | | Entries Company Did Make (With Error) | |
|---|--------|--|--------|
| Depreciation Expense | 20,000 | No entry made for depreciation | |
| Accumulated Depreciation— Buildings | 20,000 | | |
| Income Tax Expense | 16,000 | Income Tax Expense | 20,000 |
| Income Taxes Payable | 16,000 | Deferred Tax Liability | 4,000 |
| | | Income Taxes Payable | 16,000 |

ILLUSTRATION 22.20**Error Entries**

As Illustration 22.20 indicates, the \$20,000 omission error in 2020 results in the following effects.

| |
|--|
| Income Statement Effects |
| Depreciation expense (2020) is understated \$20,000. |
| Income tax expense (2020) is overstated \$4,000 ($\$20,000 \times .20$). |
| Net income (2020) is overstated \$16,000 ($\$80,000 - \$64,000$). |
| Balance Sheet Effects |
| Accumulated depreciation—buildings is understated \$20,000. |
| Deferred tax liability is overstated \$4,000 ($\$20,000 \times .20$). |

To make the proper correcting entry in 2021, Selectro should recognize that net income in 2020 is overstated by \$16,000, the Deferred Tax Liability is overstated by \$4,000, and Accumulated Depreciation—Buildings is understated by \$20,000. The entry to correct this error in 2021 is as follows.

| | | |
|------------------------------------|--------|--------|
| Retained Earnings | 16,000 | |
| Deferred Tax Liability | 4,000 | |
| Accumulated Depreciation—Buildings | | 20,000 |

The debit to Retained Earnings results because net income for 2020 is overstated. The debit to Deferred Tax Liability is made to remove this account, which was caused by the error. The credit to Accumulated Depreciation—Buildings reduces the book value of the building to its proper amount. Selectro will make the same journal entry to record the correction of the error in 2021 whether it prepares single-period (noncomparative) or comparative financial statements.

Single-Period Statements

To demonstrate how to show this information in a single-period statement, assume that Selectro Company has a beginning retained earnings balance at January 1, 2021, of \$350,000. The company reports net income of \$400,000 in 2021. **Illustration 22.21** shows Selectro's retained earnings statement for 2021.

| Selectro Company Retained Earnings Statement For the Year Ended December 31, 2021 | | |
|---|----------|------------------|
| Retained earnings, January 1, as reported | | \$350,000 |
| Correction of an error (depreciation) | \$20,000 | |
| Less: Applicable income tax reduction | 4,000 | (16,000) |
| Retained earnings, January 1, as adjusted | | 334,000 |
| Add: Net income | | 400,000 |
| Retained earnings, December 31 | | <u>\$734,000</u> |

ILLUSTRATION 22.21**Reporting an Error—Single-Period Financial Statement**

The balance sheet in 2021 would not have any deferred tax liability related to the building, and Accumulated Depreciation—Buildings is now restated at a higher amount. The income statement would not be affected.

Comparative Statements

If preparing comparative financial statements, a company should make adjustments to correct the amounts for all affected accounts reported in the statements for **all periods** reported. The company should restate the data to the correct basis for each year presented. It should **show any catch-up adjustment as a prior period adjustment to retained earnings for the earliest period it reported**. These requirements are essentially the same as those for reporting a change in accounting principle.

For example, in the case of Selectro, the error of omitting the depreciation of \$20,000 in 2020, discovered in 2021, results in the restatement of the 2020 financial statements. **Illustration 22.22** shows the accounts that Selectro restates in the 2020 financial statements.

ILLUSTRATION 22.22

Reporting an Error— Comparative Financial Statements

| | |
|--|-------------------|
| In the balance sheet: | |
| Accumulated depreciation—buildings | \$20,000 increase |
| Deferred tax liability | \$ 4,000 decrease |
| Retained earnings, ending balance | \$16,000 decrease |
| In the income statement: | |
| Depreciation expense—buildings | \$20,000 increase |
| Income tax expense | \$ 4,000 decrease |
| Net income | \$16,000 decrease |
| In the retained earnings statement: | |
| Retained earnings, ending balance (due to lower net income for the period) | \$16,000 decrease |

Selectro prepares the 2021 financial statements in comparative form with those of 2020 **as if the error had not occurred**. In addition, Selectro must disclose that it has restated its previously issued financial statements, and it describes the nature of the error. Selectro also must disclose the following.

1. The effect of the correction on each financial statement line item and any per share amounts affected for each prior period presented.
2. The cumulative effect of the change on retained earnings or other appropriate components of equity or net assets in the statement of financial position, as of the beginning of the earliest period presented. [10]

Summary of Accounting Changes and Correction of Errors

Underlying Concepts

Neutrality is an important element of faithful representation.

Having guidelines for reporting accounting changes and corrections has helped resolve several significant and long-standing accounting problems. Yet, because of diversity in situations and characteristics of the items encountered in practice, use of professional judgment is of paramount importance. In applying these guidelines, the primary objective is to serve the users of the financial statements. Achieving this objective requires accuracy, full disclosure, and an absence of misleading inferences (see **Underlying Concepts**).

Illustration 22.23 summarizes the main distinctions and treatments presented in the discussion in this chapter.

Changes in accounting principle are appropriate **only** when a company demonstrates that the newly adopted generally accepted accounting principle is **preferable** to the existing one. Companies and accountants determine preferability on the basis of whether the new principle constitutes an **improvement in financial reporting**, not on the basis of the income tax effect alone.⁹

⁹A change in accounting principle, a change in the reporting entity (special type of change in accounting principle), and a correction of an error require an explanatory paragraph in the auditor's report discussing lack of consistency from one period to the next. A change in accounting estimate does not affect the auditor's opinion relative to consistency. However, if the change in estimate has a material effect on the financial statements, disclosure may still be required. Error correction not involving a change in accounting principle does not require disclosure relative to consistency.

ILLUSTRATION 22.23**Summary of Guidelines
for Accounting Changes
and Errors****Changes in Accounting Principle**

Employ the retrospective approach by:

- a. Changing the financial statements of all prior periods presented.
- b. Disclosing in the year of the change the effect on net income and earnings per share for all prior periods presented.
- c. Reporting an adjustment to the beginning retained earnings balance in the retained earnings statement in the earliest year presented.

If impracticable to determine the prior period effect (e.g., change to LIFO):

- a. Do not change prior years' income.
- b. Use opening inventory in the year the method is adopted as the base-year inventory for all subsequent LIFO computations.
- c. Disclose the effect of the change on the current year, and the reasons for omitting the computation of the cumulative effect and pro forma amounts for prior years.

Changes in Accounting Estimate

Employ the current and prospective approach by:

- a. Reporting current and future financial statements on the new basis.
- b. Presenting prior period financial statements as previously reported.
- c. Making no adjustments to current-period opening balances for the effects in prior periods.

Changes in Reporting Entity

Employ the retrospective approach by:

- a. Restating the financial statements of all prior periods presented.
- b. Disclosing in the year of change the effect on net income and earnings per share data for all prior periods presented.

Changes Due to Error

Employ the restatement approach by:

- a. Correcting all prior period statements presented.
- b. Restating the beginning balance of retained earnings for the first period presented when the error effects occur in a period prior to the first period presented.

But it is not always easy to determine an improvement in financial reporting. **How does one measure preferability or improvement?** Such measurement varies from company to company. **Quaker Oats Company**, for example, argued that a change in accounting principle to LIFO inventory valuation “better matches current costs with current revenues” (see Illustration 22.13). Conversely, another company might change from LIFO to FIFO because it wishes to report a more realistic ending inventory. How do you determine which is the better of these two arguments? Determining the preferable method requires some “standard” or “objective.” Because no universal standard or objective is generally accepted, the problem of determining preferability continues to be difficult.

Initially, the SEC took the position that the auditor should indicate whether a change in accounting principle was preferable. The SEC has since modified this approach, noting that greater reliance may be placed on management’s judgment in assessing preferability. Even though the preferability criterion is difficult to apply, the general guidelines have acted as a deterrent to capricious changes in accounting principles.¹⁰ **If a FASB rule creates a new principle, expresses preference for, or rejects a specific accounting principle, a change is considered clearly acceptable.**

¹⁰If management has not provided reasonable justification for the change in accounting principle, the auditor should express a qualified opinion. Or, if the effect of the change is sufficiently material, the auditor should express an adverse opinion on the financial statements. See AU-C Section 508, “Reports on Audited Financial Statements,” *Statement on Auditing Standards No. 122*. Effective for audits of financial statements for periods ending on or after December 15, 2012. [Predecessor literature: “Reports on Audited Financial Statements,” *Statement on Auditing Standards No. 58* (New York: AICPA, 1988).]

What Do the Numbers Mean? What's Your Motivation?

Difficult as it is to determine which accounting standards have the strongest conceptual support, other complications make the process even more complex. These complications stem from the fact that managers have self-interest in how the financial statements make the company look. They naturally wish to show their financial performance in the best light.

Research provides insights into why companies may prefer certain accounting methods. Some of these reasons are as follows.

1. **Political costs.** As companies become larger and more politically visible, politicians and regulators devote more attention to them. The larger the firm, the more likely it is to become subject to regulation such as antitrust, and the more likely it is to be required to pay higher taxes. Therefore, companies that are politically visible may seek to report low income numbers, to avoid the scrutiny of regulators. In addition, other constituents, such as labor unions, may be less willing to ask for wage increases if reported income is low. Researchers have found that the larger the company, the more likely it is to adopt income-decreasing approaches in selecting accounting methods.
2. **Capital structure.** A number of studies have indicated that the capital structure of the company can affect the selection of accounting methods. For example, a company with a high debt to equity ratio is more likely to be constrained by debt covenants. The debt covenant may indicate that the company cannot pay dividends if retained earnings fall below a certain level. As a result, such a company is more likely to select accounting methods that will increase net income.
3. **Bonus payments.** Studies have found that if compensation plans tie managers' bonus payments to income, management will select accounting methods that maximize their bonus payments.
4. **Smooth earnings.** Substantial earnings increases attract the attention of politicians, regulators, and competitors. In addition, large increases in income are difficult to achieve

in following years. Further, executive compensation plans would use these higher numbers as a baseline and make it difficult for managers to earn bonuses in subsequent years. Conversely, investors and competitors might view large decreases in earnings as a signal that the company is in financial trouble. Also, substantial decreases in income raise concerns on the part of stockholders, lenders, and other interested parties about the competency of management. For all these reasons, companies have an incentive to "manage" or "smooth" earnings. In general, management tends to believe that a steady 10 percent growth a year is much better than a 30 percent growth one year and a 10 percent decline the next. In other words, managers usually prefer a gradually increasing income report and sometimes change accounting methods to ensure such a result.

Management pays careful attention to the accounting it follows and often changes accounting methods, not for conceptual reasons, but for economic reasons. As indicated throughout this text, such arguments have come to be known as **economic consequences** arguments. These arguments focus on the supposed impact of the accounting method on the behavior of investors, creditors, competitors, governments, or managers of the reporting companies themselves.

To counter these pressures, standard-setters such as the FASB have declared, as part of their conceptual framework, that they will assess the merits of proposed standards from a position of **neutrality**. That is, they evaluate the soundness of standards on the basis of conceptual soundness, not on the grounds of possible impact on behavior. It is not the FASB's place to choose standards according to the kinds of behavior it wishes to promote and the kinds it wishes to discourage.

Error Analysis

LEARNING OBJECTIVE 4

Analyze the effects of errors.

In this section, we show some additional types of accounting errors. Companies generally do not correct for errors that do not have a significant effect on the presentation of the financial statements. For example, should a company with a total annual payroll of \$1,750,000 and net income of \$940,000 correct its financial statements if it finds it failed to record accrued wages of \$5,000? No—it would not consider this error significant or material.

Obviously, defining materiality is difficult, and managers and auditors must use experience and judgment to determine whether adjustment is necessary for a given error. We assume **all errors discussed in this section to be material and to require adjustment.** (Also, we ignore all tax effects in this section.)

Companies must answer three questions in error analysis:

1. What type of error is involved?
2. What entries are needed to correct for the error?
3. After discovery of the error, how are financial statements to be restated?

As indicated earlier, companies treat errors **as prior period adjustments and report them in the current year as adjustments to the beginning balance of Retained Earnings**. If a company presents comparative statements, it restates the prior affected statements to correct for the error.

Balance Sheet Errors

Balance sheet errors affect only the presentation of an asset, liability, or stockholders' equity account. Examples are the classification of a short-term receivable as part of the investment section, the classification of a note payable as an account payable, and the classification of plant assets as inventory.

When the error is discovered, the company reclassifies the item to its proper position. If the company prepares comparative statements that include the error year, it should correctly restate the balance sheet for the error year.

Income Statement Errors

Income statement errors involve the improper classification of revenues or expenses. Examples include recording interest revenue as part of sales, purchases as bad debt expense, and depreciation expense as interest expense. An income statement classification error has no effect on the balance sheet and **no effect on net income**.

A company must make a reclassification entry when it discovers the error, if it makes the discovery in the same year in which the error occurs. If the error occurred in prior periods, the company does not need to make a reclassification entry at the date of discovery because the accounts for the current year are correctly stated. (Remember that the company has closed the income statement accounts from the prior period to retained earnings.) If the company prepares comparative statements that include the error year, it restates the income statement for the error year.

Balance Sheet and Income Statement Errors

The third type of error involves both the balance sheet and income statement. For example, assume that the bookkeeper overlooked accrued wages payable at the end of the accounting period. The effect of this error is to understate expenses, understate liabilities, and overstate net income for that period of time. This type of error affects both the balance sheet and the income statement. We classify this type of error in one of two ways—counterbalancing or noncounterbalancing.

Counterbalancing errors are those that will be offset or corrected over two periods. For example, the failure to record accrued wages is a counterbalancing error because over a two-year period the error will no longer be present. In other words, the failure to record accrued wages in the previous period means (1) net income for the first period is overstated, (2) accrued wages payable (a liability) is understated, and (3) wages expense is understated. In the next period, net income is understated, accrued wages payable (a liability) is correctly stated, and wages expense is overstated. For the two **years combined**: (1) net income is correct, (2) wages expense is correct, and (3) accrued wages payable at the end of the second year is correct. Most errors in accounting that affect both the balance sheet and income statement are counterbalancing errors.

Noncounterbalancing errors are those that are not offset in the next accounting period. An example would be the failure to capitalize equipment that has a useful life of five years. If we expense this asset immediately, expenses will be overstated in the first period but understated in the next four periods. At the end of the second period, the effect of the error is not fully offset. Net income is correct in the aggregate only at the end of five years because the asset is fully depreciated at this point. Thus, **noncounterbalancing errors are those that take longer than two periods to correct themselves**.

Only in rare instances is an error never reversed. An example would be if a company initially expenses land. Because land is not depreciable, theoretically the error is never offset, unless the land is sold.

Counterbalancing Errors

We illustrate the usual types of counterbalancing errors in the following sections. In studying these illustrations, keep in mind a couple of points.

First, determine whether the company has closed the books for the period in which the error is found:

1. If the company has closed the books in the current year:
 - a. If the error is already counterbalanced, no entry is necessary.
 - b. If the error is not yet counterbalanced, make an entry to adjust the present balance of retained earnings.
2. If the company has not closed the books in the current year:
 - a. If the error is already counterbalanced, make an entry to correct the error in the current period and to adjust the beginning balance of Retained Earnings.
 - b. If the error is not yet counterbalanced, make an entry to adjust the beginning balance of Retained Earnings.

Second, if the company presents comparative statements, it must restate the amounts for comparative purposes. **Restatement is necessary even if a correcting journal entry is not required.**

To illustrate, assume that Sanford Cement Co. failed to accrue revenue in 2018 when it fulfilled its performance obligation, but recorded the revenue in 2019 when it received payment. The company discovered the error in 2021. It does not need to make an entry to correct for this error because the effects have been counterbalanced by the time Sanford discovered the error in 2021. However, if Sanford presents comparative financial statements for 2018 through 2021, it must **restate the accounts and related amounts for the years 2018 and 2019 for financial reporting purposes.**

The sections that follow demonstrate the accounting for the usual types of counterbalancing errors.

Failure to Record Accrued Wages On December 31, 2020, Hurley Enterprises did not accrue wages in the amount of \$1,500. The entry in 2021 to correct this error, assuming Hurley has not closed the books for 2021, is:

| | | |
|----------------------------|-------|-------|
| Retained Earnings | 1,500 | |
| Salaries and Wages Expense | | 1,500 |

The rationale for this entry is as follows. (1) When Hurley pays the 2020 accrued wages in 2021, it makes an additional debit of \$1,500 to 2021 Salaries and Wages Expense. (2) Salaries and Wages Expense—2021 is overstated by \$1,500. (3) Because the company did not record 2020 accrued wages as Salaries and Wages Expense in 2020, the net income for 2020 was overstated by \$1,500. (4) Because 2020 net income is overstated by \$1,500, the Retained Earnings account is overstated by \$1,500 (because net income is closed to Retained Earnings).

If Hurley has closed the books for 2021, it makes no entry because the error is counterbalanced.

Failure to Record Prepaid Expenses In January 2020, Hurley Enterprises purchased a two-year insurance policy costing \$1,000. It debited Insurance Expense, and credited Cash. The company made no adjusting entries at the end of 2020.

The entry on December 31, 2021, to correct this error, assuming Hurley has not closed the books for 2021, is:

| | | |
|-------------------|-----|-----|
| Insurance Expense | 500 | |
| Retained Earnings | | 500 |

If Hurley has closed the books for 2021, it makes no entry because the error is counterbalanced.

Understatement of Unearned Revenue On December 31, 2020, Hurley Enterprises received \$50,000 as a prepayment for renting certain office space for the following year. At the time of receipt of the rent payment, the company recorded a debit to Cash and a credit to Rent Revenue. It made no adjusting entry as of December 31, 2020. The entry on December 31, 2021, to correct for this error, assuming that Hurley has not closed the books for 2021, is:

| | | |
|-------------------|--------|--------|
| Retained Earnings | 50,000 | |
| Rent Revenue | | 50,000 |

If Hurley has closed the books for 2021, it makes no entry because the error is counterbalanced.

Overstatement of Accrued Revenue On December 31, 2020, Hurley Enterprises accrued as interest revenue \$8,000 that applied to 2021. On that date, the company recorded a debit to Interest Receivable and a credit to Interest Revenue. The entry on December 31, 2021, to correct for this error, assuming that Hurley has not closed the books for 2021, is:

| | | |
|-------------------|-------|-------|
| Retained Earnings | 8,000 | |
| Interest Revenue | | 8,000 |

If Hurley has closed the books for 2021, it makes no entry because the error is counterbalanced.

Overstatement of Purchases Hurley's accountant recorded a purchase of merchandise for \$9,000 in 2020 that applied to 2021. The physical inventory for 2020 was correctly stated. The company uses the periodic inventory method. The entry on December 31, 2021, to correct for this error, assuming that Hurley has not closed the books for 2021, is:

| | | |
|-------------------|-------|-------|
| Purchases | 9,000 | |
| Retained Earnings | | 9,000 |

If Hurley has closed the books for 2021, it makes no entry because the error is counterbalanced.

Noncounterbalancing Errors

The entries for noncounterbalancing errors are more complex. Companies must make correcting entries, even if they have closed the books.

Failure to Record Depreciation Assume that on January 1, 2020, Hurley Enterprises purchased a machine for \$10,000 that had an estimated useful life of five years. The accountant incorrectly expensed this machine in 2020, but discovered the error in 2021. If we assume that Hurley uses straight-line depreciation on this asset, the entry on December 31, 2021, to correct for this error, given that Hurley has or has not closed the books, is as follows.

| Hurley has not closed the books for 2021: | | |
|---|-----------------|--------|
| Equipment | 10,000 | |
| Depreciation Expense | 2,000 | |
| Retained Earnings | | 8,000* |
| Accumulated Depreciation—Equipment (.20 × \$10,000 × 2) | | 4,000 |
| *Overstatement of expense in 2020 | \$10,000 | |
| Proper depreciation for 2020 (.20 × \$10,000) | (2,000) | |
| Retained earnings understated as of Dec. 31, 2020 | <u>\$ 8,000</u> | |
| Hurley has closed the books for 2021: | | |
| Equipment | 10,000 | |
| Retained Earnings | | 6,000* |
| Accumulated Depreciation—Equipment | | 4,000 |
| *Retained earnings understated as of Dec. 31, 2020 | \$ 8,000 | |
| Proper depreciation for 2021 (.20 × \$10,000) | (2,000) | |
| Retained earnings understated as of Dec. 31, 2021 | <u>\$ 6,000</u> | |

Failure to Adjust for Bad Debts Companies sometimes use a specific charge-off method in accounting for bad debt expense when a percentage of sales is more appropriate. They then make adjustments to change from the specific write-off method to some type of allowance method. For example, assume that Hurley Enterprises has recognized bad debt expense when it has the following uncollectible debts.

| | <u>2020</u> | <u>2021</u> |
|-----------------|-------------|-------------|
| From 2020 sales | \$550 | \$690 |
| From 2021 sales | | 700 |

Hurley estimates that it will charge off an additional \$1,400 in 2022, of which \$300 is applicable to 2020 sales and \$1,100 to 2021 sales. The entry on December 31, 2021, assuming that Hurley has or has not closed the books for 2021, is as follows.

| Hurley has not closed the books in 2021: | | |
|---|---------------|---------------|
| Bad Debt Expense | 410 | |
| Retained Earnings | 990 | |
| Allowance for Doubtful Accounts | | 1,400 |
| Allowance for doubtful accounts: Additional \$300 for 2020 sales and \$1,100 for 2021 sales. | | |
| Bad debts and retained earnings balance: | | |
| | <u>2020</u> | <u>2021</u> |
| Bad debts charged for | \$1,240* | \$ 700 |
| Additional bad debts anticipated in 2022 | 300 | 1,100 |
| Proper bad debt expense | 1,540 | 1,800 |
| Charges currently made to each period | (550) | (1,390) |
| Bad debt adjustment | \$ 990 | \$ 410 |
| *\$550 + \$690 = \$1,240 | | |
| Hurley has closed the books for 2021: | | |
| Retained Earnings | 1,400 | |
| Allowance for Doubtful Accounts | | 1,400 |

Comprehensive Example: Numerous Errors

In some circumstances, a combination of errors occurs. The company therefore prepares a worksheet to facilitate the analysis. The following problem demonstrates use of the worksheet. The mechanics of its preparation should be obvious from the solution format. The income statements of Hudson Company for the years ended December 31, 2019, 2020, and 2021, indicate the following net incomes.

| | |
|------|----------|
| 2019 | \$17,400 |
| 2020 | 20,200 |
| 2021 | 11,300 |

An examination of the accounting records for these years indicates that Hudson Company made several errors in arriving at the net income amounts reported:

- The company consistently omitted from the records wages earned by workers but not paid at December 31. The amounts omitted were:

| | |
|-------------------|---------|
| December 31, 2019 | \$1,000 |
| December 31, 2020 | 1,400 |
| December 31, 2021 | 1,600 |

When paid in the year following that in which they were earned, Hudson recorded these amounts as expenses.

- The company overstated merchandise inventory on December 31, 2019, by \$1,900 as the result of errors made in the footings and extensions on the inventory sheets.
- On December 31, 2020, Hudson expensed prepaid insurance of \$1,200, applicable to 2021.
- The company did not record on December 31, 2020, interest receivable in the amount of \$240.
- On January 2, 2020, Hudson sold for \$1,800 a piece of equipment costing \$3,900. At the date of sale, the equipment had accumulated depreciation of \$2,400. The company recorded the cash received as Miscellaneous Income in 2020. In addition, the company continued to record depreciation for this equipment in both 2020 and 2021 at the rate of 10 percent of cost.

The first step in preparing the worksheet is to prepare a schedule showing the reported net income amounts for the years ended December 31, 2019, 2020, and 2021. Each correction of the amount originally reported is clearly labeled. The next step is to indicate the balance sheet accounts affected as of December 31, 2021. **Illustration 22.24** shows the completed worksheet for Hudson Company.

| 15 | Overcharge of depreciation, 2021 | | | 390 | 390 | 390 | | Accumulated Depreciation—Equipment |
| 16 | Corrected net income | \$14,500 | \$22,030 | \$10,050 | \$46,580 | | | |
| 17 | ^a Cost | \$ 3,900 | | | | | | |
| 18 | Less: Accumulated depreciation | 2,400 | | | | | | |
| 19 | Book value | 1,500 | | | | | | |
| 20 | Less: Proceeds from sale | 1,800 | | | | | | |
| 21 | Gain on sale | 300 | | | | | | |
| 22 | Income reported | (1,800) | | | | | | |
| 23 | Adjustment | \$(1,500) | | | | | | |

The correcting entries on December 31, 2021, assuming the books have not or have been closed, are as follows.

| Hudson Company has not closed the books for 2021: | | |
|--|-------|-------|
| Retained Earnings | 1,400 | |
| Salaries and Wages Expense | | 1,400 |
| (To correct improper charge to Salaries and Wages Expense for 2021) | | |
| Salaries and Wages Expense | 1,600 | |
| Salaries and Wages Payable | | 1,600 |
| (To record proper wages expense for 2021) | | |
| Insurance Expense | 1,200 | |
| Retained Earnings | | 1,200 |
| (To record proper insurance expense for 2021) | | |
| Interest Revenue | 240 | |
| Retained Earnings | | 240 |
| (To correct improper credit to Interest Revenue in 2021) | | |
| Retained Earnings | 1,500 | |
| Accumulated Depreciation—Equipment | 2,400 | |
| Equipment | | 3,900 |
| (To record write-off of equipment in 2020 and adjustment of Retained Earnings) | | |
| Accumulated Depreciation—Equipment | 780 | |
| Depreciation Expense | | 390 |
| Retained Earnings | | 390 |
| (To correct improper charge for depreciation expense in 2020 and 2021) | | |
| Hudson Company has closed the books for 2021: | | |
| Retained Earnings | 1,600 | |
| Salaries and Wages Payable | | 1,600 |
| (To record proper wage expense for 2021) | | |
| Retained Earnings | 1,500 | |
| Accumulated Depreciation—Equipment | 2,400 | |
| Equipment | | 3,900 |
| (To record write-off of equipment in 2020 and adjustment of Retained Earnings) | | |
| Accumulated Depreciation—Equipment | 780 | |
| Retained Earnings | | 780 |
| (To correct improper charge for depreciation expense in 2020 and 2021) | | |

What Do the Numbers Mean? Guard the Financial Statements!

Restatements sometimes occur because of financial fraud. Financial frauds involve the intentional misstatement or omission of material information in the organization's financial reports. Common methods of financial fraud manipulation include recording fictitious revenues, concealing liabilities or expenses, and artificially inflating reported assets.

Of the three primary categories of occupational fraud, asset misappropriations are by far the most common, occurring in 89 percent of the cases. However, they are also the least costly,

causing a median loss of \$114,000. Corruption schemes are the next most common form of occupational fraud; 38 percent of the cases involved some form of corrupt act. These schemes resulted in a median loss to the victim organizations of \$250,000. The least common and most costly form of occupational fraud is financial statement fraud, which occurred in 10 percent of the cases and caused a median loss of \$800,000. The following chart indicates the types of occupational fraud committed and the median loss for each category.

Here are the most common types of financial statement fraud:

1. Revenue recognition.
2. Irregularities associated with foreign subsidiaries and affiliates of U.S. companies.
3. Misclassifications of accounts, such as cash, investments, receivables, and allowances for doubtful accounts.
4. Inappropriate determination of inventory costs, cost of sales, and the inventory balances at year-end.
5. Expense recording issues.
6. Identification of liabilities on the balance sheet.

McDonald, "Fraud Reports Climb Still Higher," *CFO.com* (September 26, 2012); and F. Alali and I. Wang, "Characteristics of Financial Statements and Frauds," *CPA Journal* (November 11, 2017).

Preparation of Financial Statements with Error Corrections

Up to now, our discussion of error analysis has focused on identifying the type of error involved and accounting for its correction in the records. We have noted that companies must present the correction of the error on comparative financial statements.

The following example illustrates how a company would restate a typical year's financial statements, given many different errors.

Dick & Wally's Outlet is a small retail outlet in the town of Holiday. Lacking expertise in accounting, the company does not keep adequate records, and numerous errors occurred in recording accounting information.

1. The bookkeeper inadvertently failed to record a cash receipt of \$1,000 on the sale of merchandise in 2021.
2. Accrued wages expense at the end of 2020 was \$2,500; at the end of 2021, \$3,200. The company does not accrue for wages; all wages are charged to Administrative Expenses.
3. The company had not set up an allowance for estimated uncollectible receivables. Dick and Wally decided to set up such an allowance for the estimated probable losses, as of December 31, 2021, for 2020 accounts of \$700, and for 2021 accounts of \$1,500. They also decided to correct the charge against each year so that it shows the losses (actual and estimated) relating to that year's sales. The company has written off accounts to bad debt expense (selling expense) as follows.

| | <u>In 2020</u> | <u>In 2021</u> |
|---------------|----------------|----------------|
| 2020 accounts | \$400 | \$2,000 |
| 2021 accounts | | 1,600 |

4. Prepaid insurance not recorded at the end of 2020 was \$600, and at the end of 2021, \$400. All insurance is charged to Administrative Expenses.
5. An account payable of \$6,000 should have been a note payable.
6. During 2020, the company sold for \$7,000 an asset that cost \$10,000 and had a book value of \$4,000. At the time of sale, Cash was debited and Miscellaneous Income was credited for \$7,000.
7. As a result of the last transaction, the company overstated depreciation expense (an administrative expense) in 2020 by \$800 and in 2021 by \$1,200.

Illustration 22.25 presents a worksheet that begins with the unadjusted trial balance of Dick & Wally's Outlet. You can determine the correcting entries and their effect on the financial statements by examining the worksheet.

APPENDIX 22A

Changing from or to the Equity Method

LEARNING OBJECTIVE *5

Make the computations and prepare the entries necessary to record a change from or to the equity method of accounting.

As noted in the chapter, companies generally should report an accounting change that results in financial statements for a different entity by **changing the financial statements of all prior periods presented**.

An example of a change in reporting entity is when a company's level of ownership or influence changes, such as when it changes from or to the equity method. When changing **to** the equity method, companies use retrospective application. Companies treat a change **from** the equity method prospectively. We present examples of these changes in entity in the following two sections.

Change from the Equity Method

If the investor level of influence or ownership falls below that necessary for continued use of the equity method, a company must change from the equity method to the fair value method. The earnings or losses that the investor previously recognized under the equity method should **remain as part of the carrying amount** of the investment, with no retrospective application to the new method.

When a company changes **from the equity method to the fair value method, the cost basis for accounting purposes is the carrying amount of the investment at the date of the change**. The investor applies the new method in its entirety once the equity method is no longer appropriate. At the next reporting date, the investor should record the unrealized holding gain or loss to recognize the difference between the carrying amount and fair value.¹¹

Dividends in Excess of Earnings

In subsequent periods, dividends received by the investor company may exceed its share of the investee's earnings for such periods (all periods following the change in method). To the extent that they do so, the investor company should account for such dividends as a **reduction of the investment carrying amount**, rather than as revenue. The reason: Dividends in excess of earnings are viewed as a liquidating dividend, with this excess then accounted for as a reduction of the equity investment.

To illustrate, assume that on January 1, 2019, Investor Company purchased 250,000 shares of Investee Company's 1,000,000 shares of outstanding stock for \$8,500,000. Investor correctly accounted for this investment using the equity method. After accounting for dividends received and investee net income, in 2019 Investor reported its investment in Investee Company at \$8,780,000 at December 31, 2019. On January 2, 2020, Investee Company sold 1,500,000 additional shares of its own common stock to the public, thereby reducing Investor Company's ownership from 25 percent to 10 percent. **Illustration 22A.1** shows the net income (or loss) and dividends of Investee Company for the years 2020 through 2022.

¹¹A retrospective application for this type of change is impracticable in many cases. Determining fair values on a portfolio basis for securities in previous periods may be quite difficult. As a result, prospective application is used.

ILLUSTRATION 22A.1**Income Earned and Dividends Received**

| Year | Investor's Share of Investee Income (Loss) | Investee Dividends Received by Investor |
|--------|--|---|
| 2020 | \$600,000 | \$ 400,000 |
| 2021 | 350,000 | 400,000 |
| 2022 | -0- | 210,000 |
| Totals | <u>\$950,000</u> | <u>\$1,010,000</u> |

Assuming a change from the equity method to the fair value method as of January 2, 2020, Investor Company's reported investment in Investee Company and its reported income would be as shown in **Illustration 22A.2**.

ILLUSTRATION 22A.2**Impact on Investment Carrying Amount**

| Year | Dividend Revenue Recognized | Cumulative Excess of Share of Earnings over Dividends Received | Investment at December 31 |
|------|-----------------------------|--|---|
| 2020 | \$400,000 | \$200,000 ^a | \$8,780,000 |
| 2021 | 400,000 | 150,000 ^b | 8,780,000 |
| 2022 | 150,000 | (60,000) ^c | \$8,780,000 - \$60,000 = \$8,720,000 |

^a\$600,000 - \$400,000 = \$200,000
^b(\$350,000 - \$400,000) + \$200,000 = \$150,000
^c\$150,000 - \$210,000 = \$(60,000)

Investor Company would record the dividends and earnings data for the three years subsequent to the change in methods as shown by the following entries.

| | | | |
|----------------------|--|---------|---------|
| 2020 and 2021 | | | |
| Cash | | 400,000 | |
| Dividend Revenue | | | 400,000 |
| | (To record dividend received from Investee Company) | | |
| 2022 | | | |
| Cash | | 210,000 | |
| Equity Investments | | | 60,000 |
| Dividend Revenue | | | 150,000 |
| | (To record dividend revenue from Investee Company in 2022 and to recognize cumulative excess of dividends received over share of Investee earnings in periods subsequent to change from the equity method) | | |

Change to the Equity Method

When converting to the equity method, companies use the prospective approach. Recall that under this approach, companies do not adjust opening balances to reflect the change in principle on prior reported results. Instead, they account for the effects of the change in (1) the period of change if the change affects that period only, or (2) the period of change and future periods if the change affects both. In applying the prospective approach to the change to the equity method, the investor company should add the cost of acquiring

the additional interest in the investee company to the cost basis of their previously held interest (the present stock holding). [11]¹²

For example, assume that Exact Technology on January 1, 2020, purchases a 10 percent stock interest in Cellular4D that costs \$850,000. Exact Technology uses the fair value method to account for its interest in Cellular4D by adjusting its cost basis to fair value at the end of a reporting period. The entry to record the purchase of Cellular4D on January 1, 2020, is as follows.

| January 1, 2020 | | |
|---|---------|---------|
| Equity Investment | 850,000 | |
| Cash | | 850,000 |
| (To record the purchase of a 10% interest in Cellular4D) | | |

At December 31, 2020, the fair value of Exact Technology's investment is \$1,000,000. The entry to record the excess of the fair value over its cost for Exact Technology's investment is as follows.

| December 31, 2020 | | |
|--|---------|---------|
| Fair Value Adjustment | 150,000 | |
| Unrealized Holding Gain or Loss—Income | | 150,000 |
| (\$1,000,000 – \$850,000) (To record increase in value of securities) | | |

On January 1, 2021, Exact Technology now purchases an additional 20 percent stock interest in Cellular4D for \$4,000,000. Because of this additional investment, Exact Technology now exerts significant influence over the operations of Cellular4D. Exact Technology must use the equity method to account for this investment. Exact Technology adds the cost of acquiring the additional interest in Cellular4D of \$4,000,000 to its original cost basis of \$850,000 to determine a new cost basis in Cellular4D of \$4,850,000 (\$4,000,000 + \$850,000).

Exact Technology makes the following entry to record this additional investment in Cellular4D.

| January 1, 2021 | | |
|--|-----------|-----------|
| Equity Investment (Cellular4D) | 4,000,000 | |
| Cash | | 4,000,000 |
| (To record the purchase of the additional interest in Cellular4D) | | |

Exact Technology then reclassifies its existing balance in the investment account as follows.

| January 1, 2021 | | |
|--|---------|---------|
| Equity Investment (Cellular4D) | 850,000 | |
| Equity Investment | | 850,000 |
| (To reclassify initial 10% interest to equity method) | | |

In addition, Exact Technology must adjust the fair value accounts when it changes to the equity method. The entry to record this transaction is as follows.

| January 1, 2021 | | |
|---|---------|---------|
| Retained Earnings | 150,000 | |
| Fair Value Adjustment (\$1,000,000 – \$850,000) | | 150,000 |
| (To eliminate fair value accounts for change to equity method) | | |

Exact Technology now reports an equity investment at \$4,850,000. Subsequently, Exact Technology will adjust the cost basis of \$4,850,000 for changes in the net income and dividends of Cellular4D under the equity method as discussed in Chapter 17.

¹²At one time, when an investment qualified for use of the equity method because of an increase in the level of ownership interest or degree of influence, the investor had to retroactively restate the investment, results of operations, and retained earnings, which often was a very complex task. The FASB decided that the retroactive method was too costly and time-consuming to implement, and of little benefit to users. See *FASB Accounting Standards Update No. 2016-07*, "Simplifying the Transition to the Equity Method of Accounting" (March 2016).

Review and Practice

|---|--|--|
| change in accounting estimate 22-3, 22-16 | cumulative effect 22-4 | indirect effects of a change in accounting principle 22-14 |
| change in estimate effected by a change in accounting principle 22-17 | direct effects of a change in accounting principle 22-14 | noncounterbalancing errors 22-25 |
| change in accounting principle 22-3, 22-4 | economic consequences 22-24 | prior period adjustments 22-20 |
| change in reporting entity 22-3 | errors in financial statements 22-3 | prospectively 22-5 |
| correction of an error 22-20 | impracticable 22-14 | restatement 22-20(n) |
| counterbalancing errors 22-25 | | retrospective application 22-4 |

Learning Objectives Review

1 Discuss the types of accounting changes and the accounting for changes in accounting principles.

The three different types of accounting changes are as follows. (1) *Change in accounting principle*: a change from one generally accepted accounting principle to another generally accepted accounting principle. (2) *Change in accounting estimate*: a change that occurs as the result of new information or as additional experience is acquired. (3) *Change in reporting entity*: a change from reporting as one type of entity to another type of entity.

A **change in accounting principle** involves a change from one generally accepted accounting principle to another. A change in accounting principle is not considered to result from the adoption of a new principle in recognition of events that have occurred for the first time or that were previously immaterial. If the accounting principle previously followed was not acceptable or if the principle was applied incorrectly, a change to a generally accepted accounting principle is considered a correction of an error.

The general requirement for changes in accounting principle is **retrospective application**. Under retrospective application, companies change prior years' financial statements on a basis consistent with the newly adopted principle. They treat any part of the effect attributable to years prior to those presented as an adjustment of the earliest retained earnings presented. However, retrospective application is impracticable if the prior period effect cannot be determined using every reasonable effort to do so. For example, in changing to LIFO, the base-year inventory for all subsequent LIFO calculations is generally the opening inventory in the year the company adopts the method. There is no restatement of prior years' income because it is often too impractical to do so.

2 Describe the accounting for changes in estimates and changes in the reporting entity.

Companies report changes in estimates prospectively. That is, companies should make no changes in previously reported results. They do not adjust opening balances nor change financial statements of prior periods.

An accounting change that results in financial statements that are actually the statements of a different entity should be reported by restating the financial statements of all prior periods presented, to show the financial information for the new reporting entity for all periods.

3 Describe the accounting for correction of errors.

Companies must correct errors as soon as they discover them, by proper entries in the accounts, and report them in the financial statements. The profession requires that a company treat corrections of errors as prior period adjustments, record them in the year in which it discovered the errors, and report them in the financial statements in the proper periods. If presenting comparative statements, a company should restate the prior statements affected to correct for the errors. The company need not repeat the disclosures in the financial statements of subsequent periods.

4 Analyze the effects of errors.

Three types of errors can occur. (1) *Balance sheet errors*, which affect only the presentation of an asset, liability, or stockholders' equity account. (2) *Income statement errors*, which affect only the presentation of revenue, expense, gain, or loss accounts in the income statement. (3) *Balance sheet and income statement errors*, which involve both the balance sheet and income statement. Errors are classified into two types. (1) *Counterbalancing errors* are offset or corrected over two periods. (2) *Noncounterbalancing errors* are not offset in the next accounting period and take longer than two periods to correct themselves.

*5 Make the computations and prepare the entries necessary to record a change from or to the equity method of accounting.

When changing *from* the equity method to the fair value method, the cost basis for accounting purposes is the carrying amount used for the investment at the date of change. The investor company applies the new method in its entirety once the equity method is no longer appropriate. When changing *to* the equity method, companies use the prospective approach by adding the cost of acquiring the additional interest in the investee company to the cost basis of their previously held interest.

As an aid to understanding accounting changes, we provide the following glossary.

Key Terms Related to Accounting Changes

- Accounting Change.** A change in (1) an accounting principle, (2) an accounting estimate, or (3) the reporting entity. The correction of an error in previously issued financial statements is not an accounting change.
- Change in Accounting Principle.** A change from one generally accepted accounting principle to another generally accepted accounting principle when two or more generally accepted accounting principles apply or when the accounting principle formerly used is no longer generally accepted.
- Change in Accounting Estimate.** A change that has the effect of adjusting the carrying amount of an existing asset or liability or altering the subsequent accounting for existing or future assets or liabilities. Changes in accounting estimates result from new information.
- Change in Accounting Estimate Effected by a Change in Accounting Principle.** A change in accounting estimate that is inseparable from the effect of a related change in accounting principle.
- Change in Reporting Entity.** A change that results in financial statements that, in effect, are those of a different reporting entity.
- Direct Effects of a Change in Accounting Principle.** Those recognized changes in assets or liabilities necessary to effect a change in accounting principle.
- Error in Previously Issued Financial Statements.** An error in recognition, measurement, presentation, or disclosure in financial statements resulting from mathematical mistakes, mistakes in the application of GAAP, or oversight or misuse of facts that existed at the time the financial statements were prepared. A change from an accounting principle that is not generally accepted to one that is generally accepted is a correction of an error.
- Indirect Effects of a Change in Accounting Principle.** Any changes to current or future cash flows of an entity that result from making a change in accounting principle that is applied retrospectively.
- Restatement.** The process of revising previously issued financial statements to reflect the correction of an error in those financial statements.
- Retrospective Application.** The application of a different accounting principle to one or more previously issued financial statements, or to the statement of financial position at the beginning of the current period, as if that principle had always been used, or a change to financial statements of prior accounting periods to present the financial statements of a new reporting entity as if it had existed in those prior years. [12]

Enhanced Review and Practice

Go online for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Practice Problem

Wangerin Company is in the process of adjusting and correcting its books at the end of 2020. In reviewing its records, the following information is compiled.

- At December 31, 2020, Wangerin decided to change the depreciation method on its office equipment from double-declining-balance to straight-line. The equipment had an original cost of \$200,000 when purchased on January 1, 2018. It has a 10-year useful life and no salvage value. Depreciation expense recorded prior to 2020 under the double-declining-balance method was \$72,000. Wangerin has already recorded 2020 depreciation expense of \$25,600 using the double-declining-balance method.
- Before 2020, Wangerin accounted for its income from long-term construction contracts on the completed-contract basis. Early in 2020, Wangerin changed to the percentage-of-completion basis for accounting purposes. It continues to use the completed-contract method for tax purposes. Income for 2020 has been recorded using the percentage-of-completion method. The following information is available.

| | Pretax Income from | |
|---------------|--------------------------|--------------------|
| | Percentage-of-Completion | Completed-Contract |
| Prior to 2020 | \$450,000 | \$315,000 |
| 2020 | 180,000 | 60,000 |

- Insurance for a 12-month period purchased on November 1 of this year was charged to insurance expense in the amount of \$3,300 because “the amount of the check is about the same every year.”
- Reported sales revenue for the year is \$1,908,000. This includes all sales taxes collected for the year. The sales tax rate is 6%. Because the sales tax is forwarded to the state’s Department of Revenue, the Sales Tax Expense account is debited. The bookkeeper thought that “the sales tax is a selling expense.” At the end of the current year, the balance in the Sales Tax Expense account is \$103,400.

Instructions

Prepare the journal entries necessary at December 31, 2020, to record the above corrections and changes. The books are still open for 2020. The income tax rate is 20%. Wangerin has not yet recorded its 2020 income tax expense and payable amounts so current-year tax effects may be ignored. Prior-year tax effects must be considered in item 2.

Solution

| | | | |
|----|--|------------------|---------|
| 1. | Accumulated Depreciation—Equipment | 9,600 | |
| | Depreciation Expense | | 9,600* |
| | *Equipment cost | \$200,000 | |
| | Depreciation before 2020 | (72,000) | |
| | Book value | <u>\$128,000</u> | |
| | Depreciation recorded | \$ 25,600 | |
| | Depreciation to be taken ($\$128,000 \div 8$) | (16,000) | |
| | Difference | <u>\$ 9,600</u> | |
| 2. | Construction In Process | 135,000 | |
| | Deferred Tax Liability | | 27,000* |
| | Retained Earnings | | 108,000 |
| | * $(\$450,000 - \$315,000) \times .20$ | | |
| 3. | Prepaid Insurance ($\$3,300 \times 10/12$) | 2,750 | |
| | Insurance Expense | | 2,750 |
| 4. | Sales Revenue [$\$1,908,000 \div (1.00 + .06) \times .06$] | 108,000 | |
| | Sales Taxes Payable | | 108,000 |
| | Sales Taxes Payable | 103,400 | |
| | Sales Tax Expense | | 103,400 |

WileyPLUS

Exercises, Problems, Problem Solution Walkthrough Videos, and many more assessment tools and resources are available for practice in WileyPLUS.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

Questions

- In recent years, the *Wall Street Journal* has indicated that many companies have changed their accounting principles. What are the major reasons why companies change accounting methods?
- State how each of the following items is reflected in the financial statements.
 - Change from FIFO to LIFO method for inventory valuation purposes.
 - Charge for failure to record depreciation in a previous period.
 - Litigation won in current year, related to prior period.
 - Change in the realizability of certain receivables.
 - Write-off of receivables.
 - Change from the percentage-of-completion to the completed-contract method for reporting net income.
- Discuss briefly the three approaches that have been suggested for reporting changes in accounting principles.
- Identify and describe the approach the FASB requires for reporting changes in accounting principles.
- What is the indirect effect of a change in accounting principle? Briefly describe the reporting of the indirect effects of a change in accounting principle.
- Define a change in estimate and provide an illustration. When is a change in accounting estimate effected by a change in accounting principle?
- Lenexa State Bank has followed the practice of capitalizing certain marketing costs and amortizing these costs over their expected life. In the current year, the bank determined that the future benefits from these costs were doubtful. Consequently, the bank adopted the policy of expensing these costs as incurred. How should the bank report this accounting change in the comparative financial statements?

8. Indicate how the following items are recorded in the accounting records in the current year of Coronet Co.
- Impairment of goodwill.
 - A change in depreciating plant assets from accelerated to the straight-line method.
 - Large write-off of inventories because of obsolescence.
 - Change from the cash basis to accrual basis of accounting.
 - Change from LIFO to FIFO method for inventory valuation purposes.
 - Change in the estimate of service lives for plant assets.
9. Whittier Construction Co. had followed the practice of expensing all materials assigned to a construction job without recognizing any salvage inventory. On December 31, 2020, it was determined that salvage inventory should be valued at \$52,000. Of this amount, \$29,000 arose during the current year. How does this information affect the financial statements to be prepared at the end of 2020?
10. Parsons Inc. has proposed a change from one inventory accounting method to another for financial reporting purposes. The auditor indicates that a change would be permitted only if it is to a preferable method. What difficulties develop in assessing preferability?
11. Discuss how a change to the LIFO method of inventory valuation is handled when it is impracticable to determine previous LIFO inventory amounts.
12. How should consolidated financial statements be reported this year when statements of individual companies were presented last year?
13. Simms Corp. controlled four domestic subsidiaries and one foreign subsidiary. Prior to the current year, Simms Corp. had excluded the foreign subsidiary from consolidation. During the current year, the foreign subsidiary was included in the financial statements. How should this change in accounting entity be reflected in the financial statements?
14. Distinguish between counterbalancing and noncounterbalancing errors. Give an example of each.
15. Discuss and illustrate how a correction of an error in previously issued financial statements should be handled.
16. Prior to 2020, Heberling Inc. excluded manufacturing overhead costs from work in process and finished goods inventory. These costs have been expensed as incurred. In 2020, the company decided to change its accounting methods for manufacturing inventories to full costing by including these costs as product costs. Assuming that these costs are material, how should this change be reflected in the financial statements for 2019 and 2020?
17. Elliott Corp. failed to record accrued salaries for 2019, \$2,000; 2020, \$2,100; and 2021, \$3,900. What is the amount of the overstatement or understatement of Retained Earnings at December 31, 2022?
18. In January 2020, installation costs of \$6,000 on new machinery were charged to Maintenance and Repairs Expense. Other costs of this machinery of \$30,000 were correctly recorded and have been depreciated using the straight-line method with an estimated life of 10 years and no salvage value. At December 31, 2021, it is decided that the machinery has a remaining useful life of 20 years, starting with January 1, 2021. What entry(ies) should be made in 2021 to correctly record transactions related to machinery, assuming the machinery has no salvage value? The books have not been closed for 2021 and depreciation expense has not yet been recorded for 2021.
19. On January 2, 2020, \$100,000 of 11%, 10-year bonds were issued for \$97,000. The \$3,000 discount was charged to Interest Expense. The bookkeeper, Mark Landis, records interest only on the interest payment dates of January 1 and July 1. What is the effect on reported net income for 2020 of this error, assuming straight-line amortization of the discount? What entry is necessary to correct for this error, assuming that the books are not closed for 2020?
20. An entry to record Purchases and related Accounts Payable of \$13,000 for merchandise purchased on December 23, 2021, was recorded in January 2022. This merchandise was not included in inventory at December 31, 2021. What effect does this error have on reported net income for 2021? What entry should be made to correct for this error, assuming that the books are not closed for 2021?
21. Equipment was purchased on January 2, 2020, for \$24,000, but no portion of the cost has been charged to depreciation. The corporation wishes to use the straight-line method for these assets, which have been estimated to have a life of 10 years and no salvage value. What effect does this error have on net income in 2020? What entry is necessary to correct for this error, assuming that the books are not closed for 2020?

Brief Exercises

BE22.1 (LO 1) At the beginning of 2020, Wertz Construction Company changed from the completed-contract method to recognizing revenue over time (percentage-of-completion) for financial reporting purposes. The company will continue to use the completed-contract method for tax purposes. For years prior to 2020, pretax income under the two methods was as follows: percentage-of-completion \$120,000, and completed-contract \$80,000. The tax rate is 20%. Prepare Wertz's 2020 journal entry to record the change in accounting principle.

BE22.2 (LO 1) Refer to the accounting change by Wertz Construction Company in BE22.1. Wertz has a profit-sharing plan, which pays all employees a bonus at year-end based on 1% of pretax income. Compute the indirect effect of Wertz's change in accounting principle that will be reported in the 2020 income statement, assuming that the profit-sharing contract explicitly requires adjustment for changes in income numbers.

BE22.3 (LO 1) Shannon, Inc., changed from the LIFO cost flow assumption to the FIFO cost flow assumption in 2020. The increase in the prior year's income before taxes is \$1,200,000. The tax rate is 20%. Prepare Shannon's 2020 journal entry to record the change in accounting principle.

BE22.4 (LO 1) Tedesco Company changed depreciation methods in 2020 from double-declining-balance to straight-line. Depreciation prior to 2020 under double-declining-balance was \$90,000, whereas straight-line depreciation prior to 2020 would have been \$50,000. Tedesco's depreciable assets had a cost of \$250,000 with a \$40,000 salvage value, and an 8-year remaining useful life at the beginning of 2020. Prepare the 2020 journal entries, if any, related to Tedesco's depreciable assets.

BE22.5 (LO 2) Sesame Company purchased a computer system for \$74,000 on January 1, 2019. It was depreciated based on a 7-year life and an \$18,000 salvage value. On January 1, 2021, Sesame revised these estimates to a total useful life of 4 years and a salvage value of \$10,000. Prepare Sesame's entry to record 2021 depreciation expense. Sesame uses straight-line depreciation.

BE22.6 (LO 3) In 2020, Bailey Corporation discovered that equipment purchased on January 1, 2018, for \$50,000 was expensed at that time. The equipment should have been depreciated over 5 years, with no salvage value. The effective tax rate is 30%. Prepare Bailey's 2020 journal entry to correct the error. Bailey uses straight-line depreciation.

BE22.7 (LO 3) At January 1, 2020, Beidler Company reported retained earnings of \$2,000,000. In 2020, Beidler discovered that 2019 depreciation expense was understated by \$400,000. In 2020, net income was \$900,000 and dividends declared were \$250,000. The tax rate is 20%. Prepare a 2020 retained earnings statement for Beidler Company.

BE22.8 (LO 3) Indicate the effect—Understate, Overstate, No Effect—that each of the following errors has on 2020 net income and 2021 net income.

| | <u>2020</u> | <u>2021</u> |
|--|-------------|-------------|
| a. Equipment (with a useful life of 5 years) was purchased and expensed in 2018. | — | — |
| b. Wages payable were not recorded at 12/31/20. | — | — |
| c. Equipment purchased in 2020 was expensed. | — | — |
| d. 2020 ending inventory was overstated. | — | — |
| e. Patent amortization was not recorded in 2021. | — | — |

BE22.9 (LO 1, 2) Roundtree Manufacturing Co. is preparing its year-end financial statements and is considering the accounting for the following items.

- The vice president of sales had indicated that one product line has lost its customer appeal and will be phased out over the next 3 years. Therefore, a decision has been made to lower the estimated lives on related production equipment from the remaining 5 years to 3 years.
- The Hightone Building was converted from a sales office to offices for the Accounting Department at the beginning of this year. Therefore, the expense related to this building will now appear as an administrative expense rather than a selling expense on the current year's income statement.
- Estimating the lives of new products in the Leisure Products Division has become very difficult because of the highly competitive conditions in this market. Therefore, the practice of deferring and amortizing preproduction costs has been abandoned in favor of expensing such costs as they are incurred.

Identify and explain whether each of the above items is a change in principle, a change in estimate, or an error.

BE22.10 (LO 1, 3) Palmer Co. is evaluating the appropriate accounting for the following items.

- Management has decided to switch from the FIFO inventory valuation method to the LIFO inventory valuation method for all inventories.
- When the year-end physical inventory adjustment was made for the current year, the controller discovered that the prior year's physical inventory sheets for an entire warehouse were mislaid and excluded from last year's count.
- Palmer's Custom Division manufactures large-scale, custom-designed machinery on a contract basis. Management decided to switch from the completed-contract method to the percentage-of-completion method of accounting for long-term contracts.

Identify and explain whether each of the above items is a change in accounting principle, a change in estimate, or an error.

***BE22.11 (LO 5)** Simmons Corporation owns stock of Armstrong, Inc. Prior to 2020, the investment was accounted for using the equity method. In early 2020, Simmons sold part of its investment in Armstrong, and began using the fair value method. In 2020, Armstrong earned net income of \$80,000 and paid dividends of \$95,000. Prepare Simmons's entries related to Armstrong's net income and dividends, assuming Simmons now owns 10% of Armstrong's stock.

***BE22.12 (LO 5)** Oliver Corporation has owned stock of Conrad Corporation since 2017. At December 31, 2020, its balances related to this investment were:

| | |
|-----------------------|------------|
| Equity Investments | \$185,000 |
| Fair Value Adjustment | 34,000 Dr. |

On January 1, 2021, Oliver purchased additional stock of Conrad Company for \$475,000 and now has significant influence over Conrad. Prepare Oliver's journal entries to record the purchase of the investment and the change to the equity method.

Exercises

E22.1 (LO 1) (Change in Principle—Long-Term Contracts) Pam Erickson Construction Company changed from the completed-contract to the percentage-of-completion method of accounting for long-term construction contracts during 2021. For tax purposes, the company employs the completed-contract method and will continue this approach in the future. (*Hint:* Adjust all tax consequences through the Deferred Tax Liability account.) The appropriate information related to this change is as follows.

| | Pretax Income from | | Difference |
|------|--------------------------|--------------------|------------|
| | Percentage-of-Completion | Completed-Contract | |
| 2020 | \$780,000 | \$590,000 | \$190,000 |
| 2021 | 700,000 | 480,000 | 220,000 |

Instructions

- Assuming that the tax rate is 20%, what is the amount of net income that would be reported in 2021?
- What entry(ies) are necessary to adjust the accounting records for the change in accounting principle?

E22.2 (LO 1) (Change in Principle—Inventory Methods) Holder-Webb Company began operations on January 1, 2018, and uses the average-cost method of pricing inventory. Management is contemplating a change in inventory methods for 2021. The following information is available for the years 2018–2020.

| | Net Income Computed Using | | |
|------|---------------------------|-------------|-------------|
| | Average-Cost Method | FIFO Method | LIFO Method |
| 2018 | \$15,000 | \$19,000 | \$12,000 |
| 2019 | 18,000 | 23,000 | 14,000 |
| 2020 | 20,000 | 25,000 | 17,000 |

Instructions

(Ignore all tax effects.)

- Prepare the journal entry necessary to record a change from the average-cost method to the FIFO method in 2021.
- Determine net income to be reported for 2018, 2019, and 2020, after giving effect to the change in accounting principle.
- Assume Holder-Webb Company used the LIFO method instead of the average-cost method during the years 2018–2020. In 2021, Holder-Webb changed to the FIFO method. Prepare the journal entry necessary to record the change in principle.

E22.3 (LO 1) (Accounting Change) Taveras Co. decides at the beginning of 2020 to adopt the FIFO method of inventory valuation. Taveras had used the LIFO method for financial reporting since its inception on January 1, 2018, and had maintained records adequate to apply the FIFO method retrospectively. Taveras concluded that FIFO is the preferable inventory method because it reflects the current cost of inventory on the balance sheet. The following table presents the effects of the change in accounting principles on inventory and cost of goods sold.

| Date | Inventory Determined by | | Cost of Goods Sold Determined by | |
|-------------------|-------------------------|-------------|----------------------------------|-------------|
| | LIFO Method | FIFO Method | LIFO Method | FIFO Method |
| January 1, 2018 | \$ 0 | \$ 0 | \$ 0 | \$ 0 |
| December 31, 2018 | 100 | 80 | 800 | 820 |
| December 31, 2019 | 200 | 240 | 1,000 | 940 |
| December 31, 2020 | 320 | 390 | 1,130 | 1,100 |

Other information:

1. For each year presented, sales are \$3,000 and operating expenses are \$1,000.
2. Taveras provides two years of financial statements. Earnings per share information is not required.

Instructions

- a. Prepare income statements under LIFO and FIFO for 2018, 2019, and 2020.
- b. Prepare income statements reflecting the retrospective application of the accounting change from the LIFO method to the FIFO method for 2020 and 2019.
- c. Prepare the note to the financial statements describing the change in method of inventory valuation. In the note, indicate the income statement line items for 2020 and 2019 that were affected by the change in accounting principle.
- d. Prepare comparative retained earnings statements for 2019 and 2020 under FIFO. Retained earnings reported under LIFO are as follows:

| | <u>Retained Earnings Balance</u> |
|-------------------|----------------------------------|
| December 31, 2018 | \$1,200 |
| December 31, 2019 | 2,200 |
| December 31, 2020 | 3,070 |

E22.4 (LO 1) (Accounting Change) Gordon Company started operations on January 1, 2015, and has used the FIFO method of inventory valuation since its inception. In 2021, it decides to switch to the average-cost method. You are provided with the following information.

| | <u>Net Income</u> | | <u>Retained Earnings (Ending Balance)</u> |
|------|-------------------|---------------------------|---|
| | <u>Under FIFO</u> | <u>Under Average-Cost</u> | <u>Under FIFO</u> |
| 2015 | \$100,000 | \$ 90,000 | \$100,000 |
| 2016 | 70,000 | 65,000 | 160,000 |
| 2017 | 90,000 | 80,000 | 235,000 |
| 2018 | 120,000 | 130,000 | 340,000 |
| 2019 | 300,000 | 290,000 | 590,000 |
| 2020 | 305,000 | 310,000 | 780,000 |

Instructions

- a. What is the beginning retained earnings balance at January 1, 2017, if Gordon prepares comparative financial statements starting in 2017?
- b. What is the beginning retained earnings balance at January 1, 2020, if Gordon prepares comparative financial statements starting in 2020?
- c. What is the beginning retained earnings balance at January 1, 2021, if Gordon prepares single-period financial statements for 2021?
- d. What is the net income reported by Gordon in the 2020 income statement if it prepares comparative financial statements starting with 2018?

E22.5 (LO 1) (Accounting Change) Presented below are income statements prepared on a LIFO and FIFO basis for Kenseth Company, which started operations on January 1, 2019. The company presently uses the LIFO method of pricing its inventory and has decided to switch to the FIFO method in 2020. The FIFO income statement is computed in accordance with the requirements of GAAP. Kenseth's profit-sharing agreement with its employees indicates that the company will pay employees 10% of income before profit-sharing. Income taxes are ignored.

| | <u>LIFO Basis</u> | | <u>FIFO Basis</u> | |
|------------------------------|-------------------|---------------|-------------------|---------------|
| | <u>2020</u> | <u>2019</u> | <u>2020</u> | <u>2019</u> |
| Sales | \$3,000 | \$3,000 | \$3,000 | \$3,000 |
| Cost of goods sold | 1,130 | 1,000 | 1,100 | 940 |
| Operating expenses | <u>1,000</u> | <u>1,000</u> | <u>1,000</u> | <u>1,000</u> |
| Income before profit-sharing | 870 | 1,000 | 900 | 1,060 |
| Profit-sharing expense | <u>87</u> | <u>100</u> | <u>96</u> | <u>100</u> |
| Net income | <u>\$ 783</u> | <u>\$ 900</u> | <u>\$ 804</u> | <u>\$ 960</u> |

Instructions

Answer the following questions.

- If comparative income statements are prepared, what net income should Kenseth report in 2019 and 2020?
- Explain why, under the FIFO basis, Kenseth reports \$100 in 2019 and \$96 in 2020 for its profit-sharing expense.
- Assume that Kenseth has a beginning balance of retained earnings at January 1, 2020, of \$900 using the LIFO method. The company declared and paid dividends of \$500 in 2020. Prepare the -retained earnings statement for 2020, assuming that Kenseth has switched to the FIFO method.

E22.6 (LO 1) (Change in Principle—Long-Term Contracts) Cullen Construction Company, which began operations in 2020, changed from the completed-contract to the percentage-of-completion method of accounting for long-term construction contracts during 2021. For tax purposes, the company employs the completed-contract method and will continue this approach in the future. The appropriate information related to this change is as follows.

| | Pretax Income from | | |
|------|---------------------------------|---------------------------|-------------------|
| | <u>Percentage-of-Completion</u> | <u>Completed-Contract</u> | <u>Difference</u> |
| 2020 | \$880,000 | \$590,000 | \$290,000 |
| 2021 | 900,000 | 480,000 | 420,000 |

Instructions

- Assuming that the tax rate is 20%, what is the amount of net income that would be reported in 2021?
- What entry(ies) are necessary to adjust the accounting records for the change in accounting principle?

E22.7 (LO 1) (Various Changes in Principle—Inventory Methods) Below is the net income of Anita Ferreri Instrument Co., a private corporation, computed under the three inventory methods using a periodic system.

| | <u>FIFO</u> | <u>Average-Cost</u> | <u>LIFO</u> |
|------|-------------|---------------------|-------------|
| 2018 | \$26,000 | \$24,000 | \$20,000 |
| 2019 | 30,000 | 25,000 | 21,000 |
| 2020 | 28,000 | 27,000 | 24,000 |
| 2021 | 34,000 | 30,000 | 26,000 |

Instructions

(Ignore tax considerations.)

- Assume that in 2021 Ferreri decided to change from the FIFO method to the average-cost method of pricing inventories. Prepare the journal entry necessary for the change that took place during 2021, and show net income reported for 2018, 2019, 2020, and 2021.
- Assume that in 2021 Ferreri, which had been using the LIFO method since incorporation in 2018, changed to the FIFO method of pricing inventories. Prepare the journal entry necessary to record the change in 2021 and show net income reported for 2018, 2019, 2020, and 2021.

E22.8 (LO 2) (Accounting Changes—Depreciation) Kathleen Cole Inc. acquired the following assets in January of 2018.

| | |
|---|-----------|
| Equipment, estimated service life, 5 years; salvage value, \$15,000 | \$525,000 |
| Building, estimated service life, 30 years; no salvage value | \$693,000 |

The equipment has been depreciated using the sum-of-the-years'-digits method for the first 3 years for financial reporting purposes. In 2021, the company decided to change the method of computing depreciation to the straight-line method for the equipment, but no change was made in the estimated service life or salvage value. It was also decided to change the total estimated service life of the building from 30 years to 40 years, with no change in the estimated salvage value. The building is depreciated on the straight-line method.

Instructions

- Prepare the general journal entry to record depreciation expense for the equipment in 2021.
- Prepare the journal entry to record depreciation expense for the building in 2021. (Round all computations to two decimal places.)

E22.9 (LO 2, 3) (Change in Estimate and Error; Financial Statements) Presented below are the comparative income and retained earnings statements for Denise Habbe Inc. for the years 2020 and 2021.

| | 2021 | 2020 |
|-----------------------------|------------------|------------------|
| Sales | \$340,000 | \$270,000 |
| Cost of sales | 200,000 | 142,000 |
| Gross profit | 140,000 | 128,000 |
| Expenses | 88,000 | 50,000 |
| Net income | <u>\$ 52,000</u> | <u>\$ 78,000</u> |
| Retained earnings (Jan. 1) | \$125,000 | \$ 72,000 |
| Net income | 52,000 | 78,000 |
| Dividends | (30,000) | (25,000) |
| Retained earnings (Dec. 31) | <u>\$147,000</u> | <u>\$125,000</u> |

The following additional information is provided:

- In 2021, Denise Habbe Inc. decided to switch its depreciation method from sum-of-the-years' digits to the straight-line method. The assets were purchased at the beginning of 2020 for \$100,000 with an estimated useful life of 4 years and no salvage value. (The 2021 income statement contains depreciation expense of \$30,000 on the assets purchased at the beginning of 2020.)
- In 2021, the company discovered that the ending inventory for 2020 was overstated by \$24,000; ending inventory for 2021 is correctly stated.

Instructions

Prepare the revised retained earnings statement for 2020 and 2021, assuming comparative statements. (Ignore income taxes.)

E22.10 (LO 1, 2, 3) (Accounting for Accounting Changes and Errors) Listed below are various types of accounting changes and errors.

- Change in a plant asset's salvage value.
- Change due to overstatement of inventory.
- Change from sum-of-the-years'-digits to straight-line method of depreciation.
- Change from presenting unconsolidated to consolidated financial statements.
- Change from LIFO to FIFO inventory method.
- Change in the rate used to compute warranty costs.
- Change from an unacceptable accounting principle to an acceptable accounting principle.
- Change in a patent's amortization period.
- Change from completed-contract to percentage-of-completion method on construction contracts.
- Change from FIFO to average-cost inventory method.

Instructions

For each change or error, indicate how it would be accounted for using the following code letters:

- Accounted for prospectively.
- Accounted for retrospectively.
- Neither of the above.

E22.11 (LO 2, 3) Excel (Error and Change in Estimate—Depreciation) Joy Cunningham Co. purchased a machine on January 1, 2018, for \$550,000. At that time, it was estimated that the machine would have a 10-year life and no salvage value. On December 31, 2021, the firm's accountant found that the entry for depreciation expense had been omitted in 2019. In addition, management has informed the accountant that the company plans to switch to straight-line depreciation, starting with the year 2021. At present, the company uses the sum-of-the-years'-digits method for depreciating equipment.

Instructions

Prepare the general journal entries that should be made at December 31, 2021, to record these events. (Ignore tax effects.)

E22.12 (LO 2) (Depreciation Changes) On January 1, 2017, Jackson Company purchased a building and equipment that have the following useful lives, salvage values, and costs.

Building, 40-year estimated useful life, \$50,000 salvage value, \$800,000 cost
 Equipment, 12-year estimated useful life, \$10,000 salvage value, \$100,000 cost

The building has been depreciated under the double-declining-balance method through 2020. In 2021, the company decided to switch to the straight-line method of depreciation. Jackson also decided to change the total useful life of the equipment to 9 years, with a salvage value of \$5,000 at the end of that time. The equipment is depreciated using the straight-line method.

Instructions

- Prepare the journal entry(ies) necessary to record the depreciation expense on the building in 2021.
- Compute depreciation expense on the equipment for 2021.

E22.13 (LO 2) Excel (Change in Estimate—Depreciation) Peter M. Dell Co. purchased equipment for \$510,000 which was estimated to have a useful life of 10 years with a salvage value of \$10,000 at the end of that time. Depreciation has been entered for 7 years on a straight-line basis. In 2021, it is determined that the total estimated life should be 15 years with a salvage value of \$5,000 at the end of that time.

Instructions

- Prepare the entry (if any) to correct the prior years' depreciation.
- Prepare the entry to record depreciation for 2021.

E22.14 (LO 2) (Change in Estimate—Depreciation) Gerald Englehart Industries changed from the double-declining-balance to the straight-line method in 2021 on all its equipment. There was no change in the assets' salvage values or useful lives. Plant assets, acquired on January 2, 2018, had an original cost of \$1,600,000, with a \$100,000 salvage value and an 8-year estimated useful life. Income before depreciation expense was \$270,000 in 2020 and \$300,000 in 2021.

Instructions

- Prepare the journal entry(ies) to record depreciation expense in 2021.
- Starting with income before depreciation expense, prepare the remaining portion of the income statement for 2020 and 2021.

E22.15 (LO 3) (Error Correction Entries) The first audit of the books of Bruce Gingrich Company was made for the year ended December 31, 2021. In examining the books, the auditor found that certain items had been overlooked or incorrectly handled in the last 3 years. These items are:

- At the beginning of 2019, the company purchased a machine for \$510,000 (salvage value of \$51,000) that had a useful life of 6 years. The bookkeeper used straight-line depreciation but failed to deduct the salvage value in computing the depreciation base for the 3 years.
- At the end of 2020, the company failed to accrue sales salaries of \$45,000.
- A tax lawsuit that involved the year 2019 was settled late in 2021. It was determined that the company owed an additional \$85,000 in taxes related to 2019. The company did not record a liability in 2019 or 2020 because the possibility of loss was considered remote, and charged the \$85,000 to a loss account in 2021.
- Gingrich Company purchased a copyright from another company early in 2019 for \$45,000. Gingrich had not amortized the copyright because its value had not diminished. The copyright has a useful life at purchase of 20 years.
- In 2021, the company wrote off \$87,000 of inventory considered to be obsolete; this loss was charged directly to Retained Earnings.

Instructions

Prepare the journal entries necessary in 2021 to correct the books, assuming that the books have not been closed. Disregard effects of corrections on income tax.

E22.16 (LO 3) (Error Analysis and Correcting Entry) You have been engaged to review the financial statements of Gottschalk Corporation. In the course of your examination, you conclude that the bookkeeper hired during the current year is not doing a good job. You notice a number of irregularities as follows.

- Year-end wages payable of \$3,400 were not recorded because the bookkeeper thought that "they were immaterial."
- Accrued vacation pay for the year of \$31,100 was not recorded because the bookkeeper "never heard that you had to do it."
- Insurance for a 12-month period purchased on November 1 of this year was charged to insurance expense in the amount of \$2,640 because "the amount of the check is about the same every year."

4. Reported sales revenue for the year is \$2,120,000. This includes all sales taxes collected for the year. The sales tax rate is 6%. Because the sales tax is forwarded to the state's Department of Revenue, the Sales Tax Expense account is debited. The bookkeeper thought that "the sales tax is a selling expense." At the end of the current year, the balance in the Sales Tax Expense account is \$103,400.

Instructions

Prepare the necessary correcting entries, assuming that Gottschalk uses a calendar-year basis.

E22.17 (LO 3) (Error Analysis and Correcting Entry) The reported net incomes for the first 2 years of Sandra Gustafson Products, Inc., were as follows: 2020, \$147,000; 2021, \$185,000. Early in 2022, the following errors were discovered.

1. Depreciation of equipment for 2020 was overstated \$17,000.
2. Depreciation of equipment for 2021 was understated \$38,500.
3. December 31, 2020, inventory was understated \$50,000.
4. December 31, 2021, inventory was overstated \$16,200.

Instructions

Prepare the correcting entry necessary when these errors are discovered. Assume that the books are closed. (Ignore income tax considerations.)

E22.18 (LO 3, 4) (Error Analysis) Peter Henning Tool Company's December 31 year-end financial statements contained the following errors.

| | <u>December 31, 2020</u> | <u>December 31, 2021</u> |
|----------------------|--------------------------|--------------------------|
| Ending inventory | \$9,600 understated | \$8,100 overstated |
| Depreciation expense | \$2,300 understated | — |

An insurance premium of \$66,000 was prepaid in 2020 covering the years 2020, 2021, and 2022. The entire amount was charged to expense in 2020. In addition, on December 31, 2021, fully depreciated machinery was sold for \$15,000 cash, but the entry was not recorded until 2022. There were no other errors during 2020 or 2021, and no corrections have been made for any of the errors. (Ignore income tax considerations.)

Instructions

- a. Compute the total effect of the errors on 2021 net income.
- b. Compute the total effect of the errors on the amount of Henning's working capital at December 31, 2021.
- c. Compute the total effect of the errors on the balance of Henning's retained earnings at December 31, 2021.

E22.19 (LO 3, 4) (Error Analysis; Correcting Entries) A partial trial balance of Julie Hartsack Corporation is as follows on December 31, 2021.

| | <u>Dr.</u> | <u>Cr.</u> |
|----------------------------|------------|------------|
| Supplies | \$ 2,700 | |
| Salaries and wages payable | | \$ 1,500 |
| Interest receivable | 5,100 | |
| Prepaid insurance | 90,000 | |
| Unearned rent | | —0— |
| Interest payable | | 15,000 |

Additional adjusting data:

1. A physical count of supplies on hand on December 31, 2021, totaled \$1,100.
2. Through oversight, the Salaries and Wages Payable account was not changed during 2021. Accrued salaries and wages on December 31, 2021, amounted to \$4,400.
3. The Interest Receivable account was also left unchanged during 2021. Accrued interest on investments amounts to \$4,350 on December 31, 2021.
4. The unexpired portions of the insurance policies totaled \$65,000 as of December 31, 2021.
5. \$28,000 was received on January 1, 2021, for the rent of a building for both 2021 and 2022. The entire amount was credited to rent revenue.

6. Depreciation on equipment for the year was erroneously recorded as \$5,000 rather than the correct figure of \$50,000.
7. A further review of depreciation calculations of prior years revealed that equipment depreciation of \$7,200 was not recorded. It was decided that this oversight should be corrected by a prior period adjustment.

Instructions

- a. Assuming that the books have not been closed, what are the adjusting entries necessary at December 31, 2021? (Ignore income tax considerations.)
- b. Assuming that the books have been closed, what are the adjusting entries necessary at December 31, 2021? (Ignore income tax considerations.)
- c. Repeat the requirements for items 6 and 7, taking into account income tax effects (40% tax rate) and assuming that the books have been closed.

E22.20 (LO 3, 4) (Error Analysis) The before-tax income for Lonnie Holdiman Co. for 2020 was \$101,000 and \$77,400 for 2021. However, the accountant noted that the following errors had been made:

1. Sales for 2020 included amounts of \$38,200 which had been received in cash during 2020, but for which the related products were delivered in 2021. Title did not pass to the purchaser until 2021.
2. The inventory on December 31, 2020, was understated by \$8,640.
3. The bookkeeper in recording interest expense for both 2020 and 2021 on bonds payable made the following entry on an annual basis.

| | | |
|------------------|--------|--------|
| Interest Expense | 15,000 | |
| Cash | | 15,000 |

The bonds have a face value of \$250,000 and pay a stated interest rate of 6%. They were issued at a discount of \$15,000 on January 1, 2020, to yield an effective-interest rate of 7%. (Assume that the effective-yield method should be used.)

4. Ordinary repairs to equipment had been erroneously charged to the Equipment account during 2020 and 2021. Repairs in the amount of \$8,500 in 2020 and \$9,400 in 2021 were so charged. The company applies a rate of 10% to the balance in the Equipment account at the end of the year in its determination of depreciation charges.

Instructions

Prepare a schedule showing the determination of corrected income before taxes for 2020 and 2021.

E22.21 (LO 3, 4) (Error Analysis) When the records of Debra Hanson Corporation were reviewed at the close of 2021, the following errors were discovered. For each item, indicate by a check mark in the appropriate column whether the error resulted in an overstatement, an understatement, or had no effect on net income for the years 2020 and 2021.

| Item | 2020 | | | 2021 | | |
|--|----------------|-----------------|-----------|----------------|-----------------|-----------|
| | Over-statement | Under-statement | No Effect | Over-statement | Under-statement | No Effect |
| 1. Failure to record amortization of patent in 2021. | | | | | | |
| 2. Failure to record the correct amount of ending 2020 inventory. The amount was understated because of an error in calculation. | | | | | | |
| 3. Failure to record merchandise purchased in 2020. Merchandise was also omitted from ending inventory in 2020 but was not yet sold. | | | | | | |

(continued)

(continued)

| Item | 2020 | | | 2021 | | |
|---|----------------|-----------------|-----------|----------------|-----------------|-----------|
| | Over-statement | Under-statement | No Effect | Over-statement | Under-statement | No Effect |
| 4. Failure to record accrued interest on notes payable in 2020; that amount was recorded when paid in 2021. | | | | | | |
| 5. Failure to reflect supplies on hand on balance sheet at end of 2020. | | | | | | |

***E22.22 (LO 5) (Change from Fair Value to Equity)** On January 1, 2020, Beyonce Co. purchased 25,000 shares (a 10% interest) in Elton John Corp. for \$1,400,000. At the time, the book value and the fair value of John's net assets were \$13,000,000.

On July 1, 2021, Beyonce paid \$3,040,000 for 50,000 additional shares of John common stock, which represented a 20% investment in John. As a result of this transaction, Beyonce owns 30% of John and can exercise significant influence over John's operating and financial policies.

John reported the following net income and declared and paid the following dividends.

| | <u>Net Income</u> | <u>Dividend per Share</u> |
|---------------------------|-------------------|---------------------------|
| Year ended 12/31/20 | \$700,000 | None |
| Six months ended 6/30/21 | 500,000 | None |
| Six months ended 12/31/21 | 815,000 | \$1.55 |

Instructions

Determine the ending balance that Beyonce Co. should report as its investment in John Corp. at the end of 2021.

***E22.23 (LO 5) (Change from Equity to Fair Value)** Aykroyd Corp. was a 30% owner of Martin Company, holding 210,000 shares of Martin's common stock on December 31, 2019. The investment account had the following entries.

| <u>Investment in Martin</u> | | | |
|-----------------------------|-------------|---------------------------|-----------|
| 1/1/18 Cost | \$3,180,000 | 12/6/18 Dividend received | \$150,000 |
| 12/31/18 Share of income | 390,000 | 12/5/19 Dividend received | 240,000 |
| 12/31/19 Share of income | 510,000 | | |

On January 2, 2020, Aykroyd sold 126,000 shares of Martin for \$3,440,000, thereby losing its significant influence. During the year 2020, Martin experienced the following results of operations and paid the following dividends to Aykroyd.

| | <u>Martin Income (Loss)</u> | <u>Dividends Paid to Aykroyd</u> |
|------|---------------------------------|--------------------------------------|
| 2020 | \$300,000 | \$50,400 |

At December 31, 2020, the fair value of Martin shares held by Aykroyd is \$1,570,000. This is the first reporting date since the January 2 sale.

Instructions

- What effect does the January 2, 2020, transaction have upon Aykroyd's accounting treatment for its investment in Martin?
- Compute the carrying amount of the investment in Martin as of December 31, 2020 (prior to any fair value adjustment).
- Prepare the adjusting entry on December 31, 2020, applying the fair value method to Aykroyd's long-term investment in Martin Company securities.

Problems

P22.1 (LO 1) (Change in Principle—Inventory—Periodic) The management of Utrillo Instrument Company had concluded, with the concurrence of its independent auditors, that results of operations would be more fairly presented if Utrillo changed its method of pricing inventory from last-in, first-out (LIFO) to average-cost in 2020. Given below is the 5-year summary of income under LIFO and a schedule of what the inventories would be if stated on the average-cost method.

Utrillo Instrument Company
Statement of Income and Retained Earnings
For the Years Ended May 31

| | 2016 | 2017 | 2018 | 2019 | 2020 |
|-----------------------------|-----------------|-----------------|-----------------|-----------------|-----------------|
| Sales—net | \$13,964 | \$15,506 | \$16,673 | \$18,221 | \$18,898 |
| Cost of goods sold | | | | | |
| Beginning inventory | 1,000 | 1,100 | 1,000 | 1,115 | 1,237 |
| Purchases | 13,000 | 13,900 | 15,000 | 15,900 | 17,100 |
| Ending inventory | (1,100) | (1,000) | (1,115) | (1,237) | (1,369) |
| Total | <u>12,900</u> | <u>14,000</u> | <u>14,885</u> | <u>15,778</u> | <u>16,968</u> |
| Gross profit | 1,064 | 1,506 | 1,788 | 2,443 | 1,930 |
| Administrative expenses | 700 | 763 | 832 | 907 | 989 |
| Income before taxes | 364 | 743 | 956 | 1,536 | 941 |
| Income taxes (50%) | 182 | 372 | 478 | 768 | 471 |
| Net income | 182 | 371 | 478 | 768 | 470 |
| Retained earnings—beginning | 1,206 | 1,388 | 1,759 | 2,237 | 3,005 |
| Retained earnings—ending | <u>\$ 1,388</u> | <u>\$ 1,759</u> | <u>\$ 2,237</u> | <u>\$ 3,005</u> | <u>\$ 3,475</u> |
| Earnings per share | <u>\$1.82</u> | <u>\$3.71</u> | <u>\$4.78</u> | <u>\$7.68</u> | <u>\$4.70</u> |

Schedule of Inventory Balances Using Average-Cost Method
For the Years Ended May 31

| | 2015 | 2016 | 2017 | 2018 | 2019 | 2020 |
|--|---------|---------|---------|---------|---------|---------|
| | \$1,010 | \$1,124 | \$1,101 | \$1,270 | \$1,500 | \$1,720 |

Instructions

Prepare comparative statements for the 5 years, assuming that Utrillo changed its method of inventory pricing to average-cost. Indicate the effects on net income and earnings per share for the years involved. Utrillo Instruments started business in 2015. (All amounts except EPS are rounded up to the nearest dollar.)

P22.2 (LO 1, 2, 3) Excel Groupwork (Change in Estimate and Error Correction) Holtzman Company is in the process of preparing its financial statements for 2020. Assume that no entries for depreciation have been recorded in 2020. The following information related to depreciation of fixed assets is provided to you.

- Holtzman purchased equipment on January 2, 2017, for \$85,000. At that time, the equipment had an estimated useful life of 10 years with a \$5,000 salvage value. The equipment is depreciated on a straight-line basis. On January 2, 2020, as a result of additional information, the company determined that the equipment has a remaining useful life of 4 years with a \$3,000 salvage value.
- During 2020, Holtzman changed from the double-declining-balance method for its building to the straight-line method. The building originally cost \$300,000. It had a useful life of 10 years and a salvage value of \$30,000. The following computations present depreciation on both bases for 2018 and 2019.

| | 2019 | 2018 |
|-------------------|----------|----------|
| Straight-line | \$27,000 | \$27,000 |
| Declining-balance | 48,000 | 60,000 |

- Holtzman purchased a machine on July 1, 2018, at a cost of \$120,000. The machine has a salvage value of \$16,000 and a useful life of 8 years. Holtzman's bookkeeper recorded straight-line depreciation in 2018 and 2019 but failed to consider the salvage value.

Instructions

- a. Prepare the journal entries to record depreciation expense for 2020 and correct any errors made to date related to the information provided. (Ignore taxes.)
- b. Show comparative net income for 2019 and 2020. Income before depreciation expense was \$300,000 in 2020, and was \$310,000 in 2019. (Ignore taxes.)

P22.3 (LO 1, 2, 3) (Comprehensive Accounting Change and Error Analysis Problem) Botticelli Inc. was organized in late 2018 to manufacture and sell hosiery. At the end of its fourth year of operation, the company has been fairly successful, as indicated by the following reported net incomes.

| | | | |
|------|------------------------|------|-----------|
| 2018 | \$140,000 ^a | 2020 | \$205,000 |
| 2019 | 160,000 ^b | 2021 | 276,000 |

^aIncludes a \$10,000 increase because of change in bad debt experience rate.

^bIncludes a gain of \$30,000.

The company has decided to expand operations and has applied for a sizable bank loan. The bank officer has indicated that the records should be audited and presented in comparative statements to facilitate analysis by the bank. Botticelli Inc. therefore hired the auditing firm of Check & Doublecheck Co. and has provided the following additional information.

1. In early 2019, Botticelli Inc. changed its estimate from 2% of receivables to 1% on the amount of bad debt expense to be charged to operations. Bad debt expense for 2018, if a 1% rate had been used, would have been \$10,000. The company therefore restated its net income for 2018.
2. In 2021, the auditor discovered that the company had changed its method of inventory pricing from LIFO to FIFO. The effect on the income statements for the previous years is as follows.

| | 2018 | 2019 | 2020 | 2021 |
|----------------------------------|------------------|-----------------|------------------|--------------------|
| Net income unadjusted—LIFO basis | \$140,000 | \$160,000 | \$205,000 | \$276,000 |
| Net income unadjusted—FIFO basis | 155,000 | 165,000 | 215,000 | 260,000 |
| | <u>\$ 15,000</u> | <u>\$ 5,000</u> | <u>\$ 10,000</u> | <u>\$ (16,000)</u> |

3. In 2021, the auditor discovered that:
 - a. The company incorrectly overstated the ending inventory (under both LIFO and FIFO) by \$14,000 in 2020.
 - b. A dispute developed in 2019 with the Internal Revenue Service over the deductibility of entertainment expenses. In 2018, the company was not permitted these deductions, but a tax settlement was reached in 2021 that allowed these expenses. As a result of the court's finding, tax expenses in 2021 were reduced by \$60,000.

Instructions

- a. Indicate how each of these changes or corrections should be handled in the accounting records. (Ignore income tax considerations.)
- b. Present net income as reported in comparative income statements for the years 2018 to 2021.

P22.4 (LO 1, 2, 3) (Error Corrections and Accounting Changes) Penn Company is in the process of adjusting and correcting its books at the end of 2020. In reviewing its records, the following information is compiled.

1. Penn has failed to accrue sales commissions payable at the end of each of the last 2 years, as follows.

| | |
|-------------------|---------|
| December 31, 2019 | \$3,500 |
| December 31, 2020 | \$2,500 |

2. In reviewing the December 31, 2020, inventory, Penn discovered errors in its inventory-taking procedures that have caused inventories for the last 3 years to be incorrect, as follows.

| | | |
|-------------------|-------------|----------|
| December 31, 2018 | Understated | \$16,000 |
| December 31, 2019 | Understated | \$19,000 |
| December 31, 2020 | Overstated | \$ 6,700 |

Penn has already made an entry that established the incorrect December 31, 2020, inventory amount.

3. At December 31, 2020, Penn decided to change the depreciation method on its office equipment from double-declining-balance to straight-line. The equipment had an original cost of \$100,000 when purchased on January 1, 2018. It has a 10-year useful life and no salvage value. Depreciation expense recorded prior to 2020 under the double-declining-balance method was \$36,000. Penn has already recorded 2020 depreciation expense of \$12,800 using the double-declining-balance method.
4. Before 2020, Penn accounted for its income from long-term construction contracts on the completed-contract basis. Early in 2020, Penn changed to the percentage-of-completion basis for accounting purposes. It continues to use the completed-contract method for tax purposes. Income for 2020 has been recorded using the percentage-of-completion method. The following information is available.

| | Pretax Income | |
|---------------|--------------------------|--------------------|
| | Percentage-of-Completion | Completed-Contract |
| Prior to 2020 | \$150,000 | \$105,000 |
| 2020 | 60,000 | 20,000 |

Instructions

Prepare the journal entries necessary at December 31, 2020, to record the above corrections and changes. The books are still open for 2020. The income tax rate is 20%. Penn has not yet recorded its 2020 income tax expense and payable amounts so current-year tax effects may be ignored. Prior-year tax effects must be considered in item 4.

P22.5 (LO 1, 2) Groupwork Ethics (Accounting Changes) Aston Corporation performs year-end planning in November of each year before its calendar year ends in December. The preliminary estimated net income is \$4,800,000. The CFO, Rita Warren, meets with the company president, J. B. Aston, to review the projected numbers. She presents the following projected information.

Aston Corporation
Projected Income Statement
For the Year Ended December 31, 2020

| | | |
|--------------------------|------------------|---------------------|
| Sales | | \$28,995,000 |
| Interest revenue | | 5,000 |
| Cost of goods sold | \$14,000,000 | |
| Depreciation | 2,600,000 | |
| Operating expenses | <u>6,400,000</u> | <u>23,000,000</u> |
| Income before income tax | | 6,000,000 |
| Income tax | | <u>1,200,000</u> |
| Net income | | <u>\$ 4,800,000</u> |

Aston Corporation
Selected Balance Sheet Information
At December 31, 2020

| | |
|---|--------------|
| Estimated cash balance | \$ 5,000,000 |
| Available-for-sale debt investments (at cost) | 10,000,000 |
| Fair value adjustment (1/1/20) | —0— |

Estimated fair value at December 31, 2020:

| Security | Cost | Estimated Fair Value |
|----------|---------------------|----------------------|
| A | \$ 2,000,000 | \$ 2,200,000 |
| B | 4,000,000 | 3,900,000 |
| C | 3,000,000 | 3,100,000 |
| D | 1,000,000 | 1,800,000 |
| Total | <u>\$10,000,000</u> | <u>\$11,000,000</u> |

Other information at December 31, 2020:

| | |
|--|-------------|
| Equipment | \$3,000,000 |
| Accumulated depreciation (5-year SL) | 1,200,000 |
| New robotic equipment (purchased 1/1/20) | 5,000,000 |
| Accumulated depreciation (5-year DDB) | 2,000,000 |

The corporation has never used robotic equipment before, and Warren assumed an accelerated method because of the rapidly changing technology in robotic equipment. The company normally uses straight-line depreciation for production equipment.

Aston explains to Warren that it is important for the corporation to show a \$7,000,000 income before taxes because Aston receives a \$1,000,000 bonus if the income before taxes and bonus reaches \$7,000,000. Aston also does not want the company to pay more than \$1,200,000 in income taxes to the government.

Instructions

- What can Warren do within GAAP to accommodate the president's wishes to achieve \$7,000,000 in income before taxes and bonus? Present the revised income statement based on your decision.
- Are the actions ethical? Who are the stakeholders in this decision, and what effect do Warren's actions have on their interests?

P22.6 (LO 1, 3, 4) Excel (Accounting Change and Error Analysis) On December 31, 2020, before the books were closed, the management and accountants of Madrasa Inc. made the following determinations about three pieces of equipment.

- Equipment A was purchased January 2, 2017. It originally cost \$540,000 and, for depreciation purposes, the straight-line method was originally chosen. The asset was originally expected to be useful for 10 years and have a zero salvage value. In 2020, the decision was made to change the depreciation method from straight-line to sum-of-the-years'-digits, and the estimates relating to useful life and salvage value remained unchanged.
- Equipment B was purchased January 3, 2016. It originally cost \$180,000 and, for depreciation purposes, the straight-line method was chosen. The asset was originally expected to be useful for 15 years and have a zero residual value. In 2020, the decision was made to shorten the total life of this asset to 9 years and to estimate the residual value at \$3,000.
- Equipment C was purchased January 5, 2016. The asset's original cost was \$160,000, and this amount was entirely expensed in 2016. This particular asset has a 10-year useful life and no residual value. The straight-line method was chosen for depreciation purposes.

Additional data:

- Income in 2020 before depreciation expense amounted to \$400,000.
- Depreciation expense on assets other than A, B, and C totaled \$55,000 in 2020.
- Income in 2019 was reported at \$370,000.
- Ignore all income tax effects.
- 100,000 shares of common stock were outstanding in 2019 and 2020.

Instructions

- Prepare all necessary entries in 2020 to record these determinations.
- Prepare comparative retained earnings statements for Madrasa Inc. for 2019 and 2020. The company had retained earnings of \$200,000 at December 31, 2018.

P22.7 (LO 3, 4) Groupwork (Error Corrections) You have been assigned to examine the financial statements of Zarle Company for the year ended December 31, 2020. You discover the following situations.

- Depreciation of \$3,200 for 2020 on delivery vehicles was not recorded.
- The physical inventory count on December 31, 2019, improperly excluded merchandise costing \$19,000 that had been temporarily stored in a public warehouse. Zarle uses a periodic inventory system.
- A collection of \$5,600 on account from a customer received on December 31, 2020, was not recorded until January 2, 2021.
- In 2020, the company sold for \$3,700 fully depreciated equipment that originally cost \$25,000. The company credited the proceeds from the sale to the Equipment account.
- During November 2020, a competitor company filed a patent-infringement suit against Zarle claiming damages of \$220,000. The company's legal counsel has indicated that an unfavorable verdict is probable and a reasonable estimate of the court's award to the competitor is \$125,000. The company has not reflected or disclosed this situation in the financial statements.
- Zarle has a portfolio of trading investments. No entry has been made to adjust to market. Information on cost and fair value is as follows.

| | Cost | Fair Value |
|-------------------|----------|------------|
| December 31, 2019 | \$95,000 | \$95,000 |
| December 31, 2020 | \$84,000 | \$82,000 |

- At December 31, 2020, an analysis of payroll information shows accrued salaries of \$12,200. The Salaries and Wages Payable account had a balance of \$16,000 at December 31, 2020, which was unchanged from its balance at December 31, 2019.
- A large piece of equipment was purchased on January 3, 2020, for \$40,000 and was charged to Maintenance and Repairs Expense. The equipment is estimated to have a service life of 8 years and no residual value. Zarle normally uses the straight-line depreciation method for this type of equipment.
- A \$12,000 insurance premium paid on July 1, 2019, for a policy that expires on June 30, 2022, was charged to insurance expense.
- A trademark was acquired at the beginning of 2019 for \$50,000. No amortization has been recorded since its acquisition. The maximum allowable amortization period is 10 years.

Instructions

Assume the trial balance has been prepared but the books have not been closed for 2020. Assuming all amounts are material, prepare journal entries showing the adjustments that are required. (Ignore income tax considerations.)

P22.8 (LO 3, 4) Groupwork (Comprehensive Error Analysis) On March 5, 2021, you were hired by Hemingway Inc., a closely held company, as a staff member of its newly created internal auditing department. While reviewing the company's records for 2019 and 2020, you discover that no adjustments have yet been made for the following items.

Items

- Interest income of \$14,100 was not accrued at the end of 2019. It was recorded when received in February 2020.
- A computer costing \$4,000 was expensed when purchased on July 1, 2019. It is expected to have a 4-year life with no salvage value. The company typically uses straight-line depreciation for all fixed assets.
- Research and development costs of \$33,000 were incurred early in 2019. They were capitalized and were to be amortized over a 3-year period. Amortization of \$11,000 was recorded for 2019 and \$11,000 for 2020.
- On January 2, 2019, Hemingway leased a building for 5 years at a monthly rental of \$8,000. On that date, the company paid the following amounts, which were expensed when paid.

| | |
|--------------------|----------|
| Security deposit | \$20,000 |
| First month's rent | 8,000 |
| Last month's rent | 8,000 |
| | \$36,000 |

- The company received \$36,000 from a customer at the beginning of 2019 for services that it is to perform evenly over a 3-year period beginning in 2019. None of the amount received was reported as unearned revenue at the end of 2019.
- Merchandise inventory costing \$18,200 was in the warehouse at December 31, 2019, but was incorrectly omitted from the physical count at that date. The company uses the periodic inventory method.

Instructions

Indicate the effect of any errors on the net income figure reported on the income statement for the year ending December 31, 2019, and the retained earnings figure reported on the balance sheet at December 31, 2020. Assume all amounts are material, and ignore income tax effects. Using the following format, enter the appropriate dollar amounts in the appropriate columns. Consider each item independent of the other items. It is not necessary to total the columns on the grid.

| Item | Net Income for 2019 | | Retained Earnings at 12/31/20 | |
|------|---------------------|------------|-------------------------------|------------|
| | Understated | Overstated | Understated | Overstated |
| | | | | |

(CIA adapted)

P22.9 (LO 3, 4) (Error Analysis) Lowell Corporation has used the accrual basis of accounting for several years. A review of the records, however, indicates that some expenses and revenues have been handled on a cash basis because of errors made by an inexperienced bookkeeper. Income statements prepared by the bookkeeper reported \$29,000 net income for 2019 and \$37,000 net income for 2020. Further examination of the records reveals that the following items were handled improperly.

- Rent was received from a tenant in December 2019. The amount, \$1,000, was recorded as revenue at that time even though the rental pertained to 2020.
- Salaries and wages payable on December 31 have been consistently omitted from the records of that date and have been entered as expenses when paid in the following year. The amounts of the accruals recorded in this manner were:

| | |
|-------------------|---------|
| December 31, 2018 | \$1,100 |
| December 31, 2019 | 1,200 |
| December 31, 2020 | 940 |

- Invoices for supplies purchased have been charged to expense accounts when received. Inventories of supplies on hand at the end of each year have been ignored, and no entry has been made for them.

| | |
|-------------------|---------|
| December 31, 2018 | \$1,300 |
| December 31, 2019 | 940 |
| December 31, 2020 | 1,420 |

Instructions

Prepare a schedule that will show the corrected net income for the years 2019 and 2020. All items listed should be labeled clearly. (Ignore income tax considerations.)

P22.10 (LO 3, 4) (Error Analysis and Correcting Entries) You have been asked by a client to review the records of Roberts Company, a small manufacturer of precision tools and machines. Your client is interested in buying the business, and arrangements have been made for you to review the accounting records. Your examination reveals the following information.

- Roberts Company commenced business on April 1, 2018, and has been reporting on a fiscal year ending March 31. The company has never been audited, but the annual statements prepared by the bookkeeper reflect the following income before closing and before deducting income taxes.

| Year Ended March 31 | Income Before Taxes |
|------------------------|------------------------|
| 2019 | \$ 71,600 |
| 2020 | 111,400 |
| 2021 | 103,580 |

- A relatively small number of machines have been shipped on consignment. These transactions have been recorded as ordinary sales and billed as such. On March 31 of each year, machines billed and in the hands of consignees amounted to:

| | |
|------|---------|
| 2019 | \$6,500 |
| 2020 | none |
| 2021 | 5,590 |

Sales price was determined by adding 25% to cost. Assume that the consigned machines are sold the following year.

- On March 30, 2020, two machines were shipped to a customer on a C.O.D. basis. The sale was not entered until April 5, 2020, when cash was received for \$6,100. The machines were not included in the inventory at March 31, 2020. (Title passed on March 30, 2020.)
- All machines are sold subject to a 5-year warranty. It is estimated that the expense ultimately to be incurred in connection with the warranty will amount to $\frac{1}{2}$ of 1% of sales. The company has charged an expense account for warranty costs incurred.

Sales per books and warranty costs were as follows.

| Year Ended March 31 | Sales | Warranty Expense for Sales Made in | | | |
|------------------------|------------|------------------------------------|---------|---------|--------|
| | | 2019 | 2020 | 2021 | Total |
| 2019 | \$ 940,000 | \$760 | | | \$ 760 |
| 2020 | 1,010,000 | 360 | \$1,310 | | 1,670 |
| 2021 | 1,795,000 | 320 | 1,620 | \$1,910 | 3,850 |

5. Bad debts have been recorded on a direct write-off basis. Experience of similar enterprises indicates that losses will approximate 1% of receivables. Bad debts written off were:

| | Bad Debts Incurred on Sales Made in | | | Total | Bad Debt Expense Based on 1% of Receivables |
|------|--|--------|---------|--------|--|
| | 2019 | 2020 | 2021 | | |
| 2019 | \$750 | | | \$ 750 | \$2,334 |
| 2020 | 800 | \$ 520 | | 1,320 | 2,557 |
| 2021 | 350 | 1,800 | \$1,700 | 3,850 | 4,458 |

6. The bank deducts 6% on all contracts financed. Of this amount, 1/2% is placed in a reserve to the credit of Roberts Company that is refunded to Roberts as finance contracts are paid in full. (Thus, Roberts should have a receivable for these payments and should record revenue when the net balance is remitted each year.) The reserve established by the bank has not been reflected in the books of Roberts. The excess of credits over debits (net increase) to the reserve account with Roberts on the books of the bank for each fiscal year were as follows.

| | |
|------|-----------------|
| 2019 | \$ 3,000 |
| 2020 | 3,900 |
| 2021 | 5,100 |
| | <u>\$12,000</u> |

7. Commissions on sales have been entered when paid. Commissions payable on March 31 of each year were as follows.

| | |
|------|---------|
| 2019 | \$1,400 |
| 2020 | 900 |
| 2021 | 1,120 |

8. A review of the corporate minutes reveals the manager is entitled to a bonus of 1% of the income before deducting income taxes and the bonus. The bonuses have never been recorded or paid.

Instructions

- Present a schedule showing the revised income before income taxes for each of the years ended March 31, 2019, 2020, and 2021. (Make computations to the nearest whole dollar.)
- Prepare the journal entry or entries you would give the bookkeeper to correct the books. Assume the books have not yet been closed for the fiscal year ended March 31, 2021. Disregard correction of income taxes.

(AICPA adapted)

***P22.11 (LO 5) (Fair Value to Equity Method with Goodwill)** On January 1, 2020, Millay Inc. paid \$700,000 for 10,000 shares of Genso Company's voting common stock, which was a 10% interest in Genso. Millay does not have the ability to exercise significant influence over the operating and financial policies of Genso. Millay received dividends of \$1.50 per share from Genso on October 1, 2020. Genso reported net income of \$550,000 for the year ended December 31, 2020. The cost and fair value of Genso common stock was the same at December 31, 2020.

On July 1, 2021, Millay paid \$2,325,000 for 30,000 additional shares of Genso Company's voting common stock, which represents an additional 30% investment in Genso. As a result of this transaction, Millay has the ability to exercise significant influence over the operating and financial policies of Genso. Millay received dividends of \$2.00 per share from Genso on April 1, 2021, and \$2.50 per share on October 1, 2021. Genso reported net income of \$650,000 for the year ended December 31, 2021, and \$350,000 for the 6 months ended December 31, 2021.

Instructions

(For both purchases, assume any excess of cost over book value is due to goodwill.)

- Prepare a schedule showing the income or loss before income taxes for the year ended December 31, 2020, that Millay should report from its investment in Genso in its income statement issued in March 2021.
- During March 2022, Millay issues comparative financial statements for 2020 and 2021. Prepare schedules showing the income or loss before income taxes for the years ended December 31, 2020 and 2021, that Millay should report from its investment in Genso.

(AICPA adapted)

***P22.12 (LO 5) (Change from Fair Value to Equity Method)** On January 3, 2019, Martin Company purchased for \$500,000 cash a 10% interest in Renner Corp. The fair value of Martin's investment in Renner securities is as follows: December 31, 2019, \$560,000, and December 31, 2020, \$515,000. On January 2, 2021, Martin purchased an additional 30% of Renner's stock for \$1,545,000 cash.

During 2019, 2020, and 2021, the following occurred.

| | Renner Net Income | Dividends Paid by Renner to Martin |
|------|----------------------|---------------------------------------|
| 2019 | \$350,000 | \$15,000 |
| 2020 | 450,000 | 20,000 |
| 2021 | 550,000 | 70,000 |

Instructions

On the books of Martin Company, prepare all journal entries in 2019, 2020, and 2021 that relate to its investment in Renner Corp., reflecting the data above and a change from the fair value method to the equity method.

Concepts for Analysis

CA22.1 (LO 1, 2, 3) Groupwork (Analysis of Various Accounting Changes and Errors) Mathys Inc. has recently hired a new independent auditor, Karen Ogleby, who says she wants "to get everything straightened out." Consequently, she has proposed the following accounting changes in connection with Mathys Inc.'s 2020 financial statements.

- At December 31, 2019, the client had a receivable of \$820,000 from Hendricks Inc. on its balance sheet. Hendricks Inc. has gone bankrupt, and no recovery is expected. The client proposes to write off the receivable as a prior period item.
- The client proposes the following changes in depreciation policies.
 - For office furniture and fixtures, it proposes to change from a 10-year useful life to an 8-year life. If this change had been made in prior years, retained earnings at December 31, 2019, would have been \$250,000 less. The effect of the change on 2020 income alone is a reduction of \$60,000.
 - For its new equipment in the leasing division, the client proposes to adopt the sum-of-the-years'-digits depreciation method. The client had never used SYD before. The first year the client operated a leasing division was 2020. If straight-line depreciation were used, 2020 income would be \$110,000 greater.
- In preparing its 2019 statements, one of the client's bookkeepers overstated ending inventory by \$235,000 because of a mathematical error. The client proposes to treat this item as a prior period adjustment.
- In the past, the client has spread preproduction costs in its furniture division over 5 years. Because its latest furniture is of the "fad" type, it appears that the largest volume of sales will occur during the first 2 years after introduction. Consequently, the client proposes to amortize preproduction costs on a per-unit basis, which will result in expensing most of such costs during the first 2 years after the furniture's introduction. If the new accounting method had been used prior to 2020, retained earnings at December 31, 2019, would have been \$375,000 less.
- For the nursery division, the client proposes to switch from FIFO to LIFO inventories because it believes that LIFO will provide a better matching of current costs with revenues. The effect of making this change on 2020 earnings will be an increase of \$320,000. The client says that the effect of the change on December 31, 2019, retained earnings cannot be determined.
- To achieve an appropriate recognition of revenues and expenses in its building construction division, the client proposes to switch from the completed-contract method of accounting to the percentage-of-completion method. Had the percentage-of-completion method been employed in all prior years, retained earnings at December 31, 2019, would have been \$1,075,000 greater.

Instructions

- For each of the changes described above, decide whether:
 - The change involves an accounting principle, accounting estimate, or correction of an error.
 - Restatement of opening retained earnings is required.
- What would be the proper adjustment to the December 31, 2019, retained earnings?

CA22.2 (LO 1, 2, 3) (Analysis of Various Accounting Changes and Errors) Various types of accounting changes can affect the financial statements of a business enterprise differently. Assume that the following list describes changes that have a material effect on the financial statements for the current year of your business enterprise.

1. A change from the completed-contract method to the percentage-of-completion method of accounting for long-term construction-type contracts.
2. A change in the estimated useful life of previously recorded fixed assets as a result of newly acquired information.
3. A change from deferring and amortizing preproduction costs to recording such costs as an expense when incurred because future benefits of the costs have become doubtful. The new accounting method was adopted in recognition of the change in estimated future benefits.
4. A change from including the employer share of FICA taxes with payroll tax expenses to including it with “Retirement benefits” on the income statement.
5. Correction of a mathematical error in inventory pricing made in a prior period.
6. A change from presentation of statements of individual companies to presentation of consolidated statements.
7. A change in the method of accounting for leases for tax purposes to conform with the financial accounting method. As a result, both deferred and current taxes payable changed substantially.
8. A change from the FIFO method of inventory pricing to the LIFO method of inventory pricing.

Instructions

Identify the type of change that is described in each item above and indicate whether the prior year’s financial statements should be recast when presented in comparative form with the current year’s financial statements.

CA22.3 (LO 1, 2, 3) (Analysis of Three Accounting Changes and Errors) The following are three independent, unrelated sets of facts relating to accounting changes.

Situation 1: Sanford Company is in the process of having its first audit. The company has used the cash basis of accounting for revenue recognition. Sanford president, B. J. Jimenez, is willing to change to the accrual method of revenue recognition.

Situation 2: Hopkins Co. decides in January 2021 to change from FIFO to weighted-average pricing for its inventories.

Situation 3: Marshall Co. determined that the depreciable lives of its fixed assets are too long at present to fairly match the cost of the fixed assets with the revenue produced. The company decided at the beginning of the current year to reduce the depreciable lives of all of its existing fixed assets by 5 years.

Instructions

For each of the situations described, provide the information indicated below.

- a. Type of accounting change.
- b. Manner of reporting the change under current generally accepted accounting principles, including a discussion where applicable of how amounts are computed.
- c. Effect of the change on the balance sheet and income statement.

CA22.4 (LO 1, 2, 3) Writing (Analysis of Various Accounting Changes and Errors) Katherine Irving, controller of Lotan Corp., is aware of a pronouncement on accounting changes. After reading the pronouncement, she is confused about what action should be taken on the following items related to Lotan Corp. for the year 2020.

1. In 2020, Lotan decided to change its policy on accounting for certain marketing costs. Previously, the company had chosen to defer and amortize all marketing costs over at least 5 years because Lotan believed that a return on these expenditures did not occur immediately. Recently, however, the time differential has considerably shortened, and Lotan is now expensing the marketing costs as incurred.
2. In 2020, the company examined its entire policy relating to the depreciation of plant equipment. Plant equipment had normally been depreciated over a 15-year period, but recent experience has indicated that the company was incorrect in its estimates and that the assets should be depreciated over a 20-year period.
3. One division of Lotan Corp., Hawthorne Co., has consistently shown an increasing net income from period to period. On closer examination of its operating statement, it is noted that bad debt

expense and inventory obsolescence charges are much lower than in other divisions. In discussing this with the controller of this division, it has been learned that the controller has increased his net income each period by knowingly making low estimates related to the write-off of receivables and inventory.

4. In 2020, the company purchased new machinery that should increase production dramatically. The company has decided to depreciate this machinery on an accelerated basis, even though other machinery is depreciated on a straight-line basis.
5. All equipment sold by Lotan is subject to a 3-year warranty. It has been estimated that the expense ultimately to be incurred on these machines is 1% of sales. In 2020, because of a production breakthrough, it is now estimated that $\frac{1}{2}$ of 1% of sales is sufficient. In 2018 and 2019, warranty expense was computed as \$64,000 and \$70,000, respectively. The company now believes that these warranty costs should be reduced by 50%.
6. In 2020, the company decided to change its method of inventory pricing from average-cost to the FIFO method. The effect of this change on prior years is to increase 2018 income by \$65,000 and increase 2019 income by \$20,000.

Instructions

Katherine Irving has come to you, as her CPA, for advice about the situations above. Prepare a report, indicating the appropriate accounting treatment that should be given for each of these situations.

CA22.5 (LO 1, 2) Writing (Change in Principle, Estimate) As a certified public accountant, you have been contacted by Joe Davison, CEO of Sports-Pro Athletics, Inc., a manufacturer of a variety of athletic equipment. He has asked you how to account for the following changes.

1. Sports-Pro appropriately changed its depreciation method for its machinery from the double-declining-balance method to the units-of-production method effective January 1, 2020.
2. Effective January 1, 2020, Sports-Pro appropriately changed the salvage values used in computing depreciation for its office equipment.
3. On December 31, 2020, Sports-Pro appropriately changed the specific subsidiaries constituting the group of companies for which consolidated financial statements are presented.

Instructions

Write a 1–1.5 page letter to Joe Davison explaining how each of the above changes should be presented in the December 31, 2020, financial statements.

CA22.6 (LO 2) Ethics (Change in Estimate) Mike Crane is an audit senior of a large public accounting firm who has just been assigned to the Frost Corporation's annual audit engagement. Frost has been a client of Crane's firm for many years. Frost is a fast-growing business in the commercial construction industry. In reviewing the fixed asset ledger, Crane discovered a series of unusual accounting changes, in which the useful lives of assets, depreciated using the straight-line method, were substantially lowered near the midpoint of the original estimate. For example, the useful life of one dump truck was changed from 10 to 6 years during its fifth year of service. Upon further investigation, Mike was told by Kevin James, Frost's accounting manager, "I don't really see your problem. After all, it's perfectly legal to change an accounting estimate. Besides, our CEO likes to see big earnings!"

Instructions

Answer the following questions.

- a. What are the ethical issues concerning Frost's practice of changing the useful lives of fixed assets?
- b. Who could be harmed by Frost's unusual accounting changes?
- c. What should Crane do in this situation?

Using Your Judgment

Financial Reporting Problem

The Procter & Gamble Company (P&G)

The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

- Were there changes in accounting principles reported by P&G during the three years covered by its income statements (2015–2017)? If so, describe the nature of the change and the year of change.
- What types of estimates did P&G discuss in 2017?

Comparative Analysis Case**The Coca-Cola Company and PepsiCo, Inc.**

The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- Identify the changes in accounting principles reported by Coca-Cola during the 3 years covered by its income statements (2015–2017). Describe the nature of the change and the year of change.
- Identify the changes in accounting principles reported by PepsiCo during the 3 years covered by its income statements (2015–2017). Describe the nature of the change and the year of change.
- What types of estimates did PepsiCo discuss in 2017?

Accounting, Analysis, and Principles

In preparation for significant expansion of its international operations, ABC Co. has adopted a plan to gradually shift to the same accounting methods as used by its international competitors. Part of this plan includes a switch from LIFO inventory accounting to FIFO (recall that IFRS does not allow LIFO). ABC decides to make the switch to FIFO at January 1, 2020. The following data pertains to ABC's 2020 financial statements (in millions of dollars).

| | |
|---------------------------------|-------|
| Sales | \$550 |
| Inventory purchases | 350 |
| 12/31/20 inventory (using FIFO) | 580 |
| Compensation expense | 17 |

All sales and purchases were with cash. All of 2020's compensation expense was paid with cash. (Ignore taxes.) ABC's property, plant, and equipment cost \$400 million and has an estimated useful life of 10 years with no salvage value.

ABC Co. reported the following for fiscal 2019 (in millions of dollars):

| ABC Co. | | | | | |
|--|----------------|----------------|-------------------|----------------|----------------|
| Balance Sheet | | | | | |
| At December 31, 2019 | | | | | |
| | 2019 | 2018 | | 2019 | 2018 |
| Cash | \$ 365 | \$ 200 | Common stock | \$ 500 | \$ 500 |
| Inventory | 500 | 480 | Retained earnings | 685 | 540 |
| Property, plant, and equipment | 400 | 400 | | | |
| Accumulated depreciation | (80) | (40) | | | |
| Total assets | <u>\$1,185</u> | <u>\$1,040</u> | Total equity | <u>\$1,185</u> | <u>\$1,040</u> |
| ABC Co. | | | | | |
| Income Statement | | | | | |
| For the Year Ended December 31, 2019 | | | | | |
| | | | 2019 | | |
| Sales | | | \$ 500 | | |
| Cost of goods sold | | | (300) | | |
| Depreciation expense | | | (40) | | |
| Compensation expense | | | (15) | | |
| Net income | | | <u>\$ 145</u> | | |
| Summary of Significant Accounting Policies | | | | | |
| Inventory: The company accounts for inventory by the LIFO method. The current cost of the company's inventory, which approximates FIFO, was \$60 and \$50 higher at the end of fiscal 2019 and 2018, respectively, than those reported in the balance sheet. | | | | | |

Accounting

Prepare ABC's December 31, 2020, balance sheet and an income statement for the year ended December 31, 2020. In columns beside 2020's numbers, include 2019's numbers *as they would appear in the 2020 financial statements* for comparative purposes.

Analysis

Compute ABC's inventory turnover for 2019 and 2020 under both LIFO and FIFO. Assume averages are equal to year-end balances where necessary. What causes the differences in this ratio between LIFO and FIFO?

Principles

Briefly explain, in terms of the principles discussed in Chapter 2, why GAAP requires that companies that change accounting methods recast prior year's financial statement data.

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

CE22.1 Access the glossary ("Master Glossary") to answer the following.

- a. What is a change in accounting estimate?
- b. What is a change in accounting principle?
- c. What is a restatement?
- d. What is the definition of "retrospective application"?

CE22.2 When a company has to restate its financial statements to correct an error, what information must the company disclose?

CE22.3 What reporting requirements does retrospective application require?

CE22.4 If a company registered with the SEC justifies a change in accounting method as preferable under the circumstances, and the circumstances change, can that company switch back to its prior method of accounting before the change? Why or why not?

Codification Research Case

As part of the year-end accounting process and review of operating policies, Cosper Co. is considering a change in the accounting for its equipment from the straight-line method to an accelerated method. Your supervisor wonders how the company will report this change in principle. He read in a newspaper article that the FASB has issued a standard in this area and has changed GAAP for a "change in estimate that is effected by a change in accounting principle." (Thus, the accounting may be different from what he learned in intermediate accounting.) Your supervisor wants you to research the authoritative guidance on a change in accounting principle related to depreciation methods.

Instructions

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

- What are the accounting and reporting guidelines for a change in accounting principle related to depreciation methods?
- What are the conditions that justify a change in depreciation method, as contemplated by Cosper Co.?
- What guidance does the SEC provide concerning the impact that recently issued accounting standards will have on the financial statements in a future period?

IFRS Insights

LEARNING OBJECTIVE 6

Compare the procedures for accounting changes and error analysis under GAAP and IFRS.

The IFRS addressing accounting and reporting for changes in accounting principles, changes in estimates, and errors is *IAS 8* (“Accounting Policies, Changes in Accounting Estimates and Errors”). Various presentation issues related to restatements are addressed in *IAS 1* (“Presentation of Financial Statements”). As indicated in the chapter, the FASB has issued guidance on changes in accounting principles, changes in estimates, and corrections of errors, which essentially converges GAAP to *IAS 8*.

Relevant Facts

Following are the key similarities and differences between GAAP and IFRS related to the procedures for accounting changes.

Similarities

- The accounting for changes in estimates is similar between GAAP and IFRS.
- Under GAAP and IFRS, if determining the effect of a change in accounting policy is considered impracticable, then a company should report the effect of the change in the period in which it believes it practicable to do so, which may be the current period.

Differences

- One area in which GAAP and IFRS differ is the reporting of error corrections in previously issued financial statements. While both sets of standards require restatement, GAAP is an absolute standard—that is, there is no exception to this rule.
- Under IFRS, the impracticability exception applies both to changes in accounting principles and to the correction of errors. Under GAAP, this exception applies only to changes in accounting principle.
- IFRS (*IAS 8*) does not specifically address the accounting and reporting for indirect effects of changes in accounting principles. As indicated in the chapter, GAAP has detailed guidance on the accounting and reporting of indirect effects.

About the Numbers**Direct and Indirect Effects of Changes**

Are there other effects that a company should report when it makes a change in accounting policy? For example, what happens when a company like Lancer (as discussed in the chapter) has a bonus plan based on net income and the prior year’s net income changes when FIFO is retrospectively applied? Should Lancer also change the reported amount of bonus expense? Or, what happens if we had not ignored income taxes in the Lancer example? Should Lancer adjust net income, given that taxes will be different under average-cost and FIFO in prior periods? The answers depend on whether the effects are direct or indirect.

Direct Effects Similar to GAAP, IFRS indicates that companies should retrospectively apply the **direct effects of a change in accounting policy**. An example of a **direct effect** is an adjustment to an inventory balance as a result of a change in the inventory valuation method. For example, referring to Lancer Company, Lancer should change the inventory amounts in prior periods to indicate the change to the FIFO method of inventory valuation. Another inventory-related example would be an impairment adjustment resulting from applying the lower-of-cost-or-net realizable value test to the adjusted inventory balance. Related changes, such as deferred income tax effects of the impairment adjustment, are also considered direct effects. This entry was illustrated in the Denson example in the chapter, in which the change to percentage-of-completion accounting resulted in recording a deferred tax liability.

Indirect Effects In addition to direct effects, companies can have **indirect effects related to a change in accounting policy**. An **indirect effect** is any change to current or future cash flows of a company that results from making a change in accounting policy that is applied retrospectively. An example of an indirect effect is a change in profit-sharing or royalty payment that is based on a reported amount such as revenue or net income. The IASB is silent on what to do in this situation. GAAP (likely because its standard in this area was issued after *IAS 8*) requires that indirect effects do not change prior period amounts.

For example, let's assume that Lancer Company has an employee profit-sharing plan based on net income and it changed from the weighted-average inventory method to FIFO in 2020. Lancer reports higher income in 2019 and 2020 if it used the FIFO method. In addition, let's assume that the profit-sharing plan requires that Lancer pay the incremental amount due based on the FIFO income amounts. In this situation, Lancer reports this additional expense **in the current period**; it would not change prior periods for this expense. If the company prepares comparative financial statements, it follows that it does not recast the prior periods for this additional expense. If the terms of the profit-sharing plan indicate that *no payment is necessary* in the current period due to this change, then the company need not recognize additional profit-sharing expense in the current period. Neither does it change amounts reported for prior periods.

When a company recognizes the indirect effects of a change in accounting policy, it includes in the financial statements a description of the indirect effects. In doing so, it discloses the amounts recognized in the current period and related per share information.

Impracticability

It is not always possible for companies to determine how they would have reported prior periods' financial information under retrospective application of an accounting policy change. Retrospective application is considered **impracticable** if a company cannot determine the prior period effects using every reasonable effort to do so.

Companies should not use retrospective application if one of the following conditions exists:

1. The company cannot determine the effects of the retrospective application.
2. Retrospective application requires assumptions about management's intent in a prior period.
3. Retrospective application requires significant estimates for a prior period, and the company cannot objectively verify the necessary information to develop these estimates.

If any of the above conditions exists, it is deemed impracticable to apply the retrospective approach. In this case, the company prospectively applies the new accounting policy as of the earliest date it is practicable to do so.

For example, assume that Williams Company changed its accounting policy for depreciable assets so as to more fully apply component depreciation under revaluation accounting. Unfortunately, the company does not have detailed accounting records to establish a basis for the components of these assets. As a result, Williams determines it is not practicable to account for the change to full component depreciation using the retrospective application approach. It therefore applies the policy prospectively, starting at the beginning of the current year.

Williams must disclose only the effect of the change on the results of operations in the period of change. Also, the company should explain the reasons for omitting the computations of the cumulative effect for prior years. Finally, it should disclose the justification for the change to component depreciation.

On the Horizon

For the most part, IFRS and GAAP are similar in the area of accounting changes and reporting the effects of errors. Thus, there is no active project in this area. A related development involves the presentation of comparative data. Under IFRS, when a company prepares financial statements on a new basis, two years of comparative data are reported. GAAP requires comparative information for a three-year period. Use of the shorter comparative data period could be an issue when U.S. companies adopt IFRS.

IFRS Self-Test Questions

- Which of the following is **false**?
 - GAAP and IFRS have the same absolute standard regarding the reporting of error corrections in previously issued financial statements.
 - The accounting for changes in estimates is similar between GAAP and IFRS.
 - Under IFRS, the impracticability exception applies both to changes in accounting principles and to the correction of errors.
 - GAAP has detailed guidance on the accounting and reporting of indirect effects; IFRS does not.
- Which of the following is **not** classified as an accounting change by IFRS?
 - Change in accounting policy.
 - Change in accounting estimate.
 - Errors in financial statements.
 - None of the above.
- IFRS requires companies to use which method for reporting changes in accounting policies?
 - Cumulative effect approach.
 - Retrospective approach.
 - Prospective approach.
 - Averaging approach.
- Under IFRS, the retrospective approach should not be used if:
 - retrospective application requires assumptions about management's intent in a prior period.
 - the company does not have trained staff to perform the analysis.
 - the effects of the change have counterbalanced.
 - the effects of the change have not counterbalanced.
- Which of the following is **true** regarding whether IFRS specifically addresses the accounting and reporting for effects of changes in accounting policies?

| | <u>Direct Effects</u> | <u>Indirect Effects</u> |
|----|-----------------------|-------------------------|
| a. | Yes | Yes |
| b. | No | No |
| c. | No | Yes |
| d. | Yes | No |

IFRS Concepts and Application

IFRS22.1 Where can authoritative IFRS related to accounting changes be found?

IFRS22.2 Briefly describe some of the similarities and differences between GAAP and IFRS with respect to reporting accounting changes.

IFRS22.3 How might differences in presentation of comparative data under GAAP and IFRS affect adoption of IFRS by U.S. companies?

IFRS22.4 What is the indirect effect of a change in accounting policy? Briefly describe the approach to reporting the indirect effects of a change in accounting policy under IFRS.

IFRS22.5 Discuss how a change in accounting policy is handled when it is impracticable to determine previous amounts.

IFRS22.6 Joblonsky Inc. has recently hired a new independent auditor, Karen Ogleby, who says she wants "to get everything straightened out." Consequently, she has proposed the following accounting changes in connection with Joblonsky Inc.'s 2020 financial statements.

- At December 31, 2019, the client had a receivable of \$820,000 from Hendricks Inc. on its statement of financial position. Hendricks Inc. has gone bankrupt, and no recovery is expected. The client proposes to write off the receivable as a prior period item.
- The client proposes the following changes in depreciation policies.
 - For office furniture and fixtures, it proposes to change from a 10-year useful life to an 8-year life. If this change had been made in prior years, retained earnings at December 31, 2019, would have been \$250,000 less. The effect of the change on 2020 income alone is a reduction of \$60,000.
 - For its new equipment in the leasing division, the client proposes to adopt the sum-of-the-years'-digits depreciation method. The client had never used SYD before. The first year the client operated a leasing division was 2020. If straight-line depreciation were used, 2020 income would be \$110,000 greater.
- In preparing its 2019 statements, one of the client's bookkeepers overstated ending inventory by \$235,000 because of a mathematical error. The client proposes to treat this item as a prior period adjustment.

4. In the past, the client has spread preproduction costs in its furniture division over 5 years. Because its latest furniture is of the “fad” type, it appears that the largest volume of sales will occur during the first 2 years after introduction. Consequently, the client proposes to amortize preproduction costs on a per-unit basis, which will result in expensing most of such costs during the first 2 years after the furniture’s introduction. If the new accounting method had been used prior to 2020, retained earnings at December 31, 2019, would have been \$375,000 less.
5. For the nursery division, the client proposes to switch from FIFO to average-cost inventories because it believes that average-cost will provide a better income measure. The effect of making this change on 2020 earnings will be an increase of \$320,000. The client says that the effect of the change on December 31, 2019, retained earnings cannot be determined.
6. To achieve an appropriate recognition of revenues and expenses in its building construction division, the client proposes to switch from the cost-recovery method of accounting to the percentage-of-completion method. Had the percentage-of-completion method been employed in all prior years, retained earnings at December 31, 2019, would have been \$1,075,000 greater.

Instructions

- a. For each of the changes described above, decide whether:
 1. The change involves an accounting policy, accounting estimate, or correction of an error.
 2. Restatement of opening retained earnings is required.
- b. What would be the proper adjustment to the December 31, 2019, retained earnings?

Professional Research

IFRS22.7 As part of the year-end accounting process and review of operating policies, Tokar Co. is considering a change in the accounting for its equipment from the straight-line method to an accelerated method. Your supervisor wonders how the company will report this change in accounting. It has been a few years since he took intermediate accounting, and he cannot remember whether this change would be treated in a retrospective or prospective manner. Your supervisor wants you to research the authoritative guidance on a change in accounting policy related to depreciation methods.

Instructions

Access the IFRS authoritative literature at the IASB website. (Click on the IFRS tab and then register for free eIFRS access if necessary.) When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- a. What are the accounting and reporting guidelines for a change in accounting policy related to depreciation methods?
- b. What are the conditions that justify a change in depreciation method, as contemplated by Tokar Co.?

International Financial Reporting Problem

Marks and Spencer plc (M&S)

IFRS22.8 The financial statements of **M&S** are presented in Appendix E. The company’s complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S’s financial statements and the accompanying notes to answer the following questions.

- a. Were there changes in accounting policies reported by M&S during the two years covered by its income statements (2016–2017)? If so, describe the nature of the change and the year of change.
- b. What types of estimates did M&S discuss in 2017?

Statement of Cash Flows

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

1. Describe the usefulness and format of the statement of cash flows.
2. Prepare a statement of cash flows.
3. Contrast the direct and indirect methods of calculating net cash flow from operating activities.
4. Discuss special problems in preparing a statement of cash flows.
5. Explain the use of a worksheet in preparing a statement of cash flows.

PREVIEW OF CHAPTER 23 As the following opening story indicates, examination of **W. T. Grant's** cash flows from operations would have shown the financial inflexibility that eventually caused the company's bankruptcy. This chapter explains the main components of a statement of cash flows and the types of information it provides. The content and organization of the chapter are as follows.

This chapter also includes numerous conceptual and global discussions that are integral to the topics presented here.

STATEMENT OF CASH FLOWS

Statement of Cash Flows

- Usefulness of statement
- Classification of cash flows
- Format of statement

Preparing the Statement of Cash Flows

- Illustrations—Tax Consultants Inc.
- Sources of information
- Net cash flow from operating activities—direct method

Special Problems in Statement Preparation

- Adjustments to net income
- Accounts receivable (net)
- Other working capital changes
- Net losses
- Significant noncash transactions

Use of a Worksheet

- Preparation of worksheet
- Analysis of transactions
- Preparation of final statement

Show Me the Money!

Investors usually look to net income as a key indicator of a company's financial health and future prospects. The following graph shows the net income of one company over a seven-year period.

The company showed a pattern of consistent profitability and even some periods of income growth. Between years 1 and 4, net income for this company grew by 32 percent,

from \$31 million to \$41 million. Would you expect its profitability to continue? The company had consistently paid dividends and interest. Would you expect it to continue to do so? Investors answered these questions by buying the company's stock. Eighteen months later, this company—**W. T. Grant**—filed for bankruptcy, in what was then the largest bankruptcy filing in the United States.

How could this happen? As indicated by the second line in the graph, the company had experienced several years of negative cash flow from its operations, even though it reported profits. How can a company have negative cash flows while reporting profits? The answer lays partly in the fact that W. T. Grant was having trouble collecting the receivables from its credit sales, causing cash flow to be less than net income. Investors who analyzed the cash flows would have been likely to find an early warning signal of W. T. Grant's operating problems.

Investors can also look to cash flow information to sniff out companies that can be good buys. As one analyst stated when it comes to valuing stocks: "Show me the money!" Here's the thinking behind that statement. Start with the "cash flows from operations" reported in the statement of cash flows, which (as you will learn in this chapter) consists of net income with noncash charges (like depreciation and deferred taxes) added back and cash-draining events (like an inventory pile-up) taken out. Now subtract capital expenditures and dividends. What you're left with is free cash flow (as discussed in Chapter 5).

Many analysts like companies trading at low multiples of their free cash flow—low, that is, in relation to rivals today or the same company in past years. Why? They know that reported earnings can be misleading. Case in point: Computer-game firm **Activision Blizzard** reported net income of \$113 million in a recent year. But it did better than that. It took in an additional \$300 million, mostly for subscriptions to online multiplayer games. It gets the cash now but records the revenue only over time, as the subscriptions run out. A couple of investment houses put this stock on their buy list on the strength of its cash flows.

In contrast, **Moody's Investors Service** downgraded **Tesla's** debt, citing persistently negative cash flow and continued production issues with the Model 3 mass-market sedan. Moody's is keeping a negative outlook on the credit due to "the likelihood that Tesla will have to undertake a large, near-term capital raise in order to refund maturing obligations and avoid a liquidity shortfall." And **Boeing** experienced a 3 percent decline in its stock price in a recent quarter when it reported decent operating profits but declining free cash flow (mostly due to share buybacks and increased capital expenditures). Analysts said the cash outflow spurred investors to sell.

So watch cash flow—to get an indicator of companies headed for trouble, as well as companies that may be undervalued.

Grant, "The Clock Is Ticking Faster at Tesla," *Wall Street Journal* (March 28, 2018).

Review and Practice

Go to the **Review and Practice** section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions as well as additional exercises and practice problem with solutions are also available online.

Statement of Cash Flows

LEARNING OBJECTIVE 1

Describe the usefulness and format of the statement of cash flows.

The primary purpose of the **statement of cash flows** is to provide information about a company's cash receipts and cash payments during a period. A secondary objective is to provide cash-basis information about the company's operating, investing, and financing activities. The statement of cash flows therefore reports cash receipts, cash payments, and net change in cash resulting from a company's operating, investing, and financing activities during a period. Its format reconciles the beginning and ending cash balances for the period.

Usefulness of the Statement of Cash Flows

The statement of cash flows provides information to help investors, creditors, and others assess the following [1]. (See the FASB Codification References near the end of the chapter.)

1. **The entity's ability to generate future cash flows.** A primary objective of financial reporting is to provide information with which to predict the amounts, timing, and uncertainty of future cash flows. By examining relationships between items such as sales and net cash flow from operating activities, or net cash flow from operating activities and increases or decreases in cash, it is possible to better predict the future cash flows than is possible using accrual-basis data alone.
2. **The entity's ability to pay dividends and meet obligations.** Simply put, cash is essential. Without adequate cash, a company cannot pay employees, settle debts, pay out dividends, or acquire equipment. A statement of cash flows indicates where the company's cash comes from and how the company uses its cash. Employees, creditors, stockholders, and customers should be particularly interested in this statement, because it alone shows the flows of cash in a business (see **Underlying Concepts**).
3. **The reasons for the difference between net income and net cash flow from operating activities.** The net income number is important: It provides information on the performance of a company from one period to another. But some people are critical of accrual-basis net income because companies must make estimates to arrive at it. Such is not the case with cash. Thus, as the opening story showed, financial statement readers can benefit from knowing why a company's net income and net cash flow from operating activities differ, and can assess for themselves the reliability of the income number.
4. **The cash and noncash investing and financing transactions during the period.** Besides operating activities, companies undertake investing and financing transactions. *Investing* activities include the purchase and sale of assets other than a company's products or services. *Financing* activities include borrowings and repayments of borrowings, investments by owners, and distributions to owners. By examining a company's investing and financing activities, a financial statement reader can better understand why assets and liabilities increased or decreased during the period. For example, by reading the statement of cash flows, the reader might find answers to the following questions:
 - Why did cash decrease for **Home Depot** when it reported net income for the period?
 - How much did **Southwest Airlines** spend on property, plant, and equipment last year?
 - Did dividends paid by **Campbell's Soup** increase?
 - How much money did **Coca-Cola** borrow last year?
 - How much cash did **Hewlett-Packard** use to repurchase its common stock?

Underlying Concepts

Reporting information in the statement of cash flows contributes to meeting the objective of financial reporting.

Classification of Cash Flows

The statement of cash flows classifies cash receipts and cash payments by operating, investing, and financing activities.¹ Transactions and other events characteristic of each kind of activity are as follows.

1. **Operating activities** involve the cash effects of transactions that enter into the determination of net income, such as cash receipts from sales of goods and services, and cash payments to suppliers and employees for acquisitions of inventory and expenses.
2. **Investing activities** generally involve long-term assets and include (a) making and collecting loans, and (b) acquiring and disposing of investments and productive long-lived assets.
3. **Financing activities** involve liability and stockholders' equity items and include (a) obtaining cash from creditors and repaying the amounts borrowed, and (b) obtaining capital from owners and providing them with a return on, and a return of, their investment.

Illustration 23.1 classifies the typical cash receipts and payments of a company according to operating, investing, and financing activities. The operating activities category is the most important. It shows the cash provided by company operations. This source of cash is generally considered to be the best measure of a company's ability to generate enough cash to continue as a going concern.

ILLUSTRATION 23.1

Classification of Typical Cash Inflows and Outflows

To redeem long-term debt or reacquire capital stock. | } | Generally Long-Term Liability and Equity Items |

Global View

According to IFRS, companies can define “cash and cash equivalents” as “net monetary assets”—that is, as “cash and demand deposits and highly liquid investments less short-term borrowings.”

¹The basis recommended by the FASB for the statement of cash flows is actually “cash and cash equivalents.” **Cash equivalents** are short-term, highly liquid investments that are both (a) readily convertible to known amounts of cash, and (b) so near their maturity that they present insignificant risk of changes in interest rates. Generally, only investments with original maturities of three months or less qualify under this definition. Examples of cash equivalents are Treasury bills, commercial paper, and money market funds purchased with cash that is in excess of immediate needs.

Although we use the term “cash” throughout our discussion and illustrations, we mean cash and cash equivalents when reporting the cash flows and the net increase or decrease in cash (see **Global View**).

Note the following general guidelines about the classification of cash flows.

1. Operating activities involve income statement items.
2. Investing activities involve cash flows resulting from changes in investments and long-term asset items.
3. Financing activities involve cash flows resulting from changes in long-term liability and stockholders' equity items.

Companies classify some cash flows relating to investing or financing activities as operating activities.² For example, companies classify receipts of investment income (interest and dividends) and payments of interest to lenders as operating activities. Why are these considered operating activities? Companies report these items in the income statement, where the results of operations are shown.

Conversely, companies classify some cash flows relating to operating activities as investing or financing activities. For example, a company classifies the cash received from the sale of property, plant, and equipment as an investing activity, while it excludes the effects of any related gain or loss in net cash flow from operating activities. Likewise, a gain or loss on the payment (extinguishment) of debt is generally part of the cash outflow related to the repayment of the amount borrowed. It therefore is a financing activity.

What Do the Numbers Mean? How's My Cash Flow?

To evaluate overall cash flow, it is useful to understand where in the product life cycle a company is. Generally, companies move through several stages of development, which have implications

for cash flow. As the following graph shows, the pattern of cash flows from operating, financing, and investing activities will vary depending on the stage of the product life cycle.

In the introductory phase, the product is likely not generating much revenue (operating cash flow is negative). Because the company is making heavy investments to get a product off the ground, cash flow from investment is negative, and financing cash flows are positive.

As the product moves to the growth and maturity phases, these cash flow relationships reverse. The product generates more cash flow from operations, which can be used to cover investments

needed to support the product, and less cash is needed from financing. So is a negative operating cash flow bad? Not always. It depends on the product life cycle.

Source: Adapted from Paul D. Kimmel, Jerry J. Weygandt, and Donald E. Kieso, *Financial Accounting: Tools for Business Decision Making*, 8th ed. (New York: John Wiley & Sons, 2016), p. 607.

²Banks and brokers must classify cash flows from purchases and sales of loans and securities specifically for resale and carried at fair value **as operating activities**. This requirement recognizes that for these firms these assets are similar to inventory in other businesses. [2]

Format of the Statement of Cash Flows

The three activities we discussed above constitute the general format of the statement of cash flows. The operating activities section always appears first. It is followed by the investing activities section and then the financing activities section.

A company reports the individual inflows and outflows from investing and financing activities separately. That is, a company reports them gross, not netted against one another. Thus, a cash outflow from the purchase of property is reported separately from the cash inflow from the sale of property. Similarly, a cash inflow from the issuance of debt is reported separately from the cash outflow from its retirement.

The net increase or decrease in cash reported during the period should reconcile the beginning and ending cash balances as reported in the comparative balance sheets. The general format of the statement of cash flows presents the results of the three activities discussed previously—operating, investing, and financing. **Illustration 23.2** shows a widely used form of the statement of cash flows (see **Global View**).

Global View

Both IFRS and GAAP specify that companies must classify cash flows as operating, investing, or financing.

ILLUSTRATION 23.2

Format of the Statement of Cash Flows

| Company Name Statement of Cash Flows Period Covered | | |

| Cash at end of period | | <u>XXX</u> |

Preparing the Statement of Cash Flows

LEARNING OBJECTIVE 2

Prepare a statement of cash flows.

Companies prepare the statement of cash flows differently from the three other basic financial statements. For one thing, it is not prepared from an adjusted trial balance. The statement of cash flows requires detailed information concerning the changes in account balances that occurred between two points in time. An adjusted trial balance will not provide the necessary data. Second, the statement of cash flows deals with cash receipts and payments. As a result, the company must adjust the effects of the use of accrual accounting to determine cash flows. The information to prepare this statement usually comes from three sources:

1. **Comparative balance sheets** provide the amount of the changes in assets, liabilities, and equities from the beginning to the end of the period.
2. **Current income statement data** help determine the amount of cash provided by or used by operations during the period.

3. **Selected transaction data** from the general ledger provide additional detailed information needed to determine how the company provided or used cash during the period.

Preparing the statement of cash flows from the data sources above involves three major steps:

Step 1. Determine the change in cash. This procedure is straightforward. A company can easily compute the difference between the beginning and the ending cash balance from examining its comparative balance sheets.

Step 2. Determine the net cash flow from operating activities. This procedure is complex. It involves analyzing not only the current year's income statement but also comparative balance sheets as well as selected transaction data.

Step 3. Determine net cash flows from investing and financing activities. A company must analyze all other changes in the balance sheet accounts to determine their effects on cash.

On the following pages, we work through these three steps in the process of preparing the statement of cash flows for Tax Consultants Inc. over several years.

Illustrations—Tax Consultants Inc.

We show the steps in preparing the statement of cash flows using data for Tax Consultants Inc. To begin, we use the **first year of operations** for Tax Consultants Inc. The company started on January 1, 2019, when it issued 60,000 shares of \$1 par value common stock for \$60,000 cash. The company rented its office space, furniture, and equipment, and performed tax consulting services throughout the first year. The comparative balance sheets at the beginning and end of the year 2019 appear in [Illustration 23.3](#).

| Tax Consultants Inc. | | | |
|---|-----------------|--------------|-----------------------------|
| Comparative Balance Sheets | | | |
| | Dec. 31, 2019 | Jan. 1, 2019 | Change Increase/Decrease |
| Assets | | | |
| Cash | \$49,000 | \$-0- | \$49,000 Increase |
| Accounts receivable | 36,000 | -0- | 36,000 Increase |
| Total | <u>\$85,000</u> | <u>\$-0-</u> | |
| Liabilities and Stockholders' Equity | | | |
| Accounts payable | \$ 5,000 | \$-0- | \$ 5,000 Increase |
| Common stock (\$1 par) | 60,000 | -0- | 60,000 Increase |
| Retained earnings | 20,000 | -0- | 20,000 Increase |
| Total | <u>\$85,000</u> | <u>\$-0-</u> | |

ILLUSTRATION 23.3

Comparative Balance Sheets, Tax Consultants Inc., Year 1

[Illustration 23.4](#) shows the income statement and additional information for Tax Consultants.

| Tax Consultants Inc. | |
|---|------------------|
| Income Statement | |
| For the Year Ended December 31, 2019 | |
| Revenues | \$125,000 |
| Operating expenses | <u>85,000</u> |
| Income before income taxes | 40,000 |
| Income tax expense | <u>6,000</u> |
| Net income | <u>\$ 34,000</u> |
| Additional Information | |
| Examination of selected data indicates that a dividend of \$14,000 was declared and paid during the year. | |

ILLUSTRATION 23.4

Income Statement, Tax Consultants Inc., Year 1

Step 1: Determine the Change in Cash

To prepare a statement of cash flows, the first step is to **determine the change in cash**. This is a simple computation. Tax Consultants had no cash on hand at the beginning of the year 2019. It had \$49,000 on hand at the end of 2019. Thus, cash changed (increased) in 2019 by \$49,000.

Step 2: Determine Net Cash Flow from Operating Activities

To determine net cash flow from operating activities,³ companies adjust net income in numerous ways. A useful starting point is to understand why net income must be converted to net cash provided by operating activities.

Under generally accepted accounting principles, most companies use the accrual basis of accounting. As you have learned, this basis requires that companies record revenue when a performance obligation is met and record expenses when incurred. For example, revenues may include credit sales for which the company has not yet collected cash, or expenses incurred may include some items that the company has not yet paid in cash. Thus, under the accrual basis of accounting, net income is not the same as net cash flow from operating activities.

To arrive at net cash flow from operating activities, a company must determine revenues and expenses on a **cash basis**. It does this by **eliminating the effects of income statement transactions that do not result in an increase or decrease in cash**. **Illustration 23.5** shows the relationship between net income and net cash flow from operating activities.

ILLUSTRATION 23.5

Net Income versus Net Cash Flow from Operating Activities

In this chapter, we use the term net income to refer to accrual-based net income. A company may convert net income to net cash flow from operating activities through either a direct method or an indirect method. Due to its widespread use in practice, in the following sections we illustrate use of the indirect method. Later in the chapter, we describe the direct method and discuss the advantages and disadvantages of the two methods.⁴

The **indirect method** (or **reconciliation method**) starts with net income and converts it to net cash flow from operating activities. In other words, **the indirect method adjusts net income for items that affected reported net income but did not affect cash**. To compute net cash flow from operating activities, a company adds back noncash charges in the income statement to net income and deducts noncash credits. We explain the two adjustments to net income for Tax Consultants, namely, the increases in accounts receivable and accounts payable, as follows.

³Net cash flow from operating activities” is a generic phrase, replaced in the statement of cash flows with either “Net cash **provided by** operating activities” if operations increase cash, or “Net cash **used by** operating activities” if operations decrease cash.

⁴*Accounting Trends and Techniques* indicates that out of its 500 surveyed companies, 495 (99 percent) used the indirect method, and only 5 used the direct method. *In doing homework assignments, you should follow instructions for use of either the direct or indirect method.*

Increase in Accounts Receivable—Indirect Method Tax Consultants’ accounts receivable increased by \$36,000 (from \$0 to \$36,000) during the year. For Tax Consultants, this means that cash receipts were \$36,000 lower than revenues. The Accounts Receivable account in **Illustration 23.6** shows that Tax Consultants had \$125,000 in revenues (as reported on the income statement), but it collected only \$89,000 in cash.

| Accounts Receivable | | | |
|---------------------|----------|---------|-------------------------------|
| 1/1/19 | Balance | -0- | Receipts from customer 89,000 |
| | Revenues | 125,000 | |
| 12/31/19 | Balance | 36,000 | |

ILLUSTRATION 23.6
Analysis of Accounts Receivable

As shown in Illustration 23.7, to adjust net income to net cash provided by operating activities, Tax Consultants must deduct the increase of \$36,000 in accounts receivable from net income. When the Accounts Receivable balance *decreases*, cash receipts are higher than revenue recognized under the accrual basis. Therefore, the company adds to net income the amount of the decrease in accounts receivable to arrive at net cash provided by operating activities.

Increase in Accounts Payable—Indirect Method When accounts payable increase during the year, expenses on an accrual basis exceed those on a cash basis. Why? Because Tax Consultants incurred expenses, but some of the expenses are not yet paid. To convert net income to net cash flow from operating activities, Tax Consultants must add back the increase of \$5,000 in accounts payable to net income.

As a result of the accounts receivable and accounts payable adjustments, Tax Consultants determines net cash provided by operating activities is \$3,000 for the year 2019. **Illustration 23.7** shows this computation.

| | | |
|---|------------|-----------------|
| Net income | | \$ 34,000 |
| Adjustments to reconcile net income to net cash provided by operating activities: | | |
| Increase in accounts receivable | \$(36,000) | |
| Increase in accounts payable | 5,000 | (31,000) |
| Net cash provided by operating activities | | \$ 3,000 |

ILLUSTRATION 23.7
Computation of Net Cash Flow from Operating Activities, Year 1—Indirect Method

What Do the Numbers Mean? Earnings and Cash Flow Management?

Investors must be vigilant in their monitoring of management incentives to manipulate both earnings and cash flows. That is, financial success is dependent not only on a company’s ability to generate revenues and earnings, but also cash flow. A company that shows profits but is unable to generate cash will also experience waning investor enthusiasm.

Thus, management has an incentive to make operating cash flow look good because Wall Street has paid a premium for companies that generate a lot of cash from operations, rather than through borrowings. However, similar to earnings, companies have ways to pump up cash flow from operations.

One way that companies can boost their operating cash flow is by “securitizing” receivables. That is, companies can speed up cash collections by selling their receivables. For example, **Federated Department Stores** reported a \$2.2 billion increase in cash flow from operations. This seems impressive until you read the fine print, which indicates that a big part of the increase was due to the sale of receivables. As discussed in this section, decreases in accounts receivable increase cash flow from operations. So while it appeared that Federated’s core operations had improved, the

company really did little more than accelerate collections of its receivables. In fact, the cash flow from the securitizations represented more than half of Federated’s operating cash flow.

Some securitizations, such as those executed by **Kraft-Heinz** and **AT&T**, include cash flows from so-called “beneficial interests,” which may or may not result in an increase in operating cash flows. In response to possible overstatement of operating cash flows from such securitizations, the FASB recently tightened rules to classify as operating cash flows only those directly related to the sale. Other cash flows related to beneficial interests must be disclosed as a noncash investing activity. The new rules resulted in a significant drop in cash flow from operations for Kraft-Heinz and AT&T. Thus, in evaluating the quality of accounting, investors must keep an eye on the quality of earnings *and* cash flows.

Source: Adapted from Ann Tergeesen, “Cash Flow Hocus Pocus,” *Business Week* (July 16, 2002), pp. 130–131. See also C. Mulford and A. Lopez de Mesa, *Cash Flow Trends and Their Fundamental Drivers: Comprehensive Industry Review*, Georgia Tech Financial Analysis Lab (October 2, 2012); and M. Rappaport, “Why Kraft-Heinz’s Cash Flow Is Getting Sliced,” *Wall Street Journal* (April 2, 2018).

Step 3: Determine Net Cash Flows from Investing and Financing Activities

After Tax Consultants has computed the net cash provided by operating activities, the next step is to determine whether any other changes in balance sheet accounts caused an increase or decrease in cash.

For example, an examination of the remaining balance sheet accounts for Tax Consultants shows increases in both common stock and retained earnings. The common stock increase of \$60,000 resulted from the issuance of common stock for cash. The issuance of common stock is reported in the statement of cash flows as a receipt of cash from a financing activity.

Two items caused the retained earnings increase of \$20,000:

1. Net income of \$34,000 increased retained earnings.
2. Declaration of \$14,000 of dividends decreased retained earnings.

Tax Consultants has converted net income into net cash flow from operating activities, as explained earlier. The additional data indicate that it paid the dividend. Thus, the company reports the dividend payment as a cash outflow, classified as a financing activity.

Statement of Cash Flows—2019

We are now ready to prepare the statement of cash flows. The statement starts with the operating activities section. Tax Consultants uses the indirect method to report net cash flow from operating activities.

Illustration 23.8 shows the statement of cash flows for Tax Consultants Inc., for year 1 (2019).

ILLUSTRATION 23.8
Statement of Cash Flows,
Tax Consultants Inc.,
Year 1

| Tax Consultants Inc. Statement of Cash Flows For the Year Ended December 31, 2019 | | |
|---|------------|-----------|
| Cash flows from operating activities | | |
| Net income | | \$ 34,000 |
| Adjustments to reconcile net income to net cash provided by operating activities: | | |
| Increase in accounts receivable | \$(36,000) | |
| Increase in accounts payable | 5,000 | (31,000) |
| Net cash provided by operating activities | | 3,000 |
| Cash flows from financing activities | | |
| Issuance of common stock | 60,000 | |
| Payment of cash dividends | (14,000) | |
| Net cash provided by financing activities | | 46,000 |
| Net increase in cash | | 49,000 |
| Cash, January 1, 2019 | | –0– |
| Cash, December 31, 2019 | | \$ 49,000 |

As indicated, the \$60,000 increase in common stock results in a financing activity cash inflow. The payment of \$14,000 in cash dividends is a financing activity outflow of cash. The \$49,000 increase in cash reported in the statement of cash flows agrees with the increase of \$49,000 shown in the comparative balance sheets as the change in the Cash account.

Illustration—2020

Tax Consultants Inc. continued to grow and prosper in its second year of operations. The company purchased land, building, and equipment, and revenues and net income increased

substantially over the first year. **Illustrations 23.9** and **23.10** present information related to the second year of operations for Tax Consultants Inc.

| Tax Consultants Inc. Comparative Balance Sheets As of December 31 | | | |
|--|------------------|-----------------|-----------------------------|
| <u>Assets</u> | 2020 | 2019 | Change Increase/Decrease |
| Cash | \$ 37,000 | \$49,000 | \$ 12,000 Decrease |
| Accounts receivable | 26,000 | 36,000 | 10,000 Decrease |

| Income tax expense | | <u>68,000</u> |
| Net income | | <u>\$134,000</u> |
| Additional Information | | |
| (a) The company declared and paid an \$18,000 cash dividend. | | |
| (b) The company obtained \$150,000 cash through the issuance of long-term bonds. | | |
| (c) Land, building, and equipment were acquired for cash. | | |

ILLUSTRATION 23.10

**Income Statement,
Tax Consultants Inc.,
Year 2**

Step 1: Determine the Change in Cash To prepare a statement of cash flows from the available information, the first step is to determine the change in cash. As indicated from the information presented, cash decreased \$12,000 (\$49,000 – \$37,000).

Step 2: Determine Net Cash Flow from Operating Activities—Indirect Method Using the indirect method, we adjust net income of \$134,000 on an accrual basis to arrive at net cash flow from operating activities. Explanations for the adjustments to net income follow.

- **Decrease in Accounts Receivable.** Accounts receivable decreased during the period because cash receipts (cash-basis revenues) are higher than revenues reported on an accrual basis. To convert net income to net cash flow from operating activities, the decrease of \$10,000 in accounts receivable must be added to net income.

- **Increase in Prepaid Expenses.** When prepaid expenses (assets) increase during a period, expenses on an accrual-basis income statement are lower than they are on a cash-basis income statement. The reason: Tax Consultants has made cash payments in the current period, but expenses (as charges to the income statement) have been deferred to future periods. To convert net income to net cash flow from operating activities, the company must deduct from net income the increase of \$6,000 in prepaid expenses. An increase in prepaid expenses results in a decrease in cash during the period.
- **Increase in Accounts Payable.** Like the increase in 2019, Tax Consultants must add the 2020 increase of \$35,000 in accounts payable to net income, to convert to net cash flow from operating activities. The company incurred a greater amount of expense than the amount of cash it disbursed.
- **Depreciation Expense (Increase in Accumulated Depreciation).** The purchase of depreciable assets is a use of cash, shown in the investing section in the year of acquisition. Tax Consultants' depreciation expense of \$21,000 (also represented by the increase in accumulated depreciation) is a noncash charge; the company adds it back to net income, to arrive at net cash flow from operating activities. The \$21,000 is the sum of the \$11,000 depreciation on the building plus the \$10,000 depreciation on the equipment.

Certain other periodic charges to expense do not require the use of cash. Examples are the amortization of intangible assets and depletion expense. Such charges are treated in the same manner as depreciation. Companies frequently list depreciation and similar noncash charges as the first adjustments to net income in the statement of cash flows.

As a result of the foregoing items, net cash provided by operating activities is \$194,000 as shown in **Illustration 23.11**.

ILLUSTRATION 23.11
Computation of Net Cash Flow from Operating Activities, Year 2—Indirect Method

| | | |
|---|----------|-------------------------|
| Net income | | \$134,000 |
| Adjustments to reconcile net income to net cash provided by operating activities: | | |
| Depreciation expense | \$21,000 | |
| Decrease in accounts receivable | 10,000 | |
| Increase in prepaid expenses | (6,000) | |
| Increase in accounts payable | 35,000 | 60,000 |
| Net cash provided by operating activities | | <u>\$194,000</u> |

Step 3: Determine Net Cash Flows from Investing and Financing Activities

After you have determined the items affecting net cash provided by operating activities, the next step involves analyzing the remaining changes in balance sheet accounts. Tax Consultants Inc. analyzed the following accounts.

- **Increase in Land.** As indicated from the change in the Land account, the company purchased land of \$70,000 during the period. This transaction is an investing activity, reported as a use of cash.
- **Increase in Buildings and Related Accumulated Depreciation.** As indicated in the additional data and from the change in the Buildings account, Tax Consultants acquired an office building using \$200,000 cash. This transaction is a cash outflow, reported in the investing section. The \$11,000 increase in accumulated depreciation results from recording depreciation expense on the building. As indicated earlier, the reported depreciation expense has no effect on the amount of cash.

- **Increase in Equipment and Related Accumulated Depreciation.** An increase in equipment of \$68,000 resulted because the company used cash to purchase equipment. This transaction is an outflow of cash from an investing activity. The depreciation expense entry for the period explains the increase in Accumulated Depreciation—Equipment.
- **Increase in Bonds Payable.** The Bonds Payable account increased \$150,000. Cash received from the issuance of these bonds represents an inflow of cash from a financing activity.
- **Increase in Retained Earnings.** Retained earnings increased \$116,000 during the year. Two factors explain this increase. (1) Net income of \$134,000 increased retained earnings, and (2) dividends of \$18,000 decreased retained earnings. As indicated earlier, the company adjusts net income to net cash provided by operating activities in the operating activities section. Payment of the dividends is a financing activity that involves a cash outflow.

Statement of Cash Flows—2020 Combining the foregoing items, we get the statement of cash flows for 2020 for Tax Consultants Inc., shown in **Illustration 23.12**, using the indirect method to compute net cash flow from operating activities.

| Tax Consultants Inc. Statement of Cash Flows For the Year Ended December 31, 2020 | | |
|--|-----------|------------|
| Cash flows from operating activities | | |
| Net income | | \$ 134,000 |

**Statement of Cash Flows,
Tax Consultants Inc., Year 2**

Illustration—2021

Our third example, covering the 2021 operations of Tax Consultants Inc., is more complex. It again uses the indirect method to compute and present net cash flow from operating activities.

Tax Consultants Inc. experienced continued success in 2021 and expanded its operations to include the sale of computer software used in tax-return preparation and tax planning. Thus, inventory is a new asset appearing in the company's December 31, 2021, balance sheet. **Illustrations 23.13** and **23.14** show the comparative balance sheets, income statements, and selected data for 2021.

ILLUSTRATION 23.14
Income Statement, Tax
Consultants Inc., Year 3

| Tax Consultants Inc. | | |
|---|--------------|------------------|
| Income Statement | | |
| For the Year Ended December 31, 2021 | | |
| Revenues | | \$890,000 |
| Cost of goods sold | \$465,000 | |
| Operating expenses | 221,000 | |
| Interest expense | 12,000 | |
| Loss on sale of equipment | <u>2,000</u> | <u>700,000</u> |
| Income from operations | | 190,000 |
| Income tax expense | | <u>65,000</u> |
| Net income | | <u>\$125,000</u> |
| Additional Information | | |
| (a) Operating expenses include depreciation expense of \$33,000 and expiration of prepaid expenses of \$2,000. | | |
| (b) Land was sold at its book value for cash. | | |
| (c) Cash dividends of \$55,000 were declared and paid. | | |
| (d) Interest expense of \$12,000 was paid in cash. | | |
| (e) Equipment with a cost of \$166,000 was purchased for cash. Equipment with a cost of \$41,000 and a book value of \$36,000 was sold for \$34,000 cash. | | |
| (f) Bonds were redeemed at their book value for cash. | | |
| (g) Common stock (\$1 par) was issued for cash. | | |

Step 1: Determine the Change in Cash The first step in the preparation of the statement of cash flows is to determine the change in cash. As the comparative balance sheets show, cash increased \$17,000 in 2021.

Step 2: Determine Net Cash Flow from Operating Activities—Indirect Method We explain the adjustments to net income of \$125,000 as follows.

- **Increase in Accounts Receivable.** The increase in accounts receivable of \$42,000 represents recorded accrual-basis revenues in excess of cash collections in 2021. The company deducts this increase from net income to convert from the accrual basis to the cash basis.
- **Increase in Inventory.** The \$54,000 increase in inventory represents an operating use of cash, not an expense. Tax Consultants therefore deducts this amount from net income

to arrive at net cash flow from operations. In other words, when inventory purchased exceeds inventory sold during a period, cost of goods sold on an accrual basis is lower than on a cash basis.

- **Decrease in Prepaid Expenses.** The \$2,000 decrease in prepaid expenses represents a charge to the income statement for which Tax Consultants made no cash payment in the current period. The company adds back the decrease to net income, to arrive at net cash flow from operating activities.
- **Decrease in Accounts Payable.** When accounts payable decrease during the year, cost of goods sold and expenses on a cash basis are higher than they are on an accrual basis. To convert net income to net cash flow from operating activities, the company must deduct the \$7,000 decrease in accounts payable from net income.
- **Depreciation Expense (Increase in Accumulated Depreciation).** Accumulated Depreciation—Buildings increased \$10,000 (\$21,000 – \$11,000). The Buildings account did not change during the period, which means that Tax Consultants recorded depreciation expense of \$10,000 in 2021.

Accumulated Depreciation—Equipment increased by \$18,000 (\$28,000 – \$10,000) during the year. But Accumulated Depreciation—Equipment decreased by \$5,000 as a result of the sale during the year. Thus, depreciation for the year was \$23,000. The company reconciled Accumulated Depreciation—Equipment as follows.

| | |
|----------------------------|-----------------|
| Beginning balance | \$10,000 |
| Add: Depreciation for 2021 | <u>23,000</u> |
| | 33,000 |
| Deduct: Sale of equipment | <u>5,000</u> |
| Ending balance | <u>\$28,000</u> |

The company must add back to net income the total depreciation of \$33,000 (\$10,000 + \$23,000) charged to the income statement, to determine net cash flow from operating activities.

- **Loss on Sale of Equipment.** Tax Consultants Inc. sold for \$34,000 equipment that cost \$41,000 and had a book value of \$36,000. As a result, the company reported a loss of \$2,000 on its sale. To arrive at net cash flow from operating activities, it must add back to net income the loss on the sale of the equipment. The reason is that the loss is a non-cash charge to the income statement. The loss did not reduce cash, but it did reduce net income.⁵

From the foregoing items, the company prepares the operating activities section of the statement of cash flows, as shown in **Illustration 23.15**.

| | | |
|---|----------------|-----------------|
| Cash flows from operating activities | | |
| Net income | | \$125,000 |
| Adjustments to reconcile net income to net cash provided by operating activities: | | |
| Depreciation expense | \$ 33,000 | |
| Loss on sale of equipment | 2,000 | |
| Increase in accounts receivable | (42,000) | |
| Increase in inventory | (54,000) | |
| Decrease in prepaid expenses | 2,000 | |
| Decrease in accounts payable | <u>(7,000)</u> | <u>(66,000)</u> |
| Net cash provided by operating activities | | 59,000 |

ILLUSTRATION 23.15

Operating Activities Section of Cash Flow Statement

⁵A similar adjustment is required for unrealized gains or losses recorded on trading debt investments, equity investments, or other financial assets and liabilities accounted for under the fair value option. Marking these assets and liabilities to fair value results in an increase or decrease in income, but there is no effect on cash flows.

Step 3: Determine Net Cash Flows from Investing and Financing Activities By analyzing the remaining changes in the balance sheet accounts, Tax Consultants identifies cash flows from investing and financing activities.

- **Land.** Land decreased \$25,000 during the period. As indicated from the information presented, the company sold land for cash at its book value. This transaction is an investing activity, reported as a \$25,000 source of cash.
- **Equipment.** An analysis of the Equipment account indicates the following.

| | |
|---------------------------|------------------|
| Beginning balance | \$ 68,000 |
| Purchase of equipment | <u>166,000</u> |
| | 234,000 |
| Deduct: Sale of equipment | <u>41,000</u> |
| Ending balance | <u>\$193,000</u> |

The company used cash to purchase equipment with a fair value of \$166,000—an investing transaction reported as a cash outflow. The sale of the equipment for \$34,000 is also an investing activity, but one that generates a cash inflow.

- **Bonds Payable.** Bonds payable decreased \$40,000 during the year. As indicated from the additional information, the company redeemed the bonds at their book value. This financing transaction used \$40,000 of cash.
- **Common Stock.** The Common Stock account increased \$160,000 during the year. As indicated from the additional information, Tax Consultants issued common stock of \$160,000 at par. This financing transaction provided cash of \$160,000.
- **Retained Earnings.** Retained earnings changed \$70,000 (\$206,000 – \$136,000) during the year. The \$70,000 change in retained earnings results from net income of \$125,000 from operations and the financing activity of paying cash dividends of \$55,000.

Statement of Cash Flows—2021 Tax Consultants Inc. combines the foregoing items to prepare the statement of cash flows shown in **Illustration 23.16**.

Sources of Information for the Statement of Cash Flows

Important points to remember in the preparation of the statement of cash flows are these:

1. Comparative balance sheets provide the basic information from which to prepare the report. Additional information obtained from analyses of specific accounts is also included.
2. An analysis of the Retained Earnings account is necessary. The net increase or decrease in Retained Earnings without any explanation is a meaningless amount in the statement. Without explanation, it might represent the effect of net income, dividends declared, or prior period adjustments.
3. The statement includes all changes that have passed through cash or have resulted in an increase or decrease in cash.
4. Write-downs, amortization charges, and similar “book” entries, such as depreciation of plant assets, represent neither inflows nor outflows of cash because they have no effect on cash. To the extent that they have entered into the determination of net income, however, the company must add them back to or subtract them from net income, to arrive at net cash provided (used) by operating activities.

Indirect Method—Additional Adjustments

For consistency and comparability and because it is the most widely used method in practice, we used the indirect method in the Tax Consultants’ illustrations. We determined net cash flow from operating activities by adding back to or deducting from net income those items that had no effect on cash. **Illustration 23.17** presents a more complete set of common adjustments that companies make to net income to arrive at net cash flow from operating activities.

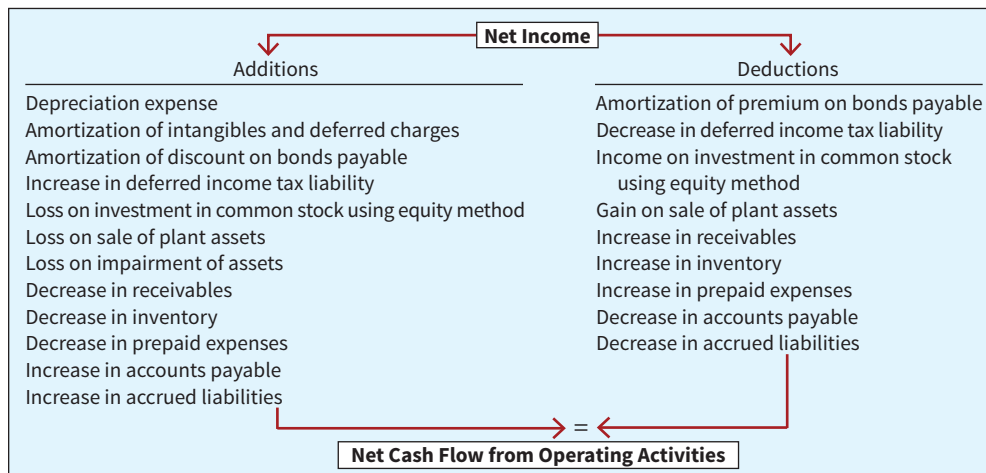

ILLUSTRATION 23.17
Adjustments Needed to Determine Net Cash Flow from Operating Activities—Indirect Method

The additions and deductions in Illustration 23.17 reconcile net income to net cash flow from operating activities, illustrating why the indirect method is also called the reconciliation method.

Net Cash Flow from Operating Activities—Direct Method

LEARNING OBJECTIVE 3

Contrast the direct and indirect methods of calculating net cash flow from operating activities.

Two different methods are available to adjust income from operations on an accrual basis to net cash flow from operating activities. We showed the indirect method in the Tax Consultants' illustrations in the prior sections.

The **direct method** reports cash receipts and cash disbursements from operating activities. The difference between these two amounts is the net cash flow from operating activities. In other words, the direct method deducts operating cash disbursements from operating cash receipts. The direct method results in the presentation of a condensed cash receipts and cash disbursements statement.

As indicated from the accrual-based income statement (see Illustration 23.4), Tax Consultants reported revenues of \$125,000. However, because the company's accounts receivable increased during 2019 by \$36,000, the company collected only \$89,000 (\$125,000 – \$36,000) in cash from these revenues. Similarly, Tax Consultants reported operating expenses of \$85,000. However, accounts payable increased during the period by \$5,000. Assuming that these payables relate to operating expenses, cash operating expenses were \$80,000 (\$85,000 – \$5,000). Because no taxes payable exist at the end of the year, the company must have paid \$6,000 income tax expense for 2019 in cash during the year. Tax Consultants computes net cash flow from operating activities as shown in **Illustration 23.18**.

ILLUSTRATION 23.18
Computation of Net Cash Flow from Operating Activities, Year 1—Direct Method

| | |
|--|------------------------|
| Cash collected from revenues | \$89,000 |
| Cash payments for expenses | <u>80,000</u> |
| Income before income taxes | 9,000 |
| Cash payments for income taxes | <u>6,000</u> |
| Net cash provided by operating activities | <u>\$ 3,000</u> |

“Net cash provided by operating activities” is the equivalent of cash basis net income. (“Net cash used by operating activities” is equivalent to cash basis net loss.)

The FASB encourages use of the direct method and permits use of the indirect method. Yet, if the direct method is used, the Board requires that companies provide in a separate schedule a reconciliation of net income to net cash flow from operating activities. Therefore, under either method, companies must prepare and report information from the indirect (reconciliation) method.

Direct Method—Expanded Example

Under the direct method, the statement of cash flows reports net cash flow from operating activities as major classes of *operating cash receipts* (e.g., cash collected from customers and cash received from interest and dividends) and *cash disbursements* (e.g., cash paid to suppliers for goods, to employees for services, to creditors for interest, and to government authorities for taxes).

We illustrate the direct method here in more detail to help you understand the difference between accrual-based income and net cash flow from operating activities. This example also illustrates the data needed to apply the direct method. Emig Company, which began business on January 1, 2020, has the selected balance sheet information shown in **Illustration 23.19**.

ILLUSTRATION 23.19
Balance Sheet Accounts, Emig Co.

| | December 31, 2020 | January 1, 2020 |
|--------------------------------------|----------------------|--------------------|
| Cash | \$159,000 | –0– |
| Accounts receivable | 15,000 | –0– |
| Inventory | 160,000 | –0– |
| Prepaid expenses | 8,000 | –0– |
| Property, plant, and equipment (net) | 90,000 | –0– |
| Accounts payable | 60,000 | –0– |
| Accrued expenses payable | 20,000 | –0– |

Emig Company's December 31, 2020, income statement and additional information are presented in **Illustration 23.20**.

| | | |
|----------------------------|---------------|-------------------------|
| Sales revenue | | \$780,000 |
| Cost of goods sold | | <u>450,000</u> |
| Gross profit | | 330,000 |
| Operating expenses | \$160,000 | |
| Depreciation | <u>10,000</u> | <u>170,000</u> |
| Income before income taxes | | 160,000 |
| Income tax expense | | <u>48,000</u> |
| Net income | | <u><u>\$112,000</u></u> |

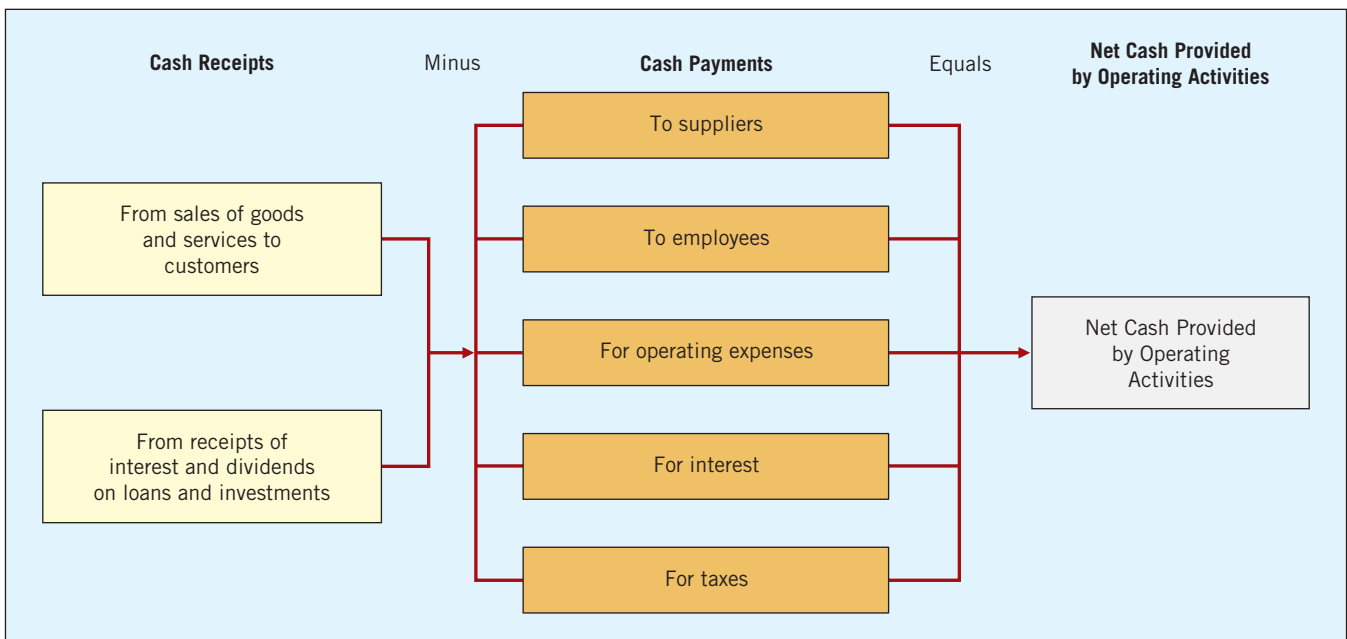

Additional Information

(a) Dividends of \$70,000 were declared and paid in cash.
 (b) The accounts payable increase resulted from the purchase of merchandise inventory.
 (c) Prepaid expenses and accrued expenses payable relate to operating expenses.

ILLUSTRATION 23.20
Income Statement,
Emig Co.

Under the **direct method**, companies compute net cash provided by operating activities by **adjusting each item in the income statement** from the accrual basis to the cash basis. To simplify and condense the operating activities section, only major classes of operating cash receipts and cash payments are reported. As **Illustration 23.21** shows, the difference between these major classes of cash receipts and cash payments is the net cash provided by operating activities.

ILLUSTRATION 23.21 Major Classes of Cash Receipts and Payments

An efficient way to apply the direct method is to analyze the revenues and expenses reported in the income statement in the order in which they are listed. The company then determines cash receipts and cash payments related to these revenues and expenses. In the following sections, we present the direct method adjustments for Emig Company in 2020, to determine net cash provided by operating activities.

Cash Receipts from Customers The income statement for Emig Company reported revenues from customers of \$780,000. To determine cash receipts from customers, the company considers the change in accounts receivable during the year.

When accounts receivable increase during the year, revenues on an accrual basis are higher than cash receipts from customers. In other words, operations led to increased revenues, but not all of these revenues resulted in cash receipts. To determine the amount of

increase in cash receipts, deduct the amount of the increase in accounts receivable from the total sales revenue. Conversely, a decrease in accounts receivable is added to sales revenue because cash receipts from customers then exceed sales revenue.

For Emig Company, accounts receivable increased \$15,000. Thus, cash receipts from customers were \$765,000, computed as follows.

| | |
|---|-------------------------|
| Sales revenue | \$780,000 |
| Deduct: Increase in accounts receivable | <u>15,000</u> |
| Cash receipts from customers | <u><u>\$765,000</u></u> |

Emig could also determine cash receipts from customers by analyzing the Accounts Receivable account as shown below.

| Accounts Receivable | | | | |
|---------------------|---------------|---------|-------------------------|---------|
| 1/1/20 | Balance | -0- | Receipts from customers | 765,000 |
| | Sales revenue | 780,000 | | |
| 12/31/20 | Balance | 15,000 | | |

Illustration 23.22 shows the relationships between cash receipts from customers, sales revenue, and changes in accounts receivable.

ILLUSTRATION 23.22
Formula to Compute Cash Receipts from Customers

| | | | |
|-------------------------------------|---|---------------|---|
| Cash Receipts from Customers | = | Sales Revenue | { + Decrease in Accounts Receivable or - Increase in Accounts Receivable |
|-------------------------------------|---|---------------|---|

Cash Payments to Suppliers Emig Company reported cost of goods sold on its income statement of \$450,000. To determine cash payments to suppliers, the company first finds purchases for the year, by adjusting cost of goods sold for the change in inventory. When inventory increases during the year, purchases this year exceed cost of goods sold. As a result, the company adds the increase in inventory to cost of goods sold, to arrive at purchases.

In 2020, Emig Company’s inventory increased \$160,000. The company computes purchases as follows.

| | |
|----------------------------|-------------------------|
| Cost of goods sold | \$450,000 |
| Add: Increase in inventory | <u>160,000</u> |
| Purchases | <u><u>\$610,000</u></u> |

After computing purchases, Emig determines cash payments to suppliers by adjusting purchases for the change in accounts payable. When accounts payable increase during the year, purchases on an accrual basis are higher than they are on a cash basis. As a result, the company deducts from purchases the increase in accounts payable to arrive at cash payments to suppliers. Conversely, if cash payments to suppliers exceed purchases, Emig adds to purchases the decrease in accounts payable. Cash payments to suppliers were \$550,000, computed as follows.

| | |
|--------------------------------------|-------------------------|
| Purchases | \$610,000 |
| Deduct: Increase in accounts payable | <u>60,000</u> |
| Cash payments to suppliers | <u><u>\$550,000</u></u> |

Emig also can determine cash payments to suppliers by analyzing Accounts Payable, as shown below.

| Accounts Payable | | | | |
|-----------------------|---------|----------|-----------|---------|
| Payments to suppliers | 550,000 | 1/1/20 | Balance | -0- |
| | | | Purchases | 610,000 |
| | | 12/31/20 | Balance | 60,000 |

Illustration 23.23 shows the relationships between cash payments to suppliers, cost of goods sold, changes in inventory, and changes in accounts payable.

$$\text{Cash Payments to Suppliers} = \text{Cost of Goods Sold} \left\{ \begin{array}{l} + \text{Increase in Inventory} \\ \text{or} \\ - \text{Decrease in Inventory} \end{array} \right\} \left\{ \begin{array}{l} + \text{Decrease in Accounts Payable} \\ \text{or} \\ - \text{Increase in Accounts Payable} \end{array} \right\}$$

ILLUSTRATION 23.23

Formula to Compute Cash Payments to Suppliers

Cash Payments for Operating Expenses Emig reported operating expenses of \$160,000 on its income statement. To determine the cash paid for operating expenses, it must adjust this amount for any changes in prepaid expenses and accrued expenses payable.

For example, when prepaid expenses increased \$8,000 during the year, cash paid for operating expenses was \$8,000 higher than operating expenses reported on the income statement. To convert operating expenses to cash payments for operating expenses, the company adds to operating expenses the increase of \$8,000. Conversely, if prepaid expenses decrease during the year, it deducts from operating expenses the amount of the decrease.

Emig also must adjust operating expenses for changes in accrued expenses payable. When accrued expenses payable increase during the year, operating expenses on an accrual basis are higher than they are on a cash basis. As a result, the company deducts from operating expenses an increase in accrued expenses payable, to arrive at cash payments for operating expenses. Conversely, it adds to operating expenses a decrease in accrued expenses payable, because cash payments exceed operating expenses.

Emig's cash payments for operating expenses were \$148,000, computed as follows.

| | |
|--|------------------|
| Operating expenses | \$160,000 |
| Add: Increase in prepaid expenses | 8,000 |
| Deduct: Increase in accrued expenses payable | <u>20,000</u> |
| Cash payments for operating expenses | <u>\$148,000</u> |

The relationships among cash payments for operating expenses, changes in prepaid expenses, and changes in accrued expenses payable are shown in **Illustration 23.24**.

$$\text{Cash Payments for Operating Expenses} = \text{Operating Expenses} \left\{ \begin{array}{l} + \text{Increase in Prepaid Expense} \\ \text{or} \\ - \text{Decrease in Prepaid Expense} \end{array} \right\} \left\{ \begin{array}{l} + \text{Decrease in Accrued Expenses Payable} \\ \text{or} \\ - \text{Increase in Accrued Expenses Payable} \end{array} \right\}$$

ILLUSTRATION 23.24

Formula to Compute Cash Payments for Operating Expenses

Note that the company did not consider depreciation expense because it is a noncash charge.

Cash Payments for Income Taxes The income statement for Emig shows income tax expense of \$48,000. This amount equals the cash paid. How do we know that? Because the comparative balance sheet indicated no income taxes payable (or deferred tax assets or liabilities) at either the beginning or end of the year.

Summary of Net Cash Flow from Operating Activities—Direct Method

The schedule presented in **Illustration 23.25** summarizes the computations shown above.

ILLUSTRATION 23.25**Accrual Basis to Cash Basis**

| Accrual Basis | | Adjustment | Add (Subtract) | Cash Basis |
|----------------------|------------------|--|-------------------|------------------|
| Sales revenue | \$780,000 | – Increase in accounts receivable | \$ (15,000) | \$765,000 |
| Cost of goods sold | 450,000 | + Increase in inventory | 160,000 | |
| | | – Increase in accounts payable | (60,000) | 550,000 |
| Operating expenses | 160,000 | + Increase in prepaid expenses | 8,000 | |
| | | – Increase in accrued expenses payable | (20,000) | 148,000 |
| Depreciation expense | 10,000 | – Depreciation expense | (10,000) | –0– |
| Income tax expense | 48,000 | | | 48,000 |
| Total expense | 668,000 | | | 746,000 |
| Net income | \$112,000 | Net cash provided by operating activities | | \$ 19,000 |

Illustration 23.26 shows the presentation of the direct method for reporting net cash flow from operating activities for the Emig Company illustration.

ILLUSTRATION 23.26**Operating Activities Section—
Direct Method, 2020**

| Emig Company Statement of Cash Flows (partial) | | |
|---|-----------|------------------|
| Cash flows from operating activities | | |
| Cash received from customers | | \$765,000 |
| Cash payments: | | |
| To suppliers | \$550,000 | |
| For operating expenses | 148,000 | |
| For income taxes | 48,000 | 746,000 |
| Net cash provided by operating activities | | \$ 19,000 |

If Emig Company uses the direct method to present the net cash flow from operating activities, it must provide in a separate schedule the reconciliation of net income to net cash provided by operating activities. The reconciliation assumes the identical form and content of the indirect method of presentation, as shown in **Illustration 23.27**.

ILLUSTRATION 23.27**Reconciliation of Net Income
to Net Cash Provided by
Operating Activities**

| Emig Company Reconciliation | | |
|---|-----------|------------------|
| Net income | | \$112,000 |
| Adjustments to reconcile net income to net cash provided by operating activities: | | |
| Depreciation expense | \$ 10,000 | |
| Increase in accounts receivable | (15,000) | |
| Increase in inventory | (160,000) | |
| Increase in prepaid expenses | (8,000) | |
| Increase in accounts payable | 60,000 | |
| Increase in accrued expense payable | 20,000 | (93,000) |
| Net cash provided by operating activities | | \$ 19,000 |

When the direct method is used, the company may present this reconciliation at the bottom of the statement of cash flows or in a separate schedule.

Evolving Issue Direct versus Indirect

The most contentious decision that the FASB faced related to cash flow reporting was choosing between the direct method and the indirect method of determining net cash flow from operating activities. Companies lobbied *against* the direct method, urging adoption of the indirect method. However, commercial lending officers expressed to the FASB a strong preference in favor of the direct method. What are the arguments in favor of each of the methods?

In Favor of the Direct Method

The principal advantage of the direct method is that **it shows operating cash receipts and payments**. Thus, it is more consistent with the objective of a statement of cash flows—to provide information about cash receipts and cash payments—than the indirect method, which does not report operating cash receipts and payments.

Supporters of the direct method contend that knowledge of the specific sources of operating cash receipts and the purposes for which operating cash payments were made in past periods is useful in estimating future operating cash flows. Furthermore, information about amounts of major classes of operating cash receipts and payments is more useful than information only about their arithmetic sum (the net cash flow from operating activities). Such information is more revealing of a company's ability (1) to generate sufficient cash from operating activities to pay its debts, (2) to reinvest in its operations, and (3) to make distributions to its owners. [3]

Indeed, a comprehensive review of academic research related to direct method cash flow presentation indicates that financial statement users prefer the direct method and that the direct method generally provides decision-useful information. That is, the direct method information is reflected in stock prices indicating that users appear to utilize this information when available.

Many companies indicate that they do not currently collect information in a manner that allows them to determine amounts such as cash received from customers or cash paid to suppliers directly from their accounting systems. But supporters of the direct method contend that the incremental cost of determining operating cash receipts and payments is not significant.

In Favor of the Indirect Method

The principal advantage of the indirect method is that **it focuses on the differences between net income and net cash flow from operating activities**. That is, it provides a useful link between the statement of cash flows and the income statement and balance sheet.

Many companies contend that it is less costly to adjust net income to net cash flow from operating activities (indirect) than it is to report gross operating cash receipts and payments (direct). Supporters of the indirect method also state that the direct method, which effectively reports income statement information on a cash rather than an accrual basis, may erroneously suggest that net cash flow from operating activities is as good as, or better than, net income as a measure of performance.

In their joint financial statement presentation project, the FASB and the IASB proposed to allow only the direct method. However, there has been significant pushback on this proposal, which suggests that the choice of either the direct or indirect method will continue to be available.

See also the FASB website: click on Projects and then Search on Inactive Joint FASB/IASB Projects. See also T. Whitehouse, "FASB Proposal May Foreshadow Changes to Cash Flow Rules," *www.complianceweek.com* (April 24, 2015).

Special Reporting Rules Applying to Direct and Indirect Methods

Companies that use the direct method are required, at a minimum, to report separately the following classes of operating cash receipts and payments (see **Global View**):

Receipts

1. Cash collected from customers (including lessees, licensees, etc.).
2. Interest and dividends received.
3. Other operating cash receipts, if any.

Payments

1. Cash paid to employees and suppliers of goods or services (including suppliers of insurance, advertising, etc.).
2. Interest paid.
3. Income taxes paid.
4. Other operating cash payments, if any.

The FASB encourages companies to provide further breakdowns of operating cash receipts and payments that they consider meaningful.

Companies using the indirect method must disclose separately changes in inventory, receivables, and payables in order to reconcile net income to net cash flow from operating activities. In addition, they must disclose, elsewhere in the financial statements or in accompanying notes, interest paid (net of amount capitalized) and income taxes paid.⁶ The FASB requires these separate and additional disclosures so that users may approximate the direct method. Also, an acceptable alternative presentation of the indirect method is to report net cash flow from operating activities as a single line item in the statement of cash flows and to present the reconciliation details elsewhere in the financial statements.

Global View

Consolidated statements of cash flows may be of limited use to analysts evaluating multinational companies. Without disaggregation, users of such statements are not able to determine "where in the world" the funds are sourced and used.

⁶*Accounting Trends and Techniques* indicates that of the 500 companies surveyed, 207 disclosed interest paid in notes to the financial statements, 257 disclosed interest paid at the bottom of the statement of cash flows, 7 disclosed interest paid within the statement of cash flows, and 29 reported no separate amount. Income taxes paid during the year were disclosed in a manner similar to interest payments.

Finally, the FASB **encourages** the use of the direct method over the indirect method. If a company uses the direct method of reporting net cash flow from operating activities, the FASB **requires** that the company provide in a separate schedule a reconciliation of net income to net cash flow from operating activities. If a company uses the indirect method, it can either report the reconciliation within the statement of cash flows or can provide it in a separate schedule, with the statement of cash flows reporting only the **net** cash flow from operating activities. [4]

Special Problems in Statement Preparation

LEARNING OBJECTIVE 4

Discuss special problems in preparing a statement of cash flows.

We discussed some of the special problems related to preparing the statement of cash flows in connection with the preceding illustrations. Other problems that arise with some frequency in the preparation of this statement include the following.

1. Adjustments to net income.
2. Accounts receivable (net).
3. Other working capital changes.
4. Net losses.
5. Significant noncash transactions.

Adjustments to Net Income

Depreciation and Amortization

Depreciation expense is the most common adjustment to net income that companies make to arrive at net cash flow from operating activities. But there are numerous other noncash expense or revenue items. Examples of expense items that companies must add back to net income are the **amortization of limited-life intangible assets** such as patents, and the **amortization of deferred costs** such as bond issue costs. These charges to expense involve expenditures made in prior periods that a company amortizes currently. These charges reduce net income without affecting cash in the current period.

Also, **amortization of bond discount or premium** on long-term bonds payable affects the amount of interest expense. However, neither affects cash. As a result, a company should add back discount amortization and subtract premium amortization from net income to arrive at net cash flow from operating activities.

Postretirement Benefit Costs

If a company has postretirement costs such as an employee pension plan, chances are that the pension expense recorded during a period will either be higher or lower than the cash funded. It will be higher when there is an increase in the unfunded liability and will be lower when there is a decrease. When the expense is higher or lower than the cash paid, **the company must adjust net income by the difference between cash paid and the expense reported** in computing net cash flow from operating activities.

Changes in Deferred Income Taxes

Changes in deferred income taxes affect net income but have no effect on cash. For example, **Delta Air Lines** reported an increase in its liability for deferred taxes of approximately \$1.2 billion. This change in the liability increased tax expense and decreased net income, but

did not affect cash. Therefore, Delta added back \$1.2 billion to net income on its statement of cash flows.

Equity Method of Accounting

Another common adjustment to net income is a **change related to an investment in common stock** when recording income or loss under the equity method. Recall that under the equity method, the investor (1) debits the investment account and credits revenue for its share of the investee's net income, and (2) credits dividends received to the investment account. Therefore, the net increase in the investment account does not affect cash flow. A company must deduct the net increase from net income to arrive at net cash flow from operating activities.

Assume that Victor Co. owns 40 percent of Milo Inc. During the year, Milo reports net income of \$100,000 and pays a cash dividend of \$30,000. Victor reports this in its statement of cash flows as a deduction from net income in the following manner—Equity in earnings of Milo, net of dividends, \$28,000 $[(\$100,000 - \$30,000) \times .40]$.

Losses and Gains

Realized Losses and Gains In the illustration for Tax Consultants, the company experienced a loss of \$2,000 from the sale of equipment. The company added this loss to net income to compute net cash flow from operating activities because **the loss is a noncash charge in the income statement**.

If Tax Consultants experiences a **gain** from a sale of equipment, it too requires an adjustment to net income. Because a company reports the gain in the statement of cash flows as part of the cash proceeds from the sale of equipment under investing activities, **it deducts the gain from net income to avoid double-counting**—once as part of net income and again as part of the cash proceeds from the sale.

To illustrate, assume that Lynch Co. had land with a carrying value of \$100,000 that it sold for \$110,000, resulting in a gain of \$10,000. In the statement of cash flows (indirect method), the company would deduct the \$10,000 gain from net income in the operating activities section. It would report the \$110,000 cash inflow from the sale as an investing activity, as follows.

| | |
|--------------------------------------|-----------|
| Cash flows from investing activities | |
| Sale of land | \$110,000 |

Unrealized Losses and Gains Unrealized losses and gains often result for investments in debt and equity securities. For example, assume that **Target** purchases the following three investments on January 10, 2020:

1. Debt investment for \$1 million that is classified as trading. During 2020, the debt investment has an unrealized holding gain of \$110,000 (recorded in net income).
2. Debt investment for \$600,000 that is classified as available-for-sale. During 2020, the available-for-sale debt investment has an unrealized holding loss of \$50,000 (recorded in other comprehensive income).
3. Equity investment for \$200,000 in the stock of Groesch Company (the number of shares purchased represents less than 20 percent of Groesch common stock). During 2020, the Groesch investment has an unrealized holding gain of \$15,000 (recorded in net income).

For Target, the unrealized holding gain of \$110,000 on the debt investment increases net income but does not increase net cash flow from operating activities. As a result, the unrealized holding gain of \$110,000 is deducted from net income to compute net cash flow from operating activities.

On the other hand, the unrealized holding loss of \$50,000 that Target incurs on the available-for-sale debt investment does not affect net income or cash flows—this loss is reported in the other comprehensive income section. As a result, no adjustment to net income is necessary in computing net cash flow from operating activities.

Finally, the unrealized holding gain of \$15,000 on the equity investment increases net income but does not increase net cash flow from operating activities. As a result, the unrealized

holding gain of \$15,000 is deducted from net income to compute net cash flow from operating activities.

Thus, the general rule is that unrealized holding gains or losses that affect net income must be adjusted to determine net cash flow from operating activities. Conversely, unrealized holding gains or losses that do not affect net income are not adjusted to determine net cash flow from operating activities.

Stock Options

Recall for share-based compensation plans that companies are required to use the fair value method to determine total compensation cost. The compensation cost is then recognized as an expense in the periods in which the employee provides services. When Compensation Expense is debited, Paid-in Capital—Stock Options is often credited. Cash is not affected by recording the expense. **Therefore, the company must increase net income by the amount of compensation expense from stock options in computing net cash flow from operating activities.**

To illustrate how this information should be reported on a statement of cash flows, assume that First Wave Inc. grants 5,000 options to its CEO, Ann Johnson. Each option entitles Johnson to purchase one share of First Wave's \$1 par value common stock at \$50 per share at any time in the next two years (the service period). The fair value of the options is \$200,000. First Wave records compensation expense in the first year as follows.

| | | |
|---|---------|---------|
| Compensation Expense ($\$200,000 \div 2$) | 100,000 | |
| Paid-in Capital—Stock Options | | 100,000 |

In addition, if we assume that First Wave has a 20 percent tax rate, it would recognize a deferred tax asset of \$20,000 ($\$100,000 \times .20$) in the first year as follows.

| | | |
|--------------------|--------|--------|
| Deferred Tax Asset | 20,000 | |
| Income Tax Expense | | 20,000 |

Therefore, on the statement of cash flows for the first year, First Wave reports the following (assuming a net income of \$600,000).

| | |
|---|-----------|
| Net income | \$600,000 |
| Adjustments to reconcile net income to net cash provided by operating activities: | |
| Share-based compensation expense | 100,000 |
| Increase in deferred tax asset | (20,000) |

As shown in First Wave's statement of cash flows, it adds the share-based compensation expense to net income because it is a noncash expense. The increase in the deferred tax asset and the related reduction in income tax expense increase net income. Although the negative income tax expense increases net income, it does not increase cash. Therefore, it should be deducted.

Subsequently, if Ann Johnson exercises her options, First Wave reports "Cash provided by exercise of stock options" in the financing section of the statement of cash flows.⁷

⁷Companies receive a tax deduction related to share-based compensation plans at the time employees exercise their options. The amount of the deduction is equal to the difference between the market price of the stock and the exercise price at the date the employee purchases the stock, which in most cases is much larger than the total compensation expense recorded. When the tax deduction exceeds the total compensation recorded, this provides an additional cash inflow to the company. For example, in a recent year **Cisco Systems** reported an additional cash inflow related to its stock-option plans equal to \$537 million. Under current GAAP, this tax-related cash inflow is reported in the operating section of the statement of cash flows. [5]

Unusual and Infrequent Items

Companies should report **either as investing activities or as financing activities** cash flows from unusual and infrequent transactions and other events whose effects are included in net income but which are not related to operations.

For example, assume that Tax Consultants had land with a carrying value of \$200,000, which was condemned by the state of Maine for a highway project. The condemnation proceeds received were \$205,000, resulting in a gain of \$5,000 less \$2,000 of taxes. In the statement of cash flows (indirect method), the company would deduct the \$5,000 gain from net income in the operating activities section. It would report the \$205,000 cash inflow from the condemnation as an investing activity, as follows.

| | |
|--------------------------------------|-----------|
| Cash flows from investing activities | |
| Condemnation of land | \$205,000 |

Note that Tax Consultants handles the gain at its **gross** amount (\$5,000), not net of tax. The company reports the cash received in the condemnation as an investing activity at \$205,000, also exclusive of the tax effect.

The FASB requires companies to classify **all income taxes paid as operating cash outflows**. Some suggested that income taxes paid be allocated to investing and financing transactions. But the Board decided that allocation of income taxes paid to operating, investing, and financing activities would be so complex and arbitrary that the benefits, if any, would not justify the costs involved (see **Underlying Concepts**). Under both the direct method and the indirect method, companies must disclose the total amount of income taxes paid.⁸

Underlying Concepts

By rejecting the requirement to allocate taxes to the various activities, the FASB invoked the cost constraint. The information would be beneficial, but the cost of providing such information would exceed the benefits of providing it.

Accounts Receivable (Net)

Up to this point, we assumed no allowance for doubtful accounts—a contra account—to offset accounts receivable. However, if a company needs an allowance for doubtful accounts, how does that allowance affect the company's determination of net cash flow from operating activities? For example, assume that Redmark Co. reports net income of \$40,000. It has the accounts receivable balances as shown in **Illustration 23.28**.

| | 2020 | 2019 | Change Increase/Decrease |
|---------------------------------|------------------|-----------------|-----------------------------|
| Accounts receivable | \$105,000 | \$90,000 | \$15,000 Increase |
| Allowance for doubtful accounts | (10,000) | (4,000) | 6,000 Increase |
| Accounts receivable (net) | <u>\$ 95,000</u> | <u>\$86,000</u> | 9,000 Increase |

ILLUSTRATION 23.28

Accounts Receivable Balances, Redmark Co.

Indirect Method

Because an increase in Allowance for Doubtful Accounts results from a charge to bad debt expense, a company should add back an increase in Allowance for Doubtful Accounts to net income to arrive at net cash flow from operating activities. **Illustration 23.29** shows one method for presenting this information in a statement of cash flows.

⁸For an insightful article on some weaknesses and limitations in the statement of cash flows, see Hugo Nurnberg, "Inconsistencies and Ambiguities in Cash Flow Statements Under FASB Statement No. 95," *Accounting Horizons* (June 1993), pp. 60–73. Nurnberg identifies the inconsistencies caused by the three-way classification of all cash receipts and cash payments, gross versus net of tax, the ambiguous disclosure requirements for noncash investing and financing transactions, and the ambiguous presentation of third-party financing transactions. See also Paul B. W. Miller and Bruce P. Budge, "Nonarticulation in Cash Flow Statements and Implications for Education, Research, and Practice," *Accounting Horizons* (December 1996), pp. 1–15; and Charles Mulford and Michael Ely, "Calculating Sustainable Cash Flow: A Study of the S&P 100," *Georgia Tech Financial Analysis Lab* (October 2004).

ILLUSTRATION 23.29
Presentation of Allowance for Doubtful Accounts—Indirect Method

| Redmark Co. Statement of Cash Flows (partial) For the Year 2020 | | |
|---|------------|-----------------|
| Cash flows from operating activities | | |
| Net income | | \$40,000 |
| Adjustments to reconcile net income to net cash provided by operating activities: | | |
| Increase in accounts receivable | \$(15,000) | |
| Increase in allowance for doubtful accounts | 6,000 | (9,000) |
| | | <u>\$31,000</u> |

As we indicated, the increase in the Allowance for Doubtful Accounts balance results from a charge to bad debt expense for the year. Because bad debt expense is a noncash charge, a company must add it back to net income in arriving at net cash flow from operating activities.

Instead of separately analyzing the allowance account, a shortcut approach is to net the allowance balance against the receivable balance and compare the change in accounts receivable on a net basis. **Illustration 23.30** shows this presentation.

ILLUSTRATION 23.30
Net Approach to Allowance for Doubtful Accounts—Indirect Method

| Redmark Co. Statement of Cash Flows (partial) For the Year 2020 | | |
|---|--|-----------------|
| Cash flows from operating activities | | |
| Net income | | \$40,000 |
| Adjustments to reconcile net income to net cash provided by operating activities: | | |
| Increase in accounts receivable (net) | | (9,000) |
| | | <u>\$31,000</u> |

This shortcut procedure works also if the change in the allowance account results from a write-off of accounts receivable. This reduces both Accounts Receivable and Allowance for Doubtful Accounts. No effect on cash flows occurs. *Because of its simplicity, use the net approach for your homework assignments.*

Direct Method

If using the direct method, a company **should not net** Allowance for Doubtful Accounts against Accounts Receivable. To illustrate, assume that Redmark Co.'s net income of \$40,000 consisted of the items shown in **Illustration 23.31**.

ILLUSTRATION 23.31
Income Statement, Redmark Co.

| Redmark Co. Income Statement For the Year 2020 | | |
|--|----------|------------------|
| Sales revenue | | \$100,000 |
| Expenses | | |
| Salaries | \$46,000 | |
| Utilities | 8,000 | |
| Bad debts | 6,000 | 60,000 |
| Net income | | <u>\$ 40,000</u> |

If Redmark deducts the \$9,000 increase in accounts receivable (net) from sales for the year, it would report cash sales at \$91,000 (\$100,000 – \$9,000) and cash payments for operating expenses at \$60,000. Both items would be misstated: Cash sales should be reported at \$85,000 (\$100,000 – \$15,000), and total cash payments for operating expenses should be reported at \$54,000 (\$60,000 – \$6,000). **Illustration 23.32** shows the proper presentation.

| Redmark Co. | | |
|---|--------------|-----------------|
| Statement of Cash Flows (partial) | | |
| For the Year 2020 | | |
| Cash flows from operating activities | | |
| Cash received from customers | | \$85,000 |
| Salaries paid | \$46,000 | |
| Utilities paid | <u>8,000</u> | <u>54,000</u> |
| Net cash provided by operating activities | | <u>\$31,000</u> |

ILLUSTRATION 23.32**Bad Debts—Direct Method**

An added complication develops when a company writes off accounts receivable. Simply adjusting sales for the change in accounts receivable will not provide the proper amount of cash sales. The reason is that the write-off of the accounts receivable is not a cash collection. Thus, an additional adjustment is necessary.

What Do the Numbers Mean? Not What It Seems

The controversy over direct and indirect methods highlights the importance that the market attributes to operating cash flow. By showing an improving cash flow, a company can give a favorable impression of its ongoing operations. For example, **WorldCom** concealed declines in its operations by capitalizing certain operating expenses—to the tune of \$3.8 billion! This practice not only “juiced up” income but also made it possible to report the cash payments in the investing section of the cash flow statement rather than as a deduction from operating cash flow.

The SEC recently addressed a similar cash flow classification issue with automakers like **Ford**, **GM**, and **Chrysler**. For years, automakers classified lease receivables and other dealer-financing arrangements as investment cash flows. Thus, they reported an increase in lease or loan receivables from cars sold as a use of cash in the investing section of the statement of cash flows. The SEC objected and now requires automakers to report these receivables as operating cash flows, since the leases and loans are used to facilitate car sales. At GM, these reclassifications reduced its operating cash flows from \$7.6 billion to \$3 billion in the year before the change.

In the banking industry, how banks classify their investments, deposits, and cash flow from acquisitions results in huge swings in operating cash flows, both downward (**Bank of America**) and upward (**KeyCorp**). According to one analyst, “As it stands now, banks can’t be reliably compared to each other by their recorded cash flow from operations . . . operating cash flow

for a bank is basically meaningless.” Another questionable cash flow classification for banks is the characterization of increases and decreases in deposits as a financing cash flow. Many analysts believe customer-driven deposits should be accounted for under operating cash flow (rather than as a financing cash flow) since “the very health of a bank’s operations depends on its deposit base and its ability to attract a growing stream of deposits.” So while the overall cash flow—from operations, investing, and financing—remained the same, operating cash flow at these companies looked better than it really was.

In response to cash flow classification debates, the FASB, working with the Emerging Issues Task Force, issued guidance to address diversity in practice related to cash flow reporting. [6] The eight topics addressed ranged from the reporting of beneficial interests of securitization transactions (discussed in the earlier What Do the Numbers Mean? box entitled “Earnings and Cash Flow Management?”) to cash flows from debt prepayments. These issues are generally beyond the topics addressed in this course.

Katz, “FASB Revisits the Cash Flow Statement,” *CFO.com* (September 30, 2014); and J. Ciesielski, “Statement of Cash Flows Fixes,” *The Analyst’s Accounting Observer* (November 21, 2016).

Other Working Capital Changes

Up to this point, we showed how companies handled all of the changes in working capital items (current asset and current liability items) as adjustments to net income in determining net cash flow from operating activities. You must be careful, however, because **some changes**

in working capital, although they affect cash, do not affect net income. Generally, these are investing or financing activities of a current nature.

One activity is the purchase of **short-term available-for-sale debt securities**. For example, the purchase of short-term available-for-sale debt securities for \$50,000 cash has no effect on net income but it does cause a \$50,000 decrease in cash. A company reports this transaction as a cash flow from investing activities as follows. [7]

| | |
|---|------------|
| Cash flows from investing activities | |
| Purchase of short-term available-for-sale debt securities | \$(50,000) |

What about **trading securities**? Because companies hold these investments principally for the purpose of selling them in the near term, companies should classify the cash flows from purchases and sales of trading securities as cash flows from **operating activities**. [8]⁹

Another example is the issuance of a **short-term nontrade note payable** for cash. This change in a working capital item has no effect on income from operations but it increases cash by the amount of the note payable. For example, a company reports the issuance of a \$10,000 short-term note payable for cash in the statement of cash flows as follows.

| | |
|--------------------------------------|----------|
| Cash flows from financing activities | |
| Issuance of short-term note | \$10,000 |

Another change in a working capital item that has no effect on income from operations or on cash is a **cash dividend payable**. Although a company will report the cash dividends when paid as a financing activity, it does not report the declared but unpaid dividend on the statement of cash flows.

Net Losses

If a company reports a net loss instead of a net income, it must adjust the net loss for those items that do not result in a cash inflow or outflow. The net loss, after adjusting for the charges or credits not affecting cash, may result in a negative or a positive cash flow from operating activities.

For example, if the net loss is \$50,000 and the total amount of charges to add back is \$60,000, then net cash provided by operating activities is \$10,000. **Illustration 23.33** shows this computation.

ILLUSTRATION 23.33

Computation of Net Cash Flow from Operating Activities—Cash Inflow

| | | |
|---|----------|-------------------------|
| Net loss | | \$(50,000) |
| Adjustments to reconcile net income to net cash provided by operating activities: | | |
| Depreciation of plant assets | \$55,000 | |
| Amortization of patents | 5,000 | 60,000 |
| Net cash provided by operating activities | | <u>\$ 10,000</u> |

If the company experiences a net loss of \$80,000 and the total amount of the charges to add back is \$25,000, the presentation appears as shown in **Illustration 23.34**.

⁹If the basis of the statement of cash flows is **cash and cash equivalents** and the short-term investment is considered a cash equivalent, then a company reports nothing in the statement because the transaction does not affect the balance of cash and cash equivalents. The Board notes that cash purchases of short-term investments generally are part of the company's cash management activities rather than part of its operating, investing, or financing activities.

| | |
|---|---------------------------------|
| Net loss | \$(80,000) |
| Adjustments to reconcile net income to net cash used by operating activities: | |
| Depreciation of plant assets | <u>25,000</u> |
| Net cash used by operating activities | <u><u>\$(55,000)</u></u> |

ILLUSTRATION 23.34**Computation of Net Cash Flow from Operating Activities—Cash Outflow**

Although not illustrated in this chapter, a negative cash flow may result even if the company reports a net income.

Significant Noncash Transactions

Because the statement of cash flows reports only the effects of operating, investing, and financing activities in terms of cash flows, it omits some **significant noncash transactions** and other events that are investing or financing activities. Among the more common of these non-cash transactions that a company should report or disclose in some manner are the following.

1. Acquisition of assets by assuming liabilities (including capital lease obligations) or by issuing equity securities.
2. Exchanges of nonmonetary assets.
3. Refinancing of long-term debt.
4. Conversion of debt or preferred stock to common stock.
5. Issuance of equity securities to retire debt.

A company does not incorporate these noncash items in the statement of cash flows. If material in amount, these disclosures may be either narrative or summarized in a separate schedule at the bottom of the statement, or they may appear in a separate note or supplementary schedule to the financial statements.¹⁰ **Illustration 23.35** shows the presentation of these significant noncash transactions or other events in a separate schedule at the bottom of the statement of cash flows.

| | |
|--|---------------------------|
| Net increase in cash | \$3,717,000 |
| Cash at beginning of year | <u>5,208,000</u> |
| Cash at end of year | <u><u>\$8,925,000</u></u> |
| Noncash investing and financing activities | |
| Purchase of land and building through issuance of 250,000 shares of common stock | \$1,750,000 |
| Exchange of Steadfast, NY, land for Bedford, PA, land | \$2,000,000 |
| Conversion of 7% bonds to 50,000 shares of common stock | \$500,000 |

ILLUSTRATION 23.35**Schedule Presentation of Noncash Investing and Financing Activities**

Or, companies may present these noncash transactions in a separate note, as shown in **Illustration 23.36**.

¹⁰Some noncash investing and financing activities are part cash and part noncash. Companies should report only the cash portion on the statement of cash flows. The noncash component should be reported at the bottom of the statement or in a separate note. A study of significant noncash investing and financing activities found that the effects of these transactions—debt issued for capital assets and capital lease financing of capital assets—can have a significant effect on analysts' assessments of capital expenditures and free cash flow. Given the importance of noncash capital expenditures to calculations of free cash flow, the authors encourage the FASB to revise its stance regarding the exclusion of all noncash activities from the statement of cash flows. See C. Mulford and H. Nicholson, "Measuring the Effects of Non-Cash Investing and Financing Activities," *Journal of Applied Research in Accounting and Finance* (Vol. 9, No. 1, 2014), pp. 27–43.

ILLUSTRATION 23.36**Note Presentation of
Noncash Investing and
Financing Activities**

Note G: Significant noncash transactions. During the year, the company engaged in the following significant noncash investing and financing transactions:

| | |
|---|-------------|
| Issued 250,000 shares of common stock to purchase land and building | \$1,750,000 |
| Exchanged land in Steadfast, NY, for land in Bedford, PA | \$2,000,000 |
| Converted 7% bonds to 50,000 shares of common stock | \$500,000 |

Companies do not generally report certain other significant noncash transactions or other events in conjunction with the statement of cash flows. Examples of these types of transactions are **stock dividends, stock splits, and restrictions on retained earnings**. Companies generally report these items, neither financing nor investing activities, in conjunction with the statement of stockholders' equity or schedules and notes pertaining to changes in capital accounts.

What Do the Numbers Mean? Better Than ROA?

As you have learned in your study of accounting, both accounting income (measured under accrual-accounting principles) and cash flow from operations can provide useful information. However, both measures are sometimes criticized. Accounting income is sometimes faulted for the multitude of judgments required to determine revenues and expenses. In addition, many companies can boost an earnings-based metric, return on equity, by piling on debt which also makes the company riskier, not better. On the other hand, cash flow performance metrics are criticized because they do not follow the revenue and expense recognition principles.

So what's a better way to measure how profitable companies really are? Or, adopting master investor Warren Buffett's view of investing: How do you find companies that consistently generate big returns on invested capital? Recently, a new measure of profitability, "COROA"—for cash operating return on assets—has been proposed to provide a better performance metric. The idea is to measure management's ability to generate pure cash returns, not cash expected in the future, on every dollar invested in property, plant, and equipment; R&D centers; inventories; and all other assets.

Specifically, COROA is computed by starting with the cash flow from operations amount and then adding back cash taxes and cash interest to calculate pure operating cash flows. That's the dollar amount that the company actually puts in its coffers during the year—and which could be used to pay dividends, make

"investments" by purchasing companies or divisions, and fund capital expenditures, especially those that propel growth. That's the numerator. Adjustments for taxes and interest are fundamental to this COROA measure. This is because falling taxes can create the illusion of ongoing progress. Interest is added back because it primarily reflects the level of leverage but has nothing to do with how well management is managing their assets.

The denominator consists of every dollar spent on the assets that produce those operating cash flows. To calculate that figure, take "total assets" from the balance sheet and add "accumulated depreciation" to account for operating assets that are still being used to make cars, semiconductors, or other products that, for accounting purposes, are fully expensed.

Thus, COROA—adjusted cash flow from operations as a percentage of total assets—is the ratio to keep an eye on. It's the best measure of pure profitability. If the number has been high for a while and is either staying high or improving, evidence is strong that the company is generating strong returns from its new investments. That's the quality that Buffett looks for. And according to accounting guru Jack Ciesielski, it's all about cash. "What's more important in the world than cash?" he asks. "Why, it's *more* cash, of course."

Use of a Worksheet

LEARNING OBJECTIVE 5

Explain the use of a worksheet in preparing a statement of cash flows.

When numerous adjustments are necessary or other complicating factors are present, companies often use **a worksheet to assemble and classify the data that will appear on the statement of cash flows**. The worksheet is merely a device that aids in the preparation of the statement. Its use is optional. **Illustration 23.37** shows the skeleton format of the worksheet for preparation of the statement of cash flows using the indirect method.

ILLUSTRATION 23.37**Format of Worksheet for Preparation of Statement of Cash Flows**

The following guidelines are important in using a worksheet.

1. In the balance sheet accounts section, **list accounts with debit balances separately from those with credit balances.** This means, for example, that Accumulated Depreciation is listed under credit balances and not as a contra account under debit balances. Enter the beginning and ending balances of each account in the appropriate columns. Then, enter the transactions that caused the change in the account balance during the year as reconciling items in the two middle columns.

After all reconciling items have been entered, each line pertaining to a balance sheet account should foot across. That is, the beginning balance plus or minus the reconciling item(s) must equal the ending balance. When this agreement exists for all balance sheet accounts, all changes in account balances have been reconciled.

2. The bottom portion of the worksheet consists of the operating, investing, and financing activities sections. Accordingly, it provides the information necessary to prepare the formal statement of cash flows. **Enter inflows of cash as debits in the reconciling columns, and outflows of cash as credits in the reconciling columns.** Thus, in this section, a company would enter the sale of equipment for cash at book value as a debit under inflows of cash from investing activities. Similarly, it would enter the purchase of land for cash as a credit under outflows of cash from investing activities.
3. **Do not enter in any journal or post to any account the reconciling items shown in the worksheet.** These items do not represent either adjustments or corrections of the balance sheet accounts. They are used only to facilitate the preparation of the statement of cash flows.

Preparation of the Worksheet

The preparation of a worksheet involves the following steps.

Step 1. Enter the balance sheet accounts and their beginning and ending balances in the balance sheet accounts section.

Step 2. Enter the data that explain the changes in the balance sheet accounts (other than cash) and their effects on the statement of cash flows in the reconciling columns of the worksheet.

Step 3. Enter the increase or decrease in cash on the cash line and at the bottom of the worksheet. This entry should enable the totals of the reconciling columns to be in agreement.

To illustrate the preparation and use of a worksheet and to illustrate the reporting of some of the special problems discussed in the prior section, we present a comprehensive example for Satellite Corporation. Again, the indirect method serves as the basis for the computation of net cash provided by operating activities. **Illustrations 23.38** and **23.39** present the balance sheet, combined statement of income and retained earnings, and additional information for Satellite Corporation.

| Other gains and losses | | |
| Gain on condemnation of land | | <u>8,000</u> |
| Income before income taxes | | 169,000 |
| Income taxes | | |
| Current | 49,000 | |
| Deferred | <u>3,000</u> | <u>52,000</u> |
| Net income | | 117,000 |
| Retained earnings, January 1 | | 496,000 |
| Less: | | |
| Cash dividends | 6,000 | |
| Stock dividend | <u>15,000</u> | <u>21,000</u> |
| Retained earnings, December 31 | | <u>\$592,000</u> |
| Per share: | | |
| Net income | | <u>\$2.13</u> |

Additional Information

(a) Other revenue of \$3,500 represents Satellite's equity share in the net income of Porter Co., an equity investee. Satellite owns 22% of Porter Co.

(b) An analysis of the equipment account and related accumulated depreciation indicates the following:

| | Equipment <u>Dr./(Cr.)</u> | Accum. Dep. <u>Dr./(Cr.)</u> | Gain or <u>(Loss)</u> |
|---|-------------------------------|---------------------------------|--------------------------|
| Balance at end of 2019 | \$142,000 | \$(31,000) | |
| Purchases of equipment | 53,000 | | |
| Sale of equipment | (8,000) | 2,500 | \$(1,500) |
| Depreciation for the period | | (11,500) | |
| Major repair charged to accumulated depreciation | | <u>11,000</u> | |
| Balance at end of 2020 | <u>\$187,000</u> | <u>\$(29,000)</u> | |

(c) Land in the amount of \$60,000 was purchased through the issuance of a long-term note; in addition, certain parcels of land costing \$10,500 were condemned. The state government paid Satellite \$18,500, resulting in an \$8,000 gain.

(d) The change in the Accumulated Depreciation—Buildings, Trademarks, and Premium on Bonds Payable accounts resulted from depreciation and amortization entries.

(e) An analysis of the paid-in capital accounts in stockholders' equity discloses the following.

| | Common Stock | Paid-In Capital in Excess of Par—Common Stock |
|-------------------------------|-----------------|--|
| Balance at end of 2019 | \$50,000 | \$ 38,000 |
| Issuance of 2% stock dividend | 1,000 | 14,000 |
| Sale of stock for cash | <u>9,000</u> | <u>135,000</u> |
| Balance at end of 2020 | <u>\$60,000</u> | <u>\$187,000</u> |

(f) Interest paid (net of amount capitalized) is \$9,000; income taxes paid is \$47,000.

The discussion that follows provides additional explanations related to the preparation of the worksheet shown in **Illustration 23.40**.

| Decrease in cash | | (18) 7,000 | | | | |
| Totals | | | \$704,500 | | \$704,500 | |

Analysis of Transactions

The following discussion explains the individual adjustments that appear on the worksheet in Illustration 23.40. Because cash is the basis for the analysis, Satellite reconciles the Cash account last. Because income is the first item that appears on the statement of cash flows, it is handled first.

Change in Retained Earnings

Net income for the period is \$117,000. The entry for it on the worksheet is as follows.

| | | | |
|----------------------|-----|---------|---------|
| | (1) | | |
| Operating—Net Income | | 117,000 | |
| Retained Earnings | | | 117,000 |

Satellite reports net income on the bottom section of the worksheet. This **is the starting point for preparation of the statement of cash flows (under the indirect method)**.

A stock dividend and a cash dividend also affected retained earnings. The retained earnings statement reports a stock dividend of \$15,000. The worksheet entry for this transaction is as follows.

| | | | |
|---|-----|--------|--------|
| | (2) | | |
| Retained Earnings | | 15,000 | |
| Common Stock | | | 1,000 |
| Paid-in Capital in Excess of Par—Common Stock | | | 14,000 |

| Retained Earnings | | | |
|-------------------|--------|------|---------|
| (2) | 15,000 | Bal. | 496,000 |
| (3) | 6,000 | (1) | 117,000 |
| | | Bal. | 592,000 |

The issuance of stock dividends is not a cash operating, investing, or financing item. Therefore, **although the company enters this transaction on the worksheet for reconciling purposes, it does not report it in the statement of cash flows.**

The \$6,000 cash dividend paid represents a financing activity cash outflow. Satellite makes the following worksheet entry:

| | | | |
|--------------------------|-----|-------|-------|
| | (3) | | |
| Retained Earnings | | 6,000 | |
| Financing—Cash Dividends | | | 6,000 |

The company reconciles the beginning and ending balances of retained earnings by entry of the three items above.

Accounts Receivable (Net)

The increase in accounts receivable (net) of \$53,000 represents adjustments that did not result in cash inflows during 2020. As a result, the company would deduct from net income the increase of \$53,000. Satellite makes the following worksheet entry.

| | | | |
|---|-----|--------|--------|
| | (4) | | |
| Accounts Receivable (net) | | 53,000 | |
| Operating—Increase in Accounts Receivable (net) | | | 53,000 |

Inventory

The increase in inventory of \$152,000 represents an operating use of cash. The incremental investment in inventory during the year reduces cash without increasing the cost of goods sold. Satellite makes the following worksheet entry.

| | | | |
|---------------------------------|-----|---------|---------|
| | (5) | | |
| Inventory | | 152,000 | |
| Operating—Increase in Inventory | | | 152,000 |

Prepaid Expense

The decrease in prepaid expenses of \$500 represents a charge in the income statement for which there was no cash outflow in the current period. Satellite should add that amount back to net income through the following entry.

| | | | |
|--|------------|-----|-----|
| | (6) | | |
| Operating—Decrease in Prepaid Expenses | | 500 | |
| Prepaid Expenses | | | 500 |

Investment in Stock

Satellite’s investment in the stock of Porter Co. increased \$3,500. This amount reflects Satellite’s share of net income earned by Porter (its equity investee) during the current year. Although Satellite’s revenue and therefore its net income increased \$3,500 by recording Satellite’s share of Porter Co.’s net income, no cash (dividend) was provided. Satellite makes the following worksheet entry.

| | | | |
|--|------------|-------|-------|
| | (7) | | |
| Equity Investments (Porter Co.) | | 3,500 | |
| Operating—Equity in Earnings of Porter Co. | | | 3,500 |

Land

Satellite purchased land in the amount of \$60,000 through the issuance of a long-term note payable. This transaction did not affect cash. It is a significant noncash investing/financing transaction that the company would disclose either in a separate schedule below the statement of cash flows or in the accompanying notes. Satellite makes the following entry to reconcile the worksheet.

| | | | |
|---------------|------------|--------|--------|
| | (8) | | |
| Land | | 60,000 | |
| Notes Payable | | | 60,000 |

| Land | | | |
|------------|----------------|------------|--------|
| Bal. | 82,000 | (9) | 10,500 |
| (8) | 60,000 | | |
| Bal. | 131,500 | | |

In addition to the noncash transaction involving the issuance of a note to purchase land, the Land account was decreased by the condemnation proceedings. The following worksheet entry records the receipt of \$18,500 for land having a book value of \$10,500.

| | | | |
|--|------------|--------|--------|
| | (9) | | |
| Investing—Proceeds from Condemnation of Land | | 18,500 | |
| Land | | | 10,500 |
| Operating—Gain on Condemnation of Land | | | 8,000 |

In reconciling net income to net cash flow from operating activities, Satellite deducts from net income the gain of \$8,000. The reason is that the transaction that gave rise to the gain is an item whose cash effect is already classified as an investing cash inflow. The Land account is now reconciled.

Equipment and Accumulated Depreciation

An analysis of Equipment and Accumulated Depreciation—Equipment shows that a number of transactions have affected these accounts. The company purchased equipment in the amount of \$53,000 during the year. Satellite records this transaction on the worksheet as follows.

| | | | |
|---------------------------------|-------------|--------|--------|
| | (10) | | |
| Equipment | | 53,000 | |
| Investing—Purchase of Equipment | | | 53,000 |

In addition, Satellite sold at a loss of \$1,500 equipment with a book value of \$5,500. It records this transaction as follows.

| | | | |
|-------------------------------------|-------------|-------|-------|
| | (11) | | |
| Investing—Sale of Equipment | | 4,000 | |
| Operating—Loss on Sale of Equipment | | 1,500 | |
| Accumulated Depreciation—Equipment | | 2,500 | |
| Equipment | | | 8,000 |

| Equipment | | | |
|-------------|---------|-------------|-------|
| Bal. | 142,000 | (11) | 8,000 |
| (10) | 53,000 | | |
| Bal. | 187,000 | | |

The proceeds from the sale of the equipment provided cash of \$4,000. In addition, the loss on the sale of the equipment has reduced net income but did not affect cash. Therefore, the company adds back to net income the amount of the loss, in order to accurately report cash provided by operating activities.

Satellite reported depreciation on the equipment at \$11,500 and recorded it on the worksheet as follows.

| | | | |
|--|-------------|--------|--------|
| | (12) | | |
| Operating—Depreciation Expense—Equipment | | 11,500 | |
| Accumulated Depreciation—Equipment | | | 11,500 |

The company adds depreciation expense back to net income because that expense reduced income but did not affect cash.

Finally, the company made a major repair to the equipment. It charged this expenditure, in the amount of \$11,000, to Accumulated Depreciation—Equipment. This expenditure required cash, and so Satellite makes the following worksheet entry.

| | | | |
|--------------------------------------|-------------|--------|--------|
| | (13) | | |
| Accumulated Depreciation—Equipment | | 11,000 | |
| Investing—Major Repairs of Equipment | | | 11,000 |

| Accumulated Depreciation— Equipment | | | |
|--|--------|-------------|--------|
| (11) | 2,500 | Bal. | 31,000 |
| (13) | 11,000 | (12) | 11,500 |
| | | Bal. | 29,000 |

After adjusting for the foregoing items, Satellite has reconciled the balances in the Equipment and related Accumulated Depreciation—Equipment accounts.

Building Depreciation and Amortization of Trademarks

Depreciation expense on the buildings of \$3,100 and amortization of trademarks of \$2,400 are both expenses in the income statement that reduced net income but did not require cash outflows in the current period. Satellite makes the following worksheet entry.

| | | | |
|--|-------------|-------|-------|
| | (14) | | |
| Operating—Depreciation Expense—Buildings | | 3,100 | |
| Operating—Amortization of Trademarks | | 2,400 | |
| Accumulated Depreciation—Buildings | | | 3,100 |
| Trademarks | | | 2,400 |

Other Noncash Charges or Credits

Analysis of the remaining accounts indicates that changes in the Accounts Payable, Accrued Liabilities, Income Taxes Payable, Premium on Bonds Payable, and Deferred Tax Liability balances resulted from charges or credits to net income that did not affect cash. The company

should individually analyze each of these items and enter them in the worksheet. The following compound entry summarizes these noncash, income-related items.

| | | | |
|--|-------------|--------|--------|
| | (15) | | |
| Income Taxes Payable | | 13,000 | |
| Premium on Bonds Payable | | 1,000 | |
| Operating—Increase in Accounts Payable | | 1,000 | |
| Operating—Increase in Accrued Liabilities | | 4,000 | |
| Operating—Increase in Deferred Tax Liability | | 3,000 | |
| Operating—Decrease in Income Taxes Payable | | | 13,000 |
| Operating—Amortization of Bond Premium | | | 1,000 |
| Accounts Payable | | | 1,000 |
| Accrued Liabilities | | | 4,000 |
| Deferred Tax Liability | | | 3,000 |

Common Stock and Related Accounts

Comparison of the Common Stock balances and the Paid-in Capital in Excess of Par—Common Stock balances shows that transactions during the year affected these accounts. First, Satellite issues a stock dividend of 2 percent to stockholders. As the discussion of worksheet entry (2) indicated, no cash was provided or used by the stock dividend transaction. In addition to the shares issued via the stock dividend, Satellite sold shares of common stock at \$16 per share. The company records this transaction as follows.

| | | | | |
|---------------------|------|--------|---|---------|
| Common Stock | | | (16) | |
| | Bal. | 50,000 | Financing—Sale of Common Stock | 144,000 |
| | (2) | 1,000 | Common Stock | 9,000 |
| | (16) | 9,000 | Paid-in Capital in Excess of Par—Common Stock | 135,000 |
| | Bal. | 60,000 | | |

| | | |
|--|------|---------|
| Paid-in Capital in Excess of Par—Common Stock | | |
| | Bal. | 38,000 |
| | (2) | 14,000 |
| | (16) | 135,000 |
| | Bal. | 187,000 |

Also, the company purchased shares of its common stock in the amount of \$17,000. It records this transaction on the worksheet as follows.

| | | | |
|--------------------------------------|-------------|--------|--------|
| | (17) | | |
| Treasury Stock | | 17,000 | |
| Financing—Purchase of Treasury Stock | | | 17,000 |

Final Reconciling Entry

The final entry to reconcile the change in cash and to balance the worksheet is shown below. The \$7,000 amount is the difference between the beginning and ending cash balance.

| | | | |
|------------------|-------------|-------|-------|
| | (18) | | |
| Decrease in Cash | | 7,000 | |
| Cash | | | 7,000 |

Once the company has determined that the differences between the beginning and ending balances per the worksheet columns have been accounted for, it can total the reconciling transactions columns, and they should balance. Satellite can prepare the statement of cash flows entirely from the items and amounts that appear at the bottom of the worksheet under “Statement of Cash Flows Effects.”

Preparation of Final Statement

Illustration 23.41 presents a formal statement of cash flows prepared from the data compiled in the lower portion of the worksheet shown in Illustration 23.40.

ILLUSTRATION 23.41**Statement of Cash Flows,
Satellite Corporation**

| Satellite Corporation Statement of Cash Flows For the Year Ended December 31, 2020 | | |
|---|-----------|------------------|
| Cash flows from operating activities | | |
| Net income | | \$117,000 |
| Adjustments to reconcile net income to net cash used by operating activities: | | |
| Depreciation expense | \$ 14,600 | |
| Amortization of trademarks | 2,400 | |
| Amortization of bond premium | (1,000) | |
| Equity in earnings of Porter Co. | (3,500) | |
| Gain on condemnation of land | (8,000) | |
| Loss on sale of equipment | 1,500 | |
| Increase in deferred tax liability | 3,000 | |
| Increase in accounts receivable (net) | (53,000) | |
| Increase in inventory | (152,000) | |
| Decrease in prepaid expenses | 500 | |
| Increase in accounts payable | 1,000 | |
| Increase in accrued liabilities | 4,000 | |
| Decrease in income taxes payable | (13,000) | (203,500) |
| Net cash used by operating activities | | (86,500) |
| Cash flows from investing activities | | |
| Proceeds from condemnation of land | 18,500 | |
| Purchase of equipment | (53,000) | |
| Sale of equipment | 4,000 | |
| Major repairs of equipment | (11,000) | |
| Net cash used by investing activities | | (41,500) |

Learning Objectives Review

1 Describe the usefulness and format of the statement of cash flows.

The primary purpose of the statement of cash flows is to provide information about cash receipts and cash payments of an entity during a period. A secondary objective is to report the entity's operating, investing, and financing activities during the period.

Companies classify cash flows as follows. (1) **Operating activities**—transactions that result in the revenues, expenses, gains, and losses that determine net income. (2) **Investing activities**—lending money and collecting on those loans, and acquiring and disposing of investments, plant assets, and intangible assets. (3) **Financing activities**—obtaining cash from creditors and repaying loans, issuing and reacquiring capital stock, and paying cash dividends.

2 Prepare a statement of cash flows.

(1) *Determine the change in cash.* This is the difference between the beginning and the ending cash balance shown on the comparative balance sheets. (2) *Determine the net cash flow from operating activities.* This procedure is complex; it involves analyzing not only the current year's income statement but also the comparative balance sheets and the selected transaction data. (3) *Determine cash flows from investing and financing activities.* Analyze all other changes in the balance sheet accounts to determine the effects on cash.

Companies must adjust net income on an accrual basis to determine net cash flow from operating activities because some expenses and losses do not cause cash outflows, and some revenues and gains do not provide cash inflows. Once a company has computed the net cash flow from operating activities, the next step is to determine whether any other changes in balance sheet accounts caused an increase or decrease in cash. Net cash flows from investing and financing activities can be determined primarily by examining the changes in noncurrent balance sheet accounts.

The information to prepare the statement usually comes from three sources. (1) *Comparative balance sheets:* Information in these statements indicates the amount of the changes in assets, liabilities, and equities during the period. (2) *Current income statement:* Information in this statement is used in determining the cash provided by operations during the period. (3) *Selected transaction data:* These data from the general ledger provide additional detailed information needed to determine how cash was provided or used during the period.

3 Contrast the direct and indirect methods of calculating net cash flow from operating activities.

Under the direct approach, companies calculate the major classes of operating cash receipts and cash disbursements. Companies summarize the computations in a schedule of changes from the accrual- to the cash-basis income statement. Presentation of the direct approach of reporting net cash flow from operating activities takes the form of a condensed cash-basis income statement. The indirect method adds back to net income the noncash expenses and losses and subtracts the noncash revenues and gains.

4 Discuss special problems in preparing a statement of cash flows.

These special problems are (1) adjustments to income (depreciation and amortization, postretirement benefit costs, change in deferred income taxes, equity method of accounting, losses and gains, stock options, unusual and infrequent items); (2) accounts receivable (net); (3) other working capital changes; (4) net losses; and (5) significant noncash transactions.

5 Explain the use of a worksheet in preparing a statement of cash flows.

When numerous adjustments are necessary or other complicating factors are present, companies often use a worksheet to assemble and classify the data that will appear on the statement of cash flows. The worksheet is merely a device that aids in the preparation of the statement. Its use is optional.

Practice Problem

Data presented below are from the records of Antonio Brasileiro Company.

| | December 31, 2020 | December 31, 2019 |
|--------------------------------|-------------------|-------------------|
| Cash | \$ 15,000 | \$ 8,000 |
| Current assets other than cash | 85,000 | 60,000 |
| Long-term investments | 10,000 | 53,000 |
| Plant assets | 335,000 | 215,000 |
| | <u>\$445,000</u> | <u>\$336,000</u> |

| | December 31, 2020 | December 31, 2019 |
|--------------------------|-------------------|-------------------|
| Accumulated depreciation | \$ 20,000 | \$ 40,000 |
| Current liabilities | 40,000 | 22,000 |
| Bonds payable | 75,000 | -0- |
| Common stock | 254,000 | 254,000 |
| Retained earnings | 56,000 | 20,000 |
| | <u>\$445,000</u> | <u>\$336,000</u> |

Additional information:

- In 2020, the company sold for \$34,000 available-for-sale debt investments carried at a cost of \$43,000 on December 31, 2020. No unrealized gains or losses were recorded on this investment in 2020.
- In 2020, the company sold for \$8,000 plant assets that cost \$50,000 and were 80% depreciated. The loss was incorrectly charged directly to Retained Earnings.
- Net income as reported on the income statement for the year was \$48,000.
- The company paid dividends totaling \$10,000.
- Depreciation charged for the year was \$20,000.

Instructions

Prepare a statement of cash flows for the year 2020 using the indirect method.

Solution

| Antonio Brasileiro Company Statement of Cash Flows For the Year Ended December 31, 2020 Indirect Method | | |
|--|-----------|------------------|
| Cash flows from operating activities | | |
| Net income (\$48,000 – \$2,000 loss on plant assets) | | \$ 46,000 |
| Adjustments to reconcile net income to net cash provided by operating activities: | | |
| Depreciation expense | \$ 20,000 | |
| Loss on sale of investments | 9,000 | |
| Loss on sale of plant assets | 2,000 | |
| Increase in current assets other than cash | (25,000) | |
| Increase in current liabilities | 18,000 | 24,000 |
| Net cash provided by operating activities | | 70,000 |
| Cash flows from investing activities | | |
| Sale of plant assets | 8,000 | |
| Sale of investments | 34,000 | |
| Purchase of plant assets* | (170,000) | |
| Net cash used by investing activities | | (128,000) |
| Cash flows from financing activities | | |
| Issuance of bonds payable | 75,000 | |
| Payment of dividends | (10,000) | |
| Net cash provided by financing activities | | 65,000 |
| Net increase in cash | | 7,000 |
| Cash balance, January 1, 2020 | | 8,000 |
| Cash balance, December 31, 2020 | | <u>\$ 15,000</u> |

*Supporting computation (purchase of plant assets):

| | |
|---------------------------------------|------------------|
| Plant assets, December 31, 2020 | \$335,000 |
| Less: Plant assets, December 31, 2019 | 215,000 |
| Net change | 120,000 |
| Plant assets sold | 50,000 |
| Plant assets purchased | <u>\$170,000</u> |

Questions

1. What is the purpose of the statement of cash flows? What information does it provide?
2. Of what use is the statement of cash flows?
3. Differentiate between investing activities, financing activities, and operating activities.
4. What are the major sources of cash (inflows) in a statement of cash flows? What are the major uses (outflows) of cash?
5. Identify and explain the major steps involved in preparing the statement of cash flows.
6. Identify the following items as (1) operating, (2) investing, or (3) financing activities: purchase of land, payment of dividends, cash sales, and purchase of treasury stock.
7. Unlike the other major financial statements, the statement of cash flows is not prepared from the adjusted trial balance. From what sources does the information to prepare this statement come, and what information does each source provide?
8. Why is it necessary to convert accrual-based net income to a cash basis when preparing a statement of cash flows?
9. Differentiate between the direct method and the indirect method by discussing each method.
10. Broussard Company reported net income of \$3.5 million in 2020. Depreciation for the year was \$520,000, accounts receivable increased \$500,000, and accounts payable increased \$300,000. Compute net cash flow from operating activities using the indirect method.
11. Collinsworth Co. reported sales on an accrual basis of \$100,000. If accounts receivable increased \$30,000 and the allowance for doubtful accounts increased \$9,000 after a write-off of \$2,000, compute cash sales.
12. Your roommate is puzzled. During the last year, the company in which she is a stockholder reported a net loss of \$675,000, yet its cash increased \$321,000 during the same period of time. Explain to your roommate how this situation could occur.
13. The board of directors of Tirico Corp. declared cash dividends of \$260,000 during the current year. If dividends payable was \$85,000 at the beginning of the year and \$90,000 at the end of the year, how much cash was paid in dividends during the year?
14. Explain how the amount of cash payments to suppliers is computed under the direct method.
15. The net income for Fallon Company for 2020 was \$320,000. During 2020, depreciation on plant assets was \$124,000, amortization of patent was \$40,000, and the company incurred a loss on sale of plant assets of \$21,000. Compute net cash flow from operating activities.
16. Each of the following items must be considered in preparing a statement of cash flows for Blackwell Inc. for the year ended December 31, 2020. State where each item is to be shown in the statement, if at all.
 - a. Plant assets that had cost \$18,000 6½ years before and were being depreciated on a straight-line basis over 10 years with no estimated scrap value were sold for \$4,000.
 - b. During the year, 10,000 shares of common stock with a stated value of \$20 a share were issued for \$41 a share.
 - c. Uncollectible accounts receivable in the amount of \$22,000 were written off against Allowance for Doubtful Accounts.
 - d. The company sustained a net loss for the year of \$50,000. Depreciation amounted to \$22,000, and a gain of \$9,000 was realized on the sale of available-for-sale debt securities for \$38,000 cash.
17. Classify the following items as (1) operating, (2) investing, (3) financing, or (4) significant noncash investing and financing activities, using the direct method.
 - a. Cash payments to employees.
 - b. Redemption of bonds payable.
 - c. Sale of building at book value.
 - d. Cash payments to suppliers.
 - e. Exchange of equipment for furniture.
 - f. Issuance of preferred stock.
 - g. Cash received from customers.
 - h. Purchase of treasury stock.
 - i. Issuance of bonds for land.
 - j. Payment of dividends.
 - k. Purchase of equipment.
 - l. Cash payments for operating expenses.
18. Stan Conner and Mark Stein were discussing the presentation format of the statement of cash flows of Bombeck Co. At the bottom of Bombeck's statement of cash flows was a separate section entitled "Noncash investing and financing activities." Give three examples of significant noncash transactions that would be reported in this section.
19. During 2020, Simms Company redeemed \$2,000,000 of bonds payable for \$1,880,000 cash. Indicate how this transaction would be reported on a statement of cash flows, if at all.
20. What are some of the arguments in favor of using the indirect (reconciliation) method as opposed to the direct method for reporting a statement of cash flows?
21. Why is it desirable to use a worksheet when preparing a statement of cash flows? Is a worksheet required to prepare a statement of cash flows?

Brief Exercises

BE23.1 (LO 1) Novak Corporation is preparing its 2020 statement of cash flows, using the indirect method. Presented below is a list of items that may affect the statement. Using the code below, indicate how each item will affect Novak's 2020 statement of cash flows.

| Code Letter | Effect |
|-------------|---|
| A | Added to net income in the operating section |
| D | Deducted from net income in the operating section |
| R-I | Cash receipt in investing section |
| P-I | Cash payment in investing section |
| R-F | Cash receipt in financing section |
| P-F | Cash payment in financing section |
| N | Noncash investing and financing activity |

Items

- | | |
|--|--|
| ___ a. Purchase of land and building. | ___ j. Increase in accounts payable. |
| ___ b. Decrease in accounts receivable. | ___ k. Decrease in accounts payable. |
| ___ c. Issuance of stock. | ___ l. Loan from bank by signing note. |
| ___ d. Depreciation expense. | ___ m. Purchase of equipment using a note. |
| ___ e. Sale of land at book value. | ___ n. Increase in inventory. |
| ___ f. Sale of land at a gain. | ___ o. Issuance of bonds. |
| ___ g. Payment of dividends. | ___ p. Redemption of bonds payable. |
| ___ h. Increase in accounts receivable. | ___ q. Sale of equipment at a loss. |
| ___ i. Purchase of available-for-sale debt investment. | ___ r. Purchase of treasury stock. |

BE23.2 (LO 2) Wainwright Corporation had the following activities in 2020.

- | | |
|---|---|
| 1. Sale of land \$180,000. | 4. Purchase of equipment \$415,000. |
| 2. Purchase of inventory \$845,000. | 5. Issuance of common stock \$320,000. |
| 3. Purchase of treasury stock \$72,000. | 6. Purchase of available-for-sale debt securities \$59,000. |

Compute the amount Wainwright should report as net cash provided (used) by investing activities in its 2020 statement of cash flows.

BE23.3 (LO 2) Stansfield Corporation had the following activities in 2020.

- | | |
|---|---|
| 1. Payment of accounts payable \$770,000. | 4. Collection of note receivable \$100,000. |
| 2. Issuance of common stock \$250,000. | 5. Issuance of bonds payable \$510,000. |
| 3. Payment of dividends \$350,000. | 6. Purchase of treasury stock \$46,000. |

Compute the amount Stansfield should report as net cash provided (used) by financing activities in its 2020 statement of cash flows.

BE23.4 (LO 2, 3) Bloom Corporation had the following 2020 income statement.

| | |
|--|------------------|
| Sales revenue | \$200,000 |
| Cost of goods sold | <u>120,000</u> |
| Gross profit | 80,000 |
| Operating expenses (includes depreciation of \$21,000) | <u>50,000</u> |
| Net income | <u>\$ 30,000</u> |

The following accounts increased during 2020: Accounts Receivable \$12,000, Inventory \$11,000, and Accounts Payable \$13,000. Prepare the cash flows from operating activities section of Bloom's 2020 statement of cash flows using the direct method.

BE23.5 (LO 2, 3) Use the information from BE23.4 for Bloom Corporation. Prepare the cash flows from operating activities section of Bloom's 2020 statement of cash flows using the indirect method.

BE23.6 (LO 3) At January 1, 2020, Eikenberry Inc. had accounts receivable of \$72,000. At December 31, 2020, accounts receivable is \$54,000. Sales revenue for 2020 total \$420,000. Compute Eikenberry's 2020 cash receipts from customers.

BE23.7 (LO 3) Moxley Corporation had January 1 and December 31 balances as follows.

| | <u>1/1/20</u> | <u>12/31/20</u> |
|------------------|---------------|-----------------|
| Inventory | \$95,000 | \$113,000 |
| Accounts payable | 61,000 | 69,000 |

For 2020, cost of goods sold was \$500,000. Compute Moxley's 2020 cash payments to suppliers.

BE23.8 (LO 2) In 2020, Elbert Corporation had net cash provided by operating activities of \$531,000, net cash used by investing activities of \$963,000, and net cash provided by financing activities of \$585,000. At January 1, 2020, the cash balance was \$333,000. Compute December 31, 2020, cash.

BE23.9 (LO 2, 3) Colbert Corporation had the following 2020 income statement.

| | |
|------------|------------------|
| Revenues | \$100,000 |
| Expenses | <u>60,000</u> |
| Net income | <u>\$ 40,000</u> |

In 2020, Colbert had the following activity in selected accounts.

| <u>Accounts Receivable</u> | | | | <u>Allowance for Doubtful Accounts</u> | | | |
|----------------------------|---------|--------|-------------|--|-------|-------|------------------|
| 1/1/20 | 20,000 | | | | | 1,200 | 1/1/20 |
| Revenues | 100,000 | 1,000 | Write-offs | Write-offs | 1,000 | 1,840 | Bad debt expense |
| | | 90,000 | Collections | | | | |
| 12/31/20 | 29,000 | | | | | 2,040 | 12/31/20 |

Prepare Colbert's cash flows from operating activities section of the statement of cash flows using (a) the direct method and (b) the indirect method.

BE23.10 (LO 3) Hendrickson Corporation reported net income of \$50,000 in 2020. Depreciation expense was \$17,000. The following working capital accounts changed.

| | |
|------------------------------------|-------------------|
| Accounts receivable | \$11,000 increase |
| Available-for-sale debt securities | 16,000 increase |
| Inventory | 7,400 increase |
| Nontrade note payable | 15,000 decrease |
| Accounts payable | 12,300 increase |

Compute net cash provided by operating activities.

BE23.11 (LO 3) In 2020, Wild Corporation reported a net loss of \$70,000. Wild's only net income adjustments were depreciation expense \$81,000, and increase in accounts receivable \$8,100. Compute Wild's net cash provided (used) by operating activities.

BE23.12 (LO 4) In 2020, Leppard Inc. issued 1,000 shares of \$10 par value common stock for land worth \$40,000.

- Prepare Leppard's journal entry to record the transaction.
- Indicate the effect the transaction has on cash.
- Indicate how the transaction is reported on the statement of cash flows.

BE23.13 (LO 5) Indicate in general journal form how the items below would be entered in a worksheet for the preparation of the statement of cash flows.

- Net income is \$317,000.
- Cash dividends declared and paid totaled \$120,000.
- Equipment was purchased for \$114,000.
- Equipment that originally cost \$40,000 and had accumulated depreciation of \$32,000 was sold for \$10,000.

Exercises

E23.1 (LO 1) (Classification of Transactions) Red Hot Chili Peppers Co. had the following activity in its most recent year of operations.

- Purchase of equipment.
- Redemption of bonds payable.
- Sale of building.
- Depreciation.
- Exchange of equipment for furniture.
- Issuance of common stock.

- g. Amortization of intangible assets.
- h. Purchase of treasury stock.
- i. Issuance of bonds for land.
- j. Payment of dividends.
- k. Increase in interest receivable on notes receivable.
- l. Pension expense exceeds amount funded.

Instructions

Classify the items as (1) operating—add to net income; (2) operating—deduct from net income; (3) investing; (4) financing; or (5) significant noncash investing and financing activities. Use the indirect method.

E23.2 (LO 1, 2) (Statement Presentation of Transactions—Indirect Method) Each of the following items must be considered in preparing a statement of cash flows (indirect method) for Turbulent Indigo Inc. for the year ended December 31, 2020.

- a. Plant assets that had cost \$20,000 6 years before and were being depreciated on a straight-line basis over 10 years with no estimated scrap value were sold for \$5,300.
- b. During the year, 10,000 shares of common stock with a stated value of \$10 a share were issued for \$43 a share.
- c. Uncollectible accounts receivable in the amount of \$27,000 were written off against Allowance for Doubtful Accounts.
- d. The company sustained a net loss for the year of \$50,000. Depreciation amounted to \$22,000, and a gain of \$9,000 was realized on the sale of land for \$39,000 cash.
- e. A 3-month U.S. Treasury bill was purchased for \$100,000. The company uses a cash and cash equivalent basis for its cash flow statement.
- f. Patent amortization for the year was \$20,000.
- g. The company exchanged common stock for a 70% interest in Tabasco Co. for \$900,000.
- h. During the year, treasury stock costing \$47,000 was purchased.

Instructions

State where each item is to be shown in the statement of cash flows, if at all.

E23.3 (LO 2, 3) Excel (Preparation of Operating Activities Section—Indirect Method, Periodic Inventory) The income statement of Vince Gill Company is shown below.

| Vince Gill Company | | |
|--------------------------------------|-------------|-------------|
| Income Statement | | |
| For the Year Ended December 31, 2020 | | |
| Sales revenue | | \$6,900,000 |
| Cost of goods sold | | |
| Beginning inventory | \$1,900,000 | |
| Purchases | 4,400,000 | |
| Goods available for sale | 6,300,000 | |
| Ending inventory | 1,600,000 | |
| Cost of goods sold | | 4,700,000 |
| Gross profit | | 2,200,000 |
| Operating expenses | | |
| Selling expenses | 450,000 | |
| Administrative expenses | 700,000 | 1,150,000 |
| Net income | | \$1,050,000 |

Additional information:

1. Accounts receivable decreased \$360,000 during the year.
2. Prepaid expenses increased \$170,000 during the year.
3. Accounts payable to suppliers of merchandise decreased \$275,000 during the year.
4. Accrued expenses payable decreased \$100,000 during the year.
5. Administrative expenses include depreciation expense of \$60,000.

Instructions

Prepare the operating activities section of the statement of cash flows for the year ended December 31, 2020, for Vince Gill Company, using the indirect method.

E23.4 (LO 2, 3) Excel (Preparation of Operating Activities Section—Direct Method) Data for the Vince Gill Company are presented in E23.3.

Instructions

Prepare the operating activities section of the statement of cash flows using the direct method.

E23.5 (LO 2, 3) (Preparation of Operating Activities Section—Direct Method) Krauss Company's income statement for the year ended December 31, 2020, contained the following condensed information.

| | | |
|---|---------------|------------------|
| Service revenue | | \$840,000 |
| Operating expenses (excluding depreciation) | \$624,000 | |
| Depreciation expense | 60,000 | |
| Loss on sale of equipment | <u>26,000</u> | <u>710,000</u> |
| Income before income taxes | | 130,000 |
| Income tax expense | | <u>40,000</u> |
| Net income | | <u>\$ 90,000</u> |

Krauss's balance sheet contained the following comparative data at December 31.

| | <u>2020</u> | <u>2019</u> |
|----------------------|-------------|-------------|
| Accounts receivable | \$37,000 | \$54,000 |
| Accounts payable | 41,000 | 31,000 |
| Income taxes payable | 4,000 | 8,500 |

(Accounts payable pertains to operating expenses.)

Instructions

Prepare the operating activities section of the statement of cash flows using the direct method.

E23.6 (LO 2, 3) (Preparation of Operating Activities Section—Indirect Method) Data for Krauss Company are presented in E23.5.

Instructions

Prepare the operating activities section of the statement of cash flows using the indirect method.

E23.7 (LO 2, 3) (Computation of Operating Activities—Direct Method) Presented below are two independent situations.

Situation A: Annie Lennox Co. reports revenues of \$200,000 and operating expenses of \$110,000 in its first year of operations, 2020. Accounts receivable and accounts payable at year-end were \$71,000 and \$29,000, respectively. Assume that the accounts payable related to operating expenses. (Ignore income taxes.)

Instructions

Using the direct method, compute net cash provided by operating activities.

Situation B: The income statement for Blues Traveler Company shows cost of goods sold \$310,000 and operating expenses (exclusive of depreciation) \$230,000. The comparative balance sheet for the year shows that inventory increased \$26,000, prepaid expenses decreased \$8,000, accounts payable (related to merchandise) decreased \$17,000, and accrued expenses payable increased \$11,000.

Instructions

Compute (a) cash payments to suppliers and (b) cash payments for operating expenses.

E23.8 (LO 2, 3) (Schedule of Net Cash Flow from Operating Activities—Indirect Method) Ballard Co. reported \$145,000 of net income for 2020. The accountant, in preparing the statement of cash flows, noted the following items occurring during 2020 that might affect cash flows from operating activities.

- Ballard purchased 100 shares of treasury stock at a cost of \$20 per share. These shares were then resold at \$25 per share.
- Ballard sold 100 shares of IBM common at \$200 per share. The acquisition cost of these shares was \$145 per share. There were no unrealized gains or losses recorded on this investment in 2020.
- Ballard revised its estimate for bad debts. Before 2020, Ballard's bad debt expense was 1% of its receivables. In 2020, this percentage was increased to 2%. Net accounts receivable decreased by \$12,000 during 2020.

4. Ballard issued 500 shares of its \$10 par common stock for a patent. The market price of the shares on the date of the transaction was \$23 per share.
5. Depreciation expense is \$39,000.
6. Ballard Co. holds 40% of the Nirvana Company's common stock as a long-term investment. Nirvana Company reported \$27,000 of net income for 2020.
7. Nirvana Company paid a total of \$2,000 of cash dividends to all investees in 2020.
8. Ballard declared a 10% stock dividend. One thousand shares of \$10 par common stock were distributed. The market price at date of issuance was \$20 per share.

Instructions

Prepare a schedule that shows the net cash flow from operating activities using the indirect method. Assume no items other than those listed above affected the computation of 2020 net cash flow from operating activities.

E23.9 (LO 2, 3) (SCF—Direct Method) Los Lobos Corp. uses the direct method to prepare its statement of cash flows. Los Lobos's trial balances at December 31, 2020 and 2019, are as follows.

| | December 31 | |
|---------------------------------------|------------------|------------------|
| | 2020 | 2019 |
| <u>Debits</u> | | |
| Cash | \$ 35,000 | \$ 32,000 |
| Accounts receivable | 33,000 | 30,000 |
| Inventory | 31,000 | 47,000 |
| Property, plant, and equipment | 100,000 | 95,000 |
| Unamortized bond discount | 4,500 | 5,000 |
| Cost of goods sold | 250,000 | 380,000 |
| Selling expenses | 141,500 | 172,000 |
| General and administrative expenses | 137,000 | 151,300 |
| Interest expense | 4,300 | 2,600 |
| Income tax expense | 20,400 | 61,200 |
| | <u>\$756,700</u> | <u>\$976,100</u> |
| <u>Credits</u> | | |
| Allowance for doubtful accounts | \$ 1,300 | \$ 1,100 |
| Accumulated depreciation—plant assets | 16,500 | 15,000 |
| Accounts payable | 25,000 | 15,500 |
| Income taxes payable | 21,000 | 29,100 |
| Deferred tax liability | 5,300 | 4,600 |
| 8% callable bonds payable | 45,000 | 20,000 |
| Common stock | 50,000 | 40,000 |
| Paid-in capital in excess of par | 9,100 | 7,500 |
| Retained earnings | 44,700 | 64,600 |
| Sales revenue | 538,800 | 778,700 |
| | <u>\$756,700</u> | <u>\$976,100</u> |

Additional information:

1. Los Lobos purchased \$5,000 in equipment during 2020.
2. Los Lobos allocated one-third of its depreciation expense to selling expenses and the remainder to general and administrative expenses.
3. Bad debt expense for 2020 was \$5,000, and write-offs of uncollectible accounts totaled \$4,800.

Instructions

Determine what amounts Los Lobos should report in its statement of cash flows for the year ended December 31, 2020, for the following items.

- | | |
|-----------------------------------|------------------------------------|
| a. Cash collected from customers. | d. Cash paid for income taxes. |
| b. Cash paid to suppliers. | e. Cash paid for selling expenses. |
| c. Cash paid for interest. | |

E23.10 (LO 1, 4) (Classification of Transactions) Following are selected balance sheet accounts of Allman Bros. Corp. at December 31, 2020 and 2019, and the increases or decreases in each account from 2019 to 2020. Also presented is selected income statement information for the year ended December 31, 2020, and additional information.

| | 2020 | 2019 | Increase (Decrease) |
|--|------------|-----------|------------------------|
| Selected balance sheet accounts: | | | |
| <u>Assets</u> | | | |
| Accounts receivable | \$ 34,000 | \$ 24,000 | \$ 10,000 |
| Property, plant, and equipment | 277,000 | 247,000 | 30,000 |
| Accumulated depreciation—plant assets | (178,000) | (167,000) | (11,000) |
| <u>Liabilities and stockholders' equity</u> | | | |
| Bonds payable | \$ 49,000 | \$ 46,000 | \$ 3,000 |
| Dividends payable | 8,000 | 5,000 | 3,000 |
| Common stock, \$1 par | 22,000 | 19,000 | 3,000 |
| Additional paid-in capital | 9,000 | 3,000 | 6,000 |
| Retained earnings | 104,000 | 91,000 | 13,000 |
| Selected income statement information for the year ended December 31, 2020: | | | |
| Sales revenue | \$ 155,000 | | |
| Depreciation | 33,000 | | |
| Gain on sale of equipment | 14,500 | | |
| Net income | 31,000 | | |

Additional information:

1. During 2020, equipment costing \$45,000 was sold for cash.
2. Accounts receivable relate to sales of merchandise.
3. During 2020, \$20,000 of bonds payable were issued in exchange for property, plant, and equipment. There was no amortization of bond discount or premium.

Instructions

Determine the category (operating, investing, or financing) and the amount that should be reported in the statement of cash flows for the following items.

- a. Payments for purchase of property, plant, and equipment.
- b. Proceeds from the sale of equipment.
- c. Cash dividends paid.
- d. Redemption of bonds payable.

E23.11 (LO 2) (SCF—Indirect Method) Condensed financial data of Pat Metheny Company for 2020 and 2019 are presented below.

| Pat Metheny Company | | |
|--|----------------|----------------|
| Comparative Balance Sheet | | |
| As of December 31, 2020 and 2019 | | |
| | 2020 | 2019 |
| Cash | \$1,800 | \$1,150 |
| Receivables | 1,750 | 1,300 |
| Inventory | 1,600 | 1,900 |
| Plant assets | 1,900 | 1,700 |
| Accumulated depreciation | (1,200) | (1,170) |
| Long-term investments (held-to-maturity) | 1,300 | 1,420 |
| | <u>\$7,150</u> | <u>\$6,300</u> |
| Accounts payable | \$1,200 | \$ 900 |
| Accrued liabilities | 200 | 250 |
| Bonds payable | 1,400 | 1,550 |
| Common stock | 1,900 | 1,700 |
| Retained earnings | 2,450 | 1,900 |
| | <u>\$7,150</u> | <u>\$6,300</u> |

Pat Metheny Company
Income Statement
For the Year Ended December 31, 2020

| | |
|------------------------------------|----------------------|
| Sales revenue | \$6,900 |
| Cost of goods sold | <u>4,700</u> |
| Gross margin | 2,200 |
| Selling and administrative expense | <u>930</u> |
| Income from operations | 1,270 |
| Other revenues and gains | |
| Gain on sale of investments | <u>80</u> |
| Income before tax | 1,350 |
| Income tax expense | <u>540</u> |
| Net income | 810 |
| Cash dividends | <u>260</u> |
| Income retained in business | <u><u>\$ 550</u></u> |

Additional information:

During the year, \$70 of common stock was issued in exchange for plant assets. No plant assets were sold in 2020.

Instructions

Prepare a statement of cash flows using the indirect method.

E23.12 (LO 2) (SCF—Direct Method) Data for Pat Metheny Company are presented in E23.11.

Instructions

Prepare a statement of cash flows using the direct method. (Do not prepare a reconciliation schedule.)

E23.13 (LO 2, 3) (SCF—Direct Method) Brecker Inc., a greeting card company, had the following statements prepared as of December 31, 2020.

Brecker Inc.
Comparative Balance Sheet
As of December 31, 2020 and 2019

| | <u>12/31/20</u> | <u>12/31/19</u> |
|--|-------------------------|-------------------------|
| Cash | \$ 6,000 | \$ 7,000 |
| Accounts receivable | 62,000 | 51,000 |
| Short-term debt investments (available-for-sale) | 35,000 | 18,000 |
| Inventory | 40,000 | 60,000 |
| Prepaid rent | 5,000 | 4,000 |
| Equipment | 154,000 | 130,000 |
| Accumulated depreciation—equipment | (35,000) | (25,000) |
| Copyrights | <u>46,000</u> | <u>50,000</u> |
| Total assets | <u>\$313,000</u> | <u>\$295,000</u> |
| Accounts payable | \$ 46,000 | \$ 40,000 |
| Income taxes payable | 4,000 | 6,000 |
| Salaries and wages payable | 8,000 | 4,000 |
| Short-term loans payable | 8,000 | 10,000 |
| Long-term loans payable | 60,000 | 69,000 |
| Common stock, \$10 par | 100,000 | 100,000 |
| Contributed capital, common stock | 30,000 | 30,000 |
| Retained earnings | <u>57,000</u> | <u>36,000</u> |
| Total liabilities and stockholders' equity | <u><u>\$313,000</u></u> | <u><u>\$295,000</u></u> |

Brecker Inc.
Income Statement
For the Year Ending December 31, 2020

| | | |
|---------------------------|--------------|-------------------------|
| Sales revenue | | \$338,150 |
| Cost of goods sold | | <u>175,000</u> |
| Gross profit | | 163,150 |
| Operating expenses | | <u>120,000</u> |
| Operating income | | 43,150 |
| Interest expense | \$11,400 | |
| Gain on sale of equipment | <u>2,000</u> | <u>9,400</u> |
| Income before tax | | 33,750 |
| Income tax expense | | <u>6,750</u> |
| Net income | | <u><u>\$ 27,000</u></u> |

Additional information:

1. Dividends in the amount of \$6,000 were declared and paid during 2020.
2. Depreciation expense and amortization expense are included in operating expenses.
3. No unrealized gains or losses have occurred on the investments during the year.
4. Equipment that had a cost of \$20,000 and was 70% depreciated was sold during 2020.

Instructions

Prepare a statement of cash flows using the direct method. (Do not prepare a reconciliation schedule.)

E23.14 (LO 2) (SCF—Indirect Method) Data for Brecker Inc. are presented in E23.13.

Instructions

Prepare a statement of cash flows using the indirect method.

E23.15 (LO 2) (SCF—Indirect Method) The following data are taken from the records of Alee Company.

| | December 31, 2020 | December 31, 2019 |
|--------------------------------|----------------------|----------------------|
| Cash | \$ 15,000 | \$ 8,000 |
| Current assets other than cash | 85,000 | 60,000 |
| Long-term debt investments | 10,000 | 53,000 |
| Plant assets | <u>335,000</u> | <u>215,000</u> |
| | <u>\$445,000</u> | <u>\$336,000</u> |
| Accumulated depreciation | \$ 20,000 | \$ 40,000 |
| Current liabilities | 40,000 | 22,000 |
| Bonds payable | 75,000 | —0— |
| Common stock | 254,000 | 254,000 |
| Retained earnings | <u>56,000</u> | <u>20,000</u> |
| | <u>\$445,000</u> | <u>\$336,000</u> |

Additional information:

1. Held-to-maturity debt securities carried at a cost of \$43,000 on December 31, 2019, were sold in 2020 for \$34,000. The loss (not unusual) was incorrectly charged directly to Retained Earnings.
2. Plant assets that cost \$50,000 and were 80% depreciated were sold during 2020 for \$8,000. The loss was incorrectly charged directly to Retained Earnings.
3. Net income as reported on the income statement for the year was \$57,000.
4. Dividends paid amounted to \$10,000.
5. Depreciation charged for the year was \$20,000.

Instructions

Prepare a statement of cash flows for the year 2020 using the indirect method.

E23.16 (LO 1, 2) (Cash Provided by Operating, Investing, and Financing Activities) The balance sheet data of Brown Company at the end of 2020 and 2019 follow.

| | 2020 | 2019 |
|------------------------------------|------------------|------------------|
| Cash | \$ 30,000 | \$ 35,000 |
| Accounts receivable (net) | 55,000 | 45,000 |
| Inventory | 65,000 | 45,000 |
| Prepaid expenses | 15,000 | 25,000 |
| Equipment | 90,000 | 75,000 |
| Accumulated depreciation—equipment | (18,000) | (8,000) |
| Land | 70,000 | 40,000 |
| | <u>\$307,000</u> | <u>\$257,000</u> |
| Accounts payable | \$ 65,000 | \$ 52,000 |
| Accrued expenses | 15,000 | 18,000 |
| Notes payable—bank, long-term | –0– | 23,000 |
| Bonds payable | 30,000 | –0– |
| Common stock, \$10 par | 189,000 | 159,000 |
| Retained earnings | 8,000 | 5,000 |
| | <u>\$307,000</u> | <u>\$257,000</u> |

Land was acquired for \$30,000 in exchange for common stock, par \$30,000, during the year; all equipment purchased was for cash. Equipment costing \$10,000 was sold for \$3,000; book value of the equipment was \$6,000. Cash dividends of \$10,000 were declared and paid during the year.

Instructions

Compute net cash provided (used) by:

- Operating activities.
- Investing activities.
- Financing activities.

E23.17 (LO 2) (SCF—Indirect Method and Balance Sheet) Jobim Inc. had the following condensed balance sheet at the end of operations for 2019.

| Jobim Inc. Balance Sheet December 31, 2019 | | | |
|---|------------------|-------------------------|------------------|
| Cash | \$ 8,500 | Current liabilities | \$ 15,000 |
| Current assets other than cash | 29,000 | Long-term notes payable | 25,500 |
| Equity investments | 20,000 | Bonds payable | 25,000 |
| Plant assets (net) | 67,500 | Common stock | 75,000 |
| Land | 40,000 | Retained earnings | 24,500 |
| | <u>\$165,000</u> | | <u>\$165,000</u> |

During 2020, the following occurred.

- A tract of land was purchased for \$9,000.
- Bonds payable in the amount of \$15,000 were redeemed at par.
- An additional \$10,000 in common stock was issued at par.
- Dividends totaling \$9,375 were paid to stockholders.
- Net income was \$35,250 after allowing depreciation of \$13,500.
- Land was purchased through the issuance of \$22,500 in bonds.
- Jobim Inc. sold part of its investment portfolio for \$12,875. This transaction resulted in a gain of \$2,000 for the company. No unrealized gains or losses were recorded on these investments in 2020.
- Both current assets (other than cash) and current liabilities remained at the same amount.

Instructions

- Prepare a statement of cash flows for 2020 using the indirect method.
- Prepare the condensed balance sheet for Jobim Inc. as it would appear at December 31, 2020.

E23.18 (LO 2, 4) (Partial SCF—Indirect Method) The accounts below appear in the ledger of Anita Baker Company.

| | | Retained Earnings | Dr. | Cr. | Bal. |
|--------------|--|--|----------|----------|-----------|
| Jan. 1, 2020 | Credit Balance | | | | \$ 42,000 |
| Aug. 15 | Dividends (cash) | | \$15,000 | | 27,000 |
| Dec. 31 | Net Income for 2020 | | | \$40,000 | 67,000 |
| | | Equipment | Dr. | Cr. | Bal. |
| Jan. 1, 2020 | Debit Balance | | | | \$140,000 |
| Aug. 3 | Purchase of Equipment | | \$62,000 | | 202,000 |
| Sept. 10 | Cost of Equipment Constructed | | 48,000 | | 250,000 |
| Nov. 15 | Equipment Sold | | | \$56,000 | 194,000 |
| | | Accumulated Depreciation— Equipment | Dr. | Cr. | Bal. |
| Jan. 1, 2020 | Credit Balance | | | | \$ 84,000 |
| Apr. 8 | Major Repairs | | \$21,000 | | 63,000 |
| Nov. 15 | Accum. Depreciation on Equipment Sold | | 25,200 | | 37,800 |
| Dec. 31 | Depreciation for 2020 | | | \$16,800 | 54,600 |

Instructions

From the postings in the accounts above, indicate how the information is reported on a statement of cash flows by preparing a partial statement of cash flows using the indirect method. The loss on sale of equipment (November 15) was \$5,800.

E23.19 (LO 5) (Worksheet Analysis of Selected Accounts) Data for Anita Baker Company are presented in E23.18.

Instructions

Prepare entries in journal form for all adjustments that should be made on a worksheet for a statement of cash flows.

E23.20 (LO 5) (Worksheet Analysis of Selected Transactions) The transactions below took place during the year 2020.

- Convertible bonds payable with a par value of \$300,000 were exchanged for unissued common stock with a par value of \$300,000. The market price of both types of securities was par.
- The net income for the year was \$410,000.
- Depreciation expense for the building was \$90,000.
- Some old office equipment was traded in on the purchase of some dissimilar office equipment, and the following entry was made.

| | | | |
|----------------------------------|--------|--------|-------|
| Equipment | 50,000 | | |
| Accum. Depreciation—Equipment | 30,000 | | |
| Equipment | | 40,000 | |
| Cash | | 34,000 | |
| Gain on Disposal of Plant Assets | | | 6,000 |

The Gain on Disposal of Plant Assets was included in income before income taxes.

- Dividends in the amount of \$123,000 were declared. They are payable in January of next year.

Instructions

Show by journal entries the adjustments that would be made on a worksheet for a statement of cash flows.

E23.21 (LO 5) (Worksheet Preparation) Below is the comparative balance sheet for Stevie Wonder Corporation.

| | Dec. 31, 2020 | Dec. 31, 2019 |
|---------------------------------|------------------|------------------|
| Cash | \$ 16,500 | \$ 21,000 |
| Short-term investments | 25,000 | 19,000 |
| Accounts receivable | 43,000 | 45,000 |
| Allowance for doubtful accounts | (1,800) | (2,000) |
| Prepaid expenses | 4,200 | 2,500 |
| Inventory | 81,500 | 65,000 |

| | | |
|---|------------------|------------------|
| | Dec. 31, 2020 | Dec. 31, 2019 |
| Land | \$ 50,000 | \$ 50,000 |
| Buildings | 125,000 | 73,500 |
| Accumulated depreciation—buildings | (30,000) | (23,000) |
| Equipment | 53,000 | 46,000 |
| Accumulated depreciation—equipment | (19,000) | (15,500) |
| Delivery equipment | 39,000 | 39,000 |
| Accumulated depreciation—delivery equipment | (22,000) | (20,500) |
| Patents | 15,000 | — |
| | <u>\$379,400</u> | <u>\$300,000</u> |
| | Dec. 31, 2020 | Dec. 31, 2019 |
| Accounts payable | \$ 26,000 | \$ 16,000 |
| Short-term notes payable (trade) | 4,000 | 6,000 |
| Accrued payables | 3,000 | 4,600 |
| Mortgage payable | 73,000 | 53,400 |
| Bonds payable | 50,000 | 62,500 |
| Common stock | 140,000 | 102,000 |
| Paid-in capital in excess of par | 10,000 | 4,000 |
| Retained earnings | 73,400 | 51,500 |
| | <u>\$379,400</u> | <u>\$300,000</u> |

Dividends in the amount of \$15,000 were declared and paid in 2020.

Instructions

From this information, prepare a worksheet for a statement of cash flows. Make reasonable assumptions as appropriate. The short-term investments are considered available-for-sale debt securities and no unrealized gains or losses have occurred on these securities.

Problems

P23.1 (LO 2, 4) (SCF—Indirect Method) The following are Sullivan Corp.'s comparative balance sheet accounts at December 31, 2020 and 2019, with a column showing the increase (decrease) from 2019 to 2020.

| Comparative Balance Sheets | | | |
|--|--------------------|--------------------|------------------------|
| | 2020 | 2019 | Increase (Decrease) |
| Cash | \$ 815,000 | \$ 700,000 | \$115,000 |
| Accounts receivable | 1,128,000 | 1,168,000 | (40,000) |
| Inventory | 1,850,000 | 1,715,000 | 135,000 |
| Property, plant, and equipment | 3,307,000 | 2,967,000 | 340,000 |
| Accumulated depreciation | (1,165,000) | (1,040,000) | (125,000) |
| Investment in Myers Co. | 310,000 | 275,000 | 35,000 |
| Loan receivable | 250,000 | — | 250,000 |
| Total assets | <u>\$6,495,000</u> | <u>\$5,785,000</u> | <u>\$710,000</u> |
| Accounts payable | \$1,015,000 | \$ 955,000 | \$ 60,000 |
| Income taxes payable | 30,000 | 50,000 | (20,000) |
| Dividends payable | 80,000 | 100,000 | (20,000) |
| Lease liability | 400,000 | — | 400,000 |
| Common stock, \$1 par | 500,000 | 500,000 | — |
| Paid-in capital in excess of par—common stock | 1,500,000 | 1,500,000 | — |
| Retained earnings | 2,970,000 | 2,680,000 | 290,000 |
| Total liabilities and stockholders' equity | <u>\$6,495,000</u> | <u>\$5,785,000</u> | <u>\$710,000</u> |

Additional information:

- On December 31, 2019, Sullivan acquired 25% of Myers Co.'s common stock for \$275,000. On that date, the carrying value of Myers's assets and liabilities, which approximated their fair values, was

\$1,100,000. Myers reported income of \$140,000 for the year ended December 31, 2020. No dividend was paid on Myers's common stock during the year.

- During 2020, Sullivan loaned \$300,000 to TLC Co., an unrelated company. TLC made the first semi-annual principal repayment of \$50,000, plus interest at 10%, on December 31, 2020.
- On January 2, 2020, Sullivan sold equipment costing \$60,000, with a carrying amount of \$38,000, for \$40,000 cash.
- On December 31, 2020, Sullivan entered into a capital lease for an office building. The present value of the annual rental payments is \$400,000, which equals the fair value of the building. Sullivan made the first rental payment of \$60,000 when due on January 2, 2021.
- Net income for 2020 was \$370,000.
- Sullivan declared and paid the following cash dividends for 2020 and 2019.

| | 2020 | 2019 |
|----------|-------------------|-------------------|
| Declared | December 15, 2020 | December 15, 2019 |
| Paid | February 28, 2021 | February 28, 2020 |
| Amount | \$80,000 | \$100,000 |

Instructions

Prepare a statement of cash flows for Sullivan Corp. for the year ended December 31, 2020, using the indirect method.

(AICPA adapted)

P23.2 (LO 2, 4) **Excel** **Groupwork** **(SCF—Indirect Method)** The comparative balance sheets for Hinckley Corporation show the following information.

| | December 31 | |
|--------------------------------------|------------------|-----------------|
| | 2020 | 2019 |
| Cash | \$ 33,500 | \$13,000 |
| Accounts receivable | 12,250 | 10,000 |
| Inventory | 12,000 | 9,000 |
| Available-for-sale debt investments | –0– | 3,000 |
| Buildings | –0– | 29,750 |
| Equipment | 45,000 | 20,000 |
| Patents | 5,000 | 6,250 |
| | <u>\$107,750</u> | <u>\$91,000</u> |
| Allowance for doubtful accounts | \$ 3,000 | \$ 4,500 |
| Accumulated depreciation—equipment | 2,000 | 4,500 |
| Accumulated depreciation—building | –0– | 6,000 |
| Accounts payable | 5,000 | 3,000 |
| Dividends payable | –0– | 5,000 |
| Notes payable, short-term (nontrade) | 3,000 | 4,000 |
| Long-term notes payable | 31,000 | 25,000 |
| Common stock | 43,000 | 33,000 |
| Retained earnings | 20,750 | 6,000 |
| | <u>\$107,750</u> | <u>\$91,000</u> |

Additional data related to 2020 are as follows.

- Equipment that had cost \$11,000 and was 40% depreciated at time of disposal was sold for \$2,500.
- \$10,000 of the long-term note payable was paid by issuing common stock.
- Cash dividends paid were \$5,000.
- On January 1, 2020, the building was completely destroyed by a flood. Insurance proceeds on the building were \$30,000 (net of \$2,000 taxes).
- Debt investments (available-for-sale) were sold at \$1,700 above their cost. The company has made similar sales and investments in the past.
- Cash was paid for the acquisition of equipment.
- A long-term note for \$16,000 was issued for the acquisition of equipment.
- Interest of \$2,000 and income taxes of \$6,500 were paid in cash.

Instructions

Prepare a statement of cash flows using the indirect method.

P23.3 (LO 2) Excel (SCF—Direct Method) Mortonson Company has not yet prepared a statement of cash flows for the 2020 fiscal year. Comparative balance sheets as of December 31, 2019 and 2020, and a statement of income and retained earnings for the year ended December 31, 2020, are presented as follows.

Mortonson Company
Statement of Income and Retained Earnings

**Statement of Retained Earnings
For the Year Ended December 31, 2020**

| | | | |
|----------|----------|--|------------------|
| January | 1, 2020 | Balance (deficit) | \$(450,000) |
| March | 31, 2020 | Net income for first quarter of 2020 | 25,000 |
| April | 1, 2020 | Transfer from paid-in capital | 425,000 |
| | | Balance | –0– |
| December | 31, 2020 | Net income for last three quarters of 2020 | 90,000 |
| | | Dividend declared—payable January 21, 2021 | (70,000) |
| | | Balance | <u>\$ 20,000</u> |

Your working papers from the audit contain the following information:

- On April 1, 2020, the existing deficit was written off against paid-in capital created by reducing the stated value of the no-par stock.
- On November 1, 2020, 29,600 shares of no-par stock were sold for \$257,000. The board of directors voted to regard \$5 per share as stated capital.
- A patent was purchased for \$15,000.
- During the year, machinery that had a cost basis of \$16,400 and on which there was accumulated depreciation of \$5,200 was sold for \$9,000. No other plant assets were sold during the year.
- The 12%, 20-year bonds were dated and issued on January 2, 2008. Interest was payable on June 30 and December 31. They were sold originally at 106. These bonds were redeemed at 100.9 plus accrued interest on March 31, 2020.

6. The 8%, 40-year bonds were dated January 1, 2020, and were sold on March 31 at 97 plus accrued interest. Interest is payable semiannually on June 30 and December 31. Expense of issuance was \$839.
7. Alexander Corporation acquired 70% control in Crimson Company on January 2, 2020, for \$100,000. The income statement of Crimson Company for 2020 shows a net income of \$15,000.
8. Major repairs to buildings of \$7,200 were charged to Accumulated Depreciation—Buildings.
9. Interest paid in 2020 was \$10,500 and income taxes paid were \$34,000.

Instructions

From the information given, prepare a statement of cash flows using the indirect method. A worksheet is not necessary, but the principal computations should be supported by schedules or general ledger accounts. The company uses straight-line amortization for bond interest.

P23.6 (LO 2, 3, 4) (SCF—Indirect Method, and Net Cash Flow from Operating Activities, Direct Method) Comparative balance sheet accounts of Marcus Inc. are presented below.

| Marcus Inc. | | |
|---|------------------|------------------|
| Comparative Balance Sheet Accounts | | |
| As of December 31, 2020 and 2019 | | |
| Debit Accounts | December 31 | |
| | 2020 | 2019 |
| Cash | \$ 42,000 | \$ 33,750 |
| Accounts Receivable | 70,500 | 60,000 |
| Inventory | 30,000 | 24,000 |
| Equity investments | 22,250 | 38,500 |
| Machinery | 30,000 | 18,750 |
| Buildings | 67,500 | 56,250 |
| Land | 7,500 | 7,500 |
| | <u>\$269,750</u> | <u>\$238,750</u> |
| Credit Accounts | | |
| Allowance for Doubtful Accounts | \$ 2,250 | \$ 1,500 |
| Accumulated Depreciation—Machinery | 5,625 | 2,250 |
| Accumulated Depreciation—Buildings | 13,500 | 9,000 |
| Accounts Payable | 35,000 | 24,750 |
| Accrued Payables | 3,375 | 2,625 |
| Long-Term Notes Payable | 21,000 | 31,000 |
| Common Stock, no-par | 150,000 | 125,000 |
| Retained Earnings | 39,000 | 42,625 |
| | <u>\$269,750</u> | <u>\$238,750</u> |

Additional data (ignoring taxes):

1. Net income for the year was \$42,500.
2. Cash dividends declared and paid during the year were \$21,125.
3. A 20% stock dividend was declared during the year. \$25,000 of retained earnings was capitalized.
4. Equity investments (level of ownership is less than 20%) that cost \$25,000 were sold during the year for \$28,750. No unrealized gains and losses were recorded on these investments in 2020.
5. Machinery that cost \$3,750, on which \$750 of depreciation had accumulated, was sold for \$2,200.

Marcus's 2020 income statement follows (ignoring taxes).

| | |
|--|------------------|
| Sales revenue | \$540,000 |
| Less: Cost of goods sold | <u>380,000</u> |
| Gross margin | 160,000 |
| Less: Operating expenses (includes \$8,625 depreciation and \$5,400 bad debts) | <u>120,450</u> |
| Income from operations | 39,550 |
| Other: Gain on sale of investments | \$3,750 |
| Loss on sale of machinery | <u>(800)</u> |
| Net income | <u>\$ 42,500</u> |

Instructions

- Compute net cash flow from operating activities using the direct method.
- Prepare a statement of cash flows using the indirect method.

P23.7 (LO 2, 3, 4) Groupwork (SCF—Direct and Indirect Methods from Comparative Financial Statements) Chapman Company, a major retailer of bicycles and accessories, operates several stores and is a publicly traded company. The comparative balance sheet and income statement for Chapman as of May 31, 2020, are as follows. The company is preparing its statement of cash flows.

Chapman Company
Comparative Balance Sheet
As of May 31

| | 2020 | 2019 |
|---|------------------|------------------|
| Current assets | | |
| Cash | \$ 28,250 | \$ 20,000 |
| Accounts receivable | 75,000 | 58,000 |
| Inventory | 220,000 | 250,000 |
| Prepaid expenses | 9,000 | 7,000 |
| Total current assets | <u>332,250</u> | <u>335,000</u> |
| Plant assets | | |
| Plant assets | 600,000 | 502,000 |
| Less: Accumulated depreciation—plant assets | <u>150,000</u> | <u>125,000</u> |
| Net plant assets | <u>450,000</u> | <u>377,000</u> |
| Total assets | <u>\$782,250</u> | <u>\$712,000</u> |
| Current liabilities | | |
| Accounts payable | \$123,000 | \$115,000 |
| Salaries and wages payable | 47,250 | 72,000 |
| Interest payable | 27,000 | 25,000 |
| Total current liabilities | <u>197,250</u> | <u>212,000</u> |
| Long-term debt | | |
| Bonds payable | 70,000 | 100,000 |
| Total liabilities | <u>267,250</u> | <u>312,000</u> |
| Stockholders' equity | | |
| Common stock, \$10 par | 370,000 | 280,000 |
| Retained earnings | <u>145,000</u> | <u>120,000</u> |
| Total stockholders' equity | <u>515,000</u> | <u>400,000</u> |
| Total liabilities and stockholders' equity | <u>\$782,250</u> | <u>\$712,000</u> |

Chapman Company
Income Statement
For the Year Ended May 31, 2020

| | |
|----------------------------|-------------------|
| Sales revenue | \$1,255,250 |
| Cost of goods sold | <u>722,000</u> |
| Gross profit | <u>533,250</u> |
| Expenses | |
| Salaries and wages expense | 252,100 |
| Interest expense | 75,000 |
| Depreciation expense | 25,000 |
| Other expenses | 8,150 |
| Total expenses | <u>360,250</u> |
| Operating income | 173,000 |
| Income tax expense | <u>43,000</u> |
| Net income | <u>\$ 130,000</u> |

The following is additional information concerning Chapman's transactions during the year ended May 31, 2020.

1. All sales during the year were made on account.
2. All merchandise was purchased on account, comprising the total accounts payable account.
3. Plant assets costing \$98,000 were purchased by paying \$28,000 in cash and issuing 7,000 shares of stock.
4. The "other expenses" are related to prepaid items.
5. All income taxes incurred during the year were paid during the year.
6. In order to supplement its cash, Chapman issued 2,000 shares of common stock at par value.
7. Cash dividends of \$105,000 were declared and paid at the end of the fiscal year.

Instructions

- a. Compare and contrast the direct method and the indirect method for reporting cash flows from operating activities.
- b. Prepare a statement of cash flows for Chapman Company for the year ended May 31, 2020, using the direct method. Be sure to support the statement with appropriate calculations. (A reconciliation of net income to net cash provided is not required.)
- c. Using the indirect method, calculate only the net cash flow from operating activities for Chapman Company for the year ended May 31, 2020.

P23.8 (LO 2, 4) (SCF—Direct and Indirect Methods) Comparative balance sheet accounts of Sharpe Company are presented below.

| Sharpe Company Comparative Balance Sheet Accounts As of December 31 | | |
|---|-----------|-----------|
| Debit Balances | 2020 | 2019 |
| Cash | \$ 70,000 | \$ 51,000 |
| Accounts Receivable | 155,000 | 130,000 |
| Inventory | 75,000 | 61,000 |
| Debt investments (available-for-sale) | 55,000 | 85,000 |
| Equipment | 70,000 | 48,000 |
| Buildings | 145,000 | 145,000 |
| Land | 40,000 | 25,000 |
| Totals | \$610,000 | \$545,000 |
| <u>Credit Balances</u> | | |
| Allowance for Doubtful Accounts | \$ 10,000 | \$ 8,000 |
| Accumulated Depreciation—Equipment | 21,000 | 14,000 |
| Accumulated Depreciation—Buildings | 37,000 | 28,000 |
| Accounts Payable | 66,000 | 60,000 |
| Income Taxes Payable | 12,000 | 10,000 |
| Long-Term Notes Payable | 62,000 | 70,000 |
| Common Stock | 310,000 | 260,000 |
| Retained Earnings | 92,000 | 95,000 |
| Totals | \$610,000 | \$545,000 |

Additional data:

1. Equipment that cost \$10,000 and was 60% depreciated was sold in 2020.
2. Cash dividends were declared and paid during the year.
3. Common stock was issued in exchange for land.
4. Debt investments that cost \$35,000 were sold during the year.
5. There were no write-offs of uncollectible accounts during the year.

Sharpe's 2020 income statement is as follows.

| | | |
|---|----------------|------------------|
| Sales revenue | | \$950,000 |
| Less: Cost of goods sold | | <u>600,000</u> |
| Gross profit | | 350,000 |
| Less: Operating expenses (includes depreciation expense and bad debt expense) | | <u>250,000</u> |
| Income from operations | | 100,000 |
| Other revenues and expenses | | |
| Gain on sale of investments | \$15,000 | |
| Loss on sale of equipment | <u>(3,000)</u> | <u>12,000</u> |
| Income before taxes | | 112,000 |
| Income taxes | | <u>45,000</u> |
| Net income | | <u>\$ 67,000</u> |

Instructions

- Compute net cash provided by operating activities under the direct method.
- Prepare a statement of cash flows using the indirect method.

P23.9 (LO 2, 4) (Indirect SCF) Dingel Corporation has contracted with you to prepare a statement of cash flows. The controller has provided the following information.

| | December 31 | |
|--------------------------------------|------------------|-----------------|
| | 2020 | 2019 |
| Cash | \$ 38,500 | \$13,000 |
| Accounts receivable | 12,250 | 10,000 |
| Inventory | 12,000 | 10,000 |
| Equity investments | -0- | 3,000 |
| Buildings | -0- | 29,750 |
| Equipment | 40,000 | 20,000 |
| Copyrights | 5,000 | 5,250 |
| Totals | <u>\$107,750</u> | <u>\$91,000</u> |
| Allowance for doubtful accounts | \$ 3,000 | \$ 4,500 |
| Accumulated depreciation—equipment | 2,000 | 4,500 |
| Accumulated depreciation—buildings | -0- | 6,000 |
| Accounts payable | 5,000 | 4,000 |
| Dividends payable | -0- | 5,000 |
| Notes payable, short-term (nontrade) | 3,000 | 4,000 |
| Long-term notes payable | 36,000 | 25,000 |
| Common stock | 38,000 | 33,000 |
| Retained earnings | <u>20,750</u> | <u>5,000</u> |
| | <u>\$107,750</u> | <u>\$91,000</u> |

Additional data related to 2020 are as follows.

- Equipment that had cost \$11,000 and was 30% depreciated at time of disposal was sold for \$2,500.
- \$5,000 of the long-term note payable was paid by issuing common stock.
- Cash dividends paid were \$5,000.
- On January 1, 2020, the building was completely destroyed by a flood. Insurance proceeds on the building were \$33,000 (net of \$4,000 taxes).
- Equity investments (ownership is less than 20% of total shares) were sold at \$1,500 above their cost. No unrealized gains or losses were recorded in 2020.
- Cash and a long-term note for \$16,000 were given for the acquisition of equipment.
- Interest of \$2,000 and income taxes of \$5,000 were paid in cash.

Instructions

- Use the indirect method to analyze the above information and prepare a statement of cash flows for Dingel.
- What would you expect to observe in the operating, investing, and financing sections of a statement of cash flows of:
 - A severely financially troubled firm?
 - A recently formed firm that is experiencing rapid growth?

Concepts for Analysis

CA23.1 (LO 2, 4) Writing (Analysis of Improper SCF) The following statement was prepared by Maloney Corporation's accountant.

| Maloney Corporation | |
|---|------------------|
| Statement of Sources and Application of Cash | |
| For the Year Ended September 30, 2020 | |
| Sources of cash | |
| Net income | \$111,000 |
| Depreciation and depletion | 70,000 |
| Increase in long-term debt | 179,000 |
| Changes in current receivables and inventories, less current liabilities (excluding current maturities of long-term debt) | 14,000 |
| | <u>\$374,000</u> |
| Application of cash | |
| Cash dividends | \$ 60,000 |
| Expenditure for property, plant, and equipment | 214,000 |
| Investments and other uses | 20,000 |
| Change in cash | 80,000 |
| | <u>\$374,000</u> |

The following additional information relating to Maloney Corporation is available for the year ended September 30, 2020.

1. Salaries and wages expense attributable to stock option plans was \$25,000 for the year.
2. Expenditures for property, plant, and equipment \$250,000
 Proceeds from retirements of property, plant, and equipment 36,000
 Net expenditures \$214,000
3. A stock dividend of 10,000 shares of Maloney Corporation common stock was distributed to common stockholders on April 1, 2020, when the per share market price was \$7 and par value was \$1.
4. On July 1, 2020, when its market price was \$6 per share, 16,000 shares of Maloney Corporation common stock were issued in exchange for 4,000 shares of preferred stock.
5. Depreciation expense \$ 65,000
 Depletion expense 5,000
\$ 70,000
6. Increase in long-term debt \$620,000
 Less: Redemption of debt 441,000
 Net increase \$179,000

Instructions

- a. In general, what are the objectives of a statement of the type shown above for Maloney Corporation? Explain.
- b. Identify the weaknesses in the form and format of Maloney Corporation's statement of cash flows without reference to the additional information. (Assume adoption of the indirect method.)
- c. For each of the six items of additional information for the statement of cash flows, indicate the preferable treatment and explain why the suggested treatment is preferable.

(AICPA adapted)

CA23.2 (LO 2, 4) Groupwork (SCF Theory and Analysis of Improper SCF) Teresa Ramirez and Lenny Traylor are examining the following statement of cash flows for Pacific Clothing Store's first year of operations.

Pacific Clothing Store
Statement of Cash Flows
For the Year Ended January 31, 2020

| | |
|---|------------|
| Sources of cash | |
| From sales of merchandise | \$ 382,000 |
| From sale of common stock | 380,000 |
| From sale of investment | 120,000 |
| From depreciation | 80,000 |
| From issuance of note for truck | 30,000 |
| From interest on investments | 8,000 |
| Total sources of cash | 1,000,000 |
| Uses of cash | |
| For purchase of fixtures and equipment | 330,000 |
| For merchandise purchased for resale | 253,000 |
| For operating expenses (including depreciation) | 170,000 |
| For purchase of investment | 95,000 |
| For purchase of truck by issuance of note | 30,000 |
| For purchase of treasury stock | 10,000 |
| For interest on note | 3,000 |
| Total uses of cash | 891,000 |
| Net increase in cash | \$ 109,000 |

Teresa claims that Pacific's statement of cash flows is an excellent portrayal of a superb first year, with cash increasing \$109,000. Lenny replies that it was not a superb first year—that the year was an operating failure, the statement was incorrectly presented, and \$109,000 is not the actual increase in cash.

Instructions

- a. With whom do you agree, Teresa or Lenny? Explain your position.
- b. Using the data provided, prepare a statement of cash flows in proper indirect method form. The only noncash items in income are depreciation and the gain from the sale of the investment (purchase and sale are related).

CA23.3 (LO 2, 4) (SCF Theory and Analysis of Transactions) Ashley Company is a young and growing producer of electronic measuring instruments and technical equipment. You have been retained by Ashley to advise it in the preparation of a statement of cash flows using the indirect method. For the fiscal year ended October 31, 2020, you have obtained the following information concerning certain events and transactions of Ashley.

1. The amount of reported earnings for the fiscal year was \$700,000, which included a deduction for a loss of \$110,000 (see item 5 below).
2. Depreciation expense of \$315,000 was included in the income statement.
3. Uncollectible accounts receivable of \$40,000 were written off against the allowance for doubtful accounts. Also, \$51,000 of bad debt expense was included in determining income for the fiscal year, and the same amount was added to the allowance for doubtful accounts.
4. A gain of \$6,000 was realized on the sale of a machine. It originally cost \$75,000, of which \$30,000 was undepreciated on the date of sale.
5. On April 1, 2020, lightning caused an uninsured building loss of \$110,000 (\$180,000 loss, less reduction in income taxes of \$70,000). This loss was included in determining income as indicated in item 1 above.
6. On July 3, 2020, building and land were purchased for \$700,000. Ashley gave in payment \$75,000 cash, \$200,000 market price of its unissued common stock, and signed a \$425,000 mortgage note payable.
7. On August 3, 2020, \$800,000 face value of Ashley's 10% convertible debentures was converted into \$150,000 par value of its common stock. The bonds were originally issued at face value.

Instructions

Explain whether each of the seven numbered items above is a cash inflow or outflow, and explain how it should be disclosed in Ashley's statement of cash flows for the fiscal year ended October 31, 2020. If any item is neither an inflow nor an outflow of cash, explain why it is not, and indicate the disclosure, if any, that should be made of the item in Ashley's statement of cash flows for the fiscal year ended October 31, 2020.

CA23.4 (LO 2, 4) Groupwork (Analysis of Transactions' Effect on SCF) Each of the following items must be considered in preparing a statement of cash flows for Cruz Fashions Inc. for the year ended December 31, 2020.

1. Fixed assets that had cost \$20,000 6½ years before and were being depreciated on a 10-year basis, with no estimated scrap value, were sold for \$4,750.
2. During the year, goodwill of \$15,000 was considered impaired and was completely written off to expense.
3. During the year, 500 shares of common stock with a stated value of \$25 a share were issued for \$32 a share.
4. The company sustained a net loss for the year of \$2,100. Depreciation amounted to \$2,000 and patent amortization was \$400.
5. Uncollectible accounts receivable in the amount of \$2,000 were written off against Allowance for Doubtful Accounts.
6. Debt investments (available-for-sale) that cost \$12,000 when purchased 4 years earlier were sold for \$10,600.
7. Bonds payable with a par value of \$24,000 on which there was an unamortized bond premium of \$2,000 were redeemed at 101.

Instructions

For each item, state where it is to be shown in the statement and then how you would present the necessary information, including the amount. Consider each item to be independent of the others. Assume that correct entries were made for all transactions as they took place.

CA23.5 (LO 1, 2) (Purpose and Elements of SCF) GAAP requires the statement of cash flows be presented when financial statements are prepared.

Instructions

- a. Explain the purposes of the statement of cash flows.
- b. List and describe the three categories of activities that must be reported in the statement of cash flows.
- c. Identify and describe the two methods that are allowed for reporting cash flows from operations.
- d. Describe the financial statement presentation of noncash investing and financing transactions. Include in your description an example of a noncash investing and financing transaction.

CA23.6 (LO 1, 2, 3) Ethics (Cash Flow Reporting) Brockman Guitar Company is in the business of manufacturing top-quality, steel-string folk guitars. In recent years, the company has experienced working capital problems resulting from the procurement of factory equipment, the unanticipated buildup of receivables and inventories, and the payoff of a balloon mortgage on a new manufacturing facility. The founder and president of the company, Barbara Brockman, has attempted to raise cash from various financial institutions, but to no avail because of the company's poor performance in recent years. In particular, the company's lead bank, First Financial, is especially concerned about Brockman's inability to maintain a positive cash position. The commercial loan officer from First Financial told Barbara, "I can't even consider your request for capital financing unless I see that your company is able to generate positive cash flows from operations."

Thinking about the banker's comment, Barbara came up with what she believes is a good plan: With a more attractive statement of cash flows, the bank might be willing to provide long-term financing. To "window dress" cash flows, the company can sell its accounts receivables to factors and liquidate its raw materials inventories. These rather costly transactions would generate lots of cash. As the chief accountant for Brockman Guitar, it is your job to tell Barbara what you think of her plan.

Instructions

Answer the following questions.

- a. What are the ethical issues related to Barbara Brockman's idea?
- b. What would you tell Barbara Brockman?

Using Your Judgment

Financial Reporting Problem

The Procter & Gamble Company (P&G)

The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

- Which method of computing net cash provided by operating activities does P&G use? What were the amounts of net cash provided by operating activities for the years 2015, 2016, and 2017? Which two items were most responsible for the decrease in net cash provided by operating activities in 2017?
- What was the most significant item in the cash flows used for investing activities section in 2017? What was the most significant item in the cash flows used for financing activities section in 2017?
- Where is "deferred income taxes" reported in P&G's statement of cash flows? Why does it appear in that section of the statement of cash flows?
- Where is depreciation reported in P&G's statement of cash flows? Why is depreciation added to net income in the statement of cash flows?

Comparative Analysis Case

The Coca-Cola Company and PepsiCo, Inc.

The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- What method of computing net cash provided by operating activities does Coca-Cola use? What method does PepsiCo use? What were the amounts of cash provided by operating activities reported by Coca-Cola and PepsiCo in 2017?
- What was the most significant item reported by Coca-Cola and PepsiCo in 2017 in their investing activities sections? What is the most significant item reported by Coca-Cola and PepsiCo in 2017 in their financing activities sections?
- What were these two companies' trends in net cash provided by operating activities over the period 2015 to 2017?
- Where is "depreciation and amortization" reported by Coca-Cola and PepsiCo in their statements of cash flows? What is the amount and why does it appear in that section of the statement of cash flows?
- Based on the information contained in Coca-Cola's and PepsiCo's financial statements, compute the following 2017 ratios for each company. These ratios require the use of statement of cash flows data. (These ratios were covered in Chapter 5.)
 - Current cash debt coverage.
 - Cash debt coverage.
- What conclusions concerning the management of cash can be drawn from the ratios computed in (e)?

Financial Statement Analysis Case

Vermont Teddy Bear Co.

Founded in the early 1980s, the **Vermont Teddy Bear Co.** designs and manufactures American-made teddy bears and markets them primarily as gifts called Bear-Grams or Teddy Bear-Grams. Bear-Grams are personalized teddy bears delivered directly to the recipient for special occasions such as birthdays and anniversaries. The Shelburne, Vermont, company's primary markets are New York, Boston, and Chicago. Sales have jumped dramatically in recent years. Such dramatic growth has significant implications for cash flows. Provided below are the cash flow statements for two recent years for the company.

| | <u>Current Year</u> | <u>Prior Year</u> |
|--|-----------------------|---------------------|
| Cash flows from operating activities: | | |
| Net income | \$ 17,523 | \$ 838,955 |
| Adjustments to reconcile net income to net cash provided by operating activities | | |
| Deferred income taxes | (69,524) | (146,590) |
| Depreciation and amortization | 316,416 | 181,348 |
| Changes in assets and liabilities: | | |
| Accounts receivable, trade | (38,267) | (25,947) |
| Inventories | (1,599,014) | (1,289,293) |
| Prepaid and other current assets | (444,794) | (113,205) |
| Deposits and other assets | (24,240) | (83,044) |
| Accounts payable | 2,017,059 | (284,567) |
| Accrued expenses | 61,321 | 170,755 |
| Accrued interest payable, debentures | — | (58,219) |
| Other | — | (8,960) |
| Income taxes payable | — | 117,810 |
| Net cash provided by (used for) operating activities | 236,480 | (700,957) |
| Net cash used for investing activities | (2,102,892) | (4,422,953) |
| Net cash (used for) provided by financing activities | (315,353) | 9,685,435 |
| Net change in cash and cash equivalents | <u>\$ (2,181,765)</u> | <u>\$ 4,561,525</u> |
| Other information: | | |
| Current liabilities | \$ 4,055,465 | \$ 1,995,600 |
| Total liabilities | 4,620,085 | 2,184,386 |
| Net sales | 20,560,566 | 17,025,856 |

Instructions

- Note that net income in the current year was only \$17,523 compared to prior-year income of \$838,955, but net cash flow from operating activities was \$236,480 in the current year and a negative \$700,957 in the prior year. Explain the causes of this apparent paradox.
- Evaluate Vermont Teddy Bear's liquidity, solvency, and profitability for the current year using cash flow-based ratios.

Accounting, Analysis, and Principles

The income statement for the year ended December 31, 2020, for Laskowski Manufacturing Company contains the following condensed information.

| Laskowski Co. | | |
|---|----------------|-------------------|
| Income Statement | | |
| Revenues | | \$6,583,000 |
| Operating expenses (excluding depreciation) | \$4,920,000 | |
| Depreciation expense | <u>880,000</u> | <u>5,800,000</u> |
| Income before income tax | | 783,000 |
| Income tax expense | | <u>353,000</u> |
| Net income | | <u>\$ 430,000</u> |

Included in operating expenses is a \$24,000 loss resulting from the sale of machinery for \$270,000 cash. The company purchased machinery at a cost of \$750,000.

Laskowski reports the following balances on its comparative balance sheets at December 31.

| Laskowski Co. | | |
|---|-------------|-------------|
| Comparative Balance Sheets (partial) | | |
| | <u>2020</u> | <u>2019</u> |
| Cash | \$672,000 | \$130,000 |
| Accounts receivable | 775,000 | 610,000 |
| Inventory | 834,000 | 867,000 |
| Accounts payable | 521,000 | 501,000 |

Income tax expense of \$353,000 represents the amount paid in 2020. Dividends declared and paid in 2020 totaled \$200,000.

Accounting

Prepare the statement of cash flows using the indirect method.

Analysis

Laskowski has an aggressive growth plan, which will require significant investments in plant and equipment over the next several years. Preliminary plans call for an investment of over \$500,000 in the next year. Compute Laskowski's free cash flow (from Chapter 5) and use it to evaluate the investment plans with the use of only internally generated funds.

Principles

How does the statement of cash flows contribute to achieving the objective of financial reporting?

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

CE23.1 Access the glossary ("Master Glossary") to answer the following.

- a. What are cash equivalents?
- b. What are financing activities?

c. What are investing activities?

d. What are operating activities?

CE23.2 Name five cash inflows that would qualify as a "financing activity."

CE23.3 How should cash flows from purchases, sales, and maturities of available-for-sale debt securities be classified and reported in the statement of cash flows?

CE23.4 Do companies need to disclose information about investing and financing activities that do not affect cash receipts or cash payments? If so, how should such information be disclosed?

Codification Research Case

As part of the year-end accounting process for your company, you are preparing the statement of cash flows according to GAAP. One of your team, a finance major, believes the statement should be prepared to report the change in working capital, because analysts many times use working capital in ratio analysis. Your supervisor would like research conducted to verify the basis for preparing the statement of cash flows.

Instructions

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

- a. What is the primary objective for the statement of cash flows? Is working capital the basis for meeting this objective?
- b. What information is provided in a statement of cash flows?
- c. List some of the typical cash inflows and outflows from operations.

IFRS Insights

LEARNING OBJECTIVE 6

Compare the statement of cash flows under GAAP and IFRS.

As in GAAP, the statement of cash flows is a required statement for IFRS. In addition, the content and presentation of a U.S. statement of cash flows is similar to one used for IFRS. However, the disclosure requirements related to the statement of cash flows are more extensive under GAAP. *IAS 7* (“Cash Flow Statements”) provides the overall IFRS requirements for cash flow information.

Relevant Facts

Following are the key similarities and differences between GAAP and IFRS related to the statement of cash flows.

Similarities

- Both GAAP and IFRS require that companies prepare a statement of cash flows.
- Both IFRS and GAAP require that the statement of cash flows should have three major sections—operating, investing, and financing—along with changes in cash and cash equivalents.
- Similar to GAAP, the cash flow statement can be prepared using either the indirect or direct method under IFRS. For both IFRS and GAAP, most companies use the indirect method for reporting net cash flow from operating activities.
- The definition of cash equivalents used in IFRS is similar to that used in GAAP.

Differences

- A major difference in the definition of cash and cash equivalents is that in certain situations, bank overdrafts are considered part of cash and cash equivalents under IFRS (which is not the case in GAAP). Under GAAP, bank overdrafts are classified as financing activities.
- IFRS requires that non-cash investing and financing activities be excluded from the statement of cash flows. Instead, these non-cash activities should be reported elsewhere. This requirement is interpreted to mean that non-cash investing and financing activities should be disclosed in the notes to the financial statements instead of in the financial statements. Under GAAP, companies may present this information in the cash flow statement.
- One area where there can be substantive differences between IFRS and GAAP relates to the classification of interest, dividends, and taxes. IFRS provides more alternatives for disclosing these items, while GAAP requires that except for dividends paid (which are classified as a financing activity), these items are all reported as operating activities.

About the Numbers

Significant Non-Cash Transactions

Because the statement of cash flows reports only the effects of operating, investing, and financing activities in terms of cash flows, it omits some **significant non-cash transactions** and other events that are investing or financing activities. Among the more common of these non-cash transactions that a company should report or disclose in some manner are the following.

1. Acquisition of assets by assuming liabilities (including finance lease obligations) or by issuing equity securities.
2. Exchanges of non-monetary assets.
3. Refinancing of long-term debt.
4. Conversion of debt or preference shares to ordinary shares.
5. Issuance of equity securities to retire debt.

Investing and financing transactions that do not require the use of cash are excluded from the statement of cash flows. If material in amount, these disclosures may be either narrative or summarized

in a separate schedule. This schedule may appear in a separate note or supplementary schedule to the financial statements.

Illustration IFRS23.1 shows the presentation of these significant non-cash transactions or other events in a separate schedule in the notes to the financial statements.

Note G: Significant non-cash transactions. During the year, the company engaged in the following significant non-cash investing and financing transactions:

| | |
|--|-------------|
| Issued 250,000 ordinary shares to purchase land and building | \$1,750,000 |
| Exchanged land in Steadfast, New York, for land in Bedford, Pennsylvania | \$2,000,000 |
| Converted 7% bonds to 50,000 ordinary shares | \$ 500,000 |

ILLUSTRATION IFRS23.1

Note Presentation of Non-Cash Investing and Financing Activities

Companies do not generally report certain other significant non-cash transactions or other events in conjunction with the statement of cash flows. Examples of these types of transactions are **share dividends, share splits, and restrictions on retained earnings**. Companies generally report these items, neither financing nor investing activities, in conjunction with the statement of changes in equity or schedules and notes pertaining to changes in equity accounts.

Special Disclosures

IAS 7 indicates that cash flows related to interest received and paid, and dividends received and paid, should be separately disclosed in the statement of cash flows. IFRS allows flexibility in how these items are classified in the statement of cash flows. However, each item should be classified in a consistent manner from period to period as operating, investing, or financing cash flows. *For homework purposes, classify interest received and paid and dividends received as part of cash flows from operating activities and dividends paid as cash flows from financing activities.* The justification for reporting the first three items in cash flows from operating activities is that each item affects net income. Dividends paid, however, do not affect net income and are often considered a cost of financing.

Companies should also disclose income taxes paid separately in the cash flows from operating activities unless they can be separately identified as part of investing or financing activities. While tax expense may be readily identifiable with investing or financing activities, the related tax cash flows are often impracticable to identify and may arise in a different period from the cash flows of the underlying transaction. Therefore, taxes paid are usually classified as cash flows from operating activities. IFRS requires that the cash paid for taxes, as well as cash flows from interest and dividends received and paid, be disclosed. The category (operating, investing, or financing) that each item was included in must be disclosed as well.

An example of such a disclosure from the notes to **Daimler's** financial statements is provided in **Illustration IFRS23.2**.

|  Daimler | | |
|--|-------------|-------------|
| Cash flows included in cash used for/provided by operating activities: | | |
| (In millions of euros) | <u>2017</u> | <u>2016</u> |
| Interest paid | (304) | (299) |
| Interest received | 187 | 211 |
| Dividends received from equity-method investments | 843 | 103 |
| Dividends received from other shareholdings | 52 | 85 |

ILLUSTRATION IFRS23.2

Note Disclosure of Interest, Taxes, and Dividends

Other companies choose to report these items directly in the statement of cash flows. In many cases, companies start with income before income taxes and then show income taxes paid as a separate item. In addition, they often add back interest expense on an accrual basis and then subtract interest paid. Reporting these items in the operating activities section is shown for Mermel Company in **Illustration IFRS23.3**.

ILLUSTRATION IFRS23.3**Reporting of Interest, Taxes, and Dividends in the Operating Section**

| Mermel Company | | |
|---|---------|-----------------|
| Statement of Cash Flows (\$000,000) | | |
| (Operating Activities Section Only) | | |
| Income before income tax | | \$ 4,000 |
| Adjustments to reconcile income before income tax to net cash provided by operating activities: | | |
| Depreciation expense | \$1,000 | |
| Interest expense | 500 | |
| Investment revenue (dividends) | (650) | |
| Decrease in inventories | 1,050 | |
| Increase in trade receivables | (310) | 1,590 |
| Cash generated from operations | | 5,590 |
| Interest paid | (300) | |
| Income taxes paid | (760) | (1,060) |
| Net cash provided by operating activities | | <u>\$ 4,530</u> |

Companies often provide a separate section to identify interest and income taxes paid.

On the Horizon

The IASB and the FASB have worked on a project on the presentation and organization of information in the financial statements. With respect to the cash flow statement specifically, the notion of *cash equivalents* will probably not be retained. The definition of cash in the existing literature would be retained, and the statement of cash flows would present information on changes in cash only. In addition, the IASB and FASB favor presentation of operating cash flows using the direct method only. This approach is generally opposed by the preparer community. The project is currently on hold.

IFRS Self-Test Questions

- Which of the following is **true** regarding the statement of cash flows under IFRS?
 - The statement of cash flows has two major sections—operating and non-operating.
 - The statement of cash flows has two major sections—financing and investing.
 - The statement of cash flows has three major sections—operating, investing, and financing.
 - The statement of cash flows has three major sections—operating, non-operating, and financing.
- In the case of a bank overdraft:
 - GAAP typically includes the amount in cash and cash equivalents.
 - IFRS typically includes the amount in cash equivalents but not in cash.
 - GAAP typically treats the overdraft as a liability, and reports the amount in the financing section of the statement of cash flows.
 - IFRS typically treats the overdraft as a liability, and reports the amount in the investing section of the statement of cash flows.
- Under IFRS, significant non-cash transactions:
 - are classified as operating, if they are related to income items.
 - are excluded from the statement of cash flows and disclosed in a narrative form or summarized in a separate schedule.
 - are classified as an investing or financing activity.
 - are classified as an operating activity, unless they can be specifically identified with financing or investing activities.
- For purposes of the statement of cash flows, under IFRS interest paid is treated as:
 - an operating activity in all cases.
 - an investing or operating activity, depending on use of the borrowed funds.
 - either a financing or investing activity.
 - either an operating or financing activity, but treated consistently from period to period.
- For purposes of the statement of cash flows, under IFRS income taxes paid are treated as:
 - cash flows from operating activities unless they can be separately identified as part of investing or financing activities.
 - an operating activity in all cases.
 - an investing or operating activity, depending on whether a refund is received.
 - either operating, financing, or investing activity, but treated consistently to other companies in the same industry.

IFRS Concepts and Application

IFRS23.1 Where can authoritative IFRS related to the statement of cash flows be found?

IFRS23.2 Briefly describe some of the similarities and differences between GAAP and IFRS with respect to cash flow reporting.

IFRS23.3 What are some of the key obstacles for the FASB and IASB within their accounting guidance in the area of cash flow reporting? Explain.

IFRS23.4 Stan Conner and Mark Stein were discussing the statement of cash flows of Bombeck Co. In the notes to the statement of cash flows was a schedule entitled “Non-cash investing and financing activities.” Give three examples of significant non-cash transactions that would be reported in this schedule.

IFRS23.5 Springsteen Co. had the following activity in its most recent year of operations.

- | | |
|---|---|
| a. Pension expense exceeds amount funded. | g. Amortization of intangible assets. |
| b. Redemption of bonds payable. | h. Purchase of treasury shares. |
| c. Sale of building at book value. | i. Issuance of bonds for land. |
| d. Depreciation. | j. Payment of dividends. |
| e. Exchange of equipment for furniture. | k. Increase in interest receivable on notes receivable. |
| f. Issuance of ordinary shares. | l. Purchase of equipment. |

Instructions

Classify the items as (1) operating—add to net income, (2) operating—deduct from net income, (3) investing, (4) financing, or (5) significant non-cash investing and financing activities. Use the indirect method.

IFRS23.6 Following are selected statement of financial position accounts of Sander Bros. Corp. at December 31, 2020 and 2019, and the increases or decreases in each account from 2019 to 2020. Also presented is selected income statement information for the year ended December 31, 2020, and additional information.

| Selected statement of financial position accounts | 2020 | 2019 | Increase (Decrease) |
|--|-----------|-----------|------------------------|
| <u>Assets</u> | | | |
| Property, plant, and equipment | \$277,000 | \$247,000 | \$30,000 |
| Accumulated depreciation | (178,000) | (167,000) | (11,000) |
| Accounts receivable | 34,000 | 24,000 | 10,000 |
| <u>Equity and liabilities</u> | | | |
| Share capital—ordinary, \$1 par | \$ 22,000 | \$ 19,000 | \$ 3,000 |
| Share premium—ordinary | 9,000 | 3,000 | 6,000 |
| Retained earnings | 104,000 | 91,000 | 13,000 |
| Bonds payable | 49,000 | 46,000 | 3,000 |
| Dividends payable | 8,000 | 5,000 | 3,000 |

Selected income statement information for the year ended December 31, 2020

| | |
|---------------------------|-----------|
| Sales revenue | \$155,000 |
| Depreciation | 38,000 |
| Gain on sale of equipment | 14,500 |
| Net income | 31,000 |

Additional information:

- During 2020, equipment costing \$45,000 was sold for cash.
- Accounts receivable relate to sales of merchandise.
- During 2020, \$25,000 of bonds payable were issued in exchange for property, plant, and equipment.

There was no amortization of bond discount or premium.

Instructions

Determine the category (operating, investing, or financing) and the amount that should be reported in the statement of cash flows for the following items.

- Payments for purchase of property, plant, and equipment.
- Proceeds from the sale of equipment.

- c. Cash dividends paid.
- d. Redemption of bonds payable.

IFRS23.7 Dingel Corporation has contracted with you to prepare a statement of cash flows. The controller has provided the following information.

| | December 31 | |
|---------------------------------------|------------------|-----------------|
| | 2020 | 2019 |
| Buildings | \$ -0- | \$29,750 |
| Equipment | 45,000 | 20,000 |
| Patents | 5,000 | 6,250 |
| Investments | -0- | 3,000 |
| Inventory | 12,000 | 9,000 |
| Accounts receivable | 12,250 | 10,000 |
| Cash | 33,500 | 13,000 |
| | <u>\$107,750</u> | <u>\$91,000</u> |
| Share capital—ordinary | \$ 43,000 | \$33,000 |
| Retained earnings | 20,750 | 6,000 |
| Allowance for doubtful accounts | 3,000 | 4,500 |
| Accumulated depreciation on equipment | 2,000 | 4,500 |
| Accumulated depreciation on buildings | -0- | 6,000 |
| Accounts payable | 5,000 | 3,000 |
| Dividends payable | -0- | 5,000 |
| Long-term notes payable | 31,000 | 25,000 |
| Notes payable, short-term (non-trade) | 3,000 | 4,000 |
| | <u>\$107,750</u> | <u>\$91,000</u> |

Additional data related to 2020 are as follows.

1. Equipment that had cost \$11,000 and was 40% depreciated at time of disposal was sold for \$2,500.
2. \$10,000 of the long-term notes payable was paid by issuing ordinary shares.
3. Cash dividends paid were \$5,000.
4. On January 1, 2020, the building was completely destroyed by a flood. Insurance proceeds on the building were \$32,000.
5. Equity investments (non-trading) were sold at \$1,700 above their cost.
6. Cash was paid for the acquisition of equipment.
7. A long-term note for \$16,000 was issued for the acquisition of equipment.
8. Interest of \$2,000 and income taxes of \$6,500 were paid in cash.

Instructions

Prepare a statement of cash flows using the indirect method.

Professional Research

IFRS23.8 As part of the year-end accounting process for your company, you are preparing the statement of cash flows according to IFRS. One of your team, a finance major, believes the statement should be prepared to report the change in working capital because analysts many times use working capital in ratio analysis. Your supervisor would like research conducted to verify the basis for preparing the statement of cash flows.

Instructions

Access the IFRS authoritative literature at the IASB website. (Click on the IFRS tab and then register for free eIFRS access if necessary.) When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- a. What is the primary objective for the statement of cash flows? Is working capital the basis for meeting this objective?
- b. What information is provided in a statement of cash flows?
- c. List some of the typical cash inflows and outflows from operations.

International Financial Reporting Problem

Marks and Spencer plc (M&S)

IFRS23.9 The financial statements of **M&S** are presented in Appendix E. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- a. Which method of computing net cash provided by operating activities does M&S use? What were the amounts of net cash provided by operating activities for the years 2016 and 2017? Which two items were most responsible for the increase in net cash provided by operating activities in 2017?
- b. What was the most significant item in the cash flows used for investing activities section in 2017? What was the most significant item in the cash flows used for financing activities section in 2017?
- c. Where is "deferred income taxes" reported in M&S's statement of cash flows? Why does it appear in that section of the statement of cash flows?
- d. Where is depreciation reported in M&S's statement of cash flows? Why is depreciation added to net income in the statement of cash flows?

Answers to IFRS Self-Test Questions

Full Disclosure in Financial Reporting

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

1. Review the full disclosure principle and describe how it is implemented.
2. Discuss the disclosure requirements for related-party transactions, post-balance-sheet events, major business segments, and interim reporting.
3. Identify the major disclosures in the auditor's report and understand management's responsibilities for the financial statements.
4. Identify reporting issues related to fraudulent financial reporting and financial forecasts.

PREVIEW OF CHAPTER 24 As the following opening story indicates, our markets will not function properly without transparent, complete, and truthful reporting of financial performance. Investors and other interested parties need to read and understand all aspects of financial reporting—the financial statements, the notes, the president's letter, and management's discussion and analysis. In this chapter, we cover the full disclosure principle in more detail and examine disclosures that must accompany financial statements so that they are not misleading. The content and organization of this chapter are as follows.

This chapter also includes numerous conceptual and global discussions that are integral to the topics presented here.

FULL DISCLOSURE IN FINANCIAL REPORTING

Full Disclosure Principle

- Increase in reporting requirements
- Differential disclosure
- Notes to the financial statements

Disclosure Issues

- Related parties
- Post-balance-sheet events
- Diversified companies
- Interim reports

Auditor's and Management's Reports

- Auditor's report
- Management's reports

Current Reporting Issues

- Fraudulent financial reporting
- Internet financial reporting
- Reporting on forecasts and projections
- Criteria for accounting and reporting choices

High-Quality Financial Reporting— Always in Fashion

Here are excerpts from leading experts regarding the importance of high-quality financial reporting:

Warren E. Buffett, Chairman and Chief Executive Officer, Berkshire Hathaway Inc.:

Financial reporting for Berkshire Hathaway, and for me personally, is the beginning of every decision that we make around here in terms of capital. I'm punching out 10-Ks and 10-Qs every single day. We look at the numbers and try to evaluate the quality of the financial reporting, and then we try to figure out what that means for the bonds and stocks that we're looking at, and thinking of either buying or selling.

Judy Lewent, former Executive Vice President and Chief Financial Officer, Merck & Co., Inc.:

. . . standards, when properly implemented, drive excellence. I can make a parallel to the pharmaceutical industry. If you look around the world at where innovations come from, economists have studied and seen that where regulatory standards are the highest is where innovation is also the highest.

Floyd Norris, Chief Financial Correspondent, The New York Times:

We are in a situation now in our society where the temptations to provide “bad” financial reporting are probably greater than they used to be. The need to get the stock price up, or to keep it up, is intense. So, the temptation to play games, the temptation to manage earnings—some of which can be legitimate and some of which cannot be—is probably greater than it used to be.

Abby Joseph Cohen, President, Global Markets Institute, Goldman, Sachs & Co.:

High-quality financial reporting is perhaps the most important thing we can expect from companies. For investors to make good decisions—whether those investors are buying stocks or bonds or making private investments—they need to know the truth. And we think that when information is as clear as possible and is reported as frequently as makes sense, investors can do their jobs as best they can.

We can also get insight into the importance of high-quality reporting based on the market assessment of companies perceived to have poor-quality reporting. At one time, **Coach, Inc.** stopped reporting as separate items sales from regular stores (full price) and factory outlets. As a result, readers of its financial statements had a hard time determining the source of Coach's sales growth. Analysts were especially concerned that the less-transparent reporting might obscure slowing sales at its regular stores, as consumers cut down on luxury goods in a sluggish economy. Did Coach's stock price suffer as a result of this lower-quality reporting? You bet, as shown in the adjacent price graph.

In the year following the change in reporting, Coach's stock price was down 34 percent. As one analyst noted, “It's never a good sign when you reduce transparency . . . It's a sign of weakness.”

Another example is the recent case of **Sunrun**. Company insiders at this solar-energy company admitted to manipulating a key sales metric around the time of the company's initial public offering (IPO). The former managers say they were told by their superiors to hold off on internally reporting hundreds of customers who canceled their contracts during a roughly five-month period in the middle of that year. Sunrun and other solar companies typically give homeowners at least several days to back out of a contract before their home-energy systems are installed. Hiding the canceled contracts made the company's sales figures appear stronger. As one manager noted, “The big internal push was to cram as many sales as we could through the pipeline.”

When discovered—shortly after the IPO—the market response was predictable. As shown in the following graph, similar to the Coach example, Sunrun's share price has declined substantially since its IPO.

In short, these examples illustrate why high-quality reporting is always in fashion—for companies, investors, and the capital markets. And, as the Coach and Sunrun examples illustrate, full disclosure is at the heart of high-quality reporting.

Porter, “As Belts Tighten, Coach Feels the Pinch,” *BusinessWeek* (May 29, 2008), p. 66; and K. Grind, “Solar Company Sunrun Was Manipulating Sales Data, Say Former Managers,” *Wall Street Journal* (May 22, 2017).

Review and Practice

Go to the **Review and Practice** section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions as well as additional exercises and practice problem with solutions are also available online.

Full Disclosure Principle

LEARNING OBJECTIVE 1

Review the full disclosure principle and describe how it is implemented.

According to the FASB Conceptual Framework, some useful information is best provided in the financial statements, and some is best provided by other means. For example, earnings and cash flows are readily available in financial statements—but investors might do better to look at comparisons to other companies in the same industry, found in news articles or brokerage house reports.

FASB rules directly affect financial statements, notes to the financial statements, and supplementary information. Other types of information found in the annual report, such as management’s discussion and analysis, are not subject to FASB rules. **Illustration 24.1** indicates the various types of financial information.

As Chapter 2 indicated, the profession has adopted a **full disclosure principle**. The full disclosure principle calls for financial reporting of **any financial facts significant enough to influence the judgment of an informed reader**. In some situations, the benefits of disclosure may be apparent but the costs uncertain. In other instances, the costs may be certain but the benefits of disclosure not as apparent.

ILLUSTRATION 24.1 Types of Financial Information**Underlying Concepts**

Here is a good example of the trade-off between cost considerations and the benefits of full disclosure.

For example, the SEC required companies to provide expanded disclosures about their contractual obligations. In light of the off-balance-sheet accounting frauds at companies like **Enron**, the benefits of these expanded disclosures seem fairly obvious to the investing public. While no one has documented the exact costs of disclosure in these situations, they would appear to be relatively small.

On the other hand, the cost of disclosure can be substantial in some cases and the benefits difficult to assess. For example, at one time the *Wall Street Journal* reported that if segment reporting were adopted, a company like **Fruehauf** would have had to increase its accounting staff 50 percent, from 300 to 450 individuals. In this case, the cost of disclosure can be measured, but the benefits are less well defined (see **Underlying Concepts**).

Some even argue that the reporting requirements are so detailed and substantial that users have a difficult time absorbing the information. These critics charge the profession with engaging in **information overload**.

Financial disasters at **Microstrategy**, **PharMor**, **WorldCom**, and **Theranos** highlight the difficulty of implementing the full disclosure principle. They raise the issue of why investors were not aware of potential problems. Was the information these companies presented not comprehensible? Was it buried? Was it too technical? Was it properly presented and fully disclosed as of the financial statement date, but the situation later deteriorated? Or was it simply not there? In the following sections, we describe the elements of high-quality disclosure that will enable companies to avoid these disclosure pitfalls.

Increase in Reporting Requirements

Disclosure requirements have increased substantially. One survey showed that the size of many companies' annual reports is growing in response to demands for increased transparency. For example, annual report page counts ranged from 51 pages for **Tootsie Roll** to a much higher count of 166 for **The Coca Cola Company's** annual report. One analysis from Moody's Investors Services documented "tremendous growth" in the volume of pages in company annual reports, with 75-page financial statements in the late 1990s, increasing to 120 pages in the early 2000s, and 400 pages in the most recent years. One analyst remarked,

“that’s very challenging for investors to get through. . . .”¹ This result is not surprising. As illustrated throughout this text, the FASB has issued many pronouncements in recent years that have substantial disclosure provisions.

The reasons for this increase in disclosure requirements are varied. Some of them are:

- **Complexity of the business environment.** The increasing complexity of business operations magnifies the difficulty of distilling economic events into summarized reports. Such areas as derivatives, leasing, business combinations, pensions, financing arrangements, revenue recognition, and deferred taxes are complex. As a result, companies extensively use **notes to the financial statements** to explain these transactions and their future effects.
- **Necessity for timely information.** Today, more than ever before, users are demanding information that is current and predictive. For example, users want more complete **interim data**. Also, the SEC recommends enhanced fair value and sustainability disclosures.
- **Accounting as a control and monitoring device.** The government has recently sought public disclosure of such phenomena as management compensation, off-balance-sheet financing arrangements, and related-party transactions. An “Enronitis” concern is expressed in many of these newer disclosure requirements, and the SEC has selected accountants and auditors as the agents to assist in controlling and monitoring these concerns.

Differential Disclosure

A trend toward **differential disclosure** is also occurring. For example, the SEC requires that companies report to it certain substantive information that is not found in annual reports to stockholders. Likewise, the FASB, recognizing that certain disclosure requirements are costly and unnecessary for certain companies, has eliminated reporting requirements for private (nonpublic) companies in such areas as fair value of financial instruments and segment reporting (see **Underlying Concepts**).

Some still complain that the FASB has not gone far enough. They note that certain types of companies (small or private) should not have to follow complex GAAP requirements such as those for deferred income taxes, leases, or pensions. This issue, often referred to as “**big GAAP versus little GAAP**,” continues to be controversial.²

The FASB has traditionally taken the position that there should be one set of GAAP. However, due to growing concern about differential costs and benefits of a “one size fits all” reporting package, the FASB has considered providing alternative accounting treatments for private companies in areas that include recognition and measurement, presentation and disclosure, effective dates, and transition methods for financial accounting standards. (see **Global View**). Since 2012, the FASB has worked with the Private Company Council (PCC) to improve the process of setting accounting standards for private companies. The PCC uses the recently developed Private Company Decision-Making Framework³ to evaluate whether alternatives to existing GAAP are necessary to address the needs of users of private company financial statements. The PCC also provides input to the FASB on the appropriate treatment for private companies for items under active consideration on the FASB’s technical agenda. We provide an expanded discussion of the PCC and private company alternatives in Appendix A.

Underlying Concepts

Surveys indicate that users differ in their needs for information and that not all companies should report all elements of information. Thus, some contend that companies should report only information that users and preparers agree is needed in the particular circumstances.

Global View

IFRS allows different accounting for small- and medium-sized entities.

¹Kroeker: Disclosure Overhaul May Result in More Footnote Rules for U.S. GAAP,” <https://tax.thomsonreuters.com/checkpoint-news> (September 28, 2016). Concern about disclosure overload is not confined to financial statements. A recent study of annual proxy statements, which supplement the accounting reports with information on company risks and executive compensation, indicates that the compensation section alone has grown dramatically in recent years. This growth is expected to continue as major new accounting standards are adopted and as companies implement rules to disclose the ratio of chief executive pay relative to the median compensation of employees. See T. Shumsky, “As Company Disclosures Balloon, It’s Getting Easier to Bury Information,” *Wall Street Journal* (February 26, 2016).

²In response to cost-benefit concerns, the SEC has exempted some small public companies from certain rules implemented in response to the Sarbanes-Oxley Act. For example, smaller companies have more time to comply with the internal control rules required by the Sarbanes-Oxley law and have more time to file annual and interim reports.

³FASB, *Private Company Decision-Making Framework: A Framework for Evaluating Financial Accounting and Reporting Guidance for Private Companies* (December 2013).

Evolving Issue Disclosure—Quantity and Quality

There is no better illustration of the adage that both quality and quantity are important than the issue of financial disclosure. While the full disclosure principle holds that more is better, how much more and of what form? An evaluation of this issue requires careful analysis of costs and benefits. Furthermore, as noted by one FASB member, the usefulness of expanded required disclosure also depends on users' ability to distinguish between the form of reporting (i.e., disclosed versus recognized items in financial statements). Research to date is inconclusive on this matter. So it is not just the amount but the quality.

The FASB has responded by initiating a Disclosure Framework project with the goal of improving the effectiveness of disclosures in notes to financial statements. This project has resulted in a new FASB concepts statement ["Conceptual Framework for Financial Reporting—Chapter 8, Notes to Financial Statements" (August 2018)], which addresses the Board's decision process in identifying disclosures to be considered when setting disclosure requirements for individual accounting standards and evaluating existing disclosure requirements.

The Disclosure Framework project has been well-received by a variety of stakeholders. Indeed some companies have taken

up the charge to improve the readability of their financial statements, including the notes. For example, after revising and integrating its annual report package, **General Electric (GE)** saw downloads at its website go from 2,700 to over 9,000. The FASB observes that reducing the volume of the notes to financial statements is not the primary focus of the Disclosure Framework project. The Board hopes that a sharper focus on important information, as was done at GE, will result in higher quality and reduced volume in most cases.

Choudhary, and K. Schipper, "Evidence that Market Participants Assess Recognized and Disclosed Items Similarly When Reliability Is Not an Issue," *The Accounting Review* (July 2013); *FASB News Release*, "FASB Improves the Effectiveness of Disclosures in Notes to Financial Statements," www.fasb.org (August 28, 2018); and C. Westfall, "Disclosure Doesn't Need to Be Difficult: GE's Bornstein," *FEI Daily* (September 28, 2016).

Notes to the Financial Statements

As you know from your study of this text, notes are an integral part of the financial statements of a business enterprise. However, readers of financial statements often overlook them because they are highly technical and often appear in small print. **Notes are the means of amplifying or explaining the items presented in the main body of the statements.** They can explain in qualitative terms information pertinent to specific financial statement items. In addition, they can provide supplementary data of a quantitative nature to expand the information in the financial statements. Notes also can explain restrictions imposed by financial arrangements or basic contractual agreements. Although notes may be technical and difficult to understand, they provide meaningful information for the user of the financial statements.⁴

Accounting Policies

Accounting policies are the specific accounting principles and methods a company currently uses and considers most appropriate to present fairly its financial statements. GAAP states that information about the accounting policies adopted by a reporting entity is essential for financial statement users in making economic decisions. It recommends that companies should present **as an integral part of the financial statements a statement identifying the accounting policies adopted and followed by the reporting entity.** Companies should present the disclosure as the first note or in a separate Summary of Significant Accounting Policies section preceding the notes to the financial statements.

The Summary of Significant Accounting Policies section answers such questions as: What method of depreciation is used on plant assets? What valuation method is employed on inventories? What amortization policy is followed in regard to intangible assets? How are marketing costs handled for financial reporting purposes?

Refer to the financial statements and notes to the financial statements for **The Procter & Gamble Company** (available online) for an illustration of note disclosure of accounting policies (Note 1) and other notes accompanying the audited financial statements.

⁴"Conceptual Framework for Financial Reporting—Chapter 8, Notes to Financial Statements," *Statement of Financial Accounting Concepts No. 8* (Norwalk, Conn.: FASB, August 2018).

Analysts examine carefully the summary of accounting policies to determine whether a company is using conservative or liberal accounting practices. For example, depreciating plant assets over an unusually long period of time is considered liberal. Using LIFO inventory valuation in a period of inflation is generally viewed as conservative.

Companies that fail to adopt high-quality reporting policies may be heavily penalized by the market. For example, as discussed in the opening story, when **Sunrun** disclosed its accounting problems, its share price dropped substantially. Investors viewed Sunrun's quality of earnings as low.

Common Notes

We have discussed many of the **notes to the financial statements** throughout this text and will discuss others more fully in this chapter. The more common notes are as follows.

Major Disclosures

Inventory. Companies should report the basis upon which inventory amounts are stated (e.g., lower-of-cost-or-net realizable value or lower-of-cost-or-market) and the method used in determining cost (LIFO, FIFO, average-cost, etc.). Manufacturers should report, either in the balance sheet or in a separate schedule in the notes, the inventory composition (finished goods, work in process, raw materials). Unusual or significant financing arrangements relating to inventories that may require disclosure include transactions with related parties, product financing arrangements, firm purchase commitments, involuntary liquidation of LIFO inventories, and pledging of inventories as collateral. Chapter 9 illustrates these disclosures.

Property, Plant, and Equipment. Companies should state the basis of valuation for property, plant, and equipment. It is usually historical cost. Companies also should disclose pledges, liens, and other commitments related to these assets. In the presentation of depreciation, companies should disclose the following in the financial statements or in the notes: (1) depreciation expense for the period; (2) balances of major classes of depreciable assets, by nature and function, at the balance sheet date; (3) accumulated depreciation, either by major classes of depreciable assets or in total, at the balance sheet date; and (4) a general description of the method or methods used in computing depreciation with respect to major classes of depreciable assets. Finally, companies should explain any major impairments. Chapter 11 illustrates property, plant, and equipment.

Creditor Claims. Investors normally find it extremely useful to understand the nature and cost of creditor claims. However, the liabilities section in the balance sheet can provide the major types of liabilities only in the aggregate. Note schedules regarding such obligations provide additional information about how a company is financing its operations, the costs that it will bear in future periods, and the timing of future cash outflows. Financial statements must disclose for each of the five years following the date of the statements the aggregate amount of maturities and sinking fund requirements for all long-term borrowings. Chapter 14 illustrates these disclosures.

Equityholders' Claims. Many companies present in the body of the balance sheet information about equity securities: the number of shares authorized, issued, and outstanding and the par value for each type of security. Or, companies may present such

data in a note. Beyond that, a common equity note disclosure relates to contracts and senior securities outstanding that might affect the various claims of the residual equityholders. An example would be the existence of outstanding stock options, outstanding convertible debt, redeemable preferred stock, and convertible preferred stock. In addition, it is necessary to disclose certain types of restrictions currently in force. Generally, these types of restrictions involve the amount of earnings available for dividend distribution. Examples of these types of disclosures are illustrated in Chapter 15 and Chapter 16.

Contingencies and Commitments. A company may have gain or loss contingencies that are not disclosed in the body of the financial statements. These contingencies include litigation, debt and other guarantees, possible tax assessments, renegotiation of government contracts, and sales of receivables with recourse. In addition, companies should disclose in the notes commitments that relate to dividend restrictions, purchase agreements (throughput and take-or-pay), hedge contracts, and employment contracts. Disclosures of such items are illustrated in Chapter 7, Chapter 9, and Chapter 13.

Fair Values. Companies that have assets or liabilities measured at fair value must disclose both the cost and the fair value of all financial instruments in the notes to the financial statements. Fair value measurements may be used for many financial assets and liabilities, investments, impairments of long-lived assets, and some contingencies. Companies also provide disclosure of information that enables users to determine the extent of usage of fair value and the inputs used to implement fair value measurement. This fair value hierarchy identifies three broad levels related to the measurement of fair values (Levels 1, 2, and 3). The levels indicate the reliability of the measurement of fair value information. Appendix 17B discusses in detail fair value disclosures.

Revenue. Users carefully review revenue disclosures to understand the nature, amount, timing, and uncertainty of revenue and cash flows arising from contracts with customers. Companies disclose information about (1) contracts with customers, including significant information related to its performance obligations; (2) significant judgments and changes in these judgments that affect the determination of the transaction price, the allocation of the transaction price, and the determination of the timing of

revenue; and (3) assets recognized from costs incurred to fulfill contracts, including the amount of amortization recognized and the method used for amortization. See Chapter 18.

Deferred Taxes, Pensions, and Leases. The FASB also requires extensive disclosure in the areas of deferred taxes, pensions, and leases. Chapter 19, Chapter 20, and Chapter 21 discuss in detail each of these disclosures. Users of financial statements should carefully read notes to the financial statements for information

about off-balance-sheet commitments, future financing needs, and the quality of a company's earnings.

Changes in Accounting Principles. The profession defines various types of accounting changes and establishes guides for reporting each type. Companies discuss, either in the summary of significant accounting policies or in the other notes, changes in accounting principles (as well as material changes in estimates and corrections of errors). See Chapter 22.

In earlier chapters, we discussed the disclosures listed above. The following sections of this chapter illustrate four additional disclosures of significance—special transactions or events, subsequent events, segment reporting, and interim reporting.

What Do the Numbers Mean? Footnote Secrets

Often, note disclosures are needed to give a complete picture of a company's financial position. A good example of such disclosures is the required disclosure of debt triggers that may be buried in financing arrangements. These triggers can require a company to pay off a loan immediately if the debt rating collapses; they are one of the reasons **Enron** crumbled so quickly. But few Enron stockholders knew about the debt triggers until the gun had gone off. Companies are also disclosing more about their bank credit lines, liquidity, and any special-purpose entities. (The latter were major villains in the Enron drama.)

How can you get better informed about note disclosures that may contain important information related to your investments? Beyond your study in this class, a good resource for understanding the contents of note disclosures is the **footnoted.com** website.

The site provides alerts on financial reporting practices, such as the growing trend of companies' filing financial statements late—a possible signal of accounting shenanigans. The footnoted.com site also highlights “the things companies bury in their SEC filings.” It notes that company reports are more complete of late, but only the largest companies are preparing documents that are readable. As the editor of the site noted, “[some companies] are being dragged kicking and screaming into plain English.”

Disclosure Issues

LEARNING OBJECTIVE 2

Discuss the disclosure requirements for related-party transactions, post-balance-sheet events, major business segments, and interim reporting.

Related-party transactions, post-balance-sheet events, major business segments, and interim reporting can pose especially difficult problems. The accountant/auditor who has responsibility for reporting on these types of transactions must take care to properly balance the rights of the reporting company and the needs of users of the financial statements.

Related Parties

Related-party transactions arise when a company engages in transactions in which one of the parties has the ability to significantly influence the policies of the other. They may also occur when a nontransacting party has the ability to influence the policies of the two transacting

parties.⁵ Competitive, free-market dealings may not exist in related-party transactions, and so an “arm’s-length” basis cannot be assumed. Transactions such as borrowing or lending money at abnormally low or high interest rates, real estate sales at amounts that differ significantly from appraised value, exchanges of nonmonetary assets, and transactions involving enterprises that have no economic substance (“shell corporations”) suggest that related parties may be involved.

In order to make adequate disclosure, companies should report the economic substance, rather than the legal form, of these transactions. GAAP requires the following disclosures of material related-party transactions. [1] (See the FASB Codification References near the end of the chapter.)

1. The nature of the relationship(s) involved.
2. A description of the transactions (including transactions to which no amounts or nominal amounts were ascribed) for each of the periods for which income statements are presented.
3. The dollar amounts of transactions for each of the periods for which income statements are presented.
4. Amounts due from or to related parties as of the date of each balance sheet presented.

Illustration 24.2, from the annual report of **Harley-Davidson, Inc.**, shows disclosure of related-party transactions.

|  Harley-Davidson, Inc. |
|---|
| <p>20. Related Party Transactions (in part)</p> <p>A director of the Company is Chairman and Chief Executive Officer and an equity owner of Fred Deeley Imports Ltd. (Deeley Imports), the exclusive distributor of the Company’s motorcycles in Canada. The Company recorded motorcycles and related products revenue and financial services revenue from Deeley Imports during current and prior years of \$194.8 million and \$204.8 million, respectively, and had finance receivables balances due from Deeley Imports of \$7.4 million and \$11.5 million, at December 31 of the current and prior years, respectively. All such products were provided in the ordinary course of business at prices and on terms and conditions that the Company believes are the same as those that would result from arm’s-length negotiations between unrelated parties.</p> |

ILLUSTRATION 24.2

Disclosure of Related-Party Transactions

Post-Balance-Sheet Events (Subsequent Events)

Notes to the financial statements should explain any significant financial events that took place after the formal balance sheet date, but before the statement is issued. These events are referred to as **post-balance-sheet events** or **subsequent events**. **Illustration 24.3** shows a time diagram of the subsequent events period.

| | Balance Sheet Date | Financial Statements Issue Date |
|-----------------------------------|---------------------------------|---------------------------------|
| Financial Statement Period | Subsequent Events Period | |
| Jan. 1, 2020 | Dec. 31, 2020 | Mar. 3, 2021 |

ILLUSTRATION 24.3

Time Periods for Subsequent Events

A period of several weeks, and sometimes months, may elapse after the end of the fiscal year but before the company issues financial statements. Various activities involved in closing

⁵Examples of related-party transactions include transactions between (a) a parent company and its subsidiaries, (b) subsidiaries of a common parent, (c) a company and trusts for the benefit of employees (controlled or managed by the enterprise), and (d) a company and its principal owners, management, or members of immediate families, and affiliates. Two classic cases of related-party transactions were **Enron**, with its misuse of special-purpose entities, and **Tyco International**, which forgave loans to its management team.

the books for the period and issuing the statements all take time: counting and pricing the inventory, reconciling subsidiary ledgers with controlling accounts, preparing necessary adjusting entries, ensuring that all transactions for the period have been entered, obtaining an audit of the financial statements by independent certified public accountants, and printing the annual report. During the period between the balance sheet date and its distribution to stockholders and creditors, important transactions or other events may occur that materially affect the company's financial position or operating situation.

Many who read a balance sheet believe the balance sheet condition is constant, and they project it into the future. However, readers must be told if the company has experienced a significant change—e.g., sold one of its plants, acquired a subsidiary, settled significant litigation, or experienced any other important event in the post-balance-sheet period. Without an explanation in a note, the reader might be misled and draw inappropriate conclusions.

Two types of events or transactions occurring after the balance sheet date may have a material effect on the financial statements or may need disclosure so that readers interpret these statements accurately:

1. Events that provide additional evidence about conditions **that existed** at the balance sheet date, including the estimates inherent in the process of preparing financial statements. These events are referred to as **recognized subsequent events** and require adjustments to the financial statements. All information available prior to the issuance of the financial statements helps investors and creditors evaluate estimates previously made. To ignore these subsequent events is to pass up an opportunity to improve the accuracy of the financial statements. This first type of event encompasses information that an accountant would have recorded in the accounts had the information been known at the balance sheet date.

| Recognized Subsequent Events |
|--|
| <p>Situation: A loss on an account receivable results from a customer's bankruptcy subsequent to the balance sheet date, but before the financial statements are issued.</p> |
| <p>Solution: The company adjusts the financial statements before their issuance. The bankruptcy stems from the customer's poor financial health existing at the balance sheet date.</p> |
| <p>Other examples: The company must adjust the financial statements before their issuance for the following situations: (1) for settlements of litigation, if the events that gave rise to the litigation, such as personal injury or patent infringement, took place prior to the balance sheet date; (2) for warranty obligations, if defects arose on products sold prior to the balance sheet date; or (3) a tax dispute related to taxes payable at the balance sheet date is settled before issuance of the statements.</p> |

2. Events that provide evidence about conditions that **did not exist** at the balance sheet date but arise subsequent to that date. These events are referred to as **nonrecognized subsequent events** and do not require adjustment of the financial statements.

| Nonrecognized Subsequent Events |
|--|
| <p>Situation: A company has a loss from a fire or flood <i>after</i> the balance sheet.</p> |
| <p>Solution: Adjustment of the financial statements is not necessary. A fire after the balance sheet date but before the financial statement date does not reflect conditions existing at the balance sheet date.</p> |
| <p>Other examples: A company should not recognize subsequent events that provide evidence about conditions that did not exist at the date of the balance sheet but that arose after the balance sheet for the following specific examples: (1) strikes, (2) sale of a bond or capital stock issued, (3) a business combination occurs, (4) settlement of litigation, (5) losses on receivables resulting from conditions (such as a customer's major casualty) arising, (6) changes in the quoted market prices of securities or foreign exchange rates, and (7) entering into significant commitments or contingent liabilities, for example, by issuing significant guarantees.[2]</p> |

As indicated, a company should not recognize subsequent events that provide evidence about conditions that did not exist at the date of the balance sheet but that arose after the balance sheet date.⁶

Some nonrecognized subsequent events may have to be disclosed to keep the financial statements from being misleading. For such events, a company discloses the nature of the event and an estimate of its financial effect (see **Underlying Concepts**).

Illustration 24.4 presents an example of subsequent events disclosure, excerpted from the annual report of **Commercial Metals Company**.

| | |
|--|----------------------------------|
|  | Commercial Metals Company |
| NOTE 24. SUBSEQUENT EVENTS | |
| <p>In September (following the August 31 fiscal year-end) the Company made the decision to exit its steel distribution business in Australia. Despite focused efforts and substantial progress to stabilize and improve the results of the Australian distribution business, the Company determined that achieving acceptable financial returns would take additional time and investment.</p> | |

ILLUSTRATION 24.4

Disclosure of Subsequent Events

Underlying Concepts

A company also should consider supplementing the historical financial statements with pro forma financial data. Occasionally, a nonrecognized subsequent event may be so significant that disclosure can best be made by means of pro forma financial data.

Many subsequent events or developments do not require adjustment of or disclosure in the financial statements. Typically, these are nonaccounting events or conditions that management normally communicates by other means. These events include legislation, product changes, management changes, unionization, marketing agreements, and loss of important customers.

Reporting for Diversified (Conglomerate) Companies

In certain business climates, companies have a tendency to diversify their operations. Take the case of conglomerate **General Electric (GE)**, whose products include locomotives, jet engines, and water purification systems. Or, consider cable giant **Comcast**; its **NBC Universal** subsidiary owns **NBC TV**, **Telemundo**, **Universal Pictures**, and **Universal Parks and Resorts**. When businesses are so diversified, investors and investment analysts want more information about the details behind conglomerate financial statements. Particularly, they want income statement, balance sheet, and cash flow information on the **individual segments** that compose the total income figure.

Illustration 24.5 shows **segmented** (disaggregated) financial information of an office equipment and auto parts company.

Much information is hidden in the aggregated totals. If the analyst has only the consolidated figures, he/she cannot tell the extent to which the differing product lines **contribute to the company's profitability, risk, and growth potential**. For example, in Illustration 24.5, the office equipment segment looks like a risky venture. Segmented reporting would provide useful information about the two business segments and would be useful for making an informed investment decision regarding the whole company.

⁶The effects from natural disasters, like hurricanes Katrina, Sandy, and Florence, which occurred after the year-end for companies with August fiscal years, require disclosure in order to keep the statements from being misleading. Some companies had to consider whether these disasters affected their ability to continue as going concerns. *Accounting Trends and Techniques* listed the following types of subsequent events and their frequency of occurrence among the 500 companies surveyed: acquisitions, 32; debt incurred, reduced, or refinanced, 31; business combinations pending or effected, 29; capital stock issued or purchased, 18; discontinued operations or asset disposals, 15; litigation, 14; and restructuring/bankruptcy, 13.

A classic situation that demonstrates the need for segmented data involved **Caterpillar, Inc.** The SEC cited Caterpillar because it failed to tell investors that nearly a quarter of its income in one year came from a Brazilian unit and was nonrecurring in nature. The company knew that different economic policies in the next year would probably greatly affect earnings of the Brazilian unit. But Caterpillar presented its financial results on a consolidated basis, not disclosing the Brazilian operations. The SEC found that Caterpillar's failure to include information about Brazil left investors with an incomplete picture of the company's financial results and denied investors the opportunity to see the company "through the eyes of management."

Companies have always been somewhat hesitant to disclose segmented data for various reasons, such as indicated below.

| Arguments Opposing Segment Reporting |
|---|
| 1. Without a thorough knowledge of the business and an understanding of such important factors as the competitive environment and capital investment requirements, the investor may find the segmented information meaningless or may even draw improper conclusions about the reported earnings of the segments. |
| 2. Additional disclosure may be helpful to competitors, labor unions, suppliers, and certain government regulatory agencies, and thus harm the reporting company. |
| 3. Additional disclosure may discourage management from taking intelligent business risks because segments reporting losses or unsatisfactory earnings may cause stockholder dissatisfaction with management. |
| 4. The wide variation among companies in the choice of segments, cost allocation, and other accounting problems limits comparability, and hence the usefulness of segmented information. |
| 5. The investor is investing in the company as a whole and not in the particular segments, and it should not matter how any single segment is performing if the overall performance is satisfactory. |
| 6. Certain technical problems, such as classification of segments and allocation of segment revenues and costs (especially "common costs"), are formidable. |

On the other hand, the advocates of segmented disclosures offer these following reasons in support of the practice.

| Arguments Supporting Segment Reporting |
|--|
| 1. Investors need segmented information to make an intelligent investment decision regarding a diversified company. <ul style="list-style-type: none"> a. Sales and earnings of individual segments enable investors to evaluate the differences between segments in growth rate, risk, and profitability, and to forecast consolidated profits. b. Segmented reports help investors evaluate the company's investment worth by disclosing the nature of a company's businesses and the relative size of the components. |
| 2. The absence of segmented reporting by a diversified company may put its unsegmented, single product-line competitors at a competitive disadvantage because the conglomerate may obscure information that its competitors must disclose. |

The advocates of segmented disclosures appear to have a much stronger case based on the usefulness of segment information to users of financial statements. The objective of reporting segmented financial data is to provide information about the **different types of business activities** in which an enterprise engages and the **different economic environments** in which it operates. Meeting this objective will help users of financial statements do the following.

- a. Better understand the enterprise's performance.
- b. Better assess its prospects for future net cash flows.
- c. Make more informed judgments about the enterprise as a whole.

Implementing Segment Reporting

Financial statements can be disaggregated in several ways. For example, they can be disaggregated by products or services, by geography, by legal entity, or by type of customer. However, it is not feasible to provide all of that information in every set of financial statements. GAAP requires that general-purpose financial statements include selected information on a single basis of segmentation. Thus, a company can meet the segmented reporting objective by providing financial statements segmented based on how the company's operations are managed. The method chosen is referred to as the **management approach**. [3] **The management approach reflects how management segments the company for making operating decisions.** The segments are evident from the components of the company's organization structure. These components are called **operating segments**.

Identifying Operating Segments An **operating segment** is a component of an enterprise:

- a. That engages in business activities from which it earns revenues and incurs expenses.
- b. Whose operating results are regularly reviewed by the company's chief operating decision-maker to assess segment performance and allocate resources to the segment.
- c. For which discrete financial information is available that is generated by or based on the internal financial reporting system.

Companies may aggregate information about two or more operating segments only if the segments have the same basic characteristics in each of the following areas.

- a. The nature of the products and services provided.
- b. The nature of the production process.
- c. The type or class of customer.
- d. The methods of product or service distribution.
- e. If applicable, the nature of the regulatory environment.

After the company decides on the possible segments for disclosure, it makes a quantitative materiality test. This test determines whether the segment is significant enough to warrant actual disclosure. An operating segment is deemed significant, and therefore a reportable segment, if it satisfies **one or more** of the following quantitative thresholds.

1. Its **revenue** (including both sales to external customers and intersegment sales or transfers) is 10 percent or more of the combined revenue of all the company's operating segments.
2. The absolute amount of its **profit or loss** is 10 percent or more of the greater, in absolute amount, of (a) the combined operating profit of all operating segments that did not incur a loss, or (b) the combined loss of all operating segments that did report a loss.
3. Its **identifiable assets** are 10 percent or more of the combined assets of all operating segments.

In applying these tests, the company must consider two additional factors. First, segment data must explain a significant portion of the company's business. Specifically, the segmented results must equal or exceed 75 percent of the combined sales to unaffiliated

customers for the entire company. This test prevents a company from providing limited information on only a few segments and lumping all the rest into one category.

Second, the profession recognizes that reporting too many segments may overwhelm users with detailed information. The FASB decided that 10 is a reasonable upper limit for the number of segments that a company must disclose.⁷

To illustrate these requirements, assume a company has identified six possible reporting segments, as shown in **Illustration 24.6** (000s omitted).

ILLUSTRATION 24.6**Data for Different Possible Reporting Segments**

| Segments | Total Revenue (Unaffiliated) | Operating Profit (Loss) | Identifiable Assets |
|----------|---------------------------------|----------------------------|------------------------|
| A | \$ 100 | \$10 | \$ 60 |
| B | 50 | 2 | 30 |
| C | 700 | 40 | 390 |
| D | 300 | 20 | 160 |
| E | 900 | 18 | 280 |
| F | 100 | (5) | 50 |
| | <u>\$2,150</u> | <u>\$85</u> | <u>\$970</u> |

The company would apply the respective tests as follows.

Revenue test: $.10 \times \$2,150 = \215 ; C, D, and E meet this test.

Operating profit (loss) test: $.10 \times \$90 = \9 (note that the \$5 loss is ignored because the test is based on non-loss segments); A, C, D, and E meet this test.

Identifiable assets tests: $.10 \times \$970 = \97 ; C, D, and E meet this test.

The reporting segments are therefore A, C, D, and E, assuming that these four segments have enough sales to meet the 75 percent of combined sales test. The 75 percent test is computed as follows.

75% of combined sales test: $.75 \times \$2,150 = \$1,612.50$. The sales of A, C, D, and E total \$2,000 ($\$100 + \$700 + \$300 + \900); therefore, the 75 percent test is met.

Measurement Principles The accounting principles that companies use for segment disclosure need not be the same as the principles they use to prepare the consolidated statements. This flexibility may at first appear inconsistent. But, preparing segment information in accordance with generally accepted accounting principles would be difficult because some principles are not expected to apply at a segment level. Examples are accounting for the cost of company-wide employee benefit plans, accounting for income taxes in a company that files a consolidated tax return, and accounting for inventory on a LIFO basis if the pool includes items in more than one segment.

The FASB does not require allocations of joint, common, or company-wide costs solely for external reporting purposes. **Common costs** are those incurred for the benefit of more than one segment and whose interrelated nature prevents a completely objective division of costs among segments. For example, the company president's salary is difficult to allocate to various segments. Allocations of common costs are inherently arbitrary and may not be meaningful. There is a presumption that if companies allocate common costs to segments, these allocations are either directly attributable or reasonably allocable.

Segmented Information Reported The FASB requires that an enterprise report the following.

1. **General information about its operating segments.** This includes factors that management considers most significant in determining the company's operating segments,

⁷According to a recent study by Deloitte, segment reporting issues are one of the five top SEC comment letter topics. For example, **PowerSecure** received a \$500,000 fine for failure to adequately identify reportable segments [S. Quinlivan, "SEC Charges Issuer with Inadequate Segment Reporting," *Dodd-Frank.com* (November 7, 2016)]. In response to these segment reporting challenges, the FASB is conducting a study of segment aggregation criteria and disclosures to provide users with more decision-useful information about the reportable segments, including new approaches to identifying reportable segments (see the FASB website; click on Projects and then Presentation and Disclosure).

and the types of products and services from which each operating segment derives its revenues.

2. **Segment profit and loss and related information.** Specifically, companies must report the following information about each operating segment **if the amounts are included in determining segment profit or loss.**
 - Commonly reported elements include:
 - a. Revenues from transactions with external customers.
 - b. Depreciation, depletion, and amortization expense.
 - Other information, which may be included in segment profit and loss and should be reported includes:
 - a. Revenues from transactions with other operating segments of the same enterprise.
 - b. Interest revenue and interest expense.
 - c. Unusual and infrequent items.
 - d. Equity in the net income of investees accounted for by the equity method.
 - e. Income tax expense or benefit.
 - f. Significant noncash items other than depreciation, depletion, and amortization expense.
3. **Segment assets.** A company must report each operating segment's total assets.
4. **Reconciliations.** A company must provide a reconciliation of the total of the segments' revenues to total revenues, a reconciliation of the total of the operating segments' profits and losses to its income before income taxes, and a reconciliation of the total of the operating segments' assets to total assets.
5. **Information about products and services and geographic areas.** For each operating segment not based on geography, the company must report (unless it is impracticable): (1) revenues from external customers, (2) long-lived assets, and (3) expenditures during the period for long-lived assets. This information, if material, must be reported (a) in the enterprise's country of domicile and (b) in each other country.
6. **Major customers.** If 10 percent or more of company revenue is derived from a single customer, the company must disclose the total amount of revenue from each such customer by segment.

Illustration of Disaggregated Information

Illustration 24.7 shows the segment disclosure for **Johnson & Johnson**.

Interim Reports

Another source of information for the investor is interim reports. As noted earlier, **interim reports** cover periods of less than one year. The stock exchanges, the SEC, and the accounting profession have an active interest in the presentation of interim information.

Interim reporting by public companies on a quarterly basis is a well-established and accepted practice. Analysts and investors want financial information as soon as possible, before it is old news (see **Underlying Concepts**). However, quarterly reporting is not without critics. Today, many contend that U.S. management is too oriented to the short-term. The truth of this statement is echoed by the words of the president of a large company who decided to retire early: "I wanted to look forward to a year made up of four seasons rather than four quarters." While some are calling for the SEC to eliminate all interim reporting requirements in response to the negative consequences of short-termism, others are calling for a common sense approach, encouraging standard-setters to consider both costs and benefits.

Presently, the SEC mandates that certain companies file a **Form 10-Q**, in which a company discloses quarterly data similar to that disclosed in the annual report. It also requires those companies to disclose selected quarterly information in notes to the annual financial statements. **Illustration 24.8** presents the selected quarterly disclosure of **Tootsie Roll Industries, Inc.** In addition to Form 10-Q, GAAP narrows the reporting alternatives related to interim reports. [4]

Underlying Concepts

For information to be relevant, it must be available to decision-makers before it loses its capacity to influence their decisions (timeliness). Interim reporting is an excellent example of this concept.

Interim Reporting Requirements

Generally, companies should use the same accounting principles for interim reports and for annual reports. They should recognize revenues in interim periods on the same basis as they are for annual periods. For example, if Cedars Corp. uses the percentage-of-completion method as the basis for recognizing revenue on an annual basis, then it should use the percentage-of-completion basis for interim reports as well. Also, Cedars should treat costs

ILLUSTRATION 24.8**Disclosure of Selected Quarterly Data**

directly associated with revenues (product costs, such as materials, labor and related fringe benefits, and manufacturing overhead) in the same manner for interim reports as for annual reports.

Companies should use the same inventory pricing methods (FIFO, LIFO, etc.) for interim reports and for annual reports. However, the following exceptions are appropriate at interim reporting periods.

1. Companies may use the gross profit method for interim inventory pricing. But they must disclose the method and adjustments to reconcile with annual inventory.
2. When a company liquidates LIFO inventories at an interim date and expects to replace them by year-end, cost of goods sold should include the expected cost of replacing the liquidated LIFO base, rather than give effect to the interim liquidation.
3. Companies should not defer inventory market declines beyond the interim period unless they are temporary and no loss is expected for the fiscal year.
4. Companies ordinarily should defer planned variances under a standard cost system; such variances are expected to be absorbed by year-end.

Companies often charge to the interim period, as incurred, costs and expenses other than product costs (often referred to as **period costs**). But companies may allocate these costs among interim periods on the basis of an estimate of time expired, benefit received, or activity associated with the periods. Companies display considerable latitude in accounting for these costs in interim periods, and many believe more definitive guidelines are needed.

Regarding disclosure, companies should report the following interim data at a minimum.

1. Sales or gross revenues, provision for income taxes, and net income.
2. Basic and diluted earnings per share where appropriate.
3. Seasonal revenue, cost, or expenses.
4. Significant changes in estimates or provisions for income taxes.
5. Disposal of a component of a business, and unusual or infrequently occurring items.
6. Contingent items.
7. Changes in accounting principles or estimates.
8. Significant changes in financial position.

The FASB encourages, but does not require, companies to publish an interim balance sheet and statement of cash flows. If a company does not present this information, it should disclose significant changes in such items as liquid assets, net working capital, long-term liabilities, and stockholders' equity.

Unique Problems of Interim Reporting

Because of the short-term nature of the information in interim reports, there is considerable controversy as to the general approach companies should employ. One group, which favors the **discrete approach**, believes that companies should treat each interim period as a separate accounting period. Using that treatment, companies would follow the principles for deferrals and accruals used for annual reports. In this view, companies should report accounting transactions as they occur, and expense recognition should not change with the period of time covered.

Another group, which favors the **integral approach**, believes that the interim report is an integral part of the annual report and that deferrals and accruals should take into consideration what will happen for the entire year. In this approach, companies should assign estimated expenses to parts of a year on the basis of sales volume or some other activity base.

At present, many companies follow the discrete approach for certain types of expenses and the integral approach for others, given the standards currently employed in practice are vague and lead to differing interpretations.

Current GAAP reflects a preference for the integral approach. However, within this broad guideline, a number of unique reporting problems develop related to the following items.

Advertising and Similar Costs The general guidelines are that companies should defer in an interim period costs such as advertising if the benefits extend beyond that period; otherwise, the company should expense those costs as incurred. But such a determination is difficult, and even if the company defers the costs, how should it allocate them between quarters?

Because of the vague guidelines in this area, accounting for advertising varies widely. At one time, some companies in the food industry, such as **RJR Nabisco** and **Pillsbury**, charged advertising costs as a percentage of sales and adjusted to actual at year-end, whereas **General Foods** and **Kellogg's** expensed these costs as incurred.

The same type of problem relates to such items as Social Security taxes, research and development costs, and major repairs. For example, should the company expense Social Security costs (payroll taxes) on highly paid personnel early in the year, or allocate and spread them to subsequent quarters? Should a major repair that occurs later in the year be anticipated and allocated proportionately to earlier periods?

Expenses Subject to Year-End Adjustment Companies often do not know with a great deal of certainty amounts of bad debts, executive bonuses, pension costs, and inventory shrinkage until year-end. **They should estimate these costs and allocate them to interim periods as best they can.** Companies use a variety of allocation techniques to accomplish this objective.

Income Taxes Not every dollar of corporate taxable income is taxed at the same rate; the tax rate structure is progressive. This aspect of business income taxes poses a problem in preparing interim financial statements. Should the company use the **annualized approach**, which is to annualize income to date and accrue the proportionate income tax for the period to date? Or should it follow the **marginal principle approach**, which is to apply the lower rate of tax to the first amount of income earned? At one time, companies generally followed the latter approach and accrued the tax applicable to each additional dollar of income.

The profession now, however, uses the annualized approach. This requires that “at the end of each interim period the company should make its best estimate of the effective tax rate expected to be applicable for the full fiscal year. The rate so determined should be used in providing for income taxes on income for the quarter.” [5]⁸

⁸As discussed in Chapter 19, the Tax Cuts and Jobs Act (TCJA) of 2017 enacted a flat federal tax rate of 21 percent. However, state, local, and some foreign tax rates follow a graduated (progressive) schedule. The estimated annual effective tax rate should reflect anticipated tax credits, foreign tax rates, percentage depletion, capital gains rates, and other available tax-planning alternatives.

Because businesses did not uniformly apply this guideline in accounting for similar situations, the FASB issued authoritative guidance. GAAP now requires companies, when computing the year-to-date tax, to apply the **estimated annual effective tax rate** to the year-to-date “ordinary” income at the end of each interim period. Further, the **interim period tax** related to “ordinary” income shall be the difference between the amount so computed and the amounts reported for previous interim periods of the fiscal period. [6]⁹

Earnings per Share Interim reporting of earnings per share has all the problems inherent in computing and presenting annual earnings per share, and then some. If a company issues shares in the third period, EPS for the first two periods will not reflect year-end EPS. For purposes of computing earnings per share and making the required disclosure determinations, each interim period should stand alone. That is, all applicable tests should be made for that single period.

Seasonality **Seasonality** occurs when most of a company’s sales occur in one short period of the year while certain costs are fairly evenly spread throughout the year. For example, the natural gas industry has its heavy sales in the winter months. In contrast, the beverage industry has its heavy sales in the summer months.

The problem of seasonality is related to the expense recognition principle in accounting. Generally, expenses are associated with the revenues they create. In a seasonal business, wide fluctuations in profits occur because off-season sales do not absorb the company’s fixed costs (for example, manufacturing, selling, and administrative costs that tend to remain fairly constant regardless of sales or production).

To illustrate why seasonality is a problem, assume the information shown in **Illustration 24.9**.

| | |
|--|---------------------------------------|
| Selling price per unit | \$1 |
| Annual sales for the period (projected and actual) | |
| 100,000 units @ \$1 | \$100,000 |
| Manufacturing costs | |
| Variable | 10¢ per unit |
| Fixed | 20¢ per unit or \$20,000 for the year |
| Nonmanufacturing costs | |
| Variable | 10¢ per unit |
| Fixed | 30¢ per unit or \$30,000 for the year |

ILLUSTRATION 24.9

Data for Seasonality Example

Illustration 24.10 presents sales for four quarters and the year (projected and actual).

| | | Percent of Sales |
|--------------------|------------------|------------------|
| 1st Quarter | \$ 20,000 | 20% |
| 2nd Quarter | 5,000 | 5 |
| 3rd Quarter | 10,000 | 10 |
| 4th Quarter | 65,000 | 65 |
| Total for the year | <u>\$100,000</u> | <u>100%</u> |

ILLUSTRATION 24.10

Sales Data for Seasonality Example

Under the present accounting framework, the income statements for the quarters might be as shown in **Illustration 24.11**.

An investor who uses the first quarter’s results might be misled. If the first quarter’s earnings are \$4,500, should this figure be multiplied by four to predict annual earnings of \$18,000? Or, if first-quarter sales of \$20,000 are 20 percent of the predicted sales for the year, would the net income for the year be \$22,500 ($\$4,500 \times 5$)? Both figures are obviously wrong, and after the second quarter’s results occur, the investor may become even more confused.

The problem with the conventional approach is that the fixed nonmanufacturing costs are not charged in proportion to sales. Some enterprises have adopted a way of avoiding this problem by making all fixed nonmanufacturing costs follow the sales pattern, as shown in **Illustration 24.12**.

⁹“Ordinary” income (or loss) refers to income (or loss) from operations or income (or loss) from continuing operations, when discontinued operations are involved.

ILLUSTRATION 24.11**Interim Net Income for Seasonal Business—Discrete Approach**

| | 1st Qtr | 2nd Qtr | 3rd Qtr | 4th Qtr | Year |
|------------------------|-----------------|-------------------|-------------------|-----------------|------------------|
| Sales | \$20,000 | \$ 5,000 | \$10,000 | \$65,000 | \$100,000 |
| Manufacturing costs | | | | | |
| Variable | (2,000) | (500) | (1,000) | (6,500) | (10,000) |
| Fixed ^a | (4,000) | (1,000) | (2,000) | (13,000) | (20,000) |
| | 14,000 | 3,500 | 7,000 | 45,500 | 70,000 |
| Nonmanufacturing costs | | | | | |
| Variable | (2,000) | (500) | (1,000) | (6,500) | (10,000) |
| Fixed ^b | (7,500) | (7,500) | (7,500) | (7,500) | (30,000) |
| Net income | \$ 4,500 | \$ (4,500) | \$ (1,500) | \$31,500 | \$ 30,000 |

^aThe fixed manufacturing costs are inventoried, so that equal amounts of fixed costs do not appear during each quarter.
^bThe fixed nonmanufacturing costs are not inventoried, so equal amounts of fixed costs appear during each quarter.

| | 1st Qtr | 2nd Qtr | 3rd Qtr | 4th Qtr | Year |
|------------------------|-----------------|-----------------|-----------------|-----------------|------------------|
| Sales | \$20,000 | \$ 5,000 | \$10,000 | \$65,000 | \$100,000 |
| Manufacturing costs | | | | | |
| Variable | (2,000) | (500) | (1,000) | (6,500) | (10,000) |
| Fixed | (4,000) | (1,000) | (2,000) | (13,000) | (20,000) |
| | 14,000 | 3,500 | 7,000 | 45,500 | 70,000 |
| Nonmanufacturing costs | | | | | |
| Variable | (2,000) | (500) | (1,000) | (6,500) | (10,000) |
| Fixed | (6,000) | (1,500) | (3,000) | (19,500) | (30,000) |
| Net income | \$ 6,000 | \$ 1,500 | \$ 3,000 | \$19,500 | \$ 30,000 |

This approach solves some of the seasonality problems of interim reporting. Sales in the first quarter are 20 percent of total sales for the year, and net income in the first quarter is 20 percent of total income. In this case, as in the previous example, the investor cannot rely on multiplying any given quarter by four but can use comparative data or rely on some estimate of sales in relation to income for a given period.

The greater the degree of seasonality experienced by a company, the greater the possibility of distortion. Because there are no definitive guidelines for handling such items as the fixed nonmanufacturing costs, variability in income can be substantial. To alleviate this problem, the profession recommends that companies subject to material seasonal variations disclose the seasonal nature of their business and consider supplementing their interim reports with information for 12-month periods ended at the interim date for the current and preceding years.

The two illustrations highlight the difference between the **discrete** and **integral** approaches. Illustration 24.11 represents the discrete approach, in which the fixed nonmanufacturing expenses are expensed as incurred. Illustration 24.12 shows the integral approach, in which expenses are charged to expense on the basis of some measure of activity (see **Global View**).

Global View

IFRS requires that interim financial statements use the discrete method, except for tax expenses.

Evolving Issue It's Faster but Is It Better?

The profession has developed some rules for interim reporting, but much still has to be done. As yet, it is unclear whether the discrete or the integral method, or some combination of the two, will be settled on.

Discussion also persists about the independent auditor's involvement in interim reports. Many auditors are reluctant to express an opinion on interim financial information, arguing that the data are too tentative and subjective. On the other hand, more people are advocating some examination of interim reports. As a compromise, the SEC currently requires that auditors perform a review of interim financial information. Such a review, which is much more limited in its procedures than the annual audit, provides some assurance that the interim information appears to be in accord with GAAP. [See AU-C Section 930, "Interim Financial Information," *Statement*

on Auditing Standards No. 122. Effective for audits of financial statements for periods ending on or after December 31, 2013. Predecessor literature: "Interim Financial Information," *Statement on Auditing Standards No. 101* (New York: AICPA, 2002).]

The SEC also believes that timeliness of information is of extreme importance. First, the SEC has said that large public companies will have only 60 days to complete their annual reports, down from 90 days. Quarterly reports must be done within 40 days of the close of the quarter, instead of 45. In addition, corporate executives and shareholders with more than 10 percent of a company's outstanding stock now have just two days to disclose their sale or purchase of stock.

In a bid to increase Internet disclosure, the SEC encourages companies to post current, quarterly, and annual reports on their

websites—or explain why they don't. The Internet postings would have to be made by the day the company submits the information to the SEC, rather than within 24 hours as current rules allow. A steady stream of information from the company to the investor could be very positive because it might alleviate management's continual concern with short-run interim numbers.

As discussed, many contend that U.S. management is too oriented to the short-term, and some are calling for the SEC to eliminate all interim reporting requirements in response to the negative consequences of short-termism. For example, the Oracle of Omaha, Warren Buffett, has issued a call to move away from quarterly reporting. And President Trump tweeted that public companies should report their financial results only twice a year instead of

quarterly, arguing it would reduce companies' costs of complying with bureaucratic red tape and help corporate executives focus on longer-term goals. The FASB is being judicious when establishing disclosures that are mandatory every reporting period and that the hurdle should be high for such requirements. The FASB is considering such advice in its Disclosure Framework project.

Benoit, "Time to End Quarterly Reports, Law Firm Says," *Wall Street Journal* (August 19, 2015); PricewaterhouseCoopers, "The Interim Reporting Model: Time to Get Back to Basics," *Point of View* (November 2014); M. Rapoport, "Buffett, Dimon Team Up to Curb 'Unhealthy Focus' on Quarterly Earnings," *Wall Street Journal* (June 7, 2018); and J. Zweig, "The End of Quarterly Reporting? Not Much to Cheer About," *Wall Street Journal* (August 17, 2018).

Auditor's and Management's Reports

LEARNING OBJECTIVE 3

Identify the major disclosures in the auditor's report and understand management's responsibilities for the financial statements.

Auditor's Report

Another important source of information, which is often overlooked, is the **auditor's report**. An **auditor** is an accounting professional who conducts an independent examination of a company's accounting data.

If satisfied that the financial statements present the financial position, results of operations, and cash flows fairly in accordance with generally accepted accounting principles, the auditor expresses an **unqualified opinion**. An example is shown in **Illustration 24.13**.¹⁰

In preparing the report, the auditor follows these reporting standards.

1. The report states whether the financial statements are in accordance with generally accepted accounting principles.
2. The report identifies those circumstances in which the company has not consistently observed such principles in the current period in relation to the preceding period.
3. Users are to regard the informative disclosures in the financial statements as reasonably adequate unless the report states otherwise.
4. The report contains either an expression of opinion regarding the financial statements taken as a whole or an assertion to the effect that an opinion cannot be expressed. When the auditor cannot express an overall opinion, the report should state the reasons. In all cases where an auditor's name is associated with financial statements, the report should contain a clear-cut indication of the character of the auditor's examination, if any, and the degree of responsibility being taken.

¹⁰This audit report conforms to the PCAOB standard on the audit report [*The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* (PCAOB Release No. 2017-001, June 1, 2017)]. The provisions are required for public companies beginning in 2018. The audit report for private companies is governed by auditing standards issued by the AICPA [See AU-C Section 700, "Forming an Opinion and Reporting on Financial Statements," *Statement on Auditing Standards No. 122*. Effective for audits of financial statements for periods ending on or after December 31, 2013. Predecessor literature: "Reports on Audited Financial Statements," *Statement on Auditing Standards No. 58* (New York: AICPA, 1988).] Notable differences for public companies under the PCAOB rules relate to (1) identification of the engagement partner; (2) auditor tenure (how long the auditor has served this client); (3) guidance on auditor reporting on supplemental information, interim financial information, and special reports; and (4) auditor communication of Critical Audit Matters (CAMs).

ILLUSTRATION 24.13

Auditor's Report

Report of Independent Registered Public Accounting Firm

To the shareholders and the board of directors of Raintree Company:

Opinion on the Financial Statements

We have audited the accompanying balance sheets of Raintree Company (the "Company") as of December 31, 2020 and 2019, the related statements of income, comprehensive income, stockholders' equity, and cash flows, for each of the three years in the period ended December 31, 2020, and the related notes [and schedules] (collectively referred to as the "financial statements"). In our opinion, the financial statements present fairly, in all material respects, the financial position of the Company as of December 31, 2020 and 2019, and the results of its operations and its cash flows for each of the three years in the period ended December 31, 2020, in conformity with U.S. GAAP.

Basis for Opinion

These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on the Company's financial statements based on our audits. We are a public accounting firm registered with the Public Company Accounting Oversight Board (United States) ("PCAOB") and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud. Our audits included performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements.

Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statements. We believe that our audits provide a reasonable basis for our opinion.

Richardson & Associates LLP

The engagement partner on our audit for the year ended December 31, 2020, was William Richardson, CPA. We have served as the Company's auditor since 2011.

Minneapolis, MN
March 31, 2021

In most cases, the auditor issues a standard **unqualified (clean) opinion**. That is, the auditor expresses the opinion that the financial statements present fairly, in all material respects, the financial position, results of operations, and cash flows of the entity in conformity with generally accepted accounting principles.

Certain circumstances, although they do not affect the auditor's unqualified opinion, may require the auditor to add an explanatory paragraph to the audit report. Some of the more important circumstances are as follows.

1. **Going concern.** The auditor must evaluate whether there is substantial doubt about the entity's **ability to continue as a going concern** for a reasonable period of time, taking into consideration all available information about the future. (The future is at least, but not limited to, 12 months from the end of the reporting period.) If substantial doubt exists about the company continuing as a going concern, the auditor adds to the report an explanatory note describing the potential problem.¹¹
2. **Lack of consistency.** If a company has changed accounting principles or the method of their application in a way that has a material effect on the comparability of its financial statements, the auditor should refer to the change in an explanatory paragraph of the report. Such an explanatory paragraph should identify the nature of the change and

¹¹Although auditors are responsible for assessing going concern uncertainties, until recently there has been no guidance in GAAP for management disclosures in this area. The FASB now requires companies to evaluate conditions or events that raise substantial doubt about the company's ability to continue as a going concern (defined as when it is probable that the company will be unable to meet its obligations as they become due within one year after the date that the financial statements are issued). When management concludes there is substantial doubt about the going concern assumption, this must be disclosed along with information to explain that conclusion. Management should also consider and disclose actions that, if implemented, will mitigate the conditions that could lead to a going concern disclosure. [7]

refer readers to the note in the financial statements that discusses the change in detail. The auditor's concurrence with a change is implicit unless the auditor takes exception to the change in expressing an opinion as to fair presentation in conformity with generally accepted accounting principles.

3. **Emphasis of a matter.** The auditor may wish to emphasize a matter regarding the financial statements but nevertheless intends to express an unqualified opinion. For example, the auditor may wish to emphasize that the entity is a component of a larger business enterprise or that it has had significant transactions with related parties. The auditor presents such explanatory information in a separate paragraph of the report.¹²

In some situations, however, the auditor is required to express (1) a **qualified** opinion or (2) an **adverse** opinion, or (3) to **disclaim** an opinion.

A **qualified opinion** contains an exception to the standard opinion. Ordinarily, the exception is not of sufficient magnitude to invalidate the statements as a whole; if it were, an adverse opinion would be rendered. The usual circumstances in which the auditor may deviate from the standard unqualified short-form report on financial statements are as follows.

1. The scope of the examination is limited or affected by conditions or restrictions.
2. The statements do not fairly present financial position or results of operations because of:
 - a. Lack of conformity with generally accepted accounting principles and standards.
 - b. Inadequate disclosure.

If confronted with one of the situations noted above, the auditor must offer a qualified opinion. A qualified opinion states that, except for the effects of the matter to which the qualification relates, the financial statements present fairly, in all material respects, the financial position, results of operations, and cash flows in conformity with generally accepted accounting principles.

Illustration 24.14 shows an example of an auditor's report with a qualified opinion. The auditor qualified the opinion because the company used an accounting principle at variance with generally accepted accounting principles.

| | |
|---|----------------------|
|  | Helio Company |
| Independent Auditor's Report | |
| <i>(Same first and second paragraphs as the standard report)</i> | |
| <p>Helio Company has excluded, from property and debt in the accompanying balance sheets, certain lease obligations that, in our opinion, should be capitalized in order to conform with generally accepted accounting principles. If these lease obligations were capitalized, property would be increased by \$1,500,000 and \$1,300,000, long-term debt by \$1,400,000 and \$1,200,000, and retained earnings by \$100,000 and \$50,000 as of December 31, in the current and prior year, respectively. Additionally, net income would be decreased by \$40,000 and \$30,000 and earnings per share would be decreased by \$.06 and \$.04, respectively, for the years then ended.</p> <p>In our opinion, except for the effects of not capitalizing certain lease obligations as discussed in the preceding paragraph, the financial statements referred to above present fairly, in all material respects, the financial position of Helio Company, and the results of its operations and its cash flows for the years then ended in conformity with generally accepted accounting principles.</p> | |

ILLUSTRATION 24.14**Qualified Auditor's Report**

An **adverse opinion** is required in any report in which the exceptions to fair presentation are so material that in the independent auditor's judgment, a qualified opinion is not justified. In such a case, the financial statements taken as a whole are not presented in accordance with generally accepted accounting principles. Adverse opinions are rare, because most companies change their accounting to conform with GAAP. The SEC will not permit a company listed on an exchange to have an adverse opinion.

¹²Under the recent PCAOB standard (*op. cit.*), certain public companies are required to include in the auditor's report a communication regarding critical audit matters (CAMs). CAMs are defined as matters arising from the audit that have been communicated or were required to be communicated to the audit committee and that (1) relate to accounts or disclosures that are material to the financial statements and (2) involved especially challenging, subjective, or complex auditor judgment. The AICPA is considering a similar requirement for the audits of private companies. See <https://www.aicpa.org/research/exposuredrafts/accountingandauditing.html>.

A **disclaimer of an opinion** is appropriate when the auditor has gathered so little information on the financial statements that no opinion can be expressed.

The audit report should provide useful information to the investor. One investment banker noted, “Probably the first item to check is the auditor’s opinion to see whether or not it is a clean one—in conformity with generally accepted accounting principles—or is qualified in regard to differences between the auditor and company management in the accounting treatment of some major item, or in the outcome of some major litigation.”

What Do the Numbers Mean? Heart of the Matter

As we discussed in the opening story, financial disclosure is one of a number of institutional features that contribute to vibrant security markets. In fact, a recent study of disclosure and other mechanisms (such as civil lawsuits and criminal sanctions) found that good disclosure is the most important contributor to a vibrant market. The study, which compared disclosure and other legal and regulatory elements across 49 countries, found that countries with the best disclosure laws have the biggest stock markets.

Countries with more successful market environments also tend to have regulations that make it relatively easy for private investors to sue corporations that provide bad information. That is, while criminal sanctions can be effective in some circumstances, disclosure and other legal and regulatory elements encouraging good disclosure are the most important determinants of highly liquid and deep securities markets.

These findings hold for nations in all stages of economic development, with particular importance for nations that are in the early stages of securities regulation. In addition, countries with fewer market protections likely will benefit the most from adoption of international standards for market regulation and disclosure. The lesson: Disclosure is good for your market.

Wysocki, “Global Accounting Convergence and the Potential Adoption of IFRS by the U.S. (Part I): Conceptual Underpinnings and Economic Analysis,” *Accounting Horizons* (September 2010). See also N. Trentmann, “Financial Reports Could Be Better, Says U.K. Regulator,” *Wall Street Journal* (October 23, 2017).

Management’s Reports

Management’s Discussion and Analysis

The SEC mandates inclusion of **management’s discussion and analysis (MD&A)**. This section covers three financial aspects of an enterprise’s business—liquidity, capital resources, and results of operations. In it, management highlights favorable or unfavorable trends and identifies significant events and uncertainties that affect these three factors. This approach obviously involves subjective estimates, opinions, and soft data. However, the SEC believes that the relevance of this information exceeds the potential lack of faithful representation.

Illustration 24.15 presents an excerpt from the MD&A section (“Business Risks” only) of **PepsiCo**’s annual report.

The MD&A section also must provide information about the effects of inflation and changing prices, if they are material to financial statement trends. The SEC has not required specific numerical computations, and companies have provided little analysis on changing prices.

An additional disclosure provided in the MD&A of many companies is discussion of the company’s critical accounting policies. This disclosure identifies accounting policies that require management to make subjective judgments regarding uncertainties, resulting in potentially significant effects on the financial results.¹³ For example, in its critical accounting policy disclosure, **PepsiCo** showed the impact on stock-based compensation expense in response to changes in estimated interest rates and stock return volatility. Through this voluntary disclosure, companies can expand on the information contained in the notes to the financial statements to indicate the sensitivity of the financial results to accounting policy judgments.

¹³See *Cautionary Advice Regarding Disclosure about Critical Accounting Policies*, Release Nos. 33-8040; 34-45149; FR-60 (Washington, D.C.: SEC); and *Proposed Rule: Disclosure in Management’s Discussion and Analysis about the Application of Critical Accounting Policies*, Release Nos. 33-8098; 34-45907; International Series Release No. 1258; File No. S7-16-02 (Washington, D.C.: SEC).

PepsiCo, Inc.

MD&A Our business risks (in part)

Risk Management Framework

The achievement of our strategic and operating objectives involves taking risks and that those risks may evolve over time. To identify, assess, prioritize, address, manage, monitor and communicate these risks across the Company's operations, we leverage an integrated risk management framework. This framework includes the following:

- PepsiCo's Board of Directors has oversight responsibility for PepsiCo's integrated risk management framework. One of the Board's primary responsibilities is overseeing and interacting with senior management with respect to key aspects of the Company's business, including risk assessment and risk mitigation of the Company's top risks.
- The Audit Committee of the Board reviews and assesses the guidelines and policies governing PepsiCo's risk management and oversight processes, and assists the Board's oversight of financial, compliance and employee safety risks facing PepsiCo;
- The Public Policy and Sustainability Committee of the Board assists the Board in its oversight of PepsiCo's policies, programs and related risks that concern key public policy and sustainability matters.
- The PepsiCo Risk Committee (PRC), which is comprised of a cross-functional, geographically diverse, senior management group, meets regularly to identify, assess, prioritize and address top strategic, financial, operating, compliance, safety, reputational and other risks. The PRC is also responsible for reporting progress on our risk mitigation efforts to the Board; and
- PepsiCo's Compliance & Ethics Department leads and coordinates our compliance policies and practices.

Market Risks

We are exposed to market risks arising from adverse changes in:

- commodity prices, affecting the cost of our raw materials and energy,
- foreign exchange rates, and
- interest rates.

In the normal course of business, we manage these risks through a variety of strategies, including productivity initiatives, global purchasing programs and hedging strategies. Ongoing productivity initiatives involve the identification and effective implementation of meaningful cost saving opportunities or efficiencies. Our global purchasing programs include fixed-price purchase orders and pricing agreements.

ILLUSTRATION 24.15

Management's Discussion and Analysis

Management's Responsibilities for Financial Statements

The Sarbanes-Oxley Act requires the SEC to develop guidelines for *all* publicly traded companies to report on management's responsibilities for, and assessment of, the internal control system. An example of the type of disclosure that public companies are now making is shown in **Illustration 24.16**.¹⁴

Home Depot

Item 9A. Controls and Procedures.

Disclosure Controls and Procedures

We maintain disclosure controls and procedures as defined in Rule 13a-15(e) under the Exchange Act that are designed to ensure that information required to be disclosed in our Exchange Act reports is recorded, processed, summarized, and reported within the time periods specified in the SEC's rules and forms, and that such information is accumulated and communicated to our management, including our Chief Executive Officer and Chief Financial Officer, as appropriate, to allow timely decisions regarding required disclosure.

Management, with the participation of our Chief Executive Officer and Chief Financial Officer, has evaluated the effectiveness of our disclosure controls and procedures as of the end of the period covered by this report. Based on that evaluation, our Chief Executive Officer and Chief Financial Officer have concluded that, as of the end of the period covered by this report, our disclosure controls and procedures were effective.

(continued)

ILLUSTRATION 24.16

Report on Management's Responsibilities

¹⁴As indicated in this disclosure, management is responsible for preparing the financial statements and establishing and maintaining an effective system of internal controls. The auditor provides an independent assessment of whether the financial statements are prepared in accordance with GAAP, and for public companies, whether the internal controls are effective.

ILLUSTRATION 24.16*(continued)***Changes in Internal Control over Financial Reporting**

There have not been any changes in our internal control over financial reporting during the fiscal quarter ended January 28, 2018 that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

Management's Report on Internal Control over Financial Reporting

Our management is responsible for establishing and maintaining adequate internal control over financial reporting, as such term is defined in Rule 13a-15(f) promulgated under the Exchange Act. Under the supervision and with the participation of our management, including our Chief Executive Officer and Chief Financial Officer, we conducted an evaluation of the effectiveness of our internal control over financial reporting as of January 28, 2018 based on the framework in Internal Control—Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission. Based on our evaluation, our management concluded that our internal control over financial reporting was effective as of January 28, 2018 in providing reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with GAAP. The effectiveness of our internal control over financial reporting as of January 28, 2018 has been audited by KPMG LLP, an independent registered public accounting firm, as stated in their report which is included herein.

Current Reporting Issues

LEARNING OBJECTIVE 4

Identify reporting issues related to fraudulent financial reporting and financial forecasts.

Fraudulent Financial Reporting

Fraudulent financial reporting is defined as “intentional or reckless conduct, whether act or omission, that results in materially misleading financial statements.”¹⁵ Fraudulent reporting can involve gross and deliberate distortion of corporate records (such as inventory count tags), or misapplication of accounting principles (failure to disclose material transactions). Although frauds are unusual, recent events involving such well-known companies as **Enron**, **WorldCom**, **Adelphia**, and **Theranos** indicate that more must be done to address this issue.

Causes of Fraudulent Financial Reporting

Fraudulent financial reporting usually occurs because of conditions in a company's internal or external environment. Influences in the **internal environment** relate to poor internal control systems, management's poor attitude toward ethics, or perhaps a company's liquidity or profitability. Those in the **external environment** may relate to industry conditions, overall business environment, or legal and regulatory considerations.

General incentives for fraudulent financial reporting vary. Common ones are the desire to obtain a higher stock price, to avoid default on a loan covenant, or to make a personal gain of some type (additional compensation, promotion). Situational pressures on the company or an individual manager also may lead to fraudulent financial reporting. Examples of these situational pressures include the following.

- **Sudden decreases in revenue or market share** for a single company or an entire industry.

¹⁵“Report of the National Commission on Fraudulent Financial Reporting” (Washington, D.C., 1987), page 2. Unintentional errors as well as corporate improprieties (such as tax fraud, employee embezzlements, and so on) which do not cause the financial statements to be misleading are excluded from the definition of fraudulent financial reporting.

- **Unrealistic budget pressures** may occur when headquarters arbitrarily determines profit objectives (particularly for short-term results) and budgets without taking actual conditions into account.
- **Financial pressure resulting from bonus plans** that depend on short-term economic performance. This pressure is particularly acute when the bonus is a significant component of the individual's total compensation.

Opportunities for fraudulent financial reporting are present in circumstances when the fraud is easy to commit and when detection is difficult. Frequently, these opportunities arise from:

1. **The absence of a board of directors or audit committee** that vigilantly oversees the financial reporting process.
2. **Weak or nonexistent internal accounting controls.** This situation can occur, for example, when a company's revenue system is overloaded as a result of a rapid expansion of sales, an acquisition of a new division, or the entry into a new, unfamiliar line of business.
3. **Unusual or complex transactions** such as the consolidation of two companies, the divestiture or closing of a specific operation, and the purchase and sale of derivative instruments.
4. **Accounting estimates requiring significant subjective judgment** by company management, such as the allowance for loan losses and the estimated liability for warranty expense.
5. **Ineffective internal audit staffs** resulting from inadequate staff size and severely limited audit scope.

A weak corporate ethical climate contributes to these situations. Opportunities for fraudulent financial reporting also increase dramatically when the accounting principles followed in reporting transactions are nonexistent, evolving, or subject to varying interpretations.¹⁶

Trends

While fraudulent financial reporting is the exception rather than the rule, economic crime is on the rise around the world. A recent global survey of over 7,200 executives from 123 countries documented the growth of economic crimes, as shown in **Illustration 24.17**.

ILLUSTRATION 24.17

Growth of Economic Crime

As indicated, economic crimes are on the rise. As shown in **Illustration 24.18**, asset misappropriation and cybercrime are generally the most common. Accounting fraud is another top source as identified in the professional services (auditors) industry.

¹⁶The discussion in this section is based on the Report of the National Commission on Fraudulent Financial Reporting, pp. 23–24 (2004). See also “2012 Report to the Nation on Occupational Fraud and Abuse, Association of Certified Fraud Examiners” (http://www.acfe.com/uploadedFiles/ACFE_Website/Content/rftn/2012-report-to-nations.pdf), for fraudulent financial reporting causes and consequences.

ILLUSTRATION 24.18

Trends in Reported Fraud

Accounting **errors** are **unintentional** mistakes, whereas **fraud** (misappropriation of assets and fraudulent financial reporting) involves **intentional** distortions of financial statements.¹⁷ Companies should correct the financial statements when they discover errors. The same treatment should be given to fraud. The discovery of fraud, however, gives rise to a different set of procedures and responsibilities for the accountant/auditor.¹⁸ **Illegal acts** encompass such items as illegal political contributions, bribes, kickbacks, and other violations of laws and regulations.¹⁹ In these situations, the accountant/auditor must evaluate the adequacy of disclosure in the financial statements. For example, if a company derives revenue from an illegal act that is considered material in relation to the financial statements, this information should be disclosed. The Sarbanes-Oxley Act is intended to deter these illegal acts. This law adds significant fines and longer jail time for those who improperly sign off on the correctness of financial statements that include willing and knowing misstatements.

Disclosure plays a very important role in these types of transactions because the events are more qualitative than quantitative and involve more subjective than objective evaluation. Users of the financial statements need some indication of the existence and nature of these transactions, through disclosures, modifications in the auditor's report (as discussed above), or reports of changes in auditors.

Response by the Profession

The AICPA has issued numerous auditing standards in response to concerns of the accounting profession, the media, and the public.²⁰ For example, the standard on fraudulent financial

¹⁷See AU-C Section 240, "Consideration of Fraud in a Financial Statement Audit," *Statement of Auditing Standards No. 122*. Effective for audits of financial statements for periods ending on or after December 31, 2013. Predecessor literature: "Consideration of Fraud in a Financial Statement Audit," *Statement on Auditing Standards No. 99* (New York: AICPA, 2002). Since passage of the Sarbanes-Oxley Act, auditors of public companies are regulated by the Public Company Accounting Oversight Board (PCAOB). The PCAOB is now the audit standard-setter for auditors of public companies. It has adopted much of the prior auditing standards issued by the Auditing Standards Board of the AICPA.

¹⁸The profession became so concerned with certain management frauds that affect financial statements that it established a National Commission on Fraudulent Financial Reporting. The major purpose of this organization was to determine how fraudulent reporting practices could be constrained. Fraudulent financial reporting is discussed later in this chapter.

¹⁹See AU-C Section 250, "Consideration of Laws and Regulations in an Audit of Financial Statements," *Statement of Auditing Standards No. 122*. Effective for audits of financial statements for periods ending on or after December 31, 2013. Predecessor literature: "Illegal Acts by Clients," *Statement on Auditing Standards No. 54* (New York: AICPA, 1988).

²⁰Because the profession believes that the role of the auditor is not well understood outside the profession, much attention has been focused on the expectation gap. The **expectation gap** is the gap between (1) the expectation of financial statement users concerning the level of assurance they believe the independent auditor provides, and (2) the assurance that the independent auditor actually does provide under generally accepted auditing standards.

reporting “raises the bar” on the performance of financial statement audits by explicitly requiring auditors to assess the risk of material financial misstatement due to fraud.²¹ As indicated earlier, the Sarbanes-Oxley Act now raises the penalty substantially for executives who are involved in fraudulent financial reporting.

Internet Financial Reporting

Most companies now use the power and reach of the Internet to provide more useful information to financial statement readers. All large companies have Internet sites, and a large proportion of companies’ websites contain links to their financial statements and other disclosures. The popularity of such reporting is not surprising since it reduces the companies’ costs of printing and disseminating paper reports.

Does Internet financial reporting improve the usefulness of a company’s financial reports? Yes, in several ways. First, dissemination of reports via the Web allows firms **to communicate more easily and quickly with users** than do traditional paper reports. In addition, **Internet reporting allows users to take advantage of tools** such as search engines and hyperlinks to quickly find information about the firm and to download the information for analysis. Finally, **Internet reporting can help make financial reports more relevant** by allowing companies to report expanded disaggregated data and more timely data than is possible through paper-based reporting. For example, some companies voluntarily report weekly sales data and segment operating data on their websites.

Given the widespread use of the Internet by investors and creditors, it is not surprising that organizations are developing new technologies and standards to further enable and enhance Internet financial reporting. An example is the established use of eXtensible Business Reporting Language (XBRL). **XBRL** is a computer language adapted from the code of the Internet. It “tags” accounting data to correspond to financial reporting items that are reported in the balance sheet, income statement, and the cash flow statement. Once tagged, any company’s XBRL data can be easily processed using spreadsheets and other computer programs. In fact, the SEC is phasing in requirements for all companies and mutual funds to prepare their financial reports using XBRL, thereby allowing users to more easily search a company’s reports, extract and analyze data, and perform financial comparisons within industries.²²

To complement the implementation of XBRL use, the SEC has supplemented its EDGAR database with a system called IDEA (short for Interactive Data Electronic Applications). This enhancement of EDGAR marks the SEC’s transition from collecting forms and documents to making the information itself freely available to investors in a timely form they can readily use. With IDEA, investors are able to quickly collate information from thousands of companies and forms and create reports and analyses on the fly, in any way they choose. IDEA has opened the door for both the SEC and investors to the new world of financial disclosure in interactive data (XBRL) format.²³

²¹See AU-C Section 240, “Consideration of Fraud in a Financial Statement Audit,” *Statement of Auditing Standards No. 122*. Effective for audits of financial statements for periods ending on or after December 31, 2013. Predecessor literature: “Consideration of Fraud in a Financial Statement Audit,” *Statement on Auditing Standards No. 99* (New York: AICPA, 2002).

²²See *SEC Interactive Data Rules for Operating Companies* (<http://www.sec.gov/rules/final/2009/33-9002.pdf>); and C. Twarowski, “Financial Data ‘on Steroids,’” *Washington Post* (August 19, 2008), p. D01. The FASB (and IASB) have collaborated to implement XBRL with their standards. See the FASB website; click on Taxonomy (XBRL).

²³See <http://www.sec.gov/edgar/aboutedgar.htm>. The SEC has implemented other regulations to ensure that investors get high-quality disclosures. For example, as discussed in Chapter 4, the SEC was concerned that companies may use pro forma reporting to deflect investor attention from bad news. In response, the SEC issued Regulation G, which requires companies to reconcile non-GAAP financial measures to GAAP. This regulation provides investors with a roadmap to analyze adjustments companies make to their GAAP numbers to arrive at pro forma results. [See SEC Regulation G, “Conditions for Use of Non-GAAP Financial Measures,” Release No. 33-8176 (March 28, 2003).] Regulation FD (Release Nos. 33-7881) was issued in 2000 to address the concern that some analysts were receiving information sooner than the general public (e.g., during conference calls with analysts when earnings releases were discussed). Regulation FD requires that when relevant information is released, all have equal access to it.

Reporting on Financial Forecasts and Projections

In recent years, the investing public's demand for more and better information has focused on disclosure of corporate expectations for the future.²⁴ These disclosures take one of two forms:²⁵

- **Financial forecasts.** A **financial forecast** is a set of prospective financial statements that present, to the best of the responsible party's knowledge and belief, a company's expected financial position, results of operations, and cash flows. The responsible party bases a financial forecast on conditions it expects to exist and the course of action it expects to take.
- **Financial projections.** **Financial projections** are prospective financial statements that present, to the best of the responsible party's knowledge and belief, given one or more *hypothetical assumptions*, an entity's expected financial position, results of operations, and cash flows. The responsible party bases a financial projection on conditions it expects *would* exist and the course of action it expects *would* be taken, given one or more hypothetical assumptions.

The difference between a financial forecast and a financial projection is clear-cut. A forecast provides information on what is **expected** to happen, whereas a projection provides information on what **might** take place but is not necessarily expected to happen.

Whether companies should be required to provide financial forecasts is the subject of intensive discussion with journalists, corporate executives, the SEC, financial analysts, accountants, and others. Predictably, there are strong arguments on either side. Presented below are some of the arguments.

Underlying Concepts

The profession indicates that the legal environment discourages companies from disclosing forward-looking information. Companies should not have to expand reporting of forward-looking information unless there are more effective deterrents to unwarranted litigation.

Arguments for Requiring Published Forecasts

1. Investment decisions are based on future expectations. Therefore, information about the future facilitates better decisions.
2. Companies already circulate forecasts informally. This situation should be regulated to ensure that the forecasts are available to all investors.
3. Circumstances change so rapidly that historical information is no longer adequate for prediction.

Arguments Against Requiring Published Forecasts

1. No one can foretell the future. Therefore, forecasts will inevitably be wrong. Worse, they may mislead, if they convey an impression of precision about the future.
2. Companies may strive only to meet their published forecasts, thereby failing to produce results that are in the stockholders' best interest.
3. If forecasts prove inaccurate, there will be recriminations and probably legal actions (see **Underlying Concepts**).²⁶
4. Disclosure of forecasts will be detrimental to organizations, because forecasts will inform competitors (foreign and domestic) as well as investors.

The AICPA has issued a statement on standards for accountants' services on prospective financial information. This statement establishes guidelines for the preparation and presentation of financial forecasts and projections.²⁷ It requires accountants to provide (1) a summary of significant assumptions used in the forecast or projection and (2) guidelines for minimum presentation.

²⁴Some areas in which companies are using financial information about the future are equipment lease-versus-buy analysis, analysis of a company's ability to successfully enter new markets, and examination of merger and acquisition opportunities. In addition, companies also prepare forecasts and projections for use by third parties in public offering documents (requiring financial forecasts), tax-oriented investments, and financial feasibility studies. Use of forward-looking data has been enhanced by the increased capability of microcomputers to analyze, compare, and manipulate large quantities of data.

²⁵See AT-C Section 305, "Prospective Financial Information," *Statement of Auditing Standards No. 18: Concepts Common to All Attestation Engagements*. Predecessor literature: "Financial Forecasts and Projections" and "Guide for Prospective Financial Information," *Codification of Statements on Standards for Attestation Engagements* (New York: AICPA 2006), paras. 3.04 and 3.05.

²⁶The issue is serious. Over a recent three-year period, 8 percent of the companies on the NYSE were sued because of an alleged lack of financial disclosure. Companies complain that they are subject to lawsuits whenever the stock price drops. And as one executive noted, "You can even be sued if the stock price goes up—because you did not disclose the good news fast enough."

²⁷*Op. cit.*

To encourage management to disclose prospective financial information, the SEC has a **safe harbor rule**. It provides protection to a company that presents an erroneous forecast, as long as the company prepared the forecast on a reasonable basis and disclosed it in good faith.²⁸ However, many companies note that the safe harbor rule does not work in practice, since it does not cover oral statements, nor has it kept them from investor lawsuits.

What Do the Numbers Mean? Global Forecasts

Great Britain permits financial forecasts, and the results have been fairly successful. Some significant differences do exist between the English and the U.S. business and legal environments. The British system, for example, does not permit litigation on forecasted information, and the solicitor (lawyer) is not permitted to work on a contingent-fee basis.

But such differences probably could be overcome if influential interests in this country cooperated to produce an atmosphere conducive to quality forecasting. A typical British forecast adapted from a construction company's report to support a public offering of stock is as follows.

Profits have grown substantially over the past 10 years and directors are confident of being able to continue this expansion. . . . While the rate of expansion will be dependent on the level of economic activity in Ireland and England, the group is well structured to avail itself of opportunities as they arise, particularly in the field of property development, which is expected to play an increasingly important role in the group's future expansion.

Profits before taxation for the half year ended 30th June were 402,000 pounds. On the basis of trading experiences since that date and the present level of sales and completions, the directors expect that in the absence of unforeseen circumstances, the group's profits before taxation for the year to 31st December will be not less than 960,000 pounds.

No dividends will be paid in respect of the current year. In a full financial year, on the basis of above forecasts (not including full year profits) it would be the intention of the board, assuming current rates of tax, to recommend dividends totaling 40% (of after-tax profits), which will be payable in the next two years.

A general narrative-type forecast issued by a U.S. corporation might appear as follows.

On the basis of promotions planned by the company for the second half of the fiscal year, net earnings for that period are expected to be approximately the same as those for the first half of the fiscal year, with net earnings for the third quarter expected to make the predominant contribution to net earnings for the second half of the year.

As indicated, the U.S. version is much less specific in its forecasted information.

Source: See "A Case for Forecasting—The British Have Tried It and Find That It Works," *World* (New York: Peat, Marwick, Mitchell & Co., Autumn 1978), pp. 10–13. In a recent survey, U.K. companies remain stubbornly backward-looking. Just 5 percent of FTSE 100 companies address the future of the business in their discussion and analysis. See PricewaterhouseCoopers, "Guide to Forward-looking Information: Don't Fear the Future" (2006).

Questions of Liability

What happens if a company does not meet its forecasts? Can the company and the auditor be sued? If a company, for example, projects an earnings increase of 15 percent and achieves only 5 percent, should stockholders be permitted to have some judicial recourse against the company?

One court case involving **Monsanto Chemical Corporation** set a precedent. In this case, Monsanto predicted that sales would increase 8 to 9 percent and that earnings would rise 4 to 5 percent. In the last part of the year, the demand for Monsanto's products dropped as a result of a business turnaround. Instead of increasing, the company's earnings declined. Investors sued the company because the projected earnings figure was erroneous, but a judge dismissed the suit because the forecasts were the best estimates of qualified people whose intents were honest.

As indicated earlier, the SEC's safe harbor rules are intended to protect companies that provide good-faith projections. However, much concern exists as to how the SEC and the courts will interpret such terms as "good faith" and "reasonable assumptions" when erroneous forecasts mislead users of this information.

Criteria for Making Accounting and Reporting Choices

Throughout this text, we have stressed the need to provide information that is useful to predict the amounts, timing, and uncertainty of future cash flows. To achieve this objective,

²⁸"Safe-Harbor Rule for Projections," *Release No. 5993* (Washington, D.C.: SEC, 1979). The Private Securities Litigation Reform Act of 1995 recognizes that some information that is useful to investors is inherently subject to less certainty or reliability than other information. By providing safe harbor for forward-looking statements, Congress has sought to facilitate access to this information by investors.

Underlying Concepts

The FASB concept statements on the objective of financial reporting, elements of financial statements, qualitative characteristics of accounting information, and recognition and measurement are important steps in the right direction.

companies must make judicious choices between alternative accounting concepts, methods, and means of disclosure. You are probably surprised by the large number of choices that exist among acceptable alternatives.

You should recognize, however, as indicated in Chapter 1, that accounting is greatly influenced by its environment. It does not exist in a vacuum. Therefore, it is unrealistic to assume that the profession can entirely eliminate alternative presentations of certain transactions and events. Nevertheless, we are hopeful that the profession, by adhering to the conceptual framework, will be able to focus on the needs of financial statement users and eliminate diversity where appropriate. The SEC's and FASB's projects on principles-based standards and disclosure effectiveness are directed at these very issues. They seek to develop guidance that will result in accounting and financial reporting that reflects the economic substance of the transactions, not the desired financial result of management. The profession must continue its efforts to develop a sound foundation upon which to build financial standards and practice (see **Underlying Concepts**). As Aristotle said, "The correct beginning is more than half the whole."

APPENDIX 24A

Basic Financial Statement Analysis

LEARNING OBJECTIVE *5

Describe the approach to financial statement analysis.

What would be important to you in studying a company's financial statements? The answer depends on your particular interest—whether you are a creditor, stockholder, potential investor, manager, government agency, or labor leader. For example, **short-term creditors** such as banks are primarily interested in the ability of the firm to pay its currently maturing obligations. In that case, you would examine the current assets and their relation to short-term liabilities to evaluate the short-run solvency of the firm.

Bondholders, on the other hand, look more to long-term indicators, such as the enterprise's capital structure, past and projected earnings, and changes in financial position. **Stockholders**, present or prospective, also are interested in many of the features considered by a long-term creditor. As a stockholder, you would focus on the earnings picture, because changes in it greatly affect the market price of your investment. You also would be concerned with the financial position of the company, because it affects indirectly the stability of earnings.

The **managers** of a company are concerned about the composition of its capital structure and about the changes and trends in earnings. This financial information has a direct influence on the type, amount, and cost of external financing that the company can obtain. In addition, the company managers find financial information useful on a day-to-day operating basis in such areas as capital budgeting, break-even analysis, variance analysis, gross margin analysis, and for internal control purposes.

Underlying Concepts

Because financial statements report on the past, they emphasize the *qualitative characteristic of feedback value*. This feedback value is useful because it can be used to better achieve the *qualitative characteristic of predictive value*.

Perspective on Financial Statement Analysis

Readers of financial statements can gather information by examining relationships between items on the statements and identifying trends in these relationships. The relationships are expressed numerically in ratios and percentages, and trends are identified through comparative analysis (see **Underlying Concepts**).

A problem with learning how to analyze statements is that the means may become an end in itself. Analysts could identify and calculate thousands of possible relationships and trends. If one knows only how to calculate ratios and trends without understanding

how such information can be used, little is accomplished. Therefore, a logical approach to financial statement analysis is necessary, consisting of the following steps.

1. **Know the questions for which you want to find answers.** As indicated earlier, various groups have different types of interest in a company.
2. **Know the questions that particular ratios and comparisons are able to help answer.** These will be discussed in this appendix.
3. **Match 1 and 2 above.** By such a matching, the statement analysis will have a logical direction and purpose.

Several caveats must be mentioned. **Financial statements report on the past.** Thus, analysis of these data is an examination of the past. When using such information in a decision-making (future-oriented) process, analysts assume that the past is a reasonable basis for predicting the future. This is usually a reasonable approach, but its limitations should be recognized.

Also, ratio and trend analyses will help identify a company's present strengths and weaknesses. They may serve as "red flags" indicating problem areas. In many cases, however, such analyses will not reveal **why** things are as they are. Finding answers about "why" usually requires an in-depth analysis and an awareness of many factors about a company that are not reported in the financial statements.

Another caveat is that a **single ratio by itself is not likely to be very useful.** For example, analysts may generally view a current ratio of 2 to 1 (current assets are twice current liabilities) as satisfactory. However, if the industry average is 3 to 1, such a conclusion may be invalid. Even given this industry average, one may conclude that the particular company is doing well if one knows the previous year's ratio was 1.5 to 1. Consequently, to derive meaning from ratios, analysts need some standard against which to compare them. Such a standard may come from industry averages, past years' amounts, a particular competitor, or planned levels.

Finally, **awareness of the limitations of accounting numbers used in an analysis** is important (see **Global View**). We will discuss some of these limitations and their consequences later in this appendix.

Global View

Some companies outside the United States provide "convenience" financial statements for U.S. readers. These financial statements have been translated into English, and they may also translate the currency units into U.S. dollars. However, the statements are *not restated* using U.S. accounting principles; financial statement analysis needs to take this fact into account.

Ratio Analysis

LEARNING OBJECTIVE *6

Identify major analytic ratios and describe their calculation.

In analyzing financial statement data, analysts use various devices to bring out the comparative and relative significance of the financial information presented. These devices include ratio analysis, comparative analysis, percentage analysis, and examination of related data. No one device is more useful than another. Every situation is different, and analysts often obtain the needed answers only upon close examination of the interrelationships among all the data provided. Ratio analysis is the starting point. Ratios can be classified as follows.

Major Types of Ratios

Liquidity Ratios. Measures of the company's short-run ability to pay its maturing obligations.

Activity Ratios. Measures of how effectively the company is using the assets employed.

Profitability Ratios. Measures of the degree of success or failure of a given company or division for a given period of time.

Coverage Ratios. Measures of the degree of protection for long-term creditors and investors.²⁹

²⁹Some analysts use other terms to categorize these ratios. For example, liquidity ratios are sometimes referred to as solvency ratios; activity ratios as *turnover* or *efficiency* ratios; and coverage ratios as *leverage* or *capital structure* ratios.

We have integrated discussions and illustrations about the computation and use of these financial ratios throughout this text. **Illustration 24A.1** summarizes all of the ratios presented in this text and identifies the specific chapters that present this material.

ILLUSTRATION 24A.1
Summary of Financial Ratios

| Ratio | Formula for Computation | Reference |
|---|---|------------|
| I. Liquidity | | |
| 1. Current ratio | $\frac{\text{Current assets}}{\text{Current liabilities}}$ | Chapter 13 |
| 2. Quick or acid-test ratio | $\frac{\text{Cash} + \text{Short-term investments} + \text{Accounts receivable (net)}}{\text{Current liabilities}}$ | Chapter 13 |
| 3. Current cash debt coverage | $\frac{\text{Net cash provided by operating activities}}{\text{Average current liabilities}}$ | Chapter 5 |
| II. Activity | | |
| 4. Accounts receivable turnover | $\frac{\text{Net sales}}{\text{Average net accounts receivable}}$ | Chapter 7 |
| 5. Inventory turnover | $\frac{\text{Cost of goods sold}}{\text{Average inventory}}$ | Chapter 9 |
| 6. Asset turnover | $\frac{\text{Net sales}}{\text{Average total assets}}$ | Chapter 11 |
| III. Profitability | | |
| 7. Profit margin on sales | $\frac{\text{Net income}}{\text{Net sales}}$ | Chapter 11 |
| 8. Return on assets | $\frac{\text{Net income}}{\text{Average total assets}}$ | Chapter 11 |
| 9. Return on common stockholders' equity | $\frac{\text{Net income} - \text{Preferred dividends}}{\text{Average common stockholders' equity}}$ | Chapter 15 |
| 10. Earnings per share | $\frac{\text{Net income} - \text{Preferred dividends}}{\text{Weighted-average common shares outstanding}}$ | Chapter 16 |
| 11. Payout ratio | $\frac{\text{Cash dividends}}{\text{Net income}}$ | Chapter 15 |
| IV. Coverage | | |
| 12. Debt to assets ratio | $\frac{\text{Total liabilities}}{\text{Total assets}}$ | Chapter 14 |
| 13. Times interest earned | $\frac{\text{Net income} + \text{Interest expense} + \text{Income tax expense}}{\text{Interest expense}}$ | Chapter 14 |
| 14. Cash debt coverage | $\frac{\text{Net cash provided by operating activities}}{\text{Average total liabilities}}$ | Chapter 5 |
| 15. Book value per share | $\frac{\text{Common stockholders' equity}}{\text{Outstanding shares}}$ | Chapter 15 |

Additional coverage of these ratios, accompanied by assignment material, is available online. This supplemental coverage takes the form of a comprehensive case adapted from the annual report of a large international chemical company that we have disguised under the name of Anetek Chemical Corporation.

Limitations of Ratio Analysis

LEARNING OBJECTIVE *7

Explain the limitations of ratio analysis.

The reader of financial statements must understand the basic limitations associated with ratio analysis. As analytical tools, ratios are attractive because they are simple and convenient. But too frequently, decision-makers base their decisions on only these simple computations. The ratios are only as good as the data upon which they are based and the information with which they are compared.

One important limitation of ratios is that they generally are **based on historical cost, which can lead to distortions in measuring performance**. Inaccurate assessments of the enterprise's financial condition and performance can result from failing to incorporate fair value information.

Also, investors must remember that **where estimated items (such as depreciation and amortization) are significant, income ratios lose some of their credibility**. For example, income recognized before the termination of a company's life is an approximation. In analyzing the income statement, users should be aware of the uncertainty surrounding the computation of net income.

As one writer aptly noted, "The physicist has long since conceded that the location of an electron is best expressed by a probability curve. Surely an abstraction like earnings per share is even more subject to the rules of probability and risk."³⁰

Probably the greatest limitation of ratio analysis is the **difficult problem of achieving comparability among firms in a given industry**. Achieving comparability requires that the analyst (1) identify basic differences in companies' accounting principles and procedures, and (2) adjust the balances to achieve comparability (see **Underlying Concepts**). Basic differences in accounting usually involve one of the following areas.

1. Inventory valuation (FIFO, LIFO, average-cost).
2. Depreciation methods, particularly the use of straight-line versus accelerated depreciation.
3. Capitalization versus expensing of certain costs.
4. Investments in common stock carried at equity versus fair value.
5. Differing treatments of postretirement benefit costs.
6. Questionable practices of defining discontinued operations and impairments.

The use of these different alternatives can make a significant difference in the ratios computed. For example, at one time **Anheuser-Busch InBev** noted that if it had used average-cost for inventory valuation instead of LIFO, inventories would have increased approximately \$33,000,000. Such an increase would have a substantive impact on the current ratio. Several studies have analyzed the impact of different accounting methods on financial statement analysis. The differences in income that can develop are staggering in some cases. Investors must be aware of the potential pitfalls if they are to be able to make the proper adjustments.

Finally, analysts should recognize that a **substantial amount of important information** is not included in a company's financial statements. Events involving such things as industry changes, management changes, competitors' actions, technological developments, government actions, and union activities are often critical to a company's successful operation. These events occur continuously, and information about them must come from careful analysis of financial reports in the media and other sources. Indeed many argue, in what is known as the **efficient-market hypothesis**, that financial statements contain "no surprises" to those engaged in market activities. They contend that the effect of these events is known in the marketplace—and the price of the company's stock adjusts accordingly—well before the issuance of such reports.

Underlying Concepts

Consistency and comparability are important concepts for financial statement analysis. If the principles and assumptions used to prepare the financial statements are continually changing, accurate assessments of a company's progress become difficult.

³⁰Richard E. Cheney, "How Dependable Is the Bottom Line?" *The Financial Executive* (January 1971), p. 12.

Comparative Analysis

LEARNING OBJECTIVE *8

Describe techniques of comparative analysis.

Comparative analysis presents the same information for two or more different dates or periods, so that like items may be compared. Ratio analysis provides only a single snapshot, for one given point or period in time. In a comparative analysis, an investment analyst can concentrate on a given item and determine whether it appears to be growing or diminishing year by year and the proportion of such change to related items. Generally, companies present comparative financial statements. They typically include two years of balance sheet information and three years of income statement information.

In addition, many companies include in their annual reports five- or ten-year summaries of pertinent data that permit readers to examine and analyze trends. As indicated in GAAP, “the presentation of comparative financial statements in annual and other reports enhances the usefulness of such reports and brings out more clearly the nature and trends of current changes affecting the enterprise.” **Illustration 24A.2** presents a five-year condensed statement, with additional supporting data, of Anetek Chemical Corporation.

ILLUSTRATION 24A.2 Condensed Comparative Financial Information

| Anetek Chemical Corporation Condensed Comparative Statements (000,000 omitted) | | | | | | | |
|---|-----------------|-----------------|-----------------|-----------------|-----------------|----------------------|----------------------|
| | 2020 | 2019 | 2018 | 2010 | 2011 | 10 Years Ago 2010 | 20 Years Ago 2000 |
| Sales and other revenue: | | | | | | | |
| Net sales | \$1,600.0 | \$1,350.0 | \$1,309.7 | \$1,176.2 | \$1,077.5 | \$636.2 | \$170.7 |
| Other revenue | 75.0 | 50.0 | 39.4 | 34.1 | 24.6 | 9.0 | 3.7 |
| Total | <u>1,675.0</u> | <u>1,400.0</u> | <u>1,349.1</u> | <u>1,210.3</u> | <u>1,102.1</u> | <u>645.2</u> | <u>174.4</u> |
| Costs and other charges: | | | | | | | |
| Cost of sales | 1,000.0 | 850.0 | 827.4 | 737.6 | 684.2 | 386.8 | 111.0 |
| Depreciation and amortization | 150.0 | 150.0 | 122.6 | 115.6 | 98.7 | 82.4 | 14.2 |
| Selling and administrative expenses | 225.0 | 150.0 | 144.2 | 133.7 | 126.7 | 66.7 | 10.7 |
| Interest expense | 50.0 | 25.0 | 28.5 | 20.7 | 9.4 | 8.9 | 1.8 |
| Income taxes | 100.0 | 75.0 | 79.5 | 73.5 | 68.3 | 42.4 | 12.4 |
| Total | <u>1,525.0</u> | <u>1,250.0</u> | <u>1,202.2</u> | <u>1,081.1</u> | <u>987.3</u> | <u>587.2</u> | <u>150.1</u> |
| Net income for the year | <u>\$ 150.0</u> | <u>\$ 150.0</u> | <u>\$ 146.9</u> | <u>\$ 129.2</u> | <u>\$ 114.8</u> | <u>\$ 58.0</u> | <u>\$ 24.3</u> |
| Other Statistics | | | | | | | |
| Earnings per share on common stock (in dollars) ^a | \$ 5.00 | \$ 5.00 | \$ 4.90 | \$ 3.58 | \$ 3.11 | \$ 1.66 | \$ 1.06 |
| Cash dividends per share on common stock (in dollars) ^a | 2.25 | 2.15 | 1.95 | 1.79 | 1.71 | 1.11 | 0.25 |
| Cash dividends declared on common stock | 67.5 | 64.5 | 58.5 | 64.6 | 63.1 | 38.8 | 5.7 |
| Stock dividend at approximate market value | | | | 46.8 | | 27.3 | |
| Taxes (major) | 144.5 | 125.9 | 116.5 | 105.6 | 97.8 | 59.8 | 17.0 |
| Wages paid | 389.3 | 325.6 | 302.1 | 279.6 | 263.2 | 183.2 | 48.6 |
| Cost of employee benefits | 50.8 | 36.2 | 32.9 | 28.7 | 27.2 | 18.4 | 4.4 |
| Number of employees at year end (thousands) | 47.4 | 36.4 | 35.0 | 33.8 | 33.2 | 26.6 | 14.6 |
| Additions to property | 306.3 | 192.3 | 241.5 | 248.3 | 166.1 | 185.0 | 49.0 |

^aAdjusted for stock splits and stock dividends.

Percentage (Common-Size) Analysis

LEARNING OBJECTIVE *9

Describe techniques of percentage analysis.

Analysts also use percentage analysis to help them evaluate and compare companies. **Percentage analysis** consists of reducing a series of related amounts to a series of percentages of a given base. For example, analysts frequently express all items in an income statement as a percentage of sales or sometimes as a percentage of cost of goods sold. They may analyze a balance sheet on the basis of total assets. Percentage analysis facilitates comparison and is helpful in evaluating the relative size of items or the relative change in items. A conversion of absolute dollar amounts to percentages may also facilitate comparison between companies of different size.

Illustration 24A.3 shows a comparative analysis of the expense section of Anetek for the last two years.

| Anetek Chemical Corporation Horizontal Comparative Analysis (000,000 omitted) | | | | |
|--|-----------|---------|------------|-------------------------|
| | 2020 | 2019 | Difference | % Change Inc. (Dec.) |
| Cost of sales | \$1,000.0 | \$850.0 | \$150.0 | 17.6% |
| Depreciation and amortization | 150.0 | 150.0 | 0 | 0 |
| Selling and administrative expenses | 225.0 | 150.0 | 75.0 | 50.0 |
| Interest expense | 50.0 | 25.0 | 25.0 | 100.0 |
| Income taxes | 100.0 | 75.0 | 25.0 | 33.3 |

ILLUSTRATION 24A.3

Horizontal Percentage Analysis

This approach, normally called **horizontal analysis**, indicates the proportionate change over a period of time. It is especially useful in evaluating trends, because absolute changes are often deceiving.

Another comparative approach, called **vertical analysis**, is the proportional expression of each financial statement item in a given period to a base figure. For example, Anetek Chemical's 2020 income statement using the percentage analysis approach appears in **Illustration 24A.4**.

| Anetek Chemical Corporation Income Statement (000,000 omitted) | | |
|---|-----------------|--------------------------------|
| | Amount | Percentage of Total Revenue |
| Net sales | \$1,600.0 | 96% |
| Other revenue | 75.0 | 4 |
| Total revenue | <u>1,675.0</u> | <u>100</u> |
| Less: | | |
| Cost of sales | 1,000.0 | 60 |
| Depreciation and amortization | 150.0 | 9 |
| Selling and administrative expenses | 225.0 | 13 |
| Interest expense | 50.0 | 3 |
| Income taxes | 100.0 | 6 |
| Total expenses | <u>1,525.0</u> | <u>91</u> |
| Net income | <u>\$ 150.0</u> | <u>9%</u> |

ILLUSTRATION 24A.4

Vertical Percentage Analysis

Vertical analysis is frequently called **common-size analysis** because it reduces all of the statement items to a "common size." That is, all of the elements within each statement are expressed in percentages of some common number and always add up to

100 percent. Common-size (percentage) analysis reveals the composition of each of the financial statements.

In the analysis of the balance sheet, common-size analysis answers such questions as: What percentage of the capital structure is stockholders' equity, current liabilities, and long-term debt? What is the mix of assets (percentage-wise) with which the company has chosen to conduct business? What percentage of current assets is in inventory, receivables, and so forth?

Common-size analysis of the income statement typically relates each item to sales. It is instructive to know what proportion of each sales dollar is absorbed by various costs and expenses incurred by the enterprise.

Analysts may use common-size statements to compare one company's statements from different years in order to detect trends not evident from comparing absolute amounts. Also, common-size statements provide intercompany comparisons regardless of size because they recast financial statements into a comparable common-size format.

Learning Objectives Review

1 Review the full disclosure principle and describe how it is implemented.

The **full disclosure principle** calls for financial reporting of any financial facts significant enough to influence the judgment of an informed reader. Implementing the full disclosure principle is difficult because the cost of disclosure can be substantial and the benefits difficult to assess. Disclosure requirements have increased because of (1) the growing complexity of the business environment, (2) the necessity for timely information, and (3) the use of accounting as a control and monitoring device.

Notes in financial statement preparation. Notes are the accountant's means of amplifying or explaining the items presented

in the main body of the statements. Notes can explain in qualitative terms information pertinent to specific financial statement items, and can provide supplementary data of a quantitative nature. Common note disclosures relate to such items as accounting policies; inventories; property, plant, and equipment; creditor claims; contingencies and commitments; and subsequent events.

2 Discuss the disclosure requirements for related-party transactions, post-balance-sheet events, major business segments, and interim reporting.

In **related-party transactions**, one party has the ability to significantly influence the policies of the other. As a result, GAAP requires

disclosure of the relationship(s) involved, a description and dollar amounts of the transactions, and amounts due from or to related parties. For **post-balance-sheet events**, companies should disclose recognized subsequent events as well as nonrecognized subsequent events. Finally, aggregated figures hide much information about the composition of these consolidated figures. There is no way to tell from the consolidated data the extent to which the differing product lines contribute to the company's profitability, risk, and growth potential. As a result, the profession requires **segment information** in certain situations.

Interim reports cover periods of less than one year. Two viewpoints exist regarding interim reports. The discrete approach holds that each interim period should be treated as a separate accounting period. The integral approach is that the interim report is an integral part of the annual report and that deferrals and accruals should take into consideration what will happen for the entire year.

Companies should use the same accounting principles for interim reports that they use for annual reports. A number of unique reporting problems develop related to the following items: (1) advertising and similar costs, (2) expenses subject to year-end adjustment, (3) income taxes, (4) earnings per share, and (5) seasonality.

3 Identify the major disclosures in the auditor's report and understand management's responsibilities for the financial statements.

In the **auditor's report**, the auditor expresses an unqualified opinion if satisfied that the financial statements present the financial position, results of operations, and cash flows fairly in accordance with generally accepted accounting principles. A qualified opinion contains an exception to the standard opinion; ordinarily, the exception is not of sufficient magnitude to invalidate the statements as a whole.

An adverse opinion is required when the exceptions to fair presentation are so material that a qualified opinion is not justified. A disclaimer of an opinion is appropriate when the auditor has so little information on the financial statements that no opinion can be expressed.

Management's responsibilities for financials. Management's discussion and analysis (MD&A) section covers three financial aspects of an enterprise's business: liquidity, capital resources, and results of operations. Management's responsibility for the financial statements is often indicated in a letter to stockholders in the annual report.

4 Identify reporting issues related to fraudulent financial reporting and financial forecasts.

The profession's response to fraudulent financial reporting. Fraudulent financial reporting is intentional or reckless conduct, whether through act or omission, that results in materially misleading financial statements. Fraudulent financial reporting usually occurs because of poor internal control, management's poor attitude toward ethics, poor performance, and so on. The Sarbanes-Oxley Act has numerous provisions intended to help prevent fraudulent financial reporting.

Financial forecasts. The SEC has indicated that companies are permitted (not required) to include profit forecasts in their reports. To encourage management to disclose such information, the SEC issued a safe harbor rule. The rule provides protection to a company that presents an erroneous forecast, as long as it prepared the projection on a reasonable basis and disclosed it in good faith. However, the safe harbor rule has not worked well in practice.

*5 Describe the approach to financial statement analysis.

Basic financial statement analysis involves examining relationships between items on the statements (ratio and percentage analysis) and identifying trends in these relationships (comparative analysis). Analysis is used to predict the future, but ratio analysis is limited because the data are from the past. Also, ratio analysis identifies present strengths and weaknesses of a company, but it may not reveal *why* they exist. Although single ratios are helpful, they are not conclusive. For maximum usefulness, analysts must compare them with industry averages, past years, planned amounts, and the like.

*6 Identify major analytic ratios and describe their calculation.

Ratios are classified as liquidity ratios, activity ratios, profitability ratios, and coverage ratios. (1) *Liquidity ratio analysis* measures the short-run ability of a company to pay its currently maturing obligations. (2) *Activity ratio analysis* measures how effectively a company is using its assets. (3) *Profitability ratio analysis* measures the degree of success or failure of a company to generate revenues adequate to cover its costs of operation and provide a return to the owners. (4) *Coverage ratio analysis* measures the degree of protection afforded long-term creditors and investors.

*7 Explain the limitations of ratio analysis.

Ratios are based on historical cost, which can lead to distortions in measuring performance. Also, where estimated items are significant, income ratios lose some of their credibility. In addition, comparability problems exist because companies use different accounting principles and procedures. Finally, analysts must recognize that a substantial amount of important information is not included in a company's financial statements.

*8 Describe techniques of comparative analysis.

Companies present comparative data, which generally includes two years of balance sheet information and three years of income statement information. In addition, many companies include in their annual reports five- to ten-year summaries of pertinent data that permit the reader to analyze trends.

*9 Describe techniques of percentage analysis.

Percentage analysis consists of reducing a series of related amounts to a series of percentages of a given base. Analysts use two approaches. *Horizontal analysis* indicates the proportionate change in financial statement items over a period of time; such analysis is most helpful in evaluating trends. *Vertical analysis* (common-size analysis) is a proportional expression of each item on the financial statements in a given period to a base amount. It analyzes the composition of each of the financial statements from different years (a) to detect trends not evident from the comparison of absolute amounts and (b) to make intercompany comparisons of different-sized enterprises.

Practice Problem

Konetzke Corporation, a publicly traded company, is preparing the interim financial data which it will issue to its stockholders and the Securities and Exchange Commission (SEC) for the fiscal year ending December 31, 2020. Your job as a member of the accounting team is to help determine the appropriate disclosures and any other potential year-end adjustments. You have collected the following information.

1. Konetzke is involved in four separate industries. The following information is available for each of the four industries. Konetzke wonders which segments are reportable.

| Operating Segment | Total Revenue | Operating Profit (Loss) | Identifiable Assets |
|-------------------|------------------|-------------------------|---------------------|
| Badger | \$ 60,000 | \$15,000 | \$167,000 |
| Spartan | 10,000 | 1,500 | 83,000 |
| Cornhusker | 23,000 | (2,000) | 21,000 |
| Hawkeye | 9,000 | 1,000 | 19,000 |
| | <u>\$102,000</u> | <u>\$15,500</u> | <u>\$290,000</u> |

2. On February 3, 2021, one of Konetzke's customers declared bankruptcy. At December 31, 2020, this company owed Konetzke \$15,000, of which \$3,000 was paid in January 2021.
3. On January 18, 2021, one of the three major plants of the client burned down.
4. On January 23, 2021, a strike was called at one of Konetzke's largest plants, which halted 30% of its production. As of today (February 13), the strike has not been settled.
5. On February 1, 2019, the board of directors adopted a resolution accepting the offer of an investment banker to guarantee the marketing of \$1,200,000 of preferred stock.

Instructions

- a. State in each case how the 2020 financial statements would be affected, if at all.
- b. Moving ahead to the first quarter of 2021, your team has compiled the following summarized revenue and expense data for the first quarter of the year.

| | |
|---------------------------|----------|
| Sales revenue | \$30,000 |
| Cost of goods sold | 18,000 |
| Variable selling expenses | 500 |
| Fixed selling expenses | 1,500 |

Included in the fixed selling expenses was the single lump-sum payment of \$800 for Internet advertisements for the entire year. Address the following with respect to the first quarter report. (1) Explain whether Konetzke should report its operating results for the quarter as if the quarter were a separate reporting period in and of itself, or as if the quarter were an integral part of the annual reporting period. (2) State how the sales revenue, cost of goods sold, and fixed selling expenses would be reflected in Konetzke's quarterly report prepared for the first quarter of 2021.

Solution

- a. 1. Konetzke first conducts the following three tests:

Revenue test: $.10 \times \$102,000 = \$10,200$. The Badger (\$60,000) and Cornhusker (\$23,000) segments both meet this test.

Operating profit (loss) test: $.10 \times (\$15,000 + \$1,500 + \$1,000) = \$1,750$. The Badger (\$15,000) and Cornhusker (\$2,000 absolute amount) segments both meet this test.

Identifiable assets test: $.10 \times \$290,000 = \$29,000$. The Badger (\$167,000) and Spartan (\$83,000) segments both meet this test.

Thus, Konetzke has three reportable segments for which segment information should be disclosed.

Regarding the post-balance-sheet events:

2. The financial statements should be adjusted for the expected loss pertaining to the remaining receivable of \$12,000. Such adjustment should reduce accounts receivable to their realizable value as of December 31, 2020.

3. Report the fire loss in a footnote to the balance sheet and refer to it in connection with the income statement, since earnings power is presumably affected.
 4. Strikes are considered general knowledge and therefore disclosure is not required. Many auditors, however, would encourage disclosure in all cases.
 5. Report the action of the new stock issue in a footnote to the balance sheet.
- b.
1. The company should report its quarterly results as if each interim period is an integral part of the annual period.
 2. The company's revenue and expenses would be reported as follows on its quarterly report prepared for the first quarter of 2021:

| | |
|--------------------------------|----------|
| Sales revenue | \$30,000 |
| Cost of goods sold | 18,000 |
| Variable selling expenses | 500 |
| Fixed selling expenses | |
| Advertising ($\$800 \div 4$) | 200 |
| Other ($\$1,500 - \800) | 700 |

Sales revenue and cost of goods sold receive the same treatment as if this were an annual report. Costs and expenses other than product costs should be charged to expense in interim periods as incurred or allocated among interim periods. Consequently, the variable selling expenses and the portion of fixed selling expenses not related to Internet advertising should be reported in full. One-fourth of the Internet advertising is reported as an expense in the first quarter, assuming the advertising is constant throughout the year. These costs can be deferred within the fiscal period if the benefits of the expenditure clearly extend beyond the interim period in which the expenditure is made.

WileyPLUS

Exercises, Problems, Problem Solution Walkthrough Videos, and many more assessment tools and resources are available for practice in WileyPLUS.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

Questions

1. What are the major advantages of notes to the financial statements? What types of items are usually reported in notes?
 2. What is the full disclosure principle in accounting? Why has disclosure increased substantially in the last 10 years?
 3. The FASB requires a reconciliation between the effective tax rate and the federal government's statutory rate. Of what benefit is such a disclosure requirement?
 4. What type of disclosure or accounting do you believe is necessary for the following items?
 - a. Because of a general increase in the number of labor disputes and strikes, both within and outside the industry, there is an increased likelihood that a company will suffer a costly strike in the near future.
 - b. A company reports a material unusual and infrequent loss on the income statement. No other mention is made of this item in the annual report.
 - c. A company expects to recover a substantial amount in connection with a pending refund claim for a prior year's taxes.
- Although the claim is being contested, counsel for the company has confirmed the client's expectation of recovery.
5. The following information was described in a note of Canon Packing Co.

“During August, Holland Products Corporation purchased 311,003 shares of the Company's common stock which constitutes approximately 35% of the stock outstanding. Holland has since obtained representation on the Board of Directors.”

“An affiliate of Holland Products Corporation acts as a food broker for Canon Packing in the greater New York City marketing area. The commissions for such services after August amounted to approximately \$20,000.”

Why is this information disclosed?
 6. What are the major types of subsequent events? Indicate how each of the following “subsequent events” would be reported.
 - a. Collection of a note written off in a prior period.
 - b. Issuance of a large preferred stock offering.
 - c. Acquisition of a company in a different industry.

- d. Destruction of a major plant in a flood.
 - e. Death of the company's chief executive officer (CEO).
 - f. Additional wage costs associated with settlement of a four-week strike.
 - g. Settlement of a federal income tax case at considerably more tax than anticipated at year-end.
 - h. Change in the product mix from consumer goods to industrial goods.
7. What are diversified companies? What accounting problems are related to diversified companies?
 8. What quantitative materiality tests are applied to determine whether a segment is significant enough to warrant separate disclosure?
 9. Identify the segment information that is required to be disclosed by GAAP.
 10. What is an operating segment, and when can information about two operating segments be aggregated?
 11. The controller for Lafayette Inc. recently commented, "If I have to disclose our segments individually, the only people who will gain are our competitors and the only people that will lose are our present stockholders." Evaluate this comment.
 12. An article in the financial press entitled "Important Information in Annual Reports This Year" noted that annual reports include a management's discussion and analysis section. What would this section contain?
 13. "The financial statements of a company are management's, not the accountant's." Discuss the implications of this statement.
 14. What are interim reports? Why are balance sheets often not provided with interim data?
 15. What are the accounting problems related to the presentation of interim data?
 16. Dierdorf Inc., a closely held corporation, has decided to go public. The controller, Ed Floyd, is concerned with presenting interim data when a LIFO inventory valuation is used. What problems are encountered with LIFO inventories when quarterly data are presented?
 17. What approaches have been suggested to overcome the seasonality problem related to interim reporting?
 18. What is the difference between a CPA's unqualified opinion or "clean" opinion and a qualified one?
 19. Jane Ellerby and Sam Callison are discussing the recent fraud that occurred at LowRental Leasing, Inc. The fraud involved the improper reporting of revenue to ensure that the company would have income in excess of \$1 million. What is fraudulent financial reporting, and how does it differ from an embezzlement of company funds?
 20. Olga Conrad, a financial writer, noted recently, "There are substantial arguments for including earnings projections in annual reports and the like. The most compelling is that it would give anyone interested something now available to only a relatively select few—like large stockholders, creditors, and attentive bartenders." Identify some arguments against providing earnings projections.
 21. The following comment appeared in the financial press: "Inadequate financial disclosure, particularly with respect to how management views the future and its role in the marketplace, has always been a stone in the shoe. After all, if you don't know how a company views the future, how can you judge the worth of its corporate strategy?" What are some arguments for reporting earnings forecasts?
 - *22. "The significance of financial statement data is not in the amount alone." Discuss the meaning of this statement.
 - *23. A close friend of yours, who is a history major and who has not had any college courses or any experience in business, is receiving the financial statements from companies in which he has minor investments (acquired for him by his now-deceased grandfather). He asks you what he needs to know to interpret and to evaluate the financial statement data that he is receiving. What would you tell him?
 - *24. Distinguish between ratio analysis and percentage analysis relative to the interpretation of financial statements. What is the value of these two types of analyses?
 - *25. In calculating inventory turnover, why is cost of goods sold used as the numerator? As the inventory turnover increases, what increasing risk does the business assume?
 - *26. What is the relationship of the asset turnover to the return on assets?
 - *27. Explain the meaning of the following terms: (a) common-size analysis, (b) vertical analysis, (c) horizontal analysis, and (d) percentage analysis.
 - *28. Presently, the profession requires that earnings per share be disclosed on the face of the income statement. What are some disadvantages of reporting ratios on the financial statements?

Brief Exercises

BE24.1 (LO 1) An annual report of Crestwood Industries states, "The company and its subsidiaries have long-term leases expiring on various dates after December 31, 2020. Amounts payable under such commitments, without reduction for related rental income, are expected to average approximately \$5,711,000 annually for the next 3 years. Related rental income from certain subleases to others is estimated to average \$3,094,000 annually for the next 3 years." What information is provided by this note?

BE24.2 (LO 1) An annual report of **Ford Motor Corporation** states, "Net income per share is computed based upon the average number of shares of capital stock of all classes outstanding. Additional shares of common stock may be issued or delivered in the future on conversion of outstanding convertible debentures, exercise of outstanding employee stock options, and for payment of defined supplemental compensation. Had such additional shares been outstanding, net income a share would have been reduced by 10¢ in the current year and 3¢ in the previous year. . . . As a result of capital stock transactions by the company during the current year (primarily the purchase of Class A Stock from Ford Foundation), net income a share was increased by 6¢." What information is provided by this note?

BE24.3 (LO 2) Morlan Corporation is preparing its December 31, 2020, financial statements. Two events that occurred between December 31, 2020, and March 10, 2021, when the statements were issued, are described below.

1. A liability, estimated at \$160,000 at December 31, 2020, was settled on February 26, 2021, at \$170,000.
2. A flood loss of \$80,000 occurred on March 1, 2021.

What effect do these subsequent events have on 2020 net income?

BE24.4 (LO 2) Tina Bailey, a student of intermediate accounting, was heard to remark after a class discussion on segment reporting, "All this is very confusing to me. First, we are told that there is merit in presenting the consolidated results, and now we are told that it is better to show segmental results. I wish they would make up their minds." Evaluate this comment.

BE24.5 (LO 2) Foley Corporation has seven industry segments with total revenues as follows.

| | | | |
|----------|-------|--------|-------|
| Penley | \$600 | Cheng | \$225 |
| Konami | 650 | Takuhi | 200 |
| KSC | 250 | Molina | 700 |
| Red Moon | 275 | | |

Based only on the revenues test, which industry segments are reportable?

BE24.6 (LO 2) Operating profits and losses for the seven industry segments of Foley Corporation are:

| | | | |
|----------|-------|--------|---------|
| Penley | \$ 90 | Cheng | \$ (20) |
| Konami | (40) | Takuhi | 34 |
| KSC | 25 | Molina | 150 |
| Red Moon | 50 | | |

Based only on the operating profit (loss) test, which industry segments are reportable?

BE24.7 (LO 2) Identifiable assets for the seven industry segments of Foley Corporation are:

| | | | |
|----------|-------|--------|-------|
| Penley | \$500 | Cheng | \$200 |
| Konami | 550 | Takuhi | 150 |
| KSC | 250 | Molina | 475 |
| Red Moon | 400 | | |

Based only on the identifiable assets test, which industry segments are reportable?

***BE24.8 (LO 6)** Answer each of the questions in the following unrelated situations.

- a. The current ratio of a company is 5:1 and its acid-test ratio is 1:1. If the inventories and prepaid items amount to \$500,000, what is the amount of current liabilities?
- b. A company had an average inventory last year of \$200,000 and its inventory turnover was 5. If sales volume and unit cost remain the same this year as last and inventory turnover is 8 this year, what will average inventory have to be during the current year?
- c. A company has current assets of \$90,000 (of which \$40,000 is inventory and prepaid items) and current liabilities of \$40,000. What is the current ratio? What is the acid-test ratio? If the company borrows \$15,000 cash from a bank on a 120-day loan, what will its current ratio be? What will the acid-test ratio be?
- d. A company has current assets of \$600,000 and current liabilities of \$240,000. The board of directors declares a cash dividend of \$180,000. What is the current ratio after the declaration but before payment? What is the current ratio after the payment of the dividend?

***BE24.9 (LO 6)** Heartland Company's budgeted sales and budgeted cost of goods sold for the coming year are \$144,000,000 and \$99,000,000, respectively. Short-term interest rates are expected to average 10%. If Heartland can increase inventory turnover from its present level of 9 times a year to a level of 12 times per year, compute its expected cost savings for the coming year.

Exercises

E24.1 (LO 2) (Post-Balance-Sheet Events) Madrasah Corporation issued its financial statements for the year ended December 31, 2020, on March 10, 2021. The following events took place early in 2021.

- a. On January 10, 10,000 shares of \$5 par value common stock were issued at \$66 per share.
- b. On March 1, Madrasah determined after negotiations with the Internal Revenue Service that income taxes payable for 2020 should be \$1,270,000. At December 31, 2020, income taxes payable were recorded at \$1,100,000.

Instructions

Discuss how the preceding post-balance-sheet events should be reflected in the 2020 financial statements.

E24.2 (LO 2) Excel (Post-Balance-Sheet Events) For each of the following subsequent (post-balance-sheet) events, indicate whether a company should (a) adjust the financial statements, (b) disclose in notes to the financial statements, or (c) neither adjust nor disclose.

- _____ 1. Settlement of federal tax case at a cost considerably in excess of the amount expected at year-end.
- _____ 2. Introduction of a new product line.
- _____ 3. Loss of assembly plant due to fire.
- _____ 4. Sale of a significant portion of the company's assets.
- _____ 5. Retirement of the company president.
- _____ 6. Prolonged employee strike.
- _____ 7. Loss of a significant customer.
- _____ 8. Issuance of a significant number of shares of common stock.
- _____ 9. Material loss on a year-end receivable because of a customer's bankruptcy.
- _____ 10. Hiring of a new president.
- _____ 11. Settlement of prior year's litigation against the company (no loss was accrued).
- _____ 12. Merger with another company of comparable size.

E24.3 (LO 2) Excel (Segmented Reporting) Carlton Company is involved in four separate industries. The following information is available for each of the four industries.

| Operating Segment | Total Revenue | Operating Profit (Loss) | Identifiable Assets |
|-------------------|------------------|-------------------------|---------------------|
| W | \$ 60,000 | \$15,000 | \$167,000 |
| X | 10,000 | 3,000 | 83,000 |
| Y | 23,000 | (2,000) | 21,000 |
| Z | 9,000 | 1,000 | 19,000 |
| | <u>\$102,000</u> | <u>\$17,000</u> | <u>\$290,000</u> |

Instructions

Determine which of the operating segments are reportable based on the:

- a. Revenue test.
- b. Operating profit (loss) test.
- c. Identifiable assets test.

***E24.4 (LO 6) (Ratio Computation and Analysis; Liquidity)** As loan analyst for Utrillo Bank, you have been presented the following information.

| | Toulouse Co. | Lautrec Co. |
|---|--------------------|--------------------|
| <u>Assets</u> | | |
| Cash | \$ 120,000 | \$ 320,000 |
| Receivables | 220,000 | 302,000 |
| Inventories | 570,000 | 518,000 |
| Total current assets | 910,000 | 1,140,000 |
| Other assets | 500,000 | 612,000 |
| Total assets | <u>\$1,410,000</u> | <u>\$1,752,000</u> |
| <u>Liabilities and Stockholders' Equity</u> | | |
| Current liabilities | \$ 305,000 | \$ 350,000 |
| Long-term liabilities | 400,000 | 500,000 |
| Capital stock and retained earnings | 705,000 | 902,000 |
| Total liabilities and stockholders' equity | <u>\$1,410,000</u> | <u>\$1,752,000</u> |
| Annual sales | \$ 930,000 | \$1,500,000 |
| Rate of gross profit on sales | 30% | 40% |

Each of these companies has requested a loan of \$50,000 for 6 months with no collateral offered. Because your bank has reached its quota for loans of this type, only one of these requests is to be granted.

Instructions

Which of the two companies, as judged by the information given above, would you recommend as the better risk and why? Assume that the ending account balances are representative of the entire year.

***E24.5 (LO 6) (Analysis of Given Ratios)** Picasso Company is a wholesale distributor of packaging equipment and supplies. The company's sales have averaged about \$900,000 annually for the 3-year period 2018–2020. The firm's total assets at the end of 2020 amounted to \$850,000.

The president of Picasso Company has asked the controller to prepare a report that summarizes the financial aspects of the company's operations for the past 3 years. This report will be presented to the board of directors at their next meeting.

In addition to comparative financial statements, the controller has decided to present a number of relevant financial ratios which can assist in the identification and interpretation of trends. At the request of the controller, the accounting staff has calculated the following ratios for the 3-year period 2018–2020.

| | 2018 | 2019 | 2020 |
|--|-------|-------|-------|
| Current ratio | 1.80 | 1.89 | 1.96 |
| Acid-test (quick) ratio | 1.04 | 0.99 | 0.87 |
| Accounts receivable turnover | 8.75 | 7.71 | 6.42 |
| Inventory turnover | 4.91 | 4.32 | 3.42 |
| Debt to assets ratio | 51.0% | 46.0% | 41.0% |
| Long-term debt to assets ratio | 31.0% | 27.0% | 24.0% |
| Sales to fixed assets (fixed asset turnover) | 1.58 | 1.69 | 1.79 |
| Sales as a percent of 2018 sales | 1.00 | 1.03 | 1.07 |
| Gross margin percentage | 36.0% | 35.1% | 34.6% |
| Net income to sales | 6.9% | 7.0% | 7.2% |
| Return on assets | 7.7% | 7.7% | 7.8% |
| Return on common stockholders' equity | 13.6% | 13.1% | 12.7% |

In preparation of the report, the controller has decided first to examine the financial ratios independent of any other data to determine if the ratios themselves reveal any significant trends over the 3-year period.

Instructions

- The current ratio is increasing while the acid-test (quick) ratio is decreasing. Using the ratios provided, identify and explain the contributing factor(s) for this apparently divergent trend.
- In terms of the ratios provided, what conclusion(s) can be drawn regarding the company's use of financial leverage during the 2018–2020 period?
- Using the ratios provided, what conclusion(s) can be drawn regarding the company's net investment in plant and equipment?

***E24.6 (LO 6) (Ratio Analysis)** Edna Millay Inc. is a manufacturer of electronic components and accessories with total assets of \$20,000,000. Selected financial ratios for Millay and the industry averages for firms of similar size are presented below.

| | Edna Millay | | | 2020 |
|---|-------------|------|------|---------------------|
| | 2018 | 2019 | 2020 | Industry Average |
| Current ratio | 2.09 | 2.27 | 2.51 | 2.24 |
| Quick ratio | 1.15 | 1.12 | 1.19 | 1.22 |
| Inventory turnover | 2.40 | 2.18 | 2.02 | 3.50 |
| Net sales to stockholders' equity | 2.71 | 2.80 | 2.99 | 2.85 |
| Return on common stockholders' equity | 0.14 | 0.15 | 0.17 | 0.11 |
| Total liabilities to stockholders' equity | 1.41 | 1.37 | 1.44 | 0.95 |

Millay is being reviewed by several entities whose interests vary, and the company's financial ratios are a part of the data being considered. Each of the parties listed below must recommend an action based on its evaluation of Millay's financial position.

Archibald MacLeish Bank. The bank is processing Millay's application for a new 5-year term note. Archibald MacLeish has been Millay's banker for several years but must reevaluate the company's financial position for each major transaction.

Robert Lowell Company. Lowell is a new supplier to Millay and must decide on the appropriate credit terms to extend to the company.

Robert Penn Warren. A brokerage firm specializing in the stock of electronics firms that are sold over-the-counter, Robert Penn Warren must decide if it will include Millay in a new fund being established for sale to Robert Penn Warren's clients.

Working Capital Management Committee. This is a committee of Millay's management personnel chaired by the chief operating officer. The committee is charged with the responsibility of periodically reviewing the company's working capital position, comparing actual data against budgets, and recommending changes in strategy as needed.

Instructions

- Describe the analytical use of each of the six ratios presented above.
- For each of the four entities, identify two financial ratios, from the ratios presented above, that would be most valuable as a basis for its decision regarding Millay.
- Discuss what the financial ratios presented in the question reveal about Millay. Support your answer by citing specific ratio levels and trends as well as the interrelationships between these ratios.

(CMA adapted)

Problems

P24.1 (LO 2) (Subsequent Events) Your firm has been engaged to examine the financial statements of Almaden Corporation for the year 2020. The bookkeeper who maintains the financial records has prepared all the unaudited financial statements for the corporation since its organization on January 2, 2015. The client provides you with the following information.

| Almaden Corporation | | | |
|----------------------------|--------------------|-----------------------|--------------------|
| Balance Sheet | | | |
| December 31, 2020 | | | |
| Assets | | Liabilities | |
| Current assets | \$1,881,100 | Current liabilities | \$ 962,400 |
| Other assets | 5,171,400 | Long-term liabilities | 1,439,500 |
| | | Stockholders' equity | 4,650,600 |
| | <u>\$7,052,500</u> | | <u>\$7,052,500</u> |

An analysis of current assets discloses the following.

| | |
|--|--------------------|
| Cash (restricted in the amount of \$300,000 for plant expansion) | \$ 571,000 |
| Investments in land | 185,000 |
| Accounts receivable less allowance of \$30,000 | 480,000 |
| Inventories (LIFO flow assumption) | 645,100 |
| | <u>\$1,881,100</u> |

Other assets include:

| | |
|--|--------------------|
| Prepaid expenses | \$ 62,400 |
| Plant and equipment less accumulated depreciation of \$1,430,000 | 4,130,000 |
| Cash surrender value of life insurance policy | 84,000 |
| Unamortized bond discount | 34,500 |
| Notes receivable (short-term) | 162,300 |
| Goodwill | 252,000 |
| Land | 446,200 |
| | <u>\$5,171,400</u> |

Current liabilities include:

| | |
|--------------------------|------------|
| Accounts payable | \$ 510,000 |
| Notes payable (due 2023) | 157,400 |

| | |
|--|--------------------|
| Estimated income taxes payable | 145,000 |
| Premium on common stock | 150,000 |
| | <u>\$ 962,400</u> |
| Long-term liabilities include: | |
| Unearned revenue | \$ 489,500 |
| Dividends payable (cash) | 200,000 |
| 8% bonds payable (due May 1, 2025) | 750,000 |
| | <u>\$1,439,500</u> |
| Stockholders' equity includes: | |
| Retained earnings | \$2,810,600 |
| Common stock, par value \$10; authorized 200,000 shares, 184,000 shares issued | 1,840,000 |
| | <u>\$4,650,600</u> |

The supplementary information below is also provided.

- On May 1, 2020, the corporation issued at 95.4, \$750,000 of bonds to finance plant expansion. The long-term bond agreement provided for the annual payment of interest every May 1. The existing plant was pledged as security for the loan. Use the straight-line method for discount amortization.
- The bookkeeper made the following mistakes.
 - In 2018, the ending inventory was overstated by \$183,000. The ending inventories for 2019 and 2020 were correctly computed.
 - In 2020, accrued wages in the amount of \$225,000 were omitted from the balance sheet, and these expenses were not charged on the income statement.
 - In 2020, a gain of \$175,000 (net of tax) on the sale of certain plant assets was credited directly to retained earnings.
- A major competitor has introduced a line of products that will compete directly with Almaden's primary line, now being produced in a specially designed new plant. Because of manufacturing innovations, the competitor's line will be of comparable quality but priced 50% below Almaden's line. The competitor announced its new line on January 14, 2021. Almaden indicates that the company will meet the lower prices that are high enough to cover variable manufacturing and selling expenses, but permit recovery of only a portion of fixed costs.
- You learned on January 28, 2021, prior to completion of the audit, of heavy damage because of a recent fire to one of Almaden's two plants; the loss will not be reimbursed by insurance. The newspapers described the event in detail.

Instructions

Analyze the above information to prepare a corrected balance sheet for Almaden in accordance with proper accounting and reporting principles. Prepare a description of any notes that might need to be prepared. The books are closed and adjustments to income are to be made through retained earnings.

P24.2 (LO 2) (Segmented Reporting) Cineplex Corporation is a diversified company that operates in five different industries: A, B, C, D, and E. The following information relating to each segment is available for 2021.

| | A | B | C | D | E |
|-------------------------|-----------------|------------------|------------------|-----------------|-----------------|
| Sales revenue | \$40,000 | \$ 75,000 | \$580,000 | \$35,000 | \$55,000 |
| Cost of goods sold | 19,000 | 50,000 | 270,000 | 19,000 | 30,000 |
| Operating expenses | 10,000 | 40,000 | 235,000 | 12,000 | 18,000 |
| Total expenses | <u>29,000</u> | <u>90,000</u> | <u>505,000</u> | <u>31,000</u> | <u>48,000</u> |
| Operating profit (loss) | \$11,000 | \$(15,000) | \$ 75,000 | \$ 4,000 | \$ 7,000 |
| Identifiable assets | <u>\$35,000</u> | <u>\$ 80,000</u> | <u>\$500,000</u> | <u>\$65,000</u> | <u>\$50,000</u> |

Sales of segments B and C included intersegment sales of \$20,000 and \$100,000, respectively.

Instructions

- a. Determine which of the segments are reportable based on the:
 1. Revenue test.
 2. Operating profit (loss) test.
 3. Identifiable assets test.
- b. Prepare the necessary disclosures required by GAAP.

***P24.3 (LO 6,8) Excel Groupwork (Ratio Computations and Additional Analysis)** Bradburn Corporation was formed 5 years ago through a public subscription of common stock. Daniel Brown, who owns 15% of the common stock, was one of the organizers of Bradburn and is its current president. The company has been successful, but it currently is experiencing a shortage of funds. On June 10, 2021, Daniel Brown approached the Topeka National Bank, asking for a 24-month extension on two \$35,000 notes, which are due on June 30, 2021, and September 30, 2021. Another note of \$6,000 is due on March 31, 2022, but he expects no difficulty in paying this note on its due date. Brown explained that Bradburn's cash flow problems are due primarily to the company's desire to finance a \$300,000 plant expansion over the next 2 fiscal years through internally generated funds.

The commercial loan officer of Topeka National Bank requested the following financial reports for the last 2 fiscal years.

Bradburn Corporation
Balance Sheet
March 31

| Assets | 2021 | 2020 |
|---|--------------------|--------------------|
| Cash | \$ 18,200 | \$ 12,500 |
| Notes receivable | 148,000 | 132,000 |
| Accounts receivable (net) | 131,800 | 125,500 |
| Inventories (at cost) | 105,000 | 50,000 |
| Plant & equipment (net of depreciation) | 1,449,000 | 1,420,500 |
| Total assets | <u>\$1,852,000</u> | <u>\$1,740,500</u> |
| Liabilities and Stockholders' Equity | | |
| Accounts payable | \$ 79,000 | \$ 91,000 |
| Notes payable | 76,000 | 61,500 |
| Accrued liabilities | 9,000 | 6,000 |
| Common stock (130,000 shares, \$10 par) | 1,300,000 | 1,300,000 |
| Retained earnings ^a | 388,000 | 282,000 |
| Total liabilities and stockholders' equity | <u>\$1,852,000</u> | <u>\$1,740,500</u> |

^aCash dividends were paid at the rate of \$1 per share in fiscal year 2020 and \$2 per share in fiscal year 2021.

Bradburn Corporation
Income Statement
For the Fiscal Years Ended March 31

| | 2021 | 2020 |
|---------------------------------|-------------------|-------------------|
| Sales revenue | \$3,000,000 | \$2,700,000 |
| Cost of goods sold ^a | 1,530,000 | 1,425,000 |
| Gross margin | 1,470,000 | 1,275,000 |
| Operating expenses | 860,000 | 780,000 |
| Income before income taxes | 610,000 | 495,000 |
| Income taxes (40%) | 244,000 | 198,000 |
| Net income | <u>\$ 366,000</u> | <u>\$ 297,000</u> |

^aDepreciation charges on the plant and equipment of \$100,000 and \$102,500 for fiscal years ended March 31, 2020 and 2021, respectively, are included in cost of goods sold.

Instructions

- a. Compute the following items for Bradburn Corporation.
 1. Current ratio for fiscal years 2020 and 2021.
 2. Acid-test (quick) ratio for fiscal years 2020 and 2021.
 3. Inventory turnover for fiscal year 2021.
 4. Return on assets for fiscal years 2020 and 2021. (Assume total assets were \$1,688,500 at 3/31/19.)
 5. Percentage change in sales, cost of goods sold, gross margin, and net income after taxes from fiscal year 2020 to 2021.
 - b. Identify and explain what other financial reports and/or financial analyses might be helpful to the commercial loan officer of Topeka National Bank in evaluating Daniel Brown's request for a time extension on Bradburn's notes.
 - c. Assume that the percentage changes experienced in fiscal year 2021 as compared with fiscal year 2020 for sales, cost of goods sold, and operating expenses will be repeated in each of the next 2 years. Is Bradburn's desire to finance the plant expansion from internally generated funds realistic? Discuss.
 - d. Should Topeka National Bank grant the extension on Bradburn's notes considering Daniel Brown's statement about financing the plant expansion through internally generated funds? Discuss.
- *P24.4 (LO 9) Excel (Horizontal and Vertical Analysis)** Presented below is the comparative balance sheet for Gilmour Company.

Gilmour Company
Comparative Balance Sheet
As of December 31, 2021 and 2020

| | December 31 | |
|---|-------------|-------------|
| | 2021 | 2020 |
| <u>Assets</u> | | |
| Cash | \$ 180,000 | \$ 275,000 |
| Accounts receivable (net) | 220,000 | 155,000 |
| Short-term investments | 270,000 | 150,000 |
| Inventories | 1,060,000 | 980,000 |
| Prepaid expenses | 25,000 | 25,000 |
| Plant & equipment | 2,585,000 | 1,950,000 |
| Accumulated depreciation | (1,000,000) | (750,000) |
| | \$3,340,000 | \$2,785,000 |
| <u>Liabilities and Stockholders' Equity</u> | | |
| Accounts payable | \$ 50,000 | \$ 75,000 |
| Accrued expenses | 170,000 | 200,000 |
| Bonds payable | 450,000 | 190,000 |
| Common stock | 2,100,000 | 1,770,000 |
| Retained earnings | 570,000 | 550,000 |
| | \$3,340,000 | \$2,785,000 |

Instructions

(Round to two decimal places.)

- a. Prepare a comparative balance sheet of Gilmour Company showing the percent each item is of the total assets or total liabilities and stockholders' equity.
 - b. Prepare a comparative balance sheet of Gilmour Company showing the dollar change and the percent change for each item.
 - c. Of what value is the additional information provided in part (a)?
 - d. Of what value is the additional information provided in part (b)?
- *P24.5 (LO 6) Writing (Dividend Policy Analysis)** Matheny Inc. went public 3 years ago. The board of directors will be meeting shortly after the end of the year to decide on a dividend policy. In the past, growth has been financed primarily through the retention of earnings. A stock or a cash dividend has never been declared. Presented below is a brief financial summary of Matheny Inc. operations.

| | (\$000 omitted) | | | | |
|------------------------------------|-----------------|----------|----------|---------|---------|
| | 2021 | 2020 | 2019 | 2018 | 2017 |
| Sales revenue | \$20,000 | \$16,000 | \$14,000 | \$6,000 | \$4,000 |
| Net income | 2,400 | 1,400 | 800 | 700 | 250 |
| Average total assets | 22,000 | 19,000 | 11,500 | 4,200 | 3,000 |
| Current assets | 8,000 | 6,000 | 3,000 | 1,200 | 1,000 |
| Working capital | 3,600 | 3,200 | 1,200 | 500 | 400 |
| Common shares: | | | | | |
| Number of shares outstanding (000) | 2,000 | 2,000 | 2,000 | 20 | 20 |
| Average market price | \$9 | \$6 | \$4 | — | — |

Instructions

- Suggest factors to be considered by the board of directors in establishing a dividend policy.
- Compute the return on assets, profit margin on sales, earnings per share, price-earnings ratio, and current ratio for each of the 5 years for Matheny Inc.
- Comment on the appropriateness of declaring a cash dividend at this time, using the ratios computed in part (b) as a major factor in your analysis.

Concepts for Analysis

CA24.1 (LO 1, 2) (General Disclosures; Inventories; Property, Plant, and Equipment) Koch Corporation is in the process of preparing its annual financial statements for the fiscal year ended April 30, 2021. Because all of Koch's shares are traded intrastate, the company does not have to file any reports with the Securities and Exchange Commission. The company manufactures plastic, glass, and paper containers for sale to food and drink manufacturers and distributors.

Koch Corporation maintains separate control accounts for its raw materials, work in process, and finished goods inventories for each of the three types of containers. The inventories are valued at the lower-of-cost-or-market.

The company's property, plant, and equipment are classified in the following major categories: land, office buildings, furniture and fixtures, manufacturing facilities, manufacturing equipment, and leasehold improvements. All fixed assets are carried at cost. The depreciation methods employed depend on the type of asset (its classification) and when it was acquired.

Koch Corporation plans to present the inventory and fixed asset amounts in its April 30, 2021, balance sheet as shown below.

| | |
|--|-------------|
| Inventories | \$4,814,200 |
| Property, plant, and equipment (net of depreciation) | 6,310,000 |

Instructions

What information regarding inventories and property, plant, and equipment must be disclosed by Koch Corporation in the audited financial statements issued to stockholders, either in the body or the notes, for the 2020–2021 fiscal year?

(CMA adapted)

CA24.2 (LO 1, 2) (Disclosures Required in Various Situations) Ace Inc. produces electronic components for sale to manufacturers of radios, television sets, and digital sound systems. In connection with her examination of Ace's financial statements for the year ended December 31, 2021, Gloria Rodd, CPA, completed field work 2 weeks ago. Ms. Rodd now is evaluating the significance of the following items prior to preparing her auditor's report. Except as noted, none of these items have been disclosed in the financial statements or notes.

Item 1: A 10-year loan agreement, which the company entered into 3 years ago, provides that dividend payments may not exceed net income earned after taxes subsequent to the date of the agreement. The balance of retained earnings at the date of the loan agreement was \$420,000. From that date through December 31, 2021, net income after taxes has totaled \$570,000 and cash dividends have totaled \$320,000. On the basis of these data, the staff auditor assigned to this review concluded that there was no retained earnings restriction at December 31, 2021.

Item 2: Recently Ace interrupted its policy of paying cash dividends quarterly to its stockholders. Dividends were paid regularly through 2020, discontinued for all of 2021 to finance purchase of equipment for the company's new plant, and resumed in the first quarter of 2022. In the annual report, dividend policy is to be discussed in the president's letter to stockholders.

Item 3: A major electronics firm has introduced a line of products that will compete directly with Ace's primary line, now being produced in the specially designed new plant. Because of manufacturing innovations, the competitor's line will be of comparable quality but priced 50% below Ace's line. The competitor announced its new line during the week following completion of field work. Ms. Rodd read the announcement in the newspaper and discussed the situation by telephone with Ace executives. Ace will meet the lower prices that are high enough to cover variable manufacturing and selling expenses but will permit recovery of only a portion of fixed costs.

Item 4: The company's new manufacturing plant building, which cost \$2,400,000 and has an estimated life of 25 years, is leased from Wichita National Bank at an annual rental of \$600,000. The company is obligated to pay property taxes, insurance, and maintenance. At the conclusion of its 10-year noncancelable lease, the company has the option of purchasing the property for \$1. In Ace's income statement, the rental payment is reported on a separate line.

Instructions

For each of the above items, discuss any additional disclosures in the financial statements and notes that the auditor should recommend to her client. (The cumulative effect of the four items should not be considered.)

CA24.3 (LO 1, 2) (Disclosures, Conditional and Contingent Liabilities) Presented below are three independent situations.

Situation 1: A company offers a one-year warranty for the product that it manufactures. A history of warranty claims has been compiled, and the probable amounts of claims related to sales for a given period can be determined.

Situation 2: Subsequent to the date of a set of financial statements but prior to the issuance of the financial statements, a company enters into a contract that will probably result in a significant loss to the company. The amount of the loss can be reasonably estimated.

Situation 3: A company has adopted a policy of recording self-insurance for any possible losses resulting from injury to others by the company's vehicles. The premium for an insurance policy for the same risk from an independent insurance company would have an annual cost of \$4,000. During the period covered by the financial statements, there were no accidents involving the company's vehicles that resulted in injury to others.

Instructions

Discuss the accrual or type of disclosure necessary (if any) and the reason(s) why such disclosure is appropriate for each of the three independent sets of facts above.

(AICPA adapted)

CA24.4 (LO 2) Groupwork (Post-Balance-Sheet Events) At December 31, 2020, Coburn Corp. has assets of \$10,000,000, liabilities of \$6,000,000, common stock of \$2,000,000 (representing 2,000,000 shares of \$1 par common stock), and retained earnings of \$2,000,000. Net sales for the year 2020 were \$18,000,000, and net income was \$800,000. As auditors of this company, you are making a review of subsequent events on February 13, 2021, and you find the following.

1. On February 3, 2021, one of Coburn's customers declared bankruptcy. At December 31, 2020, this company owed Coburn \$300,000, of which \$60,000 was paid in January 2021.
2. On January 18, 2021, one of the three major plants of the client burned.
3. On January 23, 2021, a strike was called at one of Coburn's largest plants, which halted 30% of its production. As of today (February 13), the strike has not been settled.
4. A major electronics enterprise has introduced a line of products that would compete directly with Coburn's primary line, now being produced in a specially designed new plant. Because of manufacturing innovations, the competitor has been able to achieve quality similar to that of Coburn's products but at a price 50% lower. Coburn officials say they will meet the lower prices, which are high enough to cover variable manufacturing and selling costs but which permit recovery of only a portion of fixed costs.
5. Merchandise traded in the open market is recorded in the company's records at \$1.40 per unit on December 31, 2020. This price had prevailed for 2 weeks, after release of an official market report

that predicted vastly enlarged supplies; however, no purchases were made at \$1.40. The price throughout the preceding year had been about \$2, which was the level experienced over several years. On January 18, 2021, the price returned to \$2, after public disclosure of an error in the official calculations of the prior December, correction of which destroyed the expectations of excessive supplies. Inventory at December 31, 2020, was on a lower-of-LIFO-cost-or-market basis.

6. On February 1, 2021, the board of directors adopted a resolution accepting the offer of an investment banker to guarantee the marketing of \$1,200,000 of preferred stock.

Instructions

State in each case how the 2020 financial statements would be affected, if at all.

CA24.5 (LO 2) Writing (Segment Reporting) You are compiling the consolidated financial statements for Winsor Corporation International. The corporation's accountant, Anthony Reese, has provided you with the following segment information.

Note 7: Major Segments of Business

WCI conducts funeral service and cemetery operations in the United States and Canada. Substantially all revenues of WCI's major segments of business are from unaffiliated customers. Segment information for fiscal 2021, 2020, and 2019 follows.

| | (thousands) | | | | | | |
|-------------------------------|-------------|----------|-----------|-------------|------------|-----------|--------------|
| | Funeral | Floral | Cemetery | Real Estate | Dried Whey | Limousine | Consolidated |
| Revenues | | | | | | | |
| 2021 | \$302,000 | \$10,000 | \$ 73,000 | \$ 2,000 | \$7,000 | \$12,000 | \$406,000 |
| 2020 | 245,000 | 6,000 | 61,000 | 4,000 | 4,000 | 4,000 | 324,000 |
| 2019 | 208,000 | 3,000 | 42,000 | 3,000 | 1,000 | 3,000 | 260,000 |
| Operating Income | | | | | | | |
| 2021 | 74,000 | 1,500 | 18,000 | (36,000) | 500 | 2,000 | 60,000 |
| 2020 | 64,000 | 200 | 12,000 | (28,000) | 200 | 400 | 48,800 |
| 2019 | 54,000 | 150 | 6,000 | (21,000) | 100 | 350 | 39,600 |

| 2019 | 223,000 | 500 | 78,000 | 34,000 | 500 | 3,500 | 339,500 |

Instructions

Determine which of the above segments must be reported separately and which can be combined under the category "Other." Then, write a one-page memo to the company's accountant, Anthony Reese, explaining the following.

- What segments must be reported separately and what segments can be combined.
- What criteria you used to determine reportable segments.
- What major items for each must be disclosed.

CA24.6 (LO 2) (Segment Reporting—Theory) Presented below is an excerpt from the financial statements of **H. J. Heinz Company**.

Segment and Geographic Data

The company is engaged principally in one line of business—processed food products—which represents over 90% of consolidated sales. Information about the business of the company by geographic area is presented in the table below.

There were no material amounts of sales or transfers between geographic areas or between affiliates, and no material amounts of United States export sales.

| (in thousands of U.S. dollars) | Domestic | Foreign | | | | Total | Worldwide |
|-----------------------------------|-------------|-------------------|-----------|-------------------|-----------|-------------|-------------|
| | | United Kingdom | Canada | Western Europe | Other | | |
| Sales | \$2,381,054 | \$547,527 | \$216,726 | \$383,784 | \$209,354 | \$1,357,391 | \$3,738,445 |
| Operating income | 246,780 | 61,282 | 34,146 | 29,146 | 25,111 | 149,685 | 396,465 |
| Identifiable assets | 1,362,152 | 265,218 | 112,620 | 294,732 | 143,971 | 816,541 | 2,178,693 |
| Capital expenditures | 72,712 | 12,262 | 13,790 | 8,253 | 4,368 | 38,673 | 111,385 |
| Depreciation expense | 42,279 | 8,364 | 3,592 | 6,355 | 3,606 | 21,917 | 64,196 |

Instructions

- Why does H. J. Heinz not prepare segment information on its products or services?
- What are export sales, and when should they be disclosed?
- Why are sales by geographical area important to disclose?

CA24.7 (LO 2) Writing (Segment Reporting—Theory) The following article appeared in the *Wall Street Journal*.

WASHINGTON—The Securities and Exchange Commission staff issued guidelines for companies grappling with the problem of dividing up their business into industry segments for their annual reports.

An industry segment is defined by the Financial Accounting Standards Board as a part of an enterprise engaged in providing a product or service or a group of related products or services primarily to unaffiliated customers for a profit.

Although conceding that the process is a “subjective task” that “to a considerable extent, depends on the judgment of management,” the SEC staff said companies should consider . . . various factors . . . to determine whether products and services should be grouped together or reported as segments.

Instructions

- What does financial reporting for segments of a business enterprise involve?
- Identify the reasons for requiring financial data to be reported by segments.
- Identify the possible disadvantages of requiring financial data to be reported by segments.
- Identify the accounting difficulties inherent in segment reporting.

CA24.8 (LO 2) (Interim Reporting) Snider Corporation, a publicly traded company, is preparing the interim financial data which it will issue to its stockholders and the Securities and Exchange Commission (SEC) at the end of the first quarter of the 2020–2021 fiscal year. Snider’s financial accounting department has compiled the following summarized revenue and expense data for the first quarter of the year.

| | |
|---------------------------|--------------|
| Sales revenue | \$60,000,000 |
| Cost of goods sold | 36,000,000 |
| Variable selling expenses | 1,000,000 |
| Fixed selling expenses | 3,000,000 |

Included in the fixed selling expenses was the single lump-sum payment of \$2,000,000 for television advertisements for the entire year.

Instructions

- Snider Corporation must issue its quarterly financial statements in accordance with generally accepted accounting principles regarding interim financial reporting.
 - Explain whether Snider should report its operating results for the quarter as if the quarter were a separate reporting period in and of itself, or as if the quarter were an integral part of the annual reporting period.

2. State how the sales revenue, cost of goods sold, and fixed selling expenses would be reflected in Snider Corporation's quarterly report prepared for the first quarter of the 2020–2021 fiscal year. Briefly justify your presentation.
- b. What financial information, as a minimum, must Snider Corporation disclose to its stockholders in its quarterly reports?

(CMA adapted)

CA24.9 (LO 2) Groupwork (Treatment of Various Interim Reporting Situations) The following statement is an excerpt from the FASB pronouncement related to interim reporting.

Interim financial information is essential to provide investors and others with timely information as to the progress of the enterprise. The usefulness of such information rests on the relationship that it has to the annual results of operations. Accordingly, the Board has concluded that each interim period should be viewed primarily as an integral part of an annual period.

In general, the results for each interim period should be based on the accounting principles and practices used by an enterprise in the preparation of its latest annual financial statements unless a change in an accounting practice or policy has been adopted in the current year. The Board has concluded, however, that certain accounting principles and practices followed for annual reporting purposes may require modification at interim reporting dates so that the reported results for the interim period may better relate to the results of operations for the annual period.

Instructions

The following six independent cases present how accounting facts might be reported on an individual company's interim financial reports. For each of these cases, state whether the method proposed to be used for interim reporting would be acceptable under generally accepted accounting principles applicable to interim financial data. Support each answer with a brief explanation.

- a. J. D. Long Company takes a physical inventory at year-end for annual financial statement purposes. Inventory and cost of sales reported in the interim quarterly statements are based on estimated gross profit rates, because a physical inventory would result in a cessation of operations. Long Company does have reliable perpetual inventory records.
- b. Rockford Company is planning to report one-fourth of its pension expense each quarter.
- c. Republic Company wrote inventory down to reflect lower-of-cost-or-market in the first quarter. At year-end, the market exceeds the original acquisition cost of this inventory. Consequently, management plans to write the inventory back up to its original cost as a year-end adjustment.
- d. Gansner Company realized a large gain on the sale of investments at the beginning of the second quarter. The company wants to report one-third of the gain in each of the remaining quarters.
- e. Fredonia Company has estimated its annual audit fee. It plans to pro rate this expense equally over all four quarters.
- f. LaBrava Company was reasonably certain it would have an employee strike in the third quarter. As a result, it shipped heavily during the second quarter but plans to defer the recognition of the sales in excess of the normal sales volume. The deferred sales will be recognized as sales in the third quarter when the strike is in progress. LaBrava Company management thinks this is more representative of normal second- and third-quarter operations.

CA24.10 (LO 4) Writing (Financial Forecasts) An article in *Barron's* noted the following.

Okay. Last fall, someone with a long memory and an even longer arm reached into that bureau drawer and came out with a moldy cheese sandwich and the equally moldy notion of corporate forecasts. We tried to find out what happened to the cheese sandwich—but, rats!, even recourse to the Freedom of Information Act didn't help. However, the forecast proposal was dusted off, polished up and found quite serviceable. The SEC, indeed, lost no time in running it up the old flagpole—but no one was very eager to salute. Even after some of the more objectionable features—compulsory corrections and detailed explanations of why the estimates went awry—were peeled off the original proposal.

Seemingly, despite the Commission's smiles and sweet talk, those craven corporations were still afraid that an honest mistake would lead them down the primrose path to consent decrees and class action suits. To lay to rest such qualms, the Commission last week approved a "Safe Harbor" rule that, providing the forecasts were made on a reasonable basis and in good faith, protected corporations from litigation should the projections prove wide of the mark (as only about 99% are apt to do).

Instructions

- a. What are the arguments for preparing profit forecasts?
- b. What is the purpose of the "safe harbor" rule?
- c. Why are corporations concerned about presenting profit forecasts?

CA24.11 (LO 4) Ethics (Disclosure of Estimates) Nancy Tercek, the financial vice president, and Margaret Lilly, the controller, of Romine Manufacturing Company are reviewing the financial ratios of the company for the years 2020 and 2021. The financial vice president notes that the profit margin on sales ratio has increased from 6% to 12%, a hefty gain for the 2-year period. Tercek is in the process of issuing a media release that emphasizes the efficiency of Romine Manufacturing in controlling cost. Margaret Lilly knows that the difference in ratios is due primarily to an earlier company decision to reduce the estimates of warranty and bad debt expense for 2021. The controller, not sure of her supervisor's motives, hesitates to suggest to Tercek that the company's improvement is unrelated to efficiency in controlling cost. To complicate matters, the media release is scheduled in a few days.

Instructions

- What, if any, is the ethical dilemma in this situation?
- Should Lilly, the controller, remain silent? Give reasons.
- What stakeholders might be affected by Tercek's media release?
- Give your opinion on the following statement and cite reasons: "Because Tercek, the vice president, is most directly responsible for the media release, Lilly has no real responsibility in this matter."

CA24.12 (LO 2) Ethics (Reporting of Subsequent Events) In June 2020, the board of directors for McElroy Enterprises Inc. authorized the sale of \$10,000,000 of corporate bonds. Jennifer Grayson, treasurer for McElroy Enterprises Inc., is concerned about the date when the bonds are issued. The company really needs the cash, but she is worried that if the bonds are issued before the company's year-end (December 31, 2020) the additional liability will have an adverse effect on a number of important ratios. In July, she explains to company president William McElroy that if they delay issuing the bonds until after December 31 the bonds will not affect the ratios until December 31, 2021. They will have to report the issuance as a subsequent event which requires only footnote disclosure. Grayson expects that with expected improved financial performance in 2021, ratios should be better.

Instructions

- What are the ethical issues involved?
- Should McElroy agree to the delay?

***CA24.13 (LO 6) Groupwork (Effect of Transactions on Financial Statements and Ratios)**

The transactions listed below relate to Wainwright Inc. You are to assume that on the date on which each of the transactions occurred, the corporation's accounts showed only common stock (\$100 par) outstanding, a current ratio of 2.7:1, and a substantial net income for the year to date (before giving effect to the transaction concerned). On that date, the book value per share of stock was \$151.53.

Each numbered transaction is to be considered completely independent of the others, and its related answer should be based on the effect(s) of that transaction alone. Assume that all numbered transactions occurred during 2021 and that the amount involved in each case is sufficiently material to distort reported net income if improperly included in the determination of net income. Assume further that each transaction was recorded in accordance with generally accepted accounting principles and, where applicable, in conformity with the all-inclusive concept of the income statement.

For each of the numbered transactions, you are to decide whether it:

- Increased the corporation's 2021 net income.
- Decreased the corporation's 2021 net income.
- Increased the corporation's total retained earnings directly (i.e., not via net income).
- Decreased the corporation's total retained earnings directly.
- Increased the corporation's current ratio.
- Decreased the corporation's current ratio.
- Increased each stockholder's proportionate share of total stockholders' equity.
- Decreased each stockholder's proportionate share of total stockholders' equity.
- Increased each stockholder's equity per share of stock (book value).
- Decreased each stockholder's equity per share of stock (book value).
- Had none of the foregoing effects.

Instructions

List the numbers 1 through 9. Select as many letters as you deem appropriate to reflect the effect(s) of each transaction as of the date of the transaction by printing beside the transaction number the letter(s) that identifies that transaction's effect(s).

Transactions

- _____ 1. In January, the board directed the write-off of certain patent rights that had suddenly and unexpectedly become worthless.
- _____ 2. The corporation sold at a profit land and a building that had been idle for some time. Under the terms of the sale, the corporation received a portion of the sales price in cash immediately, the balance maturing at 6-month intervals.
- _____ 3. Treasury stock originally repurchased and carried at \$127 per share was sold for cash at \$153 per share.
- _____ 4. The corporation wrote off all of the unamortized discount applicable to bonds that it refinanced in 2021.
- _____ 5. The corporation called in all its outstanding shares of stock and exchanged them for new shares on a 2-for-1 basis, reducing the par value at the same time to \$50 per share.
- _____ 6. The corporation paid a cash dividend that had been recorded in the accounts at time of declaration.
- _____ 7. Litigation involving Wainwright Inc. as defendant was settled in the corporation's favor, with the plaintiff paying all court costs and legal fees. In 2018, the corporation had appropriately established a special contingency for this court action. (Indicate the effect of reversing the contingency only.)
- _____ 8. The corporation received a check for the proceeds of an insurance policy from the company with which it is insured against theft of trucks. No entries concerning the theft had been made previously, and the proceeds reduce but do not cover completely the loss.
- _____ 9. Treasury stock, which had been repurchased at and carried at \$127 per share, was issued as a stock dividend. In connection with this distribution, the board of directors of Wainwright Inc. had authorized a transfer from retained earnings to permanent capital of an amount equal to the aggregate market value (\$153 per share) of the shares issued. No entries relating to this dividend had been made previously.

(AICPA adapted)

Using Your Judgment**Financial Reporting Problem****The Procter & Gamble Company (P&G)**

As stated in the chapter, notes to the financial statements are the means of explaining the items presented in the main body of the statements. Common note disclosures relate to such items as accounting policies, segmented information, and interim reporting. The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

- a. What specific items does P&G discuss in its Note 1—Summary of Significant Accounting Policies? (List the headings only.)
- b. For what segments did P&G report segmented information? Which segment is the largest? Who is P&G's largest customer?
- c. What interim information was reported by P&G?

Comparative Analysis Case**The Coca-Cola Company and PepsiCo, Inc.**

The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- a. 1. What specific items does Coca-Cola discuss in its Note 1—Accounting Policies? (Prepare a list of the headings only.)

2. What specific items does PepsiCo discuss in its Note 2—Our Summary of Significant Accounting Policies? (Prepare a list of the headings only.)
- b. For what lines of business or segments do Coca-Cola and PepsiCo present segmented information?
- c. Note and comment on the similarities and differences between the auditors' reports submitted by the independent auditors of Coca-Cola and PepsiCo for the year 2017.

*Financial Statement Analysis Case

RNA Inc. manufactures a variety of consumer products. The company's founders have run the company for 30 years and are now interested in retiring. Consequently, they are seeking a purchaser who will continue its operations, and a group of investors, Morgan Inc., is looking into the acquisition of RNA. To evaluate its financial stability and operating efficiency, RNA was requested to provide the latest financial statements and selected financial ratios. Summary information provided by RNA is as follows.

RNA Inc.
Income Statement
For the Year Ended November 30, 2021
(in thousands)

| | |
|---------------------------------------|----------|
| Sales (net) | \$30,500 |
| Interest income | 500 |
| Total revenue | 31,000 |
| Costs and expenses | |
| Cost of goods sold | 17,600 |
| Selling and administrative expenses | 3,550 |
| Depreciation and amortization expense | 1,890 |
| Interest expense | 900 |
| Total costs and expenses | 23,940 |
| Income before taxes | 7,060 |
| Income taxes | 2,800 |
| Net income | \$ 4,260 |

RNA Inc.
Balance Sheet
As of November 30
(in thousands)

| | 2021 | 2020 |
|--|----------|----------|
| Cash | \$ 400 | \$ 500 |
| Short-term investments (at cost) | 300 | 200 |
| Accounts receivable (net) | 3,200 | 2,900 |
| Inventory | 6,000 | 5,400 |
| Total current assets | 9,900 | 9,000 |
| Property, plant, & equipment (net) | 7,100 | 7,000 |
| Total assets | \$17,000 | \$16,000 |
| Accounts payable | \$ 3,700 | \$ 3,400 |
| Income taxes payable | 900 | 800 |
| Accrued expenses | 1,700 | 1,400 |
| Total current liabilities | 6,300 | 5,600 |
| Long-term debt | 2,000 | 1,800 |
| Total liabilities | 8,300 | 7,400 |
| Common stock (\$1 par value) | 2,700 | 2,700 |
| Paid-in capital in excess of par | 1,000 | 1,000 |
| Retained earnings | 5,000 | 4,900 |
| Total stockholders' equity | 8,700 | 8,600 |
| Total liabilities and stockholders' equity | \$17,000 | \$16,000 |

| Selected Financial Ratios | | | |
|---------------------------|----------|-------|------------------|
| | RNA Inc. | | Current Industry |
| | 2020 | 2019 | Average |
| Current ratio | 1.61 | 1.62 | 1.63 |
| Acid-test ratio | .64 | .63 | .68 |
| Times interest earned | 8.55 | 8.50 | 8.45 |
| Profit margin on sales | 13.2% | 12.1% | 13.0% |
| Asset turnover | 1.84 | 1.83 | 1.84 |
| Inventory turnover | 3.17 | 3.21 | 3.18 |

Instructions

- Calculate a new set of ratios for the fiscal year 2021 for RNA based on the financial statements presented.
- Explain the analytical use of each of the six ratios presented, describing what the investors can learn about RNA's financial stability and operating efficiency.
- Identify two limitations of ratio analysis.

(CMA adapted)

Accounting, Analysis, and Principles

Savannah, Inc. is a company that manufactures and sells a single product. Unit sales for each of the four quarters of 2020 are projected as follows.

| Quarter | Units |
|--------------|---------|
| First | 80,000 |
| Second | 150,000 |
| Third | 550,000 |
| Fourth | 120,000 |
| Annual total | 900,000 |

Savannah incurs variable manufacturing costs of \$0.40 per unit and variable nonmanufacturing costs of \$0.35 per unit. Savannah will incur fixed manufacturing costs of \$720,000 and fixed nonmanufacturing costs of \$1,080,000. Savannah will sell its product for \$4.00 per unit.

Accounting

Determine the amount of net income Savannah will report in each of the four quarters of 2020, assuming actual sales are as projected and employing the integral approach to interim financial reporting. (Ignore income taxes.) Repeat the analysis under the discrete approach.

Analysis

Compute Savannah's profit margin on sales for each of the four quarters of 2020 under both the integral and discrete approaches. Discuss the effects of employing the integral and the discrete approaches on the degree to which Savannah's profit margin on sales varies from quarter to quarter.

Principles

Explain the conceptual rationale behind the integral approach to interim financial reporting.

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

CE24.1 Access the glossary (“Master Glossary”) to answer the following.

- What is the definition of “ordinary income” (loss)?
- What is an error in previously issued financial statements?
- What is the definition of “earnings per share”?
- What is a publicly traded company?

CE24.2 What are some examples of related parties?

CE24.3 What are the quantitative thresholds that would require a public company to report separately information about an operating segment?

CE24.4 If an SEC-registered company uses the gross profit method to determine cost of goods sold for interim periods, would it be

acceptable for the company to state that it’s not practicable to determine components of inventory at interim periods? Why or why not?

Codification Research Case

As part of the year-end audit, you are discussing the disclosure checklist with your client. The checklist identifies the items that must be disclosed in a set of GAAP financial statements. The client is surprised by the disclosure item related to accounting policies. Specifically, since the audit report will attest to the statements being prepared in accordance with GAAP, the client questions the accounting policy checklist item. The client has asked you to conduct some research to verify the accounting policy disclosures.

Instructions

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

- In general, what should disclosures of accounting policies encompass?
- List some examples of the most commonly required accounting policy disclosures.

Additional Professional Resources

Go to WileyPLUS for other career-readiness resources, such as career coaching, internship opportunities, and CPAexcel prep.

IFRS Insights

LEARNING OBJECTIVE 10

Compare the disclosure requirements under GAAP and IFRS.

IFRS and GAAP disclosure requirements are similar in many regards. The IFRS addressing various disclosure issues are *IAS 24* (“Related Party Disclosures”), disclosure and recognition of post-statement of financial position events in *IAS 10* (“Events after the Balance Sheet Date”), segment reporting IFRS provisions in *IFRS 8* (“Operating Segments”), and interim reporting requirements in *IAS 34* (“Interim Financial Reporting”).

Relevant Facts

Following are the key similarities and differences between GAAP and IFRS related to disclosures.

Similarities

- GAAP and IFRS have similar standards on post-statement of financial position (subsequent) events. That is, under both sets of standards, events that occurred after the statement of financial position date, and which provide additional evidence of conditions that existed at the statement of financial position date, are recognized in the financial statements.
- Like GAAP, IFRS requires that for transactions with related parties, companies disclose the amounts involved in a transaction; the amount, terms, and nature of the outstanding balances; and any doubtful amounts related to those outstanding balances for each major category of related parties.
- Following the issuance of *IFRS 8*, “Operating Segments,” the requirements under IFRS and GAAP are very similar. That is, both standards use the management approach to identify reportable segments, and similar segment disclosures are required.
- Neither GAAP nor IFRS require interim reports. Rather, the SEC and securities exchanges outside the United States establish the rules. In the United States, interim reports generally are provided on a quarterly basis; outside the United States, six-month interim reports are common.

Differences

- Due to the broader range of judgments allowed in more principles-based IFRS, note disclosures generally are more expansive under IFRS compared to GAAP.
- Subsequent (or post-statement of financial position) events under IFRS are evaluated through the date that financial instruments are “authorized for issue.” GAAP uses the date when financial statements are “issued.” Also, for share dividends and splits in the subsequent period, IFRS does not adjust but GAAP does.
- Under IFRS, there is no specific requirement to disclose the name of the related party, which is the case under GAAP.
- Under IFRS, interim reports are prepared on a discrete basis; GAAP generally follows the integral approach.

About the Numbers

Differential Disclosure

A trend toward **differential disclosure** is occurring. The IASB has developed IFRS for small- and medium-sized entities (SMEs). SMEs are entities that publish general-purpose financial statements for external users but do not issue shares or other securities in a public market. Many believe a simplified set of standards makes sense for these companies because they do not have the resources to implement full IFRS. Simplified IFRS for SMEs is a single standard of fewer than 230 pages. It is designed to meet the needs and capabilities of SMEs, which are estimated to account for over 95 percent of all companies around the world. Compared with full IFRS (and many national accounting standards), simplified IFRS for SMEs is less complex in a number of ways:

- Topics not relevant for SMEs are omitted. Examples are earnings per share, interim financial reporting, and segment reporting.
- Simplified IFRS for SMEs allows fewer accounting policy choices. Examples are no option to revalue property, equipment, or intangibles.
- Many principles for recognizing and measuring assets, liabilities, revenue, and expenses are simplified. For example, goodwill is amortized (as a result, there is no annual impairment test), and all borrowing and R&D costs are expensed.
- Significantly fewer disclosures are required (roughly 300 versus 3,000).
- To further reduce standard overload, revisions to the IFRS for SMEs will be limited to once every three years.

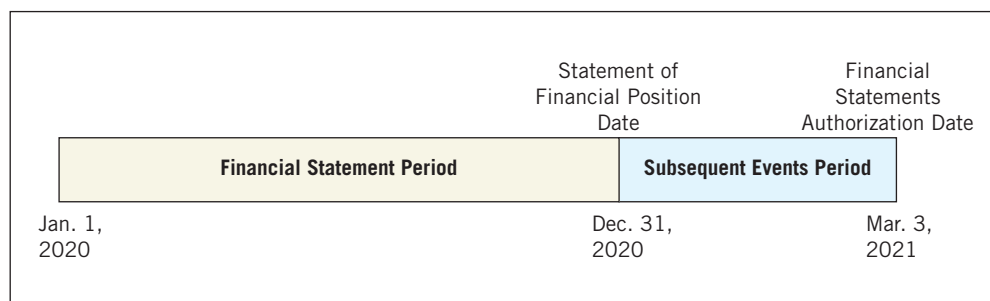

Thus, the option of using simplified IFRS helps SMEs meet the needs of their financial statement users while balancing the costs and benefits from a preparer perspective.³¹

Events after the Reporting Period (Subsequent Events)

Notes to the financial statements should explain any significant financial events that took place after the formal statement of financial position date, but before the statements are authorized for issuance (hereafter referred to as the authorization date). These events are referred to as **events after the reporting date**, or **subsequent events**. **Illustration IFRS24.1** shows a time diagram of the subsequent events period.

ILLUSTRATION IFRS24.1

Time Periods for Subsequent Events

³¹In the United States, there has been a preference for one set of GAAP except in unusual situations. With the advent of simplified IFRS for SMEs, this position is under review. Both the FASB and the AICPA are studying the big GAAP/little GAAP issue to ensure that any kind of differential reporting is conceptually sound and meets the needs of users. As discussed in the chapter, the FASB has formed a Private Company Council, whose primary objectives are to provide recommendations on FASB standard-setting for privately held enterprises.

A period of several weeks, and sometimes several months, may elapse after the end of the fiscal year but before the management or the board of directors authorizes issuance of the financial statements. Various activities involved in closing the books for the period and issuing the statements all take time: taking and pricing the inventory, reconciling subsidiary ledgers with controlling accounts, preparing necessary adjusting entries, ensuring that all transactions for the period have been entered, obtaining an audit of the financial statements by independent certified public accountants, and printing the annual report. During the period between the statement of financial position date and its authorization date, important transactions or other events may occur that materially affect the company's financial position or operating situation.

Many who read a statement of financial position believe the financial condition is constant, and they project it into the future. However, readers must be told if the company has experienced a significant change—e.g., sold one of its plants, acquired a subsidiary, suffered unusual losses, settled significant litigation, or experienced any other important event in the post-statement of financial position period. Without an explanation in a note, the reader might be misled and draw inappropriate conclusions.

Two types of events or transactions occurring after the statement of financial position date may have a material effect on the financial statements or may need disclosure so that readers interpret these statements accurately:

1. Events that provide additional evidence about conditions **that existed** at the statement of financial position date, including the estimates inherent in the process of preparing financial statements. These events are referred to as **adjusted subsequent events** and require adjustments to the financial statements. All information available prior to the authorization date of the financial statements helps investors and creditors evaluate estimates previously made. To ignore these subsequent events is to pass up an opportunity to improve the accuracy of the financial statements. This first type of event encompasses information that an accountant would have recorded in the accounts had the information been known at the statement of financial position date.

For example, if a loss on an account receivable results from a customer's bankruptcy subsequent to the statement of financial position date, the company adjusts the financial statements before their issuance. The bankruptcy stems from the customer's poor financial health existing at the statement of financial position date.

The same criterion applies to settlements of litigation. The company must adjust the financial statements if the events that gave rise to the litigation, such as personal injury or patent infringement, took place prior to the statement of financial position date.

2. Events that provide evidence about conditions that **did not exist** at the statement of financial position date but arise subsequent to that date. These events are referred to as **non-adjusted subsequent events** and do not require adjustment of the financial statements. To illustrate, a loss resulting from a customer's fire or flood *after* the statement of financial position date does not reflect conditions existing at that date.

Thus, adjustment of the financial statements is not necessary. A company should not recognize subsequent events that provide evidence about conditions that did not exist at the date of the statement of financial position but that arose after the statement of financial position date.

The following are examples of non-adjusted subsequent events:

- A major business combination after the reporting period or disposing of a major subsidiary.
- Announcing a plan to discontinue an operation or commencing the implementation of a major restructuring.
- Major purchases of assets, other disposals of assets, or expropriation of major assets by government.
- The destruction of a major production plant or inventories by a fire or natural disaster after the reporting period.
- Major ordinary share transactions and potential ordinary share transactions after the reporting period.³²
- Abnormally large changes after the reporting period in asset prices, foreign exchange rates, or taxes.
- Entering into significant commitments or contingent liabilities, for example, by issuing significant guarantees after the statement date.

³²The effects from natural disasters, like the recent eruption of the Icelandic volcano, which occurred after the year-end for companies with March fiscal years, require disclosure in order to keep the statements from being misleading. Some companies may have to consider whether these disasters affect their ability to continue as going concerns.

Some non-adjusted subsequent events may have to be disclosed to keep the financial statements from being misleading. For such events, a company discloses the nature of the event and an estimate of its financial effect. **Illustration IFRS24.2** presents an example of subsequent events disclosure, excerpted from the annual report of **Tieto Corporation**.

ILLUSTRATION IFRS24.2
Disclosure of Subsequent Events

|  | Tieto Corporation |
|--|--------------------------|
| Note 32. Events After the Balance Sheet Date | |
| <p>In February, Tieto agreed to sell the majority of its operations in Germany and Netherlands to the German Industrial Group Aurelius. Closing is expected to take place during the second quarter of 2013. Net sales of the divested business amounted to over EUR 110 million in 2012. German businesses were loss-making in 2012 and the divestment will improve Tieto's operating margin of underlying business by some 0.5 percentage points based on 2012 performance. Tieto booked about EUR 30 million in impairment in the fourth-quarter 2012. The divested business operations, including around 900 employees in total, will be transferred to the new owner at the time of closing. The divestment excludes Tieto's global businesses and customers, i.e. the forest industry business in Germany, the energy industry business in Netherlands, Product Engineering resources for global customers and selective other global roles.</p> <p>Between 7 December and 31 December 2012, a total of 111,846 Tieto Corporation new shares have been subscribed for with the company's stock options 2006C, and a total of 3,500 shares with stock options 2009A. As a result of the subscriptions, the number of Tieto shares increased to 72,492,559 and the share capital to EUR 76,064,020.00. The shares subscribed for under the stock options were registered in the Trade Register on 18 January 2013.</p> | |

Many subsequent events or developments do not require adjustment of or disclosure in the financial statements. Typically, these are non-accounting events or conditions that management normally communicates by other means. These events include legislation, product changes, management changes, strikes, unionization, marketing agreements, and loss of important customers.

Interim Reports

Another source of information for the investor is interim reports. As noted earlier, **interim reports** cover periods of less than one year. The securities exchanges, market regulators, and the accounting profession have an active interest in the presentation of interim information.

Because of the short-term nature of the information in these reports, there is considerable controversy as to the general approach companies should employ. One group, which favors the **discrete approach**, believes that companies should treat each interim period as a separate accounting period. Using that treatment, companies would follow the principles for deferrals and accruals used for annual reports. In this view, companies should report accounting transactions as they occur, and expense recognition should not change with the period of time covered.

Another group, which favors the **integral approach**, believes that the interim report is an integral part of the annual report and that deferrals and accruals should take into consideration what will happen for the entire year. In this approach, companies should assign estimated expenses to parts of a year on the basis of sales volume or some other activity base. In general, IFRS requires companies to follow the discrete approach.

Interim Reporting Requirements Under IFRS, companies should use the same accounting policies for interim reports and for annual reports. They should recognize revenues in interim periods on the same basis as they do for annual periods. For example, if Cedars Corp. uses the percentage-of-completion method as the basis for recognizing revenue on an annual basis, it should use the percentage-of-completion method for interim reports as well. Also, Cedars should treat costs directly associated with revenues (product costs, such as materials, labor and related fringe benefits, and manufacturing overhead) in the same manner for interim reports as for annual reports.

Companies should use the same inventory pricing methods (FIFO, average-cost, etc.) for interim reports and for annual reports. However, companies may use the gross profit method for interim inventory pricing. But, they must disclose the method and adjustments to reconcile with annual inventory.

Discrete Approach Following the discrete approach, companies record in interim reports revenues and expenses according to the revenue and expense recognition principles. This includes costs and expenses other than product costs (often referred to as period costs). No accruals or deferrals in anticipation of future events during the year should be reported. For example, the cost of a planned major periodic maintenance or overhaul for a company like **Airbus** or other seasonal expenditure

that is expected to occur late in the year is not anticipated for interim reporting purposes. The mere intention or necessity to incur expenditure related to the future is not sufficient to give rise to an obligation.

Or, a company like **Carrefour** may budget certain costs expected to be incurred irregularly during the financial year, such as advertising and employee training costs. Those costs generally are discretionary even though they are planned and tend to recur from year to year. However, recognizing an obligation at the end of an interim financial reporting period for such costs that have not yet been incurred generally is not consistent with the definition of a liability.

While year-to-date measurements may involve changes in estimates of amounts reported in prior interim periods of the current financial year, the principles for recognizing assets, liabilities, income, and expenses for interim periods are the same as in annual financial statements. For example, **Wm Morrison Supermarkets plc** records losses from inventory write-downs, restructurings, or impairments in an interim period similar to how it would treat these items in the annual financial statements (when incurred). However, if an estimate from a prior interim period changes in a subsequent interim period of that year, the original estimate is adjusted in the subsequent interim period.

Interim Disclosures IFRS does not require a complete set of financial statements at the interim reporting date. Rather, companies may comply with the requirements by providing condensed financial statements and selected explanatory notes. Because users of interim financial reports also have access to the most recent annual financial report, companies only need provide explanation of significant events and transactions since the end of the last annual reporting period. Companies should report the following interim data at a minimum.

1. Statement that the same accounting policies and methods of computation are followed in the interim financial statements as compared with the most recent annual financial statements or, if those policies or methods have been changed, a description of the nature and effect of the change.
2. Explanatory comments about the seasonality or cyclicity of interim operations.
3. The nature and amount of items affecting assets, liabilities, equity, net income, or cash flows that are unusual because of their nature, size, or incidence.
4. The nature and amount of changes in accounting policies and estimates of amounts previously reported.
5. Issuances, repurchases, and repayments of debt and equity securities.
6. Dividends paid (aggregate or per share) separately for ordinary shares and other shares.
7. Segment information, as required by *IFRS 8*, “Operating Segments.”
8. Changes in contingent liabilities or contingent assets since the end of the last annual reporting period.
9. Effect of changes in the composition of the company during the interim period, such as business combinations, obtaining or losing control of subsidiaries and long-term investments, restructurings, and discontinued operations.
10. Other material events subsequent to the end of the interim period that have not been reflected in the financial statements for the interim period.

If a complete set of financial statements is provided in the interim report, companies comply with the provisions of *IAS 1*, “Presentation of Financial Statements.”

On the Horizon

Hans Hoogervorst, chairperson of the IASB, recently noted: “High quality financial information is the lifeblood of market-based economies. If the blood is of poor quality, then the body shuts down and the patient dies. It is the same with financial reporting. If investors cannot trust the numbers, then financial markets stop working. For market-based economies, that is really bad news. It is an essential public good for market-based economies. . . . And in the past 10 years, most of the world’s economies—developed and emerging—have embraced IFRSs.” While the United States has yet to adopt IFRS, there is no question that IFRS and GAAP are converging quickly. We have provided expanded discussion in the *Global Views* and *IFRS Insights* to help you understand the issues surrounding convergence as they relate to intermediate accounting. After reading these discussions, you should realize that IFRS and GAAP are very similar in many areas, with differences in those areas revolving around some minor technical points. In other situations, the differences are major; for example, IFRS does not permit LIFO inventory accounting. Our hope is that the FASB and IASB can continue to narrow differences in accounting standards for use by companies around the world.

What Do the Numbers Mean? Disclosure Overload

As we discussed in Chapter 1 and throughout the text, IFRS is gaining popularity around the world. The U.S. Securities and Exchange Commission is still studying whether and how to incorporate IFRS in the accounting rules used by publicly traded companies in the United States. There is some debate on U.S. readiness to make the switch. For example, there are several areas in which the FASB and the IASB must iron out a number of technical accounting issues before they reach a substantially converged set of accounting standards. Here is a list of important areas yet to be converged:

- 1. Error correction.** According to *IAS 8*, it's not always necessary to retrospectively restate financial results when a company corrects errors, especially if the adjustment is impractical or too costly. GAAP, on the other hand, requires restatements in many error-correction cases.
- 2. Death of LIFO.** Last-in, first-out (LIFO) inventory accounting is prohibited under *IAS 2*, so any U.S. company using the method will have to abandon it (and the tax benefits) and move to another methodology. Although LIFO is permitted under GAAP, the repeal of LIFO for tax purposes is an ongoing debate.
- 3. Reversal of impairments.** *IAS 36* permits companies to reverse impairment losses up to the amount of the original impairment when the reason for the charge decreases or no longer exists. However, GAAP bans reversal.
- 4. PP&E revaluation.** *IAS 16* allows for the revaluation of property, plant, and equipment, but the entire asset class must be revalued. That means a company can choose to use the revaluation model if the asset class's fair value can be measured reliably. But, it must choose to use one model or the other; both cannot be used at the same time. GAAP does not allow revaluation.
- 5. Component depreciation.** Also under *IAS 16*, companies must recognize and depreciate equipment components separately if the components can be physically separated from the asset and have different useful life spans. In practical terms,

that means controllers will have to rely on the operations side of the business to help assess equipment components. GAAP allows component depreciation, but it is not required.

- 6. Development costs.** Based on *IAS 38*, companies are permitted to capitalize development costs as long as they meet six criteria. However, research costs are still expensed. GAAP requires that all R&D costs be charged to expense when incurred.
- 7. Sustainability reporting.** Such reporting on environmental, social, and corporate governance (ESG) issues is not required by GAAP or IFRS. However, a growing number of companies (especially those who use IFRS) are voluntarily disclosing supplementary Information on ESG. While much of this information is nonfinancial, the effects of sustainability efforts do have financial consequences—about which investors want to know. As discussed in Chapter 12, ESG reporting standards are coming online and if companies continue to get on the sustainability reporting bandwagon, such reporting will add to the heft of the annual reporting package.

Some are already debating what will happen if and when U.S. companies adopt these new standards. It is almost certain that expanded disclosure will be needed to help users navigate accounting reports upon adoption of IFRS. As one accounting analyst remarked, “Get ready for an avalanche of footnotes.” Since using IFRS requires more judgment than using GAAP, two to three times as many footnotes will be needed to explain the rationales for accounting approaches. So while principles-based standards should promote more comparability, they require investors to dig into the disclosures in the footnotes.

Harrell, “How Accounting Can Help Build a Sustainable Economy,” *Harvard Business Review* (December 14, 2015); and M. Cohn, “Companies Struggle to Go Beyond Boilerplate in Sustainability Disclosures,” *Accounting Today* (June 15, 2017).

IFRS Self-Test Questions

- Which of the following is **false**?
 - In general, IFRS note disclosures are more expansive compared to GAAP.
 - GAAP and IFRS have similar standards on subsequent events.
 - Both IFRS and GAAP require interim reports although the reporting frequency varies.
 - Segment reporting requirements are very similar under IFRS and GAAP.
- Differential reporting for small- and medium-sized entities:
 - is required for all companies less than a certain size.
 - omits accounting topics not relevant for SMEs, such as earnings per share, and interim and segment reporting.
 - has different rules for topics such as earnings per share, and interim and segment reporting.
 - requires significantly more disclosures, since more items are not recognized in the financial statements.
- Subsequent events are reviewed through which date under IFRS?
 - Statement of financial position date.
 - Sixty days after the year-end date.
 - Date of independent auditor's opinion.
 - Authorization date of the financial statements.
- Under IFRS, share dividends declared after the statement of financial position date but before the end of the subsequent events period are:
 - accounted for similar to errors as a prior period adjustment.
 - adjusted subsequent events, because they are paid from prior year earnings.
 - not adjusted in the current year's financial statements.
 - recognized on a prospective basis from the date of declaration.
- Interim reporting under IFRS:
 - is prepared using the discrete approach.
 - is prepared using a combination of the discrete and integral approach.
 - requires a complete set of financial statements for each interim period.
 - permits companies to omit disclosure of material events subsequent to the interim reporting date.

IFRS Concepts and Application

IFRS24.1 Where can authoritative IFRS be found related to the various disclosure issues discussed in the chapter?

IFRS24.2 What are the major types of subsequent events? Indicate how each of the following “subsequent events” would be reported.

- a. Collection of a note written off in a prior period.
- b. Issuance of a large preference share offering.
- c. Acquisition of a company in a different industry.
- d. Destruction of a major plant in a flood.
- e. Death of the company’s chief executive officer (CEO).
- f. Additional wage costs associated with settlement of a four-week strike.
- g. Settlement of an income tax case at considerably more tax than anticipated at year-end.
- h. Change in the product mix from consumer goods to industrial goods.

IFRS24.3 Morlan Corporation is preparing its December 31, 2020, financial statements. Two events that occurred between December 31, 2020, and March 10, 2021, when the statements were authorized for issue, are described below.

1. A liability, estimated at \$160,000 at December 31, 2020, was settled on February 26, 2021, at \$170,000.
2. A flood loss of \$80,000 occurred on March 1, 2021.

Instructions

What effect do these subsequent events have on 2020 net income?

IFRS24.4 Keystone Corporation’s financial statements for the year ended December 31, 2020, were authorized for issue on March 10, 2021. The following events took place early in 2021.

- a. On January 10, 10,000 ordinary shares of \$5 par value were issued at \$66 per share.
- b. On March 1, Keystone determined after negotiations with the taxing authorities that income taxes payable for 2020 should be \$1,320,000. At December 31, 2020, income taxes payable were recorded at \$1,100,000.

Instructions

Discuss how the preceding subsequent events should be reflected in the 2020 financial statements.

IFRS24.5 For each of the following subsequent events, indicate whether a company should (a) adjust the financial statements, (b) disclose in notes to the financial statements, or (c) neither adjust nor disclose.

- _____ 1. Settlement of a tax case at a cost considerably in excess of the amount expected at year-end.
- _____ 2. Introduction of a new product line.
- _____ 3. Loss of assembly plant due to fire.
- _____ 4. Sale of a significant portion of the company’s assets.
- _____ 5. Retirement of the company president.
- _____ 6. Issuance of a significant number of ordinary shares.
- _____ 7. Loss of a significant customer.
- _____ 8. Prolonged employee strike.
- _____ 9. Material loss on a year-end receivable because of a customer’s bankruptcy.
- _____ 10. Hiring of a new president.
- _____ 11. Settlement of prior year’s litigation against the company (no loss was accrued).
- _____ 12. Merger with another company of comparable size.

IFRS24.6 What are interim reports? Why is a complete set of financial statements often not provided with interim data? What are the accounting problems related to the presentation of interim data?

IFRS24.7 Dierdorf Inc., a closely held corporation, has decided to go public. The controller, Ed Floyd, is concerned with presenting interim data when an inventory write-down is recorded. What problems are encountered with inventories when quarterly data are presented?

IFRS24.8 Bill Novak is working on an audit of an IFRS client. In his review of the client’s interim reports, he notes that the reports are prepared on a discrete basis. That is, each interim report is viewed as a distinct period. Is this acceptable under IFRS? If so, explain how that treatment could affect comparisons to a GAAP company.

IFRS24.9 Snider Corporation, a publicly traded company, is preparing the interim financial data which it will issue to its shareholders at the end of the first quarter of the 2020–2021 fiscal year. Snider’s financial accounting department has compiled the following summarized revenue and expense data for the first quarter of the year.

| | |
|---------------------------|--------------|
| Sales revenue | \$60,000,000 |
| Cost of goods sold | 36,000,000 |
| Variable selling expenses | 1,000,000 |
| Fixed selling expenses | 3,000,000 |

Included in the fixed selling expenses was the single lump-sum payment of \$2,000,000 for television advertisements for the entire year.

Instructions

- a. Snider Corporation must issue its quarterly financial statements in accordance with IFRS regarding interim financial reporting.
 1. Explain whether Snider should report its operating results for the quarter as if the quarter were a separate reporting period in and of itself, or as if the quarter were an integral part of the annual reporting period.
 2. State how the sales revenue, cost of goods sold, and fixed selling expenses would be reflected in Snider Corporation’s quarterly report prepared for the first quarter of the 2020–2021 fiscal year. Briefly justify your presentation.
- b. What financial information, as a minimum, must Snider Corporation disclose to its shareholders in its quarterly reports?

Professional Research

IFRS24.10 As part of the year-end audit, you are discussing the disclosure checklist with your client. The checklist identifies the items that must be disclosed in a set of IFRS financial statements. The client is surprised by the disclosure item related to accounting policies. Specifically, since the audit report will attest to the statements being prepared in accordance with IFRS, the client questions the accounting policy checklist item. The client has asked you to conduct some research to verify the accounting policy disclosures.

Instructions

Access the IFRS authoritative literature at the IASB website. (Click on the IFRS tab and then register for free eIFRS access if necessary.) When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- a. In general, what should disclosures of accounting policies encompass?
- b. List some examples of the most commonly required disclosures.

International Financial Reporting Problem

Marks and Spencer plc (M&S)

IFRS24.11 The financial statements of **M&S** are presented in Appendix E. The company’s complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S’s financial statements and the accompanying notes to answer the following questions.

- a. What specific items does M&S discuss in its Note 1—Summary of Significant Accounting Policies? (List the headings only.)
- b. For what segments did M&S report segmented information? Which segment is the largest? Who is M&S’s largest customer?
- c. What interim information was reported by M&S?

Answers to IFRS Self-Test Questions

1. c 2. b 3. d 4. c 5. a

Private Company Accounting

The FASB has traditionally taken the position that there should be one set of GAAP. However, due to growing concern about differential costs and benefits of a “one size fits all” reporting package, the FASB has considered providing alternative accounting treatments for private companies in areas that include (1) recognition and measurement, (2) presentation and disclosure, and (3) transition methods for financial accounting standards and effective dates. Since 2012, the FASB has worked with the Private Company Council (PCC) to improve the process of setting accounting standards for private companies.

The Private Company Council (PCC)

Background on the PCC

The PCC is comprised of 9–12 members with balanced representation from private company auditing, preparer, and user communities. The PCC has two principal responsibilities:

1. The PCC determines, using the Private Company Decision-Making Framework (PCC Framework), whether alternatives to existing GAAP are necessary to address the needs of users of private company financial statements.
2. The PCC serves as the primary advisory body to the FASB on the appropriate treatment for private companies for items under active consideration on the FASB’s technical agenda.¹

Following a FASB endorsement process, alternatives for private companies developed by the PCC are incorporated into GAAP.

Private Company Decision-Making Framework

One of the PCC’s first responsibilities was to work with the FASB to develop mutually agreed-on criteria for private company alternatives. The result of that joint effort was the *Private Company Decision-Making Framework: A Guide for Evaluating Financial Accounting and Reporting for Private Companies* (the PCC Framework), issued in December 2013. This guide assists the Board and the PCC in determining whether and in what circumstances to provide alternative recognition, measurement, disclosure, display, effective date, and transition guidance for private companies reporting under GAAP.

In making these assessments, the Board and the PCC first should determine whether the alternative recognition or measurement guidance being evaluated provides **relevant information** to users of private company financial statements at a **reasonable cost**. That analysis

¹The Financial Accounting Foundation (FAF) recently completed a three-year review of the PCC. In response to stakeholder input, the FAF trustees made targeted improvements to increase the PCC’s effectiveness without significantly changing the PCC’s roles and responsibilities. The changes to the PCC operating procedures will increase the PCC’s focus on providing the FASB with private company perspectives on the FASB’s active agenda projects. As a result, the PCC will operate in a fashion similar to FASB’s other advisory groups [Investors Technical Advisory Committee (ITAC), the Not-for-Profit Advisor Committee (NAC), and the Valuation Resource Group (VRG)], which share their views and expertise with the Board on matters related to projects on the Board’s agenda, from the perspectives of various constituencies.

should focus on (a) the relevance of the information in meeting the objective of financial reporting for typical users of private company financial statements, (b) the characteristics that differentiate users of private company financial statements from users of public company financial statements, and (c) the cost and complexity of applying the guidance.

The guide helps the Board and the PCC identify differential information needs of users of public company financial statements and users of private company financial statements, and to identify opportunities to reduce the complexity and costs of preparing financial statements in accordance with GAAP.

PCC Accomplishments

Since its first meeting in December 2012, the PCC has addressed a number of financial accounting and reporting issues that are important to private company stakeholders as well as the wider financial reporting community. In addition to developing the PCC Framework, the FASB also issued an Accounting Standards Update on the definition of a public business entity. The FASB and the PCC use that definition to identify the types of companies that are excluded from the scope of the PCC Framework. In general, a company is considered a public business entity if it is required to file or furnish financial statements to the SEC or to file or furnish financial statements with a regulatory agency (domestic or foreign) other than the SEC in preparation for the sale of or for purposes of issuing securities.

The PCC also has become a springboard for efforts to reduce complexity in GAAP for all types of organizations, not just private companies. The FASB has adopted a practice of considering whether any GAAP alternative proposed by the PCC may make sense for public as well as private companies—along with not-for-profit organizations. For example, the FASB issued an Accounting Standards Update to address financial reporting complexity for both public and private development-stage companies.

Two issues addressed by the PCC relate to the accounting for intangible assets and the amortization of goodwill.

Private Company Alternatives for Intangible Assets and Goodwill

Accounting for Identifiable Intangible Assets

In December 2014, the FASB issued an Accounting Standards Update, developed with the PCC, that provides an alternative to exempt private companies from separately recognizing and measuring non-competition agreements and customer-related intangible assets (such as customer relationships) that are not capable of being sold or licensed independently in a business combination.²

Additional Background

As discussed in Chapter 12, in a business combination the acquirer separately recognizes all intangible assets that are **identifiable**, at their acquisition-date fair values. An intangible asset is identifiable if it meets either of the following criteria:

1. It arises from contractual or other legal rights, regardless of whether those rights are transferable or separable from the entity or from other rights and obligations.

²Accounting Standards Update No. 2014-18, *Business Combinations (Topic 805): Accounting for Identifiable Intangible Assets in a Business Combination* (a consensus of the Private Company Council).

- It is separable, that is, capable of being separated from the company and sold, transferred, licensed, rented, or exchanged, either individually or together with a related contract, identifiable asset, or liability, regardless of whether the company intends to do so.

For example, in the Tractorling example presented in Chapter 12, Multi-Diversified included patents (which meet the identifiable definition) in its calculation of the net identifiable assets.

In its reexamination of this accounting for private companies, the PCC found that separate information on certain customer-related intangible assets is not decision-useful because the assets may not be transferable and estimates of their fair values are highly subjective. As a result, the PCC recommended, and the FASB endorsed, an alternative that, if elected, indicates that private company acquirers shall not recognize separately from goodwill the following intangible assets:

- Customer-related intangible assets *unless* they are capable of being sold or licensed independently from other assets of a business.
- Non-competition agreements.

Examples of customer-related intangible assets include (1) mortgage servicing rights, (2) commodity supply contracts, (3) core deposits, and (4) customer information (for example, names and contact information).

Alternative Accounting Example

To illustrate in the context of the Tractorling example in Chapter 12, recall that goodwill is recorded only when an entire business is purchased. To record goodwill, a company compares the fair value of the net tangible and **identifiable intangible assets** with the purchase price of the acquired business. The difference is considered goodwill. Goodwill is the residual—the excess of cost over fair value of the identifiable net assets acquired.

In its acquisition of Tractorling, Multi-Diversified determined the fair value of net assets to be \$350,000, but it was willing to pay \$400,000 due to Tractorling’s established reputation, good credit rating, top management team, well-trained employees, and so on. These factors make the value of the business greater than \$350,000. Multi-Diversified places a premium on the future earning power of these attributes as well as on the basic asset structure of the company today.

Multi-Diversified labels the difference between the purchase price of \$400,000 and the fair value of net assets of \$350,000 as goodwill. Goodwill is viewed as one or a group of unidentifiable values (intangible assets), the cost of which “is measured by the difference between the cost of the group of assets or enterprise acquired and the sum of the assigned costs of individual tangible and identifiable intangible assets acquired less liabilities assumed.” This procedure assumes goodwill covers all the values that cannot be specifically identified with any identifiable tangible or intangible asset. **Illustration A.1** shows this approach.

| | | |
|---|--|-----------|
| Assigned to purchase price of \$400,000 | → Cash | \$ 25,000 |
| | → Accounts receivable | 35,000 |
| | → Inventory | 122,000 |
| | → Property, plant, and equipment, net | 205,000 |
| | → Patents | 18,000 |
| | → Liabilities | (55,000) |
| | → Fair value of net identifiable assets | 350,000 |
| | → Purchase price | 400,000 |
| | → Value assigned to goodwill | \$ 50,000 |

ILLUSTRATION A.1

Determination of Goodwill— Master Valuation Approach

Multi-Diversified records this transaction as follows.

| | | |
|--------------------------------|---------|---------|
| Cash | 25,000 | |
| Accounts Receivable | 35,000 | |
| Inventory | 122,000 | |
| Property, Plant, and Equipment | 205,000 | |
| Patents | 18,000 | |
| Goodwill | 50,000 | |
| Liabilities | | 55,000 |
| Cash | | 400,000 |

To illustrate the private company alternative, assume that **instead of patents**, Tractorling employees had a non-compete agreement with Tractorling management that would preclude them from working for any competing companies for one year following the acquisition (with an estimated fair value of \$18,000) should they leave the company. Such agreements are common in business combinations to ensure a smooth transition period.

If Multi-Diversified was a public company, as with the patents, it would recognize this non-compete agreement separately from goodwill on the post-acquisition balance sheet. However, a private company that chooses the alternative accounting would not recognize a separate intangible asset for the non-compete agreement but instead include the \$18,000 in the Goodwill balance. That is, rather than the entry recorded above, a private company would make the following entry.

| | | |
|--------------------------------|---------|---------|
| Cash | 25,000 | |
| Accounts Receivable | 35,000 | |
| Inventory | 122,000 | |
| Property, Plant, and Equipment | 205,000 | |
| Goodwill | 68,000 | |
| Liabilities | | 55,000 |
| Cash | | 400,000 |

Note that the Goodwill balance (\$50,000 + \$18,000) includes the amount attributed to the non-compete agreement. **Private companies that elect this accounting alternative must also elect the private company alternative to amortize goodwill (discussed in the next section).**

Accounting for Goodwill

The FASB also issued guidance developed with the PCC that provides an alternative for private companies in the accounting for goodwill.³ Under the alternative, rather than considering goodwill to have an indefinite life, private companies can elect to amortize goodwill on a straight-line basis over a period not to exceed 10 years. In addition, goodwill under this alternative will be tested for impairment when a triggering event occurs and based on a comparison of the carrying value of the goodwill to the fair value of the company or reporting unit.

Additional Background

As discussed in Chapter 12, companies consider goodwill to have an indefinite life and therefore should not amortize it. Although goodwill may decrease in value over time, predicting the actual life of goodwill and an appropriate pattern of amortization is extremely difficult. In

³Accounting Standards Update No. 2014-02, *Intangibles—Goodwill and Other (Topic 350): Accounting for Goodwill* (a consensus of the Private Company Council).

addition, investors find the amortization charge of little use in evaluating financial performance. Furthermore, the investment community wants to know the amount invested in goodwill, which often is the largest intangible asset on a company's balance sheet. Therefore, companies adjust its carrying value only when goodwill is impaired.

As part of its research and outreach efforts on intangible assets and goodwill, the PCC obtained feedback from private company stakeholders that the benefits of the current accounting for goodwill after initial recognition do not justify the related costs. Feedback from users of private company financial statements indicated that the current goodwill impairment test provides limited decision-useful information because most users of private company financial statements generally disregard goodwill and goodwill impairment losses in their analysis of a private company's financial condition and operating performance. The PCC also received input from preparers and auditors of private company financial statements indicating concerns about the cost and complexity involved in performing the current goodwill impairment test. Even though the recent introduction of the optional qualitative assessment has provided some cost reduction in testing goodwill for impairment, many of those stakeholders stated that the level of cost reduction has not been significant.

Private Company Alternative

In response to this input, the PCC proposed (and the FASB endorsed) an alternative accounting for private companies. Under the alternative, private companies that elect the accounting alternative will:

1. Amortize goodwill on a straight-line basis over 10 years, or less than 10 years if a shorter useful life is more appropriate.
2. Test goodwill for impairment when a triggering event occurs that indicates that the fair value of a company (or a reporting unit) may be below its carrying amount.

When a triggering event occurs, a company has the option to first assess qualitative factors to determine whether the quantitative impairment test is necessary. If that qualitative assessment indicates that it is more likely than not that goodwill is impaired, the company must perform the quantitative test to compare the company's fair value with its carrying amount, including goodwill (or the fair value of the reporting unit with the carrying amount, including goodwill, of the reporting unit). If the qualitative assessment indicates that it is not more likely than not that goodwill is impaired, further testing is unnecessary. The goodwill impairment loss cannot exceed the company's (or the reporting unit's) carrying amount of goodwill.

Alternative Accounting Example

To illustrate the accounting under the private company alternative, refer to our Tractorling example in the prior section, in which Multi-Diversified recorded goodwill of \$68,000 (including the value of the non-compete agreement for Tractorling management). Under the private company alternative, using the maximum life of 10 years, Multi-Diversified will amortize goodwill through the following entry each year following the acquisition.

| | | |
|--------------------------------------|-------|-------|
| Amortization Expense (\$68,000 ÷ 10) | 6,800 | |
| Goodwill | | 6,800 |

Going forward, the recorded goodwill is evaluated for impairment only if there is a triggering event that indicates that the goodwill's fair value may be less than the carrying value. Thus, the alternative accounting is similar to the accounting for limited-life intangible assets.⁴

⁴As noted, if a private company makes the election to apply the identifiable intangible asset alternative discussed in the prior section, it must also elect the alternative for goodwill amortization and impairment.

Summary

As reflected in the feedback received in the three-year review, the PCC has generally been graded as a success in helping the FASB respond to private company concerns related to unique user needs and the cost and complexity of applying accounting guidance. In developing the private company alternatives for intangible assets and goodwill, the FASB and PCC was guided by the PCC Framework to assess whether the recognition or measurement guidance being evaluated provides relevant information to users of private company financial statements at a reasonable cost. While some users may not find the information resulting from applying these alternatives as relevant, the alternatives provide private companies relief from costs associated with estimating the fair value of some identifiable intangibles and annual goodwill impairment tests. That is, amortization will reduce the likelihood of impairments because private companies generally will test goodwill for impairment less frequently.⁵

While the work of the PCC is at an early stage, a recent survey indicates that 16 percent of approximately 2,900 surveyed private companies have adopted or intend to adopt the goodwill amortization alternatives. The jury is still out on other private company alternatives.⁶ Although the PCC has not addressed all of the topics it originally identified as priorities, the topics that remain are generally encompassed by the FASB's simplification initiatives, which are aimed at reducing complexity for both public *and* private companies, or as part of its Disclosure Framework project.

⁵Based in part on its deliberation of this private company issue, the FASB recently added a project to its agenda on the subsequent accounting for goodwill for public business entities and not-for-profit entities. That is, some of the same benefits and reduction in cost and complexity associated with goodwill alternatives for private companies may also be relevant to public companies.

⁶PricewaterhouseCoopers, "Representing Private Companies at the FASB: The Next Phase for the PCC," *Point of View* (June 2015).

Specimen Financial Statements: **The Procter & Gamble Company**

Once each year, a corporation communicates to its stockholders and other interested parties by issuing a complete set of audited financial statements. The **annual report**, as this communication is called, summarizes the financial results of the company's operations for the year and its plans for the future. Many annual reports are attractive, multicolored, glossy public relations pieces, containing pictures of corporate officers and directors as well as photos and descriptions of new products and new buildings. Yet the basic function of every annual report is to report financial information, almost all of which is a product of the corporation's accounting system.

The content and organization of corporate annual reports have become fairly standardized. Excluding the public relations part of the report (pictures, products, etc.), the following are the traditional financial portions of the annual report:

- Financial Highlights
- Letter to the Stockholders
- Management's Discussion and Analysis
- Financial Statements
- Notes to the Financial Statements
- Management's Responsibility for Financial Reporting
- Management's Report on Internal Control over Financial Reporting
- Report of Independent Registered Public Accounting Firm
- Selected Financial Data

The official SEC filing of the annual report is called a **Form 10-K**, which often omits the public relations pieces found in most standard annual reports. On the following pages, we present **The Procter & Gamble Company (P&G)**'s financial statements taken from the company's 2017 Form 10-K.

1. The 'Other reserve' was originally created as part of the capital restructuring that took place in 2002. It represents the difference between the nominal value of the shares issued prior to the capital reduction by the Company (being the carrying value of the investment in Marks and Spencer plc) and the share capital, share premium and capital redemption reserve of Marks and Spencer plc at the date of the transaction.

2. Amounts reclassified and reported in profit or loss includes the revaluation of the cross currency swaps, offsetting the revaluation of the US dollar hedged bonds within finance costs.

3. In the prior year financial statements, the foreign exchange reserve was presented within Retained earnings.

CONSOLIDATED STATEMENT OF CASH FLOWS

| | Notes | 53 weeks ended 1 April 2017 £m | 53 weeks ended 2 April 2016 £m |
