WILEY

WileyPLUS gives you the freedom and flexibility to tailor curated content and easily manage your course to keep students engaged and on track.

When course materials are presented in an organized way, students are more likely to stay focused, develop mastery, and participate in class. WileyPLUS gives students a clear path through the course material.

Starting with Wiley's quality curated content, you can customize your course by hiding or rearranging learning objectives, setting the pacing of content, and even integrating videos, files, or links to relevant material. The easy-to-use, intuitive interface saves you time getting started, managing day-to-day class activities, and helping individual students stay on track.

Customized Content

Using the content editor, you can add videos, documents, pages, or relevant links to keep students motivated.

Interactive eTextbook

Students can easily search content, highlight and take notes, access instructor's notes and highlights, and read offline.

Drag-and-Drop Customization

Quick reordering of learning objectives and modules lets you match content to your needs.

Linear Design and Organization

Customizable modules organized by learning objective include eTextbook content, videos, animations, interactives, and practice questions.

Calendar

The drag-and-drop calendar syncs with other features in WileyPLUS—like assignments, syllabus, and grades—so that one change on the calendar shows up in all places.

Instructor App

You can modify due dates, monitor assignment submissions, change grades, and communicate with your students all from your phone.

This book was set in STIX Two Text by Aptara®, Inc. and printed and bound by Quad Graphics/Versailles. The cover was printed by Quad Graphics/Versailles.

Founded in 1807, John Wiley & Sons, Inc. has been a valued source of knowledge and understanding for more than 200 years, helping people around the world meet their needs and fulfill their aspirations. Our company is built on a foundation of principles that include responsibility to the communities we serve and where we live and work. In 2008, we launched a Corporate Citizenship Initiative, a global effort to address the environmental, social, economic, and ethical challenges we face in our business. Among the issues we are addressing are carbon impact, paper specifications and procurement, ethical conduct within our business and among our vendors, and community and charitable support. For more information, please visit our website: www.wiley.com/go/citizenship.

From the Authors

Through many editions, this text has continued to reflect the constant changes taking place in the GAAP environment. This edition continues this tradition, which has become even more significant as the financial reporting environment is exploding with major change. Here are three areas of major importance that are now incorporated extensively into this edition of the text.

“If this text helps you appreciate the challenges, worth, and limitations of financial reporting, if it encourages you to evaluate critically and understand financial accounting concepts and practice, and if it prepares you for advanced study, professional examinations, and the successful and ethical pursuit of your career in accounting or business in a global economy, then we will have attained our objectives.”

CONVERGENCE OF GAAP AND IFRS One of the most important innovations shaping our capital markets was the idea of GAAP. It might be said that it would be even better if we had one common set of accounting rules for the whole world, which would make it easier for international investors to compare the financial results of companies from different countries. Fortunately, GAAP and international accounting standards have converged to result in a number of common standards between GAAP and **International Financial Reporting Standards (IFRS)**. And you have the chance to be on the ground floor as we develop for you the similarities and differences in the two systems that ultimately will be one.

A FAIR VALUE MOVEMENT The FASB believes that fair value information is more relevant to users than historical cost. As a result, there is more information that is being reported on this basis, and even more will occur in the future. The financial press is full of articles discussing how financial institutions must fair value their assets, which has led to massive losses during the financial crisis. In addition, additional insight into the reliability related to fair values is being addressed and disclosed to help investors make important capital allocation decisions. We devote a considerable amount of material that discusses and illustrates fair value concepts in this edition, including its relevance to three major accounting standards updates: revenue, leases, and financial instruments.

A NEW WAY OF LOOKING AT GENERALLY ACCEPTED ACCOUNTING PRINCIPLES (GAAP) Learning GAAP used to be a daunting task, as it is comprised of many standards that vary in form, completeness, and structure. Fortunately, the profession has developed the Financial Accounting Standards Board Codification (often referred to as the Codification). This Codification provides in one place all the GAAP related to a given topic. This textbook is the first to incorporate this Codification—it will make learning GAAP easier and more interesting!

Intermediate Accounting is the market-leading text in providing the tools needed to understand what GAAP is and how it is applied in practice. With this Seventeenth Edition, we strive to continue to provide the material needed to understand this subject area. The text is comprehensive and up-to-date. We also include proven pedagogical tools, designed to help you learn more effectively and to answer the changing needs of this course.

We are excited about *Intermediate Accounting*, Seventeenth Edition. We believe it meets an important objective of providing useful information to educators and students interested in learning about both GAAP and IFRS. Suggestions and comments from users of this text will be appreciated. Please feel free to e-mail any one of us.

About the Authors

Don Kieso

DONALD E. KIESO, PhD, CPA, received his bachelor's degree from Aurora University and his doctorate in accounting from the University of Illinois. He has served as chairman of the Department of Accountancy and is currently the KPMG Emeritus Professor of Accountancy at Northern Illinois University. He has public accounting experience with Price Waterhouse & Co. (San Francisco and Chicago) and Arthur Andersen & Co. (Chicago) and research experience with the Research Division of the American Institute of Certified Public Accountants (New York). He has done post-doctorate work as a Visiting Scholar at the University of California at Berkeley and is a recipient of NIU's Teaching Excellence Award and four Golden Apple Teaching Awards. Professor Kieso is the author of other accounting and business books and is a member of the American Accounting Association, the American Institute of Certified Public Accountants, and the Illinois CPA Society. He has served as a member of the Board of Directors of the Illinois CPA Society, then AACSB's Accounting Accreditation Committees, the State of Illinois Comptroller's Commission, as Secretary-Treasurer of the Federation of Schools of Accountancy, and as Secretary-Treasurer of the American Accounting Association. Professor Kieso is currently serving on the Board of Trustees and Executive Committee of Aurora University, as a member of the Board of Directors of Kishwaukee Community Hospital, and as Treasurer and Director of Valley West Community Hospital. From 1989 to 1993, he served as a charter member of the National Accounting Education Change Commission. He is the recipient of the Outstanding Accounting Educator Award from the Illinois CPA Society, the FSA's Joseph A. Silvano Award of Merit, the NIU Foundation's Humanitarian Award for Service to Higher Education, a Distinguished Service Award from the Illinois CPA Society, and in 2003 an honorary doctorate from Aurora University.

Jerry Weygandt

JERRY J. WEYGANDT, PhD, CPA, is the Arthur Andersen Alumni Emeritus Professor of Accounting at the University of Wisconsin—Madison. He holds a Ph.D. in accounting from the University of Illinois. Articles by Professor Weygandt have appeared in the *Accounting Review*, *Journal of Accounting Research*, *Accounting Horizons*, *Journal of Accountancy*, and other academic and professional journals. These articles have examined such financial reporting issues as accounting for price-level adjustments, pensions, convertible securities, stock option contracts, and interim reports. Professor Weygandt is author of other accounting and financial reporting books and is a member of the American Accounting Association, the American Institute of Certified Public Accountants, and the Wisconsin Society of Certified Public Accountants. He has served on numerous committees of the American Accounting Association and as a member of the editorial board of the *Accounting Review*; he also has served as President and Secretary-Treasurer of the American Accounting Association. In addition, he has been actively involved with the American Institute of Certified Public Accountants and has been a member of the Accounting Standards Executive Committee (AcSEC) of that organization. He has served on the FASB task force that examined the reporting issues related to accounting for income taxes and served as a trustee of the Financial Accounting Foundation. Professor Weygandt has received the Chancellor's Award for Excellence in Teaching and the Beta Gamma Sigma Dean's Teaching Award. He is on the board of directors of M & I Bank of Southern Wisconsin. He is the recipient of the Wisconsin Institute of CPA's Outstanding Educator's Award and the Lifetime Achievement Award. In 2001, he received the American Accounting Association's Outstanding Educator Award.

Terry Warfield

TERRY D. WARFIELD, PhD, is the PwC Professor in Accounting at the University of Wisconsin—Madison. He received a B.S. and M.B.A. from Indiana University and a Ph.D. in accounting from the University of Iowa. Professor Warfield's area of expertise is financial reporting, and prior to his academic career, he worked for five years in the banking industry. He served as the Academic Accounting Fellow in the Office of the Chief Accountant at the U.S. Securities and Exchange Commission in Washington, D.C. from 1995–1996. Professor Warfield's primary research interests concern financial accounting standards and disclosure policies. He has published scholarly articles in *The Accounting Review*, *Journal of Accounting and Economics*, *Research in Accounting Regulation*, and *Accounting Horizons*, and he has served on the editorial boards of *The Accounting Review*, *Accounting Horizons*, and *Issues in Accounting Education*. He has served as president of the Financial Accounting and Reporting Section, the Financial Accounting Standards Committee of the American Accounting Association (Chair 1995–1996), and on the AAA-FASB Research Conference Committee. He also served on the Financial Accounting Standards Advisory Council of the Financial Accounting Standards Board and as a trustee of the Financial Accounting Foundation. Professor Warfield has received teaching awards at both the University of Iowa and the University of Wisconsin, and he was named to the Teaching Academy at the University of Wisconsin in 1995. Professor Warfield has developed and published several case studies based on his research for use in accounting classes. These cases have been selected for the AICPA Professor-Practitioner Case Development Program and have been published in *Issues in Accounting Education*.

New to This Edition

Content Changes by Chapter

Chapter 1: Financial Accounting and Accounting Standards

- Generally updated for content and recent developments.

Chapter 2: Conceptual Framework for Financial Reporting

- New footnote detailing most recent FASB updates related to disclosures.
- Completely updated *IFRS Insights* section for the most recent information concerning the IASB and FASB conceptual statements.

Chapter 3: The Accounting Information System

- New section on the chart of accounts, as well as increased explanation and graphics of the recording process.
- Updated opening story on economic crime to reflect latest data and trends.
- New “What Do the Numbers Mean?” (WDNM) box on blockchain.
- New Analytics in Action activity on collecting financial data from a variety of sources.

Chapter 4: Income Statement and Related Information

- New WDNM box on how and why companies use earnings management to misrepresent company performance.
- Updated information about joint FASB-IASB project on financial statement presentation (currently on hold).
- Updated Evolving Issue box on most recent information concerning non-GAAP reporting.

Chapter 5: Balance Sheet and Statement of Cash Flows

- Rewrote “Additional Information” section for most recent FASB updates and recommendations on note disclosures regarding accounting policies, contractual situations, contingencies, and fair value.
- New Analytics in Action activity on ratio analysis for companies in the Dow Jones average.

Chapter 6: Accounting and the Time Value of Money

- New Analytics in Action activity on analyzing business alternatives, with consideration of time value of money concepts.

Chapter 7: Cash and Receivables

- New opening story, discussing current effect of the Tax Cuts and Jobs Act of 2017 in terms of amounts of company cash parked overseas.
- New Evolving Issue, on what companies should include as part of cash and cash equivalents on the balance sheet, such as cryptocurrencies.
- Updated discussion of allowance method for uncollectible accounts per latest FASB standards (i.e., net amount expected to be collected instead of net realizable value).

- New Analytics in Action activity on estimating the allowance for doubtful accounts and conducting financial analysis of the collectibility of accounts receivable.

Chapter 8: Valuation of Inventories: A Cost-Basis Approach

- Generally updated for content and recent developments.

Chapter 9: Inventories: Additional Valuation Issues

- New WDNM boxes on (1) corporate barter to handle problem inventory and (2) importance of identifying markdown method (cost versus retail) used by retailers.
- New Analytics in Action activity on analyzing inventory balances for possible impairment.

Chapter 10: Acquisition and Disposition of Property, Plant, and Equipment

- Moved contributions discussion as a new appendix, expanding its discussion per recent FASB guidance.
- New WDNM box on importance for companies to effectively manage capital spending.

Chapter 11: Depreciation, Impairments, and Depletion

- Updated opening story on technical and environmental issues affecting recognition of impaired assets.
- Updated footnote 15 to include the financial impacts of the most recent legislation, Tax Cuts and Jobs Act of 2017.
- New WDNM box on how changes in tax depreciation rules related to bonus depreciation.
- New Analytics in Action activity on analyzing company information related to depreciation and impairment of property, plant, and equipment.

Chapter 12: Intangible Assets

- Updated discussion of goodwill impairment test per recent FASB.
- New WDNM box on how goodwill impairments reported by companies can signal their future cash flows.
- New Analytics in Action activity on analyzing goodwill for companies in the Dow Jones average.

Chapter 13: Current Liabilities and Contingencies

- New WDNM boxes on (1) advantages of increased employee benefits over wage growth and (2) how Penn Central Railroad provides example of need for rules for liabilities expected to be refinanced.
- Updated Refinancing Criteria section for short-term obligations expected to be refinanced due to latest proposed FASB Accounting Standards Update.
- New Analytics in Action activity on analyzing current liabilities as part of a valid analysis of liquidity.
- New case illustration on determining whether a lawsuit liability should be recognized.

Chapter 14: Long-Term Liabilities

- New WDNM box on why some companies are issuing 100-year and even longer-duration bonds.

Chapter 15: Stockholders' Equity

- Generally updated for content and recent developments.
- New Analytics in Action activity on analyzing ROE using the DuPont method.

Chapter 16: Dilutive Securities and Earnings per Share

- New discussion and illustrations on stock compensation costs.

Chapter 17: Investments

- New opening story on how new FASB standard on reporting loans at amortized cost and equity investments at fair value is resulting in wins for banks and losses for companies.
- Updated discussion of impairments for receivables, available-for-sale and held-to-maturity debt investments, and equity investments.
- Deleted dated WDNM box on disclosure of equity investments.

Chapter 18: Revenue Recognition

- Generally updated for content and recent developments.

Chapter 19: Accounting for Income Taxes

- Chapter updated throughout to reflect the Tax Cuts and Jobs Act of 2017, including a new opening story that discusses its most important provisions.
- Loss carrybacks now discussed in a new Appendix 19B.
- New WDNM box on impact of a lower corporate tax rate.

Improved Digital Assets

Intermediate Accounting is completely integrated with WileyPLUS, featuring a suite of teaching and learning resources developed under the close review of the authors. Driven by the same basic beliefs as the text, WileyPLUS allows students to create a personalized study plan, assess their progress along the way, and access the content and resources needed to master the material. Features of the WileyPLUS course include the following:

- **NEW Integrated CPA Exam Test Prep:** Each chapter in the text now includes additional content from Wiley CPAexcel, which is designed to help students pass the CPA exam efficiently. Integrated within WileyPLUS, this new content includes CPA exam video lessons, CPA exam practice questions, and assignable task-based simulations (TBSs), which are the primary form of assessment used by the American Institute of Certified Public Accountants (AICPA) to assess mastery of the content at the analysis and evaluation cognitive level.
- **NEW Data Analytics:** Analytics in Action activities include corresponding data sets and assignments in WileyPLUS. These resources further prepare and enhance data

Chapter 20: Accounting for Pensions and Postretirement Benefits

- Moved up last part of the continuing pension expense worksheet example earlier in the chapter, for improved continuity.
- Completely updated section on the reporting and disclosure requirements for pensions, now discussed in four categories: (1) assets and liabilities, (2) net income, (3) comprehensive income, and (4) notes to the financial statements.

Chapter 21: Accounting for Leases

- Chapter consists of Updated Chapter 21 available with Kieso 16e.
- Opening story updated per most recent information on impact of new lease standard on companies' balance sheets.

Chapter 22: Accounting Changes and Error Analysis

- New WDNM box on how substantial depreciation-related changes might affect financial information.
- Completely updated discussion of converting to the equity method in Appendix 22A, given the recent FASB standard.

Chapter 23: Statement of Cash Flows

- Expanded WDNM boxes to include recent FASB rule for classifying operating cash flows.

Chapter 24: Full Disclosure in Financial Reporting

- New discussion of FASB Disclosure Framework project on improving the effectiveness of disclosures in financial statements, which has resulted in a new concepts statement in August 2018.
- New discussion of recent controversy regarding “short-termism” of interim reporting.
- Moved “Errors, Fraud, and Illegal Acts” section later in chapter under “Fraudulent Reporting” for improved presentation of topics.

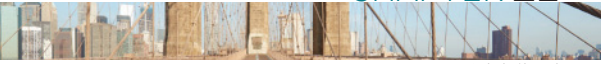

analytics skills that students will need in their future accounting careers. *Intermediate Accounting* also includes a “Data Analytics and Accounting” module within WileyPLUS that contains seven interactive lessons with industry-validated content to prepare students for the evolving workforce, video tutorials of real-world data analytics applications, and a case study using Excel that allows students to manipulate and think critically about data.

- **NEW Solution Walkthrough Videos:** The library of solution walkthrough videos has been expanded with the addition of approximately 45 new videos. Question-usage data helped determine which assessment content to highlight, ensuring that this student-favorite resource is available for the most frequently assigned content.
- **Accessible Lecture PowerPoints:** PowerPoints are a hallmark of many lectures as well as an important study tool for students. In addition to the fully accessible WileyPLUS course, we have also improved the lecture PowerPoints to be accessible, including high-quality alt text and screen-reader capabilities.

Proven Pedagogical Framework

This edition continues to provide numerous key learning aids to help you master the text material and prepare you for a successful career in accounting.

CHAPTER 21

Accounting for Leases

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

1. Describe the environment related to leasing transactions.
2. Explain the accounting for finance leases.
3. Explain the accounting for operating leases.
4. Discuss the accounting and reporting for special features of lease arrangements.

PREVIEW OF CHAPTER 21 The following opening story indicates the increased significance and prevalence of lease arrangements. As a result, the need for uniform accounting and informative reporting of these transactions has intensified. In this chapter, we look at the accounting issues related to leasing. The content and organization of this chapter are as follows.

This chapter also includes numerous conceptual and global discussions that are integral to the topics presented here.

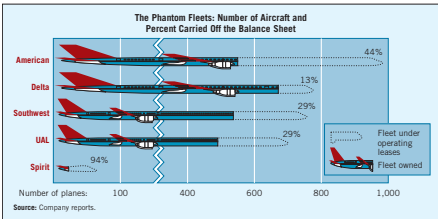

ACCOUNTING FOR LEASES

| | | | |

Times Are A-Changing

Sir David Tweedie, a former IFRS chairperson, is known for making the following observation about airline accounting. He noted that one day he would like to fly on an airplane that appears on a company's balance sheet. What Sir David was referring to is that many of the airlines such as **United**, **Delta**, and **Southwest** sometimes do not own their aircraft. The airlines lease many of their airplanes due to the favorable accounting treatment they received

when they leased rather than purchased. Presented below are the lease percentages for major U.S. airlines in a recent year.

| Airline | Percent Carried Off the Balance Sheet |
|-----------|---------------------------------------|
| American | 44% |
| Delta | 13% |
| Southwest | 29% |
| UAL | 29% |
| Spirit | 94% |

The same held true for many other industries as well. What was this favorable accounting treatment? The previous FASB standard on leasing depended on whether a lease qualified as an operating lease or a finance lease. In an operating lease, companies did not report an asset on their balance sheet for the item they leased, nor did they report a related liability for their lease obligation. Only if the company had a finance lease would companies have to report an asset and a related liability on the balance sheet. However, the FASB has recently issued a standard on leasing that mandates that all companies will have to report both assets and related liabilities for practically all lease arrangements.

The accounting change will have significant impact on many companies' balance sheets. The top 1,000 U.S. public companies alone have nearly \$1 trillion in operating lease liabilities. Companies with large off-balance-sheet operating leases will be most affected. For example, here is a list of companies that will have to capitalize a significant number of operating leases.

| Balance Sheet Impact Assets and Liabilities Increases (in millions) | | | |
|--|----------|-----------------------------|----------|
| Walgreens Boots Alliance | \$32,811 | FedEx | \$17,874 |
| CVS Health | 27,151 | United Continental Holdings | 16,254 |
| AT&T | 25,928 | Delta Air Lines | 16,236 |
| Amazon | 22,848 | Walmart | 15,366 |
| Verizon Communications | 20,734 | Bank of America | 14,500 |

So Sir David Tweedie, what we can now say is get ready as your wish is about to come true.

Ketz, "Still Searching for the 'Rite' Stuff," *Crain's Old Accountant* (April 30, 2012), <http://blogs.smeal.psu.edu/~who-is-most-impacted-by-the-new-lease-accounting-standards/>; An Analysis of the Fortune 500's Leasing Obligations," *Lease Accelerator* (2016); and Sue Lloyd, "A New Lease on Life," *Investor Perspective* (January 2016).

Review and Practice

Go to the **Review and Practice** section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions as well as additional exercises and practice problem with solutions are also available online.

Chapter Opener Vignettes

The Chapter Opener Vignettes provide an engaging introduction as well as place the content of the chapter's topics in context in terms of recent accounting, economic, and political developments.

Chapter Preview

The Chapter Preview summarizes the major issues discussed in the chapter, and provides students with a visual outline of the key topics.

Review and Practice

The Review and Practice section, placed after the text discussion, offers students the opportunity to assess their understanding of the chapter's topics before tackling homework assignments.

NEW MORE Illustration Walk-Throughs

These unique illustrations include mini-cases so that students can immediately understand how to apply the accounting concepts and procedures to specific situations.

ILLUSTRATION 21.3
Variable Lease Payments

INCLUDING VARIABLE LEASE PAYMENTS

Facts: On January 1, 2020, Jose Company leases an airplane for 6 years. The annual lease payments are \$1,000,000 per year, payable at the beginning of each year (annuity-due basis). In addition, the lease agreement specifies that the lease payment increases by \$30,000 every year.

Question: What are the lease payments in 2021?

Solution: On January 1, 2021, the lease payment is \$1,030,000 (\$1,000,000 + \$30,000), which is considered a variable payment. Given that the amount of the variable payment is known from year to year (the rate is set at commencement of the lease and in substance fixed), such variable payments are included in calculating the present value of the lease liability.

ILLUSTRATION 21.4
Variable Lease Payments

EXPENSING VARIABLE LEASE PAYMENTS

Facts: Assume the same information as in Illustration 21.3, except that the lease payments are adjusted each year by a change in the Consumer Price Index (CPI).

Question: If the CPI is 100 at January 1, 2020, and increases to 104 on January 1, 2021, what is the payment on January 1, 2021?

Solution: The variable payment on January 1, 2021, is \$1,040,000 (\$1,000,000 × 1.04). Because the amount of the variable payment from year to year is not known at the lease commencement date, this payment is not included in determining the present value of the lease liability. This additional payment (\$40,000) is recognized as an expense in the period it is incurred. Similarly, when lease payments vary with a performance measure (e.g., sales at a store location, asset usage), the variable amounts will be expensed in the period incurred.

| | | |
|-------------------------------------|------------|------------|
| Lerch records this loss as follows. | | |
| Loss on Impairment | 40,000,000 | |
| Patents | | 40,000,000 |

After recognizing the impairment, the reduced carrying amount of the patents is its new cost basis (see **Underlying Concepts**). Lerch should amortize the patent's new cost over its remaining useful life or legal life, whichever is shorter. Even if shale-oil prices increase in subsequent periods and the value of the patent increases, Lerch **may not recognize restoration of the previously recognized impairment loss**.

Underlying Concepts

The basic attributes of intangibles, their uncertainty as to future benefits, and their uniqueness have discouraged valuation in excess of cost.

Underlying Concepts

The Underlying Concepts highlight and explain major conceptual topics in the chapter.

Global View

Global Views provide students with specific examples of how global companies (and countries) implement key accounting regulations. They also provide examples of how and where IFRS differs from GAAP.

Two difficulties arise in accounting for R&D expenditures: (1) identifying the costs associated with particular activities, projects, or achievements, and (2) determining the magnitude of the future benefits and length of time over which such benefits may be realized. Because of these latter uncertainties, the FASB has simplified the accounting practice in this area. **Companies must expense all research and development costs when incurred** (see **Global View**). [14]

Global View

IFRS requires the capitalization of certain development expenditures. This conflicts with GAAP.

What Do the Numbers Mean?

The “What Do the Numbers Mean?” boxes further students’ understanding of key concepts with practical, real-world examples.

What Do the Numbers Mean? Not So Fast

As an illustration of the importance of the control criteria, consider the case of computer leasing companies, which at one time bought **IBM** equipment, leased the equipment to their customers, and removed the leased assets from their balance sheets. In leasing the assets, the computer lessors stated that they would substitute new IBM equipment if obsolescence occurred (a sales return provision). However, when IBM introduced a new computer line, IBM refused to sell it to the computer leasing companies. As a result, a number of the lessors could not meet their contracts with their customers and had to take back the old equipment. Thus, control had not been fully transferred and the computer leasing companies therefore had to reinstate the assets they had taken off the books. Such a case demonstrates one reason why the lessor classification tests must be aligned with those for revenue recognition.

Evolving Issue

The Evolving Issue feature introduces and discusses a current topic in the accounting industry in which the profession may be encountering controversy or nearing resolution. The feature shows how the key standard-setting organizations make decisions to adjust to the changing global business environment.

Evolving Issue Recognition of R&D and Internally Generated Intangibles

The requirement that companies expense immediately all R&D costs (as well as start-up costs) incurred internally is a practical solution. It ensures consistency in practice and uniformity among companies. But the practice of immediately writing off expenditures made in the expectation of benefiting future periods is conceptually incorrect.

Proponents of immediate expensing contend that from an income statement standpoint, long-run application of this standard frequently makes little difference. They argue that because of the ongoing nature of most companies’ R&D activities, the amount of R&D cost charged to expense each accounting period is about the same, whether there is immediate expensing or capitalization and subsequent amortization.

Others criticize this practice. They believe that the balance sheet should report an intangible asset related to expenditures that have future benefit. To preclude capitalization of all R&D expenditures removes from the balance sheet what may be a company’s most valuable asset.

Indeed, research findings indicate that capitalizing R&D costs may be helpful to investors. For example, one study showed a significant relationship between R&D outlays and subsequent benefits in the form of increased productivity, earnings, and shareholder value for R&D-intensive companies. Another study found that there was a significant decline in earnings’ usefulness for companies that were forced to switch from capitalizing to expensing R&D costs, and that the decline appears to persist over time.

The current accounting for R&D and other internally generated intangible assets represents one of the many trade-offs made among relevance, faithful representation, and cost-benefit considerations. The FASB and IASB have completed some limited-scope projects on the accounting for intangible assets, and the Boards have contemplated a project on the accounting for identifiable intangible assets (i.e., excluding goodwill). Such a project would address concerns that the current accounting requirements lead to inconsistent treatments for some types of intangible assets depending on how they arise.

Sources for research studies: Baruch Lev and Theodore Sougiannis, “The Capitalization, Amortization, and Value-Relevance of R&D,” *Journal of Accounting and Economics* (February 1996); and Martha L. Louderer and Bruce K. Behn, “Alternative Income Determination Rules and Earnings Usefulness: The Case of R&D Costs,” *Contemporary Accounting Research* (Fall 1995). See also the recent critique of the accounting for intangible assets in Baruch Lev and Feng Gu, *The End of Accounting* (Hoboken, NJ: John Wiley & Sons, 2016).

End-of-Chapter Pedagogy

Review and Practice

Review and Practice section includes Key Terms Review, Learning Objectives Review, and a Practice Problem with Solution. In addition, multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms are available online.

|--|---|--|

Learning Objectives Review

1 Discuss the characteristics, valuation, and amortization of intangible assets.

3 Explain the accounting issues for recording goodwill.

Unlike receivables, inventories, and patents that a company can sell or exchange individually in the marketplace, goodwill can be identified only with the company as a whole. **Goodwill is a "going con-**

Practice Problem

Sky Co., organized in 2020, provided you with the following information.

1. Purchased a license for \$20,000 on July 1, 2020. The license gives Sky exclusive rights to sell its services in the tri-state region and will expire on July 1, 2028.
2. Purchased a patent on January 2, 2021, for \$40,000. It is estimated to have a 5-year life.
3. Costs incurred to develop an exclusive Internet connection process as of June 1, 2021, were \$45,000. The process has an indefinite life.

Practice Problem

The Practice Problem offers students a comprehensive exercise, incorporating many of the chapter's topics, followed by a detailed, step-by-step solution.

Using Your Judgment

The Using Your Judgment section provides students with real-world homework problems including (1) a financial reporting problem, (2) a comparative analysis case, (3) financial statement analysis cases, and (4) an accounting, analysis, and principles problem.

Using Your Judgment

Financial Reporting Problem

The Procter & Gamble Company (P&G)
 The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Comparative Analysis Case

The Coca-Cola Company and PepsiCo, Inc.
 The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions
 Use the companies' financial information to answer the following questions.

- a. **1.** What amounts for intangible assets were reported in their respective balance sheets by Coca-Cola and PepsiCo at year-end 2017?

Analytics in Action

Accounting software systems collect vast amounts of data about the economic events experienced by a company and about the parties with whom the company engages, such as suppliers and customers. Business decision-makers take advantage of this wealth of information by using data analytics, which often employs both software and statistics, to draw inferences and make more informed business decisions. As both data access and analytical software improve, the use of data analytics to support decisions is becoming increasingly common at virtually all types of companies.

For example, consider goodwill, which has been rising briskly since 2011, to a total of \$3.408 trillion among all corporate filers in 2015. The bad news is that impairments have plummeted further during this same period, from a low of \$34.66 billion in 2013 to \$83.02 billion in 2015 (see <http://www.radicalcompliance.com/2016/05/04/impairments-hinting-at-bigger-problems-ahead/>). So are goodwill impairments more likely as goodwill balances rise? Business decision-makers would definitely want to investigate this trend further using data analytics.

Instructions Go to WileyPLUS for a data analytics exercise focusing on goodwill for companies in the Dow Jones average.

Data Analytics

Analytics in Action activities discuss how data analytics are used for specific accounting situations as well as offer hands-on experience so that students understand the power and value of analytical tools.

Bridge to the Profession

This section includes FASB Codification References, Codification Exercises, and a Codification Research Case, all designed to refer students to the relevant FASB literature for key concepts in the text and provide assessment of their understanding.

IFRS Insights

IFRS Insights offer students a detailed discussion and assessment material (including IFRS Self-Test Questions, IFRS Concepts and Application, and an International Financial Reporting Problem) of international accounting standards at the end of each chapter.

IFRS Insights

LEARNING OBJECTIVE 6

Compare the accounting for intangible assets under GAAP and IFRS.

There are some significant differences between IFRS and GAAP in the accounting for both intangible assets and impairments. IFRS related to intangible assets is presented in *IAS 38* ("Intangible Assets"). IFRS related to impairments is found in *IAS 36* ("Impairment of Assets").

Acknowledgments

Intermediate Accounting has benefited greatly from the input of focus group participants, manuscript reviewers, those who have sent comments by letter or e-mail, ancillary authors, and proofers. We greatly appreciate the constructive suggestions and innovative ideas of reviewers and the creativity and accuracy of the ancillary authors and checkers.

Prior Edition Reviewers

We greatly appreciate the over 400 reviewers who have assisted with the prior editions of Intermediate Accounting. These instructors have been invaluable in the development and continued improvement of our text.

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

1. Describe the financial reporting environment.
2. Identify the major policy-setting bodies and their role in the standard-setting process.
3. Explain the meaning of generally accepted accounting principles (GAAP) and the role of the Codification for GAAP.
4. Describe major challenges in the financial reporting environment.

PREVIEW OF CHAPTER 1 As the following opening story indicates, the U.S. system of financial reporting has long been the most robust and transparent in the world. However, to ensure that it continues to provide the most relevant and reliable financial information to users, a number of financial reporting issues must be resolved. These issues include such matters as evaluating global standards, increasing fair value reporting, and meeting multiple user needs. This chapter explains the environment of financial reporting and the many factors affecting it, as follows.

This chapter also includes numerous conceptual and global discussions that are integral to the topics presented here.

FINANCIAL ACCOUNTING AND ACCOUNTING STANDARDS

Financial Reporting Environment

- Accounting and capital allocation
- Objective of financial reporting
- Need to develop standards

Parties Involved in Standard-Setting

- Securities and Exchange Commission
- American Institute of CPAs
- Financial Accounting Standards Board

Generally Accepted Accounting Principles

- FASB Codification

Major Challenges in Financial Reporting

- Political environment
- Expectations gap
- Financial reporting issues
- International accounting standards
- Ethics

Exciting Times

A recent report says it best: “Accounting information is central to the functioning of international capital markets and to managing small businesses, conducting effective government, understanding business processes, and . . . how economic decisions are made. . . . Across the globe, a common characteristic of economies that flourish is the presence of reliable accounting information.”

Many in the United States take pride in our system of financial reporting as being the most robust and transparent in the world. Yet even with continued improvement in financial reporting over the last 20 years, we have had many accounting scandals occurring at companies like **Enron**, **AIG**, **WorldCom**, and **Lehman**, as well as the financial crisis of 2008. However, as with many difficulties, there is often a silver lining. As one commentator noted, “Those

accounting scandals were a crisis we should be thankful for; we got through it and a law was passed (Sarbanes-Oxley Act), and it works.” A key feature of this law is that company executives are required to attest to the accuracy of their companies’ financial statements.

To better understand where we are, the Center for Audit Quality conducts a yearly survey that measures investor confidence in such categories as U.S. capital markets, audited financial information, and U.S. publicly traded companies. As shown in the chart, the results indicate that the 2008 financial crisis took a bite out of investor confidence. However, investor confidence has rebounded dramatically and is at its highest level since the survey was initiated—perhaps because of Sarbanes-Oxley.

The question now is how can we continue to improve? Here are some possibilities on how we can enhance the existing system of financial reporting.

1. Today, equity securities are broadly held, with approximately half of American households investing in stocks. This presents a challenge—investors have expressed concerns that **one-size-fits-all financial reports do not meet the needs of the spectrum of investors** who rely on those reports. While many individual investors are more interested in summarized, plain-English reports, market analysts and other investment professionals may desire information at a far more detailed level than is currently provided. Technology may help customize the information that the different types of investors desire.
2. Companies also express concerns with the complexity of the financial reporting system. Companies assert that **when preparing financial reports, it is difficult to ensure compliance with the voluminous and complex requirements contained in U.S. GAAP and SEC reporting rules**. This is a particularly heavy burden on smaller, non-public companies, which may have fewer resources to comply with the wide range of rules.
3. We also need to consider the broader array of information that investors need to make informed decisions. For example, the percentage of a company’s market value that can be attributed to accounting book value has declined significantly from the days of a bricks-and-mortar economy. **Thus, we may want to consider a more comprehensive business reporting model, including both financial and nonfinancial key performance indicators.**
4. Finally, we must also consider **how to deliver all of this information in a more timely manner**. In a world where messages can be sent across the world in a blink of an eye, it is ironic that the analysis of financial information is still subject to many manual processes, resulting in delays, increased costs, and errors.

Thus, improving financial reporting involves more than simply trimming or reworking the existing accounting literature. In some cases, major change is already underway. For example:

- The FASB and IASB have recently issued less-complex, more-understandable standards in the important areas of revenue recognition, leasing, and financial instruments.

- Standard-setters are exploring expanded reporting of key performance indicators, including reports on sustainability and a disclosure framework project to improve the effectiveness of disclosures to clearly communicate the information that is most important to users of financial statements. This project, combined with the introduction of a private-company reporting framework, could go a long way to address one-size-fits-all challenges.
- The SEC now requires the delivery of financial reports using eXtensible Business Reporting Language (XBRL). Reporting through XBRL allows timelier reporting via the Internet and allows statement users to transform accounting reports to meet their specific needs.

Each of these projects will hopefully support improvements in the quality of financial reporting and increase confidence in U.S. capital markets.

Hewitt, “Opening Remarks Before the Initial Meeting of the SEC Advisory Committee on Improvements to Financial Reporting,” U.S. Securities and Exchange Commission, Washington, D.C. (August 2, 2007); and Center for Audit Quality, *Main Street Investor Survey* (September 2017). See the FASB website for updates on FASB/IASB convergence, disclosure, and private company decision-making projects.

Review and Practice

Go to the **Review and Practice** section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions as well as additional exercises and practice problem with solutions are also available online.

Financial Reporting Environment

LEARNING OBJECTIVE 1

Describe the financial reporting environment.

The essential characteristics of accounting are (1) the identification, measurement, and communication of financial information about (2) economic entities to (3) interested parties. **Financial accounting** is the process that culminates in the preparation of financial reports on the enterprise for use by both internal and external parties. Users of these financial reports include investors, creditors, managers, unions, and government agencies. In contrast, **managerial accounting** is the process of identifying, measuring, analyzing, and communicating financial information needed by management to plan, control, and evaluate a company’s operations.

Financial statements are the principal means through which a company communicates its financial information to those outside it. These statements provide a company’s history quantified in money terms. The **financial statements** most frequently provided are (1) the balance sheet, (2) the income statement, (3) the statement of cash flows, and (4) the statement of owners’ or stockholders’ equity. Note disclosures are an integral part of each financial statement.

Some financial information is better provided, or can be provided only, by means of **financial reporting** other than formal financial statements. Examples include the president’s letter or supplementary schedules in the corporate annual report, prospectuses, reports filed with government agencies, news releases, management’s forecasts, and social or environmental impact statements. Companies may need to provide such information because of authoritative pronouncement, regulatory rule, or custom. Or they may supply it because management wishes to disclose it voluntarily.

In this text, we focus on the development of two types of financial information: (1) the basic financial statements and (2) related disclosures.

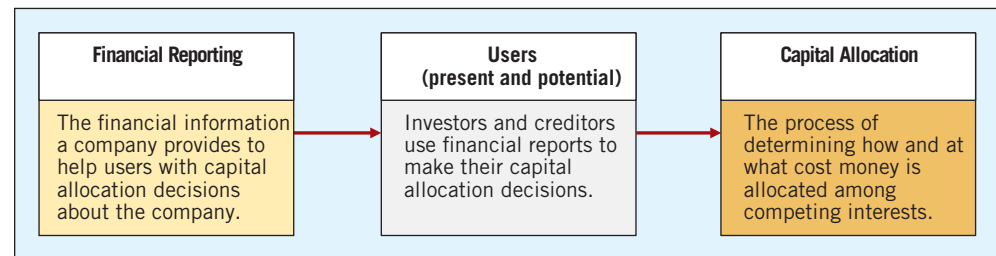

Accounting and Capital Allocation

Resources are limited. As a result, people try to conserve them and ensure that they are used effectively. Efficient use of resources often determines whether a business thrives. This fact places a substantial burden on the accounting profession.

Accountants must measure performance accurately and fairly on a timely basis, so that the right managers and companies are able to attract investment capital. For example, relevant and reliable financial information allows investors and creditors to compare the income and assets employed by such companies as **Nike**, **McDonald's**, **Microsoft**, and **Berkshire Hathaway**. Because these users can assess the relative return and risks associated with investment opportunities, they channel resources more effectively. **Illustration 1.1** shows how this process of capital allocation works.

ILLUSTRATION 1.1

Capital Allocation Process

An effective process of capital allocation is critical to a healthy economy. It promotes productivity, encourages innovation, and provides an efficient and liquid market for buying and selling securities and obtaining and granting credit. Unreliable and irrelevant information leads to poor capital allocation, which adversely affects the securities markets.

What Do the Numbers Mean? It's the Accounting

"It's the accounting." That's what many investors seem to be saying these days. Even the slightest hint of any accounting irregularity at a company leads to a subsequent pounding of the company's stock price. For example, the *Wall Street Journal* has run the following headlines related to accounting and its effects on the economy:

- Stocks take a beating as accounting woes spread beyond **Enron**.
- Quarterly reports from **IBM** and **Goldman Sachs** sent stocks tumbling.

- **VeriFone** finds accounting issues; stock price cut in half.
- **Bank of America** admits hiding debt.
- **Facebook, Zynga, Groupon**: IPO drops due to accounting, not valuation.

It now has become clear that investors must trust the accounting numbers, or they will abandon the market and put their resources elsewhere. With investor uncertainty, the cost of capital increases for companies who need additional resources. In short, relevant and reliable financial information is necessary for markets to be efficient.

Objective of Financial Reporting

What is the **objective (or purpose) of financial reporting**? The objective of general-purpose financial reporting is to **provide financial information about the reporting entity that is useful to present and potential equity investors, lenders, and other creditors** in decisions about providing resources to the entity. Those decisions involve buying, selling, or holding equity and debt instruments, and providing or settling loans and other forms of credit. Information that is decision-useful to capital providers (investors) may also be helpful

to other users of financial reporting who are not investors. Let's examine each of the elements of this objective.¹

General-Purpose Financial Statements

General-purpose financial statements provide financial reporting information to a wide variety of users. For example, when **The Hershey Company** issues its financial statements, these statements help shareholders, creditors, suppliers, employees, and regulators to better understand its financial position and related performance. Hershey's users need this type of information to make effective decisions. To be cost-effective in providing this information, general-purpose financial statements are most appropriate. In other words, general-purpose financial statements provide **the most useful information possible at the least cost**.

Equity Investors and Creditors

The objective of financial reporting **identifies investors and creditors as the primary users for general-purpose financial statements**. Identifying investors and creditors as the primary users provides an important focus of general-purpose financial reporting (see **Underlying Concepts**). For example, when Hershey issues its financial statements, its primary focus is on investors and creditors because they have the most critical and immediate need for information in financial reports. Investors and creditors need this financial information to assess Hershey's ability to generate net cash inflow and to understand management's ability to protect and enhance the assets of the company, which will be used to generate future net cash inflows. As a result, the primary user groups are not management, regulators, or some other non-investor group.

Underlying Concepts

While the objective of financial reporting is focused on investors and creditors, financial statements may still meet the needs of others.

What Do the Numbers Mean? Don't Forget Stewardship

In addition to providing decision-useful information about future cash flows, management also is accountable to investors for the custody and safekeeping of the company's economic resources and for their efficient and profitable use. For example, the management of **The Hershey Company** has the responsibility for protecting its economic resources from unfavorable effects of economic factors, such as price changes, and technological and social changes. Because Hershey's performance in discharging its responsibilities (referred to as its **stewardship** responsibilities)

usually affects its ability to generate net cash inflows, financial reporting may also provide decision-useful information to assess management performance in this role.

Source: Chapter 1, "The Objective of General Purpose Financial Reporting," and Chapter 3, "Qualitative Characteristics of Useful Financial Information," *Statement of Financial Accounting Concepts No. 8* (Norwalk, Conn.: FASB, September 2010), paras. OB4–OB10.

Entity Perspective

As part of the objective of general-purpose financial reporting, an **entity perspective** is adopted. Companies are viewed as separate and distinct from their owners (present shareholders) using this perspective. The assets of Hershey are viewed as assets of the company and not of a specific creditor or shareholder. Rather, these investors have claims on Hershey's assets in the form of liability or equity claims. The entity perspective is consistent with the present business environment where most companies engaged in financial reporting have substance distinct from their investors (both shareholders and creditors). Thus, a perspective that financial reporting should be focused only on the needs of shareholders—often referred to as the **proprietary perspective**—is not considered appropriate.

¹Chapter 1, "The Objective of General Purpose Financial Reporting," and Chapter 3, "Qualitative Characteristics of Useful Financial Information," *Statement of Financial Accounting Concepts No. 8* (Norwalk, Conn.: FASB, September 2010), par. OB2.

Decision-Usefulness

Investors are interested in financial reporting because it provides information that is useful for making decisions (referred to as the **decision-usefulness** approach). As indicated earlier, when making these decisions, investors are interested in assessing (1) the company's ability to generate net cash inflows and (2) management's ability to protect and enhance the capital providers' investments. Financial reporting should therefore help investors assess the amounts, timing, and uncertainty of prospective cash inflows from dividends or interest, and the proceeds from the sale, redemption, or maturity of securities or loans. In order for investors to make these assessments, the economic resources of an enterprise, the claims to those resources, and the changes in them must be understood. Financial statements and related explanations should be a primary source for determining this information.

The emphasis on "assessing cash flow prospects" does not mean that the cash basis is preferred over the accrual basis of accounting. Information based on accrual accounting better indicates a company's present and continuing ability to generate favorable cash flows than does information limited to the financial effects of cash receipts and payments.

Recall from your first accounting course the objective of **accrual-basis accounting**: It ensures that a company records events that change its financial statements in the periods in which the events occur, rather than only in the periods in which it receives or pays cash. Using the accrual basis to determine net income means that a company recognizes revenues when it provides the goods or services rather than when it receives cash. Similarly, it recognizes expenses when it incurs them rather than when it pays them. Under accrual accounting, a company generally recognizes revenues when it makes sales. The company can then relate the revenues to the economic environment of the period in which they occurred. Over the long run, trends in revenues and expenses are generally more meaningful than trends in cash receipts and disbursements.²

The Need to Develop Standards

The main controversy in setting accounting standards is, "Whose rules should we play by, and what should they be?" The answer is not immediately clear. Users of financial accounting statements have both coinciding and conflicting needs for information of various types. To meet these needs, and to satisfy the stewardship reporting responsibility of management, companies prepare a single set of **general-purpose financial statements**. Users expect these statements to present fairly, clearly, and completely the company's financial operations.

The accounting profession has attempted to develop a set of standards that are generally accepted and universally practiced. Otherwise, each company would have to develop its own standards. Further, readers of financial statements would have to familiarize themselves with every company's peculiar accounting and reporting practices. It would be almost impossible to prepare statements that could be compared (see **Underlying Concepts**).

This common set of standards and procedures is called **generally accepted accounting principles (GAAP)**. The term "generally accepted" means either that an authoritative accounting rule-making body has established a principle of reporting in a given area or that over time a given practice has been accepted as appropriate because of its universal application.³ Although principles and practices continue to provoke both debate and criticism, most members of the financial community recognize them as the standards that over time have proven to be most useful. We present a more extensive discussion of what constitutes GAAP later in this chapter.

Underlying Concepts

Preparing financial statements according to accepted accounting standards contributes to the comparability of accounting information.

²As used here, cash flow means "cash generated and used in operations." The term *cash flows* also frequently means cash obtained by borrowing and used to repay borrowing, cash used for investments in resources and obtained from the disposal of investments, and cash contributed by or distributed to owners.

³The terms *principles* and *standards* are used interchangeably in practice and throughout this text.

Parties Involved in Standard-Setting

LEARNING OBJECTIVE 2

Identify the major policy-setting bodies and their role in the standard-setting process.

Three organizations are instrumental in the development of financial accounting standards (GAAP) in the United States:

1. Securities and Exchange Commission (SEC)
2. American Institute of Certified Public Accountants (AICPA)
3. Financial Accounting Standards Board (FASB)

Securities and Exchange Commission (SEC)

External financial reporting and auditing developed in tandem with the growth of the industrial economy and its capital markets. However, when the stock market crashed in 1929 and the nation's economy plunged into the Great Depression, there were calls for increased government regulation of business, especially financial institutions and the stock market.

As a result of these events, the federal government established the **Securities and Exchange Commission (SEC)** to help develop and standardize financial information presented to stockholders. The SEC is a federal agency. It administers the Securities Exchange Act of 1934 and several other acts. Most companies that issue securities to the public or are listed on a stock exchange are required to file audited financial statements with the SEC. In addition, the SEC has broad powers to prescribe, in whatever detail it desires, the accounting practices and standards to be employed by companies that fall within its jurisdiction. The SEC currently exercises oversight over 12,000 companies that are listed on the major exchanges (e.g., the New York Stock Exchange and the Nasdaq) (see **Global View**).

Public/Private Partnership

At the time the SEC was created, no group—public or private—issued accounting standards. The SEC encouraged the creation of a private standard-setting body because it believed that the private sector had the appropriate resources and talent to achieve this daunting task. As a result, accounting standards have developed in the private sector either through the American Institute of Certified Public Accountants (AICPA) or the Financial Accounting Standards Board (FASB).

The SEC has affirmed its support for the FASB by indicating that financial statements conforming to standards set by the FASB are presumed to have substantial authoritative support. In short, the **SEC requires registrants to adhere to GAAP**. In addition, the SEC indicated in its reports to Congress that “it continues to believe that the initiative for establishing and improving accounting standards should remain in the private sector, subject to Commission oversight.”

SEC Oversight

The SEC's partnership with the private sector works well. The SEC acts with remarkable restraint in the area of developing accounting standards. Generally, **the SEC relies on the FASB to develop accounting standards**.

The SEC's involvement in the development of accounting standards varies. In some cases, the SEC rejects a standard proposed by the private sector. In other cases, the SEC prods the private sector into taking quicker action on certain reporting problems, such as accounting for investments in debt and equity securities and the reporting of derivative instruments. In still other situations, the SEC communicates problems to the FASB, responds to FASB exposure drafts, and provides the FASB with counsel and advice upon request (see **Global View**).

Global View

The International Organization of Securities Commissions (IOSCO), established in 1987, consists of more than 100 securities regulatory agencies or securities exchanges from all over the world. Collectively, its members represent a substantial proportion of the world's capital markets. The SEC is a member of IOSCO.

Global View

The U.S. legal system is based on English common law, whereby the government generally allows professionals to make the rules. The private sector, therefore, develops these rules (standards). Conversely, some countries have followed codified law, which leads to government-run accounting systems.

The SEC's mandate is to establish accounting principles. The private sector, therefore, must listen carefully to the views of the SEC. In some sense, the private sector is the formulator and the implementor of the standards.⁴ However, when the private sector fails to address accounting problems as quickly as the SEC would like, the partnership between the SEC and the private sector can be strained. This occurred in the deliberations on the accounting for business combinations and intangible assets. It is also highlighted by concerns over the accounting for off-balance-sheet, special-purpose entities. Examples include the failure of **Enron** and the subprime crises that led to the failure of **IndyMac Bank**.

Enforcement

As we indicated earlier, companies listed on a stock exchange must submit their financial statements to the SEC. If the SEC believes that an accounting or disclosure irregularity exists regarding the form or content of the financial statements, it sends a deficiency letter to the company. Companies usually resolve these deficiency letters quickly. If disagreement continues, the SEC may issue a “stop order,” which prevents the registrant from issuing or trading securities on the exchanges. The Department of Justice may also file criminal charges for violations of certain laws. The SEC process, private sector initiatives, and civil and criminal litigation help to ensure the integrity of financial reporting for public companies.

American Institute of Certified Public Accountants (AICPA)

The **American Institute of Certified Public Accountants (AICPA)**, which is the national professional organization of practicing Certified Public Accountants (CPAs), has been an important contributor to the development of GAAP. Various committees and boards established since the founding of the AICPA have contributed to this effort.

Committee on Accounting Procedure

At the urging of the SEC, the AICPA appointed the Committee on Accounting Procedure in 1939. The **Committee on Accounting Procedure (CAP)** composed of practicing CPAs, issued 51 **Accounting Research Bulletins** during the years 1939 to 1959. These bulletins dealt with a variety of accounting problems. But this problem-by-problem approach failed to provide the needed structured body of accounting principles. In response, in 1959 the AICPA created the Accounting Principles Board.

Accounting Principles Board

The major purposes of the **Accounting Principles Board (APB)** were to (1) advance the written expression of accounting principles, (2) determine appropriate practices, and (3) narrow the areas of difference and inconsistency in practice. To achieve these objectives, the APB's mission was twofold: to develop an overall conceptual framework to assist in the resolution of problems as they become evident and to substantively research individual issues before the AICPA issued pronouncements. The Board's 18 to 21 members, selected primarily from public accounting, also included representatives from industry and academia. The Board's official pronouncements, called **APB Opinions**, were intended to be based mainly on research studies and be supported

⁴One writer described the relationship of the FASB and SEC and the development of financial reporting standards using the analogy of a pearl. The pearl (a financial reporting standard) “is formed by the reaction of certain oysters (FASB) to an irritant (the SEC)—usually a grain of sand—that becomes embedded inside the shell. The oyster coats this grain with layers of nacre, and ultimately a pearl is formed. The pearl is a joint result of the irritant (SEC) and oyster (FASB); without both, it cannot be created.” John C. Burton, “Government Regulation of Accounting and Information,” *Journal of Accountancy* (June 1982).

by reason and analysis. Between its inception in 1959 and its dissolution in 1973, the APB issued 31 opinions.

Unfortunately, the APB came under fire early, charged with lack of productivity and failing to act promptly to correct alleged accounting abuses. Later, the APB tackled numerous thorny accounting issues, only to meet a buzz saw of opposition from industry and CPA firms. It also ran into occasional governmental interference. In 1971, the accounting profession's leaders, anxious to avoid governmental rule-making, appointed a Study Group on Establishment of Accounting Principles. Commonly known as the **Wheat Committee** for its chair Francis Wheat, this group examined the organization and operation of the APB and determined the necessary changes to attain better results. The Study Group submitted its recommendations to the AICPA Council in the spring of 1972, which led to the replacement of the APB with the Financial Accounting Standards Board (FASB) in 1973.

Financial Accounting Standards Board (FASB)

The Wheat Committee's recommendations resulted in the creation of a new standard-setting structure composed of three organizations—the Financial Accounting Foundation (FAF), the Financial Accounting Standards Board (FASB), and the Financial Accounting Standards Advisory Council (FASAC). The **Financial Accounting Foundation** selects the members of the FASB and the Advisory Council, funds their activities, and generally oversees the FASB's activities.

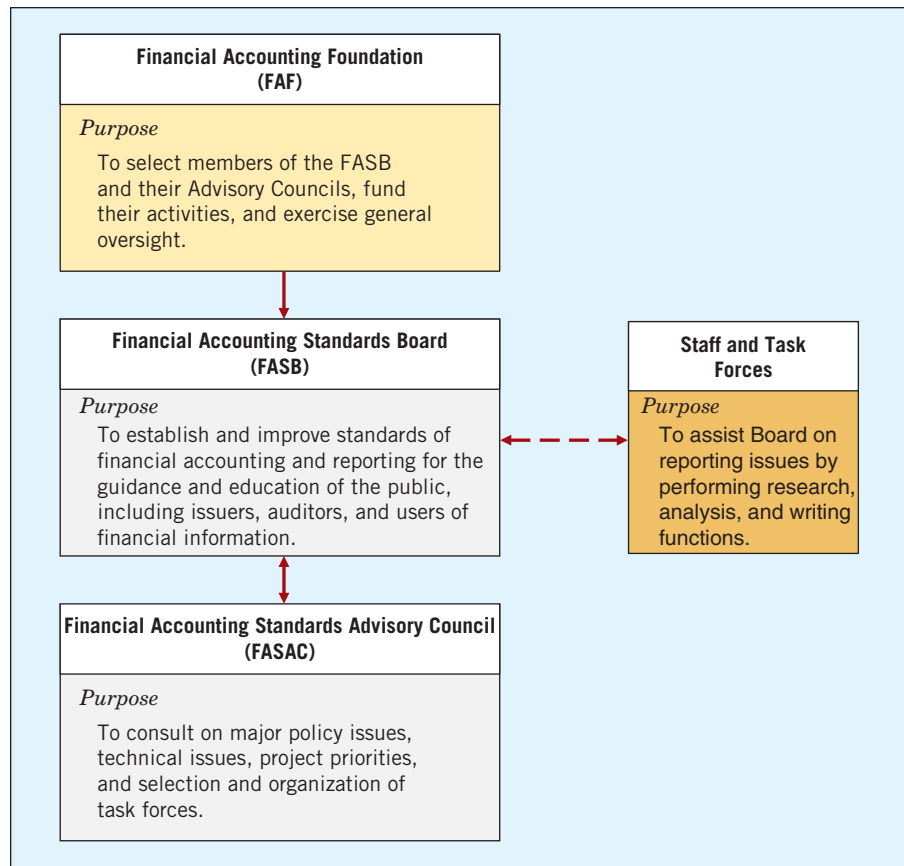

The major operating organization in this three-part structure is the **Financial Accounting Standards Board (FASB)**. Its mission is to establish and improve standards of financial accounting and reporting for the guidance and education of the public, which includes issuers, auditors, and users of financial information. The expectations of success and support for the new FASB relied on several significant differences between it and its predecessor, the APB:

1. **Smaller membership.** The FASB consists of seven members, replacing the relatively large 18-member APB.
2. **Full-time, remunerated membership.** FASB members are well-paid, full-time members appointed for renewable 5-year terms. The APB members volunteered their part-time work.
3. **Greater autonomy.** The APB was a senior committee of the AICPA. The FASB is not part of any single professional organization. It is appointed by and answerable only to the Financial Accounting Foundation.
4. **Increased independence.** APB members retained their private positions with firms, companies, or institutions. FASB members must sever all such ties.
5. **Broader representation.** All APB members were required to be CPAs and members of the AICPA. Currently, it is not necessary to be a CPA to be a member of the FASB.

In addition to research help from its own staff, the FASB relies on the expertise of various task force groups formed for various projects and on the **Financial Accounting Standards Advisory Council (FASAC)**. The FASAC consults with the FASB on major policy and technical issues and also helps select task force members. **Illustration 1.2** shows the current organizational structure for the development of financial reporting standards.⁵

⁵Other advisory groups, such as the Investors Advisory Committee (IAC), the Not-for-Profit Advisor Committee (NAC), and the recently established Private Company Council (PCC), share their views and experience with the FASB on matters related to projects on the Board's agenda, from the perspective of various constituencies and/or in areas of specific expertise.

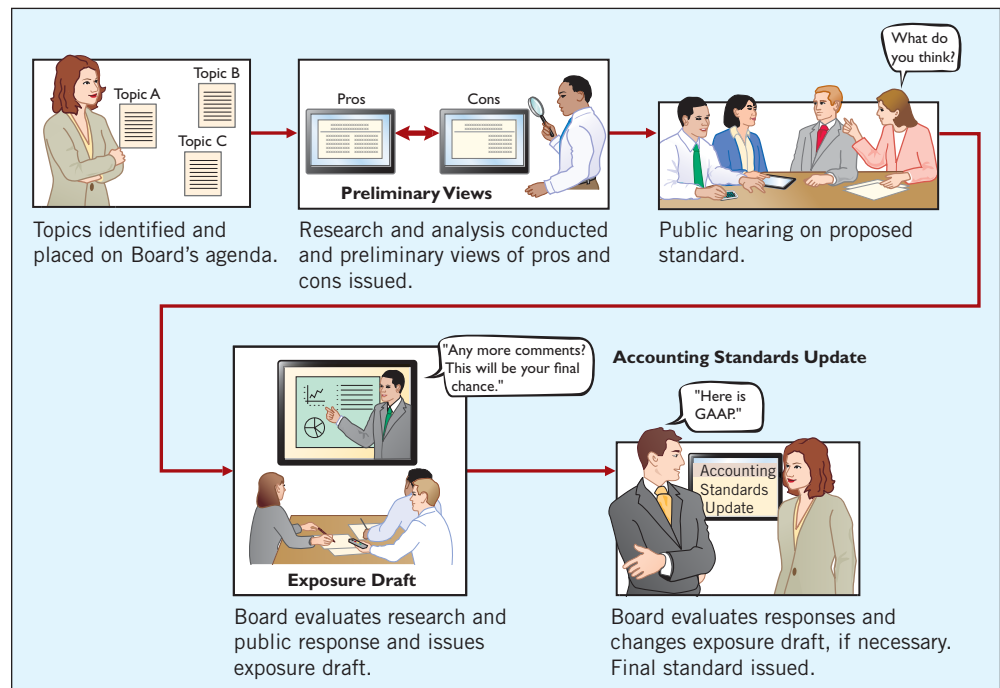

ILLUSTRATION 1.2
Organizational Structure for Setting Accounting Standards

Due Process

In establishing financial accounting standards, the FASB relies on two basic premises. (1) The FASB should be responsive to the needs and viewpoints of the entire economic community, not just the public accounting profession. (2) It should operate in full view of the public through a “due process” system that gives interested persons ample opportunity to make their views known. To ensure the achievement of these goals, the FASB follows specific steps to develop a typical FASB pronouncement, as **Illustration 1.3** shows.

ILLUSTRATION 1.3
The Due Process System of the FASB

The passage of new FASB guidance in the form of an Accounting Standards Update requires the support of four of the seven Board members. FASB pronouncements are considered GAAP and thereby binding in practice. All ARBs and APB Opinions implemented by 1973 (when the FASB formed) continue to be effective until amended or superseded by FASB pronouncements. In recognition of possible misconceptions of the term “principles,” the FASB uses the term **financial accounting standards** in its pronouncements.

Types of Pronouncements

The FASB issues two major types of pronouncements:

1. Accounting Standards Updates
2. Financial Accounting Concepts

Accounting Standards Updates The FASB issues accounting pronouncements through **Accounting Standards Updates** (Updates). These Updates amend the Accounting Standards Codification, which represents the source of authoritative accounting standards, other than standards issued by the SEC. (We discuss the Codification in more detail later in the chapter.) Each Update explains how the Codification has been amended and also includes information to help the reader understand the changes and when those changes will be effective. Common forms of amendments are accounting standards issued that address a broad area of accounting practice (such as the accounting for leases) or interpretations that modify or extend existing standards. Prior standard-setters such as the APB also issued interpretations of APB Opinions.

A second type of Update is a consensus of the **Emerging Issues Task Force (EITF)**, created in 1984 by the FASB. The EITF provides implementation guidance within the framework of the Codification to reduce diversity in practice on a timely basis. The EITF was designed to minimize the need for the FASB to spend time and effort addressing narrow implementation, application, or other emerging issues that can be analyzed within existing GAAP. Examples include accounting for pension plan terminations, revenue from barter transactions by Internet companies, and excessive amounts paid to takeover specialists. The EITF also provided timely guidance for the accounting for loans and investments in the wake of the credit crisis.

The EITF helps the FASB in many ways. The EITF identifies controversial accounting problems as they arise. The EITF determines whether it can quickly resolve them or whether to involve the FASB in solving them. In essence, it becomes a “problem filter” for the FASB. Thus, the FASB will hopefully work on more pervasive long-term problems, while the EITF deals with short-term emerging issues.

We cannot overestimate the importance of the EITF. In one year, for example, the task force examined 61 emerging financial reporting issues and arrived at a consensus on approximately 75 percent of them. The FASB reviews and approves all EITF consensuses. And the SEC indicated that it will view consensus solutions as preferred accounting. Further, it requires persuasive justification for departing from them.

Financial Accounting Concepts As part of a long-range effort to move away from the problem-by-problem approach, the FASB in November 1978 issued the first in a series of **Statements of Financial Accounting Concepts** as part of its conceptual framework project. (The Concepts Statements can be accessed at the FASB website.) The series sets forth fundamental objectives and concepts that the Board uses in developing future standards of financial accounting and reporting. The Board intends to develop a cohesive set of interrelated concepts—a conceptual framework—that will serve as tools for solving existing and emerging problems in a consistent manner. Unlike an **Accounting Standards Update**, a **Statement of Financial Accounting Concepts does not establish GAAP**. Concepts statements, however, pass through the same due process system (preliminary views, public hearing, exposure draft, etc.) as do standards updates.

Changing Role of the AICPA

As discussed, at one time the AICPA developed accounting standards, which were considered GAAP. The role of the AICPA in standard-setting is now diminished. The FASB and the

Global View

The CPA exam is administered internationally at testing sites in Bahrain, Kuwait, Japan, Lebanon, United Arab Emirates (UAE), and Brazil. The CPA exam now has some coverage of IFRS knowledge as part of the financial reporting section of the exam.

AICPA agreed that the AICPA should no longer issue authoritative guidance for public companies. The AICPA does have a Financial Reporting Executive Committee (FinREC), which is authorized to make public statements on behalf of the AICPA on financial reporting matters. The mission of FinREC is to determine the AICPA's technical policies regarding financial reporting standards, with the ultimate purpose of serving the public interest by improving financial reporting. FinREC also issues audit and accounting guides, which address particular areas in financial reporting that require attention, such as specialized accounting practices, significant or unique accounting issues, and unique regulatory considerations within the construction, casino, and airline industries. These guides provide specific direction on matters not addressed by the FASB.

Furthermore, while the AICPA has been the leader in developing auditing standards through its **Auditing Standards Board**, the Sarbanes-Oxley Act requires the Public Company Accounting Oversight Board to oversee the development of auditing standards. The AICPA continues to develop and grade the CPA examination, which is administered in all 50 states (see **Global View**).

Generally Accepted Accounting Principles

LEARNING OBJECTIVE 3

Explain the meaning of generally accepted accounting principles (GAAP) and the role of the Codification for GAAP.

Generally accepted accounting principles (GAAP) have substantial authoritative support. The AICPA's Code of Professional Conduct requires that members prepare financial statements in accordance with GAAP. Specifically, Rule 203 of this Code prohibits a member from expressing an unqualified opinion on financial statements that contain a material departure from generally accepted accounting principles.

What is GAAP? The major sources of GAAP come from the organizations discussed earlier in this chapter. It is composed of a mixture of over 2,000 documents that have been developed over the last 70 years or so. It includes APB Opinions, FASB Standards, and AICPA Research Bulletins. In addition, the FASB has issued **interpretations** and **FASB Staff Positions** that modified or extended existing standards. The APB also issued interpretations of APB Opinions. Both types of interpretations are considered authoritative for purposes of determining GAAP.

What Do the Numbers Mean? You Have to Step Back

Should the accounting profession have principles-based standards or rules-based standards? Critics of the profession today say that over the past three decades, standard-setters have moved away from broad accounting principles aimed at ensuring that companies' financial statements are fairly presented.

Instead, these critics say, standard-setters have moved toward drafting voluminous rules that, if technically followed in "checkbox" fashion, may shield auditors and companies from legal liability. That has resulted in companies creating complex capital structures that comply with GAAP but hide billions of dollars of debt and other obligations. To add fuel to the fire, the chief accountant of the enforcement division of the SEC noted, "One can violate SEC laws and still comply with GAAP."

In short, what he is saying is that it is not enough just to check the boxes. This point was reinforced by the chief accountant

of the SEC, who remarked that judgments should result in "accounting that reflects the substance of the transaction, as well as being in accordance with the literature." That is, you have to exercise judgment in applying GAAP to achieve high-quality reporting.

Sources: Adapted from S. Liesman, "SEC Accounting Cop's Warning: Playing by the Rules May Not Head Off Fraud Issues," *Wall Street Journal* (February 12, 2002), p. C7. See also "Study Pursuant to Section 108(d) of the Sarbanes-Oxley Act of 2002 on the Adoption by the United States Financial Reporting System of a Principles-Based Accounting System," *SEC* (July 25, 2003); and E. Orenstein, "Accounting as Art vs. Science, and the Role of Professional Judgment," *Accounting Matters*, FEI Financial Reporting Blog (November 2009).

FASB Codification

Historically, the documents that comprised GAAP varied in format, completeness, and structure. In some cases, these documents were inconsistent and difficult to interpret. As a result, financial statement preparers sometimes were not sure whether they had the right GAAP. Determining what was authoritative and what was not became difficult.

In response to these concerns, the FASB developed the **Financial Accounting Standards Board Accounting Standards Codification** (or more simply, “the Codification”). The FASB’s primary goal in developing the Codification is to provide in one place all the authoritative literature related to a particular topic. This will simplify user access to all authoritative U.S. generally accepted accounting principles. The Codification establishes the way GAAP is documented, presented, and updated. It explains what GAAP is and eliminates non-essential information such as redundant document summaries, basis for conclusion sections, and historical content. In short, the Codification integrates and synthesizes existing GAAP; it does not create new GAAP. It creates one level of GAAP, which is considered authoritative. All other accounting literature is considered non-authoritative.⁶

To provide easy access to this Codification, the FASB also developed the **Financial Accounting Standards Board Codification Research System (CRS)**. CRS is an online, real-time database that provides easy access to the Codification. The Codification and the related CRS provide a topically organized structure, subdivided into topic, subtopics, sections, and paragraphs, using a numerical index system.

For purposes of referencing authoritative GAAP material in this text, we will use the Codification framework. Here is an example of how the Codification framework is cited, using receivables as the example. The purpose of the search shown below is to determine GAAP for accounting for loans and trade receivables not held for sale subsequent to initial measurement.

| | |
|------------------|---|
| Topic | Go to FASB ASC 310 to access the Receivables topic. |
| Subtopics | Go to FASB ASC 310-10 to access the Overall Subtopic of the Topic 310. |
| Sections | Go to FASB ASC 310-10-35 to access the Subsequent Measurement Section of the Subtopic 310-10. |
| Paragraph | Go to FASB ASC 310-10-35-47 to access the Loans and Trade Receivables not Held for Sale paragraph of Section 310-10-35. |

Illustration 1.4 shows the Codification framework graphically.

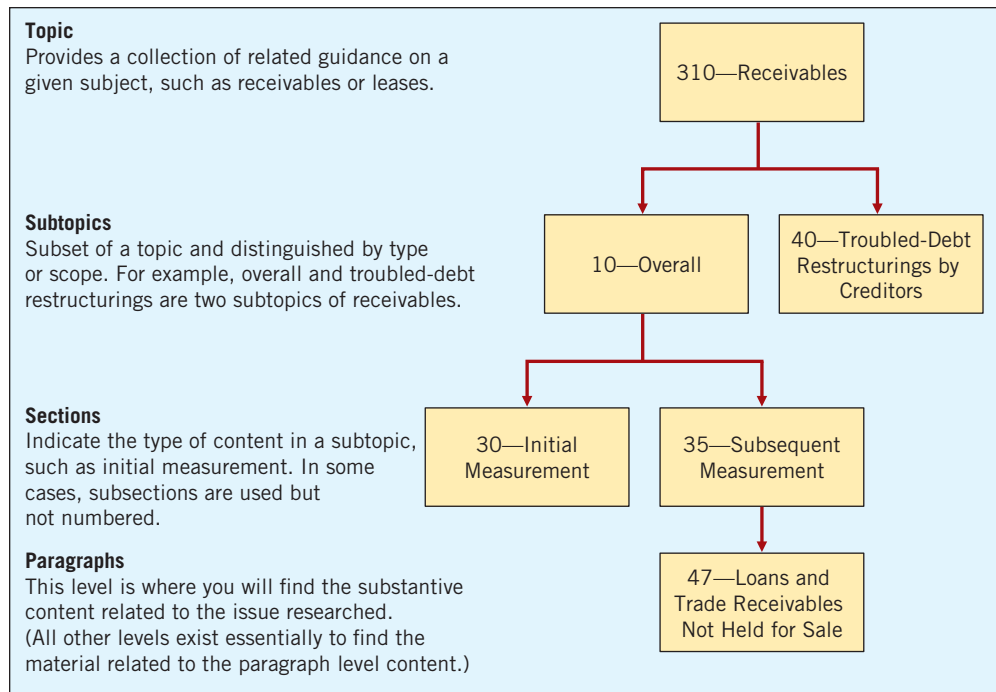

What happens if the Codification does not cover a certain type of transaction or event? In that case, other accounting literature should be considered, such as FASB Concept Statements, international financial reporting standards, and other professional literature. This will happen only rarely.

When introduced, expectations for the Codification were high. It was hoped that the Codification would enable users to better understand what GAAP is. This, in turn, would lead to less time needed to research accounting issues as well as minimize the risk of noncompliance with GAAP, sometimes substantially. In addition, the Web-based format would make updating easier, which would help users stay current with GAAP.⁷ Most agree that the Codification has lived up to its promise.

For individuals (like you) attempting to learn GAAP, the Codification will be invaluable. It streamlines and simplifies how to determine what GAAP is, which will lead to better financial accounting and reporting. We provide references to the Codification throughout this text, using a numbering system. For example, a bracket with a number, such as [1], indicates that the citation to the FASB Codification can be found in the **FASB Codification References** section near the end of the chapter.

⁶The FASB Codification can be accessed at the FASB website. Access to the full functionality of the Codification Research System requires a subscription; reduced-price academic access is available through the American Accounting Association. Prior to the Codification, the profession relied on *FASB 162*, “The Hierarchy of Generally Accepted Accounting Principles,” which defined the meaning of generally accepted accounting principles. In that document, certain documents were deemed more authoritative than others, which led to various levels of GAAP. Fortunately, the Codification does not have different levels of GAAP.

⁷To increase the usefulness of the Codification for public companies, relevant authoritative content issued by the SEC is included in the Codification. In the case of SEC content, an “S” precedes the section number.

ILLUSTRATION 1.4**FASB Codification Framework**

Major Challenges in Financial Reporting

LEARNING OBJECTIVE 4

Describe major challenges in the financial reporting environment.

Since the implementation of GAAP may affect many interests, much discussion occurs about who should develop GAAP and to whom it should apply. We discuss some of the major issues below.

GAAP in a Political Environment

User groups are possibly the most powerful force influencing the development of GAAP. User groups consist of those most interested in or affected by accounting rules. Like lobbyists in our state and national capitals, user groups play a significant role. **GAAP is as much a product of political action as it is of careful logic or empirical findings.** User groups may want particular economic events accounted for or reported in a particular way, and they fight hard to get what they want. They know that the most effective way to influence GAAP is to participate in the formulation of these rules or to try to influence or persuade the formulator of them.

These user groups often target the FASB, to pressure it to influence changes in the existing rules and the development of new ones.⁸ In fact, these pressures have been multiplying. Some influential groups demand that the accounting profession act more quickly and decisively to solve its problems. Other groups resist such action, preferring to implement change more slowly, if at all. **Illustration 1.5** shows the various user groups that apply pressure.

⁸FASB board members acknowledged that they undertook many of the Board's projects, such as "Accounting for Contingencies," "Accounting for Pensions," "Statement of Cash Flows," and "Recognition and Measurement of Financial Assets and Liabilities," due to political pressure.

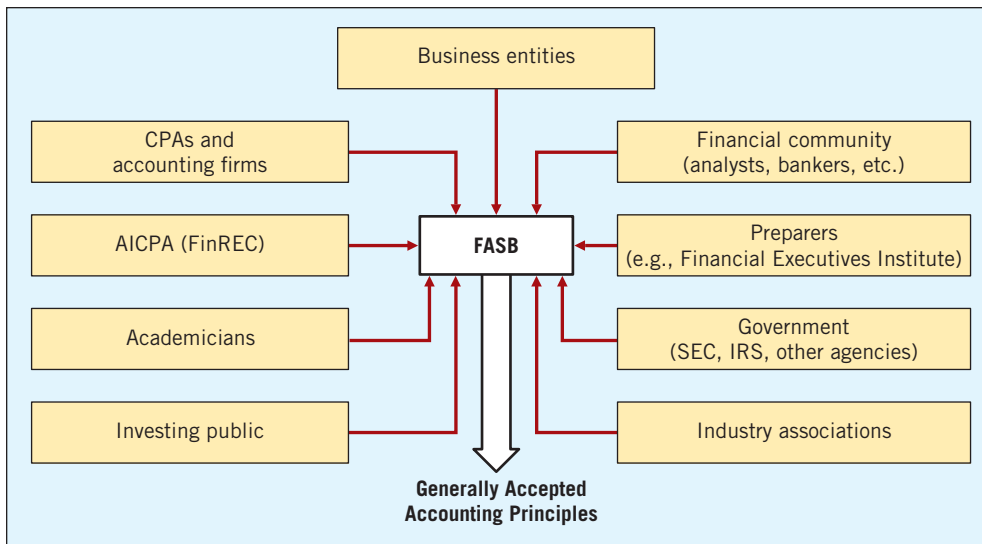

ILLUSTRATION 1.5

User Groups that Influence the Formulation of Accounting Standards

Should there be politics in establishing GAAP for financial accounting and reporting? Why not? We have politics at home; at school; at the fraternity, sorority, and dormitory; at the office; and at church, temple, and mosque. Politics is everywhere. GAAP is part of the real world, and it cannot escape politics and political pressures.

That is not to say that politics in establishing GAAP is a negative force. Considering the **economic consequences**⁹ of many accounting rules, special interest groups should vocalize their reactions to proposed rules. What the Board should *not* do is issue pronouncements that are primarily politically motivated. While paying attention to its constituencies, the Board should base GAAP on sound research and a conceptual framework that has its foundation in economic reality.

Evolving Issue Fair Value, Fair Consequences?

No recent accounting issue better illustrates the economic consequences of accounting than the current debate over the use of fair value accounting for financial assets. Both the FASB and the International Accounting Standards Board (IASB) have standards requiring the use of fair value accounting for financial assets, such as investments and other financial instruments. Fair value provides the most relevant and reliable information for investors about these assets and liabilities. However, in the wake of the credit crisis of 2008, some countries, their central banks, and bank regulators want to suspend fair value accounting, based on concerns that use of fair value accounting, which calls for recording significant losses on poorly performing loans and investments, could scare investors and depositors and lead to a “run on the bank.”

For example, in 2009, Congress ordered the FASB to change its accounting rules so as to reduce the losses banks reported, as the values of their securities had crumbled. These changes were generally supported by banks. But these changes produced a strong reaction from some investors, with one investor

group complaining that the changes would “effectively gut the transparent application of fair value measurement.” The group also says suspending fair value accounting would delay the recovery of the banking system.

Such political pressure on accounting standard-setters is not confined to the United States. For example, in 2008 French President Nicolas Sarkozy urged his European Union counterparts to back changes to accounting rules and give banks and insurers some breathing space amid the market turmoil. And more recently, international finance ministers are urging the FASB and IASB to accelerate their work on accounting standards, including the fair value guidance for financial instruments.

Most recently, IASB chair Hans Hoogervorst indicated that work remains to be done in the fair value debate and that “the dichotomy between historical cost and fair value is not as stark as one would expect.” Hoogervorst noted that while historical cost is to some extent based on fair value, it needs a degree of current measurement to maintain its relevance. It is not free from

⁹*Economic consequences* means the impact of accounting reports on the wealth positions of issuers and users of financial information, and the decision-making behavior resulting from that impact. The resulting behavior of these individuals and groups could have detrimental financial effects on the providers of the financial information. See Stephen A. Zeff, “The Rise of ‘Economic Consequences,’” *Journal of Accountancy* (December 1978), pp. 56–63. We extend appreciation to Professor Zeff for his insights on this chapter.

subjective updating requirements, and it is not necessarily stable. Moreover, historical cost is also vulnerable to abuse. In sum, all the vulnerabilities that are often attributed to fair value accounting can be equally pertinent to historical cost.

It is unclear whether these political pressures will have an effect on fair value accounting, but there is no question that the issue has stirred significant worldwide political debate. In short, the numbers have consequences.

Orenstein, “G20 Finance Ministers Urge FASB, IASB Converge Key Standards by Mid-2013 at the Latest,” FEI Financial Reporting Blog (April 2012); and Speech at the Paris IFRS Conference, <http://www.ifrs.org/Alerts/Conference/Documents/2015/Hans-Hoogervorst-speech-Paris-June-2015.pdf> (June 2015).

Global View

Foreign accounting firms that provide an audit report for a U.S.-listed company are subject to the authority of the accounting oversight board (mandated by the Sarbanes-Oxley Act).

The Expectations Gap

The **Sarbanes-Oxley Act** (as discussed in the opening story) was passed in response to a string of accounting scandals at companies like **Enron**, **Cendant**, **Sunbeam**, **Rite-Aid**, **Xerox**, and **WorldCom**. This law increased the resources for the SEC to combat fraud and curb poor reporting practices.¹⁰ And the SEC has increased its policing efforts, approving new auditor independence rules and materiality guidelines for financial reporting (see **Global View**). In addition, the Sarbanes-Oxley Act introduced sweeping changes to the institutional structure of the accounting profession. The following are some of the key provisions of the legislation.

- Establishes an oversight board, the **Public Company Accounting Oversight Board (PCAOB)**, for accounting practices. The PCAOB has oversight and enforcement authority and establishes auditing, quality control, and independence standards and rules.
- Implements stronger independence rules for auditors. Audit partners, for example, are required to rotate every five years, and auditors are prohibited from offering certain types of consulting services to corporate clients.
- Requires CEOs and CFOs to personally certify that financial statements and disclosures are accurate and complete, and requires CEOs and CFOs to forfeit bonuses and profits when there is an accounting restatement.
- Requires audit committees to be comprised of independent members and members with financial expertise.
- Requires codes of ethics for senior financial officers.

In addition, Section 404 of the Sarbanes-Oxley Act requires public companies to attest to the effectiveness of their internal controls over financial reporting. **Internal controls** are a system of checks and balances designed to prevent and detect fraud and errors. Most companies have these systems in place, but many have never completely documented them. Companies are finding that it is a costly process but perhaps badly needed.

While there continues to be debate about the benefits and costs of Sarbanes-Oxley (especially for smaller companies), studies at the time of the act's implementation provide compelling evidence that there was much room for improvement. For example, one study documented 424 companies with deficiencies in internal control.¹¹ Many problems involved closing the books, revenue recognition deficiencies, reconciling accounts, or dealing with inventory. **SunTrust Bank**, for example, fired three officers after discovering errors in how the company calculates its allowance for bad debts. And **Visteon**, a car parts supplier, said it found problems recording and managing receivables from its largest customer, **Ford Motor**.

Will these changes be enough? The **expectations gap**—what the public thinks accountants *should* do and what accountants think they *can* do—is difficult to close. Due to the number of fraudulent reporting cases, some question whether the profession is doing enough. Although the profession can argue rightfully that accounting cannot be responsible for every financial catastrophe, it must continue to strive to meet the needs of society. However, efforts to meet these needs will become more costly to society. The development of a highly transparent, clear, and reliable system will require considerable resources.

¹⁰Sarbanes-Oxley Act of 2002, H. R. Rep. No. 107-610 (2002).

Financial Reporting Issues

While our reporting model has worked well in capturing and organizing financial information in a useful and reliable fashion, much still needs to be done. For example, if we move to the year 2030 and look back at financial reporting today, we might read the following.

- **Nonfinancial measurements.** Financial reports failed to provide some key performance measures widely used by management, such as customer satisfaction indexes, backlog information, reject rates on goods purchased, as well as the results of companies' sustainability efforts.
- **Forward-looking information.** Financial reports failed to provide forward-looking information needed by present and potential investors and creditors. One individual noted that financial statements in 2020 should have started with the phrase, "Once upon a time," to signify their use of historical cost and accumulation of past events.
- **Soft assets.** Financial reports focused on hard assets (inventory, plant assets) but failed to provide much information about a company's soft assets (intangibles). The best assets are often intangible. Consider **Microsoft's** know-how and market dominance, **Wal-Mart's** expertise in supply chain management, and **Procter & Gamble's** brand image.
- **Timeliness.** Companies only prepared financial statements quarterly and provided audited financials annually. Little to no real-time financial statement information was available.
- **Understandability.** Investors and market regulators were raising concerns about the complexity and lack of understandability of financial reports.

We believe each of these challenges must be met for the accounting profession to provide the type of information needed for an efficient capital allocation process. We are confident that changes will occur, based on these positive signs:

- Already, some companies voluntarily disclose information deemed relevant to investors. Often such information is nonfinancial. For example, banking companies now disclose data on loan growth, credit quality, fee income, operating efficiency, capital management, and management strategy. Increasingly, companies are preparing reports on their sustainability efforts by reporting such information as water use and conservation, carbon impacts, and labor practices. In some cases, "integrated reports" are provided, which incorporate sustainability reports into the traditional annual report, leading some to call for standards for sustainability reporting.
- Initially, companies used the Internet to provide limited financial data. Now, most companies publish their annual reports in several formats on the Web. The most innovative companies offer sections of their annual reports in a format that the user can readily manipulate, such as in an electronic spreadsheet format. Companies also format their financial reports using eXtensible Business Reporting Language (XBRL), which permits quicker and lower-cost access to companies' financial information.
- More accounting standards now require the recording or disclosing of fair value information. For example, companies either record investments in stocks and bonds, debt obligations, and derivatives at fair value, or companies show information related to fair values in the notes to the financial statements. The FASB and the IASB have a converged standard on fair value measures, which should enhance the usefulness of fair value measures in financial statements.
- The FASB is now working on projects that address disclosure effectiveness, a reporting framework for non-public companies, and a simplification initiative. The projects could go a long way toward addressing complexity and understandability of the information in financial statements, allowing for more-effective, less-complex, and flexible reporting to meet the needs of investors.

Changes in these directions will enhance the relevance of financial reporting and provide useful information to financial statement readers.

International Accounting Standards

As indicated by Lawrence Summers, former Secretary of the Treasury, the single most important innovation shaping the capital markets was the idea of generally accepted accounting principles. He went on to say that we need something similar internationally.

Relevant and reliable financial information is a necessity for viable capital markets. Unfortunately, companies outside the United States often prepare financial statements using standards different from U.S. GAAP (or simply GAAP). As a result, international companies such as **Coca-Cola**, **Microsoft**, and **IBM** have to develop financial information in different ways. Beyond the additional costs these companies incur, users of the financial statements often must understand at least two sets of accounting standards. (Understanding one set is hard enough!) It is not surprising, therefore, that there is a growing demand for one set of high-quality international standards.

Global View

IFRS includes the standards, referred to as International Financial Reporting Standards (IFRS), developed by the IASB. The predecessor to the IASB issued International Accounting Standards (IAS).

Current Environment

Presently, there are two sets of rules accepted for international use—GAAP and **International Financial Reporting Standards (IFRS)**, issued by the London-based **International Accounting Standards Board (IASB)**. U.S. companies that list overseas are still permitted to use GAAP, and foreign companies listed on U.S. exchanges are permitted to use IFRS. As you will learn, there are many similarities between GAAP and IFRS (see **Global View**).

Already 120 countries use IFRS, and the European Union now requires all listed companies in Europe (over 7,000 companies) to use it. Most parties recognize that global markets will best be served if only one set of accounting standards is used. For example, the FASB and the IASB formalized their commitment to the convergence of GAAP and IFRS by issuing a memorandum of understanding (often referred to as the Norwalk agreement). The two Boards agreed to use their best efforts to:

- Make their existing financial reporting standards fully compatible as soon as practicable, and
- Coordinate their future work programs to ensure that once achieved, compatibility is maintained.

As a result of this agreement, the two Boards identified a number of short-term and long-term projects that would lead to convergence. For example, one short-term project was for the FASB to issue a rule that permits a fair value option for financial instruments. This rule was issued in 2007, and now the FASB and the IASB follow the same accounting in this area. Conversely, the IASB completed a project related to borrowing costs, which makes IFRS consistent with GAAP. Long-term convergence projects relate to such issues as revenue recognition and leases.

Will Convergence Happen?

Everyone seems to agree that the FASB and the IASB need to work together toward the goal of high-quality, global accounting standards, which result in comparable reporting. By doing so, unnecessary differences between standards used internationally can be reduced or avoided (see **Global View**). However, it seems likely that there will continue to be two sets of financial reporting standards in the world for the foreseeable future. For example, the United States is reluctant to fully adopt IFRS. As the chief accountant of the SEC noted, there is virtually no support for having the SEC mandate IFRS for public companies, and there is little support for the SEC to provide an option allowing U.S. companies to prepare their financial statements under IFRS. In addition, both the FASB and the IASB seem to be taking different approaches to various financial reporting problems, such as the measurement and recognition of financial instruments. Further, the IASB has decided to move forward on the conceptual framework project independent of the FASB.

Because convergence is such an important issue, we provide a discussion of international accounting standards at the end of each chapter called **IFRS Insights**. This feature will help you understand the changes that are taking place in the financial reporting area. In addition, throughout the text, we provide *Global Views* in the margins to help you understand the international reporting environment.

Global View

The adoption of IFRS by U.S. companies would make it easier to compare U.S. and foreign companies, as well as for U.S. companies to raise capital in foreign markets.

What Do the Numbers Mean? Can You Do That?

One of the more difficult issues related to convergence and international accounting standards is that countries have different cultures and customs. For example, the former chair of the IASB explained it this way regarding Europe:

“In the U.K. everything is permitted unless it is prohibited. In Germany, it is the other way around; everything is prohibited unless it is permitted. In the Netherlands, everything is prohibited even if it is permitted. And in France, everything is

permitted even if it is prohibited. Add in countries like Japan, the United States and China, it becomes very difficult to meet the needs of each of these countries.”

With this diversity of thinking around the world, it is understandable why accounting convergence has been so elusive.

Source: Sir D. Tweedie, “Remarks at the Robert P. Maxon Lectureship,” George Washington University (April 7, 2010).

Ethics in the Environment of Financial Accounting

Robert Sack, a noted commentator on the subject of accounting ethics, observed, “Based on my experience, new graduates tend to be idealistic . . . thank goodness for that! Still it is very dangerous to think that your armor is all in place and say to yourself, ‘I would have never given in to that.’ The pressures don’t explode on us; they build, and we often don’t recognize them until they have us.”

These observations are particularly appropriate for anyone entering the business world. In accounting, as in other areas of business, we frequently encounter ethical dilemmas. Some of these dilemmas are simple and easy to resolve. However, many are not, requiring difficult choices among allowable alternatives.

Companies that concentrate on “maximizing the bottom line,” “facing the challenges of competition,” and “stressing short-term results” place accountants in an environment of conflict and pressure. Basic questions such as, “Is this way of communicating financial information good or bad?” “Is it right or wrong?” and “What should I do in this circumstance?” cannot always be answered by simply adhering to GAAP or following the rules of the profession. Technical competence is not enough when encountering ethical decisions.

Doing the right thing is not always easy or obvious. The pressures “to bend the rules,” “to play the game,” or “to just ignore it” can be considerable. For example, “Will my decision affect my job performance negatively?” “Will my superiors be upset?” and “Will my colleagues be unhappy with me?” are often questions business people face in making a tough ethical decision. The decision is more difficult because there is no comprehensive ethical system to provide guidelines.

Time, job, client, personal, and peer pressures can complicate the process of ethical sensitivity and selection among alternatives. Throughout this text, **we present ethical considerations to help sensitize you** to the type of situations you may encounter in the performance of your professional responsibility.

Conclusion

Bob Herz, a former FASB chair, believes that there are three fundamental considerations the FASB must keep in mind in its rule-making activities: (1) improvement in financial reporting, (2) simplification of the accounting literature and the rule-making process, and (3) international convergence. These are notable objectives, and the Board is making good progress on all three dimensions. Issues such as off-balance-sheet financing, measurement of fair values, enhanced criteria for revenue recognition, and stock option accounting are examples of where the Board has exerted leadership. Improvements in financial reporting should follow.

Also, the Board is making it easier to understand what GAAP is. GAAP has been contained in a number of different documents. The lack of a single source makes it difficult to access and understand generally accepted principles. As discussed earlier, the Codification now organizes existing GAAP by accounting topic regardless of its source (FASB Statements, APB Opinions, and so on). The codified standards are then considered to be GAAP and to be authoritative. All other literature will be considered nonauthoritative.

Finally, international standard-setting collaboration continues. Some projects already are completed and differences eliminated. Many more are on the drawing board. The profession has many challenges, but it has responded in a timely, comprehensive, and effective manner.

Learning Objectives Review

1 Describe the financial reporting environment.

Companies provide **four primary financial statements** of financial reporting: (1) the balance sheet, (2) the income statement, (3) the statement of cash flows, and (4) the statement of owners' or stockholders' equity. Financial reporting other than financial statements may take various forms. Examples include the president's letter and supplementary schedules in the corporate annual report, prospectuses, reports filed with government agencies, news releases, management's forecasts, and descriptions of a company's social or environmental impact.

The **objective of general-purpose financial reporting** is to provide financial information about the reporting entity that is useful to present and potential equity investors, lenders, and other creditors in decisions about providing resources to the entity through equity investments and loans or other forms of credit. Information that is decision-useful to investors may also be helpful to other users of financial reporting who are not investors.

To achieve this objective, the accounting profession has attempted to **develop a set of standards that is generally accepted** and universally practiced. Without this set of standards, each company would have to develop its own standards. Readers of financial statements would have to familiarize themselves with every company's peculiar accounting and reporting practices. As a result, it would be almost impossible to prepare statements that could be compared.

2 Identify the major policy-setting bodies and their role in the standard-setting process.

The *Securities and Exchange Commission (SEC)* is a federal agency that has the broad powers to prescribe, in whatever detail it desires, the accounting standards to be employed by companies that fall within its jurisdiction. The *American Institute of Certified Public Accountants (AICPA)* issued standards through its Committee on Accounting Procedure and Accounting Principles Board. The *Financial Accounting Standards Board (FASB)* establishes and improves standards of financial accounting and reporting for the guidance and education of the public.

3 Explain the meaning of generally accepted accounting principles (GAAP) and the role of the Codification for GAAP.

Generally accepted accounting principles (GAAP) are those principles that have substantial authoritative support, such as FASB standards, interpretations, and Staff Positions, APB Opinions and interpretations, AICPA Accounting Research Bulletins, and other authoritative pronouncements. All these documents and others are now classified in one document referred to as the Codification. The purpose of the Codification is to simplify user access to all authoritative U.S. GAAP. The Codification is the means by which GAAP is documented, presented, and updated.

4 Describe major challenges in the financial reporting environment.

One major challenge is that user groups may want particular economic events accounted for or reported in a particular way, and they fight hard to get what they want. They especially target the FASB to influence changes in existing GAAP and in the development of new rules. A second challenge is that financial reports fail to provide (1) some key performance measures widely used by management, (2) forward-looking information needed by investors and creditors, (3) sufficient information on a company's soft assets (intangibles), (4) real-time financial information, and (5) easy-to-comprehend

information. Finally, financial accountants are called on for moral discernment and ethical decision-making. Decisions sometimes are difficult because a public consensus has not emerged to formulate a comprehensive ethical system that provides guidelines in making ethical judgments.

WileyPLUS

Exercises, Problems, Problem Solution Walkthrough Videos, and many more assessment tools and resources are available for practice in WileyPLUS.

Questions

- Differentiate broadly between financial accounting and managerial accounting.
- Differentiate between "financial statements" and "financial reporting."
- How does accounting help the capital allocation process?
- What is the objective of financial reporting?
- Briefly explain the meaning of decision-usefulness in the context of financial reporting.
- Of what value is a common set of standards in financial accounting and reporting?
- What is the likely limitation of "general-purpose financial statements"?
- In what way is the Securities and Exchange Commission concerned about and supportive of accounting principles and standards?
- What was the Committee on Accounting Procedure, and what were its accomplishments and failings?
- For what purposes did the AICPA create the Accounting Principles Board?
- Distinguish between Opinions of the Accounting Principles Board and Accounting Standards Updates.
- If you had to explain or define "generally accepted accounting principles or standards," what essential characteristics would you include in your explanation?
- In what ways was it felt that the pronouncements issued by the Financial Accounting Standards Board would carry greater weight than the opinions issued by the Accounting Principles Board?
- How are FASB preliminary views and FASB exposure drafts related to FASB "statements"?
- Distinguish between FASB Accounting Standards Updates and FASB Statements of Financial Accounting Concepts.
- What is Rule 203 of the Code of Professional Conduct?
- The chair of the FASB at one time noted that "the flow of standards can only be slowed if (1) producers focus less on quarterly earnings per share and tax benefits and more on quality products, and (2) accountants and lawyers rely less on rules and law and more on professional judgment and conduct." Explain his comment.
- Explain the role of the Emerging Issues Task Force in establishing generally accepted accounting principles.
- What is the difference between the Codification and the Codification Research System?
- What are the primary advantages of having a Codification of generally accepted accounting principles?
- What are the sources of pressure that change and influence the development of GAAP?
- Some individuals have indicated that the FASB must be cognizant of the economic consequences of its pronouncements. What is meant by "economic consequences"? What dangers exist if politics play too much of a role in the development of GAAP?
- If you were given complete authority in the matter, how would you propose that GAAP should be developed and enforced?
- One writer recently noted that 99.4 percent of all companies prepare statements that are in accordance with GAAP. Why then is there such concern about fraudulent financial reporting?
- What is the "expectations gap"? What is the profession doing to try to close this gap?
- The Sarbanes-Oxley Act was enacted to combat fraud and curb poor reporting practices. What are some key provisions of this legislation?
- What are some of the major challenges facing the accounting profession?
- How are financial accountants challenged in their work to make ethical decisions? Is technical mastery of GAAP not sufficient to the practice of financial accounting?

Concepts for Analysis

CA1.1 (LO 2) (FASB and Standard-Setting) Presented below are four statements which you are to identify as true or false. If false, explain why the statement is false.

1. GAAP is the term used to indicate the whole body of FASB authoritative literature.
2. Any company claiming compliance with GAAP must comply with most standards and interpretations but does not have to follow the disclosure requirements.
3. The primary governmental body that has influence over the FASB is the SEC.
4. The FASB has a government mandate and therefore does not have to follow due process in issuing a standard.

CA1.2 (LO 1, 2) (GAAP and Standard-Setting) Presented below are four statements which you are to identify as true or false. If false, explain why the statement is false.

1. The objective of financial statements emphasizes a stewardship approach for reporting financial information.
2. The purpose of the objective of financial reporting is to prepare a balance sheet, an income statement, a statement of cash flows, and a statement of owners' or stockholders' equity.
3. Because they are generally shorter, FASB interpretations are subject to less due process, compared to FASB standards.
4. The objective of financial reporting uses an entity rather than a proprietary approach in determining what information to report.

CA1.3 (LO 1, 2, 4) (Financial Reporting and Accounting Standards) Answer the following multiple-choice questions.

1. GAAP stands for:
 - a. governmental auditing and accounting practices.
 - b. generally accepted attest principles.
 - c. government audit and attest policies.
 - d. generally accepted accounting principles.
2. Accounting standard-setters use the following process in establishing accounting standards:
 - a. Research, exposure draft, discussion paper, standard.
 - b. Discussion paper, research, exposure draft, standard.
 - c. Research, preliminary views, discussion paper, standard.
 - d. Research, discussion paper, exposure draft, standard.
3. GAAP is comprised of:
 - a. FASB standards, interpretations, and concepts statements.
 - b. FASB financial standards.
 - c. FASB standards, interpretations, EITF consensuses, and accounting rules issued by FASB predecessor organizations.
 - d. any accounting guidance included in the FASB Codification.
4. The authoritative status of the conceptual framework is as follows.
 - a. It is used when there is no standard or interpretation related to the reporting issues under consideration.
 - b. It is not as authoritative as a standard but takes precedence over any interpretation related to the reporting issue.
 - c. It takes precedence over all other authoritative literature.
 - d. It has no authoritative status.
5. The objective of financial reporting places most emphasis on:
 - a. reporting to capital providers.
 - b. reporting on stewardship.
 - c. providing specific guidance related to specific needs.
 - d. providing information to individuals who are experts in the field.

6. General-purpose financial statements are prepared primarily for:
 - a. internal users.
 - b. external users.
 - c. auditors.
 - d. government regulators.
7. Economic consequences of accounting standard-setting means:
 - a. standard-setters must give first priority to ensuring that companies do not suffer any adverse effect as a result of a new standard.
 - b. standard-setters must ensure that no new costs are incurred when a new standard is issued.
 - c. the objective of financial reporting should be politically motivated to ensure acceptance by the general public.
 - d. accounting standards can have detrimental impacts on the wealth levels of the providers of financial information.
8. The expectations gap is:
 - a. what financial information management provides and what users want.
 - b. what the public thinks accountants should do and what accountants think they can do.
 - c. what the governmental agencies want from standard-setting and what the standard-setters provide.
 - d. what the users of financial statements want from the government and what is provided.

CA1.4 (LO 1) (Financial Accounting) Omar Morena has recently completed his first year of studying accounting. His instructor for next semester has indicated that the primary focus will be the area of financial accounting.

Instructions

- a. Differentiate between financial accounting and managerial accounting.
- b. One part of financial accounting involves the preparation of financial statements. What are the financial statements most frequently provided?
- c. What is the difference between financial statements and financial reporting?

CA1.5 (LO 1) (Objective of Financial Reporting) Karen Sepan, a recent graduate of the local state university, is presently employed by a large manufacturing company. She has been asked by Jose Martinez, controller, to prepare the company's response to a current Preliminary Views published by the Financial Accounting Standards Board (FASB). Sepan knows that the FASB has a conceptual framework, and she believes that these concept statements could be used to support the company's response to the Preliminary Views. She has prepared a rough draft of the response citing the objective of financial reporting.

Instructions

- a. Identify the objective of financial reporting.
- b. Describe the level of sophistication expected of the users of financial information by the objective of financial reporting.

CA1.6 (LO 1, 4) (Accounting Numbers and the Environment) The fallout from the financial crisis of 2008 included an overheated real estate market, fueled by home purchase incentives, poor lending practices, and securitization through high-risk, mortgage-backed securities, which led to a near collapse of global capital markets. As a consequence, many have argued that if the financial institutions had been required to report their loans (and loan-backed investments) at fair value instead of cost, large losses would have been reported earlier. This would have signaled regulators to the problems in the mortgage markets and therefore minimized the losses to U.S. taxpayers.

Instructions

Explain how reported accounting numbers might affect an individual's perceptions and actions. Cite two examples.

CA1.7 (LO 1, 3) Writing (Need for GAAP) Some argue that having various organizations establish accounting principles is wasteful and inefficient. Rather than mandating accounting rules, each company could voluntarily disclose the type of information it considered important. In addition, if an investor wants additional information, the investor could contact the company and pay to receive the additional information desired.

Instructions

Comment on the appropriateness of this viewpoint.

CA1.8 (LO 2) (AICPA's Role in Rule-Making) One of the major groups that has been involved in the standard-setting process is the American Institute of Certified Public Accountants. Initially, it was the primary organization that established accounting principles in the United States. Subsequently, it relinquished its power to the FASB.

Instructions

- Identify the two committees of the AICPA that established accounting principles prior to the establishment of the FASB.
- Speculate as to why these two organizations failed. In your answer, identify steps the FASB has taken to avoid failure.
- What is the present role of the AICPA in the rule-making environment?

CA1.9 (LO 2) (FASB Role in Rule-Making) A press release announcing the appointment of the trustees of the new Financial Accounting Foundation stated that the Financial Accounting Standards Board (to be appointed by the trustees) “will become the established authority for setting accounting principles under which corporations report to the shareholders and others” (AICPA news release July 20, 1972).

Instructions

- Identify the sponsoring organization of the FASB and the process by which the FASB arrives at a decision and issues an accounting standard.
- Indicate the major types of pronouncements issued by the FASB and the purposes of each of these pronouncements.

CA1.10 (LO 2, 4) Writing (Politicization of GAAP) Some accountants have said that politicization in the development and acceptance of generally accepted accounting principles (i.e., rule-making) is taking place. Some use the term “politicization” in a narrow sense to mean the influence by governmental agencies, particularly the Securities and Exchange Commission, on the development of generally accepted accounting principles. Others use it more broadly to mean the compromise that results when the bodies responsible for developing generally accepted accounting principles are pressured by interest groups (SEC, American Accounting Association, businesses through their various organizations, Institute of Management Accountants, financial analysts, bankers, lawyers, and so on).

Instructions

- The Committee on Accounting Procedure of the AICPA was established in the mid- to late 1930s and functioned until 1959, at which time the Accounting Principles Board came into existence. In 1973, the Financial Accounting Standards Board was formed and the APB went out of existence. Do the reasons these groups were formed, their methods of operation while in existence, and the reasons for the demise of the first two indicate an increasing politicization (as the term is used in the broad sense) of accounting standard-setting? Explain your answer by indicating how the CAP, the APB, and the FASB operated or operate. Cite specific developments that tend to support your answer.
- What arguments can be raised to support the “politicization” of accounting rule-making?
- What arguments can be raised against the “politicization” of accounting rule-making?

(CMA adapted)

CA1.11 (LO 2, 4) (Models for Setting GAAP) Presented below are three models for setting GAAP.

- The purely political approach, where national legislative action decrees GAAP.
- The private, professional approach, where GAAP is set and enforced by private professional actions only.
- The public/private mixed approach, where GAAP is basically set by private-sector bodies that behave as though they were public agencies and whose standards to a great extent are enforced through governmental agencies.

Instructions

- Which of these three models best describes standard-setting in the United States? Provide justification for your answer.
- Why do companies, financial analysts, labor unions, industry trade associations, and others take such an active interest in standard-setting?
- Cite an example of a group other than the FASB that attempts to establish accounting standards. Speculate as to why another group might wish to set its own standards.

CA1.12 (LO 2, 3) Groupwork (GAAP Terminology) Wayne Rogers, an administrator at a major university, recently said, “I’ve got some CDs in my IRA, which I set up to beat the IRS.” As elsewhere, in the world of accounting and finance, it often helps to be fluent in abbreviations and acronyms.

Instructions

Presented below is a list of common accounting acronyms. Identify the term for which each acronym stands, and provide a brief definition of each term.

- | | | |
|-----------|-----------|----------|
| a. AICPA. | e. FAF. | i. FASB. |
| b. CAP. | f. FASAC. | j. SEC. |
| c. EITF. | g. GAAP. | k. IASB. |
| d. APB. | h. CPA. | |

CA1.13 (LO 2, 4) Ethics (Rule-Making Issues) When the FASB issues new pronouncements, the implementation date is usually 12 months from date of issuance, with early implementation encouraged. Karen Weller, controller, discusses with her financial vice president the need for early implementation of a rule that would result in a fairer presentation of the company’s financial condition and earnings. When the financial vice president determines that early implementation of the rule will adversely affect the reported net income for the year, he discourages Weller from implementing the rule until it is required.

Instructions

Answer the following questions.

- What, if any, is the ethical issue involved in this case?
- Is the financial vice president acting improperly or immorally?
- What does Weller have to gain by advocacy of early implementation?
- Which stakeholders might be affected by the decision against early implementation?

(CMA adapted)

CA1.14 (LO 2) (Securities and Exchange Commission) The U.S. Securities and Exchange Commission (SEC) was created in 1934 and consists of five commissioners and a large professional staff. The SEC professional staff is organized into five divisions and several principal offices. The primary objective of the SEC is to support fair securities markets. The SEC also strives to foster enlightened stockholder participation in corporate decisions of publicly traded companies. The SEC has a significant presence in financial markets, the development of accounting practices, and corporation-shareholder relations, and has the power to exert influence on entities whose actions lie within the scope of its authority.

Instructions

- Explain from where the Securities and Exchange Commission receives its authority.
- Describe the official role of the Securities and Exchange Commission in the development of financial accounting theory and practices.
- Discuss the interrelationship between the Securities and Exchange Commission and the Financial Accounting Standards Board with respect to the development and establishment of financial accounting theory and practices.

(CMA adapted)

CA1.15 (LO 4) Ethics (Financial Reporting Pressures) Presented below is abbreviated testimony from Troy Normand in the **WorldCom** case. He was a manager in the corporate reporting department and is one of five individuals who pleaded guilty. He is testifying in hopes of receiving no prison time when he is ultimately sentenced.

Q. Mr. Normand, if you could just describe for the jury how the meeting started and what was said during the meeting?

A. I can’t recall exactly who initiated the discussion, but right away Scott Sullivan acknowledged that he was aware we had problems with the entries, David Myers had informed him, and we were considering resigning.

He said that he respected our concerns but that we weren’t being asked to do anything that he believed was wrong. He mentioned that he acknowledged that the company had lost focus quite a bit due to the preparations for the Sprint merger, and that he was putting plans in place and projects in place to try to determine where the problems were, why the costs were so high.

He did say he believed that the initial statements that we produced, that the line costs in those statements could not have been as high as they were, that he believed something was wrong and there was no way that the costs were that high.

I informed him that I didn’t believe the entry we were being asked to do was right, that I was scared, and I didn’t want to put myself in a position of going to jail for him or the company. He responded that

he didn't believe anything was wrong, nobody was going to be going to jail, but that if it later was found to be wrong, that he would be the person going to jail, not me.

He asked that I stay, don't jump off the plane, let him land it softly, that's basically how he put it. And he mentioned that he had a discussion with Bernie Ebbers, asking Bernie to reduce projections going forward and that Bernie had refused.

Q. Mr. Normand, you said that Mr. Sullivan said something about don't jump out of the plane. What did you understand him to mean when he said that?

A. Not to quit.

Q. During this meeting, did Mr. Sullivan say anything about whether you would be asked to make entries like this in the future?

A. Yes, he made a comment that from that point going forward we wouldn't be asked to record any entries, high-level late adjustments, that the numbers would be the numbers.

Q. What did you understand that to be mean, the numbers would be the numbers?

A. That after the preliminary statements were issued, with the exception of any normal transaction, valid transaction, we wouldn't be asked to be recording any more late entries.

Q. I believe you testified that Mr. Sullivan said something about the line cost numbers not being accurate. Did he ask you to conduct any analysis to determine whether the line cost numbers were accurate?

A. No, he did not.

Q. Did anyone ever ask you to do that?

A. No.

Q. Did you ever conduct any such analysis?

A. No, I didn't.

Q. During this meeting, did Mr. Sullivan ever provide any accounting justification for the entry you were asked to make?

A. No, he did not.

Q. Did anything else happen during the meeting?

A. I don't recall anything else.

Q. How did you feel after this meeting?

A. Not much better actually. I left his office not convinced in any way that what we were asked to do was right. However, I did question myself to some degree after talking with him wondering whether I was making something more out of what was really there.

Instructions

Answer the following questions.

- What appears to be the ethical issue involved in this case?
- Is Troy Normand acting improperly or immorally?
- What would you do if you were Troy Normand?
- Who are the major stakeholders in this case?

CA1.16 (LO 4) (Economic Consequences) Presented below are comments made in the financial press.

Instructions

Prepare responses to the requirements in each item.

- Rep. John Dingell, at one time the ranking Democrat on the House Commerce Committee, threw his support behind the FASB's controversial derivatives accounting standard and encouraged the FASB to adopt the rule promptly. Indicate why a member of Congress might feel obligated to comment on this proposed FASB standard.
- In a strongly worded letter to Senator Lauch Faircloth (R-NC) and House Banking Committee Chairman Jim Leach (R-IA), the American Institute of Certified Public Accountants (AICPA) cautioned against government intervention in the accounting standard-setting process, warning that it had the potential of jeopardizing U.S. capital markets. Explain how government intervention could possibly affect capital markets adversely.

CA1.17 (LO 4) Groupwork (GAAP and Economic Consequences) The following letter was sent to the SEC and the FASB by leaders of the business community.

Dear Sirs:

The FASB has been struggling with accounting for derivatives and hedging for many years. The FASB has now developed, over the last few weeks, a new approach that it proposes to adopt as a final standard. We understand that the Board intends to adopt this new approach as a final standard without exposing it for public comment and debate, despite the evident complexity of the new approach, the speed with which it has been developed and the significant changes to the exposure draft since it was released more than one year ago. Instead, the Board plans to allow only a brief

review by selected parties, limited to issues of operability and clarity, and would exclude questions as to the merits of the proposed approach.

As the FASB itself has said throughout this process, its mission does not permit it to consider matters that go beyond accounting and reporting considerations. Accordingly, the FASB may not have adequately considered the wide range of concerns that have been expressed about the derivatives and hedging proposal, including concerns related to the potential impact on the capital markets, the weakening of companies' ability to manage risk, and the adverse control implications of implementing costly and complex new rules imposed at the same time as other major initiatives, including the Year 2000 issues and a single European currency. We believe that these crucial issues must be considered, if not by the FASB, then by the Securities and Exchange Commission, other regulatory agencies, or Congress.

We believe it is essential that the FASB solicit all comments in order to identify and address all material issues that may exist before issuing a final standard. We understand the desire to bring this process to a prompt conclusion, but the underlying issues are so important to this nation's businesses, the customers they serve and the economy as a whole that expediency cannot be the dominant consideration. As a result, we urge the FASB to expose its new proposal for public comment, following the established due process procedures that are essential to acceptance of its standards, and providing sufficient time to affected parties to understand and assess the new approach.

We also urge the SEC to study the comments received in order to assess the impact that these proposed rules may have on the capital markets, on companies' risk management practices, and on management and financial controls. These vital public policy matters deserve consideration as part of the Commission's oversight responsibilities.

We believe that these steps are essential if the FASB is to produce the best possible accounting standard while minimizing adverse economic effects and maintaining the competitiveness of U.S. businesses in the international marketplace.

Very truly yours,

(This letter was signed by the chairs of 22 of the largest U.S. companies.)

Instructions

Answer the following questions.

- Explain the "due process" procedures followed by the FASB in developing a financial reporting standard.
- What is meant by the term "economic consequences" in accounting standard-setting?
- What economic consequences arguments are used in this letter?
- What do you believe is the main point of the letter?
- Why do you believe a copy of this letter was sent by the business community to influential members of the U.S. Congress?

Using Your Judgment

Financial Reporting Problem

Beverly Crusher, a new staff accountant, is confused because of the complexities involving accounting standard-setting. Specifically, she is confused by the number of bodies issuing financial reporting standards of one kind or another and the level of authoritative support that can be attached to these reporting standards. Beverly decides that she must review the environment in which accounting standards are set, if she is to increase her understanding of the accounting profession.

Beverly recalls that during her accounting education there was a chapter or two regarding the environment of financial accounting and the development of GAAP. However, she remembers that her instructor placed little emphasis on these chapters.

Instructions

- Help Beverly by identifying key organizations involved in accounting rule-making.
- Beverly asks for guidance regarding authoritative support. Please assist her by explaining what is meant by authoritative support.
- Give Beverly a historical overview of how rule-making has evolved so that she will not feel that she is the only one to be confused.
- What authority for compliance with GAAP has existed throughout the history of rule-making?

Bridge to the Profession

Codification Exercises

Academic access to the FASB Codification is available through university subscriptions, obtained from the American Accounting Association. This subscription covers an unlimited number of students within a single institution. Once this access has been obtained by your school, you should log in to prepare responses to the following exercises.

CE1.1 Describe the main elements of the link labeled “Help, FAQ, Learning Guide, and About the Codification.”

CE1.2 Describe the procedures for providing feedback.

CE1.3 Briefly describe the purpose and content of the “What’s New” link.

Codification Research Case

As a newly enrolled accounting major, you are anxious to better understand accounting institutions and sources of accounting literature. As a first step, you decide to explore the FASB Conceptual Framework.

Instructions

Go to the FASB website to access the FASB Concepts Statements. When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following items. (Provide paragraph citations.)

- What is the objective of financial reporting?
- What other means are there of communicating information, besides financial statements?
- Indicate some of the users and the information they are most directly concerned with in economic decision-making.

Additional Professional Resources

Go to WileyPLUS for other career-readiness resources, such as career coaching, internship opportunities, and CPAexcel prep.

IFRS Insights

LEARNING OBJECTIVE 5

Compare GAAP and IFRS and their standard-setting process.

Most agree that there is a need for one set of international accounting standards. Here is why:

- **Multinational corporations.** Today’s companies view the entire world as their market. For example, **Coca-Cola**, **Intel**, and **McDonald’s** generate more than 50 percent of their sales outside the United States, and many foreign companies, such as **Toyota**, **Nestlé**, and **Sony**, find their largest market to be the United States.
- **Mergers and acquisitions.** The mergers between **Fiat/Chrysler** and **Vodafone/Mannesmann** suggest that we will see even more such business combinations in the future.
- **Information technology.** As communication barriers continue to topple through advances in technology, companies and individuals in different countries and markets are becoming more comfortable buying and selling goods and services from one another.
- **Financial markets.** Financial markets are of international significance today. Whether it is currency, equity securities (stocks), bonds, or derivatives, there are active markets throughout the world trading these types of instruments.

Relevant Facts

Following are the key similarities and differences between GAAP (the standards issued by the Financial Accounting Standards Board) and IFRS related to the financial reporting environment.

Similarities

- Generally accepted accounting principles (GAAP) for U.S. companies are developed by the Financial Accounting Standards Board (FASB). The FASB is a private organization. The Securities and Exchange Commission (SEC) exercises oversight over the actions of the FASB. The IASB is also a private organization. Oversight over the actions of the IASB is regulated by IOSCO.
- Both the IASB and the FASB have essentially the same governance structure, that is, a Foundation that provides oversight, a Board, an Advisory Council, and an Interpretations Committee. In addition, a general body that involves the public interest is part of the governance structure.

- The FASB relies on the SEC for regulation and enforcement of its standards. The IASB relies primarily on IOSCO for regulation and enforcement of its standards.
- Both the IASB and the FASB are working together to find common grounds for convergence. A good example is the recent issuance of a new standard on revenue recognition that both organizations support.

Differences

- GAAP is more detailed or rules-based. IFRS tends to be simpler and more flexible in its accounting and disclosure requirements. The difference in approach has resulted in a debate about the merits of principles-based versus rules-based standards.
- Differences between GAAP and IFRS should not be surprising because standard-setters have developed standards in response to different user needs. In some countries, the primary users of financial statements are private investors. In others, the primary users are tax authorities or central government planners. In the United States, investors and creditors have driven accounting-standard formulation.

About the Numbers

World markets are increasingly intertwined. International consumers drive Japanese cars, wear Italian shoes and Scottish woolens, drink Brazilian coffee and Indian tea, eat Swiss chocolate bars, sit on Danish furniture, watch U.S. movies, and use Arabian oil. The tremendous variety and volume of both exported and imported goods indicates the extensive involvement in international trade—for many companies, the world is their market. To provide some indication of the extent of globalization of economic activity, **Illustration IFRS1.1** provides a listing of the top 20 global companies in terms of sales.

ILLUSTRATION IFRS1.1 Global Companies

| Rank | Company | Country | Revenues (\$ millions) | Rank | Company | Country | Revenues (\$ millions) |
|------|---------------------------------|-------------|---------------------------|------|-------------------------------|-------------|---------------------------|
| 1 | Wal-Mart Stores | U.S. | \$509,343 | 11 | Apple | U.S. | \$229,234 |
| 2 | State Grid | China | 348,903 | 12 | Samsung Electronics | South Korea | 211,940 |
| 3 | Sinopec Group | China | 326,953 | 13 | McKesson | U.S. | 208,357 |
| 4 | China National Petroleum | China | 326,008 | 14 | Glencore International | Switzerland | 205,476 |
| 5 | Royal Dutch Shell | Netherlands | 311,870 | 15 | United Health Group | U.S. | 201,159 |
| 6 | Toyota Motor | Japan | 265,172 | 16 | Daimler | Germany | 185,235 |
| 7 | Volkswagen | Germany | 260,028 | 17 | CVS Health | U.S. | 184,765 |
| 8 | BP | U.K. | 244,582 | 18 | Amazon.com | U.S. | 177,866 |
| 9 | ExxonMobil | U.S. | 244,363 | 19 | EXOR Group | Italy | 161,677 |
| 10 | Berkshire Hathaway | U.S. | 242,137 | 20 | AT&T | U.S. | 160,546 |

As capital markets are increasingly integrated, companies have greater flexibility in deciding where to raise capital. In the absence of market integration, there can be company-specific factors that make it cheaper to raise capital and list/trade securities in one location versus another. With the integration of capital markets, the automatic linkage between the location of the company and location of the capital market is loosening. As a result, companies have expanded choices of where to raise capital, either equity or debt. The move toward adoption of International Financial Reporting Standards has and will continue to facilitate this movement.

International Standard-Setting Organizations

For many years, many nations have relied on their own standard-setting organizations. For example, Canada has the Accounting Standards Board, Japan has the Accounting Standards Board of Japan, Germany has the German Accounting Standards Committee, and the United States has the Financial Accounting Standards Board (FASB). The standards issued by these organizations are sometimes principles-based, rules-based, tax-oriented, or business-based. In other words, they often differ in concept and objective. Starting in 2000, two major standard-setting bodies have emerged as the primary standard-setting bodies in the world. One organization is based in London, United Kingdom, and is called the **International Accounting Standards Board (IASB)**. The IASB issues **International Financial Reporting Standards (IFRS)**, which are used on most foreign exchanges. These standards may also be used by foreign companies listing on U.S. securities exchanges. As indicated earlier, IFRS is presently used in 120 countries and is rapidly gaining acceptance in other countries as well.

It is generally believed that IFRS has the best potential to provide a common platform on which companies can report and investors can compare financial information. As a result, our discussion focuses

on IFRS and the organization involved in developing these standards—the International Accounting Standards Board (IASB). (A detailed discussion of the U.S. system is provided in the chapter.) The two organizations that have a role in international standard-setting are the **International Organization of Securities Commissions (IOSCO)** and the IASB.

International Organization of Securities Commissions (IOSCO) The International Organization of Securities Commissions (IOSCO) does not set accounting standards. Instead, this organization is dedicated to ensuring that the global markets can operate in an efficient and effective basis. The member agencies (such as from France, Germany, New Zealand, and the SEC) have resolved to:

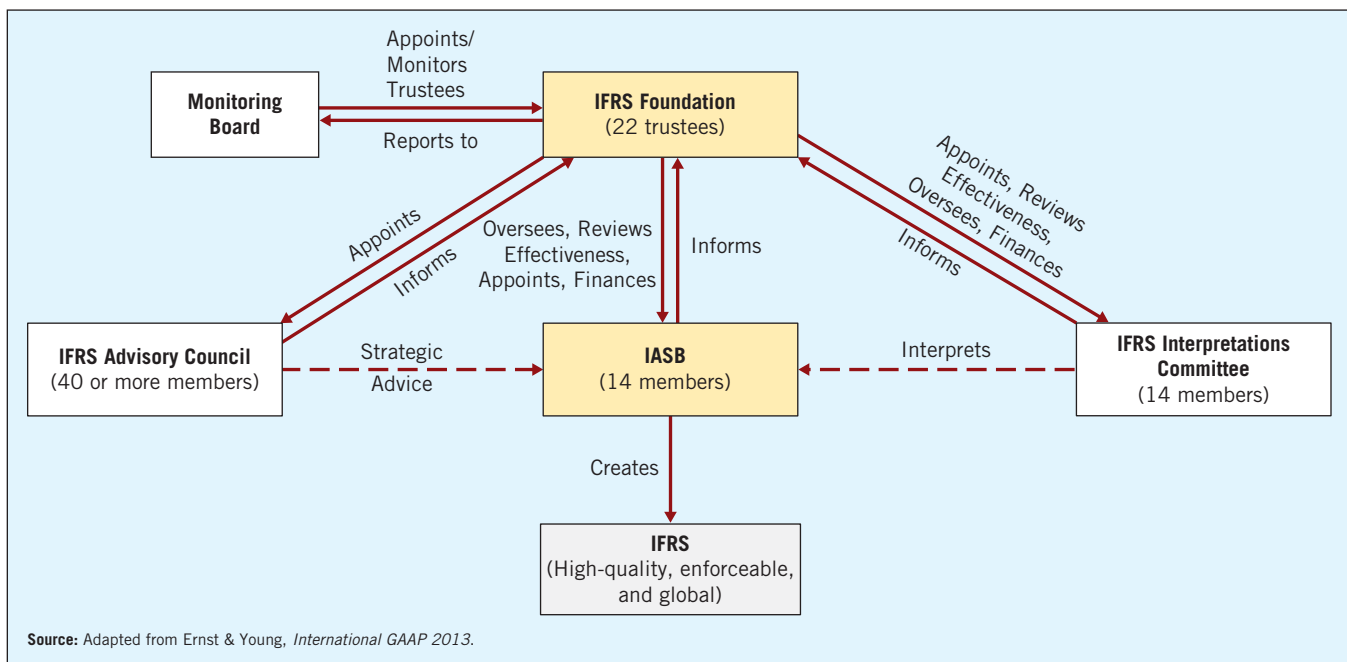

- Cooperate to promote high standards of regulation in order to maintain just, efficient, and sound markets.
- Exchange information on their respective experiences in order to promote the development of domestic markets.
- Unite their efforts to establish standards and an effective surveillance of international securities transactions.
- Provide mutual assistance to promote the integrity of the markets by a rigorous application of the standards and by effective enforcement against offenses.

A landmark year for IOSCO was 2005 when it endorsed the IOSCO Memorandum of Understanding (MOU) to facilitate cross-border cooperation, reduce global systemic risk, protect investors, and ensure fair and efficient securities markets.

International Accounting Standards Board (IASB) The standard-setting structure internationally is composed of four organizations—the International Accounting Standards Committee Foundation, the International Accounting Standards Board (IASB), a Standards Advisory Council, and an International Financial Reporting Interpretations Committee (IFRIC). The trustees of the **International Accounting Standards Committee Foundation (IASCF)** select the members of the IASB and the Standards Advisory Council, fund their activities, and generally oversee the IASB's activities. The IASB is the major operating unit in this four-part structure. Its mission is to develop, in the public interest, a single set of high-quality and understandable IFRS for general-purpose financial statements.

In addition to research help from its own staff, the IASB relies on the expertise of various task force groups formed for various projects and on the **Standards Advisory Council (SAC)**. The SAC consults with the IASB on major policy and technical issues and also helps select task force members. IFRIC develops implementation guidance for consideration by the IASB. **Illustration IFRS1.2** shows the current organizational structure for the setting of international standards.

ILLUSTRATION IFRS1.2 International Standard-Setting Structure

As indicated, the standard-setting structure internationally is very similar to the standard-setting structure in the United States (see Illustration 1.2). One notable difference is the size of the Board—the IASB has 14 members, while the FASB has just seven members. The larger IASB reflects the need for broader geographic representation in the international setting.

Types of Pronouncements Following a due process very similar to that used by the FASB, the IASB issues three major types of pronouncements:

1. International Financial Reporting Standards.
2. The Conceptual Framework for Financial Reporting.
3. International Financial Reporting Interpretations.

International Financial Reporting Standards Financial accounting standards issued by the IASB are referred to as International Financial Reporting Standards (IFRS). The IASB has issued 17 of these standards to date, covering such subjects as business combinations and share-based payments. Prior to the IASB (formed in 2001), standard-setting on the international level was done by the International Accounting Standards Committee, which issued International Accounting Standards (IAS). The committee issued 41 IASs, many of which have been amended or superseded by the IASB. Those still remaining are considered under the umbrella of IFRS.

The Conceptual Framework for Financial Reporting As part of a long-range effort to move away from the problem-by-problem approach, the International Accounting Standards Committee (predecessor to the IASB) issued a document entitled “The Conceptual Framework for Financial Reporting” (also referred to simply as the Framework). This Framework sets forth fundamental objectives and concepts that the Board uses in developing future standards of financial reporting. The intent of the document is to form a cohesive set of interrelated concepts—a conceptual framework—that will serve as tools for solving existing and emerging problems in a consistent manner. For example, the objective of general-purpose financial reporting discussed earlier is part of this Framework. The Framework and any changes to it pass through the same due process (discussion paper, public hearing, exposure draft, etc.) as an IFRS. However, this Framework is not an IFRS and hence does not define standards for any particular measurement or disclosure issue. Nothing in this Framework overrides any specific international accounting standard.

International Financial Reporting Interpretations Interpretations issued by the **International Financial Reporting Interpretations Committee (IFRIC)** are also considered authoritative and must be followed. These interpretations cover (1) newly identified financial reporting issues not specifically dealt with in IFRS, and (2) issues where unsatisfactory or conflicting interpretations have developed, or seem likely to develop, in the absence of authoritative guidance. The IFRIC has issued over 20 of these interpretations to date. In keeping with the IASB’s own approach to setting standards, the IFRIC applies a principles-based approach in providing interpretative guidance. To this end, the IFRIC looks first to the Framework for the Preparation and Presentation of Financial Statements as the foundation for formulating a consensus. It then looks to the principles articulated in the applicable standard, if any, to develop its interpretative guidance and to determine that the proposed guidance does not conflict with provisions in IFRS.

IFRIC helps the IASB in many ways. For example, emerging issues often attract public attention. If not resolved quickly, they can lead to financial crises and scandal. They can also undercut public confidence in current reporting practices. Similar to the EITF in the United States, IFRIC can address controversial accounting problems as they arise. It determines whether it can resolve them or whether to involve the IASB in solving them. In essence, it becomes a “problem filter” for the IASB. Thus, the IASB will hopefully work on more pervasive long-term problems, while the IFRIC deals with short-term emerging issues.

Hierarchy of IFRS

Because it is a private organization, the IASB has no regulatory mandate and therefore no enforcement mechanism. Similar to the U.S. setting, in which the Securities and Exchange Commission enforces the use of FASB standards for public companies, the IASB relies on other regulators to enforce the use of its standards. For example, effective January 1, 2005, the European Union required publicly traded member country companies to use IFRS.

Certain changes have been implemented with respect to use of IFRS in the United States. For example, under American Institute of Certified Public Accountants (AICPA) rules, a member of the AICPA can only report on financial statements prepared in accordance with standards promulgated by standard-setting bodies designated by the AICPA Council. In May 2008, the AICPA Council voted to designate the IASB in London as an international accounting standard-setter for purposes of establishing international financial accounting and reporting principles, and to make related amendments to its rules to provide AICPA members with the option to use IFRS.

Any company indicating that it is preparing its financial statements in conformity with IFRS must use all of the standards and interpretations. The following **hierarchy** is used to determine what recognition, valuation, and disclosure requirements should be used. Companies first look to:

1. International Financial Reporting Standards;
2. International Accounting Standards; and
3. Interpretations originated by the International Financial Reporting Interpretations Committee (IFRIC) or the former Standing Interpretations Committee (SIC).

In the absence of a standard or an interpretation, the following sources in descending order are used: (1) the requirements and guidance in standards and interpretations dealing with similar and related issues; (2) the Framework for financial reporting; and (3) most recent pronouncements of other standard-setting bodies that use a similar conceptual framework to develop accounting standards, other accounting literature, and accepted industry practices, to the extent they do not conflict with the above. The overriding requirement of IFRS is that the financial statements provide a fair presentation (often referred to as a “true and fair view”). Fair representation is assumed to occur if a company follows the guidelines established in IFRS.

International Accounting Convergence

The SEC has recognized that the establishment of a single, widely accepted set of high-quality accounting standards benefits both global capital markets and U.S. investors. U.S. investors will make better-informed investment decisions if they obtain high-quality financial information from U.S. companies that is more comparable to the presently available information from non-U.S. companies operating in the same industry or line of business. Thus, the SEC could support a move to IFRS, assuming that certain conditions are met. These conditions were spelled out in a document, referred to as the “**Roadmap**” and in a policy statement issued by the SEC in early 2010.¹²

The FASB and the IASB have been working diligently to (1) make their existing financial reporting standards fully compatible as soon as is practicable, and (2) coordinate their future work programs to ensure that once achieved, compatibility is maintained. This process is referred to as *convergence*, and the Boards have made significant progress in developing high-quality converged standards. However, much work needs to be done.

SEC Staff Paper on Incorporation of IFRS The SEC has monitored the convergence process through a staff Work Plan, which considers specific areas and factors relevant to a commission determination as to whether, when, and how the current financial reporting system for U.S. companies should be transitioned to a system incorporating IFRS. Execution of the Work Plan (which addresses such areas as independence of standard-setting, investor understanding of IFRS, and auditor readiness), combined with the completion of the convergence projects of the FASB and the IASB according to their current working agreement, will position the SEC to make a decision on required use of IFRS by U.S. issuers.

In July 2012, the SEC staff issued its final report related to the Work Plan elements.¹³ The main thrust of the report is that we will have to wait and see for a commission decision on required use of IFRS in the United States. Although the Staff Report did not set out to answer the fundamental question of whether transitioning to IFRS is in the best interests of the U.S. securities markets generally and U.S. investors specifically, it appears that it is unlikely companies would be required to change to IFRS in the near future. Rather, the SEC staff has suggested gradual incorporation of IFRS into the U.S. financial reporting system.¹⁴

The approach to incorporation is an “endorsement approach.” Rather than adopting IFRS at a point in time, the endorsement approach specifies that the FASB and IASB continue to collaborate to align GAAP and IFRS. As a result, standards (which are also IFRS) could be incorporated into GAAP.

The Way Forward The endorsement framework is the last SEC staff proposal with respect to a possible use of IFRS in the United States. It is understandable that there has been little movement in the SEC position, as there is a new chair and chief accountant at the SEC and given the continuing focus at the SEC on rule-making and other follow-up to the financial crisis of 2008.

Nonetheless, in a speech to the AICPA National Conference, the SEC chief accountant at that time reiterated the SEC’s support of the FASB’s and IASB’s efforts to date. He also indicated that the SEC staff will build on its prior work and will be renewing its efforts to help clarify what action, if any, the SEC will take regarding the further incorporation of IFRS into U.S. capital markets.¹⁵

Since the publication of the Staff Paper in 2012, the SEC staff has received input from various constituents on the desirability and feasibility of a full movement, optional or otherwise, to IFRS for domestic issuers. To date, that feedback indicates that **U.S. constituents generally are not supportive of full adoption of IFRS** for a variety of reasons, including legal issues and general cost-benefit concerns.

¹²“Roadmap for the Potential Use of Financial Statements Prepared in Accordance with International Financial Reporting Standards by U.S. Issuers,” *SEC Release No. 33-8982* (November 14, 2008), and “Statement in Support of Convergence and Global Accounting Standards,” *SEC Release Nos. 33-9109; 34-61578* (February 24, 2010).

¹⁴SEC Staff Paper, “Work Plan for the Consideration of Incorporating International Financial Reporting Standards into the Financial Reporting System for U.S. Issuers: Exploring a Possible Method of Incorporation” (May 26, 2011), available at www.sec.gov.

¹⁵J. Schnurr, Remarks before the 2014 AICPA National Conference on Current SEC and PCAOB Developments, <http://www.sec.gov/News/Speech/Detail/Speech/1370543609306#.VOT39S4yjNQ> (December 8, 2014).

U.S. constituents have also raised similar issues with respect to an option to adopt IFRS. These issues include legal impediments, practical challenges, and an impact on comparability that does not currently exist in the domestic reporting environment.

Given this feedback, the SEC sought input on other approaches to further incorporation of, or alignment with, IFRS for domestic issuers. In addition to the endorsement framework, the SEC chief accountant posed the possible development of rules that would allow U.S. companies to report IFRS-based financial information in addition to the GAAP-based information that they use for purposes of SEC filings. The rules would be needed because such additional disclosures currently would be considered a “non-GAAP” financial measure for a domestic issuer. This change in rules would permit companies who wish to report IFRS-based information to do so without affecting their GAAP-based information. While there has been little support for this IFRS option, the chief accountant is open to approaches that complement the convergence efforts of the FASB and the IASB, indicating that, “Whatever the ultimate result is with respect to IFRS in the U.S., the Boards should continue to strive where practicable for aligned high-quality global standards.”

On the Horizon

Both the IASB and the FASB are hard at work developing standards that will lead to the elimination of major differences in the way certain transactions are accounted for and reported. In fact, beginning in 2010, the IASB (and the FASB on its joint projects with the IASB) started its policy of phasing in adoption of new major standards over several years. The major reason for this policy is to provide companies time to translate and implement international standards into practice. Much has happened in a very short period of time in the international accounting environment. While adoption of IFRS in the United States is an unlikely avenue to achieve a single set of high-quality accounting standards, there continues to be strong support for the Boards to continue their work to narrow the differences between GAAP and IFRS.

IFRS Self-Test Questions

1. IFRS stands for:
 - a. International Federation of Reporting Services.
 - b. Independent Financial Reporting Standards.
 - c. International Financial Reporting Standards.
 - d. Integrated Financial Reporting Services.
2. The major key players on the international side are the:
 - a. IASB and FASB.
 - b. IOSCO and the SEC.
 - c. SEC and FASB.
 - d. IASB and IOSCO.
3. IFRS is comprised of:
 - a. International Financial Reporting Standards and FASB Financial Reporting Standards.
 - b. International Financial Reporting Standards, International Accounting Standards, and International Accounting Interpretations.
 - c. International Accounting Standards and International Accounting Interpretations.
 - d. FASB Financial Reporting Standards and International Accounting Standards.
4. The authoritative status of The Conceptual Framework for Financial Reporting is as follows:
 - a. It is used when there is no standard or interpretation related to the reporting issues under consideration.
 - b. It is not as authoritative as a standard but takes precedence over any interpretation related to the reporting issue.
 - c. It takes precedence over all other authoritative literature.
 - d. It has no authoritative status.
5. Which of the following statements is **true**?
 - a. The IASB has the same number of members as the FASB.
 - b. The IASB structure has both advisory and interpretation functions, but no trustees.
 - c. The IASB has been in existence longer than the FASB.
 - d. The IASB structure is quite similar to the FASB’s, except the IASB has a larger number of board members.

IFRS Concepts and Application

IFRS1.1 What organizations are the two key international players in the development of international accounting standards? Explain their role.

IFRS1.2 What might explain the fact that different accounting standard-setters have developed accounting standards that are sometimes quite different in nature?

IFRS1.3 What is the benefit of a single set of high-quality accounting standards?

IFRS1.4 Briefly describe the FASB/IASB convergence process and the principles that guide their convergence efforts.

Financial Reporting Case

IFRS1.5 The following comments were made at an Annual Conference of the Financial Executives Institute (FEI).

There is an irreversible movement toward the harmonization of financial reporting throughout the world. The international capital markets require an end to:

1. The confusion caused by international companies announcing different results depending on the set of accounting standards applied.
2. Companies in some countries obtaining unfair commercial advantages from the use of particular national accounting standards.
3. The complications in negotiating commercial arrangements for international joint ventures caused by different accounting requirements.
4. The inefficiency of international companies having to understand and use a myriad of different accounting standards depending on the countries in which they operate and the countries in which they raise capital and debt. Executive talent is wasted on keeping up to date with numerous sets of accounting standards and the never-ending changes to them.
5. The inefficiency of investment managers, bankers, and financial analysts as they seek to compare financial reporting drawn up in accordance with different sets of accounting standards.

Instructions

- a. What is the International Accounting Standards Board?
- b. What stakeholders might benefit from the use of International Accounting Standards?
- c. What do you believe are some of the major obstacles to convergence?

Professional Research

IFRS1.6 As a newly enrolled accounting major, you are anxious to better understand accounting institutions and sources of accounting literature. As a first step, you decide to explore the IASB's The Conceptual Framework for Financial Reporting.

Instructions

Access the IASB Framework at the IASB website. (Click on the IFRS tab and then register for free eIFRS access if necessary.) When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following items. (Provide paragraph citations.)

- a. What is the objective of general-purpose financial reporting?
- b. What other means are there of communicating information, besides financial statements?
- c. Indicate some of the users and the information they are most directly concerned with in economic decision-making.

International Financial Reporting Problem

Marks and Spencer plc (M&S)

IFRS1.7 The financial statements of **M&S** are presented in Appendix E. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- a. What is the company's main line of business?
- b. In what countries does M&S have investments?
- c. What is the address of the company's corporate headquarters?
- d. What is the company's reporting currency?

Conceptual Framework for Financial Reporting

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

1. Describe the usefulness of a conceptual framework and the objective of financial reporting.
2. Identify the qualitative characteristics of accounting information and the basic elements of financial statements.
3. Review the basic assumptions of accounting.
4. Explain the application of the basic principles of accounting.

PREVIEW OF CHAPTER 2 As the following opening story indicates, users of financial statements can face difficult questions about the recognition and measurement of financial items. To help develop the type of financial information that can be used to answer these questions, financial accounting and reporting relies on a conceptual framework. In this chapter, we discuss the conceptual framework as follows.

This chapter also includes numerous conceptual and global discussions that are integral to the topics presented here.

CONCEPTUAL FRAMEWORK FOR FINANCIAL REPORTING

Conceptual Framework

- Need for a conceptual framework
- Development of a conceptual framework
- Overview of the conceptual framework
- Basic objective

Fundamental Concepts

- Qualitative characteristics of accounting information
- Basic elements

Assumptions

- Economic entity
- Going concern
- Monetary unit
- Periodicity

Measurement, Recognition, and Disclosure Concepts

- Basic principles of accounting
- Cost constraint
- Summary of the structure

What Is It?

Everyone agrees that accounting needs a framework—a conceptual framework, so to speak—that will help guide the development of standards. To understand the importance of developing this framework, let's see how you would respond in the following two situations.

Situation 1: “Taking a Long Shot . . .”

To supplement donations collected from its general community solicitation, Tri-Cities United Charities holds an annual lottery sweepstakes. In this year’s sweepstakes, United Charities is offering a grand prize of \$1,000,000 to a single winning ticket holder. A total of 10,000 tickets have been printed, and United Charities plans to sell all the tickets at a price of \$150 each.

Since its inception, the sweepstakes has attracted area-wide interest, and United Charities has always been able to meet its sales target. However, in the unlikely event that it might fail to sell a sufficient number of tickets to cover the grand prize, United Charities has reserved the right to cancel the sweepstakes and to refund the price of the tickets to holders.

In recent years, a fairly active secondary market for tickets has developed. This year, buying–selling prices have varied between \$75 and \$95 before stabilizing at about \$90.

When the tickets first went on sale this year, multimillionaire Phil N. Tropic, well-known in Tri-Cities civic circles as a generous but sometimes eccentric donor, bought one of the tickets from United Charities, paying \$150 cash.

How would you answer the following questions?

1. Should Phil N. Tropic recognize his lottery ticket as an asset in his financial statements?
2. Assuming that Phil N. Tropic recognizes the lottery ticket as an asset, at what amount should it be reported? Some possible answers are \$150, \$100, and \$90.

Situation 2: The \$20 Million Question

The Hard Rock Mining Company has just completed the first year of operations at its new strip mine, the Lonesome Doe. Hard Rock spent \$10 million for the land and \$20 million in preparing the site for mining operations. The Mine is expected to operate for 20 years. Hard Rock is subject to environmental statutes requiring it to restore the Lonesome Doe Mine site on completion of mining operations.

Based on its experience and industry data, as well as current technology, Hard Rock forecasts that restoration will cost about \$10 million when it is undertaken. Of those costs, about \$4 million is for restoring the topsoil that was removed in preparing the site for mining operations (prior to opening the mine). The rest is directly proportional to the depth of the mine, which in turn is directly proportional to the amount of ore extracted.

How would you answer the following questions?

1. Should Hard Rock recognize a liability for site restoration in conjunction with the opening of the Lonesome Doe Mine? If so, what is the amount of that liability?
2. After Hard Rock has operated the Lonesome Doe Mine for 5 years, new technology is introduced that reduces Hard Rock’s estimated future restoration costs to \$7 million, \$3 million of which relates to restoring the topsoil. How should Hard Rock account for this change in its estimated future liability?

The answer to the questions on the two situations depends on how assets and liabilities are defined and how they should be valued. Hopefully, this chapter will provide you with a framework to resolve questions like these.

Source: Adapted from Todd Johnson and Kim Petrone, *The FASB Cases on Recognition and Measurement*, Second Edition (New York: John Wiley and Sons, Inc., 1996).

Review and Practice

Go to the **Review and Practice** section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions as well as additional exercises and practice problem with solutions are also available online.

Conceptual Framework

LEARNING OBJECTIVE 1

Describe the usefulness of a conceptual framework and the objective of financial reporting.

A **conceptual framework** establishes the concepts that underlie financial reporting. A conceptual framework is a coherent system of concepts that flow from an objective. The objective identifies the purpose of financial reporting. The other concepts provide guidance on (1) identifying the boundaries of financial reporting; (2) selecting the transactions, other events, and circumstances to be represented; (3) how they should be recognized and measured; and (4) how they should be summarized and reported.¹

Need for a Conceptual Framework

Why do we need a conceptual framework? First, to be useful, rule-making should build on and relate to an established body of concepts. A soundly developed conceptual framework thus enables the FASB to issue **more useful and consistent pronouncements over time; a coherent set of standards should result**. Indeed, without the guidance provided by a soundly developed framework, standard-setting ends up being based on individual concepts developed by each member of the standard-setting body. The following observation by a former standard-setter highlights the problem.

As our professional careers unfold, each of us develops a technical conceptual framework. Some individual frameworks are sharply defined and firmly held; others are vague and weakly held; still others are vague and firmly held. . . . At one time or another, most of us have felt the discomfort of listening to somebody buttress a preconceived conclusion by building a convoluted chain of shaky reasoning. Indeed, perhaps on occasion we have voiced such thinking ourselves. . . . My experience . . . taught me many lessons. A major one was that most of us have a natural tendency and an incredible talent for processing new facts in such a way that our prior conclusions remain intact.²

In other words, standard-setting that is based on personal conceptual frameworks will lead to different conclusions about identical or similar issues than it did previously. As a result, standards will not be consistent with one another, and past decisions may not be indicative of future ones. Furthermore, the framework should increase financial statement users' understanding of and confidence in financial reporting. It should enhance comparability among companies' financial statements (see **Global View**).

Second, as a result of a soundly developed conceptual framework, the profession should be able to more quickly solve new and emerging **practical problems by referring to an existing framework of basic theory**. For example, **Sunshine Mining** sold two issues of bonds. It can redeem them either with \$1,000 in cash or with 50 ounces of silver, whichever is worth more at maturity. Both bond issues have a stated interest rate of 8.5 percent. At what amounts should Sunshine or the buyers of the bonds record them? What is the amount of the

Global View

Although the FASB and the IASB have worked together to converge elements of their conceptual frameworks (related to objectives and qualitative characteristics issued in 2010), the IASB has recently issued its own complete conceptual framework. This will result in some differences with the FASB conceptual framework.

¹"Chapter 1, The Objective of General Purpose Financial Reporting" and "Chapter 3, Qualitative Characteristics of Useful Financial Information," *Statement of Financial Accounting Concepts No. 8* (Norwalk, Conn.: FASB, September 2010). Recall from our discussion in Chapter 1 that while the conceptual framework and any changes to it pass through the same due process (discussion paper, public hearing, exposure draft, etc.) as do the other FASB pronouncements, the framework is not authoritative. That is, the framework does not define standards for any particular measurement or disclosure issue, and nothing in the framework overrides any specific FASB pronouncement that is included in the Codification.

²C. Horngren, "Uses and Limitations of a Conceptual Framework," *Journal of Accountancy* (April 1981), p. 90.

premium or discount on the bonds? And how should Sunshine amortize this amount, if the bond redemption payments are to be made in silver (the future value of which is unknown at the date of issuance)? Consider that Sunshine cannot know, at the date of issuance, the value of future silver bond redemption payments.

It is difficult, if not impossible, for the FASB to prescribe the proper accounting treatment quickly for situations like this or like those represented in our opening story. Practicing accountants, however, must resolve such problems on a daily basis. How? Through good judgment and with the help of a universally accepted conceptual framework, practitioners can quickly focus on an acceptable treatment.

What Do the Numbers Mean? What's Your Principle?

The need for a conceptual framework is highlighted by accounting scandals such as those at **Enron**, **Royal Ahold**, and **Satyam Computer Services**. To restore public confidence in the financial reporting process, many have argued that regulators should move toward principles-based rules. They believe that companies exploited the detailed provisions in rules-based pronouncements to manage accounting reports, rather than report the economic substance of transactions.

For example, many of the off-balance-sheet arrangements of Enron avoided transparent reporting by barely achieving 3 percent

outside equity ownership, a requirement in an obscure accounting rule interpretation. Enron's financial engineers were able to structure transactions to achieve a desired accounting treatment, even if that accounting treatment did not reflect the transaction's true nature. Under principles-based rules, hopefully top management's financial reporting focus will shift from demonstrating compliance with rules to demonstrating that a company has attained the objective of financial reporting.

Development of a Conceptual Framework

Over the years, numerous organizations developed and published their own conceptual frameworks, but no single framework was universally accepted and relied on in practice. In 1976, the FASB began to develop a conceptual framework that would be a basis for setting accounting rules and for resolving financial reporting controversies. The FASB has since issued seven Statements of Financial Accounting Concepts that relate to financial reporting for business enterprises:³

1. **SFAC No. 1**, "Objectives of Financial Reporting by Business Enterprises," presents the goals and purposes of accounting (superseded by *SFAC No. 8*, Chapter 1).
2. **SFAC No. 2**, "Qualitative Characteristics of Accounting Information," examines the characteristics that make accounting information useful (superseded by *SFAC No. 8*, Chapter 3).
3. **SFAC No. 3**, "Elements of Financial Statements of Business Enterprises," provides definitions of items in financial statements, such as assets, liabilities, revenues, and expenses (superseded by *SFAC No. 6*).
4. **SFAC No. 5**, "Recognition and Measurement in Financial Statements of Business Enterprises," sets forth fundamental recognition and measurement criteria and guidance on what information should be formally incorporated into financial statements and when.
5. **SFAC No. 6**, "Elements of Financial Statements," replaces *SFAC No. 3* and expands its scope to include not-for-profit organizations.
6. **SFAC No. 7**, "Using Cash Flow Information and Present Value in Accounting Measurements," provides a framework for using expected future cash flows and present values as a basis for measurement.

³The FASB also issued a Statement of Financial Accounting Concepts that relates to nonbusiness organizations: "Objectives of Financial Reporting by Nonbusiness Organizations," *Statement of Financial Accounting Concepts No. 4* (December 1980).

7. *SFAC No. 8*, Chapter 1, “The Objective of General Purpose Financial Reporting,” and Chapter 3, “Qualitative Characteristics of Useful Financial Information,” replaces *SFAC No. 1* and *No. 2*, and Chapter 8, “Notes to Financial Statements.”⁴

Overview of the Conceptual Framework

Illustration 2.1 provides an overview of the FASB’s conceptual framework.

ILLUSTRATION 2.1 Framework for Financial Reporting

The first level identifies the **objective of financial reporting**—that is, the purpose of financial reporting. The second level provides the **qualitative characteristics** that make accounting information useful and the **elements of financial statements** (assets, liabilities, and so on). The third level identifies the **recognition, measurement, and disclosure concepts** used in establishing and applying accounting standards and the specific concepts to implement the objective. These concepts include assumptions, principles, and a cost constraint that describe the present reporting environment. We examine these three levels of the conceptual framework next.

⁴Chapter 8 of *SFAC No. 8* (issued in August 2018) will be used by the Board as part of the process for establishing disclosure requirements in accounting standards, as well as for evaluating existing disclosure requirements, if and when the Board considers those requirements.

Basic Objective

The **objective of financial reporting** is the foundation of the conceptual framework. Other aspects of the framework—qualitative characteristics, elements of financial statements, recognition, measurement, and disclosure—flow logically from the objective. Those aspects of the framework help to ensure that financial reporting achieves its objective.

The objective of general-purpose financial reporting is to provide financial information about the reporting entity that is **useful to present and potential equity investors, lenders, and other creditors in making decisions about providing resources to the entity**. Those decisions involve buying, selling, or holding equity and debt instruments, and providing or settling loans and other forms of credit. To make effective decisions, these parties need information to help them assess a company's prospects for future net cash flows, which will support payments and/or provide a return to existing and potential investors, lenders, and other creditors. Information that is **decision-useful** to capital providers may also be useful to other users of financial reporting, who are not capital providers.⁵

As indicated in Chapter 1, to provide information to decision-makers, companies prepare general-purpose financial statements. **General-purpose financial reporting** helps users who lack the ability to demand all the financial information they need from an entity and therefore must rely, at least partly, on the information provided in financial reports. However, an implicit assumption is that users need reasonable knowledge of business and financial accounting matters to understand the information contained in financial statements. This point is important. It means that financial statement preparers assume a level of competence on the part of users. This assumption impacts the way and the extent to which companies report information.

Fundamental Concepts

LEARNING OBJECTIVE 2

Identify the qualitative characteristics of accounting information and the basic elements of financial statements.

The objective (first level) focuses on the purpose of financial reporting. Later, we will discuss the ways in which this purpose is implemented (third level). What, then, is the purpose of the second level? The second level provides conceptual building blocks that explain the qualitative characteristics of accounting information and define the elements of financial statements.⁶ That is, the second level forms a bridge between the **why** of accounting (the objective) and the **how** of accounting (recognition, measurement, and financial statement presentation).

Qualitative Characteristics of Accounting Information

Should companies like **Walt Disney** or **Kellogg's** provide information in their financial statements on how much it costs them to acquire their assets (historical cost basis) or how much the assets are currently worth (fair value basis)? Should **PepsiCo** combine and show as one

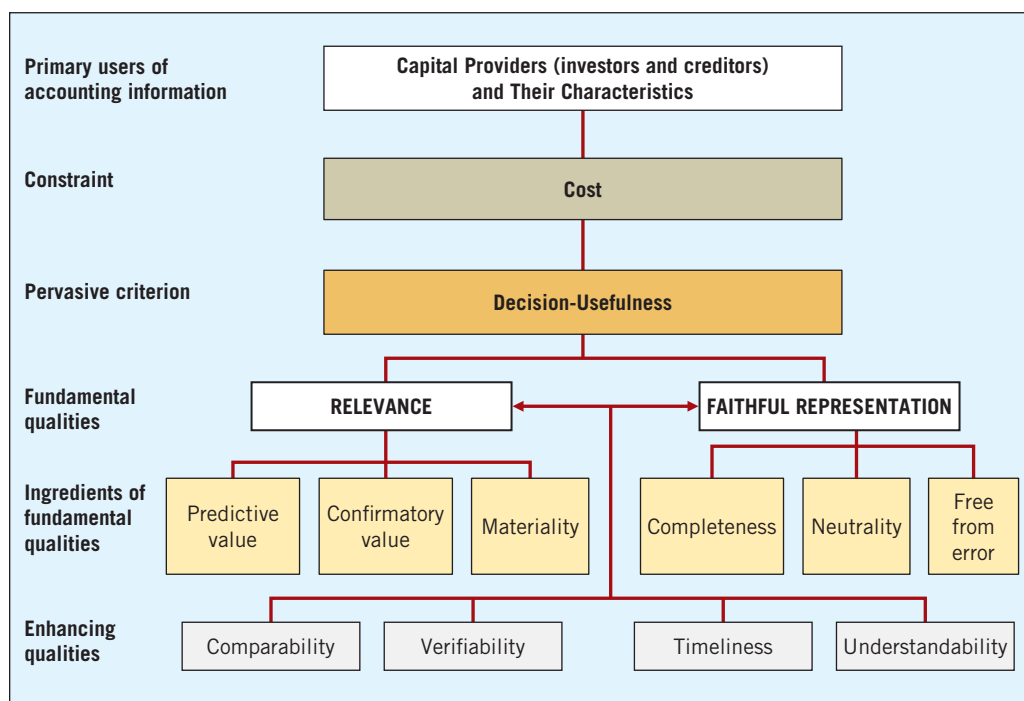

⁵“Chapter 1, The Objective of General Purpose Financial Reporting,” *Statement of Financial Accounting Concepts No. 8* (Norwalk, Conn.: FASB, September 2010), par. OB2.

⁶“Chapter 3, Qualitative Characteristics of Useful Financial Information,” *Statement of Financial Accounting Concepts No. 8* (Norwalk, Conn.: FASB, September 2010).

company the six main segments of its business, or should it report PepsiCo Beverages, Frito Lay, Quaker Foods, PepsiCo Latin America Foods, PepsiCo Europe, and PepsiCo Asia, Middle East and Africa as six separate segments?

How does a company choose an acceptable accounting method, the amount and types of information to disclose, and the format in which to present it? The answer: By determining **which alternative provides the most useful information for decision-making purposes (decision-usefulness)**. The FASB identified the **qualitative characteristics** of accounting information that distinguish better (more useful) information from inferior (less useful) information for decision-making purposes. In addition, the FASB identified a cost constraint as part of the conceptual framework (discussed later in the chapter). As **Illustration 2.2** shows, the characteristics may be viewed as a hierarchy.

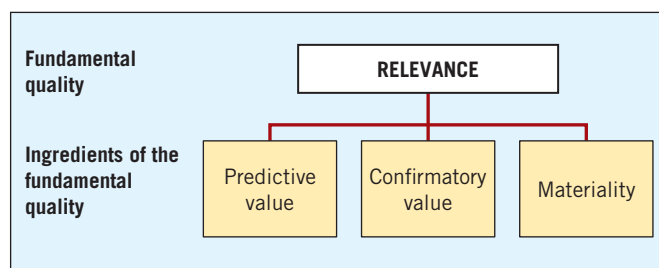

ILLUSTRATION 2.2 Hierarchy of Accounting Qualities

As indicated by Illustration 2.2, qualitative characteristics are either fundamental or enhancing, depending on how they affect the decision-usefulness of information. Regardless of classification, each qualitative characteristic contributes to the decision-usefulness of financial reporting information. However, providing useful financial information is limited by a constraint on financial reporting—cost should not exceed the benefits of a reporting practice.

Fundamental Quality—Relevance

Relevance is one of the two fundamental qualities that make accounting information useful for decision-making. Relevance and related ingredients of this fundamental quality are shown below.

To have **relevance**, accounting information must be capable of making a difference in a decision. Information with no bearing on a decision is irrelevant. Financial information is capable of making a difference when it has predictive value, confirmatory value, or both.

Financial information has **predictive value** if it has value as an input to predictive processes used by investors to form their own expectations about the future. For example, if potential investors are interested in purchasing common shares in **UPS (United Parcel Service)**, they may analyze its current resources and claims to those resources, its dividend payments, and its past income performance to predict the amount, timing, and uncertainty of UPS's future cash flows.

Relevant information also helps users confirm or correct prior expectations; it has **confirmatory value**. For example, when UPS issues its year-end financial statements, it confirms or changes past (or present) expectations based on previous evaluations. It follows that predictive value and confirmatory value are interrelated. For example, information about the current level and structure of UPS's assets and liabilities helps users predict its ability to take advantage of opportunities and to react to adverse situations. The same information helps to confirm or correct users' past predictions about that ability.

Materiality is a company-specific aspect of relevance. Information is material if omitting it or misstating it would influence decisions that users make on the basis of the reported financial information. An individual company determines whether information is material because both the nature and/or magnitude of the item(s) to which the information relates must be considered in the context of an individual company's financial report. Information is *immaterial*, and therefore irrelevant, if it would have no impact on a decision-maker. In short, **it must make a difference** or a company need not report it.⁷

Assessing materiality is one of the more challenging aspects of accounting because it requires evaluating both the **relative size and importance** of an item. However, it is difficult to provide firm guidelines in judging when a given item is or is not material. Materiality varies both with relative amount and with relative importance. For example, the two sets of numbers in **Illustration 2.3** indicate relative size.

ILLUSTRATION 2.3

Materiality Comparison

| | Company A | Company B |
|------------------------|---------------------|------------------|
| Sales | \$10,000,000 | \$100,000 |
| Costs and expenses | 9,000,000 | 90,000 |
| Income from operations | <u>\$ 1,000,000</u> | <u>\$ 10,000</u> |
| Unusual gain | \$ 20,000 | \$ 5,000 |

During the period in question, the revenues and expenses, and therefore the net incomes of Company A and Company B, are proportional. Each reported an unusual gain. In looking at the abbreviated income figures for Company A, it appears insignificant whether the amount of the unusual gain is set out separately or merged with the regular operating income. The gain is only 2 percent of the operating income. If merged, it would not seriously distort the income figure. Company B has had an unusual gain of only \$5,000. However, it is relatively much more significant than the larger gain realized by Company A. For Company B, an item of \$5,000 amounts to 50 percent of its income from operations. Obviously, the inclusion of such an item in operating income would affect the amount of that income materially. Thus, we see the importance of the **relative size** of an item in determining its materiality.

Companies and their auditors generally adopt the rule of thumb that anything under 5 percent of net income is considered immaterial. However, much can depend on specific rules. For example, one market regulator indicates that a company may use this percentage for an initial assessment of materiality, but it must also consider other factors. For example, companies can no longer fail to record items in order to meet consensus analysts' earnings

⁷Amendments to *SFAC No. 8: Conceptual Framework for Financial Reporting*, Chapter 3, "Qualitative Characteristics of Useful Financial Information" (August 2018). In this recent amendment, the FASB defined materiality to be consistent with the legal concept of materiality, as established in the securities laws. Specifically, information is material "if there is a substantial likelihood that the omitted or misstated item would have been viewed by a reasonable resource provider as having significantly altered the total mix of information."

numbers, preserve a positive earnings trend, convert a loss to a profit or vice versa, increase management compensation, or hide an illegal transaction like a bribe. In other words, **companies must consider both quantitative and qualitative factors in determining whether an item is material.**

Thus, it is generally not feasible to specify uniform quantitative thresholds at which an item becomes material. Rather, materiality judgments should be made in the context of the nature and the amount of an item. Materiality factors into a great many internal accounting decisions, too. Examples of such judgments that companies must make include the amount of classification required in a subsidiary expense ledger, the degree of accuracy required in allocating expenses among the departments of a company, and the extent to which adjustments should be made for accrued and deferred items. Only by **the exercise of good judgment and professional expertise** can reasonable and appropriate answers be found with respect to materiality issues.

What Do the Numbers Mean? Living in a Material World

The first line of defense for many companies caught “cooking the books” had been to argue that a questionable accounting item is immaterial. That defense did not work so well in the wake of accounting meltdowns at **Enron** and **Global Crossing** and the tougher rules on materiality issued by the SEC (*SAB 99*).

For example, the SEC alleged in a case against **Sunbeam** that the company’s many immaterial adjustments added up to a material misstatement that misled investors about the company’s financial position. The SEC has called for a number of companies, such as **Jack in the Box**, **McDonald’s**, and **AIG**, to restate prior financial statements for the effects of incorrect accounting. In some cases, the restatements did not meet traditional materiality

thresholds. Don Nicholaisen, then SEC chief accountant, observed that whether the amount is material or not, some transactions appear to be “flat out intended to mislead investors.” In essence he is saying that even small accounting errors for a transaction can represent important information to the users of financial statements.

Sources: Adapted from K. Brown and J. Weil, “A Lot More Information Is ‘Material’ After Enron,” *Wall Street Journal Online* (February 22, 2002); S. D. Jones and R. Gibson, “Restaurants Serve Up Restatements,” *Wall Street Journal* (January 26, 2005), p. C3; and R. McTauge, “Nicholaisen Says Restatement Needed When Deal Lacks Business Purpose,” *Securities Regulation & Law Reporter* (May 9, 2005).

Fundamental Quality—Faithful Representation

Faithful representation is the second fundamental quality that makes accounting information useful for decision-making. Faithful representation and related ingredients of this fundamental quality are shown below.

Faithful representation means that the numbers and descriptions match what really existed or happened. Faithful representation is a necessity because most users have neither the time nor the expertise to evaluate the factual content of the information. For example, if **General Motors’** income statement reports sales of \$162,300 million when it had sales of \$145,588 million, then the statement fails to faithfully represent the proper sales amount. To be a faithful representation, information must be complete, neutral, and free of material error.

Completeness **Completeness** means that all the information that is necessary for faithful representation is provided. An omission can cause information to be false or misleading and thus not be helpful to the users of financial reports. For example, when **Citigroup** fails to provide information needed to assess the value of its subprime loan receivables (toxic assets), the information is not complete and therefore not a faithful representation of their values.

Neutrality **Neutrality** means that a company cannot select information to favor one set of interested parties over another. Unbiased information must be the overriding consideration. For example, in the notes to financial statements, tobacco companies such as **R.J. Reynolds** should not suppress information about the numerous lawsuits that have been filed because of tobacco-related health concerns—even though such disclosure is damaging to the company.

Neutrality in rule-making has come under increasing attack. Some argue that the FASB should not issue pronouncements that cause undesirable economic effects on an industry or company. We disagree. Accounting rules (and the standard-setting process) must be free from bias, or we will no longer have credible financial statements. Without credible financial statements, individuals will no longer use this information. An analogy demonstrates the point: Many individuals bet on boxing matches because such contests are assumed not to be fixed. But nobody bets on wrestling matches. Why? Because the public assumes that wrestling matches are rigged. If financial information is biased (rigged), the public will lose confidence and no longer use it.⁸

Free from Error An information item that is **free from error** will be a more accurate (faithful) representation of a financial item. For example, if **JPMorgan Chase** misstates its loan losses, its financial statements are misleading and not a faithful representation of its financial results. However, faithful representation does not imply total freedom from error. This is because most financial reporting measures involve estimates of various types that incorporate management’s judgment. For example, management must estimate the amount of uncollectible accounts to determine bad debt expense. And determination of depreciation expense requires estimation of useful lives of plant and equipment, as well as the salvage value of the assets.

What Do the Numbers Mean? Show Me the Earnings!

Some young technology companies, in an effort to attract investors who will help them strike it rich, are using unconventional financial terms in their financial reports. As an example, instead of revenue, these privately held companies use terms such as “bookings,” annual recurring revenues, or other numbers that often exceed actual revenue.

Hortonworks Inc. (a software company) is a classic illustration. It forecast in its first quarter that it would have a strong \$100 million in billings by year-end. It turns out the company was not talking about revenues but rather a non-GAAP number that it uses to gauge future business. This number looked a lot smaller after Hortonworks went public and reported financial results—just \$46 million in revenue, as shown in the adjacent chart.

⁸Sometimes, in practice, it has been acceptable to invoke prudence or conservatism as a justification for an accounting treatment under conditions of uncertainty. **Prudence** or **conservatism** means when in doubt, choose the solution that will be least likely to overstate assets or income and/or understate liabilities or expenses. The conceptual framework indicates that prudence or conservatism generally is in conflict with the quality of neutrality. This is because being prudent or conservative likely leads to a bias in the reported financial position and financial performance. In fact, introducing biased understatement of assets (or overstatement of liabilities) in one period frequently leads to overstating financial performance in later periods—a result that cannot be described as prudent. This is inconsistent with neutrality, which encompasses freedom from bias. Accordingly, the conceptual framework does not include prudence or conservatism as desirable qualities of financial reporting information. See “Chapter 3, Qualitative Characteristics of Useful Financial Information,” *Statement of Financial Accounting Concepts No. 8* (Norwalk, Conn.: FASB, September 2010), paras. BC3.27–BC3.29.

Another example is **Uber Technologies** (the sometimes controversial ride service). Uber noted that it was on target to reach \$10 billion in bookings in a recent year. Uber defines bookings as total fares paid by customers. But Uber keeps little of the money from these bookings. As shown in the following chart, Uber gets only 25 cents on each \$1 of bookings.

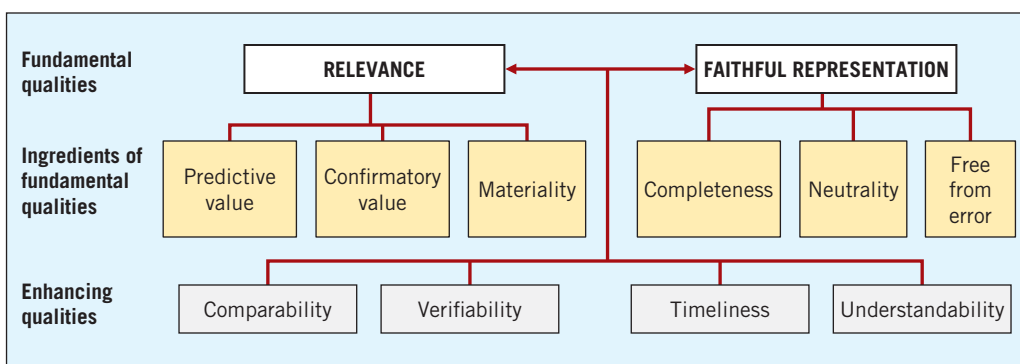

As a public company, Uber should report the 25 cents as revenue, not the one dollar. Similar income reporting disconnects were apparent at **Lululemon**, which showed gains in its store openings and top line (sales) but not a corresponding increase in profit margin. Given these examples, it is understandable that standard-setters have increased their scrutiny of the reporting of alternative performance measures.

The lesson for investors: Keep an eye on financial measures that faithfully represent financial position and performance, and be sure to count expenses and net income according to GAAP. Using gross measures such as billings, recurring revenues, or some non-financial and non-GAAP measures to determine success may be hazardous to your financial health.

Beilfuss, “Lululemon Sales Rise, Gross Margin Declines,” *Wall Street Journal* (September 10, 2015); and PwC, “Alternative Performance Measures—Better Described as ‘Profits Before Unfortunate Debits?’” *IFRS News* (March 2016).

Enhancing Qualities

Enhancing qualitative characteristics are complementary to the fundamental qualitative characteristics. These characteristics distinguish more-useful information from less-useful information. Enhancing characteristics, shown below, are comparability, verifiability, timeliness, and understandability.

Comparability Information that is measured and reported in a similar manner for different companies is considered comparable. **Comparability** enables users to identify the real similarities and differences in economic events between companies. For example, historically the accounting for pensions in Japan differed from that in the United States. In Japan, companies generally recorded little or no charge to income for these costs. U.S. companies recorded pension cost as incurred. As a result, it is difficult to compare and evaluate the financial results of **Toyota** or **Honda** to **General Motors** or **Ford**. Investors can only make valid evaluations if comparable information is available.

Another type of comparability, **consistency**, is present when a company applies the same accounting treatment to similar events, from period to period. Through such application, the company shows consistent use of accounting standards. The idea of consistency does not mean, however, that companies cannot switch from one accounting method to another. A company can change methods, but it must first demonstrate that the newly adopted method is preferable to the old. If approved, the company must then disclose the nature and effect of

the accounting change, as well as the justification for it, in the financial statements for the period in which it made the change.⁹ When a change in accounting principles occurs, the auditor generally refers to it in an explanatory paragraph of the audit report. This paragraph identifies the nature of the change and refers the reader to the note in the financial statements that discusses the change in detail.¹⁰

Verifiability **Verifiability** occurs when independent measurers, using the same methods, obtain similar results. Verifiability occurs in the following situations.

1. Two independent auditors count **PepsiCo's** inventory and arrive at the same physical quantity amount for inventory. Verification of an amount for an asset therefore can occur by simply counting the inventory (referred to as *direct verification*).
2. Two independent auditors compute PepsiCo's inventory value at the end of the year using the FIFO method of inventory valuation. Verification may occur by checking the inputs (quantity and costs) and recalculating the outputs (ending inventory value) using the same accounting convention or methodology (referred to as *indirect verification*).

Timeliness **Timeliness** means having information available to decision-makers before it loses its capacity to influence decisions. Having relevant information available sooner can enhance its capacity to influence decisions. A lack of timeliness, on the other hand, can rob information of its usefulness. For example, if **Apple** waited to report its interim results until nine months after the period, the information would be much less useful for decision-making purposes.

Understandability Decision-makers vary widely in the types of decisions they make, how they make decisions, the information they already possess or can obtain from other sources, and their ability to process the information. For information to be useful, there must be a connection (linkage) between these users and the decisions they make. This link, **understandability**, is the quality of information that lets reasonably informed users see its significance. Understandability is enhanced when information is classified, characterized, and presented clearly and concisely.

For example, assume that **Facebook** issues a three-months' report that shows interim earnings have declined significantly. This interim report provides relevant and faithfully represented information for decision-making purposes. Some users, upon reading the report, decide to sell their shares. Other users, however, do not understand the report's content and significance. They are surprised when Facebook declares a smaller year-end dividend and the share price declines. Thus, although Facebook presented highly relevant information that was a faithful representation, it was useless to those who did not understand it.

Thus, users of financial reports are assumed to have a reasonable knowledge of business and economic activities. In making decisions, users also should review and analyze the information with reasonable diligence. Information that is relevant and faithfully represented should not be excluded from financial reports solely because it is too complex or difficult for some users to understand without assistance.¹¹

⁹Surveys indicate that users highly value consistency. They note that a change tends to destroy the comparability of data before and after the change. Some companies assist users to understand the pre- and post-change data. Generally, however, users say they lose the ability to analyze over time. GAAP guidelines (discussed in Chapter 22) on accounting changes are designed to improve the comparability of the data before and after an accounting change.

¹⁰These provisions are specified in "Reports on Audited Financial Statements," *Statement on Auditing Standards No. 58* (New York: AICPA, April 1988), par. 34.

¹¹"Chapter 3, Qualitative Characteristics of Useful Financial Information," *Statement of Financial Accounting Concepts No. 8* (Norwalk, Conn.: FASB, September 2010), paras. QC30–QC31.

Basic Elements

An important aspect of developing any theoretical structure is the body of **basic elements** or definitions to be included in it. Accounting uses many terms with distinctive and specific meanings. These terms constitute the language of business or the jargon of accounting.

One such term is **asset**. Is it merely something we own? Or is an asset something we have the right to use, as in the case of leased equipment? Or is it anything of value used by a company to generate revenues—in which case, should we also consider the managers of a company as an asset?

As this example and the sweepstakes example in the opening story illustrate, it therefore seems necessary to develop basic definitions for the elements of financial statements. *SFAC No. 6* defines the 10 interrelated elements that most directly relate to measuring the performance and financial status of a business enterprise. We list them below for review and information purposes; you need not memorize these definitions at this point. We will explain and examine each of these elements in more detail in subsequent chapters.

The FASB classifies the elements into two distinct groups. The first group of three elements—assets, liabilities, and equity—describes amounts of resources and claims to resources at a **moment in time**. The other seven elements describe transactions, events, and circumstances that affect a company during a **period of time**. The first class, affected by elements of the second class, provides at any time the cumulative result of all changes. This interaction is referred to as “articulation.” That is, key figures in one financial statement correspond to balances in another.

Elements of Financial Statements

Assets. Probable future economic benefits obtained or controlled by a particular entity as a result of past transactions or events.

Liabilities. Probable future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or provide services to other entities in the future as a result of past transactions or events.

Equity. Residual interest in the assets of an entity that remains after deducting its liabilities. In a business enterprise, the equity is the ownership interest.

Investments by Owners. Increases in net assets of a particular enterprise resulting from transfers to it from other entities of something of value to obtain or increase ownership interests (or equity) in it. Assets are most commonly received as investments by owners, but that which is received may also include services or satisfaction or conversion of liabilities of the enterprise.

Distributions to Owners. Decreases in net assets of a particular enterprise resulting from transferring assets, rendering services, or incurring liabilities by the enterprise to owners. Distributions to owners decrease ownership interests (or equity) in an enterprise.

Comprehensive Income. Change in equity (net assets) of an entity during a period from transactions and other events and

circumstances from nonowner sources. It includes all changes in equity during a period except those resulting from investments by owners and distributions to owners.

Revenues. Inflows or other enhancements of assets of an entity or settlement of its liabilities (or a combination of both) during a period from delivering or producing goods, rendering services, or other activities that constitute the entity’s ongoing major or central operations.

Expenses. Outflows or other using up of assets or incurrences of liabilities (or a combination of both) during a period from delivering or producing goods, rendering services, or carrying out other activities that constitute the entity’s ongoing major or central operations.

Gains. Increases in equity (net assets) from peripheral or incidental transactions of an entity and from all other transactions and other events and circumstances affecting the entity during a period except those that result from revenues or investments by owners.

Losses. Decreases in equity (net assets) from peripheral or incidental transactions of an entity and from all other transactions and other events and circumstances affecting the entity during a period except those that result from expenses or distributions to owners.¹²

¹²“Elements of Financial Statements,” *Statement of Financial Accounting Concepts No. 6* (Stamford, Conn.: FASB, December 1985), pp. ix and x.

Assumptions

LEARNING OBJECTIVE 3

Review the basic assumptions of accounting.

The third level of the framework consists of concepts that implement the basic objective of level one. These concepts explain how companies should recognize, measure, and report financial elements and events. The FASB sets forth most of these in its *Statement of Financial Accounting Concepts No. 5*, “Recognition and Measurement in Financial Statements of Business Enterprises.” According to *SFAC No. 5*, to be recognized, an item (event or transaction) must meet the definition of an “element of financial statements” as defined in *SFAC No. 6* and must be measurable. Most aspects of current practice follow these recognition and measurement concepts.

The accounting profession continues to use the concepts in *SFAC No. 5* as operational guidelines. Here, we identify the concepts as basic assumptions, principles, and a cost constraint. Not everyone uses this classification system, so focus your attention more on **understanding the concepts** than on how we classify and organize them. These concepts serve as guidelines in responding to controversial financial reporting issues. Four basic **assumptions** underlie the financial accounting structure: (1) **economic entity**, (2) **going concern**, (3) **monetary unit**, and (4) **periodicity**.

Economic Entity Assumption

The **economic entity assumption** means that **economic activity can be identified with a particular unit of accountability**. In other words, a company keeps its activity separate and distinct from its owners and any other business unit.¹³ At the most basic level, the economic entity assumption dictates that **Panera Bread Company** record the company’s financial activities separate from those of its owners and managers. Equally important, financial statement users need to be able to distinguish the activities and elements of different companies, such as **General Motors**, **Ford**, and **Fiat Chrysler**. If users could not distinguish the activities of different companies, how would they know which company financially outperformed the other (see **Global View**)?

The entity concept does not apply solely to the segregation of activities among competing companies, such as **Home Depot** and **Lowe’s**. An individual, department, division, or an entire industry could be considered a separate entity if we choose to define it in this manner. Thus, **the entity concept does not necessarily refer to a legal entity**. A parent and its subsidiaries are separate **legal** entities, but merging their activities for accounting and reporting purposes does not violate the **economic entity** assumption.¹⁴

Global View

One phase of the conceptual framework convergence project addresses the reporting entity.

¹³The FASB has proposed to link the definition of an entity to its financial reporting objective. That is, a reporting entity is described as a circumscribed area of business activity of interest to present and potential equity investors, lenders, and other capital providers. See IASB/FASB, “The Reporting Entity,” *Exposure Draft ED/2010/2: Conceptual Framework for Financial Reporting* (March 2010).

¹⁴The concept of the entity is changing. For example, defining the “outer edges” of companies is now harder. Public companies often consist of multiple public subsidiaries, each with joint ventures, licensing arrangements, and other affiliations. Increasingly, companies form and dissolve joint ventures or customer-supplier relationships in a matter of months or weeks. These “virtual companies” raise accounting issues about how to account for the entity. As discussed in footnote 13, the FASB is addressing these issues in the entity phase of its conceptual framework project.

What Do the Numbers Mean? Whose Company Is It?

The importance of the entity assumption is illustrated by scandals involving **W. R. Grace** and **Adelphia**. In both cases, senior company employees entered into transactions that blurred the line between the employee's financial interests and those of the company. At Adelphia, among many other self-dealings, the company guaranteed over \$2 billion of loans to the founding family. W. R.

Grace used company funds to pay for an apartment and chef for the company chairman. As a result of these transactions, these insiders benefitted at the expense of shareholders. Additionally, the financial statements failed to disclose the transactions. Such disclosure would have allowed shareholders to sort out the impact of the employee transactions on company results.

Going Concern Assumption

Most accounting methods rely on the **going concern assumption**—that the company will **have a long life**. Despite numerous business failures, most companies have a fairly high continuance rate. As a rule, we expect companies to last long enough to fulfill their objectives and commitments.

This assumption has significant implications. The historical cost principle would be of limited usefulness if we assume eventual liquidation. Under a liquidation approach, for example, a company would better state asset values at net realizable value (sales price less costs of disposal) than at acquisition cost. **Depreciation and amortization policies are justifiable and appropriate only if we assume some permanence to the company.** If a company adopts the liquidation approach, the current/noncurrent classification of assets and liabilities loses much of its significance. Labeling anything a fixed or long-term asset would be difficult to justify. Indeed, listing liabilities on the basis of priority in liquidation would be more reasonable.

The going concern assumption applies in most business situations. **Only where liquidation appears imminent is the assumption inapplicable.** In these cases, a total revaluation of assets and liabilities can provide information that closely approximates the company's net realizable value. You will learn more about accounting problems related to a company in liquidation in advanced accounting courses.¹⁵

Monetary Unit Assumption

The **monetary unit assumption** means that money is the common denominator of economic activity and provides an appropriate basis for accounting measurement and analysis. That is, the monetary unit is the most effective means of expressing to interested parties changes in capital and exchanges of goods and services. **The monetary unit is relevant, simple, universally available, understandable, and useful.** Application of this assumption depends on the even more basic assumption that quantitative data are useful in communicating economic information and in making rational economic decisions (see **Global View**).

In the United States, accounting ignores price-level changes (inflation and deflation) and assumes that the unit of measure—the dollar—remains reasonably stable. We therefore use the monetary unit assumption to justify adding 1990 dollars to 2020 dollars without any adjustment. The FASB in *SFAC No. 5* indicated that it expects the dollar, unadjusted for inflation

Global View

Due to their experiences with persistent inflation, several South American countries produce “constant-currency” financial reports. Typically, companies in these countries use a general price-level index to adjust for the effects of inflation.

¹⁵In response to the minimal guidance addressing the going concern assumption, including when it is appropriate to apply or how to apply the liquidation basis of accounting, the FASB has issued two accounting standards. The first, (“Presentation of Financial Statements—Going Concern: Disclosure of Uncertainties about an Entity's Ability to Continue as a Going Concern”) [1] requires additional disclosure when substantial doubt about a company's ability to continue as a going concern occurs. (See the FASB Codification References near the end of the chapter.) The second standard (“Presentation of Financial Statements—The Liquidation Basis of Accounting”) [2] requires that companies use the liquidation basis of accounting when liquidation is imminent (when either a plan for liquidation has been approved or a plan for liquidation is being imposed by other forces, such as involuntary bankruptcy). If liquidation accounting is used, financial statements should reflect relevant information about a company's resources and obligations in liquidation by measuring and presenting assets and liabilities at the amount of cash or other consideration that the company expects to collect or pay in liquidation, along with additional disclosures about the plan for liquidation, the methods and significant assumptions used to measure assets and liabilities, the type and amount of costs and income accrued, and the expected duration of liquidation.

or deflation, to continue to be used to measure items recognized in financial statements. Only if circumstances change dramatically (such as if the United States experiences high inflation similar to that in some South American countries) will the FASB again consider “inflation accounting.”

Periodicity Assumption

To measure the results of a company’s activity accurately, we would need to wait until it liquidates. Decision-makers, however, cannot wait that long for such information. Users need to know a company’s performance and economic status on a timely basis so that they can evaluate and compare firms, and take appropriate actions. Therefore, companies must report information periodically.

The **periodicity** (or **time period**) **assumption** implies that a company can divide its economic activities into artificial time periods. These time periods vary, but the most common are monthly, quarterly, and yearly.

The shorter the time period, the more difficult it is to determine the proper net income for the period. A month’s results usually prove less verifiable than a quarter’s results, and a quarter’s results are likely to be less verifiable than a year’s results. Investors desire and demand that a company quickly process and disseminate information. Yet the quicker a company releases the information, the more likely the information will include errors. **This phenomenon provides an interesting example of the trade-off between timeliness and accuracy (free from error) in preparing financial data.**

The problem of defining the time period becomes more serious as product cycles shorten and products become obsolete more quickly. Many believe that, given technology advances, companies need to provide more online, real-time financial information to ensure the availability of relevant information.

Measurement, Recognition, and Disclosure Concepts

LEARNING OBJECTIVE 4

Explain the application of the basic principles of accounting.

Basic Principles of Accounting

We generally use four basic **principles of accounting** to record and report transactions: (1) measurement, (2) revenue recognition, (3) expense recognition, and (4) full disclosure. We look at each in turn.

Measurement Principle

We presently have a “mixed-attribute” system that permits the use of various measurement bases. The most commonly used measurements are based on historical cost and fair value. Here, we discuss each.

Historical Cost GAAP requires that companies account for and report many assets and liabilities on the basis of acquisition price. This is often referred to as the **historical cost principle**. Historical cost has an important advantage over other valuations: **It is generally thought to be verifiable.**

To illustrate this advantage, consider the problems if companies select current selling price instead. Companies might have difficulty establishing a value for unsold items. Every member of the accounting department might value the assets differently. Further, how often

would it be necessary to establish sales value? All companies close their accounts at least annually. But some compute their net income every month. Those companies would have to place a sales value on every asset each time they wished to determine income. Critics raise similar objections against current cost (replacement cost, present value of future cash flows) and any other basis of valuation **except historical cost**.

What about liabilities? Do companies account for them on a cost basis? Yes, they do. Companies issue liabilities, such as bonds, notes, and accounts payable, in exchange for assets (or services), for an agreed-upon price. **This price, established by the exchange transaction, is the “cost” of the liability.** A company uses this amount to record the liability in the accounts and report it in financial statements. Thus, many users prefer historical cost because it provides them with a **verifiable benchmark** for measuring historical trends.

Fair Value **Fair value** is defined as “the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.” Fair value is therefore a market-based measure. [3] Recently, GAAP has increasingly called for use of fair value measurements in the financial statements. This is often referred to as the **fair value principle**. Fair value information may be more useful than historical cost for certain types of assets and liabilities and in certain industries. For example, companies report many financial instruments, including derivatives, at fair value. Certain industries, such as brokerage houses and mutual funds, prepare their basic financial statements on a fair value basis.

At initial acquisition, historical cost equals fair value. In subsequent periods, as market and economic conditions change, historical cost and fair value often diverge. Thus, fair value measures or estimates often provide more relevant information about the expected future cash flows related to the asset or liability. For example, when long-lived assets decline in value, a fair value measure determines any impairment loss. In this situation, the FASB believes that fair value information is more relevant to users than historical cost. Fair value measurement, it is argued, provides better insight into the value of a company’s assets and liabilities (its financial position) and a better basis for assessing future cash flow prospects.

Recently, the Board has taken the additional step of giving companies the option to use fair value (referred to as the **fair value option**) as the basis for measurement of financial assets and financial liabilities. [4] The Board considers fair value more relevant than historical cost because it reflects the current cash equivalent value of financial instruments. As a result, companies now have the option to record fair value in their accounts for most financial instruments, including such items as receivables and debt securities.

Use of fair value in financial reporting is increasing. However, measurement based on fair value introduces increased subjectivity into accounting reports when fair value information is not readily available. To increase consistency and comparability in fair value measures, the FASB established a fair value hierarchy that provides insight into the priority of valuation techniques to use to determine fair value. As shown in **Illustration 2.4**, the fair value hierarchy is divided into three broad levels.

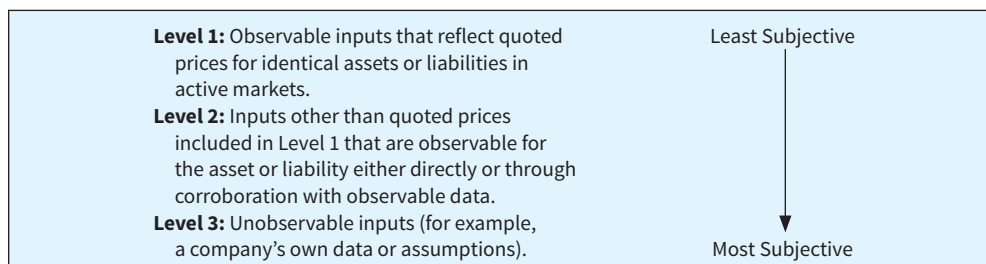

ILLUSTRATION 2.4

Fair Value Hierarchy

As Illustration 2.4 indicates, Level 1 is the least subjective because it is based on quoted prices, like a closing stock price in the *Wall Street Journal*. Level 2 is more subjective and would rely on evaluating similar assets or liabilities in active markets. At the most subjective

level, Level 3, much judgment is needed, based on the best information available, to arrive at a relevant and representationally faithful fair value measurement.¹⁶

It is easy to arrive at fair values when markets are liquid with many traders, but fair value answers are not readily available in other situations. For example, how do you value the mortgage assets of a subprime lender given that the market for these securities has essentially disappeared? A great deal of expertise and sound judgment will be needed to arrive at appropriate answers. GAAP also provides guidance on estimating fair values when market-related data is not available. In general, these valuation issues relate to Level 3 fair value measurements. These measurements may be developed using expected cash flow and present value techniques, as described in *Statement of Financial Accounting Concepts No. 7*, “Using Cash Flow Information and Present Value in Accounting,” discussed in Chapter 6.

As indicated above, we presently have a “mixed-attribute” system that permits the use of historical cost and fair value. Although the historical cost principle continues to be an important basis for valuation, recording and reporting of fair value information is increasing. The recent measurement and disclosure guidance should increase consistency and comparability when fair value measurements are used in the financial statements and related notes.

Revenue Recognition Principle

When a company agrees to perform a service or sell a product to a customer, it has a **performance obligation**. When the company satisfies this performance obligation, it recognizes revenue. The **revenue recognition principle** therefore requires that companies recognize revenue in the accounting period in which the performance obligation is satisfied. To illustrate, assume that **Klinke Cleaners** cleans clothing on June 30 but customers do not claim and pay for their clothes until the first week of July. Klinke should record revenue in June when it performed the service (satisfied the performance obligation) rather than in July when it received the cash. At June 30, Klinke would report a receivable on its balance sheet and revenue in its income statement for the service performed.

To illustrate the revenue recognition principle in more detail, assume that **Boeing Corporation** signs a contract to sell airplanes to **Delta Air Lines** for \$100 million. To determine when to recognize revenue, Boeing uses the five steps shown in **Illustration 2.5**.

Many revenue transactions pose few problems because the transaction is initiated and completed at the same time. However, when to recognize revenue in other situations is often more difficult, as when a performance obligation is satisfied over time. This is common in service arrangements or in the case of long-term construction contracts. Chapter 18 discusses revenue recognition issues in more detail.¹⁷

Expense Recognition Principle

As indicated in the discussion of financial statement elements, expenses are defined as outflows or other “using up” of assets or incurring of liabilities (or a combination of both) during a period as a result of delivering or producing goods and/or performing services. It follows then that recognition of expenses is related to net changes in assets and earning revenues. In

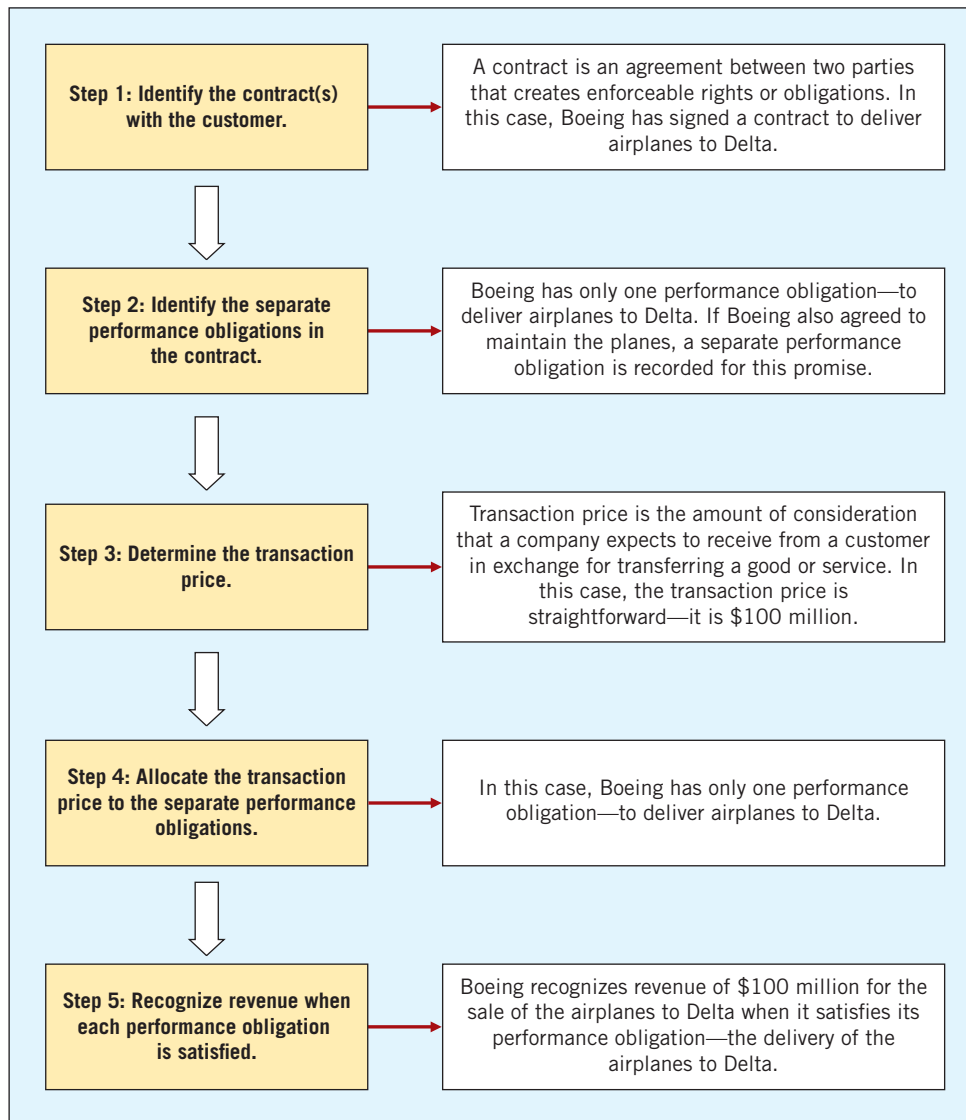

¹⁶For major groups of assets and liabilities, companies must disclose (1) the fair value measurement and (2) the fair value hierarchy level of the measurements as a whole, classified by Level 1, 2, or 3. Given the judgment involved, it follows that the more a company depends on Level 3 to determine fair values, the more information about the valuation process the company will need to disclose. Thus, additional disclosures are required for Level 3 measurements; we discuss these disclosures in more detail in subsequent chapters.

The FASB has also issued additional guidance related to issues surrounding the use of fair value in financial statements (Accounting Standards Update 2011-04, *Amendments to Achieve Common Fair Value Measurement and Disclosure Requirements in U.S. GAAP and IFRS*). A major benefit of the guidance is to provide a better definitional structure of what is meant by fair value and an improved understanding of how fair value should be measured. See also Accounting Standards Update 2018-13, *Fair Value Measurement* (Topic 820): “Disclosure Framework—Changes to the Disclosure Requirements for Fair Value Measurement.”

¹⁷The framework illustrated here is based on the recent standard [ASU No. 2014-09, “Revenue from Contracts with Customers” (Topic 606)]. The guidance establishes the principles to report useful information to users of financial statements about the nature, timing, and uncertainty of revenue from contracts with customers.

ILLUSTRATION 2.5

The Five Steps of Revenue Recognition

practice, the approach for recognizing expenses is, “Let the expense follow the revenues.” This approach is the **expense recognition principle**.

To illustrate, companies recognize expenses not when they pay wages or make a product, but when the work (service) or the product actually contributes to revenue. Thus, companies tie expense recognition to revenue recognition. That is, by matching **efforts (expenses) with accomplishment (revenues)**, the **expense recognition principle is implemented** in accordance with the definition of expense (outflows or other using up of assets or incurring of liabilities).¹⁸

Some costs, however, are difficult to associate with revenue. As a result, some other approach must be developed. Often, companies use a “rational and systematic” allocation policy that will approximate the expense recognition principle. This type of expense recognition involves assumptions about the benefits that a company receives as well as the cost associated with those benefits. For example, a company like **Intel** or **Motorola Solutions** allocates the cost of a long-lived asset over all of the accounting periods during which it uses the asset because the asset contributes to the generation of revenue throughout its useful life.

¹⁸This approach is commonly referred to as the **matching principle**. However, there is much debate about the conceptual validity of the matching principle. A major concern is that matching permits companies to defer certain costs and treat them as assets on the balance sheet. In fact, these costs may not have future benefits. If abused, this principle permits the balance sheet to become a “dumping ground” for unmatched costs.

Companies charge some costs to the current period as expenses (or losses) simply because they cannot determine a connection with revenue. Examples of these types of costs are officers' salaries and other administrative expenses.

Costs are generally classified into two groups: **product costs** and **period costs**. **Product costs**, such as material, labor, and overhead, attach to the product. Companies carry these costs into future periods if they recognize the revenue from the product in subsequent periods. **Period costs**, such as officers' salaries and other administrative expenses, attach to the period. Companies charge off such costs in the immediate period even though benefits associated with these costs may occur in the future. Why? Because companies cannot determine a direct relationship between period costs and revenue.

Illustration 2.6 summarizes these expense recognition procedures.

ILLUSTRATION 2.6
Expense Recognition

| Type of Cost | Relationship | Recognition |
|---|--|---------------------------------|
| Product costs: <ul style="list-style-type: none"> • Material • Labor • Overhead | Direct relationship between cost and revenue. | Recognize in period of revenue. |
| Period costs: <ul style="list-style-type: none"> • Salaries • Administrative costs | No direct relationship between cost and revenue. | Expense as incurred. |

Full Disclosure Principle

In deciding what information to report, companies follow the general practice of providing information that is of sufficient importance to influence the judgment and decisions of an informed user. Often referred to as the **full disclosure principle**, it recognizes that the nature and amount of information included in financial reports reflects a series of judgmental trade-offs. These trade-offs strive for (1) sufficient detail to disclose matters that **make a difference** to users, yet (2) sufficient condensation to make the **information understandable**, keeping in mind costs of preparing and using it.

Disclosure is not a substitute for proper accounting. As a former chief accountant of the SEC noted, "Good disclosure does not cure bad accounting any more than an adjective or adverb can be used without, or in place of, a noun or verb." Thus, for example, cash-basis accounting for cost of goods sold is misleading even if a company discloses accrual-basis amounts in the notes to the financial statements.

Users find information about financial position, income, cash flows, and investments in one of three places: (1) within the main body of financial statements, (2) in the notes to those statements, or (3) as supplementary information.

As discussed in Chapter 1, the **financial statements** are the balance sheet, income statement, statement of cash flows, and statement of stockholders' equity. They are a structured means of communicating financial information. To be recognized in the main body of financial statements, **an item should meet the definition of a basic element, be measurable with sufficient certainty, and be relevant and reliable.**¹⁹

The **notes to financial statements** generally amplify or explain the items presented in the main body of the statements. If the main body of the financial statements gives an incomplete picture of the performance and position of the company, the notes should provide the additional information needed. Information in the notes does not have to be quantifiable, nor does it need to qualify as an element. Notes can be partially or totally narrative. Examples of notes include descriptions of the accounting policies and methods used in measuring the elements reported in the statements, explanations of uncertainties and contingencies, and statistics and details too voluminous for inclusion in the statements. The notes can be essential to understanding the company's performance and position.

Supplementary information may include details or amounts that present a different perspective from that adopted in the financial statements. It may be quantifiable information

¹⁹SFAC No. 5, par. 63.

that is high in relevance but low in faithful representation. For example, oil and gas companies typically provide information on proven reserves as well as the related discounted cash flows.

Supplementary information may also include management's explanation of the financial information and its discussion of the significance of that information. For example, many business combinations have produced financing arrangements that demand new accounting and reporting practices and principles. In each of these situations, the same problem must be faced: making sure the company presents enough information to ensure that the **reasonably prudent investor** will not be misled.

We discuss the content, arrangement, and display of financial statements, along with other facets of full disclosure, in Chapters 4, 5, and 24.²⁰

Cost Constraint

In providing information with the qualitative characteristics that make it useful, companies must consider an overriding factor that limits (constrains) the reporting. This is referred to as the **cost constraint** (the **cost-benefit relationship**). That is, companies must weigh the costs of providing the information against the benefits that can be derived from using it. Rule-making bodies and governmental agencies use cost-benefit analysis before making final their informational requirements. In order to justify requiring a particular measurement or disclosure, the benefits perceived to be derived from it must exceed the costs perceived to be associated with it.

A corporate executive made the following remark to the FASB about a proposed rule: "In all my years in the financial arena, I have never seen such an absolutely ridiculous proposal. . . . To dignify these 'actuarial' estimates by recording them as assets and liabilities would be virtually unthinkable except for the fact that the FASB has done equally stupid things in the past. . . . For God's sake, use common sense just this once."²¹ Although extreme, this remark indicates the frustration expressed by members of the business community about rule-making and whether the benefits of a given pronouncement exceed the costs.

The difficulty in cost-benefit analysis is that the costs and especially the benefits are not always evident or measurable. The costs are of several kinds: costs of collecting and processing, of disseminating, of auditing, of potential litigation, of disclosure to competitors, and of analysis and interpretation. Benefits to preparers may include greater management control and access to capital at a lower cost. Users may receive better information for allocation of resources, tax assessment, and rate regulation. As noted earlier, benefits are generally more difficult to quantify than are costs.

The implementation of the provisions of the Sarbanes-Oxley Act illustrates the challenges in assessing costs and benefits of standards. One study estimated the increased costs of complying with the new internal-control standards related to the financial reporting process to be an average of \$7.8 million per company. However, the study concluded that "quantifying the benefits of improved more reliable financial reporting is not fully possible." More recent data on compliance indicate that after more than a decade of experience with Sarbanes-Oxley, 61 percent of companies spend less than \$500,000 annually on compliance, and 28 percent spend more than \$1,000,000. And that most companies continue to experience year-over-year increases in external auditing fees associated with internal control work.²²

²⁰As discussed (see footnote 4), the FASB has amended Chapter 8 of *SFAC No. 8* (issued in August 2018). The new chapter will be used by the Board as part of the process for establishing disclosure requirements in accounting standards as well as for evaluating existing disclosure requirements, if and when the Board considers those requirements. The FASB also has a standards-level project in which the staff is testing the concepts in Chapter 8, including an assessment of whether they will improve the effectiveness of disclosure requirements in the following topics: "Compensation—Retirement Benefits," "Income Taxes," and "Inventory." (For more information, go to the FASB website; click on Projects, then Technical Agenda, and then the Presentation and Disclosure Framework tab.)

²¹"Decision-Usefulness: The Overriding Objective," *FASB Viewpoints* (October 19, 1983), p. 4.

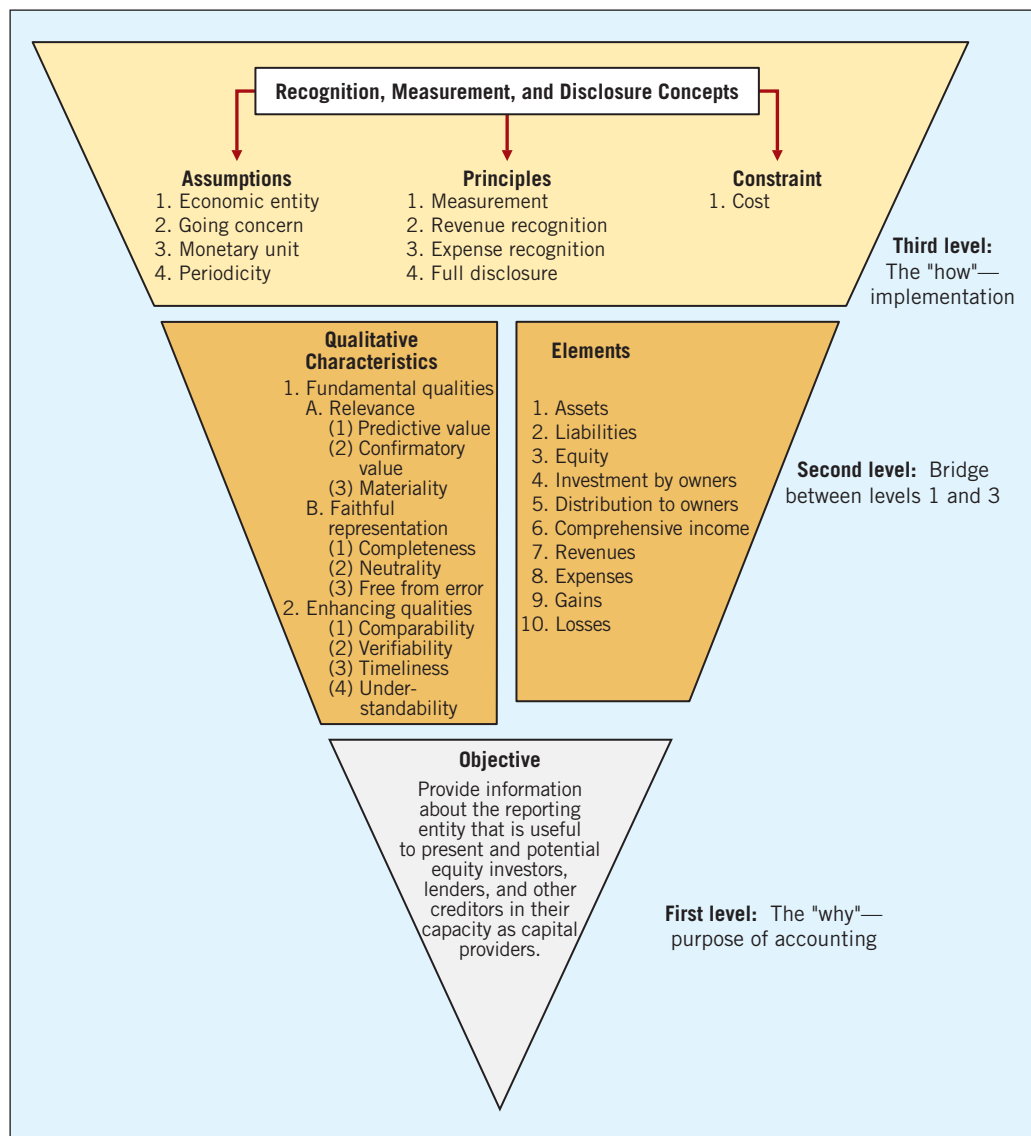

²²Charles Rivers and Associates, "Sarbanes-Oxley Section 404: Costs and Remediation of Deficiencies," letter from Deloitte and Touche, Ernst and Young, KPMG, and Pricewaterhouse-Coopers to the SEC (April 11, 2005); and Protiviti, *SOX Compliance—Changes Abound Amid Drive for Stability and Long-Term Value (2015)*, <http://www.protiviti.com/soxsurvey>.

Despite the difficulty in assessing the costs and benefits of its rules, the FASB attempts to determine that each proposed pronouncement will fill a significant need and that the costs imposed to meet the rule are justified in relation to overall benefits of the resulting information. In addition, the Board seeks input on costs and benefits as part of its due process.²³

Summary of the Structure

Illustration 2.7 presents the conceptual framework discussed in this chapter. It is similar to Illustration 2.1 except that it provides additional information for each level. We cannot over-emphasize the usefulness of this conceptual framework in helping to understand many of the problem areas that we examine in later chapters.

ILLUSTRATION 2.7 Conceptual Framework for Financial Reporting

²³For example, as part of its project on “Share-Based Payment” [5], the Board conducted a field study and surveyed commercial software providers to collect information on the costs of measuring the fair values of share-based compensation arrangements.

What Do the Numbers Mean? Don't Count These Please

Beyond touting nonfinancial measures to investors (see the “What Do the Numbers Mean?” box entitled “Show Me the Earnings!”), many companies increasingly promote the performance of their companies through the reporting of various “pro forma” earnings measures. Pro forma measures are standard measures (such as earnings) that companies adjust, usually for unusual or non-recurring items. Such adjustments make the numbers more comparable to numbers reported in periods without these unusual or non-recurring items.

However, rather than increasing comparability, it appears that some companies use pro forma reporting to accentuate the positive in their results. Examples include **Yahoo!** and **Cisco**, which define pro forma income after adding back payroll tax expense. **Level 8 Systems** transformed an operating loss into a pro forma profit by adding back expenses for depreciation and amortization of intangible assets.

And taking a more macro look, the following table shows the difference between pro forma (non-GAAP) and GAAP earnings per share for the three main Standard & Poor's stock indexes for a recent year.

What this table shows is that the S&P 600 is especially biased with a variance of 32.4% (non-GAAP higher than GAAP). Lynn

| Index | Non-GAAP Earnings | GAAP Earnings | % Variance (GAAP less Non-GAAP) |
|---------|-------------------|---------------|---------------------------------|
| S&P 400 | \$54.53 | \$45.68 | -19.4% |
| S&P 500 | 96.82 | 86.51 | -11.9 |
| S&P 600 | 21.62 | 16.33 | -32.4 |

Turner, former chief accountant at the SEC, calls such earnings measures EBS—“Everything but Bad Stuff.” To provide investors a more complete picture of company profitability, not the story preferred by management, the SEC issued Regulation G (REG G). For example, REG G (and related item 10E) requires companies to reconcile non-GAAP financial measures to GAAP, thereby giving investors a roadmap to analyze the adjustments that companies make to their GAAP numbers to arrive at pro forma results.

Learning Objectives Review

1 Describe the usefulness of a conceptual framework and the objective of financial reporting.

The accounting profession needs a conceptual framework to (1) build on and relate to an established body of concepts and objectives, (2) provide a framework for solving new and emerging practical problems,

(3) increase financial statement users' understanding of and confidence in financial reporting, and (4) enhance comparability among companies' financial statements.

The FASB issued seven Statements of Financial Accounting Concepts that relate to financial reporting for business enterprises. These concept statements provide the basis for the conceptual framework. They include objectives, qualitative characteristics, and

elements. In addition, measurement and recognition concepts are developed.

Objective of financial reporting. The objective of general-purpose financial reporting is to provide financial information about the reporting entity that is **useful to present and potential equity investors, lenders, and other creditors** in making decisions about providing resources to the entity. Those decisions involve buying, selling, or holding equity and debt instruments, and providing or settling loans and other forms of credit. Information that is decision-useful to capital providers may also be helpful to other users of financial reporting who are not capital providers.

2 Identify the qualitative characteristics of accounting information and the basic elements of financial statements.

The overriding criterion by which accounting choices can be judged is decision-usefulness—that is, providing information that is most useful for decision-making. Relevance and faithful representation are the two fundamental qualities that make information decision-useful. Relevant information makes a difference in a decision by having predictive or confirmatory value and is material. Faithful representation is characterized by completeness, neutrality, and being free from error. Enhancing qualities of useful information are (1) comparability, (2) verifiability, (3) timeliness, and (4) understandability.

Basic elements of financial statements. The basic elements of financial statements are (1) assets, (2) liabilities, (3) equity, (4) investments by owners, (5) distributions to owners, (6) comprehensive income, (7) revenues, (8) expenses, (9) gains, and (10) losses.

3 Review the basic assumptions of accounting.

Four basic assumptions underlying financial accounting are as follows. (1) *Economic entity:* The activity of a company can be kept

separate and distinct from its owners and any other business unit. (2) *Going concern:* The company will have a long life. (3) *Monetary unit:* Money is the common denominator by which economic activity is conducted, and the monetary unit provides an appropriate basis for measurement and analysis. (4) *Periodicity:* The economic activities of a company can be divided into artificial time periods.

4 Explain the application of the basic principles of accounting.

(1) *Measurement principle:* GAAP permits the use of historical cost, fair value, and other valuation bases. Although the historical cost principle (measurement based on acquisition price) continues to be an important basis for valuation, recording and reporting of fair value information is increasing. (2) *Revenue recognition principle:* A company recognizes revenue when it satisfies a performance obligation. (3) *Expense recognition principle:* As a general rule, companies recognize expenses when the service or the product actually makes its contribution to revenue (commonly referred to as *matching*). (4) *Full disclosure principle:* Companies generally provide information that is of sufficient importance to influence the judgment and decisions of an informed user. (5) *Cost constraint:* The cost of providing the information must be weighed against the benefits that can be derived from using the information.

Enhanced Review and Practice

Practice Problem

Jeremy Meadow Corporation has hired you to review its accounting records prior to the closing of the revenue and expense accounts as of December 31, the end of the current fiscal year. The following information comes to your attention.

1. During the current year, Jeremy Meadow Corporation changed its policy in regard to expensing purchases of small tools. In the past, it had expensed these purchases because they amounted to less than 2% of net income. Now, the president has decided that the company should follow a policy of capitalization and subsequent depreciation. It is expected that purchases of small tools will not fluctuate greatly from year to year.
2. The company constructed a warehouse at a cost of \$1,000,000. It had been depreciating the asset on a straight-line basis over 10 years. In the current year, the controller doubled depreciation expense because the replacement cost of the warehouse had increased significantly.
3. When the balance sheet was prepared, the preparer omitted detailed information as to the amount of cash on deposit in each of several banks. Only the total amount of cash under a caption “Cash in banks” was presented.
4. On July 15 of the current year, Jeremy Meadow Corporation purchased an undeveloped tract of land at a cost of \$320,000. The company spent \$80,000 in subdividing the land and getting it ready for sale. An appraisal of the property at the end of the year indicated that the land was now worth \$500,000. Although none of the lots were sold, the company recognized revenue of \$180,000, less related expenses of \$80,000, for a net income on the project of \$100,000.

5. For a number of years, the company used the FIFO method for inventory valuation purposes. During the current year, the president noted that all the other companies in the industry had switched to the LIFO method. The company decided not to switch to LIFO because net income would decrease \$830,000.

Instructions

State whether or not you agree with the decisions made by Jeremy Meadow Corporation. Support your answers with reference, whenever possible, to the generally accepted principles, assumptions, and cost constraint applicable in the circumstances.

Solution

1. From the facts, it is difficult to determine whether to agree or disagree. Consistency, of course, is violated in this situation although its violation may not be material. Furthermore, the change of accounting policies regarding the treatment of small tools cannot be judged good or bad but would depend on the circumstances. In this case, it seems that the result will be approximately the same whether the corporation capitalizes and expenses, or simply expenses each period, since the purchases are fairly uniform. Perhaps from a cost standpoint (expediency), it might be best to continue the present policy rather than become involved in detailed depreciation schedules, assuming that purchases remain fairly uniform. On the other hand, the president may believe there is a significant unrecorded asset that should be shown on the balance sheet. If such is the case, capitalization and subsequent depreciation would be more appropriate.
2. Disagree. At the present time, accountants do not recognize price level or current value adjustments in the accounts. Hence, it is misleading to deviate from the historical cost principle because conjecture or opinion can take place. Also, depreciation is not so much a matter of valuation as it is a means of cost allocation. Assets are not depreciated on the basis of a decline in their fair value. Rather, they are depreciated on the basis of a systematic charge of expired cost against revenues.
3. Agree. The full disclosure principle recognizes that reasonable condensation and summarization of the details of a corporation's operations and financial position are essential to readability and comprehension. Thus, in determining what is full disclosure, the accountant must decide whether omission will mislead readers of the financial statements. Generally, companies present only the total amount of cash on a balance sheet unless some special circumstance is involved (such as a possible restriction on the use of the cash). In most cases, however, the company's presentation would be considered appropriate and in accordance with the full disclosure principle.
4. Disagree. The historical cost principle indicates that companies account for assets and liabilities on the basis of cost. If sales value were selected, for example, it would be extremely difficult to establish an appraisal value for the given item without selling it. Note, too, that the revenue recognition principle provides guidance on when revenue should be recognized. Revenue should be recognized when the performance obligation is satisfied. In this case, the revenue was not recognized because the critical event, "sale of the land with transfer to the buyer," had not occurred.
5. From the facts, it is difficult to determine whether to agree or disagree with the president. The president's approach is not a violation of any principle. Consistency requires that accounting entities give accountable events the same accounting treatment from period to period for a given business enterprise. It says nothing concerning consistency of accounting principles among business enterprises. From a comparability viewpoint, it might be useful to report the information on a LIFO basis. But, as indicated above, there is no requirement to do so.

Exercises, Problems, Problem Solution Walkthrough Videos, and many more assessment tools and resources are available for practice in WileyPLUS.

Questions

1. What is a conceptual framework? Why is a conceptual framework necessary in financial accounting?
2. What is the primary objective of financial reporting?
3. What is meant by the term “qualitative characteristics of accounting information”?
4. Briefly describe the two fundamental qualities of useful accounting information.
5. How is materiality (or immateriality) related to the proper presentation of financial statements? What factors and measures should be considered in assessing the materiality of a misstatement in the presentation of a financial statement?
6. What are the enhancing qualities of the qualitative characteristics? What is the role of enhancing qualities in the conceptual framework?
7. According to the FASB conceptual framework, the objective of financial reporting for business enterprises is based on the needs of the users of financial statements. Explain the level of sophistication that the Board assumes about the users of financial statements.
8. What is the distinction between comparability and consistency?
9. Why is it necessary to develop a definitional framework for the basic elements of accounting?
10. Expenses, losses, and distributions to owners are all decreases in net assets. What are the distinctions among them?
11. Revenues, gains, and investments by owners are all increases in net assets. What are the distinctions among them?
12. What are the four basic assumptions that underlie the financial accounting structure?
13. The life of a business is divided into specific time periods, usually a year, to measure results of operations for each such time period and to portray financial conditions at the end of each period.
 - a. This practice is based on the accounting assumption that the life of the business consists of a series of time periods and that it is possible to measure accurately the results of operations for each period. Comment on the validity and necessity of this assumption.
 - b. What has been the effect of this practice on accounting? What is its relation to the accrual system? What influence has it had on accounting entries and methodology?
14. What is the basic accounting problem created by the monetary unit assumption when there is significant inflation? What appears to be the FASB position on a stable monetary unit?
15. The chairman of the board of directors of the company for which you are chief accountant has told you that he has little use for accounting figures based on historical cost. He believes that replacement values are of far more significance to the board of directors than “out-of-date costs.” Present some arguments to convince him that accounting data should still be based on historical cost.
16. What is the definition of fair value?
17. What is the fair value option? Explain how use of the fair value option reflects application of the fair value principle.
18. Briefly describe the fair value hierarchy.
19. Explain the revenue recognition principle.
20. What is a performance obligation, and how is it used to determine when revenue should be recognized?
21. What are the five steps used to determine the proper time to recognize revenue?
22. Selane Eatery operates a catering service specializing in business luncheons for large corporations. Selane requires customers to place their orders 2 weeks in advance of the scheduled events. Selane bills its customers on the tenth day of the month following the date of service and requires that payment be made within 30 days of the billing date. Conceptually, when should Selane recognize revenue related to its catering service?
23. Mogilny Company paid \$135,000 for a machine. The Accumulated Depreciation—Equipment account has a balance of \$46,500 at the present time. The company could sell the machine today for \$150,000. The company president believes that the company has a “right to this gain.” What does the president mean by this statement? Do you agree?
24. Three expense recognition methods (associating cause and effect, systematic and rational allocation, and immediate recognition) were discussed in the text under the expense recognition principle. Indicate the basic nature of each of these expense recognition methods and give two examples of each.
25. *Statement of Financial Accounting Concepts No. 5* identifies four characteristics that an item must have before it is recognized in the financial statements. What are these four characteristics?
26. Briefly describe the types of information concerning financial position, income, and cash flows that might be provided (a) within the main body of the financial statements, (b) in the notes to the financial statements, or (c) as supplementary information.
27. In January 2021, Janeway Inc. doubled the amount of its outstanding stock by selling on the market an additional 10,000 shares to finance an expansion of the business. You propose that this information be shown by a footnote on the balance sheet as of December 31, 2020. The president objects, claiming that this sale took place after December 31, 2020, and therefore should not be shown. Explain your position.
28. Describe the major constraint inherent in the presentation of accounting information.
29. What are some of the costs of providing accounting information? What are some of the benefits of accounting information? Describe the cost-benefit factors that should be considered when new accounting standards are being proposed.
30. The treasurer of Landowska Co. has heard that conservatism is a doctrine that is followed in accounting and, therefore, proposes that several policies be followed that are conservative in nature. State your opinion with respect to each of the policies listed.
 - a. The company gives a 2-year warranty to its customers on all products sold. The estimated warranty costs incurred from this year’s sales should be entered as an expense this year instead of an expense in the period in the future when the warranty is made good.
 - b. When sales are made on account, there is always uncertainty about whether the accounts are collectible. Therefore, the treasurer recommends recording the sale when the cash is received from the customers.
 - c. A personal liability lawsuit is pending against the company. The treasurer believes there is an even chance that the company will lose the suit and have to pay damages of \$200,000 to \$300,000. The treasurer recommends that a loss be recorded and a liability created in the amount of \$300,000.

Brief Exercises

BE2.1 (LO 2) Match the qualitative characteristics below with the following statements.

- | | |
|----------------------------|------------------|
| 1. Relevance | 5. Comparability |
| 2. Faithful representation | 6. Completeness |
| 3. Predictive value | 7. Neutrality |
| 4. Confirmatory value | 8. Timeliness |
- Quality of information that permits users to identify similarities in and differences between two sets of economic phenomena.
 - Having information available to users before it loses its capacity to influence decisions.
 - Information about an economic phenomenon that has value as an input to the processes used by capital providers to form their own expectations about the future.
 - Information that is capable of making a difference in the decisions of users in their capacity as capital providers.
 - Absence of bias intended to attain a predetermined result or to induce a particular behavior.

BE2.2 (LO 2) Match the qualitative characteristics below with the following statements.

- | | |
|----------------------|----------------------------|
| 1. Timeliness | 5. Faithful representation |
| 2. Completeness | 6. Relevance |
| 3. Free from error | 7. Neutrality |
| 4. Understandability | 8. Confirmatory value |
- Quality of information that assures users that information represents the economic phenomena that it purports to represent.
 - Information about an economic phenomenon that corrects past or present expectations based on previous evaluations.
 - The extent to which information is accurate in representing the economic substance of a transaction.
 - Includes all the information that is necessary for a faithful representation of the economic phenomena that it purports to represent.
 - Quality of information that allows users to comprehend its meaning.

BE2.3 (LO 2) Discuss whether the changes described in each of the cases below require recognition in the CPA's audit report as to consistency. (Assume that the amounts are material.)

- The company changed its inventory method to FIFO from weighted-average, which had been used in prior years.
- The company disposed of one of the two subsidiaries that had been included in its consolidated statements for prior years.
- The estimated remaining useful life of plant property was reduced because of obsolescence.

BE2.4 (LO 2) Identify which qualitative characteristic of accounting information is best described in each item below. (Do not use relevance and faithful representation.)

- The annual reports of **Best Buy Co.** are audited by certified public accountants.
- Black & Decker** and **Cannondale Corporation** both use the FIFO cost flow assumption.
- Starbucks Corporation** has used straight-line depreciation since it began operations.
- Motorola** issues its quarterly reports immediately after each quarter ends.

BE2.5 (LO 2) Presented below are three different transactions related to materiality. Explain whether you would classify these transactions as material.

- Blair Co. has reported a positive trend in earnings over the last 3 years. In the current year, it reduces its bad debt allowance to ensure another positive earnings year. The impact of this adjustment is equal to 3% of net income.
- Hindi Co. has an unusual gain of \$3.1 million on the sale of plant assets and a \$3.3 million loss on the sale of investments. It decides to net the gain and loss because the net effect is considered immaterial. Hindi Co.'s income for the current year was \$10 million.
- Damon Co. expenses all capital equipment under \$2,500 on the basis that it is immaterial. The company has followed this practice for a number of years.

BE2.6 (LO 2) For each item below, indicate to which category of elements of financial statements it belongs.

- | | | |
|--------------------------------|-------------------------------|--------------------------------|
| a. Retained earnings. | e. Depreciation. | h. Dividends. |
| b. Sales. | f. Loss on sale of equipment. | i. Gain on sale of investment. |
| c. Additional paid-in capital. | g. Interest payable. | j. Issuance of common stock. |
| d. Inventory. | | |

BE2.7 (LO 2) Explain how you would decide whether to record each of the following expenditures as an asset or an expense. Assume all items are material.

- Legal fees paid in connection with the purchase of land are \$1,500.
- Eduardo, Inc. paves the driveway leading to the office building at a cost of \$21,000.
- A meat market purchases a meat-grinding machine at a cost of \$3,500.
- On June 30, Monroe and Meno, medical doctors, pay 6 months' office rent to cover the month of July and the next 5 months.
- Smith's Hardware Company pays \$9,000 in wages to laborers for construction on a building to be used in the business.
- Alvarez's Florists pays wages of \$2,100 for the month to an employee who serves as driver of their delivery truck.

BE2.8 (LO 3) Identify which basic assumption of accounting is best described in each item below.

- The economic activities of **FedEx Corporation** are divided into 12-month periods for the purpose of issuing annual reports.
- Solectron Corporation, Inc.** does not adjust amounts in its financial statements for the effects of inflation.
- Walgreen Co.** reports current and noncurrent classifications in its balance sheet.
- The economic activities of **General Electric** and its subsidiaries are merged for accounting and reporting purposes.

BE2.9 (LO 3) If the going concern assumption is not made in accounting, discuss the differences in the amounts shown in the financial statements for the following items.

- Land.
- Unamortized bond premium.
- Depreciation expense on equipment.
- Inventory.
- Prepaid insurance.

BE2.10 (LO 4) Identify which basic principle of accounting is best described in each item below.

- Norfolk Southern Corporation** reports revenue in its income statement when the performance obligation is satisfied instead of when the cash is collected.
- Yahoo!** recognizes depreciation expense for a machine over the 2-year period during which that machine helps the company earn revenue.
- Oracle Corporation** reports information about pending lawsuits in the notes to its financial statements.
- Gap, Inc.** reports land on its balance sheet at the amount paid to acquire it, even though the estimated fair value is greater.

BE2.11 (LO 4) Vande Velde Company made three investments during 2020. (1) It purchased 1,000 shares of Sastre Company, a start-up company. Vande Velde made the investment based on valuation estimates from an internally developed model. (2) It purchased 2,000 shares of **GE** stock, which trades on the NYSE. (3) It invested \$10,000 in local development authority bonds. Although these bonds do not trade on an active market, their value closely tracks movements in U.S. Treasury bonds. Where will Vande Velde report these investments in the fair value hierarchy?

BE2.12 (LO 4) What accounting assumption, principle, or constraint would **Target Corporation** use in each of the situations below?

- Target was involved in litigation over the last year. This litigation is disclosed in the financial statements.
- Target allocates the cost of its depreciable assets over the life it expects to receive revenue from these assets.
- Target records the purchase of a new **Dell** PC at its cash equivalent price.

Exercises

E2.1 (LO 1) (Usefulness, Objective of Financial Reporting) Indicate whether the following statements about the conceptual framework are true or false. If false, provide a brief explanation supporting your position.

- Accounting rule-making that relies on a body of concepts will result in useful and consistent pronouncements.
- General-purpose financial reports are most useful to company insiders in making strategic business decisions.
- Accounting standards based on personal conceptual frameworks generally will result in consistent and comparable accounting reports.
- Capital providers are the only users who benefit from general-purpose financial reporting.
- Accounting reports should be developed so that users without knowledge of economics and business can become informed about the financial results of a company.
- The objective of financial reporting is the foundation from which the other aspects of the framework logically result.

E2.2 (LO 1, 2) (Usefulness, Objective of Financial Reporting, Qualitative Characteristics) Indicate whether the following statements about the conceptual framework are true or false. If false, provide a brief explanation supporting your position.

- The fundamental qualitative characteristics that make accounting information useful are relevance and verifiability.
- Relevant information only has predictive value, confirmatory value, or both.
- Information that is a faithful representation is characterized as having predictive or confirmatory value.
- Comparability pertains only to the reporting of information in a similar manner for different companies.
- Verifiability is solely an enhancing characteristic for faithful representation.
- In preparing financial reports, it is assumed that users of the reports have reasonable knowledge of business and economic activities.

E2.3 (LO 2, 4) Groupwork (Qualitative Characteristics) *SFAC No. 8*, Chapter 3, identifies the qualitative characteristics that make accounting information useful. Presented below are a number of questions related to these qualitative characteristics and underlying constraint.

- What is the quality of information that enables users to confirm or correct prior expectations?
- Identify the pervasive constraint developed in the conceptual framework.
- The chairman of the SEC at one time noted, "If it becomes accepted or expected that accounting principles are determined or modified in order to secure purposes other than economic measurement, we assume a grave risk that confidence in the credibility of our financial information system will be undermined." Which qualitative characteristic of accounting information should ensure that such a situation will not occur? (Do not use faithful representation.)
- Muruyama Corp. switches from FIFO to average-cost to FIFO over a 2-year period. Which qualitative characteristic of accounting information is not followed?
- Assume that the profession permits the savings and loan industry to defer losses on investments it sells because immediate recognition of the loss may have adverse economic consequences on the industry. Which qualitative characteristic of accounting information is not followed? (Do not use relevance or faithful representation.)
- What are the two fundamental qualities that make accounting information useful for decision-making?
- Watteau Inc. does not issue its first-quarter report until after the second quarter's results are reported. Which qualitative characteristic of accounting is not followed? (Do not use relevance.)
- Predictive value is an ingredient of which of the two fundamental qualities that make accounting information useful for decision-making purposes?
- Duggan, Inc. is the only company in its industry to depreciate its plant assets on a straight-line basis. Which qualitative characteristic of accounting information may not be followed?
- Roddick Company has attempted to determine the replacement cost of its inventory. Three different appraisers arrive at substantially different amounts for this value. The president, nevertheless, decides

to report the middle value for external reporting purposes. Which qualitative characteristic of information is lacking in these data? (Do not use relevance or faithful representation.)

E2.4 (LO 2) (Qualitative Characteristics) The qualitative characteristics that make accounting information useful for decision-making purposes are as follows.

| | | |
|-------------------------|--------------|-------------------|
| Relevance | Neutrality | Verifiability |
| Faithful representation | Completeness | Understandability |
| Predictive value | Timeliness | Comparability |
| Confirmatory value | Materiality | Free from error |

Instructions

Identify the appropriate qualitative characteristic(s) to be used given the information provided below.

- Qualitative characteristic being employed when companies in the same industry are using the same accounting principles.
- Quality of information that confirms users' earlier expectations.
- Imperative for providing comparisons of a company from period to period.
- Ignores the economic consequences of a standard or rule.
- Requires a high degree of consensus among individuals on a given measurement.
- Predictive value is an ingredient of this fundamental quality of information.
- Four qualitative characteristics that are related to both relevance and faithful representation.
- An item is not recorded because its effect on income would not change a decision.
- Neutrality is an ingredient of this fundamental quality of accounting information.
- Two fundamental qualities that make accounting information useful for decision-making purposes.
- Issuance of interim reports is an example of what enhancing quality of relevance?

E2.5 (LO 2) (Elements of Financial Statements) Ten interrelated elements that are most directly related to measuring the performance and financial status of an enterprise are provided below.

| | | |
|-----------------------|-------------------------|----------|
| Assets | Distributions to owners | Expenses |
| Liabilities | Comprehensive income | Gains |
| Equity | Revenues | Losses |
| Investments by owners | | |

Instructions

Identify the element or elements associated with the 12 items below.

- Arises from peripheral or incidental transactions.
- Obligation to transfer resources arising from a past transaction.
- Increases ownership interest.
- Declares and pays cash dividends to owners.
- Increases in net assets in a period from nonowner sources.
- Items characterized by service potential or future economic benefit.
- Equals increase in assets less liabilities during the year, after adding distributions to owners and subtracting investments by owners.
- Arises from income statement activities that constitute the entity's ongoing major or central operations.
- Residual interest in the assets of the enterprise after deducting its liabilities.
- Increases assets during a period through sale of product.
- Decreases assets during the period by purchasing the company's own stock.
- Includes all changes in equity during the period, except those resulting from investments by owners and distributions to owners.

E2.6 (LO 3, 4) (Assumptions, Principles, and Constraint) Presented below are the assumptions, principles, and constraint used in this chapter.

- | | |
|--|---------------------------------------|
| 1. Economic entity assumption | 6. Measurement principle (fair value) |
| 2. Going concern assumption | 7. Expense recognition principle |
| 3. Monetary unit assumption | 8. Full disclosure principle |
| 4. Periodicity assumption | 9. Cost constraint |
| 5. Measurement principle (historical cost) | 10. Revenue recognition principle |

Instructions

Identify by number the accounting assumption, principle, or constraint that describes each situation below. Do not use a number more than once.

- a. Allocates expenses to revenues in the proper period.
- b. Indicates that fair value changes subsequent to purchase are not recorded in the accounts. (Do not use revenue recognition principle.)
- c. Ensures that all relevant financial information is reported.
- d. Rationale why plant assets are not reported at liquidation value. (Do not use historical cost principle.)
- e. Indicates that personal and business record keeping should be separately maintained.
- f. Separates financial information into time periods for reporting purposes.
- g. Assumes that the dollar is the “measuring stick” used to report on financial performance.

E2.7 (LO 3, 4) (Assumptions, Principles, and Constraint) Presented below are a number of operational guidelines and practices that have developed over time.

Instructions

Select the assumption, principle, or constraint that most appropriately justifies these procedures and practices. (Do not use qualitative characteristics.)

- a. Fair value changes are not recognized in the accounting records.
- b. Financial information is presented so that investors will not be misled.
- c. Intangible assets are amortized over periods benefited.
- d. Agricultural companies use fair value for purposes of valuing crops.
- e. Each enterprise is kept as a unit distinct from its owner or owners.
- f. All significant post-balance-sheet events are disclosed.
- g. Revenue is recorded when the product is delivered.
- h. All important aspects of bond indentures are presented in financial statements.
- i. Rationale for accrual accounting.
- j. The use of consolidated statements is justified.
- k. Reporting must be done at defined time intervals.
- l. An allowance for doubtful accounts is established.
- m. Goodwill is recorded only at time of purchase.
- n. A company charges its sales commission costs to expense.

E2.8 (LO 4) (Full Disclosure Principle) Presented below are a number of facts related to Weller, Inc. Assume that no mention of these facts was made in the financial statements and the related notes.

Instructions

Assume that you are the auditor of Weller, Inc. and that you have been asked to explain the appropriate accounting and related disclosure necessary for each of these items.

- a. The company decided that, for the sake of conciseness, only net income should be reported on the income statement. Details as to revenues, cost of goods sold, and expenses were omitted.
- b. Equipment purchases of \$170,000 were partly financed during the year through the issuance of a \$110,000 notes payable. The company offset the equipment against the notes payable and reported plant assets at \$60,000.
- c. Weller has reported its ending inventory at \$2,100,000 in the financial statements. No other information related to inventories is presented in the financial statements and related notes.
- d. The company changed its method of valuing inventories from weighted-average to FIFO. No mention of this change was made in the financial statements.

E2.9 (LO 4) Groupwork (Accounting Principles and Assumptions—Comprehensive) Presented below are a number of business transactions that occurred during the current year for Gonzales, Inc.

Instructions

In each of the situations, discuss the appropriateness of the journal entries in terms of generally accepted accounting principles.

- a. The president of Gonzales, Inc. used his expense account to purchase a new Tahoe solely for personal use. The following journal entry was made.

| | | |
|-----------------------|--------|--------|
| Miscellaneous Expense | 29,000 | |
| Cash | | 29,000 |

- b. Merchandise inventory that cost \$620,000 is reported on the balance sheet at \$690,000, the expected selling price less estimated selling costs. The following entry was made to record this increase in value.

| | | |
|---------------|--------|--------|
| Inventory | 70,000 | |
| Sales Revenue | | 70,000 |

- c. The company is being sued for \$500,000 by a customer who claims damages for personal injury apparently caused by a defective product. Company attorneys feel extremely confident that the company will have no liability for damages resulting from the situation. Nevertheless, the company decides to make the following entry.

| | | |
|-----------------------|---------|---------|
| Loss from Lawsuit | 500,000 | |
| Liability for Lawsuit | | 500,000 |

- d. Because the general level of prices increased during the current year, Gonzales, Inc. determined that there was a \$16,000 understatement of depreciation expense on its equipment and decided to record it in its accounts. The following entry was made.

| | | |
|------------------------------------|--------|--------|
| Depreciation Expense | 16,000 | |
| Accumulated Depreciation—Equipment | | 16,000 |

- e. Because of a “fire sale,” equipment obviously worth \$200,000 was acquired at a cost of \$155,000. The following entry was made.

| | | |
|---------------|---------|---------|
| Equipment | 200,000 | |
| Cash | | 155,000 |
| Sales Revenue | | 45,000 |

E2.10 (LO 4) Groupwork (Accounting Principles—Comprehensive) Presented below is information related to Cramer, Inc.

Instructions

Comment on the appropriateness of the accounting procedures followed by Cramer, Inc.

- a. Depreciation expense on the building for the year was \$60,000. Because the building was increasing in value during the year, the controller decided to charge the depreciation expense to retained earnings instead of to net income. The following entry is recorded.

| | | |
|------------------------------------|--------|--------|
| Retained Earnings | 60,000 | |
| Accumulated Depreciation—Buildings | | 60,000 |

- b. Materials were purchased on January 1, 2020, for \$120,000 and this amount was entered in the Materials account. On December 31, 2020, the materials would have cost \$141,000, so the following entry is made.

| | | |
|---------------------|--------|--------|
| Inventory | 21,000 | |
| Gain on Inventories | | 21,000 |

- c. During the year, the company purchased equipment through the issuance of common stock. The stock had a par value of \$135,000 and a fair value of \$450,000. The fair value of the equipment was not easily determinable. The company recorded this transaction as follows.

| | | |
|--------------|---------|---------|
| Equipment | 135,000 | |
| Common Stock | | 135,000 |

- d. During the year, the company sold certain equipment for \$285,000, recognizing a gain of \$69,000. Because the controller believed that new equipment would be needed in the near future, she decided to defer the gain and amortize it over the life of any new equipment purchased.

- e. An order for \$61,500 has been received from a customer for products on hand. This order was shipped on January 9, 2021. The company made the following entry in 2020.

| | | |
|---------------------|--------|--------|
| Accounts Receivable | 61,500 | |
| Sales Revenue | | 61,500 |

Concepts for Analysis

CA2.1 (LO 1) (Conceptual Framework—General) Wayne Cooper has some questions regarding the theoretical framework in which GAAP is set. He knows that the FASB and other predecessor organizations have attempted to develop a conceptual framework for accounting theory formulation. Yet, Wayne's supervisors have indicated that these theoretical frameworks have little value in the practical sense (i.e., in the real world). Wayne did notice that accounting rules seem to be established after the fact rather than before. He thought this indicated a lack of theory structure but never really questioned the process at school because he was too busy doing the homework.

Wayne feels that some of his anxiety about accounting theory and accounting semantics could be alleviated by identifying the basic concepts and definitions accepted by the profession and considering them in light of his current work. By doing this, he hopes to develop an appropriate connection between theory and practice.

Instructions

- Help Wayne recognize the purpose of and benefit of a conceptual framework.
- Identify any Statements of Financial Accounting Concepts issued by the FASB that may be helpful to Wayne in developing his theoretical background.

CA2.2 (LO 1, 2) Writing (Conceptual Framework—General) The Financial Accounting Standards Board (FASB) has developed a conceptual framework for financial accounting and reporting. The FASB has issued eight Statements of Financial Accounting Concepts. These statements are intended to set forth the objective and fundamentals that will be the basis for developing financial accounting and reporting standards. The objective identifies the goals and purposes of financial reporting. The fundamentals are the underlying concepts of financial accounting that guide the selection of transactions, events, and circumstances to be accounted for; their recognition and measurement; and the means of summarizing and communicating them to interested parties.

The purpose of the statement on qualitative characteristics is to examine the characteristics that make accounting information useful. These characteristics or qualities of information are the ingredients that make information useful and the qualities to be sought when accounting choices are made.

Instructions

- Identify and discuss the benefits that can be expected to be derived from the FASB's conceptual framework.
- What is the most important quality for accounting information as identified in the conceptual framework? Explain why it is the most important.
- Statement of Financial Accounting Concepts No. 8* describes a number of key characteristics or qualities for accounting information. Briefly discuss the importance of any three of these qualities for financial reporting purposes.

(CMA adapted)

CA2.3 (LO 1) (Objective of Financial Reporting) Homer Winslow and Jane Alexander are discussing various aspects of the FASB's concepts statement on the objective of financial reporting. Homer indicates that this pronouncement provides little, if any, guidance to the practicing professional in resolving accounting controversies. He believes that the statement provides such broad guidelines that it would be impossible to apply the objective to present-day reporting problems. Jane concedes this point but indicates that the objective is still needed to provide a starting point for the FASB in helping to improve financial reporting.

Instructions

- Indicate the basic objective established in the conceptual framework.
- What do you think is the meaning of Jane's statement that the FASB needs a starting point to resolve accounting controversies?

CA2.4 (LO 2) Groupwork (Qualitative Characteristics) Accounting information provides useful information about business transactions and events. Those who provide and use financial reports must often select and evaluate accounting alternatives. The FASB statement on qualitative characteristics of accounting information examines the characteristics of accounting information that make it useful for decision-making. It also points out that various limitations inherent in the measurement and reporting process may necessitate trade-offs or sacrifices among the characteristics of useful information.

Instructions

- a. Describe briefly the following characteristics of useful accounting information.
 1. Relevance.
 2. Faithful representation.
 3. Understandability.
 4. Comparability.
 5. Consistency.
- b. For each of the following pairs of information characteristics, give an example of a situation in which one of the characteristics may be sacrificed in return for a gain in the other.
 1. Relevance and faithful representation.
 2. Relevance and consistency.
 3. Comparability and consistency.
 4. Relevance and understandability.
- c. What criterion should be used to evaluate trade-offs between information characteristics?

CA2.5 (LO 4) (Revenue Recognition Principle) After the presentation of your report on the examination of the financial statements to the board of directors of Piper Publishing Company, one of the new directors expresses surprise that the income statement assumes that an equal proportion of the revenue is recognized with the publication of every issue of the company's magazine. She feels that the "crucial event" in the process of earning revenue in the magazine business is the cash sale of the subscription. She says that she does not understand why most of the revenue cannot be "recognized" in the period of the cash sale.

Instructions

Discuss the propriety of timing the recognition of revenue in Piper Publishing Company's accounts with:

- a. The cash sale of the magazine subscription.
- b. The publication of the magazine every month.
- c. Over time, as the magazines are published and delivered to customers.

CA2.6 (LO 4) (Expense Recognition Principle) An accountant must be familiar with the concepts involved in determining earnings of a business entity. The amount of earnings reported for a business entity is dependent on the proper recognition, in general, of revenues and expenses for a given time period. In some situations, costs are recognized as expenses at the time of product sale. In other situations, guidelines have been developed for recognizing costs as expenses or losses by other criteria.

Instructions

- a. Explain the rationale for recognizing costs as expenses at the time of product sale.
- b. What is the rationale underlying the appropriateness of treating costs as expenses of a period instead of assigning the costs to an asset? Explain.
- c. In what general circumstances would it be appropriate to treat a cost as an asset instead of as an expense? Explain.
- d. Some expenses are assigned to specific accounting periods on the basis of systematic and rational allocation of asset cost. Explain the underlying rationale for recognizing expenses on the basis of systematic and rational allocation of asset cost.
- e. Identify the conditions under which it would be appropriate to treat a cost as a loss.

(AICPA adapted)

CA2.7 (LO 4) (Expense Recognition Principle) Accountants try to prepare income statements that are as accurate as possible. A basic requirement in preparing accurate income statements is to record costs and revenues properly. Proper recognition of costs and revenues requires that costs resulting from typical business operations be recognized in the period in which they expired.

Instructions

- a. List three criteria that can be used to determine whether such costs should appear as charges in the income statement for the current period.
- b. As generally presented in financial statements, the following items or procedures have been criticized as improperly recognizing costs. Briefly discuss each item from the viewpoint of matching costs with revenues and suggest corrective or alternative means of presenting the financial information.
 1. Receiving and handling costs.
 2. Cash discounts on purchases.

CA2.8 (LO 4) (Expense Recognition Principle) Daniel Barenboim sells and erects shell houses, that is, frame structures that are completely finished on the outside but are unfinished on the inside except

for flooring, partition studding, and ceiling joists. Shell houses are sold chiefly to customers who are handy with tools and who have time to do the interior wiring, plumbing, wall completion and finishing, and other work necessary to make the shell houses livable dwellings.

Barenboim buys shell houses from a manufacturer in unassembled packages consisting of all lumber, roofing, doors, windows, and similar materials necessary to complete a shell house. Upon commencing operations in a new area, Barenboim buys or leases land as a site for its local warehouse, field office, and display houses. Sample display houses are erected at a total cost of \$30,000 to \$44,000 including the cost of the unassembled packages. The chief element of cost of the display houses is the unassembled packages, inasmuch as erection is a short, low-cost operation. Old sample models are torn down or altered into new models every 3 to 7 years. Sample display houses have little salvage value because dismantling and moving costs amount to nearly as much as the cost of an unassembled package.

Instructions

- a. A choice must be made between (1) expensing the costs of sample display houses in the periods in which the expenditure is made and (2) spreading the costs over more than one period. Discuss the advantages of each method.
- b. Would it be preferable to amortize the cost of display houses on the basis of (1) the passage of time or (2) the number of shell houses sold? Explain.

(AICPA adapted)

CA2.9 (LO 2) Writing (Qualitative Characteristics) Recently, your uncle, Carlos Beltran, who knows that you always have your eye out for a profitable investment, has discussed the possibility of your purchasing some corporate bonds. He suggests that you may wish to get in on the “ground floor” of this deal. The bonds being issued by Neville Corp. are 10-year debentures which promise a 40% rate of return. Neville manufactures novelty/party items.

You have told Uncle Carlos that, unless you can take a look at Neville’s financial statements, you would not feel comfortable about such an investment. Believing that this is the chance of a lifetime, Uncle Carlos has procured a copy of Neville’s most recent, unaudited financial statements which are a year old. These statements were prepared by Mrs. Andy Neville. You peruse these statements, and they are quite impressive. The balance sheet showed a debt-to-equity ratio of 0.10 and, for the year shown, the company reported net income of \$2,424,240.

The financial statements are not shown in comparison with amounts from other years. In addition, no significant note disclosures about inventory valuation, depreciation methods, loan agreements, etc. are available.

Instructions

Write a letter to Uncle Carlos explaining why it would be unwise to base an investment decision on the financial statements that he has provided to you. Be sure to explain why these financial statements are neither relevant nor representationally faithful.

CA2.10 (LO 4) Ethics (Expense Recognition Principle) Anderson Nuclear Power Plant will be “mothballed” at the end of its useful life (approximately 20 years) at great expense. The expense recognition principle requires that expenses be recognized as assets are used up or liabilities are incurred. Accountants Ana Alicia and Ed Bradley argue whether it is better to allocate the expense of mothballing over the next 20 years or ignore it until mothballing occurs.

Instructions

Answer the following questions.

- a. What stakeholders should be considered?
- b. What ethical issue, if any, underlies the dispute?
- c. What alternatives should be considered?
- d. Assess the consequences of the alternatives.
- e. What decision would you recommend?

CA2.11 (LO 4) (Cost Constraint) The AICPA Special Committee on Financial Reporting proposed the following constraints related to financial reporting.

1. Business reporting should exclude information outside of management’s expertise or for which management is not the best source, such as information about competitors.
2. Management should not be required to report information that would significantly harm the company’s competitive position.
3. Management should not be required to provide forecasted financial statements. Rather, management should provide information that helps users forecast for themselves the company’s financial future.

4. Other than for financial statements, management need report only the information it knows. That is, management should be under no obligation to gather information it does not have, or does not need, to manage the business.
5. Companies should present certain elements of business reporting only if users and management agree they should be reported—a concept of flexible reporting.
6. Companies should not have to report forward-looking information unless there are effective deterrents to unwarranted litigation that discourages companies from doing so.

Instructions

For each item, briefly discuss how the proposed constraint addresses concerns about the costs and benefits of financial reporting.

Using Your Judgment

Financial Reporting Problem

The Procter & Gamble Company (P&G)

The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

- a. Using the notes to the consolidated financial statements, determine P&G's revenue recognition policies. Discuss the impact of trade promotions on P&G's financial statements.
- b. Give two examples of where historical cost information is reported in P&G's financial statements and related notes. Give two examples of the use of fair value information reported in either the financial statements or related notes.
- c. When will P&G adopt the new accounting pronouncements on revenue recognition and leasing?
- d. What is P&G's accounting policy related to advertising? What accounting principle does P&G follow regarding accounting for advertising? Where are advertising expenses reported in the financial statements?

Comparative Analysis Case

The Coca-Cola Company and PepsiCo, Inc.

The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- a. What are the primary lines of business of these two companies as shown in their notes to the financial statements?
- b. Which company has the dominant position in beverage sales?
- c. How are inventories for these two companies valued? What cost allocation method is used to report inventory? How does their accounting for inventories affect comparability between the two companies?
- d. What future accounting policy changes do the companies discuss related to revenue recognition?

Financial Statement Analysis Case

Wal-Mart Stores, Inc.

Wal-Mart Stores, Inc. provided the following disclosure in a recent annual report.

New accounting pronouncement (partial) . . . the Securities and Exchange Commission issued Staff Accounting Bulletin No. 101—"Revenue Recognition in Financial Statements" (*SAB 101*). This SAB deals with various revenue recognition issues, several of which are common within the retail industry. As a result of the issuance of this SAB . . . the Company is currently evaluating the effects of

the SAB on its method of recognizing revenues related to layaway sales and will make any accounting method changes necessary during the first quarter of [next year].

In response to *SAB 101*, Wal-Mart changed its revenue recognition policy for layaway transactions, in which Wal-Mart sets aside merchandise for customers who make partial payment. Before the change, Wal-Mart recognized all revenue on the sale at the time of the layaway. After the change, Wal-Mart does not recognize revenue until customers satisfy all payment obligations and take possession of the merchandise.

Instructions

- Discuss the expected effect on income (1) in the year that Wal-Mart makes the changes in its revenue recognition policy, and (2) in the years following the change.
- Evaluate the extent to which Wal-Mart's previous revenue policy was consistent with the revenue recognition principle.
- If all retailers had used a revenue recognition policy similar to Wal-Mart's before the change, are there any concerns with respect to the qualitative characteristic of comparability? Explain.

Accounting, Analysis, and Principles

William Murray achieved one of his life-long dreams by opening his own business, The Caddie Shack Driving Range, on May 1, 2020. He invested \$20,000 of his own savings in the business. He paid \$6,000 cash to have a small building constructed to house the operations and spent \$800 on golf clubs, golf balls, and yardage signs. Murray leased 4 acres of land at a cost of \$1,000 per month. (He paid the first month's rent in cash.) During the first month, advertising costs totaled \$750, of which \$150 was unpaid at the end of the month. Murray paid his three nephews \$400 for retrieving golf balls. He deposited in the company's bank account all revenues from customers (\$4,700). On May 15, Murray withdrew \$800 in cash for personal use. On May 31, the company received a utility bill for \$100 but did not immediately pay it. On May 31, the balance in the company bank account was \$15,100.

Murray is feeling pretty good about results for the first month, but his estimate of profitability ranges from a loss of \$4,900 to a profit of \$1,650.

Accounting

Prepare a balance sheet at May 31, 2020. Murray appropriately records any depreciation expense on a quarterly basis. How could Murray have determined that the business operated at a profit of \$1,650? How could Murray conclude that the business operated at a loss of \$4,900?

Analysis

Assume Murray has asked you to become a partner in his business. Under the partnership agreement, after paying him \$10,000, you would share equally in all future profits. Which of the two income measures above would be more useful in deciding whether to become a partner? Explain.

Principles

What is income according to GAAP? What concepts do the differences in the three income measures for The Caddie Shack Driving Range illustrate?

Bridge to the Profession

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

CE2.1 Access the glossary ("Master Glossary") at the FASB Codification website to answer the following.

- What is the definition of fair value?
- What is the definition of revenue?
- What is the definition of comprehensive income?

CE2.2 Briefly describe how the organization of the FASB Codification corresponds to the elements of financial statements.

Codification Research Case

Your aunt recently received the annual report for a company in which she has invested. The report notes that the statements have been prepared in accordance with “generally accepted accounting principles.” She has also heard that certain terms have special meanings in accounting relative to everyday use. She would like you to explain the meaning of terms she has come across related to accounting.

Instructions

Go to the FASB website and access the FASB Concepts Statements and respond to the following items. (Provide paragraph citations.) When you have accessed the documents, you can use the search tool in your Internet browser.

- How is “materiality” defined in the conceptual framework?
- The concepts statements provide several examples in which specific quantitative materiality guidelines are provided to firms. Identify at least two of these examples. Do you think the materiality guidelines should be quantified? Why or why not?
- The concepts statements discuss the concept of “articulation” between financial statement elements. Briefly summarize the meaning of this term and how it relates to an entity’s financial statements.

IFRS Insights

LEARNING OBJECTIVE 5

Compare the conceptual frameworks underlying GAAP and IFRS.

The IASB and the FASB originally planned to develop a common conceptual framework. The Boards converged on two subjects: *Objectives of Financial Reporting* and *Qualitative Characteristics of Accounting Information*. However, the IASB decided it was important to move forward and complete other parts of the conceptual framework (which it did in 2018). The FASB did not join in on this effort although it is advancing its own work plan to modify its existing conceptual framework as well. Both Boards have the same objective, that is, to develop a conceptual framework consisting of standards that are principles-based and internally consistent, thereby leading to the most useful financial reporting. Hopefully, the two Boards will eventually agree on the key components of a common conceptual framework.

Relevant Facts

Following are the key similarities and differences between GAAP and IFRS related to the conceptual framework for financial reporting.

Similarities

- As indicated above, the IASB has recently completed its conceptual framework, whereas the FASB has not. However, many of the concepts that are covered in the new IASB conceptual framework are consistent with the FASB current framework and related standards.
- The objective of financial reporting and the qualitative characteristics of useful financial information are essentially the same between the two frameworks.
- Both frameworks have similar measurement principles, based on historical cost and fair value concepts. The mixed model (historical cost and fair value) is essentially the same in the two frameworks. In 2011, the Boards issued a converged standard on fair value measurement so that the definition of fair value, measurement techniques, and disclosures are the same between GAAP and IFRS when fair value is used in financial statements.

Differences

- The IASB gives more emphasis to stewardship in its conceptual framework. The framework indicates that users need information about the resources of the entity not only to assess an entity’s prospects for future cash inflows but also to determine how effectively and efficiently management has discharged their responsibilities to use the entity’s existing resources (i.e., stewardship). In other words, the IASB conceptual framework explicitly discusses the need to provide information related

to stewardship of an entity's resources as well as the need for information to help users understand the prospects for future net cash inflows to the entity.

- The concept of prudence is introduced to support the principle of neutrality in relation to the purpose of faithful representation. Prudence is defined as the exercise of caution when making judgments under conditions of uncertainty. As an example, prudence means that revenues are not overstated, and expenses are not understated.
- The IASB also clarified two other concepts—measurement uncertainty and substance over form. The framework indicates that measurement uncertainty does not prevent information from being useful. However, in some cases the most relevant information may have such a high degree of uncertainty that the most useful information is that which is slightly less relevant but is subject to lower measurement uncertainty.
- Although both GAAP and IFRS are increasing the use of fair value to report assets, at this point IFRS has adopted it more broadly. As examples, under IFRS, companies can apply fair value to property, plant, and equipment; natural resources; and, in some cases, intangible assets.
- The monetary unit assumption is part of each framework. However, the unit of measure will vary depending on the currency used in the country in which the company is incorporated (e.g., Chinese yuan, Japanese yen, and British pound). IFRS makes an explicit assumption that financial statements are prepared on an accrual basis.
- The economic entity assumption is also part of each framework although some cultural differences result in differences in its application. For example, in Japan many companies have formed alliances that are so strong that they act similar to related corporate divisions although they are not actually part of the same company. IFRS defines a reporting entity as one that is required to (or chooses to) prepare financial statements. A reporting entity does not need to be a legal entity; it could be a portion of an entity or a combination of entities. GAAP uses a different definition (more aligned with legal entities).
- As indicated earlier, the IASB has developed a new conceptual framework. In the revised conceptual framework, the IASB has introduced two new qualitative characteristics: prudence and substance over form. Also, as noted in the next section, the IASB is making modifications to other parts of its conceptual framework by revising the definitions of a number of the basic elements. The IASB is also introducing updated chapters on such items as measurement, classification of income and expense, derecognition of assets and liabilities, and the reporting entity.

About the Numbers

Financial Statement Elements

While the conceptual framework that underlies IFRS is very similar to that used to develop GAAP, the elements identified and their definitions under IFRS are different. The IASB elements and their definitions are as follows.

| Role | Element | Definition |
|---|------------------|---|
| Economic resource | Asset | A present economic resource controlled by the entity as a result of past events. An economic resource is a right that has the potential to produce economic benefits. |
| Claim | Liability | A present obligation of the entity to transfer an economic resource as a result of past events. |
| | Equity | The residual interest in the assets of the entity after deducting all its liabilities. |
| Changes in economic resources and claims, reflecting financial performance | Income* | Increases in assets, or decreases in liabilities, that result in increases in equity, other than those relating to contributions from holders of equity claims. |
| | Expenses* | Decreases in assets, or increases in liabilities, that result in decreases in equity, other than those relating to distributions to holders of equity claims. |
| *Note that the definition of income includes revenues and gains. Also, the definition of expenses includes both expenses and losses. GAAP provides separate definitions in this area, that is, revenues, gains, expenses, and losses. | | |

On the Horizon

The FASB now faces a difficult task in attempting to update, modify, and complete a converged conceptual framework. There are many difficult issues. For example: How do we trade off characteristics such as highly relevant information that is difficult to verify? How do we define control when we are developing

a definition of an asset? Is a liability the future sacrifice itself or the obligation to make the sacrifice? Should a single measurement method, such as historical cost or fair value, be used, or does it depend on whether it is an asset or liability that is being measured?

Hopefully, the recently completed IASB conceptual framework will provide many useful concepts for the FASB in helping it to complete the revision process for its conceptual framework. We are optimistic that the revised conceptual framework will be a significant improvement over its predecessors and will lead to standards that will help financial statement users to make better decisions.

IFRS Self-Test Questions

- Which of the following statements about the IASB and FASB conceptual frameworks is **not** correct?
 - The IASB conceptual framework does not identify revenues and gains as separate elements.
 - The existing IASB and FASB conceptual frameworks are similar.
 - The FASB and IASB agree that an objective of financial reporting is to provide useful information to investors and creditors.
 - IFRS does not allow use of fair value as a measurement basis.
- Which of the following statements is **false**?
 - The monetary unit assumption is used under IFRS.
 - Under IFRS, companies may use fair value for property, plant, and equipment.
 - The FASB and IASB are no longer working on a joint conceptual framework project.
 - Under IFRS, the concept of prudence is not considered.
- Companies that use IFRS:
 - must report all their assets on the statement of financial position (balance sheet) at fair value.
 - may report property, plant, and equipment and natural resources at fair value.
 - may not use a mixed-attribute system for its balance sheet.
 - may only use historical cost as the measurement basis in financial reporting.
- The issues that the FASB and IASB must address in developing a conceptual framework include all of the following **except**:
 - should the characteristic of relevance be traded-off in favor of information that is verifiable?
 - should a single measurement method such as historical cost be used?
 - what are the key elements of asset and liability definitions?
 - should the role of financial reporting focus solely on internal decision-making?
- With respect to the IASB conceptual framework project:
 - work is being conducted to produce separate discussion papers.
 - work is being conducted with the FASB.
 - work is being conducted to result in a discussion paper covering all the identified areas.
 - the framework is now completed.

IFRS Concepts and Application

IFRS2.1 Do the IASB and FASB conceptual frameworks differ in terms of the role of financial reporting? Explain.

IFRS2.2 What are some of the differences in elements in the IASB and FASB conceptual frameworks?

IFRS2.3 What were some of the challenges to the IASB in developing a conceptual framework?

Financial Reporting Case

IFRS2.4 As discussed in Chapter 1, the **International Accounting Standards Board (IASB)** develops accounting standards for many international companies. The IASB also has developed a conceptual framework to help guide the setting of accounting standards. While the FASB and IASB have issued converged concepts statements on the objective and qualitative characteristics, other parts of their frameworks differ.

Instructions

Briefly discuss the similarities and differences between the FASB and IASB conceptual frameworks as related to elements and their definitions.

Professional Research

IFRS2.5 Your aunt recently received the annual report for a company in which she has invested. The report notes that the statements have been prepared in accordance with IFRS. She has also heard that

certain terms have special meanings in accounting relative to everyday use. She would like you to explain the meaning of terms she has come across related to accounting.

Instructions

Access the IASB conceptual framework at the IASB website. (Click on the IFRS tab and then register for free eIFRS access if necessary.) When you have accessed the documents, you can use the search tool in your Internet browser to prepare responses to the following items. (Provide paragraph citations.)

- a. How is “materiality” defined in the framework?
- b. Your aunt observes that under IFRS, the financial statements are prepared on the accrual basis. According to the framework, what does “accrual basis” mean?

International Financial Reporting Problem

Marks and Spencer plc (M&S)

IFRS2.6 The financial statements of **M&S** are presented in Appendix E. The company’s complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S’s financial statements and the accompanying notes to answer the following questions.

- a. Using the notes to the consolidated financial statements, determine M&S’s revenue recognition policies.
- b. Give two examples of where historical cost information is reported in M&S’s financial statements and related notes. Give two examples of the use of fair value information reported in either the financial statements or related notes. What new accounting policies are discussed, if any?
- c. What are M&S’s critical accounting adjustments and estimation uncertainties related to revenue recognition?

Answers to IFRS Self-Test Questions

The Accounting Information System

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

1. Describe the basic accounting information system.
2. Record and summarize basic transactions.
3. Identify and prepare adjusting entries.
4. Prepare financial statements from the adjusted trial balance and prepare closing entries.
5. Prepare financial statements for a merchandising company.

PREVIEW OF CHAPTER 3 As the opening story indicates, a reliable information system is a necessity for all companies. The purpose of this chapter is to explain and illustrate the features of an accounting information system. The content and organization of this chapter are as follows.

This chapter also includes numerous conceptual and global discussions that are integral to the topics presented here.

THE ACCOUNTING INFORMATION SYSTEM

Accounting Information System

- Basic terminology
- Debits and credits
- Accounting equation
- Financial statements and ownership structure
- The accounting cycle

Record and Summarize Basic Transactions

- Journalizing
- Posting
- Chart of accounts
- Recording process illustrated
- Trial balance

Adjusting Entries

- Types of adjusting entries
- Deferrals
- Accruals
- Adjusted trial balance

Preparing Financial Statements

- Closing
- Post-closing trial balance
- Reversing entries
- Summary

Financial Statements for Merchandisers

- Income statement
- Retained earnings statement
- Balance sheet
- Closing entries

Needed: A Reliable Information System

Maintaining a set of accounting records is not optional. Regulators require that businesses prepare and retain a set of records and documents that can be audited. The U.S. Foreign

Corrupt Practices Act, for example, requires public companies to “make and keep books, records, and accounts, which, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets.” But beyond these two reasons, a company that fails to keep an accurate record of its business transactions may lose revenue and is more likely to operate inefficiently.

One reason accurate records are not provided is because of economic crime or corruption (see the chart). It is clear that economic crime remains a persistent and difficult problem for many companies. For example, it was recently estimated that nearly 50 percent of U.S. companies experienced significant economic crime. And their global counterparts

are not far behind, with the overall global rate reported at 49 percent. While global rates appear lower, U.S. companies often have more stringent internal controls and are more likely to find and report crime.

Cybercrime is now the most reported economic crime. In the past, crime in this area was negligible. However, the increased usage of smartphones and tablet devices, social media, and cloud computing has led to risks related to the disclosure of sensitive and confidential data. Cybercrime is committed by many different offenders with diverse motives, such as (1) insiders who have authorized access and then abuse this access for personal gain, (2) competitors seeking unfair advantage, (3) foreign governments committing espionage for political or economic gain, (4) transnational criminal enterprises stealing or extorting information to generate income, and (5) activists protesting organizational actions or policies.

Importantly, economic crime knows no boundaries. As shown in the following table, respondents to the recent global economic crime survey report a 36 percent incidence of economic crime (with a slight decline from the prior survey). However, regional rates vary with some regions (Africa and Western Europe) reporting relatively high and increasing rates of economic crime.

| Region | Reported Economic Crime in 2016 | Reported Economic Crime in 2014 |
|----------------|---------------------------------|---------------------------------|
| Africa | 57% | 50% |
| Western Europe | 40 | 35 |
| North America | 37 | 41 |
| Eastern Europe | 33 | 39 |
| Asia Pacific | 30 | 32 |
| Latin America | 28 | 35 |
| Middle East | 25 | 21 |
| Global | 36 | 37 |

Even large companies sometimes fail to keep an accurate record of their business transactions. Consider **The Adecco Group**, which at one time was the largest international employment services company. Adecco confirmed weaknesses in its internal control systems and staffing operations in certain countries. Manipulation involved such matters as reconciliation of payroll bank accounts, accounts receivable, and documentation in revenue recognition.

These irregularities forced an indefinite delay in reporting the company's income figures, which led to a significant decline in its share price. Or consider **Nortel Networks Corporation**, which overstated and understated its reserve accounts to manage its earnings. This eventually led to the liquidation of the company. Even the use of computers is no assurance of accuracy and efficiency.

Sources: Adapted from "Adjusting the Lens on Economic Crime," *Global Economic Crime Survey* (PwC, 2016); and *Global Economic Crime and Fraud Survey* (PwC, 2018).

Review and Practice

Go to the **Review and Practice** section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions as well as additional exercises and practice problem with solutions are also available online.

Accounting Information System

LEARNING OBJECTIVE 1

Describe the basic accounting information system.

An **accounting information system** collects and processes transaction data and then disseminates the financial information to interested parties. Accounting information systems vary widely from one business to another. Various factors shape these systems: the nature of the business and the transactions in which it engages, the size of the firm, the volume of data to be handled, and the informational demands that management and others require.

As we discussed in Chapters 1 and 2, in response to the requirements of the Sarbanes-Oxley Act (SOX), companies are placing a renewed focus on their accounting systems to ensure relevant and reliable information is reported in financial statements.¹ A good accounting information system helps management answer such questions as:

- How much and what kind of debt is outstanding?
- Were our sales higher this period than last?
- What assets do we have?
- What were our cash inflows and outflows?
- Did we make a profit last period?
- Are any of our product lines or divisions operating at a loss?
- Can we safely increase our dividends to stockholders?
- Is our rate of return on net assets increasing?

Management can answer many other questions with the data provided by an efficient accounting system. A well-devised accounting information system benefits every type of company.

¹A recent survey indicates that a majority of companies have significantly or moderately improved their internal control over financial reporting (ICFR) structure since they were required to begin complying with Sarbanes-Oxley (SOX) Section 404 (b). Other findings represent even better news. In many cases, ICFR improvements and other compliance work are being used by organizations to drive continuous improvement of business processes related to financial reporting throughout the organization. See "Fine-Tuning SOX Costs, Hours and Controls," *Protiviti Sarbanes-Oxley Compliance Survey* (2017).

What Do the Numbers Mean? Hey, It's Complicated

The economic volatility of the past few years has left companies hungering for more timely and uniform financial information to help them react quickly to fast-changing conditions. As one expert noted, companies were extremely focused on trying to reduce costs and plan for the future better, but a lot of them discovered that they didn't have the information they needed and they didn't have the ability to get that information. The unsteady recession environment also made it risky for companies to interrupt their operations to get new systems up to speed.

So what to do? Try to piecemeal upgrades each year or start a major overhaul of their internal systems? **Best Buy**, for example, has standardized as many of its systems as possible and has been steadily upgrading them over the past decade. Acquisitions can wreak havoc on reporting systems. Best Buy is choosy about when to standardize for companies it acquires, but it sometimes has to implement new systems after international deals.

In other situations, a major overhaul is needed. For example, it is common for companies with a steady stream of acquisitions to have 50 to 70 general ledger systems. In those cases, a

company cannot react well unless its systems are up-to-date and compatible.

Many companies, like Best Buy, find that adopting new technologies leads to other benefits as processes are improved, people are empowered, and the entire business realizes unprecedented agility that enables intelligent analysis and data-driven decision-making. This is referred to as a "continuous accounting" mind-set, which transforms the way accounting works. Indeed, one study found that top-performing companies with this mind-set are closing the accounting books faster and have 90 percent greater automation, 46 percent lower audit fees, and 52 percent lower costs overall.

So is it the big bang (major overhaul) or the piecemeal approach? It seems to depend. One thing is certain—good accounting systems are a necessity. Without one, the risk of failure is high.

Sources: Emily Chasan, "The Financial-Data Dilemma," *Wall Street Journal* (July 24, 2012), p. B4; and I. Tucker, "The Blueprint for Continuous Accounting," *Strategic Finance* (May 2017).

Basic Terminology

Financial accounting rests on a set of concepts (discussed in Chapters 1 and 2) for identifying, recording, classifying, and interpreting transactions and other events relating to enterprises. You therefore need to understand the **basic terminology employed in collecting accounting data**.

Basic Terminology

Event. A happening of consequence. An event generally is the source or cause of changes in assets, liabilities, and equity. Events may be external or internal.

Transaction. An **external event** involving a transfer or exchange between two or more entities.

Account. A systematic arrangement that shows the effect of transactions and other events on a specific element (asset, liability, and so on). Companies keep a separate account for each asset, liability, revenue, and expense, and for capital (stockholders' equity). Because the format of an account often resembles the letter T, it is sometimes referred to as a **T-account** (see Illustration 3.3).

Real and Nominal Accounts. **Real** (permanent) **accounts** are asset, liability, and equity accounts; they appear on the balance sheet. **Nominal** (temporary) **accounts** are revenue, expense, and dividend accounts; except for dividends, they appear on the income statement. Companies periodically close nominal accounts; they do not close real accounts.

Ledger. The book (or computer printouts) containing the accounts. A **general ledger** is a collection of all the asset, liability, stockholders' equity, revenue, and expense accounts. A **subsidiary ledger** contains the details related to a given general ledger account.

Journal. The "book of original entry" where the company initially records transactions and selected other events. Various amounts are transferred from the book of original entry, the journal, to the ledger. Entering transaction data in the journal is known as **journalizing**.

Posting. The process of transferring the essential facts and figures from the book of original entry to the ledger accounts.

Trial Balance. The list of all open accounts in the ledger and their balances. The trial balance prepared immediately after all adjustments have been posted is called an **adjusted trial balance**. A trial balance prepared immediately after closing entries have been posted is called a **post-closing** (or **after-closing**) **trial balance**. Companies may prepare a trial balance at any time.

Adjusting Entries. Entries made at the end of an accounting period to bring all accounts up to date on an accrual basis, so that the company can prepare correct financial statements.

Financial Statements. Statements that reflect the collection, tabulation, and final summarization of the accounting data. Four statements are involved. (1) The **balance sheet** shows the financial condition of the enterprise at the end of a period. (2) The **income statement** measures the results of operations during the period. (3) The **statement of cash flows** reports the cash provided and used by operating, investing, and financing activities during the period. (4) The **retained earnings statement** reconciles the balance of the retained earnings account from the beginning to the end of the period.

Closing Entries. The formal process by which the enterprise reduces all nominal accounts to zero and determines and transfers the net income or net loss to a stockholders' equity account. Also known as "closing the ledger," "closing the books," or merely "closing."

Debits and Credits

The terms **debit** (Dr.) and **credit** (Cr.) mean left and right, respectively. These terms do not mean increase or decrease, but instead describe *where* a company makes entries in the recording process. That is, when a company enters an amount on the left side of an account, it **debits** the account. When it makes an entry on the right side, it **credits** the account. When comparing the totals of the two sides, an account shows a **debit balance** if the total of the debit amounts exceeds the credits. An account shows a **credit balance** if the credit amounts exceed the debits.

The positioning of debits on the left and credits on the right is simply an accounting custom. We could function just as well if we reversed the sides. However, the United States adopted the custom, now the rule, of having debits on the left side of an account and credits on the right side, similar to the custom of driving on the right-hand side of the road. This rule applies to all accounts.

The equality of debits and credits provides the basis for the double-entry system of recording transactions (sometimes referred to as double-entry bookkeeping). Under the universally used **double-entry accounting** system, a company records the dual (two-sided) effect of each transaction in appropriate accounts. This system provides a logical method for recording transactions. It also offers a means of proving the accuracy of the recorded amounts. If a company records every transaction with equal debits and credits, then the sum of all the debits to the accounts must equal the sum of all the credits.

Illustration 3.1 presents the basic guidelines for an accounting system. Increases to all asset and expense accounts occur on the left (or debit side) and decreases on the right (or credit side). Conversely, increases to all liability and revenue accounts occur on the right (or credit side) and decreases on the left (or debit side). A company increases stockholders' equity accounts, such as Common Stock and Retained Earnings, on the credit side, but increases Dividends on the debit side.

| | | |
|--|-------------------------------|-------------------------------|
| Normal Balance—Debit Asset Accounts <hr/> Debit + (increase) | Credit – (decrease) | |
| Expense Accounts | | |
| Debit + (increase) | Credit – (decrease) | |
| Normal Balance—Credit Liability Accounts <hr/> Debit – (decrease) | | Credit + (increase) |
| Stockholders' Equity Accounts | | |
| Debit – (decrease) | Credit + (increase) | |
| Revenue Accounts | | |
| Debit – (decrease) | Credit + (increase) | |

ILLUSTRATION 3.1

Double-Entry (Debit and Credit) Accounting System

The Accounting Equation

In a double-entry system, for every debit there must be a credit, and vice versa. This leads us, then, to the basic equation in accounting (see **Illustration 3.2**).

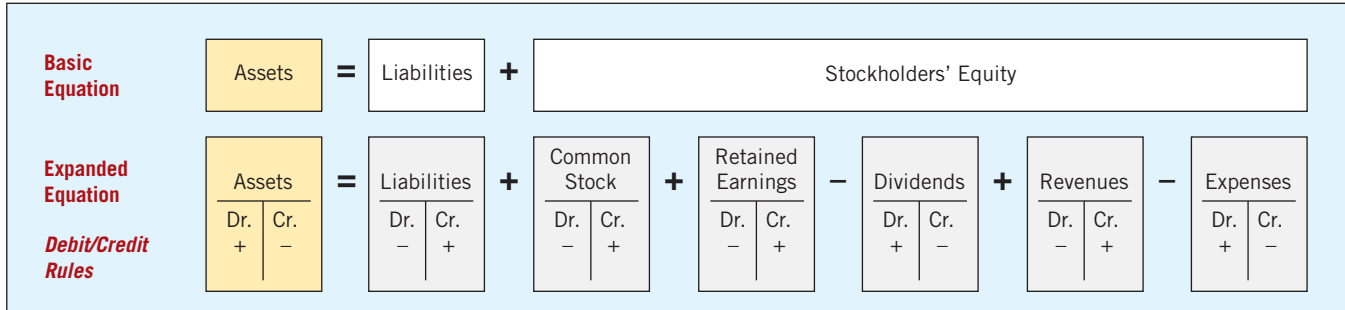

| | | | | |
|--------|---|-------------|---|----------------------|
| Assets | = | Liabilities | + | Stockholders' Equity |
|--------|---|-------------|---|----------------------|

ILLUSTRATION 3.2

The Basic Accounting Equation

Illustration 3.3 expands this equation to show the accounts that make up stockholders' equity. The figure also shows the debit/credit rules and effects on each type of account. Study this diagram carefully. It will help you understand the fundamentals of the double-entry system. Like the basic equation, the expanded equation must also balance (total debits equal total credits).

ILLUSTRATION 3.3 Expanded Equation and Debit/Credit Rules and Effects

Every time a transaction occurs, the elements of the accounting equation change. However, the basic equality remains. To illustrate, consider the following eight different transactions for Perez Inc.

1. Owners invest \$40,000 in exchange for common stock.

2. Disburse \$600 cash for administrative wages.

3. Purchase office equipment priced at \$5,200, giving a 10 percent promissory note in exchange.

4. Receive \$4,000 cash for services performed.

5. Pay off a short-term liability of \$7,000.

6. Declare a cash dividend of \$5,000.

7. Convert a long-term liability of \$80,000 into common stock.

8. Pay cash of \$16,000 for a delivery van.

Financial Statements and Ownership Structure

The stockholders' equity section of the balance sheet reports common stock and retained earnings. The income statement reports revenues and expenses. The retained earnings statement reports net income/loss and dividends. Because a company transfers dividends, revenues, and expenses to retained earnings at the end of the period, a change in any one of these three items affects stockholders' equity. **Illustration 3.4** shows the stockholders' equity relationships.

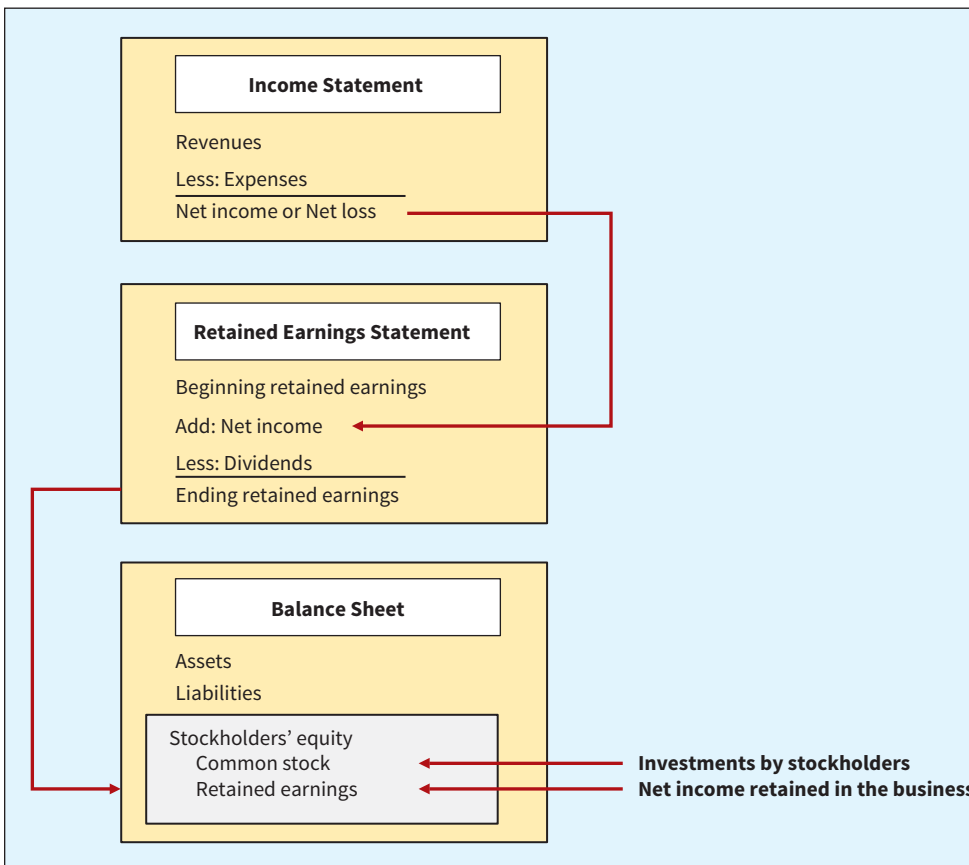

ILLUSTRATION 3.4

Financial Statements and Ownership Structure

The company's ownership structure dictates the types of accounts that are part of or affect the equity section. A corporation commonly uses Common Stock, Paid-in Capital in Excess

of Par, Dividends, and Retained Earnings accounts. A proprietorship or a partnership uses an Owner's Capital account and an Owner's Drawings account. An Owner's Capital account indicates the owner's or owners' investment in the company. An Owner's Drawings account tracks withdrawals by the owner(s).

Illustration 3.5 summarizes and relates the transactions affecting equity to the nominal (temporary) and real (permanent) classifications and to the types of business ownership.

ILLUSTRATION 3.5
Effects of Transactions on Equity Accounts

| Transactions Affecting Owners' or Stockholders' Equity | Impact on Owners' or Stockholders' Equity | Ownership Structure | | | |
|--|---|----------------------------------|---------------------------|------------------------------|-----------------------------------|
| | | Proprietorships and Partnerships | | Corporations | |
| | | Nominal (Temporary) Accounts | Real (Permanent) Accounts | Nominal (Temporary) Accounts | Real (Permanent) Accounts |
| Investment by owner(s) | Increase | | Capital | | Common Stock and related accounts |
| Revenues recognized | Increase | Revenue | Capital | Revenue | Retained Earnings |
| Expenses incurred | Decrease | Expense | | Expense | |
| Withdrawal by owner(s) | Decrease | Drawings | | Dividends | |

The Accounting Cycle

Illustration 3.6 shows the steps in the **accounting cycle**. A company normally uses these accounting procedures to record transactions and prepare financial statements.

ILLUSTRATION 3.6
The Accounting Cycle

Identifying and Recording Transactions and Other Events

The first step in the accounting cycle is analysis of transactions and selected other events. The first problem is to determine what to record. Although GAAP provides guidelines, no simple rules exist that state which events a company should record. Although changes in a company's personnel or managerial policies may be important, the company should not record these items in the accounts. On the other hand, a company should record all cash sales or purchases—no matter how small.

The concepts we presented in Chapter 2 determine what to recognize in the accounts. An item should be recognized in the financial statements if it is an element, is measurable, and is relevant and representationally faithful. Consider human resources (see **Underlying Concepts**). **R. G. Barry & Co.** at one time reported as supplemental data total assets of \$14,055,926, including \$986,094 for “Net investments in human resources.” **AT&T** and **ExxonMobil** also experimented with human resource accounting. Should we value employees for balance sheet and income statement purposes? Certainly skilled employees are an important asset (highly relevant), but the problems of determining their value and measuring it reliably have not yet been solved. Consequently, human resources are not recorded. Perhaps when measurement techniques become more sophisticated and accepted, such information will be presented, if only in supplemental form.

The FASB uses the phrase “transactions and other events and circumstances that affect a business enterprise” to describe the sources or causes of changes in an entity's assets, liabilities, and equity.² Events are of two types. (1) **External events** involve interaction between an entity and its environment, such as a transaction with another entity, a change in the price of a good or service that an entity buys or sells, a flood or earthquake, or an improvement in technology by a competitor. (2) **Internal events** occur within an entity, such as using buildings and machinery in operations, or transferring or consuming raw materials in production processes.

Many events have both external and internal elements. For example, hiring an employee, which involves an exchange of salary for labor, is an external event. Using the services of labor is part of production, an internal event. Further, an entity may initiate and control events, such as the purchase of merchandise or use of a machine. Or, events may be beyond its control, such as an interest rate change, theft, or a tax hike.

Transactions are types of external events. They may be an exchange between two entities where each receives and sacrifices value, such as purchases and sales of goods or services. Or, transactions may be transfers in one direction only. For example, an entity may incur a liability without directly receiving value in exchange, such as charitable contributions. Other examples include investments by owners, distributions to owners, payment of taxes, gifts, casualty losses, and thefts.

In short, a company records as many events as possible that affect its financial position. As discussed earlier in the case of human resources, it omits some events because of tradition and others because of complicated measurement problems. Recently, however, the accounting profession shows more receptiveness to accepting the challenge of measuring and reporting events previously viewed as too complex and immeasurable.

Underlying Concepts

Assets are probable economic benefits controlled by a particular entity as a result of a past transaction or event. Do human resources of a company meet this definition?

Record and Summarize Basic Transactions

LEARNING OBJECTIVE 2

Record and summarize basic transactions.

²“Elements of Financial Statements of Business Enterprises,” *Statement of Financial Accounting Concepts No. 6* (Stamford, Conn.: FASB, 1985), pp. 259–260.

Journalizing

A company records in **accounts** those transactions and events that affect its assets, liabilities, and equities. The **general ledger** contains all the asset, liability, and stockholders' equity accounts. An account (see Illustration 3.3) shows the effect of transactions on particular asset, liability, equity, revenue, and expense accounts.

In practice, companies do not record transactions and selected other events originally in the ledger. A transaction affects two or more accounts, each of which is on a different page in the ledger. Therefore, in order to have a complete record of each transaction or other event in one place, a company uses a **journal** (also called “the book of original entry”). In its simplest form, a **general journal** chronologically lists transactions and other events, expressed in terms of debits and credits to accounts.

As an example, **Illustration 3.7** shows the technique of journalizing, using two transactions for Softbyte, Inc. These transactions are:

- September 1 Stockholders invested \$15,000 cash in the corporation in exchange for shares of stock.
- Purchased computer equipment for \$7,000 cash.

The J1 in Illustration 3.7 indicates these two entries are on the first page of the general journal.

ILLUSTRATION 3.7

Technique of Journalizing

| GENERAL JOURNAL | | | | J1 |
|-----------------|---|------|--------|--------|
| Date | Account Titles and Explanation | Ref. | Debit | Credit |
| 2020 Sept. 1 | Cash Common Stock (Issued shares of stock for cash) | | 15,000 | 15,000 |
| 1 | Equipment Cash (Purchased equipment for cash) | | 7,000 | 7,000 |

Each **general journal entry** consists of four parts: (1) the accounts and amounts to be debited (Dr.), (2) the accounts and amounts to be credited (Cr.), (3) a date, and (4) an explanation. A company enters debits first, followed by credits (slightly indented). The explanation begins below the name of the last account to be credited and may take one or more lines. A company completes the “Ref.” column at the time it posts the accounts.

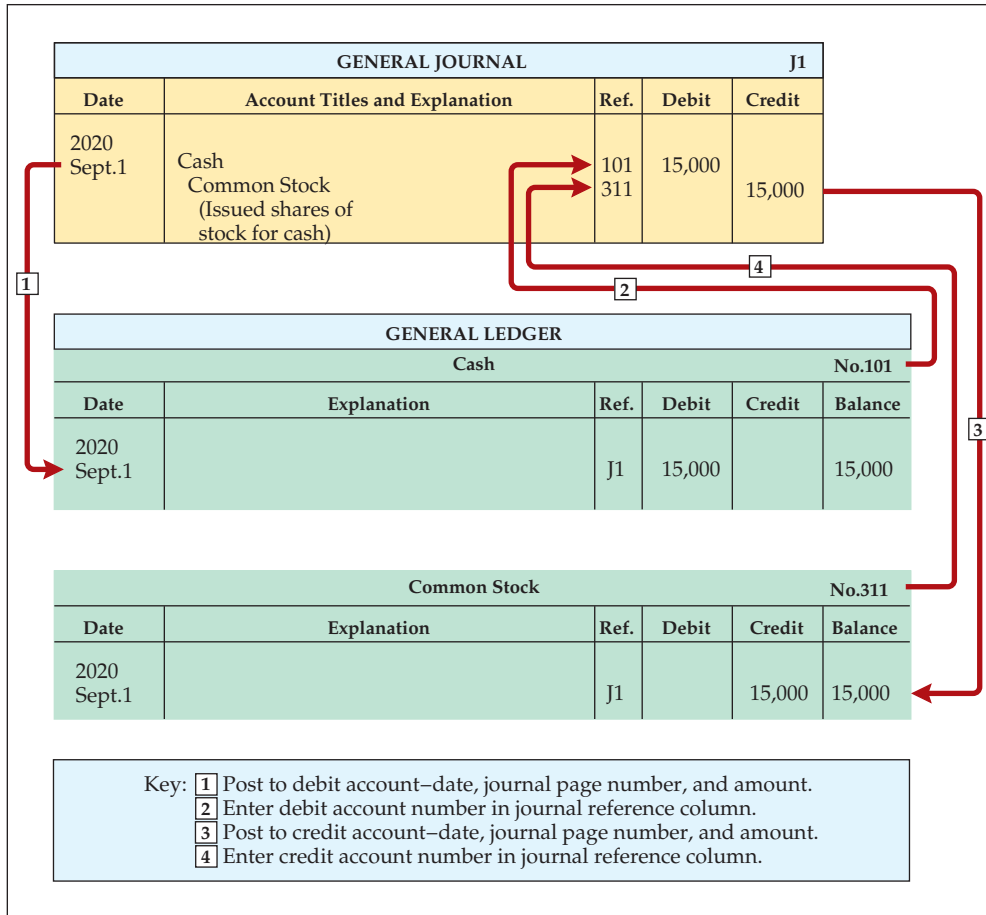

In some cases, a company uses **special journals** in addition to the general journal. Special journals summarize transactions possessing a common characteristic (e.g., cash receipts, sales, purchases, cash payments). As a result, using them reduces bookkeeping time.

Posting

Transferring journal entries to the ledger accounts is called **posting**. Posting involves the following steps.

1. In the **ledger**, in the appropriate columns of the account(s) debited, enter the date, journal page, and debit amount shown in the journal.
2. In the reference column of the **journal**, write the account number to which the debit amount was posted.
3. In the **ledger**, in the appropriate columns of the account(s) credited, enter the date, journal page, and credit amount shown in the journal.
4. In the reference column of the **journal**, write the account number to which the credit amount was posted.

Illustration 3.8 diagrams these four steps, using the first journal entry of Softbyte, Inc. The illustration shows the general ledger accounts in **standard account form**. Some companies call this form the **three-column form of account** because it has three money columns—debit, credit, and balance. The balance in the account is determined after each transaction. The explanation space and reference columns provide special information about the transaction. The boxed numbers indicate the sequence of the steps.

**ILLUSTRATION 3.8****Posting a Journal Entry**

The numbers in the “Ref.” column of the general journal refer to the ledger accounts to which a company posts the respective items. For example, the “101” placed in the column to the right of “Cash” indicates that the company posted this \$15,000 item to Account No. 101 in the ledger.

The posting of the general journal is completed when a company records all of the posting reference numbers opposite the account titles in the journal. Thus, the number in the posting reference column serves two purposes. (1) It indicates the ledger account number of the account involved. (2) It indicates the completion of posting for the particular item. Each company selects its own numbering system for its ledger accounts. Many begin numbering with asset accounts and then follow with liabilities, stockholders’ equity, revenue, and expense accounts, in that order.

The ledger accounts in Illustration 3.8 show the accounts after completion of the posting process. The reference J1 (General Journal, page 1) indicates the source of the data transferred to the ledger account.

What Do the Numbers Mean? Working on the Chain Gang

Accounting systems and accounting ledgers have come a long way, from the pencil-and-paper ledgers used by Bob Cratchit to the computerized systems that most companies rely on today. The latest innovation—“blockchain”—is one of the most popular—and controversial—topics of conversation among technology leaders in finance today.

Blockchain is a digital ledger of economic transactions that is fully public, continually updated by countless users in the cloud, and considered by many to be impossible to corrupt. A blockchain database contains two types of records: transactions and blocks. Blocks hold batches of transactions. The blocks are time-stamped and linked to a previous block. However, transactions cannot be altered retroactively.

It is also possible to program the blockchain to record transactions automatically. The monetary value of those transactions is usually measured not in U.S. dollars but in a cryptocurrency. You can think of blockchain as the rails on which bitcoin and other

cryptocurrencies—digital currencies that are not controlled by a central bank—ride. However, blockchain is much more than bitcoin. While invented to help transact in bitcoin, blockchain is the digital global ledger that not only records cryptocurrency transactions but also provides a home for documents of all sorts. In fact, some describe blockchain as “part of the iceberg beneath bitcoin.”

Blockchain could reshape the business of recordkeeping, as well as business itself. But many finance executives are lagging behind, with some concerned about the security of the blockchain platform. A 2017 survey by **Deloitte** found that only 60 percent of large-company executives said they were knowledgeable about blockchain. So now is the time for accounting and finance leaders to get on the blockchain wagon to evaluate its promise relative to security and other concerns.

Source: L. Carlozo, “What Is Blockchain?” *Journal of Accountancy* (July 1, 2017).

Chart of Accounts

The number and type of accounts differ for each company. The number of accounts depends on the amount of detail management desires. For example, the management of one company may want a single account for all types of utility expense. Another may keep separate expense accounts for each type of utility, such as gas, electricity, and water. Similarly, a small company like Softbyte will have fewer accounts than a business giant like **Anheuser-Busch InBev**. Softbyte may be able to manage and report its activities in 20 to 30 accounts, while Anheuser-Busch may require thousands of accounts to keep track of its worldwide activities.

Most companies have a **chart of accounts**. This chart lists the accounts and the account numbers that identify their location in the ledger. The numbering system that identifies the accounts usually starts with the statement of financial position accounts and follows with the income statement accounts.

In this chapter, we will be explaining the accounting for Pioneer Advertising (a service company). The ranges of the account numbers are as follows.

- Accounts 101–199 indicate asset accounts
- 200–299 indicate liabilities
- 300–399 indicate stockholders’ equity accounts
- 400–499, revenues
- 500–799, expenses
- 800–899, other revenues
- 900–999, other expenses

Illustration 3.9 shows the chart of accounts for Pioneer Advertising.

| Pioneer Advertising Chart of Accounts | |
|--|--------------------------------|
| Assets | Stockholders' Equity |
| 101 Cash | 311 Common Stock |
| 112 Accounts Receivable | 320 Retained Earnings |
| 113 Allowance for Doubtful Accounts | 332 Dividends |
| 126 Supplies | 350 Income Summary |
| 130 Prepaid Insurance | |
| 157 Equipment | Revenues |
| 158 Accumulated Depreciation— Equipment | 400 Service Revenue |
| | Expenses |
| Liabilities | 631 Supplies Expense |
| 200 Notes Payable | 711 Depreciation Expense |
| 201 Accounts Payable | 722 Insurance Expense |
| 209 Unearned Service Revenue | 726 Salaries and Wages Expense |
| 212 Salaries and Wages Payable | 729 Rent Expense |
| 230 Interest Payable | 732 Utilities Expenses |
| | 905 Interest Expense |
| | 910 Bad Debt Expense |

ILLUSTRATION 3.9**Chart of Accounts for Pioneer Advertising**

You will notice that there are gaps in the numbering system of the chart of accounts for Pioneer Advertising. Gaps are left to permit the insertion of new accounts as needed during the life of the business.

The Recording Process Illustrated

Illustrations 3.10 through **3.19** show the basic steps in the recording process, using the October transactions of Pioneer Advertising. Pioneer's accounting period is a month. A basic analysis and a debit-credit analysis precede the journalizing and posting of each transaction. For simplicity, we use the T-account form in the illustrations instead of the standard account form.

| Transaction | On October 1, C. R. Yazici invests \$100,000 cash in an advertising company to be known as Pioneer Advertising. | | | | | | | | | | | | | | | | | | | |
|-----------------------|--|--------------------|---------------|-----------------------------|--------------------|----------------|-----------------------------|---------|---|------|--|-----------------|----------|--|--|---|------------------------|--|--|--|
| Basic Analysis | The asset Cash increases \$100,000; stockholders' equity (specifically, Common Stock) increases \$100,000. | | | | | | | | | | | | | | | | | | | |
| Equation Analysis | <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="text-align: center;"><u>Assets</u></td> <td style="text-align: center;">=</td> <td style="text-align: center;"><u>Liabilities</u></td> <td style="text-align: center;">+</td> <td style="text-align: center;"><u>Stockholders' Equity</u></td> </tr> <tr> <td style="text-align: center;">Cash</td> <td style="text-align: center;">=</td> <td></td> <td></td> <td style="text-align: center;">Common Stock</td> </tr> <tr> <td style="text-align: center;">+100,000</td> <td></td> <td></td> <td></td> <td style="text-align: center;">+100,000 Issued shares</td> </tr> </table> | | <u>Assets</u> | = | <u>Liabilities</u> | + | <u>Stockholders' Equity</u> | Cash | = | | | Common Stock | +100,000 | | | | +100,000 Issued shares | | | |
| <u>Assets</u> | = | <u>Liabilities</u> | + | <u>Stockholders' Equity</u> | | | | | | | | | | | | | | | | |
| Cash | = | | | Common Stock | | | | | | | | | | | | | | | | |
| +100,000 | | | | +100,000 Issued shares | | | | | | | | | | | | | | | | |
| Debit-Credit Analysis | Debits increase assets: debit Cash \$100,000. Credits increase stockholders' equity: credit Common Stock \$100,000. | | | | | | | | | | | | | | | | | | | |
| Journal Entry | <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 10%;"></td> <td style="width: 40%; border-bottom: 1px solid black;">Oct. 1</td> <td style="width: 10%;"></td> <td style="width: 10%; border-bottom: 1px solid black;">101</td> <td style="width: 10%; border-bottom: 1px solid black;">100,000</td> <td style="width: 10%; border-bottom: 1px solid black;">100,000</td> </tr> <tr> <td></td> <td style="border-right: 1px solid black;">Cash</td> <td></td> <td style="border-right: 1px solid black;">311</td> <td></td> <td></td> </tr> <tr> <td></td> <td style="border-right: 1px solid black;">Common Stock (Issued shares for cash)</td> <td></td> <td style="border-right: 1px solid black;"></td> <td></td> <td></td> </tr> </table> | | | Oct. 1 | | 101 | 100,000 | 100,000 | | Cash | | 311 | | | | Common Stock (Issued shares for cash) | | | | |
| | Oct. 1 | | 101 | 100,000 | 100,000 | | | | | | | | | | | | | | | |
| | Cash | | 311 | | | | | | | | | | | | | | | | | |
| | Common Stock (Issued shares for cash) | | | | | | | | | | | | | | | | | | | |
| Posting | <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 50%; text-align: center;">Cash 101</td> <td style="width: 50%; text-align: center;">Common Stock 311</td> </tr> <tr> <td style="border-right: 1px solid black; text-align: center;">Oct. 1 100,000</td> <td style="text-align: center;">Oct. 1 100,000</td> </tr> </table> | | Cash 101 | Common Stock 311 | Oct. 1 100,000 | Oct. 1 100,000 | | | | | | | | | | | | | | |
| Cash 101 | Common Stock 311 | | | | | | | | | | | | | | | | | | | |
| Oct. 1 100,000 | Oct. 1 100,000 | | | | | | | | | | | | | | | | | | | |

ILLUSTRATION 3.10**Investment of Cash by Stockholders**

ILLUSTRATION 3.11
Purchase of Office Equipment

Transaction On October 1, Pioneer Advertising purchases office equipment costing \$50,000 by signing a 3-month, 12%, \$50,000 note payable.

Basic Analysis The asset Equipment increases \$50,000; the liability Notes Payable increases \$50,000.

Equation Analysis

| | | | | |
|---------------|---|--------------------|---|-----------------------------|
| <u>Assets</u> | = | <u>Liabilities</u> | + | <u>Stockholders' Equity</u> |
| Equipment | = | Notes Payable | | |
| +50,000 | | +50,000 | | |

Debit-Credit Analysis Debits increase assets: debit Equipment \$50,000.
 Credits increase liabilities: credit Notes Payable \$50,000.

Journal Entry

| | | | | | |
|--|--------|--|-----|--------|--|
| | Oct. 1 | Equipment | 157 | 50,000 | |
| | | Notes Payable (Issued 3-month, 12% note for office equipment) | 200 | 50,000 | |

Posting

| | |

| Equipment 157 | Notes Payable 200 |
| Oct. 1 50,000 | Oct. 1 50,000 |

ILLUSTRATION 3.12
Receipt of Cash for Future Service

Transaction On October 2, Pioneer Advertising receives a \$12,000 cash advance from R. Knox, a client, for advertising services that are expected to be completed by December 31.

Basic Analysis The asset Cash increases \$12,000; the liability Unearned Service Revenue increases \$12,000 because the service has not been performed yet. That is, when Pioneer receives an advance payment, it should record an unearned revenue (a liability) in order to recognize the obligation that exists. Note also that although many liabilities have the word “payable” in their title, unearned revenue is considered a liability because the liability is satisfied by providing a product or performing a service.

Equation Analysis

| | | | | |
|---------------|---|--------------------------|---|-----------------------------|
| <u>Assets</u> | = | <u>Liabilities</u> | + | <u>Stockholders' Equity</u> |
| Cash | = | Unearned Service Revenue | | |
| +12,000 | | +12,000 | | |

Debit-Credit Analysis Debits increase assets: debit Cash \$12,000.
 Credits increase liabilities: credit Unearned Service Revenue \$12,000.

Journal Entry

| | | | | | |
|--|--------|---|-----|--------|--|
| | Oct. 2 | Cash | 101 | 12,000 | |
| | | Unearned Service Revenue (Received cash from R. Knox for future service) | 209 | 12,000 | |

Posting

| | |
|----------------------------|------------------------------|
| Cash 101 | Unearned Service Revenue 209 |
| Oct. 1 100,000 2 12,000 | Oct. 2 12,000 |

ILLUSTRATION 3.13

Payment of Monthly Rent

Transaction On October 3, Pioneer Advertising pays office rent for October in cash, \$9,000.

Basic Analysis Rent Expense increases \$9,000 because the payment pertains only to the current month; the asset Cash decreases \$9,000.

Equation Analysis

| | | | | | |
|--|---------------|---|--------------------|---|-----------------------------|
| | <u>Assets</u> | = | <u>Liabilities</u> | + | <u>Stockholders' Equity</u> |
| | Cash | = | | | Expenses |
| | -9,000 | | | | -9,000 Rent Expense |

Debit-Credit Analysis

Debits increase expenses: debit Rent Expense \$9,000.
Credits decrease assets: credit Cash \$9,000.

Journal Entry

| | | | | | |
|--|--------|---|------------|-------|-------|
| | Oct. 3 | Rent Expense Cash (Paid October rent) | 729 101 | 9,000 | 9,000 |
|--|--------|---|------------|-------|-------|

Posting

| | | | |
|----------------|-------------------------------|--------------|-----------------------------|
| | Cash 101 | | Rent Expense 729 |
| Oct. 1 100,000 | Oct. 3 9,000 | Oct. 3 9,000 | |
| 2 12,000 | | | |

ILLUSTRATION 3.14

Payment for Insurance

Transaction On October 4, Pioneer Advertising pays \$6,000 for a one-year insurance policy that will expire next year on September 30.

Basic Analysis The asset Prepaid Insurance increases \$6,000 because the payment extends to more than the current month; the asset Cash decreases \$6,000. Payments of expenses that will benefit more than one accounting period are prepaid expenses or prepayments. When a company makes a payment, it debits an asset account in order to show the service or benefit that will be received in the future.

Equation Analysis

| | | | | | |
|--|--------------------------------|---|--------------------|---|-----------------------------|
| | <u>Assets</u> | = | <u>Liabilities</u> | + | <u>Stockholders' Equity</u> |
| | Cash + Prepaid Insurance | | | | |
| | -6,000 +6,000 | | | | |

Debit-Credit Analysis

Debits increase assets: debit Prepaid Insurance \$6,000.
Credits decrease assets: credit Cash \$6,000.

Journal Entry

| | | | | | |
|--|--------|--|------------|-------|-------|
| | Oct. 4 | Prepaid Insurance Cash (Paid one-year policy; effective date October 1) | 130 101 | 6,000 | 6,000 |
|--|--------|--|------------|-------|-------|

Posting

| | | | |
|----------------|-------------------------------|--------------|----------------------------|
| | Cash 101 | | Prepaid Insurance 130 |
| Oct. 1 100,000 | Oct. 3 9,000 | Oct. 4 6,000 | |
| 2 12,000 | 4 6,000 | | |

ILLUSTRATION 3.15
Purchase of Supplies on Credit

| Transaction | On October 5, Pioneer Advertising purchases an estimated three-month supply of advertising materials on account from Aero Supply for \$25,000. | | | | | | | | | | | | | | | | | | | |
|--------------------------------|---|--|------------|-----------------------------|--------|---------------|--------|--------------------|---|-----------------------------|----------|------------------|------------------|-----|--|---------|---------------|---------|--|--|
| Basic Analysis | The asset Supplies increases \$25,000; the liability Accounts Payable increases \$25,000. | | | | | | | | | | | | | | | | | | | |
| Equation Analysis | <table border="0"> <tr> <td style="text-align: center;"><u>Assets</u></td> <td style="text-align: center;">=</td> <td style="text-align: center;"><u>Liabilities</u></td> <td style="text-align: center;">+</td> <td style="text-align: center;"><u>Stockholders' Equity</u></td> </tr> <tr> <td style="text-align: center;">Supplies</td> <td style="text-align: center;">=</td> <td style="text-align: center;">Accounts Payable</td> <td></td> <td></td> </tr> <tr> <td style="text-align: center;">+25,000</td> <td></td> <td style="text-align: center;">+25,000</td> <td></td> <td></td> </tr> </table> | | | | | <u>Assets</u> | = | <u>Liabilities</u> | + | <u>Stockholders' Equity</u> | Supplies | = | Accounts Payable | | | +25,000 | | +25,000 | | |

| | | Oct. 5 25,000 | | | | | | | | | | | | | | | | | | |

ILLUSTRATION 3.16
Signing a Contract

| | |
|-----------------------|---|
| Event | On October 9, Pioneer Advertising signs a contract with a local newspaper for advertising inserts (flyers) to be distributed starting the last Sunday in November. Pioneer will start work on the content of the flyers in November. Payment of \$7,000 is due following delivery of the Sunday papers containing the flyers. |
| Basic Analysis | A business transaction has not occurred. There is only an agreement between Pioneer Advertising and the newspaper for the services to be provided in November. Therefore, no journal entry is necessary in October. |

ILLUSTRATION 3.17

Declaration and Payment of Dividend

| | | | | | | | | | | | | | | | | | | | | | | | | | | |
|-----------------------|--|--|------------|-------|-------|--------|---------|--------|-------|---|--------|---|-------|--|--|----|-------|--|--|--|-----------|--|-----|---------|-------|--|
| Transaction | On October 20, Pioneer Advertising's board of directors declares and pays a \$5,000 cash dividend to stockholders. | | | | | | | | | | | | | | | | | | | | | | | | | |
| Basic Analysis | The Dividends account increases \$5,000; the asset Cash decreases \$5,000. | | | | | | | | | | | | | | | | | | | | | | | | | |
| Equation Analysis | $\begin{array}{r} \text{Assets} \\ \text{Cash} \\ -5,000 \end{array} = \begin{array}{r} \text{Liabilities} \\ \text{Dividends} \\ -5,000 \end{array} + \begin{array}{r} \text{Stockholders' Equity} \\ \text{Dividends} \\ -5,000 \end{array}$ | | | | | | | | | | | | | | | | | | | | | | | | | |
| Debit-Credit Analysis | Debits increase dividends: debit Dividends \$5,000. Credits decrease assets: credit Cash \$5,000. | | | | | | | | | | | | | | | | | | | | | | | | | |
| Journal Entry | Oct. 20 | Dividends Cash (Declared and paid a cash dividend) | 332 101 | 5,000 | 5,000 | | | | | | | | | | | | | | | | | | | | | |

| | | 26 | 40,000 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

Study these transaction analyses carefully. **The purpose of transaction analysis is first to identify the type of account involved, and then to determine whether to make a debit or a credit to the account.** You should always perform this type of analysis before preparing a journal entry. Doing so will help you understand the journal entries discussed in this chapter as well as more complex journal entries in later chapters.

Trial Balance

A **trial balance** is a list of accounts and their balances at a given time. A company usually prepares a trial balance at the end of an accounting period. The trial balance lists the accounts in the order in which they appear in the ledger, with debit balances listed in the left column and credit balances in the right column. The totals of the two columns must agree.

The trial balance proves the mathematical equality of debits and credits after posting. Under the double-entry system, this equality occurs when the sum of the debit account balances equals the sum of the credit account balances. A trial balance also uncovers errors in journalizing and posting. In addition, it is useful in the preparation of financial statements. The procedures for preparing a trial balance consist of:

1. Listing the account titles and their balances.
2. Totaling the debit and credit columns.
3. Proving the equality of the two columns.

Illustration 3.20 presents the trial balance prepared from the ledger of Pioneer Advertising. Note that the total debits (\$287,000) equal the total credits (\$287,000). A trial balance also often shows account numbers to the left of the account titles.

A trial balance does not prove that a company recorded all transactions or that the ledger is correct. Numerous errors may exist even though the trial balance columns agree. For example, the trial balance may balance even when a company (1) fails to journalize

ILLUSTRATION 3.20

Trial Balance (Unadjusted)

| Pioneer Advertising Trial Balance October 31, 2020 | | |
|---|------------------|------------------|
| | Debit | Credit |
| Cash | \$ 80,000 | |
| Accounts Receivable | 72,000 | |
| Supplies | 25,000 | |
| Prepaid Insurance | 6,000 | |
| Equipment | 50,000 | |
| Notes Payable | | \$ 50,000 |
| Accounts Payable | | 25,000 |
| Unearned Service Revenue | | 12,000 |
| Common Stock | | 100,000 |
| Dividends | 5,000 | |
| Service Revenue | | 100,000 |
| Salaries and Wages Expense | 40,000 | |
| Rent Expense | 9,000 | |
| | <u>\$287,000</u> | <u>\$287,000</u> |

a transaction, (2) omits posting a correct journal entry, (3) posts a journal entry twice, (4) uses incorrect accounts in journalizing or posting, or (5) makes offsetting errors in recording the amount of a transaction. In other words, as long as a company posts equal debits and credits, even to the wrong account or in the wrong amount, the total debits will equal the total credits.

Adjusting Entries

LEARNING OBJECTIVE 3

Identify and prepare adjusting entries.

In order for revenues to be recorded in the period in which services are performed (performance obligations are satisfied) and for expenses to be recognized in the period in which they are incurred, companies make **adjusting entries**. In short, adjustments ensure that a company like **McDonald's** follows the revenue recognition and expense recognition principles.

The use of adjusting entries makes it possible to report on the balance sheet the appropriate assets, liabilities, and stockholders' equity at the statement date. Adjusting entries also make it possible to report on the income statement the proper revenues and expenses for the period. However, the trial balance—the first pulling together of the transaction data—may not contain up-to-date and complete data. This occurs for the following reasons.

1. Some events are not recorded daily because it is not efficient to do so. Examples are the use of supplies and the earning of salaries and wages by employees.
2. Some costs are not recorded during the accounting period because these costs expire with the passage of time rather than as a result of recurring daily transactions. Examples of such costs are building and equipment depreciation and rent and insurance.
3. Some items may be unrecorded. An example is a utility service bill that will not be received until the next accounting period.

Adjusting entries are required every time a company, such as **Coca-Cola**, prepares financial statements. At that time, Coca-Cola must analyze each account in the trial balance to determine whether it is complete and up-to-date for financial statement purposes. The analysis requires a thorough understanding of Coca-Cola's operations and the interrelationship of accounts. Because of this involved process, usually a skilled accountant prepares the adjusting entries. In gathering the adjustment data, Coca-Cola may need to make inventory counts of supplies and repair parts. Further, it may prepare supporting schedules of insurance policies,

rental agreements, and other contractual commitments. Companies often prepare adjustments after the balance sheet date. However, they date the entries as of the balance sheet date.

Types of Adjusting Entries

Adjusting entries are classified as either deferrals or accruals. Each of these classes has two subcategories, as **Illustration 3.21** shows.

ILLUSTRATION 3.21
Categories of Adjusting Entries

Deferrals:

1. **Prepaid expenses:** Expenses paid in cash before they are used or consumed.
2. **Unearned revenues:** Cash received before services are performed.

Accruals:

1. **Accrued revenues:** Revenues for services performed but not yet received in cash or recorded.
2. **Accrued expenses:** Expenses incurred but not yet paid in cash or recorded.

We review specific examples and explanations of each type of adjustment in subsequent sections. We base each example on the October 31 trial balance of Pioneer Advertising (**Illustration 3.20**). We assume that Pioneer uses an accounting period of one month. Thus, Pioneer will make monthly adjusting entries, dated October 31.

Adjusting Entries for Deferrals

To defer means to postpone or delay. **Deferrals** are expenses or revenues that are recognized at a date later than the point when cash was originally exchanged. The two types of deferrals are prepaid expenses and unearned revenues.

If a company does not make an adjustment for these deferrals, the asset and liability are overstated, and the related expense and revenue are understated. For example, in Pioneer Advertising's trial balance (**Illustration 3.20**), the balance in the asset Supplies shows only supplies purchased. This balance is overstated; the related expense account, Supplies Expense, is understated because the cost of supplies used has not been recognized. Thus, the adjusting entry for deferrals will decrease a balance sheet account and increase an income statement account. **Illustration 3.22** shows the effects of adjusting entries for deferrals.

ILLUSTRATION 3.22
Adjusting Entries for Deferrals

Prepaid Expenses

Assets paid for and recorded before a company uses them are called **prepaid expenses**. When expenses are prepaid, a company debits an asset account to show the service or benefit it will receive in the future. Examples of common prepayments are insurance, supplies, advertising, and rent. In addition, companies make prepayments when they purchase buildings and equipment.

Prepaid expenses are costs that expire either with the passage of time (e.g., rent and insurance) or through use and consumption (e.g., supplies). The expiration of these costs does not require daily entries, an unnecessary and impractical task. Accordingly, a company like **Home Depot** usually postpones the recognition of such cost expirations until it prepares financial statements. At each statement date, Home Depot makes adjusting entries to record the expenses that apply to the current accounting period and to show the remaining amounts in the asset accounts.

As shown above, prior to adjustment, assets are overstated and expenses are understated. **Thus, an adjusting entry for prepaid expenses results in a debit to an expense account and a credit to an asset account.**

Supplies A business may use several different types of supplies. For example, a CPA firm will use office supplies such as stationery, envelopes, and accounting paper. An advertising firm will stock advertising supplies such as whiteboard markers and printer cartridges. Supplies are generally debited to an asset account when they are acquired. Recognition of supplies used is generally deferred until the adjustment process. At that time, a physical inventory (count) of supplies is taken. The difference between the balance in the Supplies (asset) account and the cost of supplies on hand represents the supplies used (an expense) for the period.

For example, Pioneer Advertising purchased advertising supplies costing \$25,000 on October 5. Pioneer therefore debited the asset Supplies. This account shows a balance of \$25,000 in the October 31 trial balance (see Illustration 3.20). An inventory count at the close of business on October 31 reveals that \$10,000 of supplies are still on hand. Thus, the cost of supplies used is \$15,000 (\$25,000 – \$10,000). The analysis and adjustment for advertising supplies is summarized in **Illustration 3.23**.

ILLUSTRATION 3.23

Adjustment for Supplies

| Basic Analysis | The expense Supplies Expense is increased \$15,000, and the asset Supplies is decreased \$15,000. | | | | | | | | | | | | | | | | | | | | | | |

| no effect | | | | |

After adjustment, the asset account Supplies shows a balance of \$10,000, which equals the cost of supplies on hand at the statement date. In addition, Supplies Expense shows a balance of \$15,000, which equals the cost of supplies used in October. **Without an adjusting entry, October expenses are understated and net income overstated by \$15,000. Moreover, both assets and stockholders' equity are overstated by \$15,000 on the October 31 balance sheet.**

Insurance Most companies maintain fire and theft insurance on merchandise and equipment, personal liability insurance for accidents suffered by customers, and automobile insurance on company cars and trucks. The extent of protection against loss determines the cost

Insurance = \$6,000/year

Oct. 31
Insurance expired;
record insurance expense

of the insurance (the amount of the premium to be paid). The insurance policy specifies the term and coverage. The minimum term usually covers one year, but three- to five-year terms are available and may offer lower annual premiums. A company usually debits insurance premiums to the asset account Prepaid Insurance when paid. At the financial statement date, it then debits Insurance Expense and credits Prepaid Insurance for the cost that expired during the period.

For example, on October 4, Pioneer Advertising paid \$6,000 for a one-year fire insurance policy. Coverage began on October 1. Pioneer debited the cost of the premium to Prepaid Insurance at that time. This account still shows a balance of \$6,000 in the October 31 trial balance. The analysis and adjustment for insurance is summarized in **Illustration 3.24**.

ILLUSTRATION 3.24
Adjustment for Insurance

Basic Analysis The expense Insurance Expense is increased \$500, and the asset Prepaid Insurance is decreased \$500.

Equation Analysis

| | | | | | |
|-----|-------------------|---|--------------------|---|-----------------------------|
| (2) | <u>Assets</u> | = | <u>Liabilities</u> | + | <u>Stockholders' Equity</u> |
| | Prepaid Insurance | = | | | Insurance Expense |
| | -500 | = | | | -500 |

Debit-Credit Analysis

Debits increase expenses: debit Insurance Expense \$500.
Credits decrease assets: credit Prepaid Insurance \$500.

Journal Entry

| | | | | |
|---------|-------------------------------|-----|-----|-----|
| Oct. 31 | Insurance Expense | 722 | 500 | |
| | Prepaid Insurance | 130 | | 500 |
| | (To record insurance expired) | | | |

Posting

| Prepaid Insurance | | Insurance Expense | |
|-------------------|------------|-------------------|----------|
| Oct. 4 | 6,000 | Oct. 31 | Adj. 500 |
| Oct. 31 | Bal. 5,500 | Oct. 31 | Bal. 500 |

The asset Prepaid Insurance shows a balance of \$5,500, which represents the unexpired cost for the remaining 11 months of coverage. At the same time, the balance in Insurance Expense equals the insurance cost that expired in October. **Without an adjusting entry, October expenses are understated by \$500 and net income overstated by \$500. Moreover, both assets and stockholders' equity also are overstated by \$500 on the October 31 balance sheet.**

What Do the Numbers Mean? Am I Covered?

Rather than purchasing insurance to cover casualty losses and other obligations, some companies “self-insure.” That is, a company decides to pay for any possible claims, as they arise, out of its own resources. The company also purchases an insurance policy to cover losses that exceed certain amounts.

For example, **Almost Family, Inc.**, a healthcare services company, has a self-insured employee health-benefit program.

However, Almost Family ran into accounting problems when it failed to record an accrual of the liability for benefits not covered by its back-up insurance policy. This led to restatement of Almost Family’s fiscal results for the accrual of the benefit expense.

Depreciation Companies like **Caterpillar** or **Boeing** typically own various productive assets, such as buildings, equipment, and motor vehicles. These assets provide a service for a number of years. The term of service is commonly referred to as the **useful life** of the asset. Because Caterpillar, for example, expects an asset such as a building to provide service for many years, Caterpillar records the building as an asset, rather than an expense, in the year the building is acquired. Caterpillar records such assets at cost, as required by the historical cost principle.

To follow the expense recognition principle, Caterpillar reports a portion of the cost of a long-lived asset as an expense during each period of the asset’s useful life. **Depreciation** is

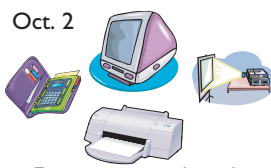

the process of allocating the cost of an asset to expense over its useful life in a rational and systematic manner.

Need for Depreciation Adjustment Generally accepted accounting principles (GAAP) view the acquisition of productive facilities as a long-term prepayment for services. The need for making periodic adjusting entries for depreciation is, therefore, the same as we described for other prepaid expenses. That is, a company recognizes the expired cost (expense) during the period and reports the unexpired cost (asset) at the end of the period. The primary causes of depreciation of a productive facility are actual use, deterioration due to the elements, and obsolescence. For example, at the time Caterpillar acquires an asset, the effects of these factors cannot be known with certainty. Therefore, Caterpillar must estimate them. **Thus, depreciation is an estimate rather than a factual measurement of the expired cost.**

To estimate depreciation expense, Caterpillar often divides the cost of the asset by its useful life. For example, if Caterpillar purchases equipment for \$10,000 and expects its useful life to be 10 years, Caterpillar records annual depreciation of \$1,000.

In the case of Pioneer Advertising, it estimates depreciation on its office equipment to be \$4,800 a year (cost \$50,000 less salvage value \$2,000 divided by useful life of 10 years), or \$400 per month. The analysis and adjustment for depreciation is summarized in **Illustration 3.25**.

ILLUSTRATION 3.25
Adjustment for Depreciation

The balance in the Accumulated Depreciation—Equipment account will increase \$400 each month. Therefore, after recording and posting the adjusting entry at November 30, the balance will be \$800.

Statement Presentation Accumulated Depreciation—Equipment is a contra asset account. A **contra asset account** offsets an asset account on the balance sheet. This means that the Accumulated Depreciation—Equipment account offsets the Equipment account on the balance sheet. Its normal balance is a credit. Pioneer Advertising uses this account instead of crediting Equipment in order to disclose both the original cost of the equipment and the total expired cost to date. In the balance sheet, Pioneer deducts Accumulated Depreciation—Equipment from the related asset account as shown in **Illustration 3.26**.

| | | | |
|--|----------|----------|--|
| Equipment | \$50,000 | | |
| Less: Accumulated depreciation—equipment | 400 | \$49,600 | |

ILLUSTRATION 3.26
Balance Sheet Presentation of Accumulated Depreciation

The **book value** of any depreciable asset is the difference between its cost and its related accumulated depreciation. In Illustration 3.26, the book value of the equipment at the balance sheet date is \$49,600. Note that the asset's book value generally differs from its fair value. The reason: **Depreciation is an allocation concept, not a valuation concept.** That is, depreciation **allocates an asset's cost to the periods in which it is used. Depreciation does not attempt to report the actual change in the value of the asset.**

Depreciation expense identifies that portion of the asset's cost that expired during the period (in this case, October). **Without this adjusting entry, total assets, total stockholders' equity, and net income are overstated, and depreciation expense is understated.**

A company records depreciation expense in a single account for each piece of equipment, such as trucks or machinery, and for all buildings. A company also establishes related accumulated depreciation accounts for the above, such as Accumulated Depreciation—Trucks, Accumulated Depreciation—Machinery, and Accumulated Depreciation—Buildings.

Unearned Revenues

When companies receive cash before services are performed, they record a liability by increasing (crediting) a liability account called **unearned revenues**. In other words, a company now has a performance obligation (liability) to provide service to one of its customers. Items like rent, magazine subscriptions, and customer deposits for future service may result in unearned revenues. Airlines, such as **Delta, American, and Southwest**, treat receipts from the sale of tickets as unearned revenue until they satisfy the performance obligation (provide the flight service). Tuition received prior to the start of a semester is another example of unearned revenue.

Unearned revenues are the opposite of prepaid expenses. Indeed, unearned revenue on the books of one company is likely to be a prepayment on the books of the company that made the advance payment. For example, if we assume identical accounting periods, a landlord will have unearned rent revenue when a tenant has prepaid rent.

When a company such as **Intel** receives payment for services to be performed in a future accounting period, it credits an unearned revenue (a liability) account to recognize the liability that exists. Intel subsequently recognizes revenue when it performs the service. However, making daily entries to record this revenue is impractical. Instead, Intel delays recognition of revenue until the adjustment process. Then, Intel makes an adjusting entry to record the revenue for services performed during the period and to show the liability that remains at the end of the accounting period. In the typical case, liabilities are overstated and revenues are understated prior to adjustment. **Thus, the adjusting entry for unearned revenues results in a debit (decrease) to a liability account and a credit (increase) to a revenue account.**

For example, Pioneer Advertising received \$12,000 on October 2 from R. Knox for advertising services expected to be completed by December 31. Pioneer credited the payment to Unearned Service Revenue. This liability account shows a balance of \$12,000 in the October 31 trial balance. Based on an evaluation of the service Pioneer performed for Knox during October, the company determines that it should recognize \$4,000 of revenue in October. The liability (Unearned Service Revenue) is therefore decreased and stockholders' equity (Service Revenue) is increased, as shown in **Illustration 3.27**.

The liability Unearned Service Revenue now shows a balance of \$8,000. This amount represents the remaining advertising services expected to be performed in the future. At the same time, Service Revenue shows total revenue recognized in October of \$104,000. **Without this adjustment, revenues and net income are understated by \$4,000 in the income statement. Moreover, liabilities will be overstated and stockholders' equity will be understated by \$4,000 on the October 31 balance sheet.**

Adjusting Entries for Accruals

The second category of adjusting entries is accruals. Companies make adjusting entries for accruals to record revenues for services performed and expenses incurred in the current accounting period. Without an accrual adjustment, the revenue account (and the related asset

Basic Analysis
The liability Unearned Service Revenue is decreased \$4,000, and the revenue Service Revenue is increased \$4,000.

account) or the expense account (and the related liability account) are understated. Thus, the adjusting entry for accruals **will increase both a balance sheet and an income statement account**. **Illustration 3.28** shows adjusting entries for accruals.

ILLUSTRATION 3.28

Adjusting Entries for Accruals

Accrued Revenues

Revenues for services performed but not yet recorded at the statement date are **accrued revenues**. Accrued revenues may accumulate (accrue) with the passing of time, as in the case of interest revenue. These are unrecorded because the earning of interest does not involve daily transactions. Companies do not record interest revenue on a daily basis because it is often impractical to do so. Accrued revenues also may result from services that have been performed

but not yet billed nor collected, as in the case of commissions and fees. These may be unrecorded because only a portion of the total service has been performed and the clients will not be billed until the service has been completed.

An adjusting entry records the receivable that exists at the balance sheet date and the revenue for the services performed during the period. Prior to adjustment, both assets and revenues are understated. Accordingly, **an adjusting entry** for accrued revenues results in a debit (increase) to an asset account and a credit (increase) to a revenue account.

In October, Pioneer Advertising performed services worth \$2,000 that were not billed to clients on or before October 31. Because these services are not billed, they are not recorded. The accrual of unrecorded service revenue increases an asset account, Accounts Receivable. It also increases stockholders' equity by increasing a revenue account, Service Revenue, as shown in **Illustration 3.29**.

| | | | Oct. 31 | Bal. 106,000 | | | | | | | | | | | | | | | | | | | | | | | | |

The asset Accounts Receivable shows that clients owe \$74,000 at the balance sheet date. The balance of \$106,000 in Service Revenue represents the total revenue for services performed by Pioneer during the month (\$100,000 + \$4,000 + \$2,000). **Without an adjusting entry, assets and stockholders' equity on the balance sheet, and revenues and net income on the income statement, are understated.**

Accrued Expenses

Expenses incurred but not yet paid or recorded at the statement date are called **accrued expenses**. Interest, rent, taxes, and salaries are common examples. Accrued expenses result from the same causes as accrued revenues. In fact, an accrued expense on the books of one company is an accrued revenue to another company. For example, the \$2,000 accrual of service revenue by Pioneer Advertising is an accrued expense to the client that received the service.

Adjustments for accrued expenses record the obligations that exist at the balance sheet date and recognize the expenses that apply to the current accounting period. Prior to adjustment, both liabilities and expenses are understated. Therefore, the adjusting entry for accrued expenses results in a debit (increase) to an expense account and a credit (increase) to a liability account.

Accrued Interest Pioneer Advertising signed a three-month note payable in the amount of \$50,000 on October 1. The note requires interest at an annual rate of 12 percent. Three factors determine the amount of the interest accumulation: (1) the face value of the note; (2) the interest rate, which is always expressed as an annual rate; and (3) the length of time the note is outstanding. For Pioneer, the total interest due on the \$50,000 note at its maturity date three months' in the future is \$1,500 ($\$50,000 \times .12 \times 3/12$), or \$500 for one month. **Illustration 3.30** shows the formula for computing interest and its application to Pioneer. Note that the formula expresses the time period as a fraction of a year.

| | | | | | | |
|-----------------------|---|----------------------------|---|---------------------------------|---|----------|
| Face Value of Note | × | Annual Interest Rate | × | Time in Terms of One Year | = | Interest |
| \$50,000 | × | .12 | × | 1/12 | = | \$500 |

ILLUSTRATION 3.30

Formula for Computing Interest

As **Illustration 3.31** shows, the accrual of interest at October 31 increases a liability account, Interest Payable. It also decreases stockholders' equity by increasing an expense account, Interest Expense.

| Basic Analysis | The expense Interest Expense is increased \$500, and the liability Interest Payable is increased \$500. | | | | | | | | | | | | | | | | | | | | | | |

Cash Flows
no effect

Interest Expense shows the interest charges for the month of October. Interest Payable shows the amount of interest owed at the statement date. Pioneer will not pay this amount until the note comes due at the end of three months. Why does Pioneer use the Interest Payable account instead of crediting Notes Payable? By recording interest payable separately, Pioneer discloses the two different types of obligations—interest and principal—in the accounts and statements. **Without this adjusting entry, liabilities and interest expense are understated, and both net income and stockholders' equity are overstated.**

Accrued Salaries and Wages Companies pay for some types of expenses, such as employee salaries and wages, after the services have been performed. For example, Pioneer Advertising last paid salaries and wages on October 26. It will not pay salaries and wages again until November 23. However, as shown in **Illustration 3.32**, three working days remain in October (October 29–31).

ILLUSTRATION 3.32
Accrued Salaries and Wages

At October 31, the salaries and wages for these days represent an accrued expense and a related liability to Pioneer. The employees receive total salaries and wages of \$10,000 for a five-day work week, or \$2,000 per day. Thus, accrued salaries and wages at October 31 are \$6,000 (\$2,000 × 3). The analysis and adjustment process is summarized in **Illustration 3.33**.

ILLUSTRATION 3.33
Adjustment for Salaries and Wages Expense

| | | +6,000 | | -6,000 |

Cash Flows
no effect

| | | | | |
|-----------------------|---|--|--------------------------------|-------------------------------|
| Basic Analysis | The expense Salaries and Wages Expense is increased \$6,000, and the liability account Salaries and Wages Payable is increased \$6,000. | | | |
| Equation Analysis | <u>Assets</u> | = | <u>Liabilities</u> | + <u>Stockholders' Equity</u> |
| | | | Salaries and Wages Payable | Salaries and Wages Expense |
| | | | +\$6,000 | -\$6,000 |
| Debit-Credit Analysis | Debits increase expenses: debit Salaries and Wages Expense \$6,000. Credits increase liabilities: credit Salaries and Wages Payable \$6,000. | | | |
| Journal Entry | Oct. 31 | Salaries and Wages Expense Salaries and Wages Payable (To record accrued salaries) | 726 212 | 6,000 6,000 |
| Posting | Salaries and Wages Expense 726 | | Salaries and Wages Payable 212 | |
| | Oct. 26 | 40,000 | | |
| | 31 | Adj. 6,000 | | Oct. 31 Adj. 6,000 |
| | Oct. 31 | Bal. 46,000 | | Oct. 31 Bal. 6,000 |

After this adjustment, the balance in Salaries and Wages Expense of \$46,000 (23 days × \$2,000) is the actual salaries and wages expense for October. The balance in Salaries and Wages Payable of \$6,000 is the amount of the liability for salaries and wages owed as of October 31. **Without the \$6,000 adjustment for salaries, both Pioneer's expenses and liabilities are understated by \$6,000.**

Pioneer pays salaries and wages every four weeks. Consequently, the next payday is November 23, when it will again pay total salaries and wages of \$40,000. The payment consists of \$6,000 of salaries and wages payable at October 31 plus \$34,000 of salaries and wages expense for November (17 working days as shown in the November calendar × \$2,000). Therefore, Pioneer makes the following entry on November 23.

| | | | |
|---------------------------------|----------------|--------|--------|
| | Nov. 23 | | |
| Salaries and Wages Payable | | 6,000 | |
| Salaries and Wages Expense | | 34,000 | |
| Cash | | | 40,000 |
| (To record November 23 payroll) | | | |

This entry eliminates the liability for Salaries and Wages Payable that Pioneer recorded in the October 31 adjusting entry. This entry also records the proper amount of Salaries and Wages Expense for the period between November 1 and November 23.

Bad Debts Companies estimate uncollectible accounts at the end of each period. This ensures that receivables are reported on the balance sheet at their net realizable value. As a result, proper valuation of the receivable balance requires recognition of uncollectible receivables and an adjusting entry for bad debt expense.

At the end of each period, a company such as **General Mills** estimates the amount of receivables that will later prove to be uncollectible. General Mills bases the estimate on various factors: the amount of bad debts it experienced in past years, general economic conditions, how long the receivables are past due, and other factors that indicate the extent of uncollectibility. To illustrate, assume that, based on past experience, Pioneer Advertising reasonably estimates a bad debt expense for the month of \$1,600. The analysis and adjustment process for bad debts is summarized in **Illustration 3.34**.

| no effect | | | | |

A company generally computes bad debts by adjusting Allowance for Doubtful Accounts to a certain percentage of the trade accounts receivable and trade notes receivable at the end of the period.

Adjusted Trial Balance

After journalizing and posting all adjusting entries, Pioneer Advertising prepares another trial balance from its ledger accounts (see **Illustration 3.35**). This trial balance is called an **adjusted trial balance**. The purpose of an adjusted trial balance is to **prove the equality** of the total debit balances and the total credit balances in the ledger after all adjustments. Because the accounts contain all data needed for financial statements, the adjusted trial balance is the **primary basis for the preparation of financial statements**.

Preparing Financial Statements

LEARNING OBJECTIVE 4

Prepare financial statements from the adjusted trial balance and prepare closing entries.

As indicated above, **Pioneer Advertising can prepare financial statements directly from the adjusted trial balance**. Illustrations 3.36 and 3.37 show the interrelationships of data in the adjusted trial balance and the financial statements.

As **Illustration 3.36** shows, Pioneer prepares the income statement from the revenue and expense accounts. Next, it derives the retained earnings statement from the retained earnings and dividends accounts and the net income (or net loss) shown in the income statement.

ILLUSTRATION 3.36 Preparation of the Income Statement and Retained Earnings

Statement from the Adjusted Trial Balance

| Pioneer Advertising Adjusted Trial Balance October 31, 2020 | | | Pioneer Advertising Income Statement For the Month Ended October 31, 2020 | |
|---|------------------|------------------|---|------------------|
| Account | Debit | Credit | | |
| Cash | \$ 80,000 | | Revenues | |
| Accounts Receivable | 74,000 | | Service revenue | \$106,000 |
| Allowance for Doubtful Accounts | | \$ 1,600 | Expenses | |
| Supplies | 10,000 | | Salaries and wages expense | \$46,000 |
| Prepaid Insurance | 5,500 | | Supplies expense | 15,000 |
| Equipment | 50,000 | | Rent expense | 9,000 |

| Retained earnings, October 1 | \$ -0- |
| Add: Net income | <u>33,000</u> |
| | 33,000 |
| Less: Dividends | <u>5,000</u> |
| Retained earnings, October 31 | <u>\$28,000</u> |

To balance sheet →

As **Illustration 3.37** shows, Pioneer then prepares the balance sheet from the asset and liability accounts, the common stock account, and the ending retained earnings balance as reported in the retained earnings statement.

Closing

The **closing process** reduces the balance of nominal (temporary) accounts to zero in order to prepare the accounts for the next period's transactions. In the closing process, Pioneer Advertising transfers all of the revenue and expense account balances (income statement items) to a clearing or suspense account called Income Summary. The Income Summary account matches revenues and expenses.

Pioneer uses this clearing account only at the end of each accounting period. The account represents the net income or net loss for the period. It then transfers this amount (the net income or net loss) to a stockholders' equity account. (For a corporation, the stockholders' equity account is retained earnings; for proprietorships and partnerships, it is a capital account.) Companies post all such **closing entries** to the appropriate general ledger accounts.

Closing Entries

In practice, companies generally prepare closing entries only at the end of a company's annual accounting period. However, to illustrate the journalizing and posting of closing entries, we

ILLUSTRATION 3.37 Preparation of the Balance Sheet from the Adjusted Trial Balance

| Pioneer Advertising Adjusted Trial Balance October 31, 2020 | | | Pioneer Advertising Balance Sheet October 31, 2020 | |
|---|------------------|------------------|--|---------------------|

Balance at Oct. 31 from retained earnings statement in Illustration 3.36

will assume that Pioneer Advertising closes its books monthly. **Illustration 3.38** shows the closing entries at October 31.

ILLUSTRATION 3.38
Closing Entries Journalized

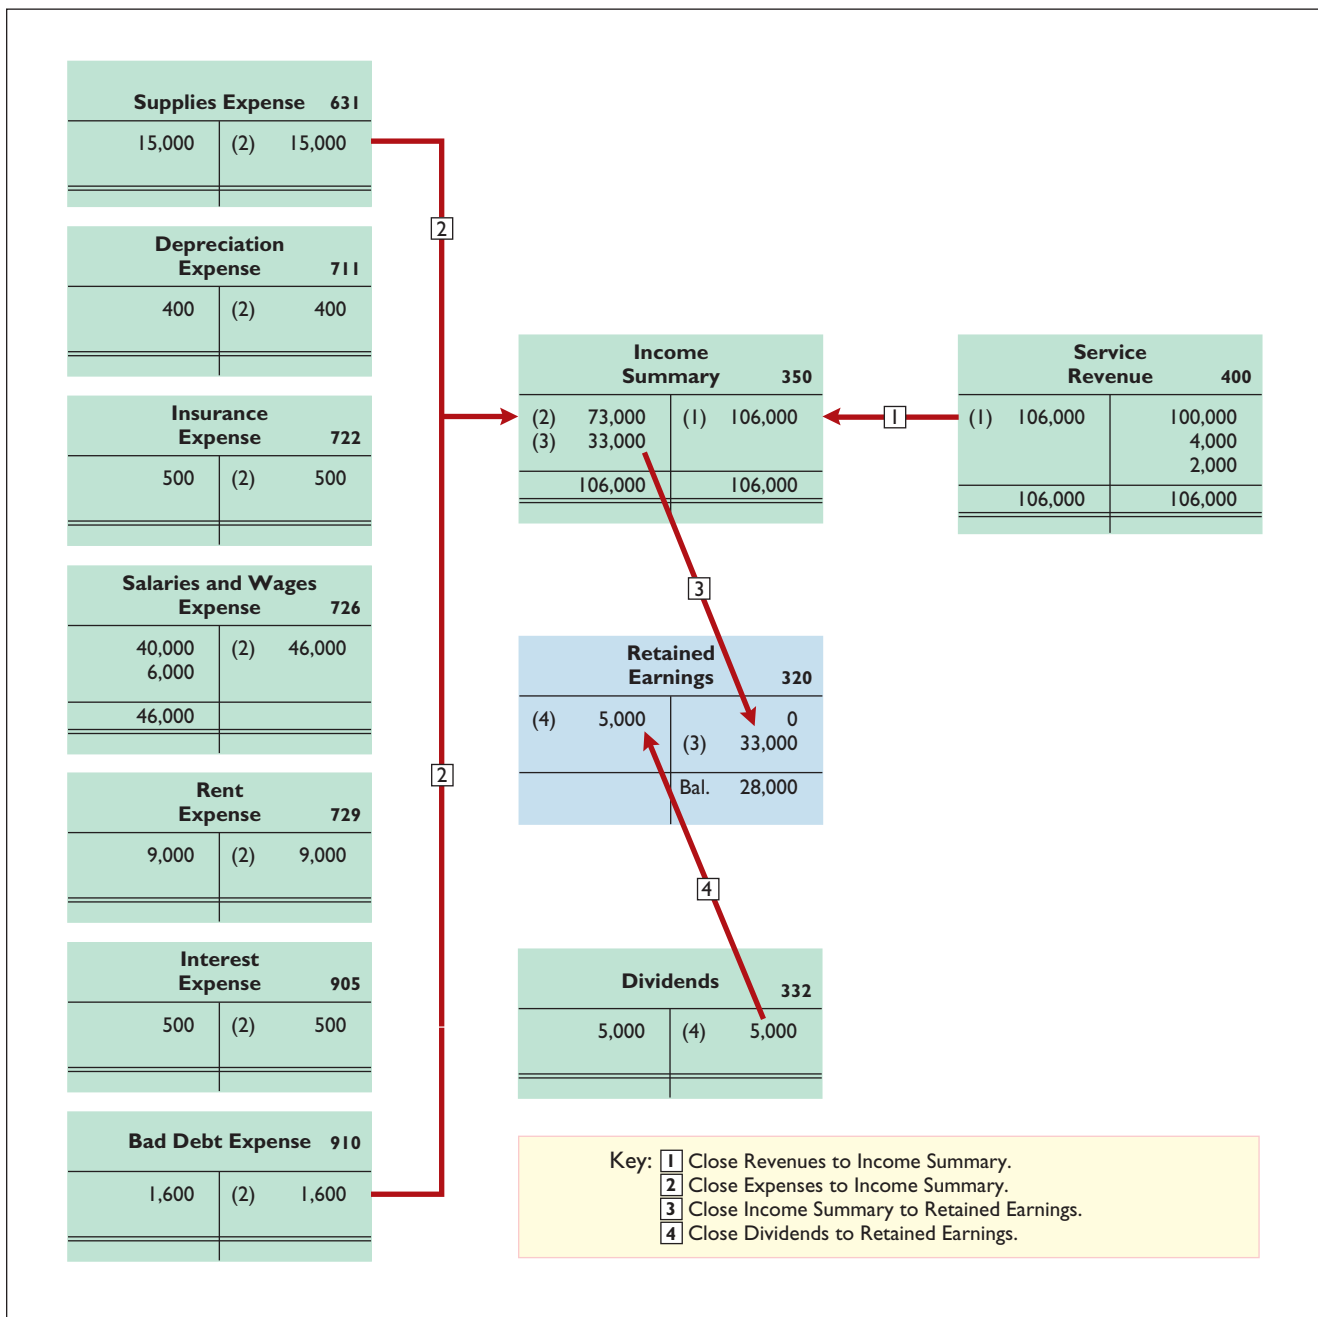

| GENERAL JOURNAL | | | | J3 |
|-----------------|--|---------|---------|----|
| Date | Account Titles and Explanation | Debit | Credit | |
| | <u>Closing Entries</u> | | | |
| | (1) | | | |
| Oct. 31 | Service Revenue | 106,000 | | |
| | Income Summary | | 106,000 | |
| | (To close revenue account) | | | |
| | (2) | | | |
| 31 | Income Summary | 73,000 | | |
| | Supplies Expense | | 15,000 | |
| | Depreciation Expense | | 400 | |
| | Insurance Expense | | 500 | |
| | Salaries and Wages Expense | | 46,000 | |
| | Rent Expense | | 9,000 | |
| | Interest Expense | | 500 | |
| | Bad Debt Expense | | 1,600 | |
| | (To close expense accounts) | | | |
| | (3) | | | |
| 31 | Income Summary | 33,000 | | |
| | Retained Earnings (\$106,000 – \$73,000) | | 33,000 | |
| | (To close net income to retained earnings) | | | |
| | (4) | | | |
| 31 | Retained Earnings | 5,000 | | |
| | Dividends | | 5,000 | |
| | (To close dividends to retained earnings) | | | |

A couple of cautions about preparing closing entries. (1) Avoid unintentionally doubling the revenue and expense balances rather than zeroing them. (2) Do not close Dividends through the Income Summary account. **Dividends are not expenses, and they are not a factor in determining net income.**

Posting Closing Entries

Illustration 3.39 shows the posting of closing entries and the underlining (ruling) of accounts. All temporary accounts have zero balances after posting the closing entries. In addition, note that the balance in Retained Earnings represents the accumulated undistributed earnings of Pioneer Advertising at the end of the accounting period. Pioneer reports the ending balance in retained earnings in the balance sheet. As noted above, **Pioneer uses the Income Summary account only in closing.** It does not journalize and post entries to this account during the year.

ILLUSTRATION 3.39 Posting of Closing Entries

As part of the closing process, Pioneer totals, balances, and double-underlines the **temporary accounts**—revenues, expenses, and dividends—as shown in T-account form in Illustration 3.39. It does not close the **permanent accounts**—assets, liabilities, and stockholders' equity (Common Stock and Retained Earnings). Instead, Pioneer draws a single underline beneath the current period entries for the permanent accounts. The account balance is then entered below the single underline and is carried forward to the next period (see, for example, Retained Earnings).

After the closing process, each income statement account and the dividends account are balanced out to zero and are ready for use in the next accounting period.

Post-Closing Trial Balance

Recall that a trial balance is prepared after entering the regular transactions of the period, and that a second trial balance (the adjusted trial balance) occurs after posting the adjusting entries. A company may prepare a third trial balance after posting the closing entries. The trial balance after closing is called the **post-closing trial balance**. The purpose of the post-closing trial balance is **to prove the equality of the permanent account balances that the company carries forward into the next accounting period**. Since all temporary accounts will have zero balances, **the post-closing trial balance will contain only permanent (real)—balance sheet—accounts**.

Illustration 3.40 shows the post-closing trial balance of Pioneer Advertising.

ILLUSTRATION 3.40

Post-Closing Trial Balance

| Pioneer Advertising | | | |
|------------------------------------|-----------|----------|-----------|
| Post-Closing Trial Balance | | | |
| October 31, 2020 | | | |
| Account | Debit | Credit | |
| Cash | \$ 80,000 | | |
| Accounts Receivable | 74,000 | | |
| Allowance for Doubtful Accounts | | \$ 1,600 | |
| Supplies | 10,000 | | |
| Prepaid Insurance | 5,500 | | |
| Equipment | 50,000 | | |
| Accumulated Depreciation—Equipment | | | 400 |
| Notes Payable | | | 50,000 |
| Accounts Payable | | | 25,000 |
| Unearned Service Revenue | | | 8,000 |
| Salaries and Wages Payable | | | 6,000 |
| Interest Payable | | | 500 |
| Common Stock | | | 100,000 |
| Retained Earnings | | | 28,000 |
| | \$219,500 | | \$219,500 |

A post-closing trial balance provides evidence that the company has properly journalized and posted the closing entries. It also shows that the accounting equation is in balance at the end of the accounting period. However, like the other trial balances, it does not prove that Pioneer has recorded all transactions or that the ledger is correct. For example, the post-closing trial balance will balance if a transaction is not journalized and posted, or if a transaction is journalized and posted twice.

Reversing Entries—An Optional Step

Some accountants prefer to reverse the effects of certain adjusting entries by making a **reversing entry** at the beginning of the next accounting period. A reversing entry is the exact

opposite of the adjusting entry made in the previous period. **Use of reversing entries is an optional bookkeeping procedure; it is not a required step in the accounting cycle.** Accordingly, we have chosen to cover this topic in Appendix 3B.

The Accounting Cycle Summarized

A summary of the steps in the accounting cycle shows a logical sequence of the accounting procedures used during a fiscal period:

1. Enter the transactions of the period in appropriate journals.
2. Post from the journals to the ledger (or ledgers).
3. Prepare an unadjusted trial balance (trial balance).
4. Prepare adjusting journal entries and post to the ledger(s).
5. Prepare a trial balance after adjusting (adjusted trial balance).
6. Prepare the financial statements from the adjusted trial balance.
7. Prepare closing journal entries and post to the ledger(s).
8. Prepare a post-closing trial balance (**optional**).
9. Prepare reversing entries (**optional**) and post to the ledger(s).

A company normally completes all of these steps in every fiscal period.

Financial Statements for a Merchandising Company

LEARNING OBJECTIVE 5

Prepare financial statements for a merchandising company.

Pioneer Advertising is a service company. In this section, we show a detailed set of financial statements for a merchandising company, Uptown Cabinet Corp. The financial statements (see Illustrations 3.41 to 3.43) are prepared from the adjusted trial balance (not shown).

Income Statement

The income statement for Uptown, shown in **Illustration 3.41**, is self-explanatory. The income statement classifies amounts into such categories as gross profit on sales, income from operations, income before taxes, and net income. Although earnings per share information is required to be shown on the face of the income statement for a corporation, we omit this item here as it will be discussed more fully later in the text. *For homework problems, do not present earnings per share information unless required to do so.*

ILLUSTRATION 3.41
Income Statement for a
Merchandising Company

| Uptown Cabinet Corp. | | |
|---|---------------|-------------------------|
| Income Statement | | |
| For the Year Ended December 31, 2020 | | |
| Net sales | | \$400,000 |
| Cost of goods sold | | <u>316,000</u> |
| Gross profit on sales | | 84,000 |
| Selling expenses | | |
| Salaries and wages expense (sales) | \$20,000 | |
| Advertising expense | <u>10,200</u> | |
| Total selling expenses | 30,200 | |
| Administrative expenses | | |
| Salaries and wages expense (general) | \$19,000 | |
| Depreciation expense—equipment | 6,700 | |
| Property tax expense | 5,300 | |
| Rent expense | 4,300 | |
| Bad debt expense | 1,000 | |
| Telephone and Internet expense | 600 | |
| Insurance expense | <u>360</u> | |
| Total administrative expenses | 37,260 | |
| Total selling and administrative expenses | | <u>67,460</u> |
| Income from operations | | 16,540 |
| Other revenues and gains | | |
| Interest revenue | | <u>800</u> |
| | | 17,340 |
| Other expenses and losses | | |
| Interest expense | | <u>1,700</u> |
| Income before income taxes | | 15,640 |
| Income tax | | <u>3,440</u> |
| Net income | | <u>\$ 12,200</u> |

Retained Earnings Statement

A corporation may retain the net income earned in the business, or it may distribute it to stockholders by payment of dividends. In **Illustration 3.42**, Uptown added the net income earned during the year to the balance of retained earnings on January 1, thereby increasing the balance of retained earnings. Deducting dividends of \$2,000 results in the ending retained earnings balance of \$26,400 on December 31.

ILLUSTRATION 3.42
Retained Earnings Statement
for a Merchandising Company

| Uptown Cabinet Corp. | | |
|---|---------------|-----------------|
| Retained Earnings Statement | | |
| For the Year Ended December 31, 2020 | | |
| Retained earnings, January 1 | \$16,200 | |
| Add: Net income | <u>12,200</u> | |
| | 28,400 | |
| Less: Dividends | <u>2,000</u> | |
| Retained earnings, December 31 | | <u>\$26,400</u> |

Balance Sheet

The balance sheet for Uptown, shown in **Illustration 3.43**, is a classified balance sheet. Interest receivable, inventory, prepaid insurance, and prepaid rent are included as current assets. Uptown considers these assets current because they will be converted into cash or used by the business within a relatively short period of time. Uptown deducts the amount of Allowance for Doubtful Accounts from the total of accounts, notes, and interest receivable because it estimates that only \$54,800 of \$57,800 will be collected in cash.

ILLUSTRATION 3.43

Balance Sheet for a Merchandising Company

| Uptown Cabinet Corp. | | | |
|---|----------|---------------|-------------------------|
| Balance Sheet | | | |
| As of December 31, 2020 | | | |
| Assets | | | |
| Current assets | | | |
| Cash | | | \$ 1,200 |
| Notes receivable | \$16,000 | | |
| Accounts receivable | 41,000 | | |
| Interest receivable | 800 | \$57,800 | |
| Less: Allowance for doubtful accounts | | <u>3,000</u> | 54,800 |
| Inventory | | | 40,000 |
| Prepaid insurance | | | 540 |
| Prepaid rent | | | <u>500</u> |
| Total current assets | | | 97,040 |
| Property, plant, and equipment | | | |
| Equipment | | 67,000 | |
| Less: Accumulated depreciation—equipment | | <u>18,700</u> | |
| Total property, plant, and equipment | | | 48,300 |
| Total assets | | | <u>\$145,340</u> |
| Liabilities and Stockholders' Equity | | | |
| Current liabilities | | | |
| Notes payable | | \$20,000 | |
| Accounts payable | | 13,500 | |
| Property taxes payable | | 2,000 | |
| Income taxes payable | | <u>3,440</u> | |
| Total current liabilities | | | \$ 38,940 |
| Long-term liabilities | | | |
| Bonds payable, due June 30, 2028 | | | <u>30,000</u> |
| Total liabilities | | | 68,940 |
| Stockholders' equity | | | |
| Common stock, \$5.00 par value, issued and outstanding, 10,000 shares | | 50,000 | |
| Retained earnings | | <u>26,400</u> | |
| Total stockholders' equity | | | 76,400 |
| Total liabilities and stockholders' equity | | | <u>\$145,340</u> |

In the property, plant, and equipment section, Uptown deducts the Accumulated Depreciation—Equipment from the cost of the equipment. The difference represents the book or carrying value of the equipment.

The balance sheet shows property taxes payable as a current liability because it is an obligation that is payable within a year. The balance sheet also shows other short-term liabilities such as accounts payable.

The bonds payable, due in 2028, are long-term liabilities. As a result, the balance sheet shows the account in a separate section. (The company paid interest on the bonds on December 31.)

Because Uptown is a corporation, the capital section of the balance sheet, called the stockholders' equity section in the illustration, differs somewhat from the capital section for a proprietorship. Total stockholders' equity consists of the common stock, which is the original investment by stockholders, and the earnings retained in the business. *For homework purposes, unless instructed otherwise, prepare an unclassified balance sheet.*

What Do the Numbers Mean? Statements, Please

To achieve the vision of “24/7 accounting,” a company must be able to update revenue, income, and balance sheet numbers every day within the quarter and publish them on the Internet. Such real-time reporting responds to the demand for more timely financial

information made available to all investors—not just to analysts with access to company management.

Two obstacles typically stand in the way of 24/7 accounting: (1) having the necessary accounting systems to close the books on

a daily basis and (2) reliability concerns associated with unaudited real-time data. Only a few companies have the necessary accounting capabilities. **Cisco Systems**, which pioneered the concept of the 24-hour close, is one such company.

Indeed, the use of a worksheet (spreadsheet) at the end of each day, month, or quarter enables a company to prepare interim financial statements even though it closes the books only at the end of each year. For example, assume that **Google** closes its books on December 31, but it wants monthly financial statements. To do this, at the end of January, Google prepares an adjusted trial balance (using a worksheet as illustrated in Appendix 3C) to supply the information needed for statements for January.

At the end of February, it uses a worksheet again. Note that because Google did not close the accounts at the end of January, the income statement taken from the adjusted trial balance on February 28 will present the net income for two months. If Google

wants an income statement for only the month of February, the company obtains it by subtracting the items in the January income statement from the corresponding items in the income statement for the two months of January and February.

If Google executes such a process daily, it can realize “24/7 accounting.” Achieving 24/7 or continuous accounting has a number of additional benefits. According to PwC, beyond faster financial close cycles, continuous-accounting organizations run at a 40 percent lower cost than their peers yet spend 20 percent more time on analysis versus data-gathering, all with doubled accounting efficiency and a more satisfied and engaged accounting and finance organization.

Source: D. McCann, “How to Create a World-Class Finance Function,” *www.CFO.com* (July 10, 2015).

Closing Entries

Uptown makes closing entries in its general journal as follows.

| December 31, 2020 | | | |
|--|--|---------|---------|
| Sales Revenue | | 400,000 | |
| Interest Revenue | | 800 | |
| Income Summary | | | 400,800 |
| | (To close revenues to Income Summary) | | |
| Income Summary | | 388,600 | |
| Cost of Goods Sold | | | 316,000 |
| Salaries and Wages Expense (sales) | | | 20,000 |
| Advertising Expense | | | 10,200 |
| Salaries and Wages Expense (general) | | | 19,000 |
| Depreciation Expense | | | 6,700 |
| Rent Expense | | | 4,300 |
| Property Tax Expense | | | 5,300 |
| Bad Debt Expense | | | 1,000 |
| Telephone and Internet Expense | | | 600 |
| Insurance Expense | | | 360 |
| Interest Expense | | | 1,700 |
| Income Tax Expense | | | 3,440 |
| | (To close expenses to Income Summary) | | |
| Income Summary (\$400,800 – \$388,600) | | 12,200 | |
| Retained Earnings | | | 12,200 |
| | (To close Income Summary to Retained Earnings) | | |
| Retained Earnings | | 2,000 | |
| Dividends | | | 2,000 |
| | (To close Dividends to Retained Earnings) | | |

APPENDIX 3A

Cash-Basis Accounting versus Accrual-Basis Accounting

LEARNING OBJECTIVE *6

Differentiate the cash basis of accounting from the accrual basis of accounting.

Most companies use **accrual-basis accounting**: They recognize revenue when the performance obligation is satisfied and expenses in the period incurred, without regard to the time of receipt or payment of cash.

Some small companies and the average individual taxpayer, however, use a strict or modified cash-basis approach. Under the **strict cash basis**, companies record revenue only when they receive cash. They record expenses only when they disperse cash. Determining income on the cash basis rests upon collecting revenue and paying expenses. The cash basis ignores two principles: the revenue recognition principle and the expense recognition principle. Consequently, cash-basis financial statements are not in conformity with GAAP.

An illustration will help clarify the differences between accrual-basis and cash-basis accounting. Assume that Quality Contractor signs an agreement to construct a garage for \$22,000. In January, Quality begins construction, incurs costs of \$18,000 on credit, and by the end of January delivers a finished garage to the buyer. In February, Quality collects \$22,000 cash from the customer. In March, Quality pays the \$18,000 due the creditors. **Illustrations 3A.1** and **3A.2** show the net incomes for each month under cash-basis accounting and accrual-basis accounting, respectively.

| Quality Contractor Income Statement—Cash Basis For the Month of | | | | |
|--|---------------------|------------------------|--------------------------|------------------------|
| | January | February | March | Total |
| Cash receipts | \$-0- | \$22,000 | \$ -0- | \$22,000 |
| Cash payments | -0- | -0- | 18,000 | 18,000 |
| Net income (loss) | <u>\$-0-</u> | <u>\$22,000</u> | <u>\$(18,000)</u> | <u>\$ 4,000</u> |

ILLUSTRATION 3A.1**Income Statements—Cash Basis**

| Quality Contractor Income Statement—Accrual Basis For the Month of | | | | |
|---|------------------------|---------------------|---------------------|------------------------|
| | January | February | March | Total |
| Revenues | \$22,000 | \$-0- | \$-0- | \$22,000 |
| Expenses | 18,000 | -0- | -0- | 18,000 |
| Net income (loss) | <u>\$ 4,000</u> | <u>\$-0-</u> | <u>\$-0-</u> | <u>\$ 4,000</u> |

ILLUSTRATION 3A.2**Income Statements—Accrual Basis**

For the three months combined, total net income is the same under both cash-basis accounting and accrual-basis accounting. The difference is in the **timing** of revenues and expenses. The basis of accounting also affects the balance sheet. **Illustrations 3A.3** and **3A.4** show Quality's balance sheets at each month-end under the cash basis and the accrual basis, respectively.

| Quality Contractor Balance Sheet—Cash Basis As of | | | |
|--|--------------|-----------------|----------------|
| | January 31 | February 28 | March 31 |
| Assets | | | |
| Cash | \$-0- | \$22,000 | \$4,000 |
| Total assets | <u>\$-0-</u> | <u>\$22,000</u> | <u>\$4,000</u> |
| Liabilities and Owners' Equity | | | |
| Owners' equity | \$-0- | \$22,000 | \$4,000 |
| Total liabilities and owners' equity | <u>\$-0-</u> | <u>\$22,000</u> | <u>\$4,000</u> |

ILLUSTRATION 3A.3**Balance Sheets—Cash Basis**

ILLUSTRATION 3A.4**Balance Sheets—Accrual Basis**

| Quality Contractor | | | |
|---------------------------------------|-----------------|-----------------|----------------|
| Balance Sheet—Accrual Basis | | | |
| As of | | | |
| | January 31 | February 28 | March 31 |
| Assets | | | |
| Cash | \$ -0- | \$22,000 | \$4,000 |
| Accounts receivable | 22,000 | -0- | -0- |
| Total assets | <u>\$22,000</u> | <u>\$22,000</u> | <u>\$4,000</u> |
| Liabilities and Owners' Equity | | | |
| Accounts payable | \$18,000 | \$18,000 | \$ -0- |
| Owners' equity | 4,000 | 4,000 | 4,000 |
| Total liabilities and owners' equity | <u>\$22,000</u> | <u>\$22,000</u> | <u>\$4,000</u> |

Analysis of Quality's income statements and balance sheets shows the ways in which cash-basis accounting is inconsistent with basic accounting theory:

1. The cash basis understates revenues and assets from the construction and delivery of the garage in January. It ignores the \$22,000 of accounts receivable, representing a near-term future cash inflow.
2. The cash basis understates expenses incurred with the construction of the garage and the liability outstanding at the end of January. It ignores the \$18,000 of accounts payable, representing a near-term future cash outflow.
3. The cash basis understates owners' equity in January by not recognizing the revenues and the asset until February. It also overstates owners' equity in February by not recognizing the expenses and the liability until March.

In short, cash-basis accounting violates the accrual concept underlying financial reporting.

The **modified cash basis** is a mixture of the cash basis and the accrual basis. It is based on the strict cash basis but with modifications that have substantial support, such as capitalizing and depreciating plant assets or recording inventory. This method is often followed by professional services firms (doctors, lawyers, accountants, and consultants) and by retail, real estate, and agricultural operations.³

Conversion from Cash Basis to Accrual Basis

Not infrequently, companies want to convert a cash basis or a modified cash basis set of financial statements to the accrual basis for presentation to investors and creditors. To illustrate this conversion, assume that Dr. Diane Windsor, like many small business owners, keeps her accounting records on a cash basis. In the year 2020, Dr. Windsor received \$300,000 from her patients and paid \$170,000 for operating expenses, resulting in an excess of cash receipts over disbursements of \$130,000 (\$300,000 – \$170,000). At January 1 and December 31, 2020, she has accounts receivable, unearned service revenue, accrued liabilities, and prepaid expenses as shown in **Illustration 3A.5**.

³Companies in the following situations might use a cash or modified cash basis.

- (1) A company that is primarily interested in cash flows (for example, a group of physicians that distributes cash-basis earnings for salaries and bonuses).
- (2) A company that has a limited number of financial statement users (small, closely held company with little or no debt).
- (3) A company that has operations that are relatively straightforward (small amounts of inventory, long-term assets, or long-term debt).

| | January 1, 2020 | December 31, 2020 |
|--------------------------|-----------------|-------------------|
| Accounts receivable | \$12,000 | \$9,000 |
| Unearned service revenue | –0– | 4,000 |
| Accrued liabilities | 2,000 | 5,500 |
| Prepaid expenses | 1,800 | 2,700 |

ILLUSTRATION 3A.5

Related to Dr. Diane Windsor**

Service Revenue Computation

To convert the amount of cash received from patients to service revenue on an accrual basis, we must consider changes in accounts receivable and unearned service revenue during the year. Accounts receivable at the beginning of the year represents revenues recognized last year that are collected this year. Ending accounts receivable indicates revenues recognized this year that are not yet collected. Therefore, to compute revenue on an accrual basis, we subtract beginning accounts receivable and add ending accounts receivable, as the formula in **Illustration 3A.6** shows.

$$\text{Cash Receipts from Customers} \left\{ \begin{array}{l} - \text{ Beginning Accounts Receivable} \\ + \text{ Ending Accounts Receivable} \end{array} \right\} = \text{Revenue on an Accrual Basis}$$

ILLUSTRATION 3A.6

Conversion of Cash Receipts to Revenue—Accounts Receivable

Similarly, beginning unearned service revenue represents cash received last year for revenues recognized this year. Ending unearned service revenue results from collections this year that will be recognized as revenue next year. Therefore, to compute revenue on an accrual basis, we add beginning unearned service revenue and subtract ending unearned service revenue, as the formula in **Illustration 3A.7** shows.

$$\text{Cash Receipts from Customers} \left\{ \begin{array}{l} + \text{ Beginning Unearned Service Revenue} \\ - \text{ Ending Unearned Service Revenue} \end{array} \right\} = \text{Revenue on an Accrual Basis}$$

ILLUSTRATION 3A.7

Conversion of Cash Receipts to Revenue—Unearned Service Revenue

Therefore, for Dr. Windsor's dental practice, to convert cash collected from customers to service revenue on an accrual basis, we would make the computations shown in **Illustration 3A.8**.

| | | |
|--------------------------------------|------------|-------------------------|
| Cash receipts from customers | | \$300,000 |
| – Beginning accounts receivable | \$(12,000) | |
| + Ending accounts receivable | 9,000 | |
| + Beginning unearned service revenue | –0– | |
| – Ending unearned service revenue | (4,000) | (7,000) |
| Service revenue (accrual) | | <u>\$293,000</u> |

ILLUSTRATION 3A.8

Conversion of Cash Receipts to Service Revenue

Operating Expense Computation

To convert cash paid for operating expenses during the year to operating expenses on an accrual basis, we must consider changes in prepaid expenses and accrued liabilities. First, we need to recognize as this year's expenses the amount of beginning prepaid expenses. (The cash payment for these occurred last year.) Therefore, to arrive at operating expense on an accrual basis, we add the beginning prepaid expenses balance to cash paid for operating expenses.

Conversely, ending prepaid expenses result from cash payments made this year for expenses to be reported next year. (Under the accrual basis, Dr. Windsor would have deferred recognizing these payments as expenses until a future period.) To convert these cash payments

to operating expenses on an accrual basis, we deduct ending prepaid expenses from cash paid for expenses, as the formula in **Illustration 3A.9** shows.

ILLUSTRATION 3A.9
Conversion of Cash Payments to Expenses—Prepaid Expenses

$$\text{Cash Paid for Operating Expenses} \left\{ \begin{array}{l} + \text{ Beginning Prepaid Expenses} \\ - \text{ Ending Prepaid Expenses} \end{array} \right\} = \text{Expenses on an Accrual Basis}$$

Similarly, beginning accrued liabilities result from expenses recognized last year that require cash payments this year. Ending accrued liabilities relate to expenses recognized this year that have not been paid. To arrive at expenses on an accrual basis, we deduct beginning accrued liabilities and add ending accrued liabilities to cash paid for expenses, as the formula in **Illustration 3A.10** shows.

ILLUSTRATION 3A.10
Conversion of Cash Payments to Expenses—Accrued Liabilities

$$\text{Cash Paid for Operating Expenses} \left\{ \begin{array}{l} - \text{ Beginning Accrued Liabilities} \\ + \text{ Ending Accrued Liabilities} \end{array} \right\} = \text{Expenses on an Accrual Basis}$$

Therefore, for Dr. Windsor’s dental practice, to convert cash paid for operating expenses to operating expenses on an accrual basis, we would make the computations shown in **Illustration 3A.11**.

ILLUSTRATION 3A.11
Conversion of Cash Paid to Operating Expenses

| | | |
|-------------------------------------|----------|------------------|
| Cash paid for operating expenses | | \$170,000 |
| + Beginning prepaid expense | \$ 1,800 | |
| – Ending prepaid expense | (2,700) | |
| – Beginning accrued liabilities | (2,000) | |
| + Ending accrued liabilities | 5,500 | 2,600 |
| Operating expenses (accrual) | | \$172,600 |

This entire conversion can be completed in worksheet form, as shown in **Illustration 3A.12**.

ILLUSTRATION 3A.12
Conversion of Statement of Cash Receipts and Disbursements to Income Statement

| Diane Windsor, D.D.S. | | | | |
|--|------------|-------------|----------|---------------|
| Conversion of Income Statement Data from Cash Basis to Accrual Basis | | | | |
| For the Year 2020 | | | | |
| Account Titles | Cash Basis | Adjustments | | Accrual Basis |
| | | Add | Deduct | |
| Collections from customers | \$300,000 | | | |
| – Accounts receivable, Jan. 1 | | | \$12,000 | |
| + Accounts receivable, Dec. 31 | | \$9,000 | | |
| + Unearned service revenue, Jan. 1 | | — | — | |
| – Unearned service revenue, Dec. 31 | | | 4,000 | |
| Service revenue | | | | \$293,000 |
| Disbursement for expenses | 170,000 | | | |
| + Prepaid expenses, Jan. 1 | | 1,800 | | |
| – Prepaid expenses, Dec. 31 | | | 2,700 | |
| – Accrued liabilities, Jan. 1 | | | 2,000 | |
| + Accrued liabilities, Dec. 31 | | 5,500 | | |
| Operating expenses | | | | 172,600 |
| Excess of cash collections over disbursements—cash basis | \$130,000 | | | |
| Net income—accrual basis | | | | \$120,400 |

Using this approach, we adjust collections and disbursements on a cash basis to revenue and expense on an accrual basis, to arrive at accrual net income. In any conversion from the cash basis to the accrual basis, depreciation or amortization is an additional expense in arriving at net income on an accrual basis.

Theoretical Weaknesses of the Cash Basis

The cash basis reports exactly when cash is received and when cash is disbursed. To many people, that information represents something concrete. Isn't cash what it is all about? Does it make sense to invent something, design it, produce it, market and sell it, if you aren't going to get cash for it in the end? Many frequently say, "Cash is the real bottom line," and also, "Cash is the oil that lubricates the economy." If so, then what is the merit of accrual accounting?

Today's economy is considerably more lubricated by credit than by cash. The accrual basis, not the cash basis, recognizes all aspects of the credit phenomenon. Furthermore, investors, creditors, and other decision-makers seek timely information about a company's *future* cash flows. Accrual-basis accounting provides this information by reporting the cash inflows and outflows associated with earnings activities as soon as these companies can estimate these cash flows with an acceptable degree of certainty. Receivables and payables are forecasters of future cash inflows and outflows. In other words, accrual-basis accounting aids in predicting future cash flows by reporting transactions and other events with cash consequences at the time the transactions and events occur, rather than when the cash is received and paid.

APPENDIX 3B

Using Reversing Entries

LEARNING OBJECTIVE *7

Identify adjusting entries that may be reversed.

Use of reversing entries simplifies the recording of transactions in the next accounting period. The use of reversing entries, however, does not change the amounts reported in the financial statements for the previous period.

Illustration of Reversing Entries—Accruals

A company most often uses reversing entries to reverse two types of adjusting entries: accrued revenues and accrued expenses. To illustrate the optional use of reversing entries for accrued expenses, we use the following transaction and adjustment data.

1. October 24 (initial salaries and wages entry): Paid \$4,000 of salaries and wages incurred between October 10 and October 24.
2. October 31 (adjusting entry): Incurred salaries and wages between October 25 and October 31 of \$1,200, to be paid in the November 8 payroll.
3. November 8 (subsequent salaries and wages entry): Paid salaries and wages of \$2,500. Of this amount, \$1,200 applied to accrued salaries and wages payable at October 31 and \$1,300 to salaries and wages payable for November 1 through November 8.

Illustration 3B.1 shows the comparative entries.

ILLUSTRATION 3B.1 Comparison of Entries for Accruals, with and without Reversing

Entries

| Reversing Entries Not Used | | | | Reversing Entries Used | | | |
|--------------------------------|----------------------------|-------|-------|------------------------|----------------------------|-------|-------|
| <u>Initial Salary Entry</u> | | | | | | | |
| Oct. 24 | Salaries and Wages Expense | 4,000 | | Oct. 24 | Salaries and Wages Expense | 4,000 | |
| | Cash | | 4,000 | | Cash | | 4,000 |
| <u>Adjusting Entry</u> | | | | | | | |
| Oct. 31 | Salaries and Wages Expense | 1,200 | | Oct. 31 | Salaries and Wages Expense | 1,200 | |
| | Salaries and Wages Payable | | 1,200 | | Salaries and Wages Payable | | 1,200 |
| <u>Closing Entry</u> | | | | | | | |
| Oct. 31 | Income Summary | 5,200 | | Oct. 31 | Income Summary | 5,200 | |
| | Salaries and Wages Expense | | 5,200 | | Salaries and Wages Expense | | 5,200 |
| <u>Reversing Entry</u> | | | | | | | |
| Nov. 1 | No entry is made. | | | Nov. 1 | Salaries and Wages Payable | 1,200 | |
| | | | | | Salaries and Wages Expense | | 1,200 |
| <u>Subsequent Salary Entry</u> | | | | | | | |
| Nov. 8 | Salaries and Wages Payable | 1,200 | | Nov. 8 | Salaries and Wages Expense | 2,500 | |
| | Salaries and Wages Expense | 1,300 | | | Cash | | 2,500 |
| | Cash | | 2,500 | | | | |

The comparative entries show that the first three entries are the same whether or not the company uses reversing entries. The last two entries differ. The November 1 reversing entry eliminates the \$1,200 balance in Salaries and Wages Payable, created by the October 31 adjusting entry. The reversing entry also creates a \$1,200 credit balance in the Salaries and Wages Expense account. As you know, it is unusual for an expense account to have a credit balance. However, the balance is correct in this instance. Why? Because the company will debit the entire amount of the first salaries and wages payment in the new accounting period to Salaries and Wages Expense. This debit eliminates the credit balance. The resulting debit balance in the expense account will equal the salaries and wages expense incurred in the new accounting period (\$1,300 in this example).

When a company makes reversing entries, it debits all cash payments of expenses to the related expense account. This means that on November 8 (and every payday), the company debits Salaries and Wages Expense for the amount paid without regard to the existence of any accrued salaries and wages payable. Repeating the same entry simplifies the recording process in an accounting system.

Illustration of Reversing Entries—Deferrals

Up to this point, we assumed the recording of all deferrals as prepaid expense or unearned revenue. In some cases, though, a company records deferrals directly in expense or revenue accounts. When this occurs, a company may also reverse deferrals.

To illustrate the use of reversing entries for prepaid expenses, we use the following transaction and adjustment data.

1. December 10 (initial entry): Purchased \$20,000 of office supplies with cash.
2. December 31 (adjusting entry): Determined that \$5,000 of office supplies are on hand.

Illustration 3B.2 shows the comparative entries.

ILLUSTRATION 3B.2 Comparison of Entries for Deferrals, with and without Reversing Entries

| Reversing Entries Not Used | | | | Reversing Entries Used | | | |
|---|------------------|--------|--------|------------------------|------------------|--------|--------|
| <u>Initial Purchase of Supplies Entry</u> | | | | | | | |
| Dec. 10 | Supplies | 20,000 | | Dec. 10 | Supplies Expense | 20,000 | |
| | Cash | | 20,000 | | Cash | | 20,000 |
| <u>Adjusting Entry</u> | | | | | | | |
| Dec. 31 | Supplies Expense | 15,000 | | Dec. 31 | Supplies | 5,000 | |
| | Supplies | | 15,000 | | Supplies Expense | | 5,000 |
| <u>Closing Entry</u> | | | | | | | |
| Dec. 31 | Income Summary | 15,000 | | Dec. 31 | Income Summary | 15,000 | |
| | Supplies Expense | | 15,000 | | Supplies Expense | | 15,000 |
| <u>Reversing Entry</u> | | | | | | | |
| Jan. 1 | No entry | | | Jan. 1 | Supplies Expense | 5,000 | |
| | | | | | Supplies | | 5,000 |

After the adjusting entry on December 31 (regardless of whether using reversing entries), the asset account Supplies shows a balance of \$5,000, and Supplies Expense shows a balance of \$15,000. If the company initially debits Supplies Expense when it purchases the supplies, it then makes a reversing entry to return to the expense account the cost of unconsumed supplies. The company then continues to debit Supplies Expense for additional purchases of supplies during the next period.

Deferrals are generally entered in real accounts (assets and liabilities), thus making reversing entries unnecessary. This approach is used because it is advantageous for items that a company needs to apportion over several periods (e.g., supplies and parts inventories). However, for other items that do not follow this regular pattern and that may or may not involve two or more periods, a company ordinarily enters them initially in revenue or expense accounts. The revenue and expense accounts may not require adjusting, and the company thus systematically closes them to Income Summary.

Using the nominal accounts adds consistency to the accounting system. It also makes the recording more efficient, particularly when a large number of such transactions occur during the year. For example, the bookkeeper knows to expense invoice items (except for capital asset acquisitions). He or she need not worry whether an item will result in a prepaid expense at the end of the period because the company will make adjustments at the end of the period.

Summary of Reversing Entries

We summarize guidelines for reversing entries as follows.

1. All accruals should be reversed.
2. All deferrals for which a company debited or credited the original cash transaction to an expense or revenue account should be reversed.
3. Adjusting entries for depreciation and bad debts are not reversed.

Recognize that reversing entries do not have to be used. Therefore, some accountants avoid them entirely.

Using a Worksheet: The Accounting Cycle Revisited

LEARNING OBJECTIVE *8

Prepare a 10-column worksheet.

In this appendix, we provide an additional illustration of the end-of-period steps in the accounting cycle and illustrate the use of a worksheet (usually in an electronic spreadsheet) in this process. Using a **worksheet** (spreadsheet) often facilitates the end-of-period (monthly, quarterly, or annually) accounting and reporting process. Use of a worksheet helps a company prepare the financial statements on a more timely basis. How? With a worksheet; a company need not wait until it journalizes and posts the adjusting and closing entries.

A company prepares a worksheet either on columnar paper or within a computer spreadsheet. In either form, a company uses the worksheet to adjust account balances and to prepare financial statements.

The worksheet does not replace the financial statements. Instead, it is an informal device for accumulating and sorting information needed for the financial statements. Completing the worksheet provides considerable assurance that a company properly handled all of the details related to the end-of-period accounting and statement preparation. The 10-column worksheet in Illustration 3C.1 provides columns for the first trial balance, adjustments, adjusted trial balance, income statement, and balance sheet.

Worksheet Columns

Trial Balance Columns

Uptown Cabinet Corp., shown in **Illustration 3C.1**, obtains data for the trial balance from its ledger balances at December 31. The amount for Inventory, \$40,000, is the year-end inventory amount, which results from the application of a perpetual inventory system.

Adjustments Columns

After Uptown enters all adjustment data on the worksheet, it establishes the equality of the adjustment columns. It then extends the balances in all accounts to the adjusted trial balance columns.

Adjustments Entered on the Worksheet

Items (a) through (g) below serve as the basis for the adjusting entries made in the worksheet for Uptown shown in Illustration 3C.1.

- a. Depreciation of equipment at the rate of 10 percent per year based on original cost of \$67,000.
- b. Estimated bad debts of \$1,000, based on an aging of Accounts Receivable.
- c. Insurance expired during the year \$360.
- d. Interest accrued on notes receivable as of December 31, \$800.
- e. The Rent Expense account contains \$500 rent paid in advance, which is applicable to next year.
- f. Property taxes accrued December 31, \$2,000.
- g. Income taxes payable estimated \$3,440.

The adjusting entries shown on the December 31, 2020, worksheet are as follows.

| | | |
|------------------------------------|-------|-------|
| a. Depreciation Expense | 6,700 | |
| Accumulated Depreciation—Equipment | | 6,700 |
| b. Bad Debt Expense | 1,000 | |
| Allowance for Doubtful Accounts | | 1,000 |
| c. Insurance Expense | 360 | |
| Prepaid Insurance | | 360 |
| d. Interest Receivable | 800 | |
| Interest Revenue | | 800 |
| e. Prepaid Rent | 500 | |
| Rent Expense | | 500 |
| f. Property Tax Expense | 2,000 | |
| Property Taxes Payable | | 2,000 |
| g. Income Tax Expense | 3,440 | |
| Income Taxes Payable | | 3,440 |

Uptown Cabinet transfers the adjusting entries to the Adjustments columns of the worksheet, often designating each by letter. The trial balance lists any new accounts resulting from the adjusting entries, as illustrated on the worksheet. (For example, see the accounts listed in rows 32 through 40 in Illustration 3C.1.) Uptown then totals and balances the Adjustments columns.

Adjusted Trial Balance

The adjusted trial balance shows the balance of all accounts after adjustment at the end of the accounting period. For example, Uptown adds the \$2,000 shown opposite the Allowance for Doubtful Accounts in the Trial Balance Cr. column to the \$1,000 in the Adjustments Cr. column. The company then extends the \$3,000 total to the Adjusted Trial Balance Cr. column. Similarly, Uptown reduces the \$900 debit opposite Prepaid Insurance by the \$360 credit in the Adjustments column. The result, \$540, is shown in the Adjusted Trial Balance Dr. column.

Income Statement and Balance Sheet Columns

Uptown extends all the debit items in the Adjusted Trial Balance columns into the Income Statement or Balance Sheet columns to the right. It similarly extends all the credit items.

The next step is to total the Income Statement columns. Uptown needs the amount of net income or loss for the period to balance the debit and credit columns. The net income of \$12,200 is shown in the Income Statement Dr. column because revenues exceeded expenses by that amount.

Uptown then balances the Income Statement columns. The company also enters the net income of \$12,200 in the Balance Sheet Cr. column as an increase in retained earnings.

Preparing Financial Statements from a Worksheet

The worksheet provides the information needed for preparation of the financial statements without reference to the ledger or other records. In addition, the worksheet sorts that data into appropriate columns, which facilitates the preparation of the statements. The financial statements of Uptown Cabinet are shown in Illustrations 3.41 to 3.43.

Learning Objectives Review

1 Describe the basic accounting information system.

Understanding the following eleven terms helps in understanding **key accounting concepts**: (1) event, (2) transaction, (3) account, (4) real and nominal accounts, (5) ledger, (6) journal, (7) posting, (8) trial balance, (9) adjusting entries, (10) financial statements, and (11) closing entries.

Using **double-entry rules**, the left side of any account is the debit side; the right side is the credit side. All asset and expense accounts are increased on the left or debit side and decreased on the right or credit side. Conversely, all liability and revenue accounts are increased on the right or credit side and decreased on the left or debit side. Stockholders' equity accounts, Common Stock and Retained Earnings, are increased on the credit side. Dividends is increased on the debit side.

The **basic steps in the accounting cycle** are (1) identifying and measuring transactions and other events, (2) journalizing, (3) posting, (4) preparing an unadjusted trial balance, (5) making adjusting entries, (6) preparing an adjusted trial balance, (7) preparing financial statements, and (8) closing.

2 Record and summarize basic transactions.

The simplest journal form chronologically lists transactions and events expressed in terms of debits and credits to particular accounts. The items entered in a general journal must be transferred (posted) to the general ledger. Companies should prepare an unadjusted trial balance at the end of a given period after they have recorded the entries in the journal and posted them to the ledger.

3 Identify and prepare adjusting entries.

Adjustments achieve a proper recognition of revenues and expenses, so as to determine net income for the current period and to achieve an accurate statement of end-of-the-period balances in assets, liabilities, and equity accounts. The major types of adjusting entries are deferrals (prepaid expenses and unearned revenues) and accruals (accrued revenues and accrued expenses).

4 Prepare financial statements from the adjusted trial balance and prepare closing entries.

Companies can **prepare financial statements** directly from the adjusted trial balance. The income statement is prepared from the revenue and expense accounts. The retained earnings statement is prepared from the retained earnings account, dividends, and net income (or net loss). The balance sheet is prepared from the asset, liability, and equity accounts.

In the **closing process**, the company transfers all of the revenue and expense account balances (income statement items) to a clearing account called Income Summary, which is used only at the end of the fiscal year. Revenues and expenses are matched in the Income Summary account. The net result of this matching represents the net income or net loss for the period. That amount is then transferred to an equity account (Retained Earnings for a corporation and capital accounts for proprietorships and partnerships).

5 Prepare financial statements for a merchandising company.

The financial statements for a merchandiser differ from those for a service company, as a merchandiser must account for gross profit on sales. The accounting cycle, however, is performed the same.

*6 Differentiate the cash basis of accounting from the accrual basis of accounting.

The cash basis of accounting records revenues when cash is received and expenses when cash is paid. Cash-basis accounting is not in conformity with GAAP. The accrual basis recognizes revenue when the performance obligation is satisfied and expenses in the period incurred, without regard to the time of the receipt or payment of cash. Accrual-basis accounting is theoretically preferable because it provides information about future cash inflows and outflows associated with earnings activities as soon as companies can estimate these cash flows with an acceptable degree of certainty.

*7 Identify adjusting entries that may be reversed.

Reversing entries are most often used to reverse two types of adjusting entries: accrued revenues and accrued expenses. Deferrals may also be reversed if the initial entry to record the transaction is made to an expense or revenue account.

*8 Prepare a 10-column worksheet.

The 10-column worksheet provides columns for the unadjusted trial balance, adjustments, adjusted trial balance, income statement, and balance sheet. The worksheet does not replace the financial statements. Instead, it is an informal device for accumulating and sorting information needed for the financial statements.

Practice Problem

Nalezny Advertising was founded by Casey Hayward in January 2008. Presented below are both the adjusted and unadjusted trial balances as of December 31, 2020.

| Nalezny Advertising Trial Balance December 31, 2020 | | | | |
|---|------------|-----|-----------|-----|
| | Unadjusted | | Adjusted | |
| | Dr. | Cr. | Dr. | Cr. |
| Cash | \$ 11,000 | | \$ 11,000 | |
| Accounts Receivable | 20,000 | | 21,500 | |
| Supplies | 8,400 | | 5,000 | |

| | Unadjusted | | Adjusted | |
|------------------------------------|------------------|------------------|------------------|------------------|
| | Dr. | Cr. | Dr. | Cr. |
| Equipment | \$ 60,000 | | \$ 60,000 | |
| Accumulated Depreciation—Equipment | | \$ 28,000 | | \$ 35,000 |
| Accounts Payable | | 5,000 | | 5,000 |
| Unearned Advertising Revenue | | 7,000 | | 5,600 |
| Salaries and Wages Payable | | –0– | | 1,300 |
| Common Stock | | 10,000 | | 10,000 |
| Retained Earnings | | 4,800 | | 4,800 |
| Advertising Revenue | | 58,600 | | 61,500 |
| Salaries and Wages Expense | 10,000 | | 11,300 | |
| Depreciation Expense | | | 7,000 | |
| Supplies Expense | | | 3,400 | |
| Rent Expense | 4,000 | | 4,000 | |
| | <u>\$113,400</u> | <u>\$113,400</u> | <u>\$123,200</u> | <u>\$123,200</u> |

Instructions

- Journalize the annual adjusting entries that were made.
- Prepare an income statement for the year ending December 31, 2020, and a balance sheet at December 31.
- Describe the remaining steps in the accounting cycle to be completed by Nalezny for 2020.

Solution

a.

| | | | |
|---------|--|-------|-------|
| Dec. 31 | Accounts Receivable (\$21,500 – \$20,000) | 1,500 | |
| | Advertising Revenue | | 1,500 |
| 31 | Unearned Advertising Revenue (\$7,000 – \$5,600) | 1,400 | |
| | Advertising Revenue | | 1,400 |
| 31 | Supplies Expense | 3,400 | |
| | Supplies | | 3,400 |
| 31 | Depreciation Expense | 7,000 | |
| | Accumulated Depreciation—Equipment | | 7,000 |
| 31 | Salaries and Wages Expense | 1,300 | |
| | Salaries and Wages Payable | | 1,300 |

b.

**Nalezny Advertising
Income Statement
For the Year Ended December 31, 2020**

| | | |
|----------------------------|----------|-----------------|
| Revenues | | |
| Advertising revenue | | \$61,500 |
| Expenses | | |
| Salaries and wages expense | \$11,300 | |
| Depreciation expense | 7,000 | |
| Rent expense | 4,000 | |
| Supplies expense | 3,400 | |
| Total expenses | | <u>25,700</u> |
| Net income | | <u>\$35,800</u> |

**Nalezny Advertising
Balance Sheet
December 31, 2020**

| <u>Assets</u> | |
|--|-----------------|
| Cash | \$11,000 |
| Accounts receivable | 21,500 |
| Supplies | 5,000 |
| Equipment | \$60,000 |
| Less: Accumulated depreciation—equipment | <u>35,000</u> |
| Total assets | <u>\$62,500</u> |

| <u>Liabilities and Stockholders' Equity</u> | | |
|---|-----------------|-----------------|
| Liabilities | | |
| Accounts payable | \$ 5,000 | |
| Unearned advertising revenue | 5,600 | |
| Salaries and wage payable | <u>1,300</u> | |
| Total liabilities | | \$11,900 |
| Stockholders' equity | | |
| Common stock | 10,000 | |
| Retained earnings | <u>40,600*</u> | <u>50,600</u> |
| Total liabilities and stockholders' equity | | <u>\$62,500</u> |
| *Retained earnings, Jan. 1, 2020 | \$ 4,800 | |
| Add: Net income | <u>35,800</u> | |
| Retained earnings, Dec. 31, 2020 | <u>\$40,600</u> | |

- c. Following preparation of financial statements (part b.), Nalezny would prepare closing entries to reduce the temporary accounts to zero. Some companies prepare a post-closing trial balance and reversing entries.

WileyPLUS

Brief Exercises, Exercises, Problems, Problem Solution Walkthrough Videos, and many more learning and assessment tools and resources are available for practice in WileyPLUS.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

Questions

- Give an example of a transaction that results in:
 - A decrease in an asset and a decrease in a liability.
 - A decrease in one asset and an increase in another asset.
 - A decrease in one liability and an increase in another liability.
- Do the following events represent business transactions? Explain your answer in each case.
 - A computer is purchased on account.
 - A customer returns merchandise and is given credit on account.
 - A prospective employee is interviewed.
 - The owner of the business withdraws cash from the business for personal use.
 - Merchandise is ordered for delivery next month.
- Name the accounts debited and credited for each of the following transactions.
 - Billing a customer for work done.
 - Receipt of cash from customer on account.
 - Purchase of office supplies on account.
 - Purchase of 15 gallons of gasoline for the delivery truck.
- Why are revenue and expense accounts called temporary or nominal accounts?
- Andrea Pafko, a fellow student, contends that the double-entry system means that each transaction must be recorded twice. Is Andrea correct? Explain.
- Is it necessary that a trial balance be prepared periodically? What purpose does it serve?
- Indicate whether each of the following items is a real or nominal account and whether it appears in the balance sheet or the income statement.
 - Prepaid Rent.
 - Salaries and Wages Payable.
 - Inventory.
 - Accumulated Depreciation—Equipment.
 - Equipment.
 - Service Revenue.
 - Salaries and Wages Expense.
 - Supplies.
- Employees are paid every Saturday for the preceding work week. If a balance sheet is prepared on Wednesday, December 31, what does the amount of wages earned during the first three days of the week (12/29, 12/30, 12/31) represent? Explain.
- (a) How are the components of revenues and expenses different for a merchandising company? (b) Explain the income measurement process of a merchandising company.
- What differences are there between the trial balance before closing and the trial balance after closing with respect to the following accounts?

| | |
|----------------------|-------------------------------|
| a. Accounts Payable. | d. Retained Earnings account. |
| b. Expense accounts. | e. Cash. |
| c. Revenue accounts. | |
- What are adjusting entries and why are they necessary?
- What are closing entries and why are they necessary?

13. Jay Hawk, maintenance supervisor for Boston Insurance Co., has purchased a riding lawnmower and accessories to be used in maintaining the grounds around corporate headquarters. He has sent the following information to the accounting department.

| | | | |
|-------------------------------|---------|---------------------------------|---------|
| Cost of mower and accessories | \$4,000 | Date purchased | 7/1/20 |
| Estimated useful life | 5 yrs | Monthly salary of groundskeeper | \$1,100 |
| Salvage value | \$0 | Estimated annual fuel cost | \$150 |

Compute the amount of depreciation expense (related to the mower and accessories) that should be reported on Boston's December 31, 2020, income statement. Assume straight-line depreciation.

14. Midwest Enterprises made the following entry on December 31, 2020.

| | | |
|---|--------|--------|
| Interest Expense | 10,000 | |
| Interest Payable | | 10,000 |
| (To record interest expense due on loan from Anaheim National Bank) | | |

What entry would Anaheim National Bank make regarding its outstanding loan to Midwest Enterprises? Explain why this must be the case.

***15.** Distinguish between cash-basis accounting and accrual-basis accounting. Why is accrual-basis accounting acceptable for most businesses and the cash-basis unacceptable in the preparation of an income statement and a balance sheet?

***16.** When salaries and wages expense for the year is computed, why are beginning accrued salaries and wages subtracted from, and ending accrued salaries and wages added to, salaries and wages paid during the year?

***17.** List two types of transactions that would receive different accounting treatment using (a) strict cash-basis accounting, and (b) a modified cash basis.

***18.** What are reversing entries, and why are they used?

***19.** "A worksheet is a permanent accounting record, and its use is required in the accounting cycle." Do you agree? Explain.

Brief Exercises

BE3.1 (LO 2) Transactions for Mehta Company for the month of May are presented below. Prepare journal entries for each of these transactions. (You may omit explanations.)

- May 1 B.D. Mehta invests \$4,000 cash in exchange for common stock in a small welding corporation.
- 3 Buys equipment on account for \$1,100.
- 13 Pays \$400 to landlord for May rent.
- 21 Bills Noble Corp. \$500 for welding work done.

BE3.2 (LO 2) Agazzi Repair Shop had the following transactions during the first month of business as a proprietorship. Journalize the transactions. (Omit explanations.)

- Aug. 2 Invested \$12,000 cash and \$2,500 of equipment in the business.
- 7 Purchased supplies on account for \$500. (Debit asset account.)
- 12 Performed services for clients, for which \$1,300 was collected in cash and \$670 was billed to the clients.
- 15 Paid August rent \$600.
- 19 Counted supplies and determined that only \$270 of the supplies purchased on August 7 are still on hand.

BE3.3 (LO 2, 3) On July 1, 2020, Crowe Co. pays \$15,000 to Zubin Insurance Co. for a 3-year insurance policy. Both companies have fiscal years ending December 31. For Crowe Co., journalize the entry on July 1 and the adjusting entry on December 31.

BE3.4 (LO 2, 3) Using the data in BE3.3, journalize the entry on July 1 and the adjusting entry on December 31 for Zubin Insurance Co. Zubin uses the accounts Unearned Service Revenue and Service Revenue.

BE3.5 (LO 2, 3) Assume that on February 1, **Procter & Gamble (P&G)** paid \$720,000 in advance for 2 years' insurance coverage. Prepare P&G's February 1 journal entry and the annual adjusting entry on June 30.

BE3.6 (LO 2, 3) LaBouche Corporation owns a warehouse. On November 1, it rented storage space to a lessee (tenant) for 3 months for a total cash payment of \$2,400 received in advance. Prepare LaBouche's November 1 journal entry and the December 31 annual adjusting entry.

BE3.7 (LO 2, 3) Dresser Company's weekly payroll, paid on Fridays, totals \$8,000. Employees work a 5-day week. Prepare Dresser's adjusting entry on Wednesday, December 31, and the journal entry to record the \$8,000 cash payment on Friday, January 2.

BE3.8 (LO 3) Included in Gonzalez Company's December 31 trial balance is a note receivable of \$12,000. The note is a 4-month, 10% note dated October 1. Prepare Gonzalez's December 31 adjusting entry to record \$300 of accrued interest, and the February 1 journal entry to record receipt of \$12,400 from the borrower.

BE3.9 (LO 3) Prepare the following adjusting entries at August 31 for **Walgreens**.

- a. Interest on notes payable of \$300 is accrued.
- b. Services performed but unbilled total \$1,400.
- c. Salaries and wages earned by employees of \$700 have not been recorded.
- d. Bad debt expense for year is \$900.

Use the following account titles: Service Revenue, Accounts Receivable, Interest Expense, Interest Payable, Salaries and Wages Expense, Salaries and Wages Payable, Allowance for Doubtful Accounts, and Bad Debt Expense.

BE3.10 (LO 3) At the end of its first year of operations, the trial balance of Alonzo Company shows Equipment \$30,000 and zero balances in Accumulated Depreciation—Equipment and Depreciation Expense. Depreciation for the year is estimated to be \$2,000. Prepare the adjusting entry for depreciation at December 31, and indicate the balance sheet presentation for the equipment at December 31.

BE3.11 (LO 4) Side Kicks has year-end account balances of Sales Revenue \$808,900, Interest Revenue \$13,500, Cost of Goods Sold \$556,200, Administrative Expenses \$189,000, Income Tax Expense \$35,100, and Dividends \$18,900. Prepare the year-end closing entries.

***BE3.12 (LO 6)** Kelly Company had cash receipts from customers in 2020 of \$142,000. Cash payments for operating expenses were \$97,000. Kelly has determined that at January 1, accounts receivable was \$13,000, and prepaid expenses were \$17,500. At December 31, accounts receivable was \$18,600, and prepaid expenses were \$23,200. Compute (a) service revenue and (b) operating expenses.

***BE3.13 (LO 7)** Assume that **Best Buy** made a December 31 adjusting entry to debit Salaries and Wages Expense and credit Salaries and Wages Payable for \$4,200 for one of its departments. On January 2, Best Buy paid the weekly payroll of \$7,000. Prepare Best Buy's (a) January 1 reversing entry; (b) January 2 entry (assuming the reversing entry was prepared); and (c) January 2 entry (assuming the reversing entry was not prepared).

Exercises

E3.1 (LO 2) (Transaction Analysis—Service Company) Beverly Crusher is a licensed CPA. During the first month of operations of her business (a sole proprietorship), the following events and transactions occurred.

- | | | |
|-------|----|--|
| April | 2 | Invested \$32,000 cash and equipment valued at \$14,000 in the business. |
| | 2 | Hired an administrative assistant at a salary of \$290 per week payable monthly. |
| | 3 | Purchased supplies on account \$700. (Debit an asset account.) |
| | 7 | Paid office rent of \$600 for the month. |
| | 11 | Completed a tax assignment and billed client \$1,100 for services rendered. (Use Service Revenue account.) |
| | 12 | Received \$3,200 advance on a management consulting engagement. |
| | 17 | Received cash of \$2,300 for services completed for Ferengi Co. |
| | 21 | Paid insurance expense \$110. |
| | 30 | Paid administrative assistant \$1,160 for the month. |
| | 30 | A count of supplies indicated that \$120 of supplies had been used. |
| | 30 | Purchased a new computer for \$6,100 with personal funds. (The computer will be used exclusively for business purposes.) |

Instructions

Journalize the transactions in the general journal. (Omit explanations.)

E3.2 (LO 2) (Corrected Trial Balance) The following trial balance of Wanda Landowska Company does not balance. Your review of the ledger reveals the following. (a) Each account had a normal balance. (b) The debit footings in Prepaid Insurance, Accounts Payable, and Property Tax Expense were each understated \$100. (c) A transposition error was made in Accounts Receivable and Service Revenue; the correct balances for Accounts Receivable and Service Revenue are \$2,750 and \$6,690, respectively. (d) A debit posting to Advertising Expense of \$300 was omitted. (e) A \$1,500 cash drawing by the owner was debited to Owner's Capital and credited to Cash.

| Wanda Landowska Company | | |
|--------------------------------|-----------------|-----------------|
| Trial Balance | | |
| April 30, 2020 | | |
| | <u>Debit</u> | <u>Credit</u> |
| Cash | \$ 4,800 | |
| Accounts Receivable | 2,570 | |
| Prepaid Insurance | 700 | |
| Equipment | | \$ 8,000 |
| Accounts Payable | | 4,500 |
| Property Taxes Payable | 560 | |
| Owner's Capital | | 11,200 |
| Service Revenue | 6,960 | |
| Salaries and Wages Expense | 4,200 | |
| Advertising Expense | 1,100 | |
| Property Tax Expense | | 800 |
| | <u>\$20,890</u> | <u>\$24,500</u> |

Instructions

Prepare a correct trial balance.

E3.3 (LO 2) (Corrected Trial Balance) The following trial balance of Blues Traveler Corporation does not balance.

| Blues Traveler Corporation | | |
|-----------------------------------|-----------------|-----------------|
| Trial Balance | | |
| April 30, 2020 | | |
| | <u>Debit</u> | <u>Credit</u> |
| Cash | \$ 5,912 | |
| Accounts Receivable | 5,240 | |
| Supplies | 2,967 | |
| Equipment | 6,100 | |
| Accounts Payable | | \$ 7,044 |
| Common Stock | | 8,000 |
| Retained Earnings | | 2,000 |
| Service Revenue | | 5,200 |
| Office Expense | 4,320 | |
| | <u>\$24,539</u> | <u>\$22,244</u> |

An examination of the ledger shows these errors.

- Cash received from a customer on account was recorded (both debit and credit) as \$1,380 instead of \$1,830.
- The purchase on account of a computer costing \$3,200 was recorded as a debit to Office Expense and a credit to Accounts Payable.
- Services were performed on account for a client, \$2,250, for which Accounts Receivable was debited \$2,250 and Service Revenue was credited \$225.
- A payment of \$95 for telephone charges was entered as a debit to Office Expense and a debit to Cash.
- The Service Revenue account was totaled at \$5,200 instead of \$5,280.

Instructions

From this information prepare a corrected trial balance.

E3.4 (LO 2) (Corrected Trial Balance) The following trial balance of Watteau Co. does not balance.

| Watteau Co. | | |
|----------------------|--------------|---------------|
| Trial Balance | | |
| June 30, 2020 | | |
| | <u>Debit</u> | <u>Credit</u> |
| Cash | | \$ 2,870 |
| Accounts Receivable | \$ 3,231 | |
| Supplies | 800 | |

| | <u>Debit</u> | <u>Credit</u> |
|----------------------------|-----------------|-----------------|
| Equipment | \$ 3,800 | |
| Accounts Payable | | \$ 2,666 |
| Unearned Service Revenue | 1,200 | |
| Common Stock | | 6,000 |
| Retained Earnings | | 3,000 |
| Service Revenue | | 2,380 |
| Salaries and Wages Expense | 3,400 | |
| Office Expense | 940 | |
| | <u>\$13,371</u> | <u>\$16,916</u> |

Each of the listed accounts should have a normal balance per the general ledger. An examination of the ledger and journal reveals the following errors.

1. Cash received from a customer on account was debited for \$570, and Accounts Receivable was credited for the same amount. The actual collection was for \$750.
2. The purchase of a computer printer on account for \$500 was recorded as a debit to Supplies for \$500 and a credit to Accounts Payable for \$500.
3. Services were performed on account for a client for \$890. Accounts Receivable was debited for \$890 and Service Revenue was credited for \$89.
4. A payment of \$65 for telephone charges was recorded as a debit to Office Expense for \$65 and a debit to Cash for \$65.
5. When the Unearned Service Revenue account was reviewed, it was found that service revenue amounting to \$325 was performed prior to June 30 (related to Unearned Service Revenue).
6. A debit posting to Salaries and Wages Expense of \$670 was omitted.
7. A payment on account for \$206 was credited to Cash for \$206 and credited to Accounts Payable for \$260.
8. A dividend of \$575 was debited to Salaries and Wages Expense for \$575 and credited to Cash for \$575.

Instruction

Prepare a correct trial balance. (Note: It may be necessary to add one or more accounts to the trial balance.)

E3.5 (LO 3) Excel (Adjusting Entries) The ledger of Duggan Rental Agency on March 31 of the current year includes the following selected accounts before adjusting entries have been prepared.

| | <u>Debit</u> | <u>Credit</u> |
|------------------------------------|--------------|---------------|
| Prepaid Insurance | \$ 3,600 | |
| Supplies | 2,800 | |
| Equipment | 25,000 | |
| Accumulated Depreciation—Equipment | | \$ 8,400 |
| Notes Payable | | 20,000 |
| Unearned Rent Revenue | | 9,300 |
| Rent Revenue | | 60,000 |
| Interest Expense | –0– | |
| Salaries and Wages Expense | 14,000 | |

An analysis of the accounts shows the following.

1. The equipment depreciates \$250 per month.
2. One-third of the unearned rent was recognized as revenue during the quarter.
3. Interest of \$500 is accrued on the notes payable.
4. Supplies on hand total \$850.
5. Insurance expires at the rate of \$300 per month.

Instructions

Prepare the adjusting entries at March 31, assuming that adjusting entries are made quarterly. Additional accounts are Depreciation Expense, Insurance Expense, Interest Payable, and Supplies Expense. (Omit explanations.)

E3.6 (LO 3) (Adjusting Entries) Karen Weller, D.D.S., opened a dental practice on January 1, 2020. During the first month of operations, the following transactions occurred.

1. Performed services for patients who had dental plan insurance. At January 31, \$750 of such services was performed but not yet billed to the insurance companies.
2. Utility expenses incurred but not paid prior to January 31 totaled \$520.
3. Purchased dental equipment on January 1 for \$80,000, paying \$20,000 in cash and signing a \$60,000, 3-year note payable. The equipment depreciates \$400 per month. Interest is \$500 per month.
4. Purchased a one-year malpractice insurance policy on January 1 for \$12,000.
5. Purchased \$1,600 of dental supplies. On January 31, determined that \$500 of supplies were on hand.

Instructions

Prepare the adjusting entries on January 31. (Omit explanations.) Account titles are Accumulated Depreciation—Equipment, Depreciation Expense, Service Revenue, Accounts Receivable, Insurance Expense, Interest Expense, Interest Payable, Prepaid Insurance, Supplies, Supplies Expense, Utilities Expenses, and Accounts Payable.

E3.7 (LO 3) (Analyze Adjusted Data) A partial adjusted trial balance of Piper Company at January 31, 2020, shows the following.

| Piper Company Adjusted Trial Balance January 31, 2020 | | |
|---|--------|--------|
| | Debit | Credit |
| Supplies | \$ 700 | |
| Prepaid Insurance | 2,400 | |
| Salaries and Wages Payable | | \$ 800 |
| Unearned Service Revenue | | 750 |
| Supplies Expense | 950 | |
| Insurance Expense | 400 | |
| Salaries and Wages Expense | 1,800 | |
| Service Revenue | | 2,000 |

Instructions

Answer the following questions, assuming the year begins January 1.

- a. If the amount in Supplies Expense is the January 31 adjusting entry, and \$850 of supplies was purchased in January, what was the balance in Supplies on January 1?
- b. If the amount in Insurance Expense is the January 31 adjusting entry, and the original insurance premium was for one year, what was the total premium and when was the policy purchased?
- c. If \$2,500 of salaries was paid in January, what was the balance in Salaries and Wages Payable at December 31, 2019?
- d. If \$1,600 was received in January for services performed in January, what was the balance in Unearned Service Revenue at December 31, 2019?

E3.8 (LO 3) Excel (Adjusting Entries) Andy Roddick is the new owner of Ace Computer Services. At the end of August 2020, his first month of ownership, Roddick is trying to prepare monthly financial statements. Below is some information related to unrecorded expenses that the business incurred during August.

1. At August 31, Roddick owed his employees \$1,900 in wages that will be paid on September 1.
2. At the end of the month, he had not yet received the month's utility bill. Based on past experience, he estimated the bill would be approximately \$600.
3. On August 1, Roddick borrowed \$30,000 from a local bank on a 15-year mortgage. The annual interest rate is 8%.
4. A telephone bill in the amount of \$117 covering August charges is unpaid at August 31.

Instructions

Prepare the adjusting journal entries as of August 31, 2020, suggested by the information above.

E3.9 (LO 2, 3) (Adjusting Entries) Selected accounts of Urdu Company are shown below.

| Supplies | | | | Accounts Receivable | | | |
|----------------------------|-----|-------|-------|----------------------------|-------|-------|-----|
| Beg. Bal. | 800 | 10/31 | 470 | 10/17 | 2,400 | | |
| | | | | 10/31 | 1,650 | | |
| Salaries and Wages Expense | | | | Salaries and Wages Payable | | | |
| 10/15 | 800 | | | | | 10/31 | 600 |
| 10/31 | 600 | | | | | | |
| Unearned Service Revenue | | | | Supplies Expense | | | |
| 10/31 | 400 | 10/20 | 650 | 10/31 | 470 | | |
| Service Revenue | | | | | | | |
| | | 10/17 | 2,400 | | | | |
| | | 10/31 | 1,650 | | | | |
| | | 10/31 | 400 | | | | |

Instructions

From an analysis of the T-accounts, reconstruct (a) the October transaction entries, and (b) the adjusting journal entries that were made on October 31, 2020. Prepare explanations for each journal entry.

E3.10 (LO 3) (Adjusting Entries) Greco Resort opened for business on June 1 with eight air-conditioned units. Its trial balance on August 31 is as follows.

| Greco Resort Trial Balance August 31, 2020 | | |
|---|------------------|------------------|
| | Debit | Credit |
| Cash | \$ 19,600 | |
| Prepaid Insurance | 4,500 | |
| Supplies | 2,600 | |
| Land | 20,000 | |
| Buildings | 120,000 | |
| Equipment | 16,000 | |
| Accounts Payable | | \$ 4,500 |
| Unearned Rent Revenue | | 4,600 |
| Mortgage Payable | | 60,000 |
| Common Stock | | 91,000 |
| Retained Earnings | | 9,000 |
| Dividends | 5,000 | |
| Rent Revenue | | 76,200 |
| Salaries and Wages Expense | 44,800 | |
| Utilities Expenses | 9,200 | |
| Maintenance and Repairs Expense | 3,600 | |
| | <u>\$245,300</u> | <u>\$245,300</u> |

Other data:

- The balance in prepaid insurance is a one-year premium paid on June 1, 2020.
- An inventory count on August 31 shows \$450 of supplies on hand.
- Annual depreciation rates are buildings (4%) and equipment (10%). Salvage value is estimated to be 10% of cost.
- Unearned Rent Revenue of \$3,800 was earned prior to August 31.
- Salaries of \$375 were unpaid at August 31.
- Rentals of \$800 were due from tenants at August 31.
- The mortgage interest rate is 8% per year.

Instructions

- Journalize the adjusting entries on August 31 for the 3-month period June 1–August 31. (Omit explanations.)
- Prepare an adjusted trial balance on August 31.

E3.11 (LO 4) (Prepare Financial Statements) The adjusted trial balance of Anderson Cooper Co. as of December 31, 2020, contains the following.

| Anderson Cooper Co. | | |
|------------------------------------|-----------------|-----------------|
| Adjusted Trial Balance | | |
| December 31, 2020 | | |
| | Dr. | Cr. |
| Cash | \$19,472 | |
| Accounts Receivable | 6,920 | |
| Prepaid Rent | 2,280 | |
| Equipment | 18,050 | |
| Accumulated Depreciation—Equipment | | \$ 4,895 |
| Notes Payable | | 5,700 |
| Accounts Payable | | 5,472 |
| Common Stock | | 20,000 |
| Retained Earnings | | 11,310 |
| Dividends | 3,000 | |
| Service Revenue | | 11,590 |
| Salaries and Wages Expense | 6,840 | |
| Rent Expense | 2,260 | |
| Depreciation Expense | 145 | |
| Interest Expense | 83 | |
| Interest Payable | | 83 |
| | <u>\$59,050</u> | <u>\$59,050</u> |

Instructions

- Prepare an income statement.
- Prepare a retained earnings statement.
- Prepare a classified balance sheet.

E3.12 (LO 3, 4) (Prepare Financial Statements) Santo Design was founded by Thomas Grant in January 2011. Presented below is the adjusted trial balance as of December 31, 2020.

| Santo Design | | |
|------------------------------------|------------------|------------------|
| Adjusted Trial Balance | | |
| December 31, 2020 | | |
| | Dr. | Cr. |
| Cash | \$ 11,350 | |
| Accounts Receivable | 21,500 | |
| Supplies | 5,000 | |
| Prepaid Insurance | 2,500 | |
| Equipment | 60,000 | |
| Accumulated Depreciation—Equipment | | \$ 35,000 |
| Accounts Payable | | 5,000 |
| Interest Payable | | 150 |
| Notes Payable | | 5,000 |
| Unearned Service Revenue | | 5,600 |
| Salaries and Wages Payable | | 1,300 |
| Common Stock | | 10,000 |
| Retained Earnings | | 3,500 |
| Service Revenue | | 61,500 |
| Salaries and Wages Expense | 11,300 | |
| Insurance Expense | 850 | |
| Interest Expense | 150 | |
| Depreciation Expense | 7,000 | |
| Supplies Expense | 3,400 | |
| Rent Expense | 4,000 | |
| | <u>\$127,050</u> | <u>\$127,050</u> |

Instructions

- a. Prepare an income statement and a retained earnings statement for the year ending December 31, 2020, and an unclassified balance sheet at December 31.
- b. Answer the following questions.
 1. If the note has been outstanding 6 months, what is the annual interest rate on that note?
 2. If the company paid \$17,500 in salaries in 2020, what was the balance in Salaries and Wages Payable on December 31, 2019?

E3.13 (LO 4, 5) (Closing Entries) The adjusted trial balance of Lopez Company shows the following data pertaining to sales at the end of its fiscal year, October 31, 2020: Sales Revenue \$800,000, Delivery Expense \$12,000, Sales Returns and Allowances \$24,000, and Sales Discounts \$15,000.

Instructions

- a. Prepare the revenues section of the income statement.
- b. Prepare separate closing entries for (1) sales and (2) the contra accounts to sales.

E3.14 (LO 4) (Closing Entries) Presented below is information related to Gonzales Corporation for the month of January 2020.

| | | | |
|--------------------|-----------|------------------------------|-----------|
| Cost of goods sold | \$208,000 | Salaries and wages expense | \$ 61,000 |
| Delivery expense | 7,000 | Sales discounts | 8,000 |
| Insurance expense | 12,000 | Sales returns and allowances | 13,000 |
| Rent expense | 20,000 | Sales revenue | 350,000 |

Instructions

Prepare the necessary closing entries.

E3.15 (LO 5) (Missing Amounts) Presented below is financial information for two different companies.

| | <u>Alatorre Company</u> | <u>Eduardo Company</u> |
|------------------------------|-------------------------|------------------------|
| Sales revenue | \$90,000 | (d) |
| Sales returns and allowances | (a) | \$ 5,000 |
| Net sales | 81,000 | 95,000 |
| Cost of goods sold | 56,000 | (e) |
| Gross profit | (b) | 38,000 |
| Operating expenses | 15,000 | 23,000 |
| Net income | (c) | 15,000 |

Instructions

Compute the missing amounts.

E3.16 (LO 4) (Closing Entries for a Corporation) Presented below are selected account balances for Homer Winslow Co. as of December 31, 2020.

| | | | |
|------------------------------|-----------|-------------------------|-----------|
| Inventory 12/31/20 | \$ 60,000 | Cost of Goods Sold | \$225,700 |
| Common Stock | 75,000 | Selling Expenses | 16,000 |
| Retained Earnings | 45,000 | Administrative Expenses | 38,000 |
| Dividends | 18,000 | Income Tax Expense | 30,000 |
| Sales Returns and Allowances | 12,000 | | |
| Sales Discounts | 15,000 | | |
| Sales Revenue | 410,000 | | |

Instructions

Prepare closing entries for Homer Winslow Co. on December 31, 2020. (Omit explanations.)

E3.17 (LO 2) (Transactions of a Corporation, Including Investment and Dividend) Scratch Miniature Golf and Driving Range Inc. was opened on March 1 by Rick Fowler. The following selected events and transactions occurred during March.

- Mar. 1 Invested \$50,000 cash in the business in exchange for common stock.
- 3 Purchased Michelle Wie's Golf Land for \$38,000 cash. The price consists of land \$10,000, building \$22,000, and equipment \$6,000. (Make one compound entry.)
- 5 Advertised the opening of the driving range and miniature golf course, paying advertising expenses of \$1,600.
- 6 Paid cash \$1,480 for a one-year insurance policy.
- 10 Purchased golf equipment for \$2,500 from Singh Company, payable in 30 days.
- 18 Received golf fees of \$1,200 in cash.

- Mar. 25 Declared and paid a \$500 cash dividend.
 30 Paid wages of \$900.
 30 Paid Singh Company in full.
 31 Received \$750 of fees in cash.

Scratch uses the following accounts: Cash, Prepaid Insurance, Land, Buildings, Equipment, Accounts Payable, Common Stock, Dividends, Service Revenue, Advertising Expense, and Salaries and Wages Expense.

Instructions

Journalize the March transactions. (Provide explanations for the journal entries.)

***E3.18 (LO 6) (Cash to Accrual Basis)** Jill Accardo, M.D., maintains the accounting records of Accardo Clinic on a cash basis. During 2020, Dr. Accardo collected \$142,600 from her patients and paid \$55,470 in expenses. At January 1, 2020, and December 31, 2020, she had accounts receivable, unearned service revenue, accrued expenses, and prepaid expenses as follows. (All long-lived assets are rented.)

| | <u>January 1, 2020</u> | <u>December 31, 2020</u> |
|--------------------------|------------------------|--------------------------|
| Accounts receivable | \$9,250 | \$15,927 |
| Unearned service revenue | 2,840 | 4,111 |
| Accrued expenses | 3,435 | 2,108 |
| Prepaid expenses | 1,917 | 3,232 |

Instructions

Prepare a schedule that converts Dr. Accardo's "excess of cash collected over cash disbursed" for the year 2020 to net income on an accrual basis for the year 2020.

***E3.19 (LO 6) (Cash and Accrual Basis)** Wayne Rogers Corp. maintains its financial records on the cash basis of accounting. Interested in securing a long-term loan from its regular bank, Wayne Rogers Corp. requests you as its independent CPA to convert its cash-basis income statement data to the accrual basis. You are provided with the following summarized data covering 2019, 2020, and 2021.

| | <u>2019</u> | <u>2020</u> | <u>2021</u> |
|-----------------------------|---------------------|---------------------|-------------|
| Cash receipts from sales: | | | |
| On 2019 sales | \$295,000 | \$160,000 | \$ 30,000 |
| On 2020 sales | –0– | 355,000 | 90,000 |
| On 2021 sales | | | 408,000 |
| Cash payments for expenses: | | | |
| On 2019 expenses | 185,000 | 67,000 | 25,000 |
| On 2020 expenses | 40,000 ^a | 160,000 | 55,000 |
| On 2021 expenses | | 45,000 ^b | 218,000 |

^aPrepayments of 2020 expenses.

^bPrepayments of 2021 expenses.

Instructions

- Using the data above, prepare abbreviated income statements for the years 2019 and 2020 on the cash basis.
- Using the data above, prepare abbreviated income statements for the years 2019 and 2020 on the accrual basis.

***E3.20 (LO 3, 7) (Adjusting and Reversing Entries)** When the accounts of Daniel Barenboim Inc. are examined, the adjusting data listed below are uncovered on December 31, the end of an annual fiscal period.

- The prepaid insurance account shows a debit of \$5,280, representing the cost of a 2-year fire insurance policy dated August 1 of the current year.
- On November 1, Rent Revenue was credited for \$1,800, representing revenue from a subrental for a 3-month period beginning on that date.
- Purchase of advertising materials for \$800 during the year was recorded in the Advertising Expense account. On December 31, advertising materials of \$290 are on hand.
- Interest of \$770 has accrued on notes payable.

Instructions

Prepare the following in general journal form.

- The adjusting entry for each item.
- The reversing entry for each item where appropriate.

***E3.21 (LO 8) (Worksheet)** Presented below are selected accounts for Alvarez Company as reported in the worksheet at the end of May 2020.

| 21 | Interest Expense | 83 | | | | | |
| 22 | Interest Payable | | 83 | | | | |
| 23 | | | | | | | |

Instructions

Complete the worksheet and prepare a classified balance sheet.

***E3.23 (LO 8) (Partial Worksheet Preparation)** Jurassic Park Co. prepares monthly financial statements from a worksheet. Selected portions of the January worksheet showed the following data.

| Jurassic Park Co. | | | | | | |
|------------------------------------|---------------|-------|-------------|-----------|------------------------|-------|
| Worksheet (partial) | | | | | | |
| For the Month Ended Jan. 31, 2020 | | | | | | |
| Account Titles | Trial Balance | | Adjustments | | Adjusted Trial Balance | |
| | Dr. | Cr. | Dr. | Cr. | Dr. | Cr. |
| Supplies | 3,256 | | | (a) 1,500 | 1,756 | |
| Accumulated Depreciation—Equipment | | 6,682 | | (b) 257 | | 6,939 |
| Interest Payable | | 100 | | (c) 50 | | 150 |
| Supplies Expense | | | (a) 1,500 | | 1,500 | |
| Depreciation Expense | | | (b) 257 | | 257 | |
| Interest Expense | | | (c) 50 | | 50 | |

During February, no events occurred that affected these accounts. But at the end of February, the following information was available.

| | |
|--------------------------|-------|
| (a) Supplies on hand | \$715 |
| (b) Monthly depreciation | \$257 |
| (c) Accrued interest | \$ 50 |

Instructions

Reproduce the data that would appear in the February worksheet, and indicate the amounts that would be shown in the February income statement.

Problems

P3.1 (LO 2, 4) (Transactions, Financial Statements—Service Company) Listed below are the transactions of Yasunari Kawabata, D.D.S., for the month of September.

- Sept. 1 Kawabata begins practice as a dentist, invests \$20,000 cash, and issues 2,000 shares of \$10 par stock.
- 2 Purchases dental equipment on account from Green Jacket Co. for \$17,280.
- 4 Pays rent for office space, \$680 for the month.
- 4 Employs a receptionist, Michael Bradley.
- 5 Purchases dental supplies for cash, \$942.
- 8 Receives cash of \$1,690 from patients for services performed.
- 10 Pays miscellaneous office expenses, \$430.
- 14 Bills patients \$5,820 for services performed.
- 18 Pays Green Jacket Co. on account, \$3,600.
- 19 Pays a dividend of \$3,000 cash.
- 20 Receives \$980 from patients on account.
- 25 Bills patients \$2,110 for services performed.
- 30 Pays the following expenses in cash: salaries and wages \$1,800; miscellaneous office expenses \$85.
- 30 Dental supplies used during September, \$330.

Instructions

- a. Enter the transactions shown above in appropriate general ledger accounts (use T-accounts). Use the following ledger accounts: Cash, Accounts Receivable, Supplies, Equipment, Accumulated Depreciation—Equipment, Accounts Payable, Common Stock, Retained Earnings, Dividends, Service Revenue, Rent Expense, Office Expense, Salaries and Wages Expense, Supplies Expense, Depreciation Expense, and Income Summary. Allow 10 lines for the Cash and Income Summary accounts, and 5 lines for each of the other accounts needed. Record depreciation using a 5-year life on the equipment, the straight-line method, and no salvage value. Do not use a drawing account.

- b. Prepare a trial balance.
- c. Prepare an income statement, a retained earnings statement, and an unclassified balance sheet.
- d. Close the ledger.
- e. Prepare a post-closing trial balance.

P3.2 (LO 3, 4) Excel (Adjusting Entries and Financial Statements) Mason Advertising was founded in January 2013. Presented below are adjusted and unadjusted trial balances as of December 31, 2020.

| Mason Advertising Trial Balance December 31, 2020 | | | | |
|--|------------|-----------|-----------|-----------|
| | Unadjusted | | Adjusted | |
| | Dr. | Cr. | Dr. | Cr. |
| Cash | \$ 11,000 | | \$ 11,000 | |

| Supplies | 8,400 | | 3,000 | |
| Prepaid Insurance | 3,350 | | 2,500 | |
| Equipment | 60,000 | | 60,000 | |
| Accumulated Depreciation—Equipment | | \$ 28,000 | | \$ 33,000 |
| Accounts Payable | | 5,000 | | 5,000 |
| Interest Payable | | –0– | | 150 |
| Notes Payable | | 5,000 | | 5,000 |
| Unearned Service Revenue | | 7,000 | | 5,600 |
| Salaries and Wages Payable | | –0– | | 1,300 |
| Common Stock | | 10,000 | | 10,000 |
| Retained Earnings | | 3,500 | | 3,500 |
| Service Revenue | | 58,600 | | 63,500 |
| Salaries and Wages Expense | 10,000 | | 11,300 | |
| Insurance Expense | | | 850 | |
| Interest Expense | 350 | | 500 | |
| Depreciation Expense | | | 5,000 | |
| Supplies Expense | | | 5,400 | |
| Rent Expense | 4,000 | | 4,000 | |
| | \$117,100 | \$117,100 | \$127,050 | \$127,050 |

Instructions

- a. Journalize the annual adjusting entries that were made. (Omit explanations.)
- b. Prepare an income statement and a retained earnings statement for the year ending December 31, 2020, and an unclassified balance sheet at December 31.
- c. Answer the following questions.
 1. If the note has been outstanding 3 months, what is the annual interest rate on that note?
 2. If the company paid \$12,500 in salaries and wages in 2020, what was the balance in Salaries and Wages Payable on December 31, 2019?

P3.3 (LO 3) (Adjusting Entries) A review of the ledger of Baylor Company at December 31, 2020, produces the following data pertaining to the preparation of annual adjusting entries.

1. Salaries and Wages Payable \$0. There are eight employees. Salaries and wages are paid every Friday for the current week. Five employees receive \$700 each per week, and three employees earn \$600 each per week. December 31 is a Tuesday. Employees do not work weekends. All employees worked the last 2 days of December.
2. Unearned Rent Revenue \$429,000. The company began subleasing office space in its new building on November 1. Each tenant is required to make a \$5,000 security deposit that is not refundable until occupancy is terminated. At December 31, the company had the following rental contracts that are paid in full for the entire term of the lease.

| Date | Term (in months) | Monthly Rent | Number of Leases |
|--------|------------------|--------------|------------------|
| Nov. 1 | 6 | \$6,000 | 5 |
| Dec. 1 | 6 | \$8,500 | 4 |

3. Prepaid Advertising \$13,200. This balance consists of payments on two advertising contracts. The contracts provide for monthly advertising in two trade magazines. The terms of the contracts are as shown below.

| <u>Contract</u> | <u>Date</u> | <u>Amount</u> | <u>Number of Magazine Issues</u> |
|-----------------|-------------|---------------|----------------------------------|
| A650 | May 1 | \$6,000 | 12 |
| B974 | Oct. 1 | 7,200 | 24 |

The first advertisement runs in the month in which the contract is signed.

4. Notes Payable \$60,000. This balance consists of a note for one year at an annual interest rate of 12%, dated June 1.

Instructions

Prepare the adjusting entries at December 31, 2020. (Show all computations).

P3.4 (LO 3, 4, 5) (Financial Statements, Adjusting and Closing Entries) The trial balance of Bellemy Fashion Center contained the following accounts at November 30, the end of the company's fiscal year.

| Bellemy Fashion Center | | |
|------------------------------------|------------------|------------------|
| Trial Balance | | |
| November 30, 2020 | | |
| | <u>Debit</u> | <u>Credit</u> |
| Cash | \$ 28,700 | |
| Accounts Receivable | 33,700 | |
| Inventory | 45,000 | |
| Supplies | 5,500 | |
| Equipment | 133,000 | |
| Accumulated Depreciation—Equipment | | \$ 24,000 |
| Notes Payable | | 51,000 |
| Accounts Payable | | 48,500 |
| Common Stock | | 90,000 |
| Retained Earnings | | 8,000 |
| Sales Revenue | | 757,200 |
| Sales Returns and Allowances | 4,200 | |
| Cost of Goods Sold | 495,400 | |
| Salaries and Wages Expense | 140,000 | |
| Advertising Expense | 26,400 | |
| Utilities Expenses | 14,000 | |
| Maintenance and Repairs Expense | 12,100 | |
| Delivery Expense | 16,700 | |
| Rent Expense | 24,000 | |
| | <u>\$978,700</u> | <u>\$978,700</u> |

Adjustment data:

- Supplies on hand totaled \$1,500.
- Depreciation is \$15,000 on the equipment.
- Interest of \$11,000 is accrued on notes payable at November 30.

Other data:

- Salaries expense is 70% selling and 30% administrative.
- Rent expense and utilities expenses are 80% selling and 20% administrative.
- \$30,000 of notes payable are due for payment next year.
- Maintenance and repairs expense is 100% administrative.

Instructions

- Journalize the adjusting entries.
- Prepare an adjusted trial balance.
- Prepare a multiple-step income statement (ignore taxes) and retained earnings statement for the year and a classified balance sheet as of November 30, 2020.

- d. Journalize the closing entries.
- e. Prepare a post-closing trial balance.

P3.5 (LO 3) (Adjusting Entries) The accounts listed below appeared in the December 31 trial balance of the Savard Theater.

| | <u>Debit</u> | <u>Credit</u> |
|------------------------------------|--------------|---------------|
| Equipment | \$192,000 | |
| Accumulated Depreciation—Equipment | | \$ 60,000 |
| Notes Payable | | 90,000 |
| Admissions Revenue | | 380,000 |
| Advertising Expense | 13,680 | |
| Salaries and Wages Expense | 57,600 | |
| Interest Expense | 1,400 | |

Instructions

- a. From the account balances listed above and the information given below, prepare the annual adjusting entries necessary on December 31. (Omit explanations.)
 1. The equipment has an estimated life of 16 years and a salvage value of \$24,000 at the end of that time. (Use straight-line method.)
 2. The note payable is a 90-day note given to the bank October 20 and bearing interest at 8%. (Use 360 days for denominator.)
 3. In December, 2,000 coupon admission books were sold at \$30 each and recorded as Admissions Revenue. They could be used for admission any time after January 1.
 4. Advertising expense paid in advance and included in Advertising Expense \$1,100.
 5. Salaries and wages accrued but unpaid \$4,700.
- b. What amounts should be shown for each of the following on the income statement for the year?
 1. Interest expense.
 2. Admissions revenue.
 3. Advertising expense.
 4. Salaries and wages expense.

P3.6 (LO 3, 4) (Adjusting Entries and Financial Statements) The following are the trial balance and the other information related to Perez Consulting Engineers.

| Perez Consulting Engineers | | |
|------------------------------------|--------------|---------------|
| Trial Balance | | |
| December 31, 2020 | | |
| | <u>Debit</u> | <u>Credit</u> |
| Cash | \$ 29,500 | |
| Accounts Receivable | 49,600 | |
| Allowance for Doubtful Accounts | | \$ 750 |
| Supplies | 1,960 | |
| Prepaid Insurance | 1,100 | |
| Equipment | 25,000 | |
| Accumulated Depreciation—Equipment | | 6,250 |
| Notes Payable | | 7,200 |
| Common Stock | | 10,000 |
| Retained Earnings | | 25,010 |
| Service Revenue | | 100,000 |
| Rent Expense | 9,750 | |
| Salaries and Wages Expense | 30,500 | |
| Utilities Expenses | 1,080 | |
| Office Expense | 720 | |
| | \$149,210 | \$149,210 |

1. Fees received in advance from clients \$6,000, which were recorded as revenue.
2. Services performed for clients that were not recorded by December 31, \$4,900.
3. Bad debt expense for the year is \$1,430.

4. Insurance expired during the year \$480.
5. Equipment is being depreciated at 10% per year.
6. Perez gave the bank a 90-day, 10% note for \$7,200 on December 1, 2020.
7. Rent of the building is \$750 per month. The rent for 2020 has been paid, as has that for January 2021, and recorded as Rent Expense.
8. Office salaries and wages earned but unpaid December 31, 2020, \$2,510.

Instructions

- a. From the trial balance and other information given, prepare annual adjusting entries as of December 31, 2020. (Omit explanations.)
- b. Prepare an income statement for 2020, a retained earnings statement, and a classified balance sheet. Perez paid a \$17,000 cash dividend during the year (recorded in Retained Earnings).

P3.7 (LO 3, 4) (Adjusting Entries and Financial Statements) Rolling Hills Golf Inc. was organized on July 1, 2020. Quarterly financial statements are prepared. The unadjusted trial balance and adjusted trial balance on September 30 are shown below.

| Rolling Hills Golf Inc. | | | | |
|------------------------------------|-----------------|-----------------|-----------------|-----------------|
| Trial Balance | | | | |
| September 30, 2020 | | | | |
| | Unadjusted | | Adjusted | |
| | Dr. | Cr. | Dr. | Cr. |
| Cash | \$ 6,700 | | \$ 6,700 | |
| Accounts Receivable | 400 | | 1,000 | |
| Prepaid Rent | 1,800 | | 900 | |
| Supplies | 1,200 | | 180 | |
| Equipment | 15,000 | | 15,000 | |
| Accumulated Depreciation—Equipment | | | | \$ 350 |
| Notes Payable | | \$ 5,000 | | 5,000 |
| Accounts Payable | | 1,070 | | 1,070 |
| Salaries and Wages Payable | | | | 600 |
| Interest Payable | | | | 50 |
| Unearned Rent Revenue | | 1,000 | | 800 |
| Common Stock | | 14,000 | | 14,000 |
| Retained Earnings | | 0 | | 0 |
| Dividends | 600 | | 600 | |
| Service Revenue | | 14,100 | | 14,700 |
| Rent Revenue | | 700 | | 900 |
| Salaries and Wages Expense | 8,800 | | 9,400 | |
| Rent Expense | 900 | | 1,800 | |
| Depreciation Expense | | | 350 | |
| Supplies Expense | | | 1,020 | |
| Utilities Expenses | 470 | | 470 | |
| Interest Expense | | | 50 | |
| | <u>\$35,870</u> | <u>\$35,870</u> | <u>\$37,470</u> | <u>\$37,470</u> |

Instructions

- a. Journalize the adjusting entries that were made.
- b. Prepare an income statement and a retained earnings statement for the 3 months ending September 30 and a classified balance sheet at September 30.
- c. Identify which accounts should be closed on September 30.
- d. If the note bears interest at 12%, how many months has it been outstanding?

P3.8 (LO 3, 4) (Adjusting Entries and Financial Statements) Vedula Advertising was founded by Murali Vedula in January 2015. The following are both the adjusted and unadjusted trial balances as of December 31, 2020.

Vedula Advertising
Trial Balance
December 31, 2020

| | Unadjusted | | Adjusted | |
|------------------------------------|------------------|------------------|------------------|------------------|
| | Dr. | Cr. | Dr. | Cr. |
| Cash | \$ 11,000 | | \$ 11,000 | |
| Accounts Receivable | 16,000 | | 19,500 | |
| Supplies | 9,400 | | 6,500 | |
| Prepaid Insurance | 3,350 | | 1,790 | |
| Equipment | 60,000 | | 60,000 | |
| Accumulated Depreciation—Equipment | | \$ 25,000 | | \$ 30,000 |
| Notes Payable | | 8,000 | | 8,000 |
| Accounts Payable | | 2,000 | | 2,000 |
| Interest Payable | | 0 | | 560 |
| Unearned Service Revenue | | 5,000 | | 3,100 |
| Salaries and Wages Payable | | 0 | | 820 |
| Common Stock | | 20,000 | | 20,000 |
| Retained Earnings | | 5,500 | | 5,500 |
| Dividends | 10,000 | | 10,000 | |
| Service Revenue | | 57,600 | | 63,000 |
| Salaries and Wages Expense | 9,000 | | 9,820 | |
| Insurance Expense | | | 1,560 | |
| Interest Expense | | | 560 | |
| Depreciation Expense | | | 5,000 | |
| Supplies Expense | | | 2,900 | |
| Rent Expense | 4,350 | | 4,350 | |
| | <u>\$123,100</u> | <u>\$123,100</u> | <u>\$132,980</u> | <u>\$132,980</u> |

Instructions

- Journalize the annual adjusting entries that were made.
- Prepare an income statement and a retained earnings statement for the year ended December 31, and a classified balance sheet at December 31.
- Identify which accounts should be closed on December 31.
- If the note has been outstanding 10 months, what is the annual interest rate on that note?
- If the company paid \$10,500 in salaries and wages in 2020, what was the balance in Salaries and Wages Payable on December 31, 2019?

P3.9 (LO 2, 3, 4) (Adjusting and Closing) Presented below is the trial balance of the Crestwood Golf Club, Inc. as of December 31. The books are closed annually on December 31.

Crestwood Golf Club, Inc.
Trial Balance
December 31

| | Debit | Credit |
|------------------------------------|------------------|------------------|
| Cash | \$ 15,000 | |
| Accounts Receivable | 13,000 | |
| Allowance for Doubtful Accounts | | \$ 1,100 |
| Prepaid Insurance | 9,000 | |
| Land | 350,000 | |
| Buildings | 120,000 | |
| Accumulated Depreciation—Buildings | | 38,400 |
| Equipment | 150,000 | |
| Accumulated Depreciation—Equipment | | 70,000 |
| Common Stock | | 400,000 |
| Retained Earnings | | 82,000 |
| Dues Revenue | | 200,000 |
| Green Fees Revenue | | 5,900 |
| Rent Revenue | | 17,600 |
| Utilities Expenses | 54,000 | |
| Salaries and Wages Expense | 80,000 | |
| Maintenance and Repairs Expense | 24,000 | |
| | <u>\$815,000</u> | <u>\$815,000</u> |

Instructions

- a. Enter the balances in ledger accounts. Allow five lines for each account.
- b. From the trial balance and the information given below, prepare annual adjusting entries and post to the ledger accounts. (Omit explanations.)
 1. The buildings have an estimated life of 30 years with no salvage value (straight-line method).
 2. The equipment is depreciated at 10% per year.
 3. Insurance expired during the year \$3,500.
 4. The rent revenue represents the amount received for 11 months for dining facilities. The December rent has not yet been received.
 5. It is estimated that 12% of the accounts receivable will be uncollectible.
 6. Salaries and wages earned but not paid by December 31, \$3,600.
 7. Dues received in advance from members \$8,900 were recorded as Dues Revenue.
- c. Prepare an adjusted trial balance.
- d. Prepare closing entries and post.

P3.10 (LO 2, 3, 4, 5) (Adjusting and Closing) Presented below is the December 31 trial balance of New York Boutique.

| New York Boutique Trial Balance December 31 | | |
|---|-----------|-----------|
| | Debit | Credit |
| Cash | \$ 18,500 | |
| Accounts Receivable | 32,000 | |
| Allowance for Doubtful Accounts | | \$ 700 |
| Inventory, December 31 | 80,000 | |
| Prepaid Insurance | 5,100 | |
| Equipment | 84,000 | |
| Accumulated Depreciation—Equipment | | 35,000 |
| Notes Payable | | 28,000 |
| Common Stock | | 80,600 |
| Retained Earnings | | 10,000 |
| Sales Revenue | | 600,000 |
| Cost of Goods Sold | 408,000 | |
| Salaries and Wages Expense (sales) | 50,000 | |
| Advertising Expense | 6,700 | |
| Salaries and Wages Expense (administrative) | 65,000 | |
| Supplies Expense | 5,000 | |
| | \$754,300 | \$754,300 |

Instructions

- a. Construct T-accounts and enter the balances shown.
- b. Prepare adjusting journal entries for the following and post to the T-accounts. (Omit explanations.) Open additional T-accounts as necessary. (The books are closed yearly on December 31.)
 1. Bad debt expense to be recorded is \$1,400.
 2. Equipment is depreciated based on a 7-year life (no salvage value).
 3. Insurance expired during the year \$2,550.
 4. Interest accrued on notes payable \$3,360.
 5. Sales salaries and wages earned but not paid \$2,400.
 6. Advertising paid in advance \$700.
 7. Office supplies on hand \$1,500, charged to Supplies Expense when purchased.
- c. Prepare closing entries and post to the accounts.

***P3.11 (LO 6) (Cash and Accrual Basis)** On January 1, 2020, Norma Smith and Grant Wood formed a computer sales and service company in Soapville, Arkansas, by investing \$90,000 cash. The new company, Arkansas Sales and Service, has the following transactions during January.

1. Pays \$6,000 in advance for 3 months' rent of office, showroom, and repair space.
2. Purchases 40 personal computers at a cost of \$1,500 each, 6 graphics computers at a cost of \$2,500 each, and 25 printers at a cost of \$300 each, paying cash upon delivery.

3. Sales, repair, and office employees earn \$12,600 in salaries and wages during January, of which \$3,000 was still payable at the end of January.
4. Sells 30 personal computers at \$2,550 each, 4 graphics computers for \$3,600 each, and 15 printers for \$500 each; \$75,000 is received in cash in January, and \$23,400 is sold on a deferred payment basis.
5. Other operating expenses of \$8,400 are incurred and paid for during January; \$2,000 of incurred expenses are payable at January 31.

Instructions

- a. Using the transaction data above, prepare (1) a cash-basis income statement and (2) an accrual-basis income statement for the month of January.
- b. Using the transaction data above, prepare (1) a cash-basis balance sheet and (2) an accrual-basis balance sheet as of January 31, 2020.
- c. Identify the items in the cash-basis financial statements that make cash-basis accounting inconsistent with the theory underlying the elements of financial statements.

***P3.12 (LO 3, 4, 8) (Worksheet, Balance Sheet, Adjusting and Closing Entries)** Cooke Company has a fiscal year ending on September 30. Selected data from the September 30 worksheet are presented below.

| Cooke Co. | | | | | |

| 23 | Utilities Expenses | 16,900 | | 16,900 | |
| 24 | Property Tax Expense | 18,000 | | 21,000 | |
| 25 | Interest Expense | 6,000 | | 12,000 | |
| 26 | Totals | 491,700 | 491,700 | | |
| 27 | Insurance Expense | | | 28,000 | |
| 28 | Supplies Expense | | | 14,400 | |
| 29 | Interest Payable | | | | 6,000 |
| 30 | Depreciation Expense | | | 5,800 | |
| 31 | Property Taxes Payable | | | | 3,000 |
| 32 | Totals | | | 506,500 | 506,500 |

Instructions

- Prepare a complete worksheet.
- Prepare a classified balance sheet. (*Note:* \$10,000 of the mortgage payable is due for payment in the next fiscal year.)
- Journalize the adjusting entries using the worksheet as a basis.
- Journalize the closing entries using the worksheet as a basis.
- Prepare a post-closing trial balance.

Using Your Judgment

Financial Reporting Problem**The Procter & Gamble Company (P&G)**

The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to these financial statements and the accompanying notes to answer the following questions.

- What were P&G's total assets at June 30, 2017? At June 30, 2016?
- How much cash (and cash equivalents) did P&G have on June 30, 2017?
- What were P&G's research and development costs in 2016? In 2017?
- What were P&G's revenues in 2016? In 2017?
- Using P&G's financial statements and related notes, identify items that may result in adjusting entries for deferrals and accruals.
- What were the amounts of P&G's depreciation and amortization expense in 2015, 2016, and 2017?

Comparative Analysis Case**The Coca-Cola Company and PepsiCo, Inc.**

The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- Which company had the greater percentage increase in total assets from 2016 to 2017?
- Using the Selected Financial Data section of these two companies, determine their 5-year average growth rates related to net sales and income from continuing operations.
- Which company had more depreciation and amortization expense for 2017? Provide a rationale as to why there is a difference in these amounts between the two companies.

Financial Statement Analysis Case

Kellogg Company has its headquarters in Battle Creek, Michigan. The company manufactures and sells ready-to-eat breakfast cereals and convenience foods including cookies, toaster pastries, and cereal bars.

Selected data from Kellogg Company's recent annual report follows (dollar amounts in millions).

| | <u>Current Year</u> | <u>Prior Year</u> | <u>2 Years Ago</u> |
|---|---------------------|-------------------|--------------------|
| Sales | \$14,580 | \$14,792 | \$14,197 |
| Gross profit % | 34.73 | 41.26 | 38.28 |
| Operating profit | 1,024 | 2,837 | 1,562 |
| Net cash flow less capital expenditures | 1,211 | 1,170 | 1,225 |
| Net earnings | 633 | 1,808 | 961 |

In its annual reports, Kellogg Company has indicated that it plans to achieve sustainability of its operating results with operating principles that emphasize profit-rich, sustainable sales growth, as well as cash flow and return on invested capital. Kellogg believes its steady earnings growth, strong cash flow, and continued investment during a multi-year period demonstrates the strength and flexibility of its business model.

Instructions

- Compute the percentage change in sales, operating profit, net cash flow less capital expenditures, and net earnings from year to year for the years presented.
- Evaluate Kellogg's performance. Which trend seems most favorable? Which trend seems least favorable? What are the implications of these trends for Kellogg's sustainable performance objectives? Explain.

Accounting, Analysis, and Principles

The Amato Theater is nearing the end of the year and is preparing for a meeting with its bankers to discuss the renewal of a loan. The accounts listed below appeared in the December 31, 2020, trial balance.

| | Debit | Credit |
|------------------------------------|----------|-----------|
| Prepaid Advertising | \$ 6,000 | |
| Equipment | 192,000 | |
| Accumulated Depreciation—Equipment | | \$ 60,000 |
| Notes Payable | | 90,000 |
| Unearned Service Revenue | | 17,500 |
| Ticket Revenue | | 360,000 |
| Advertising Expense | 18,680 | |
| Salaries and Wages Expense | 67,600 | |
| Interest Expense | 1,400 | |

Additional information is available as follows.

- The equipment has an estimated useful life of 16 years and a salvage value of \$40,000 at the end of that time. Amato uses the straight-line method for depreciation.
- The note payable is a one-year note given to the bank January 31 and bearing interest at 10%. Interest is calculated on a monthly basis.
- Late in December 2020, the theater sold 350 coupon ticket books at \$50 each. Two hundred of these ticket books have been used by year-end. The cash received was recorded as Unearned Service Revenue.
- Advertising paid in advance was \$6,000 and was debited to Prepaid Advertising. The company has used \$2,500 of the advertising as of December 31, 2020.
- Salaries and wages accrued but unpaid at December 31, 2020, were \$3,500.

Accounting

Prepare any adjusting journal entries necessary for the year ended December 31, 2020.

Analysis

Determine Amato's income before and after recording the adjusting entries. Use your analysis to explain why Amato's bankers should be willing to wait for Amato to complete its year-end adjustment process before making a decision on the loan renewal.

Principles

Although Amato's bankers are willing to wait for the adjustment process to be completed before they receive financial information, they would like to receive financial reports more frequently than annually or even quarterly. What trade-offs, in terms of relevance and faithful representation, are inherent in preparing financial statements for shorter accounting time periods?

Analytics in Action

Accounting software systems collect vast amounts of data about the economic events experienced by a company and about the parties with whom the company engages, such as suppliers and customers. Business decision-makers take advantage of this wealth of information by using data analytics, which often employs both software and statistics, to draw inferences and make more informed business decisions. As both data access and analytical software improve, the use of data analytics to support decisions is becoming increasingly common at virtually all types of companies.

Utilizing analytic tools for decision-making often requires collecting data from a number of sources. Once collected, tools such as Excel can be used to sort, format, and organize the data so that various analytic procedures can then be performed.

Instructions Go to WileyPLUS for a data analytics exercise focusing on collecting financial data from a variety of sources, which can then be used in basic financial analysis.

Bridge to the Profession

Codification Research Case

Recording transactions in the accounting system requires knowledge of the important characteristics of the elements of financial statements, such as assets and liabilities. In addition, accountants must understand the inherent uncertainty in accounting measures and distinctions between related accounting concepts that are important in evaluating the effects of transactions on the financial statements.

Instructions

Log in and provide explanations for the following items. (Provide paragraph citations.) When you have accessed the documents, you can use the search tool in your Internet browser.

- The three essential characteristics of assets.
- The three essential characteristics of liabilities.
- Uncertainty and its effect on financial statements.
- The difference between realization and recognition.

Additional Professional Resources

Go to WileyPLUS for other career-readiness resources, such as career coaching, internship opportunities, and CPAexcel prep.

IFRS Insights

LEARNING OBJECTIVE 9

Compare the accounting information systems under GAAP and IFRS.

As indicated in this chapter, companies must have an effective accounting system. In the wake of accounting scandals at U.S. companies like **Sunbeam**, **Rite-Aid**, **Xerox**, and **WorldCom**, U.S. lawmakers demanded higher assurance on the quality of accounting reports. Since the passage of the Sarbanes-Oxley Act (SOX), companies that trade on U.S. exchanges are required to place renewed focus on their accounting systems to ensure accurate reporting.

Relevant Facts

Following are the key similarities and differences between GAAP and IFRS related to accounting information systems.

Similarities

- International companies use the same set of procedures and records to keep track of transaction data. Thus, the material in Chapter 3 dealing with the account, general rules of debit and credit, and steps in the recording process—the journal, ledger, and chart of accounts—is the same under both GAAP and IFRS.
- Transaction analysis is the same under GAAP and IFRS but, as you will see in later chapters, different standards sometimes impact how transactions are recorded.
- Both the FASB and IASB go beyond the basic definitions provided in this text for the key elements of financial statements, that is, assets, liabilities, equity, revenues, and expenses.
- A trial balance under IFRS follows the same format as shown in the text. As shown in the text, dollar signs are typically used only in the trial balance and the financial statements. The same practice is followed under IFRS, using the currency of the country in which the reporting company is headquartered.

Differences

- Rules for accounting for specific events sometimes differ across countries. For example, European companies rely less on historical cost and more on fair value than U.S. companies. Despite the differences, the double-entry accounting system is the basis of accounting systems worldwide.
- Internal controls are a system of checks and balances designed to prevent and detect fraud and errors. While most public U.S. companies have these systems in place, many non-U.S. companies have neither completely documented them nor had an independent auditor attest to their effectiveness. Both of these actions are required under SOX. These enhanced internal control standards apply only to large public companies listed on U.S. exchanges.

About the Numbers

Accounting System Internal Controls

There has been debate over whether foreign issuers should have to comply with the extra layer of regulation related to internal controls attestation.⁴ Companies find that internal control review is a costly process but needed. One study estimates the cost of compliance for U.S. companies at over \$35 billion, with audit fees doubling in the first year of compliance. Recent data indicate SOX costs continue to be significant, with compliance costs ranging from \$657,400 annually for companies with one to three locations to over \$1.5 million for companies with over 12 locations.⁵ At the same time, examination of internal controls indicates lingering problems in the way companies operate. One study of first compliance with the internal control testing provisions documented material weaknesses for about 13 percent of companies reporting. As indicated in footnote 1 in the chapter, SOX compliance costs remain substantial 10 years after the passage of the act.

Debate about requiring foreign companies to comply with SOX centers on whether the higher costs of a good information system are making the U.S. securities markets less competitive. The following are recent statistics for initial public offerings (IPOs) around the world.

Note the Americas' (including the United States) share of IPOs has declined. Some critics of the SOX provisions attribute the decline to the increased cost of complying with the internal control rules. Others, looking at these same trends, are not so sure about SOX being the cause of the relative decline of U.S. IPOs. These commentators argue that growth in non-U.S. markets is a natural consequence of general globalization of capital flows and greater availability of private equity as a source of financing for companies in the Americas.

⁴See Greg Ip, Kara Scannel, and Deborah Solomon, "Trade Winds in Call to Deregulate Business, A Global Twist," *Wall Street Journal* (January 25, 2007), p. A1; and S. Powell, "A Pox on SOX, It's Bad for Stocks," *Wall Street Journal* (February 13, 2018).

⁵See M. Cohn, "SOX Compliance Still Costs Companies Heavily," *Accounting Today* (June 12, 2017).

First-Time Adoption of IFRS

As discussed in Chapter 1, IFRS is growing in acceptance around the world. For example, recent statistics indicate 40 percent of the Global Fortune 500 companies use IFRS. And the chair of the IASB predicts that IFRS adoption will grow from its current level of over 115 countries to nearly 150 countries in the near future.

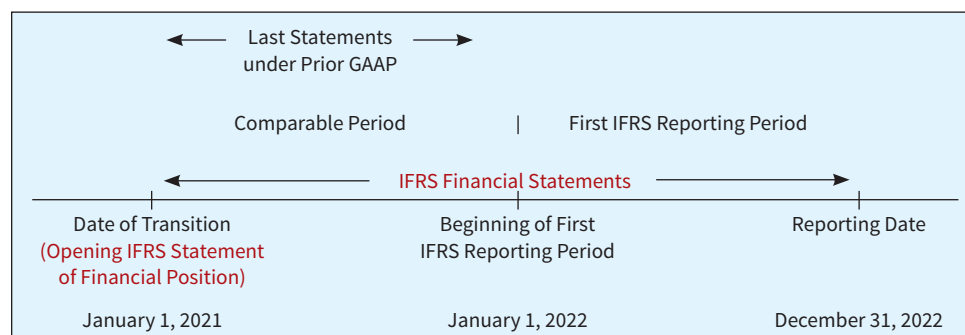

When countries accept IFRS for use as accepted accounting policies, companies need guidance to ensure that their first IFRS financial statements contain high-quality information. Specifically, *IFRS 1* requires that information in a company's first IFRS statements (1) be transparent, (2) provide a suitable starting point, and (3) have a cost that does not exceed the benefits. As a result, many companies will be going through a substantial conversion process to switch from their reporting standards to IFRS.

The overriding principle in converting to IFRS is full retrospective application of IFRS. Retrospective application—recasting prior financial statements on the basis of IFRS—provides financial statement users with comparable information. As indicated, the objective of the conversion process is to present a set of IFRS statements as if the company always reported using IFRS. To achieve this objective, a company follows these steps.

1. Identify the timing of its first IFRS statements.
2. Prepare an opening balance sheet at the date of transition to IFRS.
3. Select accounting principles that comply with IFRS, and apply these principles retrospectively.
4. Make extensive disclosures to explain the transition to IFRS.

Once a company decides to convert to IFRS, it must decide on the transition date and the reporting date. The transition date is the beginning of the earliest period for which full comparative IFRS information is presented. The reporting date is the closing balance sheet date for the first IFRS financial statements.

To illustrate, assume that FirstChoice Company plans to provide its first IFRS statements for the year ended December 31, 2022. FirstChoice decides to present comparative information for one year only. Therefore, its date of transition to IFRS is January 1, 2021, and its reporting date is December 31, 2022. The timeline for first-time adoption is presented in the following graphic.

The graphic shows the following.

1. The opening IFRS statement of financial position for FirstChoice on January 1, 2021, serves as the starting point (date of transition) for the company's accounting under IFRS.
2. The first full IFRS statements are shown for FirstChoice for December 31, 2022. In other words, a minimum of two years of IFRS statements must be presented before a conversion to IFRS occurs. As a result, FirstChoice must prepare at least one year of comparative financial statements for 2022 using IFRS.
3. FirstChoice presents financial statements in accordance with GAAP annually to December 31, 2021.

Following this conversion process, FirstChoice provides users of the financial statements with comparable IFRS statements for 2021 and 2022. Upon first-time adoption of IFRS, a company must present at least one year of comparative information under IFRS.

What Do the Numbers Mean? Change Management

For companies considering adoption of IFRS, extensive planning is required to ensure that accounting information system issues are addressed. Identifying the implications of required or elected accounting changes, such as adopting a new set of accounting standards, takes time. And the impact can be broad and vary in significance. The interrelationship of accounting changes with information technology (IT) systems, business processes, taxes,

and general operations extends the time required to address all identified issues. In general, this process may require a three- or four-year lead time to prepare the various accounting and reporting systems for first-time adoption of IFRS.

On the Horizon

The basic recording process shown in this text is followed by companies around the globe. It is unlikely to change in the future. The definitional structure of assets, liabilities, equity, revenues, and expenses may change over time as the IASB and FASB evaluate their overall conceptual framework for establishing accounting standards. In addition, high-quality international accounting requires both high-quality accounting standards and high-quality auditing. Similar to the convergence of GAAP and IFRS, there is a movement to improve international auditing standards. The International Auditing and Assurance Standards Board (IAASB) functions as an independent standard-setting body. It works to establish high-quality auditing and assurance and quality-control standards throughout the world. Whether the IAASB adopts internal control provisions similar to those in SOX remains to be seen.

IFRS Self-Test Questions

1. Which statement is correct regarding IFRS?
 - a. IFRS reverses the rules of debits and credits, that is, debits are on the right and credits are on the left.
 - b. IFRS uses the same process for recording transactions as GAAP.
 - c. The chart of accounts under IFRS is different because revenues follow assets.
 - d. None of the above statements are correct.
2. Information in a company's first IFRS statements must:
 - a. have a cost that does not exceed the benefits.
 - b. be transparent.
 - c. provide a suitable starting point.
 - d. All the above.
3. The transition date is the date:
 - a. when a company no longer reports under its national standards.
 - b. when the company issues its most recent financial statement under IFRS.
 - c. three years prior to the reporting date.
 - d. None of the above.
4. When converting to IFRS, a company must:
 - a. recast previously issued financial statements in accordance with IFRS.
 - b. use GAAP in the reporting period but subsequently use IFRS.
 - c. prepare at least three years of comparative statements.
 - d. use GAAP in the transition year but IFRS in the reporting year.
5. The purpose of presenting comparative information in the transition to IFRS is:
 - a. to ensure that the information is a faithful representation.
 - b. to be in accordance with the Sarbanes-Oxley Act.
 - c. to provide users of the financial statements with information on GAAP in one period and IFRS in the other period.
 - d. to provide users of the financial statements with information on IFRS for at least two periods.

IFRS Concepts and Application

IFRS3.1 How is the date of transition and the date of reporting determined in first-time adoption of IFRS?

IFRS3.2 What are the characteristics of high-quality information in a company's first IFRS financial statements?

IFRS3.3 What are the steps to be completed in preparing the opening IFRS statement of financial position?

IFRS3.4 Becker Ltd. is planning to adopt IFRS and prepare its first IFRS financial statements at December 31, 2021. What is the date of Becker's opening balance sheet, assuming one year of comparative information? What periods will be covered in Becker's first IFRS financial statements?

Professional Research

IFRS3.5 Recording transactions in the accounting system requires knowledge of the important characteristics of the elements of financial statements, such as assets and liabilities. In addition, accountants must understand the inherent uncertainty in accounting measures and distinctions between related accounting concepts that are important in evaluating the effects of transactions on the financial statements.

Instructions

Access the IASB Framework at the IASB website. When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following items. (Provide paragraph citations.)

- a. Provide the definition of an asset and discuss how the economic benefits embodied in an asset might flow to a company.
- b. Provide the definition of a liability and discuss how a company might satisfy a liability.
- c. What is “accrual basis”? How do adjusting entries illustrate application of the accrual basis?

International Financial Reporting Problem**Marks and Spencer plc (M&S)**

IFRS3.6 The financial statements of (M&S) are presented in Appendix E. The company’s complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S’s financial statements and the accompanying notes to answer the following questions.

- a. What were M&S’s total assets at 1 April 2017? At 2 April 2016?
- b. How much cash (and cash equivalents) did M&S have on 1 April 2017?
- c. What were M&S’s selling and marketing expenses in 2017? In 2016?
- d. What were M&S’s revenues in 2017? In 2016?
- e. Using M&S’s financial statements and related notes, identify items that may result in adjusting entries for prepayments and accruals.
- f. What were the amounts of M&S’s depreciation and amortization expense in 2016 and 2017?

Income Statement and Related Information

LEARNING OBJECTIVES

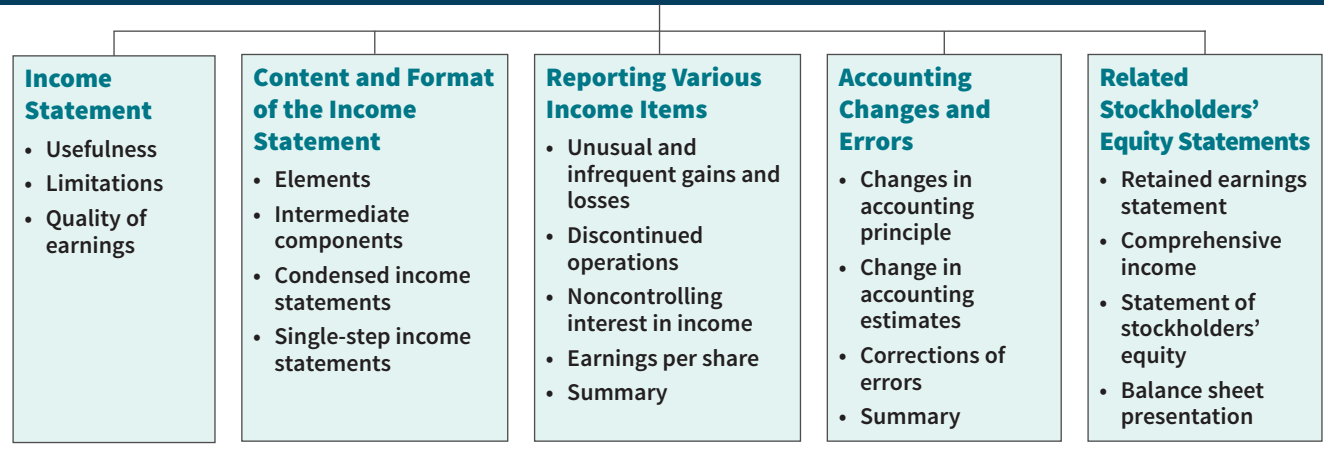

After studying this chapter, you should be able to:

1. Identify the uses and limitations of an income statement.
2. Describe the content and format of the income statement.
3. Discuss how to report various income items.
4. Explain the reporting of accounting changes and errors.
5. Describe related stockholders' equity statements.

PREVIEW OF CHAPTER 4 As the following opening story indicates, companies are attempting to provide income statement information they believe is useful for decision-making. Investors need complete and comparable information on income and its components to assess company profitability correctly. In this chapter, we examine the many different types of revenues, expenses, gains, and losses that affect the income statement and related information, as follows.

This chapter also includes numerous conceptual and global discussions that are integral to the topics presented here.

INCOME STATEMENT AND RELATED INFORMATION

Financial Statements Are Changing

The 2017 annual report of **Groupon** presents the following additional information in its financial statements:

The following is a reconciliation of Adjusted EBITDA to the most comparable U.S. GAAP financial measure, “Net profit (loss)” for the years ended December 31, 2017 and 2016 (in thousands):

| | Year Ended December 31, | |
|--|-------------------------|-----------|
| | 2017 | 2016 |
| Profit (loss) from operations | 28,601 | (166,209) |
| Adjustments | | |
| Stock-based compensation: | 80,950 | 109,523 |
| Depreciation and amortization | 137,827 | 135,909 |
| Acquisition-related expense (benefit), net | 48 | 5,650 |
| Restructuring charges | 18,828 | 40,438 |
| Gain on sale of intangible assets, business dispositions | (17,149) | (11,399) |
| Other (income) expense, net | (6,710) | 71,289 |
| Provision (benefit) for income taxes | 7,544 | (5,318) |
| Total adjustments | 221,338 | 346,092 |
| Adjusted EBITDA | 249,939 | 179,883 |

Groupon management indicates that adjusted EBITDA is a non-GAAP financial measure that comprises net loss excluding income taxes, interest and other nonoperating items, depreciation and amortization, stock-based compensation, and acquisition-related expense (benefit), net. Management also indicates that the definition of adjusted EBITDA may differ from similar measures used by other companies, even when similar terms are used to identify such measures: “Adjusted EBITDA is a key measure used by our management and Board of Directors to evaluate operating performance, generate future operating plans and make strategic decisions for the allocation of capital. Accordingly, we believe that adjusted EBITDA provides useful information to investors and others in understanding and evaluating our operating results in the same manner as our management and Board of Directors.”

Why do companies report these adjusted income numbers (sometimes referred to as non-GAAP measures)? One major reason is that companies believe some items on the income statement are not representative of operating results. These non-GAAP advocates defend non-GAAP reporting, saying it gives better insight into the fundamental operations of the business. However, while management asserts non-GAAP reporting is useful to investors, others raise concerns.

Skeptics of non-GAAP reporting often note that these adjustments generally lead to higher adjusted net income and, as a result, often report *earnings before bad stuff* (EBS). In Groupon’s case, the add-backs took a GAAP net loss of \$166.2 million and adjusted it to a non-GAAP profit of \$179.9 million in 2016. Groupon is not alone, as 40 (18%) of the 222 companies that had initial public offerings in 2016 reported losses under standard accounting rules but showed profits using their own tailor-made measures. According to consulting firm **Audit Analytics**, this represents the highest level of such reporting in recent years. It is not just start-ups on the non-GAAP bandwagon. In 2016, 88 percent of companies in the S&P 500 reported non-GAAP measures. Importantly, over 90 percent of these companies reported *higher* non-GAAP numbers compared to GAAP.

Another concern with non-GAAP reporting is that it is difficult to compare these adjusted numbers because companies have different views as to what is fundamental to their business. In many ways, the non-GAAP reporting practices by companies like Groupon represent implied criticisms of certain financial reporting standards, including how the information is presented on the income statement. In response, the SEC issued Regulation G, which requires companies to reconcile non-GAAP financial measures to GAAP. This regulation provides investors with a roadmap to analyze adjustments that companies make to their GAAP numbers to arrive at non-GAAP results. Regulation G helps investors compare one company’s non-GAAP measures with results reported by another company.

The FASB is working on a project on financial statement presentation to address users' concerns about these practices. Users believe too many alternatives exist for classifying and reporting income statement information. As a result, it is difficult to assess the financial performance of the company and compare its results with other companies. The FASB's focus on more transparent income reporting is encouraging, but managers still like non-GAAP reporting, as indicated by a recent survey. Over 55 percent polled indicated they would continue to practice non-GAAP reporting, even with a revised income statement format.

Golden, "Why the FASB Cares About Non-GAAP Performance Measures," *FASB Outlook—From the Chairman's Desk* (Q1, 2017); SEC Regulation G, "Conditions for Use of Non-GAAP Financial Measures," Release No. 33-8176 (March 28, 2003) and *Compliance & Disclosure Interpretations: Non-GAAP Financial Measures* (January 15, 2010), available at www.sec.gov/divisions/corpfin/guidance/nongaapinterp.htm; M. Rapoport, "What Companies Strip Out of 'Non-GAAP' Earnings: Fines, Exec Bonuses, Severance, Rebranding Costs . . ." *Wall Street Journal* (January 8, 2015); and S. Anders, "A Non-GAAP Reporting Sampler," *The CPA Journal* (September 2017).

Review and Practice

Go to the **Review and Practice** section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions as well as additional exercises and practice problem with solutions are also available online.

Income Statement

LEARNING OBJECTIVE 1

Identify the uses and limitations of an income statement.

The **income statement** is the report that measures the success of company operations for a given period of time. (It is also often called the statement of income or statement of earnings.¹) The business and investment community uses the income statement to determine profitability, investment value, and creditworthiness. It provides investors and creditors with information that helps them predict the **amounts, timing, and uncertainty of future cash flows**.

Usefulness of the Income Statement

The income statement helps users of financial statements predict future cash flows in a number of ways. For example, investors and creditors use the income statement information to:

1. **Evaluate the past performance of the company.** Examining revenues and expenses indicates how the company performed and allows comparison of its performance to its competitors. For example, analysts use the income data provided by **Ford** to compare its performance to that of **Toyota**.
2. **Provide a basis for predicting future performance.** Information about past performance helps to determine important trends that, if continued, provide information about future performance. For example, **General Electric** at one time reported consistent

¹We will use the term *income statement* except in situations where a company reports other comprehensive income (discussed later in the chapter). In that case, we will use the terms **statement of comprehensive income** or **comprehensive income statement**.

increases in revenues. Obviously, past success does not necessarily translate into future success. However, analysts can better predict future revenues, and hence earnings and cash flows, if a reasonable correlation exists between past and future performance.

| IBM | Recurring? |
|-----------------------------------|------------|
| Income for Year Ended 12/31/20 | |
| Revenues | |
| – Operating expenses | Yes |
| Operating income | |
| ± Unusual items | No |
| \$ Net Income | ? |

Recurring items are more certain in the future.

3. Help assess the risk or uncertainty of achieving future cash flows. Information on the various components of income—revenues, expenses, gains, and losses—highlights the relationships among them. It also helps to assess the risk of not achieving a particular level of cash flows in the future. For example, investors and creditors often segregate **IBM**'s operating performance from other non-recurring sources of income because **IBM** primarily generates revenues and cash through its operations. Thus, results from continuing operations usually have greater significance for predicting future performance than do results from non-recurring activities and events.

In summary, information in the income statement—revenues, expenses, gains, and losses—helps users evaluate past performance. It also provides insights into the likelihood of achieving a particular level of cash flows in the future.

Limitations of the Income Statement

Because net income is an estimate and reflects a number of assumptions, income statement users need to be aware of certain limitations associated with its information. Some of these limitations include:

1. Companies omit items from the income statement that they cannot measure reliably. Current practice prohibits recognition of certain items from the determination of income even though the effects of these items can arguably affect the company's performance. For example, a company may not record unrealized gains and losses on certain investment securities in income when there is uncertainty that it will ever realize the changes in value. In addition, more and more companies, like **Cisco Systems** and **Microsoft**, experience increases in value due to brand recognition, customer service, and product quality. A common framework for identifying and reporting these types of values is still lacking.

2. Income numbers are affected by the accounting methods employed. One company may depreciate its plant assets on an accelerated basis; another chooses straight-line depreciation. Assuming all other factors are equal, the first company will report lower income. In effect, we are comparing apples to oranges.

3. Income measurement involves judgment. For example, one company in good faith may estimate the useful life of an asset to be 20 years, while another company uses a 15-year estimate for the same type of asset. Similarly, some companies may make optimistic estimates of future warranty costs and bad debt write-offs, which result in lower expenses and higher income.

In summary, several limitations of the income statement reduce the usefulness of its information for predicting the amounts, timing, and uncertainty of future cash flows.

Quality of Earnings

So far, our discussion has highlighted the importance of information in the income statement for investment and credit decisions, including the evaluation of the company and its managers.² Companies try to meet or beat Wall Street expectations so that the market price of their stock and the value of management's stock compensation packages increase. As a result, companies have incentives to manage income to meet earnings targets or to make earnings look less risky.

²In support of the usefulness of income information, accounting researchers have documented an association between companies' market prices and reported incomes. See W. H. Beaver, "Perspectives on Recent Capital Markets Research," *The Accounting Review* (April 2002), pp. 453–474. See also S. Russolillo, "Surprise: Earnings Actually Drive Stocks," *Wall Street Journal* (February 23, 2017).

The SEC has expressed concern that the motivations to meet earnings targets may override good business practices. This erodes the quality of earnings and the quality of financial reporting. As indicated by one SEC chairperson, “Managing may be giving way to manipulation; integrity may be losing out to illusion.”³ As a result, the SEC has taken decisive action to prevent the practice of earnings management.

What is **earnings management**? It is often defined as the planned timing of revenues, expenses, gains, and losses to smooth out bumps in earnings. In most cases, companies use earnings management to increase income in the current year at the expense of income in future years. For example, they prematurely recognize sales in order to boost earnings. As one commentator noted, “it’s like popping a cork in [opening] a bottle of wine before it is ready.”

Companies also use earnings management to decrease current earnings in order to increase income in the future. The classic case is the use of “cookie jar” reserves. Companies establish these reserves by using unrealistic assumptions to estimate liabilities for such items as loan losses, restructuring charges, and warranty returns. The companies then reduce these reserves in the future to increase reported income in the future.

Such earnings management negatively affects the **quality of earnings** if it distorts the information in a way that is less useful for predicting future earnings and cash flows. Markets rely on trust. The bond between shareholders and the company must remain strong. Investors or others losing faith in the numbers reported in the financial statements will damage U.S. capital markets. As we mentioned in the opening story, we need heightened scrutiny of income measurement and reporting to ensure the quality of earnings and investors’ confidence in the income statement (see **Underlying Concepts**).

Underlying Concepts

The income statement provides important information to help assess the amounts, timing, and uncertainty of future cash flows—the central element of the objective of financial reporting.

What Do the Numbers Mean? Some Things Never Change

The “Numbers Game” speech by Arthur Levitt (see footnote 3) rang the alarm in 1998 for investors to be on the alert for earnings management and low-quality reporting by companies. Levitt made his remarks in the period leading up to the bursting of the Internet bubble, which revealed pervasive earnings management, and led to major investor losses. Now 20 years later and in the wake of the Sarbanes-Oxley Act, which ramped up internal controls and empowered auditors to monitor earnings management practices, some wonder if investors need to be alerted again to the dangers of earnings management.

Recent analyses suggest that some things never change. One study documented that one out of five U.S. finance chiefs have been scrambling to fiddle with their companies’ earnings. This should not come as a major surprise as it is a rather “open secret.” The adjacent chart summarizes the top five reasons managers cite for managing earnings.

The study also noted the five ways to identify earnings management in action, due to utilization of “cookie jar” reserves, heavy use of accruals, and other accounting instruments to either flatten or depress earnings, as follows: (1) earnings do not correlate with cash flows, (2) earnings deviate from the industry norm, (3) sudden changes in reserves, (4) earnings growth is too consistent, and (5) large and frequent one-time charges or gains. These tricks have been used in the past. A difficult quarter can be made easier by releasing reserves set aside for a rainy day or recognizing revenues before sales are made.

Making matters worse are that financial analysts—who are supposed to fight corporate spin—may often be playing along. Instead of challenging the companies, they’re largely passing along the rosy (non-GAAP) numbers in reports in recommending stocks to investors. For example, for 21 percent of the companies reviewed, adjusted profits soared 50 percent or more over net income. This was true of just 13 percent of the group in the same period five years ago. The bottom line is that stock prices seem to be getting a boost based on these goosed earnings. One measure of how richly priced stocks are suggests trouble. Three years ago, investors paid \$13.50 for every dollar of adjusted profits for

³A. Levitt, “The Numbers Game,” Remarks to NYU Center for Law and Business, September 28, 1998 (Securities and Exchange Commission, 1998).

companies in the S&P 500 index, according to S&P Capital IQ. Now, they're paying nearly \$18.

In the current long-running bull market, these valuations may not matter. But in hindsight, it will become clear that such valuation levels were clearly unsustainable. The conclusion? Investors would do well to remember the words of former chair

Levitt in his 1998 speech: "While the temptations are great, and the pressures strong, illusions in numbers are only that—ephemeral, and ultimately self-destructive."

Content and Format of the Income Statement

LEARNING OBJECTIVE 2

Describe the content and format of the income statement.

Elements of the Income Statement

Net income results from revenue, expense, gain, and loss transactions. The income statement summarizes these transactions. This method of income measurement, the **transaction approach**, focuses on the income-related activities that have occurred during the period.⁴ The statement can further classify income by customer, product line, or function, or by operating and nonoperating, continuing and discontinued, and regular and non-recurring categories.⁵ The following lists more formal definitions of income-related items, referred to as the major elements of the income statement.

Elements of Financial Statements

Revenues. Inflows or other enhancements of assets of an entity or settlements of its liabilities during a period from delivering or producing goods, rendering services, or other activities that constitute the entity's ongoing major or central operations.

Expenses. Outflows or other using-up of assets or incurrences of liabilities during a period from delivering or producing goods, rendering services, or carrying out other activities that constitute the entity's ongoing major or central operations.

Gains. Increases in equity (net assets) from peripheral or incidental transactions of an entity except those that result from revenues or investments by owners.

Losses. Decreases in equity (net assets) from peripheral or incidental transactions of an entity except those that result from expenses or distributions to owners.⁶

Revenues take many forms, such as sales, fees, interest, dividends, and rents. Expenses also take many forms, such as cost of goods sold, depreciation, interest, rent, salaries and wages, and taxes. Gains and losses also are of many types, resulting from the sale of investments or plant assets, settlement of liabilities, and write-offs of assets due to impairments or casualty.

⁴The most common alternative to the transaction approach is the **capital maintenance approach** to income measurement. Under this approach, a company determines income for the period based on the change in equity, after adjusting for capital contributions (e.g., investments by owners) or distributions (e.g., dividends). The main drawback associated with the capital maintenance approach is that the components of income are not evident in its measurement. The Internal Revenue Service uses the capital maintenance approach to identify unreported income and refers to this approach as the "net worth check."

⁵The term "non-recurring" encompasses transactions and other events that are derived from developments outside the normal operations of the business.

⁶"Elements of Financial Statements," *Statement of Financial Accounting Concepts No. 6* (Stamford, Conn.: FASB, 1985), paras. 78–89.

The distinctions between revenues and gains, and between expenses and losses, depend to a great extent on the typical activities of the company. For example, when **McDonald's** sells a hamburger, it records the selling price as revenue. However, when McDonald's sells land, it records any excess of the selling price over the book value as a gain. This difference in treatment results because the sale of the hamburger is part of McDonald's regular operations. The sale of land is not.

We cannot overemphasize the importance of reporting these elements. Most decision-makers find the *parts* of a financial statement to be more useful than the whole. As we indicated earlier, investors and creditors are interested in predicting the amounts, timing, and uncertainty of future income and cash flows. Having income statement elements shown in some detail and in comparison with prior years' data allows decision-makers to better assess future income and cash flows.

Intermediate Components of the Income Statement

It is common for companies to present some or all of the following sections and totals within the income statement as shown in **Illustration 4.1**. This format is often referred to as the **multiple-step income statement**.

1. **Operating Section.** A report of the revenues and expenses of the company's principal operations.
 - a. **Sales or Revenue.** A subsection presenting sales, discounts, allowances, returns, and other related information. Its purpose is to arrive at the net amount of sales revenue.
 - b. **Cost of Goods Sold.** A subsection that shows the cost of goods that were sold to produce the sales.
 - c. **Selling Expenses.** A subsection that lists expenses resulting from the company's efforts to make sales.
 - d. **Administrative or General Expenses.** A subsection reporting expenses of general administration.⁷
2. **Nonoperating Section.** A report of revenues and expenses resulting from secondary or auxiliary activities of the company. In addition, special gains and losses that are infrequent or unusual, or both, are normally reported in this section. Generally these items break down into two main subsections:
 - a. **Other Revenues and Gains.** A list of the revenues recognized or gains incurred, generally net of related expenses, from nonoperating transactions.
 - b. **Other Expenses and Losses.** A list of the expenses or losses incurred, generally net of any related incomes, from nonoperating transactions.
3. **Income Tax.** A section reporting federal and state taxes levied on income from continuing operations.
4. **Discontinued Operations.** Material gains or losses resulting from the disposition of a component of the business.
5. **Noncontrolling Interest.** Allocation of income to noncontrolling shareholders.
6. **Earnings Per Share.** A measure of performance over the reporting period.

ILLUSTRATION 4.1

Income Statement Sections

As indicated, companies report all revenues, gains, expenses, and losses on the income statement. This statement separates operating transactions from nonoperating transactions, and matches costs and expenses with related revenues. It highlights certain intermediate components of income that analysts use to compute ratios for assessing the performance of the company. Companies present nonoperating revenues, gains, expenses, and losses in a separate section, before income taxes and income from operations. Companies report discontinued operations as a separate element in the income statement. Segregating income with different characteristics and providing intermediate income figures helps readers evaluate earnings information in assessing the amounts, timing, and uncertainty of future cash flows.

⁷Although the content of the operating section is always the same, the organization of the material can differ. The breakdown above uses a **natural expense classification**. Manufacturing concerns and merchandising companies in the wholesale trade commonly use this. Another classification of operating expenses, recommended for retail stores, uses a **functional expense classification** of administrative, occupancy, publicity, buying, and selling expenses.

Illustration 4.2 presents an income statement for Cabrera Company. Cabrera's income statement includes all of the major items shown in Illustration 4.1, except for discontinued operations and noncontrolling interest. In arriving at net income, the statement presents the following subtotals and totals: gross profit, income from operations, income before income tax, and net income.⁸

| For the Year Ended December 31, 2020 | | | |
| Sales | | | |
| Sales revenue | | | \$3,053,081 |
| Less: Sales discounts | \$ 24,241 | | |
| Sales returns and allowances | 56,427 | | 80,668 |
| Net sales | | | 2,972,413 |
| Cost of goods sold | | | 1,982,541 |
| Gross profit | | | 989,872 |
| Operating expenses | | | |
| Selling expenses | | | |
| Sales salaries and commissions | \$202,644 | | |
| Sales office salaries | 59,200 | | |
| Travel and entertainment | 48,940 | | |
| Advertising expense | 38,315 | | |
| Delivery expense | 41,209 | | |
| Shipping supplies and expense | 24,712 | | |
| Postage and stationery | 16,788 | | |
| Telephone and Internet expense | 12,215 | | |
| Depreciation of sales equipment | 9,005 | 453,028 | |
| Administrative expenses | | | |
| Officers' salaries | 186,000 | | |
| Office salaries | 61,200 | | |
| Legal and professional services | 23,721 | | |
| Utilities expense | 23,275 | | |
| Insurance expense | 17,029 | | |
| Depreciation of building | 18,059 | | |
| Depreciation of office equipment | 16,000 | | |
| Stationery, supplies, and postage | 2,875 | | |
| Miscellaneous office expenses | 2,612 | 350,771 | 803,799 |
| Income from operations | | | 186,073 |
| Other revenues and gains | | | |
| Dividend revenue | 98,500 | | |
| Rent revenue | 72,910 | | 171,410 |
| | | | 357,483 |
| Other expenses and losses | | | |
| Interest on bonds and notes | | | 126,060 |
| Income before income tax | | | 231,423 |
| Income tax | | | 66,934 |
| Net income for the year | | | \$ 164,489 |
| Earnings per common share | | | <u>\$1.74</u> |

The disclosure of net sales is useful because Cabrera reports regular revenues as a separate item. It discloses non-recurring or incidental revenues elsewhere in the income statement. As a result, analysts can more easily understand and assess trends in revenue from continuing operations.

⁸Companies must include *earnings per share* or *net loss per share* on the face of the income statement. In this chapter, we discuss only earnings per share or net loss per share where a company has only common stock. Another measure shown on the face of the income statement (when applicable) is fully diluted earnings per share, which gives effect to all dilutive potential common shares that were outstanding during the reporting period. This concept is discussed in Chapter 16.

Similarly, the reporting of gross profit provides a useful number for evaluating performance and predicting future earnings. Statement readers may study the trend in gross profits to determine how successfully a company uses its resources. They also may use that information to understand how competitive pressure affected profit margins.

Finally, disclosing income from operations highlights the difference between regular and non-recurring or incidental activities. This disclosure helps users recognize that incidental or non-recurring activities are unlikely to continue at the same level. Furthermore, disclosure of operating earnings may assist in comparing different companies and assessing operating efficiencies.

What Do the Numbers Mean? Top Line or Bottom Line?

The importance of the components of income, as well as the bottom line, is illustrated in the recent case of **Chipotle**. Its stock had climbed fourfold in five years and for good reason. The company had been reporting surprisingly high bottom-line income and investors were clamoring to buy. However, in a recent month, that pattern was broken—that is, Chipotle posted solid earnings, but investors sold. The reason? Analysts attribute the sell-off to Chipotle missing its target for *revenues*. The stock fell 21 percent, from \$404 to \$317, in a day.

And Chipotle was not alone. Six in 10 large companies reported results in that same quarter that missed revenue targets. In response to the bad revenue news, **Priceline.com** fell \$117 to \$562 after reporting revenue that was lower than analysts had expected. The story has been the same for dozens of companies across industries, from **Coach**, a luxury goods retailer, to **Boston Scientific**, which sells medical devices, to more recently **Shake Shack**, a burger chain.

The recent focus on the top line, revenue, arises because market expectations for revenues do not seem to jive with the companies' optimistic profit picture. And while companies might report a surprise in earnings, analysts will be focusing on revenues. Companies have been able to cut costs to compensate—laying off workers, squeezing remaining staff, and using technology to run more efficiently—but there's a limit to how much you can squeeze your workers and use technology to produce more. U.S. companies are just about as lean as any time in history.

As one analyst noted (in this economic environment), "you won't be able to grow earnings much faster than revenue. . . . Analysts will have to revise down their earnings." So watch the top line, as well as the bottom line.

Condensed Income Statements

In some cases, a single income statement cannot possibly present all the desired expense detail. To solve this problem, a company includes only the totals of expense groups in the statement of income. It then also prepares supplementary schedules to support the totals. This format may thus reduce the income statement itself to a few lines on a single sheet. For this reason, readers who wish to study all the reported data on operations must give their attention to the supporting schedules. For example, consider the income statement shown in **Illustration 4.3** for Cabrera Company. This statement is a condensed version of the more

Cabrera Company
Income Statement
For the Year Ended December 31, 2020

| | | |
|-------------------------------|-----------|-------------|
| Net sales | | \$2,972,413 |
| Cost of goods sold | | 1,982,541 |
| Gross profit | | 989,872 |
| Selling expenses (see Note D) | \$453,028 | |
| Administrative expenses | 350,771 | 803,799 |
| Income from operations | | 186,073 |
| Other revenues and gains | | 171,410 |
| | | 357,483 |
| Other expenses and losses | | 126,060 |
| Income before income tax | | 231,423 |
| Income tax | | 66,934 |
| Net income for the year | | \$ 164,489 |
| Earnings per common share | | \$1.74 |

ILLUSTRATION 4.3

Condensed Income Statement

detailed multiple-step statement presented in Illustration 4.2. It is more representative of the type found in practice. **Illustration 4.4** then shows an example of a supporting schedule, cross-referenced as Note D and detailing the selling expenses.

ILLUSTRATION 4.4**Sample Supporting Schedule**

| Note D: Selling expenses | |
|---------------------------------|------------------|
| Sales salaries and commissions | \$202,644 |
| Sales office salaries | 59,200 |
| Travel and entertainment | 48,940 |
| Advertising expense | 38,315 |
| Delivery expense | 41,209 |
| Shipping supplies and expense | 24,712 |
| Postage and stationery | 16,788 |
| Telephone and Internet expense | 12,215 |
| Depreciation of sales equipment | 9,005 |
| Total selling expenses | <u>\$453,028</u> |

How much detail should a company include in the income statement? On the one hand, a company wants to present a simple, summarized statement so that readers can readily discover important factors. On the other hand, it wants to disclose the results of all activities and to provide more than just a skeleton report. As we show in Illustrations 4.3 and 4.4, the income statement always includes certain basic elements, but companies can present them in various formats.

Single-Step Income Statements

In reporting revenues, gains, expenses, and losses, some companies often use a format known as the **single-step income statement** instead of a multiple-step income statement. The single-step statement consists of just two groupings: revenues and expenses. Expenses are deducted from revenues to arrive at net income or loss, hence the expression “single-step.” Frequently, companies report income tax separately as the last item before net income to indicate its relationship to income before income tax. **Illustration 4.5** shows the single-step income statement of Cabrera Company.

ILLUSTRATION 4.5**Single-Step Income Statement**

| Cabrera Company | |
|---|-------------------|
| Income Statement | |
| For the Year Ended December 31, 2020 | |
| <u>Revenues</u> | |
| Net sales | \$2,972,413 |
| Dividend revenue | 98,500 |
| Rent revenue | 72,910 |
| Total revenues | <u>3,143,823</u> |
| <u>Expenses</u> | |
| Cost of goods sold | 1,982,541 |
| Selling expenses | 453,028 |
| Administrative expenses | 350,771 |
| Interest expense | 126,060 |
| Income tax expense | 66,934 |
| Total expenses | <u>2,979,334</u> |
| <u>Net income</u> | <u>\$ 164,489</u> |
| Earnings per common share | <u>\$1.74</u> |

Companies that use the single-step income statement in financial reporting typically do so because of its simplicity. That is, **the primary advantage of the single-step format lies in its simple presentation and the absence of any implication that one type of**

revenue or expense item has priority over another. This format thus eliminates potential classification problems.⁹

Reporting Various Income Items

LEARNING OBJECTIVE 3

Discuss how to report various income items.

Companies are generally allowed flexibility in the presentation of the components of income. However, the FASB developed specific guidelines in two important areas: what to include in income and how to report certain unusual or infrequent items.

What should be reported in net income and where it should be reported is controversial. For example, should companies report a gain or loss on sale of an investment as part of net income or report it directly in retained earnings? Should a company report a loss on discontinued operations differently than interest expense? What we therefore need is consistent and comparable income reporting practices. Developing a framework for reporting income components is important to ensure useful information.

Furthermore, as our opening story discusses, we need consistent and comparable income reporting practices to avoid “promotional” information reported by companies.¹⁰ Some users advocate a **current operating performance approach** to income reporting. These analysts argue that the most useful income measure reflects only regular and recurring revenue and expense elements. Some unusual or infrequent (non-recurring) items do not reflect a company’s future earning power.

In contrast, others warn that a focus on operating income potentially misses important information about a company’s performance. Any gain or loss experienced by the company, whether directly or indirectly related to operations, contributes to its long-run profitability. As one analyst notes, “write-offs matter. . . . They speak to the volatility of (past) earnings.”¹¹ As a result, analysts can use some nonoperating items to assess the riskiness of future earnings. Furthermore, determining which items are operating and which are infrequent or unusual requires judgment. This might lead to differences in the treatment of these items and to possible manipulation of income measures.

So, what to do? The accounting profession has **adopted a modified all-inclusive concept** (see **Global View**). In this approach, companies record most items, including unusual or infrequent ones, as part of net income.¹² In addition, companies are required to highlight these items in the financial statements so that users can better determine the long-run earning power of the company. These income items fall into four general categories, which we discuss in the following sections:

1. Unusual and infrequent gains and losses.
2. Discontinued operations.
3. Noncontrolling interest.
4. Earnings per share.

Global View

In many countries, the “modified all-inclusive” income statement approach does not parallel that of U.S. GAAP. For example, companies in these countries take some gains and losses directly to owners’ equity accounts instead of reporting them on the income statement.

⁹*Accounting Trends and Techniques* (New York: AICPA) reported that of the 500 companies surveyed, 411 employed the multiple-step form, and 89 employed the single-step income statement format.

¹⁰At one time, the FASB and the IASB worked on a joint project on financial statement presentation, which studied how to best report income as well as information presented in the balance sheet and the statement of cash flows. The joint project is on hold. The FASB is working on a narrower project on financial performance reporting, with a focus on disaggregation in the income statement. See the FASB website (click Projects and then Technical Agenda) for more details.

¹¹A survey of 500 large public companies (*Accounting Trends and Techniques* (New York: AICPA)) documented that 106 of the 500 survey companies reported a write-down of assets (see also Illustration 4.6). This highlights the importance of good reporting for these unusual or infrequent items.

¹²The FASB issued a statement of concepts that offers some guidance on this topic: “Recognition and Measurement in Financial Statements of Business Enterprises,” *Statement of Financial Accounting Concepts No. 5* (Stamford, Conn.: FASB, 1984).

Unusual and Infrequent Gains and Losses

Companies that have unusual or infrequent gains and losses or both are required to disclose this information in the income statement or in the notes to the financial statements. In addition, additional disclosure is often needed in the notes to the financial statements so that the users of the income statement understand the effect of these gains or losses on net income and future cash flows. These gains or losses are defined as follows:

- a. **Unusual.** High degree of abnormality and of a type clearly unrelated to, or only incidentally related to, the ordinary and typical activities of the company, taking into account the environment in which it operates.
- b. **Infrequency of occurrence.** Type of transaction that is not reasonably expected to recur in the foreseeable future, taking into account the environment in which the company operates.

Common types of unusual or infrequent gains and losses or both are as follows:

- Losses on write-down (impairment) of receivables; inventories; property, plant, and equipment; goodwill or other intangible assets.
- Restructuring charges.
- Other gains and losses from sale or abandonment of property, plant and equipment.
- Effects of a strike, including those against competitors and major suppliers.
- Gains and losses on extinguishment (redemption) of debt obligations.
- Gains and losses related to casualties such as fires, floods, and earthquakes.
- Gains or losses on sale of investment securities. [1] (See the FASB Codification References near the end of the chapter.)

Illustration 4.6 identifies the most common types of unusual gains and losses reported in a survey of 500 large companies. Note that more than 40 percent of the surveyed firms reported restructuring charges, and nearly 60 percent of the companies reported write-downs or gains or losses on asset sales.

ILLUSTRATION 4.6
Number of Unusual Items
Reported in a Recent Year
by 500 Large Companies

As indicated earlier, revenues and expenses, other revenues and gains, and other expenses and losses should be reported as part of income before income taxes. Therefore, gains and losses from unusual or infrequent gains or losses or both are not reported net of tax. In practice, companies will generally itemize each gain or loss on the income statement or show one amount for all these items and then itemize these items in the notes to the financial statements. *For homework purposes, these unusual or infrequent gains or losses or both should be itemized and reported in the Other revenues and gains section or the Other expenses and losses section of the income statement. Gains and losses shown in the homework should be considered material and unusual or infrequent in nature or both.*

Discontinued Operations

A **discontinued operation** occurs when two things happen:

1. A company eliminates the results of operations of a component of the business. A component comprises operations and cash flows that can be clearly distinguished, operationally and for financial reporting purposes.

- The elimination of a component that represents a **strategic shift**, having a major effect on the company's operations and financial results. A strategic shift generally includes the disposal of (1) a major line of business, (2) a major geographical area, or (3) a major equity method investment. [2]

To illustrate, Softso has the following product lines that it manufactures and sells—beauty care, health care, and baby care. Within these product lines, it has a total of 18 brands. Each brand is considered a separate component because each brand comprises operations and cash flows that can be clearly distinguished, operationally and for financial reporting purposes. Each product line represents a major line of business. Softso decides to eliminate the baby-care product line because it is suffering substantial losses. Softso should report the elimination of the baby-care product line as a discontinued operation because the baby-care line represents a major line of business and its disposal represents a major part of Softso's operations (a strategic shift).

On the other hand, assume that Softso decides to remain in the baby-care business but will discontinue one brand in this product line because it is very unprofitable. Softso should not report the elimination of this brand as a discontinued operation because it does not represent a major part of Softso's operations (disposing of it is not considered a strategic shift).

As indicated, the reporting of a discontinued operation involves strategic shifts that are substantial in nature. Here are some additional examples:

- The sale of a product line that represents 15 percent of a company's total revenues.
- The sale of a geographical area that represents 20 percent of a company's total assets.
- The sale of a component that is an equity investment that represents 20 percent of a company's total assets.

Companies report as discontinued operations (in a separate income statement category) the gain or loss from **disposal of a component of a business**. In addition, companies report the **results of operations of a component that has been or will be disposed of** separately from continuing operations. Companies show the effects of discontinued operations net of tax as a separate category, after continuing operations. [3]

To illustrate, Multiplex Products, Inc., a highly diversified company, decides to discontinue its electronics division. During the current year, the electronics division lost \$300,000 (net of tax). Multiplex sold the division at the end of the year at a loss of \$500,000 (net of tax). Multiplex determines that the electronics division discontinuation meets the strategic shift criteria because the division is a major line of business (its assets exceed 20 percent of Multiplex's total assets). **Illustration 4.7** shows the reporting of discontinued operations for Multiplex.

| | | |
|---|-----------|---------------------|
| Income from continuing operations | | \$20,000,000 |
| Discontinued operations | | |
| Loss from operation of discontinued electronics division (net of tax) | \$300,000 | |
| Loss from disposal of electronics division (net of tax) | 500,000 | (800,000) |
| Net income | | <u>\$19,200,000</u> |

ILLUSTRATION 4.7

Income Statement Presentation of Discontinued Operations

Companies use the phrase **"Income from continuing operations"** only when gains or losses on discontinued operations occur.

A company that reports a discontinued operation must report on the face of the income statement the per share effect of income from continuing operations and net income. In addition, it must report per share amounts for discontinued items either on the face of the income statement or in the notes to the financial statements.¹³ To illustrate, consider the income statement for Poquito Industries Inc., shown in Illustration 4.8. Poquito had 100,000 shares outstanding for

¹³In practice, a company will generally report only one line on the income statement, such as "Loss on discontinued operations, net of tax," and then in the notes explain the two components of the loss that total \$800,000. For homework purposes, report both amounts on the face of the income statement, net of tax, if both amounts are provided.

the entire year. Notice the order in which Poquito shows the data, with per share information at the bottom. The Poquito income statement, as **Illustration 4.8** shows, is highly condensed. Poquito would need to describe items such as “Other expenses and losses” and “Discontinued operations” fully and appropriately in the statement or related notes.

ILLUSTRATION 4.8
Income Statement

| Poquito Industries Inc. | | |
|--|----------|-------------------|
| Income Statement | | |
| For the Year Ended December 31, 2020 | | |
| Sales revenue | | \$1,420,000 |
| Cost of goods sold | | 600,000 |
| Gross profit | | 820,000 |
| Selling and administrative expenses | | 320,000 |
| Income from operations | | 500,000 |
| Other revenues and gains | | |
| Interest revenue | | 10,000 |
| Other expenses and losses | | |
| Loss on disposal of part of Textile Division | \$ 5,000 | |
| Loss on sale of investments | 30,000 | |
| Interest expense | 15,000 | 50,000 |
| Income before income tax | | 460,000 |
| Income tax | | 184,000 |
| Income from continuing operations | | 276,000 |
| Discontinued operations | | |
| Income from operations of Pizza Division, less | | |
| applicable income tax of \$24,800 | 54,000 | |
| Loss on disposal of Pizza Division, less | | |
| applicable income tax of \$41,000 | 90,000 | 36,000 |
| Net income | | \$ 240,000 |
| Per share | | |
| Income from continuing operations | | \$2.76 |
| Income from operations of discontinued division, net of tax | | 0.54 |
| Loss on disposal of discontinued operation, net of tax | | 0.90 |
| Net income | | \$2.40 |

Intraperiod Tax Allocation

As indicated in Illustrations 4.7 and 4.8, companies report discontinued operations on the income statement net of tax. The allocation of tax to this item is called **intraperiod tax allocation**, that is, allocation within the income statement of a period. It relates the income tax expense (sometimes referred to as the income tax provision) of the fiscal period to the specific items that give rise to the amount of the income tax provision.

Intraperiod tax allocation helps financial statement users better understand the impact of income taxes on the various components of net income. For example, readers of financial statements will understand how much income tax expense relates to “Income from continuing operations” and how much to discontinued operations. This approach helps users to better predict the amount, timing, and uncertainty of future cash flows. In addition, intraperiod tax allocation discourages statement readers from using pretax measures of performance when evaluating financial results, and thereby recognizes that income tax expense is a real cost.

Companies use intraperiod tax allocation on the income statement for (1) income from continuing operations and (2) discontinued operations. The general concept is **“let the tax follow the income.”**

To compute the income tax expense attributable to “Income from continuing operations,” a company computes the income tax expense related to both the revenue and expense transactions as well as other income and expense used in determining this income subtotal. (In this computation, the company does not consider the tax consequences of items excluded from the determination of “Income from continuing operations.”) Companies then associate a separate tax effect for discontinued operations. Here, we look in more detail at the calculation of intraperiod tax allocation for a discontinued gain or discontinued loss.

Discontinued Operations (Gain)

In applying the concept of intraperiod tax allocation, assume that Schindler Co. has income before income tax of \$250,000. It has a gain of \$100,000 from a discontinued operation. Assuming a 30 percent income tax rate, Schindler presents the information on the income statement as shown in **Illustration 4.9**.

| | | |
|-----------------------------------|---------------|-------------------------|
| Income before income tax | | \$250,000 |
| Income tax | | <u>75,000</u> |
| Income from continuing operations | | 175,000 |
| Gain on discontinued operations | \$100,000 | |
| Less: Applicable income tax | <u>30,000</u> | <u>70,000</u> |
| Net income | | <u><u>\$245,000</u></u> |

ILLUSTRATION 4.9

Intraperiod Tax Allocation, Discontinued Operations Gain

Schindler determines the income tax of \$75,000 ($\$250,000 \times .30$) attributable to “Income before income tax” from revenue and expense transactions related to this income. Schindler omits the tax consequences of items excluded from the determination of “Income before income tax.” The company shows a separate tax effect of \$30,000 related to the “Gain on discontinued operations.”

Discontinued Operations (Loss)

To illustrate the reporting of a loss from discontinued operations, assume that Schindler Co. has income before income tax of \$250,000. It also has a loss from discontinued operations of \$100,000. Assuming a 30 percent tax rate, Schindler presents the income tax on the income statement as shown in **Illustration 4.10**. In this case, the loss provides a positive tax benefit of \$30,000. Schindler, therefore, subtracts it from the \$100,000 loss.

| | | |
|---------------------------------------|---------------|-------------------------|
| Income before income tax | | \$250,000 |
| Income tax | | <u>75,000</u> |
| Income from continuing operations | | 175,000 |
| Loss from discontinued operations | \$100,000 | |
| Less: Applicable income tax reduction | <u>30,000</u> | <u>70,000</u> |
| Net income | | <u><u>\$105,000</u></u> |

ILLUSTRATION 4.10

Intraperiod Tax Allocation, Discontinued Operations Loss

Companies may also report the tax effect of a discontinued item by means of a note disclosure, as shown in **Illustration 4.11**.

| | | |
|---|--|-------------------------|
| Income before income tax | | \$250,000 |
| Income tax | | <u>75,000</u> |
| Income from continuing operations | | 175,000 |
| Loss on discontinued operations, less applicable income tax reduction (Note 1) | | <u>70,000</u> |
| Net income | | <u><u>\$105,000</u></u> |

ILLUSTRATION 4.11

Note Disclosure of Intraperiod Tax Allocation

Note 1: During the year, the Company suffered a loss on discontinuing operations of \$70,000, net of applicable income tax reduction of \$30,000.

Noncontrolling Interest in Income

A company like **The Coca-Cola Company** owns substantial interests in other companies. Coca-Cola generally consolidates the financial results of these companies into its own financial statements. In these cases, Coca-Cola is referred to as the parent, and the other companies are referred to as subsidiaries. **Noncontrolling interest** is then the portion of equity (net assets) interest in a subsidiary not attributable to the parent company.

To illustrate noncontrolling interest in income, assume that Coca-Cola acquires 70 percent of the outstanding stock of Koch Company. Because Coca-Cola owns more than 50 percent of Koch, it consolidates Koch's financial results with its own. Consolidated net income is then allocated to the controlling (Coca-Cola) and noncontrolling stockholders' percentage of ownership in Koch. In other words, under this arrangement, the ownership of Koch is divided into two classes: (1) the majority interest represented by stockholders who own the controlling interest, and (2) the noncontrolling interest represented by stockholders who are not part of the controlling group. When Coca-Cola prepares a consolidated income statement, GAAP requires that net income be allocated to the controlling and noncontrolling interest. This allocation is reported at the bottom of the income statement, after net income.

An example of how Coca-Cola reports its noncontrolling interest is shown in **Illustration 4.12**.

ILLUSTRATION 4.12

Presentation of Noncontrolling Interest

|  The Coca-Cola Company (in millions) | |
|---|----------------|
| Consolidated net income | \$1,283 |
| Less: Net income attributable to noncontrolling interests | 35 |
| Net income attributable to stockholders of The Coca-Cola Company | <u>\$1,248</u> |

The noncontrolling interest amounts are not expenses or dividends, but are allocations of net income (loss) to the noncontrolling interest. [4]

Earnings per Share

A company customarily sums up the results of its operations in one important figure: net income. However, the financial world has widely accepted an even more distilled and compact figure as the most significant business indicator—**earnings per share (EPS)**.

The computation of earnings per share is usually straightforward. **Earnings per share is net income minus preferred dividends (income available to common stockholders), divided by the weighted average of common shares outstanding.**¹⁴

To illustrate, assume that Lancer, Inc. reports net income of \$350,000. It declares and pays preferred dividends of \$50,000 for the year. The weighted-average number of common shares outstanding during the year is 100,000 shares. Lancer computes earnings per share of \$3, as shown in **Illustration 4.13**.

ILLUSTRATION 4.13

Equation Illustrating Computation of Earnings per Share

| |
|--|
| $\frac{\text{Net Income} - \text{Preferred Dividends}}{\text{Weighted-Average Common Shares Outstanding}} = \text{Earnings per Share}$ |
| $\frac{\$350,000 - \$50,000}{100,000} = \$3$ |

Note that EPS measures the number of dollars earned by each share of common stock. It does not represent the dollar amount paid to stockholders in the form of dividends.

Prospectuses, proxy material, and annual reports to stockholders commonly use the “net income per share” or “earnings per share” ratio. The financial press, statistical services like Standard & Poor's, and Wall Street securities analysts also highlight EPS. Because of its importance, **companies must disclose earnings per share on the face of the income statement.** A company that reports a discontinued operation must report per share amounts for this line item either on the face of the income statement or in the notes to the financial statements. [5]

To illustrate, an excerpt from the income statement for Poquito Industries Inc. is presented in **Illustration 4.14** (taken from Illustration 4.8). Notice the per share information

¹⁴In calculating earnings per share, companies deduct preferred dividends from net income if the dividends are **declared or if they are cumulative though not declared.** Only the net income attributable to the controlling interest should be used in computing earnings per share.

presented at the bottom. Assume that the company had 100,000 shares outstanding for the entire year. The Poquito income statement, as Illustration 4.14 shows, is highly condensed. As discussed, Poquito would need to describe items such as “Discontinued operations” fully and appropriately in the statement or related notes.

| Poquito Industries Inc. | | |

| Income from operations of Pizza Division, less applicable income tax of \$24,800 | \$54,000 | |
| Loss on disposal of Pizza Division, less applicable income tax of \$41,000 | 90,000 | 36,000 |
| Net income | | <u>\$240,000</u> |
| Per share of common stock | | |
| Income from continuing operations | | \$2.76 |
| Income from operations of discontinued division, net of tax | | 0.54 |
| Loss on disposal of discontinued operation, net of tax | | 0.90 |
| Net income | | <u>\$2.40</u> |

ILLUSTRATION 4.14
Income Statement

As indicated earlier, many corporations have simple capital structures that include only common stock. For these companies, a presentation such as “Earnings per common share” is appropriate on the income statement. In many instances, however, companies’ earnings per share are subject to dilution (reduction) in the future because existing contingencies permit the issuance of additional common shares. [6]¹⁵

What Do the Numbers Mean? Four: The Loneliest Number

Managing earnings up or down adversely affects the quality of earnings. Why do companies engage in such practices? Research concludes that many companies tweak quarterly earnings to meet investor expectations. How do they do it? Research findings indicate that companies tend to nudge their earnings numbers up by a 10th of a cent or two. That lets them round results up to the highest cent, as illustrated in the following chart.

What the research shows is that the number “4” appeared less often in the 10th’s place than any other digit and significantly less often than would be expected by chance. This effect is called “quadrophobia.” For the typical company in the study, an increase of \$31,000 in quarterly net income would boost earnings per share by a 10th of a cent. A more recent analysis of quarterly results for more than 2,600 companies found that rounding up remains more common than rounding down. Another recent study reinforces the concerns about earnings management. Based on a survey of 169 public-company chief financial officers, about 20 percent of firms manage earnings to misrepresent their economic performance. And when they do manage earnings, it could move EPS by an average of 10 percent.

Is such earnings management a problem for investors? It is if they cannot determine the impact on earnings quality. Indeed, the surveyed CFOs “believe that it is difficult for outside observers to unravel earnings management, especially when such earnings are managed using subtle unobservable choices or real actions.” What’s an investor to do? The survey authors say the CFOs “advocate paying close attention to the key managers running the firm, the lack of correlation between earnings and cash flows, significant deviations between firm and peer experience, and unusual behavior in accruals.”

¹⁵The earnings per share effects of noncontrolling interest should also be presented. In addition, the amounts of income from continuing operations and discontinued operations (if present) attributable to the controlling interest should be disclosed. We discuss the computational problems involved in these situations for earnings per share computations in Chapter 16.

ings Quality: Evidence from the Field,” Emory University Working Paper (July 2012). See also D. Michaels, “SEC Probes Whether Companies Rounded Up Earnings per Share—Regulators Investigating the Case of the Missing ‘4,’” *Wall Street Journal* (June 22, 2018).

Summary of Various Income Items

Because of the numerous intermediate income figures created by the reporting of non-recurring items, readers must carefully evaluate earnings information reported by the financial press. **Illustration 4.15** summarizes the basic concepts that we previously discussed. Although simplified, the chart provides a useful framework for determining the treatment of special items affecting the income statement.

ILLUSTRATION 4.15 Summary of Various Items in the Income Statement

| Type of Situation | Criteria | Examples | Placement on Income Statement |
|---------------------------------------|--|---|---|
| Unusual or infrequent gains or losses | Material unusual, infrequent, or both. | Write-downs of receivables, inventories, property, and intangibles; restructurings; gains or losses from sales of assets used in business. | Reported in “Other revenues and gains” or “Other expenses and losses” section. (Not shown net of tax.) |
| Discontinued operations | Elimination of the results of operations of a component of the business with cash flows that can be clearly distinguished and for which the elimination represents a strategic shift. | Sale by diversified company of major division that represents only activities in electronics industry. Food distributor that sells wholesale to supermarket chains and through fast-food restaurants decides to discontinue the division that sells to one of two classes of customers. | Show in separate section after continuing operations. (Shown net of tax.) |
| Noncontrolling interest | Allocation of net income or loss divided between two classes: (1) the majority interest represented by the shareholders who own the controlling interest, and (2) the noncontrolling interest. | Net income (loss) attributable to noncontrolling shareholders. | Report as a separate item below net income or loss as an allocation of the net income or loss (not as an item of income or expense). |
| Earnings per share | Must be reported on the face of the income statement. | Net income minus preferred dividends divided by weighted-average shares outstanding | Report separate EPS for income from continuing operations (if applicable) and net income. |

Accounting Changes and Errors

LEARNING OBJECTIVE 4

Explain the reporting of accounting changes and errors.

Changes in accounting principle, change in estimates, and corrections of errors require unique reporting provisions.

Changes in Accounting Principle

Changes in accounting occur frequently in practice because important events or conditions may be in dispute or uncertain at the statement date. One type of accounting change results when a company adopts a different accounting principle (see **Underlying Concepts**). **Changes in accounting principle** include a change in the method of inventory pricing from FIFO to average-cost, or a change in accounting for construction contracts from the percentage-of-completion to the completed-contract method. [7]¹⁶

A company recognizes a change in accounting principle by making a **retrospective adjustment** to the financial statements. Such an adjustment recasts the prior years' statements on a basis consistent with the newly adopted principle. The company records the cumulative effect of the change for prior periods as an adjustment to beginning retained earnings of the earliest year presented.

To illustrate, Gaubert Inc. decided in March 2020 to change from FIFO to weighted-average inventory pricing. Gaubert's income before income tax, using the new weighted-average method in 2020, is \$30,000. **Illustration 4.16** presents the pretax income data for 2018 and 2019 for this example.

| Year | FIFO | Weighted-Average Method | Excess of FIFO over Weighted-Average Method |
|-------|----------|-------------------------|---|
| 2018 | \$40,000 | \$35,000 | \$5,000 |
| 2019 | 30,000 | 27,000 | 3,000 |
| Total | | | <u>\$8,000</u> |

Illustration 4.17 shows the information Gaubert presented in its comparative income statements, based on a 30 percent tax rate.

| | 2020 | 2019 | 2018 |
|--------------------------|-----------------|-----------------|-----------------|
| Income before income tax | \$30,000 | \$27,000 | \$35,000 |
| Income tax | 9,000 | 8,100 | 10,500 |
| Net income | <u>\$21,000</u> | <u>\$18,900</u> | <u>\$24,500</u> |

Thus, under the retrospective approach, the company recasts the prior years' income numbers under the newly adopted method. This approach therefore preserves comparability across years.

Changes in Accounting Estimates

Changes in accounting estimates are inherent in the accounting process. For example, companies estimate useful lives and salvage values of depreciable assets, uncollectible receivables, inventory obsolescence, and the number of periods expected to benefit from a particular expenditure. Not infrequently, due to time, circumstances, or new information, even estimates originally made in good faith must be changed. A company accounts for such changes in estimates in the period of change if they affect only that period, or in the period of change and future periods if the change affects both.

To illustrate a change in estimate that affects only the period of change, assume that DuPage Materials Corp. consistently estimated its bad debt expense at 1 percent of accounts receivable. In 2020, however, DuPage determines that it must revise upward the estimate of

Underlying Concepts

Companies can change principles, but they must demonstrate that the newly adopted principle is preferable to the old one. Such changes result in lost consistency from period to period.

ILLUSTRATION 4.16

Calculation of a Change in Accounting Principle

ILLUSTRATION 4.17

Income Statement Presentation of a Change in Accounting Principle

¹⁶In Chapter 22, we examine in greater detail the problems related to accounting changes, and changes in estimates and errors.

bad debts for accounts receivable outstanding to 2 percent, or double the prior years' percentage. The 2 percent rate is necessary to reduce accounts receivable to net realizable value. Using 2 percent results in a bad debt charge of \$240,000, or double the amount using the 1 percent estimate for prior years. DuPage records the bad debt expense and related allowance at December 31, 2020 (assuming a zero balance in the allowance), as follows.

| | | |
|---------------------------------|---------|---------|
| Bad Debt Expense | 240,000 | |
| Allowance for Doubtful Accounts | | 240,000 |

DuPage includes the entire change in estimate in 2020 income because the change does not affect future periods. **Companies do not handle changes in estimate retrospectively.** That is, such changes are not carried back to adjust prior years. **Changes in estimate are not considered errors.**

Corrections of Errors

Errors occur as a result of mathematical mistakes, mistakes in the application of accounting principles, or oversight or misuse of facts that existed at the time financial statements were prepared. In recent years, many companies have corrected for errors in their financial statements. The errors involved such items as improper reporting of revenue, accounting for stock compensation, allowances for receivables, inventories, and other provisions.

Companies correct errors by making proper entries in the accounts and reporting the corrections in the financial statements. Corrections of errors are treated as **prior period adjustments**, similar to changes in accounting principles. Companies record a correction of an error in the year in which it is discovered. They report the error in the financial statements as an adjustment to the beginning balance of retained earnings. If a company prepares comparative financial statements, it should restate the prior statements for the effects of the error.

To illustrate, in 2021, Hillsboro Co. determined that it incorrectly overstated its accounts receivable and sales revenue by \$100,000 in 2020. In 2021, Hillsboro makes the following entry to correct for this error (ignore income taxes).

| | | |
|---------------------|---------|---------|
| Retained Earnings | 100,000 | |
| Accounts Receivable | | 100,000 |

Beginning retained earnings is debited in 2021 because sales revenue, and therefore net income, was overstated in 2020 (hence, Retained Earnings was overstated). Accounts Receivable is credited to reduce this overstated balance to the correct amount.

Summary

The impact of changes in accounting principle and error corrections are debited or credited directly to retained earnings for the amounts related to prior periods. **Illustration 4.18**

ILLUSTRATION 4.18 Summary of Accounting Changes and Errors

| Type of Situation | Criteria | Examples | Placement on Income Statement |
|---------------------------------|---|--|---|
| Changes in accounting principle | Change from one generally accepted accounting principle to another. | Change in the basis of inventory pricing from FIFO to average-cost. | Recast prior years' income statement on the same basis as the newly adopted principle. (Shown net of tax.) |
| Changes in estimates | Normal, recurring corrections and adjustments. | Changes in the realizability of receivables and inventories; changes in estimated lives of equipment, intangible assets; changes in estimated liability for warranty costs, income taxes, and salary payments. | Show change only in the affected accounts in current and future periods. (Not shown net of tax.) |
| Corrections of errors | Mistake, misuse of facts. | Error in reporting income and expenses. | Treat as prior period adjustment; restate prior years' income statements to correct for error. (Shown net of tax.) |

summarizes the basic concepts related to these two items, as well as the accounting and reporting for changes in estimates. Although simplified, the chart provides a useful framework for determining the treatment of special items affecting the income statement.

Related Stockholders' Equity Statements

LEARNING OBJECTIVE 5

Describe related stockholders' equity statements.

Retained Earnings Statement

Net income increases retained earnings. A net loss decreases retained earnings. Both cash dividends and stock dividends decrease retained earnings. Changes in accounting principles (generally) and prior period adjustments may increase or decrease retained earnings. Companies charge or credit these adjustments (net of tax) to the opening balance of retained earnings. This excludes the adjustments from the determination of net income for the current period.

Companies may show retained earnings information in different ways. For example, some companies prepare a separate retained earnings statement, as **Illustration 4.19** shows.

| Stricker Inc. | | |
|---|----------------|--------------------|
| Retained Earnings Statement | | |
| For the Year Ended December 31, 2020 | | |
| Retained earnings, January 1, as reported | | \$1,050,000 |
| Correction for understatement of net income in prior period (net of tax) (inventory error) | | <u>50,000</u> |
| Retained earnings, January 1, as adjusted | | 1,100,000 |
| Add: Net income | | <u>360,000</u> |
| | | 1,460,000 |
| Less: Cash dividends | \$100,000 | |
| Stock dividends | <u>200,000</u> | <u>300,000</u> |
| Retained earnings, December 31 | | <u>\$1,160,000</u> |

ILLUSTRATION 4.19

Retained Earnings Statement

The reconciliation of the beginning to the ending balance in retained earnings provides information about why retained earnings increased or decreased during the year.¹⁷ The association of dividend distributions with net income for the period indicates what management is doing with earnings: It may be “plowing back” into the business part or all of the earnings, distributing all current income, or distributing current income plus the accumulated earnings of prior years.

Restrictions of Retained Earnings

Companies often restrict retained earnings to comply with contractual requirements, board of directors' policy, or current necessity. Generally, companies disclose in the notes to the financial statements the amounts of restricted retained earnings. In some cases, companies transfer the amount of retained earnings restricted to an account titled **Appropriated Retained Earnings**.

¹⁷*Accounting Trends and Techniques* indicates that most companies (490 of 500 surveyed) present changes in retained earnings either within the statement of stockholders' equity (486 firms) or in a separate statement of retained earnings (4 firms). Only 1 of the 500 companies prepares a combined statement of income and retained earnings.

The retained earnings section may therefore report two separate amounts—(1) retained earnings free (unrestricted) and (2) retained earnings appropriated (restricted). The total of these two amounts equals the total retained earnings.

Comprehensive Income

Companies generally include in net income all revenues, expenses, gains, and losses recognized during the period. These items are classified within the income statement so that financial statement readers can better understand the significance of various components of net income. Changes in accounting principles and corrections of errors are excluded from the calculation of net income because their effects relate to prior periods.

In recent years, the use of fair values for measuring assets and liabilities has increased. As a result, reporting of gains and losses related to changes in fair value have placed a strain on income reporting. Because fair values are continually changing, some argue that recognizing these gains and losses in net income is misleading. The FASB agrees and has identified a limited number of transactions that should be recorded in other comprehensive income. The aggregate amount of the other comprehensive income item is reported in stockholders' equity as Accumulated Other Comprehensive Income. One example is unrealized gains and losses on available-for-sale debt investments.¹⁸ These gains and losses are excluded from net income, thereby reducing volatility in net income due to fluctuations in fair value. At the same time, disclosure of the potential gain or loss is provided.

Companies include these items that bypass the income statement in a measure called comprehensive income. **Comprehensive income** includes all changes in equity during a period *except* those resulting from investments by owners and distributions to owners. Comprehensive income, therefore, includes the following: all revenues and gains, expenses and losses reported in net income, and all gains and losses that bypass net income but affect stockholders' equity. These items—non-owner changes in equity that bypass the income statement—are referred to as **other comprehensive income**.

Companies must display the components of other comprehensive income in one of two ways: (1) a single continuous statement (**one statement approach**) or (2) two separate, but consecutive statements of net income and other comprehensive income (**two statement approach**) (see **Global View**). The one statement approach is often referred to as the statement of comprehensive income. The two statement approach uses the traditional term income statement for the first statement and the comprehensive income statement for the second statement. [8]

Under either approach, companies display each component of net income and each component of other comprehensive income. In addition, net income and comprehensive income are reported. Companies are not required to report earnings per share information related to comprehensive income.¹⁹

We illustrate these two alternatives in the next two sections. In each case, assume that V. Gill Inc. reports the following information for 2020: sales revenue \$800,000, cost of goods sold \$600,000, operating expenses \$90,000, and an unrealized holding gain on available-for-sale debt investments of \$30,000, net of tax.

One Statement Approach

In this approach, the traditional net income is a subtotal, with total comprehensive income shown as a final total. The combined statement has the advantage of not requiring the

¹⁸We further discuss available-for-sale debt investments in Chapter 17. Additional examples of other comprehensive items are translation gains and losses on foreign currency, unrealized gains and losses on certain hedging transactions, and adjustments related to pensions. Corrections of errors and changes in accounting principles are not considered other comprehensive income items.

¹⁹A company must display the components of other comprehensive income either (1) net of related tax effects, or (2) before related tax effects, with one amount shown for the aggregate amount of tax related to the total amount of other comprehensive income. Both alternatives must show each component of other comprehensive income, net of related taxes either in the face of the statement or in the notes. *Accounting Trends and Techniques* indicates that 89 of 490 surveyed companies report tax effects in the notes.

Global View

GAAP and IFRS are now converged with respect to comprehensive income reporting.

creation of a new financial statement. However, burying net income as a sub-total on the statement is a disadvantage. **Illustration 4.20** shows the one statement format for V. Gill.

| V. Gill Inc. Statement of Comprehensive Income For the Year Ended December 31, 2020 | |
|---|-------------------------|
| Sales revenue | \$800,000 |
| Cost of goods sold | <u>600,000</u> |
| Gross profit | 200,000 |
| Operating expenses | <u>90,000</u> |
| Net income | 110,000 |
| Other comprehensive income | |
| Unrealized holding gain, net of tax | <u>30,000</u> |
| Comprehensive income | <u><u>\$140,000</u></u> |

ILLUSTRATION 4.20

**One Statement Format:
Comprehensive Income**

Two Statement Approach

Illustration 4.21 shows the two statement format for V. Gill. Reporting comprehensive income in a separate statement indicates that the gains and losses identified as other comprehensive income have the same status as traditional gains and losses.

| V. Gill Inc. Income Statement For the Year Ended December 31, 2020 | |
|--|-------------------------|
| Sales revenue | \$800,000 |
| Cost of goods sold | <u>600,000</u> |
| Gross profit | 200,000 |
| Operating expenses | <u>90,000</u> |
| Net income | <u><u>\$110,000</u></u> |

| V. Gill Inc. Comprehensive Income Statement For the Year Ended December 31, 2020 | |
|--|-------------------------|
| Net income | \$110,000 |
| Other comprehensive income | |
| Unrealized holding gain, net of tax | <u>30,000</u> |
| Comprehensive income | <u><u>\$140,000</u></u> |

ILLUSTRATION 4.21

**Two Statement Format:
Comprehensive Income**

Statement of Stockholders' Equity

In addition to a comprehensive income statement, companies also present a **statement of stockholders' equity** (often referred to as statement of changes in stockholders' equity). This statement reports the changes in each stockholders' equity account and in total stockholders' equity during the year. Companies often prepare **in columnar form** the statement of stockholders' equity. In this format, they use columns for each account and for total stockholders' equity. Stockholders' equity is generally comprised of contributed capital (common and preferred stock and additional paid-in capital), retained earnings, and the accumulated balances in other comprehensive income. The statement reports the change in each stockholders' equity account and in total stockholders' equity for the period. The following items are disclosed in this statement.

1. Contributions (issuances of shares) and distributions (dividends) to owners.
2. Reconciliation of the carrying amount of each component of stockholders' equity from the beginning to the end of the period.

To illustrate, assume the same information for V. Gill. The company has the following stockholders' equity account balances at the beginning of 2020: Common Stock \$300,000, Retained Earnings \$50,000, and Accumulated Other Comprehensive Income \$60,000. No changes in the Common Stock account occurred during the year. **Illustration 4.22** shows a statement of stockholders' equity for V. Gill.

ILLUSTRATION 4.22**Presentation of Comprehensive Income in Stockholders' Equity Statement**

| V. Gill Inc. Statement of Stockholders' Equity For the Year Ended December 31, 2020 | | | | |
|---|------------------|----------------------|---|------------------|
| | Total | Retained Earnings | Accumulated Other Comprehensive Income | Common Stock |
| Beginning balance | \$410,000 | \$ 50,000 | \$60,000 | \$300,000 |
| Net income | 110,000 | 110,000 | | |
| Other comprehensive income | | | | |
| Unrealized holding gain, net of tax | 30,000 | | 30,000 | |
| Ending balance | <u>\$550,000</u> | <u>\$160,000</u> | <u>\$90,000</u> | <u>\$300,000</u> |

Balance Sheet Presentation

Regardless of reporting in one statement or two, V. Gill reports **accumulated other comprehensive income** of \$90,000 in the stockholders' equity section of the balance sheet as shown in **Illustration 4.23**.

ILLUSTRATION 4.23**Presentation of Accumulated Other Comprehensive Income in the Balance Sheet**

| V. Gill Inc. Balance Sheet As of December 31, 2020 (Stockholders' Equity Section) | |
|--|------------------|
| Stockholders' equity | |
| Common stock | \$300,000 |
| Retained earnings | 160,000 |
| Accumulated other comprehensive income | <u>90,000</u> |
| Total stockholders' equity | <u>\$550,000</u> |

By providing information on the components of comprehensive income, as well as accumulated other comprehensive income, the company communicates information about all changes in net assets. With this information, users will better understand the quality of the company's earnings.

Evolving Issue Income Reporting

As indicated in the chapter, information reported in the income statement is important to meeting the objective of financial reporting. However, there is debate over income reporting practices, be it the controversy over non-GAAP reporting or whether to report comprehensive income in a one statement or a two statement format. In response to these debates the FASB is working on a project to improve the usefulness of the income statement.

Based in part on research on non-GAAP reporting (as discussed in the opening story), the project—Financial Performance Reporting—Disaggregation of Performance Information—has

the goal to improve the decision-usefulness of the income statement through the disaggregation of performance information. While the FASB considered improving the structure of the income (performance) statement by developing an improved operating income measure, it instead decided to prioritize its efforts on the disaggregation of income (performance) information.

Likely areas of emphasis will be on understanding the activities reflected in lines on the income statement, such as the cost of revenue (cost of goods sold) or fulfillment of performance obligations and activities associated with marketing, selling, and general

and administrative expenses. The FASB is performing outreach to understand the following issues:

1. If, and how, companies review the components of the lines that represent the cost of revenue and selling, general, and administrative expenses for internal reporting purposes.
2. On what level the accounting information systems track the components.
3. How the components are rolled up into consolidated lines.

Once data is collected on these issues, the project will focus on (1) identifying the lines to be disaggregated and then (2) determining how the lines would be disaggregated. A likely approach would be to base disaggregation on the way a company internally reviews the components and the accounting system information that maps and allocates the components into those lines—a “management approach,” as used in segment reporting. You can follow progress of the performance reporting project at the FASB website (click Projects and then Technical Agenda).

Learning Objectives Review

1 Identify the uses and limitations of an income statement.

The **income statement is useful** because it provides investors and creditors with information that helps them predict the amounts, timing, and uncertainty of future cash flows. Also, the income statement helps users determine the risk (level of uncertainty) of not achieving particular cash flows. The **limitations of an income statement** are as follows. (1) The statement does not include many items that contribute to general growth and well-being of a company. (2) Income numbers are often affected by the accounting methods used. (3) Income measures are subject to estimates.

The *transaction approach* focuses on the activities that occurred during a given period. Instead of presenting only a net change in net assets, it discloses the components of the change. The transaction approach to income measurement requires the use of revenue, expense, loss, and gain accounts.

2 Describe the content and format of the income statement.

The **major elements of the income statement** are as follows.

1. **Revenues:** Inflows or other enhancements of assets of an entity or settlements of its liabilities during a period from

delivering or producing goods, rendering services, or other activities that constitute the entity's ongoing major or central operations.

2. **Expenses:** Outflows or other using-up of assets or incurrences of liabilities during a period from delivering or producing goods, rendering services, or carrying out other activities that constitute the entity's ongoing major or central operations.
3. **Gains:** Increases in equity (net assets) from peripheral or incidental transactions of an entity except those that result from revenues or investments by owners.
4. **Losses:** Decreases in equity (net assets) from peripheral or incidental transactions of an entity except those that result from expenses or distributions to owners.

In a **single-step income statement**, just two groupings exist: revenues and expenses. Expenses are deducted from revenues to arrive at net income or loss—a single subtraction. Frequently, companies report income tax separately as the last item before net income.

A **multiple-step income statement** shows two further classifications: (1) a separation of operating results from those obtained through the nonoperating activities of the company, and (2) a classification of expenses by functions, such as merchandising or manufacturing, selling, and administration.

3 Discuss how to report various income items.

Companies generally include unusual or infrequent gains or losses or both or non-recurring items in the income statement as follows. (1) Other items of a material amount that are of an unusual or infrequent nature or both are separately disclosed as a component of continuing operations. (2) Discontinued operations are classified as a separate item, after income from continuing operations. (3) If a company holds a noncontrolling interest in a subsidiary company, it must present an allocation of net income or loss that is attributable to the noncontrolling interest.

Companies must disclose **earnings per share** on the face of the income statement. If the company has a discontinued item, it must also report income from continuing operations, discontinued operations, and net income on a per share basis.

4 Explain the reporting of accounting changes and errors.

Changes in accounting principles and corrections of errors are adjusted through retained earnings. Changes in estimates are a normal part of the accounting process. The effects of these changes are handled

prospectively, with the effects recorded in income in the period of change and in future periods without adjustment to retained earnings.

5 Describe related stockholders' equity statements.

The **retained earnings statement** should disclose net income (loss), dividends, adjustments due to changes in accounting principles, error corrections, and restrictions of retained earnings.

Companies report the components of **other comprehensive income** in one of two ways: (1) a single statement of comprehensive income (one statement format) or (2) in a second statement (two statement format).

Companies also present a **statement of stockholders' equity**. This statement reports the change in each stockholders' equity account (including Accumulated Other Comprehensive Income) and in total stockholders' equity for the period.

Enhanced Review and Practice

Go online for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Practice Problem

Presented below are 11 income statement items from Braun Company for the year ended December 31, 2020.

| | |
|---|-------------|
| Sales revenue | \$2,700,000 |
| Cost of goods sold | 1,150,000 |
| Interest revenue | 15,000 |
| Loss from abandonment of plant assets | 45,000 |
| Gain from extinguishment of debt | 28,000 |
| Selling expenses | 290,000 |
| Administrative expenses | 190,000 |
| Effect of change in estimated useful lives of fixed assets (included in administrative expenses) | 35,000 |
| Loss from earthquake | 30,000 |
| Gain on disposal of discontinued operation | 50,000 |

Instructions

- Using the information above, prepare a condensed multiple-step income statement. Assume a tax rate of 30% and 100,000 shares of common stock outstanding during 2020.
- Compute comprehensive income for Braun in 2020, assuming Braun had an unrealized holding loss on an available-for-sale debt investment, net of tax, \$12,000.

Solution

a.

Braun Company
Income Statement
For the Year Ended December 31, 2020

| | | |
|-------------------------|-----------|-------------|
| Sales revenue | | \$2,700,000 |
| Cost of goods sold | | 1,150,000 |
| Gross profit | | 1,550,000 |
| Selling expenses | \$290,000 | 480,000 |
| Administrative expenses | 190,000 | 1,070,000 |
| Income from operations | | 1,070,000 |

(continued)

| | | |
|--|--------|------------|
| Other revenues and gains | | |
| Interest revenue | 15,000 | |
| Gain on debt extinguishment | 28,000 | 43,000 |
| | | <hr/> |
| Other expenses and losses | | |
| Loss from plant abandonment | 45,000 | |
| Loss from earthquake | 30,000 | 75,000 |
| | | <hr/> |
| Income before income tax | | 1,038,000 |

Exercises, Problems, Problem Solution Walkthrough Videos, and many more assessment tools and resources are available for practice in WileyPLUS.

Questions

- What kinds of questions about future cash flows do investors and creditors attempt to answer with information in the income statement?
- How can information based on past transactions be used to predict future cash flows?
- Identify at least two situations in which important changes in value are not reported in the income statement.
- Identify at least two situations in which application of different accounting methods or accounting estimates results in difficulties in comparing companies.
- Explain the transaction approach to measuring income. Why is the transaction approach to income measurement preferable to other ways of measuring income?
- What is earnings management?
- How can earnings management affect the quality of earnings?
- Why should caution be exercised in the use of the net income figure derived in an income statement? What are the objectives of generally accepted accounting principles in their application to the income statement?
- A *Wall Street Journal* article noted that **Apple** reported higher income than its competitors by using a more aggressive policy for recognizing revenue on future upgrades to its products. Some contend that Apple's quality of earnings is low. What does the term "quality of earnings" mean?
- What is the major distinction (a) between revenues and gains and (b) between expenses and losses?
- What are the advantages and disadvantages of the single-step income statement?
- What is the basis for distinguishing between operating and non-operating items?
- Distinguish between the modified all-inclusive income statement and the current operating performance income statement. According to present generally accepted accounting principles, which is recommended? Explain.
- How should correction of errors be reported in the financial statements?
- Discuss the appropriate treatment in the financial statements of each of the following.
 - Gain on sale of investment securities.
 - A profit-sharing bonus to employees computed as a percentage of net income.

- c. Additional depreciation on factory machinery because of an error in computing depreciation for the previous year.
- d. Rent received from subletting a portion of the office space.
- e. A patent infringement suit, brought 2 years ago against the company by another company, was settled this year by a cash payment of \$725,000.
- f. A reduction in the Allowance for Doubtful Accounts balance because the account appears to be considerably in excess of the probable loss from uncollectible receivables.
16. Indicate where the following items would ordinarily appear on the financial statements of Boleyn, Inc. for the year 2020.
- a. The service life of certain equipment was changed from 8 to 5 years. If a 5-year life had been used previously, additional depreciation of \$425,000 would have been charged.
- b. In 2020, a flood destroyed a warehouse that had a book value of \$1,600,000. Floods are rare in this locality.
- c. In 2020, the company wrote off \$1,000,000 of inventory that was considered obsolete.
- d. In 2017, a supply warehouse with an expected useful life of 7 years was erroneously expensed.
- e. Boleyn, Inc. changed from weighted-average to FIFO inventory pricing.
17. Indicate the section of a multiple-step income statement in which each of the following is shown.
- a. Loss on inventory write-down.
- b. Loss from strike.
- c. Bad debt expense.
- d. Loss on disposal of a discontinued operation.
- e. Gain on sale of machinery.
- f. Interest revenue.
- g. Depreciation expense.
- h. Material write-offs of notes receivable.
18. Perlman Land Development, Inc. purchased land for \$70,000 and spent \$30,000 developing it. It then sold the land for \$160,000. Sheehan Manufacturing purchased land for a future plant site for \$100,000. Due to a change in plans, Sheehan later sold the land for \$160,000. Should these two companies report the land sales, both at gains of \$60,000, in a similar manner?
19. You run into Greg Norman at a party and begin discussing financial statements. Greg says, "I prefer the single-step income statement because the multiple-step format generally overstates income." How should you respond to Greg?
20. Santo Corporation has eight expense accounts in its general ledger which could be classified as selling expenses. Should Santo report these eight expenses separately in its income statement or simply report one total amount for selling expenses?
21. Cooper Investments reported an unusual gain from the sale of certain assets in its 2020 income statement. How does intraperiod tax allocation affect the reporting of this unusual gain?
22. Discuss the appropriate treatment in the income statement for the following items:
- a. Loss on discontinued operations.
- b. Noncontrolling interest allocation.
- c. Earnings per share.
- d. Gain on sale of equipment.
23. Lebron Co. owns most but not all of the shares of its subsidiary Bryant Inc. Lebron reported net income of \$124,700. The amount to

be attributed to the noncontrolling interest in Bryant is \$30,000. Indicate how Lebron will report the noncontrolling interest in its income statement.

24. What effect does intraperiod tax allocation have on reported net income?

25. Neumann Company computed earnings per share as follows.

| | |
|---------------------------------------|--|
| Net income | |
| Common shares outstanding at year-end | |

Neumann has a simple capital structure. What possible errors might the company have made in the computation? Explain.

26. Qualls Corporation reported 2020 earnings per share of \$7.21. In 2021, Qualls reported earnings per share as follows.

| | |
|--------------------------------------|---------------|
| On income from continuing operations | \$6.40 |
| On discontinued operations | <u>1.88</u> |
| On net income | <u>\$8.28</u> |

Is the increase in earnings per share from \$7.21 to \$8.28 a favorable trend?

27. What is meant by "tax allocation within a period"? What is the justification for such practice?

28. When does tax allocation within a period become necessary? How should this allocation be handled?

29. During 2020, Liselotte Company reported income of \$1,500,000 before income taxes and realized a gain of \$450,000 on the disposal of assets related to a discontinued operation. The criteria for classification as a discontinued operation is appropriate for this sale. The income is subject to income taxation at the rate of 34%. The gain on the sale of the plant is taxed at 30%. Indicate an appropriate presentation of these items in the income statement.

30. On January 30, 2019, a suit was filed against Frazier Corporation under the Environmental Protection Act. On August 6, 2020, Frazier Corporation agreed to settle the action and pay \$920,000 in damages to certain current and former employees. How should this settlement be reported in the 2020 financial statements? Discuss.

31. Linus Paper Company decided to close two small pulp mills in Conway, New Hampshire, and Corvallis, Oregon. These two closings do not represent a major shift in strategy for the company. Would these closings be reported in a separate section entitled "Discontinued operations after income from continuing operations"? Discuss.

32. What major types of items are reported in the retained earnings statement?

33. Generally accepted accounting principles usually require the use of accrual accounting to "fairly present" income. If the cash receipts and disbursements method of accounting will "clearly reflect" taxable income, why does this method not usually also "fairly present" income?

34. State some of the more serious problems encountered in seeking to achieve the ideal measurement of periodic net income. Explain what accountants do as a practical alternative.

35. What is meant by the terms *elements* and *items* as they relate to the income statement? Why might items have to be disclosed in the income statement?

36. What are the two ways that other comprehensive income may be displayed (reported)?

37. How should the disposal of a component of a business be disclosed in the income statement?

Brief Exercises

BE4.1 (LO 2) Starr Co. had sales revenue of \$540,000 in 2020. Other items recorded during the year were:

| | |
|---|-----------|
| Cost of goods sold | \$330,000 |
| Salaries and wages expense | 120,000 |
| Income tax expense | 25,000 |
| Increase in value of company reputation | 15,000 |
| Other operating expenses | 10,000 |
| Unrealized gain on value of patents | 20,000 |

Prepare a single-step income statement for Starr for 2020. Starr has 100,000 shares of stock outstanding.

BE4.2 (LO 2) Brisky Corporation had net sales of \$2,400,000 and interest revenue of \$31,000 during 2020. Expenses for 2020 were cost of goods sold \$1,450,000, administrative expenses \$212,000, selling expenses \$280,000, and interest expense \$45,000. Brisky's tax rate is 30%. The corporation had 100,000 shares of common stock authorized and 70,000 shares issued and outstanding during 2020. Prepare a single-step income statement for the year ended December 31, 2020.

BE4.3 (LO 2) Using the information provided in BE4.2, prepare a condensed multiple-step income statement for Brisky Corporation.

BE4.4 (LO 2, 3) Finley Corporation had income from continuing operations of \$10,600,000 in 2020. During 2020, it disposed of its restaurant division at an after-tax loss of \$189,000. Prior to disposal, the division operated at a loss of \$315,000 (net of tax) in 2020 (assume that the disposal of the restaurant division meets the criteria for recognition as a discontinued operation). Finley had 10,000,000 shares of common stock outstanding during 2020. Prepare a partial income statement for Finley beginning with income from continuing operations.

BE4.5 (LO 2, 3) Stacy Corporation had income from operations of \$7,200,000. In addition, it suffered an unusual and infrequent pretax loss of \$770,000 from a volcano eruption, interest revenue of \$17,000, and a write-down on buildings of \$53,000. The corporation's tax rate is 30%. Prepare a partial income statement for Stacy beginning with Income from operations. The corporation had 5,000,000 shares of common stock outstanding during 2020.

BE4.6 (LO 4) During 2020, Williamson Company changed from FIFO to weighted-average inventory pricing. Pretax income in 2019 and 2018 (Williamson's first year of operations) under FIFO was \$160,000 and \$180,000, respectively. Pretax income using weighted-average pricing in the prior years would have been \$145,000 in 2019 and \$170,000 in 2018. In 2020, Williamson reported pretax income (using weighted-average pricing) of \$180,000. Show comparative income statements for Williamson, beginning with "Income before income tax," as presented on the 2020 income statement. (The tax rate in all years is 30%.)

BE4.7 (LO 4) Vandross Company has recorded bad debt expense in the past at a rate of 1½% of accounts receivable, based on an aging analysis. In 2020, Vandross decides to increase its estimate to 2%. If the new rate had been used in prior years, cumulative bad debt expense would have been \$380,000 instead of \$285,000. In 2020, bad debt expense will be \$120,000 instead of \$90,000. If Vandross's tax rate is 30%, what amount should it report as the cumulative effect of changing the estimated bad debt rate?

BE4.8 (LO 3) In 2020, Hollis Corporation reported net income of \$1,000,000. It declared and paid preferred stock dividends of \$250,000. During 2020, Hollis had a weighted average of 190,000 common shares outstanding. Compute Hollis's 2020 earnings per share.

BE4.9 (LO 5) Portman Corporation has retained earnings of \$675,000 at January 1, 2020. Net income during 2020 was \$1,400,000, and cash dividends declared and paid during 2020 totaled \$75,000. Prepare a retained earnings statement for the year ended December 31, 2020.

BE4.10 (LO 4, 5) Using the information from BE4.9, prepare a retained earnings statement for the year ended December 31, 2020. Assume an error was discovered: land costing \$80,000 (net of tax) was charged to maintenance and repairs expense in 2020.

BE4.11 (LO 5) On January 1, 2020, Richards Inc. had cash and common stock of \$60,000. At that date, the company had no other asset, liability, or equity balances. On January 2, 2020, it purchased for cash \$20,000 of debt securities that it classified as available-for-sale. It received interest of \$3,000 during the year on these securities. In addition, it has an unrealized holding gain on these securities of \$4,000 net of tax. Determine the following amounts for 2020: (a) net income, (b) comprehensive income, (c) other comprehensive income, and (d) accumulated other comprehensive income (end of 2020).

Exercises

E4.1 (LO 2) (Computation of Net Income) Presented below are changes in all the account balances of Fritz Mayhew Furniture Co. during the current year, except for retained earnings.

| | Increase (Decrease) | | Increase (Decrease) |
|---------------------------|------------------------|---|------------------------|
| Cash | \$ 79,000 | Accounts Payable | \$ (51,000) |
| Accounts Receivable (net) | 45,000 | Bonds Payable | 82,000 |
| Inventory | 127,000 | Common Stock | 125,000 |
| Investments | (47,000) | Paid-In Capital in Excess of Par— Common Stock | 13,000 |

Instructions

Compute the net income for the current year, assuming that there were no entries in the Retained Earnings account except for net income and a dividend declaration of \$19,000 which was paid in the current year.

E4.2 (LO 2, 3) (Compute Income Measures) Presented below is information related to Viel Company at December 31, 2020, the end of its first year of operations.

| | |
|--|-----------|
| Sales revenue | \$310,000 |
| Cost of goods sold | 140,000 |
| Selling and administrative expenses | 50,000 |
| Gain on sale of plant assets | 30,000 |
| Unrealized gain on available-for-sale debt investments | 10,000 |
| Interest expense | 6,000 |
| Loss on discontinued operations | 12,000 |
| Dividends declared and paid | 5,000 |

Instructions

Compute the following: (a) income from operations, (b) net income, (c) comprehensive income, and (d) retained earnings balance at December 31, 2020. (Ignore income tax effects.)

E4.3 (LO 2, 3) (Income Statement Items) Presented below are certain account balances of Paczki Products Co.

| | | | |
|---------------------------------------|----------|-------------------------|----------|
| Rent revenue | \$ 6,500 | Sales discounts | \$ 7,800 |
| Interest expense | 12,700 | Selling expenses | 99,400 |
| Beginning retained earnings | 114,400 | Sales revenue | 390,000 |
| Ending retained earnings | 125,000 | Income tax expense | 31,000 |
| Dividend revenue | 71,000 | Cost of goods sold | 184,400 |
| Sales returns and allowances | 12,400 | Administrative expenses | 82,500 |
| Allocation to noncontrolling interest | 17,000 | | |

Instructions

From the foregoing, compute the following: (a) total net revenue, (b) net income, and (c) income attributable to controlling stockholders.

E4.4 (LO 2) (Single-Step Income Statement) The financial records of LeRoi Jones Inc. were destroyed by fire at the end of 2020. Fortunately, the controller had kept certain statistical data related to the income statement as follows.

- The beginning merchandise inventory was \$92,000 and decreased 20% during the current year.
- Sales discounts amount to \$17,000.
- 20,000 shares of common stock were outstanding for the entire year.
- Interest expense was \$20,000.
- The income tax rate is 30%.
- Cost of goods sold amounts to \$500,000.
- Administrative expenses are 20% of cost of goods sold but only 8% of gross sales.
- Four-fifths of the operating expenses relate to sales activities.

Instructions

From the foregoing information prepare an income statement for the year 2020 in single-step form.

E4.5 (LO 2) Excel (Multiple-Step and Single-Step Statements) Two accountants for the firm of Elwes and Wright are arguing about the merits of presenting an income statement in a multiple-step versus a single-step format. The discussion involves the following 2020 information related to P. Bride Company (\$000 omitted).

| | |
|--|----------|
| Administrative expense | |
| Officers' salaries | \$ 4,900 |
| Depreciation of office furniture and equipment | 3,960 |
| Cost of goods sold | 60,570 |
| Rent revenue | 17,230 |
| Selling expense | |
| Delivery expense | 2,690 |
| Sales commissions | 7,980 |
| Depreciation of sales equipment | 6,480 |
| Sales revenue | 96,500 |
| Income tax | 9,070 |
| Interest expense | 1,860 |

Instructions

- Prepare an income statement for the year 2020 using the multiple-step form. Common shares outstanding for 2020 total 40,550 (000 omitted).
- Prepare an income statement for the year 2020 using the single-step form.
- Which one do you prefer? Discuss.

E4.6 (LO 2, 3) (Multiple-Step Statement) The following balances were taken from the books of Alonzo Corp. on December 31, 2020.

| | | | |
|---------------------------------|-----------|-------------------------------------|-----------|
| Interest revenue | \$ 86,000 | Accumulated depreciation—equipment | \$ 40,000 |
| Cash | 51,000 | Accumulated depreciation—buildings | 28,000 |
| Sales revenue | 1,380,000 | Notes receivable | 155,000 |
| Accounts receivable | 150,000 | Selling expenses | 194,000 |
| Prepaid insurance | 20,000 | Accounts payable | 170,000 |
| Sales returns and allowances | 150,000 | Bonds payable | 100,000 |
| Allowance for doubtful accounts | 7,000 | Administrative and general expenses | 97,000 |
| Sales discounts | 45,000 | Accrued liabilities | 32,000 |
| Land | 100,000 | Interest expense | 60,000 |
| Equipment | 200,000 | Notes payable | 100,000 |
| Buildings | 140,000 | Loss from earthquake damage | 150,000 |
| Cost of goods sold | 621,000 | Common stock | 500,000 |
| | | Retained earnings | 21,000 |

Assume the total effective tax rate on all items is 20%.

Instructions

Prepare a multiple-step income statement; 100,000 shares of common stock were outstanding during the year.

E4.7 (LO 2, 3) (Multiple-Step and Single-Step Statements) The accountant of Latifa Shoe Co. has piled the following information from the company's records as a basis for an income statement for the year ended December 31, 2020.

| | |
|--|-----------|
| Rent revenue | \$ 29,000 |
| Interest expense | 18,000 |
| Market appreciation on land above cost | 31,000 |
| Salaries and wages expense (selling) | 114,800 |
| Supplies (selling) | 17,600 |
| Income tax | 23,100 |
| Salaries and wages expense (administrative) | 135,900 |
| Other administrative expenses | 51,700 |
| Cost of goods sold | 496,000 |
| Net sales | 980,000 |
| Depreciation on plant assets (70% selling, 30% administrative) | 65,000 |
| Cash dividends declared | 16,000 |

There were 20,000 shares of common stock outstanding during the year.

Instructions

- Prepare a multiple-step income statement.
- Prepare a single-step income statement.
- Which format do you prefer? Discuss.

E4.8 (LO 2, 3) (Income Statement, EPS) Presented below are selected ledger accounts of Tucker Corporation as of December 31, 2020.

| | |
|--|-----------|
| Cash | \$ 50,000 |
| Administrative expenses | 100,000 |
| Selling expenses | 80,000 |
| Net sales | 540,000 |
| Cost of goods sold | 210,000 |
| Cash dividends declared (2020) | 20,000 |
| Cash dividends paid (2020) | 15,000 |
| Discontinued operations (loss before income taxes) | 40,000 |
| Depreciation expense, not recorded in 2019 | 30,000 |
| Retained earnings, December 31, 2019 | 90,000 |
| Effective tax rate 20% | |

Instructions

- Compute net income for 2020.
- Prepare a partial income statement beginning with income from continuing operations before income tax, and including appropriate earnings per share information. Assume 10,000 shares of common stock were outstanding during 2020.

E4.9 (LO 2, 3, 5) (Multiple-Step Statement with Retained Earnings Statement) Presented below is information related to Ivan Calderon Corp. for the year 2020.

| | | | |
|-------------------------|-------------|--|-----------|
| Net sales | \$1,300,000 | Write-off of inventory due to obsolescence | \$ 80,000 |
| Cost of goods sold | 780,000 | Depreciation expense omitted by accident in 2019 | 55,000 |
| Selling expenses | 65,000 | Casualty loss | 50,000 |
| Administrative expenses | 48,000 | Cash dividends declared | 45,000 |
| Dividend revenue | 20,000 | Retained earnings at December 31, 2019 | 980,000 |
| Interest revenue | 7,000 | Effective tax rate of 20% on all items | |

Instructions

- Prepare a multiple-step income statement for 2020. Assume that 60,000 shares of common stock are outstanding for the entire year.
- Prepare a separate retained earnings statement for 2020.

E4.10 (LO 3) (Earnings per Share) The stockholders' equity section of Hendly Corporation appears below as of December 31, 2020.

| | |
|---|----------------------|
| 8% preferred stock, \$50 par value, authorized 100,000 shares, outstanding 90,000 shares | \$ 4,500,000 |
| Common stock, \$1.00 par, authorized and issued 10 million shares | 10,000,000 |
| Additional paid-in capital | 20,500,000 |
| Retained earnings (includes 2020 net income of \$33,000,000) | 167,000,000 |
| Net income | <u>\$202,000,000</u> |

Net income for 2020 reflects a total effective tax rate of 20%. Included in the net income figure is a loss of \$18,000,000 (before tax) as a result of a non-recurring major casualty. Preferred stock dividends of \$360,000 were declared and paid in 2020. Dividends of \$1,000,000 were declared and paid to common stockholders in 2020.

Instructions

Compute earnings per share data as it should appear on the income statement of Hendly Corporation.

E4.11 (LO 2, 3) (Condensed Income Statement—Periodic Inventory Method) The following are selected ledger accounts of Spock Corporation at December 31, 2020.

| | | | |
|-------------------------------|------------|--|-----------|
| Cash | \$ 185,000 | Salaries and wages expense (sales) | \$284,000 |
| Inventory | 535,000 | Salaries and wages expense (office) | 346,000 |
| Sales revenue | 4,275,000 | Purchase returns | 15,000 |
| Unearned sales revenue | 117,000 | Sales returns and allowances | 79,000 |
| Purchases | 2,786,000 | Freight-in | 72,000 |
| Sales discounts | 34,000 | Accounts receivable | 142,500 |
| Purchase discounts | 27,000 | Sales commissions | 83,000 |
| Selling expenses | 69,000 | Telephone and Internet expense (sales) | 17,000 |
| Accounting and legal services | 33,000 | Utilities expense (office) | 32,000 |
| Insurance expense (office) | 24,000 | Miscellaneous office expenses | 8,000 |
| Advertising expense | 54,000 | Rent revenue | 240,000 |

| | | | |
|---|-----------|----------------------------|-----------|
| Delivery expense | \$ 93,000 | Casualty loss (before tax) | \$ 70,000 |
| Depreciation expense (office equipment) | 48,000 | Interest expense | 176,000 |
| Depreciation expense (sales equipment) | 36,000 | Common stock (\$10 par) | 900,000 |

Spock's effective tax rate on all items is 20%. A physical inventory indicates that the ending inventory is \$686,000.

Instructions

Prepare a condensed 2020 income statement for Spock Corporation.

E4.12 (LO 5) Excel (Retained Earnings Statement) Eddie Zambrano Corporation began operations on January 1, 2017. During its first 3 years of operations, Zambrano reported net income and declared dividends as follows.

| | Net Income | Dividends Declared |
|------|------------|--------------------|
| 2017 | \$ 40,000 | \$ -0- |
| 2018 | 125,000 | 50,000 |
| 2019 | 160,000 | 50,000 |

The following information relates to 2020.

| | |
|---|-----------|
| Income before income tax | \$240,000 |
| Prior period adjustment: understatement of 2018 depreciation expense (before taxes) | \$ 25,000 |
| Cumulative decrease in income from change in inventory methods (before taxes) | \$ 35,000 |
| Dividends declared (of this amount, \$25,000 will be paid on Jan. 15, 2021) | \$100,000 |
| Effective tax rate | 20% |

Instructions

- Prepare a 2020 retained earnings statement for Eddie Zambrano Corporation.
- Assume Eddie Zambrano Corporation restricted retained earnings in the amount of \$70,000 on December 31, 2020. After this action, what would Zambrano report as total retained earnings in its December 31, 2020, balance sheet?

E4.13 (LO 3) (Earnings per Share) At December 31, 2019, Shiga Naoya Corporation had the following stock outstanding.

| | |
|---|--------------|
| 10% cumulative preferred stock, \$100 par, 107,500 shares | \$10,750,000 |
| Common stock, \$5 par, 4,000,000 shares | 20,000,000 |

During 2020, Shiga Naoya did not issue any additional common stock. The following also occurred during 2020.

| | |
|--|--------------|
| Income from continuing operations before taxes | \$23,650,000 |
| Discontinued operations (loss before taxes) | \$ 3,225,000 |
| Preferred dividends declared | \$ 1,075,000 |
| Common dividends declared | \$ 2,200,000 |
| Effective tax rate | 17% |

Instructions

Compute earnings per share data as it should appear in the 2020 income statement of Shiga Naoya Corporation. (Round to two decimal places.)

E4.14 (LO 4) (Change in Accounting Principle) Tim Mattke Company began operations in 2018 and for simplicity reasons, adopted weighted-average pricing for inventory. In 2020, in accordance with other companies in its industry, Mattke changed its inventory pricing to FIFO. The pretax income data is reported below.

| Year | Weighted-Average | FIFO |
|------|------------------|-----------|
| 2018 | \$370,000 | \$395,000 |
| 2019 | 390,000 | 430,000 |
| 2020 | 410,000 | 450,000 |

Instructions

- What is Mattke's net income in 2020? Assume a 20% tax rate in all years.
- Compute the cumulative effect of the change in accounting principle from weighted-average to FIFO inventory pricing.
- Show comparative income statements for Tim Mattke Company, beginning with income before income tax, as presented on the 2020 income statement.

E4.15 (LO 2, 5) (Comprehensive Income) Roxanne Carter Corporation reported the following for 2020: net sales \$1,200,000, cost of goods sold \$750,000, selling and administrative expenses \$320,000, and an unrealized holding gain on available-for-sale debt securities \$18,000.

Instructions

Prepare a statement of comprehensive income, using (a) the one statement format, and (b) the two statement format. (Ignore income taxes and earnings per share.)

E4.16 (LO 5) (Comprehensive Income) C. Reither Co. reports the following information for 2020: sales revenue \$700,000, cost of goods sold \$500,000, operating expenses \$80,000, and an unrealized holding loss on available-for-sale debt securities for 2020 of \$60,000. It declared and paid a cash dividend of \$10,000 in 2020.

C. Reither Co. has January 1, 2020, balances in common stock \$350,000; accumulated other comprehensive income \$80,000; and retained earnings \$90,000. It issued no stock during 2020.

Instructions

Prepare a statement of stockholders' equity. (Ignore income taxes.)

E4.17 (LO 2, 3, 5) (Various Reporting Formats) The following information was taken from the records of Roland Carlson Inc. for the year 2020: income tax applicable to income from continuing operations \$187,000, income tax applicable to loss on discontinued operations \$25,500, and unrealized holding gain on available-for-sale debt securities (net of tax) \$15,000.

| | | | |
|---------------------------------|-----------|-----------------------------------|------------|
| Gain on sale of equipment | \$ 95,000 | Cash dividends declared | \$ 150,000 |
| Loss on discontinued operations | 75,000 | Retained earnings January 1, 2020 | 600,000 |
| Administrative expenses | 240,000 | Cost of goods sold | 850,000 |
| Rent revenue | 40,000 | Selling expenses | 300,000 |
| Loss on write-down of inventory | 60,000 | Sales revenue | 1,900,000 |

Shares outstanding during 2020 were 100,000.

Instructions

- Prepare a single-step income statement (with respect to items in Income from operations).
- Prepare a comprehensive income statement for 2020, using the two statement format.
- Prepare a retained earnings statement for 2020.

Problems

P4.1 (LO 2, 3, 5) (Multiple-Step Statement, Retained Earnings Statement) The following information is related to Dickinson Company for 2020.

| | |
|--|------------|
| Retained earnings balance, January 1, 2020 | \$ 980,000 |
| Sales revenue | 25,000,000 |
| Cost of goods sold | 16,000,000 |
| Interest revenue | 70,000 |
| Selling and administrative expenses | 4,700,000 |
| Write-off of goodwill | 820,000 |
| Income taxes for 2020 | 1,244,000 |
| Gain on the sale of investments | 110,000 |
| Loss due to flood damage | 390,000 |
| Loss on the disposition of the wholesale division (net of tax) | 440,000 |
| Loss on operations of the wholesale division (net of tax) | 90,000 |
| Dividends declared on common stock | 250,000 |
| Dividends declared on preferred stock | 80,000 |

Dickinson Company decided to discontinue its entire wholesale operations (considered a discontinued operation) and to retain its manufacturing operations. On September 15, Dickinson sold the wholesale operations to Rogers Company. During 2020, there were 500,000 shares of common stock outstanding all year.

Instructions

Prepare a multiple-step income statement and a retained earnings statement.

P4.2 (LO 2, 3, 5) Excel (Single-Step Statement, Retained Earnings Statement, Periodic Inventory) The following is the trial balance of Thompson Corporation at December 31, 2020.

| Thompson Corporation | | |
|------------------------------------|--------------------|--------------------|
| Trial Balance | | |
| December 31, 2020 | | |
| | Debit | Credit |
| Purchase Discounts | | \$ 10,000 |
| Cash | \$ 189,700 | |
| Accounts Receivable | 105,000 | |
| Rent Revenue | | 18,000 |
| Retained Earnings | | 160,000 |
| Salaries and Wages Payable | | 18,000 |
| Sales Revenue | | 1,100,000 |
| Notes Receivable | 110,000 | |
| Accounts Payable | | 49,000 |
| Accumulated Depreciation—Equipment | | 28,000 |
| Sales Discounts | 14,500 | |
| Sales Returns and Allowances | 17,500 | |
| Notes Payable | | 70,000 |
| Selling Expenses | 232,000 | |
| Administrative Expenses | 99,000 | |
| Common Stock | | 300,000 |
| Income Tax Expense | 53,900 | |
| Cash Dividends | 45,000 | |
| Allowance for Doubtful Accounts | | 5,000 |
| Supplies | 14,000 | |
| Freight-In | 20,000 | |
| Land | 70,000 | |
| Equipment | 140,000 | |
| Bonds Payable | | 100,000 |
| Gain on Sale of Land | | 30,000 |
| Accumulated Depreciation—Buildings | | 19,600 |
| Inventory (January 1, 2020) | 89,000 | |
| Buildings | 98,000 | |
| Purchases | 610,000 | |
| Totals | <u>\$1,907,600</u> | <u>\$1,907,600</u> |

A physical count of inventory on December 31 resulted in an inventory amount of \$64,000; thus, cost of goods sold for 2020 is \$645,000.

Instructions

Prepare a single-step income statement and a retained earnings statement. Assume that the only changes in retained earnings during the current year were from net income and dividends. Thirty thousand shares of common stock were outstanding the entire year.

P4.3 (LO 2, 3, 4) Excel Groupwork (Various Income-Related Items) Maher Inc. reported income from continuing operations before taxes during 2020 of \$790,000. Additional transactions occurring in 2020 but not considered in the \$790,000 are as follows.

- The corporation experienced an uninsured flood loss in the amount of \$90,000 during the year.
- At the beginning of 2018, the corporation purchased a machine for \$54,000 (salvage value of \$9,000) that had a useful life of 6 years. The bookkeeper used straight-line depreciation for 2018, 2019, and 2020, but failed to deduct the salvage value in computing the depreciation base.
- Sale of securities held as a part of its portfolio resulted in a loss of \$57,000 (pretax).
- When its president died, the corporation realized \$150,000 from an insurance policy. The cash surrender value of this policy had been carried on the books as an investment in the amount of \$46,000 (the gain is nontaxable).
- The corporation disposed of its recreational division at a loss of \$115,000 before taxes. Assume that this transaction meets the criteria for discontinued operations.
- The corporation decided to change its method of inventory pricing from average-cost to the FIFO method. The effect of this change on prior years is to increase 2018 income by \$60,000 and decrease 2019 income by \$20,000 before taxes. The FIFO method has been used for 2020. The tax rate on these items is 30%.

Instructions

Prepare an income statement for the year 2020 starting with income from continuing operations before taxes. Compute earnings per share as it should be shown on the face of the income statement. Common shares outstanding for the year are 120,000 shares. (Assume a tax rate of 30% on all items, unless indicated otherwise.)

P4.4 (LO 2, 3, 4, 5) (Multiple- and Single-Step Statements, Retained Earnings Statement)

The following account balances were included in the trial balance of Twain Corporation at June 30, 2020.

| | | | |
|---|-------------|--|----------|
| Sales revenue | \$1,578,500 | Depreciation expense (office furniture and equipment) | \$ 7,250 |
| Sales discounts | 31,150 | Property tax expense | 7,320 |
| Cost of goods sold | 896,770 | Bad debt expense (selling) | 4,850 |
| Salaries and wages expense (sales) | 56,260 | Maintenance and repairs expense (administration) | 9,130 |
| Sales commissions | 97,600 | Office expense | 6,000 |
| Travel expense (salespersons) | 28,930 | Sales returns and allowances | 62,300 |
| Delivery expense | 21,400 | Dividends received | 38,000 |
| Entertainment expense | 14,820 | Interest expense | 18,000 |
| Telephone and Internet expense (sales) | 9,030 | Income tax expense | 102,000 |
| Depreciation expense (sales equipment) | 4,980 | Depreciation understatement due to error—2017 (net of tax) | 17,700 |
| Maintenance and repairs expense (sales) | 6,200 | Dividends declared on preferred stock | 9,000 |
| Miscellaneous selling expenses | 4,715 | Dividends declared on common stock | 37,000 |
| Office supplies used | 3,450 | | |
| Telephone and Internet expense (administration) | 2,820 | | |

The Retained Earnings account had a balance of \$337,000 at July 1, 2019. There are 80,000 shares of common stock outstanding.

Instructions

- Using the multiple-step form, prepare an income statement and a retained earnings statement for the year ended June 30, 2020.
- Using the single-step form, prepare an income statement and a retained earnings statement for the year ended June 30, 2020.

P4.5 (LO 2, 3, 4, 5) (Unusual or Infrequent Items) Presented below is a combined single-step income and retained earnings statement for Nerwin Company for 2020.

| | | |
|--|-----------|------------------|
| | | (000 omitted) |
| Net sales revenue | | \$640,000 |
| Costs and expenses | | |
| Cost of goods sold | \$500,000 | |
| Selling, general, and administrative expenses | 66,000 | |
| Other, net | 17,000 | 583,000 |
| Income before income tax | | 57,000 |
| Income tax | | 19,400 |
| Net income | | 37,600 |
| Retained earnings at beginning of period, as previously reported | 141,000 | |
| Adjustment required for correction of error | (7,000) | |
| Retained earnings at beginning of period, as restated | | 134,000 |
| Dividends on common stock | | (12,200) |
| Retained earnings at end of period | | <u>\$159,400</u> |

Additional facts are as follows.

- “Selling, general, and administrative expenses” for 2020 included a charge of \$8,500,000 that was usual but infrequently occurring.
- “Other, net” for 2020 included a loss on sale of equipment of \$6,000,000.
- “Adjustment required for correction of an error” was a result of a change in estimate (useful life of certain assets reduced to 8 years and a catch-up adjustment made).
- Nerwin Company disclosed earnings per common share for net income in the notes to the financial statements.

Instructions

Determine from these additional facts whether the presentation of the facts in the Nerwin Company income and retained earnings statement is appropriate. If the presentation is not appropriate, describe the appropriate presentation and discuss its theoretical rationale. (Do not prepare a revised statement.)

P4.6 (LO 3, 4, 5) (Retained Earnings Statement, Prior Period Adjustment) Below is the Retained Earnings account for the year 2020 for Acadian Corp.

| | | |
|---|---------------|-------------------------|
| Retained earnings, January 1, 2020 | | \$257,600 |
| Add: | | |
| Gain on sale of investments (net of tax) | \$41,200 | |
| Net income | 84,500 | |
| Refund on litigation with government, related to the year 2017 (net of tax) | 21,600 | |
| Recognition of income earned in 2019, but omitted from income statement in that year (net of tax) | <u>25,400</u> | <u>172,700</u> |
| | | 430,300 |
| Deduct: | | |
| Loss on discontinued operations (net of tax) | 35,000 | |
| Write-off of goodwill (net of tax) | 60,000 | |
| Cumulative effect on income of prior years in changing from LIFO to FIFO inventory valuation in 2020 (net of tax) | 23,200 | |
| Cash dividends declared | <u>32,000</u> | <u>150,200</u> |
| Retained earnings, December 31, 2020 | | <u><u>\$280,100</u></u> |

Instructions

- Prepare a corrected retained earnings statement. Acadian Corp. normally sells investments of the type mentioned above. FIFO inventory was used in 2020 to compute net income.
- State where the items that do not appear in the corrected retained earnings statement should be shown.

P4.7 (LO 2, 3, 4) Groupwork (Income Statement, Irregular Items) Wade Corp. has 150,000 shares of common stock outstanding. In 2020, the company reports income from continuing operations before income tax of \$1,210,000. Additional transactions not considered in the \$1,210,000 are as follows.

- In 2020, Wade Corp. sold equipment for \$40,000. The machine had originally cost \$80,000 and had accumulated depreciation of \$30,000. The gain or loss is considered non-recurring.
- The company discontinued operations of one of its subsidiaries during the current year at a loss of \$190,000 before taxes. Assume that this transaction meets the criteria for discontinued operations. The loss from operations of the discontinued subsidiary was \$90,000 before taxes; the loss from disposal of the subsidiary was \$100,000 before taxes.
- An internal audit discovered that amortization of intangible assets was understated by \$35,000 (net of tax) in a prior period. The amount was charged against retained earnings.
- The company recorded a non-recurring gain of \$125,000 on the condemnation of some of its property (included in the \$1,210,000).

Instructions

Analyze the above information and prepare an income statement for the year 2020, starting with income from continuing operations before income tax. Compute earnings per share as it should be shown on the face of the income statement. (Assume a total effective tax rate of 19% on all items, unless otherwise indicated.)

Concepts for Analysis

CA4.1 (LO 2, 3) (Identification of Income Statement Deficiencies) O'Malley Corporation was incorporated and began business on January 1, 2017. It has been successful and now requires a bank loan for additional working capital to finance expansion. The bank has requested an audited income statement for the year 2020. The accountant for O'Malley Corporation provides you with the following income statement which O'Malley plans to submit to the bank.

| O'Malley Corporation | | |
|---|-----------|------------------|
| Income Statement | | |
| Sales revenue | | \$850,000 |
| Dividends | | 32,300 |
| Gain on recovery of insurance proceeds from earthquake loss | | 38,500 |
| | | <u>920,800</u> |
| Less: | | |
| Selling expenses | \$101,100 | |
| Cost of goods sold | 510,000 | |
| Advertising expense | 13,700 | |
| Loss on obsolescence of inventories | 34,000 | |
| Loss on discontinued operations | 48,600 | |
| Administrative expense | 73,400 | 780,800 |
| | | <u>140,000</u> |
| Income before income tax | | 140,000 |
| Income tax | | 56,000 |
| Net income | | <u>\$ 84,000</u> |

Instructions

Indicate the deficiencies in the income statement presented above. Assume that the corporation desires a single-step income statement.

CA4.2 (LO 1, 4) Groupwork (Earnings Management) Bobek Inc. has recently reported steadily increasing income. The company reported income of \$20,000 in 2017, \$25,000 in 2018, and \$30,000 in 2019. A number of market analysts have recommended that investors buy the stock because they expect the steady growth in income to continue. Bobek is approaching the end of its fiscal year in 2020, and it again appears to be a good year. However, it has not yet recorded warranty expense.

Based on prior experience, this year's warranty expense should be around \$5,000, but some managers have approached the controller to suggest a larger, more conservative warranty expense should be recorded this year. Income before warranty expense is \$43,000. Specifically, by recording a \$7,000 warranty accrual this year, Bobek could report an increase in income for this year and still be in a position to cover its warranty costs in future years.

Instructions

- What is earnings management?
- Assume income before warranty expense is \$43,000 for both 2020 and 2021 and that total warranty expense over the 2-year period is \$10,000. What is the effect of the proposed accounting in 2020? In 2021?
- What is the appropriate accounting in this situation?

CA4.3 (LO 1) Ethics (Earnings Management) Charlie Brown, controller for Kelly Corporation, is preparing the company's income statement at year-end. He notes that the company lost a considerable sum on the sale of some equipment it had decided to replace. Since the company has sold equipment routinely in the past, Brown knows the losses cannot be reported as an unusual item. He also does not want to highlight it as a material loss since he feels that will reflect poorly on him and the company. He reasons that if the company had recorded more depreciation during the assets' lives, the losses would not be so great. Since depreciation is included among the company's operating expenses, he wants to report the losses along with the company's expenses, where he hopes it will not be noticed.

Instructions

- What are the ethical issues involved?
- What should Brown do?

CA4.4 (LO 3) (Income Reporting Items) Simpson Corp. is an entertainment firm that derives approximately 30% of its income from the Casino Knights Division, which manages gambling facilities. As auditor for Simpson Corp., you have recently overheard the following discussion between the controller and financial vice president.

Vice President: If we sell the Casino Knights Division, it seems ridiculous to segregate the results of the sale in the income statement. Separate categories tend to be absurd and confusing to the stockholders. I believe that we should simply report the gain on the sale as other income or expense without detail.

- Controller: Professional pronouncements would require that we report this information separately in the income statement. If a sale of this type is considered unusual and infrequent, it must be reported separate from income from continuing operations.
- Vice President: What about the walkout we had last month when employees were upset about their commission income? Would this situation not also be subject to reporting outside operating income?
- Controller: I am not sure whether this item should get special reporting or not.
- Vice President: Oh well, it doesn't make any difference because the net effect of all these items is immaterial, so no disclosure is necessary.

Instructions

- On the basis of the foregoing discussion, answer the following questions. Who is correct about handling the sale? What would be the correct income statement presentation for the sale of the Casino Knights Division?
- How should the walkout by the employees be reported?
- What do you think about the vice president's observation on materiality?
- What are the earnings per share implications of these topics?

CA4.5 (LO 2, 3) (Identification of Income Statement Weaknesses) The following financial statement was prepared by employees of Walters Corporation.

| Walters Corporation Income Statement Year Ended December 31, 2020 | |
|--|-------------|
| Revenues | |
| Gross sales, including sales taxes | \$1,044,300 |
| Less: Returns, allowances, and cash discounts | 56,200 |
| Net sales | 988,100 |
| Dividends, interest, and purchase discounts | 30,250 |
| Recoveries of accounts written off in prior years | 13,850 |
| Total revenues | 1,032,200 |
| Costs and expenses | |
| Cost of goods sold, including sales taxes | 465,900 |
| Salaries and related payroll expenses | 60,500 |
| Rent | 19,100 |
| Delivery expense and freight-in | 3,400 |
| Bad debt expense | 27,800 |
| Total costs and expenses | 576,700 |
| Income before other items | 455,500 |
| Other items | |
| Loss on discontinued styles (Note 1) | 71,500 |
| Loss on sale of marketable securities (Note 2) | 39,050 |
| Loss on sale of warehouse (Note 3) | 86,350 |
| Total other items | 196,900 |
| Net income | \$ 258,600 |
| Net income per share of common stock | \$2.30 |

Note 1: New styles and rapidly changing consumer preferences resulted in a \$71,500 loss on the disposal of discontinued styles and related accessories.

Note 2: The corporation sold an investment in marketable securities at a loss of \$39,050. The corporation normally sells securities of this nature.

Note 3: The corporation sold one of its warehouses at an \$86,350 loss.

Instructions

Identify and discuss the weaknesses in classification and disclosure in the single-step income statement above. You should explain why these treatments are weaknesses and what the proper presentation of the items would be in accordance with GAAP.

CA4.6 (LO 2, 3, 4, 5) Ethics (Classification of Income Statement Items) As audit partner for Grupo and Rijo, you are in charge of reviewing the classification of unusual items that have occurred during the current year. The following material items have come to your attention.

1. A merchandising company incorrectly overstated its ending inventory 2 years ago. Inventory for all other periods is correctly computed.
2. An automobile dealer sells for \$137,000 an extremely rare 1930 S type Invicta which it purchased for \$21,000 10 years ago. The Invicta is the only such display item the dealer owns.
3. A drilling company during the current year extended the estimated useful life of certain drilling equipment from 9 to 15 years. As a result, depreciation for the current year was materially lowered.
4. A retail outlet changed its computation for bad debt expense from 1% to ½ of 1% of receivables because of changes in its customer clientele.
5. A mining concern sells a foreign subsidiary engaged in uranium mining, although it (the seller) continues to engage in uranium mining in other countries.
6. A steel company changes from the average-cost method to the FIFO method for inventory costing purposes.
7. A construction company, at great expense, prepared a major proposal for a government loan. The loan is not approved.
8. A water pump manufacturer has had large losses resulting from a strike by its employees early in the year.
9. Depreciation for a prior period was incorrectly understated by \$950,000. The error was discovered in the current year.
10. A large sheep rancher suffered a major loss because the state required that all sheep in the state be killed to halt the spread of a rare disease. Such a situation has not occurred in the state for 20 years.
11. A food distributor that sells wholesale to supermarket chains and to fast-food restaurants (two distinguishable classes of customers) decides to discontinue the division that sells to one of the two classes of customers. This represents a strategic shift in the company business.

Instructions

From the foregoing information, indicate in what section of the income statement or retained earnings statement these items should be classified. Provide a brief rationale for your position.

CA4.7 (LO 5) (Comprehensive Income) Willie Nelson, Jr., controller for Jenkins Corporation, is preparing the company's financial statements at year-end. Currently, he is focusing on the income statement and determining the format for reporting comprehensive income. During the year, the company earned net income of \$400,000 and had unrealized gains on available-for-sale debt securities of \$15,000. In the previous year, net income was \$410,000, and the company had no unrealized gains or losses.

Instructions

- a. Show how income and comprehensive income will be reported on a comparative basis for the current and prior years, using the two statement format.
- b. Show how income and comprehensive income will be reported on a comparative basis for the current and prior years, using the one statement format.
- c. Which format should Nelson recommend?

Using Your Judgment

Financial Reporting Problem

The Procter & Gamble Company (P&G)

The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

- a. What type of income statement format does P&G use? Indicate why this format might be used to present income statement information.

- b. What are P&G's primary revenue sources?
- c. Compute P&G's gross profit for each of the years 2015–2017. Explain why gross profit decreased in 2017.
- d. Why does P&G make a distinction between operating and nonoperating revenue?
- e. What financial ratios did P&G choose to report in its “Financial Summary” section covering the years 2012–2017?

Comparative Analysis Case

The Coca-Cola Company and PepsiCo, Inc.

The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- a. What type of income format(s) is used by these two companies? Identify any differences in income statement format between these two companies.
- b. What are the gross profits, operating profits, net incomes, and net incomes attributable to noncontrolling interests for these two companies over the 3-year period 2015–2017? Which company has had better financial results over this period of time?
- c. What income statement format do these two companies use to report comprehensive income?

Financial Statement Analysis Cases

Case 1: Bankruptcy Prediction

The Z-score bankruptcy prediction model uses balance sheet and income information to arrive at a Z-Score, which can be used to predict financial distress:

$$Z = \frac{\text{Working capital}}{\text{Total assets}} \times 1.2 + \frac{\text{Retained earnings}}{\text{Total assets}} \times 1.4 + \frac{\text{EBIT}}{\text{Total assets}} \times 3.3 + \frac{\text{Sales}}{\text{Total assets}} \times 0.99 + \frac{\text{MV equity}}{\text{Total liabilities}} \times 0.6$$

EBIT is earnings before interest and taxes. MV equity is the market value of common equity, which can be determined by multiplying stock price by shares outstanding.

Following extensive testing, it has been shown that companies with Z-scores above 3.0 are unlikely to fail; those with Z-scores below 1.81 are very likely to fail. While the original model was developed for publicly held manufacturing companies, the model has been modified to apply to companies in various industries, emerging companies, and companies not traded in public markets.

Instructions

- a. Use information in the financial statements of **Walgreens** to compute the Z-score for the years 2016 and 2017.
- b. Interpret your result. Where does the company fall in the financial distress range?
- c. The Z-score uses EBIT as one of its elements. Why do you think this income measure is used?

Case 2: P/E Ratios

One of the more closely watched ratios by investors is the price/earnings (P/E) ratio. By dividing price per share by earnings per share, analysts get insight into the value the market attaches to a company's earnings. More specifically, a high P/E ratio (in comparison to companies in the same industry) may suggest the stock is overpriced. Also, there is some evidence that companies with low P/E ratios are underpriced and tend to outperform the market. However, the ratio can be misleading.

P/E ratios are sometimes misleading because the E (earnings) is subject to a number of assumptions and estimates that could result in overstated earnings and a lower P/E. Some analysts conduct “revenue analysis” to evaluate the quality of an earnings number. Revenues are less subject to management estimates and all earnings must begin with revenues. These analysts also compute the price-to-sales ratio (PSR = price per share ÷ sales per share) to assess whether a company is performing well compared to similar companies. If a company has a price-to-sales ratio significantly higher than its competitors, investors may be betting on a stock that has yet to prove itself. [Source: Janice Revell, “Beyond P/E,” *Fortune* (May 28, 2001), p. 174.]

Instructions

- Identify some of the estimates or assumptions that could result in overstated earnings.
- Compute the P/E ratio and the PSR for **Tootsie Roll** and **Hershey** for 2017.
- Use these data to compare the quality of each company's earnings.

Accounting, Analysis, and Principles

Counting Crows Inc. provided the following information for the year 2020.

| | |
|--|------------|
| Retained earnings, January 1, 2020 | \$ 600,000 |
| Administrative expenses | 240,000 |
| Selling expenses | 300,000 |
| Sales revenue | 1,900,000 |
| Cash dividends declared | 80,000 |
| Cost of goods sold | 850,000 |
| Loss on discontinued operations | 110,000 |
| Rent revenue | 102,700 |
| Unrealized holding gain on available-for-sale debt securities | 17,000 |
| Income tax applicable to continuing operations | 187,000 |
| Income tax benefit applicable to loss on discontinued operations | 60,500 |
| Income tax applicable to unrealized holding gain on available-for-sale debt securities | 2,000 |

Accounting

Prepare (a) a single-step income statement for 2020, (b) a retained earnings statement for 2020, and (c) a statement of comprehensive income using the two statement format. Shares outstanding during 2020 were 100,000.

Analysis

Explain how a multiple-step income statement format can provide useful information to a financial statement user.

Principles

In a recent meeting with its auditor, Counting Crows' management argued that the company should be able to prepare a non-GAAP income statement with some one-time administrative expenses reported similar to discontinued operations. Is such reporting consistent with the qualitative characteristics of accounting information as discussed in the conceptual framework? Explain.

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

CE4.1 Access the glossary ("Master Glossary") to answer the following.

- What is a change in accounting estimate?
- How is a change in accounting principle distinguished from a "change in accounting estimate effected by a change in accounting principle"?
- What is the formal definition of comprehensive income?

CE4.2 Enyart Company has a noncontrolling interest in a subsidiary. Enyart's controller is unsure how to report losses in the subsidiary

that exceed the value of Enyart's interest in the subsidiary. Advise the controller.

CE4.3 What guidance does the SEC provide for public companies with respect to the reporting of the “effect of preferred stock dividends and accretion of carrying amount of preferred stock on earnings per share”?

Codification Research Case

Your client took accounting a number of years ago and was unaware of comprehensive income reporting. He is not convinced that any accounting standards exist for comprehensive income.

Instructions

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

- What authoritative literature addresses comprehensive income? When was it issued?
- Provide the definition of comprehensive income.
- Define classifications within net income and give examples.
- Define classifications within other comprehensive income and give examples.
- What are reclassification adjustments?

IFRS Insights

LEARNING OBJECTIVE 6

Compare the accounting procedures for income reporting under GAAP and IFRS.

As in GAAP, the income statement is a required statement for IFRS. In addition, the content and presentation of an IFRS income statement is similar to the one used for GAAP. *IAS 1*, “Presentation of Financial Statements,” provides general guidelines for the reporting of income statement information. Subsequently, a number of international standards have been issued that provide additional guidance to issues related to income statement presentation.

Relevant Facts

Following are the key similarities and differences between GAAP and IFRS related to the income statement.

Similarities

- Both GAAP and IFRS require companies to indicate the amount of net income attributable to non-controlling interest.
- With the recent FASB Accounting Standards Update, under both IFRS and GAAP, unusual and infrequent income items are reported in Income before income taxes (i.e., not an extraordinary item treatment, with reporting similar to discontinued operations).
- Both GAAP and IFRS follow the same presentation guidelines for discontinued operations, but IFRS defines a discontinued operation more narrowly. Both standard-setters have indicated a willingness to develop a similar definition to be used in the joint project on financial statement presentation.
- Both GAAP and IFRS have items that are recognized in equity as part of comprehensive income but do not affect net income. Both GAAP and IFRS allow a one statement or two statement approach to preparing the statement of comprehensive income.

Differences

- Presentation of the income statement under GAAP follows either a single-step or multiple-step format. IFRS does not mention a single-step or multiple-step approach.
- Under IFRS, companies must classify expenses by either nature or function. GAAP does not have that requirement, but the SEC requires a functional presentation.

- IFRS identifies certain minimum items that should be presented on the income statement. GAAP has no minimum information requirements. However, the SEC rules have more rigorous presentation requirements.
- IFRS does not define key measures like income from operations. SEC regulations define many key measures and provide requirements and limitations on companies reporting non-GAAP/IFRS information.
- Under IFRS, revaluation of property, plant, and equipment, and intangible assets is permitted, with gains reported as other comprehensive income. The effect of this difference is that application of IFRS results in more transactions affecting equity but not net income.

About the Numbers

Income Reporting

Illustration IFRS4.1 provides a summary of the primary income items under IFRS. As indicated in the table, similar to GAAP, companies report all revenues, gains, expenses, and losses on the income statement and, at the end of the period, close them to Retained Earnings. They provide useful subtotals on the income statement, such as gross profit, income from operations, income before income tax, and net income. Companies present other income and expense in a separate section, before income from operations. Companies classify discontinued operations of a component of a business as a separate item in the income statement, after “Income from continuing operations.” Providing intermediate income figures helps readers evaluate earnings information in assessing the amounts, timing, and uncertainty of future cash flows.

ILLUSTRATION IFRS4.1 Summary of Income Items Under IFRS

| Type of Situation | Criteria | Examples | Placement on Income Statement |
|-------------------------------------|--|--|--|
| Sales or service revenues | Revenue arising from the ordinary activities of the company | Sales revenue, service revenue | Sales or revenue section |
| Cost of goods sold | Expense arising from the cost of inventory sold or services provided | In a merchandising company, cost of goods sold; in a service company, cost of services | Deduct from sales (to arrive at gross profit) or service revenue |
| Selling and administrative expenses | Expenses arising from the ordinary activities of the company | Sales salaries, delivery expense, rent, depreciation, utilities | Deduct from gross profit; if the function-of-expense approach is used, depreciation and amortization expense and labor costs must be disclosed |
| Other income and expense | Gains and losses and other ancillary revenues and expenses | Gain on sale of long-lived assets, impairment loss on intangible assets, investment revenue, dividend and interest revenue, casualty losses | Report as part of income from operations |
| Financing costs | Separates cost of financing from operating costs | Interest expense | Report in separate section between income from operations and income before income tax |
| Income tax | Levies imposed by governmental bodies on the basis of income | Taxes computed on income before income tax | Report in separate section between income before income tax and net income |
| Discontinued operations | A component of a company that has either been disposed of or is classified as held-for-sale | A sale by diversified company of a major division representing its only activities in the electronics industry Food distributor that sells wholesale to supermarkets decides to discontinue the division in a major geographic area | Report gains or losses on discontinued operations net of tax in a separate section between income from continuing operations and net income |
| Non-controlling interest | Allocation of net income or loss divided between two classes: (1) the majority interest represented by the shareholders who own the controlling interest, and (2) the non-controlling interest | Net profit (loss) attributable to non-controlling shareholders | Report as a separate item below net income or loss as an allocation of the net income or loss (not as an item of income or expense) |

Expense Classifications

Companies are required to present an analysis of expenses classified either by their nature (such as cost of materials used, direct labor incurred, delivery expense, advertising expense, employee benefits, depreciation expense, and amortization expense) or their function (such as cost of goods sold, selling expenses, and administrative expenses).

An advantage of the **nature-of-expense method** is that it is simple to apply because allocations of expense to different functions are not necessary. For manufacturing companies that must allocate costs to the product produced, using a nature-of-expense approach permits companies to report expenses without making arbitrary allocations.

The **function-of-expense method**, however, is often viewed as more relevant because this method identifies the major cost drivers of the company and therefore helps users assess whether these amounts are appropriate for the revenue generated. As indicated, a disadvantage of this method is that the allocation of costs to the varying functions may be arbitrary and therefore the expense classification becomes misleading.

To illustrate these two methods, assume that the accounting firm of Telaris Co. performs audit, tax, and consulting services. It has the following revenues and expenses.

| | |
|--|-----------|
| Service revenues | \$400,000 |
| Cost of services | |
| Staff salaries (related to various services performed) | 145,000 |
| Supplies expense (related to various services performed) | 10,000 |
| Selling expenses | |
| Advertising costs | 20,000 |
| Entertainment expense | 3,000 |
| Administrative expenses | |
| Utilities expense | 5,000 |
| Depreciation on building | 12,000 |

If Telaris Co. uses the nature-of-expense approach, its income statement presents each expense item but does not classify the expenses into various subtotals, as follows.

| Telaris Co. | |
|--------------------------------------|-------------------------|
| Income Statement | |
| For the Month of January 2020 | |
| Service revenues | \$400,000 |
| Staff salaries | 145,000 |
| Supplies expense | 10,000 |
| Advertising costs | 20,000 |
| Utilities expense | 5,000 |
| Depreciation on building | 12,000 |
| Entertainment expense | 3,000 |
| Net income | <u>\$205,000</u> |

If Telaris uses the function-of-expense approach, its income statement is as follows.

| Telaris Co. | |
|--------------------------------------|-------------------------|
| Income Statement | |
| For the Month of January 2020 | |
| Service revenues | \$400,000 |
| Cost of services | 155,000 |
| Selling expenses | 23,000 |
| Administrative expenses | 17,000 |
| Net income | <u>\$205,000</u> |

The function-of-expense method is generally used in practice although many companies believe both approaches have merit. These companies use the function-of-expense approach on the income statement but provide detail of the expenses (as in the nature-of-expense approach) in the notes to the financial statements. The IASB/FASB discussion paper on financial statement presentation also recommends the dual approach.

On the Horizon

The IASB and FASB have worked on a project that would restructure the financial statements. One stage of this project will address the issue of how to classify various items in the income statement. A main goal of this new approach is to provide information that better represents how businesses are run, that is, an idea to require comprehensive income be reported in a combined statement of comprehensive income. This approach draws attention away from just one number—net income. This broad project is on hold; both Boards are working on separate, narrower projects in response to non-GAAP reporting.

IFRS Self-Test Questions

- Which of the following is **not** reported in an income statement under IFRS?
 - Discontinued operations.
 - Extraordinary items.
 - Cost of goods sold.
 - Income tax.
- Which of the following statements is **correct** regarding income reporting under IFRS?
 - IFRS does not permit revaluation of property, plant, and equipment, and intangible assets.
 - IFRS provides the same options for reporting comprehensive income as GAAP.
 - Companies must classify expenses by nature.
 - IFRS provides a definition for all items presented in the income statement.
- Which statement is **correct** regarding IFRS?
 - An advantage of the nature-of-expense method is that it is simple to apply because allocations of expense to different functions are not necessary.
 - The function-of-expense approach never requires arbitrary allocations.
 - An advantage of the function-of-expense method is that allocation of costs to the varying functions is rarely arbitrary.
 - IFRS requires use of the nature-of-expense approach.
- The non-controlling interest section of the income statement is:
 - required under GAAP but not under IFRS.
 - required under IFRS but not under GAAP.
 - required under IFRS and GAAP.
 - not reported under GAAP or IFRS.
- Which of the following is **not** an acceptable way of displaying the components of other comprehensive income under IFRS?
 - Within the statement of retained earnings.
 - Second income statement.
 - Combined statement of comprehensive income.
 - All of these choices are acceptable.

IFRS Concepts and Application

IFRS4.1 Explain the difference between the “nature-of-expense” and “function-of-expense” classifications.

IFRS4.2 Discuss the appropriate treatment in the income statement for the following items:

- Loss on discontinued operations.
- Non-controlling interest allocation.

IFRS4.3 Bradshaw Company experienced a loss that was deemed to be both unusual in nature and infrequent in occurrence. How should Bradshaw report this item in accordance with IFRS?

IFRS4.4 Presented below is information related to Viel Company at December 31, 2020, the end of its first year of operations.

| | |
|---|-----------|
| Sales revenue | \$310,000 |
| Cost of goods sold | 140,000 |
| Selling and administrative expenses | 50,000 |
| Gain on sale of plant assets | 30,000 |
| Unrealized gain on available-for-sale debt securities | 10,000 |
| Interest expense | 6,000 |
| Loss on discontinued operations | 12,000 |
| Allocation to non-controlling interest | 40,000 |
| Dividends declared and paid | 5,000 |

Instructions

Compute the following: (a) income from operations, (b) net income, (c) net income attributable to Viel Company controlling shareholders, (d) comprehensive income, and (e) retained earnings balance at December 31, 2020. (Ignore income taxes.)

IFRS4.5 The income statement for a British company, **Avon Rubber plc**, is presented as follows. Avon prepares its financial statements in accordance with IFRS.

|  Avon Rubber plc | | |
|--|--------------|------------|
| Consolidated Income Statement | | |
| (pounds in thousands) | | |
| | Current Year | Prior Year |
| Continuing operations | | |
| Revenue | 107,600 | 117,574 |
| Cost of sales | (77,892) | (89,256) |
| Gross profit | 29,708 | 28,318 |
| Distribution costs | (4,832) | (4,527) |
| Administrative expenses | (13,740) | (14,536) |
| Other operating income | — | — |
| Operating profit/(loss) from continuing operations | 11,136 | 9,255 |
| Operating profit/(loss) is analysed as: | | |
| Before depreciation, amortization and exceptional items | 15,723 | 13,577 |
| Depreciation and amortization | (4,587) | (4,322) |
| Operating profit/(loss) before exceptional items | 11,136 | 9,255 |
| Exceptional operating items | | |
| Finance income | 5 | 16 |
| Finance costs | (486) | (985) |
| Other finance income | (443) | (1,152) |
| Profit/(loss) before taxation | 10,212 | 7,134 |
| Taxation | (3,094) | (2,808) |
| Profit/(loss) for the year from continuing operations | 7,118 | 4,326 |
| Earnings/(loss) per share | | |
| Basic | 25.2p | 15.2p |
| Diluted | 23.3p | 14.4p |
| Earnings/(loss) per share from continuing operations | | |
| Basic | 25.2p | 15.2p |
| Diluted | 23.3p | 14.4p |

Instructions

- Review the Avon Rubber income statement and identify at least three differences between the IFRS income statement and an income statement of a U.S. company as presented in the chapter.
- Identify any irregular items reported by Avon Rubber. Is the reporting of these irregular items in Avon's income statement similar to reporting of these items in U.S. companies' income statements? Explain.

Professional Research

IFRS4.6 Your client took accounting a number of years ago and was unaware of comprehensive income reporting. He is not convinced that any accounting standards exist for comprehensive income.

Instructions

Access the IFRS authoritative literature at the IASB website. (Click on the IFRS tab and then register for free eIFRS access if necessary.) When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- What IFRS addresses reporting in the statement of comprehensive income? When was it issued?
- Provide the definition of total comprehensive income.
- Explain the rationale for presenting additional line items, headings, and subtotals in the statement of comprehensive income.
- What items of income or expense may be presented either in the statement of comprehensive income or in the notes?

International Financial Reporting Problem

Marks and Spencer plc (M&S)

IFRS4.7 The financial statements of **M&S** are presented in Appendix E. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- a. What type of income statement format does M&S use? Indicate why this format might be used to present income statement information.
- b. What are M&S's primary revenue sources?
- c. Compute M&S's gross profit for each of the years 2016 and 2017.
- d. Why does M&S make a distinction between operating and non-operating profit?
- e. Does M&S report any non-GAAP measures? Explain.

Balance Sheet and Statement of Cash Flows

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

1. Explain the uses, limitations, and content of the balance sheet.
2. Prepare a classified balance sheet.
3. Explain the purpose, content, and presentation of the statement of cash flows.
4. Describe additional types of information provided.

PREVIEW OF CHAPTER 5 As the following opening story indicates, the FASB and IASB are working to improve the presentation of financial information on the balance sheet, as well as other financial statements. In this chapter, we examine the many different types of assets, liabilities, and equity items that affect the balance sheet and the statement of cash flows. The content and organization of the chapter are as follows.

This chapter also includes numerous conceptual and global discussions that are integral to the topics presented here.

BALANCE SHEET AND STATEMENT OF CASH FLOWS

Balance Sheet

- Usefulness of the balance sheet
- Limitations of the balance sheet
- Classification in the balance sheet

Preparation of the Balance Sheet

- Account form
- Report form

Statement of Cash Flows

- Purpose of the statement of cash flows
- Content of the statement of cash flows
- Preparation of the statement of cash flows
- Usefulness of the statement of cash flows

Additional Information

- Notes to the financial statements
- Techniques of disclosure

Hey, It Doesn't Balance!

A good accounting student knows by now that $\text{Total Assets} = \text{Total Liabilities} + \text{Total Equity}$. From this equation, we can also determine net assets, which are determined as follows: $\text{Total Assets} - \text{Total Liabilities} = \text{Net Assets}$. O.K., this is simple so far. But let's look at a discussion paper by the FASB/IASB on how the statement of financial position (the balance sheet) should be structured.

The statement of financial position is divided into five major parts, with many assets and liabilities netted against one another. Here is the general framework for the new statement of financial position:

| |
|----------------------------------|
| Business |
| Operating assets and liabilities |
| Investing assets and liabilities |
| Financing |
| Financing assets |
| Financing liabilities |
| Income Taxes |
| Discontinued Operations |
| Equity |

The statement does look a bit different than the traditional balance sheet. Let's put some numbers to the statement and see how it works. See the following example of a different presentation of the balance sheet.

| Statement of Financial Position | | |
|-------------------------------------|-------------|--------------------|
| Business | | |
| Operating | | |
| Inventories | \$ 400,000 | |
| Receivables | 200,000 | |
| <i>Total short-term assets</i> | | \$ 600,000 |
| Property (net) | 500,000 | |
| Intangible assets | 50,000 | |
| <i>Total long-term assets</i> | | 550,000 |
| Accounts payable | 30,000 | |
| Wages payable | 40,000 | |
| <i>Total short-term liabilities</i> | | (70,000) |
| Lease liability | 10,000 | |
| Other long-term debt | 35,000 | |
| <i>Total long-term liabilities</i> | | (45,000) |
| Net operating assets | | 1,035,000 |
| Investing | | |
| Trading securities | 45,000 | |
| Other securities | 5,000 | |
| <i>Total investing assets</i> | | 50,000 |
| Total Net Business Assets | | 1,085,000 |
| Financing | | |
| Financing assets | | |
| Cash | 30,000 | |
| <i>Total financing assets</i> | | 30,000 |
| Financing liabilities | | |
| Short- and long-term borrowing | 130,000 | |
| <i>Total financing liabilities</i> | | (130,000) |
| Net Financing Liabilities | | (100,000) |
| Discontinued Operations | | |
| Assets held for sale | | 420,000 |
| Income Taxes | | |
| Deferred income taxes | | 70,000 |
| Net Assets | | \$1,475,000 |
| Equity | | |
| Share capital—ordinary | \$1,000,000 | |
| Retained earnings | 475,000 | |
| Total Equity | | \$1,475,000 |

As indicated, it does balance—in that net assets equal equity—but isn't it important to know total assets and total liabilities? As some have observed, the statement of financial position will not balance the way we expect it to. That is, assets won't equal liabilities and equity.

This is because the assets and liabilities are grouped into the business, financing, discontinued operations, and income taxes categories. This new model raises a number of questions, such as:

- Does separating business activities from financing activities provide information that is more decision-useful?
- Does information on income taxes and discontinued operations merit separate categories?

The FASB is working to get answers to these and other questions about this proposed model. One thing is for sure—adoption of the new financial statements will be a dramatic change but hopefully one for the better.

Sources: Marie Leone and Tim Reason, “How Extreme Is the Makeover?” *CFO Magazine* (March 1, 2009); and *Preliminary Views on Financial Statement Presentation*, FASB/IASB Discussion Paper (October 2008).

Review and Practice

Go to the **Review and Practice** section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions as well as additional exercises and practice problem with solutions are also available online.

Balance Sheet

LEARNING OBJECTIVE 1

Explain the uses, limitations, and content of the balance sheet.

The **balance sheet**, sometimes referred to as the **statement of financial position**, reports the assets, liabilities, and stockholders’ equity of a business enterprise at a specific date. This financial statement provides information about the nature and amounts of investments in enterprise resources, obligations to creditors, and the owners’ equity in net resources. It therefore helps in predicting the amounts, timing, and uncertainty of future cash flows.

Usefulness of the Balance Sheet

By reporting information on assets, liabilities, and stockholders’ equity, the balance sheet provides a basis for computing rates of return and evaluating the capital structure of the enterprise. Analysts also use information in the balance sheet to assess a company’s risk¹ and future cash flows. In this regard, analysts use the balance sheet to assess a company’s liquidity, solvency, and financial flexibility.

Liquidity describes “the amount of time that is expected to elapse until an asset is realized or otherwise converted into cash or until a liability has to be paid.”² Creditors are interested in short-term liquidity ratios, such as the ratio of cash (or near cash) to short-term liabilities. These ratios indicate whether a company, like **Amazon.com**, will have the resources to pay its current and maturing obligations. Similarly, stockholders assess liquidity to evaluate the possibility of future cash dividends or the buyback of shares. In general, the greater Amazon’s liquidity, the lower its risk of failure.

¹Risk conveys the unpredictability of future events, transactions, circumstances, and results of the company.

²“Reporting Income, Cash Flows, and Financial Position of Business Enterprises,” *Proposed Statement of Financial Accounting Concepts* (Stamford, Conn.: FASB, 1981), par. 29.

Solvency refers to the ability of a company to pay its debts as they mature. For example, when a company carries a high level of long-term debt relative to assets, it has lower solvency than a similar company with a low level of long-term debt. Companies with higher debt are relatively more risky because they will need more of their assets to meet their fixed obligations (interest and principal payments).

Liquidity and solvency affect a company's **financial flexibility**, which measures the "ability of an enterprise to take effective actions to alter the amounts and timing of cash flows so it can respond to unexpected needs and opportunities."³ For example, a company may become so loaded with debt—so financially inflexible—that it has little or no sources of cash to finance expansion or to pay off maturing debt. A company with a high degree of financial flexibility is better able to survive bad times, to recover from unexpected setbacks, and to take advantage of profitable and unexpected investment opportunities. Generally, the greater an enterprise's financial flexibility, the lower its risk of failure.

Limitations of the Balance Sheet

Some of the major limitations of the balance sheet are:

1. Most assets and liabilities are reported at **historical cost**. As a result, the information provided in the balance sheet is often criticized for not reporting a more relevant fair value. For example, **Georgia-Pacific** owns timber and other assets that may appreciate in value after purchase. Yet, Georgia-Pacific reports any increase only if and when it sells the assets.
2. Companies use **judgments and estimates** to determine many of the items reported in the balance sheet. For example, in its balance sheet, **Dell** estimates the amount of receivables that it will collect, the useful life of its warehouses, and the number of computers that will be returned under warranty.
3. The balance sheet necessarily **omits many items that are of financial value** but that a company cannot record objectively. For example, the knowledge and skill of **Intel** employees in developing new computer chips are arguably the company's most significant assets. However, because Intel cannot reliably measure the value of its employees and other intangible assets (such as customer base, research superiority, and reputation), it does not recognize these items in the balance sheet. Similarly, many liabilities are reported in an "off-balance-sheet" manner, if at all.

The bankruptcy of **Enron**, the seventh-largest U.S. company at the time, highlights the omission of important items in the balance sheet. In Enron's case, it failed to disclose certain off-balance-sheet financing obligations in its main financial statements.⁴

What Do the Numbers Mean? Grounded

The terrorist attacks of September 11, 2001, showed how vulnerable the major airlines could be to falling demand for their services. Since that infamous date, major airlines have had to reduce capacity and slash jobs to avoid bankruptcy. **United Airlines, Northwest Airlines, US Airways**, and several smaller competitors filed for bankruptcy in the wake of 9/11.

Delta Airlines made the following statements in its annual report issued shortly after 9/11:

"If we are unsuccessful in further reducing our operating costs . . . we will need to restructure our costs under Chapter 11 of the U.S. Bankruptcy Code. . . . We have substantial

³"Reporting Income, Cash Flows, and Financial Position of Business Enterprises," *Proposed Statement of Financial Accounting Concepts* (Stamford, Conn.: FASB, 1981), par. 25.

⁴We discuss several of these omitted items (such as off-balance-sheet arrangements) in later chapters. See Wayne Upton, Jr., *Special Report: Business and Financial Reporting, Challenges from the New Economy* (Norwalk, Conn.: FASB, 2001); U.S. Securities and Exchange Commission, "Disclosure in Management's Discussion and Analysis about Off-Balance Sheet Arrangements and Aggregate Contractual Obligations," <http://www.sec.gov/rules/final/33-8182.htm> (May 2003); and *Commission Guidance on Presentation of Liquidity and Capital Resources Disclosures in Management's Discussion and Analysis Release Nos. 33-9144; 34-62934* (September 17, 2010).

liquidity needs and there is no assurance that we will be able to obtain the necessary financing to meet those needs on acceptable terms, if at all.”

These financial flexibility challenges have continued, exacerbated by volatile fuel prices, labor costs, and the unpredictability of the global economic environment. Not surprisingly, several of the major airlines (Delta and Northwest, **Continental** and United, **Airtran** and **Southwest**, and **American Airlines** and US Airways) have merged as a way to build some competitive synergies

and to bolster their financial flexibility. There is no question that running an airline is a difficult task. As superstar investor Warren Buffett said, “I have an 800 number now that I call if I get the urge to buy an airline stock,” adding that his “aeroholic” buddies “talk me down.”

Sources: R. Seaney, “Airline Mergers: Good for Travelers?” <http://abcnews.go.com/Travel/airline-merger-mania-cost/story?id=16227892> (April 27, 2012); and T. Reed, “Buffett Decries Airline Investing Even Though at Worst He Broke Even,” *Forbes* (May 13, 2013).

Classification in the Balance Sheet

Balance sheet accounts are **classified**. That is, balance sheets group together similar items to arrive at significant subtotals. Furthermore, the material is arranged so that important relationships are shown.

The FASB has often noted that the parts and subsections of financial statements can be more informative than the whole. Therefore, the FASB discourages the reporting of summary accounts alone (total assets, net assets, total liabilities, etc.). Instead, companies should report and classify individual items in sufficient detail to permit users to assess the amounts, timing, and uncertainty of future cash flows. Such classification also makes it easier for users to evaluate the company’s liquidity, financial flexibility, profitability, and risk.

To classify items in financial statements, companies group those items with similar characteristics and separate items with different characteristics.⁵ For example, companies should report separately:

1. Assets that differ in their **type or expected function** in the company’s central operations or other activities. For example, **IBM** reports merchandise inventories separately from property, plant, and equipment.
2. Assets and liabilities with **different implications for the company’s financial flexibility**. For example, a company that uses assets in its operations, like **Walgreens**, should report those assets separately from assets held for investment and assets subject to restrictions, such as leased equipment.
3. Assets and liabilities with **different general liquidity characteristics**. For example, **Boeing Company** reports cash separately from inventories.

The three general classes of items included in the balance sheet are assets, liabilities, and equity. We defined them in Chapter 2 as follows.

Elements of the Balance Sheet

1. Assets. Probable future economic benefits obtained or controlled by a particular entity as a result of past transactions or events.

2. Liabilities. Probable future sacrifices of economic benefits arising from present obligations of a particular entity to transfer

assets or provide services to other entities in the future as a result of past transactions or events.

3. Equity. Residual interest in the assets of an entity that remains after deducting its liabilities. In a business enterprise, the equity is the ownership interest.⁶

Companies then further divide these items into several subclassifications. **Illustration 5.1** indicates the general format of balance sheet presentation.

⁵“Reporting Income, Cash Flows, and Financial Positions of Business Enterprises,” *Proposed Statement of Financial Accounting Concepts* (Stamford, Conn.: FASB, 1981), par. 51.

⁶“Elements of Financial Statements of Business Enterprises,” *Statement of Financial Accounting Concepts No. 6* (Stamford, Conn.: FASB, 1985), paras. 25, 35, and 49.

ILLUSTRATION 5.1**Balance Sheet Classifications**

| Assets | Liabilities and Owners' Equity |
|--------------------------------|--------------------------------|
| Current assets | Current liabilities |
| Long-term investments | Long-term debt |
| Property, plant, and equipment | Owners' (stockholders') equity |
| Intangible assets | |
| Other assets | |

A company may classify the balance sheet in some other manner, but in practice you usually see little departure from these major subdivisions. A proprietorship or partnership does present the classifications within the owners' equity section a little differently, as we will show later in the chapter.

Current Assets

Current assets are cash and other assets a company expects to convert into cash, sell, or consume either in one year or in the operating cycle, whichever is longer. The operating cycle is the average time between when a company acquires materials and supplies and when it receives cash for sales of the product (for which it acquired the materials and supplies). The cycle operates from cash through inventory, production, receivables, and back to cash. When several operating cycles occur within one year (which is generally the case for service companies), a company uses the one-year period. If the operating cycle is more than one year, a company uses the longer period.

Current assets are presented in the balance sheet in order of liquidity. The five major items found in the current assets section, and their bases of valuation, are shown in **Illustration 5.2**.

ILLUSTRATION 5.2**Current Assets and Basis of Valuation**

| Item | Basis of Valuation |
|---------------------------|--|
| Cash and cash equivalents | Fair value |
| Short-term investments | Generally, fair value |
| Receivables | Estimated amount collectible |
| Inventories | Lower-of-cost-or-net realizable value/market |
| Prepaid expenses | Cost |

A company does not report these five items as current assets if it does not expect to realize them in one year or in the operating cycle, whichever is longer. For example, a company excludes from the current assets section cash restricted for purposes other than payment of current obligations or for use in current operations. **Generally, if a company expects to convert an asset into cash or to use it to pay a current liability within a year or the operating cycle, whichever is longer, it classifies the asset as current.**

This rule, however, is subject to interpretation. A company classifies an investment in common stock as either a current asset or a noncurrent asset depending on management's intent. When it has small holdings of common stocks or bonds that it will hold long-term, it should not classify them as current.

Although a current asset is well defined, certain theoretical problems also develop. For example, how is including prepaid expenses in the current assets section justified? The rationale is that if a company did not pay these items in advance, it would instead need to use other current assets during the operating cycle. If we follow this logic to its ultimate conclusion, however, any asset previously purchased saves the use of current assets during the operating cycle and would be considered current.

Another problem occurs in the current-asset definition when a company consumes plant assets during the operating cycle. Conceptually, it seems that a company should place in the current assets section an amount equal to the current depreciation charge on the plant assets, because it will consume them in the next operating cycle. However, this conceptual problem is ignored. This example illustrates that the formal distinction made between some current and noncurrent assets is somewhat arbitrary.

Cash Cash is generally considered to consist of currency and demand deposits (monies available on demand at a financial institution). **Cash equivalents** are short-term highly liquid investments that will mature within three months or less. Most companies use the caption “Cash and cash equivalents,” and they indicate that this amount approximates fair value.

A company must disclose any restrictions or commitments related to the availability of cash. As an example, see the excerpt from the annual report of **Alterra Healthcare Corp.** in **Illustration 5.3**.

|  Alterra Healthcare Corp. | |
|---|--------------|
| <u>Current assets</u> | |
| Cash | \$18,728,000 |
| Restricted cash and investments (Note 7) | 7,191,000 |
| <p>Note 7: Restricted Cash and Investments. Restricted cash and investments consist of certificates of deposit restricted as collateral for lease arrangements and debt service with interest rates ranging from 4.0% to 5.5%.</p> | |

ILLUSTRATION 5.3**Balance Sheet Presentation of Restricted Cash**

Alterra Healthcare restricted cash to meet an obligation due currently. Therefore, Alterra included this restricted cash under current assets.

If a company restricts cash for purposes other than current obligations, it excludes the cash from current assets. **Illustration 5.4** shows an example of this, from the annual report of **Owens Corning, Inc.**

|  Owens Corning, Inc. | |
|--|-------|
| (in millions) | |
| <u>Current assets</u> | |
| Cash and cash equivalents | \$ 70 |
| Restricted securities—Fibreboard—current portion (Note 23) | 900 |
| <u>Other assets</u> | |
| Restricted securities—Fibreboard (Note 23) | 938 |
| <p>Note 23 (in part). The Insurance Settlement funds are held in and invested by the Fibreboard Settlement Trust (the “Trust”) and are available to satisfy Fibreboard’s pending and future asbestos related liabilities. . . . The assets of the Trust are comprised of cash and marketable securities (collectively, the “Trust Assets”) and are reflected on Owens Corning’s consolidated balance sheet as restricted assets. These assets are reflected as current assets or other assets, with each category denoted “Restricted securities—Fibreboard.”</p> | |

ILLUSTRATION 5.4**Balance Sheet Presentation of Current and Noncurrent Restricted Cash**

Short-Term Investments All equity securities are recorded at fair value with changes reported in net income (unless accounted for under the equity method or if it is not practicable to determine fair value). Companies group investments in debt securities into three separate portfolios for valuation and reporting purposes:

Held-to-maturity: Debt securities that a company has the positive intent and ability to hold to maturity.

Trading: Debt securities bought and held primarily for sale in the near term to generate income on short-term price differences.

Available-for-sale: Debt securities not classified as held-to-maturity or trading securities.

A company should report trading securities as current assets. It classifies individual equity investments and held-to-maturity and available-for-sale debt securities as current or noncurrent depending on the circumstances (based on management’s intent). It should

report held-to-maturity securities at amortized cost. All trading and available-for-sale debt securities are reported at fair value. [1]⁷ (See the FASB Codification References near the end of the chapter.) Note that only debt securities are classified as available-for-sale with changes reported in stockholders' equity.

For example, **Illustration 5.5** is an excerpt from the annual report of **Intuit Inc.** with respect to its available-for-sale investments.

ILLUSTRATION 5.5**Balance Sheet Presentation of Investments in Securities**

|  Intuit Inc. (in thousands) | |
|---|------------|
| <u>Assets</u> | |
| Cash and cash equivalents | \$ 170,043 |
| Short-term investments (Note 2) | 1,036,758 |
| Note 2 (in part). The following schedule summarizes the estimated fair value of our short-term investments (all available-for-sale): | |
| Corporate notes | \$ 50,471 |
| Municipal bonds | 931,374 |
| U.S. government securities | 54,913 |

Receivables A company should clearly identify any expected loss due to uncollectibles, the amount and nature of any nontrade receivables, and any receivables used as collateral. Major categories of receivables should be shown in the balance sheet or the related notes. For receivables arising from unusual transactions (such as sale of property, or a loan to affiliates or employees), companies should separately classify these as long-term, unless collection is expected within one year. **Stanley Black & Decker** reported its receivables as shown in **Illustration 5.6**.

ILLUSTRATION 5.6**Balance Sheet Presentation of Receivables**

|  Stanley Black & Decker (in millions) | |
|--|-----------|
| <u>Current assets</u> | |
| Cash and cash equivalents | \$ 906.9 |
| Accounts and notes receivable, net | 1,553.2 |
| Inventories, net | 1,438.6 |
| Prepaid expenses | 209.0 |
| Other current assets | 215.0 |
| Total current assets | 4,322.7 |
| Note B (in part): Accounts and Notes Receivable | |
| Trade accounts receivable | \$1,484.0 |
| Trade notes receivable | 100.3 |
| Other accounts receivables | 32.8 |
| Gross accounts and notes receivable | 1,617.1 |
| Allowance for doubtful accounts | (63.9) |
| Accounts and notes receivable, net | \$1,553.2 |

Inventories To present inventories properly, a company discloses the basis of valuation (e.g., lower-of-cost-or-net realizable value or lower-of-cost-or-market) and the cost flow assumption used (e.g., FIFO or LIFO). A manufacturing concern (like **Acer Incorporated**, shown in **Illustration 5.7**) also indicates the stage of completion of the inventories.

⁷Under the fair value option, companies may elect to use fair value as the measurement basis for selected financial assets and liabilities. For these companies, some of their financial assets (and liabilities) may be recorded at historical cost, while others are recorded at fair value. [2]

Acer Incorporated

(in thousands)

| Current assets | |
|--|--------------------|
| Raw materials | \$ 442,706 |
| Work in process | 1,506 |
| Finished goods | 515,202 |
| Spare parts | 138,477 |
| Inventories in transit | 281,364 |
| Less: Provision for inventory obsolescence and net realizable value | (159,553) |
| | <u>\$1,219,702</u> |

Note 8 (in part): Inventories. Inventories are measured at the lower of standard cost and net realizable value. The differences between standard and actual cost are fully recognized in cost of sales. Net realizable value represents the estimated selling price in the ordinary course of business, less all estimated costs of completion and necessary selling expenses.

ILLUSTRATION 5.7**Balance Sheet Presentation of Inventories, Showing Stage of Completion**

Weyerhaeuser Company, a forestry company and lumber manufacturer with several finished-goods product lines, reported its inventory as shown in **Illustration 5.8**.

**Weyerhaeuser Company**

Current assets

| Inventories | |
|--|---------------|
| Logs and chips | \$ 68,471,000 |
| Lumber, plywood and panels | 86,741,000 |
| Pulp, newsprint and paper | 47,377,000 |
| Containerboard, paperboard, containers and cartons | 59,682,000 |
| Other products | 161,717,000 |
| Total product inventories | 423,988,000 |
| Materials and supplies | 175,540,000 |

ILLUSTRATION 5.8**Balance Sheet Presentation of Inventories, Showing Product Lines**

Prepaid Expenses A company includes prepaid expenses in current assets if it will receive benefits (usually services) within one year or the operating cycle, whichever is longer. As we discussed earlier, these items are current assets because if they had not already been paid, they would require the use of cash during the next year or the operating cycle. A company reports prepaid expenses at the amount of the unexpired or unconsumed cost.

A common example is the prepayment for an insurance policy. A company classifies it as a prepaid expense because the payment precedes the receipt of the benefit of coverage. Other common prepaid expenses include prepaid rent, advertising, taxes, and office or operating supplies. **Hasbro, Inc.**, for example, listed its prepaid expenses in current assets as shown in **Illustration 5.9**.

**Hasbro, Inc.**

(in thousands)

Current assets

| | |
|--|--------------------|
| Cash and cash equivalents | \$ 715,400 |
| Accounts receivable, less allowances of \$27,700 | 556,287 |
| Inventories | 203,337 |
| Prepaid expenses and other current assets | 243,291 |
| Total current assets | <u>\$1,718,315</u> |

ILLUSTRATION 5.9**Balance Sheet Presentation of Prepaid Expenses****Noncurrent Assets**

Noncurrent assets are those not meeting the definition of current assets. They include a variety of items, as we discuss in the following sections.

Long-Term Investments Long-term investments, often referred to simply as investments, normally consist of one of four types:

1. Investments in securities, such as bonds, common stock, or long-term notes.
2. Investments in tangible fixed assets not currently used in operations, such as land held for speculation.
3. Investments set aside in special funds, such as a sinking fund, pension fund, or plant expansion fund. This includes the cash surrender value of life insurance.
4. Investments in nonconsolidated subsidiaries or affiliated companies.

Companies usually present long-term investments on the balance sheet just below “Current assets,” in a separate section called “Investments.” Realize that many securities classified as long-term investments are, in fact, readily marketable. But a company does not include them as current assets unless it **intends to convert them to cash in the short-term**—that is, within a year or in the operating cycle, whichever is longer. As indicated earlier, debt investments classified as available-for-sale are reported at fair value, and held-to-maturity debt investments are reported at amortized cost. Equity investments are reported using the fair value method or the equity method.

Motorola, Inc. reported its investments section, located between “Property, plant, and equipment” and “Other assets,” as shown in **Illustration 5.10**.

ILLUSTRATION 5.10**Balance Sheet Presentation of Long-Term Investments**

|  Motorola, Inc. (in millions) | |
|--|--------------|
| <u>Investments</u> | |
| Equity investments | \$ 872 |
| Other investments | 2,567 |
| Fair value adjustment to available-for-sale securities | <u>2,487</u> |
| Total | \$5,926 |

Property, Plant, and Equipment Property, plant, and equipment are tangible long-lived assets used in the regular operations of the business. These assets consist of physical property such as land, buildings, machinery, furniture, tools, and wasting resources (timberland, minerals). With the exception of land, a company either depreciates (e.g., buildings) or depletes (e.g., timberlands or oil reserves) these assets.

Mattel, Inc. presented its property, plant, and equipment in its balance sheet as shown in **Illustration 5.11**. A company discloses the basis it uses to value property, plant, and equipment; any liens against the properties; and accumulated depreciation—usually in the notes to the financial statements.

ILLUSTRATION 5.11**Balance Sheet Presentation of Property, Plant, and Equipment**

|  Mattel, Inc. | |
|---|--------------------|
| <u>Property, plant, and equipment</u> | |
| Land | \$ 32,793,000 |
| Buildings | 257,430,000 |
| Machinery and equipment | 564,244,000 |
| Capitalized leases | 23,271,000 |
| Leasehold improvements | <u>74,988,000</u> |
| | 952,726,000 |
| Less: Accumulated depreciation | <u>472,986,000</u> |
| | 479,740,000 |
| Tools, dies and molds, net | <u>168,092,000</u> |
| Property, plant, and equipment, net | 647,832,000 |

Intangible Assets Intangible assets lack physical substance and are not financial instruments (see the “Fair Values” section later in this chapter for the definition of a financial

instrument). They include patents, copyrights, franchises, goodwill, trademarks, trade names, and customer lists. A company writes off (amortizes) limited-life intangible assets over their useful lives. It periodically assesses indefinite-life intangibles (such as goodwill) for impairment. Intangibles can represent significant economic resources, yet financial analysts often ignore them, because valuation is difficult.

PepsiCo, Inc. reported intangible assets in its balance sheet as shown in **Illustration 5.12**.

| PepsiCo, Inc. (in millions) | |
|--------------------------------|------------|
| <u>Intangible assets</u> | |
| Goodwill | \$3,374 |
| Trademarks | 1,320 |
| Other identifiable intangibles | <u>147</u> |
| Total intangibles | \$4,841 |

ILLUSTRATION 5.12

Balance Sheet Presentation of Intangible Assets

Other Assets The items included in the section “Other assets” vary widely in practice. Some include items such as long-term prepaid expenses, prepaid pension cost, and noncurrent receivables. Other items that might be included are assets in special funds, deferred income taxes, property held for sale, and restricted cash or securities. A company should limit this section to include only unusual items sufficiently different from assets included in specific categories.

What Do the Numbers Mean? “Show Me the Assets!”

Before the dot-com bubble burst, concerns about liquidity and solvency led creditors of many dot-com companies to demand more assurances that these companies could pay their bills when due. A key indicator for creditors is the amount of working capital. For example, when a report predicted that **Amazon.com**’s working capital would turn negative, the company’s vendors began to explore steps that would ensure that Amazon would pay them.

Some vendors demanded that their dot-com customers sign notes stating that the goods shipped to them would serve as collateral for the transaction. Other vendors began shipping goods on consignment—an arrangement whereby the vendor retains ownership of the goods until a third party buys and pays for them.

A bubble in the real estate market (the financial crisis of 2008) created a working capital and liquidity crisis for no less a

revered financial institution than **Bear Stearns**. What happened? Bear Stearns was one of the biggest investors in mortgage-backed securities. But when the housing market cooled off and the value of the collateral backing Bear Stearns’ mortgage securities dropped dramatically, the market questioned Bear Stearns’ ability to meet its obligations. The result: The Federal Reserve stepped in to avert a collapse of the company, backing a bailout plan that guaranteed \$30 billion of Bear Stearns’ investments. This paved the way for a buy-out by **JPMorgan Chase** at \$2 per share (later amended to \$10 a share)—quite a bargain since Bear Stearns had been trading above \$80 a share just a month earlier.

Source: Robin Sidel, Greg Ip, Michael M. Phillips, and Kate Kelly, “The Week That Shook Wall Street: Inside the Demise of Bear Stearns,” *Wall Street Journal* (March 18, 2008), p. A1.

Liabilities

Similar to assets, companies classify liabilities as current or long-term.

Current Liabilities **Current liabilities** are the obligations that a company reasonably expects to liquidate either through the use of current assets or the creation of other current liabilities. This concept includes:

1. Payables resulting from the acquisition of goods and services: accounts payable, wages payable, taxes payable, and so on.
2. Collections received in advance for the delivery of goods or performance of services, such as unearned rent revenue or unearned subscriptions revenue.
3. Other liabilities whose liquidation will take place within the operating cycle, such as the portion of long-term bonds to be paid in the current period or short-term obligations arising from the purchase of equipment.

At times, a liability that is payable within the next year is not included in the current liabilities section. This occurs either when the company has executed a contractual agreement to refinance the debt through another long-term issue [3] or to retire the debt out of noncurrent assets. This approach is used because liquidation does not result from the use of current assets or the creation of other current liabilities.

Companies do not report current liabilities in any consistent order. In general, though, companies most commonly list notes payable, accounts payable, or short-term debt as the first item. Income taxes payable, current maturities of long-term debt, or other current liabilities are commonly listed last. For example, see **Halliburton Company's** current liabilities section in **Illustration 5.13**.

ILLUSTRATION 5.13**Balance Sheet Presentation of Current Liabilities**

|  Halliburton Company (in millions) | |
|---|------------|
| <u>Current liabilities</u> | |
| Short-term notes payable | \$1,570 |
| Accounts payable | 782 |
| Accrued employee compensation and benefits | 267 |
| Unearned revenues | 386 |
| Income taxes payable | 113 |
| Accrued special charges | 6 |
| Current maturities of long-term debt | 8 |
| Other current liabilities | <u>694</u> |
| Total current liabilities | 3,826 |

Current liabilities include such items as trade and nontrade notes and accounts payable, advances received from customers, and current maturities of long-term debt. If the amounts are material, companies classify income taxes and other accrued items separately. A company should fully describe in the notes any information about a secured liability—for example, stock held as collateral on notes payable—to identify the assets providing the security.

The excess of total current assets over total current liabilities is referred to as **working capital** (or sometimes **net working capital**). Working capital represents the net amount of a company's relatively liquid resources. That is, it is the liquidity buffer available to meet the financial demands of the operating cycle.

Companies seldom disclose on the balance sheet an amount for working capital. But bankers and other creditors compute it as an indicator of the short-run liquidity of a company. To determine the actual liquidity and availability of working capital to meet current obligations, however, requires analysis of the composition of the current assets and their nearness to cash.

Long-Term Liabilities **Long-term liabilities** are obligations that a company does not reasonably expect to liquidate within the normal operating cycle. Instead, it expects to pay them at some date beyond that time. The most common examples are bonds payable, notes payable, deferred income tax liabilities, lease obligations, and pension obligations. **Companies classify long-term liabilities that mature within the current operating cycle as current liabilities if payment of the obligation requires the use of current assets.**

Generally, long-term liabilities are of three types:

1. Obligations arising from specific financing situations, such as the issuance of bonds, long-term lease obligations, and long-term notes payable.
2. Obligations arising from the ordinary operations of the company, such as pension obligations and deferred income tax liabilities.
3. Obligations that depend on the occurrence or non-occurrence of one or more future events to confirm the amount payable, the payee, or the date payable, such as service or product warranties and other contingencies.

Companies generally provide a great deal of supplementary disclosure for long-term liabilities because most long-term debt is subject to various covenants and restrictions for the protection of lenders.⁸

Companies frequently describe the terms of all long-term liability agreements (including maturity date or dates, rates of interest, nature of obligation, and any security pledged to support the debt) in notes to the financial statements. **Illustration 5.14** provides an example of this, taken from an excerpt from **The Great Atlantic & Pacific Tea Company's** financials.

|  The Great Atlantic & Pacific Tea Company, Inc. | |
|---|-----------------------------|
| Total current liabilities | \$978,109,000 |
| Long-term debt (See note) | 254,312,000 |
| Obligations under capital leases | 252,618,000 |
| Deferred income taxes | 57,167,000 |
| Other non-current liabilities | 127,321,000 |
| Note: Indebtedness. Debt consists of: | |
| 9.5% senior notes, due in annual installments of \$10,000,000 | \$ 40,000,000 |
| Mortgages and other notes due (average interest rate of 9.9%) | 107,604,000 |
| Bank borrowings at 9.7% | 67,225,000 |
| Commercial paper at 9.4% | 100,102,000 |
| | <u>314,931,000</u> |
| Less: Current portion | (60,619,000) |
| Total long-term debt | <u>\$254,312,000</u> |

ILLUSTRATION 5.14**Balance Sheet Presentation of Long-Term Debt**

Owners' Equity

The **owners' equity (stockholders' equity)** section is one of the most difficult sections to prepare and understand. This is due to the complexity of capital stock agreements and the various restrictions on stockholders' equity imposed by state corporation laws, liability agreements, and boards of directors. Companies usually divide the section into six parts:

Stockholders' Equity Section

- 1. Capital Stock.** The par or stated value of the shares issued.
- 2. Additional Paid-in Capital.** The excess of amounts paid in over the par or stated value.
- 3. Retained Earnings.** The corporation's undistributed earnings.
- 4. Accumulated Other Comprehensive Income.** The aggregate amount of the other comprehensive income items.
- 5. Treasury Stock.** Generally, the cost of shares repurchased.
- 6. Noncontrolling Interest (Minority Interest).** A portion of the equity of subsidiaries not wholly owned by the reporting company.

For capital stock, companies must disclose the par value and the authorized, issued, and outstanding share amounts. A company usually presents the additional paid-in capital in one amount although subtotals are informative if the sources of additional capital are varied and material. The retained earnings amount may be divided between the **unappropriated** (the amount that is usually available for dividend distribution) and **restricted** (e.g., by bond indentures or other loan

⁸Companies usually explain the pertinent rights and privileges of the various securities (both debt and equity) outstanding in the notes to the financial statements. Examples of information that companies should disclose are dividend and liquidation preferences, participation rights, call prices and dates, conversion or exercise prices or rates and pertinent dates, sinking fund requirements, unusual voting rights, and significant terms of contracts to issue additional shares. [4]

agreements) amounts. In addition, companies show any capital stock reacquired (treasury stock) as a reduction of stockholders' equity. Accumulated other comprehensive income includes such items as unrealized gains and losses on available-for-sale debt investments and unrealized gains and losses on certain derivative transactions. Noncontrolling interest (discussed in Chapter 4) is also shown as a separate item (where applicable) as a part of equity.

Illustration 5.15 presents an example of the stockholders' equity section from **Las Vegas Sands Corporation**.

ILLUSTRATION 5.15
Balance Sheet Presentation
of Stockholders' Equity

|  Las Vegas Sands Corporation | |
|--|------------------|
| <u>Equity</u> | |
| Preferred stock, \$0.001 par value, 50,000,000 shares authorized, 3,614,923 shares issued and outstanding | \$ 207,356 |
| Common stock, \$0.001 par value, 1,000,000,000 shares authorized, 707,507,982 shares issued and outstanding | 708 |
| Capital in excess of par value | 5,444,705 |
| Accumulated other comprehensive income | 129,519 |
| Retained earnings | 880,703 |
| Total Las Vegas Sands Corp. stockholders' equity | <u>6,662,991</u> |
| Noncontrolling interests | <u>1,268,197</u> |
| Total equity | \$7,931,188 |

The ownership or stockholders' equity accounts in a corporation differ considerably from those in a partnership or proprietorship. Partners show separately their permanent capital accounts and the balance in their temporary accounts (drawing accounts). Proprietorships ordinarily use a single capital account that handles all of the owner's equity transactions.

What Do the Numbers Mean? Warning Signals

Analysts use balance sheet information in models designed to predict financial distress. Researcher E. I. Altman pioneered a

bankruptcy-prediction model that derives a "Z-score" by combining balance sheet and income measures in the following equation.

$$Z = \frac{\text{Working capital}}{\text{Total assets}} \times 1.2 + \frac{\text{Retained earnings}}{\text{Total assets}} \times 1.4 + \frac{\text{EBIT}}{\text{Total assets}} \times 3.3 + \frac{\text{Sales}}{\text{Total assets}} \times 0.99 + \frac{\text{MV equity}}{\text{Total liabilities}} \times 0.6$$

Following extensive testing, Altman found that companies with Z-scores above 3.0 are unlikely to fail. Those with Z-scores below 1.81 are very likely to fail.

Altman developed the original model for publicly held manufacturing companies. He and others have modified the model to apply to companies in various industries, emerging companies, and companies not traded in public markets.

At one time, the use of Z-scores was virtually unheard of among practicing accountants. Today, auditors, management

consultants, and courts of law use this measure to help evaluate the overall financial position and trends of a firm. In addition, banks use Z-scores for loan evaluation. While a low score does not guarantee bankruptcy, the model has been proven accurate in many situations.

Preparation of the Balance Sheet

LEARNING OBJECTIVE 2

Prepare a classified balance sheet.

Account Form

One common arrangement that companies use in presenting a classified balance sheet is the **account form**. It lists assets, by sections, on the left side, and liabilities and stockholders' equity, by sections, on the right side. The main disadvantage is the need for a sufficiently wide space in which to present the items side by side. Often, the account form requires two facing pages.

Report Form

To avoid this disadvantage, the **report form** lists the sections one above the other, on the same page. See, for example, **Illustration 5.16**, which lists assets, followed by liabilities and stockholders' equity directly below, on the same page (see **Underlying Concepts**).⁹

| Scientific Products, Inc. Balance Sheet December 31, 2020 | | |
|---|----------------|--------------------|
| Assets | | |
| Current assets | | |
| Cash | | \$ 42,485 |
| Investments (available-for-sale) | | 28,250 |
| Accounts receivable | \$165,824 | |
| Less: Allowance for doubtful accounts | <u>1,850</u> | 163,974 |
| Notes receivable | | 23,000 |
| Inventories—at average-cost | | 489,713 |
| Supplies on hand | | 9,780 |
| Prepaid expenses | | <u>16,252</u> |
| Total current assets | | \$ 773,454 |
| Long-term investments | | |
| Equity investments | | 87,500 |
| Property, plant, and equipment | | |
| Land—at cost | | 125,000 |
| Buildings—at cost | 975,800 | |
| Less: Accumulated depreciation | <u>341,200</u> | <u>634,600</u> |
| Total property, plant, and equipment | | 759,600 |
| Intangible assets | | |
| Goodwill | | <u>100,000</u> |
| Total assets | | <u>\$1,720,554</u> |

(continued)

ILLUSTRATION 5.16

Classified Report Form Balance Sheet

Underlying Concepts

The presentation of balance sheet information meets the objective of financial reporting—to provide information about entity resources, claims to resources, and changes in them.

⁹*Accounting Trends and Techniques* (New York: AICPA) indicates that all of the 500 companies surveyed use either the “report form” (484) or the “account form” (16), sometimes collectively referred to as the “customary form.”

ILLUSTRATION 5.16*(continued)*

| Liabilities and Stockholders' Equity | | | |
|--|---------------|---------------|--------------------|
| Current liabilities | | | |
| Notes payable to banks | | \$ 50,000 | |
| Accounts payable | | 197,532 | |
| Accrued interest on notes payable | | 500 | |
| Income taxes payable | | 62,520 | |
| Accrued salaries, wages, and other liabilities | | 9,500 | |
| Deposits received from customers | | <u>420</u> | |
| Total current liabilities | | | \$ 320,472 |
| Long-term debt | | | |
| Twenty-year 12% debentures, due January 1, 2028 | | | <u>500,000</u> |
| Total liabilities | | | 820,472 |
| Stockholders' equity | | | |
| Paid in on capital stock | | | |
| Preferred, 7%, cumulative | | | |
| Authorized, issued, and outstanding, | | | |
| 30,000 shares of \$10 par value | \$300,000 | | |
| Common— | | | |
| Authorized, 500,000 shares of | | | |
| \$1 par value; issued and outstanding, | | | |
| 400,000 shares | 400,000 | | |
| Additional paid-in capital | <u>37,500</u> | 737,500 | |
| Retained earnings | | 153,182 | |
| Accumulated other comprehensive income | | 8,650 | |
| Less: Treasury stock | | <u>12,750</u> | |
| Equity attributable to Scientific Products, Inc. | | | 886,582 |
| Equity attributable to noncontrolling interest | | | <u>13,500</u> |
| Total stockholders' equity | | | 900,082 |
| Total liabilities and stockholders' equity | | | <u>\$1,720,554</u> |

Infrequently, companies use other balance sheet formats. For example, companies sometimes deduct current liabilities from current assets to arrive at working capital. Or, they deduct all liabilities from all assets.

Statement of Cash Flows

LEARNING OBJECTIVE 3

Explain the purpose, content, and preparation of the statement of cash flows.

Chapter 2 indicated that an important element of the objective of financial reporting is “assessing the amounts, timing, and uncertainty of cash flows.” The three financial statements we have looked at so far—the income statement, the statement of stockholders’ equity, and the balance sheet—each present some information about the cash flows of an enterprise during a period. But they do so to a limited extent. For instance, the income statement provides information about resources provided by operations but not exactly cash. The statement of stockholders’ equity shows the amount of cash used to pay dividends or purchase treasury stock. Comparative balance sheets might show what assets the company has acquired or disposed of, and what liabilities it has incurred or liquidated.

Useful as they are, none of these statements presents a detailed summary of all the cash inflows and outflows, or the sources and uses of cash during the period. To fill this need, the FASB requires the **statement of cash flows** (also called the **cash flow statement**). [5]

What Do the Numbers Mean? Watch That Cash Flow

Investors usually focus on net income measured on an accrual basis. However, information on cash flows can be important for assessing a company's liquidity, financial flexibility, and overall financial performance. The following graph shows **W. T. Grant's** financial performance over 7 years.

Although W. T. Grant showed consistent profits and even some periods of earnings growth, its cash flow began to “go south” starting in about year 3. The company filed for bankruptcy shortly after year 7. Financial statement readers who studied the company's cash flows would have found early warnings of its problems. The Grant experience is a classic case, illustrating the importance of cash flows as an early-warning signal of financial problems.

The picture at **IBM** was similar and raised some red flags as to the company's financial flexibility. As shown in the following chart, IBM's earnings per share (EPS) growth held steady, but growth in free cash flow was on the decline.

A look under the hood indicates that while debt levels were increasing, IBM had been using free cash flow for increased dividends and share buybacks. Recall that buybacks increase EPS by reducing shares outstanding. However, some analysts believe that many of the funds should be allocated to R&D. That is, free cash flow going toward dividends and share repurchases indicated IBM's “low quality of earnings.”

Source: A. Shields, “Why IBM Has Generated Higher Earnings Despite Falling Revenue,” *Market Realist*, <http://marketrealist.com/2014/07/why-ibm-has-generated-higher-earnings-despite-falling-revenues/> (July 11, 2014).

Purpose of the Statement of Cash Flows

The primary purpose of a statement of cash flows is to provide relevant information about the cash receipts and cash payments of an enterprise during a period (see **Underlying Concepts**). To achieve this purpose, the statement of cash flows reports the following: (1) the cash effects of operations during a period, (2) investing transactions, (3) financing transactions, and (4) the net increase or decrease in cash during the period.¹⁰

Reporting the sources, uses, and net increase or decrease in cash helps investors, creditors, and others know what is happening to a company's most liquid resource. Because most individuals maintain a checkbook and prepare a tax return on a cash basis, they can comprehend the information reported in the statement of cash flows.

The statement of cash flows provides answers to the following simple but important questions:

1. Where did the cash come from during the period?
2. What was the cash used for during the period?
3. What was the change in the cash balance during the period?

Underlying Concepts

The statement of cash flows meets the objective of financial reporting—to help assess the amounts, timing, and uncertainty of future cash flows.

¹⁰The FASB recommends the basis as “cash and cash equivalents.” **Cash equivalents** are liquid investments that mature within three months or less.

Content of the Statement of Cash Flows

Companies classify cash receipts and cash payments during a period into three different activities in the statement of cash flows—operating, investing, and financing activities, defined as follows.

1. **Operating activities** involve the cash effects of transactions that enter into the determination of net income.
2. **Investing activities** include making and collecting loans and acquiring and disposing of investments (both debt and equity) and property, plant, and equipment.
3. **Financing activities** involve liability and owners' equity items. They include (a) obtaining resources from owners and providing them with a return on their investment, and (b) borrowing money from creditors and repaying the amounts borrowed.

Illustration 5.17 shows the basic format of the statement of cash flows.

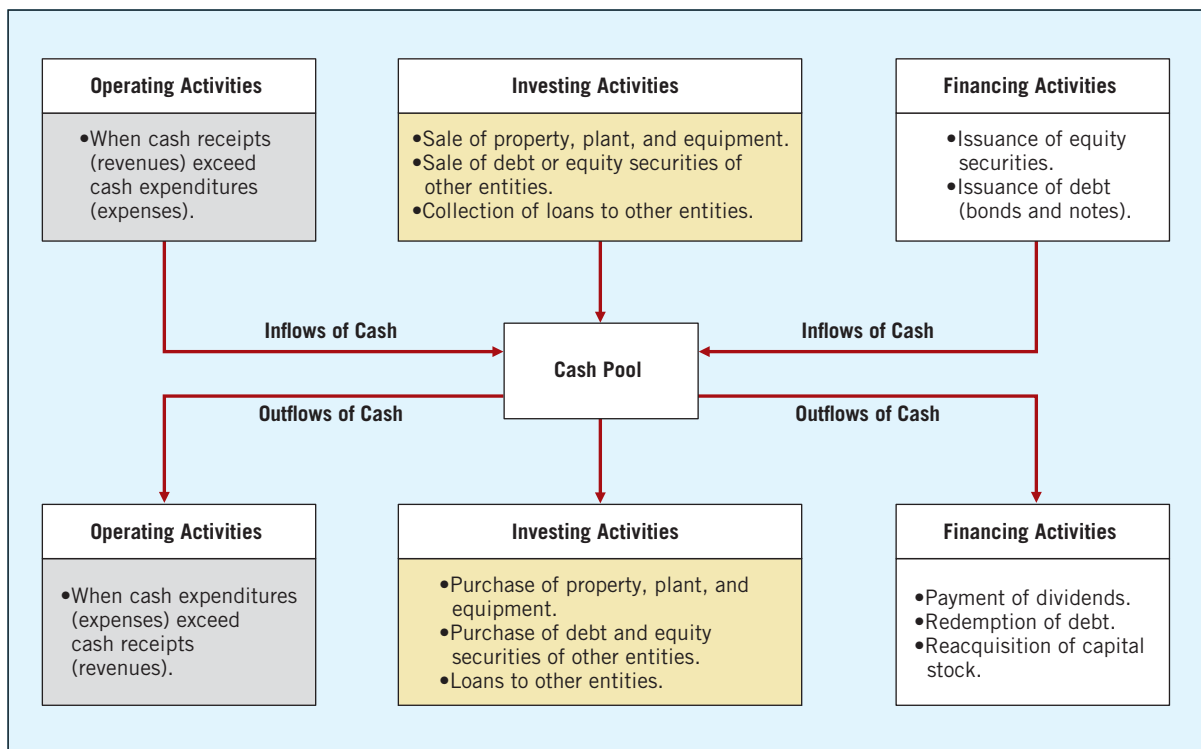

ILLUSTRATION 5.17

Basic Format of Cash Flow Statement

| Statement of Cash Flows | |
|--------------------------------------|-------|
| Cash flows from operating activities | \$XXX |
| Cash flows from investing activities | XXX |
| Cash flows from financing activities | XXX |
| Net increase (decrease) in cash | XXX |
| Cash at beginning of year | XXX |
| Cash at end of year | \$XXX |

Illustration 5.18 graphs the inflows and outflows of cash classified by activity.

ILLUSTRATION 5.18 Cash Inflows and Outflows

The statement's value is that it helps users evaluate **liquidity**, **solvency**, and **financial flexibility**. As stated earlier, **liquidity** refers to the "nearness to cash" of assets and liabilities. **Solvency** is the firm's ability to pay its debts as they mature. **Financial flexibility**

is a company's ability to respond and adapt to financial adversity and unexpected needs and opportunities.

We have devoted Chapter 23 entirely to the detailed preparation and content of the statement of cash flows. The intervening chapters will cover several elements and complex topics that affect the content of a typical statement of cash flows. The presentation in this chapter is introductory—a reminder of the existence of the statement of cash flows and its usefulness.

Preparation of the Statement of Cash Flows

Sources of Information

Companies obtain the information to prepare the statement of cash flows from several sources: (1) comparative balance sheets, (2) the current income statement, and (3) selected transaction data. The following example demonstrates how companies use these sources in preparing a statement of cash flows.

On January 1, 2020, in its first year of operations, Telemarketing Inc. issued 50,000 shares of \$1 par value common stock for \$50,000 cash. The company rented its office space, furniture, and telecommunications equipment and performed marketing services throughout the first year. In June 2020, the company purchased land for \$15,000. **Illustration 5.19** shows the company's comparative balance sheets at the beginning and end of 2020.

| Telemarketing Inc. Balance Sheets | | | |
|--|----------------------|---------------------|--------------------------|
| | <u>Dec. 31, 2020</u> | <u>Jan. 1, 2020</u> | <u>Increase/Decrease</u> |
| <u>Assets</u> | | | |
| Cash | \$31,000 | \$-0- | \$31,000 Increase |
| Accounts receivable | 41,000 | -0- | 41,000 Increase |
| Land | 15,000 | -0- | 15,000 Increase |
| Total | <u>\$87,000</u> | <u>\$-0-</u> | |
| <u>Liabilities and Stockholders' Equity</u> | | | |
| Accounts payable | \$12,000 | \$-0- | 12,000 Increase |
| Common stock | 50,000 | -0- | 50,000 Increase |
| Retained earnings | 25,000 | -0- | 25,000 Increase |
| Total | <u>\$87,000</u> | <u>\$-0-</u> | |

ILLUSTRATION 5.19

Comparative Balance Sheets

Illustration 5.20 presents the income statement and additional information.

| Telemarketing Inc. Income Statement For the Year Ended December 31, 2020 | |
|---|-------------------------|
| Revenues | \$172,000 |
| Operating expenses | <u>120,000</u> |
| Income before income tax | 52,000 |
| Income tax | <u>13,000</u> |
| Net income | <u>\$ 39,000</u> |
| Additional information: | |
| Dividends of \$14,000 were paid during the year. | |

ILLUSTRATION 5.20

Income Statement Data

Preparing the Statement of Cash Flows

Preparing the statement of cash flows from these sources involves four steps:

1. Determine the net cash provided by (or used in) operating activities.
2. Determine the net cash provided by (or used in) investing and financing activities.

- Determine the change (increase or decrease) in cash during the period.
- Reconcile the change in cash with the beginning and the ending cash balances.

Net cash provided by operating activities is the excess of cash receipts over cash payments from operating activities. Companies determine this amount by converting net income on an accrual basis to a cash basis. To do so, they adjust net income for items that do not affect cash. This procedure requires that a company analyze not only the current year's income statement but also the comparative balance sheets and selected transaction data.

Analysis of Telemarketing's comparative balance sheets reveals two items that will affect the computation of net cash provided by operating activities:

- The increase in accounts receivable reflects a noncash increase of \$41,000 in revenues.
- The increase in accounts payable reflects a noncash increase of \$12,000 in expenses.

Therefore, to arrive at net cash provided by operating activities, Telemarketing deducts from net income the increase in accounts receivable (\$41,000). That is, the increase in accounts receivable of \$41,000 results in an increase in revenue (and income) but no cash was received. Telemarketing adds back to net income the increase in accounts payable (\$12,000). In other words, accruals of expenses of \$12,000 decreased income but no cash was paid. As a result of these adjustments, the company determines net cash provided by operating activities to be \$10,000, computed as shown in **Illustration 5.21**.

ILLUSTRATION 5.21**Computation of Net Cash Provided by Operating Activities**

| | | |
|---|------------|------------------|
| Net income | | \$ 39,000 |
| Adjustments to reconcile net income to net cash provided by operating activities: | | |
| Increase in accounts receivable | \$(41,000) | |
| Increase in accounts payable | 12,000 | (29,000) |
| Net cash provided by operating activities | | \$ 10,000 |

Next, the company determines its investing and financing activities. Telemarketing's only **investing activity** was the land purchase. It had two **financing activities**: (1) common stock increased \$50,000 from the issuance of 50,000 shares for cash, and (2) the company paid \$14,000 cash in dividends. Knowing the amounts provided/used by operating, investing, and financing activities, the company determines the **net increase in cash**. **Illustration 5.22** presents Telemarketing's statement of cash flows for 2020 (see **Global View**).

ILLUSTRATION 5.22**Statement of Cash Flows****Global View**

IFRS requires a statement of cash flows. Both IFRS and GAAP specify that the cash flows must be classified as operating, investing, or financing.

| Telemarketing Inc. | | |
|---|------------|-----------------|
| Statement of Cash Flows | | |
| For the Year Ended December 31, 2020 | | |
| Cash flows from operating activities | | |
| Net income | | \$39,000 |
| Adjustments to reconcile net income to net cash provided by operating activities: | | |
| Increase in accounts receivable | \$(41,000) | |
| Increase in accounts payable | 12,000 | (29,000) |
| Net cash provided by operating activities | | 10,000 |
| Cash flows from investing activities | | |
| Purchase of land | (15,000) | |
| Net cash used by investing activities | | (15,000) |
| Cash flows from financing activities | | |
| Issuance of common stock | 50,000 | |
| Payment of cash dividends | (14,000) | |
| Net cash provided by financing activities | | 36,000 |
| Net increase in cash | | 31,000 |
| Cash at beginning of year | | — |
| Cash at end of year | | \$31,000 |

The increase in cash of \$31,000 reported in the statement of cash flows **agrees with** the increase of \$31,000 in cash calculated from the comparative balance sheets.

Significant Noncash Activities

Not all of a company's significant activities involve cash. Examples of significant noncash activities are:

1. Issuance of common stock to purchase assets.
2. Conversion of bonds into common stock.
3. Issuance of debt to purchase assets.
4. Exchanges of long-lived assets.

Significant financing and investing activities that do not affect cash are not reported in the body of the statement of cash flows. Rather, these activities are reported in either a separate schedule at the bottom of the statement of cash flows or in separate notes to the financial statements. Such reporting of these noncash activities satisfies the full disclosure principle.

Illustration 5.23 shows an example of a comprehensive statement of cash flows. Note that the company purchased equipment through the issuance of \$50,000 of bonds, which is a significant noncash transaction. *In solving homework assignments, you should present significant noncash activities in a separate schedule at the bottom of the statement of cash flows.*

| Nestor Company Statement of Cash Flows For the Year Ended December 31, 2020 | | |
|--|-----------|------------------|
| Cash flows from operating activities | | |
| Net income | | \$320,750 |
| Adjustments to reconcile net income to net cash provided by operating activities: | | |
| Depreciation expense | \$ 88,400 | |
| Amortization of intangibles | 16,300 | |
| Gain on sale of plant assets | (8,700) | |
| Increase in accounts receivable (net) | (11,000) | |
| Decrease in inventory | 15,500 | |
| Decrease in accounts payable | (9,500) | 91,000 |
| Net cash provided by operating activities | | 411,750 |
| Cash flows from investing activities | | |
| Sale of plant assets | 90,500 | |
| Purchase of equipment | (182,500) | |
| Purchase of land | (70,000) | |
| Net cash used by investing activities | | (162,000) |
| Cash flows from financing activities | | |
| Payment of cash dividend | (19,800) | |
| Issuance of common stock | 100,000 | |
| Redemption of bonds | (50,000) | |
| Net cash provided by financing activities | | 30,200 |
| Net increase in cash | | 279,950 |
| Cash at beginning of year | | 135,000 |
| Cash at end of year | | \$414,950 |
| Noncash investing and financing activities | | |
| Purchase of equipment through issuance of \$50,000 of bonds | | |

ILLUSTRATION 5.23

Comprehensive Statement of Cash Flows

Usefulness of the Statement of Cash Flows

“Happiness is a positive cash flow” is certainly true. Although net income provides a long-term measure of a company's success or failure, cash is its lifeblood. Without cash,

a company will not survive. For small and newly developing companies, cash flow is the single most important element for survival. Even medium and large companies must control cash flow.

Creditors examine the cash flow statement carefully because they are concerned about being paid. They begin their examination by finding net cash provided by operating activities. A high amount indicates that a company is able to generate sufficient cash from operations to pay its bills without further borrowing. Conversely, a low or negative amount of net cash provided by operating activities indicates that a company may have to borrow or issue equity securities to acquire sufficient cash to pay its bills. Consequently, creditors look for answers to the following questions in the company's cash flow statements.

1. How successful is the company in generating net cash provided by operating activities?
2. What are the trends in net cash flow provided by operating activities over time?
3. What are the major reasons for the positive or negative net cash provided by operating activities?

You should recognize that companies can fail even though they report net income. The difference between net income and net cash provided by operating activities can be substantial. Companies such as **W. T. Grant Company** and **Prime Motor Inn**, for example, reported high net income numbers but negative net cash provided by operating activities. Eventually, both companies filed for bankruptcy.

In addition, substantial increases in receivables and/or inventory can explain the difference between positive net income and negative net cash provided by operating activities. For example, in its first year of operations, Hu Inc. reported a net income of \$80,000. Its net cash provided by operating activities, however, was a negative \$95,000, as shown in **Illustration 5.24**.

ILLUSTRATION 5.24

Negative Net Cash Provided by Operating Activities

| Hu Inc. Net Cash Flow from Operating Activities | | |
|---|-------------|---------------------------|
| Cash flows from operating activities | | |
| Net income | | \$ 80,000 |
| Adjustments to reconcile net income to net cash provided by operating activities: | | |
| Increase in receivables | \$ (75,000) | |
| Increase in inventories | (100,000) | (175,000) |
| Net cash provided by operating activities | | <u>\$ (95,000)</u> |

Hu could easily experience a “cash crunch” because it has its cash tied up in receivables and inventory. If Hu encounters problems in collecting receivables, or if inventory moves slowly or becomes obsolete, its creditors may have difficulty collecting on their loans.

Financial Liquidity

Readers of financial statements often assess liquidity by using the **current cash debt coverage**. It indicates whether the company can pay off its current liabilities from its operations in a given year. **Illustration 5.25** shows the formula for this ratio.

ILLUSTRATION 5.25

Formula for Current Cash Debt Coverage

$$\frac{\text{Net Cash Provided by Operating Activities}}{\text{Average Current Liabilities}} = \text{Current Cash Debt Coverage}$$

The higher the current cash debt coverage, the less likely a company will have liquidity problems. For example, a ratio near 1:1 is good. It indicates that the company can meet all of its current obligations from internally generated cash flow.

Financial Flexibility

The **cash debt coverage** provides information on financial flexibility. It indicates a company's ability to repay its liabilities from net cash provided by operating activities, without having to liquidate the assets employed in its operations. **Illustration 5.26** shows the formula for this ratio. Notice its similarity to the current cash debt coverage. However, because it uses average total liabilities in place of average current liabilities, it takes a somewhat longer-range view.

$$\frac{\text{Net Cash Provided by Operating Activities}}{\text{Average Total Liabilities}} = \text{Cash Debt Coverage}$$

ILLUSTRATION 5.26

Formula for Cash Debt Coverage

The higher this ratio, the less likely the company will experience difficulty in meeting its obligations as they come due. It signals whether the company can pay its debts and survive if external sources of funds become limited or too expensive.

Free Cash Flow

A more sophisticated way to examine a company's financial flexibility is to develop a free cash flow analysis. **Free cash flow** is the amount of discretionary cash flow a company has. It can use this cash flow to purchase additional investments, retire its debt, purchase treasury stock, or simply add to its liquidity. Financial statement users calculate free cash flow as shown in **Illustration 5.27**.

$$\text{Net Cash Provided by Operating Activities} - \text{Capital Expenditures} - \text{Cash Dividends} = \text{Free Cash Flow}$$

ILLUSTRATION 5.27

Formula for Free Cash Flow

In a free cash flow analysis, we first deduct capital spending, to indicate it is the least discretionary expenditure a company generally makes. (Without continued efforts to maintain and expand facilities, it is unlikely that a company can continue to maintain its competitive position.) We then deduct dividends. Although a company *can* cut its dividend, it usually will do so only in a **financial emergency**. The amount resulting after these deductions is the company's free cash flow. Obviously, the greater the amount of free cash flow, the greater the company's financial flexibility.

Questions that a free cash flow analysis answers are:

1. Is the company able to pay its dividends without resorting to external financing?
2. If business operations decline, will the company be able to maintain its needed capital investment?
3. What is the amount of discretionary cash flow that can be used for additional investment, retirement of debt, purchase of treasury stock, or addition to liquidity?

Illustration 5.28 is a free cash flow analysis using the cash flow statement for Nestor Company (shown in Illustration 5.23).

| Nestor Company Free Cash Flow Analysis | |
|---|-------------------------|
| Net cash provided by operating activities | \$411,750 |
| Less: Capital expenditures | 252,500 |
| Dividends | 19,800 |
| Free cash flow | <u>\$139,450</u> |

ILLUSTRATION 5.28

Free Cash Flow Computation

This computation shows that Nestor has a positive, and substantial, net cash provided by operating activities of \$411,750. Nestor's statement of cash flows reports that the company purchased equipment of \$182,500 and land of \$70,000 for total capital spending of \$252,500.

Nestor has more than sufficient cash flow to meet its dividend payment and therefore has satisfactory financial flexibility.

As you can see from looking back at Illustration 5.23, Nestor used its free cash flow to redeem bonds and add to its liquidity. If it finds additional investments that are profitable, it can increase its spending without putting its dividend or basic capital spending in jeopardy. Companies that have strong financial flexibility can take advantage of profitable investments even in tough times. In addition, strong financial flexibility frees companies from worry about survival in poor economic times. In fact, those with strong financial flexibility often fare better in a poor economy because they can take advantage of opportunities that other companies cannot.

What Do the Numbers Mean? “There Ought to Be a Law”

As one manager noted, “There ought to be a law that before you can buy a stock, you must be able to read a balance sheet.” We agree, and the same can be said for a statement of cash flows.

Krispy Kreme Doughnuts provides an example of how stunning earnings growth can hide real problems. Not long ago, the doughnut maker was a glamour stock with a 60 percent earnings per share growth rate and a price-earnings ratio around 70. Seven months later, its stock price had dropped

72 percent. What happened? Stockholders alleged that Krispy Kreme may have been inflating its revenues and not taking enough bad debt expense (which inflated both assets and income). In addition, Krispy Kreme’s operating cash flow was negative. Most financially sound companies generate positive cash flow.

The following are additional examples of how one rating agency rated the earnings quality of some companies, using some key balance sheet and statement of cash flow measurements.

| Earnings-Quality Winners | Company | Earnings-Quality Indicators | Earnings-Quality Losers | Company | Earnings-Quality Indicators |
|--------------------------|------------------------------|---------------------------------------|-------------------------|---------------------|--|
| | Avon Products | Strong cash flow | | Ford Motor | High debt and underfunded pension plan |
| | Capital One Financial | Conservatively capitalized | | Kroger | High goodwill and debt |
| | Ecolab | Good management of working capital | | Ryder System | Negative free cash flow |
| | Timberland | Minimal off-balance-sheet commitments | | Teco Energy | Selling assets to meet liquidity needs |

Another rating organization uses a metric to adjust for shortcomings in amounts reported in the balance sheet. Just as improving balance sheet and cash flow information is a leading indicator of improved earnings, a deteriorating balance sheet and statement of cash flows warn of earnings declines (and falling stock prices). This was the case at **Avon**; its strong cash flow rating subsequently declined, such that its free cash flow was just 76 percent of net

income. This raised red flags about the results on foreign investments by Avon.

Ozanian, “Beyond Balance Sheet: Earnings Quality,” *Forbes.com* (January 28, 2005); and H. Karp, “Avon’s Investments Fall Short,” *Wall Street Journal* (December 8, 2011).

Additional Information

Underlying Concepts

The basis for including additional information should meet the *full disclosure principle*. That is, the information should be of sufficient importance to influence the judgment of an informed user.

LEARNING OBJECTIVE 4

Describe additional types of information provided.

In both Chapter 4 and this chapter, we have discussed the primary financial statements that all companies prepare in accordance with GAAP. However, the primary financial statements cannot provide the complete picture related to the financial position and financial performance of a company. Additional descriptive information in note disclosures and certain techniques of disclosure expand on and amplify the items presented in the main body of the statements (see **Underlying Concepts**). For example, the balance sheet is not complete if a company simply lists the asset, liability, and owners’ equity accounts.

Notes to the Financial Statements

As indicated earlier, notes are an integral part of reporting financial statement information. Notes can explain in qualitative terms information related to specific financial statement items. In addition, they can provide supplemental data of a quantitative nature to expand the information in financial statements. Notes also can explain restrictions imposed by financial arrangements or basic contractual agreements. Although notes may be technical and difficult to understand in some cases, they provide meaningful information for users of financial statements.¹¹

Accounting Policies

Accounting policies are the specific principles, bases, conventions, rules, and practices applied by a company in preparing and presenting financial information. GAAP recommends disclosure for all significant accounting principles and methods that involve selection from among alternatives or those that are peculiar to a given industry. [6] For instance, companies can compute inventories under several cost flow assumptions (e.g., LIFO and FIFO), depreciate plant and equipment under several accepted methods (e.g., double-declining-balance and straight-line), and carry investments at different valuations (e.g., amortized cost, equity, and fair value). Sophisticated users of financial statements know of these possibilities and examine the statements closely to determine the methods used.

Companies therefore present a “Summary of Significant Accounting Policies” generally as the first note to the financial statements. This disclosure is important because, under GAAP, alternative treatments of a transaction are sometimes permitted. If these policies are not understood, users of financial statements are not able to compare the financial statements among companies. **Illustration 5.29** presents the accounting policy related to revenue recognition as reported by **Microsoft**.

| | |
|--|---|
| | Microsoft Corporation |
| | Note 1—Accounting Policies (in part) |
| | <p>Revenue Recognition</p> <p>Revenue is recognized when persuasive evidence of an arrangement exists, delivery has occurred, the fee is fixed or determinable, and collectability is probable. Revenue generally is recognized net of allowances for returns and any taxes collected from customers and subsequently remitted to governmental authorities. Revenue recognition for multiple-element arrangements requires judgment to determine if multiple elements exist, whether elements can be accounted for as separate units of accounting, and if so, the fair value for each of the elements. Microsoft enters into arrangements that can include various combinations of software, services, and hardware. Where elements are delivered over different periods of time, and when allowed under U.S. GAAP, revenue is allocated to the respective elements based on their relative selling prices at the inception of the arrangement, and revenue is recognized as each element is delivered.</p> |

ILLUSTRATION 5.29

Accounting Policy Note

Related to accounting policies, companies must also disclose information about the nature of their operations, the use of estimates in preparing financial statements, and certain significant estimates. [7] **Illustration 5.30** shows an example of such a disclosure.

| | |
|--|--|
| | Chesapeake Corporation |
| | <p>Risks and Uncertainties. Chesapeake operates in three business segments which offer a diversity of products over a broad geographic base. The Company is not dependent on any single customer, group of customers, market, geographic area or supplier of materials, labor or services. Financial statements include, where necessary, amounts based on the judgments and estimates of management. These estimates include allowances for bad debts, accruals for landfill closing costs, environmental remediation costs, loss contingencies for litigation, self-insured medical and workers’ compensation insurance and determinations of discount and other rate assumptions for pensions and postretirement benefit expenses.</p> |

ILLUSTRATION 5.30

Balance Sheet Disclosure of Significant Risks and Uncertainties

¹¹The FASB recently issued a new concepts statement [*Conceptual Framework for Financial Reporting—Chapter 8, Notes to Financial Statements* (August 2018)]. The statement addresses the Board’s decision process in identifying disclosures to be considered when setting standards-level disclosure requirements, as well as evaluating existing disclosure requirements. The concepts are consistent with the discussion in this section.

Additional Notes to the Financial Statements

In addition to a note related to explanation of their accounting policies, companies use specific notes to discuss items in the financial statements. Judgment must be exercised to identify the important aspects of financial information that need amplification in the notes. In many cases, the profession requires specific disclosures. For the balance sheet, note disclosures include (1) contractual situations, (2) contingencies, and (3) information on fair values.

Contractual Situations Companies should disclose contractual situations, if significant, in the notes to the financial statements. For example, they must clearly state the essential provisions of lease contracts, pension obligations, and stock compensation plans in the notes. Analysts want to know not only the amount of the liabilities but also how the different contractual provisions affect the company at present and in the future. Companies must disclose the following commitments if the amounts are material: commitments related to obligations to maintain working capital, to limit the payment of dividends, to restrict the use of assets, and to require the maintenance of certain financial ratios. Management must exercise considerable judgment to determine whether omission of such information is misleading. The rule in this situation is, “When in doubt, disclose.” It is better to disclose a little too much information than not enough.

What Do the Numbers Mean? What About Your Commitments?

Many of the recent accounting scandals related to the non-disclosure of significant contractual obligations. In response, the SEC has mandated that companies disclose contractual obligations in a tabular summary in the management

discussion and analysis section of the company’s annual report.

Presented below, as an example, is a disclosure from **The Procter & Gamble Company**.

Contractual Commitments, as of June 30, 2017 (in millions of dollars)

| | Total | Less Than 1 Year | 1–3 Years | 3–5 Years | After 5 Years |
|--|-----------------|---------------------|----------------|----------------|------------------|
| Recorded Liabilities | | | | | |
| Total debt | \$31,455 | \$13,543 | \$3,101 | \$4,236 | \$10,575 |
| Capital leases | 51 | 13 | 20 | 10 | 8 |
| Uncertain tax positions (1) | 18 | 18 | — | — | — |
| Other | | | | | |
| Interest payments relating to long-term debt | 5,220 | 594 | 1,014 | 887 | 2,725 |
| Operating leases (2) | 1,493 | 261 | 510 | 354 | 368 |
| Minimum pension funding (3) | 378 | 123 | 255 | — | — |
| Purchase obligations (4) | 1,607 | 843 | 393 | 169 | 202 |
| Total contractual commitments | <u>\$40,222</u> | <u>\$15,395</u> | <u>\$5,293</u> | <u>\$5,656</u> | <u>\$13,878</u> |

(1) As of June 30, 2017, the Company’s Consolidated Balance Sheet reflects a liability for uncertain tax positions of \$585 million, including \$120 million of interest and penalties. Due to the high degree of uncertainty regarding the timing of future cash outflows of liabilities for uncertain tax positions beyond one year, a reasonable estimate of the period of cash settlement beyond twelve months from the balance sheet date of June 30, 2017, cannot be made.

(2) Operating lease obligations are shown net of guaranteed sublease income.

(3) Represents future pension payments to comply with local funding requirements. These future pension payments assume the Company continues to meet its future statutory funding requirements. Considering the current economic environment in which the Company operates, the Company believes its cash flows are adequate to meet the future statutory funding requirements. The projected payments beyond fiscal year 2020 are not currently determinable.

(4) Primarily reflects future contractual payments under various take-or-pay arrangements entered into as part of the normal course of business.

Underlying Concepts

The FASB has a project that has the goal to make disclosures more useful.

Contingencies A **contingency** is an existing situation involving uncertainty as to possible gain (gain contingency) or loss (loss contingency) that will ultimately be resolved when one or more future events occur or fail to occur. In short, contingencies are material events with an uncertain future. Examples of gain contingencies are tax operating–loss carryforwards or company litigation against another party. Typical loss contingencies relate to litigation, environmental issues, possible tax assessments, or government investigations. The note disclosure in **Illustration 5.31** shows the presentation of such information based on the financial statements of **Costco Wholesale Corporation** (see **Underlying Concepts**).

Costco Wholesale Corporation

Note 10—Commitments and Contingencies

Legal Proceedings (in part)

The Company is involved in a number of claims, proceedings and litigation arising from its business and property ownership. In accordance with applicable accounting guidance, the Company establishes an accrual for legal proceedings if and when those matters reach a stage where they present loss contingencies that are both probable and reasonably estimable. There may be exposure to loss in excess of any amounts accrued. The Company monitors those matters for developments that would affect the likelihood of a loss (taking into account where applicable indemnification arrangements concerning suppliers and insurers) and the accrued amount, if any, thereof, and adjusts the amount as appropriate. As of the date of this Report, the Company has recorded an immaterial accrual with respect to one matter described below, in addition to other immaterial accruals for matters not described below. If the loss contingency at issue is not both probable and reasonably estimable, the Company does not establish an accrual, but will continue to monitor the matter for developments that will make the loss contingency both probable and reasonably estimable. The Company is a defendant in numerous putative class actions that have been brought around the United States against motor fuel retailers, including the Company, alleging that they have been overcharging consumers by selling gasoline or diesel that is warmer than 60 degrees without adjusting the volume sold to compensate for heat-related expansion or disclosing the effect of such expansion on the energy equivalent received by the consumer.

ILLUSTRATION 5.31

Contingency Disclosure

We examine the accounting and reporting requirements involving contingencies more fully in Chapter 13.

Fair Values As we have discussed, fair value information may be more useful than historical cost for certain types of assets and liabilities. This is particularly so in the case of financial instruments. **Financial instruments** are defined as cash, an ownership interest, or a contractual right to receive or obligation to deliver cash or another financial instrument. Such contractual rights to receive cash or other financial instruments are assets. Contractual obligations to pay are liabilities. Cash, investments, accounts receivable, and payables are examples of financial instruments.

Given the expanded use of fair value measurements, as discussed in Chapter 2, GAAP also has expanded disclosures about fair value measurements. [8] To increase consistency and comparability in the use of fair value measures, companies follow a fair value hierarchy that provides insight into how to determine fair value. The hierarchy has three levels. **Level 1** measures (the least subjective) are based on observable inputs, such as market prices for identical assets or liabilities. **Level 2** measures (more subjective) are based on market-based inputs other than those included in Level 1, such as those based on market prices for similar assets or liabilities. **Level 3** measures (most subjective) are based on unobservable inputs, such as a company's own data or assumptions.¹²

For major groups of assets and liabilities, companies must make the following fair value disclosures: (1) the fair value measurement and (2) the fair value hierarchy level of the measurements as a whole, classified by Level 1, 2, or 3. **Illustration 5.32** provides a disclosure for **Devon Energy** for its assets and liabilities measured at fair value.

In addition, companies must provide significant additional disclosure related to Level 3 measurements. The disclosures related to Level 3 are substantial and must identify what assumptions the company used to generate the fair value numbers and any related income effects. Companies will want to use Level 1 and 2 measurements as much as possible. In most cases, these valuations should be very reliable, as the fair value measurements are based on market information. In contrast, a company that uses Level 3 measurements extensively must be carefully evaluated to understand the impact these valuations have on the financial statements.

¹²Level 3 fair value measurements may be developed using expected cash flow and present value techniques, as described in "Using Cash Flow Information and Present Value in Accounting," *Statement of Financial Accounting Concepts No. 7*, as discussed in Chapter 6.

ILLUSTRATION 5.32**Disclosure of Fair Values**

| Devon Energy Corporation | | | | |
|---|---------------------|---|---|--|
| Note 7: Fair Value Measurements (in part). Certain of Devon's assets and liabilities are reported at fair value in the accompanying balance sheets. The following table provides fair value measurement information for such assets and liabilities. | | | | |
| | Total Fair Value | Fair Value Measurements Using: | | |
| | | Quoted Prices in Active Markets (Level 1) | Significant Other Observable Inputs (Level 2) | Significant Unobservable Inputs (Level 3) |
| (In millions) | | | | |
| Assets: | | | | |
| Short-term investments | \$ 341 | \$ 341 | \$ — | \$ — |
| Investment in Chevron common stock | 1,327 | 1,327 | — | — |
| Financial instruments | 8 | — | 8 | — |
| Liabilities: | | | | |
| Financial instruments | 497 | — | 497 | — |
| Asset retirement obligation (ARO) | 1,300 | — | — | 1,300 |

GAAP establishes a fair value hierarchy that prioritizes the inputs to valuation techniques used to measure fair value. As presented in the table above, this hierarchy consists of three broad levels. Level 1 inputs on the hierarchy consist of unadjusted quoted prices in active markets for identical assets and liabilities and have the highest priority. Level 3 inputs have the lowest priority. Devon uses appropriate valuation techniques based on the available inputs to measure the fair values of its assets and liabilities. When available, Devon measures fair value using Level 1 inputs because they generally provide the most reliable evidence of fair value.

Techniques of Disclosure

Companies should disclose as completely as possible the effect of various contingencies on financial condition, the methods of valuing assets and liabilities, and the company's contracts and agreements. To disclose this pertinent information, companies may use parenthetical explanations, notes, cross-reference and contra items, and supporting schedules.

Parenthetical Explanations

Companies often provide additional information by parenthetical explanations following the item. For example, **Illustration 5.33** shows a parenthetical explanation of the number of shares issued by **Ford Motor Company** on the balance sheet under "Stockholders' equity."

ILLUSTRATION 5.33**Parenthetical Disclosure of Shares Issued—Ford Motor Company**

| Ford Motor Company | | |
|---|-------------------------------|------|
| <u>Stockholders' Equity (in millions)</u> | | |
| Common stock, par value \$0.01 per share | (1,837 million shares issued) | \$18 |

Underlying Concepts

The user-specific quality of *understandability* requires accountants to be careful in describing transactions and events.

This additional pertinent balance sheet information adds clarity and completeness. It has an advantage over a note because it brings the additional information into the **body of the statement** where readers will less likely overlook it. Companies, however, should avoid lengthy parenthetical explanations, which might be distracting (see **Underlying Concepts**).

Cross-Reference and Contra Items

Companies "cross-reference" a direct relationship between an asset and a liability on the balance sheet. For example, as shown in **Illustration 5.34**, on December 31, 2020, a company might show the following entries—one listed among the current assets, and the other listed among the current liabilities.

| | |
|--|-----------|
| <u>Current Assets (in part)</u> | |
| Cash on deposit with sinking fund trustee for redemption of bonds payable—see Current liabilities | \$800,000 |

| | |
|--|-------------|
| <u>Current Liabilities (in part)</u> | |
| Bonds payable to be redeemed in 2021—see Current assets | \$2,300,000 |

ILLUSTRATION 5.34**Cross-Referencing and Contra Items**

This cross-reference points out that the company will redeem \$2,300,000 of bonds payable currently, for which it has only set aside \$800,000. Therefore, it needs additional cash from unrestricted cash, from sales of investments, from profits, or from some other source. Alternatively, the company can show the same information parenthetically.

Another common procedure is to establish contra or adjunct accounts. A **contra account** on a balance sheet reduces either an asset, liability, or owners' equity account. Examples include Accumulated Depreciation—Equipment and Discount on Bonds Payable. Contra accounts provide some flexibility in presenting the financial information. With the use of the Accumulated Depreciation—Equipment account, for example, a reader of the statement can see the original cost of the asset as well as the depreciation to date.

An **adjunct account**, on the other hand, increases either an asset, liability, or owners' equity account. An example is Premium on Bonds Payable, which, when added to the Bonds Payable account, describes the total bond liability of the company.

Supporting Schedules

Often a company needs a separate schedule to present more detailed information about certain assets or liabilities, as shown in **Illustration 5.35**.

| | |
|---|--------------------------|
| <u>Property, plant, and equipment</u> | |
| Land, buildings, equipment, and other fixed assets—net (see Schedule 3) | \$643,300 |
| Schedule 3 | |
| Land, Buildings, Equipment, and Other Fixed Assets | |
| | Other Fixed Assets |
| | <u>Total</u> |
| | <u>Land</u> |
| | <u>Buildings</u> |
| | <u>Equip.</u> |
| Balance January 1, 2020 | \$740,000 |
| Additions in 2020 | 161,200 |
| | 901,200 |
| Assets retired or sold in 2020 | 31,700 |
| Balance December 31, 2020 | 869,500 |
| Depreciation taken to January 1, 2020 | 196,000 |
| Depreciation taken in 2020 | 56,000 |
| | 252,000 |
| Depreciation on assets retired in 2020 | 25,800 |
| Depreciation accumulated December 31, 2020 | 226,200 |
| Book value of assets | \$643,300 |
| | \$46,000 |
| | \$348,000 |
| | \$191,000 |
| | \$58,300 |

ILLUSTRATION 5.35**Disclosure through Use of Supporting Schedules**

Global View

Internationally, accounting terminology is a problem. Confusion arises even between nations that share a language. For example, U.S. investors normally think of “stock” as “equity” or “ownership.” To the British, “stocks” means inventory. In the United States, “fixed assets” generally refers to “property, plant, and equipment.” In Britain, the category includes more items.

Terminology

The account titles in the general ledger do not necessarily represent the best terminology for balance sheet purposes (see **Global View**). Companies often use brief account titles and include technical terms that only accountants understand. But many persons unacquainted

with accounting terminology examine balance sheets. Thus, balance sheets should contain descriptions that readers will generally understand and clearly interpret.

For example, companies have used the term “reserve” in differing ways: to describe amounts deducted from assets (contra accounts such as accumulated depreciation and allowance for doubtful accounts), as a part of the title of contingent or estimated liabilities, and to describe an appropriation of retained earnings. Because of the different meanings attached to this term, misinterpretation often resulted from its use. Therefore, the profession has recommended that companies use the word **reserve** only to describe an appropriation of retained earnings. The use of the term in this narrower sense—to describe appropriated retained earnings—has resulted in a better understanding of its significance when it appears in a balance sheet. However, the term “appropriated” appears more logical, and we encourage its use.

For years, the profession has recommended that the use of the word **surplus** be discontinued in balance sheet presentations of stockholders’ equity. The use of the terms *capital surplus*, *paid-in surplus*, and *earned surplus* is confusing. Although condemned by the profession, these terms appear all too frequently in current financial statements.

Evolving Issue Balance Sheet Reporting: Gross or Net?

In addition to the issue of financial statement presentation discussed in the opening story, a second area of controversy for balance sheet reporting is the issue of offsetting (or netting) of assets and liabilities. It is generally accepted that offsetting of recognized assets and recognized liabilities detracts from the ability of users both to understand the transactions and conditions that have occurred and to assess the company’s future cash flows. In other words, providing information on assets, liabilities, and stockholders’ equity helps users to compute rates of return and evaluate capital structure. However, netting assets and liabilities can limit a user’s ability to assess the future economic benefits and obligations. That is, offsetting hides the existence of assets and liabilities, making it difficult to evaluate liquidity, solvency, and financial flexibility. As a result, GAAP does not permit the reporting of summary accounts alone (e.g., total assets, net assets, and total liabilities).

Recently, the IASB and FASB have worked to develop common criteria for offsetting on the balance sheet. Current offsetting rules under IFRS are more restrictive than GAAP. The rules proposed would allow offsetting only in rare circumstances (e.g., when right of offset is legally enforceable). Implementation of these new rules in the United States would result in a dramatic

“grossing up” of balance sheets (particularly for financial institutions). For example, one study estimated that the new rules would gross up U.S. banks’ balance sheets by \$900 billion (or an average of 68%, ranging from a 31.4% increase for **Citigroup** to 104.7% for **Morgan Stanley**).* Not surprisingly, the FASB received significant push-back from some of its constituents (particularly financial institutions) to the proposed rules.

As a result, to date the Boards have not been able to agree on a converged standard, thereby stalling this project. However, the Boards have issued converged disclosure requirements. The disclosure rules require companies to disclose both gross information and net information about instruments and transactions that are eligible for offset in the balance sheet. While the Boards have not been able to develop a converged set of criteria for offsetting, the information provided under the new converged disclosure rules should enable users of a company’s financial statements to evaluate the effects of netting arrangements on its financial position. In doing so, the new rules support the full disclosure principle.

*See Y. N’Diaye, “S&P: Accounting Rule Could Boost Bank Balance Sheets by Average 68%,” <https://mninews.deutsche-boerse.com> (September 22, 2011).

Using Ratios to Analyze Performance

LEARNING OBJECTIVE *5

Identify the major types of financial ratios and what they measure.

Analysts and other interested parties can gather qualitative information from financial statements by examining relationships between items on the statements and identifying trends in these relationships. A useful starting point in developing this information is ratio analysis.

A **ratio** expresses the mathematical relationship between one quantity and another. **Ratio analysis** expresses the relationship among pieces of selected financial statement data, in a **percentage**, a **rate**, or a simple **proportion**.

To illustrate, **IBM Corporation** recently had current assets of \$46,970 million and current liabilities of \$39,798 million. We find the ratio between these two amounts by dividing current assets by current liabilities. The alternative means of expression are:

Percentage: Current assets are 118% of current liabilities.

Rate: Current assets are 1.18 times as great as current liabilities.

Proportion: The relationship of current assets to current liabilities is 1.18:1.

To analyze financial statements, we classify ratios into four types, as follows.

Major Types of Ratios

Liquidity Ratios. Measures of the company's short-term ability to pay its maturing obligations.

Activity Ratios. Measures of how effectively the company uses its assets.

Profitability Ratios. Measures of the degree of success or failure of a given company or division for a given period of time.

Coverage Ratios. Measures of the degree of protection for long-term creditors and investors.

In Chapter 5, we discussed three measures related to the statement of cash flows (current cash debt coverage, cash debt coverage, and free cash flow). Throughout the remainder of the text, we provide ratios to help you understand and interpret the information presented in financial statements. **Illustration 5A.1** presents the ratios that we will use throughout the text. You should find this chart helpful as you examine these ratios in more detail in the following chapters. An appendix to Chapter 24 further discusses financial statement analysis.

ILLUSTRATION 5A.1 A Summary of Financial Ratios

| Ratio | Formula | Purpose or Use |
|--|---|---|
| I. Liquidity | | |
| 1. Current ratio | $\frac{\text{Current assets}}{\text{Current liabilities}}$ | Measures short-term debt-paying ability |
| 2. Quick or acid-test ratio | $\frac{\text{Cash} + \text{Short-term investments} + \text{Accounts receivable (net)}}{\text{Current liabilities}}$ | Measures immediate short-term liquidity |
| 3. Current cash debt coverage | $\frac{\text{Net cash provided by operating activities}}{\text{Average current liabilities}}$ | Measures a company's ability to pay off its current liabilities in a given year from its operations |
| II. Activity | | |
| 4. Accounts receivable turnover | $\frac{\text{Net sales}}{\text{Average net accounts receivable}}$ | Measures liquidity of receivables |
| 5. Inventory turnover | $\frac{\text{Cost of goods sold}}{\text{Average inventory}}$ | Measures liquidity of inventory |
| 6. Asset turnover | $\frac{\text{Net sales}}{\text{Average total assets}}$ | Measures how efficiently assets are used to generate sales |
| III. Profitability | | |
| 7. Profit margin on sales | $\frac{\text{Net income}}{\text{Net sales}}$ | Measures net income generated by each dollar of sales |
| 8. Return on assets | $\frac{\text{Net income}}{\text{Average total assets}}$ | Measures overall profitability of assets |
| 9. Return on common stockholders' equity | $\frac{\text{Net income} - \text{Preferred dividends}}{\text{Average common stockholders' equity}}$ | Measures profitability of owners' investment |

(continued)

ILLUSTRATION 5A.1 (continued)

| Ratio | Formula | Purpose or Use |
|---------------------------|--|--|
| 10. Earnings per share | $\frac{\text{Net income} - \text{Preferred dividends}}{\text{Weighted-average common shares outstanding}}$ | Measures net income earned on each share of common stock |
| 11. Price-earnings ratio | $\frac{\text{Market price per share}}{\text{Earnings per share}}$ | Measures the ratio of the market price per share to earnings per share |
| 12. Payout ratio | $\frac{\text{Cash dividends}}{\text{Net income}}$ | Measures percentage of earnings distributed in the form of cash dividends |
| IV. Coverage | | |
| 13. Debt to assets ratio | $\frac{\text{Total liabilities}}{\text{Total assets}}$ | Measures the percentage of total assets provided by creditors |
| 14. Times interest earned | $\frac{\text{Net income} + \text{Interest expense} + \text{Income tax expense}}{\text{Interest expense}}$ | Measures ability to meet interest payments as they come due |
| 15. Cash debt coverage | $\frac{\text{Net cash provided by operating activities}}{\text{Average total liabilities}}$ | Measures a company's ability to repay its total liabilities in a given year from its operations |
| 16. Book value per share | $\frac{\text{Common stockholders' equity}}{\text{Outstanding shares}}$ | Measures the amount each share would receive if the company were liquidated at the amounts reported on the balance sheet |
| 17. Free cash flow | $\text{Net cash provided by operating activities} - \text{Capital expenditures} - \text{Cash dividends}$ | Measures the amount of discretionary cash flow |

Learning Objectives Review

1 Explain the uses, limitations, and content of the balance sheet.

The **balance sheet is useful** because it provides information about the nature and amounts of investments in a company's resources, obligations to creditors, and owners' equity. The balance sheet contributes to financial reporting by providing a basis for (1) computing

rates of return, (2) evaluating the capital structure of the enterprise, and (3) assessing the liquidity, solvency, and financial flexibility of the enterprise.

Three **limitations of a balance sheet** are as follows. (1) The balance sheet does not reflect fair value because accountants use a historical cost basis in valuing and reporting most assets and liabilities. (2) Companies must use judgments and estimates to determine certain amounts, such as the collectibility of receivables and the

useful life of long-term tangible and intangible assets. (3) The balance sheet omits many items that are of financial value to the business but cannot be recorded objectively, such as human resources, customer base, and reputation.

The **general elements of the balance sheet** are assets, liabilities, and equity. The major classifications of assets are current assets; long-term investments; property, plant, and equipment; intangible assets; and other assets. The major classifications of liabilities are current and long-term liabilities. The balance sheet of a corporation generally classifies owners' equity as capital stock, additional paid-in capital, and retained earnings.

2 Prepare a classified balance sheet.

The report form lists liabilities and stockholders' equity directly below assets on the same page. The account form lists assets, by sections, on the left side, and liabilities and stockholders' equity, by sections, on the right side.

3 Explain the purpose, content, and preparation of the statement of cash flows.

The **primary purpose of a statement of cash flows** is to provide relevant information about a company's cash receipts and cash payments during a period. Reporting the sources, uses, and net change in cash enables financial statement readers to know what is happening to a company's most liquid resource.

In the statement of cash flows, **companies classify the period's cash receipts and cash payments into three different activities**. (1) *Operating activities*: Involve the cash effects of transactions that enter into the determination of net income. (2) *Investing activities*: Include making and collecting loans, and acquiring and disposing of investments (both debt and equity) and of property, plant, and equipment. (3) *Financing activities*: Involve liability and owners' equity items. Financing activities include (a) obtaining capital from owners and providing them with a return on their investment, and (b) borrowing money from creditors and repaying the amounts borrowed.

The **information to prepare the statement of cash flows** usually comes from comparative balance sheets, the current income statement, and selected transaction data. Companies follow four steps to prepare the statement of cash flows from these sources. (1) Determine the net cash provided by (or used in) operating activities. (2) Determine the net cash provided by (or used in) investing and financing activities. (3) Determine the change (increase or decrease) in cash during the period. (4) Reconcile the change in cash with the beginning and ending cash balances.

Creditors examine the statement of cash flows carefully because they are concerned about being paid. The net cash flow provided by

operating activities in relation to the company's liabilities is helpful in making this assessment. Two ratios used in this regard are the current cash debt ratio and the cash debt ratio. In addition, the amount of free cash flow provides creditors and stockholders with a picture of the company's financial flexibility.

4 Describe additional types of information provided.

Four types of information normally are supplemental to account titles and amounts presented in the balance sheet. (1) *Accounting policies*: Explanations of the valuation methods used or the basic assumptions made concerning inventory valuation, depreciation methods, investments in subsidiaries, etc. (2) *Contractual situations*: Explanations of certain restrictions or covenants attached to specific assets or, more likely, to liabilities. (3) *Contingencies*: Material events that have an uncertain outcome. (4) *Fair values*: Disclosures related to fair values, particularly related to financial instruments.

Companies use **three methods to disclose pertinent information in the balance sheet**. (1) *Parenthetical explanations*: Parenthetical information provides additional information or description following the item. A company uses notes if it cannot conveniently show additional explanations or descriptions as parenthetical explanations. (2) *Cross-reference and contra items*: Companies "cross-reference" a direct relationship between an asset and a liability on the balance sheet. (3) *Supporting schedules*: Often a company uses a separate schedule to present more detailed information than just the single summary item shown in the balance sheet.

5 Identify the major types of financial ratios and what they measure.

Ratios express the mathematical relationship between one quantity and another, expressed as a percentage, a rate, or a proportion. *Liquidity* ratios measure the short-term ability to pay maturing obligations. *Activity* ratios measure the effectiveness of asset usage. *Profitability* ratios measure the success or failure of an enterprise. *Coverage* ratios measure the degree of protection for long-term creditors and investors.

Enhanced Review and Practice

Practice Problems

- Assume that Sanchez Company has the following accounts at December 31, 2020.
 - Common Stock.
 - Discount on Bonds Payable.
 - Treasury Stock (at cost).
 - Notes Payable (short-term).
 - Raw Materials.
 - Preferred Stock Investments (long-term).

7. Unearned Rent Revenue.
8. Work in Process.
9. Copyrights.
10. Buildings.
11. Notes Receivable (short-term).
12. Cash.
13. Salaries and Wages Payable.
14. Accumulated Depreciation—Buildings.
15. Accumulated Other Comprehensive Income.
16. Cash Restricted for Plant Expansion.
17. Land Held for Future Plant Site.
18. Noncontrolling Interest.
19. Allowance for Doubtful Accounts—Accounts Receivable.
20. Retained Earnings.
21. Paid-in Capital in Excess of Par—Common Stock.
22. Unearned Subscriptions Revenue.
23. Receivables—Officers (due in one year).
24. Finished Goods.
25. Accounts Receivable.
26. Bonds Payable (due in 4 years).

Instructions

Prepare a classified balance sheet in good form. (No monetary amounts are necessary.)

Solution

1.

| Sanchez Company | | | |
|---|-------|---|-------|
| Balance Sheet | | | |
| December 31, 2020 | | | |
| Assets | | Liabilities and Stockholders' Equity | |
| <u>Current assets</u> | | <u>Current liabilities</u> | |
| Cash (less cash restricted for plant expansion) | \$XXX | Notes payable (short-term) | \$XXX |
| Accounts receivable | \$XXX | Salaries and wages payable | XXX |
| Less: Allowance for doubtful accounts | XXX | Unearned subscriptions revenue | XXX |
| Notes receivable | XXX | Unearned rent revenue | XXX |
| Receivables—officers | XXX | Total current liabilities | \$XXX |
| Inventory | | <u>Long-term debt</u> | |
| Finished goods | XXX | Bonds payable (due in four years) | XXX |
| Work in process | XXX | Discount on bonds payable | (XXX) |
| Raw materials | XXX | Total liabilities | XXX |
| Total current assets | \$XXX | <u>Stockholders' equity</u> | |
| <u>Long-term investments</u> | | Capital stock: | |
| Preferred stock investments | XXX | Common stock | \$XXX |
| Land held for future plant site | XXX | Additional paid-in capital: | |

| Buildings | XXX | Accumulated other comprehensive income | XXX |
| Less: Accumulated depreciation—buildings | XXX | Treasury stock (at cost) | (XXX) |
| | XXX | Total equity attributable to Sanchez shareholders | XXX |
| <u>Intangible assets</u> | | Equity attributable to noncontrolling interest | XXX |
| Copyrights | XXX | Total liabilities and stockholders' equity | \$XXX |
| Total assets | \$XXX | | |

2. Cassy Corporation's balance sheet at the end of 2019 included the following items.

| | | | |
|------------------------------------|------------------|---------------------|------------------|
| Current assets | \$282,000 | Current liabilities | \$180,000 |
| Land | 36,000 | Bonds payable | 120,000 |
| Buildings | 144,000 | Common stock | 216,000 |
| Equipment | 108,000 | Retained earnings | <u>52,800</u> |
| Accumulated depreciation—buildings | (36,000) | Total | <u>\$568,800</u> |
| Accumulated depreciation—equipment | (13,200) | | |
| Patents | <u>48,000</u> | | |
| Total | <u>\$568,800</u> | | |

The following information is available for 2020.

- Treasury stock was purchased at a cost of \$13,200.
- Cash dividends of \$36,000 were declared and paid.
- A long-term investment in stock was purchased for \$19,200.
- Current assets other than cash increased by \$34,800. Current liabilities increased by \$15,600.
- Depreciation expense was \$4,800 on the building and \$10,800 on equipment.
- Net income was \$66,000.
- Bonds payable of \$60,000 were issued.
- An addition to the building was completed at a cost of \$32,400.
- Patent amortization was \$3,000.
- Equipment (cost \$24,000 and accumulated depreciation \$9,600) was sold for \$12,000.

Instructions

- Prepare a balance sheet at December 31, 2020.
- Prepare a statement of cash flows for 2020. The cash balance at January 1, 2020, was \$5,000.

Solution

2. a.

| Cassy Corporation | | |
|---|---------------|------------------|
| Balance Sheet | | |
| December 31, 2020 | | |
| <u>Assets</u> | | |
| Current assets (see Notes below) | | \$355,800 |
| Long-term investments | | 19,200 |
| Property, plant, and equipment | | |
| Land | \$ 36,000 | |
| Buildings (\$144,000 + \$32,400) | \$176,400 | |
| Less: Accumulated depreciation—buildings (\$36,000 + \$4,800) | <u>40,800</u> | 135,600 |
| Equipment (\$108,000 – \$24,000) | 84,000 | |
| Less: Accumulated depreciation—equipment (\$13,200 – \$9,600 + \$10,800) | <u>14,400</u> | <u>69,600</u> |
| Total | | 241,200 |
| Intangible assets—patents (\$48,000 – \$3,000) | | <u>45,000</u> |
| Total assets | | <u>\$661,200</u> |
| <u>Liabilities and Stockholders' Equity</u> | | |
| Current liabilities (\$180,000 + \$15,600) | | \$195,600 |
| Long-term liabilities | | |
| Bonds payable (\$120,000 + \$60,000) | | <u>180,000</u> |
| Total liabilities | | 375,600 |

| | | |
|--|-----------|------------------|
| Stockholders' equity | | |
| Common stock | \$216,000 | |
| Retained earnings (\$52,800 + \$66,000 – \$36,000) | 82,800 | |
| Total | 298,800 | |
| Less: Cost of treasury stock | (13,200) | |
| Total stockholders' equity | | 285,600 |
| Total liabilities and stockholders' equity | | <u>\$661,200</u> |

Notes: The amount determined for current assets is computed last and is a “plug” figure. That is, total liabilities and stockholders' equity is computed because information is available to determine this amount. Because the total assets amount is the same as the total liabilities and stockholders' equity amount, the amount of total assets is determined. Information is available to compute all the asset amounts except current assets. Therefore, current assets can be determined by deducting the total of all the other asset balances from the total asset balance (i.e., \$661,200 – \$45,000 – \$241,200 – \$19,200).

2. b.

| | | | |
|---|----------|--|-----------------|
| Cassy Corporation | | | |
| Statement of Cash Flows | | | |
| For the Year Ended December 31, 2020 | | | |
| <hr/> | | | |
| Cash flows from operating activities | | | |
| Net income | | | \$66,000 |
| Adjustments to reconcile net income | | | |
| to net cash provided by operating activities: | | | |
| Loss on sale of equipment [(\$24,000 – \$9,600) – \$12,000] | \$ 2,400 | | |
| Depreciation expense | 15,600 | | |
| Patent amortization | 3,000 | | |
| Increase in current liabilities | 15,600 | | |
| Increase in current assets (other than cash) | (34,800) | | 1,800 |
| Net cash provided by operating activities | | | 67,800 |
| Cash flows from investing activities | | | |
| Sale of equipment | 12,000 | | |
| Addition to building | (32,400) | | |
| Investment in stock | (19,200) | | |
| Net cash used by investing activities | | | (39,600) |
| Cash flows from financing activities | | | |
| Issuance of bonds | 60,000 | | |
| Payment of dividends | (36,000) | | |
| Purchase of treasury stock | (13,200) | | |
| Net cash provided by financing activities | | | 10,800 |
| Net increase in cash | | | 39,000 |
| Cash at the beginning of the year | | | 5,000 |
| Cash at the end of the year | | | <u>\$44,000</u> |

Exercises, Problems, Problem Solution Walkthrough Videos, and many more assessment tools and resources are available for practice in WileyPLUS.

Questions

- How does information from the balance sheet help users of the financial statements?
- What is meant by solvency? What information in the balance sheet can be used to assess a company's solvency?
- A recent financial magazine indicated that the airline industry has poor financial flexibility. What is meant by financial flexibility, and why is it important?
- Discuss at least two situations in which estimates could affect the usefulness of information in the balance sheet.
- Perez Company reported higher inventories compared to its competitors in a recent year. Discuss this effect on the current ratio (current assets ÷ current liabilities). What does this tell a statement user about Perez Company's liquidity?

6. What is meant by liquidity? Rank the following assets from one to five in order of liquidity.
- Goodwill
 - Inventory
 - Buildings
 - Short-term investments
 - Accounts receivable
7. What are the major limitations of the balance sheet as a source of information?
8. Discuss at least two items that are important to the value of companies like **Intel** or **IBM** but that are not recorded in their balance sheets. What are some reasons why these items are not recorded in the balance sheet?
9. How does separating current assets from property, plant, and equipment in the balance sheet help analysts?
10. In its December 31, 2020, balance sheet Oakley Corporation reported as an asset, “Net notes and accounts receivable, \$7,100,000.” What other disclosures are necessary?
11. Should available-for-sale securities always be reported as a current asset? Explain.
12. What is the relationship between current assets and current liabilities?
13. The New York Knicks, Inc. sold 10,000 season tickets at \$2,000 each. By December 31, 2020, 16 of the 40 home games had been played. What amount should be reported as a current liability at December 31, 2020?
14. What is working capital? How does working capital relate to the operating cycle?
15. In what section of the balance sheet should the following items appear, and what balance sheet terminology would you use?
- Treasury stock (recorded at cost).
 - Checking account at bank.
 - Land (held as an investment).
 - Sinking fund.
 - Unamortized premium on bonds payable.
 - Copyrights.
 - Pension fund assets.
 - Premium on common stock.
 - Long-term investments (pledged against bank loans payable).
16. Where should the following items be shown on the balance sheet, if shown at all?
- Allowance for doubtful accounts.
 - Merchandise held on consignment.
 - Advances received on sales contract.
 - Cash surrender value of life insurance.
 - Land.
 - Merchandise out on consignment.
 - Franchises.
 - Accumulated depreciation of equipment.
 - Materials in transit—purchased f.o.b. destination.
17. According to generally accepted accounting principles, what is the balance sheet valuation of each of the following assets?
- Trade accounts receivable.
 - Land.
 - Inventories.
 - Trading securities.
 - Prepaid expenses.
18. Recall the definition of assets: probable economic benefits obtained or controlled by a particular entity as a result of past transactions or events. Discuss how a leased building might qualify as an asset of the lessee (tenant) under this definition.
19. Kathleen Battle says, “Retained earnings should be reported as an asset, since it is earnings which are reinvested in the business.” How would you respond to Battle?
20. The creditors of Chester Company agree to accept promissory notes for the amount of its indebtedness with a proviso that two-thirds of the annual profits must be applied to their liquidation. How should these notes be reported on the balance sheet of the issuing company? Give a reason for your answer.
21. What is the purpose of a statement of cash flows? How does it differ from a balance sheet and an income statement?
22. The net income for the year for Genesis, Inc. is \$750,000, but the statement of cash flows reports that the net cash provided by operating activities is \$640,000. What might account for the difference?
23. Net income for the year for Carrie, Inc. was \$750,000, but the statement of cash flows reports that net cash provided by operating activities was \$860,000. What might account for the difference?
24. Differentiate between operating activities, investing activities, and financing activities.
25. Each of the following items must be considered in preparing a statement of cash flows. Indicate where each item is to be reported in the statement, if at all. Assume that net income is reported as \$90,000.
- Accounts receivable increased from \$34,000 to \$39,000 from the beginning to the end of the year.
 - During the year, 10,000 shares of preferred stock with a par value of \$100 per share were issued at \$115 per share.
 - Depreciation expense amounted to \$14,000, and bond premium amortization amounted to \$5,000.
 - Land increased from \$10,000 to \$30,000.
26. Sergey Co. has net cash provided by operating activities of \$1,200,000. Its average current liabilities for the period are \$1,000,000, and its average total liabilities are \$1,500,000. Comment on the company’s liquidity and financial flexibility, given this information.
27. Net income for the year for Tanizaki, Inc. was \$750,000, but the statement of cash flows reports that net cash provided by operating activities was \$860,000. Tanizaki also reported capital expenditures of \$75,000 and paid dividends in the amount of \$30,000. Compute Tanizaki’s free cash flow.
28. What is the purpose of a free cash flow analysis?
29. What are some of the techniques of disclosure for the balance sheet?
30. What is a “Summary of Significant Accounting Policies”?
31. What types of contractual obligations must be disclosed in great detail in the notes to the balance sheet? Why do you think these detailed provisions should be disclosed?
32. What is the profession’s recommendation in regard to the use of the term “surplus”? Explain.

Brief Exercises

BE5.1 (LO 2) Harding Corporation has the following accounts included in its December 31, 2020, trial balance: Accounts Receivable \$110,000, Inventory \$290,000, Allowance for Doubtful Accounts \$8,000, Patents \$72,000, Prepaid Insurance \$9,500, Accounts Payable \$77,000, and Cash \$30,000. Prepare the current assets section of the balance sheet, listing the accounts in proper sequence.

BE5.2 (LO 2) Koch Corporation's adjusted trial balance contained the following asset accounts at December 31, 2020: Cash \$7,000, Land \$40,000, Patents \$12,500, Accounts Receivable \$90,000, Prepaid Insurance \$5,200, Inventory \$30,000, Allowance for Doubtful Accounts \$4,000, and Equity Investments (to be sold in the next quarter) \$11,000. Prepare the current assets section of the balance sheet, listing the accounts in proper sequence.

BE5.3 (LO 2) Included in Outkast Company's December 31, 2020, trial balance are the following accounts: Prepaid Rent \$5,200, Debt Investments (to be held to maturity until 2023) \$56,000, Unearned Fees \$17,000, Land (held for investment) \$39,000, and Notes Receivable (long-term) \$42,000. Prepare the long-term investments section of the balance sheet.

BE5.4 (LO 2) Lowell Company's December 31, 2020, trial balance includes the following accounts: Inventory \$120,000, Buildings \$207,000, Accumulated Depreciation—Equipment \$19,000, Equipment \$190,000, Land (held for investment) \$46,000, Accumulated Depreciation—Buildings \$45,000, Land \$71,000, and Timberland \$70,000. Prepare the property, plant, and equipment section of the balance sheet.

BE5.5 (LO 2) Crane Corporation has the following accounts included in its December 31, 2020, trial balance: Equity Investments (to be sold in the next 6 months) \$21,000, Goodwill \$150,000, Prepaid Insurance \$12,000, Patents \$220,000, and Franchises \$130,000. Prepare the intangible assets section of the balance sheet.

BE5.6 (LO 2) Patrick Corporation's adjusted trial balance contained the following asset accounts at December 31, 2020: Prepaid Rent \$12,000, Goodwill \$50,000, Franchise Fees Receivable \$2,000, Franchises \$47,000, Patents \$33,000, and Trademarks \$10,000. Prepare the intangible assets section of the balance sheet.

BE5.7 (LO 2) Thomas Corporation's adjusted trial balance contained the following liability accounts at December 31, 2020: Bonds Payable (due in 3 years) \$100,000, Accounts Payable \$72,000, Notes Payable (due in 90 days) \$22,500, Salaries and Wages Payable \$4,000, and Income Taxes Payable \$7,000. Prepare the current liabilities section of the balance sheet.

BE5.8 (LO 2) Included in Adams Company's December 31, 2020, trial balance are the following accounts: Accounts Payable \$220,000, Pension Liability \$375,000, Discount on Bonds Payable \$29,000, Unearned Rent Revenue \$41,000, Bonds Payable \$400,000, Salaries and Wages Payable \$27,000, Interest Payable \$12,000, and Income Taxes Payable \$29,000. Prepare the current liabilities section of the balance sheet.

BE5.9 (LO 2) Use the information presented in BE5.8 for Adams Company to prepare the long-term liabilities section of the balance sheet.

BE5.10 (LO 2) Hawthorn Corporation's adjusted trial balance contained the following accounts at December 31, 2020: Retained Earnings \$120,000, Common Stock \$750,000, Bonds Payable \$100,000, Paid-in Capital in Excess of Par—Common Stock \$200,000, Goodwill \$55,000, Accumulated Other Comprehensive Loss \$150,000, and Noncontrolling Interest \$35,000. Prepare the stockholders' equity section of the balance sheet.

BE5.11 (LO 2) Stowe Company's December 31, 2020, trial balance includes the following accounts: Investment in Common Stock \$70,000, Retained Earnings \$114,000, Trademarks \$31,000, Preferred Stock \$152,000, Common Stock \$55,000, Deferred Income Taxes \$88,000, Paid-in Capital in Excess of Par—Common Stock \$174,000, and Noncontrolling Interest \$63,000. Prepare the stockholders' equity section of the balance sheet.

BE5.12 (LO 3) Keyser Beverage Company reported the following items in the most recent year.

| | |
|---|----------|
| Net income | \$40,000 |
| Dividends paid | 5,000 |
| Increase in accounts receivable | 10,000 |
| Increase in accounts payable | 7,000 |
| Purchase of equipment (capital expenditure) | 8,000 |
| Depreciation expense | 4,000 |
| Issue of notes payable | 20,000 |

Compute net cash provided by operating activities, the net change in cash during the year, and free cash flow.

BE5.13 (LO 3) Ames Company reported 2020 net income of \$151,000. During 2020, accounts receivable increased by \$13,000 and accounts payable increased by \$9,500. Depreciation expense was \$44,000. Prepare the cash flows from operating activities section of the statement of cash flows.

BE5.14 (LO 3) Martinez Corporation engaged in the following cash transactions during 2020.

| | |
|----------------------------|-----------|
| Sale of land and building | \$191,000 |
| Purchase of treasury stock | 40,000 |
| Purchase of land | 37,000 |
| Payment of cash dividend | 95,000 |
| Purchase of equipment | 53,000 |
| Issuance of common stock | 147,000 |
| Retirement of bonds | 100,000 |

Compute the net cash provided (used) by investing activities.

BE5.15 (LO 3) Use the information presented in BE5.14 for Martinez Corporation to compute the net cash used (provided) by financing activities.

BE5.16 (LO 3) Using the information in BE5.14, determine Martinez's free cash flow, assuming that it reported net cash provided by operating activities of \$400,000.

Exercises

E5.1 (LO 1, 2) (Balance Sheet Classifications) Presented below are a number of balance sheet accounts of Deep Blue Something, Inc.

- | | |
|--|---|
| a. Debt Investments. | h. Interest Payable. |
| b. Treasury Stock. | i. Deficit. |
| c. Common Stock. | j. Equity Investments (ownership stake of less than 20%). |
| d. Dividends Payable. | k. Income Taxes Payable. |
| e. Accumulated Depreciation—Equipment. | l. Unearned Subscriptions Revenue. |
| f. Construction in Process. | m. Work in Process. |
| g. Petty Cash. | n. Salaries and Wages Payable. |

Instructions

For each of the accounts above, indicate the proper balance sheet classification. In the case of borderline items, indicate the additional information that would be required to determine the proper classification.

E5.2 (LO 1, 2) (Classification of Balance Sheet Accounts) Presented below are the captions of Faulk Company's balance sheet.

- | | |
|------------------------------------|--------------------------------|
| a. Current assets. | f. Current liabilities. |
| b. Investments. | g. Noncurrent liabilities. |
| c. Property, plant, and equipment. | h. Capital stock. |
| d. Intangible assets. | i. Additional paid-in capital. |
| e. Other assets. | j. Retained earnings. |

Instructions

Indicate by letter where each of the following items would be classified.

- | | |
|---|---|
| 1. Preferred stock. | 8. Premium on bonds payable. |
| 2. Goodwill. | 9. Allowance for doubtful accounts. |
| 3. Salaries and wages payable. | 10. Accounts receivable. |
| 4. Accounts payable. | 11. Cash surrender value of life insurance. |
| 5. Buildings. | 12. Notes payable (due next year). |
| 6. Equity investments (to be sold within one year). | 13. Supplies. |
| 7. Current maturity of long-term debt. | 14. Common stock. |

- | | |
|------------------------|---------------------------|
| 15. Land. | 18. Prepaid insurance. |
| 16. Bond sinking fund. | 19. Bonds payable. |
| 17. Inventory. | 20. Income taxes payable. |

E5.3 (LO 1, 2) (Classification of Balance Sheet Accounts) Assume that Fielder Enterprises uses the following headings on its balance sheet.

- | | |
|------------------------------------|--|
| a. Current assets. | g. Long-term liabilities. |
| b. Investments. | h. Capital stock. |
| c. Property, plant, and equipment. | i. Equity attributed to noncontrolling interest. |
| d. Intangible assets. | j. Paid-in capital in excess of par. |
| e. Other assets. | k. Retained earnings. |
| f. Current liabilities. | |

Instructions

Indicate by letter how each of the following usually should be classified. If an item should appear in a note to the financial statements, use the letter “N” to indicate this fact. If an item need not be reported at all on the balance sheet, use the letter “X.”

- Prepaid insurance.
- Stock owned in affiliated companies.
- Unearned service revenue.
- Advances to suppliers.
- Unearned rent revenue.
- Preferred stock.
- Additional paid-in capital on preferred stock.
- Copyrights.
- Petty cash fund.
- Sales taxes payable.
- Accrued interest on notes receivable.
- Twenty-year issue of bonds payable that will mature within the next year. (No sinking fund exists, and refunding is not planned.)
- Machinery retired from use and held for sale.
- Fully depreciated machine still in use.
- Accrued interest on bonds payable.
- Salaries that company budget shows will be paid to employees within the next year.
- Discount on bonds payable. (Assume related to bonds payable in item 12.)
- Accumulated depreciation—buildings.
- Shares held by noncontrolling stockholders.

E5.4 (LO 1, 2) (Preparation of a Classified Balance Sheet) Assume that Denis Savard Inc. has the following accounts at the end of the current year.

- Common Stock.
- Discount on Bonds Payable.
- Treasury Stock (at cost).
- Notes Payable (short-term).
- Raw Materials.
- Preferred Stock Investments (long-term).
- Unearned Rent Revenue.
- Work in Process.
- Copyrights.
- Buildings.
- Notes Receivable (short-term).
- Cash.

13. Salaries and Wages Payable.
14. Accumulated Depreciation—Buildings.
15. Restricted Cash for Plant Expansion.
16. Land Held for Future Plant Site.
17. Allowance for Doubtful Accounts.
18. Retained Earnings.
19. Paid-in Capital in Excess of Par—Common Stock.
20. Unearned Subscriptions Revenue.
21. Receivables—Officers (due in one year).
22. Inventory (finished goods).
23. Accounts Receivable.
24. Bonds Payable (due in 4 years).
25. Noncontrolling Interest.

Instructions

Prepare a classified balance sheet in good form. (No monetary amounts are necessary.)

E5.5 (LO 2) (Preparation of a Corrected Balance Sheet) Uhura Company has decided to expand its operations. The bookkeeper recently completed the following balance sheet in order to obtain additional funds for expansion.

| Uhura Company Balance Sheet For the Year Ended 2020 | |
|--|-----------|
| Current assets | |
| Cash | \$230,000 |
| Accounts receivable (net) | 340,000 |
| Inventory (lower-of-average-cost-or-market) | 401,000 |
| Equity investments (marketable)—at cost (fair value \$120,000) | 140,000 |
| Property, plant, and equipment | |
| Buildings (net) | 570,000 |
| Equipment (net) | 160,000 |
| Land held for future use | 175,000 |
| Intangible assets | |
| Goodwill | 80,000 |
| Cash surrender value of life insurance | 90,000 |
| Prepaid expenses | 12,000 |
| Current liabilities | |
| Accounts payable | 135,000 |
| Notes payable (due next year) | 125,000 |
| Pension obligation | 82,000 |
| Rent payable | 49,000 |
| Premium on bonds payable | 53,000 |
| Long-term liabilities | |
| Bonds payable | 500,000 |
| Stockholders' equity | |
| Common stock, \$1.00 par, authorized | |
| 400,000 shares, issued 290,000 | 290,000 |
| Additional paid-in capital | 160,000 |
| Retained earnings | ? |

Instructions

Prepare a revised balance sheet given the available information. Assume that the accumulated depreciation balance for the buildings is \$160,000 and for the equipment, \$105,000. The allowance for doubtful accounts has a balance of \$17,000. The pension obligation is considered a long-term liability.

E5.6 (LO 1, 2) (Corrections of a Balance Sheet) The bookkeeper for Geronimo Company has prepared the following balance sheet as of July 31, 2020.

| Geronimo Company Balance Sheet As of July 31, 2020 | | | |
|--|-----------|----------------------------|-----------|
| Cash | \$ 69,000 | Notes and accounts payable | \$ 44,000 |
| Accounts receivable (net) | 40,500 | Long-term liabilities | 75,000 |
| Inventory | 60,000 | Stockholders' equity | 155,500 |
| Equipment (net) | 84,000 | | \$274,500 |
| Patents | 21,000 | | |
| | \$274,500 | | |

The following additional information is provided.

1. Cash includes \$1,200 in a petty cash fund and \$15,000 in a bond sinking fund.
2. The net accounts receivable balance is comprised of the following two items: (a) accounts receivable \$44,000 and (b) allowance for doubtful accounts \$3,500.
3. Inventory costing \$5,300 was shipped out on consignment on July 31, 2020. The ending inventory balance does not include the consigned goods. Receivables in the amount of \$5,300 were recognized on these consigned goods.
4. Equipment had a cost of \$112,000 and an accumulated depreciation balance of \$28,000.
5. Income taxes payable of \$6,000 were accrued on July 31. Geronimo Company, however, had set up a cash fund to meet this obligation. This cash fund was not included in the cash balance but was offset against the income taxes payable amount.

Instructions

Prepare a corrected classified balance sheet as of July 31, 2020, from the available information, adjusting the account balances using the additional information.

E5.7 (LO 2) Excel (Current Assets Section of the Balance Sheet) Presented below are selected accounts of Yasunari Kawabata Company at December 31, 2020.

| | | | |
|-------------------------------------|-----------|---------------------------------|-------------|
| Inventory (finished goods) | \$ 52,000 | Cost of Goods Sold | \$2,100,000 |
| Unearned Service Revenue | 90,000 | Notes Receivable | 40,000 |
| Equipment | 253,000 | Accounts Receivable | 161,000 |
| Inventory (work in process) | 34,000 | Inventory (raw materials) | 207,000 |
| Cash | 37,000 | Supplies Expense | 60,000 |
| Debt Investments (trading) | 31,000 | Allowance for Doubtful Accounts | 12,000 |
| Customer Advances | 36,000 | Licenses | 18,000 |
| Restricted Cash for Plant Expansion | 50,000 | Additional Paid-in Capital | 88,000 |
| | | Treasury Stock | 22,000 |

The following additional information is available.

1. Inventories are valued at lower-of-cost-or-market using LIFO.
2. Equipment is recorded at cost. Accumulated depreciation, computed on a straight-line basis, is \$50,600.
3. The short-term investments have a fair value of \$29,000.
4. The notes receivable are due April 30, 2022, with interest receivable every April 30. The notes bear interest at 6%. (*Hint:* Accrue interest due on December 31, 2020.)
5. The allowance for doubtful accounts applies to the accounts receivable. Accounts receivable of \$50,000 are pledged as collateral on a bank loan.
6. Licenses are recorded net of accumulated amortization of \$14,000.
7. Treasury stock is recorded at cost.

Instructions

Prepare the current assets section of Yasunari Kawabata Company's December 31, 2020, balance sheet, with appropriate disclosures.

E5.8 (LO 1, 2) (Current vs. Long-term Liabilities) Frederic Chopin Corporation is preparing its December 31, 2020, balance sheet. The following items may be reported as either a current or long-term liability.

- On December 15, 2020, Chopin declared a cash dividend of \$2.50 per share to stockholders of record on December 31. The dividend is payable on January 15, 2021. Chopin has issued 1,000,000 shares of common stock, of which 50,000 shares are held in treasury.
- At December 31, bonds payable of \$100,000,000 are outstanding. The bonds pay 12% interest every September 30 and mature in installments of \$25,000,000 every September 30, beginning September 30, 2021.
- At December 31, 2019, customer advances were \$12,000,000. During 2020, Chopin collected \$30,000,000 of customer advances; advances of \$25,000,000 should be recognized in income.

Instructions

For each item above, indicate the dollar amounts to be reported as a current liability and as a long-term liability, if any.

E5.9 (LO 1, 2) (Current Assets and Current Liabilities) The current assets and current liabilities sections of the balance sheet of Alessandro Scarlatti Company appear as follows.

| Alessandro Scarlatti Company | | | | |
|---------------------------------------|----------|------------------|------------------|------------------|
| Balance Sheet (partial) | | | | |
| December 31, 2020 | | | | |
| Cash | | \$ 40,000 | Accounts payable | \$ 61,000 |
| Accounts receivable | \$89,000 | | Notes payable | 67,000 |
| Less: Allowance for doubtful accounts | 7,000 | 82,000 | | <u>\$128,000</u> |
| Inventory | | 171,000 | | |
| Prepaid expenses | | 9,000 | | |
| | | <u>\$302,000</u> | | |

The following errors in the corporation's accounting have been discovered:

- January 2021 cash disbursements entered as of December 2020 included payments of accounts payable in the amount of \$39,000, on which a cash discount of 2% was taken.
- The inventory included \$27,000 of merchandise that had been received at December 31 but for which no purchase invoices had been received or entered. Of this amount, \$12,000 had been received on consignment; the remainder was purchased f.o.b. destination, terms 2/10, n/30.
- Sales for the first four days in January 2021 in the amount of \$30,000 were entered in the sales journal as of December 31, 2020. Of these, \$21,500 were sales on account and the remainder were cash sales.
- Cash, not including cash sales, collected in January 2021 and entered as of December 31, 2020, totaled \$35,324. Of this amount, \$23,324 was received on account after cash discounts of 2% had been deducted; the remainder represented the proceeds of a bank loan.

Instructions

- Restate the current assets and current liabilities sections of the balance sheet in accordance with good accounting practice. (Assume that both accounts receivable and accounts payable are recorded gross.)
- State the net effect of your adjustments on Alessandro Scarlatti Company's retained earnings balance.

E5.10 (LO 1, 2) (Current Liabilities) Norma Smith is the controller of Baylor Corporation and is responsible for the preparation of the year-end financial statements. The following transactions occurred during the year.

- On December 20, 2020, a former employee filed a legal action against Baylor for \$100,000 for wrongful dismissal. Management believes the action to be frivolous and without merit. The likelihood of payment to the employee is remote.
- Bonuses to key employees based on net income for 2020 are estimated to be \$150,000.
- On December 1, 2020, the company borrowed \$600,000 at 8% per year. Interest is paid quarterly.
- Accounts receivable at December 31, 2020, is \$10,000,000. An aging analysis indicates that Baylor's expense provision for doubtful accounts is estimated to be 3% of the receivables balance.
- On December 15, 2020, the company declared a \$2.00 per share dividend on the 40,000 shares of common stock outstanding, to be paid on January 5, 2021.

- f. During the year, customer advances of \$160,000 were received; \$50,000 of this amount was earned by December 31, 2020.

Instructions

For each item above, indicate the dollar amount to be reported as a current liability. If a liability is not reported, explain why.

E5.11 (LO 2) Excel (Balance Sheet Preparation) Presented below is the adjusted trial balance of Kelly Corporation at December 31, 2020.

| | Debit | Credit |
|------------------------------------|-------------|-------------|
| Cash | \$? | |
| Supplies | 1,200 | |
| Prepaid Insurance | 1,000 | |
| Equipment | 48,000 | |
| Accumulated Depreciation—Equipment | | \$ 4,000 |
| Trademarks | 950 | |
| Accounts Payable | | 10,000 |
| Salaries and Wages Payable | | 500 |
| Unearned Service Revenue | | 2,000 |
| Bonds Payable (due 2027) | | 9,000 |
| Common Stock | | 10,000 |
| Retained Earnings | | 25,000 |
| Service Revenue | | 10,000 |
| Salaries and Wages Expense | 9,000 | |
| Insurance Expense | 1,400 | |
| Rent Expense | 1,200 | |
| Interest Expense | 900 | |
| Total | <u>\$?</u> | <u>\$?</u> |

Additional information:

1. Net loss for the year was \$2,500.
2. No dividends were declared during 2020.

Instructions

Prepare a classified balance sheet as of December 31, 2020.

E5.12 (LO 2) (Preparation of a Balance Sheet) Presented below is the trial balance of Scott Butler Corporation at December 31, 2020.

| | Debit | Credit |
|---|------------|--------------|
| Cash | \$ 197,000 | |
| Sales Revenue | | \$ 8,100,000 |
| Debt Investments (trading) (at cost, \$145,000) | 153,000 | |
| Cost of Goods Sold | 4,800,000 | |
| Debt Investments (long-term) | 299,000 | |
| Equity Investments (long-term) | 277,000 | |
| Notes Payable (short-term) | | 90,000 |
| Accounts Payable | | 455,000 |
| Selling Expenses | 2,000,000 | |
| Investment Revenue | | 63,000 |
| Land | 260,000 | |
| Buildings | 1,040,000 | |
| Dividends Payable | | 136,000 |
| Accrued Liabilities | | 96,000 |
| Accounts Receivable | 435,000 | |
| Accumulated Depreciation—Buildings | | 152,000 |
| Allowance for Doubtful Accounts | | 25,000 |
| Administrative Expenses | 900,000 | |
| Interest Expense | 211,000 | |
| Inventory | 597,000 | |
| Gain | | 80,000 |
| Notes Payable (long-term) | | 900,000 |

| | Debit | Credit |
|------------------------------------|---------------------|---------------------|
| Equipment | 600,000 | |
| Bonds Payable | | 1,000,000 |
| Accumulated Depreciation—Equipment | | 60,000 |
| Franchises | 160,000 | |
| Common Stock (\$5 par) | | 1,000,000 |
| Treasury Stock | 191,000 | |
| Patents | 195,000 | |
| Retained Earnings | | 78,000 |
| Paid-in Capital in Excess of Par | | 80,000 |
| Totals | <u>\$12,315,000</u> | <u>\$12,315,000</u> |

Instructions

Prepare a balance sheet at December 31, 2020, for Scott Butler Corporation. (Ignore income taxes.)

E5.13 (LO 3) (Statement of Cash Flows—Classifications) The major classifications of activities reported in the statement of cash flows are operating, investing, and financing. Classify each of the transactions listed below as:

1. Operating activity—add to net income.
2. Operating activity—deduct from net income.
3. Investing activity.
4. Financing activity.
5. Reported as significant noncash activity.

The transactions are as follows.

- | | |
|--|---|
| <ol style="list-style-type: none"> a. Issuance of common stock. b. Purchase of land and building. c. Redemption of bonds. d. Sale of equipment. e. Depreciation of machinery. f. Amortization of patent. g. Issuance of bonds for plant assets. | <ol style="list-style-type: none"> h. Payment of cash dividends. i. Exchange of furniture for office equipment. j. Purchase of treasury stock. k. Loss on sale of equipment. l. Increase in accounts receivable during the year. m. Decrease in accounts payable during the year. |
|--|---|

E5.14 (LO 3) (Preparation of a Statement of Cash Flows) The comparative balance sheets of Constantine Cavamanlis Inc. at the beginning and the end of the year 2020 are as follows.

| Constantine Cavamanlis Inc. | | | |
|--|---------------|--------------|---------------|
| Balance Sheets | | | |
| Assets | Dec. 31, 2020 | Jan. 1, 2020 | Inc./Dec. |
| Cash | \$ 45,000 | \$ 13,000 | \$32,000 Inc. |
| Accounts receivable | 91,000 | 88,000 | 3,000 Inc. |
| Equipment | 39,000 | 22,000 | 17,000 Inc. |
| Less: Accumulated depreciation—equipment | 17,000 | 11,000 | 6,000 Inc. |
| Total | \$158,000 | \$112,000 | |
| Liabilities and Stockholders' Equity | | | |
| Accounts payable | \$ 20,000 | \$ 15,000 | 5,000 Inc. |
| Common stock | 100,000 | 80,000 | 20,000 Inc. |
| Retained earnings | 38,000 | 17,000 | 21,000 Inc. |
| Total | \$158,000 | \$112,000 | |

Net income of \$44,000 was reported, and dividends of \$23,000 were paid in 2020. New equipment was purchased and none was sold.

Instructions

Prepare a statement of cash flows for the year 2020.

E5.15 (LO 3) (Preparation of a Statement of Cash Flows) The following is a condensed version of the comparative balance sheets for Zubin Mehta Corporation for the last two years at December 31.

| | 2020 | 2019 |
|------------------------------------|-----------|-----------|
| Cash | \$177,000 | \$ 78,000 |
| Accounts receivable | 180,000 | 185,000 |
| Investments | 52,000 | 74,000 |
| Equipment | 298,000 | 240,000 |
| Accumulated depreciation—equipment | (106,000) | (89,000) |
| Current liabilities | 134,000 | 151,000 |
| Common stock | 160,000 | 160,000 |
| Retained earnings | 307,000 | 177,000 |

Additional information:

Investments were sold at a loss of \$10,000; no equipment was sold; cash dividends paid were \$30,000; and net income was \$160,000.

Instructions

- Prepare a statement of cash flows for 2020 for Zubin Mehta Corporation.
- Determine Zubin Mehta Corporation's free cash flow.

E5.16 (LO 3) (Preparation of a Statement of Cash Flows) A comparative balance sheet for Shabbona Corporation is presented as follows.

| | December 31 | |
|---|------------------|------------------|
| | 2020 | 2019 |
| <u>Assets</u> | | |
| Cash | \$ 73,000 | \$ 22,000 |
| Accounts receivable | 82,000 | 66,000 |
| Inventory | 180,000 | 189,000 |
| Land | 71,000 | 110,000 |
| Equipment | 260,000 | 200,000 |
| Accumulated depreciation—equipment | (69,000) | (42,000) |
| Total | <u>\$597,000</u> | <u>\$545,000</u> |
| <u>Liabilities and Stockholders' Equity</u> | | |
| Accounts payable | \$ 34,000 | \$ 47,000 |
| Bonds payable | 150,000 | 200,000 |
| Common stock (\$1 par) | 214,000 | 164,000 |
| Retained earnings | 199,000 | 134,000 |
| Total | <u>\$597,000</u> | <u>\$545,000</u> |

Additional information:

- Net income for 2020 was \$125,000. No gains or losses were recorded in 2020.
- Cash dividends of \$60,000 were declared and paid.
- Bonds payable amounting to \$50,000 were retired through issuance of common stock.

Instructions

- Prepare a statement of cash flows for 2020 for Shabbona Corporation.
- Determine Shabbona Corporation's current cash debt coverage, cash debt coverage, and free cash flow. Comment on its liquidity and financial flexibility.

E5.17 (LO 2, 3) (Preparation of a Statement of Cash Flows and a Balance Sheet) Grant Wood Corporation's balance sheet at the end of 2019 included the following items.

| | | | |
|--------------------------------|------------------|---------------------|------------------|
| Current assets (Cash \$82,000) | \$235,000 | Current liabilities | \$150,000 |
| Land | 30,000 | Bonds payable | 100,000 |
| Buildings | 120,000 | Common stock | 180,000 |
| Equipment | 90,000 | Retained earnings | 44,000 |
| Accum. depr.—buildings | (30,000) | Total | <u>\$474,000</u> |
| Accum. depr.—equipment | (11,000) | | |
| Patents | 40,000 | | |
| Total | <u>\$474,000</u> | | |

The following information is available for 2020.

1. Net income was \$55,000.
2. Equipment (cost \$20,000 and accumulated depreciation \$8,000) was sold for \$10,000.
3. Depreciation expense was \$4,000 on the building and \$9,000 on equipment.
4. Patent amortization was \$2,500.
5. Current assets other than cash increased by \$29,000. Current liabilities increased by \$13,000.
6. An addition to the building was completed at a cost of \$27,000.
7. A long-term investment in stock was purchased for \$16,000.
8. Bonds payable of \$50,000 were issued.
9. Cash dividends of \$30,000 were declared and paid.
10. Treasury stock was purchased at a cost of \$11,000.

Instructions

(Show only totals for current assets and current liabilities.)

- a. Prepare a statement of cash flows for 2020.
- b. Prepare a balance sheet at December 31, 2020.

E5.18 (LO 3) (Preparation of a Statement of Cash Flows, Analysis) The comparative balance sheets of Madrasah Corporation at the beginning and end of the year 2020 appear below.

| Madrasah Corporation | | | |
|---|------------------|------------------|---------------|
| Balance Sheets | | | |
| Assets | Dec. 31, 2020 | Jan. 1, 2020 | Inc./Dec. |
| Cash | \$ 20,000 | \$ 13,000 | \$ 7,000 Inc. |
| Accounts receivable | 106,000 | 88,000 | 18,000 Inc. |
| Equipment | 39,000 | 22,000 | 17,000 Inc. |
| Less: Accumulated depreciation—equipment | 17,000 | 11,000 | 6,000 Inc. |
| Total | <u>\$148,000</u> | <u>\$112,000</u> | |
| Liabilities and Stockholders' Equity | | | |
| Accounts payable | \$ 20,000 | \$ 15,000 | 5,000 Inc. |
| Common stock | 100,000 | 80,000 | 20,000 Inc. |
| Retained earnings | 28,000 | 17,000 | 11,000 Inc. |
| Total | <u>\$148,000</u> | <u>\$112,000</u> | |

Net income of \$44,000 was reported, and dividends of \$33,000 were paid in 2020. New equipment was purchased and none was sold.

Instructions

- a. Prepare a statement of cash flows for the year 2020.
- b. Compute the current ratio (current assets ÷ current liabilities) as of January 1, 2020, and December 31, 2020, and compute free cash flow for the year 2020.
- c. In light of the analysis in (b), comment on Madrasah's liquidity and financial flexibility.

Problems

P5.1 (LO 2) (Preparation of a Classified Balance Sheet, Periodic Inventory) Presented below is a list of accounts in alphabetical order.

| | |
|--|--|
| Accounts Receivable | Bond Sinking Fund |
| Accumulated Depreciation—Buildings | Bonds Payable |
| Accumulated Depreciation—Equipment | Buildings |
| Accumulated Other Comprehensive Income | Cash (in bank) |
| Advances to Employees | Cash (on hand) |
| Advertising Expense | Cash Surrender Value of Life Insurance |
| Allowance for Doubtful Accounts | Commission Expense |

| | |
|--|------------------------------------|
| Common Stock | Patents |
| Copyrights | Payroll Taxes Payable |
| Debt Investments (trading) | Pension Liability |
| Dividends Payable | Petty Cash |
| Equipment | Preferred Stock |
| Freight-In | Premium on Bonds Payable |
| Gain on Disposal of Equipment | Prepaid Rent |
| Interest Receivable | Purchase Returns and Allowances |
| Inventory—Beginning | Purchases |
| Inventory—Ending | Retained Earnings |
| Land | Salaries and Wages Expense (sales) |
| Land for Future Plant Site | Salaries and Wages Payable |
| Loss from Flood | Sales Discounts |
| Noncontrolling Interest | Sales Revenue |
| Notes Payable (due next year) | Treasury Stock (at cost) |
| Paid-in Capital in Excess of Par—Preferred Stock | Unearned Subscriptions Revenue |

Instructions

Prepare a classified balance sheet in good form. (No monetary amounts are to be shown.)

P5.2 (LO 2) Excel (Balance Sheet Preparation) Presented below are a number of balance sheet items for Montoya, Inc. for the current year, 2020.

| | | | |
|---------------------------|------------|------------------------------------|------------|
| Goodwill | \$ 125,000 | Accumulated depreciation—equipment | \$ 292,000 |
| Payroll taxes payable | 177,591 | Inventory | 239,800 |
| Bonds payable | 300,000 | Rent payable (short-term) | 45,000 |
| Discount on bonds payable | 15,000 | Income taxes payable | 98,362 |
| Cash | 360,000 | Rent payable (long-term) | 480,000 |
| Land | 480,000 | Common stock, \$1 par value | 200,000 |
| Notes receivable | 445,700 | Preferred stock, \$10 par value | 150,000 |
| Notes payable (to banks) | 265,000 | Prepaid expenses | 87,920 |
| Accounts payable | 490,000 | Equipment | 1,470,000 |
| Retained earnings | ? | Debt investments (trading) | 121,000 |
| Income taxes receivable | 97,630 | Accumulated depreciation—buildings | 270,200 |
| Notes payable (long-term) | 1,600,000 | Buildings | 1,640,000 |

Instructions

Prepare a classified balance sheet in good form. Common stock authorized was 400,000 shares, and preferred stock authorized was 20,000 shares. Assume that notes receivable and notes payable are short-term, unless stated otherwise. Cost and fair value of debt investments (trading) are the same.

P5.3 (LO 2) (Balance Sheet Adjustment and Preparation) The adjusted trial balance of Eastwood Company and other related information for the year 2020 are presented as follows.

| Eastwood Company Adjusted Trial Balance December 31, 2020 | | |
|---|-----------|----------|
| | Debit | Credit |
| Cash | \$ 41,000 | |
| Accounts Receivable | 163,500 | |
| Allowance for Doubtful Accounts | | \$ 8,700 |
| Prepaid Insurance | 5,900 | |
| Inventory | 208,500 | |
| Equity Investments (long-term) | 339,000 | |
| Land | 85,000 | |
| Construction in Process (building) | 124,000 | |
| Patents | 36,000 | |
| Equipment | 400,000 | |
| Accumulated Depreciation—Equipment | | 240,000 |
| Discount on Bonds Payable | 20,000 | |
| Accounts Payable | | 148,000 |
| Accrued Liabilities | | 49,200 |
| Notes Payable | | 94,000 |

| | Debit | Credit |
|---|-------------|-------------|
| Bonds Payable | | 200,000 |
| Common Stock | | 500,000 |
| Paid-in Capital in Excess of Par—Common Stock | | 45,000 |
| Retained Earnings | | 138,000 |
| | \$1,422,900 | \$1,422,900 |

Additional information:

- The LIFO method of inventory value is used.
- The cost and fair value of the long-term investments that consist of stocks (with ownership less than 20% of total shares) are the same.
- The amount of the Construction in Progress account represents the costs expended to date on a building in the process of construction. (The company rents factory space at the present time.) The land on which the building is being constructed cost \$85,000, as shown in the trial balance.
- The patents were purchased by the company at a cost of \$40,000 and are being amortized on a straight-line basis.
- Of the discount on bonds payable, \$2,000 will be amortized in 2021.
- The notes payable represent bank loans that are secured by long-term investments carried at \$120,000. These bank loans are due in 2021.
- The bonds payable bear interest at 8% payable every December 31, and are due January 1, 2031.
- 600,000 shares of common stock of a par value of \$1 were authorized, of which 500,000 shares were issued and outstanding.

Instructions

Prepare a balance sheet as of December 31, 2020, so that all important information is fully disclosed.

P5.4 (LO 2) Groupwork (Preparation of a Corrected Balance Sheet) The balance sheet of Kishwaukee Corporation as of December 31, 2020, is as follows.

| Kishwaukee Corporation | |
|---|-------------|
| Balance Sheet | |
| December 31, 2020 | |
| <u>Assets</u> | |
| Goodwill (Note 2) | \$ 120,000 |
| Buildings (Note 1) | 1,640,000 |
| Inventory | 312,100 |
| Land | 950,000 |
| Accounts receivable | 170,000 |
| Treasury stock (50,000 shares) | 87,000 |
| Cash on hand | 175,900 |
| Assets allocated to trustee for plant expansion | |
| Cash in bank | 70,000 |
| Debt investments (held-to-maturity) | 138,000 |
| | \$3,663,000 |
| <u>Equities</u> | |
| Notes payable (Note 3) | \$ 600,000 |
| Common stock, authorized and issued, 1,000,000 shares, no par | 1,150,000 |
| Retained earnings | 803,000 |
| Noncontrolling interest | 55,000 |
| Appreciation capital (Note 1) | 570,000 |
| Income taxes payable | 75,000 |
| Reserve for depreciation recorded to date on the building | 410,000 |
| | \$3,663,000 |

Note 1: Buildings are stated at cost, except for one building that was recorded at appraised value. The excess of appraisal value over cost was \$570,000. Depreciation has been recorded based on cost.

Note 2: Goodwill in the amount of \$120,000 was recognized because the company believed that book value was not an accurate representation of the fair value of the company. The gain of \$120,000 was credited to Retained Earnings.

Note 3: Notes payable are long-term except for the current installment due of \$100,000.

Instructions

Prepare a corrected classified balance sheet in good form. The notes above are for information only.

P5.5 (LO 2) Groupwork (Balance Sheet Adjustment and Preparation) Presented below is the balance sheet of Sargent Corporation for the current year, 2020.

| Sargent Corporation Balance Sheet December 31, 2020 | | | |
|---|--------------------|-----------------------|------------------|
| Current assets | \$ 485,000 | Current liabilities | \$ 380,000 |
| Investments | 640,000 | Long-term liabilities | 1,000,000 |
| Property, plant, and equipment | 1,720,000 | Stockholders' equity | 1,770,000 |
| Intangible assets | 305,000 | | <u>3,150,000</u> |
| | <u>\$3,150,000</u> | | |

The following information is presented.

1. The current assets section includes cash \$150,000, accounts receivable \$170,000 less \$10,000 for allowance for doubtful accounts, inventories \$180,000, and unearned rent revenue \$5,000. Inventory is stated on the lower-of-FIFO-cost-or-net realizable value.
2. The investments section includes the cash surrender value of a life insurance contract \$40,000; investments in common stock, short-term \$80,000 and long-term \$270,000; and bond sinking fund \$250,000. The cost and fair value of investments in common stock are the same.
3. Property, plant, and equipment includes buildings \$1,040,000 less accumulated depreciation \$360,000, equipment \$450,000 less accumulated depreciation \$180,000, land \$500,000, and land held for future use \$270,000.
4. Intangible assets include a franchise \$165,000, goodwill \$100,000, and discount on bonds payable \$40,000.
5. Current liabilities include accounts payable \$140,000, notes payable—short-term \$80,000 and long-term \$120,000, and income taxes payable \$40,000.
6. Long-term liabilities are composed solely of 7% bonds payable due 2028.
7. Stockholders' equity has preferred stock, no par value, authorized 200,000 shares, issued 70,000 shares for \$450,000; and common stock, \$1.00 par value, authorized 400,000 shares, issued 100,000 shares at an average price of \$10. In addition, the corporation has retained earnings of \$320,000.

Instructions

Prepare a balance sheet in good form, adjusting the amounts in each balance sheet classification as affected by the information given above.

P5.6 (LO 2, 3) Excel (Preparation of a Statement of Cash Flows and a Balance Sheet) Lansbury Inc. had the following balance sheet at December 31, 2019.

| Lansbury Inc. Balance Sheet December 31, 2019 | | | |
|---|------------------|---------------------------|------------------|
| Cash | \$ 20,000 | Accounts payable | \$ 30,000 |
| Accounts receivable | 21,200 | Notes payable (long-term) | 41,000 |
| Investments | 32,000 | Common stock | 100,000 |
| Plant assets (net) | 81,000 | Retained earnings | 23,200 |
| Land | 40,000 | | <u>\$194,200</u> |
| | <u>\$194,200</u> | | |

During 2020, the following occurred.

1. Lansbury Inc. sold part of its debt investment portfolio for \$15,000. This transaction resulted in a gain of \$3,400 for the firm. The company classifies these investments as available-for-sale.
2. A tract of land was purchased for \$13,000 cash.
3. Long-term notes payable in the amount of \$16,000 were retired before maturity by paying \$16,000 cash.

4. An additional \$20,000 in common stock was issued at par.
5. Dividends of \$8,200 were declared and paid to stockholders.
6. Net income for 2020 was \$32,000 after allowing for depreciation of \$11,000.
7. Land was purchased through the issuance of \$35,000 in bonds.
8. At December 31, 2020, Cash was \$37,000, Accounts Receivable was \$41,600, and Accounts Payable remained at \$30,000.

Instructions

- a. Prepare a statement of cash flows for 2020.
- b. Prepare an unclassified balance sheet as it would appear at December 31, 2020.
- c. How might the statement of cash flows help the user of the financial statements? Compute two cash flow ratios.

P5.7 (LO 2, 3) Groupwork (Preparation of a Statement of Cash Flows and Balance Sheet)

Aero Inc. had the following balance sheet at December 31, 2019.

| Aero Inc. Balance Sheet December 31, 2019 | | | |
|---|------------------|-------------------|------------------|
| Cash | \$ 20,000 | Accounts payable | \$ 30,000 |
| Accounts receivable | 21,200 | Bonds payable | 41,000 |
| Investments | 32,000 | Common stock | 100,000 |
| Plant assets (net) | 81,000 | Retained earnings | 23,200 |
| Land | 40,000 | | <u>\$194,200</u> |
| | <u>\$194,200</u> | | |

During 2020, the following occurred.

1. Aero liquidated its available-for-sale debt investment portfolio at a loss of \$5,000.
2. A tract of land was purchased for \$38,000.
3. An additional \$30,000 in common stock was issued at par.
4. Dividends totaling \$10,000 were declared and paid to stockholders.
5. Net income for 2020 was \$35,000, including \$12,000 in depreciation expense.
6. Land was purchased through the issuance of \$30,000 in additional bonds.
7. At December 31, 2020, Cash was \$70,200, Accounts Receivable was \$42,000, and Accounts Payable was \$40,000.

Instructions

- a. Prepare a statement of cash flows for the year 2020 for Aero.
- b. Prepare the unclassified balance sheet as it would appear at December 31, 2020.
- c. Compute Aero's free cash flow and current cash debt coverage for 2020.
- d. Use the analysis of Aero to illustrate how information in the balance sheet and statement of cash flows helps the user of the financial statements.

Concepts for Analysis

CAS.1 (LO 2) (Reporting the Financial Effects of Varied Transactions) In an examination of Arenes Corporation as of December 31, 2020, you have learned that the following situations exist. No entries have been made in the accounting records for these items.

1. The corporation erected its present factory building in 2004. Depreciation was calculated by the straight-line method, using an estimated life of 35 years. Early in 2020, the board of directors conducted a careful survey and estimated that the factory building had a remaining useful life of 25 years as of January 1, 2020.
2. An additional assessment of 2019 income taxes was levied and paid in 2020.

3. When calculating the accrual for officers' salaries at December 31, 2020, it was discovered that the accrual for officers' salaries for December 31, 2019, had been overstated.
4. On December 15, 2020, Arenes Corporation declared a cash dividend on its common stock outstanding, payable February 1, 2021, to the common stockholders of record December 31, 2020.

Instructions

Describe fully how each of the items above should be reported in the financial statements of Arenes Corporation for the year 2020.

CA5.2 (LO 1, 2) (Identifying Balance Sheet Deficiencies) The assets of Fonzarelli Corporation are presented below (000s omitted).

| Fonzarelli Corporation Balance Sheet (partial) December 31, 2020 | | |
|--|-----------|-------------|
| Assets | | |
| Current assets | | |
| Cash | | \$ 100,000 |
| Unclaimed payroll checks | | 27,500 |
| Debt investments (trading) (fair value \$30,000) at cost | | 37,000 |
| Accounts receivable (less bad debt reserve) | | 75,000 |
| Inventory—at lower-of-cost (determined by the next-in, first-out method)-or-net realizable value | | 240,000 |
| Total current assets | | 479,500 |
| Tangible assets | | |
| Land (less accumulated depreciation) | | 80,000 |
| Buildings and equipment | \$800,000 | |
| Less: Accumulated depreciation | 250,000 | 550,000 |
| Net tangible assets | | 630,000 |
| Long-term investments | | |
| Stocks and bonds | | 100,000 |
| Treasury stock | | 70,000 |
| Total long-term investments | | 170,000 |
| Other assets | | |
| Discount on bonds payable | | 19,400 |
| Sinking fund | | 975,000 |
| Total other assets | | 994,400 |
| Total assets | | \$2,273,900 |

Instructions

Indicate the deficiencies, if any, in the foregoing presentation of Fonzarelli Corporation's assets.

CA5.3 (LO 1, 2) Writing (Critique of Balance Sheet Format and Content) The following is the balance sheet of Sameed Brothers Corporation (000s omitted).

| Sameed Brothers Corporation Balance Sheet December 31, 2020 | | |
|---|----------|-----------|
| Assets | | |
| Current assets | | |
| Cash | \$26,000 | |
| Marketable securities | 18,000 | |
| Accounts receivable | 25,000 | |
| Inventory | 20,000 | |
| Supplies | 4,000 | |
| Stock investment in subsidiary company | 20,000 | \$113,000 |

| <u>Assets</u> | | |
|---|---------------|-------------------------|
| Investments | | |
| Treasury stock | | 25,000 |
| Property, plant, and equipment | | |
| Buildings and land | 91,000 | |
| Less: Reserve for depreciation | <u>31,000</u> | 60,000 |
| Other assets | | |
| Cash surrender value of life insurance | | <u>19,000</u> |
| Total assets | | <u><u>\$217,000</u></u> |
| <u>Liabilities and Stockholders' Equity</u> | | |
| Current liabilities | | |
| Accounts payable | \$22,000 | |
| Reserve for income taxes | 15,000 | |
| Customers' accounts with credit balances | <u>1</u> | \$ 37,001 |
| Deferred credits | | |
| Unamortized premium on bonds payable | | 2,000 |
| Long-term liabilities | | |
| Bonds payable | | <u>60,000</u> |
| Total liabilities | | 99,001 |
| Common stock | | |
| Common stock, par \$5 | 85,000 | |
| Earned surplus | 24,999 | |
| Cash dividends declared | <u>8,000</u> | 117,999 |
| Total liabilities and stockholders' equity | | <u><u>\$217,000</u></u> |

Instructions

Evaluate the balance sheet presented. State briefly the proper treatment of any item criticized.

CA5.4 (LO 2) Ethics (Presentation of Property, Plant, and Equipment) Carol Keene, corporate comptroller for Dumaine Industries, is trying to decide how to present "Property, plant, and equipment" in the balance sheet. She realizes that the statement of cash flows will show that the company made a significant investment in purchasing new equipment this year, but overall she knows the company's plant assets are rather old. She feels that she can disclose one figure titled "Property, plant, and equipment, net of depreciation," and the result will be a low figure. However, it will not disclose the age of the assets. If she chooses to show the cost less accumulated depreciation, the age of the assets will be apparent. She proposes the following.

| | |
|--|-------------------|
| Property, plant, and equipment, net of depreciation | \$10,000,000 |
| <i>rather than</i> | |
| Property, plant, and equipment | \$50,000,000 |
| Less: Accumulated depreciation | <u>40,000,000</u> |
| Net book value | \$10,000,000 |

Instructions

Answer the following questions.

- What are the ethical issues involved?
- What should Keene do?

CA5.5 (LO 3) Writing (Cash Flow Analysis) The partner in charge of the Kappeler Corporation audit comes by your desk and leaves a letter he has started to the CEO and a copy of the cash flow statement for the year ended December 31, 2020. Because he must leave on an emergency, he asks you to finish the letter by explaining: (1) the disparity between net income and cash flow, (2) the importance of operating cash flow, (3) the renewable source(s) of cash flow, and (4) possible suggestions to improve the cash position.

Kappeler Corporation
Statement of Cash Flows
For the Year Ended December 31, 2020

| | | |
|---|-----------|------------------|
| Cash flows from operating activities | | |
| Net income | | \$ 100,000 |
| Adjustments to reconcile net income to net cash provided by operating activities: | | |
| Depreciation expense | \$ 10,000 | |
| Amortization expense | 1,000 | |
| Loss on sale of fixed assets | 5,000 | |
| Increase in accounts receivable (net) | (40,000) | |
| Increase in inventory | (35,000) | |
| Decrease in accounts payable | (41,000) | (100,000) |
| Net cash provided by operating activities | | -0- |
| Cash flows from investing activities | | |
| Sale of plant assets | 25,000 | |
| Purchase of equipment | (100,000) | |
| Purchase of land | (200,000) | |
| Net cash used by investing activities | | (275,000) |
| Cash flows from financing activities | | |
| Payment of dividends | (10,000) | |
| Redemption of bonds | (100,000) | |
| Net cash used by financing activities | | (110,000) |
| Net decrease in cash | | (385,000) |
| Cash balance, January 1, 2020 | | 400,000 |
| Cash balance, December 31, 2020 | | <u>\$ 15,000</u> |

Date

President Kappeler, CEO
 Kappeler Corporation
 125 Wall Street
 Middleton, Kansas 67458

Dear Mr. Kappeler:

I have good news and bad news about the financial statements for the year ended December 31, 2020. The good news is that net income of \$100,000 is close to what we predicted in the strategic plan last year, indicating strong performance this year. The bad news is that the cash balance is seriously low. Enclosed is the Statement of Cash Flows, which best illustrates how both of these situations occurred simultaneously . . .

Instructions

Complete the letter to the CEO, including the four components requested by your boss.

Using Your Judgment

Financial Reporting Problem

The Procter & Gamble Company (P&G)

The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G's financial statements and the related information in the annual report to answer the following questions.

- What alternative formats could P&G have adopted for its balance sheet? Which format did it adopt?
- Identify the various techniques of disclosure P&G might have used to disclose additional pertinent financial information. Which technique does it use in its financials?
- In what classifications are P&G's investments reported? What valuation basis does P&G use to report its investments? How much working capital did P&G have on June 30, 2017? On June 30, 2016?

- d. What were P&G's cash flows from its operating, investing, and financing activities for 2017? What were its trends in net cash provided by operating activities over the period 2015–2017? Explain why the change in accounts payable and in accrued and other liabilities is added to net income to arrive at net cash provided by operating activities.
- e. Compute P&G's (1) current cash debt coverage, (2) cash debt coverage, and (3) free cash flow for 2017. What do these ratios indicate about P&G's financial condition?

Comparative Analysis Case

The Coca-Cola Company and PepsiCo, Inc.

The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- a. What format(s) did these companies use to present their balance sheets?
- b. How much working capital did each of these companies have at the end of 2017? Speculate as to their rationale for the amount of working capital they maintain.
- c. What are the companies' annual and 3-year (2015–2017) growth rates in total assets and long-term debt?
- d. What were these two companies' trends in net cash provided by operating activities over the period 2015–2017?
- e. Compute both companies' (1) current cash debt coverage, (2) cash debt coverage, and (3) free cash flow. What do these ratios indicate about the financial condition of the two companies?

Financial Statement Analysis Cases

Case 1: Uniroyal Technology Corporation

Uniroyal Technology Corporation (UTC), with corporate offices in Sarasota, Florida, is organized into three operating segments. The high-performance plastics segment is responsible for research, development, and manufacture of a wide variety of products, including orthopedic braces, graffiti-resistant seats for buses and airplanes, and a static-resistant plastic used in the central processing units of microcomputers. The coated fabrics segment manufactures products such as automobile seating, door and instrument panels, and specialty items such as waterproof seats for personal watercraft and stain-resistant, easy-cleaning upholstery fabrics. The foams and adhesives segment develops and manufactures products used in commercial roofing applications.

The following items relate to operations in a recent year.

1. Serious pressure was placed on profitability by sharply increasing raw material prices. Some raw materials increased in price 50% during the past year. Cost containment programs were instituted and product prices were increased whenever possible, which resulted in profit margins actually improving over the course of the year.
2. The company entered into a revolving credit agreement, under which UTC may borrow the lesser of \$15,000,000 or 80% of eligible accounts receivable. At the end of the year, approximately \$4,000,000 was outstanding under this agreement. The company plans to use this line of credit in the upcoming year to finance operations and expansion.

Instructions

- a. Should investors be informed of raw materials price increases, such as described in item 1? Does the fact that the company successfully met the challenge of higher prices affect the answer? Explain.
- b. How should the information in item 2 be presented in the financial statements of UTC?

Case 2: Sherwin-Williams Company

Sherwin-Williams, based in Cleveland, Ohio, manufactures a wide variety of paint and other coatings, which are marketed through its specialty stores and in other retail outlets. The company also manufactures paint for automobiles. The Automotive Division has had financial difficulty. During a recent year, five branch locations of the Automotive Division were closed, and new management was put in place for the branches remaining.

The following titles were shown on Sherwin-Williams's balance sheet for that year.

| | |
|-------------------------------------|---------------------------|
| Accounts payable | Buildings |
| Accounts receivable, less allowance | Cash and cash equivalents |
| Accrued taxes | Common stock |

| | |
|-------------------------------|--|
| Employee compensation payable | Other current assets |
| Finished goods inventories | Other long-term liabilities |
| Intangibles and other assets | Postretirement obligations other than pensions |
| Land | Retained earnings |
| Long-term debt | Short-term investments |
| Machinery and equipment | Taxes payable |
| Other accruals | Work in process and raw materials inventories |
| Other capital | |

Instructions

- Organize the accounts in the general order in which they would have been presented in a classified balance sheet.
- When several of the branch locations of the Automotive Division were closed, what balance sheet accounts were most likely affected? Did the balance in those accounts decrease or increase?

Case 3: Deere & Company

Presented below is the SEC-mandated disclosure of contractual obligations provided by **Deere & Company** in a recent annual report. Deere & Company reported current assets of \$50,060 and total current liabilities of \$21,394 at year-end. (All dollars are in millions.)

Aggregate Contractual Obligations

The payment schedule for the company's contractual obligations at year-end in millions of dollars is as follows:

| | Total | Less than 1 year | 1–3 years | 4 and 5 years | More than 5 years |
|------------------------|-----------------|---------------------|-----------------|------------------|----------------------|
| Debt | | | | | |
| Equipment operations | \$ 5,091 | \$ 434 | \$ 270 | \$ 775 | \$3,612 |
| Financial services | 31,692 | 9,962 | 11,477 | 6,578 | 3,675 |
| Total | 36,783 | 10,396 | 11,747 | 7,353 | 7,287 |
| Interest on debt | 4,777 | 609 | 1,069 | 745 | 2,354 |
| Accounts payable | 2,743 | 2,611 | 90 | 39 | 3 |
| Capital leases | 87 | 39 | 42 | 4 | 2 |
| Purchasing obligations | 3,007 | 2,970 | 37 | — | — |
| Operating leases | 371 | 121 | 134 | 70 | 46 |
| Total | <u>\$47,768</u> | <u>\$16,746</u> | <u>\$13,119</u> | <u>\$8,211</u> | <u>\$9,692</u> |

Instructions

- Compute Deere & Company's working capital and current ratio (current assets ÷ current liabilities) with and without the off-balance-sheet contractual obligations reported in the schedule.
- Briefly discuss how the information provided in the contractual obligation disclosure would be useful in evaluating Deere & Company for loans (1) due in one year and (2) due in five years.

Case 4: Amazon.com

The incredible growth of **Amazon.com** has put fear into the hearts of traditional retailers. Amazon's stock price has soared to amazing levels. However, it is often pointed out in the financial press that it took the company several years to report its first profit. The following financial information is taken from a recent annual report.

| (\$ in millions) | Current Year | Prior Year |
|-----------------------------|--------------|------------|
| Current assets | \$31,327 | \$24,625 |
| Total assets | 54,505 | 40,159 |
| Current liabilities | 28,089 | 22,980 |
| Total liabilities | 43,764 | 30,413 |
| Cash provided by operations | 6,842 | 5,475 |
| Capital expenditures | 4,893 | 3,444 |
| Dividends paid | — | — |
| Net income (loss) | (241) | 274 |
| Sales | 88,988 | 74,452 |

Instructions

- Calculate free cash flow for Amazon for the current and prior years, and discuss its ability to finance expansion from internally generated cash. At one time, Amazon had avoided purchasing large warehouses. Instead, it used those of others. It is possible, however, that in order to increase customer

satisfaction the company could build its own warehouses. How might your impression of its ability to finance expansion change?

- b. Discuss any potential implications of the change in Amazon's cash provided by operations from the prior year to the current year.

Accounting, Analysis, and Principles

Early in January 2021, Hopkins Company is preparing for a meeting with its bankers to discuss a loan request. Its bookkeeper provided the following accounts and balances at December 31, 2020.

| | Debit | Credit |
|----------------------------|-----------|-----------|
| Cash | \$ 75,000 | |
| Accounts Receivable (net) | 38,500 | |
| Inventory | 65,300 | |
| Equipment (net) | 84,000 | |
| Patents | 15,000 | |
| Notes and Accounts Payable | | \$ 52,000 |
| Notes Payable (due 2022) | | 75,000 |
| Common Stock | | 100,000 |
| Retained Earnings | | 50,800 |
| | \$277,800 | \$277,800 |

Except for the following items, Hopkins has recorded all adjustments in its accounts.

- Cash includes \$500 petty cash and \$15,000 in a bond sinking fund.
- Net accounts receivable is comprised of \$52,000 in accounts receivable and \$13,500 in allowance for doubtful accounts.
- Equipment had a cost of \$112,000 and accumulated depreciation of \$28,000.
- On January 8, 2021, one of Hopkins' customers declared bankruptcy. At December 31, 2020, this customer owed Hopkins \$9,000.

Accounting

Prepare a corrected December 31, 2020, balance sheet for Hopkins Company.

Analysis

Hopkins' bank is considering granting an additional loan in the amount of \$45,000, which will be due December 31, 2021. How can the information in the balance sheet provide useful information to the bank about Hopkins' ability to repay the loan?

Principles

In the upcoming meeting with the bank, Hopkins plans to provide additional information about the fair value of its equipment and some internally generated intangible assets related to its customer lists. This information indicates that Hopkins has significant unrealized gains on these assets, which are not reflected on the balance sheet. What objections is the bank likely to raise about the usefulness of this information in evaluating Hopkins for the loan renewal?

Analytics in Action

Accounting software systems collect vast amounts of data about the economic events experienced by a company and about the parties with whom the company engages, such as suppliers and customers. Business decision-makers take advantage of this wealth of information by using data analytics, which often employs both software and statistics, to draw inferences and make more informed business decisions. As both data access and analytical software improve, the use of data analytics to support decisions is becoming increasingly common at virtually all types of companies.

As discussed in Appendix 5A, ratio analysis can be used to interpret the information presented in financial statements. Specifically, liquidity ratios, activity ratios, profitability ratios, and coverage ratios are commonly used analytical tools for decision-making by investors and creditors.

Instructions Go to WileyPLUS for a data analytics exercise focusing on ratio analysis for companies in the Dow Jones average.

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

CE5.1 Access the Codification glossary (“Master Glossary”) to answer the following.

- What is the definition provided for current assets?
 - What is the definition of an intangible asset? In what section of the Codification are intangible assets addressed?
 - What are cash equivalents?
 - What are financing activities?
- CE5.2** What guidance does the Codification provide on the classification of current liabilities?
- CE5.3** What guidance does the Codification provide concerning the format of accounting disclosures?
- CE5.4** What are the objectives related to the statement of cash flows?

Codification Research Case

In light of the full disclosure principle, investors and creditors need to know the balances for assets, liabilities, and equity as well as the accounting policies adopted by management to measure the items reported in the balance sheet.

Instructions

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

- Identify the literature that addresses the disclosure of accounting policies.
- How are accounting policies defined in the literature?
- What are the three scenarios that would result in detailed disclosure of the accounting methods used?
- What are some examples of common disclosures that are required under this statement?

IFRS Insights

LEARNING OBJECTIVE 6

Compare the accounting procedures related to the balance sheet under GAAP and IFRS.

As in GAAP, the balance sheet and the statement of cash flows are required statements for IFRS. However, the content and presentation of an IFRS statement of financial position (balance sheet) are different, while those for the cash flow statement are similar to those used for GAAP. In general, the disclosure requirements related to the balance sheet and the statement of cash flows are much more extensive and detailed in the United States. *IAS 1*, “Presentation of Financial Statements,” provides the overall IFRS requirements for balance sheet information. *IAS 7*, “Cash Flow Statements,” provides the overall IFRS requirements for cash flow information. IFRS insights on the statement of cash flows are presented in Chapter 23.

Relevant Facts

Following are the key similarities and differences between GAAP and IFRS related to the balance sheet.

Similarities

- Both IFRS and GAAP allow the use of title “balance sheet” or “statement of financial position.” IFRS recommends but does not require the use of the title “statement of financial position” rather than balance sheet.
- Both IFRS and GAAP require disclosures about (1) accounting policies followed, (2) judgments that management has made in the process of applying the entity’s accounting policies, and (3) the key assumptions and estimation uncertainty that could result in a material adjustment to the carrying amounts of assets and liabilities within the next financial year. Comparative prior period information must be presented and financial statements must be prepared annually.
- IFRS and GAAP require presentation of non-controlling interests in the equity section of the balance sheet.

Differences

- IFRS requires a classified statement of financial position except in very limited situations. IFRS follows the same guidelines as this text for distinguishing between current and non-current assets and liabilities. However, under GAAP, public companies must follow SEC regulations, which require specific line items. In addition, specific GAAP mandates certain forms of reporting for this information.
- Under IFRS, current assets are usually listed in the reverse order of liquidity. For example, under GAAP cash is listed first, but under IFRS it is listed last.
- IFRS has many differences in terminology that you will notice in this text. For example, in the following sample statement of financial position, notice in the equity section common stock is called share capital—ordinary.
- Use of the term “reserve” is discouraged in GAAP, but there is no such prohibition in IFRS.

About the Numbers

Classification in the Statement of Financial Position

Statement of financial position accounts are **classified**. That is, a statement of financial position groups together similar items to arrive at significant subtotals. Furthermore, the material is arranged so that important relationships are shown. The IASB indicates that the parts and subsections of financial statements are more informative than the whole. Therefore, the IASB discourages the reporting of summary accounts alone (total assets, net assets, total liabilities, etc.).

Instead, companies should report and classify individual items in sufficient detail to permit users to assess the amounts, timing, and uncertainty of future cash flows. Such classification also makes it easier for users to evaluate the company’s liquidity and financial flexibility, profitability, and risk. Companies then further divide these items into several subclassifications. A representative statement of financial position presentation is shown as follows.

| Scientific Products, Inc. | | | |
|---|-----------|-----------|----------------|
| Statement of Financial Position | | | |
| December 31, 2020 | | | |
| Assets | | | |
| Non-current assets | | | |
| <i>Long-term investments</i> | | | |
| Investments in held-for-collection securities | | \$ 82,000 | |
| Land held for future development | | 5,500 | \$ 87,500 |
| | | | |
| <i>Property, plant, and equipment</i> | | | |
| Land | | 125,000 | |
| Buildings | \$975,800 | | |
| Less: Accumulated depreciation | 341,200 | 634,600 | |
| | | | |
| Total property, plant, and equipment | | | 759,600 |
| <i>Intangible assets</i> | | | |
| Capitalized development costs | | 6,000 | |
| Goodwill | | 66,000 | |
| Other identifiable intangible assets | | 28,000 | 100,000 |
| | | | |
| Total non-current assets | | | 947,100 |

| | | |
|--|---------------|---------------------------|
| Current assets | | |
| Inventories | | 489,713 |
| Prepaid expenses | | 16,252 |
| Accounts receivable | 165,824 | |
| Less: Allowance for doubtful accounts | <u>1,850</u> | 163,974 |
| Short-term investments | | 51,030 |
| Cash and cash equivalents | | <u>52,485</u> |
| Total current assets | | 773,454 |
| Total assets | | <u>\$1,720,554</u> |
| Equity and Liabilities | | |
| Equity | | |
| Share capital—preference | \$300,000 | |
| Share capital—ordinary | 400,000 | |
| Share premium—preference | 10,000 | |
| Share premium—ordinary | 27,500 | |
| Retained earnings | 153,182 | |
| Accumulated other comprehensive income | 8,650 | |
| Less: Treasury shares | <u>12,750</u> | |
| Equity attributable to Scientific Products, Inc. | | \$886,582 |
| Equity attributable to non-controlling interest | | <u>13,500</u> |
| Total equity | | \$ 900,082 |
| Non-current liabilities | | |
| Bond liabilities due January 31, 2025 | 425,000 | |
| Provisions related to pensions | <u>75,000</u> | |
| Total non-current liabilities | | 500,000 |
| Current liabilities | | |
| Notes payable | 80,000 | |
| Accounts payable | 197,532 | |
| Interest payable | 20,500 | |
| Salary and wages payable | 5,560 | |
| Provisions related to warranties | 12,500 | |
| Deposits received from customers | <u>4,380</u> | |
| Total current liabilities | | 320,472 |
| Total liabilities | | 820,472 |
| Total equity and liabilities | | <u>\$1,720,554</u> |

The statement presented is in “report form” format. Some companies use other statement of financial position formats. For example, companies sometimes deduct current liabilities from current assets to arrive at working capital. Or, they deduct all liabilities from all assets. Some companies report the subtotal *net assets*, which equals total assets minus total liabilities.

Equity

The **equity** (also referred to as **shareholders’ equity**) section is one of the most difficult sections to prepare and understand. This is due to the complexity of ordinary and preference share agreements and the various restrictions on equity imposed by corporation laws, liability agreements, and boards of directors. Companies usually divide the section into six parts:

Equity Section

- 1. Share Capital.** The par or stated value of shares issued. It includes ordinary shares (sometimes referred to as *common shares*) and preference shares (sometimes referred to as *preferred shares*).
- 2. Share Premium.** The excess of amounts paid-in over the par or stated value.
- 3. Retained Earnings.** The corporation’s undistributed earnings.
- 4. Accumulated Other Comprehensive Income.** The aggregate amount of the other comprehensive income items.
- 5. Treasury Shares.** Generally, the amount of ordinary shares repurchased.
- 6. Non-Controlling Interest (Minority Interest).** A portion of the equity of subsidiaries not owned by the reporting company.

For ordinary shares, companies must disclose the par value and the authorized, issued, and outstanding share amounts. The same holds true for preference shares. A company usually presents the share premium (for both ordinary and preference shares) in one amount, although subtotals are informative if the sources of additional capital are varied and material. The retained earnings amount may be divided between the **unappropriated** (the amount that is usually available for dividend distribution) and **restricted** (e.g., by bond indentures or other loan agreements) amounts. In addition, companies show any shares reacquired (treasury shares) as a reduction of equity.

Accumulated other comprehensive income (sometimes referred to as *reserves* or *other reserves*) includes such items as unrealized gains and losses on non-trading equity investments and unrealized gains and losses on certain derivative transactions. Non-controlling interest, sometimes referred to as minority interest, is also shown as a separate item (where applicable) as a part of equity.

Delhaize Group presented its equity section as follows.

|  Delhaize Group (in millions) | |
|--|----------------|
| Share capital | € 50 |
| Share premium | 2,725 |
| Treasury shares | (56) |
| Retained earnings | 2,678 |
| Other reserves | <u>(1,254)</u> |
| Shareholders' equity | 4,143 |
| Minority interests | <u>52</u> |
| Total equity | €4,195 |

Many companies reporting under IFRS often use the term “reserve” as an all-inclusive catch-all for items such as retained earnings, share premium, and accumulated other comprehensive income.

Revaluation Equity

GAAP and IFRS differ in the IFRS provision for balance sheet revaluations of property, plant, and equipment. Under the *revaluation model*, revaluations are recorded and reported as part of equity. To illustrate, Richardson Company uses IFRS and has property and equipment on an historical cost basis of \$2,000,000. At the end of the year, Richardson appraises its property and equipment and determines it had a revaluation increase of \$243,000.

Richardson records this revaluation under IFRS with an increase to property and equipment as well as a valuation reserve in equity. A note to the financial statements explains the change in the revaluation equity account from one period to the next, as shown below for Richardson Company, assuming a beginning balance of \$11,345,000.

| Note 30. Reserves (in part) (in thousands) | |
|--|-------------|
| | <u>2020</u> |
| Properties Revaluation Reserve | |
| Balance at beginning of year | \$11,345 |
| Increase (decrease) on revaluation of plant and equipment | 243 |
| Impairment losses | — |
| Reversals of impairment losses | <u>—</u> |
| Balance at end of year | \$11,588 |

Fair Presentation

Companies must present fairly the financial position, financial performance, and cash flows of the company. Fair presentation means the faithful representation of transactions and events using the definitions and recognition criteria in the IASB conceptual framework. It is presumed that the use of IFRS with appropriate disclosure results in financial statements that are fairly presented. In other words, inappropriate use of accounting policies cannot be overcome by explanatory notes to the financial statements. In some rare cases, as indicated in Chapter 2, companies can use a “true and fair” override. This situation develops, for example, when the IFRS for a given company appears to conflict with the objective of financial reporting. This situation might occur when a regulatory body indicates that a specific IFRS may be misleading. As indicated earlier, a true and fair override is highly unlikely in today’s reporting environment.

One highly publicized exception is the case of **Société Générale** (SocGen), a French bank. The bank used the true and fair rule to justify reporting losses that occurred in 2008 in the prior year. Although allowed under the true and fair rule, such reporting was questioned because it permitted the bank to “take a bath,” that is, record as many losses as possible in 2007, which was already a bad year for the bank. As a result, SocGen’s 2008 reports looked better. [See F. Norris, “SocGen Changes Its Numbers,” *The New York Times* (May 13, 2008).]

On the Horizon

The FASB and the IASB have worked on a project to converge their standards related to financial statement presentation. A key feature of the proposed framework is that each of the statements will be organized, in the same format, to separate an entity’s financing activities from its operating and investing activities and, further, to separate financing activities into transactions with owners and creditors. Thus, the same classifications used in the statement of financial position would also be used in the statement of comprehensive income and the statement of cash flows. The project is currently on hold. You can follow the joint financial presentation project at the FASB website.

IFRS Self-Test Questions

- Which of the following statements about IFRS and GAAP accounting and reporting requirements for the balance sheet is **not** correct?
 - Both IFRS and GAAP distinguish between current and non-current assets and liabilities.
 - The presentation formats required by IFRS and GAAP for the balance sheet are similar.
 - Both IFRS and GAAP require that comparative information be reported.
 - One difference between the reporting requirements under IFRS and those of the GAAP balance sheet is that an IFRS balance sheet may list long-term assets first.
- Current assets under IFRS are listed generally:
 - by importance.
 - in the reverse order of their expected conversion to cash.
 - by longevity.
 - alphabetically.
- Companies that use IFRS:
 - may report all their assets on the statement of financial position at fair value.
 - are not allowed to net assets (assets – liabilities) on their statement of financial positions.
 - may report non-current assets before current assets on the statement of financial position.
 - do not have any guidelines as to what should be reported on the statement of financial position.
- Franco Company uses IFRS and owns property, plant, and equipment with a historical cost of \$5,000,000. At December 31, 2019, the company reported a valuation reserve of \$690,000. At December 31, 2020, the property, plant, and equipment was appraised at \$5,325,000. The valuation reserve will show what balance at December 31, 2020?
 - \$365,000.
 - \$325,000.
 - \$690,000.
 - \$0.
- A company has purchased a tract of land and expects to build a production plant on the land in approximately 5 years. During the 5 years before construction, the land will be idle. Under IFRS, the land should be reported as:
 - land expense.
 - property, plant, and equipment.
 - an intangible asset.
 - a long-term investment.

IFRS Concepts and Application

IFRS5.1 Where can authoritative IFRS guidance be found related to the statement of financial position (balance sheet) and the statement of cash flows?

IFRS5.2 Briefly describe some of the similarities and differences between GAAP and IFRS with respect to statement of financial position (balance sheet) reporting.

IFRS5.3 Briefly describe the convergence efforts related to financial statement presentation.

IFRS5.4 Rainmaker Company prepares its financial statements in accordance with IFRS. In 2020, Rainmaker recorded the following revaluation adjustments related to its buildings and land: The company’s building increased in value by \$200,000; its land declined by \$35,000. How will these revaluation adjustments affect Rainmaker’s statement of financial position? Will the reporting differ under GAAP? Explain.

International Reporting Case

IFRS5.5 The balance sheet for **Tomkins plc**, a British company, is presented as follows.

|  Tomkins plc Consolidated Balance Sheet (amounts in £ millions) | |
|---|----------------|
| Non-current assets | |
| Goodwill | 436.0 |
| Other intangible assets | 78.0 |
| Property, plant and equipment | 1,122.8 |
| Investments in associates | 20.6 |
| Trade and other receivables | 81.1 |
| Deferred tax assets | 82.9 |
| Post-employment benefit surpluses | 1.3 |
| | <u>1,822.7</u> |
| Current assets | |
| Inventories | 590.8 |
| Trade and other receivables | 753.0 |
| Income tax recoverable | 49.0 |
| Available-for-sale investments | 1.2 |
| Cash and cash equivalents | 445.0 |
| | <u>1,839.0</u> |
| Assets held for sale | 11.9 |
| | <u>3,673.6</u> |
| Total assets | |
| Current liabilities | |
| Bank overdrafts | 4.8 |
| Bank and other loans | 11.2 |
| Obligations under finance leases | 1.0 |
| Trade and other payables | 677.6 |
| Income tax liabilities | 15.2 |
| Provisions | 100.3 |
| | <u>810.1</u> |
| Non-current liabilities | |
| Bank and other loans | 687.3 |
| Obligations under finance leases | 3.6 |
| Trade and other payables | 27.1 |
| Post-employment benefit obligations | 343.5 |
| Deferred tax liabilities | 25.3 |
| Income tax liabilities | 79.5 |
| Provisions | 19.2 |
| | <u>1,185.5</u> |
| Total liabilities | |
| Net assets | |
| | <u>1,678.0</u> |
| Capital and reserves | |
| Ordinary share capital | 79.6 |
| Share premium account | 799.2 |
| Own shares | (8.2) |
| Capital redemption reserve | 921.8 |
| Currency translation reserve | (93.0) |
| Available-for-sale reserve | (0.9) |
| Accumulated deficit | (161.9) |
| | <u>1,536.6</u> |
| Shareholders' equity | 1,536.6 |
| Minority interests | 141.4 |
| | <u>1,678.0</u> |
| Total equity | |
| | <u>1,678.0</u> |

Instructions

- Identify at least three differences in balance sheet reporting between British and U.S. firms, as shown in Tomkins' balance sheet.
- Review Tomkins' balance sheet and identify how the format of this financial statement provides useful information, as illustrated in the chapter.

Professional Research

IFRS5.6 In light of the full disclosure principle, investors and creditors need to know the balances for assets, liabilities, and equity, as well as the accounting policies adopted by management to measure the items reported in the statement of financial position.

Instructions

Access the IFRS authoritative literature at the IASB website. (If necessary, click on the IFRS tab and then register for eIFRS free access.) When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- a. Identify the literature that addresses the disclosure of accounting policies.
- b. How are accounting policies defined in the literature?
- c. What are the guidelines concerning consistency in applying accounting policies?
- d. What are some examples of common disclosures that are required under this statement?

International Financial Reporting Problem

Marks and Spencer plc (M&S)

IFRS5.7 The financial statements of **M&S** are presented in Appendix E. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- a. What alternative formats could M&S have adopted for its statement of financial position? Which format did it adopt?
- b. Identify the various techniques of disclosure M&S might have used to disclose additional pertinent financial information. Which technique does it use in its financials?
- c. In what classifications are M&S's investments reported? What valuation basis does M&S use to report its investments? How much working capital did M&S have on 31 March 2016? On 1 April 2017?
- d. What were M&S's cash flows from its operating, investing, and financing activities for 2017? What were its trends in net cash provided by operating activities over the period 2016 to 2017? Explain why the change in accounts payable and in accrued and other liabilities is added to net income to arrive at net cash provided by operating activities.
- e. Compute M&S's (1) current cash debt coverage, (2) cash debt coverage, and (3) free cash flow for 2017. What do these ratios indicate about M&S's financial conditions?

Answers to IFRS Self-Test Questions

Accounting and the Time Value of Money

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

1. Describe the fundamental concepts related to the time value of money.
2. Solve future and present value of 1 problems.
3. Solve future value of ordinary and annuity due problems.
4. Solve present value of ordinary and annuity due problems.
5. Solve present value problems related to deferred annuities, bonds, and expected cash flows.

PREVIEW OF CHAPTER 6 As we discuss in the following opening story, as a financial expert in today's accounting environment, you will be expected to make present and future value measurements and to understand their implications. The purpose of this chapter is to present the tools and techniques that will help you measure the present value of future cash inflows and outflows. The content and organization of the chapter are as follows.

As the time value of money concept is universal, this chapter does not include an *IFRS Insights* section.

ACCOUNTING AND THE TIME VALUE OF MONEY

Basic Time Value Concepts

- Applications
- The nature of interest
- Simple interest
- Compound interest
- Fundamental variables

Single-Sum Problems

- Future value of single sum
- Present value of single sum
- Solving for other unknowns

Annuities (Future Value)

- Future value of ordinary annuity
- Future value of annuity due
- Examples of FV of annuity

Annuities (Present Value)

- Present value of ordinary annuity
- Present value of annuity due
- Examples of PV of annuity

Other Time Value of Money Issues

- Deferred annuities
- Valuation of long-term bonds
- Effective-interest method of bond discount/premium amortization
- Present value measurement

How Do I Measure That?

A significant part of accounting is measurement. And as we discussed in Chapter 2, we have a mixed-attribute measurement model. That is, many items are measured based on historical cost (e.g., property, plant, and equipment, inventory), but increasingly accounting

measurements are based on fair value (e.g., financial instruments, impairments). Determining fair value of an item is fairly straightforward when market prices are available (Level 1 in the fair value hierarchy). However, when a market price is not available, accountants must rely on valuation models to develop a fair value estimate (Level 3 of the fair value hierarchy).

Developing fair value estimates based on a valuation model generally involves discounted cash flow techniques, which have three primary elements: (1) estimating the amounts and timing of future cash flows, (2) developing probability estimates for those cash flows, and (3) determining the appropriate discount rate to apply to the expected cash flows to arrive at a fair value estimate. Seems pretty straightforward, right? Actually, this can be a challenging process when applied to the variety of complex assets and liabilities for which GAAP requires a fair value estimate.

Many companies, particularly financial institutions, faced this challenge during the financial crisis when securities markets seized up to the point where valid market prices for investments and loans were not readily available. Major banks, such as **HSBC Holdings**, **Wells Fargo**, and **Bank of America**, confronted this issue with respect to their mortgage-backed securities and interest rate swaps used to hedge interest rate risk. **Kohl's Department Stores** dealt with a similar situation for its investment in auction rates securities (ARS). The fair value of ARS is generally determined at quarterly auctions. However, these auctions failed during the financial crisis, and Kohl's and other ARS investors were forced to use a valuation model rather than market prices to determine fair value.

The FASB provides fair value estimation guidance (FASB ASC 820), but the Board also performs ongoing assessment of whether and to what extent additional valuation guidance is needed. In this regard, the Board established the **Valuation Resource Group (VRG)**. The VRG is comprised of accounting and valuation professionals, preparers and users of financial statements, regulators, and other industry representatives. The VRG provides the Board and the FASB staff with multiple viewpoints on application issues relating to fair value for financial reporting purposes. Here is a sampling of the issues discussed by the VRG:

- Measurement of contingent consideration in a business combination.
- Incorporating multi-period excess earnings in valuing intangible assets.
- Effects of premiums and discounts in fair value measurements.
- Determining the carrying amount of a reporting unit when performing the goodwill impairment test.
- Measurement uncertainty analysis disclosures.

As indicated, the list of topics is revealing as to the variety and complexity of the issues that must be addressed in implementing the fair value measurement principle. Discussion of these items by the VRG helped the FASB develop appropriate approaches for applying fair value guidance to specific examples. For example, with respect to the contingent consideration topic, the VRG noted that taxes must be considered when developing future cash flow estimates and that, in some cases, these tax effects are different for assets and liabilities. More recently, VRG input is reflected in the FASB's standards update that simplified the goodwill impairment test.

The VRG provided good counsel to the FASB with respect to applying the fair value measurement principle. After studying this chapter, you should have a better understanding of time value of money principles and discounted cash flow techniques as they are applied in accounting measurements.

Review and Practice

Go to the **Review and Practice** section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions as well as additional exercises and practice problem with solutions are also available online.

Basic Time Value Concepts

LEARNING OBJECTIVE 1

Describe the fundamental concepts related to the time value of money.

In accounting (and finance), the phrase **time value of money** indicates a relationship between time and money—that a dollar received today is worth more than a dollar promised at some time in the future. Why? Because of the opportunity to invest today’s dollar and receive interest on the investment. Yet, when deciding among investment or borrowing alternatives, it is essential to be able to compare today’s dollar and tomorrow’s dollar on the same footing—to compare “apples to apples.” Investors do that by using the concept of **present value**, which has many applications in accounting.

Applications of Time Value Concepts

Financial reporting uses different measurements in different situations—historical cost for equipment, net realizable value for inventories, fair value for investments. As we discussed in Chapters 2 and 5, the FASB increasingly is requiring the use of fair values in the measurement of assets and liabilities. According to the FASB’s recent guidance on fair value measurements, the most useful fair value measures are based on market prices in active markets. Within the fair value hierarchy, these are referred to as Level 1. Recall that Level 1 fair value measures are the least subjective because they are based on quoted prices, such as a closing stock price in the *Wall Street Journal*.

However, for many assets and liabilities, market-based fair value information is not readily available. In these cases, fair value can be estimated based on the expected future cash flows related to the asset or liability. Such fair value estimates are generally considered Level 3 (most subjective) in the fair value hierarchy because they are based on unobservable inputs, such as a company’s own data or assumptions related to the expected future cash flows associated with the asset or liability. As discussed in the fair value guidance, present value techniques are used to convert expected cash flows into present values, which represent an estimate of fair value. [1]

Because of the increased use of present values in this and other contexts, it is important to understand present value techniques.¹ We list some of the applications of present value-based measurements to accounting topics below; we discuss many of these in the following chapters.

Present Value-Based Accounting Measurements

1. **Notes.** Valuing noncurrent receivables and payables that carry no stated interest rate or a lower than market interest rate.
2. **Leases.** Valuing assets and obligations to be capitalized under long-term leases and measuring the amount of the lease payments and annual leasehold amortization.
3. **Pensions and Other Postretirement Benefits.** Measuring service cost components of employers’ postretirement benefits expense and postretirement benefits obligation.
4. **Long-Term Assets.** Evaluating alternative long-term investments by discounting future cash flows. Determining the value of assets acquired under deferred payment contracts. Measuring impairments of assets.
5. **Stock-Based Compensation.** Determining the fair value of employee services in compensatory stock-option plans.
6. **Business Combinations.** Determining the value of receivables, payables, liabilities, accruals, and commitments acquired or assumed in a “purchase.”
7. **Disclosures.** Measuring the value of future cash flows from oil and gas reserves for disclosure in supplementary information.
8. **Environmental Liabilities.** Determining the fair value of future obligations for asset retirements.

¹GAAP addresses present value as a measurements basis for a broad array of transactions, such as accounts and loans receivable [2], leases [3], postretirement benefits [4], asset impairments [5], and stock-based compensation [6].

In addition to accounting and business applications, compound interest, annuity, and present value concepts apply to personal finance and investment decisions. In purchasing a home or car, planning for retirement, and evaluating alternative investments, you will need to understand time value of money concepts.

The Nature of Interest

Interest is payment for the use of money. It is the excess cash received or repaid over and above the amount lent or borrowed (**principal**). For example, Corner Bank lends Hillfarm Company \$10,000 with the understanding that it will repay \$11,500. The excess over \$10,000, or \$1,500, represents interest expense for Hillfarm and interest revenue for Corner Bank.

The lender generally states the amount of interest as a rate over a specific period of time. For example, if Hillfarm borrowed \$10,000 for one year before repaying \$10,600, the rate of interest is 6 percent per year ($\$600 \div \$10,000$). The custom of expressing interest as a percentage rate is an established business practice.² In fact, business managers make investing and borrowing decisions on the basis of the rate of interest involved, rather than on the actual dollar amount of interest to be received or paid.

How is the interest rate determined? One important factor is the level of credit risk (risk of nonpayment) involved. Other factors being equal, the higher the credit risk, the higher the interest rate. Low-risk borrowers like **Microsoft** or **Intel** can probably obtain a loan at or slightly below the going market rate of interest. However, a bank would probably charge the neighborhood delicatessen several percentage points above the market rate, if granting the loan at all.

The amount of interest involved in any financing transaction is a function of the following three variables.

Variables in Interest Computation

- | | |
|--|--|
| <ol style="list-style-type: none"> 1. Principal. The amount borrowed or invested. 2. Interest Rate. A percentage of the outstanding principal. | <ol style="list-style-type: none"> 3. Time. The number of years or fractional portion of a year that the principal is outstanding. |
|--|--|

Thus, the following three relationships apply:

- The larger the principal amount, the larger the dollar amount of interest.
- The higher the interest rate, the larger the dollar amount of interest.
- The longer the time period, the larger the dollar amount of interest.

Simple Interest

Companies compute **simple interest** on the amount of the principal only. It is the return on (or growth of) the principal for one time period. The following equation expresses simple interest.³

$$\text{Interest} = p \times i \times n$$

where

p = principal

i = rate of interest for a single period

n = number of periods

²Federal law requires the disclosure of interest rates on an annual basis in all contracts. That is, instead of stating the rate as “1% per month,” contracts must state the rate as “12% per year” if it is simple interest or “12.68% per year” if it is compounded monthly.

³Business mathematics and business finance texts traditionally state simple interest as I (interest) = P (principal) \times R (rate) \times T (time).

To illustrate, Barstow Electric Inc. borrows \$10,000 for 3 years with a simple interest rate of 8% per year. It computes the total interest it will pay as follows.

$$\begin{aligned}\text{Interest} &= p \times i \times n \\ &= \$10,000 \times .08 \times 3 \\ &= \$2,400\end{aligned}$$

If Barstow borrows \$10,000 for 3 months at 8%, the interest is \$200, computed as follows.

$$\begin{aligned}\text{Interest} &= \$10,000 \times .08 \times 3/12 \\ &= \$200\end{aligned}$$

Compound Interest

John Maynard Keynes, the legendary English economist, supposedly called it magic. Mayer Rothschild, the founder of the famous European banking firm, proclaimed it the eighth wonder of the world. Today, people continue to extol its wonder and its power. The object of their affection? Compound interest.

We compute **compound interest** on principal **and** on any interest earned that has not been paid or withdrawn. It is the return on (or growth of) the principal for two or more time periods. Compounding computes interest not only on the principal but also on the interest earned to date on that principal, assuming the interest is left on deposit.

To illustrate the difference between simple and compound interest, assume that Vasquez Company deposits \$10,000 in the Last National Bank, where it will earn simple interest of 9% per year. It deposits another \$10,000 in the First State Bank, where it will earn compound interest of 9% per year compounded annually. In both cases, Vasquez will not withdraw any interest until 3 years from the date of deposit. **Illustration 6.1** shows the computation of interest Vasquez will receive, as well as its accumulated year-end balance.

ILLUSTRATION 6.1 Simple vs. Compound Interest

| Last National Bank | | | First State Bank | | |
|-----------------------------|-------------------|------------------------------|-------------------------------|-------------------|------------------------------|
| Simple Interest Calculation | Simple Interest | Accumulated Year-End Balance | Compound Interest Calculation | Compound Interest | Accumulated Year-End Balance |
| Year 1 \$10,000.00 × .09 | \$ 900.00 | \$10,900.00 | Year 1 \$10,000.00 × .09 | \$ 900.00 | \$10,900.00 |
| Year 2 \$10,000.00 × .09 | 900.00 | \$11,800.00 | Year 2 \$10,900.00 × .09 | 981.00 | \$11,881.00 |
| Year 3 \$10,000.00 × .09 | 900.00 | \$12,700.00 | Year 3 \$11,881.00 × .09 | 1,069.29 | \$12,950.29 |
| | <u>\$2,700.00</u> | | | <u>\$2,950.29</u> | |
| | | | | | |

← **\$250.29** Difference ←

Note in Illustration 6.1 that simple interest uses the initial principal of \$10,000 to compute the interest in all 3 years. **Compound interest uses the accumulated balance (principal plus interest to date) at each year-end to compute interest in the succeeding year.** This explains the larger balance in the compound interest account.

Obviously, any rational investor would choose compound interest, if available, over simple interest. In the example above, compounding provides \$250.29 of additional interest revenue. For practical purposes, compounding assumes that unpaid interest earned becomes a part of the principal. Furthermore, the accumulated balance at the end of each year becomes the new principal sum on which interest is earned during the next year.

Compound interest is the typical interest computation applied in business situations. This occurs particularly in our economy, where companies use and finance large amounts of long-lived assets over long periods of time. Financial managers view and evaluate their investment opportunities in terms of a series of periodic returns, each of which they can reinvest to yield additional returns. Simple interest usually applies only to short-term investments and debts that involve a time span of one year or less.

What Do the Numbers Mean? A Pretty Good Start

The continuing debate on Social Security reform provides a great context to illustrate the power of compounding. One proposed idea is for the government to give \$1,000 to every citizen at birth. This gift would be deposited in an account that would earn interest tax-free until the citizen retires. Assuming the account earns a modest 5% annual return until retirement at age 65, the \$1,000 would grow to \$23,839. With monthly compounding, the \$1,000 deposited at birth would grow to \$25,617.

Why start so early? If the government waited until age 18 to deposit the money, it would grow to only \$9,906 with annual compounding. That is, reducing the time invested by a third results in more than a 50% reduction in retirement money. This example illustrates the importance of starting early when the power of compounding is involved.

Compound Interest Tables

We present five different types of compound interest tables at the end of this chapter. These tables should help you study this chapter as well as solve other problems involving interest.

Interest Tables and Their Contents

- Future Value of 1 Table.** Contains the amounts to which 1 will accumulate if deposited now at a specified rate and left for a specified number of periods (**Table 6.1**).
- Present Value of 1 Table.** Contains the amounts that must be deposited now at a specified rate of interest to equal 1 at the end of a specified number of periods (**Table 6.2**).
- Future Value of an Ordinary Annuity of 1 Table.** Contains the amounts to which periodic rents of 1 will accumulate if the payments (rents) are invested at the **end** of each period at a specified rate of interest for a specified number of periods (**Table 6.3**).
- Present Value of an Ordinary Annuity of 1 Table.** Contains the amounts that must be deposited now at a specified rate of interest to permit withdrawals of 1 at the **end** of regular periodic intervals for the specified number of periods (**Table 6.4**).
- Present Value of an Annuity Due of 1 Table.** Contains the amounts that must be deposited now at a specified rate of interest to permit withdrawals of 1 at the **beginning** of regular periodic intervals for the specified number of periods (**Table 6.5**).

Illustration 6.2 lists the general format and content of these tables. It shows how much principal plus interest a dollar accumulates to at the end of each of five periods, at three different rates of compound interest.

ILLUSTRATION 6.2

Excerpt from Table 6.1

| Future Value of 1 at Compound Interest (Excerpt from Table 6.1) | | | |
|--|---------|---------|---------|
| Period | 4% | 5% | 6% |
| 1 | 1.04000 | 1.05000 | 1.06000 |
| 2 | 1.08160 | 1.10250 | 1.12360 |
| 3 | 1.12486 | 1.15763 | 1.19102 |
| 4 | 1.16986 | 1.21551 | 1.26248 |
| 5 | 1.21665 | 1.27628 | 1.33823 |

The compound tables rely on basic formulas. For example, the formula to determine the future value factor (FVF) for 1 is:

$$FVF_{n,i} = (1 + i)^n$$

where

$FVF_{n,i}$ = future value factor for n periods at i interest

n = number of periods

i = rate of interest for a single period

Financial calculators include preprogrammed $FVF_{n,i}$ and other time value of money formulas.

To illustrate the use of interest tables to calculate compound amounts, assume an interest rate of 5%. **Illustration 6.3** shows the future value to which 1 accumulates (the future value factor).

| Period | Beginning-of-Period Amount | Multiplier $(1 + i)$ | End-of-Period Amount* | Formula $(1 + i)^n$ |
|--------|----------------------------|----------------------|-----------------------|---------------------|
| 1 | 1.00000 | 1.05 | 1.05000 | $(1.05)^1$ |
| 2 | 1.05000 | 1.05 | 1.10250 | $(1.05)^2$ |
| 3 | 1.10250 | 1.05 | 1.15763 | $(1.05)^3$ |

*Note that these amounts appear in Table 6.1 in the 5% column.

ILLUSTRATION 6.3**Accumulation of Compound Amounts**

Throughout our discussion of compound interest tables, note the intentional use of the term **periods** instead of **years**. Interest is generally expressed in terms of an annual rate. However, many business circumstances dictate a compounding period of less than one year. In such circumstances, a company must convert the annual interest rate to correspond to the length of the period. To convert the “annual interest rate” into the “compounding period interest rate,” a company **divides the annual rate by the number of compounding periods per year**.

In addition, companies determine the number of periods by **multiplying the number of years involved by the number of compounding periods per year**. To illustrate, assume an investment of \$1 for 6 years at 8% annual interest compounded **quarterly**. Using Table 6.1, read the factor that appears in the 2% ($.08 \div 4$) column on the 24th row—6 years \times 4 compounding periods per year, namely 1.60844, or approximately \$1.61. Thus, all compound interest tables use the term **periods**, not **years**, to express the quantity of n . **Illustration 6.4** shows how to determine (1) the interest rate per compounding period and (2) the number of compounding periods in four situations of differing compounding frequency.⁴

| 12% Annual Interest Rate over 5 Years Compounded | Interest Rate per Compounding Period | Number of Compounding Periods |
|--|--------------------------------------|--|
| Annually (1) | $.12 \div 1 = 12\%$ | 5 years \times 1 compounding per year = 5 periods |
| Semiannually (2) | $.12 \div 2 = 6\%$ | 5 years \times 2 compoundings per year = 10 periods |
| Quarterly (4) | $.12 \div 4 = 3\%$ | 5 years \times 4 compoundings per year = 20 periods |
| Monthly (12) | $.12 \div 12 = 1\%$ | 5 years \times 12 compoundings per year = 60 periods |

ILLUSTRATION 6.4**Frequency of Compounding**

How often interest is compounded can substantially affect the rate of return. For example, a 9% annual interest compounded **daily** provides a 9.42% yield, or a difference of 0.42%. The 9.42% is the **effective yield**.⁵ The annual interest rate (9%) is the **stated, nominal, or face rate**. When the compounding frequency is greater than once a year, the effective-interest rate will always exceed the stated rate.

⁴Because interest is theoretically earned (accruing) every second of every day, it is possible to calculate interest that is **compounded continuously**. Using the natural, or Napierian, system of logarithms facilitates computations involving continuous compounding. As a practical matter, however, most business transactions assume interest to be compounded no more frequently than daily.

⁵The formula for calculating the **effective rate**, in situations where the compounding frequency (n) is greater than once a year, is as follows.

$$\text{Effective rate} = (1 + i)^n - 1$$

To illustrate, if the stated annual rate is 8% compounded quarterly (or 2% per quarter), the effective annual rate is:

$$\begin{aligned} \text{Effective rate} &= (1 + .02)^4 - 1 \\ &= (1.02)^4 - 1 \\ &= 1.0824 - 1 \\ &= .0824 \\ &= 8.24\% \end{aligned}$$

Illustration 6.5 shows how compounding for five different time periods affects the effective yield and the amount earned by an investment of \$10,000 for one year.

ILLUSTRATION 6.5**Comparison of Different Compounding Periods**

| Interest Rate | Compounding Periods | | | | |
|---------------|---------------------|-------------------|-------------------|-------------------|-------------------|
| | Annually | Semiannually | Quarterly | Monthly | Daily |
| 8% | 8.00% \$800 | 8.16% \$816 | 8.24% \$824 | 8.30% \$830 | 8.33% \$833 |
| 9% | 9.00% \$900 | 9.20% \$920 | 9.31% \$931 | 9.38% \$938 | 9.42% \$942 |
| 10% | 10.00% \$1,000 | 10.25% \$1,025 | 10.38% \$1,038 | 10.47% \$1,047 | 10.52% \$1,052 |

Fundamental Variables

The following four variables are fundamental to all compound interest problems.

Fundamental Variables

- Rate of Interest.** Unless otherwise stated, an annual rate that must be adjusted to reflect the length of the compounding period if less than a year.
- Number of Time Periods.** The number of compounding periods. (A period may be equal to or less than a year.)
- Future Value.** The value at a future date of a given sum or sums invested assuming compound interest.
- Present Value.** The value now (present time) of a future sum or sums discounted assuming compound interest.

Illustration 6.6 depicts the relationship of these four fundamental variables in a **time diagram**.

ILLUSTRATION 6.6**Basic Time Diagram**

In some cases, all four of these variables are known. However, at least one variable is unknown in many business situations. To better understand and solve the problems in this chapter, we encourage you to sketch compound interest problems in the form of the preceding time diagram.

Single-Sum Problems

LEARNING OBJECTIVE 2

Solve future and present value of 1 problems.

Many business and investment decisions involve a single amount of money that either exists now or will in the future. Single-sum problems are generally classified into one of the following two categories.

1. Computing the **unknown future value** of a known single sum of money that is invested now for a certain number of periods at a certain interest rate.
2. Computing the **unknown present value** of a known single sum of money in the future that is discounted for a certain number of periods at a certain interest rate.

When analyzing the information provided, determine first whether the problem involves a future value or a present value. Then apply the following general rules, depending on the situation:

- **If solving for a future value**, *accumulate* all cash flows to a future point. In this instance, interest increases the amounts or values over time so that the future value exceeds the present value.
- **If solving for a present value**, *discount* all cash flows from the future to the present. In this case, **discounting** reduces the amounts or values, so that the present value is less than the future amount.

Preparation of time diagrams aids in identifying the unknown as an item in the future or the present. Sometimes the problem involves neither a future value nor a present value. Instead, the unknown is the interest or discount rate, or the number of compounding or discounting periods.

Future Value of a Single Sum

To determine the **future value** of a single sum, multiply the future value factor by its present value (principal), as follows.

$$FV = PV (FVF_{n,i})$$

where

FV = future value

PV = present value (principal or single sum)

$FVF_{n,i}$ = future value factor for n periods at i interest

To illustrate, Bruegger Co. wants to determine the future value of \$50,000 invested for 5 years compounded annually at an interest rate of 6%. **Illustration 6.7** shows this investment situation in time-diagram form.

ILLUSTRATION 6.7

Future Value Time Diagram
($n = 5, i = 6\%$)

Using the future value formula, Bruegger solves this investment problem as follows.

$$\begin{aligned}
 \text{Future value} &= PV (FVF_{n,i}) \\
 &= \$50,000 (FVF_{5,6\%}) \\
 &= \$50,000 (1 + .06)^5 \\
 &= \$50,000 (1.33823) \\
 &= \$66,912
 \end{aligned}$$

To determine the future value factor of 1.33823 in the formula above, Bruegger uses a financial calculator or reads the appropriate table, in this case Table 6.1 (6% column and the 5-period row).

Companies can apply this time diagram and formula approach to routine business situations. To illustrate, assume that **Commonwealth Edison Company** deposited \$250 million in an escrow account with **Northern Trust Company** at the beginning of 2020 as a commitment toward a power plant to be completed December 31, 2023. How much will the company have on deposit at the end of 4 years if interest is 10%, compounded semiannually?

With a known present value of \$250 million, a total of 8 compounding periods (4×2), and an interest rate of 5% per compounding period ($.10 \div 2$), the company can time-diagram this problem and determine the future value as shown in **Illustration 6.8**.

ILLUSTRATION 6.8

Future Value Time Diagram
($n = 8, i = 5\%$)

$$\begin{aligned} \text{Future value} &= \$250,000,000 (FVF_{8,5\%}) \\ &= \$250,000,000 (1 + .05)^8 \\ &= \$250,000,000 (1.47746) \\ &= \$369,365,000 \end{aligned}$$

Using a future value factor found in Table 6.1 (5% column, 8-period row), we find that the deposit of \$250 million will accumulate to \$369,365,000 by December 31, 2023.

Present Value of a Single Sum

The Bruegger example showed that \$50,000 invested at an annually compounded interest rate of 6% will equal \$66,912 at the end of 5 years. It follows, then, that \$66,912, 5 years in the future, is worth \$50,000 now. That is, \$50,000 is the present value of \$66,912. The **present value** is the amount needed to invest now, to produce a known future value.

The present value is always a smaller amount than the known future value, due to earned and accumulated interest. In determining the future value, a company moves forward in time using a process of **accumulation**. In determining present value, it moves backward in time using a process of **discounting**.

As indicated earlier, a “present value of 1 table” appears at the end of this chapter as Table 6.2. **Illustration 6.9** demonstrates the nature of such a table. It shows the present value of 1 for five different periods at three different rates of interest.

ILLUSTRATION 6.9

Excerpt from Table 6.2

| Present Value of 1 at Compound Interest (Excerpt from Table 6.2) | | | | |
|---|--------|--------|--------|--|
| Period | 4% | 5% | 6% | |
| 1 | .96154 | .95238 | .94340 | |
| 2 | .92456 | .90703 | .89000 | |
| 3 | .88900 | .86384 | .83962 | |
| 4 | .85480 | .82270 | .79209 | |
| 5 | .82193 | .78353 | .74726 | |

The following formula is used to determine the present value of 1 (present value factor):

$$PVF_{n,i} = \frac{1}{(1 + i)^n}$$

where

$PVF_{n,i}$ = present value factor for n periods at i interest

To illustrate, assuming an interest rate of 5%, the present value of 1 discounted for three different periods is as shown in **Illustration 6.10**.

| Discount Periods | 1 | ÷ | $(1+i)^n$ | = | Present Value* | Formula |
|------------------|---------|---|------------|---|----------------|--------------|
| 1 | 1.00000 | | 1.05 | | .95238 | $1/(1.05)^1$ |
| 2 | 1.00000 | | $(1.05)^2$ | | .90703 | $1/(1.05)^2$ |
| 3 | 1.00000 | | $(1.05)^3$ | | .86384 | $1/(1.05)^3$ |

*Note that these amounts appear in Table 6.2 in the 5% column.

The present value of any single sum (future value), then, is as follows.

$$PV = FV (PVF_{n,i})$$

where

PV = present value

FV = future value

$PVF_{n,i}$ = present value factor for n periods at i interest

To illustrate, what is the present value of \$73,466 to be received or paid in 5 years discounted at 8% compounded annually? **Illustration 6.11** shows this problem as a time diagram.

ILLUSTRATION 6.11

Present Value Time Diagram
($n = 5, i = 8\%$)

Using the formula, we solve this problem as follows.

$$\begin{aligned}
 \text{Present value} &= FV (PVF_{n,i}) \\
 &= \$73,466 (PVF_{5,8\%}) \\
 &= \$73,466 \left(\frac{1}{(1 + .08)^5} \right) \\
 &= \$73,466 (.68058) \\
 &= \$50,000 \text{ (rounded by } \$51)
 \end{aligned}$$

To determine the present value factor of 0.68058, use a financial calculator or read the present value of a single sum in Table 6.2 (8% column, 5-period row).

The time diagram and formula approach can be applied in a variety of situations. For example, assume that your rich uncle decides to give you \$2,000 for a trip to Europe when you graduate from college 3 years from now. He proposes to finance the trip by investing a sum of money now at 8% compound interest that will provide you with \$2,000 upon your graduation. The only conditions are that you graduate and that you tell him how much to invest now.

To impress your uncle, you set up the time diagram in **Illustration 6.12** and solve this problem as follows.

ILLUSTRATION 6.12

Present Value Time Diagram
($n = 3, i = 8\%$)

$$\begin{aligned}
 \text{Present value} &= \$2,000 (PVF_{3,8\%}) \\
 &= \$2,000 \left(\frac{1}{(1 + .08)^3} \right) \\
 &= \$2,000 (.79383) \\
 &= \$1,587.66
 \end{aligned}$$

Advise your uncle to invest \$1,587.66 now to provide you with \$2,000 upon graduation. To satisfy your uncle's other condition, you must pass this course (and many more).

Solving for Other Unknowns in Single-Sum Problems

In computing either the future value or the present value in the previous single-sum illustrations, both the number of periods and the interest rate were known. In many business situations, both the future value and the present value are known, but the number of periods or the interest rate is unknown. The following two examples are single-sum problems (future value and present value) with either an unknown number of periods (n) or an unknown interest rate (i). These examples, and the accompanying solutions, demonstrate that knowing any three of the four values (future value, FV ; present value, PV ; number of periods, n ; interest rate, i) allows you to derive the remaining unknown variable.

Example—Computation of the Number of Periods

The Village of Somonauk wants to accumulate \$70,000 for the construction of a veterans monument in the town square. At the beginning of the current year, the Village deposited \$47,811 in a memorial fund that earns 10% interest compounded annually. How many years will it take to accumulate \$70,000 in the memorial fund?

In this illustration, the Village knows both the present value (\$47,811) and the future value (\$70,000), along with the interest rate of 10%. **Illustration 6.13** depicts this investment problem as a time diagram.

ILLUSTRATION 6.13

Time Diagram to Solve for Unknown Number of Periods

Knowing both the present value and the future value allows the Village to solve for the unknown number of periods. It may use either the future value or the present value formulas, as shown in **Illustration 6.14**.

ILLUSTRATION 6.14

Solving for Unknown Number of Periods

| Future Value Approach | Present Value Approach |
|--|---|
| $FV = PV (FVF_{n,10\%})$ $\$70,000 = \$47,811 (FVF_{n,10\%})$ $FVF_{n,10\%} = \frac{\$70,000}{\$47,811} = 1.46410$ | $PV = FV (PVF_{n,10\%})$ $\$47,811 = \$70,000 (PVF_{n,10\%})$ $PVF_{n,10\%} = \frac{\$47,811}{\$70,000} = .68301$ |

Using the future value factor of 1.46410, refer to Table 6.1 and read down the 10% column to find that factor in the 4-period row. Thus, it will take 4 years for the \$47,811 to accumulate to \$70,000 if invested at 10% interest compounded annually. Or, using the present value factor of 0.68301, refer to Table 6.2 and read down the 10% column to find that factor in the 4-period row.

Example—Computation of the Interest Rate

Advanced Design, Inc. needs \$1,070,584 for basic research 5 years from now. The company currently has \$800,000 to invest for that purpose. At what rate of interest must it invest the \$800,000 to fund basic research projects of \$1,070,584, 5 years from now?

The time diagram in **Illustration 6.15** depicts this investment situation.

ILLUSTRATION 6.15

Time Diagram to Solve for Unknown Interest Rate

Advanced Design may determine the unknown interest rate from either the future value approach or the present value approach, as **Illustration 6.16** shows.

| Future Value Approach | Present Value Approach |
|---|--|
| $FV = PV (FVF_{5,i})$ $\$1,070,584 = \$800,000 (FVF_{5,i})$ $FVF_{5,i} = \frac{\$1,070,584}{\$800,000} = 1.33823$ | $PV = FV (PVF_{5,i})$ $\$800,000 = \$1,070,584 (PVF_{5,i})$ $PVF_{5,i} = \frac{\$800,000}{\$1,070,584} = .74726$ |

ILLUSTRATION 6.16

Solving for Unknown Interest Rate

Using the future value factor of 1.33823, refer to Table 6.1 and read across the 5-period row to find that factor in the 6% column. Thus, the company must invest the \$800,000 at 6% to accumulate to \$1,070,584 in 5 years. Or, using the present value factor of .74726 and Table 6.2, again find that factor at the juncture of the 5-period row and the 6% column.

Annuities (Future Value)

LEARNING OBJECTIVE 3

Solve future value of ordinary and annuity due problems.

The preceding discussion involved only the accumulation or discounting of a single principal sum. However, many situations arise in which a series of dollar amounts are paid or received periodically, such as installment loans or sales; regular, partially recovered invested funds; or a series of realized cost savings.

For example, a life insurance contract involves a series of equal payments made at equal intervals of time. Such a process of periodic payment represents the accumulation of a sum of money through an annuity. An **annuity**, by definition, requires the

| Future Value of an Ordinary Annuity of 1 (Excerpt from Table 6.3) | | | |
|--|---------|----------|---------|
| Period | 4% | 5% | 6% |
| 1 | 1.00000 | 1.00000 | 1.00000 |
| 2 | 2.04000 | 2.05000 | 2.06000 |
| 3 | 3.12160 | 3.15250 | 3.18360 |
| 4 | 4.24646 | 4.31013 | 4.37462 |
| 5 | 5.41632 | 5.52563* | 5.63709 |

*Note that this annuity table factor is the same as the sum of the future values of 1 factors shown in Illustration 6.17.

ILLUSTRATION 6.18

Excerpt from Table 6.3

Interpreting the table, if \$1 is invested at the end of each year for 4 years at 5% interest compounded annually, the value of the annuity at the end of the fourth year is \$4.31 ($4.31013 \times \1.00). Now, multiply the factor from the appropriate line and column of the table by the dollar amount of **one rent** involved in an ordinary annuity. The result: the accumulated sum of the rents and the compound interest to the date of the last rent.

The following formula computes the future value of an ordinary annuity.

$$\text{Future value of an ordinary annuity} = R (FVF-OA_{n,i})$$

where

R = periodic rent

$FVF-OA_{n,i}$ = future value of an ordinary annuity factor for n periods at i interest

To illustrate, what is the future value of five \$5,000 deposits made at the end of each of the next 5 years, earning interest of 6%? **Illustration 6.19** depicts this problem as a time diagram.

**ILLUSTRATION 6.19**

Time Diagram for Future Value of Ordinary Annuity
($n = 5, i = 6\%$)

Use of the formula solves this investment problem as follows.

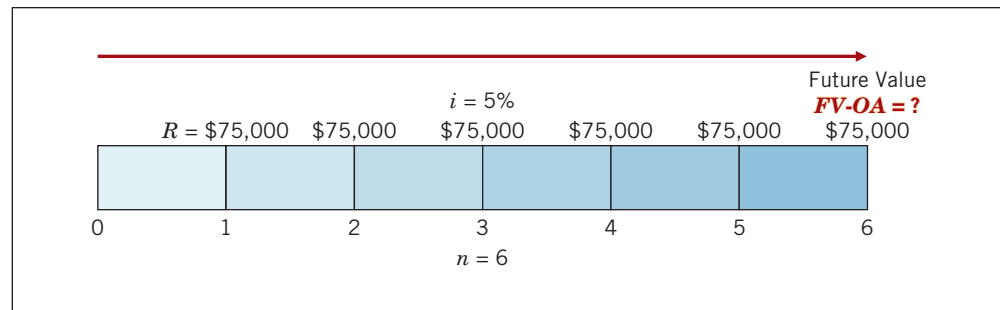

$$\begin{aligned}
 \text{Future value of an ordinary annuity} &= R (FVF-OA_{n,i}) \\
 &= 5,000 (FVF-OA_{5,6\%}) \\
 &= \$5,000 \left(\frac{(1 + .06)^5 - 1}{0.06} \right) \\
 &= \$5,000 (5.63709) \\
 &= \$28,185.45
 \end{aligned}$$

To determine the future value of an ordinary annuity factor of 5.63709 in the above formula, use a financial calculator or read the appropriate table, in this case, Table 6.3 (6% column and the 5-period row).

To illustrate these computations in a business situation, assume that Hightown Electronics deposits \$75,000 at the end of each 6-month period for the next 3 years, to accumulate enough money to meet debts that mature in 3 years. What is the future value that the company will have on deposit at the end of 3 years if the annual interest rate is 10%? The time diagram in **Illustration 6.20** depicts this situation.

ILLUSTRATION 6.20

Time Diagram for Future Value of Ordinary Annuity
($n = 6, i = 5\%$)

The formula solution for the Hightown Electronics situation is as follows.

$$\begin{aligned}
 \text{Future value of an ordinary annuity} &= R (FVF-OA_{n,i}) \\
 &= \$75,000 (FVF-OA_{6,5\%}) \\
 &= \$75,000 \left(\frac{(1 + .05)^6 - 1}{.05} \right) \\
 &= \$75,000 (6.80191) \\
 &= \$510,143.25
 \end{aligned}$$

Thus, six 6-month deposits of \$75,000 earning 5% per period will grow to \$510,143.25.

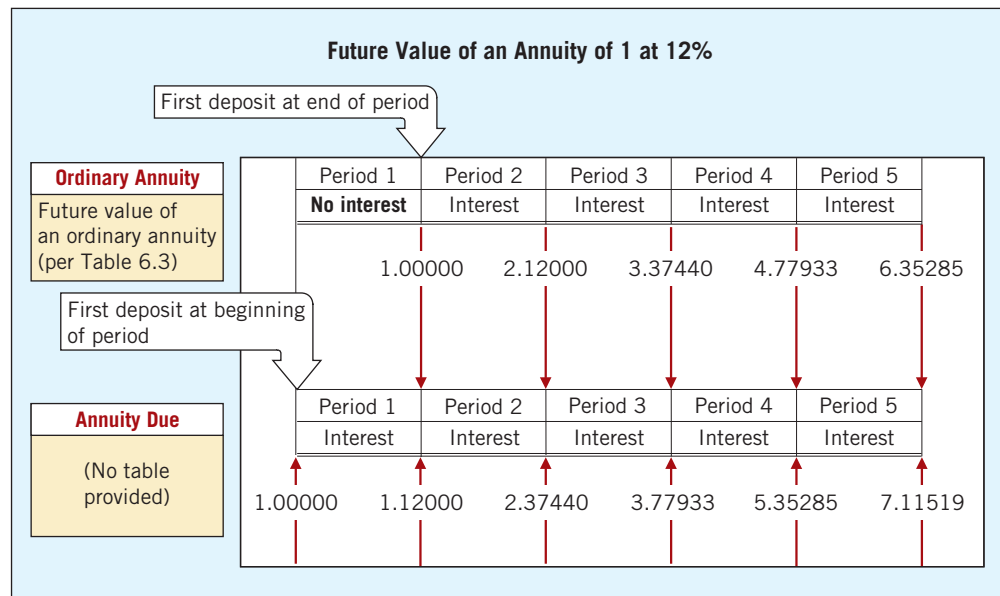

Future Value of an Annuity Due

The preceding analysis of an ordinary annuity assumed that the periodic rents occur at the **end** of each period. Recall that an **annuity due** assumes periodic rents occur at the **beginning** of each period. This means an annuity due will accumulate interest during the first period (in contrast to an ordinary annuity rent, which will not). In other words, the two types of annuities differ in the number of interest accumulation periods involved even though the same number of rents occur.

If rents occur at the end of a period (ordinary annuity), in determining the **future value of an annuity** there will be one less interest period than if the rents occur at the beginning of the period (annuity due). **Illustration 6.21** shows this distinction.

ILLUSTRATION 6.21

Comparison of the Future Value of an Ordinary Annuity with an Annuity Due

In this example, the cash flows from the annuity due come exactly one period earlier than for an ordinary annuity. As a result, the future value of the annuity due factor is exactly 12% higher than the ordinary annuity factor. For example, the value of an ordinary annuity factor at the end of period one at 12% is 1.00000, whereas for an annuity due it is 1.12000.

To find the future value of an annuity due factor, multiply the future value of an ordinary annuity factor by 1 plus the interest rate. For example, to determine the future value of an annuity due interest factor for 5 periods at 12% compound interest, simply multiply the future value of an ordinary annuity interest factor for 5 periods (6.35285), by one plus the interest rate ($1 + .12$), to arrive at 7.11519 (6.35285×1.12).

To illustrate the use of the ordinary annuity tables in converting to an annuity due, assume that Sue Lotadough plans to deposit \$800 a year on each birthday of her son Howard. She makes the first deposit on his tenth birthday, at 6% interest compounded annually. Sue wants to know the amount she will have accumulated for college expenses by her son's eighteenth birthday.

If the first deposit occurs on Howard's tenth birthday, Sue will make a total of 8 deposits over the life of the annuity (assume no deposit on the eighteenth birthday), as shown in **Illustration 6.22**. Because all the deposits are made at the beginning of the periods, they represent an annuity due.

**ILLUSTRATION 6.22****Annuity Due Time Diagram**

Referring to the “future value of an ordinary annuity of 1” table for 8 periods at 6%, Sue finds a factor of 9.89747. She then multiplies this factor by $(1 + .06)$ to arrive at the future value of an annuity due factor. As a result, the accumulated value on Howard's eighteenth birthday is \$8,393.06, as calculated in **Illustration 6.23**.

| | |
|---|--------------------------|
| 1. Future value of an ordinary annuity of 1 for 8 periods at 6% (Table 6.3) | 9.89747 |
| 2. Factor $(1 + .06)$ | $\times 1.06$ |
| 3. Future value of an annuity due of 1 for 8 periods at 6% | 10.49132 |
| 4. Periodic deposit (rent) | $\times \$800$ |
| 5. Accumulated value on son's 18th birthday | <u><u>\$8,393.06</u></u> |

ILLUSTRATION 6.23**Computation of Accumulated Value of Annuity Due**

Depending on the college he chooses, Howard may have enough to finance only part of his first year of school.

What Do the Numbers Mean? Don't Wait to Make That Contribution!

There is great power in compounding of interest, and there is no better illustration of this maxim than the case of retirement savings, especially for young adults. Under current tax rules for

individual retirement accounts (IRAs), you can contribute up to \$5,500 in an investment fund that will grow tax-free until you reach retirement age. What's more, you get a tax deduction for

the amount contributed in the current year. Financial planners encourage young adults to take advantage of the tax benefits of IRAs. Indeed, one type of IRA—a Roth—is tax-free when you receive payments in retirement. By starting early, you can use the power of compounding to grow a pretty good nest egg. As shown in the chart, starting earlier can have a big impact on the value of your retirement fund.

By setting aside \$1,000 each year, beginning when you are 25 and assuming a rate of return of 6%, your retirement account at age 65 will have a tidy balance of \$154,762 [$\$1,000 \times 154.76197$ ($FVF-OA_{40,6\%}$)]. That's the power of compounding. Not too bad you say, but hey, there are a lot of things you might want to spend that \$1,000 on (clothes, a trip to Vegas or Europe, new golf clubs). However, if you delay starting those contributions until age 30, your retirement fund will grow only to a value of \$111,435 [$\$1,000 \times 111.43478$ ($FVF-OA_{35,6\%}$)]. That is quite a haircut—about 28%. As you can see, by delaying or missing contributions, you miss out on the power of compounding and put a dent in your projected nest egg.

Examples of Future Value of Annuity Problems

The foregoing annuity examples relied on three known values—amount of each rent, interest rate, and number of periods. Using these values enables us to determine the unknown fourth value, future value.

The first two future value problems we present illustrate the computations of (1) the amount of the rents and (2) the number of rents. The third problem illustrates the computation of the future value of an annuity due.

Computation of Rent

Assume that you plan to accumulate \$14,000 for a down payment on a condominium apartment 5 years from now. For the next 5 years, you earn an annual return of 8% compounded semiannually. How much should you deposit at the end of each 6-month period?

The \$14,000 is the future value of 10 (5×2) semiannual end-of-period payments of an unknown amount, at an interest rate of 4% ($.08 \div 2$). **Illustration 6.24** depicts this problem as a time diagram.

ILLUSTRATION 6.24

Future Value of Ordinary Annuity Time Diagram
($n = 10, i = 4\%$)

Using the formula for the future value of an ordinary annuity, you determine the amount of each rent as follows.

$$\text{Future value of an ordinary annuity} = R (FVF-OA_{n,i})$$

$$\$14,000 = R (FVF-OA_{10,4\%})$$

$$\$14,000 = R (12.00611)$$

$$R = \$1,166.07$$

Thus, you must make 10 semiannual deposits of \$1,166.07 each in order to accumulate \$14,000 for your down payment.

Computation of the Number of Periodic Rents

Suppose that a company's goal is to accumulate \$117,332 by making periodic deposits of \$20,000 at the end of each year, which will earn 8% compounded annually while accumulating. How many deposits must it make?

The \$117,332 represents the future value of $n(?)$ \$20,000 deposits, at an 8% annual rate of interest. **Illustration 6.25** depicts this problem in a time diagram.

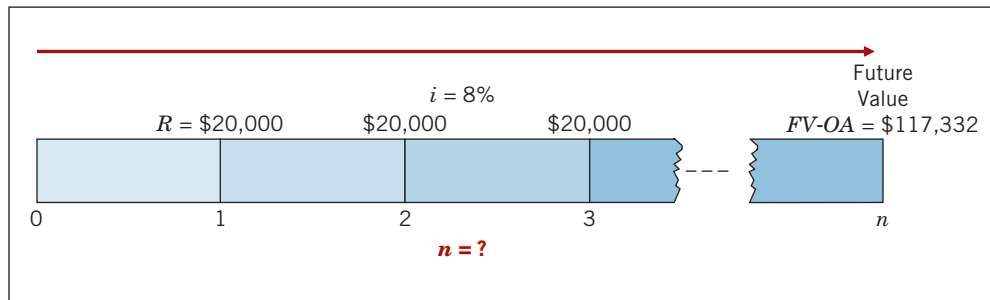

ILLUSTRATION 6.25

Future Value of Ordinary Annuity Time Diagram, to Solve for Unknown Number of Periods

Using the future value of an ordinary annuity formula, the company obtains the following factor.

Future value of an ordinary annuity = $R (FVF-OA_{n,i})$

$$\$117,332 = \$20,000 (FVF-OA_{n,8\%})$$

$$FVF-OA_{n,8\%} = \frac{\$117,332}{\$20,000} = 5.86660$$

Use Table 6.3 and read down the 8% column to find 5.86660 in the 5-period row. Thus, the company must make five deposits of \$20,000 each.

Computation of the Future Value

To create his retirement fund, Walter Goodwrench, a mechanic, now works weekends. Mr. Goodwrench deposits \$2,500 today in a savings account that earns 9% interest. He plans to deposit \$2,500 every year for a total of 30 years. How much cash will Mr. Goodwrench accumulate in his retirement savings account, when he retires in 30 years? **Illustration 6.26** depicts this problem in a time diagram.

ILLUSTRATION 6.26

Future Value Annuity Due Time Diagram ($n = 30, i = 9\%$)

Using the “future value of an ordinary annuity of 1” table, Mr. Goodwrench computes the solution as shown in **Illustration 6.27**.

| | |
|--|-------------------------|
| 1. Future value of an ordinary annuity of 1 for 30 periods at 9% | 136.30754 |
| 2. Factor $(1 + .09)$ | $\times 1.09$ |
| 3. Future value of an annuity due of 1 for 30 periods at 9% | 148.57522 |
| 4. Periodic rent | $\times \$2,500$ |
| 5. Accumulated value at end of 30 years | <u><u>\$371,438</u></u> |

ILLUSTRATION 6.27

Computation of Accumulated Value of an Annuity Due

Annuities (Present Value)

LEARNING OBJECTIVE 4

Solve present value of ordinary and annuity due problems.

The present value of an annuity is **the single sum** that, if invested at compound interest now, would provide for an annuity (a series of withdrawals) for a certain number of future periods.

Present Value of an Ordinary Annuity

The present value of an ordinary annuity is the present value of a series of equal rents, to be withdrawn at equal intervals at the end of the period.

One approach to finding the present value of an annuity determines the present value of each of the rents in the series and then totals their individual present values. For example, we may view an annuity of \$1, to be received at the **end** of each of 5 periods, as separate amounts. We then compute each present value using the table of present values (see Table 6.2), assuming an interest rate of 5%. **Illustration 6.28** shows this approach.

ILLUSTRATION 6.28

Solving for the Present Value of an Ordinary Annuity

| End of Period in Which \$1.00 Is to Be Received | | | | | |
|---|---|----------|----------|----------|----------|
| Present Value at Beg. of Year 1 | 1 | 2 | 3 | 4 | 5 |
| \$0.95238 | ← \$1.00 | | | | |
| .90703 | ← | ← \$1.00 | | | |
| .86384 | ← | ← | ← \$1.00 | | |
| .82270 | ← | ← | ← | ← \$1.00 | |
| .78353 | ← | ← | ← | ← | ← \$1.00 |
| <u>\$4.32948</u> | Total (present value of an ordinary annuity of \$1.00 for five periods at 5%) | | | | |

This computation tells us that if we invest the single sum of \$4.33 today at 5% interest for 5 periods, we will be able to withdraw \$1 at the end of each period for 5 periods. We can summarize this cumbersome procedure by the following formula.

$$PVF-OA_{n,i} = \frac{1 - \frac{1}{(1+i)^n}}{i}$$

The expression $PVF-OA_{n,i}$ refers to the present value of an ordinary annuity of 1 factor for n periods at i interest. Ordinary annuity tables base present values on this formula. **Illustration 6.29** shows an excerpt from such a table.

ILLUSTRATION 6.29

Excerpt from Table 6.4

| Present Value of an Ordinary Annuity of 1 (Excerpt from Table 6.4) | | | |
|---|---------|-----------------|---------|
| Period | 4% | 5% | 6% |
| 1 | .96154 | .95238 | .94340 |
| 2 | 1.88609 | 1.85941 | 1.83339 |
| 3 | 2.77509 | 2.72325 | 2.67301 |
| 4 | 3.62990 | 3.54595 | 3.46511 |
| 5 | 4.45182 | 4.32948* | 4.21236 |

*Note that this annuity table factor is equal to the sum of the present value of 1 factors shown in Illustration 6.28.

The general formula for the present value of any ordinary annuity is as follows.

$$\text{Present value of an ordinary annuity} = R (PVF-OA_{n,i})$$

where

$$R = \text{periodic rent (ordinary annuity)}$$

$$PVF-OA_{n,i} = \text{present value of an ordinary annuity of 1}$$

$$\text{for } n \text{ periods at } i \text{ interest}$$

To illustrate with an example, what is the present value of rental receipts of \$6,000 each, to be received at the end of each of the next 5 years when discounted at 6%? This problem may be time-diagrammed and solved as shown in **Illustration 6.30**.

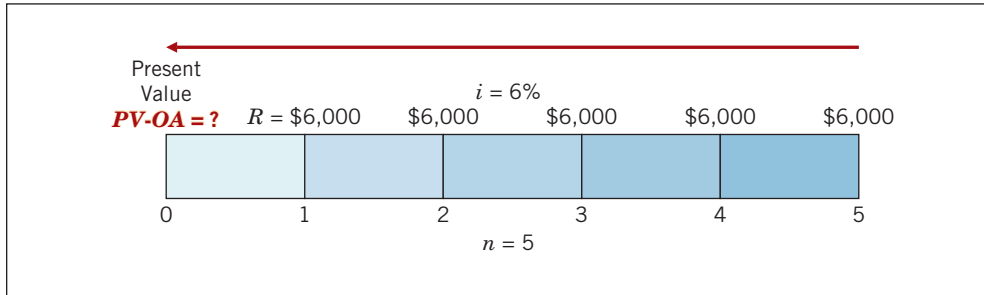

ILLUSTRATION 6.30

Present Value of Ordinary Annuity Time Diagram

The formula for this calculation is as follows.

$$\begin{aligned} \text{Present value of an ordinary annuity} &= R (PVF-OA_{n,i}) \\ &= \$6,000 (PVF-OA_{5,6\%}) \\ &= \$6,000 (4.21236) \\ &= \$25,274.16 \end{aligned}$$

The present value of the 5 ordinary annuity rental receipts of \$6,000 each is \$25,274.16. To determine the present value of the ordinary annuity factor 4.21236, use a financial calculator or read the appropriate table, in this case Table 6.4 (6% column and 5-period row).

What Do the Numbers Mean? Up in Smoke

Time value of money concepts also can be relevant to public policy debates. For example, several states had to determine how to receive the payments from tobacco companies as settlement for a national lawsuit against the companies for the healthcare costs of smoking.

The **State of Wisconsin** was due to collect 25 years of payments totaling \$5.6 billion. The state could wait to collect the payments, or it could sell the payments to an investment bank (a process called *securitization*). If it were to sell the payments, it would receive a lump-sum payment today of \$1.26 billion. Is this a good deal for the state? Assuming a discount rate of 8% and that the payments will be received in equal amounts (e.g., an annuity), the present value of the tobacco payment is:

$$\begin{aligned} \$5.6 \text{ billion} \div 25 &= \$224 \text{ million} \\ \$224 \text{ million} \times 10.67478^* &= \$2.39 \text{ billion} \\ *PV-OA (i = 8\%, n = 25) \end{aligned}$$

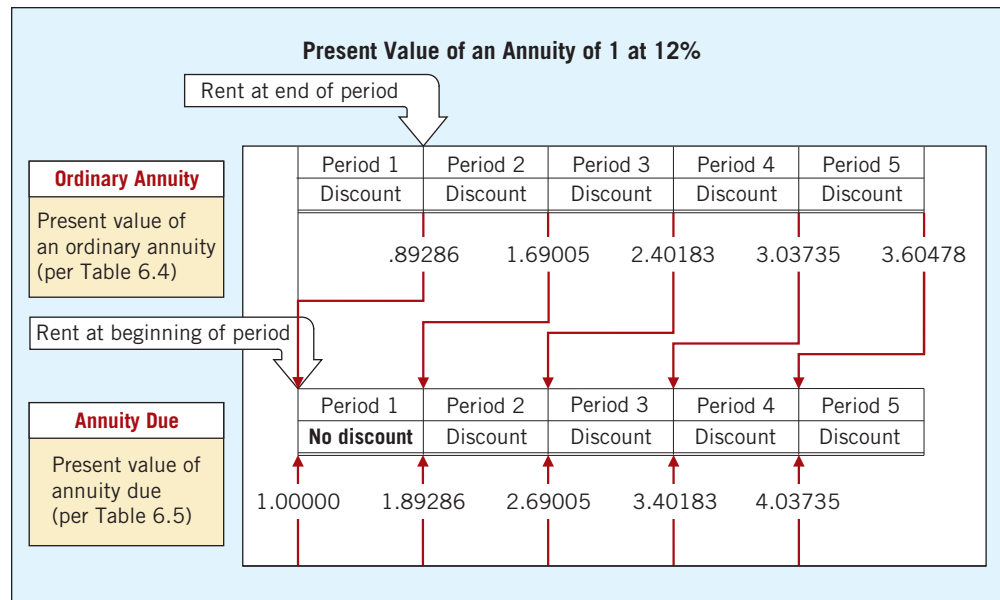

Why would some in the state be willing to take just \$1.26 billion today for an annuity whose present value is almost twice that amount? One reason is that Wisconsin was facing a hole in its budget that could be plugged in part by the lump-sum payment. Also, some believed that the risk of not getting paid by the tobacco companies in the future makes it prudent to get the money earlier.

If this latter reason has merit, then the present value computation above should have been based on a higher interest rate. Assuming a discount rate of 15%, the present value of the annuity is \$1.448 billion (\$5.6 billion \div 25 = \$224 million; \$224 million \times 6.46415), which is much closer to the lump-sum payment offered to the State of Wisconsin.

Present Value of an Annuity Due

In our discussion of the present value of an ordinary annuity, we discounted the final rent based on the number of rent periods. In determining the present value of an annuity due, there is always one fewer discount period. **Illustration 6.31** shows this distinction.

ILLUSTRATION 6.31
Comparison of Present Value of an Ordinary Annuity with an Annuity Due

Because each cash flow comes exactly one period sooner in the present value of the annuity due, the present value of the cash flows is exactly 12% higher than the present value of an ordinary annuity. Thus, **to find the present value of an annuity due factor, multiply the present value of an ordinary annuity factor by 1 plus the interest rate** (that is, $1 + i$).

To determine the present value of an annuity due interest factor for 5 periods at 12% interest, take the present value of an ordinary annuity for 5 periods at 12% interest (3.60478) and multiply it by 1.12 to arrive at the present value of an annuity due, 4.03735 (3.60478×1.12). We provide present value of annuity due factors in Table 6.5.

To illustrate, Space Odyssey, Inc., rents a communications satellite for 4 years with annual rental payments of \$4.8 million to be made at the beginning of each year. If the relevant annual interest rate is 5%, what is the present value of the rental obligations? **Illustration 6.32** shows the company's time diagram for this problem.

ILLUSTRATION 6.32
Present Value of Annuity Due Time Diagram ($n = 4, i = 5%$)

Illustration 6.33 shows the computations to solve this problem.

ILLUSTRATION 6.33
Computation of Present Value of an Annuity Due

| | |
|--|----------------------------|
| 1. Present value of an ordinary annuity of 1 for 4 periods at 5% (Table 6.4) | 3.54595 |
| 2. Factor $(1 + .05)$ | $\times 1.05$ |
| 3. Present value of an annuity due of 1 for 4 periods at 5% | 3.72325 |
| 4. Periodic deposit (rent) | $\times \$4,800,000$ |
| 5. Present value of payments | <u><u>\$17,871,600</u></u> |

Using Table 6.5 also locates the desired factor 3.72325 and computes the present value of the lease payments to be \$17,871,600.

Examples of Present Value of Annuity Problems

In the following three examples, we demonstrate the computation of (1) the present value, (2) the interest rate, and (3) the amount of each rent.

Computation of the Present Value of an Ordinary Annuity

You have just won a lottery totaling \$4,000,000. You learn that you will receive a check in the amount of \$200,000 at the end of each of the next 20 years. What amount have you really won? That is, what is the present value of the \$200,000 checks you will receive over the next 20 years? **Illustration 6.34** shows a time diagram of this enviable situation (assuming an appropriate interest rate of 10%).

ILLUSTRATION 6.34

Time Diagram to Solve for Present Value of Lottery Payments

You calculate the present value as follows.

$$\begin{aligned} \text{Present value of an ordinary annuity} &= R (PVF-OA_{n,i}) \\ &= \$200,000 (PVF-OA_{20,10\%}) \\ &= \$200,000 (8.51356) \\ &= \$1,702,712 \end{aligned}$$

As a result, if the state deposits \$1,702,712 now and earns 10% interest, it can withdraw \$200,000 a year for 20 years to pay you the \$4,000,000.

Computation of the Interest Rate

Many shoppers use credit cards to make purchases. When you receive the statement for payment, you may pay the total amount due or you may pay the balance in a certain number of payments. For example, assume you receive a statement from **MasterCard** with a balance due of \$528.77. You may pay it off in 12 equal monthly payments of \$50 each, with the first payment due one month from now. What rate of interest would you be paying?

The \$528.77 represents the present value of the 12 payments of \$50 each at an unknown rate of interest. The time diagram in **Illustration 6.35** depicts this situation.

ILLUSTRATION 6.35

Time Diagram to Solve for Effective-Interest Rate on Loan

You calculate the rate as follows.

$$\begin{aligned} \text{Present value of an ordinary annuity} &= R (PVF-OA_{n,i}) \\ \$528.77 &= \$50 (PVF-OA_{12,i}) \\ (PVFOA_{12,i}) &= \frac{\$528.77}{\$50} = 10.57540 \end{aligned}$$

Referring to Table 6.4 and reading across the 12-period row, you find 10.57534 in the 2% column. Since 2% is a monthly rate, the nominal annual rate of interest is 24% ($12 \times .02$). The effective annual rate is 26.82423% [$(1 + .02)^{12} - 1$]. Obviously, you are better off paying the entire bill now if possible.

Computation of a Periodic Rent

Norm and Jackie Remmers have saved \$36,000 to finance their daughter Dawna's college education. They deposited the money in the Bloomington Savings and Loan Association, where it earns 4% interest compounded semiannually. What equal amounts can their daughter withdraw at the end of every 6 months during her 4 college years, without exhausting the fund?

Illustration 6.36 shows a time diagram of this situation.

ILLUSTRATION 6.36

Time Diagram for Ordinary Annuity for a College Fund

Determining the answer by simply dividing \$36,000 by 8 withdrawals is wrong. Why? Because that ignores the interest earned on the money remaining on deposit. Dawna must consider that interest is compounded semiannually at 2% ($.04 \div 2$) for 8 periods (4 years \times 2). Thus, using the same present value of an ordinary annuity formula, she determines the amount of each withdrawal that she can make as follows.

Present value of an ordinary annuity = $R (PVF-OA_{n,i})$

$$\$36,000 = R (PVF-OA_{8,2\%})$$

$$\$36,000 = R (7.32548)$$

$$R = \$4,914.35$$

Other Time Value of Money Issues

LEARNING OBJECTIVE 5

Solve present value problems related to deferred annuities, bonds, and expected cash flows.

Solving time value problems often requires using more than one table. For example, a business problem may need computations of both present value of a single sum and present value of an annuity. In addition, GAAP may require the use of expected cash flows in determining present value. In this section, we examine:

1. Deferred annuities.
2. Bond problems.
3. Present value measurement.

Deferred Annuities

A **deferred annuity** is an annuity in which the rents begin after a specified number of periods. A deferred annuity does not begin to produce rents until two or more periods have expired. For example, “an **ordinary annuity** of six annual rents deferred 4 years” means that

no rents will occur during the first 4 years and that the first of the six rents will occur at the end of the fifth year. “An **annuity due** of six annual rents deferred 4 years” means that no rents will occur during the first 4 years and that the first of six rents will occur at the beginning of the fifth year.

Future Value of a Deferred Annuity

Computing the future value of a deferred annuity is relatively straightforward. Because there is no accumulation or investment on which interest may accrue, the future value of a deferred annuity is the same as the future value of an annuity not deferred. That is, computing the future value simply ignores the deferred period.

To illustrate, assume that Sutton Corporation plans to purchase a land site in 6 years for the construction of its new corporate headquarters. Because of cash flow problems, Sutton budgets deposits of \$80,000 on which it expects to earn 5% annually, only at the end of the fourth, fifth, and sixth periods. What future value will Sutton have accumulated at the end of the sixth year?

Illustration 6.37 shows a time diagram of this situation.

ILLUSTRATION 6.37

Time Diagram for Future Value of Deferred Annuity

Sutton determines the value accumulated by using the standard formula for the future value of an ordinary annuity:

$$\begin{aligned}
 \text{Future value of an ordinary annuity} &= R (FVF-OA_{n,i}) \\
 &= \$80,000 (FVF-OA_{3,5\%}) \\
 &= \$80,000 (3.15250) \\
 &= \$252,200
 \end{aligned}$$

Present Value of a Deferred Annuity

Computing the present value of a deferred annuity must recognize the interest that accrues on the original investment during the deferral period.

To compute the present value of a deferred annuity, we compute the present value of an ordinary annuity of 1 as if the rents had occurred for the entire period. We then subtract the present value of rents that were not received during the deferral period. We are left with the present value of the rents actually received subsequent to the deferral period.

To illustrate, Bob Boyd has developed and copyrighted tutorial software for students in advanced accounting. He agrees to sell the copyright to Campus Learning Systems for 6 annual payments of \$5,000 each. The payments will begin 5 years from today. Given an annual interest rate of 8%, what is the present value of the 6 payments?

This situation is an ordinary annuity of 6 payments deferred 4 periods. The time diagram in **Illustration 6.38** depicts this sales agreement.

ILLUSTRATION 6.38

Time Diagram for Present Value of Deferred Annuity

Two options are available to solve this problem. The first is to use only Table 6.4, as shown in **Illustration 6.39**.

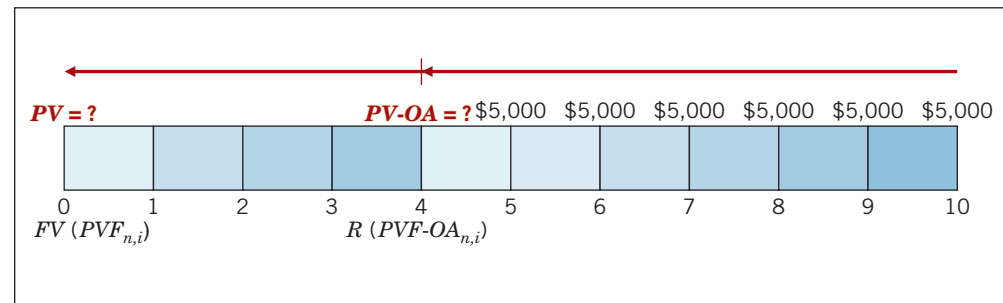

ILLUSTRATION 6.39
Computation of the Present Value of a Deferred Annuity

| | | |
|---|----------------|---------------------------|
| 1. Each periodic rent | | \$5,000 |
| 2. Present value of an ordinary annuity of 1 for total periods (10) [number of rents (6) plus number of deferred periods (4)] at 8% | 6.71008 | |
| 3. Less: Present value of an ordinary annuity of 1 for the number of deferred periods (4) at 8% | <u>3.31213</u> | |
| 4. Difference | | <u>× 3.39795</u> |
| 5. Present value of 6 rents of \$5,000 deferred 4 periods | | <u><u>\$16,989.75</u></u> |

The subtraction of the present value of an annuity of 1 for the deferred periods eliminates the nonexistent rents during the deferral period. It converts the present value of an ordinary annuity of \$1.00 for 10 periods to the present value of 6 rents of \$1.00, deferred 4 periods.

Alternatively, Boyd can use both Table 6.2 and Table 6.4 to compute the present value of the 6 rents. He can first discount the annuity 6 periods. However, because the annuity is deferred 4 periods, he must treat the present value of the annuity as a future amount to be discounted another 4 periods. The time diagram in **Illustration 6.40** depicts this two-step process.

ILLUSTRATION 6.40
Time Diagram for Present Value of Deferred Annuity (2-Step Process)

Calculation using formulas would be done in two steps, as follows.

Step 1: Present value of
 an ordinary annuity = $R (PVF-OA_{n,i})$
 = \$5,000 ($PVF-OA_{6,8\%}$)
 = \$5,000 (4.62288)
 (Table 6.4, Present value of an ordinary annuity)
 = \$23,114.40

Step 2: Present value of a
 single sum = $FV (PVF_{n,i})$
 = \$23,114.40 ($PVF_{4,8\%}$)
 = \$23,114.40 (.73503)
 (Table 6.2, Present value of a single sum)
 = \$16,989.78

The present value of \$16,989.78 is the same as in Illustration 6.39 although computed differently. (The \$0.03 difference is due to rounding.)

Valuation of Long-Term Bonds

A long-term bond produces two cash flows: (1) periodic interest payments during the life of the bond, and (2) the principal (face value) paid at maturity. At the date of issue, bond buyers determine the present value of these two cash flows using the market rate of interest.

The periodic interest payments represent an annuity. The principal represents a single-sum problem. The current market value of the bonds is the combined present values of the interest annuity and the principal amount.

To illustrate, Alltech Corporation on January 1, 2020, issues \$100,000 of 5% bonds due in 5 years with interest payable annually at year-end ($\$100,000 \times .05 = \$5,000$). The current market rate of interest for bonds of similar risk is 6%. What will the buyers pay for this bond issue?

The time diagram in **Illustration 6.41** depicts both cash flows.

**ILLUSTRATION 6.41**

Time Diagram to Solve for Bond Valuation

Alltech computes the present value of the two cash flows by discounting at 6%, as shown in **Illustration 6.42**.

| | |
|---|---------------------------|
| 1. Present value of the principal: $FV (PVF_{5,6\%}) = \$100,000 (.74726)$ | \$74,726.00 |
| 2. Present value of the interest payments: $R (PVF-OA_{5,6\%}) = \$5,000 (4.21236)$ | 21,061.80 |
| 3. Combined present value (market price)—carrying value of bonds | <u><u>\$95,787.80</u></u> |

ILLUSTRATION 6.42

Computation of the Present Value of an Interest-Bearing Bond

By paying \$95,787.80 at date of issue, the buyers of the bonds will realize an effective yield of 6% over the 5-year term of the bonds. This is true because Alltech discounted the cash flows at 6%.

Effective-Interest Method of Amortization of Bond Discount or Premium

In the previous example (Illustration 6.42), Alltech Corporation issued bonds at a discount, computed as shown in **Illustration 6.43**.

| | | |
|--|------------------|---------------------------|
| Maturity value (face amount) of bonds | | \$100,000.00 |
| Present value of the principal | \$74,726.00 | |
| Present value of the interest | <u>21,061.80</u> | |
| Proceeds (present value and cash received) | | <u>(95,787.80)</u> |
| Discount on bonds issued | | <u><u>\$ 4,212.20</u></u> |

ILLUSTRATION 6.43

Computation of Bond Discount

Alltech amortizes (writes off to interest expense) the amount of this discount over the life of the bond issue.

The preferred procedure for amortization of a discount or premium is the **effective-interest method**. Under the effective-interest method:

1. The company issuing the bond first computes bond interest expense by multiplying the carrying value of the bonds at the beginning of the period by the effective-interest rate.
2. The company then determines the bond discount or premium amortization by comparing the bond interest expense with the interest to be paid in cash.

Illustration 6.44 depicts the computation of bond amortization.

ILLUSTRATION 6.44
Amortization Computation

$$\left(\begin{array}{l} \text{Carrying Value} \\ \text{of Bonds at} \\ \text{Beginning of Period} \end{array} \times \begin{array}{l} \text{Effective-} \\ \text{Interest} \\ \text{Rate} \end{array} \right) - \left(\begin{array}{l} \text{Face Amount} \\ \text{of Bonds} \end{array} \times \begin{array}{l} \text{Stated} \\ \text{Interest} \\ \text{Rate} \end{array} \right) = \text{Amortization} \\ \text{Amount}$$

The effective-interest method produces a periodic interest expense equal to a **constant percentage of the carrying value of the bonds**. Since the percentage used is the effective rate of interest incurred by the borrower at the time of issuance, the effective-interest method reflects a more accurate cost of borrowing over the life of the bond.

We can use the data from the Alltech Corporation example to illustrate the effective-interest method of amortization. Alltech issued \$100,000 face value of bonds at a discount of \$4,212.20, resulting in a carrying value of \$95,787.80. **Illustration 6.45** shows the effective-interest amortization schedule for Alltech's bonds.

ILLUSTRATION 6.45
Effective-Interest
Amortization Schedule

| Schedule of Bond Discount Amortization 5-Year, 5% Bonds Sold to Yield 6% | | | | |
|---|--------------------------|--------------------------|----------------------------------|-------------------------------|
| Date | Cash Interest Paid | Interest Expense | Bond Discount Amortization | Carrying Value of Bonds |
| 1/1/18 | | | | \$ 95,787.80 |
| 12/31/18 | \$ 5,000.00 ^a | \$ 5,747.27 ^b | \$ 747.27 ^c | 96,535.07 ^d |
| 12/31/19 | 5,000.00 | 5,792.10 | 792.10 | 97,327.17 |
| 12/31/20 | 5,000.00 | 5,839.63 | 839.63 | 98,166.80 |
| 12/31/21 | 5,000.00 | 5,890.01 | 890.01 | 99,056.81 |
| 12/31/22 | 5,000.00 | 5,943.19 ^e | 943.19 | 100,000.00 |
| | <u>\$25,000.00</u> | <u>\$29,212.20</u> | <u>\$4,212.20</u> | |

^a\$100,000 × .05 = \$5,000 ^d\$95,787.80 + \$747.27 = \$96,535.07
^b\$95,787.80 × .06 = \$5,747.27 ^e\$0.22 difference due to rounding.
^c\$5,747.27 – \$5,000 = \$747.27

We use the amortization schedule illustrated above for note and bond transactions in Chapters 7 and 14.

Present Value Measurement

In the past, most accounting calculations of present value relied on the most likely cash flow amount. *Concepts Statement No. 7* introduces an **expected cash flow approach**.⁶ It uses a range of cash flows and incorporates the probabilities of those cash flows to provide a more relevant measurement of present value.

To illustrate the expected cash flow model, assume that there is a 30% probability that future cash flows will be \$100, a 50% probability that they will be \$200, and a 20% probability that they will be \$300. In this case, the expected cash flow would be \$190 [(\$100 × 0.3) + (\$200 × 0.5) + (\$300 × 0.2)]. Traditional present value approaches would use the most likely estimate (\$200). However, that estimate fails to consider the different probabilities of the possible cash flows.

Choosing an Appropriate Interest Rate

After determining expected cash flows, a company must then use the proper interest rate to discount the cash flows. The interest rate used for this purpose has the following three components.

⁶"Using Cash Flow Information and Present Value in Accounting Measurements," *Statement of Financial Accounting Concepts No. 7* (Norwalk, Conn.: FASB, 2000).

Three Components of Interest

- Pure Rate of Interest (2%–4%).** The amount a lender would charge if there were no possibilities of default and no expectation of inflation.
- Expected Inflation Rate of Interest (0%–?).** Lenders recognize that in an inflationary economy, they are being paid back with less valuable dollars. As a result, they increase their interest rate to compensate for this loss in purchasing power.
- Credit Risk Rate of Interest (0%–5%).** The government has little or no credit risk (i.e., risk of nonpayment) when it issues bonds. A business enterprise, however, depending upon its financial stability, profitability, etc., can have a low or a high credit risk.

When inflationary expectations are higher, interest rates are higher.

The FASB takes the position that after computing the expected cash flows, a company should discount those cash flows by the **risk-free rate of return**. That rate is defined as **the pure rate of return plus the expected inflation rate**. The Board notes that the expected cash flow framework adjusts for credit risk because it incorporates the probability of receipt or payment into the computation of expected cash flows. Therefore, the rate used to discount the expected cash flows should consider only the pure rate of interest and the inflation rate.

Example of Expected Cash Flow

To illustrate, assume that Al's Appliance Outlet offers a 2-year warranty on all products sold. In 2020, Al's Appliance sold \$250,000 of a particular type of clothes dryer. Al's Appliance entered into an agreement with Ralph's Repair to provide all warranty service on the dryers sold in 2020. To determine the warranty expense to record in 2020 and the amount of warranty liability to record on the December 31, 2020, balance sheet, Al's Appliance must measure the fair value of the agreement. Since there is not a ready market for these warranty contracts, Al's Appliance uses expected cash flow techniques to value the warranty obligation.

Based on prior warranty experience, Al's Appliance estimates the expected cash outflows associated with the dryers sold in 2020, as shown in **Illustration 6.46**.

| | Cash Flow Estimate | × | Probability Assessment | = | Expected Cash Flow |
|------|--------------------|---|------------------------|---|--------------------|
| 2020 | \$3,800 | | .20 | | \$ 760 |
| | 6,300 | | .50 | | 3,150 |
| | 7,500 | | .30 | | 2,250 |
| | | | Total | | <u>\$6,160</u> |
| 2021 | \$5,400 | | .30 | | \$1,620 |
| | 7,200 | | .50 | | 3,600 |
| | 8,400 | | .20 | | 1,680 |
| | | | Total | | <u>\$6,900</u> |

ILLUSTRATION 6.46

Expected Cash Outflows—Warranties

Applying expected cash flow concepts to these data, Al's Appliance estimates warranty cash outflows of \$6,160 in 2020 and \$6,900 in 2021.

Illustration 6.47 shows the present value of these cash flows, assuming a risk-free rate of 5% and cash flows occurring at the end of the year.

| Year | Expected Cash Flow | × | PV Factor, $i = 5\%$ | = | Present Value |
|------|--------------------|---|----------------------|---|--------------------|
| 2020 | \$6,160 | | 0.95238 | | \$ 5,866.66 |
| 2021 | 6,900 | | 0.90703 | | 6,258.51 |
| | | | Total | | <u>\$12,125.17</u> |

ILLUSTRATION 6.47

Present Value of Cash Flows

What Do the Numbers Mean? How Low Can They Go?

Management of the level of interest rates is an important policy tool of the Federal Reserve Bank. Through a number of policy options, the Fed has the ability to move interest rates up or down, and these rate changes can affect the wealth of all market participants. For example, if the Fed wants to raise rates (because the overall economy is getting overheated), it can raise the *discount rate*, which is the rate banks pay to borrow money from the Fed. This rate increase will factor into the rates banks and other creditors use to lend money. As a result, companies will think twice about borrowing money to expand their businesses. The result will be a slowing economy. A rate cut does just the opposite. It makes borrowing cheaper, and it can help the economy expand as more companies borrow to expand their operations.

Keeping rates low had been the Fed's policy in the early 2000s. The low rates did help keep the economy humming. But these same low rates may have also resulted in too much real estate lending and the growth of a real estate bubble, as the price of housing was fueled by cheaper low-interest mortgage loans. But, as the old saying goes, "What goes up, must come down." That is

what real estate prices did, triggering massive loan write-offs, a seizing up of credit markets, and a slowing economy.

So just when a rate cut might have helped the economy, the Fed's rate-cutting toolbox was empty. In response, the Fed began repurchasing long-term government bonds—referred to as "quantitative easing." These repurchases put money into the market and reduce long-term interest rates. After three rounds of quantitative easing, it now appears that the Fed was able to spur the economy out of its persistent funk. More recently, Fed watchers are trying to predict how far the Fed will allow rates to rise (after a small rate increase in December 2015), with many concerned that rate increases could disrupt the economy's fragile recovery and contribute to higher inflation, which eats into the real value of all returns.

| effective yield 6-7 | ordinary annuity 6-14 | |

Learning Objectives Review

1 Describe the fundamental concepts related to the time value of money.

Some of the **applications of present value-based measurements** to accounting topics are (1) notes, (2) leases, (3) pensions and other postretirement benefits, (4) long-term assets, (5) sinking funds, (6) business combinations, (7) disclosures, and (8) installment contracts. See items 1 and 2 in the following Fundamental Concepts box for the distinctions between simple and compound interest.

In order to identify which of the **five compound interest tables** to use, determine whether you are solving for (1) the future value of a single sum, (2) the present value of a single sum, (3) the future value of a series of sums (an annuity), or (4) the present value of a series of sums (an annuity). In addition, when a series of sums (an annuity) is involved, identify whether these sums are received or paid (1) at the beginning of each period (annuity due) or (2) at the end of each period (ordinary annuity).

The following **four variables are fundamental to all compound interest problems**. (1) *Rate of interest*: unless otherwise

stated, an annual rate, adjusted to reflect the length of the compounding period if less than a year. (2) *Number of time periods*: the number of compounding periods (a period may be equal to or less than a year). (3) *Future value*: the value at a future date of a given sum or sums invested assuming compound interest. (4) *Present value*: the value now (present time) of a future sum or sums discounted assuming compound interest.

2 Solve future and present value of 1 problems.

See items 5(a) and 6(a) in the following Fundamental Concepts box.

3 Solve future value of ordinary and annuity due problems.

See item 5(b) in the following Fundamental Concepts box.

4 Solve present value of ordinary and annuity due problems.

See item 6(b) in the following Fundamental Concepts box.

5 Solve present value problems related to deferred annuities, bonds, and expected cash flows.

Deferred annuities are annuities in which rents begin after a specified number of periods. The future value of a deferred annuity is computed the same as the future value of an annuity not deferred. To find the present value of a deferred annuity, compute the present value of an ordinary annuity of 1 as if the rents had occurred for the entire period, and then subtract the present value of rents not received during the deferral period. The **current market price of bonds** combines the present values of the interest annuity and the principal amount. The **expected cash flow approach** uses a range of cash flows and the probabilities of those cash flows to provide the most likely estimate of expected cash flows. The proper interest rate used to discount the cash flows is the risk-free rate of return.

Enhanced Review and Practice

Go online for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Fundamental Concepts

- Simple Interest.** Interest on principal only, regardless of interest that may have accrued in the past.
- Compound Interest.** Interest accrues on the unpaid interest of past periods as well as on the principal.
- Rate of Interest.** Interest is usually expressed as an annual rate, but when the compounding period is shorter than one year, the interest rate for the shorter period must be determined.
- Annuity.** A series of payments or receipts (called rents) that occur at equal intervals of time. Types of annuities:
 - Ordinary Annuity.** Each rent is payable (receivable) at the end of the period.
 - Annuity Due.** Each rent is payable (receivable) at the beginning of the period.
- Future Value.** Value at a later date of a single sum that is invested at compound interest.
 - Future Value of 1** (or value of a single sum). The future value of \$1 (or a single given sum), FV , at the end of n periods at i compound interest rate (Table 6.1).
 - Future Value of an Annuity.** The future value of a series of rents invested at compound interest. In other words, the accumulated total that results from a series of equal deposits at regular intervals invested at compound interest. Both deposits and interest increase the accumulation.
 - Future Value of an Ordinary Annuity.** The future value on the date of the last rent (Table 6.3).
 - Future Value of an Annuity Due.** The future value one period after the date of the last rent. When an

annuity due table is not available, use Table 6.3 with the following formula:

$$\text{Value of annuity due of 1 for } n \text{ rents} = (\text{Value of ordinary annuity for } n \text{ rents}) \times (1 + \text{interest rate})$$

- Present Value.** The value at an earlier date (usually now) of a given future sum discounted at compound interest.
 - Present Value of 1** (or present value of a single sum). The present value (worth) of \$1 (or a given sum), due n periods hence, discounted at i compound interest (Table 6.2).
 - Present Value of an Annuity.** The present value (worth) of a series of rents discounted at compound interest. In other words, it is the sum when invested at compound interest that will permit a series of equal withdrawals at regular intervals.
 - Present Value of an Ordinary Annuity.** The value now of \$1 to be received or paid at the end of each period (rents) for n periods, discounted at i compound interest (Table 6.4).
 - Present Value of an Annuity Due.** The value now of \$1 to be received or paid at the beginning of each period (rents) for n periods, discounted at i compound interest (Table 6.5). To use Table 6.4 for an annuity due, apply this formula:

$$\text{Present value of annuity due of 1 for } n \text{ rents} = (\text{Present value of an ordinary annuity of } n \text{ rents}) \times (1 + \text{interest rate})$$

Practice Problem

Messier Company is a manufacturer of cycling equipment. It is facing several decisions involving time value of money considerations.

Instructions

Provide the requested information for (a)–(d) below. (Round all answers to the nearest dollar.)

- Messier recently signed a lease for a new office building for a lease period of 10 years. Under the lease agreement, a security deposit of \$12,000 is made, with the deposit to be returned at the expiration of the lease, with interest compounded at 10% per year. What amount will the company receive at the time the lease expires?
- Recently, the vice president of operations of the company has requested construction of a new plant to meet the increasing demand for the company's bikes. After a careful evaluation of the request, the board of directors has decided to raise funds for the new plant by issuing \$3,000,000 of 11% bonds on March 1, 2020, with principal due on March 1, 2035, and interest payable each March 1 and September 1. At the time of issuance, the market interest rate for similar financial instruments is 10%. Determine the selling price of the bonds.
- The company, having issued the bonds in part (b), is committed to make annual sinking fund deposits of \$90,000. The deposits are made on the last day of each year and yield a return of 10%. Will the fund at the end of 15 years be sufficient to retire the bonds? If not, what will the deficiency be?
- Messier has 50 employees. Recently, after a long negotiation with the local labor union, the company decided to initiate a pension plan as a part of its employee compensation plan. The plan will start on January 1, 2020. Each employee covered by the plan is entitled to a pension payment each year after retirement. As required by accounting standards, the controller of the company needs to report the pension obligation (liability). The following estimates have been collected.

| | |
|---|--------------------|
| Average length of time to retirement | 15 years |
| Expected life duration after retirement | 10 years |
| Total pension payment expected each year after retirement for all employees | \$800,000 per year |

On the basis of the information above, determine the present value of the pension liability. Assume payment made at the end of the year and the interest rate to be used is 8%.

Solution

- a. Future value of \$12,000 at 10% for 10 years

$$(\$12,000 \times 2.59374) = \underline{\underline{\$ 31,125}}$$

- b. Formula for the interest payments*:

$$\begin{aligned} PV-OA &= R (PVF-OA_{n,i}) \\ PV-OA &= \$165,000 (PVF-OA_{30,5\%}) \\ PV-OA &= \$165,000 (15.37245) \\ PV-OA &= \underline{\underline{\$2,536,454}} \end{aligned}$$

$$\begin{aligned} *Payments &= \$3,000,000 \times .11 \times 1/2 \\ n &= 30 (15 \text{ years} \times 2 \text{ semiannual periods}) \\ i &= .05 (.10 \div 2 \text{ periods per year}) \end{aligned}$$

Formula for the principal:

$$\begin{aligned} PV &= FV (PVF_{n,i}) \\ PV &= \$3,000,000 (PVF_{30,5\%}) \\ PV &= \$3,000,000 (0.23138) \\ PV &= \underline{\underline{\$694,140}} \end{aligned}$$

The selling price of the bonds = \$2,536,454 + \$694,140 = \$3,230,594.

- c. Future value of an ordinary annuity of \$90,000

$$\text{at } 10\% \text{ for } 15 \text{ years } (\$90,000 \times 31.77248) \quad \underline{\underline{\$2,859,523}}$$

$$\text{Deficiency } (\$3,000,000 - \$2,859,523) \quad \underline{\underline{\$ 140,477}}$$

- d. Compute the value of the deferred annuity and then discount that amount to the present.

- i. Present value of the expected annual pension payments at the end of the tenth year:

$$PV-OA = R (PVF-OA_{n,i})$$

$$PV-OA = \$800,000 (PVF-OA_{10,8\%})$$

$$PV-OA = \$800,000 (6.71008)$$

$$PV-OA = \underline{\underline{\$5,368,064}}$$

- ii. Present value of the expected annual pension payments at the beginning of the current year:

$$PV = FV (PVF_{n,i})$$

$$PV = \$5,368,064 (PVF_{15,8\%})$$

$$PV = \$5,368,064 (0.31524)$$

$$PV = \underline{\underline{\$1,692,228}}$$

The company's pension obligation (liability) is \$1,692,228.

Questions

- What is the time value of money? Why should accountants have an understanding of compound interest, annuities, and present value concepts?
- Identify three situations in which accounting measures are based on present values. Do these present value applications involve single sums or annuities, or both single sums and annuities? Explain.
- What is the nature of interest? Distinguish between "simple interest" and "compound interest."
- What are the components of an interest rate? Why is it important for accountants to understand these components?
- The following are a number of values taken from compound interest tables involving the same number of periods and the same rate of interest. Indicate what each of these four values represents.

| | |
|-------------|--------------|
| a. 6.71008. | c. .46319. |
| b. 2.15892. | d. 14.48656. |
- Jose Oliva is considering two investment options for a \$1,500 gift he received for graduation. Both investments have 8% annual interest rates. One offers quarterly compounding; the other compounds on a semiannual basis. Which investment should he choose? Why?
- Regina Henry deposited \$20,000 in a money market certificate that provides interest of 10% compounded quarterly if the amount is maintained for 3 years. How much will Regina have at the end of 3 years?
- Will Smith will receive \$80,000 5 years from now, from a trust fund established by his father. Assuming the appropriate interest rate for discounting is 12% (compounded semiannually), what is the present value of this amount today?
- What are the primary characteristics of an annuity? Differentiate between an "ordinary annuity" and an "annuity due."
- Kehoe, Inc. owes \$40,000 to Ritter Company. How much would Kehoe have to pay each year if the debt is retired through four equal payments (made at the end of the year), given an interest rate on the debt of 12%? (Round to two decimal places.)
- The Kellys are planning for a retirement home. They estimate they will need \$200,000 4 years from now to purchase this home. Assuming an interest rate of 10%, what amount must be deposited at the end of each of the 4 years to fund the home price? (Round to two decimal places.)
- Assume the same situation as in Question 11, except that the four equal amounts are deposited at the beginning of the period rather than at the end. In this case, what amount must be deposited at the beginning of each period? (Round to two decimals.)
- Explain how the future value of an ordinary annuity interest table is converted to the future value of an annuity due interest table.
- Explain how the present value of an ordinary annuity interest table is converted to the present value of an annuity due interest table.
- In a book named *Treasure*, the reader has to figure out where a 2.2 pound, 24 kt gold horse has been buried. If the horse is found, a prize of \$25,000 a year for 20 years is provided. The actual cost to the publisher to purchase an annuity to pay for the prize is \$245,000. What interest rate (to the nearest percent) was used to determine the amount of the annuity? (Assume end-of-year payments.)
- Alexander Enterprises leases property to Hamilton, Inc. Because Hamilton is experiencing financial difficulty, Alexander agrees to receive five rents of \$20,000 at the end of each year, with the rents deferred 3 years. What is the present value of the five rents discounted at 12%?
- Answer the following questions.
 - On May 1, 2020, Goldberg Company sold some machinery to Newlin Company on an installment contract basis. The contract required five equal annual payments, with the first payment due on May 1, 2020. What present value concept is appropriate for this situation?
 - On June 1, 2020, Seymour Inc. purchased a new machine that it does not have to pay for until June 1, 2022. The total payment on June 1, 2022, will include both principal and interest. Assuming

- interest at a 12% rate, the cost of the machine would be the total payment multiplied by what time value of money concept?
- c. Costner Inc. wishes to know how much money it will have available in 5 years if five equal amounts of \$35,000 are invested, with the first amount invested immediately. What interest table is appropriate for this situation?
- d. Megan Hoffman invests in a “jumbo” \$200,000, 3-year certificate of deposit at First Wisconsin Bank. What table would be used to determine the amount accumulated at the end of 3 years?
18. Recently, Glenda Estes was interested in purchasing a Honda Acura. The salesperson indicated that the price of the car was either \$27,600 cash or \$6,900 at the end of each of 5 years. Compute the effective-interest rate to the nearest percent that Glenda would pay if she chooses to make the five annual payments.
19. Property/casualty insurance companies have been criticized because they reserve for the total loss as much as 5 years before it may happen. The IRS has joined the debate because it says the full reserve is unfair from a taxation viewpoint. What can explain the IRS position?

Brief Exercises

(Unless instructed otherwise, round answers to the nearest dollar.)

BE6.1 (LO 2) Chris Spear invested \$15,000 today in a fund that earns 8% compounded annually. To what amount will the investment grow in 3 years? To what amount would the investment grow in 3 years if the fund earns 8% annual interest compounded semiannually?

BE6.2 (LO 2) Tony Bautista needs \$25,000 in 4 years. What amount must he invest today if his investment earns 12% compounded annually? What amount must he invest if his investment earns 12% annual interest compounded quarterly?

BE6.3 (LO 2) Candice Willis will invest \$30,000 today. She needs \$150,000 in 21 years. What annual interest rate must she earn?

BE6.4 (LO 2) Bo Newman will invest \$10,000 today in a fund that earns 5% annual interest. How many years will it take for the fund to grow to \$17,100?

BE6.5 (LO 3) Sally Medavoy will invest \$8,000 a year for 20 years in a fund that will earn 6% annual interest. If the first payment into the fund occurs today, what amount will be in the fund in 20 years? If the first payment occurs at year-end, what amount will be in the fund in 20 years?

BE6.6 (LO 3) Steve Madison needs \$250,000 in 10 years. How much must he invest at the end of each year, at 5% interest, to meet his needs?

BE6.7 (LO 2) John Fillmore’s lifelong dream is to own his own fishing boat to use in his retirement. John has recently come into an inheritance of \$400,000. He estimates that the boat he wants will cost \$300,000 when he retires in 5 years. How much of his inheritance must he invest at an annual rate of 8% (compounded annually) to buy the boat at retirement?

BE6.8 (LO 2) Refer to the data in BE6.7. Assuming quarterly compounding of amounts invested at 8%, how much of John Fillmore’s inheritance must be invested to have enough at retirement to buy the boat?

BE6.9 (LO 3) Morgan Freeman is investing \$9,069 at the end of each year in a fund that earns 5% interest. In how many years will the fund be at \$100,000?

BE6.10 (LO 4) Henry Quincy wants to withdraw \$30,000 each year for 10 years from a fund that earns 8% interest. How much must he invest today if the first withdrawal is at year-end? How much must he invest today if the first withdrawal takes place immediately?

BE6.11 (LO 4) Leon Tyler’s VISA balance is \$793.15. He may pay it off in 12 equal end-of-month payments of \$75 each. What interest rate is Leon paying?

BE6.12 (LO 4) Maria Alvarez is investing \$300,000 in a fund that earns 4% interest compounded annually. What equal amounts can Maria withdraw at the end of each of the next 20 years?

BE6.13 (LO 3) Adams Inc. will deposit \$30,000 in a 6% fund at the end of each year for 8 years beginning December 31, 2020. What amount will be in the fund immediately after the last deposit?

BE6.14 (LO 4) Amy Monroe wants to create a fund today that will enable her to withdraw \$25,000 per year for 8 years, with the first withdrawal to take place 5 years from today. If the fund earns 8% interest, how much must Amy invest today?

BE6.15 (LO 5) Clancey Inc. issues \$2,000,000 of 7% bonds due in 10 years with interest payable at year-end. The current market rate of interest for bonds of similar risk is 8%. What amount will Clancey receive when it issues the bonds?

BE6.16 (LO 4) Zach Taylor is settling a \$20,000 loan due today by making 6 equal annual payments of \$4,727.53. Determine the interest rate on this loan, if the payments begin one year after the loan is signed.

BE6.17 (LO 4) Consider the loan in BE6.16. What payments must Zach Taylor make to settle the loan at the same interest rate but with the 6 payments beginning on the day the loan is signed?

Exercises

(Unless instructed otherwise, round answers to the nearest dollar. Interest rates are per annum unless otherwise indicated.)

E6.1 (LO 1) (Using Interest Tables) For each of the following cases, indicate (a) to what rate columns, and (b) to what number of periods you would refer in looking up the interest factor.

1. In a future value of 1 table:

| | <u>Annual Rate</u> | <u>Number of Years Invested</u> | <u>Compounded</u> |
|----|------------------------|-------------------------------------|-------------------|
| a. | 9% | 9 | Annually |
| b. | 12% | 5 | Quarterly |
| c. | 10% | 15 | Semiannually |

2. In a present value of an annuity of 1 table:

| | <u>Annual Rate</u> | <u>Number of Years Involved</u> | <u>Number of Rents Involved</u> | <u>Frequency of Rents</u> |
|----|------------------------|-------------------------------------|-------------------------------------|-------------------------------|
| a. | 9% | 25 | 25 | Annually |
| b. | 10% | 15 | 30 | Semiannually |
| c. | 12% | 7 | 28 | Quarterly |

E6.2 (LO 1, 2) Excel (Simple and Compound Interest Computations) Alan Jackson invests \$20,000 at 8% annual interest, leaving the money invested without withdrawing any of the interest for 8 years. At the end of the 8 years, Alan withdraws the accumulated amount of money.

Instructions

- Compute the amount Alan would withdraw assuming the investment earns simple interest.
- Compute the amount Alan would withdraw assuming the investment earns interest compounded annually.
- Compute the amount Alan would withdraw assuming the investment earns interest compounded semiannually.

E6.3 (LO 2, 3, 4) Excel (Computation of Future Values and Present Values) Using the appropriate interest table, answer each of the following questions. (Each case is independent of the others.)

- What is the future value of \$7,000 at the end of 5 periods at 8% compounded interest?
- What is the present value of \$7,000 due 8 periods hence, discounted at 6%?
- What is the future value of 15 periodic payments of \$7,000 each made at the end of each period and compounded at 10%?
- What is the present value of \$7,000 to be received at the end of each of 20 periods, discounted at 5% compound interest?

E6.4 (LO 3, 4) (Computation of Future Values and Present Values) Using the appropriate interest table, answer the following questions. (Each case is independent of the others.)

- What is the future value of 20 periodic payments of \$4,000 each made at the beginning of each period and compounded at 8%?
- What is the present value of \$2,500 to be received at the beginning of each of 30 periods, discounted at 5% compound interest?
- What is the future value of 15 deposits of \$2,000 each made at the beginning of each period and compounded at 10%? (Future value as of the fifteenth period.)
- What is the present value of six receipts of \$1,000 each received at the beginning of each period, discounted at 9% compounded interest?

E6.5 (LO 4) (Computation of Present Value) Using the appropriate interest table, compute the present values of the following periodic amounts due at the end of the designated periods.

- \$30,000 receivable at the end of each period for 8 periods compounded at 12%.
- \$30,000 payments to be made at the end of each period for 16 periods at 9%.
- \$30,000 payable at the end of the seventh, eighth, ninth, and tenth periods at 12%.

E6.6 (LO 2, 3, 4) (Future Value and Present Value Problems) Presented below are three unrelated situations.

- Dwayne Wade Company recently signed a lease for a new office building, for a lease period of 10 years. Under the lease agreement, a security deposit of \$12,000 is made, with the deposit to be returned at the expiration of the lease, with interest compounded at 5% per year. What amount will the company receive at the time the lease expires?
- Serena Williams Corporation, having recently issued a \$20 million, 15-year bond issue, is committed to make annual sinking fund deposits of \$600,000. The deposits are made on the last day of each year and yield a return of 10%. Will the fund at the end of 15 years be sufficient to retire the bonds? If not, what will the deficiency be?
- Under the terms of his salary agreement, president Rex Walters has an option of receiving either an immediate bonus of \$55,000, or a deferred bonus of \$70,000 payable in 10 years. Ignoring tax considerations and assuming a relevant interest rate of 4%, which form of settlement should Walters accept?

E6.7 (LO 5) (Computation of Bond Prices) What would you pay for a \$100,000 debenture bond that matures in 15 years and pays \$5,000 a year in interest if you wanted to earn a yield of:

- 4%?
- 5%?
- 6%?

E6.8 (LO 5) (Computations for a Retirement Fund) Clarence Weatherspoon, a super salesman contemplating retirement on his fifty-fifth birthday, decides to create a fund on an 8% basis that will enable him to withdraw \$20,000 per year on June 30, beginning in 2024 and continuing through 2027. To develop this fund, Clarence intends to make equal contributions on June 30 of each of the years 2020–2023.

Instructions

- How much must the balance of the fund equal on June 30, 2023, in order for Clarence to satisfy his objective?
- What are each of Clarence's contributions to the fund?

E6.9 (LO 2) (Unknown Rate) LEW Company purchased a machine at a price of \$100,000 by signing a note payable, which requires a single payment of \$123,210 in 2 years. Assuming annual compounding of interest, what rate of interest is being paid on the loan?

E6.10 (LO 2) (Unknown Periods and Unknown Interest Rate) Consider the following independent situations.

- Mike Finley wishes to become a millionaire. His money market fund has a balance of \$92,296 and has a guaranteed interest rate of 10%. How many years must Mike leave that balance in the fund in order to get his desired \$1,000,000?
- Assume that Sally Williams desires to accumulate \$1 million in 15 years using her money market fund balance of \$182,696. At what interest rate must Sally's investment compound annually?

E6.11 (LO 4) (Evaluation of Purchase Options) Rizzo Excavating Inc. is purchasing a bulldozer. The equipment has a price of \$100,000. The manufacturer has offered a payment plan that would allow Rizzo to make 10 equal annual payments of \$16,274.53, with the first payment due one year after the purchase.

Instructions

- How much total interest will Rizzo pay on this payment plan?
- Rizzo could borrow \$100,000 from its bank to finance the purchase at an annual rate of 9%. Should Rizzo borrow from the bank or use the manufacturer's payment plan to pay for the equipment?

E6.12 (LO 4) (Analysis of Alternatives) The Black Knights Inc., a manufacturer of low-sugar, low-sodium, low-cholesterol TV dinners, would like to increase its market share in the Sunbelt. In order to do so, Black Knights has decided to locate a new factory in the Panama City area. Black Knights will either buy or lease a site depending upon which is more advantageous. The site location committee has narrowed down the available sites to the following three very similar buildings that will meet their needs.

Building A: Purchase for a cash price of \$600,000, useful life 25 years.

Building B: Lease for 25 years with annual lease payments of \$69,000 being made at the beginning of the year.

Building C: Purchase for \$650,000 cash. This building is larger than needed; however, the excess space can be sublet for 25 years at a net annual rental of \$7,000. Rental payments will be received at the end of each year. The Black Knights Inc. has no aversion to being a landlord.

Instructions

In which building would you recommend that The Black Knights Inc. locate, assuming a 12% cost of funds?

E6.13 (LO 5) (Computation of Bond Liability) Hincapie Inc. manufactures cycling equipment. Recently, the vice president of operations of the company has requested construction of a new plant to meet the increasing demand for the company's bikes. After a careful evaluation of the request, the board of directors has decided to raise funds for the new plant by issuing \$2,000,000 of 11% term corporate bonds on March 1, 2020, due on March 1, 2035, with interest payable each March 1 and September 1. At the time of issuance, the market interest rate for similar financial instruments is 10%.

Instructions

As the controller of the company, determine the selling price of the bonds.

E6.14 (LO 5) (Computation of Pension Liability) Nerwin, Inc. is a furniture manufacturing company with 50 employees. Recently, after a long negotiation with the local labor union, the company decided to initiate a pension plan as a part of its compensation plan. The plan will start on January 1, 2020. Each employee covered by the plan is entitled to a pension payment each year after retirement. As required by accounting standards, the controller of the company needs to report the pension obligation (liability). On the basis of a discussion with the supervisor of the Personnel Department and an actuary from an insurance company, the controller develops the following information related to the pension plan.

| | |
|---|--------------------|
| Average length of time to retirement | 15 years |
| Expected life duration after retirement | 10 years |
| Total pension payment expected each year after retirement for all employees. Payment made at the end of the year. | \$700,000 per year |

The interest rate to be used is 8%.

Instructions

On the basis of the information above, determine the present value of the pension obligation (liability).

E6.15 (LO 2, 3) (Investment Decision) Andrew Bogut just received a signing bonus of \$1,000,000. His plan is to invest this payment in a fund that will earn 8%, compounded annually.

Instructions

- If Bogut plans to establish the AB Foundation once the fund grows to \$1,999,000, how many years until he can establish the foundation?
- Instead of investing the entire \$1,000,000, Bogut invests \$300,000 today and plans to make 9 equal annual investments into the fund beginning one year from today. What amount should the payments be if Bogut plans to establish the \$1,999,000 foundation at the end of 9 years?

E6.16 (LO 3) (Retirement of Debt) Ricky Fowler borrowed \$70,000 on March 1, 2018. This amount plus accrued interest at 6% compounded semiannually is to be repaid March 1, 2028. To retire this debt, Ricky plans to contribute to a debt retirement fund five equal amounts starting on March 1, 2023, and for the next 4 years. The fund is expected to earn 5% per annum.

Instructions

How much must be contributed each year by Ricky Fowler to provide a fund sufficient to retire the debt on March 1, 2028?

E6.17 (LO 4) (Computation of Amount of Rentals) Your client, Albert Almora Leasing Company, is preparing a contract to lease a machine to Souvenirs Corporation for a period of 25 years. Almora has an investment cost of \$365,755 in the machine, which has a useful life of 25 years and no salvage value at the end of that time. Your client is interested in earning an 11% return on its investment and has agreed to accept 25 equal rental payments at the end of each of the next 25 years.

Instructions

You are requested to provide Almora with the amount of each of the 25 rental payments that will yield an 11% return on investment.

E6.18 (LO 4) (Least Costly Payoff) Assume that **Sonic Foundry Corporation** has a contractual debt outstanding. Sonic has available two means of settlement. It can either make immediate payment of \$2,600,000, or it can make annual payments of \$300,000 for 15 years, each payment due on the last day of the year.

Instructions

Which method of payment do you recommend, assuming an expected effective interest rate of 8% during the future period?

E6.19 (LO 4) (Least Costly Payoff) Assuming the same facts as those in E6.18 except that the payments must begin now and be made on the first day of each of the 15 years, what payment method would you recommend?

E6.20 (LO 5) (Expected Cash Flows) For each of the following, determine the expected cash flows.

| | <u>Cash Flow Estimate</u> | <u>Probability Assessment</u> |
|----|-------------------------------|-----------------------------------|
| a. | \$ 4,800 | 20% |
| | 6,300 | 50% |
| | 7,500 | 30% |
| b. | \$ 5,400 | 30% |
| | 7,200 | 50% |
| | 8,400 | 20% |
| c. | \$(1,000) | 10% |
| | 3,000 | 80% |
| | 5,000 | 10% |

E6.21 (LO 5) (Expected Cash Flows and Present Value) Keith Bowie is trying to determine the amount to set aside so that he will have enough money on hand in 2 years to overhaul the engine on his vintage used car. While there is some uncertainty about the cost of engine overhauls in 2 years, by conducting some research online, Keith has developed the following estimates.

| <u>Engine Overhaul Estimated Cash Outflow</u> | <u>Probability Assessment</u> |
|---|-----------------------------------|
| \$200 | 10% |
| 450 | 30% |
| 600 | 50% |
| 750 | 10% |

Instructions

How much should Keith Bowie deposit today in an account earning 6%, compounded annually, so that he will have enough money on hand in 2 years to pay for the overhaul?

E6.22 (LO 5) (Fair Value Estimate) Killroy Company owns a trade name that was purchased in an acquisition of McClellan Company. The trade name has a book value of \$3,500,000, but according to GAAP, it is assessed for impairment on an annual basis. To perform this impairment test, Killroy must estimate the fair value of the trade name. (You will learn more about intangible asset impairments in Chapter 12.) It has developed the following cash flow estimates related to the trade name based on internal information. Each cash flow estimate reflects Killroy's estimate of annual cash flows over the next 8 years. The trade name is assumed to have no salvage value after the 8 years. (Assume the cash flows occur at the end of each year.)

| <u>Cash Flow Estimate</u> | <u>Probability Assessment</u> |
|---------------------------|-----------------------------------|
| \$380,000 | 20% |
| 630,000 | 50% |
| 750,000 | 30% |

Instructions

- What is the estimated fair value of the trade name? Killroy determines that the appropriate discount rate for this estimation is 8%.
- Is the estimate developed for part (a) a Level 1 or Level 3 fair value estimate? Explain.

Problems

(Unless instructed otherwise, round answers to the nearest dollar. Interest rates are per annum unless otherwise indicated.)

P6.1 (LO 2, 4) Groupwork (Various Time Value Situations) Answer each of these unrelated questions.

- On January 1, 2020, Fishbone Corporation sold a building that cost \$250,000 and that had accumulated depreciation of \$100,000 on the date of sale. Fishbone received as consideration a \$240,000

non-interest-bearing note due on January 1, 2023. There was no established exchange price for the building, and the note had no ready market. The prevailing rate of interest for a note of this type on January 1, 2020, was 9%. At what amount should the gain from the sale of the building be reported?

- On January 1, 2020, Fishbone Corporation purchased 300 of the \$1,000 face value, 9%, 10-year bonds of Walters Inc. The bonds mature on January 1, 2030, and pay interest annually beginning January 1, 2021. Fishbone purchased the bonds to yield 11%. How much did Fishbone pay for the bonds?
- Fishbone Corporation bought a new machine and agreed to pay for it in equal annual installments of \$4,000 at the end of each of the next 10 years. Assuming that a prevailing interest rate of 8% applies to this contract, how much should Fishbone record as the cost of the machine?
- Fishbone Corporation purchased a special tractor on December 31, 2020. The purchase agreement stipulated that Fishbone should pay \$20,000 at the time of purchase and \$5,000 at the end of each of the next 8 years. The tractor should be recorded on December 31, 2020, at what amount, assuming an appropriate interest rate of 12%?
- Fishbone Corporation wants to withdraw \$120,000 (including principal) from an investment fund at the end of each year for 9 years. What should be the required initial investment at the beginning of the first year if the fund earns 11%?

P6.2 (LO 2, 3, 4) Groupwork Excel (Various Time Value Situations) Using the appropriate interest table, provide the solution to each of the following four questions by computing the unknowns.

- What is the amount of the payments that Ned Winslow must make at the end of each of 8 years to accumulate a fund of \$90,000 by the end of the eighth year, if the fund earns 8% interest, compounded annually?
- Robert Hitchcock is 40 years old today and he wishes to accumulate \$500,000 by his sixty-fifth birthday so he can retire to his summer place on Lake Hopatcong. He wishes to accumulate this amount by making equal deposits on his fortieth through his sixty-fourth birthdays. What annual deposit must Robert make if the fund will earn 8% interest compounded annually?
- Diane Ross has \$20,000 to invest today at 9% to pay a debt of \$47,347. How many years will it take her to accumulate enough to liquidate the debt?
- Cindy Houston has a \$27,600 debt that she wishes to repay 4 years from today; she has \$19,553 that she intends to invest for the 4 years. What rate of interest will she need to earn annually in order to accumulate enough to pay the debt?

P6.3 (LO 2, 4) (Analysis of Alternatives) Assume that **Wal-Mart Stores, Inc.** has decided to surface and maintain for 10 years a vacant lot next to one of its stores to serve as a parking lot for customers. Management is considering the following bids involving two different qualities of surfacing for a parking area of 12,000 square yards.

Bid A: A surface that costs \$5.75 per square yard to install. This surface will have to be replaced at the end of 5 years. The annual maintenance cost on this surface is estimated at 25 cents per square yard for each year except the last year of its service. The replacement surface will be similar to the initial surface.

Bid B: A surface that costs \$10.50 per square yard to install. This surface has a probable useful life of 10 years and will require annual maintenance in each year except the last year, at an estimated cost of 9 cents per square yard.

Instructions

Prepare computations showing which bid should be accepted by Wal-Mart. You may assume that the cost of capital is 9%, that the annual maintenance expenditures are incurred at the end of each year, and that prices are not expected to change during the next 10 years.

P6.4 (LO 4) Excel (Evaluating Payment Alternatives) Howie Long has just learned he has won a \$500,000 prize in the lottery. The lottery has given him two options for receiving the payments. (1) If Howie takes all the money today, the state and federal governments will deduct taxes at a rate of 46% immediately. (2) Alternatively, the lottery offers Howie a payout of 20 equal payments of \$36,000 with the first payment occurring when Howie turns in the winning ticket. Howie will be taxed on each of these payments at a rate of 25%.

Instructions

Assuming Howie can earn an 8% rate of return (compounded annually) on any money invested during this period, which payout option should he choose?

P6.5 (LO 2, 4) (Analysis of Alternatives) Julia Baker died, leaving to her husband Brent an insurance policy contract that provides that the beneficiary (Brent) can choose any one of the following four options.

- a. \$55,000 immediate cash.
- b. \$4,000 every 3 months payable at the end of each quarter for 5 years.
- c. \$18,000 immediate cash and \$1,800 every 3 months for 10 years, payable at the beginning of each 3-month period.
- d. \$4,000 every 3 months for 3 years and \$1,500 each quarter for the following 25 quarters, all payments payable at the end of each quarter.

Instructions

If money is worth 2½% per quarter, compounded quarterly, which option would you recommend that Brent exercise?

P6.6 (LO 5) (Purchase Price of a Business) During the past year, Stacy McGill planted a new vineyard on 150 acres of land that she leases for \$30,000 a year. She has asked you, as her accountant, to assist her in determining the value of her vineyard operation.

The vineyard will bear no grapes for the first 5 years (1–5). In the next 5 years (6–10), Stacy estimates that the vines will bear grapes that can be sold for \$60,000 each year. For the next 20 years (11–30), she expects the harvest will provide annual revenues of \$110,000. But during the last 10 years (31–40) of the vineyard's life, she estimates that revenues will decline to \$80,000 per year.

During the first 5 years, the annual cost of pruning, fertilizing, and caring for the vineyard is estimated at \$9,000; during the years of production, 6–40, these costs will rise to \$12,000 per year. The relevant market rate of interest for the entire period is 6%. Assume that all receipts and payments are made at the end of each year.

Instructions

Dick Button has offered to buy Stacy's vineyard business by assuming the 40-year lease. On the basis of the current value of the business, what is the minimum price Stacy should accept?

P6.7 (LO 2, 3, 4) (Time Value Concepts Applied to Solve Business Problems) Answer the following questions related to Dubois Inc.

- a. Dubois Inc. has \$600,000 to invest. The company is trying to decide between two alternative uses of the funds. One alternative provides \$80,000 at the end of each year for 12 years, and the other is to receive a single lump-sum payment of \$1,900,000 at the end of the 12 years. Which alternative should Dubois select? Assume the interest rate is constant over the entire investment.
- b. Dubois Inc. has completed the purchase of new Dell computers. The fair value of the equipment is \$824,150. The purchase agreement specifies an immediate down payment of \$200,000 and semiannual payments of \$76,952 beginning at the end of 6 months for 5 years. What is the interest rate, to the nearest percent, used in discounting this purchase transaction?
- c. Dubois Inc. loans money to John Kruk Corporation in the amount of \$800,000. Dubois accepts an 8% note due in 7 years with interest payable semiannually. After 2 years (and receipt of interest for 2 years), Dubois needs money and therefore sells the note to Chicago National Bank, which demands interest on the note of 10% compounded semiannually. What is the amount Dubois will receive on the sale of the note?
- d. Dubois Inc. wishes to accumulate \$1,300,000 by December 31, 2030, to retire bonds outstanding. The company deposits \$200,000 on December 31, 2020, which will earn interest at 10% compounded quarterly, to help in the retirement of this debt. In addition, the company wants to know how much should be deposited at the end of each quarter for 10 years to ensure that \$1,300,000 is available at the end of 2030. (The quarterly deposits will also earn at a rate of 10%, compounded quarterly.) (Round to even dollars.)

P6.8 (LO 4) (Analysis of Alternatives) Ellison Inc., a manufacturer of steel school lockers, plans to purchase a new punch press for use in its manufacturing process. After contacting the appropriate vendors, the purchasing department received differing terms and options from each vendor. The Engineering Department has determined that each vendor's punch press is substantially identical and each has a useful life of 20 years. In addition, Engineering has estimated that required year-end maintenance costs will be \$1,000 per year for the first 5 years, \$2,000 per year for the next 10 years, and \$3,000 per year for the last 5 years. Following is each vendor's sales package.

Vendor A: \$55,000 cash at time of delivery and 10 year-end payments of \$18,000 each. Vendor A offers all its customers the right to purchase at the time of sale a separate 20-year maintenance

service contract, under which Vendor A will perform all year-end maintenance at a one-time initial cost of \$10,000.

Vendor B: Forty semiannual payments of \$9,500 each, with the first installment due upon delivery. Vendor B will perform all year-end maintenance for the next 20 years at no extra charge.

Vendor C: Full cash price of \$150,000 will be due upon delivery.

Instructions

Assuming that both Vendors A and B will be able to perform the required year-end maintenance, that Ellison's cost of funds is 10%, and the machine will be purchased on January 1, from which vendor should the press be purchased?

P6.9 (LO 2, 4) (Analysis of Business Problems) James Kirk is a financial executive with McDowell Enterprises. Although James Kirk has not had any formal training in finance or accounting, he has a "good sense" for numbers and has helped the company grow from a very small company (\$500,000 sales) to a large operation (\$45 million in sales). With the business growing steadily, however, the company needs to make a number of difficult financial decisions in which James Kirk feels a little "over his head." He therefore has decided to hire a new employee with "numbers" expertise to help him. As a basis for determining whom to employ, he has decided to ask each prospective employee to prepare answers to questions relating to the following situations he has encountered recently. Here are the questions.

- In 2019, McDowell Enterprises negotiated and closed a long-term lease contract for newly constructed truck terminals and freight storage facilities. The buildings were constructed on land owned by the company. On January 1, 2020, McDowell took possession of the leased property. The 20-year lease is effective for the period January 1, 2020, through December 31, 2039. Advance rental payments of \$800,000 are payable to the lessor (owner of facilities) on January 1 of each of the first 10 years of the lease term. Advance payments of \$400,000 are due on January 1 for each of the last 10 years of the lease term. McDowell has an option to purchase all the leased facilities for \$1 on December 31, 2039. At the time the lease was negotiated, the fair value of the truck terminals and freight storage facilities was approximately \$7,200,000. If the company had borrowed the money to purchase the facilities, it would have had to pay 10% interest. Should the company have purchased rather than leased the facilities?
- Last year the company exchanged a piece of land for a non-interest-bearing note. The note is to be paid at the rate of \$15,000 per year for 9 years, beginning one year from the date of disposal of the land. An appropriate rate of interest for the note was 11%. At the time the land was originally purchased, it cost \$90,000. What is the fair value of the note?
- The company has always followed the policy to take any cash discounts on goods purchased. Recently, the company purchased a large amount of raw materials at a price of \$800,000 with terms 1/10, n/30 on which it took the discount. McDowell has recently estimated its cost of funds at 10%. Should McDowell continue this policy of always taking the cash discount?

P6.10 (LO 2, 4) (Analysis of Lease vs. Purchase) Dunn Inc. owns and operates a number of hardware stores in the New England region. Recently, the company has decided to locate another store in a rapidly growing area of Maryland. The company is trying to decide whether to purchase or lease the building and related facilities.

Purchase: The company can purchase the site, construct the building, and purchase all store fixtures. The cost would be \$1,850,000. An immediate down payment of \$400,000 is required, and the remaining \$1,450,000 would be paid off over 5 years at \$350,000 per year (including interest payments made at end of year). The property is expected to have a useful life of 12 years, and then it will be sold for \$500,000. As the owner of the property, the company will have the following out-of-pocket expenses each period.

| | |
|--|-----------------|
| Property taxes (to be paid at the end of each year) | \$40,000 |
| Insurance (to be paid at the beginning of each year) | 27,000 |
| Other (primarily maintenance which occurs at the end of each year) | <u>16,000</u> |
| | <u>\$83,000</u> |

Lease: First National Bank has agreed to purchase the site, construct the building, and install the appropriate fixtures for Dunn Inc. if Dunn will lease the completed facility for 12 years. The annual costs for the lease would be \$270,000. Dunn would have no responsibility related to the facility over the 12 years. The terms of the lease are that Dunn would be required to make 12 annual payments (the first payment to be made at the time the store opens and then each following year). In addition,

a deposit of \$100,000 is required when the store is opened. This deposit will be returned at the end of the twelfth year, assuming no unusual damage to the building structure or fixtures.

Instructions

Which of the two approaches should Dunn Inc. follow? (Currently, the cost of funds for Dunn Inc. is 10%.)

P6.11 (LO 5) (Pension Funding) You have been hired as a benefit consultant by Jean Honore, the owner of Attic Angels. She wants to establish a retirement plan for herself and her three employees. Jean has provided the following information. The retirement plan is to be based upon annual salary for the last year before retirement and is to provide 50% of Jean's last-year annual salary and 40% of the last-year annual salary for each employee. The plan will make annual payments at the beginning of each year for 20 years from the date of retirement. Jean wishes to fund the plan by making 15 annual deposits beginning January 1, 2020. Invested funds will earn 12% compounded annually. Information about plan participants as of January 1, 2020, is as follows.

Jean Honore, owner: Current annual salary of \$48,000; estimated retirement date January 1, 2045.

Colin Davis, flower arranger: Current annual salary of \$36,000; estimated retirement date January 1, 2050.

Anita Baker, sales clerk: Current annual salary of \$18,000; estimated retirement date January 1, 2040.

Gavin Bryars, part-time bookkeeper: Current annual salary of \$15,000; estimated retirement date January 1, 2035.

In the past, Jean has given herself and each employee a year-end salary increase of 4%. Jean plans to continue this policy in the future.

Instructions

- Based upon the above information, what will be the annual retirement benefit for each plan participant? (Round to the nearest dollar.) (*Hint:* Jean will receive raises for 24 years.)
- What amount must be on deposit at the end of 15 years to ensure that all benefits will be paid? (Round to the nearest dollar.)
- What is the amount of each annual deposit Jean must make to the retirement plan?

P6.12 (LO 5) Ethics (Pension Funding) Craig Brokaw, newly appointed controller of STL, is considering ways to reduce his company's expenditures on annual pension costs. One way to do this is to switch STL's pension fund assets from First Security to NET Life. STL is a very well-respected computer manufacturer that recently has experienced a sharp decline in its financial performance for the first time in its 25-year history. Despite financial problems, STL still is committed to providing its employees with good pension and postretirement health benefits.

Under its present plan with First Security, STL is obligated to pay \$43 million to meet the expected value of future pension benefits that are payable to employees as an annuity upon their retirement from the company. On the other hand, NET Life requires STL to pay only \$35 million for identical future pension benefits. First Security is one of the oldest and most reputable insurance companies in North America. NET Life has a much weaker reputation in the insurance industry. In pondering the significant difference in annual pension costs, Brokaw asks himself, "Is this too good to be true?"

Instructions

Answer the following questions.

- Why might NET Life's pension cost requirement be \$8 million less than First Security's requirement for the same future value?
- What ethical issues should Craig Brokaw consider before switching STL's pension fund assets?
- Who are the stakeholders that could be affected by Brokaw's decision?

P6.13 (LO 4, 5) (Expected Cash Flows and Present Value) Danny's Lawn Equipment sells high-quality lawn mowers and offers a 3-year warranty on all new lawn mowers sold. In 2020, Danny sold \$300,000 of new specialty mowers for golf greens for which Danny's service department does not have the equipment to do the service. Danny has entered into an agreement with Mower Mavens to provide all warranty service on the special mowers sold in 2020. Danny wishes to measure the fair value of the agreement to determine the warranty liability for sales made in 2020. The controller for Danny's Lawn

Equipment estimates the following expected warranty cash outflows associated with the mowers sold in 2020.

| <u>Year</u> | <u>Cash Flow Estimate</u> | <u>Probability Assessment</u> |
|-------------|---------------------------|-------------------------------|
| 2021 | \$2,500 | 20% |
| | 4,000 | 60% |
| | 5,000 | 20% |
| 2022 | \$3,000 | 30% |
| | 5,000 | 50% |
| | 6,000 | 20% |
| 2023 | \$4,000 | 30% |
| | 6,000 | 40% |
| | 7,000 | 30% |

Instructions

Using expected cash flow and present value techniques, determine the value of the warranty liability for the 2020 sales. Use an annual discount rate of 5%. Assume all cash flows occur at the end of the year.

P6.14 (LO 4, 5) (Expected Cash Flows and Present Value) At the end of 2020, Sawyer Company is conducting an impairment test and needs to develop a fair value estimate for machinery used in its manufacturing operations. Given the nature of Sawyer's production process, the equipment is for special use. (No secondhand market values are available.) The equipment will be obsolete in 2 years, and Sawyer's accountants have developed the following cash flow information for the equipment.

| <u>Year</u> | <u>Net Cash Flow Estimate</u> | <u>Probability Assessment</u> |
|-------------|-------------------------------|-------------------------------|
| 2021 | \$6,000 | 40% |
| | 9,000 | 60% |
| 2022 | \$ (500) | 20% |
| | 2,000 | 60% |
| | 4,000 | 20% |
| | <u>Scrap Value</u> | |
| 2022 | \$ 500 | 50% |
| | 900 | 50% |

Instructions

Using expected cash flow and present value techniques, determine the fair value of the machinery at the end of 2020. Use a 6% discount rate. Assume all cash flows occur at the end of the year.

P6.15 (LO 5) (Fair Value Estimate) Murphy Mining Company recently purchased a quartz mine that it intends to work for the next 10 years. According to state environmental laws, Murphy must restore the mine site to its original natural prairie state after it ceases mining operations at the site. To properly account for the mine, Murphy must estimate the fair value of this asset retirement obligation. This amount will be recorded as a liability and added to the value of the mine on Murphy's books. (You will learn more about these asset retirement obligations in Chapters 10 and 13.)

There is no active market for retirement obligations such as these, but Murphy has developed the following cash flow estimates based on its prior experience in mining-site restoration. It will take 3 years to restore the mine site when mining operations cease in 10 years. Each estimated cash outflow reflects an annual payment at the end of each year of the 3-year restoration period.

| <u>Restoration Estimated Cash Outflow</u> | <u>Probability Assessment</u> |
|---|-------------------------------|
| \$15,000 | 10% |
| 22,000 | 30% |
| 25,000 | 50% |
| 30,000 | 10% |

Instructions

- What is the estimated fair value of Murphy's asset retirement obligation? Murphy determines that the appropriate discount rate for this estimation is 5%. Round calculations to the nearest dollar.
- Is the estimate developed for part (a) a Level 1 or Level 3 fair value estimate? Explain.

Using Your Judgment

Financial Reporting Problem

The Procter & Gamble Company (P&G)

The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

- Examining each item in P&G's balance sheet, identify those items that require present value, discounting, or interest computations in establishing the amount reported. (The accompanying notes are an additional source for this information.)
- (1) What interest rates are disclosed by P&G as being used to compute interest and present values?
(2) Why are there so many different interest rates applied to P&G's financial statement elements (assets, liabilities, revenues, and expenses)?

Financial Statement Analysis Case

Consolidated Natural Gas Company

Consolidated Natural Gas Company (CNG), with corporate headquarters in Pittsburgh, Pennsylvania, is one of the largest producers, transporters, distributors, and marketers of natural gas in North America.

Periodically, the company experiences a decrease in the value of its gas- and oil-producing properties, and a special charge to income was recorded in order to reduce the carrying value of those assets.

Assume the following information. In 2016, CNG estimated the cash inflows from its oil- and gas-producing properties to be \$375,000 per year. During 2020, the write-downs described above caused the estimate to be decreased to \$275,000 per year. Production costs (cash outflows) associated with all these properties were estimated to be \$125,000 per year in 2019, but this amount was revised to \$155,000 per year in 2020.

Instructions

(Assume that all cash flows occur at the end of the year.)

- Calculate the present value of net cash flows for 2019–2021 (three years), using the 2019 estimates and a 10% discount factor.
- Calculate the present value of net cash flows for 2020–2022 (three years), using the 2020 estimates and a 10% discount factor.
- Compare the results using the two estimates. Is information on future cash flows from oil- and gas-producing properties useful, considering that the estimates must be revised each year? Explain.

Accounting, Analysis, and Principles

Johnson Co. accepts a note receivable from a customer in exchange for some damaged inventory. The note requires the customer make semiannual installments of \$50,000 each for 10 years. The first installment begins six months from the date the customer takes delivery of the damaged inventory. Johnson's management estimates that the fair value of the damaged inventory is \$679,517.

Accounting

- What interest rate is Johnson implicitly charging the customer? Express the rate as an annual rate but assume semiannual compounding.
- At what dollar amount do you think Johnson should record the note receivable on the day the customer takes delivery of the damaged inventory?

Analysis

Assume the note receivable for damaged inventory makes up a significant portion of Johnson's assets. If interest rates increase, what happens to the fair value of the receivable? Briefly explain why.

Principles

The Financial Accounting Standards Board has issued an accounting standard that allows companies to report assets such as notes receivable at fair value. Discuss how fair value versus historical cost potentially involves a trade-off of one desired quality of accounting information against another.

Analytics in Action

Accounting software systems collect vast amounts of data about the economic events experienced by a company and about the parties with whom the company engages, such as suppliers and customers. Business decision-makers take advantage of this wealth of information by using data analytics, which often employs both software and statistics, to draw inferences and make more informed business decisions. As both data access and analytical software improve, the use of data analytics to support decisions is becoming increasingly common at virtually all types of companies.

Evaluation of alternative investment, borrowing, and other business alternatives often requires application of time value of money and expected cash flow concepts, in which alternatives can be evaluated using analytical tools.

Instructions Go to WileyPLUS for a data analytics exercise focusing on analysis of business alternatives, with consideration of time value of money concepts.

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

CE6.1 Access the glossary (“Master Glossary”) to answer the following.

- a. What is the definition of present value?
- b. Briefly describe the term “discount rate adjustment technique.”

CE6.2 In addition to the list of topics identified in footnote 1 in the chapter, identify the specific Codification guidance related to the use of present value in goodwill impairment.

CE6.3 What is interest cost? Briefly describe imputation of interest.

Codification Research Case

At a recent meeting of the accounting staff in your company, the controller raised the issue of using present value techniques to conduct impairment tests for some of the company’s fixed assets. Some of the more senior members of the staff admitted having little knowledge of present value concepts in this context, but they had heard about a FASB Concepts Statement that may be relevant. As the junior staff in the department, you have been asked to conduct some research of the authoritative literature on this topic and report back at the staff meeting next week.

Instructions

If your school has a subscription to the FASB Codification, log in and access the FASB Statements of Financial Accounting Concepts. When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following items. (Provide paragraph citations.)

- a. Identify the concept statement that addresses present value measurement in accounting.
- b. What are some of the contexts in which present value concepts are applied in accounting measurement?
- c. Provide definitions for the following terms:
 1. Best estimate.
 2. Estimated cash flow (contrasted to expected cash flow).
 3. Fresh-start measurement.
 4. Interest methods of allocation.

Additional Professional Resources

Go to WileyPLUS for other career-readiness resources, such as career coaching, internship opportunities, and CPAexcel prep.

TABLE 6.1 Future Value of 1 (Future Value of a Single Sum)

| (n) Periods | $FVF_{n,i} = (1 + i)^n$ | | | | | |

Cash and Receivables

LEARNING OBJECTIVES

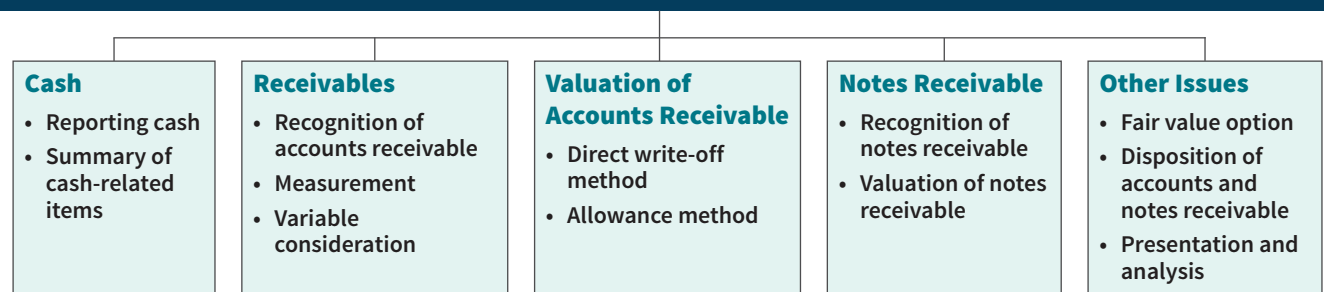

After studying this chapter, you should be able to:

1. Indicate how to report cash and related items.
2. Define receivables and explain accounting issues related to their recognition.
3. Explain accounting issues related to valuation of accounts receivable.
4. Explain accounting issues related to recognition and valuation of notes receivable.
5. Explain additional accounting issues related to accounts and notes receivable.

PREVIEW OF CHAPTER 7 As the following opening story indicates, investors and creditors need to keep an eye on cash balances and how companies manage these cash balances. This highlights the importance of good information on cash to help investors assess liquidity and financial flexibility. In this chapter, we discuss cash and receivables—two current assets important to the liquidity of companies like **Apple**, **Cisco**, and **General Electric**. The content and organization of the chapter are as follows.

This chapter also includes numerous conceptual and global discussions that are integral to the topics presented here.

CASH AND RECEIVABLES

Is Your Cash Trapped?

At one time, **Apple** executives explained what they planned to do with their large cash balance of \$98 billion. However, what they were really talking about was not the full \$98 billion but the \$34 billion the company had here in the United States. The other \$64 billion was sitting in overseas subsidiaries and might never find its way back to the United States. The reason: at that time—before passage of the Tax Cuts and Jobs Act of 2017 (TCJA)—U.S. tax laws allowed companies to defer taxes on their profits from international operations until they brought the cash back into the country.

So what many companies did was to leave the cash sitting in foreign bank accounts or re-invested in factories and acquisitions overseas. After all, why should a company send its cash back to the United States and pay taxes at relatively high U.S. corporate tax rates (as high as 39 percent in the United States as compared to a rate of about 20 percent in Ireland), when it can reinvest this cash overseas without any tax payments? As a result, companies had strong incentives to move as much of their earnings overseas to low-tax jurisdictions such as a country like Ireland. As one expert noted, it cannot be the luck of the Irish that explains the extraordinary and systematic profitability of Irish subsidiaries of U.S. companies.

So when investors analyzed an annual report of a multinational company with a large cash balance, they might have believed that cash was available for increased dividends or for acquisitions in the United States. But that is not necessarily so—much of the cash was trapped overseas and might never return. These untaxed foreign earnings were quite significant for a number of multinational companies. For example, in a recent five-year period, the accumulated untaxed foreign earnings had reached over \$2 trillion, with the majority of these earnings concentrated in three sectors: health care, technology, and industrials. The following table presents six of the top companies in terms of cash parked overseas as a percentage of market value.

| Overseas Cash as a Percentage of Market Cap | | |
|---|----------------------------|-------------------------|
| | Cash Parked Overseas | |
| | Amount (\$ in millions) | As a % of Market Cap |
| NetApp | \$ 4,300 | 36% |
| Cisco Systems | 47,400 | 31 |
| Hewlett-Packard | 15,133 | 24 |
| General Electric | 61,100 | 23 |
| Amgen | 25,700 | 21 |
| Microsoft | 77,100 | 11 |

In light of these large “trapped cash” balances, investors needed more information about foreign earnings, the amount of cash in foreign deposits, and cash generated from foreign operations where untaxed foreign earnings were reported. The SEC required such disclosures. In the wake of the TCJA, which enacted a tax on those foreign balances and reduced the U.S. tax rate to 21 percent, companies now have far fewer incentives to keep cash locked up overseas. Indeed, one of the goals of the TCJA was to encourage companies to bring those cash balances home to increase dividends, expand operations, and add jobs. So far, those balances have not been repatriated, as shown in the following chart showing overseas cash balances for six large companies before and after enactment of the law.

As indicated, those foreign cash balances have budged very little after the new law. Worse yet, some companies have stopped disclosing foreign cash balances. For example, the foreign cash number disappeared from the first quarterly report after the TCJA was enacted for **Apple**, **Microsoft**, and **Oracle**. While not rule-breaking to leave it out, such reporting makes it more difficult to gauge whether one of the federal tax changes enacted last year is stoking corporate investment in the United States as was hoped by TCJA proponents. Other companies, like **Qualcomm** and **Cisco Systems**, have continued to put out the number. So have

Coca-Cola, Caterpillar, and GE. Of those companies, Coca-Cola, Caterpillar, and GE have reduced their offshore holdings. One analyst doubted a major repatriation of foreign cash balances, noting, “I’m not sure that companies, certainly at this stage of the business cycle, are going to aggressively expand their plant and equipment balances (in the United States) in anticipation of even greater demand for their products.”

Graziano, “Parking A-Lot Overseas: At Least \$600 Billion in Cash and Over \$2 Trillion in Earnings,” *Credit Suisse Equity Research* (March 17, 2015); and B. Kochkodin, “Apple Leaves Overseas Cash Out of Its Latest Quarterly Report,” *www.bloomberg.com* (May 11, 2018).

Review and Practice

Go to the **Review and Practice** section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions as well as additional exercises and practice problem with solutions are also available online.

Cash

LEARNING OBJECTIVE 1

Indicate how to report cash and related items.

Cash, the most liquid of assets, is the standard medium of exchange and the basis for measuring and accounting for all other items. Companies generally classify cash as a current asset. Cash consists of coin, currency, and available funds on deposit at the bank. Negotiable instruments such as money orders, certified checks, cashier’s checks, personal checks, and bank drafts are also viewed as cash. What about savings accounts? Banks do have the legal right to demand notice before withdrawal. But, because banks rarely demand prior notice, savings accounts nevertheless are considered cash.

Some negotiable instruments provide small investors with an opportunity to earn interest. These items, more appropriately classified as temporary investments than as cash, include money market funds, money market savings certificates, certificates of deposit (CDs), and similar types of deposits and “short-term paper.”¹ These securities usually contain restrictions or penalties on their conversion to cash. Money market funds that provide checking account privileges, however, are usually classified as cash.

Certain items present classification problems: Companies treat **postdated checks and I.O.U.s** as receivables. They also treat **travel advances** as receivables if collected from employees or deducted from their salaries. Otherwise, companies classify the travel advance as a prepaid expense. **Postage stamps on hand** are classified as part of office supplies inventory or as a prepaid expense. Because **petty cash funds and change funds are used** to meet current operating expenses and liquidate current liabilities, companies include these funds in current assets as cash.

¹A variety of “short-term paper” is available for investment. For example, **certificates of deposit** (CDs) represent formal evidence of indebtedness, issued by a bank, subject to withdrawal under the specific terms of the instrument. Issued in various denominations, they have maturities anywhere from 7 days to 10 years and generally pay interest at the short-term interest rate in effect at the date of issuance.

In **money-market funds**, a variation of the mutual fund, the mix of Treasury bills and commercial paper making up the fund’s portfolio determines the yield. Most money-market funds require an initial minimum investment of \$1,000; many allow withdrawal by check or wire transfer.

Treasury bills are U.S. government obligations generally issued with 4-, 13-, and 26-week maturities; they are sold at weekly government auctions in denominations of \$1,000 up to a maximum purchase of \$5 million.

Commercial paper is a short-term note issued by corporations with good credit ratings. Often issued in \$5,000 and \$10,000 denominations, these notes generally yield a higher rate than Treasury bills.

Reporting Cash

Although the reporting of cash is relatively straightforward, a number of issues merit special attention. These issues relate to the reporting of:

1. Cash equivalents.
2. Restricted cash.
3. Bank overdrafts.

Cash Equivalents

A current classification that has become popular is “Cash and cash equivalents.”² **Cash equivalents** are short-term, highly liquid investments that are both (a) readily convertible to known amounts of cash, and (b) so near their maturity that they present insignificant risk of changes in value because of changes in interest rates. Generally, only investments with original maturities of three months or less qualify under these definitions. Examples of cash equivalents are Treasury bills, commercial paper, and money market funds. Some companies combine cash with temporary investments on the balance sheet. In these cases, they describe the amount of the temporary investments either parenthetically or in the notes.

Most individuals think of cash equivalents as cash. Unfortunately, that is not always the case. Companies like **Kohl’s** and **ADC Telecommunications** learned the hard way and took sizable write-downs on cash equivalents. Their losses resulted because they purchased auction-rate notes. These notes carry interest rates that usually reset weekly and often have long-maturity dates (as long as 30 years). Companies argued that such notes should be classified as cash equivalents because they can be routinely traded at auction on a daily basis. (In short, they are liquid and risk-free.) Auditors agreed and permitted cash-equivalent treatment even though maturities extended well beyond three months. But when the credit crunch hit, the auctions stopped, and the value of these securities dropped because no market existed. In retrospect, the cash-equivalent classification was misleading.

The FASB has studied whether to eliminate the cash-equivalent classification from financial statement presentations altogether. One idea would have companies report only cash. If an asset is not cash and is short-term in nature, it should be reported as a temporary investment. An interesting moral to this story is that when times are good, some careless accounting may work. But in bad times, it quickly becomes apparent that sloppy accounting can lead to misleading and harmful effects for users of the financial statements.

Restricted Cash

Petty cash, payroll, and dividend funds are examples of cash set aside for a particular purpose. In most situations, these fund balances are not material. Therefore, companies do not segregate them from cash in the financial statements. When material in amount, companies segregate **restricted cash** from “regular” cash for reporting purposes. Companies classify restricted cash either in the current assets or in the long-term assets section, depending on the date of availability or disbursement. Classification in the current section is appropriate if using the cash for payment of existing or maturing obligations (within a year or the operating cycle, whichever is longer). On the other hand, companies show the restricted cash in the long-term section of the balance sheet if holding the cash for a longer period of time. Among other potential restrictions, companies need to determine whether any of the cash in accounts outside the United States is restricted by regulations against exportation of currency.

²*Accounting Trends and Techniques* indicated that approximately 2 percent of the companies surveyed use the caption “Cash,” 89 percent use “Cash and cash equivalents,” and 2 percent use a caption such as “Cash and marketable securities” or similar terminology.

Cash classified in the long-term section is frequently set aside for plant expansion, retirement of long-term debt, or, in the case of **International Thoroughbred Breeders** as shown in **Illustration 7.1**, for entry fee deposits.

|  International Thoroughbred Breeders | |
|--|-------------|
| Restricted cash and investments (See Note) | \$3,730,000 |
| <p>Note: Restricted Cash. At year-end, the Company had approximately \$3,730,000, which was classified as restricted cash and investments. These funds are primarily cash received from horsemen for nomination and entry fees to be applied to upcoming racing meets, purse winnings held in trust for horsemen, and amounts held for unclaimed ticketholder winnings.</p> | |

ILLUSTRATION 7.1**Disclosure of Restricted Cash**

Banks and other lending institutions often require customers to maintain minimum cash balances in checking or savings accounts. The SEC defines these minimum balances, called **compensating balances**, as “that portion of any demand deposit (or any time deposit or certificate of deposit) maintained by a corporation which constitutes support for existing borrowing arrangements of the corporation with a lending institution. Such arrangements would include both outstanding borrowings and the assurance of future credit availability.” [1] (See the FASB Codification References near the end of the chapter.)

To avoid misleading investors about the amount of cash available to meet recurring obligations, the SEC recommends that companies state separately **legally restricted deposits** held as compensating balances against **short-term** borrowing arrangements among the “Cash and cash equivalent items” in current assets. Companies should classify separately restricted deposits held as compensating balances against **long-term** borrowing arrangements as noncurrent assets in either the investments or other assets sections, using a caption such as “Cash on deposit maintained as compensating balance.” In cases where compensating balance arrangements exist without agreements that restrict the use of cash amounts shown on the balance sheet, companies should describe the arrangements and the amounts involved in the notes.

Bank Overdrafts

Bank overdrafts occur when a company writes a check for more than the amount in its cash account. Companies should report bank overdrafts in the current liabilities section, adding them to the amount reported as accounts payable. If material, companies should disclose these items separately, either on the face of the balance sheet or in the related notes.³

Bank overdrafts are generally not offset against the cash account. A major exception is when available cash is present in another account in the same bank on which the overdraft occurred. Offsetting in this case is required.

Summary of Cash-Related Items

Cash and cash equivalents include the medium of exchange and most negotiable instruments. If the item cannot be quickly converted to coin or currency, a company separately classifies it as an investment, receivable, or prepaid expense. Companies segregate and classify cash that is unavailable for payment of currently maturing liabilities in the long-term assets section. **Illustration 7.2** summarizes the classification of cash-related items.

³Bank overdrafts usually occur because of a simple oversight by the company writing the check. Banks often expect companies to have overdrafts from time to time and therefore negotiate a fee as payment for this possible occurrence. However, at one time, **E. F. Hutton** (a large brokerage firm) began intentionally overdrawing its accounts by astronomical amounts—on some days exceeding \$1 billion—thus obtaining interest-free loans that it could invest. Because the amounts were so large and fees were not negotiated in advance, E. F. Hutton came under criminal investigation for its actions.

ILLUSTRATION 7.2**Classification of Cash-Related Items**

| Classification of Cash, Cash Equivalents, and Noncash Items | | |
|---|--|--|
| Item | Classification | Comment |
| Cash | Cash | If unrestricted, report as cash. If restricted, identify and classify as current and noncurrent assets. |
| Petty cash and change funds | Cash | Report as cash. |
| Short-term paper | Cash equivalents | Investments with maturity of less than 3 months, often combined with cash. |
| Short-term paper | Temporary investments | Investments with maturity of 3 to 12 months. |
| Postdated checks and I.O.U.s | Receivables | Assumed to be collectible. |
| Travel advances | Receivables | Assumed to be collected from employees or deducted from their salaries. |
| Postage on hand (as stamps or in postage meters) | Prepaid expenses | May also be classified as office supplies inventory. |
| Bank overdrafts | Current liability | If right of offset exists, reduce cash. |
| Compensating balances | Cash separately classified as a deposit maintained as compensating balance | Classify as current or noncurrent in the balance sheet. Disclose separately in notes details of the arrangement. |

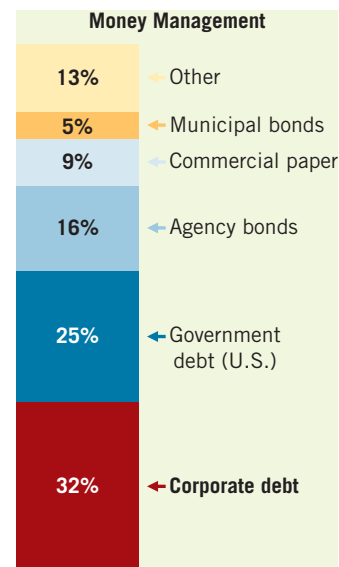

Evolving Issue What Counts for Cash?

What to include in the cash balance has been the subject of debate. As we have learned, companies report both cash and cash equivalents as cash on their balance sheets. For balances not reported in cash but which need to be available on relatively short notice to pay for inventory, employees, or other expenses, companies have a variety of parking places. As shown in the adjacent chart, companies plow the largest portion of their cash holdings into corporate debt. As indicated, corporate debt is the parking place of choice, followed by U.S. Treasury and agency debt. Surveyed corporate treasurers say that high-grade corporate bonds are preferred because they are reasonably safe while providing a greater yield premium relative to Treasury securities. Seems like a good strategy as long as the corporate issuers can make their payments. However, if the economy takes a downturn, similar to investments in auction-rate notes, these investments may not be true cash equivalents.

What about cryptocurrencies, such as Bitcoin? These currencies are generating a significant amount of press given their rapid increases in value and extreme volatility. Because of this volatility, the value of Bitcoin in circulation has recently fluctuated between \$100 and \$300 billion. Cryptocurrency—despite its name—is not accounted for as currency and is not included in cash and cash equivalents. Under the current U.S. accounting framework, cryptocurrency is not cash, currency, or a financial asset. Possible alternatives to fit cryptocurrencies into the accounting model range from treating it as a commodity, inventory, or an intangible asset.

Given the current accounting and reporting framework did not contemplate cryptocurrencies, some are urging standard-setters and regulators to provide guidance by developing an accounting framework for cryptocurrency holdings, including the costs related to “mining” efforts. A popular perspective argues for Bitcoin and other cryptocurrencies being accounted for as an indefinite-life intangible asset. The implication of this model is that

declines in the market price of cryptocurrencies should be included in earnings, while increases in value beyond the original cost or recoveries of previous declines in value would not be captured.

In the absence of GAAP in this area, companies are being encouraged to provide transparent disclosures concerning the reporting of cryptocurrencies and the entity’s risk exposure to such assets. Such disclosure can alert investors to the impact of cryptocurrency holdings on capital resources and liquidity and related risk factors, similar to other cash parking places.

Receivables

LEARNING OBJECTIVE 2

Define receivables and explain accounting issues related to their recognition.

Like cash, **receivables** are also financial assets. Receivables (often referred to as **loans and receivables**) are claims held against customers and others for money, goods, or services. An example of a loan is a financial institution like **Wells Fargo** providing funds to **Tesla**. An example of a receivable is a company like **GoPro** recording an account receivable when it sells a camera on account to one of its retailers. For purposes of discussion, we will simply use the term *receivables* to mean loans and receivables.

For financial statement purposes, companies classify receivables as either **current** (short-term) or **noncurrent** (long-term). Companies expect to collect **current receivables** within a year or during the current operating cycle, whichever is longer. They classify all other receivables as **noncurrent**. Receivables are further classified in the balance sheet as either trade or nontrade receivables.

Customers often owe a company amounts for goods bought or services rendered. A company may subclassify these **trade receivables**, usually the most significant item it possesses, into accounts receivable and notes receivable. **Accounts receivable** are oral promises of the purchaser to pay for goods and services sold. They represent “open accounts” resulting from short-term extensions of credit. A company normally collects them within 30 to 60 days. **Notes receivable** are written promises to pay a certain sum of money on a specified future date. They may arise from sales, financing, or other transactions. Notes may be short-term or long-term.

Nontrade receivables arise from a variety of transactions. Some examples of nontrade receivables are:

1. Advances to officers and employees.
2. Advances to subsidiaries.
3. Deposits paid to cover potential damages or losses.
4. Deposits paid as a guarantee of performance or payment.
5. Dividends and interest receivable.
6. Claims against:
 - a. Insurance companies for casualties sustained.
 - b. Defendants under suit.
 - c. Governmental bodies for tax refunds.
 - d. Common carriers for damaged or lost goods.
 - e. Creditors for returned, damaged, or lost goods.
 - f. Customers for returnable items (crates, containers, etc.).

Because of the peculiar nature of nontrade receivables, companies generally report them as separate items in the balance sheet. **Illustration 7.3** shows the reporting of trade and nontrade receivables in the balance sheets of **Molson Coors Brewing Company** and **Seaboard Corporation**.

The basic issues in accounting for accounts and notes receivable are the same: **recognition, valuation, and disposition**. We discuss these basic issues for accounts and notes receivable next.

ILLUSTRATION 7.3 Receivables Balance Sheet Presentations

|  Molson Coors Brewing Company (in thousands) | |
|---|---------------------------|
| Current assets | |
| Cash and cash equivalents | \$ 377,023 |
| Accounts and notes receivable | |
| Trade, less allowance for doubtful accounts of \$8,827 | 758,526 |
| Current notes receivable and other receivables, less allowance for doubtful accounts of \$3,181 | 112,626 |
| Inventories | 369,521 |
| Maintenance and operating supplies, less allowance for obsolete supplies of \$10,556 | 34,782 |
| Other current assets, less allowance for advertising supplies of \$948 | 124,336 |
| Total current assets | <u><u>\$1,776,814</u></u> |

|  Seaboard Corporation (in thousands) | |
|---|---------------------------|
| Current assets | |
| Cash and cash equivalents | \$ 47,346 |
| Short-term investments | 286,660 |
| Receivables | |

| Net receivables | <u>359,313</u> |
| Inventories | 392,946 |
| Deferred income taxes | 19,558 |
| Other current assets | 77,710 |
| Total current assets | <u><u>\$1,183,533</u></u> |

Recognition of Accounts Receivable

As indicated, accounts receivable generally arise as part of a revenue arrangement. For example, if **Lululemon** sells a yoga outfit to Jennifer Burian for \$100 on account, when does Lululemon recognize revenue (the sale) and the related accounts receivable? As indicated in Chapter 2, the revenue recognition principle indicates that Lululemon should recognize revenue when it satisfies its performance obligation by transferring the good or service to the customer. It follows that in the Lululemon situation, the yoga outfit is transferred when Jennifer obtains control of this outfit.

When this change in control occurs, Lululemon should recognize an account receivable and sales revenue. Lululemon makes the following entry, assuming that \$100 is the amount it expects to receive from Jennifer.

| | | |
|---------------------|-----|-----|
| Accounts Receivable | 100 | |
| Sales Revenue | | 100 |

The concept of change of control is the deciding factor in determining when a performance obligation is satisfied and an account receivable recognized. Here are some key indicators to determine that Lululemon has transferred and that Jennifer has obtained control of the yoga outfit.

1. **Lululemon has the right to payment from the customer.** If Jennifer is obligated to pay, it indicates that control has passed to the customer.
2. **Lululemon has passed legal title to the customer.** If Jennifer has legal title to the goods, it indicates that control has passed to the customer.
3. **Lululemon has transferred physical possession of the goods.** If Jennifer has physical possession, it indicates that control has passed to the customer.
4. **Lululemon no longer has significant risks and rewards of ownership of the goods.** If Jennifer now has the significant risks and rewards of ownership, it indicates that control has passed to the customer.
5. **Jennifer has accepted the asset.**

Measurement of the Transaction Price

The **transaction price** is the amount of consideration that a company expects to receive from a customer in exchange for transferring goods or services. In the Lululemon case, the

transaction price is easily determined because Jennifer Burian agrees to pay a fixed amount to Lululemon over a short period of time. However in other situations, companies must consider items such as variable consideration which may affect the accounts receivable balance.

Variable Consideration

In some cases the price of a good or service is dependent on future events. These future events often include such items as discounts, returns and allowances, rebates, and performance bonuses. Here are four items that affect the transaction price and thus the accounts receivable balance: (1) trade discounts, (2) cash discounts, (3) sales returns and allowances, and (4) time value of money.

Trade Discounts

Prices may be subject to a trade or quantity discount. Companies use such **trade discounts** to avoid frequent changes in catalogs, to alter prices for different quantities purchased, or to hide the true invoice price from competitors.

Trade discounts are commonly quoted in percentages. For example, say your cell phone has a list price of \$90, and the manufacturer sells it to **Best Buy** for list less a 40 percent trade discount. The manufacturer then records the receivable at \$54 per phone. The manufacturer, per normal practice, simply deducts the trade discount from the list price and bills the customer net. As another example, assume **Ryobi** sells a cordless drill with a suggested retail price of \$99.99 to a retailer like **Home Depot** for \$70, a trade discount of approximately 30 percent. Home Depot in turn sells the drill for \$99.99. Ryobi records the accounts receivable and related sales revenue at \$70, not \$99.99.

Cash Discounts (Sales Discounts)

Companies offer **cash discounts (sales discounts)** to induce prompt payment. Cash discounts are generally presented in terms such as 2/10, n/30 (2 percent if paid within 10 days, gross amount due in 30 days), or 2/10, E.O.M., net 30, E.O.M. (2 percent if paid any time by the tenth day of the following month, with full payment due by the thirtieth of the following month).

Customers usually take sales discounts unless their cash is severely limited. Why? A customer that receives a 1 percent reduction in the sales price for payment within 10 days, total payment due within 30 days, effectively earns 18.25 percent $[\frac{.01}{(20/365)}]$, or at least avoids that rate of interest cost.

Companies should record accounts receivable and related revenue at the amount of consideration expected to be received from a customer. [2] For example, assume that Hanley Company sells goods for \$10,000 to Murdoch Inc. with terms 2/10, net 30, and Hanley expects that the discount will be taken. As a result, Hanley records the accounts receivable and related sales revenue at its net price of \$9,800 $[\$10,000 - (\$10,000 \times .02)]$. This approach is often referred to as the net method as it attempts to value the receivable at its realizable value.

If Murdoch fails to take the discount, then Hanley debits the discount not taken to accounts receivable and credits Sales Discounted Forfeited. Sales Discounts Forfeited is shown in the "Other revenue and gains" section of the income statement.⁴ Theoretically, the net method is correct because the receivable is stated at realizable value (assuming estimates are correct) and the net sales measures the revenue recognized from the sale. However, many companies continue to use what is referred to as the gross method in recording the receivable and related sales.

If Hanley uses the gross method, it records the accounts receivable and related sales revenue at \$10,000, not \$9,800. Under the gross method, Hanley recognizes sales discounts when it receives payment within the discount period. Hanley's income statement then shows sales discounts as a deduction from sales to arrive at net sales. The entries in **Illustration 7.4** show the difference between the gross method and net method.

⁴To the extent that discounts not taken reflect short-term financing, some argue that companies could use an interest revenue account to record these amounts.

ILLUSTRATION 7.4**Entries under Gross and Net Methods of Recording Cash (Sales) Discounts**

| <u>Gross Method</u> | | <u>Net Method</u> | |
|--|--------|---|-------|
| Sales of \$10,000, terms 2/10, n/30 | | | |
| Accounts Receivable | 10,000 | Accounts Receivable | 9,800 |
| Sales Revenue | 10,000 | Sales Revenue | 9,800 |
| Payment on \$4,000 of sales received within discount period | | | |
| Cash | 3,920 | Cash | 3,920 |
| Sales Discounts (\$4,000 × .02) | 80 | Accounts Receivable | 3,920 |
| Accounts Receivable | 4,000 | | |
| Payment on \$6,000 of sales received after discount period | | | |
| Cash | 6,000 | Cash | 6,000 |
| Accounts Receivable | 6,000 | Accounts Receivable | 5,880 |
| | | Sales Discounts Forfeited (\$6,000 × .02) | 120 |

We present the gross method because companies may not use the net method for practicability reasons. That is, the net method requires additional analysis and bookkeeping to record sales discounts forfeited on accounts receivable that have passed the discount period. If collection periods are relatively short, using either the gross or the net method results in the same amounts for revenues and receivables equal to the transaction price. Any differences that arise are likely to be immaterial.

Sales Returns and Allowances

Another form of variable consideration relates to sales returns and allowances. For example, assume that Max Glass sells hurricane glass to Oliver Builders. As part of the sales agreement, Max includes a provision that if Oliver is dissatisfied with the product, Max will grant an allowance on the sales price or agree to take the product back. As a result, similar to a sales discount, Max should record the accounts receivable and related revenue at the amount of consideration expected to be received.

To illustrate, assume on January 4, 2020, Max sells \$5,000 of hurricane glass to Oliver on account. Max records the sale on account as follows.

| January 4, 2020 | | |
|------------------------|-------|-------|
| Accounts Receivable | 5,000 | |
| Sales Revenue | | 5,000 |

On January 16, 2020, Max grants an allowance of \$300 to Oliver because some of the hurricane glass is defective. The entry to record this transaction is as follows.

| January 16, 2020 | | |
|------------------------------|-----|-----|
| Sales Returns and Allowances | 300 | |
| Accounts Receivable | | 300 |

Sales Returns and Allowances is a contra revenue account to Sales Revenue and offsets sales revenue on the income statement.

On January 31, 2020, before preparing financial statements, Max estimates that an additional \$100 in sales returns and allowances will result from the sale to Oliver on January 4, 2020. An adjusting entry to record this additional allowance is as follows.

| January 31, 2020 | | |
|--|-----|-----|
| Sales Returns and Allowances | 100 | |
| Allowance for Sales Returns and Allowances | | 100 |

Allowance for Sales Returns and Allowances is a contra asset account to Accounts Receivable and offsets accounts receivable on the balance sheet. This allowance account shows the

estimated amount of claims Max expects to pay in the future. Max does not credit Accounts Receivable on January 31 because it does not know precisely the amount of accounts receivable that will be subject to an allowance. In addition, assuming that Max has many different customers, it may not know which customers will receive an allowance. The allowance account will absorb any additional write-offs that occur in the future.

As a result of these transactions, Max reports net sales revenue on the income statement of \$4,600 (\$5,000 – \$300 – \$100), which is the amount Max expects to receive from Oliver from the sale of the glass. In addition, Max reports on its balance sheet the estimated net amount expected to be collected of its accounts receivable from Oliver of \$4,600 (\$5,000 – \$300 – \$100).

The use of both Sales Returns and Allowances, and Allowance for Sales Return and Allowances accounts is helpful to management because they help identify potential problems associated with inferior merchandise, inefficiencies in filling orders, or delivery or shipment mistakes.⁵

Time Value of Money

Another variable consideration issue relates to the time value of money. Ideally, a company should measure receivables in terms of their present value, that is, the discounted value of the cash to be received in the future. When expected cash receipts require a waiting period, the receivable face amount is not worth the amount that the company ultimately receives.

To illustrate, assume that **Best Buy** makes a sale on account for \$1,000 with payment due in four months. The applicable annual rate of interest is 12 percent, and payment is made at the end of four months. The present value of that receivable is not \$1,000 but \$961.54 ($\$1,000 \times .96154$). In other words, the \$1,000 Best Buy receives four months from now is not the same as the \$1,000 received today.

Theoretically, any revenue after the period of sale is interest revenue. In practice, companies ignore interest revenue related to accounts receivable because the amount of the discount is not usually material in relation to the net income for the period (see **Underlying Concepts**). The profession specifically excludes from present value considerations “receivables arising from transactions with customers in the normal course of business which are due in customary trade terms not exceeding approximately one year.” [3]

Underlying Concepts

Materiality means it could make a difference to a decision-maker. The FASB believes that present value concepts can be ignored for short-term receivables.

Valuation of Accounts Receivable

LEARNING OBJECTIVE 3

Explain accounting issues related to valuation of accounts receivable.

As one revered accountant aptly noted, the credit manager’s idea of heaven probably would be a place where everyone (eventually) paid his or her debts.⁶ Unfortunately, this situation often does not occur. For example, a customer may not be able to pay because of a decline in its sales

⁵As indicated, at the date of sale, both sales revenue and accounts receivable are recorded at their gross amounts without consideration of sales returns and allowances. Then, at the end of the reporting period, adjusting entries are made, resulting in both sales revenues and accounts receivable being reported at net amounts and which reflect actual and estimated returns and allowances. Most companies follow this adjusting entry approach because estimating net sales at the date of sale is often difficult and time-consuming. In addition, recording accounts receivables net at the sale date may lead to a lack of correspondence between the control account and the subsidiary ledger related to accounts receivable. By waiting to make the necessary adjusting entries at the end of the reporting period, information related to actual sales returns and allowances is available, and a company still achieves the FASB’s objective of reflecting accounts receivable and sales revenue at the expected amount the company is entitled to receive. If Oliver returns the product, Max also accounts for the returned inventory and adjusts Cost of Goods Sold for the cost of the product. We provide expanded discussion related to sales returns and allowances in Chapters 8 and 18.

⁶William J. Vatter, *Managerial Accounting* (Englewood Cliffs, N.J.: Prentice-Hall, 1950), p. 60.

revenue due to a downturn in the economy. Similarly, individuals may be laid off from their jobs or faced with unexpected hospital bills. Companies record credit losses as debits to Bad Debt Expense (or Uncollectible Accounts Expense). Such losses are a normal and necessary risk of doing business on a credit basis.

Two methods are used in accounting for uncollectible accounts: (1) the direct write-off method and (2) the allowance method. The following sections explain these methods.

Direct Write-Off Method for Uncollectible Accounts

Under the **direct write-off method**, when a company determines a particular account to be uncollectible, it charges the loss to Bad Debt Expense. Assume, for example, that on December 10 Cruz Co. writes off as uncollectible Yusado's \$8,000 balance. The entry is:

| December 10 | | |
|---|-------|-------|
| Bad Debt Expense | 8,000 | |
| Accounts Receivable (Yusado) | | 8,000 |
| (To record write-off of Yusado account) | | |

Under this method, Bad Debt Expense will show only **actual losses** from uncollectibles. The company will report accounts receivable at its gross amount.

Supporters of the **direct write-off method** (which is often used for tax purposes) contend that it records facts, not estimates. It assumes that a good account receivable resulted from each sale, and that later events revealed certain accounts to be uncollectible and worthless. From a practical standpoint, this method is simple and convenient to apply. But the direct write-off method is theoretically deficient. It usually fails to record expenses in the same period as associated revenues. Nor does it result in receivables being stated at the net amount expected to be collected on the balance sheet. **As a result, using the direct write-off method is not considered appropriate, except when the amount uncollectible is immaterial.**

Allowance Method for Uncollectible Accounts

The **allowance method** of accounting for bad debts involves estimating uncollectible accounts at the end of each period. This ensures that companies state receivables on the balance sheet at the **net amount expected to be collected** (carrying value of the receivables less estimated uncollectible accounts). At each financial statement date, companies estimate uncollectible accounts using information about past and current events as well as forecasts of future collectibility. As a result, the balance sheet reflects the current estimate of expected uncollectible account losses at the reporting date, and the income statement reflects the effects of credit deterioration (or improvement) that has taken place during the period.

Many companies set their credit policies to provide for a certain percentage of uncollectible accounts. (In fact, many feel that failure to reach that percentage means that they are losing sales due to overly restrictive credit policies.) Thus, the FASB requires the allowance method for financial reporting purposes when bad debts are material in amount. This method has three essential features:

1. Companies **estimate** uncollectible accounts receivable and compare the new estimate to the current balance in the allowance account.
2. Companies debit estimated increases in uncollectibles to Bad Debt Expense and credit them to Allowance for Doubtful Accounts (a contra asset account) through an adjusting entry at the end of each period.
3. When companies write off a specific account, they debit actual uncollectibles to Allowance for Doubtful Accounts and credit that amount to Accounts Receivable.

Recording Estimated Uncollectibles

To illustrate the allowance method, assume that Brown Furniture in 2020, its first year of operations, has credit sales of \$1,800,000. Of this amount, \$150,000 remains uncollected at December 31. The credit manager estimates that \$10,000 of these sales will be uncollectible. The adjusting entry to record the estimated uncollectibles (assuming a zero balance in the allowance account) is:

| December 31, 2020 | | |
|--|--------|--------|
| Bad Debt Expense | 10,000 | |
| Allowance for Doubtful Accounts | | 10,000 |
| (To record estimate of uncollectible accounts) | | |

Brown reports Bad Debt Expense in the income statement as an operating expense. Thus, Brown records the increased estimated uncollectibles as bad debt expense in the period of credit deterioration.

As **Illustration 7.5** shows, the company deducts the allowance account from accounts receivable in the current assets section of the balance sheet.

| Brown Furniture Balance Sheet (partial) | | |
|--|-----------|-----------|
| Current assets | | |
| Cash | | \$ 15,000 |
| Accounts receivable | \$150,000 | |
| Less: Allowance for doubtful accounts | 10,000 | 140,000 |
| Inventory | | 300,000 |
| Prepaid insurance | | 25,000 |
| Total current assets | | \$480,000 |

ILLUSTRATION 7.5

Presentation of Allowance for Doubtful Accounts

Allowance for Doubtful Accounts shows the estimated amount of claims on customers that the company expects it will not collect in the future.⁷ Companies use a contra account instead of a direct credit to Accounts Receivable because they do not know which customers will not pay. The credit balance in the allowance account will absorb the specific write-offs when they occur. The amount of \$140,000 in Illustration 7.5 represents the **net amount expected to be collected** on the accounts receivable at the statement date. **Companies do not close Allowance for Doubtful Accounts at the end of the fiscal year.**

Recording the Write-Off of an Uncollectible Account

When companies have exhausted all means of collecting a past-due account and collection appears impossible, the company should write off the account. In the credit card industry, for example, it is standard practice to write off accounts that are 210 days past due.

To illustrate a receivables write-off, assume that the financial vice president of Brown Furniture authorizes a write-off of the \$1,000 balance owed by Randall Co. on March 1, 2021. The entry to record the write-off is:

| March 1, 2021 | | |
|------------------------------------|-------|-------|
| Allowance for Doubtful Accounts | 1,000 | |
| Accounts Receivable (Randall Co.) | | 1,000 |
| (Write-off of Randall Co. account) | | |

Bad Debt Expense does not increase when the write-off occurs. **Under the allowance method, companies debit every bad debt write-off to the allowance account rather**

⁷The account description employed for the allowance account is usually Allowance for Doubtful Accounts or simply Allowance. *Accounting Trends and Techniques* indicated that approximately 83 percent of the companies surveyed used "allowance" in their description.

than to Bad Debt Expense. A debit to Bad Debt Expense would be incorrect because the company has already recognized the expense when it made the adjusting entry for estimated bad debts. Instead, the entry to record the write-off of an uncollectible account reduces both Accounts Receivable and Allowance for Doubtful Accounts.

Recovery of an Uncollectible Account

Occasionally, a company collects from a customer after it has written off the account as uncollectible. The company makes two entries to record the recovery of a bad debt. (1) It reverses the entry made in writing off the account. This reinstates the customer's account. (2) It journalizes the collection in the usual manner.

To illustrate, assume that on July 1, 2021, Randall Co. pays the \$1,000 amount that Brown had written off on March 1. These are the entries:

| July 1, 2021 | | |
|-----------------------------------|-------|-------|
| Accounts Receivable (Randall Co.) | 1,000 | |
| Allowance for Doubtful Accounts | | 1,000 |
| (To reverse write-off of account) | | |
| | | |
| Cash | 1,000 | |
| Accounts Receivable (Randall Co.) | | 1,000 |
| (Collection of account) | | |

Note that the recovery of a bad debt, like the write-off of a bad debt, affects **only balance sheet accounts**. The net effect of the two entries above is a debit to Cash and a credit to Allowance for Doubtful Accounts for \$1,000.⁸

Estimating the Allowance

To simplify the preceding explanation, we assumed we knew the amount of the expected uncollectibles. In “real life,” companies must estimate that amount when they use the allowance method. As indicated, expected uncollectible accounts are estimated based on information about past events (loss experience), adjusted for current conditions and reasonable forecasts of factors that would affect uncollectible accounts. While much judgment is involved, the goal is to develop the best estimate of expected uncollectible receivables.⁹

For example, a company can estimate the percentage of its outstanding receivables that will become uncollectible, without identifying specific accounts. This procedure provides a reasonably accurate estimate of the receivables' realizable value. Hence, it is referred to as the **percentage-of-receivables approach**.¹⁰

Companies may apply this method using one **composite rate** that reflects an estimate of the uncollectible receivables. Or, companies may set up an **aging schedule** of accounts receivable, which applies a different percentage based on past experience to the various age categories. An aging schedule also identifies which accounts require special attention by indicating the extent to which certain accounts are past due. The schedule of Wilson & Co. in **Illustration 7.6** is an example.

⁸If using the direct write-off approach, the company debits the amount collected to Cash and credits a revenue account entitled Uncollectible Amounts Recovered, with proper notation in the customer's account.

⁹In contrast to prior impairment rules, which recorded bad debts only when a loss had occurred, companies must adjust estimates for the possibility that expectations about losses may not be reflected in historical data. That is, companies are required to estimate credit losses over the entire contractual term of the receivables. [4]

¹⁰In general, estimating bad debt expense with a focus on the income statement (e.g., percentage-of-sales) is not appropriate. That is, the goal is to arrive at an estimate in the allowance, which reduces the receivables amount to the net amount expected to be collected. While a percentage-of-sales approach may provide a better “matching” of bad debt expense to sales, the balance in the allowance likely will not provide a representationally faithful estimate of the net amount expected to be collected.

ILLUSTRATION 7.6

Accounts Receivable Aging Schedule

| Wilson & Co. Aging Schedule | | | | | | |
|--|--------------------|------------------|---|----------------------------------|-----------------|------------------|
| Name of Customer | Balance Dec. 31 | Under 30 days | 30–60 days | 61–90 days | 91–120 days | Over 120 days |
| Western Stainless Steel Corp. | \$ 98,000 | \$ 15,000 | \$ 65,000 | \$18,000 | | |
| Brockway Steel Company | 320,000 | 280,000 | 40,000 | | | |
| Freeport Sheet & Tube Co. | 55,000 | | | | | \$55,000 |
| Allegheny Iron Works | 74,000 | 50,000 | 10,000 | | \$14,000 | |
| | <u>\$547,000</u> | <u>\$345,000</u> | <u>\$115,000</u> | <u>\$18,000</u> | <u>\$14,000</u> | <u>\$55,000</u> |
| | | | Percentage Estimated to Be Uncollectible* | Required Balance in Allowance | | |
| Age | Amount | | | | | |
| Under 30 days | \$345,000 | | 0.8% | | \$ 2,760 | |
| 30–60 days | 115,000 | | 4.0 | | 4,600 | |
| 61–90 days | 18,000 | | 15.0 | | 2,700 | |
| 91–120 days | 14,000 | | 20.0 | | 2,800 | |
| Over 120 days | 55,000 | | 25.0 | | 13,750 | |
| | | | | | <u>\$26,610</u> | |
| Year-end balance of allowance for doubtful accounts | | | | | | |

* Estimates are based on historical loss rates, taking into consideration whether and, if so, how the historical loss rates differ from what is currently expected over the life of the trade receivables (on the basis of current conditions and reasonable and supportable forecasts about the future).

Wilson reports bad debt expense of \$26,610 for this year, assuming that no balance existed in the allowance account.¹¹

To change the illustration slightly, **assume that the allowance account had a credit balance of \$800 before adjustment.** In this case, Wilson adds \$25,810 (\$26,610 – \$800) to the allowance account and makes the following entry.

| | | |
|---------------------------------|--------|--------|
| Bad Debt Expense | 25,810 | |
| Allowance for Doubtful Accounts | | 25,810 |

Wilson therefore states the balance in the allowance account at \$26,610. **If the Allowance for Doubtful Accounts balance before adjustment had a debit balance of \$200,** then Wilson records bad debt expense of \$26,810 (\$26,610 desired balance + \$200 debit balance). In the percentage-of-receivables method, Wilson cannot ignore the balance in the allowance account because the percentage is related to a real account (Accounts Receivable).

Companies do not prepare an aging schedule only to determine bad debt expense. They often prepare it as a control device to determine the composition of receivables and to identify delinquent accounts. In the Wilson example, the aging analysis was used to classify receivables according to a risk factor (days past due) that is related to the collectibility of the receivables. Other approaches are acceptable as long as the estimation techniques are applied consistently over time with the objective of faithfully estimating expected uncollectible accounts. [5] For example, a company may use historical loss ratios for customers with different credit ratings as a basis for estimating uncollectible accounts. Or, a company may utilize a probability-weighted discounted cash flow model (as illustrated in Chapter 6) to estimate expected credit losses. The discounted cash flow approach is generally appropriate when analyzing an individual loan or receivable (we present a comprehensive example of this approach in Appendix 7B).

¹¹The expected loss model does not specify a recognition threshold (e.g., probable and estimable) to record an allowance for uncollectible accounts. As a result, companies must measure expected uncollectible accounts and record bad debt expense on all receivables, even those with a low risk of loss (e.g., receivables that are not past due). Thus, in the Wilson example, an estimate for uncollectible accounts is developed for balances that are under 30 days past due.

In summary, the primary objective for financial statement purposes is to report receivables in the balance sheet at the net amount expected to be collected. The allowance for doubtful accounts as a percentage of receivables will vary, depending on the industry and the economic climate. Companies such as **Eastman Kodak**, **General Electric**, and **Monsanto** have recorded allowances ranging from \$3 to \$6 per \$100 of accounts receivable. Other large companies, such as **CPC International** (\$1.48), **Texaco** (\$1.23), and **USX Corp.** (\$0.78), have had bad debt allowances of less than \$1.50 per \$100. At the other extreme are hospitals that allow for \$15 to \$20 per \$100 of accounts receivable.

Regardless of the estimation approach used, determining the expense associated with uncollectible accounts requires a large degree of judgment. Recent concern exists that some banks use this judgment to manage earnings. By overestimating the amounts of uncollectible loans in a good earnings year, the bank can “save for a rainy day” in a future period. In future (less-profitable) periods, banks can reduce the overly conservative allowance for loan loss account to increase earnings.¹²

What Do the Numbers Mean? Please Release Me?

As the economy climbed out of the great recession of 2008, several U.S. banks reported increases in net income compared to the same quarter in the previous year. How did the market greet this news? With a resounding “blah.” For example, **Wells Fargo**’s report led to a share price decline of 8.4 percent, and **Citigroup** saw a 1.7 percent drop in its share price when it announced earnings. What gives?

It seems that the source of earnings increase matters to the market. And in the case of banks, a significant portion of these

earnings increases were the result of decreases in the banks’ bad debt expense, not increased revenues on loans and investments. These decreases happened when the banks’ reserves that had accumulated in the allowance for loan losses were judged to be too high. How big was the effect? As shown in the following chart, of the \$14.3 billion in earnings reported by the top 10 U.S. banks, \$3.5 billion came from releasing loan loss reserves. For Citi, without the reserve release, it would have reported a loss.

As shown in the left side of the chart, the 10 largest banks had \$127.2 billion in the allowance for loan losses at the end of 2011, and \$26.7 billion was drawn down (released) in that same year.

So is this a problem? Supposedly, reserves should be released when there is a decline in the likelihood that loans will not be paid. However, some market-watchers doubt that banks can afford

to keep up the pace of reserve releases. Lowering reserves could increase pressure on profits that are being hit by slow economic growth, low interest rates, and other costs. For example, in a recent quarter, U.S. banks experienced an earnings decline of 7.3 percent compared to the same quarter from a year earlier. The culprit? Big banks experienced increased costs to settle legal cases related to

¹²The SEC brought action against **Suntrust Banks**, requiring a reversal of \$100 million of bad debt expense. This reversal increased after-tax profit by \$61 million. Recall from our earnings management discussion in Chapter 4 that increasing or decreasing income through management manipulation can reduce the quality of financial reports.

sales of risky mortgage securities before the financial crisis. Three of the biggest United States banks—**JPMorgan Chase**, **Bank of America**, and **Citigroup**—together posted \$4.4 billion in legal costs during the quarter. According to one analyst, “The releases are masking some horrible operating performance. . . . The bottom line is your earnings power is decreasing.”

To be fair, analysts often criticize banks when they increase the allowance for loan losses during profitable periods. In some cases, the banks are accused of managing earnings. That is, in good times they increase loan loss reserves, which reduces (or

smoothes) earnings. Then in bad times, the reserves can be released, thereby increasing earnings. The SEC has reprimanded some banks for this alleged earnings management—in not only the tough times, but the good times as well.

Rapoport, “Banks Depleting Earnings Backstop: Days Numbered for Using Reserves to Increase Profit,” *Wall Street Journal* (February 8, 2012), p. C1; and Associated Press, “Legal Costs Weigh Down U.S. Banks Earnings,” *The New York Times* (February 24, 2015).

Notes Receivable

LEARNING OBJECTIVE 4

Explain accounting issues related to recognition and valuation of notes receivable.

A note receivable is supported by a formal **promissory note**, a written promise to pay a certain sum of money at a specific future date. Such a note is a negotiable instrument that a **maker** signs in favor of a designated **payee** who may legally and readily sell or otherwise transfer the note to others. Although all notes contain an interest element because of the time value of money, companies classify them as interest-bearing or non-interest-bearing. **Interest-bearing notes** have a stated rate of interest. **Zero-interest-bearing notes** (non-interest-bearing) include interest as part of their face amount. Notes receivable are considered fairly liquid, even if long-term, because companies may easily convert them to cash (although they might pay a fee to do so).

Companies frequently accept notes receivable from customers who need to extend the payment period of an outstanding receivable. Or they require notes from high-risk or new customers. In addition, companies often use notes in loans to employees and subsidiaries, and in the sales of property, plant, and equipment. In some industries (e.g., the pleasure and sport boat industry), notes support all credit sales. The majority of notes, however, originate from lending transactions. The basic issues in accounting for notes receivable are the same as those for accounts receivable: **recognition, valuation, and disposition**.

Recognition of Notes Receivable

Companies record and report long-term notes receivable at the **present value of the cash they expect to collect**. When the interest stated on an interest-bearing note equals the effective (market) rate of interest, the note sells at face value.¹³ When the stated rate differs from the market rate, the cash exchanged (present value) differs from the face value of the note. Companies then record this difference, either a discount or a premium, and amortize it over the life of a note to approximate the effective (market) interest rate. This illustrates one of the many situations in which time value of money concepts are applied to accounting measurement.

Note Issued at Face Value

To illustrate the discounting of a note issued at face value, assume that Bigelow Corp. lends Scandinavian Imports \$10,000 in exchange for a \$10,000, three-year note bearing interest at 10 percent annually. The market rate of interest for a note of similar risk is also 10 percent. We show the time diagram depicting both cash flows in **Illustration 7.7**.

¹³The **stated interest rate**, also referred to as the face rate or the coupon rate, is the rate contracted as part of the note. The **effective-interest rate**, also referred to as the market rate or the effective yield, is the rate used in the market to determine the value of the note—that is, the discount rate used to determine present value.

ILLUSTRATION 7.7
Time Diagram for Note Issued at Face Value

Bigelow computes the present value or exchange price of the note as shown in **Illustration 7.8**.

ILLUSTRATION 7.8
Present Value of Note—Stated and Market Rates the Same

| | |
|---|-----------------|
| Face value of the note | \$10,000 |
| Present value of the principal: \$10,000 ($PVF_{3,10\%}$) = \$10,000 × .75132 | \$7,513 |
| Present value of the interest: \$1,000 ($PVF-OA_{3,10\%}$) = \$1,000 × 2.48685 | <u>2,487</u> |
| Present value of the note | <u>(10,000)</u> |
| Difference | <u>\$ -0-</u> |

In this case, the present value of the note equals its face value because the effective (market) and stated rates of interest are also the same. Bigelow records the receipt of the note as follows.

| | | |
|------------------|--------|--------|
| Notes Receivable | 10,000 | |
| Cash | | 10,000 |

Bigelow recognizes the interest earned each year as follows.

| | | |
|-----------------------------------|-------|-------|
| Cash | 1,000 | |
| Interest Revenue (\$10,000 × .10) | | 1,000 |

Note Not Issued at Face Value

Zero-Interest-Bearing Notes If a company receives a zero-interest-bearing note, its present value is the cash paid to the issuer. Because the company knows both the future amount and the present value of the note, it can compute the interest rate. This rate is often referred to as the **implicit interest rate**. Companies record the difference between the future (face) amount and the present value (cash paid) as a discount and amortize it to interest revenue over the life of the note.

To illustrate, Jeremiah Company receives a three-year, \$10,000 zero-interest-bearing note, the present value of which is \$7,721.80. The implicit rate that equates the total cash to be received (\$10,000 at maturity) to the present value of the future cash flows (\$7,721.80) is 9 percent (the present value of 1 for three periods at 9 percent is .77218). We show the time diagram depicting the one cash flow in **Illustration 7.9**.

ILLUSTRATION 7.9
Time Diagram for Zero-Interest-Bearing Note

You can use a financial calculator to solve this problem.

Calculator Solution for Present Value of Note Receivable

| | Inputs | Answer |
|-----|--------|---------|
| N | 3 | |
| I | 10 | |
| PV | ? | -10,000 |
| PMT | 1,000 | |
| FV | 10,000 | |

Jeremiah records the transaction as follows.

| | | |
|--|-----------|----------|
| Notes Receivable | 10,000.00 | |
| Discount on Notes Receivable (\$10,000 – \$7,721.80) | | 2,278.20 |
| Cash | | 7,721.80 |

Discount on Notes Receivable is a valuation account. Companies report it on the balance sheet as a contra asset account to notes receivable. They then amortize the discount, and recognize interest revenue annually using the **effective-interest method**. **Illustration 7.10** shows the three-year discount amortization and interest revenue schedule.

Calculator Solution for Effective-Interest Rate on Note

| | Inputs | Answer |
|-----|-----------|--------|
| N | 3 | |
| I | ? | 9 |
| PV | -7,721.80 | |
| PMT | 0 | |
| FV | 10,000 | |

| Schedule of Note Discount Amortization | | | | |
|---|------------------|------------------------|------------------------|-------------------------------|
| Effective-Interest Method | | | | |
| 0% Note Discounted at 9% | | | | |
| | Cash Received | Interest Revenue | Discount Amortized | Carrying Amount of Note |
| Date of issue | | | | \$ 7,721.80 |
| End of year 1 | \$ -0- | \$ 694.96 ^a | \$ 694.96 ^b | 8,416.76 ^c |
| End of year 2 | -0- | 757.51 | 757.51 | 9,174.27 |
| End of year 3 | -0- | 825.73 ^d | 825.73 | 10,000.00 |
| | <u>\$ -0-</u> | <u>\$2,278.20</u> | <u>\$2,278.20</u> | |

^a\$7,721.80 × .09 = \$694.96 ^c\$7,721.80 + \$694.96 = \$8,416.76

^b\$694.96 – \$0 = \$694.96 ^d5¢ adjustment to compensate for rounding

ILLUSTRATION 7.10
Discount Amortization Schedule—Effective-Interest Method

Jeremiah records interest revenue at the end of the first year using the effective-interest method as follows.

| | | |
|-------------------------------------|--------|--------|
| Discount on Notes Receivable | 694.96 | |
| Interest Revenue (\$7,721.80 × .09) | | 694.96 |

The amount of the discount, \$2,278.20 in this case, represents the interest revenue Jeremiah will receive from the note over the three years.

Interest-Bearing Notes Often the stated rate and the effective rate differ. The zero-interest-bearing note is one example.

To illustrate a more common situation, assume that Morgan Corp. makes a loan to Marie Co. and receives in exchange a three-year, \$10,000 note bearing interest at 10 percent annually. The market rate of interest for a note of similar risk is 12 percent. We show the time diagram depicting both cash flows in **Illustration 7.11**.

ILLUSTRATION 7.11
Time Diagram for Interest-Bearing Note

Morgan computes the present value of the two cash flows as shown in **Illustration 7.12**.

ILLUSTRATION 7.12**Computation of Present Value—Effective Rate Different from Stated Rate**

| | | |
|--|--------------|----------------|
| Face value of the note | | \$10,000 |
| Present value of the principal: | | |
| \$10,000 ($PVF_{3,12\%}$) = $\$10,000 \times .71178$ | \$7,118 | |
| Present value of the interest: | | |
| \$1,000 ($PVF-OA_{3,12\%}$) = $\$1,000 \times 2.40183$ | <u>2,402</u> | |
| Present value of the note | | <u>(9,520)</u> |
| Difference (Discount) | | <u>\$ 480</u> |

In this case, because the effective rate of interest (12 percent) exceeds the stated rate (10 percent), the present value of the note is less than the face value. That is, Morgan exchanged the note at a **discount**. Morgan records the receipt of the note at a discount as follows.

| | | |
|------------------------------|--------|--------------|
| Notes Receivable | 10,000 | |
| Discount on Notes Receivable | | 480 |
| Cash | | <u>9,520</u> |

Morgan then amortizes the discount and recognizes interest revenue annually using the **effective-interest method**. **Illustration 7.13** shows the three-year discount amortization and interest revenue schedule.

ILLUSTRATION 7.13**Discount Amortization Schedule—Effective-Interest Method**

| Schedule of Note Discount Amortization | | | | |
|---|----------------------|--|-----------------------|-------------------------------|
| Effective-Interest Method | | | | |
| 10% Note Discounted at 12% | | | | |
| | Cash Received | Interest Revenue | Discount Amortized | Carrying Amount of Note |
| Date of issue | | | | \$ 9,520 |
| End of year 1 | \$1,000 ^a | \$1,142 ^b | \$142 ^c | 9,662 ^d |
| End of year 2 | 1,000 | 1,159 | 159 | 9,821 |
| End of year 3 | <u>1,000</u> | <u>1,179</u> | <u>179</u> | 10,000 |
| | <u>\$3,000</u> | <u>\$3,480</u> | <u>\$480</u> | |
| ^a $\$10,000 \times .10 = \$1,000$ | | ^c $\$1,142 - \$1,000 = \$142$ | | |
| ^b $\$9,520 \times .12 = \$1,142$ | | ^d $\$9,520 + \$142 = \$9,662$ | | |

On the date of issue, the note has a present value of \$9,520. Its unamortized discount—additional interest revenue spread over the three-year life of the note—is \$480.

At the end of year 1, Morgan receives \$1,000 in cash. But its interest revenue is \$1,142 ($\$9,520 \times .12$). The difference between \$1,000 and \$1,142 is the amortized discount, \$142. Morgan records receipt of the annual interest and amortization of the discount for the first year as follows (amounts per amortization schedule).

| | | |
|------------------------------|-------|--------------|
| Cash | 1,000 | |
| Discount on Notes Receivable | | 142 |
| Interest Revenue | | <u>1,142</u> |

The carrying amount of the note is now \$9,662 ($\$9,520 + \142). Morgan repeats this process until the end of year 3.

When the present value exceeds the face value, the note is exchanged at a premium. Companies record the premium on a note receivable as a debit and amortize it using the effective-interest method over the life of the note as annual reductions in the amount of interest revenue recognized.

Notes Received for Property, Goods, or Services When a **note is received in exchange for property, goods, or services** in a bargained transaction entered into at arm's length, the stated interest rate is presumed to be fair unless:

1. No interest rate is stated, or
2. The stated interest rate is unreasonable, or
3. The face amount of the note is materially different from the current cash sales price for the same or similar items or from the current fair value of the debt instrument. [6]

In these circumstances, the company measures the present value of the note by the fair value of the property, goods, or services or by an amount that reasonably approximates the fair value of the note.

To illustrate, Oasis Development Co. sold a corner lot to Rusty Pelican as a restaurant site. Oasis accepted in exchange a five-year note having a maturity value of \$35,247 and no stated interest rate. The land originally cost Oasis \$14,000. At the date of sale, the land had a fair value of \$20,000. Given the criterion above, Oasis uses the fair value of the land, \$20,000, as the present value of the note. Oasis therefore records the sale as:

| | | |
|--|--------|--------|
| Notes Receivable | 35,247 | |
| Discount on Notes Receivable (\$35,247 – \$20,000) | | 15,247 |
| Land | | 14,000 |
| Gain on Disposal of Land (\$20,000 – \$14,000) | | 6,000 |

Oasis amortizes the discount to interest revenue over the five-year life of the note using the effective-interest method.

Choice of Interest Rate

In note transactions, other factors involved in the exchange, such as the fair value of the property, goods, or services, determine the effective or real interest rate. But, if a company cannot determine that fair value and if the note has no ready market, determining the present value of the note is more difficult. To estimate the present value of a note under such circumstances, the company must approximate an applicable interest rate that may differ from the stated interest rate. This process of interest-rate approximation is called **imputation**. The resulting interest rate is called an **imputed interest rate**.

The prevailing rates for similar instruments, from issuers with similar credit ratings, affect the choice of a rate. Restrictive covenants, collateral, payment schedule, and the existing prime interest rate also impact the choice. A company determines the imputed interest rate when it receives the note. It ignores any subsequent changes in prevailing interest rates.

Valuation of Notes Receivable

Like accounts receivable, companies record and report short-term notes receivable at their net amount expected to be collected—that is, at their face amount less all necessary allowances. The primary notes receivable allowance account is Allowance for Doubtful Accounts. The computations and estimations involved in valuing short-term notes receivable and in recording bad debt expense and the related allowance **exactly parallel that for trade accounts receivable**. Companies estimate the amount of uncollectibles by an analysis of the receivables.

Long-term notes receivable involve additional estimation problems. For example, the value of a note receivable can change significantly over time from its original cost. That is, with the passage of time, historical numbers become less and less relevant. As discussed earlier (in Chapters 2, 5, and 6), the FASB requires that for financial instruments such as receivables, companies disclose not only their cost but also their fair value in the notes to the financial statements.

Other Issues

LEARNING OBJECTIVE 5

Explain additional accounting issues related to accounts and notes receivable.

Three additional special issues for accounting and reporting of receivables relate to the following.

1. Fair value option.
2. Disposition of receivables.
3. Presentation and disclosure.

Fair Value Option

Companies have the option to use fair value as the basis of measurement in the financial statements. [7] The FASB believes that fair value measurement for financial instruments provides more relevant and understandable information than historical cost. It considers fair value to be more relevant because it reflects the current cash equivalent value of financial instruments. As a result, companies now have the option to record fair value in their accounts for most financial instruments, including receivables.

If companies choose the **fair value option**, the receivables are recorded at fair value, with unrealized holding gains or losses reported as part of net income. An **unrealized holding gain or loss** is the net change in the fair value of the receivable from one period to another, exclusive of interest revenue. As a result, the company reports the receivable at fair value each reporting date. In addition, it reports the change in value as part of net income (see **Global View**).

Companies may elect to use the fair value option at the time the financial instrument is originally recognized or when some event triggers a new basis of accounting (such as when a business acquisition occurs). If a company elects the fair value option for a financial instrument, it must continue to use fair value measurement for that instrument until the company no longer owns this instrument. If the company does not elect the fair value option for a given financial instrument at the date of recognition, it may not use this option on that specific instrument in subsequent periods.

Global View

IFRS also has the fair value option.

Recording Fair Value Option

Assume that Escobar Company receives a note receivable from one of its customers for \$620,000 on December 31, 2019. Therefore, at December 31, 2019, the fair value and carrying value of the notes receivable is \$620,000. Escobar decides to use the fair value option for this receivable. Having elected to use the fair value option, Escobar must value these receivables **at fair value in all subsequent periods in which it holds these receivables**. Similarly, if Escobar elects *not* to use the fair value option, it must use its carrying amount for all future periods.

On December 31, 2020, the notes receivable has a carrying value of \$620,000 and a fair value of \$810,000. Because Escobar has elected the fair value option, it reports the receivable at fair value, with any unrealized holding gains and losses reported as part of net income. The **unrealized holding gain** is the difference between the fair value and the carrying amount at December 31, 2020, which for Escobar is \$190,000 (\$810,000 – \$620,000). Escobar makes an adjusting entry to record the increase in value of notes receivable and to record the unrealized holding gain, as follows.

| December 31, 2020 | | |
|--|---------|---------|
| Notes Receivable | 190,000 | |
| Unrealized Holding Gain or Loss—Income | | 190,000 |

Escobar adds the difference between fair value and the cost of the notes receivable to arrive at the fair value reported on the balance sheet. In subsequent periods, the company will report **any change in fair value** as an unrealized holding gain or loss. For example, if at December 31, 2021, the fair value of the notes receivable is \$800,000, Escobar recognizes an unrealized holding loss of \$10,000 (\$810,000 – \$800,000) and reduces the Notes Receivable account.

Disposition of Accounts and Notes Receivable

In the normal course of events, companies collect accounts and notes receivable when due and then remove them from the books. However, the growing size and significance of credit sales and receivables has led to changes in this “normal course of events.” **In order to accelerate the receipt of cash from receivables, the owner may transfer accounts or notes receivables to another company for cash.**

There are various reasons for this early transfer. First, for competitive reasons, providing sales financing for customers is virtually mandatory in many industries. In the sale of durable

goods, such as automobiles, trucks, industrial and farm equipment, computers, and appliances, most sales are on an installment contract basis. Many major companies in these industries have created wholly owned subsidiaries specializing in receivables financing. For example, **Ford** has **Ford Motor Credit**, and **John Deere** has **John Deere Credit**.

Second, the **holder** may sell receivables because money is tight and access to normal credit is unavailable or too expensive. Also, a firm may sell its receivables, instead of borrowing, to avoid violating existing lending agreements.

Finally, billing and collection of receivables are often time-consuming and costly. Credit card companies such as **MasterCard**, **Visa**, **American Express**, **Diners Club**, **Discover**, and others take over the collection process and provide merchants with immediate cash.¹⁴

The transfer of receivables to a third party for cash happens in one of two ways:

1. Sales of receivables.
2. Secured borrowing.

Sales of Receivables

Sales of receivables have increased substantially in recent years. A common type is a sale to a factor. **Factors** are finance companies or banks that buy receivables from businesses for a fee and then collect the remittances directly from the customers. **Factoring receivables** is traditionally associated with the textile, apparel, footwear, furniture, and home furnishing industries.¹⁵ **Illustration 7.14** shows a typical factoring arrangement.

ILLUSTRATION 7.14

Basic Procedures in Factoring

In a factoring or a securitization transaction, a company sells receivables on either a **without recourse** or a **with recourse** basis.¹⁶

Sale without Recourse For receivables sold **without recourse** (nonrecourse), the seller of the receivable assumes no responsibility for any credit losses associated with the transferred receivables. The transfer of accounts receivable in a nonrecourse transaction is therefore an

¹⁴Some **purchasers** of receivables buy them to obtain the legal protection of ownership rights afforded a purchaser of assets versus the lesser rights afforded a secured creditor. In addition, banks and other lending institutions may need to purchase receivables because of legal lending limits. That is, they cannot make any additional loans but they can buy receivables and charge a fee for this service.

¹⁵Credit cards like **MasterCard** and **Visa** are a type of factoring arrangement. Typically, the purchaser of the receivable charges a $\frac{3}{4}$ – $1\frac{1}{2}$ percent commission of the receivables purchased (the commission is 4–5 percent for credit card factoring).

¹⁶**Recourse** is the right of a transferee of receivables to receive payment from the transferor of those receivables for (1) failure of the debtors to pay when due, (2) the effects of prepayments, or (3) adjustments resulting from defects in the eligibility of the transferred receivables. [8]

outright sale of the receivables both in form (transfer of title) and substance (transfer of control). In nonrecourse transactions (as in any sale of assets), the seller:

1. Debits Cash for the proceeds and credits Accounts Receivable for the face value of the receivables.
2. Recognizes the difference, reduced by any provision for probable adjustments (discounts, returns, allowances, etc.), as Loss on Sale of Receivables.
3. Uses a Due from Factor account (reported as a receivable) to account for the proceeds retained by the factor to cover probable sales discounts, sales returns, and sales allowances.

To illustrate, Crest Textiles, Inc. factors \$500,000 of accounts receivable with Commercial Factors, Inc., on a **without recourse** basis. Crest Textiles transfers the receivable records to Commercial Factors, which will receive the collections. Commercial Factors assesses a finance charge of 3 percent of the amount of accounts receivable and retains an amount equal to 5 percent of the accounts receivable (for probable adjustments). Crest Textiles and Commercial Factors make the journal entries shown in **Illustration 7.15** for the receivables transferred without recourse.

ILLUSTRATION 7.15 Entries for Sale of Receivables without Recourse

| Crest Textiles, Inc. | | Commercial Factors, Inc. | |
|-----------------------------|---------------------|----------------------------------|---------|
| Cash | 460,000 | Accounts (Notes) Receivable | 500,000 |
| Due from Factor | 25,000* | Due to Customer (Crest Textiles) | 25,000 |
| Loss on Sale of Receivables | 15,000** | Interest Revenue | 15,000 |
| Accounts (Notes) Receivable | 500,000 | Cash | 460,000 |
| *(.05 × \$500,000) | **(.03 × \$500,000) | | |

In recognition of the sale of receivables, Crest Textiles records a loss of \$15,000. The factor's net income will be the difference between the interest revenue of \$15,000 and the amount of any uncollectible receivables.

Sale with Recourse For receivables sold **with recourse**, the seller guarantees payment to the purchaser in the event the debtor fails to pay. To record this type of transaction, the seller uses a **financial components approach** because the seller has a continuing involvement with the receivable. Values are now assigned to such components as the recourse provision, servicing rights, and agreement to reacquire. In this approach, each party to the sale only recognizes the assets controlled and the liabilities incurred after the sale.

To illustrate, assume the same information as in Illustration 7.15 for Crest Textiles and for Commercial Factors, except that Crest Textiles sold the receivables on a with recourse basis. Crest Textiles determines that this recourse liability has a fair value of \$6,000. To determine the loss on the sale of the receivables, Crest Textiles computes the net proceeds from the sale as shown in **Illustration 7.16**.

ILLUSTRATION 7.16

Net Proceeds Computation

| | | |
|--------------------------|-----------|------------------|
| Cash received | \$460,000 | |
| Due from factor | 25,000 | \$485,000 |
| Less: Recourse liability | | 6,000 |
| Net proceeds | | \$479,000 |

Net proceeds are cash or other assets received in a sale less any liabilities incurred. Crest Textiles then computes the loss as shown in **Illustration 7.17**.

ILLUSTRATION 7.17

Loss on Sale Computation

| | |
|------------------------------------|------------------|
| Carrying (book) value | \$500,000 |
| Net proceeds | 479,000 |
| Loss on sale of receivables | \$ 21,000 |

Illustration 7.18 shows the journal entries for both Crest Textiles and Commercial Factors for the receivables sold with recourse.

| Crest Textiles, Inc. | | Commercial Factors, Inc. | |
|----------------------|---------|--------------------------|---------|
| Cash | 460,000 | Accounts Receivable | 500,000 |
| Due from Factor | 25,000 | Due to Customer | |
| Loss on Sale of | | (Crest Textiles) | 25,000 |
| Receivables | 21,000 | Interest Revenue | 15,000 |
| Accounts (Notes) | | Cash | 460,000 |
| Receivable | 500,000 | | |
| Recourse Liability | 6,000 | | |

ILLUSTRATION 7.18

Entries for Sale of Receivables with Recourse

In this case, Crest Textiles recognizes a loss of \$21,000. In addition, it records a liability of \$6,000 to indicate the probable payment to Commercial Factors for uncollectible receivables. If Commercial Factors collects all the receivables, Crest Textiles eliminates its recourse liability and increases income. Commercial Factors' net income is the interest revenue of \$15,000. It will have no bad debts related to these receivables.

Secured Borrowing

A company like **Scotts Miracle-Gro** often uses receivables as collateral in a borrowing transaction. In fact, a creditor like **U.S. Bank** often requires that the debtor designate (assign) or pledge¹⁷ receivables as security for the loan. If the loan is not paid when due, the creditor can convert the collateral to cash—that is, collect the receivables.

To illustrate, on March 1, 2020, Howat Mills, Inc. provides (assigns) \$700,000 of its accounts receivable to Citizens Bank as collateral for a \$500,000 note. Here is what happens under this arrangement:

- Howat Mills continues to collect the accounts receivable; the account debtors are not notified of the arrangement.
- Citizens Bank assesses a finance charge of 1 percent of the accounts receivable and interest on the note of 12 percent.
- Howat Mills makes monthly payments to the bank for all cash it collects on the receivables.

Illustration 7.19 shows the entries for the secured borrowing for Howat Mills and Citizens Bank.

In addition to recording the collection of receivables, Howat Mills must recognize all discounts, returns and allowances, and bad debts. Each month Howat Mills uses the proceeds from the collection of the accounts receivable to retire the note obligation. In addition, it pays interest on the note.¹⁸

Secured Borrowing versus Sale

As discussed previously, the FASB concluded that a sale occurs only if the seller surrenders control of the receivables to the buyer. The following three conditions must be met before a company can record a sale:

1. The transferred asset has been isolated from the transferor (put beyond reach of the transferor and its creditors).

¹⁷If a company transfers the receivables for custodial purposes, the custodial arrangement is often referred to as a **pledge**.

¹⁸What happens if Citizens Bank collected the transferred accounts receivable rather than Howat Mills? Citizens Bank would simply remit the cash proceeds to Howat Mills, and Howat Mills would make the same entries shown in Illustration 7.19, according to the payment schedule in the secured borrowing agreement. As a result, Howat Mills reports these "collateralized" receivables as an asset on the balance sheet.

ILLUSTRATION 7.19 Entries for Transfer of Receivables—Secured Borrowing

| <u>Howat Mills, Inc.</u> | | <u>Citizens Bank</u> | |
|---|---------|----------------------|---------|
| Transfer of accounts receivable and issuance of note on March 1, 2020 | | | |
| Cash | 493,000 | Notes Receivable | 500,000 |
| Interest Expense (.01 × \$700,000) | 7,000 | Interest Revenue | 7,000 |
| Notes Payable | 500,000 | Cash | 493,000 |
| Collection in March of \$440,000 of accounts less cash discounts of \$6,000 plus receipt of \$14,000 sales returns | | | |
| Cash | 434,000 | (No entry) | |
| Sales Discounts | 6,000 | | |
| Sales Returns and Allowances | 14,000 | | |
| Accounts Receivable (\$440,000 + \$14,000) | 454,000 | | |
| Remitted March collections plus accrued interest to the bank on April 1, 2020 | | | |
| Interest Expense ($\$500,000 \times .12 \times \frac{1}{12}$) | 5,000 | Cash | 439,000 |
| Notes Payable | 434,000 | Interest Revenue | 5,000 |
| Cash | 439,000 | Notes Receivable | 434,000 |
| Collection in April of the balance of accounts less \$2,000 written off as uncollectible | | | |
| Cash | 244,000 | (No entry) | |
| Allowance for Doubtful Accounts | 2,000 | | |
| Accounts Receivable (\$700,000 – \$454,000) | 246,000 | | |
| Remitted the balance due of \$66,000 (\$500,000 – \$434,000) on the note plus interest on May 1, 2020 | | | |
| Interest Expense ($\$66,000 \times .12 \times \frac{1}{12}$) | 660 | Cash | 66,660 |
| Notes Payable | 66,000 | Interest Revenue | 660 |
| Cash | 66,660 | Notes Receivable | 66,000 |

- The transferees have obtained the right to pledge or exchange either the transferred assets or beneficial interests in the transferred assets.
- The transferor does not maintain effective control over the transferred assets through an agreement to repurchase or redeem them before their maturity.

If the three conditions are met, a sale occurs. Otherwise, the transferor should record the transfer as a secured borrowing. For example, Crest Textiles makes the following entry if the sale of receivables does not meet the sale conditions.

| | | |
|-----------------|---------|---------|
| Cash | 475,000 | |
| Due from Factor | 25,000 | |
| Notes Payable | | 500,000 |

If sale accounting is appropriate, a company must still consider assets obtained and liabilities incurred in the transaction. **Illustration 7.20** shows the rules of accounting for transfers of receivables.

As indicated, if there is continuing involvement in a sale transaction, a company must record the assets obtained and liabilities incurred (see **Global View**).¹⁹

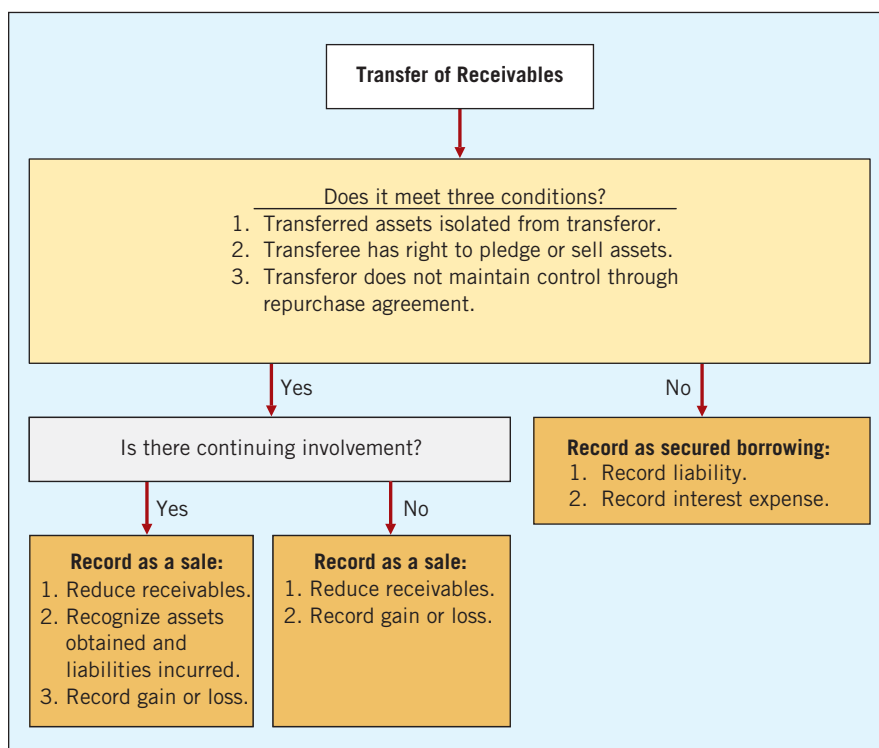

Global View

With recent changes in U.S. GAAP, the accounting guidance for transfers is substantially converged.

¹⁹In response to the financial crisis, which was partly caused by securitizations gone bad (see the “What Do the Numbers Mean?” box entitled “Securitizations—Good or Bad?”), the FASB issued new accounting rules that, in general, will result in reduced sale treatment for transfers of receivables. First, rules were issued to limit the types of trusts that can be used in a securitization. [9] Second, the FASB issued enhanced guidance on transfers of assets in **repurchase agreements**. These arrangements were used by some financial institutions during the financial crisis (e.g., **Lehman Brothers’** Repo 105) to “window-dress” their balance sheets and show lower leverage. The new rules tighten the requirements for meeting the control criterion, which raises the bar for companies to be able to assert sale accounting in a repurchase agreement. [10]

ILLUSTRATION 7.20

Accounting for Transfers of Receivables

What Do the Numbers Mean? Securitizations—Good or Bad?

A popular form of sale (transfer) of receivables is securitization. **Securitization** takes a pool of assets, such as credit card receivables, mortgage receivables, or car loan receivables, and sells shares in these pools of interest and principal payments. This, in effect, creates securities backed by these pools of assets. Virtually every asset with a payment stream and a long-term payment history is a candidate for securitization. What are the differences between factoring and securitization? Factoring usually involves sale to only one company, fees are high, the quality of the receivables is low, and the seller afterward does not service the receivables. In a securitization, many investors are involved, margins are tight, the receivables are of generally higher quality, and the seller usually continues to service the receivables.

Securitizations got a black eye in the booming mortgage market leading up to the financial crisis of 2008. In that setting, mortgage loans to high-risk (subprime) borrowers were securitized with lenders selling the loans to investment banks or trusts (special purpose entities) at a gain. Investors in the securities issued by the trusts were happy because they earned a return that they believed was excellent, given the risk they took. However, due to lax regulatory oversight of the mortgage lending process, many of the securitizations resulted in lenders having to take back the loans

when subprime borrowers could not make the payments when the economy and the housing market slowed.

The costs of these bad securitizations are still being felt by banks several years after the mortgage market meltdown, and some are raising alarms as the subprime market appears to be heating up again. For example, \$4.4 billion in subprime securities were issued in 2017 with issuance momentum continuing into 2018. Subprime issues in the first quarter of 2018 (\$1.3 billion) were double the amount issued in the same quarter in 2017.

The moral of the story is that accounting matters. Lenders had strong incentives to want to report upfront gains on sales of loans. But in most cases, these gains should never have been booked. The FASB has since issued rules to tighten up “gain-on-sale” accounting for securitizations and loan losses. With these rules, lenders have to keep the loans on their balance sheets. Under these conditions, lenders would be much less likely to lend so much money to individuals with poor credit ratings.

A10; Associated Press, “Legal Costs Weigh Down US Banks Earnings,” *The New York Times* (February 24, 2015); and B. McLannahan and J. Rennison, “U.S. Subprime Mortgage Bonds Back in Fashion,” *Financial Times* (March 28, 2018).

Presentation and Analysis

Presentation of Receivables

The general rules in classifying receivables are:

1. Segregate the different types of receivables that a company possesses, if material.
2. Appropriately offset the valuation accounts against the proper receivable accounts.

3. Determine that receivables classified in the current assets section will be converted into cash within the year or the operating cycle, whichever is longer.
4. Disclose any loss contingencies that exist on the receivables.
5. Disclose any receivables designated or pledged as collateral.
6. Disclose the nature of credit risk inherent in the receivables, how that risk is analyzed and assessed in arriving at the allowance for credit losses, and the changes and reasons for those changes in the allowance for credit losses.

Global View

Holding receivables that it will receive in a foreign currency represents risk that the exchange rate may move against the company. This results in a decrease in the amount collected in terms of U.S. dollars. Companies engaged in cross-border transactions often “hedge” these receivables by buying contracts to exchange currencies at specified amounts at future dates.

With respect to additional disclosures, companies are required to disaggregate based on type of receivable. In response to demands for additional information about credit risk, the FASB recently issued rules for companies to provide the following disclosures about its receivables on a disaggregated basis: (1) a roll-forward schedule of the allowance for doubtful accounts from the beginning of the reporting period to the end of the reporting period, (2) the non-accrual status of receivables by class of receivables, and (3) impaired receivables by type of receivable. In addition, companies should disclose credit quality indicators and the aging of past due receivables. [11]

Companies must disclose concentrations of credit risk for all financial instruments (including receivables). Concentrations of credit risk exist when receivables have common characteristics that may affect their collection. These common characteristics might be companies in the same industry or same region of the country. For example, **Quantum Corporation** reported that sales of its disk drives to its top five customers (including **Hewlett-Packard**) represented nearly 40 percent of its revenues in a recent year. Financial statement users want to know if a substantial amount of receivables from such sales are to customers facing uncertain economic conditions (see **Global View**). No numerical guidelines are provided as to what is meant by a “concentration of credit risk.”²⁰

The assets sections of Colton Corporation’s balance sheet in **Illustration 7.21** show many of the disclosures required for receivables.

Analysis of Receivables

Accounts Receivable Turnover Analysts frequently compute financial ratios to evaluate the liquidity of a company’s accounts receivable. To assess the liquidity of the receivables, they use the **accounts receivable turnover**. This ratio measures the number of times, on average, a company collects receivables during the period. The ratio is computed by dividing net sales by average (net) accounts receivable outstanding during the year. Theoretically, the numerator should include only net credit sales, but this information is frequently unavailable. However, if the relative amounts of credit and cash sales remain fairly constant, the trend indicated by the ratio will still be valid. Barring significant seasonal factors, average receivables outstanding can be computed from the beginning and ending balances of net trade receivables.

To illustrate, **Best Buy** reported 2017 net sales of \$39,403 million, its beginning and ending accounts receivable balances were \$1,347 million and \$1,162 million, respectively. **Illustration 7.22** shows the computation of its accounts receivable turnover.

ILLUSTRATION 7.22

Computation of Accounts Receivable Turnover

| |
|---|
| $\frac{\text{Net Sales}}{\text{Average Net Accounts Receivable}} = \text{Accounts Receivable Turnover}$ |
| $\frac{\$39,403}{(\$1,347 + \$1,162)/2} = 31.4 \text{ times, or every } 11.6 \text{ days } (365 \div 31.4)$ |

²⁰Three items should be disclosed with an identified concentration: (1) information on the characteristic that determines the concentration, (2) the amount of loss that could occur upon nonperformance, and (3) information on any collateral related to the receivable. [12]

ILLUSTRATION 7.21

Disclosure of Receivables

| Colton Corporation Balance Sheet (partial) As of December 31, 2017 | | | | | | | |
|---|--------|-----------------|----------|---------------------------|------------|-------------|--------------|
| Current assets | | | | | | | |
| Cash and cash equivalents | | | | | | | \$ 1,870,250 |
| Accounts and notes receivable (Note 2) | | | | \$10,509,673 | | | |
| Less: Allowance for doubtful accounts | | | | 500,226 | | | |
| | | | | 10,009,447 | | | |
| Advances to subsidiaries due 9/30/21 | | | | | | | 2,090,000 |
| Federal income taxes refundable | | | | | | | 146,704 |
| Dividends and interest receivable | | | | | | | 75,500 |
| Other receivables and claims (including debit balances in accounts payable) | | | | 174,620 | | | 12,496,271 |
| Total current assets | | | | | | | \$14,366,521 |
| Noncurrent receivables | | | | | | | |
| Notes receivable from officers and key employees | | | | | | | 376,090 |
| Claims receivable (litigation settlement to be collected over four years) | | | | | | | 585,000 |
| Note 2: Accounts and Notes Receivable. All noncurrent receivables are due within five years from the balance sheet date. Trade receivables that are less than three months past due are not considered impaired. At December 31, the aging analysis of receivables is as follows. | | | | | | | |
| Amounts (\$000) | Total | Neither Past | | Past Due but Not Impaired | | | |
| | | Due or Impaired | <30 days | 30–60 days | 60–90 days | 90–120 days | >120 days |
| 2020 | 10,510 | 5,115 | 2,791 | 1,582 | 570 | 360 | 92 |
| As at December 31, 2020, trade receivables at initial value of \$109 were impaired and fully provided for. The following table summarises movements in the provision for impairment of receivables. | | | | | | | |
| | | | | Total \$000 | | | |
| | | | | At January 1, 2020 | | | |
| | | | | Expense for the year | | | |
| | | | | Written off | | | |
| | | | | Recoveries | | | |
| | | | | At December 31, 2020 | | | |
| | | | | 98 | | | |
| | | | | 26 | | | |
| | | | | (9) | | | |
| | | | | (6) | | | |
| | | | | 109 | | | |
| Certain subsidiaries transferred receivable balances amounting to \$1,014 to a bank in exchange for cash during the year ended December 31, 2020. The transaction has been accounted for as a secured borrowing. In case of default under the loan agreement, the borrower has the right to receive the cash flows from the receivables transferred. Without default, the subsidiaries will collect the receivables and assign new receivables as collateral. | | | | | | | |

Segregate different types of receivables

Disclose aging of receivables

Presentation of impaired receivables

Disclose collateral arrangements

This information²¹ shows how successful the company is in collecting its outstanding receivables (see **Underlying Concepts**). If possible, an aging schedule should also be prepared to help determine how long receivables have been outstanding. A satisfactory accounts receivable turnover may have resulted because certain receivables were collected quickly though others have been outstanding for a relatively long period. An aging schedule would reveal such patterns.

Average Days to Collect Receivables Often the accounts receivable turnover is transformed to **days to collect accounts receivable or days outstanding**—an average collection period. In this case, 31.4 is divided into 365 days, resulting in 11.6 days. Companies frequently use the average collection period to assess the effectiveness of a company's credit and collection policies. The general rule is that the average collection period should not greatly exceed the

Underlying Concepts

Information that helps users assess a company's current liquidity and prospective cash flows is a primary objective of accounting.

²¹Several figures other than 365 could be used. A common alternative is 360 days because it is divisible by 30 (days) and 12 (months). Use 365 days in any homework computations.

credit term period. That is, if customers are given a 60-day period for payment, then the average collection period should not be too much in excess of 60 days.

What Do the Numbers Mean? I'm Still Waiting

Small companies many times find themselves in a bind when the economy turns south. Their suppliers demand payment earlier, and their customers (represented by their accounts receivable) take longer to pay. That means companies with the least clout get squeezed the hardest. As one company executive noted, “The slowdown of currency, of money, the exchange, puts us in a very precarious position.”

The average time small companies took to collect accounts receivable increased to 27 days from about 23 days in a recent four-year period. Many small companies are seeing their payments from larger customers stretch from 30 days to 60 and even 90 days after an invoice is issued. **Wal-Mart Stores, Inc.**, for example, at one time took 29.5 days to pay its bills, up from 27 days a year earlier. **Apple** took 52 days, up from 43 days a year earlier. As one individual stated, “If you are working with one of these large companies, as your only customer, they have the power. They can go to somebody else, but you can't go anywhere.”

These working capital management practices have persisted, especially for larger companies. As shown in the adjacent chart, U.S. companies are holding back payments to their suppliers for longer than at any point in the past decade, a push that is helping them keep more cash on hand that otherwise would be tied up in their businesses.

As indicated, the largest companies increased payment delays to 56.7 days in 2017, from 53.3 in 2016. The study estimates that these companies have nearly \$1.1 trillion tied up in inventories, payments to suppliers, and payments not yet received from customers. However, these improvements may be hitting the wall—just 9 percent of surveyed companies reported working capital improvements three years in a row. As companies get squeezed between

late payments and tighter credit terms, nonpayments often result. Therefore, much judgment must be exercised in determining the proper percentage to record for bad debts.

Chasen, “The Big Number: 38.2—Average Days of Working Capital at Global Companies,” *Wall Street Journal* (August 5, 2014); and T. Shumsky and N. Trentmann, “Delaying Payments to Suppliers Helps Companies Unlock Cash,” *Wall Street Journal* (June 28, 2018).

APPENDIX 7A

Cash Controls

LEARNING OBJECTIVE *6

Explain common techniques employed to control cash.

Cash is the asset most susceptible to improper diversion and use. Management faces two problems in accounting for cash transactions: (1) to establish proper controls to prevent any unauthorized transactions by officers or employees, and (2) to provide information necessary to properly manage cash on hand and cash transactions. Yet even with sophisticated control devices, errors can and do happen. For example, the *Wall Street Journal* ran a story entitled “A \$7.8 Million Error Has a Happy Ending for a Horrified Bank.” The story described how **Manufacturers Hanover Trust Co.** mistakenly overpaid about \$7.8 million in cash dividends to its stockholders. (As implied in the headline, most stockholders returned the monies.)

To safeguard cash and to ensure the accuracy of the accounting records for cash, companies need effective **internal control** over cash. Provisions of the Sarbanes-Oxley Act call for enhanced efforts to increase the quality of internal control (for cash and other assets). Such efforts are expected to result in improved financial reporting. In this appendix, we discuss some of the basic control issues related to cash.

Using Bank Accounts

To obtain desired control objectives, a company can vary the number and location of banks and the types of bank accounts. For large companies operating in multiple locations, the location of bank accounts can be important (see **Global View**). Establishing collection accounts in strategic locations can accelerate the flow of cash into the company by shortening the time between a customer's mailing of a payment and the company's use of the cash. Multiple collection centers generally reduce the size of a company's **collection float**. This is the difference between the amount on deposit according to the company's records and the amount of collected cash according to the bank record.

Large, multilocation companies frequently use **lockbox accounts** to collect in cities with heavy customer billing. The company rents a local post office box and authorizes a local bank to pick up the remittances mailed to that box number. The bank empties the box at least once a day and immediately credits the company's account for collections. The greatest advantage of a lockbox is that it accelerates the availability of collected cash. Generally, in a lockbox arrangement the bank microfilms the checks for record purposes and provides the company with a deposit slip, a list of collections, and any customer correspondence. Thus, a lockbox system improves the control over cash and accelerates collection of cash. If the income generated from accelerating the receipt of funds exceeds the cost of the lockbox system, then it is a worthwhile undertaking.

The **general checking account** is the principal bank account in most companies and frequently the only bank account in small businesses. A company deposits in and disburses cash from this account. A company routes all transactions through it. For example, a company deposits from and disburses to all other bank accounts through the general checking account.

Companies use **imprest bank accounts** to make a specific amount of cash available for a limited purpose. The account acts as a clearing account for a large volume of checks or for a specific type of check. To clear a specific and intended amount through the imprest account, a company transfers that amount from the general checking account or other source. Companies often use imprest bank accounts for disbursing payroll checks, dividends, commissions, bonuses, confidential expenses (e.g., officers' salaries), and travel expenses.

Global View

Multinational corporations often have cash accounts in more than one currency. For financial statement purposes, these corporations typically translate these currencies into U.S. dollars, using the exchange rate in effect at the balance sheet date.

The Imprest Petty Cash System

Almost every company finds it necessary to pay small amounts for miscellaneous expenses such as taxi fares, minor office supplies, and employees' lunches. Disbursements by check for such items is often impractical, yet some control over them is important. A simple method of obtaining reasonable control, while adhering to the rule of disbursement by check, is the **imprest system for petty cash** disbursements. This is how the system works:

1. The company designates a petty cash custodian, and gives the custodian a small amount of currency from which to make payments. It records transfer of funds to petty cash as:

Petty Cash
Cash

300

300

- The petty cash custodian obtains signed receipts from each individual to whom he or she pays cash, attaching evidence of the disbursement to the petty cash receipt. Petty cash transactions are not recorded until the fund is reimbursed; someone other than the petty cash custodian records those entries.
- When the supply of cash runs low, the custodian presents to the controller or accounts payable cashier a request for reimbursement supported by the petty cash receipts and other disbursement evidence. The custodian receives a company check to replenish the fund. At this point, the company records transactions based on petty cash receipts.

| | | |
|-----------------------|----|-----|
| Supplies Expense | 42 | |
| Postage Expense | 53 | |
| Miscellaneous Expense | 76 | |
| Cash Over and Short | 2 | |
| Cash | | 173 |

- If the company decides that the amount of cash in the petty cash fund is excessive, it lowers the fund balance as follows.

| | | |
|------------|----|----|
| Cash | 50 | |
| Petty Cash | | 50 |

Subsequent to establishment, a company makes entries to the Petty Cash account only to increase or decrease the size of the fund.

A company uses a **Cash Over and Short** account when the petty cash fund fails to prove out. That is, an error occurs such as incorrect change, overpayment of expense, or lost receipt. If cash proves out **short** (i.e., the sum of the receipts and cash in the fund is less than the imprest amount), the company debits the shortage to the Cash Over and Short account. If cash proves out **over**, it credits the overage to Cash Over and Short. The company closes Cash Over and Short only at the end of the year. It generally shows Cash Over and Short on the income statement as an "Other expense or revenue."

There are usually expense items in the fund except immediately after reimbursement. Therefore, to maintain accurate financial statements, a company must reimburse the funds at the end of each accounting period and also when nearly depleted.

Under the imprest system, the petty cash custodian is responsible at all times for the amount of the fund on hand either as cash or in the form of signed receipts. These receipts provide the evidence required by the disbursing officer to issue a reimbursement check. Further, a company follows two additional procedures to obtain more complete control over the petty cash fund:

- A superior of the petty cash custodian makes surprise counts of the fund from time to time to determine that a satisfactory accounting of the fund has occurred.
- The company cancels or mutilates petty cash receipts after they have been submitted for reimbursement, so that they cannot be used to secure a second reimbursement.

Physical Protection of Cash Balances

Not only must a company safeguard cash receipts and cash disbursements through internal control measures, but it must also protect the cash on hand and in banks. Because receipts become cash on hand and disbursements are made from cash in banks, adequate control of receipts and disbursements is part of the protection of cash balances, along with certain other procedures.

Physical protection of cash is so elementary a necessity that it requires little discussion. A company should make every effort to minimize the cash on hand in the office. It should

only have on hand a petty cash fund, the current day's receipts, and perhaps funds for making change. Insofar as possible, it should keep these funds in a vault, safe, or locked cash drawer. The company should transmit intact each day's receipts to the bank as soon as practicable. Accurately stating the amount of available cash both in internal management reports and in external financial statements is also extremely important.

Every company has a record of cash received, disbursed, and the balance. Because of the many cash transactions, however, errors or omissions may occur in keeping this record. Therefore, a company must periodically prove the balance shown in the general ledger. It can count cash actually present in the office—petty cash, change funds, and undeposited receipts—for comparison with the company records. For cash on deposit, a company prepares a bank reconciliation—a reconciliation of the company's record and the bank's record of the company's cash.

Reconciliation of Bank Balances

At the end of each calendar month, the bank supplies each customer with a **bank statement** (a copy of the bank's account with the customer) together with the customer's checks that the bank paid during the month.²² If neither the bank nor the customer made any errors, if all deposits made and all checks drawn by the customer reached the bank within the same month, and if no unusual transactions occurred that affected either the company's or the bank's record of cash, the balance of cash reported by the bank to the customer equals that shown in the customer's own records. This condition seldom occurs due to one or more of the reconciling items presented below.

Reconciling Items

1. **Deposits in Transit.** End-of-month deposits of cash recorded on the depositor's books in one month are received and recorded by the bank in the following month.
2. **Outstanding Checks.** Checks written by the depositor are recorded when written but may not be recorded by (may not "clear") the bank until the next month.
3. **Bank Charges.** Charges recorded by the bank against the depositor's balance for such items as bank services, printing checks, **not-sufficient-funds (NSF) checks**, and safe-deposit box rentals. The depositor may not be aware of these charges until the receipt of the bank statement.
4. **Bank Credits.** Collections or deposits by the bank for the benefit of the depositor that may be unknown to the depositor until receipt of the bank statement. Examples are note collection for the depositor and interest earned on interest-bearing checking accounts.
5. **Bank or Depositor Errors.** Errors on either the part of the bank or the part of the depositor cause the bank balance to disagree with the depositor's book balance.

Hence, a company expects differences between its record of cash and the bank's record. Therefore, it must reconcile the two to determine the nature of the differences between the two amounts.

A **bank reconciliation** is a schedule explaining any differences between the bank's and the company's records of cash. If the difference results only from transactions not yet recorded by the bank, the company's record of cash is considered correct. But, if some part

²²As we mentioned in Chapter 7, paper checks continue to be used as a means of payment. However, ready availability of desktop publishing software and hardware has created new opportunities for check fraud in the form of duplicate, altered, and forged checks. At the same time, new fraud-fighting technologies, such as ultraviolet imaging, high-capacity barcodes, and biometrics, are being developed. These technologies convert paper documents into electronically processed document files, thereby reducing the risk of fraud.

of the difference arises from other items, either the bank or the company must adjust its records.

A company may prepare two forms of a bank reconciliation. One form reconciles from the bank statement balance to the book balance or vice versa. The other form reconciles both the bank balance and the book balance to a correct cash balance. Most companies use this latter form. **Illustration 7A.1** shows a sample of that form and its common reconciling items.

ILLUSTRATION 7A.1**Bank Reconciliation Form and Content**

| | | |
|---|------|---------------|
| Balance per bank statement (end of period) | | \$\$\$ |
| Add: Deposits in transit | \$\$ | |
| Undeposited receipts (cash on hand) | \$\$ | |
| Bank errors that understate the bank statement balance | \$\$ | \$\$ |
| | | \$\$\$ |
| Deduct: Outstanding checks | \$\$ | |
| Bank errors that overstate the bank statement balance | \$\$ | \$\$ |
| Correct cash balance | | \$\$\$ |
| Balance per depositor's books | | \$\$\$ |
| Add: Bank credits and collections not yet recorded in the books | \$\$ | |
| Book errors that understate the book balance | \$\$ | \$\$ |
| | | \$\$\$ |
| Deduct: Bank charges not yet recorded in the books | \$\$ | |
| Book errors that overstate the book balance | \$\$ | \$\$ |
| Correct cash balance | | \$\$\$ |

This form of reconciliation consists of two sections: (1) "Balance per bank statement" and (2) "Balance per depositor's books." Both sections end with the same "Correct cash balance." The correct cash balance is the amount to which the books must be adjusted and is the amount reported on the balance sheet. **Companies prepare adjusting journal entries for all the addition and deduction items appearing in the "Balance per depositor's books" section.** Companies should immediately call to the bank's attention any errors attributable to it.

To illustrate, Nugget Mining Company's books show a cash balance at the Denver National Bank on November 30, 2020, of \$20,502. The bank statement covering the month of November shows an ending balance of \$22,190. An examination of Nugget's accounting records and November bank statement identified the following reconciling items.

1. A deposit of \$3,680 that Nugget mailed November 30 does not appear on the bank statement.
2. Checks written in November but not charged to the November bank statement are:

| | |
|-------------|--------|
| Check #7327 | \$ 150 |
| #7348 | 4,820 |
| #7349 | 31 |

3. Nugget has not yet recorded the \$600 of interest collected by the bank on November 20 for Sequoia Co. bonds held by the bank for Nugget.
4. Bank service charges of \$18 are not yet recorded on Nugget's books.
5. The bank returned one of Nugget's customer's checks for \$220 with the bank statement, marked "NSF." The bank treated this bad check as a disbursement.
6. Nugget discovered that it incorrectly recorded check #7322, written in November for \$131 in payment of an account payable, as \$311.
7. A check for Nugent Oil Co. in the amount of \$175 that the bank incorrectly charged to Nugget accompanied the statement.

Nugget reconciled the bank and book balances to the correct cash balance of \$21,044 as shown in **Illustration 7A.2**.

ILLUSTRATION 7A.2

Sample Bank Reconciliation

| Nugget Mining Company Bank Reconciliation Denver National Bank, November 30, 2020 | | | |
|--|-----|------------|------------------------|
| Balance per bank statement (end of period) | | | \$22,190 |
| Add: Deposit in transit | (1) | \$3,680 | |
| Bank error—incorrect check charged to account by bank | (7) | <u>175</u> | <u>3,855</u> |
| | | | 26,045 |
| Deduct: Outstanding checks | (2) | | <u>5,001</u> |
| Correct cash balance | | | <u>\$21,044</u> |
| Balance per books | | | \$20,502 |
| Add: Interest collected by the bank | (3) | \$ 600 | |
| Error in recording check #7322 | (6) | <u>180</u> | <u>780</u> |
| | | | 21,282 |
| Deduct: Bank service charges | (4) | 18 | |
| NSF check returned | (5) | <u>220</u> | <u>238</u> |
| Correct cash balance | | | <u>\$21,044</u> |

The journal entries required to adjust and correct Nugget's books in early December 2020 are taken from the items in the "Balance per books" section and are as follows.

| | | |
|--|-----|-----|
| Cash | 600 | |
| Interest Revenue | | 600 |
| (To record interest on Sequoia Co. bonds, collected by bank) | | |
| Cash | 180 | |
| Accounts Payable | | 180 |
| (To correct error in recording amount of check #7322) | | |
| Office Expense (bank charges) | 18 | |
| Cash | | 18 |
| (To record bank service charges for November) | | |
| Accounts Receivable | 220 | |
| Cash | | 220 |
| (To record customer's check returned NSF) | | |

After posting the entries, Nugget's cash account will have a balance of \$21,044. Nugget should return the Nugget Oil Co. check to Denver National Bank, informing the bank of the error.

APPENDIX 7B

Collectibility Assessment Based on Expected Cash Flows

LEARNING OBJECTIVE *7

Describe the estimation of the allowance based on expected cash flows.

Companies continually evaluate their receivables to determine their ultimate collectibility. As discussed in the chapter, many companies start with historical loss rates and modify these rates for changes in economic conditions that could affect a borrower's ability to repay the loan. The discussion in the chapter assumed use of this approach to determine the amount of bad debts to be recorded for a period.

Companies commonly evaluate loans (long-term notes receivable) for collectibility based on an analysis of the expected contractual cash flows. They then apply discounted expected cash flow methods (as discussed in Chapter 6) to measure the allowance and to report the loan at the net amount expected to be collected.

Measurement of Collectibility

The allowance for doubtful accounts and related bad debt expense on a loan or note receivable can be estimated as the difference between the investment in the loan (generally the principal plus accrued interest or amortized cost) and the expected future cash flows discounted at the loan's historical effective-interest rate.²³

When using the historical effective loan rate, the value of the investment will change only if some of the legally contracted cash flows are reduced. A company recognizes a loss in this case because the expected future cash flows are now lower. The company ignores interest rate changes caused by current economic events that affect the fair value of the loan. As indicated in the chapter, in estimating future cash flows, the creditor should use reasonable and supportable assumptions and projections.

Example

At December 31, 2019, Ogden Bank recorded an investment of \$100,000 in a loan to Carl King. The loan has an historical effective-interest rate of 10 percent, the principal is due in full at maturity in three years, and interest is due annually. The loan officer performs a review of the loan's expected future cash flows and utilizes the present value method for measuring the collectibility of the loan. Unfortunately, King is experiencing financial difficulty and thinks he will have a difficult time making full payment. **Illustration 7B.1** shows the cash flow schedule prepared by the loan officer.

ILLUSTRATION 7B.1

Collectibility Analysis of Loan

| Dec. 31 | Contractual Cash Flow | Expected Cash Flow | Loss of Cash Flow |
|------------------|--------------------------|-----------------------|----------------------|
| 2020 | \$ 10,000 | \$ 5,000 | \$ 5,000 |
| 2021 | 10,000 | 5,000 | 5,000 |
| 2022 | \$110,000 | 105,000 | 5,000 |
| Total cash flows | <u>\$130,000</u> | <u>\$115,000</u> | <u>\$15,000</u> |

As indicated, this loan is impaired. The expected cash flows of \$115,000 are less than the contractual cash flows, including principal and interest, of \$130,000. The amount of the impairment to be recorded equals the difference between the recorded investment of \$100,000 and the present value of the expected cash flows, as shown in **Illustration 7B.2**.

ILLUSTRATION 7B.2

Computation of Impairment Loss

| | | |
|--|--|--|
| Recorded investment | | \$100,000 |
| Less: Present value of \$100,000 due in 3 years at 10% (Table 6.2); $FV(PVF_{3,10\%})$; $(\$100,000 \times .75132)$ | | \$75,132 |
| Present value of \$5,000 interest payable annually for 3 years at 10% R ($PVF-OA_{3,10\%}$); $(\$5,000 \times 2.48685)$ | | <u>12,434</u> |
| Impairment | | <u><u>87,566</u></u> \$ 12,434 |

²³The creditor may also, for the sake of expediency, use the market price of the loan (if such a price is available) or the fair value of the collateral if it is a collateralized loan. [13] Note that the collectibility analysis shown in this appendix only applies to credit risk inherent in a loan or receivable. However, if the loans are bundled into a security (e.g., mortgage-backed securities), the impairment test is different. Impairments of securities are measured based on fair value. We discuss this accounting in Chapter 17.

The impairment is \$12,434. Why isn't it \$15,000 (\$130,000 – \$115,000)? Because Ogden Bank must measure the loss at a present-value amount, not at an undiscounted amount, when it records the loss.

Recording Bad Debts

Ogden Bank (the creditor) recognizes an impairment \$12,434 by debiting Bad Debt Expense for the expected loss. At the same time, it reduces the overall value of the receivable by crediting Allowance for Doubtful Accounts. The journal entry to record the loss is therefore as follows.²⁴

| | | |
|---------------------------------|--------|--------|
| Bad Debt Expense | 12,434 | |
| Allowance for Doubtful Accounts | | 12,434 |

What entry does Carl King (the debtor) make? The debtor makes no entry because he still legally owes \$100,000.

In some cases, debtors like King negotiate a modification in the terms of the loan agreement. In such cases, the accounting entries from Ogden Bank are the same as the situation in which the loan officer must estimate the future cash flows—except that the calculation for the amount of the loss becomes more reliable (because the revised expected cash flow amounts are contractually specified in the loan agreement).²⁵ The entries related to the debtor in this case often change; they are discussed in Appendix 14A.

²⁴In the event of a loan write-off, the company charges the loss against the allowance. In subsequent periods, if revising estimated expected cash flows based on new information, the company adjusts the allowance account and bad debt expense account (either increased or decreased depending on whether conditions improved or worsened) in the same fashion as the original impairment. We use the terms “loss” and “bad debt expense” interchangeably throughout this discussion. Companies should charge losses related to receivables transactions to Bad Debt Expense or the related Allowance for Doubtful Accounts because they use these accounts to recognize changes in values affecting receivables.

²⁵Many alternatives are permitted to recognize income by Ogden Bank in subsequent periods. [14]

Review and Practice

Key Terms Review

| compensating balances 7-5 | promissory note 7-17 | |
| direct write-off method 7-12 | receivables 7-7 | |

Learning Objectives Review

1 Indicate how to report cash and related items.

To be reported as “cash,” an asset must be readily available for the payment of current obligations and free from contractual restrictions

that limit its use in satisfying debts. **Cash consists of coin, currency, and available funds on deposit at the bank.** Negotiable instruments such as money orders, certified checks, cashier's checks, personal checks, and bank drafts are also viewed as cash. Savings accounts are usually classified as cash.

Companies report cash as a current asset in the balance sheet. The reporting of other related items are as follows.

1. **Restricted cash:** The SEC recommends that companies state separately legally restricted deposits held as compensating balances against short-term borrowing among the “Cash and cash equivalent items” in current assets. Restricted deposits held against long-term borrowing arrangements should be separately classified as noncurrent assets in either the investments or other assets sections.
2. **Bank overdrafts:** Companies should report overdrafts in the current liabilities section and usually add them to the amount reported as accounts payable. If material, these items should be separately disclosed either on the face of the balance sheet or in the related notes.
3. **Cash equivalents:** Companies often report this item together with cash as “Cash and cash equivalents.”

2 Define receivables and explain issues related to their recognition.

Receivables are claims held against customers and others for money, goods, or services. The receivables are classified into three types: (1) current or noncurrent, (2) trade or nontrade, and (3) accounts receivable or notes receivable. Two issues that may complicate the measurement of accounts receivable are (1) the availability of discounts (trade and cash discounts), and (2) the length of time between the sale and the payment due dates (the interest element).

Ideally, companies should measure receivables in terms of their present value—that is, the discounted value of the cash to be received in the future. The profession specifically excludes from the present value considerations receivables arising from normal business transactions that are due in customary trade terms within approximately one year.

3 Explain accounting issues related to valuation of accounts receivable.

Companies value and report short-term receivables at the net amount expected to be collected, which is not necessarily the amount legally receivable. Determining the net amount expected to be collected requires estimating uncollectible receivables.

4 Explain accounting issues related to recognition and valuation of notes receivable.

Companies record short-term notes at face value and long-term notes receivable at the present value of the cash they expect to collect. When the interest stated on an interest-bearing note equals the effective (market) rate of interest, the note sells at face value. When the stated rate differs from the effective rate, a company records either a discount or premium. Like accounts receivable, companies record and report short-term notes receivable at the net amount expected to be collected. The same is also true of long-term receivables.

5 Explain additional accounting issues related to accounts and notes receivable.

Fair value option. Companies have the option to record receivables at fair value. Once the fair value option is chosen, the receivable is reported on the balance sheet at fair value, with the change in fair value recorded in income.

Disposition of accounts and notes receivable. To accelerate the receipt of cash from receivables, the owner may transfer the receivables to another company for cash in one of two ways. (1) **Sales (factoring) of receivables:** Factors are finance companies or banks that buy receivables from businesses and then collect the remittances directly from the customers. In many cases, transferors may have some continuing involvement with the receivable sold. Companies use a financial components approach to record this type of transaction. (2) **Secured borrowing:** A creditor often requires that the debtor designate or pledge receivables as security for the loan.

Reporting and analyzing receivables. Companies should report receivables with appropriate offset of valuation accounts against receivables, classify receivables as current or noncurrent, identify pledged or designated receivables, and disclose the credit risk inherent in the receivables. Analysts assess receivables based on turnover and the days outstanding.

*6 Explain common techniques employed to control cash.

The common techniques employed to control cash are as follows. (1) **Using bank accounts:** A company can vary the number and location of banks and the types of accounts to obtain desired control objectives. (2) **The imprest petty cash system:** It may be impractical to require small amounts of various expenses be paid by check, yet some control over them is important. (3) **Physical protection of cash balances:** Adequate control of receipts and disbursements is a part of the protection of cash balances. Every effort should be made to minimize the cash on hand in the office. (4) **Reconciliation of bank balances:** Cash on deposit is not available for count and is proved by preparing a bank reconciliation.

*7 Describe the estimation of the allowance based on expected cash flows.

Companies commonly evaluate the collectability of loans (long-term notes receivable) based on an analysis of the expected contractual cash flows. The allowance for doubtful accounts and related bad debt expense on a loan or note receivable can be estimated as the difference between the investment in the loan and expected future cash flows discounted at the loan’s historical effective-interest rate.

Enhanced Review and Practice

Go online for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Practice Problem

The trial balance before adjustment for Slamar Company shows the following balances.

| | <u>Debit</u> | <u>Credit</u> |
|---------------------------------|--------------|---------------|
| Net sales | \$860,000 | |
| Accounts receivable | 338,000 | |
| Allowance for doubtful accounts | | \$4,240 |

Consider the following independent situations:

- To obtain additional cash, Slamar factors without recourse \$50,000 of accounts receivable with Pierce Finance. The finance charge is 11% of the amount factored.
- To obtain a 1-year loan of \$75,000, Slamar assigns \$80,000 of specific receivable accounts to Milo Financial. The finance charge is 9% of the loan; the cash is received and the accounts turned over to Milo Financial.
- The company wants to maintain Allowance for Doubtful Accounts at 6% of gross accounts receivable.

Instructions

- Using the data above, give the journal entries required to record situations 1–3.
- Discuss how analysis based on the current ratio and the accounts receivable turnover would be affected if Slamar had transferred the receivables in situation 1 using a secured borrowing.

Solution

a.

| | | |
|--|--------|--------|
| 1. Cash | 44,500 | |
| Loss on Sale of Receivables ($\$50,000 \times .11$) | 5,500 | |
| Accounts Receivable | | 50,000 |
| 2. Cash | 68,250 | |
| Interest Expense ($\$75,000 \times .09$) | 6,750 | |
| Notes Payable | | 75,000 |
| 3. Bad Debt Expense | 16,040 | |
| Allowance for Doubtful Accounts [$(\$338,000 \times .06) - \$4,240$] | | 16,040 |

- With a secured borrowing, the receivables would stay on Slamar's books, and Slamar would record a note payable. This would reduce the current ratio and accounts receivable turnover.

WileyPLUS

Exercises, Problems, Problem Solution Walkthrough Videos, and many more assessment tools and resources are available for practice in WileyPLUS.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

Questions

- What may be included under the heading of "cash"?
 - Coins and currency.
 - U.S. Treasury (government) bonds.
 - Certificate of deposit (matures in 5 months).
 - Cash in a bank that is in receivership.
 - NSF check (returned with bank statement).
 - Deposit in foreign bank (exchangeability limited).
 - Postdated checks.
 - Cash to be used for retirement of long-term bonds.
- In what accounts should the following items be classified?
 - Coins and currency.
 - U.S. Treasury (government) bonds.
 - Certificate of deposit (matures in 5 months).
 - Cash in a bank that is in receivership.
 - NSF check (returned with bank statement).
 - Deposit in foreign bank (exchangeability limited).
 - Postdated checks.
 - Cash to be used for retirement of long-term bonds.

- i. Deposits in transit.
 - j. 100 shares of **HP** stock (intention is to sell in one year or less).
 - k. Savings and checking accounts.
 - l. Petty cash.
 - m. Stamps.
 - n. Travel advances.
3. Define a “compensating balance.” How should a compensating balance be reported?
 4. Springsteen Inc. reported in a recent annual report “Restricted cash for debt redemption.” What section of the balance sheet would report this item?
 5. What are the reasons that a company gives trade discounts? Why are trade discounts not recorded in the accounts like cash discounts?
 6. What are two methods of recording accounts receivable transactions when a cash discount situation is involved? Which is more theoretically correct? Which is used in practice more of the time? Why?
 7. Discuss the accounting for sales allowances and how they relate to the concept of variable consideration.
 8. What are the basic problems that occur in the valuation of accounts receivable?
 9. What is the theoretical justification of the allowance method as contrasted with the direct write-off method of accounting for bad debts?
 10. Indicate how the percentage-of-receivables method, based on an aging schedule, accomplishes the objectives of the allowance method of accounting for bad debts. What other methods, besides an aging analysis, can be used for estimating uncollectible accounts?
 11. Of what merit is the contention that the allowance method lacks the objectivity of the direct write-off method? Discuss in terms of accounting’s measurement function.
 12. Explain how the accounting for bad debts can be used for earnings management.
 13. Because of calamitous earthquake losses, Bernstein Company, one of your client’s oldest and largest customers, suddenly and unexpectedly became bankrupt. Approximately 30% of your client’s total sales have been made to Bernstein Company during each of the past several years. The amount due from Bernstein Company—none of which is collectible—equals 22% of total accounts receivable, an amount that is considerably in excess of what was determined to be an adequate provision for doubtful accounts at the close of the preceding year. How would your client record the write-off of the Bernstein Company receivable if it is using the allowance method of accounting for bad debts? Justify your suggested treatment.
 14. What is the normal procedure for handling the collection of accounts receivable previously written off using the direct write-off method? The allowance method?
 15. On January 1, 2020, Lombard Co. sells property for which it had paid \$690,000 to Sargent Company, receiving in return Sargent’s

zero-interest-bearing note for \$1,000,000 payable in 5 years. What entry would Lombard make to record the sale, assuming that Lombard frequently sells similar items of property for a cash sales price of \$640,000?

16. What is “imputed interest”? In what situations is it necessary to impute an interest rate for notes receivable? What are the considerations in imputing an appropriate interest rate?
17. What is the fair value option? Where do companies that elect the fair value option report unrealized holding gains and losses?
18. Indicate three reasons why a company might sell its receivables to another company.
19. When is the financial components approach to recording the transfers of receivables used? When should a transfer of receivables be recorded as a sale?
20. Moon Hardware is planning to factor some of its receivables. The cash received will be used to pay for inventory purchases. The factor has indicated that it will require “recourse” on the sold receivables. Explain to the controller of Moon Hardware what “recourse” is and how the recourse will be reflected in Moon’s financial statements after the sale of the receivables.
21. Horizon Outfitters Company includes in its trial balance for December 31 an item for Accounts Receivable \$789,000. This balance consists of the following items:

| | |
|---|------------------|
| Due from regular customers | \$523,000 |
| Refund receivable on prior year’s income taxes (an established claim) | 15,500 |
| Travel advance to employees | 22,000 |
| Loan to wholly owned subsidiary | 45,500 |
| Advances to creditors for goods ordered | 61,000 |
| Accounts receivable assigned as security for loans payable | 75,000 |
| Notes receivable past due plus interest on these notes | 47,000 |
| Total | <u>\$789,000</u> |

Illustrate how these items should be shown in the balance sheet as of December 31.

22. What is the accounts receivable turnover, and what type of information does it provide?
23. You are evaluating Woodlawn Racetrack for a potential loan. An examination of the notes to the financial statements indicates restricted cash at year-end amounts to \$100,000. Explain how you would use this information in evaluating Woodlawn’s liquidity.
- *24. Distinguish among the following: (1) a general checking account, (2) an imprest bank account, and (3) a lockbox account.
- *25. What are the general rules for measuring and recognizing gain or loss by both the debtor and the creditor in an impairment?
- *26. Describe the estimation of the allowance, based on expected cash flows.

Brief Exercises

BE7.1 (LO 1) Kraft Enterprises owns the following assets at December 31, 2020.

| | | | |
|------------------------------|--------|-----------------------------------|--------|
| Cash in bank—savings account | 68,000 | Checking account balance | 17,000 |
| Cash on hand | 9,300 | Postdated checks | 750 |
| Cash refund due from IRS | 31,400 | Certificates of deposit (180-day) | 90,000 |

What amount should be reported as cash?

BE7.2 (LO 2) Restin Co. uses the gross method to record sales made on credit. On June 1, 2020, it made sales of \$50,000 with terms 3/15, n/45. On June 12, 2020, Restin received full payment for the June 1 sale. Prepare the required journal entries for Restin Co.

BE7.3 (LO 2) Use the information from BE7.2, assuming Restin Co. uses the net method to account for cash discounts. Prepare the required journal entries for Restin Co.

BE7.4 (LO 2) Roeher Company sold \$9,000 of its specialty shelving to Elkins Office Supply Co. on account. Prepare the entries when (a) Roeher makes the sale, (b) Roeher grants an allowance of \$700 when some of the shelving does not meet exact specifications but still could be sold by Elkins, and (c) at year-end; Roeher estimates that an additional \$200 in allowances will be granted to Elkins.

BE7.5 (LO 3) Wilton, Inc. had net sales in 2020 of \$1,400,000. At December 31, 2020, before adjusting entries, the balances in selected accounts were Accounts Receivable \$250,000 debit, and Allowance for Doubtful Accounts \$2,400 credit. If Wilton estimates that 8% of its receivables will prove to be uncollectible, prepare the December 31, 2020, journal entry to record bad debt expense.

BE7.6 (LO 3) Use the information presented in BE7.5 for Wilton, Inc.

- Instead of an Allowance for Doubtful Accounts Balance of \$2,400 credit, the balance was \$1,900 debit. Assume that 10% of accounts receivable will prove to be uncollectible. Prepare the entry to record bad debt expense.
- Instead of estimating uncollectibles based on a percentage of receivables, assume Wilton prepares an aging schedule that estimates total uncollectible accounts at \$24,600. (Assume an allowance of \$2,400 credit.) Prepare the entry to record bad debt expense.

BE7.7 (LO 4) Milner Family Importers sold goods to Tung Decorators for \$30,000 on November 1, 2020, accepting Tung's \$30,000, 6-month, 6% note. Prepare Milner's November 1 entry, December 31 annual adjusting entry, and May 1 entry for the collection of the note and interest.

BE7.8 (LO 4) Dold Acrobats lent \$16,529 to Donaldson, Inc., accepting Donaldson's 2-year, \$20,000, zero-interest-bearing note. The implied interest rate is 10%. Prepare Dold's journal entries for the initial transaction, recognition of interest each year, and the collection of \$20,000 at maturity.

BE7.9 (LO 5) On October 1, 2020, Chung, Inc. assigns \$1,000,000 of its accounts receivable to Seneca National Bank as collateral for a \$750,000 note. The bank assesses a finance charge of 2% of the receivables assigned and interest on the note of 9%. Prepare the October 1 journal entries for both Chung and Seneca.

BE7.10 (LO 5) Wood Incorporated factored \$150,000 of accounts receivable with Engram Factors Inc. on a without-recourse basis. Engram assesses a 2% finance charge of the amount of accounts receivable and retains an amount equal to 6% of accounts receivable for possible adjustments. Prepare the journal entry for Wood Incorporated and Engram Factors to record the factoring of the accounts receivable to Engram.

BE7.11 (LO 5) Use the information in BE7.10 for Wood. Assume that the receivables are sold with recourse. Prepare the journal entry for Wood to record the sale, assuming that the recourse liability has a fair value of \$7,500.

BE7.12 (LO 5) Arness Woodcrafters sells \$250,000 of receivables to Commercial Factors, Inc. on a with recourse basis. Commercial assesses a finance charge of 5% and retains an amount equal to 4% of accounts receivable. Arness estimates the fair value of the recourse liability to be \$8,000. Prepare the journal entry for Arness to record the sale.

BE7.13 (LO 5) Use the information presented in BE7.12 for Arness Woodcrafters but assume that the recourse liability has a fair value of \$4,000, instead of \$8,000. Prepare the journal entry and discuss the effects of this change in the value of the recourse liability on Arness's financial statements.

BE7.14 (LO 5) Recent financial statements of **General Mills, Inc.** report net sales of \$12,442,000,000. Accounts receivable are \$912,000,000 at the beginning of the year and \$953,000,000 at the end of the year. Compute General Mills' accounts receivable turnover. Compute General Mills' average collection period for accounts receivable in days.

***BE7.15 (LO 6)** Finman Company designated Jill Holland as petty cash custodian and established a petty cash fund of \$200. The fund is reimbursed when the cash in the fund is at \$15, which it is. Petty cash receipts indicate funds were disbursed for office supplies \$94 and miscellaneous expense \$87. Prepare journal entries for the establishment of the fund and the reimbursement.

***BE7.16 (LO 6)** Horton Corporation is preparing a bank reconciliation and has identified the following potential reconciling items. For each item, indicate if it is (1) added to balance per bank statement,

(2) deducted from balance per bank statement, (3) added to balance per books, or (4) deducted from balance per books.

- | | |
|--|--------------------------------|
| a. Deposit in transit \$5,500. | d. Outstanding checks \$7,422. |
| b. Bank service charges \$25. | e. NSF check returned \$377. |
| c. Interest credited to Horton's account \$31. | |

***BE7.17 (LO 6)** Use the information presented in BE7.16 for Horton Corporation. Prepare any entries necessary to make Horton's accounting records correct and complete.

***BE7.18 (LO 7)** Assume that Toni Braxton Company has recently fallen into financial difficulties. By reviewing all available evidence on December 31, 2020, one of Toni Braxton's creditors, the National American Bank, determined that Toni Braxton would pay back only 65% of the principal at maturity. As a result, the bank decided that the loan was impaired. If the loss is estimated to be \$225,000, what entry(ies) should National American Bank make to record this loss?

Exercises

E7.1 (LO 1) Excel (Determining Cash Balance) The controller for Clint Eastwood Co. is attempting to determine the amount of cash to be reported on its December 31, 2020, balance sheet. The following information is provided.

- Commercial savings account of \$600,000 and a commercial checking account balance of \$900,000 are held at First National Bank of Yojimbo.
- Money market fund account held at Volonte Co. (a mutual fund organization) permits Eastwood to write checks on this balance, \$5,000,000.
- Travel advances of \$180,000 for executive travel for the first quarter of next year (employee to reimburse through salary reduction).
- A separate cash fund in the amount of \$1,500,000 is restricted for the retirement of long-term debt.
- Petty cash fund of \$1,000.
- An I.O.U. from Marianne Koch, a company customer, in the amount of \$190,000.
- A bank overdraft of \$110,000 has occurred at one of the banks the company uses to deposit its cash receipts. At the present time, the company has no deposits at this bank.
- The company has two certificates of deposit, each totaling \$500,000. These CDs have a maturity of 120 days.
- Eastwood has received a check that is dated January 12, 2021, in the amount of \$125,000.
- Eastwood has agreed to maintain a cash balance of \$500,000 at all times at First National Bank of Yojimbo to ensure future credit availability.
- Eastwood has purchased \$2,100,000 of commercial paper of Sergio Leone Co. which is due in 60 days.
- Currency and coin on hand amounted to \$7,700.

Instructions

- Compute the amount of cash and cash equivalents to be reported on Eastwood Co.'s balance sheet at December 31, 2020.
- Indicate the proper reporting for items that are not reported as cash and cash equivalents on the December 31, 2020, balance sheet.

E7.2 (LO 1) (Determining Cash Balance) The following are independent situations.

- Checking account balance \$925,000; certificate of deposit \$1,400,000; cash advance to subsidiary of \$980,000; utility deposit paid to gas company \$180.
- Checking account balance \$600,000; an overdraft in special checking account at same bank as normal checking account of \$17,000; cash held in a bond sinking fund \$200,000; petty cash fund \$300; coins and currency on hand \$1,350.
- Checking account balance \$590,000; postdated check from customer \$11,000; cash restricted due to maintaining compensating balance requirement of \$100,000; certified check from customer \$9,800; postage stamps on hand \$620.
- Checking account balance at bank \$37,000; money market balance at mutual fund (has checking privileges) \$48,000; NSF check received from customer \$800.

5. Checking account balance \$700,000; cash restricted for future plant expansion \$500,000; short-term Treasury bills \$180,000 (which mature in 6 months); cash advance received from customer \$900 (not included in checking account balance); cash advance of \$7,000 to company executive, payable on demand; refundable deposit of \$26,000 paid to federal government to guarantee performance on construction contract.

Instructions

For each individual situation, determine the amount that should be reported as cash. If the item(s) is not reported as cash, explain the rationale.

E7.3 (LO 2) (Financial Statement Presentation of Receivables) Jim Carrie Company shows a balance of \$181,140 in the Accounts Receivable account on December 31, 2020. The balance consists of the following.

| | |
|--|----------|
| Installment accounts due in 2021 | \$23,000 |
| Installment accounts due after 2021 | 34,000 |
| Overpayments to vendors | 2,640 |
| Due from regular customers, of which \$40,000 represents accounts pledged as security for a bank loan | 79,000 |
| Advances to employees | 1,500 |
| Advance to subsidiary company (due in 2021) | 81,000 |

Instructions

Illustrate how the information above should be shown on the balance sheet of Jim Carrie Company on December 31, 2020.

E7.4 (LO 2) (Determining Ending Accounts Receivable) Your accounts receivable clerk, Mitra Adams, to whom you pay a salary of \$1,500 per month, has just purchased a new Acura. You decide to test the accuracy of the accounts receivable balance of \$82,000 as shown in the ledger.

The following information is available for your *first year* in business.

| | |
|---|-----------|
| 1. Collections from customers | \$198,000 |
| 2. Merchandise purchased | 320,000 |
| 3. Ending merchandise inventory | 90,000 |
| 4. Goods are marked to sell at 40% above cost | |

Instructions

Compute an estimate of the ending balance of accounts receivable from customers that should appear in the ledger and any apparent shortages. Assume that all sales are made on account.

E7.5 (LO 2) Excel (Recording Sales Gross and Net) On June 3, Arnold Company sold to Chester Company merchandise having a sale price of \$3,000 with terms of 2/10, n/60, f.o.b. shipping point. An invoice totaling \$90, terms n/30, was received by Chester on June 8 from John Booth Transport Service for the freight cost. On June 12, the company received a check for the balance due from Chester Company.

Instructions

- a. Prepare journal entries on the Arnold Company books to record all the events noted above under each of the following bases.
 1. Sales and receivables are entered at gross selling price.
 2. Sales and receivables are entered at net of cash discounts.
- b. Prepare the journal entry under basis 2, assuming that Chester Company did not remit payment until July 29.

E7.6 (LO 2) (Recording Sales Transactions) Presented below is information from Perez Computers Incorporated.

| | |
|--------|--|
| July 1 | Sold \$20,000 of computers to Robertson Company with terms 3/15, n/60. Perez uses the gross method to record cash discounts. Perez estimates allowances of \$1,300 will be honored on these sales. |
| 10 | Perez received payment from Robertson for the full amount owed from the July transactions. |
| 17 | Sold \$200,000 in computers and peripherals to The Clark Store with terms of 2/10, n/30. |
| 30 | The Clark Store paid Perez for its purchase of July 17. |

Instructions

Prepare the necessary journal entries for Perez Computers.

E7.7 (LO 3) (Recording Bad Debts) Duncan Company reports the following financial information before adjustments.

| | Dr. | Cr. |
|---------------------------------|-----------|----------|
| Accounts Receivable | \$100,000 | |
| Allowance for Doubtful Accounts | | \$ 2,000 |
| Sales Revenue (all on credit) | | 900,000 |
| Sales Returns and Allowances | 50,000 | |

Instructions

Prepare the journal entry to record Bad Debt Expense assuming Duncan Company estimates bad debts at (a) 5% of accounts receivable and (b) 5% of accounts receivable but Allowance for Doubtful Accounts had a \$1,500 debit balance.

E7.8 (LO 3) (Recording Bad Debts) At the end of 2020, Aramis Company has accounts receivable of \$800,000 and an allowance for doubtful accounts of \$40,000. On January 16, 2021, Aramis Company determined that its receivable from Ramirez Company of \$6,000 will not be collected, and management authorized its write-off.

Instructions

- Prepare the journal entry for Aramis Company to write off the Ramirez receivable.
- What is the net amount expected to be collected of Aramis Company's accounts receivable before the write-off of the Ramirez receivable?
- What is the net amount expected to be collected of Aramis Company's accounts receivable after the write-off of the Ramirez receivable?

E7.9 (LO 3) (Computing Bad Debts and Preparing Journal Entries) The trial balance before adjustment of Taylor Swift Inc. shows the following balances.

| | Dr. | Cr. |
|---------------------------------|----------|-----------|
| Accounts Receivable | \$90,000 | |
| Allowance for Doubtful Accounts | 1,750 | |
| Sales Revenue (all on credit) | | \$680,000 |

Instructions

Give the entry for estimated bad debts assuming that the allowance is to provide for doubtful accounts on the basis of (a) 4% of gross accounts receivable and (b) 5% of gross accounts receivable and Allowance for Doubtful Accounts has a \$1,700 credit balance.

E7.10 (LO 3) (Bad-Debt Reporting) The chief accountant for Dickinson Corporation provides you with the following list of accounts receivable written off in the current year.

| Date | Customer | Amount |
|--------------|--------------------------|---------|
| March 31 | E. L. Masters Company | \$7,800 |
| June 30 | Stephen Crane Associates | 6,700 |
| September 30 | Amy Lowell's Dress Shop | 7,000 |
| December 31 | R. Frost, Inc. | 9,830 |

Dickinson follows the policy of debiting Bad Debt Expense as accounts are written off. The chief accountant maintains that this procedure is appropriate for financial statement purposes because the Internal Revenue Service will not accept other methods for recognizing bad debts.

All of Dickinson's sales are on a 30-day credit basis. Sales for the current year total \$2,200,000. The balance in Accounts Receivable at year-end is \$77,000 and an analysis of customer risk and charge-off experience indicates that 12% of receivables will be uncollectible (assume a zero balance in the allowance).

Instructions

- Do you agree or disagree with Dickinson's policy concerning recognition of bad debt expense? Why or why not?
- By what amount would net income differ if bad debt expense was computed using the percentage-of-receivables approach?

E7.11 (LO 3) (Bad Debts—Aging) Danica Patrick, Inc. includes the following account among its trade receivables.

| Hopkins Co. | | | | | |
|-------------|-----------------|-------|--|-------|------------------------|
| 1/1 | Balance forward | 700 | | 1/28 | Cash (#1710) 1,100 |
| 1/20 | Invoice #1710 | 1,100 | | 4/2 | Cash (#2116) 1,350 |
| 3/14 | Invoice #2116 | 1,350 | | 4/10 | Cash (1/1 Balance) 155 |
| 4/12 | Invoice #2412 | 1,710 | | 4/30 | Cash (#2412) 1,000 |
| 9/5 | Invoice #3614 | 490 | | 9/20 | Cash (#3614 and |
| 10/17 | Invoice #4912 | 860 | | | part of #2412) 790 |
| 11/18 | Invoice #5681 | 2,000 | | 10/31 | Cash (#4912) 860 |
| 12/20 | Invoice #6347 | 800 | | 12/1 | Cash (#5681) 1,250 |
| | | | | 12/29 | Cash (#6347) 800 |

Instructions

Age the balance and specify any items that apparently require particular attention at year-end.

E7.12 (LO 2, 3, 5) (Journalizing Various Receivable Transactions) Presented below is information related to James Garfield Corp., which sells merchandise with terms 2/10, net 60. Garfield records its sales and receivables net.

- July 1 James Garfield Corp. sold to Warren Harding Co. merchandise having a sales price of \$8,000.
- 5 Accounts receivable of \$9,000 (gross) are factored with Andrew Jackson Credit Corp. without recourse at a financing charge of 9%. Cash is received for the proceeds; collections are handled by the finance company. (These accounts were all past the discount period.)
- 9 Specific accounts receivable of \$9,000 (gross) are pledged to Alf Landon Credit Corp. as security for a loan of \$6,000 at a finance charge of 6% of the amount of the loan. The finance company will make the collections. (All the accounts receivable are past the discount period.)
- Dec. 29 Warren Harding Co. notifies Garfield that it is bankrupt and will pay only 10% of its account. Give the entry to write off the uncollectible balance using the allowance method. (*Note:* First record the increase in the receivable on July 11 when the discount period passed.)

Instructions

Prepare all necessary entries in general journal form for Garfield Corp.

E7.13 (LO 4) (Note Transactions at Unrealistic Interest Rates) On July 1, 2020, Agincourt Inc. made two sales.

1. It sold land having a fair value of \$700,000 in exchange for a 4-year zero-interest-bearing promissory note in the face amount of \$1,101,460. The land is carried on Agincourt's books at a cost of \$590,000.
2. It rendered services in exchange for a 3%, 8-year promissory note having a face value of \$400,000 (interest payable annually).

Agincourt Inc. recently had to pay 8% interest for money that it borrowed from British National Bank. The customers in these two transactions have credit ratings that require them to borrow money at 12% interest.

Instructions

Record the two journal entries that should be recorded by Agincourt Inc. for the sales transactions above that took place on July 1, 2020.

E7.14 (LO 4, 5) (Notes Receivable with Unrealistic Interest Rate) On December 31, 2020, Ed Abbey Co. performed environmental consulting services for Hayduke Co. Hayduke was short of cash, and Abbey Co. agreed to accept a \$200,000 zero-interest-bearing note due December 31, 2022, as payment in full. Hayduke is somewhat of a credit risk and typically borrows funds at a rate of 10%. Abbey is much more creditworthy and has various lines of credit at 6%.

Instructions

- a. Prepare the journal entry to record the transaction of December 31, 2020, for the Ed Abbey Co.
- b. Assuming Ed Abbey Co.'s fiscal year-end is December 31, prepare the journal entry for December 31, 2021.
- c. Assuming Ed Abbey Co.'s fiscal year-end is December 31, prepare the journal entry for December 31, 2022.

E7.15 (LO 5) (Assigning Accounts Receivable) On April 1, 2020, Rasheed Company assigns \$400,000 of its accounts receivable to the Third National Bank as collateral for a \$200,000 loan due July 1, 2020. The assignment agreement calls for Rasheed to continue to collect the receivables. Third National Bank assesses a finance charge of 2% of the accounts receivable, and interest on the loan is 10% (a realistic rate of interest for a note of this type).

Instructions

- Prepare the April 1, 2020, journal entry for Rasheed Company.
- Prepare the journal entry for Rasheed's collection of \$350,000 of the accounts receivable during the period from April 1, 2020, through June 30, 2020.
- On July 1, 2020, Rasheed paid Third National all that was due from the loan it secured on April 1, 2020. Prepare the journal entry to record this payment.

E7.16 (LO 2, 3, 5) (Journalizing Various Receivable Transactions) The trial balance before adjustment for Phil Collins Company shows the following balances.

| | Dr. | Cr. |
|---------------------------------|----------|-----------|
| Accounts Receivable | \$82,000 | |
| Allowance for Doubtful Accounts | 2,120 | |
| Sales Revenue | | \$430,000 |

Instructions

Using the data above, give the journal entries required to record each of the following cases. (Each situation is independent.)

- To obtain additional cash, Collins factors without recourse \$25,000 of accounts receivable with Stills Finance. The finance charge is 10% of the amount factored.
- To obtain a 1-year loan of \$55,000, Collins pledges \$65,000 of specific receivable accounts to Crosby Financial. The finance charge is 8% of the loan; the cash is received and the accounts turned over to Crosby Financial.
- The company wants to maintain the Allowance for Doubtful Accounts at 5% of gross accounts receivable.
- Based on an aging analysis, an allowance of \$5,800 should be reported. Assume the allowance has a credit balance of \$1,100.

E7.17 (LO 5) (Transfer of Receivables with Recourse) Ames Quartet Inc. factors receivables with a carrying amount of \$200,000 to Joffrey Company for \$160,000 on a with recourse basis.

Instructions

The recourse provision has a fair value of \$1,000. This transaction should be recorded as a sale. Prepare the appropriate journal entry to record this transaction on the books of Ames Quartet Inc.

E7.18 (LO 5) (Transfer of Receivables with Recourse) Beyoncé Corporation factors \$175,000 of accounts receivable with Kathleen Battle Financing, Inc. on a with recourse basis. Kathleen Battle Financing will collect the receivables. The receivables records are transferred to Kathleen Battle Financing on August 15, 2020. Kathleen Battle Financing assesses a finance charge of 2% of the amount of accounts receivable and also reserves an amount equal to 4% of accounts receivable to cover probable adjustments.

Instructions

- What conditions must be met for a transfer of receivables with recourse to be accounted for as a sale?
- Assume the conditions from part (a) are met. Prepare the journal entry on August 15, 2020, for Beyoncé to record the sale of receivables, assuming the recourse obligation has a fair value of \$2,000.

E7.19 (LO 5) (Transfer of Receivables without Recourse) JFK Corp. factors \$300,000 of accounts receivable with LBJ Finance Corporation on a without recourse basis on July 1, 2020. The receivables records are transferred to LBJ Finance, which will receive the collections. LBJ Finance assesses a finance charge of 1½% of the amount of accounts receivable and retains an amount equal to 4% of accounts receivable to cover sales discounts, returns, and allowances. The transaction is to be recorded as a sale.

Instructions

- Prepare the journal entry on July 1, 2020, for JFK Corp. to record the sale of receivables without recourse.
- Prepare the journal entry on July 1, 2020, for LBJ Finance Corporation to record the purchase of receivables without recourse.

E7.20 (LO 5) (Analysis of Receivables) Presented below is information for Jones Company.

1. Beginning-of-the-year Accounts Receivable balance was \$15,000.
2. Net sales (all on account) for the year were \$100,000. Jones does not offer cash discounts.
3. Collections on accounts receivable during the year were \$70,000.

Instructions

- a. Prepare (summary) journal entries to record the items noted above.
- b. Compute Jones's accounts receivable turnover and days to collect receivables for the year. The company does not believe it will have any bad debts.
- c. Use the turnover ratio computed in (b) to analyze Jones's liquidity. The turnover ratio last year was 6.0.

E7.21 (LO 5) (Transfer of Receivables) Use the information for Jones Company as presented in E7.20. Jones is planning to factor some accounts receivable at the end of the year. Accounts totaling \$25,000 will be transferred to Credit Factors, Inc. with recourse. Credit Factors will retain 5% of the balances for probable adjustments and assesses a finance charge of 4%. The fair value of the recourse obligation is \$1,200.

Instructions

- a. Prepare the journal entry to record the sale of the receivables.
- b. Compute Jones's accounts receivable turnover for the year, assuming the receivables are sold, and discuss how factoring of receivables affects the turnover ratio.

***E7.22 (LO 6) (Petty Cash)** Carolyn Keene, Inc. decided to establish a petty cash fund to help ensure internal control over its small cash expenditures. The following information is available for the month of April.

1. On April 1, it established a petty cash fund in the amount of \$200.
2. A summary of the petty cash expenditures made by the petty cash custodian as of April 10 is as follows.

| | |
|--|---------|
| Delivery charges paid on merchandise purchased | \$60.00 |
| Supplies purchased and used | 25.00 |
| Postage expense | 33.00 |
| I.O.U. from employees | 17.00 |
| Miscellaneous expense | 36.00 |

The petty cash fund was replenished on April 10. The balance in the fund was \$27.

3. The petty cash fund balance was increased \$100 to \$300 on April 20.

Instructions

Prepare the journal entries to record transactions related to petty cash for the month of April.

***E7.23 (LO 6) (Petty Cash)** The petty cash fund of Fonzarelli's Auto Repair Service, a sole proprietorship, contains the following.

| | |
|--|-----------------|
| 1. Coins and currency | \$ 15.20 |
| 2. Postage stamps | 2.90 |
| 3. An I.O.U. from Richie Cunningham, an employee, for cash advance | 40.00 |
| 4. Check payable to Fonzarelli's Auto Repair from Pottsie Weber, an employee, marked NSF | 34.00 |
| 5. Vouchers for the following: | |
| Stamps | \$ 20.00 |
| Two Rose Bowl tickets for Nick Fonzarelli | 170.00 |
| Printer cartridge | 14.35 |
| | <u>204.35</u> |
| | <u>\$296.45</u> |

The general ledger account Petty Cash has a balance of \$300.

Instructions

Prepare the journal entry to record the reimbursement of the petty cash fund.

***E7.24 (LO 6) (Bank Reconciliation and Adjusting Entries)** Angela Lansbury Company deposits all receipts and makes all payments by check. The following information is available from the cash records.

| June 30 Bank Reconciliation | |
|------------------------------------|-----------------|
| Balance per bank | \$ 7,000 |
| Add: Deposits in transit | 1,540 |
| Deduct: Outstanding checks | (2,000) |
| Balance per books | <u>\$ 6,540</u> |

| Month of July Results | | |
|--|----------|-----------|
| | Per Bank | Per Books |
| Balance July 31 | \$8,650 | \$9,250 |
| July deposits | 5,000 | 5,810 |
| July checks | 4,000 | 3,100 |
| July note collected (not included in July deposits) | 1,000 | — |
| July bank service charge | 15 | — |
| July NSF check from a customer, returned by the bank (recorded by bank as a charge) | 335 | — |

Instructions

- a. Prepare a bank reconciliation going from balance per bank and balance per book to correct cash balance.
- b. Prepare the general journal entry or entries to correct the Cash account.

***E7.25 (LO 6) (Bank Reconciliation and Adjusting Entries)** Logan Bruno Company has just received the August 31, 2020, bank statement, which is summarized below.

| County National Bank | Disbursements | Receipts | Balance |
|---|---------------|----------|----------|
| Balance, August 1 | | | \$ 9,369 |
| Deposits during August | | \$32,200 | 41,569 |
| Note collected for depositor, including \$40 interest | | 1,040 | 42,609 |
| Checks cleared during August | \$34,500 | | 8,109 |
| Bank service charges | 20 | | 8,089 |
| Balance, August 31 | | | 8,089 |

The general ledger Cash account contained the following entries for the month of August.

| Cash | | | |
|------------------------|--------|-------------------------|--------|
| Balance, August 1 | 10,050 | Disbursements in August | 34,903 |
| Receipts during August | 35,000 | | |

Deposits in transit at August 31 are \$3,800, and checks outstanding at August 31 total \$1,050. Cash on hand at August 31 is \$310. The bookkeeper improperly entered one check in the books at \$146.50 which was written for \$164.50 for supplies (expense); it cleared the bank during the month of August.

Instructions

- a. Prepare a bank reconciliation dated August 31, 2020, proceeding to a correct balance.
- b. Prepare any entries necessary to make the books correct and complete.
- c. What amount of cash should be reported in the August 31 balance sheet?

***E7.26 (LO 7) (Expected Cash Flows)** On December 31, 2020, Iva Majoli Company borrowed \$62,092 from Paris Bank, signing a 5-year, \$100,000 zero-interest-bearing note. The note was issued to yield 10% interest. Unfortunately, during 2022, Majoli began to experience financial difficulty. As a result, at December 31, 2022, Paris Bank determined that it was probable that it would receive back only \$75,000 at maturity. The market rate of interest on loans of this nature is now 11%.

Instructions

- a. Prepare the entry to record the issuance of the loan by Paris Bank on December 31, 2020.
- b. Prepare the entry, if any, to record the impairment of the loan on December 31, 2022, by Paris Bank.

***E7.27 (LO 7) (Expected Cash Flows)** On December 31, 2020, Conchita Martinez Company signed a \$1,000,000 note to Sauk City Bank. The market interest rate at that time was 12%. The stated interest

rate on the note was 10%, payable annually. The note matures in 5 years. Unfortunately, because of lower sales, Conchita Martinez's financial situation worsened. On December 31, 2022, Sauk City Bank determined that it was probable that the company would pay back only \$600,000 of the principal at maturity. However, it was considered likely that interest would continue to be paid, based on the \$1,000,000 loan.

Instructions

- Determine the amount of cash Conchita Martinez received from the loan on December 31, 2020.
- Prepare a note amortization schedule for Sauk City Bank up to December 31, 2022.
- Determine the loss on impairment that Sauk City Bank should recognize on December 31, 2022.

Problems

P7.1 (LO 1) Excel (Determine Proper Cash Balance) Francis Equipment Co. closes its books regularly on December 31, but at the end of 2020 it held its cash book open so that a more favorable balance sheet could be prepared for credit purposes. Cash receipts and disbursements for the first 10 days of January were recorded as December transactions. The information is given below.

- January cash receipts recorded in the December cash book totaled \$45,640, of which \$28,000 represents cash sales, and \$17,640 represents collections on account for which cash discounts of \$360 were given.
- January cash disbursements recorded in the December check register liquidated accounts payable of \$22,450 on which discounts of \$250 were taken.
- The ledger has not been closed for 2020.
- The amount shown as inventory was determined by physical count on December 31, 2020.

The company uses the periodic method of inventory.

Instructions

- Prepare any entries you consider necessary to correct Francis's accounts at December 31.
- To what extent was Francis Equipment Co. able to show a more favorable balance sheet at December 31 by holding its cash book open? (Compute working capital and the current ratio.) Assume that the balance sheet that was prepared by the company showed the following amounts:

| | Dr. | Cr. |
|---------------------------|----------|----------|
| Cash | \$39,000 | |
| Accounts receivable | 42,000 | |
| Inventory | 67,000 | |
| Accounts payable | | \$45,000 |
| Other current liabilities | | 14,200 |

P7.2 (LO 3) Groupwork (Bad-Debt Reporting) The following are a series of unrelated situations.

- Halen Company's unadjusted trial balance at December 31, 2020, included the following accounts.

| | Debit | Credit |
|---------------------------------|----------|-------------|
| Accounts receivable | \$53,000 | |
| Allowance for doubtful accounts | 4,000 | |
| Net sales | | \$1,200,000 |

Halen Company estimates its bad debt expense to be 7% of gross accounts receivable. Determine its bad debt expense for 2020.

- An analysis and aging of Stuart Corp. accounts receivable at December 31, 2020, disclosed the following.

| | |
|---|------------|
| Amounts estimated to be uncollectible | \$ 180,000 |
| Accounts receivable | 1,750,000 |
| Allowance for doubtful accounts (per books) | 125,000 |

What is the net amount expected to be collected of Stuart's receivables at December 31, 2020?

- Shore Co. provides for doubtful accounts based on 4% of gross accounts receivable. The following data are available for 2020.

| | |
|--|-------------|
| Credit sales during 2020 | \$4,400,000 |
| Bad debt expense | 57,000 |
| Allowance for doubtful accounts 1/1/20 | 17,000 |
| Collection of accounts written off in prior years (customer credit was reestablished) | 8,000 |
| Customer accounts written off as uncollectible during 2020 | 30,000 |

What is the balance in Allowance for Doubtful Accounts at December 31, 2020?

4. At the end of its first year of operations, December 31, 2020, Darden Inc. reported the following information.

| | |
|---|-----------|
| Accounts receivable, net of allowance for doubtful accounts | \$950,000 |
| Customer accounts written off as uncollectible during 2020 | 24,000 |
| Bad debt expense for 2020 | 84,000 |

What should be the balance in accounts receivable at December 31, 2020, before subtracting the allowance for doubtful accounts?

5. The following accounts were taken from Bullock Inc.'s trial balance at December 31, 2020.

| | Debit | Credit |
|---------------------------------|-----------|-----------|
| Net credit sales | | \$750,000 |
| Allowance for doubtful accounts | \$ 14,000 | |
| Accounts receivable | 310,000 | |

If doubtful accounts are 3% of accounts receivable, determine the bad debt expense to be reported for 2020.

Instructions

Answer the questions relating to each of the five independent situations as requested.

P7.3 (LO 3) Excel (Bad-Debt Reporting—Aging) Manilow Corporation operates in an industry that has a high rate of bad debts. Before any year-end adjustments, the balance in Manilow's Accounts Receivable account was \$555,000 and Allowance for Doubtful Accounts had a credit balance of \$40,000. The year-end balance reported in the balance sheet for Allowance for Doubtful Accounts will be based on the aging schedule shown below.

| Days Account Outstanding | Amount | Probability of Collection |
|----------------------------------|-----------|------------------------------|
| Less than 16 days | \$300,000 | .98 |
| Between 16 and 30 days | 100,000 | .90 |
| Between 31 and 45 days | 80,000 | .85 |
| Between 46 and 60 days | 40,000 | .80 |
| Between 61 and 75 days | 20,000 | .55 |
| Over 75 days (to be written off) | 15,000 | .00 |

Instructions

- What is the appropriate balance for Allowance for Doubtful Accounts at year-end?
- Show how accounts receivable would be presented on the balance sheet.
- What is the dollar effect of the year-end bad debt adjustment on the before-tax income?

(CMA adapted)

P7.4 (LO 3) (Bad-Debt Reporting) From inception of operations to December 31, 2020, Fortner Corporation provided for uncollectible accounts receivable under the allowance method. The provisions are recorded, based on analyses of customers with different risk characteristics. Bad debts written off were charged to the allowance account; recoveries of bad debts previously written off were credited to the allowance account, and no year-end adjustments to the allowance account were made. Fortner's usual credit terms are net 30 days.

The balance in Allowance for Doubtful Accounts was \$130,000 (Cr.) at January 1, 2020. During 2020, credit sales totaled \$9,000,000, the provision for doubtful accounts was determined to be \$180,000, \$90,000 of bad debts were written off, and recoveries of accounts previously written off amounted to \$15,000. Fortner installed a computer system in November 2020, and an aging of accounts receivable was prepared for the first time as of December 31, 2020. A summary of the aging is as follows.

| Classification by Month of Sale | Balance in Each Category | Estimated % Uncollectible |
|------------------------------------|-----------------------------|------------------------------|
| November–December 2020 | \$1,080,000 | 2% |
| July–October | 650,000 | 10% |
| January–June | 420,000 | 25% |
| Prior to 1/1/20 | 150,000 | 80% |
| | <u>\$2,300,000</u> | |

Based on the review of collectibility of the account balances in the “prior to 1/1/20” aging category, additional receivables totaling \$60,000 were written off as of December 31, 2020. The 80% uncollectible estimate applies to the remaining \$90,000 in the category. Effective with the year ended December 31, 2020, Fortner adopted a different method for estimating the allowance for doubtful accounts at the amount indicated by the year-end aging analysis of accounts receivable.

Instructions

- Prepare a schedule analyzing the changes in Allowance for Doubtful Accounts for the year ended December 31, 2020. Show supporting computations in good form. (*Hint:* In computing the 12/31/20 allowance, subtract the \$60,000 write-off.)
- Prepare the journal entry for the year-end adjustment to Allowance for Doubtful Accounts balance as of December 31, 2020.

(AICPA adapted)

P7.5 (LO 3) (Bad-Debt Reporting) Presented below is information related to the Accounts Receivable accounts of Gulistan Inc. during the current year 2020.

- An aging schedule of the accounts receivable as of December 31, 2020, is as follows.

| Age | Net Debit Balance | % to Be Applied after Correction Is Made |
|---------------|-------------------|--|
| Under 60 days | \$172,342 | 1% |
| 60–90 days | 136,490 | 3% |
| 91–120 days | 39,924* | 6% |
| Over 120 days | 23,644 | \$3,700 definitely uncollectible; estimated remainder uncollectible is 25% |
| | <u>\$372,400</u> | |

*The \$3,240 write-off of receivables is related to the 91-to-120 day category.

- The Accounts Receivable control account has a debit balance of \$372,400 on December 31, 2020.
- Two entries were made in the Bad Debt Expense account during the year: (1) a debit on December 31 for the amount credited to Allowance for Doubtful Accounts, and (2) a credit for \$3,240 on November 3, 2020, and a debit to Allowance for Doubtful Accounts because of a bankruptcy.
- Allowance for Doubtful Accounts is as follows for 2020.

| Allowance for Doubtful Accounts | | | | | |
|---------------------------------|---------------------------------------|-------|---------|-------------------|--------|
| Nov. 3 | Uncollectible accounts written off | 3,240 | Jan. 1 | Beginning balance | 8,750 |
| | | | Dec. 31 | 5% of \$372,400 | 18,620 |

- A credit balance exists in Accounts Receivable (60–90 days) of \$4,840, which represents an advance on a sales contract.

Instructions

Assuming that the books have not been closed for 2020, make the necessary correcting entries.

P7.6 (LO 2, 3) (Journalize Various Accounts Receivable Transactions) The balance sheet of Starsky Company at December 31, 2019, includes the following.

| | | |
|---------------------------------------|---------------|-----------|
| Notes receivable | \$ 36,000 | |
| Accounts receivable | 182,100 | |
| Less: Allowance for doubtful accounts | <u>17,300</u> | \$200,800 |

Transactions in 2020 include the following.

- Accounts receivable of \$138,000 were collected including accounts of \$60,000 on which 2% sales discounts were allowed.
- \$5,300 was received in payment of an account which was written off the books as worthless in 2019.

3. Customer accounts of \$17,500 were written off during the year.
4. At year-end, Allowance for Doubtful Accounts was estimated to need a balance of \$20,000. This estimate is based on an analysis of aged accounts receivable.

Instructions

Prepare all journal entries necessary to reflect the transactions above.

P7.7 (LO 4) (Notes Receivable with Realistic Interest Rate) On October 1, 2020, Arden Farm Equipment Company sold a pecan-harvesting machine to Valco Brothers Farm, Inc. In lieu of a cash payment Valco Brothers Farm gave Arden a 2-year, \$120,000, 8% note (a realistic rate of interest for a note of this type). The note required interest to be paid annually on October 1. Arden's financial statements are prepared on a calendar-year basis.

Instructions

Assuming Valco Brothers Farm fulfills all the terms of the note, prepare the necessary journal entries for Arden Farm Equipment Company for the entire term of the note.

P7.8 (LO 4) (Notes Receivable Journal Entries) On December 31, 2020, Oakbrook Inc. rendered services to Beghun Corporation at an agreed price of \$102,049, accepting \$40,000 down and agreeing to accept the balance in four equal installments of \$20,000 receivable each December 31. An assumed interest rate of 11% is imputed.

Instructions

Prepare the entries that would be recorded by Oakbrook Inc. for the sale and for the receipts and interest on the following dates (prepare an amortization schedule). (Assume that the effective-interest method is used for amortization purposes.)

- a. December 31, 2020.
- b. December 31, 2021.
- c. December 31, 2022.
- d. December 31, 2023.
- e. December 31, 2024.

P7.9 (LO 4) (Comprehensive Receivables Problem) Braddock Inc. had the following long-term receivable account balances at December 31, 2019.

| | |
|---------------------------------------|-------------|
| Note receivable from sale of division | \$1,500,000 |
| Note receivable from officer | 400,000 |

Transactions during 2020 and other information relating to Braddock's long-term receivables were as follows.

1. The \$1,500,000 note receivable is dated May 1, 2019, bears interest at 9%, and represents the balance of the consideration received from the sale of Braddock's electronics division to New York Company. Principal payments of \$500,000 plus appropriate interest are due on May 1, 2020, 2021, and 2022. The first principal and interest payment was made on May 1, 2020. Collection of the note installments is reasonably assured.
2. The \$400,000 note receivable is dated December 31, 2019, bears interest at 8%, and is due on December 31, 2022. The note is due from Sean May, president of Braddock Inc. and is collateralized by 10,000 shares of Braddock's common stock. Interest is payable annually on December 31, and all interest payments were paid on their due dates through December 31, 2020. The quoted market price of Braddock's common stock was \$45 per share on December 31, 2020.
3. On April 1, 2020, Braddock sold a patent to Pennsylvania Company in exchange for a \$100,000 zero-interest-bearing note due on April 1, 2022. There was no established exchange price for the patent, and the note had no ready market. The prevailing rate of interest for a note of this type at April 1, 2020, was 12%. The present value of \$1 for two periods at 12% is 0.797 (use this factor). The patent had a carrying value of \$40,000 at January 1, 2020, and the amortization for the year ended December 31, 2020, would have been \$8,000. The collection of the note receivable from Pennsylvania is reasonably assured.
4. On July 1, 2020, Braddock sold a parcel of land to Splinter Company for \$200,000 under an installment sale contract. Splinter made a \$60,000 cash down payment on July 1, 2020, and signed a 4-year 11% note for the \$140,000 balance. The equal annual payments of principal and interest on the note will be \$45,125 payable on July 1, 2021, through July 1, 2024. The land could have been sold at an established cash price of \$200,000. The cost of the land to Braddock was \$150,000. Circumstances are such that the collection of the installments on the note is reasonably assured.

Instructions

- Prepare the long-term receivables section of Braddock's balance sheet at December 31, 2020.
- Prepare a schedule showing the current portion of the long-term receivables and accrued interest receivable that would appear in Braddock's balance sheet at December 31, 2020.
- Prepare a schedule showing interest revenue from the long-term receivables that would appear on Braddock's income statement for the year ended December 31, 2020.

P7.10 (LO 5) (Assigned Accounts Receivable—Journal Entries) Salen Company finances some of its current operations by assigning accounts receivable to a finance company. On July 1, 2020, it assigned, under guarantee, specific accounts amounting to \$150,000. The finance company advanced to Salen 80% of the accounts assigned (20% of the total to be withheld until the finance company has made its full recovery), less a finance charge of $\frac{1}{2}\%$ of the total accounts assigned.

On July 31, Salen Company received a statement that the finance company had collected \$80,000 of these accounts and had made an additional charge of $\frac{1}{2}\%$ of the total accounts outstanding as of July 31. This charge is to be deducted at the time of the first remittance due Salen Company from the finance company. (*Hint: Make entries at this time.*) On August 31, 2020, Salen Company received a second statement from the finance company, together with a check for the amount due. The statement indicated that the finance company had collected an additional \$50,000 and had made a further charge of $\frac{1}{2}\%$ of the balance outstanding as of August 31.

Instructions

Make all entries on the books of Salen Company that are involved in the transactions above.

(AICPA adapted)

P7.11 (LO 5) Groupwork (Income Effects of Receivables Transactions) Sandburg Company requires additional cash for its business. Sandburg has decided to use its accounts receivable to raise the additional cash and has asked you to determine the income statement effects of the following contemplated transactions.

- On July 1, 2020, Sandburg assigned \$400,000 of accounts receivable to Keller Finance Company. Sandburg received an advance from Keller of 80% of the assigned accounts receivable less a commission of 3% on the advance. Prior to December 31, 2020, Sandburg collected \$220,000 on the assigned accounts receivable, and remitted \$232,720 to Keller, \$12,720 of which represented interest on the advance from Keller.
- On December 1, 2020, Sandburg sold \$300,000 of net accounts receivable to Wunsch Company for \$270,000. The receivables were sold outright on a without recourse basis.
- On December 31, 2020, an advance of \$120,000 was received from First Bank by pledging \$160,000 of Sandburg's accounts receivable. Sandburg's first payment to First Bank is due on January 30, 2021.

Instructions

Prepare a schedule showing the income statement effects for the year ended December 31, 2020, as a result of the above facts.

***P7.12 (LO 6) (Petty Cash, Bank Reconciliation)** Bill Jovi is reviewing the cash accounting for Nottleman, Inc., a local mailing service. Jovi's review will focus on the petty cash account and the bank reconciliation for the month ended May 31, 2020. He has collected the following information from Nottleman's bookkeeper for this task.

Petty Cash

- The petty cash fund was established on May 10, 2020, in the amount of \$250.
- Expenditures from the fund by the custodian as of May 31, 2020, were evidenced by approved receipts for the following.

| | |
|-----------------------------------|---------|
| Postage expense | \$33.00 |
| Mailing labels and other supplies | 65.00 |
| I.O.U. from employees | 30.00 |
| Shipping charges (to customer) | 57.45 |
| Newspaper advertising | 22.80 |
| Miscellaneous expense | 15.35 |

On May 31, 2020, the petty cash fund was replenished and increased to \$300; currency and coin in the fund at that time totaled \$26.40.

Bank Reconciliation

| Third National Bank Bank Statement | | | |
|---|----------------------|-----------------|----------------|
| | <u>Disbursements</u> | <u>Receipts</u> | <u>Balance</u> |
| Balance, May 1, 2020 | | | \$8,769 |
| Deposits | | \$28,000 | |
| Note payment direct from customer (interest of \$30) | | 930 | |
| Checks cleared during May | \$31,150 | | |
| Bank service charges | 27 | | |
| Balance, May 31, 2020 | | | 6,522 |
| <u>Nottleman's Cash Account</u> | | | |
| Balance, May 1, 2020 | | \$ 8,850 | |
| Deposits during May 2020 | | 31,000 | |
| Checks written during May 2020 | | (31,835) | |

Deposits in transit are determined to be \$3,000, and checks outstanding at May 31 total \$850. Cash on hand (besides petty cash) at May 31, 2020, is \$246.

Instructions

- Prepare the journal entries to record the transactions related to the petty cash fund for May.
- Prepare a bank reconciliation dated May 31, 2020, proceeding to a correct cash balance, and prepare the journal entries necessary to make the books correct and complete.
- What amount of cash should be reported in the May 31, 2020, balance sheet?

***P7.13 (LO 6) (Bank Reconciliation and Adjusting Entries)** The cash account of Aguilar Co. showed a ledger balance of \$3,969.85 on June 30, 2020. The bank statement as of that date showed a balance of \$4,150. Upon comparing the statement with the cash records, the following facts were determined.

- There were bank service charges for June of \$25.
- A bank memo stated that Bao Dai's note for \$1,200 and interest of \$36 had been collected on June 29, and the bank had made a charge of \$5.50 on the collection. (No entry had been made on Aguilar's books when Bao Dai's note was sent to the bank for collection.)
- Receipts for June 30 for \$3,390 were not deposited until July 2.
- Checks outstanding on June 30 totaled \$2,136.05.
- The bank had charged the Aguilar Co.'s account for a customer's uncollectible check amounting to \$253.20 on June 29.
- A customer's check for \$90 (as payment on the customer's Accounts Receivable) had been entered as \$60 in the cash receipts journal by Aguilar on June 15.
- Check no. 742 in the amount of \$491 had been entered in the cash journal as \$419, and check no. 747 in the amount of \$58.20 had been entered as \$582. Both checks had been issued to pay for purchases and were payments on Aguilar's Accounts Payable.

Instructions

- Prepare a bank reconciliation dated June 30, 2020, proceeding to a correct cash balance.
- Prepare any entries necessary to make the books correct and complete.

***P7.14 (LO 6) (Bank Reconciliation and Adjusting Entries)** Presented below is information related to Haselhof Inc.

Balance per books at October 31, \$41,847.85; receipts \$173,523.91; disbursements \$164,893.54. Balance per bank statement November 30, \$56,274.20.

The following checks were outstanding at November 30.

| | |
|------|------------|
| 1224 | \$1,635.29 |
| 1230 | 2,468.30 |
| 1232 | 2,125.15 |
| 1233 | 482.17 |

Included with the November bank statement and not recorded by the company were a bank debit memo for \$27.40 covering bank charges for the month, a debit memo for \$372.13 for a customer's check

returned and marked NSF, and a credit memo for \$1,400 representing bond interest collected by the bank in the name of Haselhof Inc. Cash on hand at November 30 recorded and awaiting deposit amounted to \$1,915.40.

Instructions

- Prepare a bank reconciliation (to the correct balance) at November 30, for Haselhof Inc. from the information above.
- Prepare any journal entries required to adjust the cash account at November 30.

***P7.15 (LO 7) (Expected Cash Flows)** On January 1, 2020, Botosan Company issued a \$1,200,000, 5-year, zero-interest-bearing note to National Organization Bank. The note was issued to yield 8% annual interest. Unfortunately, during 2021 Botosan fell into financial trouble due to increased competition. After reviewing all available evidence on December 31, 2021, National Organization Bank decided that the loan was impaired. Botosan will probably pay back only \$800,000 of the principal at maturity.

Instructions

- Prepare journal entries for both Botosan Company and National Organization Bank to record the issuance of the note on January 1, 2020. (Round to the nearest \$10.)
- Assuming that both Botosan Company and National Organization Bank use the effective-interest method to amortize the discount, prepare the amortization schedule for the note.
- Under what circumstances can National Organization Bank consider Botosan's note to be impaired?
- Compute the loss National Organization Bank will suffer from Botosan's financial distress on December 31, 2021. What journal entries should be made to record this loss?

Concepts for Analysis

CA7.1 (LO 3) (Bad-Debt Accounting) Simms Company has significant amounts of trade accounts receivable. Simms uses the allowance method to estimate bad debts instead of the direct write-off method. During the year, some specific accounts were written off as uncollectible, and some that were previously written off as uncollectible were collected.

Instructions

- What are the deficiencies of the direct write-off method?
- Briefly describe the allowance method to estimate bad debts and the theoretical justification for its use?
- How should Simms account for the collection of the specific accounts previously written off as uncollectible?

CA7.2 (LO 2, 5) (Various Receivable Accounting Issues) Kimmel Company uses the net method of accounting for sales discounts. Kimmel also offers trade discounts to various groups of buyers. On August 1, 2020, Kimmel sold some accounts receivable on a without recourse basis. Kimmel incurred a finance charge. Kimmel also has some notes receivable bearing an appropriate rate of interest. The principal and total interest are due at maturity. The notes were received on October 1, 2020, and mature on September 30, 2022. Kimmel's operating cycle is less than one year.

Instructions

- Using the net method, how should Kimmel account for the sales discounts at the date of sale? What is the rationale for the amount recorded as sales under the net method?
 - Using the net method, what is the effect on Kimmel's sales revenues and net income when customers do not take the sales discounts?
- What is the effect of trade discounts on sales revenues and accounts receivable? Why?
- How should Kimmel account for the accounts receivable factored on August 1, 2020? Why?
- How should Kimmel account for the note receivable and the related interest on December 31, 2020? Why?

CA7.3 (LO 3) Writing (Bad-Debt Reporting Issues) Clark Pierce conducts a wholesale merchandising business that sells approximately 5,000 items per month with a total monthly average sales value

of \$250,000. Its annual bad debt rate has been approximately 1½% of sales. In recent discussions with his bookkeeper, Mr. Pierce has become confused by all the alternatives apparently available in handling the Allowance for Doubtful Accounts balance. The following information has been presented to Pierce.

1. An allowance can be set up (a) on the basis of a percentage of receivables or (b) on the basis of a valuation of all past due or otherwise questionable accounts receivable. Those considered uncollectible can be charged to such allowance at the close of the accounting period, or specific items can be charged off directly against (1) Gross Sales or to (2) Bad Debt Expense in the year in which they are determined to be uncollectible.
2. Collection agency and legal fees, and so on, incurred in connection with the attempted recovery of bad debts can be charged to (a) Bad Debt Expense, (b) Allowance for Doubtful Accounts, (c) Legal Expense, or (d) Administrative Expense.
3. Debts previously written off in whole or in part but currently recovered can be credited to (a) Other Revenue, (b) Bad Debt Expense, or (c) Allowance for Doubtful Accounts.

Instructions

Which of the foregoing methods would you recommend to Mr. Pierce in regard to (1) allowances and charge-offs, (2) collection expenses, and (3) recoveries? State briefly and clearly the reasons supporting your recommendations.

CA7.4 (LO 2, 4) Writing (Basic Note and Accounts Receivable Transactions)

Part 1: On July 1, 2020, Wallace Company, a calendar-year company, sold special-order merchandise on credit and received in return an interest-bearing note receivable from the customer. Wallace Company will receive interest at the prevailing rate for a note of this type. Both the principal and interest are due in one lump sum on June 30, 2021.

Instructions

When should Wallace Company report interest revenue from the note receivable? Discuss the rationale for your answer.

Part 2: On December 31, 2020, Wallace Company had significant amounts of accounts receivable as a result of credit sales to its customers. Wallace uses the allowance method based on credit sales to estimate bad debts. Past experience indicates a reliable estimate of uncollectible accounts can be developed based on an aging analysis of receivable balances. This pattern is expected to continue.

Instructions

- a. Discuss the rationale for using the allowance method based on the balance in the trade receivables accounts.
- b. How should Wallace Company report the allowance for doubtful accounts on its balance sheet at December 31, 2020? Also, describe the alternatives, if any, for presentation of bad debt expense in Wallace Company's 2020 income statement.

(AICPA adapted)

CA7.5 (LO 5) (Sale of Notes Receivable) Corrs Wholesalers Co. sells industrial equipment for a standard 3-year note receivable. Revenue is recognized at time of sale. Each note is secured by a lien on the equipment and has a face amount equal to the equipment's list price. Each note's stated interest rate is below the customer's market rate at date of sale. All notes are to be collected in three equal annual installments beginning one year after sale. Some of the notes are subsequently sold to a bank with recourse, some are subsequently sold without recourse, and some are retained by Corrs. At year-end, Corrs evaluates all outstanding notes receivable and provides for estimated losses arising from defaults.

Instructions

- a. What is the appropriate valuation basis for Corrs's notes receivable at the date it sells equipment?
- b. How should Corrs account for the sale, without recourse, of a February 1, 2020, note receivable sold on May 1, 2020? Why is it appropriate to account for it in this way?
- c. At December 31, 2020, how should Corrs measure and account for the impact of estimated losses resulting from notes receivable that it:
 1. Retained and did **not** sell?
 2. Sold to bank with recourse?

(AICPA adapted)

CA7.6 (LO 4) (Zero-Interest-Bearing Note Receivable) On September 30, 2019, Rolen Machinery Co. sold a machine and accepted the customer's zero-interest-bearing note. Rolen normally makes sales

on a cash basis. Since the machine was unique, its sales price was not determinable using Rolen's normal pricing practices.

After receiving the first of two equal annual installments on September 30, 2020, Rolen immediately sold the note with recourse. On October 9, 2021, Rolen received notice that the note was dishonored, and it paid all amounts due. At all times prior to default, the note was reasonably expected to be paid in full.

Instructions

- a.
 1. How should Rolen determine the sales price of the machine?
 2. How should Rolen report the effects of the zero-interest-bearing note on its income statement for the year ended December 31, 2019? Why is this accounting presentation appropriate?
- b. What are the effects of the sale of the note receivable with recourse on Rolen's income statement for the year ended December 31, 2020, and its balance sheet at December 31, 2020?
- c. How should Rolen account for the effects of the note being dishonored?

CA7.7 (LO 4, 5) Groupwork (Reporting of Notes Receivable, Interest, and Sale of Receivables) On July 1, 2020, Moresan Company sold special-order merchandise on credit and received in return an interest-bearing note receivable from the customer. Moresan will receive interest at the prevailing rate for a note of this type. Both the principal and interest are due in one lump sum on June 30, 2021.

On September 1, 2020, Moresan sold special-order merchandise on credit and received in return a zero-interest-bearing note receivable from the customer. The prevailing rate of interest for a note of this type is determinable. The note receivable is due in one lump sum on August 31, 2022.

Moresan also has significant amounts of trade accounts receivable as a result of credit sales to its customers. On October 1, 2020, some trade accounts receivable were assigned to Indigo Finance Company on a non-notification (Moresan handles collections) basis for an advance of 75% of their amount at an interest charge of 8% on the balance outstanding.

On November 1, 2020, other trade accounts receivable were sold on a without recourse basis. The factor withheld 5% of the trade accounts receivable factored as protection against sales returns and allowances and charged a finance charge of 3%.

Instructions

- a. How should Moresan determine the interest revenue for 2020 on the:
 1. Interest-bearing note receivable? Why?
 2. Zero-interest-bearing note receivable? Why?
- b. How should Moresan report the interest-bearing note receivable and the zero-interest-bearing note receivable on its balance sheet at December 31, 2020?
- c. How should Moresan account for subsequent collections on the trade accounts receivable assigned on October 1, 2020, and the payments to Indigo Finance? Why?
- d. How should Moresan account for the trade accounts receivable factored on November 1, 2020? Why?

(AICPA adapted)

CA7.8 (LO 4) Writing (Accounting for Zero-Interest-Bearing Note) Soon after beginning the year-end audit work on March 10 at Engone Company, the auditor has the following conversation with the controller.

Controller: The year ended March 31 should be our most profitable in history and, as a consequence, the board of directors has just awarded the officers generous bonuses.

Auditor: I thought profits were down this year in the industry, according to your latest interim report.

Controller: Well, they were down, but 10 days ago we closed a deal that will give us a substantial increase for the year.

Auditor: Oh, what was it?

Controller: Well, you remember a few years ago our former president bought stock in Henderson Enterprises because he had those grandiose ideas about becoming a conglomerate. For 6 years we have not been able to sell this stock, which cost us \$3,000,000 and has not paid a nickel in dividends. Thursday we sold this stock to Bimini Inc. for \$4,000,000. So, we will have a gain of \$700,000 (\$1,000,000 pretax) which will increase our net income for the year to \$4,000,000, compared with last year's \$3,800,000. As far as I know, we'll be the only company in the industry to register an increase in net income this year. That should help the market value of the stock!

Auditor: Do you expect to receive the \$4,000,000 in cash by March 31, your fiscal year-end?

Controller: No. Although Bimini Inc. is an excellent company, they are a little tight for cash because of their rapid growth. Consequently, they are going to give us a \$4,000,000 zero-interest-bearing note with payments of \$400,000 per year for the next 10 years. The first payment is due on March 31 of next year.

Auditor: Why is the note zero-interest-bearing?

Controller: Because that's what everybody agreed to. Since we don't have any interest-bearing debt, the funds invested in the note do not cost us anything and besides, we were not getting any dividends on the Henderson Enterprises stock.

Instructions

Do you agree with the way the controller has accounted for the transaction? If not, how should the transaction be accounted for?

CA7.9 (LO 2, 3) Writing (Receivables Management) As the manager of the accounts receivable department for Beavis Leather Goods, Ltd., you recently noticed that Kelly Collins, your accounts receivable clerk who is paid \$1,200 per month, has been wearing unusually tasteful and expensive clothing. (This is Beavis's first year in business.) This morning, Collins drove up to work in a brand new Lexus.

Naturally suspicious by nature, you decide to test the accuracy of the accounts receivable balance of \$192,000 as shown in the ledger. The following information is available for your first year (precisely 9 months ended September 30, 2020) in business.

| | |
|--|-----------|
| 1. Collections from customers | \$188,000 |
| 2. Merchandise purchased | 360,000 |
| 3. Ending merchandise inventory | 90,000 |
| 4. Goods are marked to sell at 40% above cost. | |

Instructions

Assuming all sales were made on account, compute the ending accounts receivable balance that should appear in the ledger, noting any apparent shortage. Then, draft a memo dated October 3, 2020, to Mark Price, the branch manager, explaining the facts in this situation. Remember that this problem is serious, and you do not want to make hasty accusations.

CA7.10 (LO 3) Ethics (Bad-Debt Reporting) Marvin Company is a subsidiary of Hughes Corp. The controller believes that the yearly allowance for doubtful accounts for Marvin should be 8% of gross accounts receivable. Given the recession and the high interest rate environment, the president, nervous that the parent company might expect the subsidiary to sustain its 10% growth rate, suggests that the controller increase the allowance for doubtful accounts to 9%. The president thinks that the lower net income, which reflects a 6% growth rate, will be a more sustainable rate for Marvin Company.

Instructions

- a. In a recessionary environment with tight credit and high interest rates:
 1. Identify steps Marvin Company might consider to improve the accounts receivable situation.
 2. Then evaluate each step identified in terms of the risks and costs involved.
- b. Should the controller be concerned with Marvin Company's growth rate in estimating the allowance? Explain your answer.
- c. Does the president's request pose an ethical dilemma for the controller? Give your reasons.

Using Your Judgment

Financial Reporting

The Procter & Gamble Company (P&G)

The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

- a. What criteria does P&G use to classify "Cash and cash equivalents" as reported in its balance sheet?
- b. As of June 30, 2017, what balances did P&G have in cash and cash equivalents? What were the major uses of cash during the year?

- c. P&G reports no allowance for doubtful accounts, suggesting that bad debt expense is not material for this company. Is it reasonable that a company like P&G would not have material bad debt expense? Explain.

Comparative Analysis Case

The Coca-Cola Company and PepsiCo, Inc.

The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- What were the cash and cash equivalents reported by Coca-Cola and PepsiCo at the end of 2017? What does each company classify as cash equivalents?
- What were the accounts receivable (net) for Coca-Cola and PepsiCo at the end of 2017? Which company reports the greater allowance for doubtful accounts (amount and percentage of gross receivable) at the end of 2017?
- Assuming that all "net operating revenues" (Coca-Cola) and all "net revenues" (PepsiCo) were net *credit* sales, compute the accounts receivable turnover for 2017 for Coca-Cola and PepsiCo; also compute the days outstanding for receivables. What is your evaluation of the difference?

Financial Statement Analysis Cases

Case 1: Occidental Petroleum Corporation

Occidental Petroleum Corporation reported the following information in a recent annual report.

|  Occidental Petroleum Corporation Consolidated Balance Sheets (in millions) | | |
|---|-----------------|---------------|
| Assets at December 31, | Current year | Prior year |
| Current assets | | |
| Cash and cash equivalents | \$ 683 | \$ 146 |
| Trade receivables, net of allowances | 804 | 608 |
| Receivables from joint ventures, partnerships, and other | 330 | 321 |
| Inventories | 510 | 491 |
| Prepaid expenses and other | 147 | 307 |
| Total current assets | 2,474 | 1,873 |
| Long-term receivables, net | 264 | 275 |

Notes to Consolidated Financial Statements

Cash and Cash Equivalents. Cash equivalents consist of highly liquid investments. Cash equivalents totaled approximately \$661 million and \$116 million at current and prior year-ends, respectively.

Trade Receivables. Occidental has agreement to sell, under a revolving sale program, an undivided percentage ownership interest in a designated pool of non-interest-bearing receivables. Under this program, Occidental serves as the collection agent with respect to the receivables sold. An interest in new receivables is sold as collections are made from customers. The balance sold at current year-end was \$360 million.

Instructions

- What items other than coin and currency may be included in "cash"?
- What items may be included in "cash equivalents"?
- What are compensating balance arrangements, and how should they be reported in financial statements?
- What are the possible differences between cash equivalents and short-term (temporary) investments?
- Assuming that the sale agreement meets the criteria for sale accounting, cash proceeds were \$345 million, the carrying value of the receivables sold was \$360 million, and the fair value of the recourse liability was \$15 million, what was the effect on income from the sale of receivables?
- Briefly discuss the impact of the transaction in (e) on Occidental's liquidity.

Case 2: Microsoft Corporation

Microsoft is the leading developer of software in the world. To continue to be successful Microsoft must generate new products, which requires significant amounts of cash. The following is the current asset and current liability information from Microsoft's recent balance sheets (in millions). Following the Microsoft data is the current asset and current liability information from **Oracle**'s balance sheets of the same year (in millions). Oracle is another major software developer.

|  Microsoft Corporation | | |
|--|--------------|------------|
| Balance Sheets (partial) | | |
| As of June 30 | | |
| (in millions) | | |
| Current assets | Current Year | Prior Year |
| Cash and cash equivalents | \$ 8,669 | \$ 3,804 |
| Short-term investments | 77,040 | 73,218 |
| Accounts receivable, net | 19,544 | 17,486 |
| Inventories | 2,660 | 1,938 |
| Other | 6,333 | 5,020 |
| Total current assets | \$114,246 | \$101,466 |
| Total current liabilities | \$ 45,625 | \$ 37,417 |

|  Oracle | | |
|---|--------------|------------|
| Balance Sheets (partial) | | |
| As of May 31 | | |
| (in millions) | | |
| Current assets | Current Year | Prior Year |
| Cash and cash equivalents | \$17,769 | \$14,613 |
| Marketable securities | 21,050 | 17,603 |
| Accounts receivable, net | 6,087 | 6,049 |
| Inventories | 189 | 240 |
| Other current assets | 3,043 | 3,187 |
| Total current assets | \$48,138 | \$41,692 |
| Total current liabilities | \$14,389 | \$12,872 |

Part 1 (Cash and Cash Equivalents)**Instructions**

- What is the definition of a cash equivalent? Give some examples of cash equivalents. How do cash equivalents differ from other types of short-term investments?
- Calculate (1) the current ratio and (2) working capital for each company for the current year and discuss your results.
- Is it possible to have too many liquid assets?

Part 2 (Accounts Receivable) Microsoft provided the following disclosure related to its accounts receivable.

| Allowance for Doubtful Accounts. The allowance for doubtful accounts reflects our best estimate of probable losses inherent in the accounts receivable balance. We determine the allowance based on known troubled accounts, historical experience, and other currently available evidence. Activity in the allowance for doubtful accounts is as follows: | | | | |
|---|--------------------------------|-------------------------------|------------|--------------------------|
| (in millions) | | | | |
| Year Ended June 30 | Balance at beginning of period | Charged to costs and expenses | Write-offs | Balance at end of period |
| Two years ago | \$333 | \$115 | \$(59) | \$389 |
| Prior year | 389 | 4 | (57) | 336 |
| Current year | 336 | 16 | (51) | 301 |

Instructions

- Compute Microsoft's accounts receivable turnover for the current year and discuss your results. Microsoft had sales revenue of \$69,943 million in the current year.
- Reconstruct the summary journal entries for current year based on the information in the disclosure.
- Briefly discuss how the accounting for bad debts affects the analysis in Part 2 (a).

Accounting, Analysis, and Principles

The Flatiron Pub provides catering services to local businesses. The following information was available for The Flatiron Pub for the years ended December 31, 2019 and 2020.

| | December 31, 2019 | December 31, 2020 |
|------------------------------------|----------------------|----------------------|
| Cash | \$ 2,000 | \$ 1,685 |
| Accounts receivable | 46,000 | ? |
| Allowance for doubtful accounts | 550 | ? |
| Other current assets | 8,500 | 7,925 |
| Current liabilities | 37,000 | 44,600 |
| Total credit sales | 205,000 | 255,000 |
| Collections on accounts receivable | 190,000 | 228,000 |

Flatiron management is preparing for a meeting with its bank concerning renewal of a loan and has collected the following information related to the above balances.

- The cash reported at December 31, 2020, reflects the following items: petty cash \$1,575 and postage stamps \$110. The other current assets balance at December 31, 2020, includes the checking account balance of \$4,000.
- On November 30, 2020, Flatiron agreed to accept a 6-month, \$5,000 note bearing 12% interest, payable at maturity, from a major client in settlement of a \$5,000 bill. The above balances do not reflect this transaction.
- Flatiron factored some accounts receivable at the end of 2020. It transferred accounts totaling \$10,000 to Final Factor, Inc. with recourse. Final Factor will receive the collections from Flatiron's customers and will retain 2% of the balances. Final Factor assesses Flatiron a finance charge of 3% on this transfer. The fair value of the recourse liability is \$400. However, management has determined that the amount due from the factor and the fair value of the resource obligation have not been recorded, and neither are included in the balances above.
- Flatiron charged off uncollectible accounts with balances of \$1,600. On the basis of the latest available information, the 2020 provision for bad debts is estimated to be 2.5% of accounts receivable.

Accounting

- Based on the above transactions, determine the balance for (1) Accounts Receivable and (2) Allowance for Doubtful Accounts at December 31, 2020.
- Prepare the current assets section of The Flatiron Pub's balance sheet at December 31, 2020.

Analysis

- Compute Flatiron's current ratio and accounts receivable turnover for December 31, 2020. Use these measures to analyze Flatiron's liquidity. The accounts receivable turnover in 2019 was 4.37.
- Discuss how the analysis you did above of Flatiron's liquidity would be affected if Flatiron had transferred the receivables in a secured borrowing transaction.

Principles

What is the conceptual basis for recording bad debt expense based on the percentage-of-receivables approach at December 31, 2020?

Analytics in Action

Accounting software systems collect vast amounts of data about the economic events experienced by a company and about the parties with whom the company engages, such as suppliers and customers. Business decision-makers take advantage of this wealth of information by using data analytics, which often employs both software and statistics, to draw inferences and make more informed business decisions. As both data access and analytical software improve, the use of data analytics to support decisions is becoming increasingly common at virtually all types of companies.

Determining bad debt expense requires analysis of historical data related to uncollectible accounts. These data can be analyzed to develop a prediction of account balances not expected to be collected (Allowance for Doubtful Accounts).

Instructions Go to WileyPLUS for a data analytics exercise focusing on estimating the allowance for doubtful accounts and conducting financial analysis of the collectibility of accounts receivable.

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

CE7.1 Access the glossary (“Master Glossary”) to answer the following.

- a. What is the definition of cash?
- b. What is the definition of securitization?
- c. What are the three contexts that give rise to recourse?

CE7.2 Carrie Underwood believes that by establishing an allowance for uncollectible receivables, a company recognizes losses that have occurred in the past. What does the authoritative literature say about this belief?

CE7.3 In addition to securitizations, what are the other types of transfers of financial assets identified in the Codification?

CE7.4 The controller for Nesheim Construction Company believes that it is appropriate to offset a note payable to Oregon Bank against an account receivable from Oregon Bank related to remodeling services provided to the bank. What is the authoritative guidance concerning the criteria to be met to allow such offsetting?

Codification Research Case

As the new staff person in your company’s treasury department, you have been asked to conduct research related to a proposed transfer of receivables. Your supervisor wants the authoritative sources for the following items that are discussed in the securitization agreement.

Instructions

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

- a. Identify relevant Codification section that addresses transfers of receivables.

- b. Provide definitions for the following:
1. Transfer.
 2. Recourse.
 3. Collateral.

IFRS Insights

LEARNING OBJECTIVE 8

Compare the accounting procedures for cash and receivables under GAAP and IFRS.

The basic accounting and reporting issues related to recognition and measurement of receivables, such as the use of allowance accounts, how to record discounts, use of the allowance method to account for bad debts, and factoring, are similar for both IFRS and GAAP. *IAS 1* (“Presentation of Financial Statements”) is the only standard that discusses issues specifically related to cash. *IFRS 7* (“Financial Instruments: Disclosure”) and *IFRS 9* (“Financial Instruments”) are the two international standards that address issues related to financial instruments and more specifically receivables.

Relevant Facts

Following are the key similarities and differences between GAAP and IFRS related to cash and receivables.

Similarities

- The accounting and reporting related to cash is essentially the same under both IFRS and GAAP. In addition, the definition used for cash equivalents is the same.
- Like GAAP, cash and receivables are generally reported in the current assets section of the statement of financial position under IFRS.
- Like GAAP, for trade and other accounts receivable without a significant financing component, an allowance for uncollectible accounts should be recorded to result in receivables reported at the net amount expected to be collected. The estimation approach used is similar to that under GAAP.
- Similar to GAAP, IFRS requires that loans and receivables be accounted for at amortized cost, adjusted for allowances for doubtful accounts. IFRS sometimes refers to these allowances as *provisions*. The entry to record the allowance would be as follows.

| | | |
|---------------------------------|--------|--------|
| Bad Debt Expense | xxxxxx | |
| Provision for Doubtful Accounts | | xxxxxx |

Differences

- Under IFRS, companies may report cash and receivables as the last items in current assets under IFRS. Under GAAP, these items are reported in order of liquidity.
- While IFRS implies that receivables with different characteristics should be reported separately, there is no standard that mandates this segregation. GAAP has explicit guidance in the area.
- Unlike GAAP, IFRS has a different approach to estimating uncollectible accounts on receivables with a significant financing component (e.g., notes receivable). For long-term receivables that *have not* experienced a deterioration in credit quality after origination, uncollectible accounts are estimated based on expected losses over the next 12 months. For long-term receivables that experience a credit quality decline, uncollectible accounts are estimated based on lifetime expected losses (which is the model used under GAAP for all receivables).
- The fair value option is similar under GAAP and IFRS but not identical. The international standard related to the fair value option is subject to certain qualifying criteria not in the U.S. standard. In addition, there are some differences in the financial instruments covered.
- Under IFRS, bank overdrafts are generally reported as cash. Under GAAP, such balances are reported as liabilities.

- IFRS and GAAP differ in the criteria used to account for transfers of receivables. IFRS is a combination of an approach focused on risks and rewards and loss of control. GAAP uses loss of control as the primary criterion. In addition, IFRS generally permits partial transfers; GAAP does not.

About the Numbers

The accounting for loan impairments is similar between GAAP and IFRS. Subsequent to recording an impairment, events or economic conditions may change such that the extent of the impairment loss decreases (e.g., due to an impairment in the debtor's credit rating). Under IFRS, some or all of the previously recognized impairment loss shall be reversed either directly, with a debit to Accounts Receivable, or by debiting the allowance account and crediting Bad Debt Expense. Such reversals of impairment losses are not allowed under GAAP.

To illustrate, recall the Ogden Bank impairment example from the chapter. In that situation, Ogden Bank (the creditor) recognized an impairment loss of \$12,434 by debiting Bad Debt Expense for the expected loss. At the same time, it reduced the overall value of the receivable by crediting Allowance for Doubtful Accounts. Ogden made the following entry to record the loss.

| | | |
|---------------------------------|--------|--------|
| Bad Debt Expense | 12,434 | |
| Allowance for Doubtful Accounts | | 12,434 |

Now, assume that in the year following the impairment recorded by Ogden, Carl King (the borrower) has worked his way out of financial difficulty. Ogden now expects to receive all payments on the loan according to the original loan terms. Based on this new information, the present value of the expected payments is \$100,000. Thus, Ogden makes the following entry to reverse the previously recorded impairment.

| | | |
|---------------------------------|--------|--------|
| Allowance for Doubtful Accounts | 12,434 | |
| Bad Debt Expense | | 12,434 |

Note that the reversal of impairment losses shall not result in carrying amount of the receivable that exceeds the amortized cost that would have been reported had the impairment not been recognized. Under GAAP, reversal of an impairment is not permitted. Rather, the balance of the loan after the impairment becomes the new basis for the loan.

On the Horizon

The question of recording fair values for financial instruments will continue to be an important issue to resolve as the Boards work toward convergence. Both the IASB and the FASB have indicated that they believe that financial statements would be more transparent and understandable if companies recorded and reported all financial instruments at fair value. That said, in *IFRS 9* the IASB created a split model, where some financial instruments are recorded at fair value but other financial assets, such as loans and receivables, can be accounted for at amortized cost if certain criteria are met. While the FASB has adopted a similar approach to classifications, there remain differences in the accounting for impairments on financial instruments with a significant financing component (just about all notes receivable). As indicated, the IASB approach estimates uncollectible accounts over shorter future periods, compared to the FASB model. Critics say that this can result in a delayed recognition of impairments under IFRS as well as situations in which two companies with identical securities account for those securities in different ways. Most believe that both Boards' approaches to estimating uncollectible accounts represent improvements and address the weakness in previous bad debt accounting that was highlighted by the financial crisis. Time will tell if one model or the other provides more useful information to investors and creditors.

IFRS Self-Test Questions

- Under IFRS, cash and cash equivalents are reported:
 - the same as GAAP.
 - as separate items.
 - similar to GAAP, except for the reporting of bank overdrafts.
 - always as the first items in the current assets section.
- Under IFRS, receivables are to be reported on the balance sheet at:
 - amortized cost.
 - amortized cost adjusted for estimated loss provisions.
 - historical cost.
 - replacement cost.
- Which of the following statements is **false**?
 - Receivables include equity securities purchased by the company.
 - Receivables include credit card receivables.
 - Receivables include amounts owed by employees as result of company loans to employees.
 - Receivables include amounts resulting from transactions with customers.

4. Under IFRS:
- the entry to record estimated uncollected accounts is the same as GAAP.
 - loans and receivables should only be tested for impairment as a group.
 - it is always acceptable to use the direct write-off method.
 - all financial instruments are recorded at fair value.
5. Which of the following statements is **true**?
- The fair value option requires that some types of financial instruments be recorded at fair value.
 - The fair value option requires that all noncurrent financial instruments be recorded at amortized cost.
 - The fair value option allows, but does not require, that some types of financial instruments be recorded at fair value.
 - The FASB and IASB would like to reduce the reliance on fair value accounting for financial instruments in the future.

IFRS Concepts and Application

IFRS7.1 What are some steps taken by both the FASB and IASB to move to fair value measurement for financial instruments? In what ways have some of the approaches differed?

IFRS7.2 On December 31, 2020, Firth Company borrowed \$62,092 from Paris Bank, signing a 5-year, \$100,000 zero-interest-rate note. The note was issued to yield 10% interest. Unfortunately, during 2022, Firth began to experience financial difficulty. As a result, at December 31, 2022, Paris Bank determined that it was probable that it would collect only \$75,000 at maturity. The market rate of interest on loans of this nature is now 11%.

Instructions

- Prepare the entry (if any) to record the impairment of the loan on December 31, 2022, by Paris Bank.
- Prepare the entry on March 31, 2023, if Paris learns that Firth will be able to repay the loan under the original terms.

Professional Research

IFRS7.3 As the new staff person in your company's treasury department, you have been asked to conduct research related to a proposed transfer of receivables. Your supervisor wants the authoritative sources for the following items that are discussed in the receivables transfer agreement.

Instructions

Access the IFRS authoritative literature at the IASB website. (Click on the IFRS tab and then register for free eIFRS access if necessary.) When you have accessed the documents, you can use the search tool in your Internet browser to prepare responses to the following items. **(a)** Identify relevant IFRSs that address transfers (derecognition) of receivables. **(b)** What are the criteria for a transfer of a financial asset to qualify for derecognition? **(c)** Provide the definition for "Amortized cost."

International Financial Reporting Problem

Marks and Spencer plc (M&S)

IFRS7.4 The financial statements of **M&S** are presented in Appendix E. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- What criteria does M&S use to classify "Cash and cash equivalents" as reported in its statement of financial position?
- As of 1 April 2017, what balances did M&S have in cash and cash equivalents? What were the major uses of cash during the year?
- What amounts related to trade receivables does M&S report? Does M&S have any past due but not impaired receivables?

Valuation of Inventories: A Cost-Basis Approach

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

1. Identify inventory classifications and different inventory systems.
2. Determine the goods and costs included in inventory.
3. Describe and compare the cost flow assumptions used to account for inventories.
4. Identify special issues related to LIFO.
5. Determine the effects of inventory errors on the financial statements.

PREVIEW OF CHAPTER 8 As the following opening story indicates, the accounting choice related to inventory is affected by operating strategies, tax consequences, and is important for providing information that is useful for predicting financial performance. In this chapter, we discuss the basic issues related to accounting and reporting for inventory. The content and organization of the chapter are as follows.

This chapter also includes numerous conceptual and global discussions that are integral to the topics presented here. IFRS Insights related to inventory are presented in Chapter 9.

VALUATION OF INVENTORIES: A COST-BASIS APPROACH

Inventory Issues

- Classification
- Cost flow
- Control
- Cost of goods sold

Goods and Costs Included in Inventory

- Goods included
- Costs included

Cost Flow Assumptions

- Specific identification
- Average-cost
- FIFO
- LIFO

LIFO: Special Issues

- LIFO reserve
- LIFO liquidation
- Dollar-value LIFO
- Comparison of LIFO approaches
- Advantages and disadvantages
- Basis for selection

Effect of Inventory Errors

- Ending inventory misstated
- Purchases and inventory misstated

To Switch or Not to Switch

Many companies use the last-in, first-out (LIFO) cost flow assumption in the accounting for inventories. LIFO has a lot going for it in terms of tax savings and providing an income number that better reflects the gross profit associated with inventories with different historical costs. However, in the wake of international convergence discussions (LIFO is not permitted under IFRS) and tax policy debates (LIFO is one of a number of “tax loopholes” that if closed could help address our budget and deficit challenges), more companies are seriously considering the switch from LIFO to first-in, first-out (FIFO) or average-cost inventory methods. For example, of the 449 large public companies recently surveyed by the AICPA, just 163 indicated LIFO use (a 25% decline relative to 11 years earlier). Here are some of the reasons to support the switch from LIFO.

- While many believe that LIFO provides a more useful income measure, other methods, such as FIFO and average-cost, better reflect the current value of inventory on the balance sheet.
- Many companies discontinued LIFO use to support uniformity of inventory valuation across operations. That is, companies were using LIFO in their U.S. operations but FIFO and/or average-cost in international units. The switch from LIFO simplifies the external reporting for these multinational companies.
- There is also a “bandwagon” effect—when some companies make the switch, their peers likely follow suit to enhance comparability for financial statement users.
- The recent periods of low inflation have resulted in less significant tax benefits associated with LIFO use. That is, in times of rising costs, by expensing the most recently purchased items, cost of goods sold is higher (compared to FIFO or average-cost) and taxable income is lower. This has been the experience for a number of integrated oil companies, like **ExxonMobil** and **ConocoPhillips**, as oil prices have remained depressed. Indeed, a number of companies do not believe the smaller tax benefits of LIFO offset the costs. For example, **Kraft Foods** switched from LIFO to average-cost, noting that in the recent stable price environment, its cost of goods sold was \$95 million *higher* under average-cost.
- Finally, the companies most resistant to make the switch from LIFO are those with large inventory balances. That is, the higher the inventory balance, the higher the additional tax payment will be upon the switch to FIFO. However, a growing number of companies have implemented just-in-time (JIT) or other lean manufacturing techniques, under which much lower inventories are kept on hand. In the extreme, JIT leads to zero inventory and no LIFO effect relative to other methods. For example, **JCPenney** recently switched from LIFO to FIFO in the same period that it rolled out its “Door-to-Floor” lean inventory strategy. As a result, the accounting effect of the change to FIFO was immaterial.

The merits of LIFO use (about which you will learn more in this chapter) are many. However, these benefits appear to be waning. We expect more companies to consider a voluntary switch away from LIFO in the future.

Shumsky, “Oil Price Rally, Accounting Method Push Down Oil Inventories,” *Wall Street Journal* (December 14, 2016); and D. P. Tinkelman and C. E. I. Tan, “Estimating the Potential Revenue Impact of Taxing LIFO Reserves in the Current Low Commodity Price Environment,” *Journal of the American Tax Association* (January 2018).

Review and Practice

Go to the **Review and Practice** section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions as well as additional exercises and practice problem with solutions are also available online.

Inventory Issues

LEARNING OBJECTIVE 1

Identify inventory classifications and different inventory systems.

Classification

Inventories are asset items that a company holds for sale in the ordinary course of business, or goods that it will use or consume in the production of goods to be sold. The description and measurement of inventory require careful attention. The investment in inventories is frequently the largest current asset of merchandising (retail) and manufacturing businesses.

A **merchandising concern**, such as **Wal-Mart Stores, Inc.**, usually purchases its merchandise in a form ready for sale. It reports the cost assigned to unsold units left on hand as **merchandise inventory**. Only one inventory account, Inventory, appears in the financial statements.

Manufacturing concerns, on the other hand, produce goods to sell to merchandising firms. Many of the largest U.S. businesses are manufacturers, such as **Boeing, IBM, ExxonMobil, Procter & Gamble, Ford, and Motorola**. Although the products they produce may differ, manufacturers normally have three inventory accounts—Raw Materials, Work in Process, and Finished Goods.

A company reports the cost assigned to goods and materials on hand but not yet placed into production as **raw materials inventory**. Raw materials include the wood to make a baseball bat or the steel to make a car. These materials can be traced directly to the end product.

At any point in a continuous production process, some units are only partially processed. The cost of the raw material for these unfinished units, plus the direct labor cost applied specifically to this material and a ratable share of manufacturing overhead costs, constitute the **work in process inventory**.

Companies report the costs identified with the completed but unsold units on hand at the end of the fiscal period as **finished goods inventory**. **Illustration 8.1** contrasts the financial statement presentation of inventories of **Wal-Mart Stores, Inc.** (a merchandising company) with those of **Sherwin-Williams Company** (a manufacturing company.) The remainder of the balance sheet is essentially similar for the two types of companies.

ILLUSTRATION 8.1

Comparison of Presentation of Current Assets for Merchandising and Manufacturing Companies

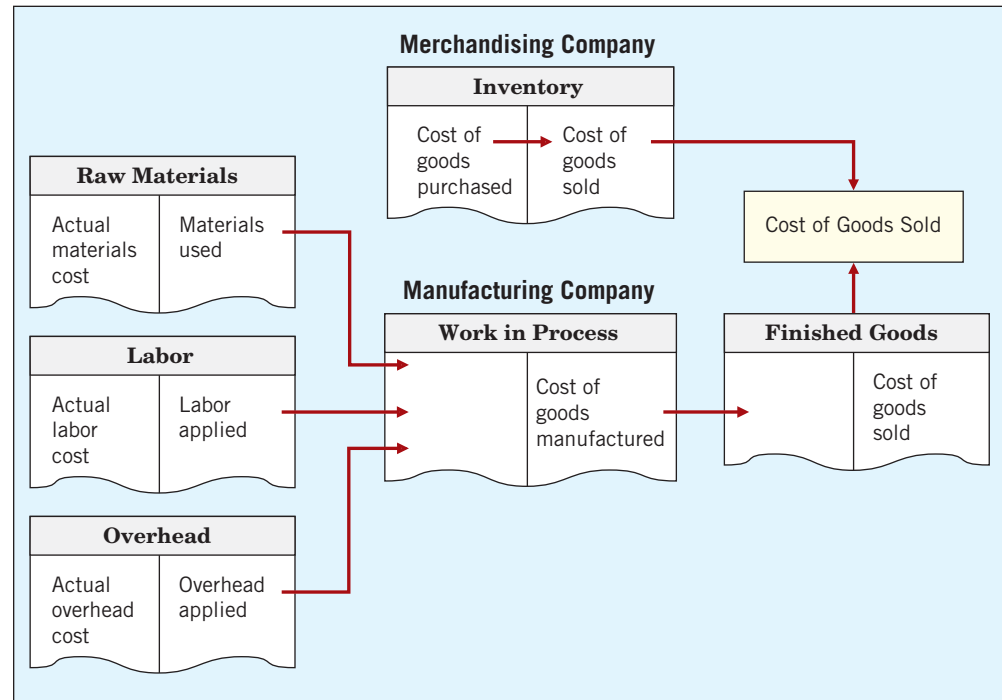

| Merchandising Company | |
|------------------------------|-----------------|
| Wal-Mart Stores, Inc. | |
| Balance Sheet | |
| January 31, 2017 | |
| Current assets (in millions) | |
| Cash and cash equivalents | \$ 6,867 |
| Receivables, net | 5,835 |
| Inventories | 43,046 |
| Prepaid expenses and other | 1,941 |
| Total current assets | <u>\$57,689</u> |

| Manufacturing Company | |
|--|--------------------|
| Sherwin-Williams Company | |
| Balance Sheet | |
| December 31, 2017 | |
| Current assets (thousands) | |
| Cash and cash equivalents | \$ 204,213 |
| Accounts receivable, less allowance | 2,104,555 |
| Inventories: | |
| Finished goods | \$1,415,339 |
| Work in process and raw materials | 386,036 |
| Total Inventory | 1,801,375 |
| Other current assets | 355,697 |
| Total current assets | <u>\$4,465,840</u> |

A manufacturing company like Sherwin-Williams also might include a Manufacturing or Factory **Supplies Inventory** account. In it, Sherwin-Williams would include such items as machine oils, nails, cleaning material, and the like—supplies that are used in production but are not the primary materials being processed.

Illustration 8.2 shows the differences in the flow of costs through a merchandising company and a manufacturing company.

ILLUSTRATION 8.2
Flow of Costs through Manufacturing and Merchandising Companies

Inventory Cost Flow

Companies that sell or produce goods report inventory and cost of goods sold at the end of each accounting period. The flow of costs for a company is as follows. Beginning inventory plus the cost of goods purchased or manufactured is the cost of goods available for sale. As goods are sold, they are assigned to cost of goods sold. Those goods that are not sold by the end of the accounting period represent ending inventory. **Illustration 8.3** describes these relationships.

ILLUSTRATION 8.3
Inventory Cost Flow

Companies use one of two types of systems for maintaining accurate inventory records for these costs—the perpetual system or the periodic system.

Perpetual System

A **perpetual inventory system** continuously tracks changes in the Inventory account. That is, a company records all purchases and sales (issues) of goods directly in the Inventory account **as they occur**. The accounting features of a perpetual inventory system are as follows.

1. Purchases of merchandise for resale or raw materials for production are debited to Inventory rather than to Purchases.

- Freight-in is debited to Inventory, not Purchases. Purchase returns and allowances and purchase discounts are credited to Inventory rather than to separate accounts.
- Cost of goods sold is recorded at the time of each sale by debiting Cost of Goods Sold and crediting Inventory.
- A subsidiary ledger of individual inventory records is maintained as a control measure. The subsidiary records show the quantity and cost of each type of inventory on hand.

The perpetual inventory system provides a continuous record of the balances in both the Inventory account and the Cost of Goods Sold account.

Periodic System

Under a **periodic inventory system**, a company determines the quantity of inventory on hand only periodically, as the name implies. To do so, a company does the following. (1) It records all acquisitions of inventory during the accounting period by debiting the Purchases account. (2) A company then adds the total in the Purchases account at the end of the accounting period to the cost of the inventory on hand at the beginning of the period. This sum determines the total cost of the goods available for sale during the period. (3) To compute the cost of goods sold, the company then subtracts the ending inventory from the cost of goods available for sale.

Note that under a periodic inventory system, the cost of goods sold is a residual amount that depends on a physical count of ending inventory. This process is referred to as “taking a physical inventory.” Companies that use the periodic system take a physical inventory at least once a year.

Comparing Perpetual and Periodic Systems

To illustrate the difference between a perpetual and a periodic system, assume that Fesmire Company had the following transactions during the current year.

| | |
|---------------------|-----------------------------|
| Beginning inventory | 100 units at \$6 = \$ 600 |
| Purchases | 900 units at \$6 = \$5,400 |
| Sales | 600 units at \$12 = \$7,200 |
| Ending inventory | 400 units at \$6 = \$2,400 |

Fesmire records these transactions during the current year as shown in **Illustration 8.4**.

| Perpetual Inventory System | | Periodic Inventory System | |
|--|-------|---|------------|
| Beginning inventory, 100 units at \$6 | | | |
| The Inventory account shows the inventory on hand at \$600. | | The Inventory account shows the inventory on hand at \$600. | |
| Purchase 900 units at \$6 | | | |
| Inventory | 5,400 | Purchases | 5,400 |
| Accounts Payable | 5,400 | Accounts Payable | 5,400 |
| Sale of 600 units at \$12 | | | |
| Accounts Receivable | 7,200 | Accounts Receivable | 7,200 |
| Sales Revenue | 7,200 | Sales Revenue | 7,200 |
| Cost of Goods Sold | 3,600 | | (No entry) |
| (600 at \$6) | | | |
| Inventory | 3,600 | | |
| End-of-period entries for inventory accounts, 400 units at \$6 | | | |
| No entry necessary. | | Inventory (ending, by count) | 2,400 |
| The Inventory account shows the ending balance of \$2,400 (\$600 + \$5,400 – \$3,600). | | Cost of Goods Sold | 3,600 |
| | | Purchases | 5,400 |
| | | Inventory (beginning) | 600 |

ILLUSTRATION 8.4

Comparative Entries— Perpetual vs. Periodic

When a company uses a perpetual inventory system and a difference exists between the perpetual inventory balance and the physical inventory count, it needs a separate entry to adjust the perpetual inventory account. To illustrate, assume that at the end of the reporting period, the perpetual inventory account reported an inventory balance of \$4,000. However, a physical count indicates inventory of \$3,800 is actually on hand. The entry to record the necessary write-down is as follows.

| | | |
|--------------------------|-----|-----|
| Inventory Over and Short | 200 | |
| Inventory | | 200 |

Perpetual inventory overages and shortages generally represent a misstatement of cost of goods sold. The difference results from normal and expected shrinkage, breakage, shoplifting, incorrect recordkeeping, and the like. Inventory Over and Short therefore adjusts Cost of Goods Sold. In practice, companies sometimes report Inventory Over and Short in the “Other revenues and gains” or “Other expenses and losses” section of the income statement.

Note that a company using the periodic inventory system does not report the account Inventory Over and Short. The reason: The periodic method does not have accounting records against which to compare the physical count. As a result, a company buries inventory overages and shortages in cost of goods sold.

Inventory Control

For various reasons, management is vitally interested in inventory planning and control. Whether a company manufactures or merchandises goods, it needs an accurate accounting system with up-to-date records. It may lose sales and customers if it does not stock products in the desired style, quality, and quantity. Further, companies must monitor inventory levels carefully to limit the financing costs of carrying large amounts of inventory.

In a perfect world, companies would like a continuous record of both their inventory levels and their cost of goods sold. The popularity and affordability of accounting software makes the perpetual system cost-effective for many kinds of businesses. Companies like **Target**, **Best Buy**, and **Sears Holdings** now incorporate the recording of sales with optical scanners at the cash register into perpetual inventory systems.

However, many companies cannot afford a complete perpetual system. But, most of these companies need current information regarding their inventory levels, to protect against stock-outs or overpurchasing, and to aid in preparation of monthly or quarterly financial data. As a result, these companies use a **modified perpetual inventory system**. This system provides detailed inventory records of increases and decreases in quantities only—not dollar amounts. It is merely a memorandum device outside the double-entry system, which helps in determining the level of inventory at any point in time.

Whether a company maintains a complete perpetual inventory in quantities and dollars or a modified perpetual inventory system, it probably takes a physical inventory once a year. No matter what type of inventory records companies use, they all face the danger of loss and error. Waste, breakage, theft, improper entry, failure to prepare or record requisitions, and other similar possibilities may cause the inventory records to differ from the actual inventory on hand. Thus, **all companies** need periodic verification of the inventory records by actual count, weight, or measurement, with the counts compared with the detailed inventory records. As indicated earlier, a company corrects the records to agree with the quantities actually on hand.

Insofar as possible, companies should take the physical inventory near the end of their fiscal year, to properly report inventory quantities in their annual accounting reports. Because this is not always possible, physical inventories taken within two or three months of the year’s end are satisfactory if a company maintains detailed inventory records with a fair degree of accuracy.¹

¹Some companies have developed methods of determining inventories, including statistical sampling, that are sufficiently reliable to make unnecessary an annual physical count of each item of inventory.

What Do the Numbers Mean? Staying Lean

When you drop by a **Walmart** store, you are witnessing one of history's greatest logistical and operational successes. As one article noted, the retail giant stocks products in more than 70 countries and at any given time operates more than 11,000 stores in 27 countries around the world. It manages an average of \$32 billion in inventory.

With these kinds of numbers, having an effective and efficient supply chain management system and a sound internal control system is imperative. For example, Wal-Mart Stores, Inc. uses its buying power in the supply chain to purchase an increasing proportion of its goods directly from manufacturers and on a combined basis across geographic borders. Wal-Mart estimates that it saves 5–15% across its supply chain by implementing direct purchasing on a combined basis for the 15 countries in which it operates. Thus, Wal-Mart has a good handle on what products it needs to stock, and it gets the best prices when it purchases inventory.

Wal-Mart also provides a classic example of the use of tight inventory controls. Department managers use a scanner that when placed over the bar code corresponding to a particular item, will tell them how many of the items the store sold yesterday, last week, and over the same period last year. It will tell them how many of those items are in stock, how many are on the way, and how many the neighboring Walmart stores are carrying (in case one store runs out). Wal-Mart's inventory management practices have helped it become one of the top-ranked companies on the Fortune 500 in terms of sales.

Sources: J. Birchall, "Walmart Aims to Cut Supply Chain Cost," *Financial Times* (January 4, 2010); <http://www.tradegecko.com/blog/incredibly-successful-supply-chain-management-walmart>; and S. Nassauer, "Wal-Mart Shrinks the Big Box, Vexing Vendors," *Wall Street Journal* (October 25, 2015).

Determining Cost of Goods Sold

Goods sold (or used) during an accounting period seldom correspond exactly to the goods bought (or produced) during that period. As a result, inventories either increase or decrease during the period. Companies must then allocate the cost of all the goods available for sale (or use) between the goods that were sold or used and those that are still on hand. The **cost of goods available for sale or use** is the *sum* of (1) the cost of the goods on hand at the beginning of the period, and (2) the cost of the goods acquired or produced during the period. The **cost of goods sold** is the *difference* between (1) the cost of goods available for sale during the period, and (2) the cost of goods on hand at the end of the period. **Illustration 8.5** shows these calculations.

| | |
|--|-------------------------|
| Beginning inventory, Jan. 1 | \$100,000 |
| Cost of goods acquired or produced during the year | 800,000 |
| Total cost of goods available for sale | 900,000 |
| Ending inventory, Dec. 31 | (200,000) |
| Cost of goods sold during the year | <u>\$700,000</u> |

ILLUSTRATION 8.5

Computation of Cost of Goods Sold

Goods and Costs Included in Inventory

LEARNING OBJECTIVE 2

Determine the goods and costs included in inventory.

Goods Included in Inventory

A company recognizes inventory and accounts payable at the time it controls the asset. For example, when **Verizon** purchases **Apple** watches for resale, Verizon records these watches as inventory at the time control passes to Verizon. Control is therefore the key factor in determining when purchases and sales of a product are recognized.

The FASB indicates that Verizon controls the Apple watches when it has the ability to direct the use of and obtain substantially all the benefits from these watches (see **Global View**). Control also includes Verizon's ability to prevent other companies from directing the use of

Global View

Who owns the goods, as well as the costs to include in inventory, are essentially accounted for the same under IFRS and GAAP.

or receiving the benefits from these watches. As noted in Chapter 7, companies then look to various indicators to determine whether control has passed.²

One of these indicators, passage of title, is often used to determine control because the rights and obligations are established legally. For example, when Verizon purchases the Apple watches, legal title belongs to Verizon until the watches are sold to customers. However in some limited cases, other indicators must be considered because legal title and passage of control do not match.

Goods in Transit

Often, a company like **Walgreens** purchases merchandise that remains in transit—not yet received—at the end of a fiscal period. The accounting for these shipped goods depends on who controls the merchandise. In these situations, companies generally determine control based on who has legal title to the goods by applying the “passage of title” rule. If a supplier ships goods to Walgreens **f.o.b. shipping point**, title passes to Walgreens when the supplier delivers the goods to the common carrier, who acts as an agent for Walgreens. (The abbreviation f.o.b. stands for free on board.) If the supplier ships the goods **f.o.b. destination**, title passes to Walgreens only when it receives the goods from the common carrier. “Shipping point” and “destination” are often designated by a particular location, for example, f.o.b. Denver.

When Walgreens obtains legal title to goods, it must record them as purchases in that fiscal period, assuming a periodic inventory system. Thus, goods shipped to Walgreens f.o.b. shipping point, but in transit at the end of the period, belong to Walgreens. It should show the purchase in its records because legal title to these goods passed to Walgreens upon shipment of the goods. To disregard such purchases results in understating inventories and accounts payable in the balance sheet, and understating purchases and ending inventories in the income statement.

Consigned Goods

Companies market certain products through a **consignment** shipment. Under this arrangement, a company like Williams Art Gallery (the consignor) ships various art merchandise to **Sotheby’s Holdings** (the consignee), who acts as Williams’ agent in selling the **consigned goods**. Sotheby’s agrees to accept the goods without any liability, except to exercise due care and reasonable protection from loss or damage, until it sells the goods to a third party. When Sotheby’s sells the goods, it remits the revenue, less a selling commission and expenses incurred in accomplishing the sale, to Williams.

Goods out on consignment remain the property of the consignor (Williams in the example above). Although Sotheby’s has physical possession of the goods, it does not have control because legal title and the risks and rewards of ownership remain with Williams. Williams thus includes the goods in its inventory at purchase price or production cost. Occasionally, and only for a significant amount, the consignor shows the inventory out on consignment as a separate item. Sometimes a consignor reports the inventory on consignment in the notes to the financial statements. For example, **Eagle Clothes, Inc.** reported the following related to consigned goods: “Inventories consist of finished goods shipped on consignment to customers of the Company’s subsidiary **April-Marcus, Inc.**”

The consignee makes no entry to the inventory account for goods received. Remember, these goods remain the property of the consignor until sold. In fact, the consignee should be extremely careful *not* to include any of the goods consigned as a part of inventory. Additional discussion related to consignments is provided in Chapter 18.

Special Sales Agreements

As we indicated earlier, transfer of legal title is the general guideline used to determine whether a company should include an item in inventory. Unfortunately, transfer of legal title and the underlying substance of the transaction sometimes do not match. For example, legal title may have passed to the purchaser, but the seller of the goods retains control of the inventory.

²As indicated in Chapter 7, Lululemon recognized accounts receivable and sales revenue when it transferred control of its yoga outfit to its customer, Jennifer Burian.

Two special sales situations are illustrated here to indicate the types of problems companies encounter in practice:

1. Sales with repurchase agreement.
2. Sales with high rates of return.

Sales with Repurchase Agreement Sometimes a company finances its inventory without reporting either a liability or the inventory on its balance sheet. This approach, often referred to as a repurchase (or product financing) agreement, usually involves a transfer (sale) with either an implicit or explicit repurchase agreement.

To illustrate, Hill Enterprises transfers (“sells”) inventory to Chase, Inc. and simultaneously agrees to repurchase this merchandise at a specified price over a specified period of time. Chase then uses the inventory as collateral and borrows against it. Chase uses the loan proceeds to pay Hill, which repurchases the inventory in the future. Chase employs the proceeds from repayment to meet its loan obligation.

The essence of this transaction is that Hill is financing its inventory—and retaining control—even though it transferred to Chase technical legal title to the merchandise. By structuring a transaction in this manner, Hill avoids personal property taxes in certain states. Other advantages of this transaction for Hill are the removal of the current liability from its balance sheet and the ability to manipulate income. For Chase, the purchase of the goods may solve a LIFO liquidation problem (discussed later), or Chase may enter into a similar reciprocal agreement at a later date.

These arrangements are often described in practice as “**parking transactions.**” In this situation, Hill simply parks the inventory on Chase’s balance sheet for a short period of time. Generally, when a repurchase agreement exists, Hill should report the inventory and related liability on its books. [1] (See the FASB Codification References near the end of the chapter.) The reason? Hill has retained control of the asset; that is, Hill still owns the asset (see **Underlying Concepts**).

Sales with High Rates of Return In industries such as publishing, music, toys, and sporting goods, formal or informal agreements often exist that permit purchasers to return inventory for a full or partial refund.

To illustrate, Quality Publishing Company sells textbooks to Campus Bookstores with an agreement that Campus may return for full credit any books not sold. Historically, Campus Bookstores returned approximately 25 percent of the textbooks from Quality Publishing. How should Quality Publishing report its sales transactions?

The key question to determine whether a sale occurs is: Has Quality Publishing transferred control of these goods to Campus Bookstore? Because Campus Bookstore now has the ability to direct the use of and obtain substantially all the benefits from these textbooks, these transactions are normally recorded as a sale by Quality Publishing. In addition, the normal indicators for transfer of control, such as passage of legal title, loss of physical control, and transfer of risks and rewards of ownership, appear to have occurred. However, Quality Publishing must also recognize that only partial control has transferred to Campus Bookstore. Therefore, Quality Publishing does the following.

1. **Record sales revenue at the amount it expects to receive from the transaction.** This transaction involves variable consideration and therefore the transaction price is adjusted to recognize that a portion of these textbooks will be returned.
2. **Establish an estimated inventory return account to recognize that some of its textbooks will be returned.** The reason for recording estimated inventory is that control over a significant number of the textbooks has not passed to Campus Bookstore.

In other words, control does pass from seller to buyer for a majority of the textbooks but not all of them. Quality Publishing therefore records an estimated inventory return amount to recognize that fact. If returns are unpredictable and uncertain, Quality Publishing should not consider the textbooks sold and should not remove the goods from its inventory. This example illustrates that difficulty of determining when control has passed in situations where substantial returns are involved. [2] We provide expanded discussion of special sales agreements and returns in Chapter 18.

Underlying Concepts

Recognizing revenue at the time the inventory is “parked” violates the revenue recognition principle. That is, a performance obligation is not met because control has not been transferred to the buyer.

What Do the Numbers Mean? No Parking!

In one of the more elaborate accounting frauds, employees at **Kurzweil Applied Intelligence Inc.** booked millions of dollars in phony inventory sales during a two-year period that straddled two audits and an initial public stock offering. They dummied up phony shipping documents and logbooks to support bogus sales transactions. Then they shipped high-tech equipment, not to customers, but to a public warehouse for “temporary” storage, where some of it sat for 17 months. (Kurzweil still had ownership.)

To foil auditors’ attempts to verify the existence of the inventory, Kurzweil employees moved the goods from warehouse to warehouse. To cover the fraudulently recorded sales transactions as auditors closed in, the employees brought back the still-hidden goods, under the pretense that the goods were returned by customers. When auditors uncovered the fraud, the bottom dropped out of Kurzweil’s stock.

Similar inventory shenanigans occurred at **Delphi**, which used side-deals with third parties to get inventory off its books and to record sales. The overstatement in income eventually led to a bankruptcy filing for Delphi.

More recently and with an international twist, concerns about inventory shenanigans are surfacing in China. Following years of torrid growth, the global economic slowdown has resulted in a huge buildup of unsold goods that is cluttering shop floors, logging car dealerships, and filling factory warehouses. The large

inventory overhang is raising alarms about phantom profits and suspect economic data coming out of China.

In response to these shady practices, companies and auditors are harnessing technology-enabled tools to monitor and better track inventory. For example, **EY** is expanding the use of drones in inventory observations, as part of its digital auditing capabilities, which helps improve monitoring capabilities as well as the accuracy and frequency of inventory counts. And a growing number of companies are using barcode systems and radio-frequency identification (RFID), which attaches a digital tag to items of inventory, enabling individual products or components to be tracked throughout the supply chain, enhancing inventory control, stock security, and quality management. The costs of these technology tools have come down recently, so that we now have more tools to crack down on inventory fraudsters.

McCracken, “Delphi Executives Named in Suit over Inventory Practices,” *Wall Street Journal* (May 5, 2005), p. A3; K. Bradsher, “China Confronts Mounting Piles of Unsold Goods,” *The New York Times* (August 23, 2012); “EY Scaling the Use of Drones in the Audit Process,” *EY London* (June 13, 2017), <http://www.ey.com/gl/en/newsroom/news-releases/news-ey-scaling-the-use-of-drones-in-the-audit-process>; and “Stock Control and Inventory,” Info Entrepreneurs, <http://www.infoentrepreneurs.org/en/guides/controle-des-stocks-et-inventaire/>.

Costs Included in Inventory

One of the most important problems in dealing with inventory concerns the dollar amount at which to carry the inventory in the accounts. **Companies generally account for the acquisition of inventories, like other assets, on a cost basis.**

Product Costs

Product costs are those costs that “attach” to the inventory. As a result, a company records product costs in the inventory account. These costs are directly connected with bringing the goods to the buyer’s place of business and converting such goods to a salable condition. Such charges include freight charges on goods purchased, other direct costs of acquisition, and labor and other production costs incurred in processing the goods up to the time of sale.

It seems proper also to allocate to inventories a share of any buying costs or expenses of a purchasing department, storage costs, and other costs incurred in storing or handling the goods before their sale. However, because of the practical difficulties involved in allocating such costs and expenses, companies usually exclude these items in valuing inventories.

A manufacturing company’s costs include direct materials, direct labor, and manufacturing overhead costs. Manufacturing overhead costs include indirect materials, indirect labor, and various manufacturing-related costs, such as depreciation, taxes, insurance, and utilities.

Period Costs

Period costs are those costs that are indirectly related to the acquisition or production of goods. Period costs such as selling expenses and, under ordinary circumstances, general and administrative expenses are therefore not included as part of inventory cost.

Yet, conceptually, these expenses are as much a cost of the product as the initial purchase price and related freight charges attached to the product. Why then do companies exclude these costs from inventoriable items? Because companies generally consider selling expenses as more directly related to the cost of goods sold than to the unsold inventory. In addition,

period costs, especially administrative expenses, are so unrelated or indirectly related to the immediate production process that any allocation is purely arbitrary.³

Interest is another period cost. Companies usually expense **interest costs** associated with getting inventories ready for sale. Supporters of this approach argue that interest costs are really a **cost of financing**. Others contend that interest costs incurred to finance activities associated with readying inventories for sale are as much a **cost of the asset** as materials, labor, and overhead. Therefore, they reason, companies should capitalize interest costs.

The FASB ruled that companies should capitalize interest costs related to assets constructed for internal use or assets produced as discrete projects (such as ships or real estate projects) for sale or lease [4].⁴ The FASB emphasized that these discrete projects should take considerable time, entail substantial expenditures, and be likely to involve significant amounts of interest cost. A company should not capitalize interest costs for inventories that it routinely manufactures or otherwise produces in large quantities on a repetitive basis. In this case, the informational benefit does not justify the cost (see **Global View**).

Global View
GAAP has more detailed rules related to the accounting for inventories, compared to IFRS.

Treatment of Purchase Discounts

The use of a **Purchase Discounts** account in a periodic inventory system indicates that the company is reporting its purchases and accounts payable at the gross amount. If a company uses this **gross method**, it reports purchase discounts as a deduction from purchases on the income statement.

Another approach is to record the purchases and accounts payable at an amount **net of the cash discounts**. In this approach, the company records failure to take a purchase discount within the discount period in a Purchase Discounts Lost account. If a company uses this **net method**, it considers purchase discounts lost as a financial expense and reports it in the “Other expenses and losses” section of the income statement. This treatment is considered better for two reasons. (1) It provides a correct reporting of the cost of the asset and related liability. (2) It can measure management inefficiency by holding management responsible for discounts not taken.

To illustrate the difference between the gross and net methods, assume the transactions shown in **Illustration 8.6**.

| Gross Method | | | Net Method | | |
|--|--------|--------|-------------------------|-------|-------|
| Purchase cost \$10,000, terms 2/10, net 30 | | | | | |
| Purchases | 10,000 | | Purchases | 9,800 | |
| Accounts Payable | | 10,000 | Accounts Payable | | 9,800 |
| Invoices of \$4,000 are paid within discount period | | | | | |
| Accounts Payable | 4,000 | | Accounts Payable | 3,920 | |
| Purchase Discounts | | 80 | Cash | | 3,920 |
| Cash | | 3,920 | | | |
| Invoices of \$6,000 are paid after discount period | | | | | |
| Accounts Payable | 6,000 | | Accounts Payable | 5,880 | |
| Cash | | 6,000 | Purchase Discounts Lost | | 120 |
| | | | Cash | | 6,000 |

ILLUSTRATION 8.6

Entries under Gross and Net Methods

Underlying Concepts
Not using the net method because of resultant difficulties is an example of the application of the cost constraint.

Many believe that the somewhat more complicated net method is not justified by the resulting benefits (see **Underlying Concepts**). This could account for the widespread use of the less logical but simpler gross method. In addition, some contend that management is reluctant to report in the financial statements the amount of purchase discounts lost. *Use the gross method to record purchase discounts for homework problems unless specified otherwise.*

³Companies should not record abnormal freight, handling costs, and amounts of wasted materials (spoilage) as inventory costs. If the costs associated with the actual level of spoilage or product defects are greater than the costs associated with normal spoilage or defects, the company should charge the excess as an expense in the current period. [3]

⁴The reporting rules related to interest cost capitalization have their greatest impact in accounting for long-term assets. We therefore discuss them in Chapter 10.

What Do the Numbers Mean? You May Need a Map

Does it really matter *where* a company reports certain costs in its income statement as long as it includes them all as expenses in computing income?

For e-tailers, such as **Amazon.com** or **Drugstore.com**, *where* they report certain selling costs does appear to be important. Contrary to well-established retailer practices, these companies insist on reporting some selling costs—fulfillment costs related to inventory shipping and warehousing—as part of administrative expenses, instead of as cost of goods sold. This practice is allowable within GAAP, *if* applied consistently and adequately disclosed. Although the practice doesn't affect the bottom line, it does make the e-tailers' gross margins look better. For example, Amazon reported \$25.2 billion of these costs—those associated with free two-day shipping—in 2017. Some experts thought Amazon should include those charges in costs of goods sold, which would substantially lower its gross profit, as shown in the following table (in millions).

| | E-Tailer Reporting | Traditional Reporting |
|--------------------|--------------------|-----------------------|
| Sales | \$2,795 | \$2,795 |
| Cost of goods sold | 2,132 | 2,397 |
| Gross profit | \$ 663 | \$ 398 |
| Gross margin % | 24% | 14% |

Similarly, if **Drugstore.com** and **eToys.com** made similar adjustments, their gross margins would go from positive to negative.

Thus, if you want to be able to compare the operating results of e-tailers to other traditional retailers, it might be a good idea to have a good accounting map in order to navigate their income statements and how they report certain selling costs. According to GAAP [5], companies must disclose the accounting policy for classifying these selling costs in income.

Sources: Adapted from P. Elstrom, "The End of Fuzzy Math?" *BusinessWeek, e.Biz—Net Worth* (December 11, 2000); and "Amazon's Deceptive Accounting Games," *Seeking Alpha* (February 12, 2018), <https://seekingalpha.com>.

Which Cost Flow Assumption to Adopt?

LEARNING OBJECTIVE 3

Describe and compare the cost flow assumptions used to account for inventories.

During any given fiscal period, companies typically purchase merchandise at several different prices. If a company prices inventories at cost and it made numerous purchases at different unit costs, which cost price should it use? Conceptually, a specific identification of the given items sold and unsold seems optimal. But this measure often proves both expensive and impossible to achieve. Consequently, companies use one of several systematic inventory **cost flow assumptions**.

Indeed, the actual physical flow of goods and the cost flow assumption often greatly differ. **There is no requirement that the cost flow assumption adopted be consistent with the physical movement of goods.** A company's major objective in selecting a method should be to choose the one that, under the circumstances, most clearly reflects periodic income. [6]

To illustrate, assume that Call-Mart Inc. had the following transactions in its first month of operations.

| Date | Purchased | Sold or Issued | Balance |
|----------|----------------|----------------|-------------|
| March 2 | 2,000 @ \$4.00 | | 2,000 units |
| March 15 | 6,000 @ \$4.40 | | 8,000 units |
| March 19 | | 4,000 units | 4,000 units |
| March 30 | 2,000 @ \$4.75 | | 6,000 units |

From this information, Call-Mart computes the ending inventory of 6,000 units and the cost of goods available for sale (beginning inventory + purchases) of \$43,900 [(2,000 at \$4.00) + (6,000 at \$4.40) + (2,000 at \$4.75)]. The question is, which price or prices should it assign to the 6,000 units of ending inventory? The answer depends on which cost flow assumption it uses.

Specific Identification

Specific identification calls for identifying each item sold and each item in inventory. A company includes in cost of goods sold the costs of the specific items sold. It includes in inventory the costs of the specific items on hand. This method may be used only in instances where it is practical to separate physically the different purchases made. As a result, most companies only use this method when handling a relatively small number of costly, easily distinguishable items. In the retail trade, this includes some types of jewelry, fur coats, automobiles, and some furniture. In manufacturing, it includes special orders and many products manufactured under a job cost system.

To illustrate, assume that Call-Mart Inc.'s 6,000 units of inventory consists of 1,000 units from the March 2 purchase, 3,000 from the March 15 purchase, and 2,000 from the March 30 purchase. **Illustration 8.7** shows how Call-Mart computes the ending inventory and cost of goods sold.

| Date | No. of Units | Unit Cost | Total Cost |
|--|--------------|-----------------|-----------------|
| March 2 | 1,000 | \$4.00 | \$ 4,000 |
| March 15 | 3,000 | 4.40 | 13,200 |
| March 30 | 2,000 | 4.75 | 9,500 |
| Ending inventory | 6,000 | | \$26,700 |
| Cost of goods available for sale (computed in previous section) | | \$43,900 | |
| Deduct: Ending inventory | | 26,700 | |
| Cost of goods sold | | \$17,200 | |

ILLUSTRATION 8.7

Specific Identification Method

This method appears ideal (see **Global View**). Specific identification matches actual costs against actual revenue. Thus, a company reports ending inventory at actual cost. In other words, **under specific identification the cost flow matches the physical flow of the goods**. On closer observation, however, this method has certain deficiencies.

Some argue that specific identification allows a company to manipulate net income. For example, assume that a wholesaler purchases identical plywood early in the year at three different prices. When it sells the plywood, the wholesaler can select either the lowest or the highest price to charge to expense. It simply selects the plywood from a specific lot for delivery to the customer. A business manager, therefore, can manipulate net income by delivering to the customer the higher- or lower-priced item, depending on whether the company seeks lower or higher reported earnings for the period.

Another problem relates to the arbitrary allocation of costs that sometimes occurs with specific inventory items. For example, a company often faces difficulty in relating shipping charges, storage costs, and discounts directly to a given inventory item. This results in allocating these costs somewhat arbitrarily, leading to a “breakdown” in the precision of the specific identification method.⁵

Global View

IFRS indicates specific identification is the preferred inventory method unless it is impracticable to use.

Average-Cost

As the name implies, the **average-cost method** prices items in the inventory on the basis of the average cost of all similar goods available during the period. To illustrate use of the periodic inventory method (amount of inventory computed at the end of the period), Call-Mart computes the ending inventory and cost of goods sold using a **weighted-average method** as shown in **Illustration 8.8**.

⁵The film industry provides a good illustration of the cost allocation problem. Often actors receive a percentage of net income for a given movie or television program. Some actors, however, have alleged that their programs have been extremely profitable to the film studios but they themselves have received little in the way of profit-sharing. Actors contend that the studios allocate additional costs to successful projects to avoid sharing profits.

ILLUSTRATION 8.8**Weighted-Average Method—Periodic Inventory**

| Date of Invoice | No. Units | Unit Cost | Total Cost |
|----------------------------------|---------------|------------------------------------|-----------------|
| March 2 | 2,000 | \$4.00 | \$ 8,000 |
| March 15 | 6,000 | 4.40 | 26,400 |
| March 30 | <u>2,000</u> | 4.75 | <u>9,500</u> |
| Total goods available | <u>10,000</u> | | <u>\$43,900</u> |
| Weighted-average cost per unit | | $\frac{\$43,900}{10,000} = \4.39 | |
| Inventory in units | 6,000 units | | |
| Ending inventory | | $6,000 \times \$4.39 = \$26,340$ | |
| Cost of goods available for sale | | \$43,900 | |
| Deduct: Ending inventory | | <u>26,340</u> | |
| Cost of goods sold | | <u>\$17,560</u> | |

In computing the average cost per unit, Call-Mart includes the beginning inventory, if any, both in the total units available and in the total cost of goods available.

Companies use the **moving-average method** with perpetual inventory records. **Illustration 8.9** shows the application of the average-cost method for perpetual records.

ILLUSTRATION 8.9**Moving-Average Method—Perpetual Inventory**

| Date | Purchased | | Sold or Issued | Balance |
|----------|---------------------------|--|------------------------------|---------------------------|
| March 2 | (2,000 @ \$4.00) \$ 8,000 | | | (2,000 @ \$4.00) \$ 8,000 |
| March 15 | (6,000 @ 4.40) 26,400 | | | (8,000 @ 4.30) 34,400 |
| March 19 | | | (4,000 @ \$4.30) \$17,200 | (4,000 @ 4.30) 17,200 |
| March 30 | (2,000 @ 4.75) 9,500 | | | (6,000 @ 4.45) 26,700 |

In this method, Call-Mart computes a **new average unit cost** each time it makes a purchase. For example, on March 15, after purchasing 6,000 units for \$26,400, Call-Mart has 8,000 units costing \$34,400 (\$8,000 plus \$26,400) on hand. The average unit cost is \$34,400 divided by 8,000, or \$4.30. Call-Mart uses this unit cost in costing withdrawals until it makes another purchase. At that point, Call-Mart computes a new average unit cost. Accordingly, the company shows the cost of the 4,000 units withdrawn on March 19 at \$4.30, for a total cost of goods sold of \$17,200. On March 30, following the purchase of 2,000 units for \$9,500, Call-Mart determines a new unit cost of \$4.45 ($\$26,700 \div 6,000$) and ending inventory of \$26,700.

Companies often use average-cost methods for practical rather than conceptual reasons. These methods are both simple to apply and objective. They are not as subject to income manipulation as some of the other inventory costing methods. In addition, proponents of the average-cost methods reason that measuring a specific physical flow of inventory is often impossible. Therefore, it is better to cost items on an average-price basis. This argument is particularly persuasive when dealing with similar inventory items.

First-In, First-Out (FIFO)

The **first-in, first-out (FIFO) method** assumes that a company uses goods in the order in which it purchases them. In other words, the FIFO method assumes that **the first goods purchased are the first used** (in a manufacturing concern) **or the first sold** (in a merchandising concern). The inventory remaining must therefore represent the most recent purchases.

To illustrate, assume that Call-Mart uses the periodic inventory system. It determines its cost of the ending inventory by taking the cost of the most recent purchase and working back until it accounts for all units in the inventory. Call-Mart determines its ending inventory and cost of goods sold as shown in **Illustration 8.10**.

| Date | No. Units | Unit Cost | Total Cost |
|-------------------------|----------------------------------|-----------------|-----------------|
| March 30 | 2,000 | \$4.75 | \$ 9,500 |
| March 15 | 4,000 | 4.40 | 17,600 |
| Ending inventory | 6,000 | | \$27,100 |
| | Cost of goods available for sale | \$43,900 | |
| | Deduct: Ending inventory | 27,100 | |
| | Cost of goods sold | \$16,800 | |

ILLUSTRATION 8.10**FIFO Method—Periodic Inventory**

If Call-Mart instead uses a perpetual inventory system in quantities and dollars, it attaches a cost figure to each withdrawal. Then the cost of the 4,000 units removed on March 19 consists of the cost of the items purchased on March 2 and March 15. **Illustration 8.11** shows the inventory on a FIFO basis perpetual system for Call-Mart.

| Date | Purchased | | Sold or Issued | | Balance |
|----------|------------------|----------|-------------------|----------------|----------|
| March 2 | (2,000 @ \$4.00) | \$ 8,000 | | 2,000 @ \$4.00 | \$ 8,000 |
| March 15 | (6,000 @ 4.40) | 26,400 | | 2,000 @ 4.00 | } 34,400 |
| | | | | 6,000 @ 4.40 | |
| March 19 | | | 2,000 @ \$4.00 | } 4,000 @ 4.40 | 17,600 |
| | | | 2,000 @ 4.40 | | |
| | | | (\$16,800) | | |
| March 30 | (2,000 @ 4.75) | 9,500 | | 4,000 @ 4.40 | } 27,100 |
| | | | | 2,000 @ 4.75 | |

ILLUSTRATION 8.11**FIFO Method—Perpetual Inventory**

Here, the ending inventory is \$27,100, and the cost of goods sold is \$16,800 [(2,000 @ \$4.00) + (2,000 @ \$4.40)].

Notice that in these two FIFO examples, the cost of goods sold (\$16,800) and ending inventory (\$27,100) are the same. **In all cases where FIFO is used, the inventory and cost of goods sold would be the same at the end of the month whether a perpetual or periodic system is used.** Why? Because the same costs will always be first in and, therefore, first out. This is true whether a company computes cost of goods sold as it sells goods throughout the accounting period (the perpetual system) or as a residual at the end of the accounting period (the periodic system).

One objective of FIFO is to approximate the physical flow of goods. When the physical flow of goods is actually first-in, first-out, the FIFO method closely approximates specific identification. At the same time, it prevents manipulation of income. With FIFO, a company cannot pick a certain cost item to charge to expense.

Another advantage of the FIFO method is that the ending inventory is close to current cost. Because the first goods in are the first goods out, the ending inventory amount consists of the most recent purchases. This is particularly true with rapid inventory turnover. This approach generally approximates replacement cost on the balance sheet when price changes have not occurred since the most recent purchases.

However, the FIFO method fails to match current costs against current revenues on the income statement. A company charges the oldest costs against the more current revenue, possibly distorting gross profit and net income.

Last-In, First-Out (LIFO)

The **last-in, first-out (LIFO) method** matches the cost of the last goods purchased against revenue (see **Global View**). If Call-Mart Inc. uses a periodic inventory system, it assumes that **the cost of the total quantity sold or issued during the month comes from the most recent purchases**. Call-Mart prices the ending inventory by using the total units as a basis

Global View

IFRS does not permit LIFO.

of computation and disregards the exact dates of sales or issuances. For example, Call-Mart would assume that the cost of the 4,000 units withdrawn absorbed the 2,000 units purchased on March 30 and 2,000 of the 6,000 units purchased on March 15. **Illustration 8.12** shows how Call-Mart computes the inventory and related cost of goods sold, using the periodic inventory method.

ILLUSTRATION 8.12**LIFO Method—Periodic Inventory**

| Date of Invoice | No. Units | Unit Cost | Total Cost |
|-------------------------|---------------------------|-----------------|-----------------|
| March 2 | 2,000 | \$4.00 | \$ 8,000 |
| March 15 | 4,000 | 4.40 | 17,600 |
| Ending inventory | 6,000 | | \$25,600 |
| | Goods available for sale | \$43,900 | |
| | Deduct: Ending inventory | 25,600 | |
| | Cost of goods sold | \$18,300 | |

If Call-Mart keeps a perpetual inventory record in quantities and dollars—such that it can reprice inventory layers with every withdrawal—use of the LIFO method results in **different ending inventory and cost of goods sold amounts than the amounts calculated under the periodic method**. **Illustration 8.13** shows these differences under the perpetual method.

ILLUSTRATION 8.13**LIFO Method—Perpetual Inventory**

| Date | Purchased | Sold or Issued | Balance |
|----------|---------------------------|---------------------------|---|
| March 2 | (2,000 @ \$4.00) \$ 8,000 | | 2,000 @ \$4.00 \$ 8,000 |
| March 15 | (6,000 @ 4.40) 26,400 | | 2,000 @ 4.00 } 6,000 @ 4.40 } 34,400 |
| March 19 | | (4,000 @ \$4.40) \$17,600 | 2,000 @ 4.00 } 2,000 @ 4.40 } 16,800 |
| March 30 | (2,000 @ 4.75) 9,500 | | 2,000 @ 4.00 } 2,000 @ 4.40 } 2,000 @ 4.75 } 26,300 |

The month-end periodic inventory computation presented in Illustration 8.12 (inventory \$25,600 and cost of goods sold \$18,300) shows a different amount from the perpetual inventory computation (inventory \$26,300 and cost of goods sold \$17,600). The periodic system matches the total withdrawals for the month with the total purchases for the month in applying the last-in, first-out method. In contrast, the perpetual system matches each withdrawal with the immediately preceding purchases. In effect, the periodic computation assumed that Call-Mart included the cost of the goods that it purchased on March 30 in the sale or issue on March 19.

Special Issues Related to LIFO

LEARNING OBJECTIVE 4

Identify special issues related to LIFO.

LIFO Reserve

Many companies use LIFO for tax and external reporting purposes. However, they maintain a FIFO, average-cost, or standard cost system for internal reporting purposes. There are several reasons to do so. (1) Companies often base their pricing decisions on a FIFO, average-cost, or standard-cost assumption, rather than on a LIFO basis.

(2) Recordkeeping on some other basis is easier because the LIFO assumption usually does not approximate the physical flow of the product. (3) Profit-sharing and other bonus arrangements often depend on a non-LIFO inventory assumption. (4) The use of a pure LIFO system is troublesome for interim periods, which require estimates of year-end quantities and prices.

The difference between the inventory method used for internal reporting purposes and LIFO is the Allowance to Reduce Inventory to LIFO account or the **LIFO reserve**. The change in the allowance balance from one period to the next is the **LIFO effect**. The LIFO effect is the adjustment that companies must make to the accounting records in a given year.

To illustrate, assume that Acme Boot Company uses the FIFO method for internal reporting purposes and LIFO for external reporting purposes. At January 1, 2020, the Allowance to Reduce Inventory to LIFO balance is \$20,000. At December 31, 2020, the balance should be \$50,000. As a result, Acme Boot realizes a LIFO effect of \$30,000 and makes the following entry at year-end.

| | | |
|---------------------------------------|--------|--------|
| Cost of Goods Sold | 30,000 | |
| Allowance to Reduce Inventory to LIFO | | 30,000 |

Acme Boot deducts Allowance to Reduce Inventory to LIFO from inventory to ensure that it states the inventory on a LIFO basis at year-end.

Companies should disclose either the LIFO reserve or the replacement cost of the inventory, as shown in **Illustration 8.14**. [7]

| | |
|--|--|
|  | American Maize-Products Company |
| Inventories (Note 3) | \$80,320,000 |
| <p>Note 3: Inventories. At December 31, \$31,516,000 of inventories were valued using the LIFO method. This amount is less than the corresponding replacement value by \$3,765,000.</p> | |

ILLUSTRATION 8.14

Note Disclosures of LIFO Reserve

|  | Brown Shoe Company, Inc. | | | | | | |
|---|---|---------------|--------------|---------------|-----------------------|-----------|-----------|
| (in thousands) | | | | | | | |
| | <table border="1"> <thead> <tr> <th></th> <th style="text-align: center;">Current Year</th> <th style="text-align: center;">Previous Year</th> </tr> </thead> <tbody> <tr> <td style="text-align: center;">Inventories, (Note 1)</td> <td style="text-align: center;">\$365,989</td> <td style="text-align: center;">\$362,274</td> </tr> </tbody> </table> | | Current Year | Previous Year | Inventories, (Note 1) | \$365,989 | \$362,274 |
| | Current Year | Previous Year | | | | | |
| Inventories, (Note 1) | \$365,989 | \$362,274 | | | | | |
| <p>Note 1 (partial): Inventories. Inventories are valued at the lower of cost or market determined principally by the last-in, first-out (LIFO) method. If the first-in, first-out (FIFO) cost method had been used, inventories would have been \$11,709 higher in the current year and \$13,424 higher in the previous year.</p> | | | | | | | |

What Do the Numbers Mean? Comparing Apples to Apples

Investors commonly use the current ratio to evaluate a company's liquidity. They compute the current ratio as current assets divided by current liabilities. A higher current ratio indicates that a company is better able to meet its current obligations when they come due. However, it is not meaningful to compare the current ratio for a company using LIFO to one for a company

using FIFO. It would be like comparing apples to oranges since the two companies measure inventory (and cost of goods sold) differently.

To make the current ratio comparable on an apples-to-apples basis, analysts use the LIFO reserve. The following adjustments should do the trick:

$$\text{Inventory Adjustment: LIFO inventory} + \text{LIFO reserve} = \text{FIFO inventory}$$

(For cost of goods sold, deduct the change in the LIFO reserve from LIFO cost of goods sold to yield the comparable FIFO amount.)

For **Brown Shoe** (see Illustration 8.14), with current assets of \$487.8 million and current liabilities of \$217.8 million, the current

ratio using LIFO is $\$487.8 \div \$217.8 = 2.2$. After adjusting for the LIFO effect, Brown Shoe's current ratio under FIFO would be $(\$487.8 + \$11.7) \div \$217.8 = 2.3$.

Thus, without the LIFO adjustment, the Brown Shoe current ratio is understated.

LIFO Liquidation

Up to this point, we have emphasized a **specific-goods approach** to costing LIFO inventories (also called **traditional LIFO** or **unit LIFO**). This approach is often unrealistic for two reasons:

1. When a company has many different inventory items, the accounting cost of tracking each inventory item is expensive.
2. Erosion of the LIFO inventory can easily occur. Referred to as **LIFO liquidation**, this often distorts net income and leads to substantial tax payments.

To understand the LIFO liquidation problem, assume that Basler Co. has 30,000 pounds of steel in its inventory on December 31, 2020, with cost determined on a specific-goods LIFO approach.

| Ending Inventory (2020) | | | |
|-------------------------|---------------|-----------|------------------|
| | Pounds | Unit Cost | LIFO Cost |
| 2017 | 8,000 | \$ 4 | \$ 32,000 |
| 2018 | 10,000 | 6 | 60,000 |
| 2019 | 7,000 | 9 | 63,000 |
| 2020 | 5,000 | 10 | 50,000 |
| | <u>30,000</u> | | <u>\$205,000</u> |

As indicated, the ending 2020 inventory for Basler comprises costs from past periods. These costs are called **layers** (increases from period to period). The first layer is identified as the base layer. **Illustration 8.15** shows the layers for Basler.

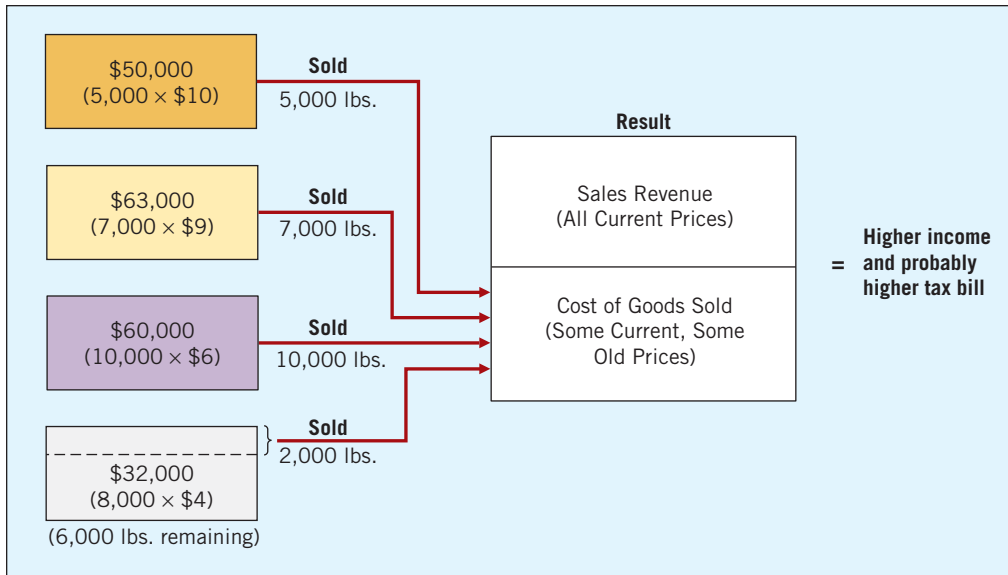

ILLUSTRATION 8.15

Layers of LIFO Inventory

| | |
|------------------------|----------------------------|
| 2020 Layer | \$50,000 (5,000 × \$10) |
| 2019 Layer | \$63,000 (7,000 × \$9) |
| 2018 Layer | \$60,000 (10,000 × \$6) |
| 2017 Base layer | \$32,000 (8,000 × \$4) |

Note the increased price of steel over the four-year period. In 2021, due to metal shortages, Basler had to liquidate much of its inventory (a LIFO liquidation). At the end of 2021, only 6,000 pounds of steel remained in inventory. Because the company uses LIFO, Basler liquidates the most recent layer, 2020, first, followed by the 2019 layer, and so on. The result: Basler matches costs from preceding periods against sales revenues reported in current dollars. As **Illustration 8.16** shows, this leads to a distortion in net income and increased taxable income in the current period. Unfortunately, **LIFO liquidations can occur frequently when using a specific-goods LIFO approach.**

To alleviate the LIFO liquidation problems and to simplify the accounting, companies can combine goods into pools. A **pool** groups items of a similar nature. Thus, instead of only identical units, a company combines, and counts as a group, a number of similar units or

ILLUSTRATION 8.16 LIFO Liquidation

products. This method, the **specific-goods pooled LIFO approach**, usually results in fewer LIFO liquidations. Why? Because the reduction of one quantity in the pool may be offset by an increase in another.

The specific-goods pooled LIFO approach eliminates some of the disadvantages of the specific-goods (traditional) accounting for LIFO inventories. This pooled approach, using quantities as its measurement basis, however, creates other problems.

First, most companies continually change the mix of their products, materials, and production methods. As a result, in employing a pooled approach using quantities, companies must continually redefine the pools. This can be time-consuming and costly. Second, even when practical, the approach often results in an erosion ("LIFO liquidation") of the layers, thereby losing much of the LIFO costing benefit. Erosion of the layers occurs when a specific good or material in the pool is replaced with another good or material. The new item may not be similar enough to be treated as part of the old pool. Therefore, a company may need to recognize any inflationary profit deferred on the old goods as it replaces them.

Dollar-Value LIFO

The dollar-value LIFO method overcomes the problems of redefining pools and eroding layers. **The dollar-value LIFO method determines and measures any increases and decreases in a pool in terms of total dollar value, not the physical quantity of the goods in the inventory pool.**

Such an approach has two important advantages over the specific-goods pooled approach. First, companies may include a broader range of goods in a dollar-value LIFO pool. Second, a dollar-value LIFO pool permits replacement of goods that are similar items, similar in use, or interchangeable. (In contrast, a specific-goods LIFO pool only allows replacement of items that are substantially identical.)

Thus, dollar-value LIFO techniques help protect LIFO layers from erosion. Because of this advantage, companies frequently use the dollar-value LIFO method in practice.⁶ Companies use the more traditional LIFO approaches only when dealing with few goods and expecting little change in product mix.

⁶A study by James M. Reeve and Keith G. Stanga disclosed that the vast majority of respondent companies applying LIFO use the dollar-value method or the dollar-value retail method to apply LIFO. Only a small minority of companies use the specific-goods (unit LIFO) approach or the specific-goods pooling approach. See J.M. Reeve and K.G. Stanga, "The LIFO Pooling Decision," *Accounting Horizons* (June 1987), p. 27.

Under the dollar-value LIFO method, one pool may contain the entire inventory. However, companies generally use several pools.⁷ In general, the more goods included in a pool, the more likely that increases in the quantities of some goods will offset decreases in other goods in the same pool. Thus, companies avoid liquidation of the LIFO layers. It follows that having fewer pools means less cost and less chance of a reduction of a LIFO layer.⁸

Dollar-Value LIFO Example

To illustrate how the dollar-value LIFO method works, assume that Enrico Company first adopts dollar-value LIFO on December 31, 2019 (base period). The inventory at current prices on that date was \$20,000. The inventory on December 31, 2020, at current prices is \$26,400.

Can we conclude that Enrico's inventory quantities increased 32 percent during the year ($\$26,400 \div \$20,000 = 132\%$)? First, we need to ask: What is the value of the ending inventory in terms of beginning-of-the-year prices? Assuming that prices have increased 20 percent during the year, the ending inventory at beginning-of-the-year prices amounts to \$22,000 ($\$26,400 \div 1.20$). Therefore, the inventory quantity has increased only 10 percent, or from \$20,000 to \$22,000 in terms of beginning-of-the-year prices.

The next step is to price this real-dollar quantity increase. This real-dollar quantity increase of \$2,000 valued at year-end prices is \$2,400 ($1.20 \times \$2,000$). This increment (layer) of \$2,400, when added to the beginning inventory of \$20,000, totals \$22,400 for the December 31, 2020, inventory, as shown below.

| | |
|---|-------------------------------|
| First layer—(beginning inventory) in terms of 100 | \$20,000 |
| Second layer—(2020 increase) in terms of 120 | <u>2,400</u> |
| Dollar-value LIFO inventory, December 31, 2020 | <u><u>\$22,400</u></u> |

Note that a layer forms only when the ending inventory at base-year prices exceeds the beginning inventory at base-year prices. And only when a new layer forms must Enrico compute a new index.

Comprehensive Dollar-Value LIFO Example

To illustrate the use of the dollar-value LIFO method in a more complex situation, assume that Bismark Company develops the following information.

| December 31 | Inventory at | Price Index | End-of-Year |
|-------------|--------------------|--------------|------------------|
| (Base year) | End-of-Year Prices | (percentage) | Inventory at |
| | | ÷ | Base-Year Prices |
| 2017 | \$200,000 | 100 | \$200,000 |
| 2018 | 299,000 | 115 | 260,000 |
| 2019 | 300,000 | 120 | 250,000 |
| 2020 | 351,000 | 130 | 270,000 |

At December 31, 2017, Bismark computes the ending inventory under dollar-value LIFO as \$200,000, as **Illustration 8.17** shows.

⁷The Reeve and Stanga study (*ibid.*) reports that most companies have only a few pools—the median is six for retailers and three for nonretailers. But the distributions are highly skewed; some companies have 100 or more pools. Retailers that use LIFO have significantly more pools than nonretailers. About a third of the nonretailers (mostly manufacturers) use a single pool for their entire LIFO inventory.

⁸One study shows that when quantities are increasing, multiple pools over a period of time may produce (under rather general conditions) significantly higher cost of goods sold deductions than a single-pool approach. When a stock-out occurs, a single-pool approach may lessen the layer liquidation for that year, but it may not erase the cumulative cost of goods sold advantage accruing to the use of multiple pools built up over the preceding years. See William R. Coon and Randall B. Hayes, "The Dollar Value LIFO Pooling Decision: The Conventional Wisdom Is Too General," *Accounting Horizons* (December 1989), pp. 57–70.

| Ending Inventory at Base-Year Prices | Layer at Base-Year Prices | Price Index (percentage) | Ending Inventory at LIFO Cost |
|--|---------------------------------|-----------------------------|-------------------------------------|
| \$200,000 | \$200,000 | × 100 | = \$200,000 |

ILLUSTRATION 8.17**Computation of 2017 Inventory at LIFO Cost**

At December 31, 2018, a comparison of the ending inventory at base-year prices (\$260,000) with the beginning inventory at base-year prices (\$200,000) indicates that the quantity of goods (in base-year prices) increased \$60,000 (\$260,000 – \$200,000). Bismark prices this increment (layer) at the 2018 index of 115 percent to arrive at a new layer of \$69,000. Ending inventory for 2018 is \$269,000, composed of the beginning inventory of \$200,000 and the new layer of \$69,000. **Illustration 8.18** shows the computations.

| Ending Inventory at Base-Year Prices | Layers at Base-Year Prices | Price Index (percentage) | Ending Inventory at LIFO Cost |
|--|----------------------------------|-----------------------------|-------------------------------------|
| \$260,000 | → 2017 \$200,000 | × 100 | = \$200,000 |
| | → 2018 60,000 | × 115 | = 69,000 |
| | <u>\$260,000</u> | | <u>\$269,000</u> |

ILLUSTRATION 8.18**Computation of 2018 Inventory at LIFO Cost**

At December 31, 2019, a comparison of the ending inventory at base-year prices (\$250,000) with the beginning inventory at base-year prices (\$260,000) indicates a decrease in the quantity of goods of \$10,000 (\$250,000 – \$260,000). If the ending inventory at base-year prices is less than the beginning inventory at base-year prices, **a company must subtract the decrease from the most recently added layer. When a decrease occurs, the company “peels off” previous layers at the prices in existence when it added the layers.** In Bismark’s situation, this means that it removes \$10,000 in base-year prices from the 2018 layer of \$60,000 at base-year prices. It values the balance of \$50,000 (\$60,000 – \$10,000) at base-year prices at the 2018 price index of 115 percent. As a result, it now values this 2018 layer at \$57,500 (\$50,000 × 1.15). Therefore, Bismark computes the ending inventory at \$257,500, consisting of the beginning inventory of \$200,000 and the second layer of \$57,500. **Illustration 8.19** shows the computations for 2019.

| Ending Inventory at Base-Year Prices | Layers at Base-Year Prices | Price Index (percentage) | Ending Inventory at LIFO Cost |
|--|----------------------------------|-----------------------------|-------------------------------------|
| \$250,000 | → 2017 \$200,000 | × 100 | = \$200,000 |
| | → 2018 50,000 | × 115 | = 57,500 |
| | <u>\$250,000</u> | | <u>\$257,500</u> |

ILLUSTRATION 8.19**Computation of 2019 Inventory at LIFO Cost**

Note that if Bismark eliminates a layer or base (or portion thereof), it cannot rebuild it in future periods. That is, the layer is gone forever.

At December 31, 2020, a comparison of the ending inventory at base-year prices (\$270,000) with the beginning inventory at base-year prices (\$250,000) indicates an increase in the quantity of goods (in base-year prices) of \$20,000 (\$270,000 – \$250,000). After converting the \$20,000 increase, using the 2020 price index, the ending inventory is \$283,500, composed of the beginning layer of \$200,000, a 2018 layer of \$57,500, and a 2020 layer of \$26,000 (\$20,000 × 1.30). **Illustration 8.20** shows this computation.

The ending inventory at base-year prices must always equal the total of the layers at base-year prices. Checking that this situation exists will help to ensure correct dollar-value computations.

ILLUSTRATION 8.20
Computation of 2020
Inventory at LIFO Cost

| Ending Inventory at Base-Year Prices | Layers at Base-Year Prices | Price Index (percentage) | Ending Inventory at LIFO Cost |
|--|----------------------------------|-----------------------------|-------------------------------------|
| \$270,000 | 2017 \$200,000 | × 100 | = \$200,000 |
| | 2018 50,000 | × 115 | = 57,500 |
| | 2020 20,000 | × 130 | = 26,000 |
| | <u>\$270,000</u> | | <u>\$283,500</u> |

Selecting a Price Index

Obviously, price changes are critical in dollar-value LIFO. How do companies determine the price indexes? Many companies use the general price-level index that the federal government prepares and publishes each month. The most popular general external price-level index is the **Consumer Price Index for Urban Consumers (CPI-U)**.⁹ Companies also use more-specific external price indexes. For instance, various organizations compute and publish daily indexes for most commodities (gold, silver, other metals, corn, wheat, and other farm products). Many trade associations prepare indexes for specific product lines or industries. Any of these indexes may be used for dollar-value LIFO purposes.

When a relevant specific external price index is not readily available, a company may compute its own specific internal price index. The desired approach is to price ending inventory at the most current cost. Therefore, a company that chose to compute its own specific internal price index would ordinarily determine current cost by referring to the actual cost of the goods it most recently had purchased. The price index provides a measure of the change in price or cost levels between the base year and the current year. The company then computes the index for each year after the base year. The general formula for computing the index is as shown in **Illustration 8.21**.

ILLUSTRATION 8.21
Formula for Computing
a Price Index

$$\frac{\text{Ending Inventory for the Period at Current Cost}}{\text{Ending Inventory for the Period at Base-Year Cost}} = \text{Price Index for Current Year}$$

This approach is generally referred to as the **double-extension method**. As its name implies, the value of the units in inventory is extended at *both* base-year prices and current-year prices.

To illustrate this computation, assume that Toledo Company's base-year inventory (January 1, 2020) consisted of the following.

| Items | Quantity | Cost per Unit | Total Cost |
|---|----------|---------------|-----------------|
| A | 1,000 | \$ 6 | \$ 6,000 |
| B | 2,000 | 20 | 40,000 |
| January 1, 2020, inventory at base-year costs | | | <u>\$46,000</u> |

Examination of the ending inventory indicates that the company holds 3,000 units of Item A and 6,000 units of Item B on December 31, 2020. The most recent actual purchases related to these items were as follows.

| Items | Purchase Date | Quantity Purchased | Cost per Unit |
|-------|-------------------|--------------------|---------------|
| A | December 1, 2020 | 4,000 | \$ 7 |
| B | December 15, 2020 | 5,000 | 25 |
| B | November 16, 2020 | 1,000 | 22 |

Toledo double-extends the inventory as shown in **Illustration 8.22**.

⁹Indexes may be **general** (composed of several commodities, goods, or services) or **specific** (for one commodity, good, or service). Additionally, they may be **external** (computed by an outside party, such as the government, commodity exchange, or trade association) or **internal** (computed by the enterprise for its own product or service).

| 12/31/20 Inventory at Base-Year Costs | | | | 12/31/20 Inventory at Current-Year Costs | | |
|---------------------------------------|-------|-------------------------|------------------|--|----------------------------|------------------|
| Items | Units | Base-Year Cost per Unit | Total | Units | Current-Year Cost per Unit | Total |
| A | 3,000 | \$ 6 | \$ 18,000 | 3,000 | \$ 7 | \$ 21,000 |
| B | 6,000 | 20 | 120,000 | 5,000 | 25 | 125,000 |
| B | | | | 1,000 | 22 | 22,000 |
| | | | <u>\$138,000</u> | | | <u>\$168,000</u> |

ILLUSTRATION 8.22**Double-Extension Method of Determining a Price Index**

After the inventories are double-extended, Toledo uses the formula in Illustration 8.21 to develop the index for the current year (2020), as shown in **Illustration 8.23**.

$$\frac{\text{Ending Inventory for the Period at Current Cost}}{\text{Ending Inventory for the Period at Base-Year Cost}} = \frac{\$168,000}{\$138,000} = 121.74\%$$

ILLUSTRATION 8.23**Computation of 2020 Index**

Toledo then applies this index (121.74%) to the layer added in 2020. Note in this illustration that Toledo used the most recent actual purchases to determine current cost. Alternatively, it could have used other approaches such as FIFO and average-cost. Whichever flow assumption is adopted, a company must use it consistently from one period to another.

Use of the double-extension method is time-consuming and difficult where substantial technological change has occurred or where many items are involved. That is, as time passes, the company must determine a new base-year cost for new products, and must keep a base-year cost for each inventory item.¹⁰

What Do the Numbers Mean? Quite a Difference

As indicated, significant differences can arise in inventory measured according to current cost and dollar-value LIFO. Let's look at an additional summary example.

Truman Company uses the dollar-value LIFO method of computing its inventory. Inventory for the last three years is as follows.

| Year Ended December 31 | Inventory at Current-Year Cost | Price Index |
|---------------------------|-----------------------------------|----------------|
| 2018 | \$60,000 | 100 |
| 2019 | 84,000 | 105 |
| 2020 | 87,000 | 116 |

The values of the 2018, 2019, and 2020 inventories using the dollar-value LIFO method are presented in the table below.

| Year | Inventory at End-of-Year Prices | Inventory at Base-Year Prices | Layers at Base-Year Prices | × | Price-Index Layers at LIFO Cost | Dollar-Value LIFO Inventory |
|------|---------------------------------------|-------------------------------------|----------------------------------|---|---------------------------------------|-----------------------------------|
| 2018 | \$60,000 | $\$60,000 \div 100 = \$60,000$ | 2018 \$60,000 | × | 100 = \$60,000 | <u>\$60,000</u> |
| 2019 | 84,000 | $\$84,000 \div 105 = \$80,000$ | 2018 \$60,000 | × | 100 = \$60,000 | |
| | | | 2019 20,000 | × | 105 = \$21,000 | <u>\$81,000</u> |
| 2020 | 87,000 | $\$87,000 \div 116 = \$75,000$ | 2018 \$60,000 | × | 100 = \$60,000 | |
| | | | 2019 15,000 | × | 105 = \$15,750 | <u>\$75,750</u> |

As indicated, consistent with LIFO costing in times of rising prices, the dollar-value LIFO inventory amount is less than inventory stated at end-of-year prices. The company did not add layers at the 2020 prices. This is because the increase in inventory at end-of-year (current) prices was due to higher prices. Also, establishing the LIFO layers based on price-adjusted dollars relative to base-year layers reduces the likelihood of a LIFO liquidation.

¹⁰To simplify the analysis, companies may use another approach, initially sanctioned by the Internal Revenue Service for tax purposes. Under this method, a company obtains an index from an outside source or by double-extending only a sample portion of the inventory. For example, the IRS allows all companies to use as their inflation rate for a LIFO pool 80 percent of the inflation rate reported by the appropriate consumer or producer price indexes prepared by the Bureau of Labor Statistics (BLS). Once the company obtains the index, it divides the ending inventory at current cost by the index to find the base-year cost. Using generally available external indexes greatly simplifies LIFO computations, and frees companies from having to compute internal indexes.

Comparison of LIFO Approaches

We present three different approaches to computing LIFO inventories in this chapter—specific-goods LIFO, specific-goods pooled LIFO, and dollar-value LIFO. As we indicated earlier, the use of the specific-goods LIFO is unrealistic. Most companies have numerous goods in inventory at the end of a period. Costing (pricing) them on a unit basis is extremely expensive and time-consuming.

The specific-goods pooled LIFO approach reduces recordkeeping and clerical costs. In addition, it is more difficult to erode the layers because the reduction of one quantity in the pool may be offset by an increase in another. Nonetheless, the pooled approach using quantities as its measurement basis can lead to untimely LIFO liquidations.

As a result, **most companies using a LIFO system employ dollar-value LIFO**. Although the approach appears complex, the logic and the computations are actually quite simple, after determining an appropriate index.

However, problems do exist with the dollar-value LIFO method. The selection of the items to be put in a pool can be subjective.¹¹ Such a determination, however, is extremely important because manipulation of the items in a pool without conceptual justification can affect reported net income. For example, the SEC noted that some companies have set up pools that are easy to liquidate. As a result, to increase income, a company simply decreases inventory, thereby matching low-cost inventory items to current revenues.

To curb this practice, the SEC has taken a much harder line on the number of pools that companies may establish. In a well-publicized case, **Stauffer Chemical Company** increased the number of LIFO pools from 8 to 280, boosting its net income by \$16,515,000 or approximately 13 percent. Stauffer justified the change in its annual report on the basis of “achieving a better matching of cost and revenue.” The SEC required Stauffer to reduce the number of its inventory pools, contending that some pools were inappropriate and alleging income manipulation.

Major Advantages of LIFO

One obvious advantage of LIFO approaches is that the LIFO cost flow may approximate the physical flow of the goods in and out of inventory. For instance, in a coal pile, the last coal in is the first coal out because it is on the top of the pile. The coal remover is not going to take the coal from the bottom of the pile! The coal taken first is the coal placed on the pile last.

However, this is one of only a few situations where the actual physical flow corresponds to LIFO. Therefore, most adherents of LIFO use other arguments for its widespread use, as follows.

Matching

LIFO matches the more recent costs against current revenues to provide a better measure of current earnings. During periods of inflation, many challenge the quality of non-LIFO earnings, noting that failing to match current costs against current revenues **creates transitory or “paper” profits (“inventory profits”)**. Inventory profits occur when the inventory costs matched against sales are less than the inventory replacement cost. This results in understating the cost of goods sold and overstating profit. Using LIFO (rather than a method such as FIFO) matches current costs against revenues, thereby reducing inventory profits.

Tax Benefits/Improved Cash Flow

LIFO’s popularity mainly stems from its tax benefits. As long as the price level increases and inventory quantities do not decrease, a deferral of income tax occurs. Why? Because a company matches the items it most recently purchased (at the higher price level) against revenues.

¹¹It is suggested that companies analyze how inventory purchases are affected by price changes, how goods are stocked, how goods are used, and if future liquidations are likely. See William R. Cron and Randall Hayes, *ibid.*, p. 57.

For example, when **Fuqua Industries** switched to LIFO, it realized a tax savings of about \$4 million. Even if the price level decreases later, the company still temporarily deferred its income taxes. Thus, use of LIFO in such situations improves a company's cash flow.¹²

The tax law requires that if a company uses LIFO for tax purposes, it must also use LIFO for financial accounting purposes¹³ (although neither tax law nor GAAP requires a company to pool its inventories in the same manner for book and tax purposes). This requirement is often referred to as the **LIFO conformity rule**. Other inventory valuation methods do not have this requirement.

Future Earnings Hedge

With LIFO, future price declines will not substantially affect a company's future reported earnings. The reason: Since the company records the most recent inventory as sold first, there is not much ending inventory at high prices vulnerable to a price decline. Thus LIFO eliminates or substantially minimizes write-downs to market as a result of price decreases. In contrast, inventory costed under FIFO is more vulnerable to price declines, which can reduce net income substantially.

Major Disadvantages of LIFO

Despite its advantages, LIFO has the following drawbacks.

Reduced Earnings

Many corporate managers view the lower profits reported under the LIFO method in inflationary times as a distinct disadvantage. They would rather have higher reported profits than lower taxes. Some fear that investors may misunderstand an accounting change to LIFO, and that the lower profits may cause the price of the company's stock to fall.

Inventory Understated

LIFO may have a distorting effect on a company's balance sheet. The inventory valuation is normally outdated because the oldest costs remain in inventory. This understatement makes the working capital position of the company appear worse than it really is. A good example is **Walgreens**, which uses LIFO costing for most of its inventory, valued at \$6.1 billion in a recent year. Under FIFO costing, Walgreens' inventories have a value of \$8.4 billion—approximately 38 percent higher than the LIFO amount.

The magnitude and direction of this variation between the carrying amount of inventory and its current price depend on the degree and direction of the price changes and the amount of inventory turnover. The combined effect of rising product prices and avoidance of inventory liquidations increases the difference between the inventory carrying value at LIFO and current prices of that inventory. This magnifies the balance sheet distortion attributed to the use of LIFO.

Physical Flow

LIFO does not approximate the physical flow of the items except in specific situations (such as the coal pile discussed earlier). Originally, companies could use LIFO only in certain circumstances. This situation has changed over the years. Now, physical flow characteristics no longer determine whether a company may employ LIFO.

¹²In periods of rising prices, the use of fewer pools will translate into greater income tax benefits through the use of LIFO. The use of fewer pools allows companies to offset inventory reductions on some items and inventory increases in others. In contrast, the use of more pools increases the likelihood of liquidating old, low-cost inventory layers and incurring negative tax consequences. See Reeve and Stanga, *ibid.*, pp. 28–29.

¹³Management often selects an accounting procedure because a lower tax results from its use, instead of an accounting method that is conceptually more appealing. Throughout this text, we identify accounting procedures that provide income tax benefits to the user.

Involuntary Liquidation/Poor Buying Habits

If a company eliminates the base or layers of old costs, it may match old, irrelevant costs against current revenues. A distortion in reported income for a given period may result, as well as detrimental income tax consequences. For example, **Caterpillar** at one time experienced a LIFO liquidation, resulting in an increased tax bill of \$60 million.¹⁴

Because of the liquidation problem, LIFO may cause poor buying habits. A company may simply purchase more goods and match these goods against revenue to avoid charging the old costs to expense. Furthermore, recall that with LIFO, a company may attempt to manipulate its net income at the end of the year simply by altering its pattern of purchases.¹⁵

One survey uncovered the following reasons why companies reject LIFO (as shown in **Illustration 8.24**).¹⁶

ILLUSTRATION 8.24

Why Do Companies Reject LIFO? Summary of Responses

| Reasons to Reject LIFO | Number | % of Total* |
|----------------------------------|--------|-------------|
| No expected tax benefits | | |
| No required tax payment | 34 | 16% |
| Declining prices | 31 | 15 |
| Rapid inventory turnover | 30 | 14 |
| Immaterial inventory | 26 | 12 |
| Miscellaneous tax related | 38 | 17 |
| | 159 | 74% |
| Regulatory or other restrictions | 26 | 12% |
| Excessive cost | | |
| High administrative costs | 29 | 14% |
| LIFO liquidation-related costs | 12 | 6 |
| | 41 | 20% |
| Other adverse consequences | | |
| Lower reported earnings | 18 | 8% |
| Bad accounting | 7 | 3 |
| | 25 | 11% |

*Percentage totals more than 100% as some companies offered more than one explanation.

Basis for Selection of Inventory Method

How does a company choose among the various inventory methods? Although no absolute rules can be stated, preferability for LIFO usually occurs in either of the following circumstances: (1) if selling prices and revenues have been increasing faster than costs, thereby distorting income, and (2) in situations where LIFO has been traditional, such as department stores and industries where a fairly constant “base stock” is present (such as refining, chemicals, and glass).¹⁷

Conversely, LIFO is probably inappropriate in the following circumstances: (1) where prices tend to lag behind costs; (2) in situations where specific identification is traditional, such as in the sale of automobiles, farm equipment, art, and antique jewelry; or (3) where unit costs tend to decrease as production increases, thereby nullifying the tax benefit that LIFO might provide.¹⁸

¹⁴Companies should disclose the effects on income of LIFO inventory liquidations in the notes to the financial statements. [8]

¹⁵For example, **General Tire and Rubber** accelerated raw material purchases at the end of the year to minimize the book profit from a liquidation of LIFO inventories and to minimize income taxes for the year.

¹⁶Michael H. Granof and Daniel Short, “Why Do Companies Reject LIFO?” *Journal of Accounting, Auditing, and Finance* (Summer 1984), pp. 323–333 and Table 1, p. 327.

¹⁷*Accounting Trends and Techniques* reported that of 669 inventory method disclosures, 163 used LIFO, 312 used FIFO, 133 used average-cost, and 56 used other methods. A recent study [D. Tinkerton, “Who Benefits from LIFO?” *Tax Notes* (December 2017)] of all public companies (broader than that in *Accounting Trends and Techniques*) documented that less than 10 percent of large and small companies use LIFO, a decline from nearly 30 percent in 1985. As discussed in the opening story, because of steady or falling raw materials costs and costs savings from electronic data interchange and just-in-time technologies in recent years, many businesses using LIFO no longer experience substantial tax benefits. Even some companies for which LIFO is creating a benefit are finding that the administrative costs associated with LIFO are higher than the LIFO benefit obtained. As a result, some companies are moving to FIFO or average-cost.

¹⁸See Barry E. Cushing and Marc J. LeClere, “Evidence on the Determinants of Inventory Accounting Policy Choice,” *The Accounting Review* (April 1992), pp. 355–366 and Table 4, p. 363, for a list of factors hypothesized to affect FIFO–LIFO choices.

Tax consequences are another consideration. Switching from FIFO to LIFO usually results in an immediate tax benefit. However, switching from LIFO to FIFO can result in a substantial tax burden. For example, when **Chrysler** changed from LIFO to FIFO, it became responsible for an additional \$53 million in taxes that the company had deferred over 14 years of LIFO inventory valuation. Why, then, would Chrysler, and other companies, change to FIFO? The major reason was the profit crunch of that era. Although Chrysler showed a loss of \$7.6 million after the switch, the loss would have been \$20 million *more* if the company had not changed its inventory valuation from LIFO to FIFO.

It is questionable whether companies should switch from LIFO to FIFO for the sole purpose of increasing reported earnings. Intuitively, we would assume that companies with higher reported earnings would have a higher share valuation (common stock price). However, some studies have indicated that the users of financial data exhibit a much higher sophistication than might be expected. Share prices are the same and, in some cases, even higher under LIFO in spite of lower reported earnings.¹⁹

The concern about reduced income resulting from adoption of LIFO has even less substance now because the IRS has also relaxed the LIFO conformity rule which requires a company employing LIFO for tax purposes to use it for book purposes as well. The IRS has also relaxed restrictions against providing non-LIFO income numbers as supplementary information. As a result, companies now provide supplemental non-LIFO disclosures. While not intended to override the basic LIFO method adopted for financial reporting, these disclosures may be useful in comparing operating income and working capital with companies not on LIFO.

For example, **Sherwin-Williams Company**, a LIFO user, presented the information in its annual report as shown in **Illustration 8.25**.

|  Sherwin-Williams Company | | |
|--|----------|---------|
| Note 3—Inventories | | |
| Inventories were principally stated at the lower of cost or market with cost determined on the last-in, first-out (LIFO) method. The following presents the effect on inventories, net income and net income per common share had the Company used the first-in, first-out (FIFO) inventory valuation method adjusted for income taxes at the statutory rate in effect at each reporting date and assuming no other adjustments. Management believes that the use of LIFO results in a better matching of costs and revenues. This information is presented to enable the reader to make comparisons with companies using the FIFO method of inventory valuation. The decrease in percentage of total inventories on LIFO in 2017 was due to the Acquisition, which only carried approximately 40 percent of its inventory on the LIFO method. | | |
| | 2017 | 2016 |
| Percentage of total inventories on LIFO | 66% | 79% |
| Excess of FIFO over LIFO | 286,961 | 253,353 |
| Increase in net income due to LIFO | (20,669) | (1,421) |
| Increase in net income per common share due to LIFO | (0.22) | (0.02) |

ILLUSTRATION 8.25**Supplemental Non-LIFO Disclosure**

Relaxation of the LIFO conformity rule has led some companies to select LIFO as their inventory valuation method because they will be able to disclose FIFO income numbers in the financial reports if they so desire.²⁰

Companies often combine inventory methods. For example, **John Deere** uses LIFO for most of its inventories, and prices the remainder using FIFO (see **Global View**).

Global View

Many U.S. companies that have international operations use LIFO for U.S. purposes but use FIFO for their foreign subsidiaries.

¹⁹See, for example, Shyam Sunder, "Relationship Between Accounting Changes and Stock Prices: Problems of Measurement and Some Empirical Evidence," *Empirical Research in Accounting: Selected Studies, 1973* (Chicago: University of Chicago), pp. 1–40. But see Robert Moren Brown, "Short-Range Market Reaction to Changes to LIFO Accounting Using Preliminary Earnings Announcement Dates," *The Journal of Accounting Research* (Spring 1980), which found that companies that do change to LIFO suffer a short-run decline in the price of their stock.

²⁰Note that a company can use one variation of LIFO for financial reporting purposes and another for tax without violating the LIFO conformity rule. Such a relaxation has caused many problems because the general approach to accounting for LIFO has been "whatever is good for tax is good for financial reporting."

The Hershey Company follows the same practice. One reason for these practices is that certain product lines can be highly susceptible to deflation instead of inflation. In addition, if the level of inventory is unstable, unwanted involuntary liquidations may result in certain product lines if using LIFO. Finally, for high inventory turnover in certain product lines, a company cannot justify LIFO's additional recordkeeping and expense. In such cases, a company often uses average-cost because it is easy to compute.²¹

Although a company may use a variety of inventory methods to assist in accurate computation of net income, once it selects a costing method, it must apply it consistently thereafter. If conditions indicate that the inventory costing method in use is unsuitable, the company must seriously consider all other possibilities before selecting another method. It should clearly explain any change and disclose its effect in the financial statements.

Evolving Issue Repeal LIFO!

In some situations, use of LIFO can result in significant tax savings for companies. For example, **Sherwin-Williams Company** estimates its tax bill would increase by \$16 million if it were to change from LIFO to FIFO. The option to use LIFO to reduce taxes has become a political issue because of the growing federal deficit. Some are proposing elimination of LIFO (and other tax law changes) to help reduce a recent fiscal year budget deficit. Why pick on LIFO? Well, one estimate indicates that repeal of LIFO would help plug the budget deficit with over \$76 billion in additional tax collections over 10 years. While a proposal to fully repeal LIFO did not survive in the final version of the recent Tax Cuts and Jobs Act of

2017, the reduction in the tax rate from 35 percent to 21 percent will make the tax benefits of LIFO less valuable. In addition, since IFRS does not permit LIFO, its repeal will contribute to international accounting convergence.

Lundeen, "Proposed Tax Changes in President Obama's Fiscal Year 2016 Budget," <http://taxfoundation.org/blog/proposed-tax-changes-president-obama-s-fiscal-year-2016-budget> (February 11, 2015); and E. Orlet, "What the Tax Cut and Jobs Act Reform Means for Distributors," *ted magazine* (December 20, 2017).

Inventory Valuation Methods—Summary Analysis

The preceding sections of this chapter described a number of inventory valuation methods. Here we present a brief summary of the three major inventory methods to show the effects these valuation methods have on the financial statements. This comparison assumes periodic inventory procedures and the following selected data.

| Selected Data | | |
|-----------------------------|--------------------|----------|
| Beginning cash balance | | \$ 7,000 |
| Beginning retained earnings | | \$10,000 |
| Beginning inventory: | 4,000 units @ \$3 | \$12,000 |
| Purchases: | 6,000 units @ \$4 | \$24,000 |
| Sales: | 5,000 units @ \$12 | \$60,000 |
| Operating expenses | | \$10,000 |
| Income tax rate | | 40% |

Illustration 8.26 shows the comparative results on net income of the use of average-cost, FIFO, and LIFO. Notice that gross profit and net income are lowest under LIFO, highest under FIFO, and somewhere in the middle under average-cost.

²¹For an interesting discussion of the reasons for and against the use of FIFO and average-cost, see Michael H. Granof and Daniel G. Short, "For Some Companies, FIFO Accounting Makes Sense," *Wall Street Journal* (August 30, 1982); and the subsequent rebuttal by Gary C. Biddle, "Taking Stock of Inventory Accounting Choices," *Wall Street Journal* (September 15, 1982).

ILLUSTRATION 8.26**Comparative Results of Average-Cost, FIFO, and LIFO Methods**

| | Average-Cost | FIFO | LIFO |
|---------------------|---|--|--|
| Sales | \$60,000 | \$60,000 | \$60,000 |
| Cost of goods sold | <u>18,000^a</u> | <u>16,000^b</u> | <u>20,000^c</u> |
| Gross profit | 42,000 | 44,000 | 40,000 |
| Operating expenses | <u>10,000</u> | <u>10,000</u> | <u>10,000</u> |
| Income before taxes | 32,000 | 34,000 | 30,000 |
| Income taxes (40%) | <u>12,800</u> | <u>13,600</u> | <u>12,000</u> |
| Net income | <u>\$19,200</u> | <u>\$20,400</u> | <u>\$18,000</u> |
| | ^a 4,000 @ \$3 = \$12,000 6,000 @ \$4 = <u>24,000</u> <u>\$36,000</u> \$36,000 ÷ 10,000 = \$3.60 \$3.60 × 5,000 = <u>\$18,000</u> | ^b 4,000 @ \$3 = \$12,000 1,000 @ \$4 = <u>4,000</u> <u>\$16,000</u> | ^c 5,000 @ \$4 = <u>\$20,000</u> |

Illustration 8.27 shows the final balances of selected items at the end of the period.

| | Inventory | Gross Profit | Taxes | Net Income | Retained Earnings | Cash |
|-------------------------------|--|----------------|------------|-------------|-----------------------------------|-----------------------|
| Average-Cost | \$18,000 (5,000 × \$3.60) | \$42,000 | \$12,800 | \$19,200 | \$29,200 (\$10,000 + \$19,200) | \$20,200 ^a |
| FIFO | \$20,000 (5,000 × \$4) | \$44,000 | \$13,600 | \$20,400 | \$30,400 (\$10,000 + \$20,400) | \$19,400 ^a |
| LIFO | \$16,000 (4,000 × \$3) (1,000 × \$4) | \$40,000 | \$12,000 | \$18,000 | \$28,000 (\$10,000 + \$18,000) | \$21,000 ^a |
| ^a Cash at year-end | = | Beg. Balance + | Sales - | Purchases - | Operating expenses - | Taxes |
| Average-cost—\$20,200 | = | \$7,000 + | \$60,000 - | \$24,000 - | \$10,000 - | \$12,800 |
| FIFO—\$19,400 | = | \$7,000 + | \$60,000 - | \$24,000 - | \$10,000 - | \$13,600 |
| LIFO—\$21,000 | = | \$7,000 + | \$60,000 - | \$24,000 - | \$10,000 - | \$12,000 |

ILLUSTRATION 8.27**Balances of Selected Items under Alternative Inventory Valuation Methods**

LIFO results in the highest cash balance at year-end (because taxes are lower). This example assumes that prices are rising. The opposite result occurs if prices are declining.

Effect of Inventory Errors

LEARNING OBJECTIVE 5

Determine the effects of inventory errors on the financial statements.

Items incorrectly included or excluded in determining cost of goods sold through inventory misstatements will result in errors in the financial statements. We next look at two cases, assuming a periodic inventory system.

Ending Inventory Misstated

What would happen if **IBM** correctly records its beginning inventory and purchases, but fails to include some items in ending inventory? **Illustration 8.28** shows the effects on the financial statements at the end of the period.

ILLUSTRATION 8.28**Financial Statement Effects of Misstated Ending Inventory**

| Balance Sheet | | Income Statement | |
|-------------------|-------------|--------------------|-------------|
| Inventory | Understated | Cost of goods sold | Overstated |
| Retained earnings | Understated | Net income | Understated |
| Working capital | Understated | | |
| Current ratio | Understated | | |

If ending inventory is understated, working capital (current assets less current liabilities) and the current ratio (current assets divided by current liabilities) are understated. If cost of goods sold is overstated, then net income is understated.

To illustrate the effect on net income over a two-year period (2019–2020), assume that Jay Weiseman Corp. understates its ending inventory by \$10,000 in 2019; all other items are correctly stated. The effect of this error is to decrease net income in 2019 and to increase net income in 2020. The error is counterbalanced (offset) in 2020 because beginning inventory is understated and net income is overstated. As **Illustration 8.29** shows, the income statement misstates the net income figures for both 2019 and 2020 although the *total* for the two years is correct.

ILLUSTRATION 8.29**Effect of Ending Inventory Error on Two Periods**

| Jay Weiseman Corp. (All Figures Assumed) | | | | | |
|---|--|-----------|--|-----------|--|
| | Incorrect Recording | | Correct Recording | | |
| | 2019 | 2020 | 2019 | 2020 | |
| Revenues | \$100,000 | \$100,000 | \$100,000 | \$100,000 | |
| Cost of goods sold | | | | | |
| Beginning inventory | 25,000 | 20,000 | 25,000 | 30,000 | |
| Purchased or produced | 45,000 | 60,000 | 45,000 | 60,000 | |
| Goods available for sale | 70,000 | 80,000 | 70,000 | 90,000 | |
| Less: Ending inventory | 20,000* | 40,000 | 30,000 | 40,000 | |
| Cost of goods sold | 50,000 | 40,000 | 40,000 | 50,000 | |
| Gross profit | 50,000 | 60,000 | 60,000 | 50,000 | |
| Administrative and selling expenses | 40,000 | 40,000 | 40,000 | 40,000 | |
| Net income | \$ 10,000 | \$ 20,000 | \$ 20,000 | \$ 10,000 | |
| | Total income for two years = \$30,000 | | Total income for two years = \$30,000 | | |

*Ending inventory understated by \$10,000 in 2019.

If Weiseman *overstates* ending inventory in 2019, the reverse effect occurs. Inventory, working capital, current ratio, and net income are overstated, and cost of goods sold is understated. The effect of the error on net income will be counterbalanced in 2020, but the income statement misstates both years' net income figures.

Purchases and Inventory Misstated

Suppose that Bishop Company does not record as a purchase certain goods that it owns and does not count them in ending inventory. The effect on the financial statements (assuming this is a purchase on account) is shown in **Illustration 8.30**.

ILLUSTRATION 8.30**Financial Statement Effects of Misstated Purchases and Inventory**

| Balance Sheet | | Income Statement | |
|-------------------|-------------|--------------------|-------------|
| Inventory | Understated | Purchases | Understated |
| Retained earnings | No effect | Cost of goods sold | No effect |
| Accounts payable | Understated | Net income | No effect |
| Working capital | No effect | Inventory (ending) | Understated |
| Current ratio | Overstated | | |

Omission of goods from purchases and inventory results in an understatement of inventory and accounts payable in the balance sheet. It also results in an understatement of purchases and ending inventory in the income statement. However, the omission of such goods does not affect net income for the period. Why not? Because Bishop understates both purchases and ending inventory by the same amount—the error is thereby offset in cost of goods sold. Total working capital is unchanged, but the current ratio is overstated because of the omission of equal amounts from inventory and accounts payable.

To illustrate the effect on the current ratio, assume that Bishop *understates* accounts payable and ending inventory by \$40,000. **Illustration 8.31** shows the understated and correct data.

| Purchases and Ending Inventory Understated | | Purchases and Ending Inventory Correct | |
|--|-----------|--|-----------|
| Current assets | \$120,000 | Current assets | \$160,000 |
| Current liabilities | \$ 40,000 | Current liabilities | \$ 80,000 |
| Current ratio | 3 to 1 | Current ratio | 2 to 1 |

ILLUSTRATION 8.31**Effects of Purchases and Ending Inventory Errors**

The understated data indicate a current ratio of 3 to 1, whereas the correct ratio is 2 to 1. Thus, understatement of accounts payable and ending inventory can lead to a “window-dressing” of the current ratio. That is, Bishop can make the current ratio appear better than it is.

If Bishop *overstates* both purchases (on account) and ending inventory, then the effects on the balance sheet are exactly the reverse. The financial statements overstate inventory and accounts payable, and understate the current ratio. The overstatement does not affect cost of goods sold and net income because the errors offset one another. Similarly, working capital is not affected.

We cannot overemphasize the importance of proper inventory measurement in presenting accurate financial statements (see **Underlying Concepts**). For example, **Leslie Fay**, a women’s apparel maker, had accounting irregularities that wiped out one year’s net income and caused a restatement of the prior year’s earnings. One reason: It inflated inventory and deflated cost of goods sold. **Anixter Bros. Inc.** had to restate its income by \$1.7 million because an accountant in the antenna manufacturing division overstated the ending inventory, thereby reducing its cost of sales. Similarly, **AM International** allegedly recorded as sold products that were only being rented. As a result, inaccurate inventory and sales figures inappropriately added \$7.9 million to pretax income.

Underlying Concepts

When inventory is misstated, its presentation is not representationally faithful.

Learning Objectives Review

1 Identify inventory classifications and different inventory systems.

Only one inventory account, Inventory, appears in the financial statements of a merchandising concern. A manufacturer normally has three inventory accounts: Raw Materials, Work in Process, and Finished Goods. Companies report the cost assigned to goods and materials on hand but not yet placed into production as raw materials inventory. They report the cost of the raw materials on which production has been started but not completed, plus the direct labor cost applied specifically to this material and a ratable share of manufacturing overhead costs, as work in process inventory. Finally, they report the costs identified with the completed but unsold units on hand at the end of the fiscal period as finished goods inventory.

A **perpetual inventory system** maintains a continuous record of inventory changes in the Inventory account. That is, a company records all purchases and sales (issues) of goods directly in the Inventory account as they occur. Under a **periodic inventory system**, companies determine the quantity of inventory on hand only periodically. A company debits a Purchases account, but the Inventory account remains the same. It determines cost of goods sold at the end of the period by subtracting ending inventory from cost of goods available for sale. A company ascertains ending inventory by physical count.

2 Determine the goods and costs included in inventory.

Companies record purchases of inventory when they obtain control of the goods (generally when they receive legal title to the goods). Shipping terms must be evaluated to determine when legal title passes, and careful consideration must be made for cost of goods sold on consignment and sales with repurchase agreements and high rates of return.

Product costs are those costs that attach to the inventory and are recorded in the Inventory account. Such charges include freight charges on goods purchased, other direct costs of acquisition, and labor and other production costs incurred in processing the goods up to the time of sale. **Period costs** are those costs that are indirectly related to the acquisition or production of goods. These changes, such as selling expense and general and administrative expenses, are therefore not included as part of inventory cost.

3 Describe and compare the cost flow assumptions used to account for inventories.

(1) *Average-cost* prices items in the inventory on the basis of the average cost of all similar goods available during the period. (2) *First-in, first-out (FIFO)* assumes that a company uses goods in the order in which it purchases them. The inventory remaining must therefore represent the most recent purchases. (3) *Last-in, first-out (LIFO)* matches the cost of the last goods purchased against revenue.

4 Identify special issues related to LIFO.

The difference between the inventory method used for internal reporting purposes and LIFO is referred to as **Allowance to Reduce Inventory to LIFO**, or the **LIFO reserve**. The change in LIFO reserve is referred to as the LIFO effect. Companies should disclose either the LIFO reserve or the replacement cost of the inventory in the financial statements.

LIFO liquidations match costs from preceding periods against sales revenues reported in current dollars. This distorts net income and results in increased taxable income in the current period. LIFO liquidations can occur frequently when using a specific-goods LIFO approach.

For the **dollar-value LIFO method**, companies determine and measure increases and decreases in a pool in terms of total dollar value, not the physical quantity of the goods in the inventory pool.

The major advantages of LIFO are the following. (1) It matches recent costs against current revenues to provide a better measure of current earnings. (2) As long as the price level increases and inventory quantities do not decrease, a deferral of income tax occurs in LIFO. (3) Because of the deferral of income tax, cash flow improves. **Major disadvantages** are (1) reduced earnings, (2) understated inventory, (3) does not approximate physical flow of the items except in peculiar situations, and (4) involuntary liquidation issues.

Companies ordinarily prefer LIFO in the following circumstances: (1) if selling prices and revenues have been increasing faster than costs and (2) if a company has a fairly constant "base stock." Conversely, LIFO would probably not be appropriate in the following circumstances: (1) if sale prices tend to lag behind costs, (2) if specific identification is traditional, and (3) when unit costs tend to decrease as production increases, thereby nullifying the tax benefit that LIFO might provide.

5 Determine the effects of inventory errors on the financial statements.

If the company misstates ending inventory: (1) In the balance sheet, the inventory and retained earnings will be misstated, which will lead to miscalculation of the working capital and current ratio, and (2) in the income statement, the cost of goods sold and net income will be misstated. *If the company misstates purchases (and related accounts payable) and inventory:* (1) In the balance sheet, the inventory and accounts payable will be misstated, which will lead to miscalculation of the current ratio, and (2) in the income statement, purchases and ending inventory will be misstated.

Enhanced Review and Practice

Go online for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Practice Problem

Clinton Company makes specialty cases for smart phones and other handheld devices. The company has experienced strong growth, and you are especially interested in how well Clinton is managing its inventory balances. You have collected the following information for the current year.

| | |
|--|------------------|
| Inventory at the beginning of year | \$ 1,555 million |
| Inventory at the end of year, before any adjustments | 1,267 million |
| Total cost of goods sold, before any adjustments | 17,844 million |

The company values inventory using the LIFO cost flow assumption.

Instructions

Prepare a schedule (a computer worksheet would serve well) showing the impact of the following items on Clinton's inventory turnover.

- Shipping contracts changed 2 months ago from f.o.b. shipping point to f.o.b. destination. At the end of the year, \$5 million of products are en route to China (and will not arrive until after financial statements are released). Current inventory balances do not reflect this change in policy.
- During the year, Clinton recorded sales and costs of goods sold on \$2 million of units shipped to various wholesalers on consignment. At year-end, these units were not included in the ending inventory balance; none of these units have been sold by wholesalers.
- To be more consistent with industry inventory valuation practices, Clinton changed from perpetual LIFO to FIFO for its inventory of iPad cases. This inventory is currently carried at \$724 million. Data for this item of inventory for the year are as follows.

| Month | Units Purchased | Inventory Sold | Price per Unit | Units Balance |
|-------------|-----------------|----------------|----------------|---------------|
| January 1 | 100 | | \$3.10 | 100 |
| April 15 | 150 | | 3.20 | 250 |
| October 25 | | 130 | | 120 |
| November 10 | 250 | | 3.50 | 370 |
| December 20 | | 150 | | 220 |

- Explain to Clinton management the advantages of using the LIFO cost flow assumption. Are there any drawbacks? Explain.

| 3 | Beginning inventory | \$ 1,555.00 | – | – | – | \$ 1,555.00 |
| 4 | Ending inventory | 1,267.00 | \$ 5.00 | \$ 2.00 | \$ 46.00 | 1,320.00 |
| 5 | Average inventory | 1,411.00 | – | – | – | 1,437.50 |
| 6 | Cost of goods sold | 17,844.00 | \$(5.00) | \$(2.00) | \$(46.00) | 17,791.00 |
| 7 | Inventory turnover | 12.65 | – | – | – | 12.38 |
| 8 | | | | | | |
| 9 | Explanation | | Goods officially change hands at the point of destination. | Clinton should include the goods on consignment to other sellers. | Ending inventory under FIFO would be \$770 (220 @ \$3.50), which is \$46 (\$770 - \$724) higher than LIFO. | |
| 10 | | | | | | |

- d. The major advantages of the LIFO inventory method include better matching of costs with revenues, deferral of income taxes, improved cash flow, and minimization of the impact of future price declines on future earnings. Better matching arises in the use of LIFO because the most recent costs are matched with current revenues. In times of rising prices, this matching will result in lower taxable income, which in turn will reduce current taxes. The deferral of taxes under LIFO contributes to a higher cash flow. As illustrated in the analysis above, the switch to FIFO resulted in a higher ending inventory, which leads to a lower cost of goods sold and higher income. Thus, Clinton's reported income will be higher but so will its taxes. Note that under LIFO, future taxes may be higher when lower cost items of inventory are sold in future periods and matched with higher sales prices.

Disadvantages of the LIFO inventory method include (1) reduced earnings, (2) understated inventory on the balance sheet, (3) the LIFO cost flow assumption does not correspond to the physical flow of goods, and (4) involuntary liquidation issues.

WileyPLUS

Exercises, Problems, Problem Solution Walkthrough Videos, and many more assessment tools and resources are available for practice in WileyPLUS.

Questions

- In what ways are the inventory accounts of a retailing company different from those of a manufacturing company?
- Why should inventories be included in (a) a statement of financial position and (b) the computation of net income?
- What is the difference between a perpetual inventory and a physical inventory? If a company maintains a perpetual inventory, should its physical inventory at any date be equal to the amount indicated by the perpetual inventory records? Why?
- Mishima, Inc. indicated in a recent annual report that approximately \$19 million of merchandise was received on consignment. Should Mishima, Inc. report this amount on its balance sheet? Explain.
- What is a repurchase agreement (product financing) arrangement? How should a product repurchase agreement be reported in the financial statements?
- Where, if at all, should the following items be classified on a balance sheet?
 - Goods out on approval to customers.
 - Goods in transit that were recently purchased f.o.b. destination.
 - Land held by a realty firm for sale.
 - Raw materials.
 - Goods received on consignment.
 - Manufacturing supplies.
- Define "cost" as applied to the valuation of inventories.
- Distinguish between product costs and period costs as they relate to inventory.
- Ford Motor Co.** is considering alternate methods of accounting for the cash discounts it takes when paying suppliers promptly. One method suggested was to report these discounts as financial income when payments are made. Comment on the propriety of this approach.
- Zonker Inc. purchases 500 units of an item at an invoice cost of \$30,000. What is the cost per unit? If the goods are shipped f.o.b. shipping point and the freight bill was \$1,500, what is the cost per unit if Zonker Inc. pays the freight charges? If these items were bought on 2/10, n/30 terms and the invoice and the freight bill were paid within the 10-day period, what would be the cost per unit?
- Specific identification is sometimes said to be the ideal method of assigning cost to inventory and to cost of goods sold. Briefly indicate the arguments for and against this method of inventory valuation.
- FIFO, average-cost, and LIFO methods are often used instead of specific identification for inventory valuation purposes. Compare these methods with the specific identification method, discussing the theoretical propriety of each method in the determination of income and asset valuation.
- How might a company obtain a price index in order to apply dollar-value LIFO?
- Describe the LIFO double-extension method. Using the following information, compute the index at December 31, 2020, applying the double-extension method to a LIFO pool consisting of 25,500 units of product A and 10,350 units of product B. The base-year cost of product A is \$10.20 and of product B is \$37.00. The price at December 31, 2020, for product A is \$21.00 and for product B is \$45.60. (Round to two decimal places.)
- As compared with the FIFO method of costing inventories, does the LIFO method result in a larger or smaller net income in a period of rising prices? What is the comparative effect on net income in a period of falling prices?
- What is the dollar-value method of LIFO inventory valuation? What advantage does the dollar-value method have over the specific goods approach of LIFO inventory valuation? Why will the traditional LIFO inventory costing method and the dollar-value LIFO inventory costing method produce different inventory valuations if the composition of the inventory base changes?
- Explain the following terms.
 - LIFO layer.
 - LIFO reserve.
 - LIFO effect.

18. On December 31, 2019, the inventory of Powhattan Company amounts to \$800,000. During 2020, the company decides to use the dollar-value LIFO method of costing inventories. On December 31, 2020, the inventory is \$1,053,000 at December 31, 2020, prices. Using the December 31, 2019, price level of 100 and the December 31, 2020, price level of 108, compute the inventory value at December 31, 2020, under the dollar-value LIFO method.

19. In an article that appeared in the *Wall Street Journal*, the phrases “phantom (paper) profits” and “high LIFO profits” through involuntary liquidation were used. Explain these phrases.

20. At the balance sheet date, Clarkson Company held title to goods in transit amounting to \$214,000. This amount was omitted from the purchases figure for the year and also from the ending inventory. What is the effect of this omission on the net income for the year as calculated when the books are closed? What is the effect on the company’s financial position as shown in its balance sheet? Is materiality a factor in determining whether an adjustment for this item should be made?

Brief Exercises

BE8.1 (LO 1) Included in the December 31 trial balance of Rivera Company are the following assets.

| | | | |
|-------------------|------------|---------------------------|-----------|
| Cash | \$ 190,000 | Work in process | \$200,000 |
| Equipment (net) | 1,100,000 | Accounts receivable (net) | 400,000 |
| Prepaid insurance | 41,000 | Patents | 110,000 |
| Raw materials | 335,000 | Finished goods | 170,000 |

Prepare the current assets section of the December 31 balance sheet.

BE8.2 (LO 1) Matlock Company uses a perpetual inventory system. Its beginning inventory consists of 50 units that cost \$34 each. During June, the company purchased 150 units at \$34 each, returned 6 units for credit, and sold 125 units at \$50 each. Journalize the June transactions.

BE8.3 (LO 2) Stallman Company took a physical inventory on December 31 and determined that goods costing \$200,000 were on hand. Not included in the physical count were \$25,000 of goods purchased from Pelzer Corporation, f.o.b. shipping point, and \$22,000 of goods sold to Alvarez Company for \$30,000, f.o.b. destination. Both the Pelzer purchase and the Alvarez sale were in transit at year-end. What amount should Stallman report as its December 31 inventory?

BE8.4 (LO 3) Amsterdam Company uses a periodic inventory system. For April, when the company sold 600 units, the following information is available.

| | <u>Units</u> | <u>Unit Cost</u> | <u>Total Cost</u> |
|-------------------|--------------|------------------|-------------------|
| April 1 inventory | 250 | \$10 | \$ 2,500 |
| April 15 purchase | 400 | 12 | 4,800 |
| April 23 purchase | 350 | 13 | 4,550 |
| | <u>1,000</u> | | <u>\$11,850</u> |

Compute the April 30 inventory and the April cost of goods sold using the average-cost method.

BE8.5 (LO 3) Data for Amsterdam Company are presented in BE8.4. Compute the April 30 inventory and the April cost of goods sold using the FIFO method.

BE8.6 (LO 3) Data for Amsterdam Company are presented in BE8.4. Compute the April 30 inventory and the April cost of goods sold using the LIFO method.

BE8.7 (LO 4) Trout Company uses the LIFO method for financial reporting purposes but FIFO for internal reporting purposes. At January 1, 2020, the LIFO reserve has a credit balance of \$1,300,000. At December 31, 2020, Trout’s internal reports indicated that the FIFO inventory balance was \$2,900,000 and for external reporting purposes the LIFO inventory balance was \$1,500,000. What is the amount of the LIFO reserve and the LIFO effect related to 2020? What is the journal entry needed to record the LIFO effect at December 31, 2020?

BE8.8 (LO 4) Midori Company had ending inventory at end-of-year prices of \$100,000 at December 31, 2019; \$119,900 at December 31, 2020; and \$134,560 at December 31, 2021. The year-end price indexes were 100 at 12/31/19, 110 at 12/31/20, and 116 at 12/31/21. Compute the ending inventory for Midori Company for 2019 through 2021 using the dollar-value LIFO method.

BE8.9 (LO 4) Arna, Inc. uses the dollar-value LIFO method of computing its inventory. Data for the past 3 years follow.

| <u>Year Ended December 31</u> | <u>Inventory at Current-Year Cost</u> | <u>Price Index</u> |
|-------------------------------|---------------------------------------|--------------------|
| 2019 | \$19,750 | 100 |
| 2020 | 22,140 | 108 |
| 2021 | 25,935 | 114 |

Compute the value of the 2020 and 2021 inventories using the dollar-value LIFO method.

BE8.10 (LO 5) Bienvenu Enterprises reported cost of goods sold for 2020 of \$1,400,000 and retained earnings of \$5,200,000 at December 31, 2020. Bienvenu later discovered that its ending inventories at December 31, 2019 and 2020, were overstated by \$110,000 and \$35,000, respectively. Determine the corrected amounts for 2020 cost of goods sold and December 31, 2020, retained earnings.

Exercises

E8.1 (LO 2) (Inventoriable Goods and Costs) Presented below is a list of items that may or may not be reported as inventory in a company's December 31 balance sheet.

1. Goods out on consignment at another company's store.
2. Goods sold on an installment basis (bad debts can be reasonably estimated).
3. Goods purchased f.o.b. shipping point that are in transit at December 31.
4. Goods purchased f.o.b. destination that are in transit at December 31.
5. Goods sold to another company, for which our company has signed an agreement to repurchase at a set price that covers all costs related to the inventory.
6. Goods sold where large returns are predictable.
7. Goods sold f.o.b. shipping point that are in transit at December 31.
8. Freight charges on goods purchased.
9. Interest costs incurred for inventories that are routinely manufactured.
10. Costs incurred to advertise goods held for resale.
11. Materials on hand not yet placed into production by a manufacturing firm.
12. Office supplies.
13. Raw materials on which a manufacturing firm has started production but which are not completely processed.
14. Factory supplies.
15. Goods held on consignment from another company.
16. Costs identified with units completed by a manufacturing firm but not yet sold.
17. Goods sold f.o.b. destination that are in transit at December 31.
18. Short-term investments in stocks and bonds that will be resold in the near future.

Instructions

Indicate which of these items would typically be reported as inventory in the financial statements. If an item should not be reported as inventory, indicate how it should be reported in the financial statements.

E8.2 (LO 2) Excel (Inventoriable Goods and Costs) In your audit of Jose Oliva Company, you find that a physical inventory on December 31, 2020, showed merchandise with a cost of \$441,000 was on hand at that date. You also discover the following items were all excluded from the \$441,000.

1. Merchandise of \$61,000 which is held by Oliva on consignment. The consignor is the Max Suzuki Company.
2. Merchandise costing \$38,000 which was shipped by Oliva f.o.b. destination to a customer on December 31, 2020. The customer was expected to receive the merchandise on January 6, 2021.
3. Merchandise costing \$46,000 which was shipped by Oliva f.o.b. shipping point to a customer on December 29, 2020. The customer was scheduled to receive the merchandise on January 2, 2021.
4. Merchandise costing \$83,000 shipped by a vendor f.o.b. destination on December 30, 2020, and received by Oliva on January 4, 2021.

- Merchandise costing \$51,000 shipped by a vendor f.o.b. shipping point on December 31, 2020, and received by Oliva on January 5, 2021.

Instructions

Based on the above information, calculate the amount that should appear on Oliva's balance sheet at December 31, 2020, for inventory.

E8.3 (LO 2) (Inventoriable Goods and Costs) Assume that in an annual audit of Harlowe Inc. at December 31, 2020, you find the following transactions near the closing date.

- A special machine, fabricated to order for a customer, was finished and specifically segregated in the back part of the shipping room on December 31, 2020. The customer was billed on that date and the machine excluded from inventory although it was shipped on January 4, 2021.
- Merchandise costing \$2,800 was received on January 3, 2021, and the related purchase invoice recorded January 5. The invoice showed the shipment was made on December 29, 2020, f.o.b. destination.
- A packing case containing a product costing \$3,400 was standing in the shipping room when the physical inventory was taken. It was not included in the inventory because it was marked "Hold for shipping instructions." Your investigation revealed that the customer's order was dated December 18, 2020, but that the case was shipped and the customer billed on January 10, 2021. The product was a stock item of your client.
- Merchandise received on January 6, 2021, costing \$680 was entered in the purchase journal on January 7, 2021. The invoice showed shipment was made f.o.b. supplier's warehouse on December 31, 2020. Because it was not on hand at December 31, it was not included in inventory.
- Merchandise costing \$720 was received on December 28, 2020, and the invoice was not recorded. You located it in the hands of the purchasing agent; it was marked "on consignment."

Instructions

Assuming that each of the amounts is material, state whether the merchandise should be included in the client's inventory, and give your reason for your decision on each item.

E8.4 (LO 2) (Inventoriable Goods and Costs—Perpetual) Colin Davis Machine Company maintains a general ledger account for each class of inventory, debiting such accounts for increases during the period and crediting them for decreases. The transactions below relate to the Raw Materials inventory account, which is debited for materials purchased and credited for materials requisitioned for use.

- An invoice for \$8,100, terms f.o.b. destination, was received and entered January 2, 2020. The receiving report shows that the materials were received December 28, 2019.
- Materials costing \$28,000, shipped f.o.b. destination, were not entered by December 31, 2019, "because they were in a railroad car on the company's siding on that date and had not been unloaded."
- Materials costing \$7,300 were returned to the supplier on December 29, 2019, and were shipped f.o.b. shipping point. The return was entered on that date, even though the materials are not expected to reach the supplier's place of business until January 6, 2020.
- An invoice for \$7,500, terms f.o.b. shipping point, was received and entered December 30, 2019. The receiving report shows that the materials were received January 4, 2020, and the bill of lading shows that they were shipped January 2, 2020.
- Materials costing \$19,800 were received December 30, 2019, but no entry was made for them because "they were ordered with a specified delivery of no earlier than January 10, 2020."

Instructions

Prepare correcting general journal entries required at December 31, 2019, assuming that the books have not been closed.

E8.5 (LO 2) (Inventoriable Goods and Costs—Error Adjustments) Craig Company asks you to review its December 31, 2020, inventory values and prepare the necessary adjustments to the books. The following information is given to you.

- Craig uses the periodic method of recording inventory. A physical count reveals \$234,890 of inventory on hand at December 31, 2020.
- Not included in the physical count of inventory is \$13,420 of merchandise purchased on December 15 from Browser. This merchandise was shipped f.o.b. shipping point on December 29 and arrived in January. The invoice arrived and was recorded on December 31.

3. Included in inventory is merchandise sold to Champy on December 30, f.o.b. destination. This merchandise was shipped after it was counted. The invoice was prepared and recorded as a sale on account for \$12,800 on December 31. The merchandise cost \$7,350, and Champy received it on January 3.
4. Included in inventory was merchandise received from Dudley on December 31 with an invoice price of \$15,630. The merchandise was shipped f.o.b. destination. The invoice, which has not yet arrived, has not been recorded.
5. Not included in inventory is \$8,540 of merchandise purchased from Glowser Industries. This merchandise was received on December 31 after the inventory had been counted. The invoice was received and recorded on December 30.
6. Included in inventory was \$10,438 of inventory held by Craig on consignment from Jackel Industries.
7. Included in inventory is merchandise sold to Kemp f.o.b. shipping point. This merchandise was shipped on December 31 after it was counted. The invoice was prepared and recorded as a sale for \$18,900 on December 31. The cost of this merchandise was \$10,520, and Kemp received the merchandise on January 5.
8. Excluded from inventory was a carton labeled "Please accept for credit." This carton contains merchandise costing \$1,500 which had been sold to a customer for \$2,600. No entry had been made to the books to reflect the return, but none of the returned merchandise seemed damaged; Craig will honor the return.

Instructions

- a. Determine the proper inventory balance for Craig Company at December 31, 2020.
- b. Prepare any correcting entries to adjust inventory to its proper amount at December 31, 2020. Assume the books have not been closed.

E8.6 (LO 2) (Determining Merchandise Amounts—Periodic) Two or more items are omitted in each of the following tabulations of income statement data. Fill in the amounts that are missing.

| | 2019 | 2020 | 2021 |
|---------------------------------|-----------|---------|-----------|
| Sales revenue | \$290,000 | \$? | \$410,000 |
| Sales returns and allowances | 11,000 | 13,000 | ? |
| Net sales | ? | 347,000 | ? |
| Beginning inventory | 20,000 | 32,000 | ? |
| Ending inventory | ? | ? | ? |
| Purchases | ? | 260,000 | 298,000 |
| Purchase returns and allowances | 5,000 | 8,000 | 10,000 |
| Freight-in | 8,000 | 9,000 | 12,000 |
| Cost of goods sold | 233,000 | ? | 293,000 |
| Gross profit on sales | 46,000 | 91,000 | 97,000 |

E8.7 (LO 2) (Purchases Recorded Net) Presented below are transactions related to Tom Brokaw, Inc.

- May 10 Purchased goods billed at \$15,000 subject to cash discount terms of 2/10, n/60.
 11 Purchased goods billed at \$13,200 subject to terms of 1/15, n/30.
 19 Paid invoice of May 10.
 24 Purchased goods billed at \$11,500 subject to cash discount terms of 2/10, n/30.

Instructions

- a. Prepare general journal entries for the transactions above under the assumption that purchases are to be recorded at net amounts after cash discounts and that discounts lost are to be treated as financial expense.
- b. Assuming no purchase or payment transactions other than those given above, prepare the adjusting entry required on May 31 if financial statements are to be prepared as of that date.

E8.8 (LO 2) (Purchases Recorded, Gross Method) Cruise Industries purchased \$10,800 of merchandise on February 1, 2020, subject to a trade discount of 10% and with credit terms of 3/15, n/60. It returned \$2,500 (gross price before trade or cash discount) on February 4. The invoice was paid on February 13.

Instructions

- a. Assuming that Cruise uses the perpetual method for recording merchandise transactions, record the purchase, return, and payment using the gross method.
- b. Assuming that Cruise uses the periodic method for recording merchandise transactions, record the purchase, return, and payment using the gross method.
- c. At what amount would the purchase on February 1 be recorded if the net method were used?

E8.9 (LO 3) Excel (Periodic versus Perpetual Entries) Fong Sai-Yuk Company sells one product. Presented below is information for January for Fong Sai-Yuk Company.

| | | |
|--------|-----------|--------------------------|
| Jan. 1 | Inventory | 100 units at \$5 each |
| 4 | Sale | 80 units at \$8 each |
| 11 | Purchase | 150 units at \$6 each |
| 13 | Sale | 120 units at \$8.75 each |
| 20 | Purchase | 160 units at \$7 each |
| 27 | Sale | 100 units at \$9 each |

Fong Sai-Yuk uses the FIFO cost flow assumption. All purchases and sales are on account.

Instructions

- Assume Fong Sai-Yuk uses a periodic system. Prepare all necessary journal entries, including the end-of-month closing entry to record cost of goods sold. A physical count indicates that the ending inventory for January is 110 units.
- Compute gross profit using the periodic system.
- Assume Fong Sai-Yuk uses a perpetual system. Prepare all necessary journal entries.
- Compute gross profit using the perpetual system.

E8.10 (LO 3) (FIFO and LIFO—Periodic and Perpetual) Inventory information for Part 311 of Monique Aaron Corp. discloses the following information for the month of June.

| | | | | | |
|--------|-----------|------------------|---------|------|------------------|
| June 1 | Balance | 300 units @ \$10 | June 10 | Sold | 200 units @ \$24 |
| 11 | Purchased | 800 units @ \$12 | 15 | Sold | 500 units @ \$25 |
| 20 | Purchased | 500 units @ \$13 | 27 | Sold | 300 units @ \$27 |

Instructions

- Assuming that the periodic inventory method is used, compute the cost of goods sold and ending inventory under (1) LIFO and (2) FIFO.
- Assuming that the perpetual inventory method is used and costs are computed at the time of each withdrawal, what is the value of the ending inventory at LIFO?
- Assuming that the perpetual inventory method is used and costs are computed at the time of each withdrawal, what is the gross profit if the inventory is valued at FIFO?
- Why is it stated that LIFO usually produces a lower gross profit than FIFO?

E8.11 (LO 3) (FIFO, LIFO and Average-Cost Determination) John Adams Company's record of transactions for the month of April was as follows.

| Purchases | | Sales | |
|-----------|---------------------------------|---------|---------------|
| April 1 | (balance on hand) 600 @ \$ 6.00 | April 3 | 500 @ \$10.00 |
| 4 | 1,500 @ 6.08 | 9 | 1,400 @ 10.00 |
| 8 | 800 @ 6.40 | 11 | 600 @ 11.00 |
| 13 | 1,200 @ 6.50 | 23 | 1,200 @ 11.00 |
| 21 | 700 @ 6.60 | 27 | 900 @ 12.00 |
| 29 | 500 @ 6.79 | | <u>4,600</u> |
| | <u>5,300</u> | | |

Instructions

- Assuming that periodic inventory records are kept in units only, compute the inventory at April 30 using (1) LIFO and (2) average-cost.
- Assuming that perpetual inventory records are kept in dollars, determine the inventory using (1) FIFO and (2) LIFO.
- Compute cost of goods sold assuming periodic inventory procedures and inventory priced at FIFO.
- In an inflationary period, which inventory method—FIFO, LIFO, average-cost—will show the highest net income?

E8.12 (LO 3) (FIFO, LIFO, Average-Cost Inventory) Shania Twain Company was formed on December 1, 2019. The following information is available from Twain's inventory records for Product BAP.

| | <u>Units</u> | <u>Unit Cost</u> |
|---------------------------------------|--------------|------------------|
| January 1, 2020 (beginning inventory) | 600 | \$ 8.00 |
| Purchases: | | |
| January 5, 2020 | 1,200 | 9.00 |
| January 25, 2020 | 1,300 | 10.00 |
| February 16, 2020 | 800 | 11.00 |
| March 26, 2020 | 600 | 12.00 |

A physical inventory on March 31, 2020, shows 1,600 units on hand.

Instructions

Prepare schedules to compute the ending inventory at March 31, 2020, under each of the following inventory methods.

- a. FIFO b. LIFO. c. Weighted-average (round unit costs to two decimal places).

E8.13 (LO 3) (Compute FIFO, LIFO, Average-Cost—Periodic) Presented below is information related to Blowfish radios for the Hootie Company for the month of July.

| <u>Date</u> | <u>Transaction</u> | <u>Units In</u> | <u>Unit Cost</u> | <u>Total</u> | <u>Units Sold</u> | <u>Selling Price</u> | <u>Total</u> |
|-------------|--------------------|-----------------|------------------|----------------|-------------------|----------------------|-----------------|
| July 1 | Balance | 100 | \$4.10 | \$ 410 | | | |
| 6 | Purchase | 800 | 4.20 | 3,360 | | | |
| 7 | Sale | | | | 300 | \$7.00 | \$ 2,100 |
| 10 | Sale | | | | 300 | 7.30 | 2,190 |
| 12 | Purchase | 400 | 4.50 | 1,800 | | | |
| 15 | Sale | | | | 200 | 7.40 | 1,480 |
| 18 | Purchase | 300 | 4.60 | 1,380 | | | |
| 22 | Sale | | | | 400 | 7.40 | 2,960 |
| 25 | Purchase | 500 | 4.58 | 2,290 | | | |
| 30 | Sale | | | | 200 | 7.50 | 1,500 |
| | Totals | <u>2,100</u> | | <u>\$9,240</u> | <u>1,400</u> | | <u>\$10,230</u> |

Instructions

- a. Assuming that the periodic inventory method is used, compute the inventory cost at July 31 under each of the following cost flow assumptions.
- FIFO.
 - LIFO.
 - Weighted-average.
- b. Answer the following questions.
- Which of the methods used above will yield the lowest figure for gross profit for the income statement? Explain why.
 - Which of the methods used above will yield the lowest figure for ending inventory for the balance sheet? Explain why.

E8.14 (LO 3) (FIFO and LIFO—Periodic and Perpetual) The following is a record of Pervis Ellison Company's transactions for Boston Teapots for the month of May 2020.

| | | | |
|-------|---------------------------|--------|-----------------------|
| May 1 | Balance 400 units @ \$20 | May 10 | Sale 300 units @ \$38 |
| 12 | Purchase 600 units @ \$25 | 20 | Sale 540 units @ \$38 |
| 28 | Purchase 400 units @ \$30 | | |

Instructions

- a. Assuming that perpetual inventories are not maintained and that a physical count at the end of the month shows 560 units on hand, what is the cost of the ending inventory using (1) FIFO and (2) LIFO?
- b. Assuming that perpetual records are maintained and they tie into the general ledger, calculate the ending inventory using (1) FIFO and (2) LIFO.

E8.15 (LO 3) (FIFO and LIFO; Income Statement Presentation) The board of directors of Ichiro Corporation is considering whether or not it should instruct the accounting department to shift from a first-in, first-out (FIFO) basis of pricing inventories to a last-in, first-out (LIFO) basis. The following information is available.

| | |
|------------------------|---------------------|
| Sales | 21,000 units @ \$50 |
| Inventory, January 1 | 6,000 units @ 20 |
| Purchases | 6,000 units @ 22 |
| | 10,000 units @ 25 |
| | 7,000 units @ 30 |
| Inventory, December 31 | 8,000 units @ ? |
| Operating expenses | \$200,000 |

Instructions

Prepare a condensed income statement for the year on both bases for comparative purposes.

E8.16 (LO 3) (FIFO and LIFO Effects) You are the vice president of finance of Sandy Alomar Corporation, a retail company that prepared two different schedules of gross margin for the first quarter ended March 31, 2020. These schedules appear below.

| | Sales (\$5 per unit) | Cost of Goods Sold | Gross Margin |
|------------|-------------------------|-----------------------|-----------------|
| Schedule 1 | \$150,000 | \$124,900 | \$25,100 |
| Schedule 2 | 150,000 | 129,400 | 20,600 |

The computation of cost of goods sold in each schedule is based on the following data.

| | Units | Cost per Unit | Total Cost |
|--------------------------------|--------|------------------|---------------|
| Beginning inventory, January 1 | 10,000 | \$4.00 | \$40,000 |
| Purchase, January 10 | 8,000 | 4.20 | 33,600 |
| Purchase, January 30 | 6,000 | 4.25 | 25,500 |
| Purchase, February 11 | 9,000 | 4.30 | 38,700 |
| Purchase, March 17 | 11,000 | 4.40 | 48,400 |

Jane Torville, the president of the corporation, cannot understand how two different gross margins can be computed from the same set of data. As the vice president of finance, you have explained to Ms. Torville that the two schedules are based on different assumptions concerning the flow of inventory costs, i.e., FIFO and LIFO. Schedules 1 and 2 were not necessarily prepared in this sequence of cost flow assumptions.

Instructions

Prepare two separate schedules computing cost of goods sold and supporting schedules showing the composition of the ending inventory under both cost flow assumptions.

E8.17 (LO 3) (FIFO and LIFO—Periodic) Brady Sports began operations on January 2, 2020. The following stock record card for footballs was taken from the records at the end of the year.

| Date | Voucher | Terms | Units Received | Unit Invoice Cost | Gross Invoice Amount |
|--------|---------|--------------|-------------------|----------------------|-------------------------|
| 1/15 | 10624 | Net 30 | 50 | \$20 | \$1,000 |
| 3/15 | 11437 | 1/5, net 30 | 65 | 16 | 1,040 |
| 6/20 | 21332 | 1/10, net 30 | 90 | 15 | 1,350 |
| 9/12 | 27644 | 1/10, net 30 | 84 | 12 | 1,008 |
| 11/24 | 31269 | 1/10, net 30 | 76 | 11 | 836 |
| Totals | | | 365 | | \$5,234 |

A physical inventory on December 31, 2020, reveals that 100 footballs were in stock. The bookkeeper informs you that all the discounts were taken. Assume that Brady Sports uses the invoice price less discount for recording purchases.

Instructions

- Compute the December 31, 2020, inventory using the FIFO method.
- Compute the 2020 cost of goods sold using the LIFO method.
- What method would you recommend to the owner to minimize income taxes in 2020, using the inventory information for footballs as a guide?

E8.18 (LO 4) (LIFO Effect) The following example was provided to encourage the use of the LIFO method. In a nutshell, LIFO subtracts inflation from inventory costs, deducts it from taxable income, and

records it in a LIFO reserve account on the books. The LIFO benefit grows as inflation widens the gap between current-year and past-year (minus inflation) inventory costs. This gap is:

| | <u>With LIFO</u> | <u>Without LIFO</u> |
|---------------------|-------------------|---------------------|
| Revenues | \$3,200,000 | \$3,200,000 |
| Cost of goods sold | 2,800,000 | 2,800,000 |
| Operating expenses | 150,000 | 150,000 |
| Operating income | 250,000 | 250,000 |
| LIFO adjustment | 40,000 | 0 |
| Taxable income | <u>\$ 210,000</u> | <u>\$ 250,000</u> |
| Income taxes (36%) | <u>\$ 75,600</u> | <u>\$ 90,000</u> |
| Cash flow | <u>\$ 174,400</u> | <u>\$ 160,000</u> |
| Extra cash | <u>\$ 14,400</u> | <u>0</u> |
| Increased cash flow | 9% | 0% |

Instructions

- Explain what is meant by the LIFO reserve account.
- How does LIFO subtract inflation from inventory costs?
- Explain how the cash flow of \$174,400 in this example was computed. Explain why this amount may not be correct.
- Why does a company that uses LIFO have extra cash? Explain whether this situation will always exist.

E8.19 (LO 3, 4) (Alternative Inventory Methods—Comprehensive) Tori Amos Corporation began operations on December 1, 2019. The only inventory transaction in 2019 was the purchase of inventory on December 10, 2019, at a cost of \$20 per unit. None of this inventory was sold in 2019. Relevant information is as follows.

| Ending inventory units | | |
|-------------------------------------|-----|-----|
| December 31, 2019 | | 100 |
| December 31, 2020, by purchase date | | |
| December 2, 2020 | 100 | |
| July 20, 2020 | 50 | 150 |

During the year, the following purchases and sales were made.

| <u>Purchases</u> | | <u>Sales</u> | |
|------------------|-------------------|--------------|-----|
| March 15 | 300 units at \$24 | April 10 | 200 |
| July 20 | 300 units at 25 | August 20 | 300 |
| September 4 | 200 units at 28 | November 18 | 150 |
| December 2 | 100 units at 30 | December 12 | 200 |

The company uses the periodic inventory method.

Instructions

- Determine ending inventory under (1) specific identification, (2) FIFO, (3) LIFO, and (4) average-cost.
- Determine ending inventory using dollar-value LIFO. Assume that the December 2, 2020, purchase cost is the current cost of inventory. (*Hint:* The beginning inventory is the base layer priced at \$20 per unit.)

E8.20 (LO 4) (Dollar-Value LIFO) Oasis Company has used the dollar-value LIFO method for inventory cost determination for many years. The following data were extracted from Oasis' records.

| <u>Date</u> | <u>Price Index</u> | <u>Ending Inventory at Base Prices</u> | <u>Ending Inventory at Dollar-Value LIFO</u> |
|-------------------|--------------------|--|--|
| December 31, 2020 | 105 | \$92,000 | \$92,600 |
| December 31, 2021 | ? | 97,000 | 98,350 |

Instructions

Calculate the index used for 2021 that yielded the above results.

E8.21 (LO 4) (Dollar-Value LIFO) The dollar-value LIFO method was adopted by Enya Corp. on January 1, 2020. Its inventory on that date was \$160,000. On December 31, 2020, the inventory at prices existing on that date amounted to \$140,000. The price level at January 1, 2020, was 100, and the price level at December 31, 2020, was 112.

Instructions

- Compute the amount of the inventory at December 31, 2020, under the dollar-value LIFO method.
- On December 31, 2021, the inventory at prices existing on that date was \$172,500, and the price level was 115. Compute the inventory on that date under the dollar-value LIFO method.

E8.22 (LO 4) (Dollar-Value LIFO) Presented below is information related to Dino Radja Company.

| <u>Date</u> | Ending Inventory (End-of-Year Prices) | Price Index |
|-------------------|--|----------------|
| December 31, 2017 | \$ 80,000 | 100 |
| December 31, 2018 | 115,500 | 105 |
| December 31, 2019 | 108,000 | 120 |
| December 31, 2020 | 122,200 | 130 |
| December 31, 2021 | 154,000 | 140 |
| December 31, 2022 | 176,900 | 145 |

Instructions

Compute the ending inventory for Dino Radja Company for 2017 through 2022 using the dollar-value LIFO method.

E8.23 (LO 4) (Dollar-Value LIFO) The following information relates to the Jimmy Johnson Company.

| <u>Date</u> | Ending Inventory (End-of-Year Prices) | Price Index |
|-------------------|--|----------------|
| December 31, 2016 | \$ 70,000 | 100 |
| December 31, 2017 | 90,300 | 105 |
| December 31, 2018 | 95,120 | 116 |
| December 31, 2019 | 105,600 | 120 |
| December 31, 2020 | 100,000 | 125 |

Instructions

Use the dollar-value LIFO method to compute the ending inventory for Johnson Company for 2016 through 2020.

E8.24 (LO 5) (Inventory Errors—Periodic) Ann M. Martin Company makes the following errors during the current year. (Evaluate each case independently and assume ending inventory in the following year is correctly stated.)

- Ending inventory is overstated, but purchases and related accounts payable are recorded correctly.
- Both ending inventory and purchases and related accounts payable are understated. (Assume this purchase was recorded and paid for in the following year.)
- Ending inventory is correct, but a purchase on account was not recorded. (Assume this purchase was recorded and paid for in the following year.)

Instructions

Indicate the effect of each of these errors on working capital, current ratio (assume that the current ratio is greater than 1), retained earnings, and net income for the current year and the subsequent year.

E8.25 (LO 4) (Inventory Errors) At December 31, 2019, Stacy McGill Corporation reported current assets of \$370,000 and current liabilities of \$200,000. The following items may have been recorded incorrectly.

- Goods purchased costing \$22,000 were shipped f.o.b. shipping point by a supplier on December 28. McGill received and recorded the invoice on December 29, 2019, but the goods were not included in McGill's physical count of inventory because they were not received until January 4, 2020.

2. Goods purchased costing \$15,000 were shipped f.o.b. destination by a supplier on December 26. McGill received and recorded the invoice on December 31, but the goods were not included in McGill's 2019 physical count of inventory because they were not received until January 2, 2020.
3. Goods held on consignment from Claudia Kishi Company were included in McGill's December 31, 2019, physical count of inventory at \$13,000.
4. Freight-in of \$3,000 was debited to advertising expense on December 28, 2019.

Instructions

- a. Compute the current ratio based on McGill's balance sheet.
- b. Recompute the current ratio after corrections are made.
- c. By what amount will income (before taxes) be adjusted up or down as a result of the corrections?

E8.26 (LO 5) (Inventory Errors) The net income per books of Linda Patrick Company was determined without knowledge of the errors indicated.

| Year | Net Income per Books | Error in Ending Inventory | |
|------|-------------------------|------------------------------|----------|
| 2015 | \$50,000 | Overstated | \$ 3,000 |
| 2016 | 52,000 | Overstated | 9,000 |
| 2017 | 54,000 | Understated | 11,000 |
| 2018 | 56,000 | No error | |
| 2019 | 58,000 | Understated | 2,000 |
| 2020 | 60,000 | Overstated | 8,000 |

Instructions

Prepare a worksheet to show the adjusted net income figure for each of the 6 years after taking into account the inventory errors.

Problems

P8.1 (LO 2, 3, 4) Groupwork (Various Inventory Issues) The following independent situations relate to inventory accounting.

1. Kim Co. purchased goods with a list price of \$175,000, subject to trade discounts of 20% and 10%, with no cash discounts allowable. How much should Kim Co. record as the cost of these goods?
2. Keillor Company's inventory of \$1,100,000 at December 31, 2020, was based on a physical count of goods priced at cost and before any year-end adjustments relating to the following items.
 - a. Goods shipped from a vendor f.o.b. shipping point on December 24, 2020, at an invoice cost of \$69,000 to Keillor Company were received on January 4, 2021.
 - b. The physical count included \$29,000 of goods billed to Sakic Corp. f.o.b. shipping point on December 31, 2020. The carrier picked up these goods on January 3, 2021.

What amount should Keillor report as inventory on its balance sheet?

3. Zimmerman Corp. had 1,500 units of part M.O. on hand May 1, 2020, costing \$21 each. Purchases of part M.O. during May were as follows.

| | Units | Unit Cost |
|-------|-------|-----------|
| May 9 | 2,000 | \$22.00 |
| 17 | 3,500 | 23.00 |
| 26 | 1,000 | 24.00 |

A physical count on May 31, 2020, shows 2,000 units of part M.O. on hand. Using the FIFO method, what is the cost of part M.O. inventory at May 31, 2020? Using the LIFO method, what is the inventory cost? Using the average-cost method, what is the inventory cost?

4. Ashbrook Company adopted the dollar-value LIFO method on January 1, 2020 (using internal price indexes and multiple pools). The following data are available for inventory pool A for the 2 years following adoption of LIFO.

| <u>Inventory</u> | <u>At Base- Year Cost</u> | <u>At Current- Year Cost</u> |
|------------------|-------------------------------|----------------------------------|
| 1/1/20 | \$200,000 | \$200,000 |
| 12/31/20 | 240,000 | 264,000 |
| 12/31/21 | 256,000 | 286,720 |

Computing an internal price index and using the dollar-value LIFO method, at what amount should the inventory be reported at December 31, 2021?

5. Donovan Inc., a retail store chain, had the following information in its general ledger for the year 2021.

| | |
|--------------------------------------|-----------|
| Merchandise purchased for resale | \$909,400 |
| Interest on notes payable to vendors | 8,700 |
| Purchase returns | 16,500 |
| Freight-in | 22,000 |
| Freight-out (delivery expense) | 17,100 |
| Cash discounts on purchases | 6,800 |

What is Donovan's inventoriable cost for 2021?

Instructions

Answer each of the preceding questions about inventories, and explain your answers.

P8.2 (LO 2) Groupwork (Inventory Adjustments) Dimitri Company, a manufacturer of small tools, provided the following information from its accounting records for the year ended December 31, 2020.

| | |
|---|-------------|
| Inventory at December 31, 2020 (based on physical count of goods in Dimitri's plant, at cost, on December 31, 2020) | \$1,520,000 |
| Accounts payable at December 31, 2020 | 1,200,000 |
| Net sales (sales less sales returns) | 8,150,000 |

Additional information is as follows.

- Included in the physical count were tools billed to a customer f.o.b. shipping point on December 31, 2020. These tools had a cost of \$31,000 and were billed at \$40,000. The shipment was on Dimitri's loading dock waiting to be picked up by the common carrier.
- Goods were in transit from a vendor to Dimitri on December 31, 2020. The invoice cost was \$76,000, and the goods were shipped f.o.b. shipping point on December 29, 2020.
- Work in process inventory costing \$30,000 was sent to an outside processor for plating on December 30, 2020.
- Tools returned by customers and held pending inspection in the returned goods area on December 31, 2020, were not included in the physical count. On January 8, 2021, the tools costing \$32,000 were inspected and returned to inventory. Credit memos totaling \$47,000 were issued to the customers on the same date.
- Tools shipped to a customer f.o.b. destination on December 26, 2020, were in transit at December 31, 2020, and had a cost of \$26,000. Upon notification of receipt by the customer on January 2, 2021, Dimitri issued a sales invoice for \$42,000.
- Goods, with an invoice cost of \$27,000, received from a vendor at 5:00 p.m. on December 31, 2020, were recorded on a receiving report dated January 2, 2021. The goods were not included in the physical count, but the invoice was included in accounts payable at December 31, 2020.
- Goods received from a vendor on December 26, 2020, were included in the physical count. However, the related \$56,000 vendor invoice was not included in accounts payable at December 31, 2020, because the accounts payable copy of the receiving report was lost.
- On January 3, 2021, a monthly freight bill in the amount of \$8,000 was received. The bill specifically related to merchandise purchased in December 2020, one-half of which was still in the inventory at December 31, 2020. The freight charges were not included in either the inventory or in accounts payable at December 31, 2020.

Instructions

Using the following format, prepare a schedule of adjustments as of December 31, 2020, to the initial amounts per Dimitri's accounting records. Show separately the effect, if any, of each of the eight transactions on the December 31, 2020, amounts. If the transactions would have no effect on the initial amount shown, enter NONE.

| | <u>Inventory</u> | <u>Accounts Payable</u> | <u>Net Sales</u> |
|------------------------------------|--------------------|-----------------------------|----------------------|
| Initial amounts | <u>\$1,520,000</u> | <u>\$1,200,000</u> | <u>\$8,150,000</u> |
| Adjustments—increase (decrease) | | | |
| 1 | | | |
| 2 | | | |
| 3 | | | |
| 4 | | | |
| 5 | | | |
| 6 | | | |
| 7 | | | |
| 8 | | | |
| Total adjustments | _____ | _____ | _____ |
| Adjusted amounts | <u>\$ _____</u> | <u>\$ _____</u> | <u>\$ _____</u> |

(AICPA adapted)

P8.3 (LO 2) Excel (Purchases Recorded Gross and Net) Some of the transactions of Torres Company during August are listed below. Torres uses the periodic inventory method.

- August 10 Purchased merchandise on account, \$12,000, terms 2/10, n/30.
- 13 Returned part of the purchase of August 10, \$1,200, and received credit on account.
- 15 Purchased merchandise on account, \$16,000, terms 1/10, n/60.
- 25 Purchased merchandise on account, \$20,000, terms 2/10, n/30.
- 28 Paid invoice of August 15 in full.

Instructions

- a. Assuming that purchases are recorded at gross amounts and that discounts are to be recorded when taken:
 1. Prepare general journal entries to record the transactions.
 2. Describe how the various items would be shown in the financial statements.
- b. Assuming that purchases are recorded at net amounts and that discounts lost are treated as financial expenses:
 1. Prepare general journal entries to enter the transactions.
 2. Prepare the adjusting entry necessary on August 31 if financial statements are to be prepared at that time.
 3. Describe how the various items would be shown in the financial statements.
- c. Which of the two methods do you prefer and why?

P8.4 (LO 3) Excel (Compute FIFO, LIFO, and Average-Cost) Hull Company's record of transactions concerning part X for the month of April was as follows.

| <u>Purchases</u> | | <u>Sales</u> | |
|---------------------------|--------------|--------------|-----|
| April 1 (balance on hand) | 100 @ \$5.00 | April 5 | 300 |
| 4 | 400 @ 5.10 | 12 | 200 |
| 11 | 300 @ 5.30 | 27 | 800 |
| 18 | 200 @ 5.35 | 28 | 150 |
| 26 | 600 @ 5.60 | | |
| 30 | 200 @ 5.80 | | |

Instructions

- a. Compute the inventory at April 30 on each of the following bases. Assume that perpetual inventory records are kept in units only. Carry unit costs to the nearest cent.
 1. First-in, first-out (FIFO).
 2. Last-in, first-out (LIFO).
 3. Average-cost.

- b. If the perpetual inventory record is kept in dollars, and costs are computed at the time of each withdrawal, what amount would be shown as ending inventory in (1), (2), and (3) above? (Carry average unit costs to four decimal places.)

P8.5 (LO 3) (Compute FIFO, LIFO, and Average-Cost) Some of the information found on a detail inventory card for Slatkin Inc. for the first month of operations is as follows.

| Date | Received | | Issued, No. of Units | Balance, No. of Units |
|-----------|--------------|-----------|-------------------------|--------------------------|
| | No. of Units | Unit Cost | | |
| January 2 | 1,200 | \$3.00 | | 1,200 |
| 7 | | | 700 | 500 |
| 10 | 600 | 3.20 | | 1,100 |
| 13 | | | 500 | 600 |
| 18 | 1,000 | 3.30 | 300 | 1,300 |
| 20 | | | 1,100 | 200 |
| 23 | 1,300 | 3.40 | | 1,500 |
| 26 | | | 800 | 700 |
| 28 | 1,600 | 3.50 | | 2,300 |
| 31 | | | 1,300 | 1,000 |

Instructions

- a. From these data compute the ending inventory on each of the following bases. Assume that perpetual inventory records are kept in units only. (Carry unit costs to the nearest cent and ending inventory to the nearest dollar.)
1. First-in, first-out (FIFO).
 2. Last-in, first-out (LIFO).
 3. Average-cost.
- b. If the perpetual inventory record is kept in dollars, and costs are computed at the time of each withdrawal, would the amounts shown as ending inventory in (1), (2), and (3) above be the same? Explain and compute. (Round average unit costs to four decimal places.)

P8.6 (LO 3) Groupwork (Compute FIFO, LIFO, Average-Cost—Periodic and Perpetual) Ehlo Company is a multiproduct firm. Presented below is information concerning one of its products, the Hawkeye.

| Date | Transaction | Quantity | Price/Cost |
|------|---------------------|----------|------------|
| 1/1 | Beginning inventory | 1,000 | \$12 |
| 2/4 | Purchase | 2,000 | 18 |
| 2/20 | Sale | 2,500 | 30 |
| 4/2 | Purchase | 3,000 | 23 |
| 11/4 | Sale | 2,200 | 33 |

Instructions

Compute cost of goods sold, assuming Ehlo uses:

- a. Periodic system, FIFO cost flow.
- b. Perpetual system, FIFO cost flow.
- c. Periodic system, LIFO cost flow.
- d. Perpetual system, LIFO cost flow.
- e. Periodic system, weighted-average cost flow.
- f. Perpetual system, moving-average cost flow.

P8.7 (LO 3) Groupwork (Financial Statement Effects of FIFO and LIFO) The management of Tritt Company has asked its accounting department to describe the effect upon the company's financial position and its income statements of accounting for inventories on the LIFO rather than the FIFO basis during 2020 and 2021. The accounting department is to assume that the change to LIFO would have been effective on January 1, 2020, and that the initial LIFO base would have been the inventory value on December 31, 2019. The following are the company's financial statements and other data for the years 2020 and 2021 when the FIFO method was employed.

| | Financial Position as of | | |
|------------------------------|---------------------------------|------------------|------------------|
| | <u>12/31/19</u> | <u>12/31/20</u> | <u>12/31/21</u> |
| Cash | \$ 90,000 | \$130,000 | \$154,000 |
| Accounts receivable | 80,000 | 100,000 | 120,000 |
| Inventory | 120,000 | 140,000 | 176,000 |
| Other assets | 160,000 | 170,000 | 200,000 |
| Total assets | <u>\$450,000</u> | <u>\$540,000</u> | <u>\$650,000</u> |
| Accounts payable | \$ 40,000 | \$ 60,000 | \$ 80,000 |
| Other liabilities | 70,000 | 80,000 | 110,000 |
| Common stock | 200,000 | 200,000 | 200,000 |
| Retained earnings | 140,000 | 200,000 | 260,000 |
| Total liabilities and equity | <u>\$450,000</u> | <u>\$540,000</u> | <u>\$650,000</u> |

| | Income for Years Ended | |
|----------------------------|-------------------------------|-------------------|
| | <u>12/31/20</u> | <u>12/31/21</u> |
| Sales revenue | \$900,000 | \$1,350,000 |
| Less: Cost of goods sold | 505,000 | 756,000 |
| Other expenses | <u>205,000</u> | <u>304,000</u> |
| | 710,000 | 1,060,000 |
| Income before income taxes | 190,000 | 290,000 |
| Income taxes (40%) | <u>76,000</u> | <u>116,000</u> |
| Net income | <u>\$114,000</u> | <u>\$ 174,000</u> |

Other data:

- Inventory on hand at December 31, 2019, consisted of 40,000 units valued at \$3.00 each.
- Sales (all units sold at the same price in a given year):

| | |
|----------------------------------|----------------------------------|
| 2020—150,000 units @ \$6.00 each | 2021—180,000 units @ \$7.50 each |
|----------------------------------|----------------------------------|
- Purchases (all units purchased at the same price in given year):

| | |
|----------------------------------|----------------------------------|
| 2020—150,000 units @ \$3.50 each | 2021—180,000 units @ \$4.40 each |
|----------------------------------|----------------------------------|
- Income taxes at the effective rate of 40% are paid on December 31 each year.

Instructions

Name the account(s) presented in the financial statements that would have different amounts for 2021 if LIFO rather than FIFO had been used, and state the new amount for each account that is named. Show computations.

(CMA adapted)

P8.8 (LO 4) (Dollar-Value LIFO) Norman's Televisions produces television sets in three categories: portable, midsize, and flat-screen. On January 1, 2020, Norman adopted dollar-value LIFO and decided to use a single inventory pool. The company's January 1 inventory consists of:

| <u>Category</u> | <u>Quantity</u> | <u>Cost per Unit</u> | <u>Total Cost</u> |
|-----------------|-----------------|----------------------|--------------------|
| Portable | 6,000 | \$100 | \$ 600,000 |
| Midsize | 8,000 | 250 | 2,000,000 |
| Flat-screen | <u>3,000</u> | 400 | <u>1,200,000</u> |
| | <u>17,000</u> | | <u>\$3,800,000</u> |

During 2020, the company had the following purchases and sales.

| <u>Category</u> | <u>Quantity Purchased</u> | <u>Cost per Unit</u> | <u>Quantity Sold</u> | <u>Selling Price per Unit</u> |
|-----------------|---------------------------|----------------------|----------------------|-------------------------------|
| Portable | 15,000 | \$110 | 14,000 | \$150 |
| Midsize | 20,000 | 300 | 24,000 | 405 |
| Flat-screen | <u>10,000</u> | 500 | <u>6,000</u> | 600 |
| | <u>45,000</u> | | <u>44,000</u> | |

Instructions

(Round to four decimals.)

- Compute ending inventory, cost of goods sold, and gross profit.
- Assume the company uses three inventory pools instead of one. Repeat instruction (a).

P8.9 (LO 4) Groupwork (Internal Indexes—Dollar-Value LIFO) On January 1, 2020, Bonanza Wholesalers Inc. adopted the dollar-value LIFO inventory method for income tax and external financial reporting purposes. However, Bonanza continued to use the FIFO inventory method for internal accounting and management purposes. In applying the LIFO method, Bonanza uses internal conversion price indexes and the multiple pools approach under which substantially identical inventory items are grouped into LIFO inventory pools. The following data were available for inventory pool no. 1, which comprises products A and B, for the 2 years following the adoption of LIFO.

| | <u>FIFO Basis per Records</u> | | |
|---------------------|-------------------------------|------------------|-------------------|
| | <u>Units</u> | <u>Unit Cost</u> | <u>Total Cost</u> |
| Inventory, 1/1/20 | | | |
| Product A | 10,000 | \$30 | \$300,000 |
| Product B | 9,000 | 25 | 225,000 |
| | | | <u>\$525,000</u> |
| Inventory, 12/31/20 | | | |
| Product A | 17,000 | 36 | \$612,000 |
| Product B | 9,000 | 26 | 234,000 |
| | | | <u>\$846,000</u> |
| Inventory, 12/31/21 | | | |
| Product A | 13,000 | 40 | \$520,000 |
| Product B | 10,000 | 32 | 320,000 |
| | | | <u>\$840,000</u> |

Instructions

- Prepare a schedule to compute the internal conversion price indexes for 2020 and 2021. Round indexes to two decimal places.
- Prepare a schedule to compute the inventory amounts at December 31, 2020 and 2021, using the dollar-value LIFO inventory method.

(AICPA adapted)

P8.10 (LO 4) (Internal Indexes—Dollar-Value LIFO) Presented below is information related to Kaisson Corporation for the last 3 years.

| Item | Quantities in Ending Inventories | <u>Base-Year Cost</u> | | <u>Current-Year Cost</u> | |
|--------------------------|--|-----------------------|-----------------|--------------------------|-----------------|
| | | <u>Unit Cost</u> | <u>Amount</u> | <u>Unit Cost</u> | <u>Amount</u> |
| <u>December 31, 2019</u> | | | | | |
| A | 9,000 | \$2.00 | \$18,000 | \$2.20 | \$19,800 |
| B | 6,000 | 3.00 | 18,000 | 3.55 | 21,300 |
| C | 4,000 | 5.00 | 20,000 | 5.40 | 21,600 |
| | | | <u>\$56,000</u> | | <u>\$62,700</u> |
| <u>December 31, 2020</u> | | | | | |
| A | 9,000 | \$2.00 | \$18,000 | \$2.60 | \$23,400 |
| B | 6,800 | 3.00 | 20,400 | 3.75 | 25,500 |
| C | 6,000 | 5.00 | 30,000 | 6.40 | 38,400 |
| | | | <u>\$68,400</u> | | <u>\$87,300</u> |
| <u>December 31, 2021</u> | | | | | |
| A | 8,000 | \$2.00 | \$16,000 | \$2.70 | \$21,600 |
| B | 8,000 | 3.00 | 24,000 | 4.00 | 32,000 |
| C | 6,000 | 5.00 | 30,000 | 6.20 | 37,200 |
| | | | <u>\$70,000</u> | | <u>\$90,800</u> |

Instructions

Compute the ending inventories under the dollar-value LIFO method for 2019, 2020, and 2021. The base period is January 1, 2019, and the beginning inventory cost at that date was \$45,000. Compute indexes to two decimal places.

P8.11 (LO 4) Writing (Dollar-Value LIFO) Richardson Company cans a variety of vegetable-type soups. Recently, the company decided to value its inventories using dollar-value LIFO pools. The clerk who accounts for inventories does not understand how to value the inventory pools using this new method, so, as a private consultant, you have been asked to teach him how this new method works.

He has provided you with the following information about purchases made over a 6-year period.

| Date | Ending Inventory (End-of-Year Prices) | Price Index |
|---------------|--|-------------|
| Dec. 31, 2016 | \$ 80,000 | 100 |
| Dec. 31, 2017 | 111,300 | 105 |
| Dec. 31, 2018 | 108,000 | 120 |
| Dec. 31, 2019 | 128,700 | 130 |
| Dec. 31, 2020 | 147,000 | 140 |
| Dec. 31, 2021 | 174,000 | 145 |

You have already explained to him how this inventory method is maintained, but he would feel better about it if you were to leave him detailed instructions explaining how these calculations are done and why he needs to put all inventories at a base-year value.

Instructions

- Compute the ending inventory for Richardson Company for 2016 through 2021 using dollar-value LIFO.
- Using your computation schedules as your illustration, write a step-by-step set of instructions explaining how the calculations are done. Begin your explanation by briefly explaining the theory behind this inventory method, including the purpose of putting all amounts into base-year price levels.

Concepts for Analysis

CA8.1 (LO 2) (Inventoriable Goods and Costs) You are asked to travel to Milwaukee to observe and verify the inventory of the Milwaukee branch of one of your clients. You arrive on Thursday, December 30, and find that the inventory procedures have just been started. You spot a railway car on the sidetrack at the unloading door and ask the warehouse superintendent, Buck Rogers, how he plans to inventory the contents of the car. He responds, "We are not going to include the contents in the inventory."

Later in the day, you ask the bookkeeper for the invoice on the carload and the related freight bill. The invoice lists the various items, prices, and extensions of the goods in the car. You note that the carload was shipped December 24 from Albuquerque, f.o.b. Albuquerque, and that the total invoice price of the goods in the car was \$35,300. The freight bill called for a payment of \$1,500. Terms were net 30 days. The bookkeeper affirms the fact that this invoice is to be held for recording in January.

Instructions

- Does your client have a liability that should be recorded at December 31? Discuss.
- Prepare a journal entry(ies), if required, to reflect any accounting adjustment required. Assume a perpetual inventory system is used by your client.
- For what possible reason(s) might your client wish to postpone recording the transaction?

CA8.2 (LO 2) (Inventoriable Goods and Costs) Clay Matthews, an inventory control specialist, is interested in better understanding the accounting for inventories. Although Clay understands the more sophisticated computer inventory control systems, he has little knowledge of how inventory cost is determined. In studying the records of Strider Enterprises, which sells normal brand-name goods from its own store and on consignment through Chavez Inc., he asks you to answer the following questions.

Instructions

- Should Strider Enterprises include in its inventory normal brand-name goods purchased from its suppliers but not yet received if the terms of purchase are f.o.b. shipping point (manufacturer's plant)? Why?

- b. Should Strider Enterprises include freight-in expenditures as an inventory cost? Why?
- c. If Strider Enterprises purchases its goods on terms 2/10, net 30, should the purchases be recorded gross or net? Why?
- d. What are products on consignment? How should they be reported in the financial statements?

(AICPA adapted)

CA8.3 (LO 2) (Inventoriable Goods and Costs) George Solti, the controller for Garrison Lumber Company, has recently hired you as assistant controller. He wishes to determine your expertise in the area of inventory accounting and therefore asks you to answer the following unrelated questions.

- a. A company is involved in the wholesaling and retailing of automobile tires for foreign cars. Most of the inventory is imported, and it is valued on the company's records at the actual inventory cost plus freight-in. At year-end, the warehousing costs are prorated over cost of goods sold and ending inventory. Are warehousing costs considered a product cost or a period cost?
- b. A certain portion of a company's "inventory" is composed of obsolete items. Should obsolete items that are not currently consumed in the production of "goods or services to be available for sale" be classified as part of inventory?
- c. A company purchases airplanes for sale to others. However, until they are sold, the company charts and services the planes. What is the proper way to report these airplanes in the company's financial statements?
- d. A company wants to buy coal deposits but does not want the financing for the purchase to be reported on its financial statements. The company therefore establishes a trust to acquire the coal deposits. The company agrees to buy the coal over a certain period of time at specified prices. The trust is able to finance the coal purchase and pay off the loan as it is paid by the company for the minerals. How should this transaction be reported?

CA8.4 (LO 2) (Accounting Treatment of Purchase Discounts) Shawnee Corp., a household appliances dealer, purchases its inventories from various suppliers. Shawnee has consistently stated its inventories at FIFO cost.

Instructions

Shawnee is considering alternate methods of accounting for the cash discounts it takes when paying its suppliers promptly. From a theoretical standpoint, discuss the acceptability of each of the following methods.

- a. Financial income when payments are made.
- b. Reduction of cost of goods sold for the period when payments are made.
- c. Direct reduction of purchase cost.

(AICPA adapted)

CA8.5 (LO 2) (General Inventory Issues) In January 2020, Susquehanna Inc. requested and secured permission from the commissioner of the Internal Revenue Service to compute inventories under the last-in, first-out (LIFO) method and elected to determine inventory cost under the dollar-value LIFO method. Susquehanna Inc. satisfied the commissioner that cost could be accurately determined by use of an index number computed from a representative sample selected from the company's single inventory pool.

Instructions

- a. Why should inventories be included in (1) a balance sheet and (2) the computation of net income?
- b. The Internal Revenue Code allows some accountable events to be considered differently for income tax reporting purposes and financial accounting purposes, while other accountable events must be reported the same for both purposes. Discuss why it might be desirable to report some accountable events differently for financial accounting purposes than for income tax reporting purposes.
- c. Discuss the ways and conditions under which the FIFO and LIFO inventory costing methods produce different inventory valuations. Do not discuss procedures for computing inventory cost.

(AICPA adapted)

CA8.6 (LO 3) (LIFO Inventory Advantages) Jane Yoakam, president of Estefan Co., recently read an article that claimed that at least 100 of the country's largest 500 companies were either adopting or considering adopting the last-in, first-out (LIFO) method for valuing inventories. The article stated that the firms were switching to LIFO to (1) neutralize the effect of inflation in their financial statements, (2) eliminate inventory profits, and (3) reduce income taxes. Ms. Yoakam wonders if the switch would benefit her company.

Estefan currently uses the first-in, first-out (FIFO) method of inventory valuation in its periodic inventory system. The company has a high inventory turnover rate, and inventories represent a significant proportion of the assets.

Ms. Yoakam has been told that the LIFO system is more costly to operate and will provide little benefit to companies with high turnover. She intends to use the inventory method that is best for the company in the long run rather than selecting a method just because it is the current fad.

Instructions

- Explain to Ms. Yoakam what “inventory profits” are and how the LIFO method of inventory valuation could reduce them.
- Explain to Ms. Yoakam the conditions that must exist for Estefan Co. to receive tax benefits from a switch to the LIFO method.

CA8.7 (LO 3) Writing (Average-Cost, FIFO, and LIFO) Prepare a memorandum containing responses to the following items.

- Describe the cost flow assumptions used in average-cost, FIFO, and LIFO methods of inventory valuation.
- Distinguish between weighted-average-cost and moving-average-cost for inventory costing purposes.
- Identify the effects on both the balance sheet and the income statement of using the LIFO method instead of the FIFO method for inventory costing purposes over a substantial time period when purchase prices of inventoriable items are rising. State why these effects take place.

CA8.8 (LO 4) Writing (LIFO Application and Advantages) Geddes Corporation is a medium-sized manufacturing company with two divisions and three subsidiaries, all located in the United States. The Metallic Division manufactures metal castings for the automotive industry, and the Plastic Division produces small plastic items for electrical products and other uses. The three subsidiaries manufacture various products for other industrial users.

Geddes Corporation plans to change from the lower of first-in, first-out (FIFO)-cost-or market method of inventory valuation to the last-in, first-out (LIFO) method of inventory valuation to obtain tax benefits. To make the method acceptable for tax purposes, the change also will be made for its annual financial statements.

Instructions

- Describe the establishment of and subsequent pricing procedures for each of the following LIFO inventory methods.
 - LIFO applied to units of product when the periodic inventory system is used.
 - Application of the dollar-value method to LIFO units of product.
- Discuss the specific advantages and disadvantages of using the dollar-value LIFO application as compared to specific goods LIFO (unit LIFO). (Ignore income tax considerations.)
- Discuss the general advantages and disadvantages claimed for LIFO methods.

CA8.9 (LO 4) Writing (Dollar-Value LIFO Issues) Arruza Co. is considering switching from the specific-goods LIFO approach to the dollar-value LIFO approach. Because the financial personnel at Arruza know very little about dollar-value LIFO, they ask you to answer the following questions.

- What is a LIFO pool?
- Is it possible to use a LIFO pool concept and not use dollar-value LIFO? Explain.
- What is a LIFO liquidation?
- How are price indexes used in the dollar-value LIFO method?
- What are the advantages of dollar-value LIFO over specific-goods LIFO?

CA8.10 (LO 3, 4) Writing (FIFO and LIFO) Harrisburg Company is considering changing its inventory valuation method from FIFO to LIFO because of the potential tax savings. However, management wishes to consider all of the effects on the company, including its reported performance, before making the final decision.

The inventory account, currently valued on the FIFO basis, consists of 1,000,000 units at \$8 per unit on January 1, 2020. There are 1,000,000 shares of common stock outstanding as of January 1, 2020, and the cash balance is \$400,000.

The company has made the following forecasts for the period 2020–2022.

| | 2020 | 2021 | 2022 |
|---|--------|--------|--------|
| Unit sales (in millions of units) | 1.1 | 1.0 | 1.3 |
| Sales price per unit | \$10 | \$12 | \$12 |
| Unit purchases (in millions of units) | 1.0 | 1.1 | 1.2 |
| Purchase price per unit | \$8 | \$9 | \$10 |
| Annual depreciation (in thousands of dollars) | \$300 | \$300 | \$300 |
| Cash dividends per share | \$0.15 | \$0.15 | \$0.15 |
| Cash payments for additions to and replacement of plant and equipment (in thousands of dollars) | \$350 | \$350 | \$350 |
| Income tax rate | 20% | 20% | 20% |
| Operating expenses (exclusive of depreciation) as a percent of sales | 15% | 15% | 15% |
| Common shares outstanding (in millions) | 1 | 1 | 1 |

Instructions

- a. Prepare a schedule that illustrates and compares the following data for Harrisburg Company under the FIFO and the LIFO inventory method for 2020–2022. Assume the company would begin LIFO at the beginning of 2020.

1. Year-end inventory balances.
2. Annual net income after taxes.
3. Earnings per share.
4. Cash balance.

Assume all sales are collected in the year of sale and all purchases, operating expenses, and taxes are paid during the year incurred.

- b. Using the data above, your answer to (a), and any additional issues you believe need to be considered, prepare a report that recommends whether or not Harrisburg Company should change to the LIFO inventory method. Support your conclusions with appropriate arguments.

(CMA adapted)

CA8.11 (LO 3, 4) Ethics (LIFO Choices) Wilkens Company uses the LIFO method for inventory costing. In an effort to lower net income, company president Mike Wilkens tells the plant accountant to take the unusual step of recommending to the purchasing department a large purchase of inventory at year-end. The price of the item to be purchased has nearly doubled during the year, and the item represents a major portion of inventory value.

Instructions

Answer the following questions.

- a. Identify the major stakeholders. If the plant accountant recommends the purchase, what are the consequences?
- b. If Wilkens Company were using the FIFO method of inventory costing, would Mike Wilkens give the same order? Why or why not?

Using Your Judgment

Financial Statement Analysis Cases

Case 1: T J International

T J International was founded in 1969 as Trus Joist International. The firm, a manufacturer of specialty building products, has its headquarters in Boise, Idaho. The company, through its partnership in the Trus Joist MacMillan joint venture, develops and manufactures engineered lumber. This product is a high-quality substitute for structural lumber and uses lower-grade wood and materials formerly considered waste. The company also is majority owner of the Outlook Window Partnership, which is a consortium of three wood and vinyl window manufacturers.

Following is T J International's adapted income statement and information concerning inventories from its annual report.

T J International

| | |
|-------------------------------------|---------------------|
| Sales | \$618,876,000 |
| Cost of goods sold | <u>475,476,000</u> |
| Gross profit | 143,400,000 |
| Selling and administrative expenses | <u>102,112,000</u> |
| Income from operations | 41,288,000 |
| Other expense | <u>24,712,000</u> |
| Income before income tax | 16,576,000 |
| Income taxes | <u>7,728,000</u> |
| Net income | <u>\$ 8,848,000</u> |

Inventories. Inventories are valued at the lower of cost or market and include material, labor, and production overhead costs. Inventories consisted of the following:

| | <u>Current Year</u> | <u>Prior Year</u> |
|---------------------------------------|---------------------|---------------------|
| Finished goods | \$27,512,000 | \$23,830,000 |
| Raw materials and work-in-progress | <u>34,363,000</u> | <u>33,244,000</u> |
| | 61,875,000 | 57,074,000 |
| Reduction to LIFO cost | <u>(5,263,000)</u> | <u>(3,993,000)</u> |
| | <u>\$56,612,000</u> | <u>\$53,081,000</u> |

The last-in, first-out (LIFO) method is used for determining the cost of lumber, veneer, Microllam lumber, TJI joists, and open web joists. Approximately 35 percent of total inventories at the end of the current year were valued using the LIFO method. The first-in, first-out (FIFO) method is used to determine the cost of all other inventories.

Instructions

- How much would income before taxes have been if FIFO costing had been used to value all inventories?
- If the income tax rate is 46.6%, what would income tax have been if FIFO costing had been used to value all inventories? In your opinion, is this difference in net income between the two methods material? Explain.
- Does the use of a different costing system for different types of inventory mean that there is a different physical flow of goods among the different types of inventory? Explain.

Case 2: Noven Pharmaceuticals, Inc.

Noven Pharmaceuticals, Inc., headquartered in Miami, Florida, describes itself in a recent annual report as follows.

Noven Pharmaceuticals, Inc.

Noven is a place of ideas—a company where scientific excellence and state-of-the-art manufacturing combine to create new answers to human needs. Our transdermal delivery systems speed drugs painlessly and effortlessly into the bloodstream by means of a simple skin patch. This technology has proven applications in estrogen replacement, but at Noven we are developing a variety of systems incorporating bestselling drugs that fight everything from asthma, anxiety and dental pain to cancer, heart disease and neurological illness. Our research portfolio also includes new technologies, such as iontophoresis, in which drugs are delivered through the skin by means of electrical currents, as well as products that could satisfy broad consumer needs, such as our anti-microbial mouthrinse.

Noven also reported in its annual report that its activities to date have consisted of product development efforts, some of which have been independent and some of which have been completed in conjunction with **Rhone-Poulenc Rorer (RPR)** and **Ciba-Geigy**. The revenues so far have consisted of money received from licensing fees, “milestone” payments (payments made under licensing agreements when certain stages of the development of a certain product have been completed), and interest on its investments. The company expects that it will have significant revenue in the upcoming fiscal year from the launch of its first product, a transdermal estrogen delivery system.

The current assets portion of Noven’s balance sheet follows.

| | |
|----------------------------------|---------------------|
| Cash and cash equivalents | \$12,070,272 |
| Securities held to maturity | 23,445,070 |
| Inventory of supplies | 1,264,553 |
| Prepaid and other current assets | 825,159 |
| Total current assets | <u>\$37,605,054</u> |

Inventory of supplies is recorded at the lower-of-cost (first-in, first-out)-or-net realizable value and consists mainly of supplies for research and development.

Instructions

- What would you expect the physical flow of goods for a pharmaceutical manufacturer to be most like: FIFO, LIFO, or random (flow of goods does not follow a set pattern)? Explain.
- What are some of the factors that Noven should consider as it selects an inventory measurement method?
- Suppose that Noven had \$49,000 in an inventory of transdermal estrogen delivery patches. These patches are from an initial production run and will be sold during the coming year. Why do you think that this amount is not shown in a separate inventory account? In which of the accounts shown is the inventory likely to be? At what point will the inventory be transferred to a separate inventory account?

Case 3: The Kroger Company

The **Kroger Company** reported the following data in its annual report (in millions).

| | January 28, <u>2017</u> | January 30, <u>2016</u> | January 31, <u>2015</u> |
|---------------------------------|----------------------------|----------------------------|----------------------------|
| Net sales | \$115,337 | \$109,830 | \$108,465 |
| Cost of sales (using LIFO) | 89,502 | 85,496 | 85,512 |
| Year-end inventories using FIFO | 7,852 | 7,440 | 6,933 |
| Year-end inventories using LIFO | 6,561 | 6,168 | 8,178 |

Instructions

- Compute Kroger’s inventory turnovers for fiscal years ending January 28, 2017, and January 30, 2016, using:
 - Cost of sales and LIFO inventory.
 - Cost of sales and FIFO inventory.
- Some firms calculate inventory turnover using sales rather than cost of goods sold in the numerator. Calculate Kroger’s fiscal years ending January 28, 2017, and January 30, 2016, turnover, using:
 - Sales and LIFO inventory.
 - Sales and FIFO inventory.
- State which method you would choose to evaluate Kroger’s performance. Justify your choice.

Accounting, Analysis, and Principles

Englehart Company sells two types of pumps. One is large and is for commercial use. The other is smaller and is used in residential swimming pools. The following inventory data is available for the month of March.

| | Units | Price per Unit | Total |
|--------------------------|-------|-------------------|-----------|
| Residential Pumps | | | |
| Inventory at Feb. 28: | 200 | \$ 400 | \$ 80,000 |
| Purchases: | | | |
| March 10 | 500 | \$ 450 | \$225,000 |
| March 20 | 400 | \$ 475 | \$190,000 |
| March 30 | 300 | \$ 500 | \$150,000 |
| Sales: | | | |
| March 15 | 500 | \$ 540 | \$270,000 |
| March 25 | 400 | \$ 570 | \$228,000 |
| Inventory at March 31: | 500 | | |
| Commercial Pumps | | | |
| Inventory at Feb. 28: | 600 | \$ 800 | \$480,000 |
| Purchases: | | | |
| March 3 | 600 | \$ 900 | \$540,000 |
| March 12 | 300 | \$ 950 | \$285,000 |
| March 21 | 500 | \$1,000 | \$500,000 |
| Sales: | | | |
| March 18 | 900 | \$1,080 | \$972,000 |
| March 29 | 600 | \$1,140 | \$684,000 |
| Inventory at March 31: | 500 | | |

Accounting

- Assuming Englehart uses a periodic inventory system, determine the cost of inventory on hand at March 31 and the cost of goods sold for March under first-in, first-out (FIFO).
- Assume Englehart uses dollar-value LIFO and one pool, consisting of the combination of residential and commercial pumps. Determine the cost of inventory on hand at March 31 and the cost of goods sold for March. Assume Englehart's initial adoption of LIFO is on March 1. Use the double-extension method to determine the appropriate price indices. (*Hint:* The price index for February 28/March 1 should be 1.00.) (Round the index to three decimal places.)

Analysis

- Assume you need to compute a current ratio for Englehart. Which inventory method (FIFO or dollar-value LIFO) do you think would give you a more meaningful current ratio?
- Some of Englehart's competitors use LIFO inventory costing and some use FIFO. How can an analyst compare the results of companies in an industry, when some use LIFO and others use FIFO?

Principles

Can companies change from one inventory accounting method to another? If a company changes to an inventory accounting method used by most of its competitors, what are the trade-offs in terms of the conceptual framework discussed in Chapter 2 of the text?

Bridge to the Profession

Codification Exercises

If your school has a subscription to the FASB Codification, go to <http://aaahq.org/asclgin.cfm> to log in and prepare responses to the following. Provide Codification references for your responses.

CE8.1 Access the glossary (“Master Glossary”) to answer the following.

- What is the definition provided for inventory?
- What is a customer?
- Under what conditions is a distributor considered a customer?
- What is a product financing arrangement?

CE8.2 Due to rising fuel costs, your client, **Overstock.com**, is considering adding a charge for shipping and handling costs on products sold through its website. What is the authoritative guidance for reporting these costs?

CE8.3 What guidance does the Codification provide concerning reporting inventories above cost?

CE8.4 What is the nature of the SEC guidance concerning the reporting of LIFO liquidations?

Codification Research Case

In conducting year-end inventory counts, your audit team is debating the impact of the client’s right of return policy both on inventory

valuation and revenue recognition. The assistant controller argues that there is no need to worry about the return policies since they have not changed in a while. The audit senior wants a more authoritative answer, given the recently issued standard on revenue recognition. You have been asked to conduct some research of the authoritative literature before she presses the point with the client.

Instructions

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

- What is the authoritative guidance for revenue recognition when right of return exists?
- When is this guidance important for a company? That is, for which of steps in the five-step revenue recognition model does right of return come into play?
- Does the FASB literature provide an example of the accounting for right of return? If so, summarize the example.
- What are the general guidelines for constraining estimates of the transaction price (variable consideration)?

Inventories: Additional Valuation Issues

LEARNING OBJECTIVES

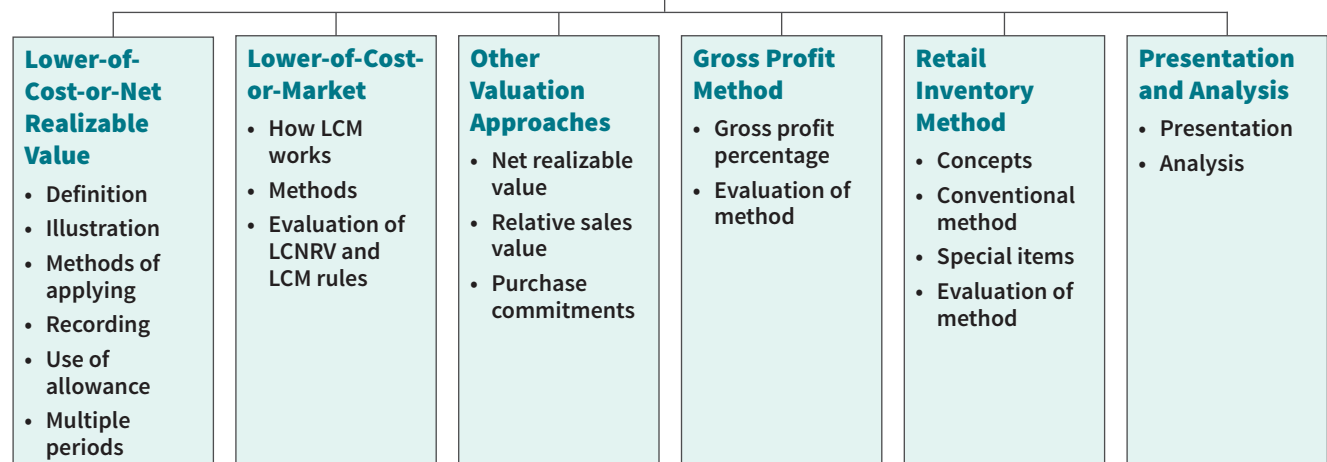

After studying this chapter, you should be able to:

1. Describe and apply the lower-of-cost-or-net realizable value rule.
2. Describe and apply the lower-of-cost-or-market rule.
3. Identify other inventory valuation issues.
4. Determine ending inventory by applying the gross profit method.
5. Determine ending inventory by applying the retail inventory method.
6. Explain how to report and analyze inventory.

PREVIEW OF CHAPTER 9 As the opening story indicates, information on inventories is important to investors. In this chapter, we discuss some of the valuation and estimation concepts that companies use to develop relevant inventory information. The content and organization of the chapter are as follows.

This chapter also includes numerous conceptual and global discussions that are integral to the topics presented here.

INVENTORIES: ADDITIONAL VALUATION ISSUES

Not What It Seems to Be

Investors need comparable information about inventory when evaluating a retailer's financial statements. To do so, investors need to determine what inventory method a retailer is using (FIFO, LIFO, average-cost, or a combination of methods) and then adjust the company's results to a common method. That is a good start. What investors often then do is compute relevant information about the company such as inventory turnover, number of days sales in inventory, gross profit rate, and liquidity measures such as the acid-test ratio (using adjusted numbers).

These calculations are critical. Inventory is a significant component of working capital, and the gross profit resulting from sales of inventory is often viewed as the most important income component in measuring a retailer's success. For example, consider the financial statements of **Best Buy** shown in the following table. Inventory comprises over 44 percent of current assets, and gross profit represents over 22 percent of sales revenue.

| Best Buy (\$ in millions) | | | |
|-------------------------------------|-----------------|--|------------------------|
| Consolidated Balance Sheets | | Consolidated Statements of Earnings | |
| <i>Current Assets</i> | | Revenue | \$40,339 |
| Cash and cash equivalents | \$ 2,432 | Cost of goods sold | <u>31,292</u> |
| Short-term investments | 1,456 | Gross profit | \$ 9,047 |
| Receivables | 1,280 | | |
| Merchandise inventory | 5,174 | Net income (loss) | <u>\$ 1,233</u> |
| Other current assets | <u>1,387</u> | | |
| Total current assets | <u>\$11,729</u> | | |

Financial analysis is based on these numbers. However, there often are questions about the reliability of the information reported in the financial statements. That is, subjective estimates are involved because of possible decline in the value of the inventory. For example, Best Buy provides disclosures related to inventory in its annual report.

As indicated in the following Best Buy disclosures, subjective estimates concerning the measurement of inventory (related to markdowns and inventory losses) could have a significant impact on an investor's ability to compare inventory levels (and their impact on gross profit) at the company relative to other retailers.

| Critical Accounting Estimates in Preparation of the Financial Statements: Inventory | Judgments and Uncertainties |
|---|---|
| <p>We value our inventory at the lower of cost or market through the establishment of markdown and inventory loss adjustments.</p> <p>Our inventory valuation reflects markdowns for the excess of the cost over the amount we expect to realize from the ultimate sale or other disposal of the inventory. Markdowns establish a new cost basis for our inventory. Subsequent changes in facts or circumstances do not result in the reversal of previously recorded markdowns or an increase in that newly established cost basis.</p> <p>Our inventory valuation also reflects adjustments for anticipated physical inventory losses (e.g., theft) that have occurred since the last physical inventory. Physical inventory counts are taken on a regular basis to ensure that the inventory reported in our consolidated financial statements is properly stated.</p> | <p>Our markdown adjustment contains uncertainties because the calculation requires management to make assumptions and to apply judgment regarding inventory aging, forecast consumer demand, the promotional environment and technological obsolescence.</p> <p>Our inventory loss adjustment contains uncertainties because the calculation requires management to make assumptions and to apply judgment regarding a number of factors, including historical results and current inventory loss trends.</p> |

Thus, inventory balances may not be what they seem, not only due to the cost flow assumptions (e.g., LIFO/FIFO) you learned about in Chapter 8, but also due to significant markdowns and losses that you will learn about in this chapter.

Review and Practice

Go to the **Review and Practice** section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions as well as additional exercises and practice problem with solutions are also available online.

Lower-of-Cost-or-Net Realizable Value

LEARNING OBJECTIVE 1

Describe and apply the lower-of-cost-or-net realizable value rule.

Inventories are recorded at their cost. However, if inventory declines in value below its original cost, a major departure from the historical cost principle occurs. Whatever the reason for a decline—damage, physical deterioration, obsolescence, changes in price levels, or other causes—a company should write down the inventory to net realizable value to report this loss. **A company abandons the historical cost principle when the future utility (revenue-producing ability) of the asset drops below its original cost.**

Definition of Net Realizable Value

Recall that **cost** is the acquisition price of inventory computed using one of the historical cost-based methods—specific identification, average-cost, FIFO, or LIFO. The term **net realizable value (NRV)** refers to the net amount that a company expects to realize from the sale of inventory. Specifically, net realizable value is the estimated selling price in the ordinary course of business, less reasonably predictable costs of completion, disposal, and transportation. [1] (See the FASB Codification References near the end of the chapter.)

To illustrate, assume that Mander Corp. has unfinished inventory with a cost of \$950, a sales value of \$1,000, estimated cost of completion of \$50, and estimated selling costs of \$200. Mander's net realizable value is computed as shown in **Illustration 9.1**.

| | | |
|------------------------------------|-------|---------------|
| Inventory value—unfinished | | \$1,000 |
| Less: Estimated cost of completion | \$ 50 | |
| Estimated cost to sell | 200 | 250 |
| Net realizable value | | \$ 750 |

ILLUSTRATION 9.1

Computation of Net Realizable Value

Mander reports inventory on its balance sheet at \$750. In its income statement, Mander reports a Loss Due to Decline of Inventory to NRV of \$200 (\$950 – \$750). A departure from cost is justified because inventories should not be reported at amounts higher than their expected realization from sale or use. In addition, a company like Mander should charge the loss of utility against revenues in the period in which the loss occurs, not in the period of sale.

Companies therefore report their inventories at the **lower-of-cost-or-net realizable value (LCNRV)** at each reporting date. [2] **Illustration 9.2** shows how **Kesa Electricals** indicate measurement at LCNRV.

Kesa Electricals

Inventories are stated at the lower-of-cost-or-net realizable value. Cost is determined using the weighted average method. Net realizable value represents the estimated selling price in the ordinary course of business, less applicable variable selling expenses.

ILLUSTRATION 9.2

LCNRV Disclosures

Illustration of LCNRV

As indicated, a company values inventory at LCNRV. A company estimates net realizable value based on the most predictable evidence of the inventories' realizable amounts (expected selling price, expected costs of completion, disposal, and transportation). To illustrate, Regner Foods computes its inventory at LCNRV, as shown in **Illustration 9.3** (amounts in thousands).

ILLUSTRATION 9.3
Determining Final Inventory Value

| Food | Cost | Net Realizable Value | Final Inventory Value |
|------------------|-----------|----------------------|-----------------------|
| Spinach | \$ 80,000 | \$120,000 | \$ 80,000 |
| Carrots | 100,000 | 100,000 | 100,000 |
| Cut beans | 50,000 | 40,000 | 40,000 |
| Peas | 90,000 | 72,000 | 72,000 |
| Mixed vegetables | 95,000 | 92,000 | 92,000 |
| | | | <u>\$384,000</u> |

| Final Inventory Value: | |
|------------------------|--|
| Spinach | Cost (\$80,000) is selected because it is lower than net realizable value. |
| Carrots | Cost (\$100,000) is the same as net realizable value. |
| Cut beans | Net realizable value (\$40,000) is selected because it is lower than cost. |
| Peas | Net realizable value (\$72,000) is selected because it is lower than cost. |
| Mixed vegetables | Net realizable value (\$92,000) is selected because it is lower than cost. |

As indicated, the final inventory value of \$384,000 equals the sum of the LCNRV for each of the inventory items. That is, Regner applies the LCNRV rule to each individual type of food.

Underlying Concepts

The inconsistency in the presentation of inventory is an example of the trade-off between *relevance and faithful representation*. Net realizable value is more relevant than cost, and cost is more representationally faithful than NRV.

Methods of Applying LCNRV

In the Regner Foods illustration, we assumed that the company applied the lower-of-cost-or-net realizable value to each individual type of food. However, companies may apply the LCNRV rule either directly to each item, to each category, or to the total of the inventory (see **Underlying Concepts**). If a company follows a major categories or total inventory approach in applying the LCNRV rule, increases in selling prices tend to offset decreases in selling prices. To illustrate, assume that Regner Foods separates its food products into two major categories, frozen and canned, as shown in **Illustration 9.4**.

ILLUSTRATION 9.4
Alternative Applications of LCNRV

| | Cost | NRV | Lower-of-Cost-or-Net Realizable Value by: | | |
|------------------|------------------|------------------|---|------------------|------------------|
| | | | Individual Items | Major Categories | Total Inventory |
| Frozen | | | | | |
| Spinach | \$ 80,000 | \$120,000 | \$ 80,000 | | |
| Carrots | 100,000 | 100,000 | 100,000 | | |
| Cut beans | 50,000 | 40,000 | 40,000 | | |
| Total frozen | <u>230,000</u> | <u>260,000</u> | | \$230,000 | |
| Canned | | | | | |
| Peas | 90,000 | 72,000 | 72,000 | | |
| Mixed vegetables | 95,000 | 92,000 | 92,000 | | |
| Total canned | <u>185,000</u> | <u>164,000</u> | | 164,000 | |
| Total | <u>\$415,000</u> | <u>\$424,000</u> | <u>\$384,000</u> | <u>\$394,000</u> | <u>\$415,000</u> |

If Regner Foods applied the LCNRV rule to individual items, the amount of inventory is \$384,000. If applying the rule to major categories, it jumps to \$394,000. If applying LCNRV to the total inventory, it totals \$415,000. Why this difference? When a company uses a major categories or total inventory approach, selling prices higher than cost offset selling prices lower than cost. For Regner Foods, using the major categories approach partially offsets the high selling price for spinach. Using the total inventory approach totally offsets the high selling price for spinach.

Companies usually value inventory on an item-by-item basis. In fact, tax rules require that companies use an individual-item basis barring practical difficulties. In addition, the individual-item approach gives the most conservative valuation for balance sheet purposes. Often, a company values inventory on a total-inventory basis when it offers only one end product (comprised of many different raw materials). If it produces several end products, a company might use a category approach instead. The method selected should be the one that most clearly reflects income. **Whichever method a company selects, it should apply the method consistently from one period to another.**

Recording NRV Instead of Cost

One of two methods may be used to record the income effect of valuing inventory at NRV. One method, referred to as the **cost-of-goods-sold method**, debits cost of goods sold for the write-down of the inventory to NRV. As a result, the company does not report a loss in the income statement because the cost of goods sold already includes the amount of the loss. The second method, referred to as the **loss method**, debits a loss account for the write-down of the inventory to NRV. We use the following inventory data for Ricardo Company to illustrate entries under both methods.

| | |
|---|-----------|
| Cost of goods sold (before adjustment to NRV) | \$108,000 |
| Ending inventory (cost) | 82,000 |
| Ending inventory (at NRV) | 70,000 |

Illustration 9.5 shows the entries for both the cost-of-goods-sold and loss methods, assuming the use of a perpetual inventory system.

| Cost-of-Goods-Sold Method | | Loss Method | |
|---|--------|----------------------------------|--------|
| To reduce inventory from cost to NRV | | | |
| Cost of Goods Sold | 12,000 | Loss Due to Decline of Inventory | |
| Inventory | | to NRV | 12,000 |
| | 12,000 | Inventory | 12,000 |

ILLUSTRATION 9.5

Accounting for the Reduction of Inventory to NRV—Perpetual Inventory System

The cost-of-goods-sold method buries the loss in the Cost of Goods Sold account. The loss method, by identifying the loss due to the write-down, shows the loss separate from Cost of Goods Sold in the income statement.

Illustration 9.6 contrasts the differing amounts reported in the income statement under the two approaches, using data from the Ricardo example.

| Cost-of-Goods-Sold Method | |
|---|-----------|
| Sales revenue | \$200,000 |
| Cost of goods sold (after adjustment to NRV*) | 120,000 |
| Gross profit on sales | \$ 80,000 |
| *Cost of goods sold (before adjustment to NRV) \$ 108,000 | |
| Difference between inventory at cost and NRV (\$82,000 – \$70,000) 12,000 | |
| Cost of goods sold (after adjustment to NRV) \$ 120,000 | |
| Loss Method | |
| Sales revenue | \$200,000 |
| Cost of goods sold | 108,000 |
| Gross profit on sales | 92,000 |
| Loss due to decline of inventory to NRV | 12,000 |
| | \$ 80,000 |

ILLUSTRATION 9.6

Income Statement Presentation—Cost-of-Goods-Sold and Loss Methods of Reducing Inventory to NRV

Underlying Concepts

The income statement under the cost-of-goods-sold method presentation lacks *representational faithfulness*. The cost-of-goods-sold method does not indicate what it purports to represent. However, allowing this presentation illustrates the concept of materiality.

GAAP does not specify a particular account to debit for the write-down. We believe the loss method presentation is preferable because it clearly discloses the loss resulting from a decline in inventory to NRV (see **Underlying Concepts**).

Use of an Allowance

Instead of crediting the Inventory account for market adjustments, companies generally use an allowance account, often referred to as Allowance to Reduce Inventory to NRV. For example, using an allowance account under the loss method, Ricardo Company makes the following entry to record the inventory write-down to NRV.

| | | |
|---|--------|--------|
| Loss Due to Decline of Inventory to NRV | 12,000 | |
| Allowance to Reduce Inventory to NRV | | 12,000 |

Use of the allowance account results in reporting both the cost and the NRV of the inventory. Ricardo reports inventory in the balance sheet as shown in **Illustration 9.7**.

ILLUSTRATION 9.7

Presentation of Inventory Using an Allowance Account

| | |
|--------------------------------------|------------------|
| Inventory (at cost) | \$ 82,000 |
| Allowance to reduce inventory to NRV | <u>(12,000)</u> |
| Inventory (at NRV) | <u>\$ 70,000</u> |

The use of the allowance under the cost-of-goods-sold or loss method permits the balance sheet to reflect inventory measured at \$82,000, although the balance sheet shows a net amount of \$70,000. It also keeps subsidiary inventory ledgers and records in correspondence with the control account without changing prices. *For homework purposes, use an allowance account to record net realizable value adjustments, unless instructed otherwise.*

With respect to accounting for the allowance in the subsequent period, if the company still has on hand the merchandise in question, it should retain the allowance account. If it does not keep that account, the company will overstate beginning inventory and cost of goods. However, **if the company has sold the goods**, then it should close the account. It then establishes a “new allowance account” for any decline in inventory value that takes place in the current year.

Use of an Allowance—Multiple Periods

In general, accountants leave the allowance account on the books. They merely adjust the balance at the next year-end to agree with the discrepancy between cost and the LCNRV at that balance sheet date. Thus, if prices are falling, the company records an additional write-down. If prices are rising, the company records an increase in income, as shown in **Illustration 9.8**.

ILLUSTRATION 9.8

Effect on Net Income of Reducing Inventory to NRV

| Date | Inventory at Cost | Inventory at NRV | Amount Required in Valuation Account | Adjustment of Valuation Account Balance | Effect on Net Income |
|---------------|-------------------|------------------|--------------------------------------|---|----------------------|
| Dec. 31, 2016 | \$188,000 | \$176,000 | \$12,000 | \$12,000 inc. | Decrease |
| Dec. 31, 2017 | 194,000 | 187,000 | 7,000 | 5,000 dec. | Increase |
| Dec. 31, 2018 | 173,000 | 174,000 | 0 | 7,000 dec. | Increase |
| Dec. 31, 2019 | 182,000 | 180,000 | 2,000 | 2,000 inc. | Decrease |

We can think of the net increase in income as the excess of the credit effect of closing the beginning allowance balance over the debit effect of setting up the current year-end allowance account. Recognizing the increases and decreases has the same effect on net income as closing the allowance balance to beginning inventory or to cost of goods sold.

What Do the Numbers Mean? I'll Trade You

Now that we know how to record a decline in value below cost, you might wonder what managers do with problem inventory that has been written down. Unfortunately, the solution for many companies is either (a) contract with liquidators and get the best price for the inventory, which is typically only 10 to 40 percent of book value; or (b) even worse, as one manager remarked, “We’ll figure it out later. There are more pressing matters to attend to right now.” However, without a good plan to deal with problem inventory, other issues arise, such as problem inventory taking up space that could be used for newer, more profitable products, as well as storage costs and waste (inventory that perishes or whose date has expired often simply gets thrown out). Reducing wasted inventory is critical for cost control and profitability. So what to do?

An increasingly popular approach to deal with excess problem inventory is corporate barter—the exchange of goods and services for problem inventory on a noncash basis through the use of commercial trade credit. Here is how it works. The company with the problem inventory seeks a trading partner that could provide something of value in exchange for the problem inventory. Media services, including TV and radio commercial airtime and print advertising space, have long been the barter instrument of choice. That is, the company with problem inventory receives advertising and other

services—services that are especially valuable for companies with no or limited media budgets. Logistics barter is also common, which includes such services as ocean/air freight, less than truckload (LTL), full truck, intermodal, and drayage. All companies require some form of logistics to do business, and logistics barter can typically be used by companies whose annual sales revenue is as little as \$50 million.

A liquidator may still be involved to sell the problem inventory, but the barter partner usually receives three to four times the cash liquidation value. This is because the liquidator sells the inventory under restrictions, such as limiting redistribution of the assets to certain geographic areas—or to certain accounts such as noncompetitive accounts—or inappropriate selling environments such as discount or secondhand outlets. The company that unloads the problem inventory now has a trade credit that can be used to purchase raw materials, capital equipment, or professional services. While a barter transaction cannot help a company avoid the accounting consequences of an inventory impairment, it represents an innovative way to make the best of a bad situation.

Source: Nicholas Isasi, “Achieving a Higher Value for Problematic Inventory via Corporate Barter,” *Accounting Today* (October 21, 2015).

Lower-of-Cost-or-Market

LEARNING OBJECTIVE 2

Describe and apply the lower-of-cost-or-market rule.

The use of the lower-of-cost-or-net realizable value method works well to measure the decline in value of inventory for most companies. The recent introduction of the LCNRV approach was designed to simplify and reduce the cost and complexity of inventory measurement under GAAP. However, the FASB learned that for companies using LIFO or the retail inventory methods, the change to LCNRV would result in potentially significant costs, particularly upon transition, and would not simplify their subsequent measurement of inventory.¹

As a consequence, the FASB decided to grant an exception to the LCNRV approach for companies that use the LIFO or retail inventory methods. Rather than comparing cost to net realizable value, under the alternative approach, companies compare a “designated market value” of the inventory to cost. The approach is commonly referred to as **lower-of-cost-or-market (LCM)**. This approach begins with replacement cost, then applies two additional limitations to value ending inventory—net realizable value and net realizable value less a normal profit margin. As discussed earlier, net realizable value (NRV) is the estimated selling price in the ordinary course of business, less reasonably predictable costs of completion and disposal (often referred to as net selling price).

¹Specifically, as was discussed in Chapter 8, in times of rising prices, LIFO costing generally results in inventory stated at lower historical cost amounts. However, applying LCNRV to already lower-stated LIFO inventory amounts (in a period when prices decline) results in an *increase* in income. This leads to distortions in income, significant costs to track changes in the LIFO reserve, and is inconsistent with the goal of LCNRV. In addition, as we discuss later in the chapter, the use of the retail inventory method based on cost-to-retail price ratios provides a reliable estimate of inventory cost. Moreover, implementation of the conventional retail inventory method results in a reasonable approximation for LCNRV in many situations, without the additional cost to estimate net realizable value. The Board did not want LIFO and retail inventory method companies to incur these costs, given the change to LCNRV might not simplify the accounting nor improve the information reported to users for these companies. See *FASB Accounting Standards Update 2015-11, Inventory (Topic 330): “Simplifying the Measurement of Inventory”* (July 2015), paras. BC5–BC9.

A normal profit margin is subtracted from that amount to arrive at **net realizable value less a normal profit margin**.

To illustrate, assume that Parker Corp. has unfinished inventory with a sales value of \$1,000, estimated cost of completion and disposal of \$300, and a normal profit margin of 10 percent of sales. Parker determines the net realizable value shown in **Illustration 9.9**.

ILLUSTRATION 9.9

Computation of Net Realizable Value

| | |
|---|---------------|
| Inventory—sales value | \$1,000 |
| Less: Estimated cost of completion and disposal | 300 |
| Net realizable value | 700 |
| Less: Allowance for normal profit margin (10% of sales) | 100 |
| Net realizable value less a normal profit margin | \$ 600 |

The general lower-of-cost-or-market rule is: A company values inventory at the lower-of-cost-or-market, with market limited to an amount that is not more than net realizable value or less than net realizable value less a normal profit margin. [3]

The **upper limit (ceiling)** is the net realizable value of inventory. The **lower limit (floor)** is the net realizable value less a normal profit margin. What is the rationale for these two limitations? Establishing these limits for the value of the inventory prevents companies from over- or understating inventory.

The maximum limitation, **not to exceed the net realizable value (ceiling)**, prevents overstatement of the value of obsolete, damaged, or shopworn inventories. That is, if the replacement cost of an item exceeds its net realizable value, a company should not report inventory at replacement cost. The company can receive only the selling price less cost of disposal. To report the inventory at replacement cost would result in an overstatement of inventory and understatement of the loss in the current period.

To illustrate, assume that **Staples** paid \$1,000 for a color laser printer that it can now replace for \$900. The printer’s net realizable value is \$700. At what amount should Staples report the laser printer in its financial statements? To report the replacement cost of \$900 overstates the ending inventory and understates the loss for the period. Therefore, Staples should report the printer at \$700.

The minimum limitation (floor) is **not to be less than net realizable value reduced by an allowance for an approximately normal profit margin**. The floor establishes a value below which a company should not price inventory, regardless of replacement cost. It makes no sense to price inventory below net realizable value less a normal margin. This minimum amount (floor) measures what the company can receive for the inventory and still earn a normal profit. Use of a floor deters understatement of inventory and overstatement of the loss in the current period (see **Global View**).

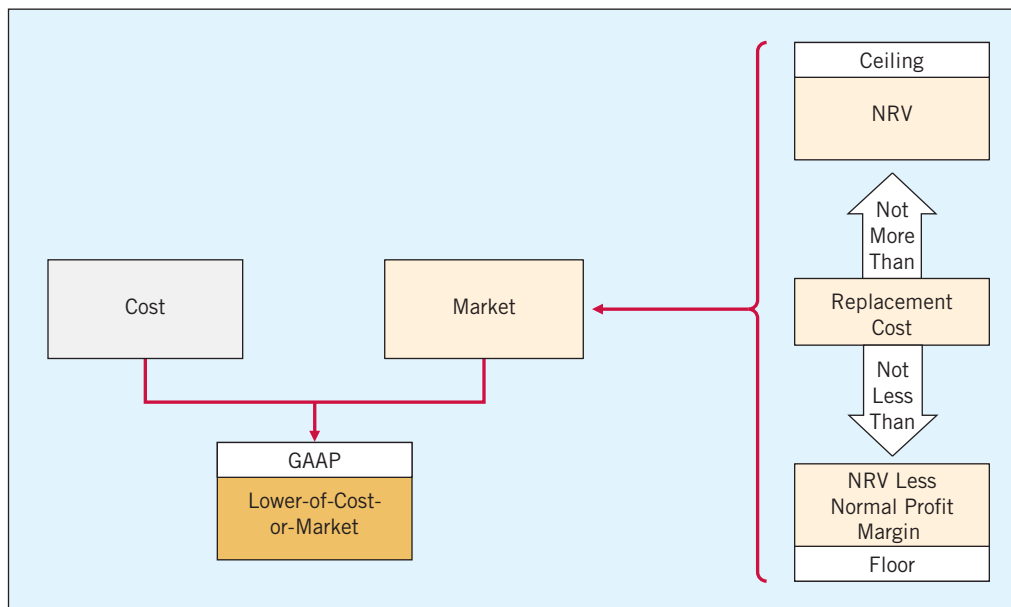

Illustration 9.10 graphically presents the guidelines for valuing inventory at the lower-of-cost-or-market.

Global View

IFRS requires all companies to apply LCNRV. Thus, IFRS does not use a ceiling or floor to determine market.

ILLUSTRATION 9.10

Inventory Valuation—Lower-of-Cost-or-Market

How Lower-of-Cost-or-Market Works

The **designated market value** is the amount that a company compares to cost. It is **always the middle value of three amounts**: replacement cost, net realizable value, and net realizable value less a normal profit margin. To illustrate how to compute designated market value, let us return to the inventory data for Regner Foods, as shown in **Illustration 9.11**. Assume now that Regner uses the LIFO method.

| Food | Replacement Cost | Net Realizable Value (Ceiling) | Net Realizable Value Less a Normal Profit Margin (Floor) | Designated Market Value |
|------------------|------------------|--------------------------------|--|-------------------------|
| Spinach | \$ 88,000 | \$120,000 | \$104,000 | \$104,000 |
| Carrots | 90,000 | 100,000 | 70,000 | 90,000 |
| Cut beans | 45,000 | 40,000 | 27,500 | 40,000 |
| Peas | 36,000 | 72,000 | 48,000 | 48,000 |
| Mixed vegetables | 105,000 | 92,000 | 80,000 | 92,000 |

Designated Market Value Decision:

| | |
|------------------|--|
| Spinach | Net realizable value less a normal profit margin is selected because it is the middle value. |
| Carrots | Replacement cost is selected because it is the middle value. |
| Cut beans | Net realizable value is selected because it is the middle value. |
| Peas | Net realizable value less a normal profit margin is selected because it is the middle value. |
| Mixed vegetables | Net realizable value is selected because it is the middle value. |

ILLUSTRATION 9.11

Computation of Designated Market Value

Regner Foods then compares designated market value to cost to determine the lower-of-cost-or-market. It determines the final inventory value as shown in **Illustration 9.12**.

| Food | Cost | Replacement Cost | Net Realizable Value (Ceiling) | Net Realizable Value Less a Normal Profit Margin (Floor) | Designated Market Value | Final Inventory Value |
|------------------|------------------|------------------|--------------------------------|--|-------------------------|-----------------------|
| Spinach | \$ 80,000 | \$ 88,000 | \$120,000 | \$104,000 | \$104,000 | \$ 80,000 |
| Carrots | 100,000 | 90,000 | 100,000 | 70,000 | 90,000 | 90,000 |
| Cut beans | 50,000 | 45,000 | 40,000 | 27,500 | 40,000 | 40,000 |
| Peas | 90,000 | 36,000 | 72,000 | 48,000 | 48,000 | 48,000 |
| Mixed vegetables | 95,000 | 105,000 | 92,000 | 80,000 | 92,000 | 92,000 |
| | <u>\$415,000</u> | | | | | <u>\$350,000</u> |

Final Inventory Value:

| | |
|------------------|--|
| Spinach | Cost (\$80,000) is selected because it is lower than designated market value (net realizable value less a normal profit margin). |
| Carrots | Designated market value (replacement cost, \$90,000) is selected because it is lower than cost. |
| Cut beans | Designated market value (net realizable value, \$40,000) is selected because it is lower than cost. |
| Peas | Designated market value (net realizable value less a normal profit margin, \$48,000) is selected because it is lower than cost. |
| Mixed vegetables | Designated market value (net realizable value, \$92,000) is selected because it is lower than cost. |

ILLUSTRATION 9.12

Determining Final Inventory Value

As with the LCNRV approach, the application of the lower-of-cost-or-market rule incorporates only losses in value that occur in the normal course of business. Regner makes the following entry (using the loss method) to record the decline in value.

| | | |
|--|--------|--------|
| Loss Due to Decline of Inventory to Market (\$415,000 – \$350,000) | 65,000 | |
| Allowance to Reduce Inventory to Market | | 65,000 |

Methods of Applying Lower-of-Cost-or-Market

In the Regner Foods illustration, we assumed that the company applied the lower-of-cost-or-market rule to each individual type of food. As in the application of LCNRV, companies may apply the lower-of-cost-or-market rule either directly to each item, to each category, or to the total of the inventory. To illustrate, assume that Regner Foods separates its food products into two major categories, frozen and canned, as shown in [Illustration 9.13](#).

ILLUSTRATION 9.13
Alternative Applications of
Lower-of-Cost-or-Market

| | Cost | Designated Market | Lower-of-Cost-or-Market by: | | |
|---------------------|------------------|----------------------|-----------------------------|---------------------|--------------------|
| | | | Individual Items | Major Categories | Total Inventory |
| Frozen | | | | | |
| Spinach | \$ 80,000 | \$104,000 | \$ 80,000 | | |
| Carrots | 100,000 | 90,000 | 90,000 | | |
| Cut beans | 50,000 | 40,000 | 40,000 | | |
| Total frozen | <u>230,000</u> | <u>234,000</u> | | \$230,000 | |
| Canned | | | | | |
| Peas | 90,000 | 48,000 | 48,000 | | |
| Mixed vegetables | 95,000 | 92,000 | 92,000 | | |
| Total canned | <u>185,000</u> | <u>140,000</u> | | 140,000 | |
| Total | <u>\$415,000</u> | <u>\$374,000</u> | <u>\$350,000</u> | <u>\$370,000</u> | <u>\$374,000</u> |

If Regner Foods applied the lower-of-cost-or-market rule to individual items, the amount of inventory is \$350,000. If applying the rule to major categories, it jumps to \$370,000. If applying lower-of-cost-or-market to the total inventory, it totals \$374,000. Why this difference? When a company uses a major categories or total inventory approach, market values higher than cost offset market values lower than cost. For Regner Foods, using the major categories approach partially offsets the high market value for spinach. Using the total inventory approach totally offsets the high market value for spinach.

Recall that companies usually value inventory on an item-by-item basis and this approach gives the most conservative valuation for balance sheet purposes. The method selected should be the one that most clearly reflects income. Whichever method a company selects, it should apply the method consistently from one period to another.

Evaluation of the LCNRV and Lower-of-Cost-or-Market Rules

The LCNRV and lower-of-cost-or-market rules suffer some conceptual deficiencies:

1. A company recognizes decreases in the value of the asset and the charge to expense in the period in which the loss in utility occurs—not in the period of sale. On the other hand, it recognizes increases in the value of the asset only at the point of sale. This inconsistent treatment can distort income data.
2. Application of the rules results in inconsistency because a company may value the inventory at cost in one year and at market in the next year.
3. These approaches value the inventory in the balance sheet conservatively, but their effect on the income statement may or may not be conservative. Net income for the year in which a company takes the loss is definitely lower. Net income of the subsequent period may be higher than normal if the expected reductions in sales price do not materialize.
4. Application of these rules uses “normal profit” or “ordinary” costs to sell or dispose in determining inventory values. Since companies develop these estimates based on past experience (which they may not attain in the future), this subjective measure presents an opportunity for income manipulation.

Many financial statement users appreciate the LCNRV and lower-of-cost-or-market rules because they at least know that these rules prevent overstatement of inventory. In addition, recognizing all losses but anticipating no gains generally avoids overstating income.

What Do the Numbers Mean? “Put It in Reverse”

The lower-of-cost-or-net-realizable value (market) rule is designed to provide timely information about the decline in the value of inventory. When the value of inventory declines, income takes a hit in the period of the write-down.

What happens in the periods after the write-down? For some companies, gross margins and bottom lines get a boost when they

sell inventory that had been written down in a previous period. For example, as the following table shows, **Vishay Intertechnology**, **Transwitch**, and **Cisco Systems** reported gains from selling inventory that had previously been written down. The table also evaluates how clearly these companies disclosed the effects of the reversal of inventory write-downs.

| Company | Gain from Reversal | Disclosure |
|-------------------------------|--------------------|--|
| Vishay Intertechnology | Not available | Poor—The semiconductor company did not mention the gain in its earnings announcement. Two weeks later in an SEC filing, Vishay disclosed the gain on the inventory that it had written down. |
| Transwitch | \$600,000 | Poor—The company did not mention the gain in its earnings announcement. Three weeks later in an SEC filing, the company disclosed the gain on the inventory that it had written down. |
| Cisco Systems | \$525 million | Good—The networking giant detailed in its earnings release and in SEC filings the gains from selling inventory it had previously written off. |

For Transwitch, the reversal of fortunes amounted to 23 percent of net income. The problem is that the \$600,000 credit had little to do with the company’s ongoing operations, and the company did not do a good job disclosing the effect of the reversal on current-year profitability.

Similar disclosure concerns arise as a number of retailers (e.g., **Nordstrom** and **Kohl’s**) have worked to trim inventory, helping them boost margins. However, lower inventory can make it more difficult for retailers to maximize sales. That, in turn, makes it tougher for them to cover the fixed costs of running stores and administrative expenses. Tight inventory can also mean selling out of a popular item. To the extent that lower inventory means less breadth of offering, it also puts more pressure on retailers to hit the right fashion notes (leading to discounting), causing a double hit to sales. As noted by one analyst, retailers “can get away with missing a few sales because

their gross margin rate has improved enough so that gross-margin dollars to offset them.” Indeed, some retailers that sell out of items are often tempted to order more, thinking they can sell it and boost profits. However, that incremental merchandise does not resonate or if consumers continue to wait for discounts, it could kick off another round of promotions. So a light inventory strategy can cut both ways, and investors may not be properly accounting for that risk.

Transparency of financial reporting should be a top priority. With better disclosure of the reversals and the effects of inventory trimming that boost profits in the current period, financial transparency would also get a boost.

Sources: S. E. Ante, “The Secret Behind Those Profit Jumps,” *Business-Week Online* (December 8, 2003); and M. Gottfried, “Lighter Inventory Boosts Retailers, for Now,” *Wall Street Journal* (November 13, 2016).

Other Valuation Approaches

LEARNING OBJECTIVE 3

Identify other inventory valuation issues.

Valuation at Net Realizable Value

As indicated in the prior section, companies record inventory at cost or at the LCNRV or lower-of-cost-or-market.² Under limited circumstances, support exists for **recording inventory at**

²Manufacturing companies frequently employ a **standardized cost system** that predetermines the unit costs for material, labor, and manufacturing overhead and values raw materials, work in process, and finished goods inventories at their standard costs. For financial reporting purposes, it is acceptable to price inventories at standard costs if there is no significant difference between the actual costs and standard costs. If there is a significant difference, companies should adjust the inventory amounts to actual cost. In *Accounting Research and Terminology Bulletin, Final Edition*, the profession notes that “**standard costs are acceptable if adjusted at reasonable intervals to reflect current conditions.**”

Burlington Industries and **Hewlett-Packard** use standard costs for valuing at least a portion of their inventories.

net realizable value, even if that amount is above cost. GAAP permits this exception to the normal recognition rule under the following conditions:

1. When there is a controlled market with a quoted price applicable to all quantities, *and*
2. When no significant costs of disposal are involved, *and*
3. The product is available for immediate delivery.

Global View

Similar to GAAP, certain agricultural products and mineral products can be reported at net realizable value using IFRS.

Until items of inventory meet the three NRV conditions, they are accounted for based on accumulated historical costs.³ For example, mining companies ordinarily report inventories of certain minerals (rare metals, especially) at selling prices because there is often a controlled market without significant costs of disposal. Similar treatment is given agricultural products (such as harvested crops or animals held-for-sale) that are immediately marketable at quoted prices (see **Global View**).

Another situation in which valuation at net realizable value is allowed is when it is difficult to obtain cost figures. For example, the accounting for inventory in a meat-packing plant presents a costing challenge. The “raw material” consists of cattle, each unit of which the company purchases as a whole and then divides into parts that are the products. Instead of one product out of many raw materials or parts, the meat-packing company makes many products from one “unit” of raw material. To allocate the cost of the animal “on the hoof” into the cost of ribs, chuck, and shoulders is a practical impossibility.

This costing situation is in stark contrast to a manufacturing plant, where the company combines various raw materials and purchased parts to create a finished product. The manufacturer can use the cost basis to account for various items in inventory because it knows the cost of each individual component part. Because of a peculiarity of the industry, meat-packing companies sometimes carry **inventories at sales price less distribution costs**. That is, it is much easier and more useful for the company to determine the market price of the various products and value them in the inventory at selling price less the various costs necessary to get them to market (costs such as shipping and handling).

Valuation Using Relative Sales Value

A special problem arises when a company buys a group of varying units in a single **lump-sum purchase**, also called a **basket purchase**. To illustrate, assume that Woodland Developers purchases land for \$1 million that it will subdivide into 400 lots. These lots are of different sizes and shapes but can be roughly sorted into three groups graded A, B, and C. As Woodland sells the lots, it apportions the purchase cost of \$1 million among the lots sold and the lots remaining on hand.

You might wonder why Woodland would not simply divide the total cost of \$1 million by 400 lots, to get a cost of \$2,500 for each lot. This approach would not recognize that the lots vary in size, shape, and attractiveness. Therefore, to accurately value each unit, the common and most logical practice is to allocate the total among the various units on the basis of their **relative sales value**.

Illustration 9.14 shows the allocation of relative sales value for the Woodland Developers example.

ILLUSTRATION 9.14

Allocation of Costs, Using Relative Sales Value

| Lots | Number of Lots | Sales Price per Lot | Total Sales Price | Relative Sales Price | Total Cost | Cost Allocated to Lots | Cost per Lot |
|------|----------------|---------------------|--------------------|----------------------|-------------|------------------------|--------------|
| A | 100 | \$10,000 | \$1,000,000 | 100/250 | \$1,000,000 | \$ 400,000 | \$4,000 |
| B | 100 | 6,000 | 600,000 | 60/250 | 1,000,000 | 240,000 | 2,400 |
| C | 200 | 4,500 | 900,000 | 90/250 | 1,000,000 | 360,000 | 1,800 |
| | | | <u>\$2,500,000</u> | | | <u>\$1,000,000</u> | |

Woodland determines the cost of lots sold and the gross profit, using the amounts given in the “Cost per Lot” column, as shown in **Illustration 9.15**.

³Companies that meet the three conditions for valuation at net realizable value (NRV) have an option to use either NRV or LCNRV. [4]

| Lots | Number of Lots Sold | Cost per Lot | Cost of Lots Sold | Sales | Gross Profit |
|------|---------------------|--------------|-------------------|--------------------|--------------------|
| A | 77 | \$4,000 | \$308,000 | \$ 770,000 | \$ 462,000 |
| B | 80 | 2,400 | 192,000 | 480,000 | 288,000 |
| C | 100 | 1,800 | 180,000 | 450,000 | 270,000 |
| | | | <u>\$680,000</u> | <u>\$1,700,000</u> | <u>\$1,020,000</u> |

ILLUSTRATION 9.15**Determination of Gross Profit, Using Relative Sales Value**

The ending inventory is therefore \$320,000 (\$1,000,000 – \$680,000).

Woodland also can compute this inventory amount another way. The ratio of cost to selling price for all the lots is \$1 million divided by \$2,500,000, or 40 percent. Accordingly, if the total sales price of lots sold is, say \$1,700,000, then the cost of the lots sold is 40 percent of \$1,700,000, or \$680,000. The inventory of lots on hand is then \$1 million less \$680,000, or \$320,000.

The petroleum industry widely uses the relative sales value method to value (at cost) the many products and by-products obtained from a barrel of crude oil.

Purchase Commitments—A Special Problem

In many lines of business, a company's survival and continued profitability depends on its having a sufficient stock of merchandise to meet customer demand. Consequently, it is quite common for a company to make **purchase commitments**, which are agreements to buy inventory weeks, months, or even years in advance. Generally, the seller retains title to the merchandise or materials covered in the purchase commitments. Indeed, the goods may exist only as natural resources as unplanted seed (in the case of agricultural commodities) or as work in process (in the case of a product).⁴

Usually, it is not necessary for the buyer to make any entries to reflect commitments for purchases of goods that the seller has not shipped. Ordinary orders, for which the buyer and seller will determine prices at the time of shipment and **which are subject to cancellation**, do not represent either an asset or a liability to the buyer. Therefore, the buyer need not record such purchase commitments or report them in the financial statements.

What happens, though, if a buyer enters into a formal, noncancelable purchase contract? Even then, the buyer recognizes no asset or liability at the date of inception, **because the contract is "executory" in nature**: Neither party has fulfilled its part of the contract. However, if material, the buyer should disclose such contract details in a note to its financial statements. **Illustration 9.16** shows an example of a purchase commitment disclosure.

Note 1: Contracts for the purchase of raw materials in 2020 have been executed in the amount of \$600,000. The market price of such raw materials on December 31, 2019, is \$640,000.

ILLUSTRATION 9.16**Disclosure of Purchase Commitment**

In the disclosure in Illustration 9.16, the contract price was less than the market price at the balance sheet date. **If the contract price is greater than the market price and the buyer expects that losses will occur when the purchase is effected, the buyer should recognize losses in the period during which such declines in market prices take place.** [5]⁵

⁴One study noted that about 30 percent of public companies have purchase commitments outstanding, with an estimated value of \$725 billion ("SEC Staff Report on Off-Balance Sheet Arrangements, Special Purpose Entities, and Related Issues," <http://www.sec.gov/news/studies/soxoffbalancerept.pdf>, June 2005). Purchase commitments are popular because the buyer can secure a supply of inventory at a known price. The seller also benefits in these arrangements by knowing how much to produce.

⁵There is a long-standing controversy on the accounting in this area. See, for example, Yuji Ijiri, *Recognition of Contractual Rights and Obligations*, Research Report (Stamford, Conn.: FASB, 1980), who argues that companies should capitalize firm purchase commitments. "Firm" means that it is unlikely that companies can avoid performance under the contract without a severe penalty.

Also, see Mahendra R. Gujarathi and Stanley F. Biggs, "Accounting for Purchase Commitments: Some Issues and Recommendations," *Accounting Horizons* (September 1988), pp. 75–78. They conclude, "Recording an asset and liability on the date of inception for the noncancelable purchase commitments is suggested as the first significant step towards alleviating the accounting problems associated with the issue. At year-end, the potential gains and losses should be treated as contingencies which provide a coherent structure for the reporting of such gains and losses."

Underlying Concepts

Reporting the loss is *conservative*. However, reporting the decline in market price is debatable because no asset is recorded. This area demonstrates the need for good definitions of assets and liabilities.

As an example, at one time many Northwest forest-product companies such as **Boise Cascade**, **Georgia-Pacific**, and **Weyerhaeuser** at one time signed long-term timber-cutting contracts with the **U.S. Forest Service**. These contracts required that the companies pay \$310 per thousand board feet for timber-cutting rights. Unfortunately, the market price for timber-cutting rights in the latter part of that year dropped to \$80 per thousand board feet. As a result, a number of these companies had long-term contracts that, if fulfilled, would result in substantial future losses (see **Underlying Concepts**).

To illustrate the accounting problem, assume that St. Regis Paper Co. signed timber-cutting contracts to be executed in 2021 at a price of \$10,000,000. Assume further that the market price of the timber cutting rights on December 31, 2020, dropped to \$7,000,000. St. Regis would make the following entry on December 31, 2020.

| | | |
|--|-----------|-----------|
| Unrealized Holding Gain or Loss—Income (Purchase Commitments) | 3,000,000 | |
| Estimated Liability on Purchase Commitments | | 3,000,000 |

St. Regis would report this unrealized holding loss in the income statement under “Other expenses and losses.” And because the contract is to be executed within the next fiscal year, St. Regis would report the Estimated Liability on Purchase Commitments in the current liabilities section on the balance sheet. When St. Regis cuts the timber at a cost of \$10 million, it would make the following entry.

| | | |
|---|-----------|------------|
| Purchases (Inventory) | 7,000,000 | |
| Estimated Liability on Purchase Commitments | 3,000,000 | |
| Cash | | 10,000,000 |

The result of the purchase commitment was that St. Regis paid \$10 million for a contract worth only \$7 million. It recorded the loss in the previous period—when the price actually declined.

If St. Regis can partially or fully recover the contract price before it cuts the timber, it reduces the Estimated Liability on Purchase Commitments. In that case, it then reports in the period of the price increase a resulting gain for the amount of the partial or full recovery. For example, Congress permitted some of the forest-products companies to buy out of their contracts at reduced prices in order to avoid potential bankruptcies. To illustrate, assume that Congress permitted St. Regis to reduce its contract price and therefore its commitment by \$1,000,000. The entry to record this transaction is as follows.

| | | |
|---|-----------|-----------|
| Estimated Liability on Purchase Commitments | 1,000,000 | |
| Unrealized Holding Gain or Loss— Income (Purchase Commitments) | | 1,000,000 |

If the market price at the time St. Regis cuts the timber is more than \$2,000,000 below the contract price, St. Regis will have to recognize an additional loss in the period of cutting and record the purchase at the lower-of-cost-or-market.

Are purchasers at the mercy of market price declines? Not totally. Purchasers can protect themselves against the possibility of market price declines of goods under contract by hedging. In **hedging**, the purchaser in the purchase commitment simultaneously enters into a contract in which it agrees to sell in the future the same quantity of the same (or similar) goods at a fixed price. Thus the company holds a *buy position* in a purchase commitment and a *sell position* in a futures contract in the same commodity. The purpose of the hedge is to offset the price risk of the buy and sell positions. The company will be better off under one contract by approximately (maybe exactly) the same amount by which it is worse off under the other contract.

For example, St. Regis Paper Co. could have hedged its purchase commitment contract with a futures contract for timber rights of the same amount. In that case, its loss of \$3,000,000 on the purchase commitment could have been offset by a \$3,000,000 gain on the futures contract.⁶

⁶Appendix 17A provides a complete discussion of hedging and the use of derivatives such as futures.

As easy as this makes it sound, accounting for purchase commitments is still unsettled and controversial. Some argue that companies should report purchase commitments as assets and liabilities at the time they sign the contract. Others believe that the present recognition at the delivery date is more appropriate. *FASB Concepts Statement No. 6* states, “a purchase commitment involves both an item that might be recorded as an asset and an item that might be recorded as a liability. That is, it involves both a right to receive assets and an obligation to pay. . . . If both the right to receive assets and the obligation to pay were recorded at the time of the purchase commitment, the nature of the loss and the valuation account that records it when the price falls would be clearly seen.” Although the discussion in *Concepts Statement No. 6* does not exclude the possibility of recording assets and liabilities for purchase commitments, it contains no conclusions or implications about whether companies should record them.⁷

The Gross Profit Method of Estimating Inventory

LEARNING OBJECTIVE 4

Determine ending inventory by applying the gross profit method.

Companies take a physical inventory to verify the accuracy of the perpetual inventory records or, if no records exist, to arrive at an inventory amount. Sometimes, however, taking a physical inventory is impractical. In such cases, companies use substitute measures to approximate inventory on hand.

One substitute method of verifying or determining the inventory amount is the **gross profit method** (also called the **gross margin method**). Auditors widely use this method in situations where they need only an estimate of the company’s inventory (e.g., interim reports). Companies also use this method when fire or other catastrophe destroys either inventory or inventory records. The gross profit method relies on three assumptions:

1. The beginning inventory plus purchases equal total goods to be accounted for.
2. Goods not sold must be on hand.
3. The sales, reduced to cost, deducted from the sum of the opening inventory plus purchases, equal ending inventory.

To illustrate, assume that Cetus Corp. has a beginning inventory of \$60,000 and purchases of \$200,000, both at cost. Sales at selling price amount to \$280,000. The gross profit on selling price is 30 percent.

Cetus applies the gross profit method as shown in **Illustration 9.17**.

| | | |
|---------------------------------------|---------------|------------------|
| Beginning inventory (at cost) | | \$ 60,000 |
| Purchases (at cost) | | <u>200,000</u> |
| Goods available (at cost) | | 260,000 |
| Sales (at selling price) | \$280,000 | |
| Less: Gross profit (30% of \$280,000) | <u>84,000</u> | |
| Sales (at cost) | | <u>196,000</u> |
| Approximate inventory (at cost) | | <u>\$ 64,000</u> |

ILLUSTRATION 9.17

Application of Gross Profit Method

The current period’s records contain all the information Cetus needs to compute inventory at cost, except for the gross profit percentage. Cetus determines the gross profit percentage

⁷“Elements of Financial Statements,” *Statement of Financial Accounting Concepts No. 6* (Stamford, Conn.: FASB, 1985), paras. 251–253.

by reviewing company policies or prior period records. In some cases, companies must adjust this percentage if they consider prior periods unrepresentative of the current period.⁸

Computation of Gross Profit Percentage

In most situations, the **gross profit percentage** is stated as a percentage of selling price. The previous illustration, for example, used a 30 percent gross profit on sales. Gross profit on selling price is the common method for quoting the profit for several reasons. (1) Most companies state goods on a retail basis, not a cost basis. (2) A profit quoted on selling price is lower than one based on cost. This lower rate gives a favorable impression to the consumer. (3) The gross profit based on selling price can never exceed 100 percent.⁹

In Illustration 9.17, the gross profit was a given. But how did Cetus derive that figure? To see how to compute a gross profit percentage, assume that an article cost \$15 and sells for \$20, a gross profit of \$5. As shown in the computations in **Illustration 9.18**, this markup is ¼ or 25 percent of retail, and 1/3 or, 33⅓ percent of cost.

ILLUSTRATION 9.18
Computation of Gross Profit Percentage

| | |
|---|--|
| $\frac{\text{Markup}}{\text{Retail}} = \frac{\$5}{\$20} = 25\% \text{ at retail}$ | $\frac{\text{Markup}}{\text{Cost}} = \frac{\$5}{\$15} = 33\frac{1}{3}\% \text{ on cost}$ |
|---|--|

Although companies normally compute the gross profit on the basis of selling price, you should understand the basic relationship between markup on cost and markup on selling price. For example, assume that a company marks up a given item by 25 percent. What, then, is the **gross profit on selling price**? To find the answer, assume that the item sells for \$1. In this case, the following formula applies.

$$\text{Cost} + \text{Gross profit} = \text{Selling price}$$

$$\begin{aligned} C + .25C &= SP \\ (1 + .25)C &= SP \\ 1.25C &= \$1.00 \\ C &= \$0.80 \end{aligned}$$

The gross profit equals \$0.20 (\$1.00 – \$0.80). The rate of gross profit on selling price is therefore 20 percent (\$0.20/\$1.00).

⁸An alternative method of estimating inventory using the gross profit percentage is considered by some to be less complicated than the traditional method. This alternative method uses the standard income statement format as follows. (Assume the same data as in the Cetus example above.)

| Relationships | | Solution |
|-----------------------------|----------------|------------------------|
| Sales revenue | | \$280,000 |
| Cost of sales | | \$280,000 |
| Beginning inventory | \$ 60,000 | \$ 60,000 |
| Purchases | <u>200,000</u> | <u>200,000</u> |
| Goods available for sale | 260,000 | 260,000 |
| Ending inventory | <u>(3) ?</u> | <u>(3) 64,000 Est.</u> |
| Cost of goods sold | (2) ? | (2) 196,000 Est. |
| Gross profit on sales (30%) | (1) ? | (1) 84,000 Est. |

Compute the unknowns as follows: first the gross profit amount, then cost of goods sold, and finally the ending inventory, as shown below.

- (1) $\$280,000 \times .30 = \$84,000$ (gross profit on sales).
- (2) $\$280,000 - \$84,000 = \$196,000$ (cost of goods sold).
- (3) $\$260,000 - \$196,000 = \$64,000$ (ending inventory).

⁹The terms *gross margin percentage*, *rate of gross profit*, and *percentage markup* are synonymous, although companies more commonly use *markup* in reference to cost and *gross profit* in reference to sales.

Conversely, assume that the gross profit on selling price is 20 percent. What is the **markup on cost**? To find the answer, again assume that the item sells for \$1. Again, the same formula holds:

$$\begin{aligned} \text{Cost} + \text{Gross profit} &= \text{Selling price} \\ C + .20SP &= SP \\ C &= (1 - .20)SP \\ C &= .80SP \\ C &= .80(\$1.00) \\ C &= \$0.80 \end{aligned}$$

As in the previous example, the markup equals \$0.20 (\$1.00 – \$0.80). The markup on cost is 25 percent (\$0.20/\$0.80).

Retailers use the formulas shown in **Illustration 9.19** to express these relationships.

| |
|---|
| <p>1. Gross Profit on Selling Price = $\frac{\text{Percentage Markup on Cost}}{100\% + \text{Percentage Markup on Cost}}$</p> <p>2. Percentage Markup on Cost = $\frac{\text{Gross Profit on Selling Price}}{100\% - \text{Gross Profit on Selling Price}}$</p> |
|---|

ILLUSTRATION 9.19

Formulas Relating to Gross Profit

To understand how to use these formulas, consider their application in the calculations shown in **Illustration 9.20**.

| Gross Profit on Selling Price | | Percentage Markup on Cost |
|--|---|--|
| Given: 20% | → | $\frac{.20}{1.00 - .20} = 25\%$ |
| Given: 25% | → | $\frac{.25}{1.00 - .25} = 33\frac{1}{3}\%$ |
| $\frac{.25}{1.00 + .25} = 20\%$ | ← | Given: 25% |
| $\frac{.50}{1.00 - .50} = 33\frac{1}{3}\%$ | ← | Given: 50% |

ILLUSTRATION 9.20

Application of Gross Profit Formulas

Because selling price exceeds cost and with the gross profit amount being the same for both, **gross profit on selling price will always be less than the related percentage based on cost**. Note that companies do not multiply sales by a cost-based markup percentage. Instead, they must convert the gross profit percentage to a percentage based on selling price.

Evaluation of Gross Profit Method

Illustration 9.21 summarizes the three main disadvantages of the gross profit method.

| Major Disadvantage | Result |
|---|---|
| 1. It is an estimate. | Companies must take a physical inventory once a year to verify the inventory. |
| 2. It generally relies on past percentages in determining the markup. | Although the past often provides answers to the future, a current rate is more appropriate. Note that whenever significant fluctuations occur, companies should adjust the percentage as appropriate. |
| 3. Care must be exercised when applying a blanket gross profit rate when there are varying gross profits. | Frequently, a store or department handles merchandise with widely varying rates of gross profit. In these situations, the company may need to apply the gross profit method by subsections, lines of merchandise, or a similar basis that classifies merchandise according to their respective rates of gross profit. |

ILLUSTRATION 9.21

Disadvantages of Gross Profit Method

The gross profit method is normally unacceptable for financial reporting purposes because it provides only an estimate. GAAP requires a physical inventory as additional verification of the inventory indicated in the records. Nevertheless, GAAP permits the gross profit method to determine ending inventory for interim (generally quarterly) reporting purposes, provided a company discloses the use of this method. Note that the gross profit method will follow closely the inventory method used (FIFO, LIFO, average-cost) because it relies on historical records.

What Do the Numbers Mean? The Squeeze

Managers and analysts closely follow gross profits. A small change in the gross profit rate can significantly affect the bottom line. At one time, **Apple** suffered a textbook case of shrinking gross profits. In response to pricing wars in the personal computer market, Apple had to reduce prices more quickly than it could reduce its costs. As a result, gross profit declined and so did its stock price. However, times are now changing. Apple's stock price is increasing, and one of the key drivers behind the high stock valuations is Apple's improved gross profit. Perhaps this is not so surprising when you consider the success of its iPhone, its upgrades, and the Apple watch!

Here are two other examples of how gross profit and stock price are very much correlated. **Nike**—the largest global manufacturer of athletic footwear—at one time reported earnings that

indicated falling gross profit, leading market analysts to adjust Nike's stock price downward. The cause—continuing downward pressure on its gross profit. On the positive side, an increase in the gross profit rate provides a positive signal to the market. For example, just a 1 percent boost in **Dr. Pepper**'s gross profit rate cheered the market, indicating the company was able to avoid the squeeze of increased commodity costs by raising its prices.

Retail Inventory Method

LEARNING OBJECTIVE 5

Determine ending inventory by applying the retail inventory method.

Accounting for inventory in a retail operation presents several challenges. Retailers with certain types of inventory may use the specific identification method to value their inventories. Such an approach makes sense when a retailer holds significant individual inventory units, such as automobiles, pianos, or fur coats. However, imagine attempting to use such an approach at **Target**, **Home Depot**, **Sears Holdings**, or **Bloomingdale's**—high-volume retailers that have many different types of merchandise. It would be extremely difficult to determine the cost of each sale, to enter cost codes on the tickets, to change the codes to reflect declines in value of the merchandise, to allocate costs such as transportation, and so on.

An alternative is to compile the inventories at retail prices. For most retailers, an observable pattern between cost and price exists. The retailer can then use a formula to convert retail prices to cost. This method is called the **retail inventory method**. **It requires that the retailer keep a record of (1) the total cost and retail value of goods purchased, (2) the total cost and retail value of the goods available for sale, and (3) the sales for the period.** Use of the retail inventory method is very common. For example, **Safeway** supermarkets, **Target**, **Wal-Mart**, and **Best Buy** use the retail inventory method.

Here is how it works at a company like **Best Buy**. Beginning with the retail value of the goods available for sale, Best Buy deducts the sales revenue for the period. This calculation determines an estimated inventory (goods on hand) at retail. It next computes the **cost-to-retail ratio** for all goods. The formula for this computation is to divide the total goods available for sale at cost by the total goods available at retail price. Finally, to obtain ending inventory at cost, Best Buy applies the cost-to-retail ratio to the ending inventory valued at retail. **Illustration 9.22** shows the retail inventory method calculations for Best Buy (assumed data).

ILLUSTRATION 9.22

Retail Inventory Method

| Best Buy (current period) | | |
|--|-----------------|------------------|
| | Cost | Retail |
| Beginning inventory | \$14,000 | \$ 20,000 |
| Purchases | 63,000 | 90,000 |
| Goods available for sale | <u>\$77,000</u> | 110,000 |
| Deduct: Sales revenue | | 85,000 |
| Ending inventory, at retail | | <u>\$ 25,000</u> |
| Cost-to-retail ratio ($\$77,000 \div \$110,000$) = 70% Ending inventory at cost (70% of \$25,000) = <u>\$17,500</u> | | |

There are different versions of the retail inventory method. These include the **conventional** method (based on lower-of-average-cost-or-market), the **cost** method, the **LIFO retail** method, and the **dollar-value LIFO** retail method. Regardless of which version a company uses, the IRS, various retail associations, and the accounting profession all sanction use of the retail inventory method. One of its advantages is that a company like Best Buy can approximate the inventory balance **without a physical count**. However, to avoid a potential overstatement of the inventory, Target makes periodic inventory counts. Such counts are especially important in retail operations where loss due to shoplifting or breakage is common.

The retail inventory method is particularly useful for any type of **interim report** because such reports usually need a fairly quick and reliable measure of the inventory. Also, similar to use of the gross profit method, insurance adjusters often use this method to **estimate losses** from fire, flood, or other type of casualty. This method also acts as a **control device** because a company will have to explain any deviations from a physical count at the end of the year. Finally, the retail method **expedites the physical inventory count** at the end of the year. The crew taking the physical inventory need record only the retail price of each item. The crew does not need to look up each item's invoice cost, thereby saving time and expense.

Retail-Method Concepts

The amounts shown in the "Retail" column of Illustration 9.22 represent the original retail prices, assuming no price changes. In practice, though, retailers frequently mark up or mark down the prices they charge buyers.

For retailers, the term **markup** means an additional markup of the original retail price. (In another context, such as the earlier gross profit discussion, we often think of markup on the basis of cost.) **Markup cancellations** are decreases in prices of merchandise that the retailer had marked up above the original retail price.

In a competitive market, retailers often need to use **markdowns**, which are decreases in the original sales prices. Such cuts in sales prices may be necessary because of a decrease in the general level of prices, special sales, soiled or damaged goods, overstocking, and market competition. Markdowns are common in retailing these days. **Markdown cancellations** occur when the markdowns are later offset by increases in the prices of goods that the retailer had marked down—such as after a one-day sale, for example. Neither a markup cancellation nor a markdown cancellation can exceed the original markup or markdown.

To illustrate these concepts, assume that Designer Clothing Store recently purchased 100 dress shirts from Marroway, Inc. The cost for these shirts was \$1,500, or \$15 a shirt. Designer Clothing established the selling price on these shirts at \$30 a shirt. The shirts were selling quickly in anticipation of Father's Day, so the manager added a markup of \$5 per shirt. This markup made the price too high for customers, and sales slowed. The manager then reduced the price to \$32. At this point we would say that the shirts at Designer Clothing have had a markup of \$5 and a markup cancellation of \$3.

Right after Father's Day, the manager marked down the remaining shirts to a sale price of \$23. At this point, an additional markup cancellation of \$2 has taken place, and a \$7 markdown has occurred. If the manager later increases the price of the shirts to \$24, a markdown cancellation of \$1 would occur.

Retail Inventory Method with Markups and Markdowns—Conventional Method

Retailers use markup and markdown concepts in developing the proper inventory valuation at the end of the accounting period. To obtain the appropriate inventory figures, companies must give proper treatment to markups, markup cancellations, markdowns, and markdown cancellations.

To illustrate the different possibilities, consider the data for In-Fusion Inc., shown in **Illustration 9.23**. In-Fusion can calculate its ending inventory at cost under two assumptions, A and B. (We'll explain the reasons for the two later.)

ILLUSTRATION 9.23

Retail Inventory Method with Markups and Markdowns

| | Cost | Retail |
|------------------------|--------|----------|
| Beginning inventory | \$ 500 | \$ 1,000 |
| Purchases (net) | 20,000 | 35,000 |
| Markups | | 3,000 |
| Markup cancellations | | 1,000 |
| Markdowns | | 2,500 |
| Markdown cancellations | | 2,000 |
| Sales (net) | | 25,000 |

| In-Fusion Inc. | | |
|--------------------------------|---|------------------------|
| | Cost | Retail |
| Beginning inventory | \$ 500 | \$ 1,000 |
| Purchases (net) | <u>20,000</u> | <u>35,000</u> |
| Merchandise available for sale | 20,500 | 36,000 |
| Add: Markups | | \$3,000 |
| Less: Markup cancellations | | <u>1,000</u> |
| Net markups | | <u>2,000</u> |
| | <u>20,500</u> | <u>38,000</u> |
| (A) | Cost-to-retail ratio = $\frac{\\$20,500}{\\$38,000} = 53.9\%$ | |
| Deduct: | | |
| Markdowns | | 2,500 |
| Markdown cancellations | | <u>(2,000)</u> |
| Net markdowns | | <u>500</u> |
| | <u><u>\$20,500</u></u> | <u><u>37,500</u></u> |
| (B) | Cost-to-retail ratio = $\frac{\\$20,500}{\\$37,500} = 54.7\%$ | |
| Deduct: Sales (net) | | <u>25,000</u> |
| Ending inventory at retail | | <u><u>\$12,500</u></u> |

Assumption A: Computes a cost ratio after markups (and markup cancellations) but before markdowns.

Assumption B: Computes a cost ratio after both markups and markdowns (and cancellations).

The computations for In-Fusion are:

Ending inventory at retail × Cost ratio = Value of ending inventory

Assumption **A**: $\$12,500 \times .539 = \$6,737.50$

Assumption **B**: $\$12,500 \times .547 = \$6,837.50$

The question becomes: Which assumption and which percentage should In-Fusion use to compute the ending inventory valuation? The answer depends on which retail inventory method In-Fusion chooses.

One approach uses only assumption A (a cost ratio using markups but not markdowns). It approximates the lower-of-average-cost-or-market. We will refer to this approach as the **conventional retail inventory method** or the **lower-of-cost-or-market approach**.¹⁰

To understand why this method considers only the markups, not the markdowns, in the cost percentage, you must understand how a retail business operates. A markup normally indicates an increase in the market value of the item. On the other hand, a markdown means a decline in the utility of that item. Therefore, to approximate the lower-of-cost-or-market, we would consider markdowns a current loss and so would not include them in calculating the cost-to-retail ratio. Omitting the markdowns would make the cost-to-retail ratio lower, which leads to an approximate lower-of-cost-or-market.

An example will make the distinction between the two methods clear. In-Fusion purchased two items for \$5 apiece; the original sales price was \$10 each. One item was subsequently written down to \$2. Assuming no sales for the period, if **markdowns are considered** in the cost-to-retail ratio (assumption B—the **cost method**), we compute the ending inventory as shown in **Illustration 9.24**.

| Markdowns Included in Cost-to-Retail Ratio | | |
|--|------|-------------|
| | Cost | Retail |
| Purchases | \$10 | \$20 |
| Deduct: Markdowns | | 8 |
| Ending inventory, at retail | | <u>\$12</u> |
| $\text{Cost-to-retail ratio} = \frac{\$10}{\$12} = 83.3\%$ | | |
| $\text{Ending inventory at cost } (\$12 \times .833) = \$10$ | | |

ILLUSTRATION 9.24**Retail Inventory Method Including Markdowns—Cost Method**

This approach (the cost method) reflects an **average cost** of the two items of the commodity without considering the loss on the one item. It values ending inventory at \$10.

If **markdowns are not considered** in the cost-to-retail ratio (assumption A—the **conventional retail method**), we compute the ending inventory as shown in **Illustration 9.25**.

| Markdowns Not Included in Cost-to-Retail Ratio | | |
|--|------|-------------|
| | Cost | Retail |
| Purchases | \$10 | \$20 |
| $\text{Cost-to-retail ratio} = \frac{\$10}{\$20} = 50\%$ | | |
| Deduct: Markdowns | | 8 |
| Ending inventory, at retail | | <u>\$12</u> |
| $\text{Ending inventory at cost } (\$12 \times .50) = \$6$ | | |

ILLUSTRATION 9.25**Retail Inventory Method Excluding Markdowns—Conventional Method (LCM)**

Under this approach (the conventional retail method, in which markdowns are **not considered**), ending inventory would be \$6. The inventory valuation of \$6 reflects two inventory items, one inventoried at \$5 and the other at \$1. It reflects the fact that In-Fusion reduced the sales price from \$10 to \$2, and reduced the cost from \$5 to \$1.¹¹

To approximate the lower-of-cost-or-market, In-Fusion must establish the **cost-to-retail ratio**. It does this by dividing the cost of goods available for sale by the sum of the original retail price of these goods plus the net markups. This calculation excludes markdowns and markdown cancellations. **Illustration 9.26** shows the basic format for the retail inventory method using the lower-of-cost-or-market approach along with the In-Fusion Inc. information.

¹⁰This explains part of the rationale for the previously discussed exception to LCM for companies that use the retail inventory method.

¹¹This figure is not really market (replacement cost), but it is net realizable value less the normal margin that is allowed. In other words, the sale price of the goods written down is \$2, but subtracting a normal margin of 50 percent (\$5 cost, \$10 price), the figure becomes \$1.

ILLUSTRATION 9.26
**Comprehensive Conventional
 Retail Inventory Method
 Format**

| In-Fusion Inc. | | |
|--------------------------------|-----------------|-----------------|
| | Cost | Retail |
| Beginning inventory | \$ 500 | \$ 1,000 |
| Purchases (net) | 20,000 | 35,000 |
| Totals | <u>20,500</u> | <u>36,000</u> |
| Add: Net markups | | |
| Markups | | \$3,000 |
| Markup cancellations | | <u>1,000</u> |
| Totals | <u>\$20,500</u> | <u>38,000</u> |
| Deduct: Net markdowns | | |
| Markdowns | | 2,500 |
| Markdown cancellations | | <u>2,000</u> |
| Sales price of goods available | | 37,500 |
| Deduct: Sales (net) | | <u>25,000</u> |
| Ending inventory, at retail | | <u>\$12,500</u> |

$$\text{Cost-to-retail ratio} = \frac{\text{Cost of goods available}}{\text{Original retail price of goods available, plus net markups}}$$

$$= \frac{\$20,500}{\$38,000} = 53.9\%$$

$$\text{Ending inventory at lower-of-cost-or-market } (.539 \times \$12,500) = \underline{\underline{\$6,737.50}}$$

Because an averaging effect occurs, an exact lower-of-cost-or-market inventory valuation is ordinarily not obtained, but an adequate approximation can be achieved. In contrast, adding net markups and deducting net markdowns yields **approximate cost**.

Special Items Relating to Retail Method

The retail inventory method becomes more complicated when we consider such items as freight-in, purchase returns and allowances, and purchase discounts. In the retail method, we treat such items as follows.

- **Freight costs** are part of the purchase cost.
- **Purchase returns** are ordinarily considered as a reduction of the price at both cost and retail.
- **Purchase discounts and allowances** usually are considered as a reduction of the cost of purchases.

In short, the treatment for the items affecting the cost column of the retail inventory approach follows the computation for cost of goods available for sale.¹²

Note also that **sales returns and allowances** are considered as proper adjustments to gross sales. However, when sales are recorded gross, companies do not recognize **sales discounts**. To adjust for the sales discount account in such a situation would provide an ending inventory figure at retail that would be overvalued.

In addition, a number of special items require careful analysis:

- **Transfers-in** from another department are reported in the same way as purchases from an outside company.
- **Normal shortages** (breakage, damage, theft, shrinkage) should reduce the retail column because these goods are no longer available for sale. Such costs are reflected in the selling price because a certain amount of shortage is considered normal in a retail

¹²When the purchase allowance is not reflected by a reduction in the selling price, no adjustment is made to the retail column.

enterprise. As a result, companies do not consider this amount in computing the cost-to-retail percentage. Rather, to arrive at ending inventory at retail, they show normal shortages as a deduction similar to sales.

- **Abnormal shortages**, on the other hand, are deducted from both the cost and retail columns and reported as a special inventory amount or as a loss. To do otherwise distorts the cost-to-retail ratio and overstates ending inventory.
- **Employee discounts** (given to employees to encourage loyalty, better performance, and so on) are deducted from the retail column in the same way as sales. These discounts should not be considered in the cost-to-retail percentage because they do not reflect an overall change in the selling price.¹³

Illustration 9.27 shows some of these concepts. The company, Extreme Sport Apparel, determines its inventory using the conventional retail inventory method.

| Extreme Sport Apparel | | |
|--|-----------------|-----------------|
| | Cost | Retail |
| Beginning inventory | \$ 1,000 | \$ 1,800 |
| Purchases | 30,000 | 60,000 |
| Freight-in | 600 | — |
| Purchase returns | (1,500) | (3,000) |
| Totals | 30,100 | 58,800 |
| Net markups | | 9,000 |
| Abnormal shortage | (1,200) | (2,000) |
| Totals | <u>\$28,900</u> | ↔ 65,800 |
| Deduct: | | |
| Net markdowns | | 1,400 |
| Sales revenue | \$36,000 | |
| Sales returns | (900) | 35,100 |
| Employee discounts | | 800 |
| Normal shortage | | 1,300 |
| | | <u>\$27,200</u> |
| Cost-to-retail ratio = $\frac{\$28,900}{\$65,800} = 43.9\%$ | | |
| Ending inventory at lower-of-cost-or-market (.439 × \$27,200) = <u>\$11,940.80</u> | | |

ILLUSTRATION 9.27

Conventional Retail Inventory Method—Special Items Included

Evaluation of Retail Inventory Method

Companies like **Gap Inc.**, **Home Depot**, or your local department store use the retail inventory method of computing inventory for the following reasons: (1) to permit the computation of net income without a physical count of inventory, (2) as a control measure in determining inventory shortages, (3) in regulating quantities of merchandise on hand, and (4) for insurance information.

One characteristic of the retail inventory method is that it **has an averaging effect on varying rates of gross profit**. This can be problematic when companies apply the method to an entire business, where rates of gross profit vary among departments. There is no allowance for possible distortion of results because of such differences. Companies refine the retail method under such conditions by computing inventory separately by departments or by classes of merchandise with similar gross profits. In addition, the reliability of this method assumes that the distribution of items in inventory is similar to the “mix” in the total goods available for sale.

¹³Note that if employee sales are recorded gross, no adjustment is necessary for employee discounts in the retail column.

What Do the Numbers Mean? Mark Me

As popular as the retail method might seem, not all retailers use it. And that could create some challenges for investors. The challenge arises from the differences in the treatment of markdowns under the cost and retail methods. Under the cost method, markdowns are not recorded until merchandise is sold. In contrast, under the retail method, markdowns are recorded immediately (reflected in the cost-to-retail ratio). Depending on the method used, the timing of when the markdown affects cost of goods sold (and gross margin) varies. So for a cost-method retailer with a lot of clearance items sitting on the shelves, the effect of a markdown will not hit income until, say, the fourth quarter when the goods

are sold at the discounted price. Under the retail method, the margin hit happens right away. Many specialty retailers such as **Abercrombie & Fitch**, **Michael Kors**, and **L Brands** use the cost method. While department stores such as **TJX Companies**, **J.C. Penney**, and **Macy's** tend to use the retail method. So investors who want to make valid comparisons need to be tuned into the use of retail or cost methods, even for companies in the same industry. Read those footnotes!

Presentation and Analysis

LEARNING OBJECTIVE 6

Explain how to report and analyze inventory.

Presentation of Inventories

Accounting standards require financial statement disclosure of the composition of the inventory, inventory financing arrangements, and the inventory costing methods employed. The standards also require the consistent application of costing methods from one period to another.

Manufacturers should report the inventory composition either in the balance sheet or in a separate schedule in the notes. The relative mix of raw materials, work in process, and finished goods helps in assessing liquidity and in computing the stage of inventory completion.

Significant or unusual financing arrangements relating to inventories may require note disclosure. Examples include transactions with related parties, product financing arrangements, firm purchase commitments, involuntary liquidation of LIFO inventories, and pledging of inventories as collateral. Companies should present inventories pledged as collateral for a loan in the current assets section rather than as an offset to the liability.

A company should also report the basis on which it states inventory amounts (e.g., lower-of-cost-or-market) and the method used in determining cost (LIFO, FIFO, average-cost, etc.). For example, the annual report (adapted) of **Mumford of Wyoming** contains the disclosures shown in **Illustration 9.28**.

ILLUSTRATION 9.28

Disclosure of Inventory Methods

Mumford of Wyoming

Note A: Significant Accounting Policies

| | |
|---|-------------|
| Live feeder cattle and feed—last-in, first-out (LIFO) cost, which is below approximate market | \$854,800 |
| Live range cattle—lower of principally identified cost or market | \$1,240,500 |
| Live sheep and supplies—lower of first-in, first-out (FIFO) cost or net realizable value | \$674,000 |
| Dressed meat and by-products—principally at market less allowances for distribution and selling expenses | \$362,630 |

Illustration 9.28 shows that a company can use different costing methods for different elements of its inventory. If Mumford changes the method of costing any of its inventory elements, it must report a change in accounting principle. For example, if Mumford changes its method of accounting for live sheep from FIFO to average-cost, it should separately report this change, along with the effect on income, in the current and prior periods. Changes in accounting principle require an explanatory paragraph in the auditor's report describing the change in method.

Fortune Brands, Inc. reported its inventories in its annual report (adapted) as shown in **Illustration 9.29** (note the "trade practice" followed in classifying inventories among the current assets).

| Fortune Brands, Inc. | |
|--|------------------|
| Current assets | |
| (in millions) | December 31 |
| Inventories | |
| Maturing spirits | \$1,243.0 |
| Other raw materials, supplies and work in process | 322.7 |
| Finished products | 450.9 |
| Total inventories | <u>\$2,016.6</u> |
| Significant Accounting Policies (in part) | |
| <p>Inventories The first-in, first-out (FIFO) inventory method is our principal inventory method across all segments. In accordance with generally recognized trade practice, maturing spirits inventories are classified as current assets, although the majority of these inventories ordinarily will not be sold within one year, due to the duration of aging processes. Inventory provisions are recorded to reduce inventory to the lower of cost or net realizable value for obsolete or slow moving inventory based on assumptions about future demand and marketability of products, the impact of new product introductions, inventory turns, product spoilage and specific identification of items, such as product discontinuance or engineering/material changes.</p> | |

ILLUSTRATION 9.29**Disclosure of Trade Practice
in Valuing Inventories**

Analysis of Inventories

As our opening story illustrates, the amount of inventory that a company carries can have significant economic consequences. As a result, companies must manage inventories. But, inventory management is a double-edged sword. It requires constant attention. On the one hand, management wants to stock a great variety and quantity of items. Doing so will provide customers with the greatest selection. However, such an inventory policy may incur excessive carrying costs (e.g., investment, storage, insurance, taxes, obsolescence, and damage). On the other hand, low inventory levels lead to stockouts, lost sales, and disgruntled customers.

Using financial ratios helps companies to chart a middle course between these two dangers. Common ratios used in the management and evaluation of inventory levels are inventory turnover and a related measure, average days to sell inventory.

Inventory Turnover

The **inventory turnover** measures the number of times on average a company sells the inventory during the period. It measures the liquidity of the inventory. To compute inventory turnover, divide the cost of goods sold by the average inventory on hand during the period.

Barring seasonal factors, analysts compute average inventory from beginning and ending inventory balances. For example, in its 2017 annual report **Kellogg Company** reported a beginning inventory of \$1,238 million, an ending inventory of \$1,217 million, and cost of goods sold of \$7,901 million for the year. **Illustration 9.30** shows the inventory turnover formula and Kellogg Company's 2017 ratio computation.

$$\frac{\text{Cost of Goods Sold}}{\text{Average Inventory}} = \text{Inventory Turnover}$$

$$\frac{\$7,901}{(\$1,217 + \$1,238)/2} = 6.44 \text{ times}$$

ILLUSTRATION 9.30**Inventory Turnover**

Average Days to Sell Inventory

A variant of the inventory turnover is the **average days to sell inventory**. This measure represents the average number of days' sales for which a company has inventory on hand. For example, the inventory turnover for **Kellogg Company** of 6.44 times divided into 365 is approximately 56.7 days.

There are typical levels of inventory in every industry. However, companies that keep their inventory at lower levels with higher turnovers than those of their competitors, and that still can satisfy customer needs, are the most successful.

APPENDIX 9A

LIFO Retail Methods

LEARNING OBJECTIVE *7

Determine ending inventory by applying the LIFO retail methods.

A number of retail establishments have changed from the more conventional treatment to a **LIFO retail method**. For example, the world's largest retailer, **Wal-Mart Stores, Inc.**, uses the LIFO retail method. The primary reason to do so is for the tax advantages associated with valuing inventories on a LIFO basis. In addition, adoption of LIFO results in a better matching of costs and revenues.

The use of LIFO retail is made under two assumptions: (1) stable prices and (2) fluctuating prices.

Stable Prices—LIFO Retail Method

It is much more complex to compute the final inventory balance using a LIFO flow than using the conventional retail method. Under the LIFO retail method, companies like **Wal-Mart** or **Target** consider **both markups and markdowns** in obtaining the proper cost-to-retail percentage. Furthermore, since the LIFO method is concerned only with the additional layer, or the amount that should be subtracted from the previous layer, the beginning inventory is excluded from the cost-to-retail percentage.

A major assumption of the LIFO retail method is that the markups and markdowns apply only to the goods purchased during the current period and not to the beginning inventory. This assumption is debatable and may explain why some companies do not adopt this method.

Illustration 9A.1 presents the major concepts involved in the LIFO retail method applied to the Hernandez Company. Note that, to simplify the accounting, we have assumed that the price level has remained unchanged.

ILLUSTRATION 9A.1

LIFO Retail Method—Stable Prices

| | Cost | Retail |
|--|------------------|------------------|
| Beginning inventory—2020 | \$ 27,000 | \$ 45,000 |
| Net purchases during the period | 346,500 | 480,000 |
| Net markups | | 20,000 |
| Net markdowns | | (5,000) |
| Total (excluding beginning inventory) | 346,500 ↔ | 495,000 |
| Total (including beginning inventory) | <u>\$373,500</u> | 540,000 |
| Net sales during the period | | (484,000) |
| Ending inventory at retail | | <u>\$ 56,000</u> |
| Establishment of cost-to-retail percentage under assumptions of LIFO retail ($\$346,500 \div \$495,000$) = <u>70%</u> | | |

Illustration 9A.2 indicates that the inventory is composed of two layers: the beginning inventory and the additional increase that occurred in the inventory this period (2020). When we start the next period (2021), the beginning inventory will be composed of those two layers. If an increase in inventory occurs again, an additional layer will be added.

| Ending Inventory at Retail Prices—2020 | Layers at Retail Prices | Cost-to-Retail | Ending Inventory at LIFO Cost |
|--|-------------------------|---|-------------------------------|
| \$56,000 | 2019 \$45,000 | × .60 = | \$27,000 |
| | 2020 11,000 | × .70 = | 7,700 |
| | <u>\$56,000</u> | | <u>\$34,700</u> |
| | | *\$27,000 (prior year's cost-to-retail) \$45,000 | |

ILLUSTRATION 9A.2

Ending Inventory at LIFO Cost, 2020—Stable Prices

However, if the final inventory figure is below the beginning inventory, Hernandez must reduce the beginning inventory starting with the most recent layer. For example, assume that the ending inventory for 2021 at retail is \$50,000. **Illustration 9A.3** shows the computation of the ending inventory at cost. Notice that the 2020 layer is reduced from \$11,000 to \$5,000.

| Ending Inventory at Retail Prices—2021 | Layers at Retail Prices | Cost-to-Retail | Ending Inventory at LIFO Cost |
|--|-------------------------|----------------|-------------------------------|
| \$50,000 | 2019 \$45,000 | × .60 = | \$27,000 |
| | 2020 5,000 | × .70 = | 3,500 |
| | <u>\$50,000</u> | | <u>\$30,500</u> |

ILLUSTRATION 9A.3

Ending Inventory at LIFO Cost, 2021—Stable Prices

Fluctuating Prices—Dollar-Value LIFO Retail Method

The previous example simplified the LIFO retail method by ignoring changes in the selling price of the inventory. Let us now assume that a change in the price level of the inventories occurs (as is usual). If the price level does change, the company must **eliminate the price change** so as to measure the real increase in inventory, not the dollar increase. This approach is referred to as the **dollar-value LIFO retail method**.

To illustrate, assume that the beginning inventory had a retail market value of \$10,000 and the ending inventory had a retail market value of \$15,000. Assume further that the price level has risen from 100 to 125. It is inappropriate to suggest that a real increase in inventory of \$5,000 has occurred. Instead, the company must deflate the ending inventory at retail, as the computation in **Illustration 9A.4** shows.

| | | |
|--|-----------------|-----------------|
| Ending inventory at retail (deflated) ($\$15,000 \div 1.25^*$) | \$12,000 | |
| Beginning inventory at retail | <u>10,000</u> | |
| Real increase in inventory at retail | <u>\$ 2,000</u> | |
| Ending inventory at retail on LIFO basis: | | |
| First layer | \$10,000 | |
| Second layer ($\$2,000 \times 1.25$) | <u>2,500</u> | <u>\$12,500</u> |
| *1.25 = $125 \div 100$ | | |

ILLUSTRATION 9A.4

Ending Inventory at Retail—Deflated and Restated

This approach is essentially the dollar-value LIFO method discussed in Chapter 8. In computing the LIFO inventory under a dollar-value LIFO approach, the company finds the dollar increase in inventory and deflates it to beginning-of-the-year prices. This indicates whether actual increases or decreases in quantity have occurred. If an increase in quantities occurs, the company prices this increase at the new index, in order to compute the value of the new layer. If a decrease in quantities happens, the company subtracts the decrease from the most recent layers to the extent necessary.

The following computations, based on those in Illustration 9A.1 for Hernandez Company, illustrate the differences between the dollar-value LIFO retail method and the regular LIFO retail approach. Assume that the current 2020 price index is 112 (prior year = 100) and that the inventory (\$56,000) has remained unchanged. In comparing Illustration 9A.1 with **Illustration 9A.5**, note that the computations involved in finding the cost-to-retail percentage are exactly the same. However, the dollar-value method determines the increase that has occurred in the inventory in terms of base-year prices.

ILLUSTRATION 9A.5
Dollar-Value LIFO Retail Method—Fluctuating Prices

| | Cost | Retail |
|---|----------------|-----------------|
| Beginning inventory—2020 | \$ 27,000 | \$ 45,000 |
| Net purchases during the period | 346,500 | 480,000 |
| Net markups | | 20,000 |
| Net markdowns | | (5,000) |
| Total (excluding beginning inventory) | 346,500 | 495,000 |
| Total (including beginning inventory) | \$373,500 | 540,000 |
| Net sales during the period at retail | | (484,000) |
| Ending inventory at retail | | \$ 56,000 |
| Establishment of cost-to-retail percentage under assumptions of LIFO retail (\$346,500 ÷ \$495,000) = | | 70% |
| A. Ending inventory at retail prices deflated to base-year prices (\$56,000 ÷ 1.12) | | \$50,000 |
| B. Beginning inventory (retail) at base-year prices | | 45,000 |
| C. Inventory increase (retail) from beginning of period | | \$ 5,000 |

From this information, we compute the inventory amount at cost, as shown in **Illustration 9A.6**.

ILLUSTRATION 9A.6
Ending Inventory at LIFO Cost, 2020—Fluctuating Prices

| Ending Inventory at Base-Year Retail Prices—2020 | Layers at Base-Year Retail Prices | Price Index | Cost-to-Retail | Ending Inventory at LIFO Cost |
|--|-----------------------------------|-------------|----------------|-------------------------------|
| \$50,000 | 2019 \$45,000 | 1.00 | .60 | \$27,000 |
| | 2020 5,000 | 1.12 | .70 | 3,920 |
| | <u>\$50,000</u> | | | <u>\$30,920</u> |

As Illustration 9A.6 shows, before the conversion to cost takes place, Hernandez must restate layers of a particular year to the prices in effect in the year when the layer was added.

Note the difference between the LIFO approach (stable prices) and the dollar-value LIFO method as indicated in **Illustration 9A.7**.

ILLUSTRATION 9A.7
Comparison of Effect of Price Assumptions

| | LIFO (stable prices) | LIFO (fluctuating prices) |
|---------------------|----------------------|---------------------------|
| Beginning inventory | \$27,000 | \$27,000 |
| Increment | 7,700 | 3,920 |
| Ending inventory | \$34,700 | \$30,920 |

The difference of \$3,780 (\$34,700 – \$30,920) results from an increase in the **price** of goods, not from an increase in the **quantity** of goods.

Subsequent Adjustments Under Dollar-Value LIFO Retail

The dollar-value LIFO retail method follows the same procedures in subsequent periods as the traditional dollar-value method discussed in Chapter 8. That is, when a real increase in inventory occurs, Hernandez adds a new layer.

To illustrate, using the data from the previous example, assume that the retail value of the 2021 ending inventory at current prices is \$64,800, the 2021 price index is 120 percent of base-year, and the cost-to-retail percentage is 75 percent. In base-year dollars, the ending inventory is therefore \$54,000 ($\$64,800 \div 1.20$). **Illustration 9A.8** shows the computation of the ending inventory at LIFO cost.

| Ending Inventory at Base-Year Retail Prices—2021 | Layers at Base-Year Retail Prices | | Price Index | | Cost-to-Retail | | Ending Inventory at LIFO Cost |
|--|---|-----------------|-------------|------|----------------|-----|-------------------------------------|
| \$54,000 | 2019 | \$45,000 | × | 1.00 | × | .60 | = \$27,000 |
| | 2020 | 5,000 | × | 1.12 | × | .70 | = 3,920 |
| | 2021 | 4,000 | × | 1.20 | × | .75 | = 3,600 |
| | | <u>\$54,000</u> | | | | | <u>\$34,520</u> |

ILLUSTRATION 9A.8

**Increased Ending Inventory
at LIFO Cost, 2021—Fluctuat-
ing Prices**

Conversely, when a real decrease in inventory develops, Hernandez “peels off” previous layers at prices in existence when the layers were added. To illustrate, assume that in 2021 the ending inventory in base-year prices is \$48,000. The computation of the LIFO inventory is as shown in **Illustration 9A.9**.

| Ending Inventory at Base-Year Retail Prices—2021 | Layers at Base-Year Retail Prices | | Price Index | | Cost-to-Retail | | Ending Inventory at LIFO Cost |
|--|---|-----------------|-------------|------|----------------|-----|-------------------------------------|
| \$48,000 | 2019 | \$45,000 | × | 1.00 | × | .60 | = \$27,000 |
| | 2020 | 3,000 | × | 1.12 | × | .70 | = 2,352 |
| | | <u>\$48,000</u> | | | | | <u>\$29,352</u> |

ILLUSTRATION 9A.9

**Decreased Ending Inventory
at LIFO Cost, 2021—Fluctuat-
ing Prices**

The advantages and disadvantages of the lower-of-cost-or-market method (conventional retail) versus LIFO retail are the same for retail operations as for non-retail operations. As a practical matter, a company’s selection of which retail inventory method to use often involves determining which method provides a lower taxable income. It might appear that retail LIFO will provide the lower taxable income in a period of rising prices. But this is not always the case. LIFO will provide an approximate current cost matching, but it states ending inventory at cost. The conventional retail method may have a large write-off because of the use of the lower-of-cost-or-market approach, which may offset the LIFO current cost matching.

Changing from Conventional Retail to LIFO

Because conventional retail is a lower-of-cost-or-market approach, the company must restate beginning inventory to a cost basis when changing from the conventional retail to the LIFO method.¹⁴ The usual approach is to compute the cost basis from the purchases of the prior year, adjusted for both markups and markdowns.¹⁵

¹⁴Changing from the conventional retail method to LIFO retail represents a change in accounting principle. We provide an expanded discussion of accounting principle changes in Chapter 22.

¹⁵A logical question to ask is, “Why are only the purchases from the prior period considered and not also the beginning inventory?” Apparently, the IRS believes that “the purchases-only approach” provides a more reasonable cost basis. The IRS position is debatable. However, for our purposes, it seems appropriate to use the purchases-only approach.

To illustrate, assume that Hakeman Clothing Store employs the conventional retail method but wishes to change to the LIFO retail method beginning in 2021. The amounts shown on the company's books are as follows.

| | At Cost | At Retail |
|----------------------------|----------|-----------|
| Inventory, January 1, 2020 | \$ 5,210 | \$ 15,000 |
| Net purchases in 2020 | 47,250 | 100,000 |
| Net markups in 2020 | | 7,000 |
| Net markdowns in 2020 | | 2,000 |
| Sales revenue in 2020 | | 95,000 |

Illustration 9A.10 shows the computation of ending inventory under the **conventional retail method** for 2020.

ILLUSTRATION 9A.10

Conventional Retail Inventory Method

| | Cost | Retail |
|--|-----------------|-------------------------|
| Inventory January 1, 2020 | \$ 5,210 | \$ 15,000 |
| Net purchases | 47,250 | 100,000 |
| Net additional markups | | 7,000 |
| | <u>\$52,460</u> | <u>122,000</u> |
| Net markdowns | | (2,000) |
| Sales revenue | | (95,000) |
| Ending inventory at retail | | <u>\$ 25,000</u> |
| Establishment of cost-to-retail percentage (\$52,460 ÷ \$122,000) = | | <u>43%</u> |
| December 31, 2020, inventory at cost | | |
| Inventory at retail | | \$ 25,000 |
| Cost-to-retail ratio | | × .43 |
| Inventory at cost under conventional retail | | <u>\$ 10,750</u> |

Hakeman Clothing can then quickly approximate the ending inventory for 2020 under the **LIFO retail method**, as shown in **Illustration 9A.11**.

ILLUSTRATION 9A.11

Conversion to LIFO Retail Inventory Method

| December 31, 2020, Inventory at LIFO Cost | |
|---|---|
| Ending inventory = | $\frac{\text{Retail}}{\$25,000} \times \frac{\text{Ratio}}{.45} = \frac{\text{LIFO}}{\$11,250}$ |
| *The cost-to-retail ratio was computed as follows. | |
| $\frac{\text{Net purchases at cost}}{\text{Net purchases at retail plus markups less markdowns}} = \frac{\$47,250}{\$100,000 + \$7,000 - \$2,000} = 45\%$ | |

The difference of \$500 (\$11,250 – \$10,750) between the LIFO retail method and the conventional retail method in the ending inventory for 2020 is the amount by which the company must adjust beginning inventory for 2021. The entry to adjust the inventory to a cost basis is as follows.

| | | |
|--|-----|-----|
| Inventory | 500 | |
| Adjustment to Record Inventory at Cost | | 500 |

| hedging 9-14 | lump-sum (basket) purchase 9-12 | net realizable value less a normal profit margin 9-8 |
| inventory turnover 9-25 | markdown 9-19 | purchase commitments 9-13 |
| *LIFO retail method 9-26 | markdown cancellations 9-19 | retail inventory method 9-18 |
| loss method 9-5 | markup 9-19 | upper limit (ceiling) 9-8 |
| lower limit (floor) 9-8 | | |

Learning Objectives Review

1 Describe and apply the lower-of-cost-or-net realizable value rule.

If inventory declines in value below its original cost, for whatever reason, a company should write down the inventory to reflect this loss. The general rule is to **abandon the historical cost principle when the future utility (revenue-producing ability) of the asset drops below its original cost**. In these situations, companies write down inventory to net realizable value to record this loss.

2 Describe and apply the lower-of-cost-or-market rule.

For companies that use the LIFO or the retail inventory methods of costing inventory, a better measure for reporting the decline in value of inventories is to use replacement cost subject to certain constraints. Rather than comparing cost to net realizable value, under **the lower-of-cost-or-market approach**, companies compare a “designated market value” of the inventory to cost. Under this exception to the general rule, companies write inventory down to the designated market value to record the loss.

3 Identify other inventory valuation issues.

Companies **value inventory at net realizable value** when (1) there is a controlled market with a quoted price applicable to all quantities, (2) no significant costs of disposal are involved, and (3) the cost figures are too difficult to obtain.

When a company purchases a group of varying units at a single lump-sum price—a so-called basket purchase—the company may allocate the total purchase price to the individual items on the **basis of relative sales value**.

Accounting for purchase commitments is controversial. Some argue that companies should report purchase commitment contracts as assets and liabilities at the time the contract is signed. Others believe that recognition at the delivery date is most appropriate. The FASB neither excludes nor recommends the recording of assets and liabilities for purchase commitments. However, companies record losses when market prices fall relative to the commitment price.

4 Determine ending inventory by applying the gross profit method.

Companies follow these steps to determine ending inventory by the **gross profit method**. (1) Compute the gross profit percentage

on selling price. (2) Compute gross profit by multiplying net sales by the gross profit percentage. (3) Compute cost of goods sold by subtracting gross profit from net sales. (4) Compute ending inventory by subtracting cost of goods sold from total goods available for sale.

5 Determine ending inventory by applying the retail inventory method.

Companies follow these steps to determine ending inventory by the **conventional retail method**. (1) To estimate inventory at retail, deduct the sales for the period from the retail value of the goods available for sale. (2) To find the cost-to-retail ratio for all goods passing through a department or firm, divide the total goods available for sale at cost by the total goods available at retail. (3) Convert the inventory valued at retail to approximate cost by applying the cost-to-retail ratio.

6 Explain how to report and analyze inventory.

Accounting standards require financial statement disclosure of (1) the composition of the inventory (in the balance sheet or a separate schedule in the notes), (2) significant or unusual inventory financing arrangements, and (3) inventory costing methods employed (which may differ for different elements of inventory). Accounting standards also require the consistent application of costing methods from one period to another. Common ratios used in the management and evaluation of inventory levels are inventory turnover and average days to sell inventory.

*7 Determine ending inventory by applying the LIFO retail methods.

The application of LIFO retail is made under two assumptions: stable prices and fluctuating prices.

Procedures under stable prices: (a) Because the LIFO method is a cost method, both markups and markdowns must be considered in obtaining the proper cost-to-retail percentage. (b) Since the LIFO method is concerned only with the additional layer, or the amount that should be subtracted from the previous layer, the beginning inventory is excluded from the cost-to-retail percentage. (c) The markups and markdowns apply only to the goods purchased during the current period and not to the beginning inventory.

Procedures under fluctuating prices: The steps are the same as for stable prices except that in computing the LIFO inventory under a dollar-value LIFO approach, the dollar increase

in inventory is found and deflated to beginning-of-the-year prices. Doing so will determine whether actual increases or decreases in quantity have occurred. If quantities increase, this increase is priced at the new index to compute the new layer. If quantities decrease, the decrease is subtracted from the most recent layers to the extent necessary.

Enhanced Review and Practice

Go online for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Practice Problem

Norwood Company makes miniature circuit boards that are components of wireless phones and personal organizers. The company has experienced strong growth, and you are especially interested in how well Norwood is managing its inventory balances. You have collected the following information for the current year.

| | |
|--|--------------|
| Inventory at the beginning of year | \$ 1,026,000 |
| Inventory at the end of year, before any adjustments | 1,007,000 |
| Total cost of goods sold, before any adjustments | 11,776,000 |

The company values inventory at lower-of-cost (using LIFO cost flow assumption)-or-market; use the cost-of-goods-sold method.

Instructions

- a. Compute Norwood's inventory turnover before any adjustment.
- b. Recompute the inventory turnover after adjusting Norwood's inventory information for the following items.
 1. During the year, Norwood recorded sales and costs of goods sold on \$22,000 of units shipped to various wholesalers on consignment. At year-end, none of these units have been sold by wholesalers.
 2. Shipping contracts changed 2 months ago from f.o.b. shipping point to f.o.b. destination point. At the end of the year, \$25,000 of products are en route to China and will not arrive until after financial statements are released. Current inventory balances do not reflect this change in policy.
 3. At the end of the year, Norwood determined that a certain section of inventory with an historical cost of \$112,000 has a replacement cost of \$100,800, net realizable value of \$101,000 and net realizable value less a normal profit margin of \$90,400. There is no need to make a lower-of-cost-or-market adjustment to other inventory.

Solution

$$\text{a. } \frac{\$11,776,000}{(\$1,026,000 + \$1,007,000)/2} = 11.6 \text{ times}$$

- b. Adjustments to ending inventory

| Item | Adjustment to Ending Inventory | Explanation |
|----------------------------|--------------------------------------|---|
| 1. Consigned goods | \$22,000 | Norwood should count the goods it has consigned in other stores. |
| 2. Goods in transit | \$25,000 | Goods officially change hands at the point of destination. Norwood should still show these goods in inventory (not cost of goods sold), until they reach the destination. |
| 3. Lower-of-cost-or-market | \$(11,200) | (\$112,000 – \$100,800). The correct valuation is \$100,800 since the market designation of \$100,800 is less than the original cost. |

$$\text{Adjusted inventory turnover} = \frac{\$11,740,200^{\text{a}}}{(\$1,026,000 + \$1,042,800^{\text{b}})/2} = 11.3 \text{ times}$$

^aCost of goods sold: \$11,776,000 – \$22,000 – \$25,000 + \$11,200 = \$11,740,200

^bEnding inventory: \$1,007,000 + \$22,000 + \$25,000 – \$11,200 = \$1,042,800

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

Questions

- Where there is evidence that the utility of inventory goods, as part of their disposal in the ordinary course of business, will be less than cost, what is the proper accounting treatment?
- Why are inventories valued at the lower-of-cost-or-net realizable value (LCNRV)? What are the arguments against the use of the LCNRV method of valuing inventories?
- What approaches may be employed in applying the LCNRV procedure? Which approach is normally used and why?
- In some instances, accounting principles require a departure from valuing inventories at cost alone. Determine the proper unit inventory price in the following cases using LCNRV.

| | Cases | | | | |
|----------------------------|---------|---------|---------|---------|---------|
| | 1 | 2 | 3 | 4 | 5 |
| Cost | \$15.90 | \$16.10 | \$15.90 | \$15.90 | \$15.90 |
| Sales value | 14.80 | 19.20 | 15.20 | 10.40 | 17.80 |
| Estimated cost to complete | 1.50 | 1.90 | 1.65 | .80 | 1.00 |
| Estimated cost to sell | .50 | .70 | .55 | .40 | .60 |

- What method(s) might be used in the accounts to record a loss due to a price decline in the inventories? Discuss.
- Explain the rationale for the ceiling and floor in the lower-of-cost-or-market method of valuing inventories.
- In some instances, accounting principles require a departure from valuing inventories at cost alone. Determine the proper unit inventory price in the following cases, under the lower-of-cost-or-market rule.

| | Cases | | | | |
|---|---------|---------|---------|---------|---------|
| | 1 | 2 | 3 | 4 | 5 |
| Cost | \$15.90 | \$16.10 | \$15.90 | \$15.90 | \$15.90 |
| Net realizable value | 14.50 | 19.20 | 15.20 | 10.40 | 16.40 |
| Net realizable value less normal profit | 12.80 | 17.60 | 13.75 | 8.80 | 14.80 |
| Market (replacement cost) | 14.80 | 17.20 | 12.80 | 9.70 | 16.80 |

- What factors might call for inventory valuation at sales prices (net realizable value or market price)?
- Under what circumstances is relative sales value an appropriate basis for determining the price assigned to inventory?
- At December 31, 2020, Ashley Co. has outstanding purchase commitments for 150,000 gallons, at \$6.20 per gallon, of a raw material to be used in its manufacturing process. The company prices its raw material inventory at cost or market, whichever is lower. Assuming that the market price as of December 31, 2020, is \$5.90, how would you treat this situation in the accounts?
- What are the major uses of the gross profit method?

- Distinguish between gross profit as a percentage of cost and gross profit as a percentage of sales price. Convert the following gross profit percentages based on cost to gross profit percentages based on sales price: 25% and 33 $\frac{1}{3}$ %. Convert the following gross profit percentages based on sales price to gross profit percentages based on cost: 33 $\frac{1}{3}$ % and 60%.
- Adriana Co., with annual net sales of \$5 million, maintains a markup of 25% based on cost. Adriana's expenses average 15% of net sales. What is Adriana's gross profit and net profit in dollars?
- A fire destroys all of the merchandise of Assante Company on February 10, 2020. Presented below is information compiled up to the date of the fire.

| | |
|---------------------------------------|------------|
| Inventory, January 1, 2020 | \$ 400,000 |
| Sales revenue to February 10, 2020 | 1,950,000 |
| Purchases to February 10, 2020 | 1,140,000 |
| Freight-in to February 10, 2020 | 60,000 |
| Rate of gross profit on selling price | 40% |

What is the approximate inventory on February 10, 2020?

- What conditions must exist for the retail inventory method to provide valid results?
- The conventional retail inventory method yields results that are essentially the same as those yielded by the lower-of-cost-or-market method. Explain. Prepare an illustration of how the retail inventory method reduces inventory to market.
- Determine the ending inventory under the conventional retail method for the furniture department of Mayron Department Stores from the following data.

| | Cost | Retail |
|-------------------|------------|------------|
| Inventory, Jan. 1 | \$ 149,000 | \$ 283,500 |
| Purchases | 1,400,000 | 2,160,000 |
| Freight-in | 70,000 | |
| Markups, net | | 92,000 |
| Markdowns, net | | 48,000 |
| Sales revenue | | 2,175,000 |

- If the results of a physical inventory indicated an inventory at retail of \$295,000, what inferences would you draw?

- Deere and Company** reported inventory in its balance sheet as follows.

| | |
|-------------|-----------------|
| Inventories | \$1,999,100,000 |
|-------------|-----------------|

What additional disclosures might be necessary to present the inventory fairly?

- Of what significance is inventory turnover to a retail store?
- What modifications to the conventional retail method are necessary to approximate a LIFO retail flow?

Brief Exercises

BE9.1 (LO 1) Presented below is information related to Rembrandt Inc.'s inventory.

| (per unit) | Skis | Boots | Parkas |
|------------------|----------|----------|---------|
| Historical cost | \$190.00 | \$106.00 | \$53.00 |
| Selling price | 212.00 | 145.00 | 73.75 |
| Cost to sell | 19.00 | 8.00 | 2.50 |
| Cost to complete | 32.00 | 29.00 | 21.25 |

Determine the following: (a) the net realizable value for each item, and (b) the carrying value of each item under LCNRV.

BE9.2 (LO 1) Floyd Corporation has the following four items in its ending inventory.

| Item | Cost | Net Realizable Value (NRV) |
|------------|---------|----------------------------|
| Jokers | \$2,000 | \$2,100 |
| Penguins | 5,000 | 4,950 |
| Riddlers | 4,400 | 4,625 |
| Scarecrows | 3,200 | 3,830 |

Determine the following: (a) the LCNRV for each item, and (b) the amount of write-down, if any, using (1) an item-by-item LCNRV evaluation and (2) a total category LCNRV evaluation.

BE9.3 (LO 1) Kumar Inc. uses a perpetual inventory system. At January 1, 2020, inventory was \$214,000,000 at both cost and net realizable value. At December 31, 2020, the inventory was \$286,000,000 at cost and \$265,000,000 at net realizable value. Prepare the entry under (a) the cost-of-goods-sold method and (b) the loss method.

BE9.4 (LO 2) Presented below is information related to Rembrandt Inc.'s inventory, assuming Rembrandt uses lower-of-LIFO cost-or-market.

| (per unit) | Skis | Boots | Parkas |
|--------------------------|----------|----------|---------|
| Historical cost | \$190.00 | \$106.00 | \$53.00 |
| Selling price | 212.00 | 145.00 | 73.75 |
| Cost to distribute | 19.00 | 8.00 | 2.50 |
| Current replacement cost | 203.00 | 105.00 | 51.00 |
| Normal profit margin | 32.00 | 29.00 | 21.25 |

Determine the following: (a) the two limits to market value (i.e., the ceiling and the floor) that should be used in the lower-of-cost-or-market computation for skis, (b) the cost amount that should be used in the lower-of-cost-or-market comparison of boots, and (c) the market amount that should be used to value parkas on the basis of the lower-of-cost-or-market.

BE9.5 (LO 2) Kumar Inc. uses LIFO inventory costing. At January 1, 2020, inventory was \$214,000 at both cost and market value. At December 31, 2020, the inventory was \$286,000 at cost and \$265,000 at market value. Prepare the necessary December 31 entry under (a) the cost-of-goods-sold method and (b) the loss method.

BE9.6 (LO 3) Bell, Inc. buys 1,000 computer game CDs from a distributor who is discontinuing those games. The purchase price for the lot is \$8,000. Bell will group the CDs into three price categories for resale, as indicated below.

| Group | No. of CDs | Price per CD |
|-------|------------|--------------|
| 1 | 100 | \$ 5 |
| 2 | 800 | 10 |
| 3 | 100 | 15 |

Determine the cost per CD for each group, using the relative sales value method.

BE9.7 (LO 3) Kemper Company signed a long-term noncancelable purchase commitment with a major supplier to purchase raw materials in 2021 at a cost of \$1,000,000. At December 31, 2020, the raw materials to be purchased have a market value of \$950,000. Prepare any necessary December 31, 2020, entry.

BE9.8 (LO 3) Use the information for Kemper Company from BE9.7. In 2021, Kemper paid \$1,000,000 to obtain the raw materials which were worth \$950,000. Prepare the entry to record the purchase.

BE9.9 (LO 4) Fosbre Corporation's April 30 inventory was destroyed by fire. January 1 inventory was \$150,000, and purchases for January through April totaled \$500,000. Sales revenue for the same period was \$700,000. Fosbre's normal gross profit percentage is 35% on sales. Using the gross profit method, estimate Fosbre's April 30 inventory that was destroyed by fire.

BE9.10 (LO 5) Boyne Inc. had beginning inventory of \$12,000 at cost and \$20,000 at retail. Net purchases were \$120,000 at cost and \$170,000 at retail. Net markups were \$10,000, net markdowns were \$7,000, and sales revenue was \$147,000. Compute ending inventory at cost using the conventional retail method.

BE9.11 (LO 6) In its 2018 annual report, **Gap Inc.** reported inventory of \$1,997 million on January 31, 2018, and \$1,830 million on February 1, 2017, cost of goods sold of \$9,789 million for 2018, and net sales of \$15,855 million. Compute Gap's inventory turnover and the average days to sell inventory for the fiscal year 2018.

***BE9.12 (LO 7)** Use the information for Boyne Inc. from BE9.10. Compute ending inventory at cost using the LIFO retail method.

***BE9.13 (LO 7)** Use the information for Boyne Inc. from BE9.10, and assume the price level increased from 100 at the beginning of the year to 115 at year-end. Compute ending inventory at cost using the dollar-value LIFO retail method.

Exercises

E9.1 (LO 1) Excel (LCNRV) The inventory of Oheto Company on December 31, 2020, consists of the following items.

| Part | Quantity | Cost per Unit | Net Realizable Value |
|------------------|----------|---------------|----------------------|
| 110 | 600 | \$ 95 | \$100 |
| 111 | 1,000 | 60 | 52 |
| 112 | 500 | 80 | 76 |
| 113 | 200 | 170 | 180 |
| 120 | 400 | 205 | 208 |
| 121 ^a | 1,600 | 16 | 1 |
| 122 | 300 | 240 | 235 |

^aPart No. 121 is obsolete and has a realizable value of \$1 each as scrap.

Instructions

- Determine the inventory as of December 31, 2020, by the LCNRV method, applying this method to each item.
- Determine the inventory by the LCNRV method, applying the method to the total of the inventory.

E9.2 (LO 1) (LCNRV) Riegel Company uses the LCNRV method, on an individual-item basis, in pricing its inventory items. The inventory at December 31, 2020, consists of products D, E, F, G, H, and I. Relevant per unit data for these products appear below.

| | Item | | | | | |
|-------------------------|-------|-------|------|------|-------|------|
| | D | E | F | G | H | I |
| Estimated selling price | \$120 | \$110 | \$95 | \$90 | \$110 | \$90 |
| Cost | 75 | 80 | 80 | 80 | 50 | 36 |
| Cost to complete | 30 | 30 | 25 | 35 | 30 | 30 |
| Selling costs | 10 | 18 | 10 | 20 | 10 | 20 |

Instructions

Using the LCNRV rule, determine the proper unit value for balance sheet reporting purposes at December 31, 2020, for each of the inventory items above.

E9.3 (LO 1) (LCNRV) Sedato Company follows the practice of pricing its inventory at LCNRV, on an individual-item basis.

| <u>Item No.</u> | <u>Quantity</u> | <u>Cost per Unit</u> | <u>Estimated Selling Price</u> | <u>Cost to Complete and Sell</u> |
|-----------------|-----------------|--------------------------|------------------------------------|--------------------------------------|
| 1320 | 1,200 | \$3.20 | \$4.50 | \$1.60 |
| 1333 | 900 | 2.70 | 3.40 | 1.00 |
| 1426 | 800 | 4.50 | 5.00 | 1.40 |
| 1437 | 1,000 | 3.60 | 3.20 | 1.35 |
| 1510 | 700 | 2.25 | 3.25 | 1.40 |
| 1522 | 500 | 3.00 | 3.90 | 0.80 |
| 1573 | 3,000 | 1.80 | 2.50 | 1.20 |
| 1626 | 1,000 | 4.70 | 6.00 | 1.50 |

Instructions

From the information above, determine the amount of Sedato Company inventory.

E9.4 (LO 1) (LCNRV—Journal Entries) Dover Company began operations in 2020 and determined its ending inventory at cost and at LCNRV at December 31, 2020, and December 31, 2021. This information is presented below.

| | <u>Cost</u> | <u>Net Realizable Value</u> |
|----------|-------------|-----------------------------|
| 12/31/20 | \$346,000 | \$322,000 |
| 12/31/21 | 410,000 | 390,000 |

Instructions

- Prepare the journal entries required at December 31, 2020, and December 31, 2021, assuming inventory is recorded at LCNRV and a perpetual inventory system using the cost-of-goods-sold method.
- Prepare journal entries required at December 31, 2020, and December 31, 2021, assuming inventory is recorded at LCNRV and a perpetual system using the loss method.
- Which of the two methods above provides the higher net income in each year?

E9.5 (LO 1) (LCNRV—Valuation Account) Presented below is information related to Knight Enterprises.

| | <u>Jan. 31</u> | <u>Feb. 28</u> | <u>Mar. 31</u> | <u>Apr. 30</u> |
|-------------------------|----------------|----------------|----------------|----------------|
| Inventory at cost | \$15,000 | \$15,100 | \$17,000 | \$14,000 |
| Inventory at LCNRV | 14,500 | 12,600 | 15,600 | 13,300 |
| Purchases for the month | | 17,000 | 24,000 | 26,500 |
| Sales for the month | | 29,000 | 35,000 | 40,000 |

Instructions

- From the information, prepare (as far as the data permit) monthly income statements in columnar form for February, March, and April. The inventory is to be shown in the statement at cost; the gain or loss due to market fluctuations is to be shown separately (using a valuation account).
- Prepare the journal entry required to establish the valuation account at January 31 (using the loss method) and entries to adjust it monthly thereafter.

E9.6 (LO 1) (LCNRV—Error Effect) LaGreca Company uses the LCNRV method, on an individual-item basis, in pricing its inventory items. The inventory at December 31, 2020, included product X. Relevant per-unit data for product X are as follows.

| | |
|-------------------------|------|
| Estimated selling price | \$50 |
| Cost | 40 |
| Estimated selling costs | 14 |
| Normal profit | 9 |

There were 1,000 units of product X on hand at December 31, 2020. Product X was incorrectly valued at \$38 per unit for reporting purposes. All 1,000 units were sold in 2021.

Instructions

Compute the effect of this error on net income for 2020 and the effect on net income for 2021, and indicate the direction of the misstatement for each year.

E9.7 (LO 2) (Lower-of-Cost-or-Market) Wangerin Company follows the practice of pricing its inventory at the lower-of-cost-or-market, on an individual-item basis.

| Item No. | Quantity | Cost per Unit | Cost to Replace | Estimated Selling Price | Cost of Completion and Disposal | Normal Profit |
|----------|----------|---------------|-----------------|-------------------------|---------------------------------|---------------|
| 1320 | 1,200 | \$3.20 | \$3.00 | \$4.50 | \$0.35 | \$1.25 |
| 1333 | 900 | 2.70 | 2.30 | 3.50 | 0.50 | 0.50 |
| 1426 | 800 | 4.50 | 3.70 | 5.00 | 0.40 | 1.00 |
| 1437 | 1,000 | 3.60 | 3.10 | 3.20 | 0.25 | 0.90 |
| 1510 | 700 | 2.25 | 2.00 | 3.25 | 0.80 | 0.60 |
| 1522 | 500 | 3.00 | 2.70 | 3.80 | 0.40 | 0.50 |
| 1573 | 3,000 | 1.80 | 1.60 | 2.50 | 0.75 | 0.50 |
| 1626 | 1,000 | 4.70 | 5.20 | 6.00 | 0.50 | 1.00 |

Instructions

From the information above, determine the amount of Wangerin Company inventory.

E9.8 (LO 2) (Lower-of-Cost-or-Market—Journal Entries) Corrs Company began operations in 2019 and determined its ending inventory at cost and at lower-of-LIFO cost-or-market at December 31, 2019, and December 31, 2020. This information is presented below.

| | Cost | Lower-of-Cost-or-Market |
|----------|-----------|-------------------------|
| 12/31/19 | \$356,000 | \$327,000 |
| 12/31/20 | 420,000 | 395,000 |

Instructions

- Prepare the journal entries required at December 31, 2019, and December 31, 2020, assuming that the inventory is recorded at market, and a perpetual inventory system (cost-of-goods-sold method) is used.
- Prepare journal entries required at December 31, 2019, and December 31, 2020, assuming that the inventory is recorded at market under a perpetual system (loss method is used).
- Which of the two methods above provides the higher net income in each year?

E9.9 (LO 3) Excel (Relative Sales Value Method) Phil Collins Realty Corporation purchased a tract of unimproved land for \$55,000. This land was improved and subdivided into building lots at an additional cost of \$34,460. These building lots were all of the same size but owing to differences in location were offered for sale at different prices as follows.

| Group | No. of Lots | Price per Lot |
|-------|-------------|---------------|
| 1 | 9 | \$3,000 |
| 2 | 15 | 4,000 |
| 3 | 17 | 2,400 |

Operating expenses for the year allocated to this project total \$18,200. Lots unsold at the year-end were as follows.

| | |
|---------|--------|
| Group 1 | 5 lots |
| Group 2 | 7 lots |
| Group 3 | 2 lots |

Instructions

At the end of the fiscal year Phil Collins Realty Corporation instructs you to arrive at the net income realized on this operation to date.

E9.10 (LO 3) (Relative Sales Value Method) During 2020, Pretenders Furniture Company purchases a carload of wicker chairs. The manufacturer sells the chairs to Pretenders for a lump sum of \$59,850 because it is discontinuing manufacturing operations and wishes to dispose of its entire stock. Three types of chairs are included in the carload. The three types and the estimated selling price for each are listed below.

| Type | No. of Chairs | Estimated Selling Price Each |
|-----------------|---------------|------------------------------|
| Lounge chairs | 400 | \$90 |
| Armchairs | 300 | 80 |
| Straight chairs | 700 | 50 |

During 2020, Pretenders sells 200 lounge chairs, 100 armchairs, and 120 straight chairs.

Instructions

What is the amount of gross profit realized during 2020? What is the amount of inventory of unsold straight chairs on December 31, 2020?

E9.11 (LO 3) (Purchase Commitments) Marvin Gaye Company has been having difficulty obtaining key raw materials for its manufacturing process. The company therefore signed a long-term non-cancelable purchase commitment with its largest supplier of this raw material on November 30, 2020, at an agreed price of \$400,000. At December 31, 2020, the raw material had declined in price to \$365,000.

Instructions

What entry would you make on December 31, 2020, to recognize these facts?

E9.12 (LO 3) (Purchase Commitments) At December 31, 2020, Indigo Girls Company has outstanding noncancelable purchase commitments for 36,000 gallons, at \$3.00 per gallon, of raw material to be used in its manufacturing process. The company prices its raw material inventory at cost or market, whichever is lower.

Instructions

- Assuming that the market price as of December 31, 2020, is \$3.30, how would this matter be treated in the accounts and statements? Explain.
- Assuming that the market price as of December 31, 2020, is \$2.70, instead of \$3.30, how would you treat this situation in the accounts and statements?
- Give the entry in January 2021, when the 36,000-gallon shipment is received, assuming that the situation given in (b) above existed at December 31, 2020, and that the market price in January 2021 was \$2.70 per gallon. Give an explanation of your treatment.

E9.13 (LO 4) (Gross Profit Method) Each of the following gross profit percentages is expressed in terms of cost.

- 20%
- 25%
- 33 $\frac{1}{3}$ %
- 50%

Instructions

Indicate the gross profit percentage in terms of sales for each of the above.

E9.14 (LO 4) (Gross Profit Method) Mark Price Company uses the gross profit method to estimate inventory for monthly reporting purposes. Presented below is information for the month of May.

| | |
|--------------------|------------|
| Inventory, May 1 | \$ 160,000 |
| Purchases (gross) | 640,000 |
| Freight-in | 30,000 |
| Sales revenue | 1,000,000 |
| Sales returns | 70,000 |
| Purchase discounts | 12,000 |

Instructions

- Compute the estimated inventory at May 31, assuming that the gross profit is 30% of sales.
- Compute the estimated inventory at May 31, assuming that the gross profit is 30% of cost.

E9.15 (LO 4) (Gross Profit Method) Tim Legler requires an estimate of the cost of goods lost by fire on March 9. Merchandise on hand on January 1 was \$38,000. Purchases since January 1 were \$72,000; freight-in, \$3,400; purchase returns and allowances, \$2,400. Sales are made at 33 $\frac{1}{3}$ % above cost and totaled \$100,000 to March 9. Goods costing \$10,900 were left undamaged by the fire; remaining goods were destroyed.

Instructions

- Compute the cost of goods destroyed.
- Compute the cost of goods destroyed, assuming that the gross profit is 33 $\frac{1}{3}$ % of sales.

E9.16 (LO 4) (Gross Profit Method) Wallace Company lost most of its inventory in a fire in December just before the year-end physical inventory was taken. The corporation's books disclosed the following.

| | | | |
|------------------------|-----------|-----------------------------------|-----------|
| Beginning inventory | \$170,000 | Sales revenue | \$650,000 |
| Purchases for the year | 390,000 | Sales returns | 24,000 |
| Purchase returns | 30,000 | Rate of gross profit on net sales | 40% |

Merchandise with a selling price of \$21,000 remained undamaged after the fire. Damaged merchandise with an original selling price of \$15,000 had a net realizable value of \$5,300.

Instructions

Compute the amount of the loss as a result of the fire, assuming that the corporation had no insurance coverage.

E9.17 (LO 4) (Gross Profit Method) You are called by Tim Duncan of Spurs Co. on July 16 and asked to prepare a claim for insurance as a result of a theft that took place the night before. You suggest that an inventory be taken immediately. The following data are available.

| | |
|--|-----------|
| Inventory, July 1 | \$ 38,000 |
| Purchases—goods placed in stock July 1–15 | 85,000 |
| Sales revenue—goods delivered to customers (gross) | 116,000 |
| Sales returns—goods returned to stock | 4,000 |

Your client reports that the goods on hand on July 16 cost \$30,500, but you determine that this figure includes goods of \$6,000 received on a consignment basis. Your past records show that sales are made at approximately 40% over cost. Duncan's insurance covers only goods owned.

Instructions

Compute the claim against the insurance company.

E9.18 (LO 4) (Gross Profit Method) Gheorge Moresan Lumber Company handles three principal lines of merchandise with these varying rates of gross profit on cost.

| | |
|-----------------------|-----|
| Lumber | 25% |
| Millwork | 30% |
| Hardware and fittings | 40% |

On August 18, a fire destroyed the office, lumber shed, and a considerable portion of the lumber stacked in the yard. To file a report of loss for insurance purposes, the company must know what the inventories were immediately preceding the fire. No detail or perpetual inventory records of any kind were maintained. The only pertinent information you are able to obtain are the following facts from the general ledger, which was kept in a fireproof vault and thus escaped destruction.

| | <u>Lumber</u> | <u>Millwork</u> | <u>Hardware</u> |
|--------------------------------|---------------|-----------------|-----------------|
| Inventory, Jan. 1, 2020 | \$ 250,000 | \$ 90,000 | \$ 45,000 |
| Purchases to Aug. 18, 2020 | 1,500,000 | 375,000 | 160,000 |
| Sales revenue to Aug. 18, 2020 | 2,080,000 | 533,000 | 210,000 |

Instructions

Submit your estimate of the inventory amounts immediately preceding the fire.

E9.19 (LO 4) (Gross Profit Method) Presented below is information related to Aaron Rodgers Corporation for the current year.

| | | |
|--------------------------------|------------------|-------------|
| Beginning inventory | \$ 600,000 | |
| Purchases | <u>1,500,000</u> | |
| Total goods available for sale | | \$2,100,000 |
| Sales revenue | | 2,500,000 |

Instructions

Compute the ending inventory, assuming that (a) gross profit is 45% of sales, (b) gross profit is 60% of cost, (c) gross profit is 35% of sales, and (d) gross profit is 25% of cost.

E9.20 (LO 5) (Retail Inventory Method) Presented below is information related to Bobby Engram Company.

| | <u>Cost</u> | <u>Retail</u> |
|---------------------|-------------|---------------|
| Beginning inventory | \$ 58,000 | \$100,000 |
| Purchases (net) | 122,000 | 200,000 |
| Net markups | | 10,345 |
| Net markdowns | | 26,135 |
| Sales revenue | | 186,000 |

Instructions

- a. Compute the ending inventory at retail.
- b. Compute a cost-to-retail percentage (round to two decimals) under the following conditions.
 1. Excluding both markups and markdowns.
 2. Excluding markups but including markdowns.
 3. Excluding markdowns but including markups.
 4. Including both markdowns and markups.
- c. Which of the methods in (b) above (1, 2, 3, or 4) does the following?
 1. Provides the most conservative estimate of ending inventory.

2. Provides an approximation of lower-of-cost-or-market.
3. Is used in the conventional retail method.
- d. Compute ending inventory at lower-of-cost-or-market (round to nearest dollar).
- e. Compute cost of goods sold based on (d).
- f. Compute gross margin based on (d).

E9.21 (LO 5) (Retail Inventory Method) Presented below is information related to Ricky Henderson Company.

| | Cost | Retail |
|------------------------|------------|------------|
| Beginning inventory | \$ 200,000 | \$ 280,000 |
| Purchases | 1,375,000 | 2,140,000 |
| Markups | | 95,000 |
| Markup cancellations | | 15,000 |
| Markdowns | | 35,000 |
| Markdown cancellations | | 5,000 |
| Sales revenue | | 2,200,000 |

Instructions

Compute the inventory by the conventional retail inventory method.

E9.22 (LO 5) (Retail Inventory Method) The records of Ellen's Boutique report the following data for the month of April.

| | | | |
|------------------------|----------|--------------------------------------|----------|
| Sales revenue | \$99,000 | Purchases (at cost) | \$48,000 |
| Sales returns | 2,000 | Purchases (at sales price) | 88,000 |
| Markups | 10,000 | Purchase returns (at cost) | 2,000 |
| Markup cancellations | 1,500 | Purchase returns (at sales price) | 3,000 |
| Markdowns | 9,300 | Beginning inventory (at cost) | 30,000 |
| Markdown cancellations | 2,800 | Beginning inventory (at sales price) | 46,500 |
| Freight on purchases | 2,400 | | |

Instructions

Compute the ending inventory by the conventional retail inventory method.

E9.23 (LO 6) (Analysis of Inventories) The financial statements of **ConAgra Foods, Inc.**'s 2017 annual report disclose the following information.

| (in millions) | 2017 | 2016 | 2015 |
|----------------------|---------|-------------|-----------|
| Year-end inventories | \$934.2 | \$1,044.1 | \$1,642.6 |
| | | Fiscal Year | |
| | | 2017 | 2016 |
| Net sales | | \$7,826.9 | \$8,664.1 |
| Cost of goods sold | | 5,484.8 | 6,234.9 |
| Net income | | 648.0 | (665.9) |

Instructions

Compute ConAgra's (a) inventory turnover and (b) the average days to sell inventory for 2017 and 2016.

***E9.24 (LO 7) (Retail Inventory Method—Conventional and LIFO)** Keller Company began operations on January 1, 2019, adopting the conventional retail inventory system. None of the company's merchandise was marked down in 2019 and, because there was no beginning inventory, its ending inventory for 2019 of \$38,100 would have been the same under either the conventional retail system or the LIFO retail system.

On December 31, 2020, the store management considers adopting the LIFO retail system and desires to know how the December 31, 2020, inventory would appear under both systems. All pertinent data regarding purchases, sales, markups, and markdowns are shown below. There has been no change in the price level.

| | Cost | Retail |
|-------------------------|-----------|-----------|
| Inventory, Jan. 1, 2020 | \$ 38,100 | \$ 60,000 |
| Markdowns (net) | | 13,000 |
| Markups (net) | | 22,000 |
| Purchases (net) | 130,900 | 178,000 |
| Sales (net) | | 167,000 |

Instructions

Determine the cost of the 2020 ending inventory under both (a) the conventional retail method and (b) the LIFO retail method.

***E9.25 (LO 7) (Retail Inventory Method—Conventional and LIFO)** Leonard Company began operations late in 2019 and adopted the conventional retail inventory method. Because there was no beginning inventory for 2019 and no markdowns during 2019, the ending inventory for 2019 was \$14,000 under both the conventional retail method and the LIFO retail method. At the end of 2020, management wants to compare the results of applying the conventional and LIFO retail methods. There was no change in the price level during 2020. The following data are available for computations.

| | <u>Cost</u> | <u>Retail</u> |
|----------------------------|-------------|---------------|
| Inventory, January 1, 2020 | \$14,000 | \$20,000 |
| Sales revenue | | 80,000 |
| Net markups | | 9,000 |
| Net markdowns | | 1,600 |
| Purchases | 58,800 | 81,000 |
| Freight-in | 7,500 | |
| Estimated theft | | 2,000 |

Instructions

Compute the cost of the 2020 ending inventory under both (a) the conventional retail method and (b) the LIFO retail method.

***E9.26 (LO 7) (Dollar-Value LIFO Retail)** You assemble the following information for Seneca Department Store, which computes its inventory under the dollar-value LIFO method.

| | <u>Cost</u> | <u>Retail</u> |
|----------------------------------|-------------|---------------|
| Inventory on January 1, 2020 | \$216,000 | \$300,000 |
| Purchases | 364,800 | 480,000 |
| Increase in price level for year | | 9% |

Instructions

Compute the cost of the inventory on December 31, 2020, assuming that the inventory at retail is (a) \$294,300 and (b) \$365,150.

***E9.27 (LO 7) (Dollar-Value LIFO Retail)** Presented below is information related to Langston Hughes Corporation.

| | <u>Price Index</u> | <u>LIFO Cost</u> | <u>Retail</u> |
|--|------------------------|----------------------|---------------|
| Inventory on December 31, 2020, when dollar-value LIFO is adopted | 100 | \$36,000 | \$ 74,500 |
| Inventory, December 31, 2021 | 110 | ? | 100,100 |

Instructions

Compute the ending inventory under the dollar-value LIFO method at December 31, 2021. The cost-to-retail ratio for 2021 was 60%.

***E9.28 (LO 7) (Conventional Retail and Dollar-Value LIFO Retail)** Amiras Corporation began operations on January 1, 2020, with a beginning inventory of \$30,100 at cost and \$50,000 at retail. The following information relates to 2020.

| | <u>Retail</u> |
|-----------------------------------|---------------|
| Net purchases (\$108,500 at cost) | \$150,000 |
| Net markups | 10,000 |
| Net markdowns | 5,000 |
| Sales revenue | 126,900 |

Instructions

- Assume Amiras decided to adopt the conventional retail method. Compute the ending inventory to be reported in the balance sheet.
- Assume instead that Amiras decides to adopt the dollar-value LIFO retail method. The appropriate price indexes are 100 at January 1 and 110 at December 31. Compute the ending inventory to be reported in the balance sheet.
- On the basis of the information in part (b), compute cost of goods sold.

***E9.29 (LO 7) (Dollar-Value LIFO Retail)** Connie Chung Corporation adopted the dollar-value LIFO retail inventory method on January 1, 2019. At that time the inventory had a cost of \$54,000 and a retail price of \$100,000. The following information is available.

| | Year-End Inventory at Retail | Current Year Cost—Retail % | Year-End Price Index |
|------|---------------------------------|-------------------------------|-------------------------|
| 2019 | \$118,720 | 57% | 106 |
| 2020 | 138,750 | 60% | 111 |
| 2021 | 125,350 | 61% | 115 |
| 2022 | 162,500 | 58% | 125 |

The price index at January 1, 2019, is 100.

Instructions

Compute the ending inventory at December 31 of the years 2019–2022. (Round to the nearest dollar.)

***E9.30 (LO 7) (Change to LIFO Retail)** John Olerud Ltd., a local retailing concern in the Bronx, New York, has decided to change from the conventional retail inventory method to the LIFO retail method starting on January 1, 2021. The company recomputed its ending inventory for 2020 in accordance with the procedures necessary to switch to LIFO retail. The inventory computed was \$212,600.

Instructions

Assuming that John Olerud Ltd.'s ending inventory for 2020 under the conventional retail inventory method was \$205,000, prepare the appropriate journal entry on January 1, 2021.

Problems

P9.1 (LO 1) (LCNRV) Remmers Company manufactures desks. Most of the company's desks are standard models and are sold on the basis of catalog prices. At December 31, 2020, the following finished desks (10 desks in each category) appear in the company's inventory.

| Finished Desks | A | B | C | D |
|---------------------------------------|------|------|------|-------|
| 2020 catalog selling price | \$45 | \$48 | \$90 | \$105 |
| FIFO cost per inventory list 12/31/20 | 47 | 45 | 83 | 96 |
| Estimated cost to complete and sell | 5 | 11 | 26 | 20 |
| 2021 catalog selling price | 50 | 54 | 90 | 120 |

The 2020 catalog was in effect through November 2020, and the 2021 catalog is effective as of December 1; catalog prices are net of the usual discounts.

Instructions

At what amount should each of the four desks appear in the company's December 31, 2020, inventory, assuming that the company has adopted a lower-of-FIFO-cost-or-net realizable value (LCNRV) approach for valuation of inventories on an individual-item basis?

P9.2 (LO 1) (LCNRV) Garcia Home Improvement Company installs replacement siding, windows, and louvered glass doors for single-family homes and condominium complexes. The company is in the process of preparing its annual financial statements for the fiscal year ended May 31, 2020. Jim Alcide, controller for Garcia, has gathered the following data concerning inventory.

At May 31, 2020, the balance in Garcia's Raw Materials Inventory account was \$408,000, and Allowance to Reduce Inventory to NRV had a credit balance of \$27,500. Alcide summarized the relevant inventory cost and market data at May 31, 2020, in the schedule below.

Alcide assigned Patricia Devereaux, an intern from a local college, the task of calculating the amount that should appear on Garcia's May 31, 2020, financial statements for inventory under the LCNRV rule as applied to each item in inventory. Devereaux expressed concern over departing from the historical cost principle.

| | Cost | Sales Price | Net Realizable Value |
|----------------------|------------------|------------------|-------------------------|
| Aluminum siding | \$ 70,000 | \$ 64,000 | \$ 56,000 |
| Cedar shake siding | 86,000 | 94,000 | 84,800 |
| Louvered glass doors | 112,000 | 186,400 | 168,300 |
| Thermal windows | 140,000 | 154,800 | 140,000 |
| Total | <u>\$408,000</u> | <u>\$499,200</u> | <u>\$449,100</u> |

Instructions

- Determine the proper balance in Allowance to Reduce Inventory to NRV at May 31, 2020.
- For the fiscal year ended May 31, 2020, determine the amount of the gain or loss that would be recorded (using the loss method) due to the change in Allowance to Reduce Inventory to NRV.
- Explain the rationale for the use of the LCNRV rule as it applies to inventories.

P9.3 (LO 1) (LCNRV—Cost-of-Goods-Sold and Loss) Malone Company determined its ending inventory at cost and at LCNRV at December 31, 2020, December 31, 2021, and December 31, 2022, as shown below.

| | Cost | NRV |
|----------|-----------|-----------|
| 12/31/20 | \$650,000 | \$650,000 |
| 12/31/21 | 780,000 | 712,000 |
| 12/31/22 | 905,000 | 830,000 |

Instructions

- Prepare the journal entries required at December 31, 2021, and at December 31, 2022, assuming that a perpetual inventory system and the cost-of-goods-sold method of adjusting to LCNRV is used.
- Prepare the journal entries required at December 31, 2021, and at December 31, 2022, assuming that a perpetual inventory is recorded at cost and reduced to LCNRV using the loss method.

P9.4 (LO 2) Excel Groupwork (Lower-of-Cost-or-Market) Referring to the situation in P9.2 for Garcia Home Improvement Company, consider the following expanded data at May 31, 2020. Assume Garcia uses LIFO inventory costing.

| | Cost | Replacement Cost | Sales Price | Net Realizable Value | Normal Profit |
|----------------------|------------------|---------------------|------------------|-------------------------|------------------|
| Aluminum siding | \$ 70,000 | \$ 62,500 | \$ 64,000 | \$ 56,000 | \$ 5,100 |
| Cedar shake siding | 86,000 | 79,400 | 94,000 | 84,800 | 7,400 |
| Louvered glass doors | 112,000 | 124,000 | 186,400 | 168,300 | 18,500 |
| Thermal windows | 140,000 | 126,000 | 154,800 | 140,000 | 15,400 |
| Total | <u>\$408,000</u> | <u>\$391,900</u> | <u>\$499,200</u> | <u>\$449,100</u> | <u>\$46,400</u> |

Instructions

1. Determine the proper balance in Allowance to Reduce Inventory to Market at May 31, 2020.
2. For the fiscal year ended May 31, 2020, determine the amount of the gain or loss that would be recorded due to the change in Allowance to Reduce Inventory to Market. Prior to adjustment, the Allowance account had a balance of \$27,500.
- Explain the rationale for the use of the lower-of-cost-or-market rule as it applies to inventories.

(CMA adapted)

P9.5 (LO 2) Writing (Lower-of-Cost-or-Market) Fiedler Co. follows the practice of valuing its inventory at the lower-of-cost-or-market. The following information is available from the company's inventory records as of December 31, 2020.

| Item | Quantity | Unit Cost | Replacement Cost/Unit | Estimated Selling Price/Unit | Completion & Disposal Cost/Unit | Normal Profit Margin/Unit |
|------|----------|--------------|--------------------------|------------------------------------|---------------------------------------|---------------------------------|
| A | 1,100 | \$7.50 | \$8.40 | \$10.50 | \$1.50 | \$1.80 |
| B | 800 | 8.20 | 7.90 | 9.40 | 0.90 | 1.20 |
| C | 1,000 | 5.60 | 5.40 | 7.20 | 1.15 | 0.60 |
| D | 1,000 | 3.80 | 4.20 | 6.30 | 0.80 | 1.50 |
| E | 1,400 | 6.40 | 6.30 | 6.70 | 0.70 | 1.00 |

Instructions

Greg Forda is an accounting clerk in the accounting department of Fiedler Co., and he cannot understand why the market value keeps changing from replacement cost to net realizable value to something that he cannot even figure out. Greg is very confused, and he is the one who records inventory purchases and calculates ending inventory. You are the manager of the department and an accountant.

- Calculate the lower-of-cost-or-market using the individual-item approach.
- Show the journal entry he will need to make in order to write down the ending inventory from cost to market.
- Write a memo to Greg explaining what designated market value is as well as how it is computed. Use your calculations to aid in your explanation.

P9.6 (LO 4) (Gross Profit Method) Eastman Company lost most of its inventory in a fire in December just before the year-end physical inventory was taken. Corporate records disclose the following.

| | | | |
|-----------------------|-----------|--|-----------|
| Inventory (beginning) | \$ 80,000 | Sales revenue | \$415,000 |
| Purchases | 290,000 | Sales returns | 21,000 |
| Purchase returns | 28,000 | Gross profit % based on net selling price | 35% |

Merchandise with a selling price of \$30,000 remained undamaged after the fire, and damaged merchandise has a net realizable value of \$8,150. The company does not carry fire insurance on its inventory.

Instructions

Prepare a formal labeled schedule computing the fire loss incurred. (Do not use the retail inventory method.)

P9.7 (LO 4) Groupwork (Gross Profit Method) On April 15, 2021, fire damaged the office and warehouse of Stanislaw Corporation. The only accounting record saved was the general ledger, from which the balance sheet data below was prepared.

| Stanislaw Corporation March 31, 2021 | | |
|---|-----------|-----------|
| | Dr. | Cr. |
| Cash | \$ 20,000 | |
| Accounts receivable | 40,000 | |
| Inventory, December 31, 2020 | 75,000 | |
| Land | 35,000 | |
| Buildings | 110,000 | |
| Accumulated depreciation | | \$ 41,300 |
| Equipment | 3,600 | |
| Accounts payable | | 23,700 |
| Other accrued expenses | | 10,200 |
| Common stock | | 100,000 |
| Retained earnings | | 52,000 |
| Sales revenue | | 135,000 |
| Purchases | 52,000 | |
| Miscellaneous expense | 26,600 | |
| | \$362,200 | \$362,200 |

The following data and information have been gathered.

- The fiscal year of the corporation ends on December 31.
- An examination of the April bank statement and canceled checks revealed that checks written during the period April 1–15 totaled \$13,000: \$5,700 paid to accounts payable as of March 31, \$3,400 for April merchandise shipments, and \$3,900 paid for other expenses. Deposits during the same period amounted to \$12,950, which consisted of receipts on account from customers with the exception of a \$950 refund from a vendor for merchandise returned in April.
- Correspondence with suppliers revealed unrecorded obligations at April 15 of \$15,600 for April merchandise shipments, including \$2,300 for shipments in transit (f.o.b. shipping point) on that date.
- Customers acknowledged indebtedness of \$46,000 at April 15, 2021. It was also estimated that customers owed another \$8,000 that will never be acknowledged or recovered. Of the acknowledged indebtedness, \$600 will probably be uncollectible.
- The companies insuring the inventory agreed that the corporation's fire-loss claim should be based on the assumption that the overall gross profit rate for the past 2 years was in effect during the current year. The corporation's audited financial statements disclosed this information:

| | Year Ended December 31 | |
|---------------------|---------------------------|-----------|
| | 2020 | 2019 |
| Net sales | \$530,000 | \$390,000 |
| Net purchases | 280,000 | 235,000 |
| Beginning inventory | 50,000 | 66,000 |
| Ending inventory | 75,000 | 50,000 |

- Inventory with a cost of \$7,000 was salvaged and sold for \$3,500. The balance of the inventory was a total loss.

Instructions

Prepare a schedule computing the amount of inventory fire loss. The supporting schedule of the computation of the gross profit should be in good form.

(AICPA adapted)

P9.8 (LO 5) Excel (Retail Inventory Method) The records for the Clothing Department of Shrapova's Discount Store are summarized below for the month of January.

| |
|--|
| Inventory, January 1: at retail \$25,000; at cost \$17,000 |
| Purchases in January: at retail \$137,000; at cost \$82,500 |
| Freight-in: \$7,000 |
| Purchase returns: at retail \$3,000; at cost \$2,300 |
| Transfers in from suburban branch: at retail \$13,000; at cost \$9,200 |
| Net markups: \$8,000 |
| Net markdowns: \$4,000 |
| Inventory losses due to normal breakage, etc.: at retail \$400 |
| Sales revenue at retail: \$95,000 |
| Sales returns: \$2,400 |

Instructions

- Compute the inventory for this department as of January 31, at retail prices.
- Compute the ending inventory using lower-of-average-cost-or-market.

P9.9 (LO 5) (Retail Inventory Method) Presented below is information related to Waveland Inc.

| | Cost | Retail |
|--|-----------|------------|
| Inventory, 12/31/20 | \$250,000 | \$ 390,000 |
| Purchases | 914,500 | 1,460,000 |
| Purchase returns | 60,000 | 80,000 |
| Purchase discounts | 18,000 | — |
| Gross sales revenue (after employee discounts) | — | 1,410,000 |
| Sales returns | — | 97,500 |
| Markups | — | 120,000 |
| Markup cancellations | — | 40,000 |
| Markdowns | — | 45,000 |
| Markdown cancellations | — | 20,000 |
| Freight-in | 42,000 | — |
| Employee discounts granted | — | 8,000 |
| Loss from breakage (normal) | — | 4,500 |

Instructions

Assuming that Waveland Inc. uses the conventional retail inventory method, compute the cost of its ending inventory at December 31, 2021.

P9.10 (LO 5) Groupwork (Retail Inventory Method) Fuque Inc. uses the retail inventory method to estimate ending inventory for its monthly financial statements. The following data pertain to a single department for the month of October 2021.

| | |
|--|-----------|
| Inventory, October 1, 2021 | |
| At cost | \$ 52,000 |
| At retail | 78,000 |
| Purchases (exclusive of freight and returns) | |
| At cost | 272,000 |
| At retail | 423,000 |
| Freight-in | 16,600 |
| Purchase returns | |
| At cost | 5,600 |
| At retail | 8,000 |
| Markups | 9,000 |
| Markup cancellations | 2,000 |
| Markdowns (net) | 3,600 |
| Normal spoilage and breakage | 10,000 |
| Sales revenue | 390,000 |

Instructions

- Using the conventional retail method, prepare a schedule computing estimated lower-of-cost-or-market inventory for October 31, 2021.

- b. A department store using the conventional retail inventory method estimates the cost of its ending inventory as \$60,000. An accurate physical count reveals only \$47,000 of inventory at lower-of-cost-or-market. List the factors that may have caused the difference between the computed inventory and the physical count.

P9.11 (LO 1, 3, 6) (Statement and Note Disclosure, LCNRV, and Purchase Commitment)

Maddox Specialty Company, a division of Lost World Inc., manufactures three models of gear shift components for bicycles that are sold to bicycle manufacturers, retailers, and catalog outlets. Since beginning operations in 1993, Maddox has used normal absorption costing and has assumed a first-in, first-out cost flow in its perpetual inventory system. The balances of the inventory accounts at the end of Maddox's fiscal year, November 30, 2020, are shown below. The inventories are stated at cost before any year-end adjustments.

| | |
|------------------|-----------|
| Finished goods | \$647,000 |
| Work in process | 112,500 |
| Raw materials | 264,000 |
| Factory supplies | 69,000 |

The following information relates to Maddox's inventory and operations.

1. The finished goods inventory consists of the items analyzed below.

| | Cost | NRV |
|--------------------------|------------------|------------------|
| <u>Down tube shifter</u> | | |
| Standard model | \$ 67,500 | \$ 67,000 |
| Click adjustment model | 94,500 | 89,000 |
| Deluxe model | 108,000 | 110,000 |
| Total down tube shifters | <u>270,000</u> | <u>266,000</u> |
| <u>Bar end shifter</u> | | |
| Standard model | 83,000 | 90,050 |
| Click adjustment model | 99,000 | 97,550 |
| Total bar end shifters | <u>182,000</u> | <u>187,600</u> |
| <u>Head tube shifter</u> | | |
| Standard model | 78,000 | 77,650 |
| Click adjustment model | 117,000 | 119,300 |
| Total head tube shifters | <u>195,000</u> | <u>196,950</u> |
| Total finished goods | <u>\$647,000</u> | <u>\$650,550</u> |

2. One-half of the head tube shifter finished goods inventory is held by catalog outlets on consignment.
3. Three-quarters of the bar end shifter finished goods inventory has been pledged as collateral for a bank loan.
4. One-half of the raw materials balance represents derailleurs acquired at a contracted price 20% above the current market price. The NRV of the rest of the raw materials is \$127,400.
5. The total NRV of the work in process inventory is \$108,700.
6. Included in the cost of factory supplies are obsolete items with an historical cost of \$4,200. The market value of the remaining factory supplies is \$65,900.
7. Maddox applies the LCNRV method to each of the three types of shifters in finished goods inventory. For each of the other three inventory accounts, Maddox applies the LCNRV method to the total of each inventory account.
8. Consider all amounts presented above to be material in relation to Maddox's financial statements taken as a whole.

Instructions

- a. Prepare the inventory section of Maddox's balance sheet as of November 30, 2020, including any required note(s).
- b. Without prejudice to your answer to (a), assume that the NRV of Maddox's inventories is less than cost. Explain how this decline would be presented in Maddox's income statement for the fiscal year ended November 30, 2020.
- c. Assume that Maddox has a firm purchase commitment for the same type of derailleur included in the raw materials inventory as of November 30, 2020, and that the purchase commitment is at a contracted price 15% greater than the current market price. These derailleurs are to be delivered to Maddox after November 30, 2020. Discuss the impact, if any, that this purchase commitment would have on Maddox's financial statements prepared for the fiscal year ended November 30, 2020.

(CMA adapted)

- *P9.12 (LO 7) (Conventional and Dollar-Value LIFO Retail)** As of January 1, 2020, Aristotle Inc. adopted the retail method of accounting for its merchandise inventory.

To prepare the store's financial statements at June 30, 2020, you obtain the following data.

| | Cost | Selling Price |
|------------------------------|-----------|---------------|
| Inventory, January 1 | \$ 30,000 | \$ 43,000 |
| Markdowns | | 10,500 |
| Markups | | 9,200 |
| Markdown cancellations | | 6,500 |
| Markup cancellations | | 3,200 |
| Purchases | 104,800 | 155,000 |
| Sales revenue | | 154,000 |
| Purchase returns | 2,800 | 4,000 |
| Sales returns and allowances | | 8,000 |

Instructions

- Prepare a schedule to compute Aristotle's June 30, 2020, inventory under the conventional retail method of accounting for inventories.
- Without prejudice to your solution to part (a), assume that you computed the June 30, 2020, inventory to be \$59,400 at retail and the ratio of cost to retail to be 70%. The general price level has increased from 100 at January 1, 2020, to 108 at June 30, 2020. Prepare a schedule to compute the June 30, 2020, inventory at the June 30 price level under the dollar-value LIFO retail method.

(AICPA adapted)

***P9.13 (LO 7) Groupwork (Retail, LIFO Retail, and Inventory Shortage)** Late in 2017, Joan Seceda and four other investors took the chain of Becker Department Stores private, and the company has just completed its third year of operations under the ownership of the investment group. Andrea Selig, controller of Becker Department Stores, is in the process of preparing the year-end financial statements. Based on the preliminary financial statements, Seceda has expressed concern over inventory shortages, and she has asked Selig to determine whether an abnormal amount of theft and breakage has occurred. The accounting records of Becker Department Stores contain the following amounts on November 30, 2020, the end of the fiscal year.

| | Cost | Retail |
|---------------------|-----------|-----------|
| Beginning inventory | \$ 68,000 | \$100,000 |
| Purchases | 255,000 | 400,000 |
| Net markups | | 50,000 |
| Net markdowns | | 110,000 |
| Sales revenue | | 320,000 |

According to the November 30, 2020, physical inventory, the actual inventory at retail is \$115,000.

Instructions

- Describe the circumstances under which the retail inventory method would be applied and the advantages of using the retail inventory method.
- Assuming that prices have been stable, calculate the value, at cost, of Becker Department Stores' ending inventory using the last-in, first-out (LIFO) retail method. Be sure to furnish supporting calculations.
- Estimate the amount of shortage, at retail, that has occurred at Becker Department Stores during the year ended November 30, 2020.
- Complications in the retail method can be caused by such items as (1) freight-in costs, (2) purchase returns and allowances, (3) sales returns and allowances, and (4) employee discounts. Explain how each of these four special items is handled in the retail inventory method.

(CMA adapted)

***P9.14 (LO 7) (Change to LIFO Retail)** Diderot Stores Inc., which uses the conventional retail inventory method, wishes to change to the LIFO retail method beginning with the accounting year ending December 31, 2020.

Amounts as shown below appear on the store's books before adjustment.

| | Cost | Retail |
|----------------------------|-----------|-----------|
| Inventory, January 1, 2020 | \$ 15,800 | \$ 24,000 |
| Purchases in 2020 | 116,200 | 184,000 |
| Markups in 2020 | | 12,000 |
| Markdowns in 2020 | | 5,500 |
| Sales revenue in 2020 | | 175,000 |

You are to assume that all markups and markdowns apply to 2020 purchases, and that it is appropriate to treat the entire inventory as a single department.

Instructions

Compute the inventory at December 31, 2020, under the following methods.

- The conventional retail method.
- The last-in, first-out retail method, effecting the change in method as of January 1, 2020. Assume that the cost-to-retail percentage for 2019 was recomputed correctly in accordance with procedures necessary to change to LIFO. This ratio was 59%.

(AICPA adapted)

***P9.15 (LO 7) (Change to LIFO Retail; Dollar-Value LIFO Retail)** Davenport Department Store converted from the conventional retail method to the LIFO retail method on January 1, 2020, and is now considering converting to the dollar-value LIFO inventory method. During your examination of the financial statements for the year ended December 31, 2021, management requested that you furnish a summary showing certain computations of inventory cost for the past 3 years.

Here is the available information.

- The inventory at January 1, 2019, had a retail value of \$56,000 and cost of \$29,800 based on the conventional retail method.
- Transactions during 2019 were as follows.

| | Cost | Retail |
|--|-----------|-----------|
| Purchases | \$311,000 | \$554,000 |
| Purchase returns | 5,200 | 10,000 |
| Purchase discounts | 6,000 | |
| Gross sales revenue (after employee discounts) | | 551,000 |
| Sales returns | | 9,000 |
| Employee discounts | | 3,000 |
| Freight-in | 17,600 | |
| Net markups | | 20,000 |
| Net markdowns | | 12,000 |

- The retail value of the December 31, 2020, inventory was \$75,600, the cost ratio for 2020 under the LIFO retail method was 61%, and the regional price index was 105% of the January 1, 2020, price level.
- The retail value of the December 31, 2021, inventory was \$62,640, the cost ratio for 2021 under the LIFO retail method was 60%, and the regional price index was 108% of the January 1, 2020, price level.

Instructions

- Prepare a schedule showing the computation of the cost of inventory on hand at December 31, 2019, based on the conventional retail method.
- Prepare a schedule showing the recomputation of the inventory to be reported on December 31, 2019, in accordance with procedures necessary to convert from the conventional retail method to the LIFO retail method beginning January 1, 2020. Assume that the retail value of the December 31, 2019, inventory was \$60,000.
- Without prejudice to your solution to part (b), assume that you computed the December 31, 2019, inventory (retail value \$60,000) under the LIFO retail method at a cost of \$33,300. Prepare a schedule showing the computations of the cost of the store's 2020 and 2021 year-end inventories under the dollar-value LIFO method.

(AICPA adapted)

Concepts for Analysis

CA9.1 (LO 1) (LCNRV) You have been asked by the financial vice president to develop a short presentation on the LCNRV method for inventory purposes. The financial VP needs to explain this method to the president because it appears that a portion of the company's inventory has declined in value.

Instructions

The financial vice president asks you to answer the following questions.

- What is the purpose of the LCNRV method?
- What is meant by “net realizable value”?
- Do you apply the LCNRV method to each individual item, to a category, or to the total of the inventory? Explain.
- What are the potential disadvantages of the LCNRV method?

CA9.2 (LO 1) Ethics (LCNRV) The net realizable value of Lake Corporation’s inventory has declined below its cost. Allyn Conan, the controller, wants to use the loss method to write down inventory because it more clearly discloses the decline in the net realizable value and does not distort the cost of goods sold. His supervisor, financial vice president Bill Ortiz, prefers the cost-of-goods-sold method to write down inventory because it does not call attention to the decline in net realizable value.

Instructions

Answer the following questions.

- What, if any, is the ethical issue involved?
- Is any stakeholder harmed if Bill Ortiz’s preference is used?
- What should Allyn Conan do?

CA9.3 (LO 1) (LCNRV) Ogala Corporation purchased a significant amount of raw materials inventory for a new product that it is manufacturing. Ogala uses the LCNRV rule for these raw materials. The net realizable value of the raw materials is below the original cost.

Ogala uses the FIFO inventory method for these raw materials. In the last 2 years, each purchase has been at a lower price than the previous purchase, and the ending inventory quantity for each period has been higher than the beginning inventory quantity for that period.

Instructions

- At which amount should Ogala’s raw materials inventory be reported on the balance sheet? Why?
- In general, why is the LCNRV rule used to report inventory?
- What would have been the effect on ending inventory and cost of goods sold had Ogala used the average-cost inventory method instead of the FIFO inventory method for the raw materials? Why?

CA9.4 (LO 1) (LCNRV) Steele Corporation purchased a significant amount of raw materials inventory for a new product that it is manufacturing. Steele uses the lower-of-average-cost-or-net realizable value (LCNRV) rule for these raw materials. The net realizable value of the raw materials is below the original cost.

In the last 2 years, each purchase has been at a lower price than the previous purchase, and the ending inventory quantity for each period has been higher than the beginning inventory quantity for that period.

Instructions

- At which amount should Steele’s raw materials inventory be reported on the balance sheet? Why?
 - In general, why is the LCNRV rule used to report inventory?
- What would have been the effect on ending inventory and cost of goods sold had Steele used the LIFO inventory method instead of the average-cost inventory method for the raw materials? Why?

CA9.5 (LO 5) Writing (Retail Inventory Method) Saurez Company, your client, manufactures paint. The company’s president, Maria Saurez, has decided to open a retail store to sell Saurez paint as well as wallpaper and other supplies that would be purchased from other suppliers. She has asked you for information about the conventional retail method of pricing inventories at the retail store.

Instructions

Prepare a report to the president explaining the retail method of pricing inventories. Your report should include the following points.

- Description and accounting features of the method.
- The conditions that may distort the results under the method.
- A comparison of the advantages of using the retail method with those of using cost methods of inventory pricing.
- The accounting theory underlying the treatment of net markdowns and net markups under the method.

(AICPA adapted)

CA9.6 (LO 2, 5) (Cost Determination, LCM, Retail Method) Olson Corporation, a retailer and wholesaler of national brand-name household lighting fixtures, purchases its inventories from various suppliers.

Instructions

- a. 1. What criteria should be used to determine which of Olson's costs are inventoriable?
2. Are Olson's administrative costs inventoriable? Defend your answer.
- b. 1. Olson uses LIFO and the lower-of-cost-or-market rule for its wholesale inventories. What are the theoretical arguments for that rule?
2. The replacement cost of the inventories is below the net realizable value less a normal profit margin, which, in turn, is below the original cost. What amount should be used to value the inventories? Why?
- c. Assume instead that Olson calculates the estimated cost of its ending inventories held for sale at retail using the conventional retail inventory method. How would Olson treat the beginning inventories and net markdowns in calculating the cost ratio used to determine its ending inventories? Why?

(AICPA adapted)

CA9.7 (LO 3) Ethics (Purchase Commitments) Prophet Company signed a long-term purchase contract to buy timber from the U.S. Forest Service at \$300 per thousand board feet. Under these terms, Prophet must cut and pay \$6,000,000 for this timber during the next year. Currently, the market value is \$250 per thousand board feet. At this rate, the market price is \$5,000,000. Jerry Herman, the controller, wants to recognize the loss in value on the year-end financial statements, but the financial vice president, Billie Hands, argues that the loss is temporary and should be ignored. Herman notes that market value has remained near \$250 for many months, and he sees no sign of significant change.

Instructions

- a. What are the ethical issues, if any?
- b. Is any particular stakeholder harmed by the financial vice president's decision?
- c. What should the controller do?

Using Your Judgment

Financial Reporting Problem

The Procter & Gamble Company (P&G)

The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

- a. How does P&G value its inventories? Which inventory costing method does P&G use as a basis for reporting its inventories?
- b. How does P&G report its inventories in the balance sheet? In the notes to its financial statements, what three descriptions are used to classify its inventories?
- c. What costs does P&G include in Inventory and Cost of Products Sold?
- d. What was P&G's inventory turnover in 2017? What is its gross profit percentage? Evaluate P&G's inventory turnover and its gross profit percentage.

Comparative Analysis Case

The Coca-Cola Company and PepsiCo, Inc.

The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- a. What is the amount of inventory reported by Coca-Cola at December 31, 2017, and by PepsiCo at December 31, 2017? What percent of total assets is invested in inventory by each company?

- b. What inventory costing methods are used by Coca-Cola and PepsiCo? How does each company value its inventories?
- c. In the notes, what classifications (description) are used by Coca-Cola and PepsiCo to categorize their inventories?
- d. Compute and compare the inventory turnovers and days to sell inventory for Coca-Cola and PepsiCo for 2017. Indicate why there might be a significant difference between the two companies.

Financial Statement Analysis Cases

Case 1: Robots, Inc.

Robots, Inc. reported the following information regarding 2019–2020 inventory.

| Robots, Inc. | | |
|--|------------------|------------------|
| | <u>2020</u> | <u>2019</u> |
| Current assets | | |
| Cash | \$ 153,010 | \$ 538,489 |
| Accounts receivable, net of allowance for doubtful accounts of \$46,000 in 2020 and \$160,000 in 2019 | 1,627,980 | 2,596,291 |
| Inventories (Note 2) | 1,340,494 | 1,734,873 |
| Other current assets | 123,388 | 90,592 |
| Assets of discontinued operations | — | <u>32,815</u> |
| Total current assets | <u>3,244,872</u> | <u>4,993,060</u> |

| Notes to Consolidated Financial Statements | | |
|--|--------------------|--------------------|
| Note 1 (in part): Nature of Business and Significant Accounting Policies | | |
| <i>Inventories</i> —Inventories are stated at the lower-of-cost-or-market. Cost is determined by the last-in, first-out (LIFO) method. | | |
| Note 2: Inventories | | |
| Inventories consist of the following. | | |
| | <u>2020</u> | <u>2019</u> |
| Raw materials | \$1,264,646 | \$2,321,178 |
| Work in process | 240,988 | 171,222 |
| Finished goods and display units | <u>129,406</u> | <u>711,252</u> |
| Total inventories | 1,635,040 | 3,203,652 |
| Less: Amount classified as long-term | <u>294,546</u> | <u>1,468,779</u> |
| Current portion | <u>\$1,340,494</u> | <u>\$1,734,873</u> |

Inventories are stated at the lower of cost determined by the LIFO method or market for Robots, Inc. If the FIFO method had been used for the entire consolidated group, inventories after an adjustment to the lower-of-cost-or-market would have been approximately \$2,000,000 and \$3,800,000 at October 31, 2020 and 2019, respectively.

Inventory has been written down to estimated net realizable value, and results of operations for 2020, 2019, and 2018 include a corresponding charge of approximately \$868,000, \$960,000, and \$273,000, respectively, which represents the excess of LIFO cost over market.

Inventory of \$294,546 and \$1,468,779 at October 31, 2020 and 2019, respectively, shown on the balance sheet as a noncurrent asset represents that portion of the inventory that is not expected to be sold currently.

Reduction in inventory quantities during the years ended October 31, 2020, 2019, and 2018 resulted in liquidation of LIFO inventory quantities carried at a lower cost prevailing in prior years as compared with the cost of fiscal 2017 purchases. The effect of these reductions was to decrease the net loss by approximately \$24,000, \$157,000, and \$90,000 at October 31, 2020, 2019, and 2018, respectively.

Instructions

- a. Comment on why Robots, Inc., might disclose how its LIFO inventories would be valued under FIFO.
- b. Why does the LIFO liquidation reduce operating costs?
- c. Comment on whether Robots, Inc. would report more or less income if it had been on a FIFO basis for all its inventory.

Case 2: Barrick Gold Corporation

Barrick Gold Corporation, with headquarters in Toronto, Canada, is the world's most profitable and largest gold mining company outside South Africa. Part of the key to Barrick's success has been due to its ability to maintain cash flow while improving production and increasing its reserves of gold-containing property. In the most recent year, Barrick achieved record growth in cash flow, production, and reserves.

The company maintains an aggressive policy of developing previously identified target areas that have the possibility of a large amount of gold ore, and that have not been previously developed. Barrick limits the riskiness of this development by choosing only properties that are located in politically stable regions, and by the company's use of internally generated funds, rather than debt, to finance growth.

Barrick's inventories are as follows.

| Barrick Gold Corporation | |
|--|-----------|
| <u>Inventories (in millions, US dollars)</u> | |
| Current | |
| Gold in process | \$133 |
| Mine operating supplies | <u>82</u> |
| | \$215 |
| Non-current (included in Other assets) | |
| Ore in stockpiles | \$65 |

Instructions

- Why do you think that there are no finished goods inventories? Why do you think the raw material, ore in stockpiles, is considered to be a non-current asset?
- Consider that Barrick has no finished goods inventories. What journal entries are made to record a sale?
- Suppose that gold bullion that cost \$1.8 million to produce was sold for \$2.4 million. The journal entry was made to record the sale, but no entry was made to remove the gold from the gold in process inventory. How would this error affect the following?

| <u>Balance Sheet</u> | | <u>Income Statement</u> | |
|----------------------|---|-------------------------|---|
| Inventory | ? | Cost of goods sold | ? |
| Retained earnings | ? | Net income | ? |
| Accounts payable | ? | | |
| Working capital | ? | | |
| Current ratio | ? | | |

Accounting, Analysis, and Principles

Englehart Company sells two types of pumps. One is large and is for commercial use. The other is smaller and is used in residential swimming pools. The following inventory data is available for the month of March.

| | <u>Units</u> | <u>Price per Unit</u> | <u>Total</u> |
|--------------------------|--------------|-----------------------|--------------|
| Residential Pumps | | | |
| Inventory at Feb. 28: | 200 | \$ 400 | \$ 80,000 |
| Purchases: | | | |
| March 10 | 500 | \$ 450 | \$225,000 |
| March 20 | 400 | \$ 475 | \$190,000 |
| March 30 | 300 | \$ 500 | \$150,000 |
| Sales: | | | |
| March 15 | 500 | \$ 540 | \$270,000 |
| March 25 | 400 | \$ 570 | \$228,000 |
| Inventory at March 31: | 500 | | |
| Commercial Pumps | | | |
| Inventory at Feb. 28: | 600 | \$ 800 | \$480,000 |
| Purchases: | | | |
| March 3 | 600 | \$ 900 | \$540,000 |
| March 12 | 300 | \$ 950 | \$285,000 |
| March 21 | 500 | \$1,000 | \$500,000 |
| Sales: | | | |
| March 18 | 900 | \$1,080 | \$972,000 |
| March 29 | 600 | \$1,140 | \$684,000 |
| Inventory at March 31: | 500 | | |

In addition to the above information, due to a downturn in the economy that has hit Englehart's commercial customers especially hard, Englehart expects commercial pump prices from March 31 onward to be considerably different (and lower) than at the beginning of and during March. Englehart has developed the following additional information.

| | <u>Commercial Pumps</u> | <u>Residential Pumps</u> |
|---------------------------------|-------------------------|--------------------------|
| Net realizable value (per unit) | \$900 | \$580 |

The normal profit margin is 16.67% of cost. Englehart uses the FIFO accounting method.

Accounting

- a. Determine the dollar amount that Englehart should report on its March 31 balance sheet for inventory. Assume Englehart applies lower-of-cost-or-net realizable value at the individual product level.
- b. Repeat part (a) but assume Englehart applies lower-of-cost-or-net realizable value at the major categories level. Englehart places both commercial and residential pumps into the same (and only) category.

Analysis

Which of the two approaches above (individual product level or major categories) for applying LCNRV do you think gives the financial statement reader better information?

Principles

Assume that during April, the net realizable value of commercial pumps rebounds to \$1,050.

- a. Briefly describe how Englehart will report in its April financial statements the inventory remaining from March 31.
- b. Briefly describe the conceptual trade-offs inherent in the accounting in part (a).

Analytics in Action

Accounting software systems collect vast amounts of data about the economic events experienced by a company and about the parties with whom the company engages, such as suppliers and customers. Business decision-makers take advantage of this wealth of information by using data analytics, which often employs both software and statistics, to draw inferences and make more informed business decisions. As both data access and analytical software improve, the use of data analytics to support decisions is becoming increasingly common at virtually all types of companies.

Evaluating inventory for possible impairment requires developing estimates of net realizable value compared to the carrying value of the inventory under either FIFO or weighted-average cost flow assumptions.

Instructions Go to WileyPLUS for a data analytics exercise focusing on analysis of inventory balances for possible impairment.

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

CE9.1 Access the glossary (“Master Glossary”) to answer the following.

- What is the definition of inventory?
- What is the definition of market as it relates to inventory?
- What is the definition of net realizable value?

CE9.2 Based on increased competition for one of its key products, Tutaj Company is concerned that it will not be able to sell its products at a price that would cover its costs. Since the company is already having a bad year, the sales manager proposes writing down the inventory to the lowest level possible, so that all the bad news will be in the current year. Explain to the sales manager the rationale for lower-of-cost-or-net realizable value adjustments, according to GAAP.

CE9.3 What are the provisions for subsequent measurement of inventory in the context of a hedging transaction?

CE9.4 What is the nature of the SEC guidance concerning inventory disclosures?

Codification Research Case

Jones Co. is in a technology-intensive industry. Recently, one of its competitors introduced a new product with technology that might

render obsolete some of Jones’s inventory. The accounting staff wants to follow the appropriate authoritative literature in determining the accounting for this significant market event.

Instructions

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

- Identify the primary authoritative guidance for the accounting for inventories. What is the predecessor literature?
- List three types of goods that are classified as inventory. What characteristic will automatically exclude an item from being classified as inventory?
- Define “market” as used in the phrase “lower-of-cost-or-market.”
- Explain when it is acceptable to state inventory above cost and which industries allow this practice.

Additional Professional Resources

Go to WileyPLUS for other career-readiness resources, such as career coaching, internship opportunities, and CPAexcel prep.

IFRS Insights

LEARNING OBJECTIVE 8

Compare the accounting procedures related to valuation of inventories under GAAP and IFRS.

The major IFRS requirements related to accounting and reporting for inventories are found in *IAS 2* (“Inventories”), and *IAS 41* (“Agriculture”). In most cases, IFRS and GAAP are the same. The major differences are that IFRS prohibits the use of the LIFO cost flow assumption and does not have an exception to LCNRV.

Relevant Facts

Following are the key similarities and differences between GAAP and IFRS related to inventories.

Similarities

- IFRS and GAAP account for inventory acquisitions at historical cost and evaluate inventory for LCNRV subsequent to acquisition.
- Who owns the goods—goods in transit, consigned goods, special sales agreements—as well as the costs to include in inventory are essentially accounted for the same under IFRS and GAAP.

Differences

- The requirements for accounting for and reporting inventories are more principles-based under IFRS. That is, GAAP provides more detailed guidelines in inventory accounting.

- A major difference between IFRS and GAAP relates to the LIFO cost flow assumption. GAAP permits the use of LIFO for inventory valuation. IFRS prohibits its use. FIFO and average-cost are the only two acceptable cost flow assumptions permitted under IFRS. Both sets of standards permit specific identification where appropriate.
- IFRS does not have an exception to the LCNRV rule for the LIFO/retail inventory methods (IFRS does not allow LIFO). GAAP, on the other hand, for LIFO/retail inventory method companies, defines market as replacement cost subject to the constraints of net realizable value (the ceiling) and net realizable value less a normal markup (the floor). IFRS does not use a ceiling or a floor to determine lower-of-cost-or-market.
- Under GAAP, if inventory is written down under the LCNRV or lower-of-cost-or-market valuation, the new basis is now considered its cost. As a result, the inventory may not be written back up to its original cost in a subsequent period. Under IFRS, the write-down may be reversed in a subsequent period up to the amount of the previous write-down. Both the write-down and any subsequent reversal should be reported on the income statement. IFRS accounting for lower-of-cost-or-market is discussed more fully in the *About the Numbers* section below.
- IFRS requires both biological assets and agricultural produce at the point of harvest to be reported at net realizable value. GAAP does not require companies to account for all biological assets in the same way. Furthermore, these assets generally are not reported at net realizable value. Disclosure requirements also differ between the two sets of standards. IFRS accounting for agriculture and biological assets is discussed more fully in the *About the Numbers* section.

About the Numbers

Lower-of-Cost-or-Net Realizable Value (LCNRV)

Inventories are recorded at their cost. However, if inventory declines in value below its original cost, a major departure from the historical cost principle occurs. Whatever the reason for a decline—obsolescence, price-level changes, or damaged goods—a company should write down the inventory to net realizable value to report this loss. **A company abandons the historical cost principle when the future utility (revenue-producing ability) of the asset drops below its original cost.**

Net Realizable Value Recall that cost is the acquisition price of inventory computed using one of the historical cost-based methods—specific identification, average-cost, or FIFO. The term **net realizable value (NRV)** refers to the net amount that a company expects to realize from the sale of inventory. Specifically, net realizable value is the estimated selling price in the normal course of business less estimated costs to complete and estimated costs to make a sale.

To illustrate, assume that Mander Corp. has unfinished inventory with a cost of \$950, a sales value of \$1,000, estimated cost of completion of \$50, and estimated selling costs of \$200. Mander's net realizable value is computed as follows.

| | | |
|------------------------------------|------------|----------------------|
| Inventory value—unfinished | | \$1,000 |
| Less: Estimated cost of completion | \$ 50 | |
| Estimated cost to sell | <u>200</u> | <u>250</u> |
| Net realizable value | | <u>\$ 750</u> |

Mander reports inventory on its statement of financial position (balance sheet) at \$750. In its income statement, Mander reports a Loss on Inventory Write-Down of \$200 (\$950 – \$750).

A departure from cost is justified because inventories should not be reported at amounts higher than their expected realization from sale or use. In addition, a company like Mander should charge the loss of utility against revenues in the period in which the loss occurs, not in the period of sale. Companies therefore report their inventories at the **lower-of-cost-or-net realizable value (LCNRV)** at each reporting date.

Illustration of LCNRV As indicated, a company values inventory at LCNRV. A company estimates net realizable value based on the most reliable evidence of the inventories' realizable amounts (expected selling price, expected costs to completion, and expected costs to sell). To illustrate, Regner Foods computes its inventory at LCNRV, as shown in **Illustration IFRS9.1**.

ILLUSTRATION IFRS9.1
LCNRV Data

| Food | Cost | Net Realizable Value | Final Inventory Value |
|------------------|-----------|----------------------|-----------------------|
| Spinach | \$ 80,000 | \$120,000 | \$ 80,000 |
| Carrots | 100,000 | 110,000 | 100,000 |
| Cut beans | 50,000 | 40,000 | 40,000 |
| Peas | 90,000 | 72,000 | 72,000 |
| Mixed vegetables | 95,000 | 92,000 | 92,000 |
| | | | <u>\$384,000</u> |

| Final Inventory Value: | |
|------------------------|---|
| Spinach | Cost (\$80,000) is selected because it is lower than net realizable value. |
| Carrots | Cost (\$100,000) is selected because it is lower than net realizable value. |
| Cut beans | Net realizable value (\$40,000) is selected because it is lower than cost. |
| Peas | Net realizable value (\$72,000) is selected because it is lower than cost. |
| Mixed vegetables | Net realizable value (\$92,000) is selected because it is lower than cost. |

As indicated, the final inventory value of \$384,000 equals the sum of the LCNRV for each of the inventory items. That is, Regner Foods applies the LCNRV rule to each individual type of food. Similar to GAAP, under IFRS, companies may apply the LCNRV rule to a group of similar or related items, or to the total of the inventory. If a company follows a group-of-similar-or-related-items or total-inventory approach in determining LCNRV, increases in market prices tend to offset decreases in market prices. In most situations, companies price inventory on an item-by-item basis. In fact, tax rules in some countries require that companies use an individual-item basis, barring practical difficulties.

In addition, the individual-item approach gives the lowest valuation for statement of financial position purposes. In some cases, a company prices inventory on a total-inventory basis when it offers only one end product (comprised of many different raw materials). If it produces several end products, a company might use a similar-or-related approach instead. **Whichever method a company selects, it should apply the method consistently from one period to another.**

Recording Net Realizable Value Instead of Cost Similar to GAAP, one of two methods may be used to record the income effect of valuing inventory at net realizable value. One method, referred to as the **cost-of-goods-sold method**, debits cost of goods sold for the write-down of the inventory to net realizable value. As a result, the company does not report a loss in the income statement because the cost of goods sold already includes the amount of the loss. The second method, referred to as the **loss method**, debits a loss account for the write-down of the inventory to net realizable value. We use the following inventory data for Ricardo Company to illustrate entries under both methods.

| | |
|---|-----------|
| Cost of goods sold (before adjustment to NRV) | \$108,000 |
| Ending inventory (cost) | 82,000 |
| Ending inventory (at NRV) | 70,000 |

Illustration IFRS9.2 shows the entries for both the cost-of-goods-sold and loss methods, assuming the use of a perpetual inventory system.

ILLUSTRATION IFRS9.2
LCNRV Entries

| Cost-of-Goods-Sold Method | | Loss Method | |
|--|--------|---------------------|--------|
| To reduce inventory from cost to net realizable value | | | |
| Cost of Goods Sold | 12,000 | Loss Due to Decline | |
| Inventory | | of Inventory to NRV | 12,000 |
| | | Inventory | 12,000 |

The cost-of-goods-sold method buries the loss in the Cost of Goods Sold account. The loss method, by identifying the loss due to the write-down, shows the loss separate from Cost of Goods Sold in the income statement. **Illustration IFRS9.3** contrasts the differing amounts reported in the income statement under the two approaches, using data from the Ricardo example.

| Cost-of-Goods-Sold Method | |
|---|-------------------|
| Sales revenue | \$200,000 |
| Cost of goods sold (after adjustment to NRV*) | <u>120,000</u> |
| Gross profit on sales | <u>\$ 80,000</u> |
| | |
| *Cost of goods sold (before adjustment to NRV) | \$ 108,000 |
| Difference between inventory at cost and NRV ((\$82,000 – \$70,000)) | <u>12,000</u> |
| Cost of goods sold (after adjustment to NRV) | <u>\$ 120,000</u> |
| | |
| Loss Method | |
| Sales revenue | \$200,000 |
| Cost of goods sold | <u>108,000</u> |
| Gross profit on sales | 92,000 |
| Loss due to decline of inventory to NRV | <u>12,000</u> |
| | <u>\$ 80,000</u> |

ILLUSTRATION IFRS9.3**Income Statement Reporting—LCNRV**

IFRS does not specify a particular account to debit for the write-down. We believe the loss method presentation is preferable because it clearly discloses the loss resulting from a decline in inventory net realizable values.

Use of an Allowance Instead of crediting the Inventory account for net realizable value adjustments, companies generally use an allowance account, often referred to as Allowance to Reduce Inventory to NRV. For example, using an allowance account under the loss method, Ricardo Company makes the following entry to record the inventory write-down to net realizable value.

| | | |
|---|--------|--------|
| Loss Due to Decline of Inventory to NRV | 12,000 | |
| Allowance to Reduce Inventory to NRV | | 12,000 |

Use of the allowance account results in reporting both the cost and the net realizable value of the inventory. Ricardo reports inventory in the statement of financial position as shown in **Illustration IFRS9.4**.

| | |
|--|------------------------|
| Inventory (at cost) | \$82,000 |
| Allowance to reduce inventory to NRV | <u>(12,000)</u> |
| Inventory (at net realizable value) | <u>\$70,000</u> |

ILLUSTRATION IFRS9.4**Presentation of Inventory Using an Allowance Account**

The use of the allowance under the cost-of-goods-sold or loss method permits both the income statement and the statement of financial position to reflect inventory measured at \$82,000, although the statement of financial position shows a net amount of \$70,000. It also keeps subsidiary inventory ledgers and records in correspondence with the control account without changing prices. *For homework purposes, use an allowance account to record net realizable value adjustments, unless instructed otherwise.*

Recovery of Inventory Loss In periods following the write-down, economic conditions may change such that the net realizable value of inventories previously written down may be *greater* than cost or there is clear evidence of an increase in the net realizable value. In this situation, the amount of the write-down is reversed, with the reversal limited to the amount of the original write-down.

Continuing the Ricardo example, assume that in the subsequent period, market conditions change, such that the net realizable value increases to \$74,000 (an increase of \$4,000). As a result, only \$8,000 is needed in the allowance. Ricardo makes the following entry, using the loss method.

| | | |
|--|-------|-------|
| Allowance to Reduce Inventory to NRV | 4,000 | |
| Recovery of Inventory Loss (\$74,000 – \$70,000) | | 4,000 |

Valuation Bases

For the most part, companies record inventory at LCNRV. However, there are some situations in which companies depart from the LCNRV rule. Such treatment may be justified in situations when cost is difficult to determine, the items are readily marketable at quoted market prices, and units of product are

interchangeable. In this section, we discuss agricultural assets (including biological assets and agricultural produce), for which net realizable value is the general rule for valuing inventory.

Agricultural Inventory Under IFRS, net realizable value measurement is used for inventory when the inventory is related to agricultural activity. In general, agricultural activity results in two types of agricultural assets: (1) biological assets or (2) agricultural produce at the point of harvest.

A **biological asset** (classified as a non-current asset) is a living animal or plant, such as sheep, cows, fruit trees, or cotton plants. **Agricultural produce** is the harvested product of a biological asset, such as wool from a sheep, milk from a dairy cow, picked fruit from a fruit tree, or cotton from a cotton plant.

Biological assets are measured on initial recognition and at the end of each reporting period at fair value less costs to sell (net realizable value). Companies record a gain or loss due to changes in the net realizable value of biological assets in income when it arises. For example, a gain may arise on initial recognition of a biological asset, such as when a calf is born. A gain or loss may arise on initial recognition of agricultural produce as a result of harvesting. Losses may arise on initial recognition for agricultural assets because costs to sell are deducted in determining fair value less costs to sell.

Agricultural produce (which are harvested from biological assets) are measured at fair value less costs to sell (net realizable value) at the point of harvest. Once harvested, the net realizable value of the agricultural produce becomes its cost, and this asset is accounted for similar to other inventories held for sale in the normal course of business. Measurement at fair value or selling price less point-of-sale costs corresponds to the net realizable value measure in the LCNRV test (selling price less estimated costs to complete and sell) since at harvest, the agricultural product is complete and is ready for sale.

Illustration of Agricultural Accounting at Net Realizable Value To illustrate the accounting at net realizable value for agricultural assets, assume that Bancroft Dairy produces milk for sale to local cheese-makers. Bancroft began operations on January 1, 2020, by purchasing 420 milking cows for \$460,000. Bancroft provides the information related to the milking cows as shown in **Illustration IFRS9.5**.

ILLUSTRATION IFRS9.5

Agricultural Assets— Bancroft Dairy

| | | |
|--|----------------|------------------|
| Milking cows | | |
| Carrying value, January 1, 2020* | | \$460,000 |
| Change in fair value due to growth and price changes | \$35,000 | |
| Decrease in fair value due to harvest | <u>(1,200)</u> | |
| Change in carrying value | | <u>33,800</u> |
| Carrying value, January 31, 2020 | | <u>\$493,800</u> |
| Milk harvested during January** | | <u>\$ 36,000</u> |

*The carrying value is measured at fair value less costs to sell (net realizable value). The fair value of milking cows is determined based on market prices of livestock of similar age, breed, and genetic merit.
**Milk is initially measured at its fair value less costs to sell (net realizable value) at the time of milking. The fair value of milk is determined based on market prices in the local area.

As indicated, the carrying value of the milking cows increased during the month. Part of the change is due to changes in market prices (less costs to sell) for milking cows. The change in market price may also be affected by growth—the increase in value as the cows mature and develop increased milking capacity. At the same time, as mature cows are milked, their milking capacity declines (fair value decrease due to harvest). For example, changes in fair value arising from growth and harvesting from mature cows can be estimated based on changes in market prices of different age cows in the herd.

Bancroft makes the following entry to record the change in carrying value of the milking cows.

| | | |
|---|--------|--------|
| Biological Asset—Milking Cows (\$493,800 – \$460,000) | 33,800 | |
| Unrealized Holding Gain or Loss—Income | | 33,800 |

As a result of this entry, Bancroft's statement of financial position reports Biological Asset—Milking Cows as a non-current asset at fair value less costs to sell (net realizable value). In addition, the unrealized gains and losses are reported as other income and expense on the income statement. In subsequent periods at each reporting date, Bancroft continues to report Biological Asset—Milking Cows at net realizable value and records any related unrealized gains or losses in income. Because there is a ready market for the biological assets (milking cows), valuation at net realizable value provides more relevant information about these assets.

In addition to recording the change in the biological asset, Bancroft makes the following summary entry to record the milk harvested for the month of January.

| | | |
|--|--------|--------|
| Milk Inventory | 36,000 | |
| Unrealized Holding Gain or Loss—Income | | 36,000 |

The milk inventory is recorded at net realizable value at the time it is harvested, and Unrealized Holding Gain or Loss—Income is recognized in income. As with the biological assets, net realizable value is considered the most relevant for purposes of valuation at harvest. What happens to the milk inventory that Bancroft recorded upon harvesting the milk from the cows? Assuming the milk harvested in January was sold to a local cheese-maker for \$38,500, Bancroft records the sale as follows.

| | | |
|--------------------|--------|--------|
| Cash | 38,500 | |
| Cost of Goods Sold | 36,000 | |
| Milk Inventory | | 36,000 |
| Sales Revenue | | 38,500 |

Thus, once harvested, the net realizable value of the harvested milk becomes its cost, and the milk is accounted for similar to other inventories held for sale in the normal course of business.

A final note: Some animals or plants may not be considered biological assets but would be classified and accounted for as other types of assets (not at net realizable value). For example, a pet shop may hold an inventory of dogs purchased from breeders that it then sells. Because the pet shop is not breeding the dogs, these dogs are not considered biological assets. As a result, the dogs are accounted for as inventory held for sale (at LCNRV).

On the Horizon

One issue that will be difficult to resolve relates to the use of the LIFO cost flow assumption. As indicated, IFRS specifically prohibits its use. Conversely, the LIFO cost flow assumption is widely used in the United States because of its favorable tax advantages. In addition, many argue that LIFO from a financial reporting point of view provides a better matching of current costs against revenue and therefore enables companies to compute a more realistic income.

IFRS Self-Test Questions

- All of the following are key similarities between GAAP and IFRS with respect to accounting for inventories **except**:
 - costs to include in inventories are similar.
 - LIFO cost flow assumption where appropriate is used by both sets of standards.
 - fair value valuation of inventories is prohibited by both sets of standards.
 - guidelines on ownership of goods are similar.
- All of the following are key differences between GAAP and IFRS with respect to accounting for inventories **except** the:
 - definition of the lower-of-cost-or-market test for inventory valuation differs between GAAP and IFRS.
 - average-cost method is prohibited under IFRS.
 - inventory basis determination for write-downs differs between GAAP and IFRS.
 - guidelines are more principles-based under IFRS than they are under GAAP.
- Starfish Company (a company using GAAP and the LIFO inventory method) is considering changing to IFRS and the FIFO inventory method. How would a comparison of these methods affect Starfish's financials?
 - During a period of inflation, working capital would decrease when IFRS and the FIFO inventory method are used as compared to GAAP and LIFO.
 - During a period of inflation, the taxes will decrease when IFRS and the FIFO inventory method are used as compared to GAAP and LIFO.
 - During a period of inflation, net income would be greater if IFRS and the FIFO inventory method are used as compared to GAAP and LIFO.
 - During a period of inflation, the current ratio would decrease when IFRS and the FIFO inventory method are used as compared to GAAP and LIFO.
- Assume that Darcy Industries had the following inventory values.

| | |
|---|---------|
| Inventory cost (on December 31, 2020) | \$1,500 |
| Inventory market (on December 31, 2020) | \$1,350 |
| Inventory net realizable value (on December 31, 2020) | \$1,320 |

 Under IFRS, what is the inventory carrying value on December 31, 2020?
 - \$1,500.
 - \$1,570.
 - \$1,560.
 - \$1,320.
- Under IFRS, agricultural activity results in which of the following types of assets?
 - Agricultural produce
 - Biological assets
 - I only.
 - II only.
 - I and II.
 - Neither I nor II.

IFRS Concepts and Application

IFRS9.1 Briefly describe some of the similarities and differences between GAAP and IFRS with respect to the accounting for inventories.

IFRS9.2 LaTour Inc. is based in France and prepares its financial statements in accordance with IFRS. In 2020, it reported cost of goods sold of \$578 million and average inventory of \$154 million. Briefly discuss how analysis of LaTour's inventory turnover (and comparisons to a company using GAAP) might be affected by differences in inventory accounting between IFRS and GAAP.

IFRS9.3 Reed Pentak, a finance major, has been following globalization and made the following observation concerning accounting convergence: "I do not see many obstacles concerning development of a single accounting standard for inventories." Prepare a response to Reed to explain the main obstacle to achieving convergence in the area of inventory accounting.

IFRS9.4 Briefly describe the valuation of (a) biological assets and (b) agricultural produce.

IFRS9.5 In some instances, accounting principles require a departure from valuing inventories at cost alone. Determine the proper unit inventory price in the following cases.

| | Cases | | | | |
|----------------------------|---------|---------|---------|---------|---------|
| | 1 | 2 | 3 | 4 | 5 |
| Cost | \$15.90 | \$16.10 | \$15.90 | \$15.90 | \$15.90 |
| Sales price | 14.80 | 19.20 | 15.20 | 10.40 | 17.80 |
| Estimated cost to complete | 1.50 | 1.90 | 1.65 | .80 | 1.00 |
| Estimated cost to sell | .50 | .70 | .55 | .40 | .60 |

IFRS9.6 Riegel Company uses the LCNRV method, on an individual-item basis, in pricing its inventory items. The inventory at December 31, 2020, consists of products D, E, F, G, H, and I. Relevant per unit data for these products appear below.

| | Items | | | | | |
|-------------------------|-------|-------|------|------|-------|------|
| | D | E | F | G | H | I |
| Estimated selling price | \$120 | \$110 | \$95 | \$90 | \$110 | \$90 |
| Cost | 75 | 80 | 80 | 80 | 50 | 36 |
| Cost to complete | 30 | 30 | 25 | 35 | 30 | 30 |
| Selling costs | 10 | 18 | 10 | 20 | 10 | 20 |

Using the LCNRV rule, determine the proper unit value for statement of financial position reporting purposes at December 31, 2020, for each of the inventory items above.

IFRS9.7 Dover Company began operations in 2020 and determined its ending inventory at cost and at LCNRV at December 31, 2020, and December 31, 2021. This information is presented below.

| | Cost | Net Realizable Value |
|----------|-----------|----------------------|
| 12/31/20 | \$346,000 | \$322,000 |
| 12/31/21 | 410,000 | 390,000 |

- Prepare the journal entries required at December 31, 2020, and December 31, 2021, assuming that the inventory is recorded at LCNRV and a perpetual inventory system using the cost-of-goods-sold method is used.
- Prepare journal entries required at December 31, 2020, and December 31, 2021, assuming that the inventory is recorded at cost and a perpetual system using the loss method is used.
- Which of the two methods above provides the higher net income in each year?

IFRS9.8 Keyser's Fleece Inc. holds a drove of sheep. Keyser shears the sheep on a semiannual basis and then sells the harvested wool into the specialty knitting market. Keyser has the following information related to the shearing sheep at January 1, 2020, and during the first six months of 2020.

| | <u>Shearing Sheep</u> |
|---|-----------------------|
| Carrying value (equal to net realizable value), January 1, 2020 | \$74,000 |
| Change in fair value due to growth and price changes | 4,700 |
| Change in fair value due to harvest | (575) |
| Wool harvested during the first 6 months (at NRV) | 9,000 |

Prepare the journal entry(ies) for Keyser's biological asset (shearing sheep) for the first six months of 2020.

IFRS9.9 Refer to the data in IFRS9.8 for Keyser's Fleece Inc. Prepare the journal entries for (a) the wool harvested in the first six months of 2020, and (b) the wool harvested that is sold for \$10,500 in July 2020.

Professional Research

IFRS9.10 Jones Co. is in a technology-intensive industry. Recently, one of its competitors introduced a new product with technology that might render obsolete some of Jones's inventory. The accounting staff wants to follow the appropriate authoritative literature in determining the accounting for this significant market event.

Instructions

Access the IFRS authoritative literature at the IASB website (click on the IFRS tab and then register for free eIFRS access if necessary). When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- Identify the authoritative literature addressing inventory pricing.
- List three types of goods that are classified as inventory. What characteristic will automatically exclude an item from being classified as inventory?
- Define "net realizable value" as used in the phrase "lower-of-cost-or-net realizable value."
- Explain when it is acceptable to state inventory above cost and which industries allow this practice.

International Financial Reporting Problem

Marks and Spencer plc (M&S)

IFRS9.11 The financial statements of **M&S** are presented in Appendix E. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- How does M&S value its inventories? Which inventory costing method does M&S use as a basis for reporting its inventories?
- How does M&S report its inventories in the statement of financial position?
- What costs does M&S include in Inventory and Cost of Sales?
- What was M&S's inventory turnover in 2017? What is its gross profit percentage? Evaluate M&S's inventory turnover and its gross profit percentage.

Acquisition and Disposition of Property, Plant, and Equipment

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

1. Identify property, plant, and equipment and its related costs.
2. Discuss the accounting problems associated with interest capitalization.
3. Explain the accounting issues related to acquiring and valuing plant assets.
4. Describe the accounting treatment for costs subsequent to acquisition.
5. Describe the accounting treatment for the disposal of property, plant, and equipment.

PREVIEW OF CHAPTER 10 As we indicate in the following opening story, a company like **Jet Blue Airways** has a substantial investment in property, plant, and equipment. Conversely, other companies, such as **Microsoft**, have a relatively minor investment in these types of assets. In this chapter, we discuss the proper accounting for the acquisition, use, and disposition of property, plant, and equipment. The content and organization of the chapter are as follows.

This chapter also includes numerous conceptual and global discussions that are integral to the topics presented here. *IFRS Insights* related to PPE are presented in Chapter 11.

ACQUISITION AND DISPOSITION OF PROPERTY, PLANT, AND EQUIPMENT

Property, Plant, and Equipment

- Acquisition of property, plant, and equipment
- Cost of land
- Cost of buildings
- Cost of equipment
- Self-constructed assets

Interest Costs During Construction

- Qualifying assets
- Capitalization period
- Amount to capitalize
- Example
- Special issues
- Observations

Valuation of Property, Plant, and Equipment

- Cash discounts
- Deferred-payment contracts
- Lump-sum purchases
- Issuance of stock
- Exchanges of nonmonetary assets
- Other valuation methods

Costs Subsequent to Acquisition

- Additions
- Improvements and replacements
- Rearrangement and reinstallation
- Repairs
- Summary

Disposition of Property, Plant, and Equipment

- Sale of plant assets
- Involuntary conversion
- Miscellaneous problems

Watch Your Spending

Investments in long-lived assets, such as property, plant, and equipment, are important elements in many companies' balance sheets. Along with research and development, these investments are the driving force in generating cash flows. To provide some insight into the magnitude of these expenditures, the following graph shows how capital expenditures on structures and equipment (whether new or used) have shown steady growth after the effects of the 2008 financial crisis.

On an even more positive note, spending on capital projects (including research and development) is on the uptrend in just about all industries, as shown in the following table.

| Industry | Capital Expense (in billions) | | Change |
|-----------------------|-------------------------------|-----------|--------|
| | 2014 | 2015 | |
| Manufacturing | \$231,089 | \$239,588 | 3.68% |
| Mining | 230,776 | 174,710 | -24.29 |
| Finance and insurance | 153,260 | 164,520 | 7.35 |
| Real estate | 121,919 | 152,331 | 24.94 |
| Information | 132,049 | 135,550 | 2.65 |
| Utilities | 118,895 | 130,232 | 9.54 |
| Transportation | 111,010 | 116,678 | 5.11 |
| Health care | 89,011 | 93,587 | 5.14 |
| Retail trade | 82,402 | 85,832 | 4.16 |
| Services | 30,383 | 33,614 | 10.63 |

Capital expenditures are significant for many companies. For example, at **Jet Blue Airways**, plant assets are 69 percent of its total assets. For **Wal-Mart Stores, Inc.**, it's 56 percent. Conversely, **Microsoft's** percentage is just 8 percent. Amounts for companies' capital expenditures are reported on a company's balance sheet and directly affect such items as total assets, depreciation expense, cash flows, and net income. Companies that overspend in this area find that income is reduced as depreciation increases without corresponding increases in revenues. As a result, these companies often lose financial flexibility. That is, they find themselves in a cash bind as their cash flows from operations can no longer meet their obligations.

A good example is **Baker Hughes, Inc.** (an oilfield-services company), which in a recent year reported cash flow from operations of \$24 million but capital expenditures of \$1,442 million.

Although the company is presently stable, the unfavorable relationship of cash flow from operations to capital expenditures was a cause for concern.

Companies can also affect income by reducing capital expenditures. For example, **Cintas** (a uniform-rental business) cut back on capital expenditures in recent years. Subsequently, depreciation expense declined to \$152 million from \$158 million in the prior year. That lifted its earnings per share by seven cents. Similarly, **Norfolk Southern** added eight cents per share to its bottom line through lower depreciation charges.

Thus, not only do companies have to be careful in planning the proper amount of capital expenditures, but users must understand the impact of these expenditures on measures of financial performance. As illustrated by the examples above, the level of capital expenditures, depreciation expense, cash flow from operations, and net income all play a role in assessing a company's ability to generate future cash flows.

Phelps, "Top 100 Capital Spending Report: Greek Yogurt Plants Are Stacking Up," *www.FoodProcessing.com* (April 9, 2012); T. Francis, "Big Firms Finally Start to Ramp Up Spending," *Wall Street Journal* (March 4, 2015); and *2017 Capital Spending Report: U.S. Capital Spending Patterns 2006–2015* (*www.census.gov*).

Review and Practice

Go to the **Review and Practice** section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions as well as additional exercises and practice problem with solutions are also available online.

Property, Plant, and Equipment

LEARNING OBJECTIVE 1

Identify property, plant, and equipment and its related costs.

Companies like **Boeing**, **Target**, and **Starbucks** use assets of a durable nature. Such assets are called **property, plant, and equipment**. Other terms commonly used are **plant assets** and **fixed assets**. We use these terms interchangeably. Property, plant, and equipment include land, building structures (offices, factories, warehouses), and equipment (machinery, computers, vehicles, furniture, tools). The major characteristics of property, plant, and equipment are as follows.

1. **They are acquired for use in operations and not for resale.** Only assets used in normal business operations are classified as property, plant, and equipment. For example, an idle building is more appropriately classified separately as an investment. Land developers or subdividers classify land as inventory.
2. **They are long-term in nature and usually depreciated.** Property, plant, and equipment yield services over a number of years. Companies allocate the cost of the investment in these assets to future periods through periodic depreciation charges. The exception is land, which is depreciated only if a material decrease in value occurs, such as a loss in fertility of agricultural land because of poor crop rotation, drought, or soil erosion.
3. **They possess physical substance.** Property, plant, and equipment are tangible assets characterized by physical existence or substance. This differentiates them from intangible assets, such as patents or goodwill. Unlike raw material, however, property, plant, and equipment do not physically become part of a product held for resale.

Acquisition of Property, Plant, and Equipment

Global View

Under international accounting standards, historical cost is the benchmark (preferred) treatment for property, plant, and equipment. However, companies may also use revalued amounts. When using revaluation, companies must revalue the class of assets regularly.

Underlying Concepts

Fair value is relevant to inventory but less so for property, plant, and equipment which, consistent with the going concern assumption, are held for use in the business, not for sale like inventory.

Most companies use historical cost as the basis for valuing property, plant, and equipment (see **Global View**). **Historical cost** measures the cash or cash equivalent price of obtaining the asset and bringing it to the location and condition necessary for its intended use. For example, companies like **Kellogg Co.** consider the purchase price, freight costs, sales taxes, and installation costs of a productive asset as part of the asset's cost. It then allocates these costs to future periods through depreciation. Further, Kellogg **adds to the asset's original cost** any related costs incurred **after the asset's acquisition**, such as additions, improvements, or replacements, **if they provide future service potential**. Otherwise, Kellogg expenses these costs immediately.¹

Subsequent to acquisition, companies should not write up property, plant, and equipment to reflect fair value when it is above cost. The main reasons for this position are as follows.

1. Historical cost involves actual, not hypothetical, transactions and so is the most reliable.
2. Companies should not anticipate gains and losses but should recognize gains and losses only when the asset is sold.

Even those who favor fair value measurement for inventory and financial instruments often take the position that property, plant, and equipment should not be revalued. The major concern is the difficulty of developing a reliable fair value for these types of assets. For example, how does one value a **General Motors** automobile manufacturing plant or a nuclear power plant owned by **Consolidated Edison**?

However, if the fair value of the property, plant, and equipment is less than its carrying amount, the asset may be written down. These situations occur when the asset is impaired (discussed in Chapter 11) and in situations where the asset is being held for sale. A long-lived asset classified as held for sale should be measured at the lower of its carrying amount or fair value less costs to sell. In that case, a reasonable valuation for the asset can be obtained, based on the sales price. A long-lived asset is not depreciated if it is classified as held for sale. This is because such assets are not being used to generate revenues (see **Underlying Concepts**). [1] (See the FASB Codification References near the end of the chapter.)

Cost of Land

All expenditures made to acquire land and ready it for use are considered part of the land cost. Thus, when **Wal-Mart Stores, Inc.** or **Home Depot** purchases land on which to build a new store, its land costs typically include (1) the purchase price; (2) closing costs, such as title to the land, attorney's fees, and recording fees; (3) costs incurred in getting the land in condition for its intended use, such as grading, filling, draining, and clearing; (4) assumption of any liens, mortgages, or encumbrances on the property; and (5) any additional land improvements that have an indefinite life.

For example, when Home Depot purchases land for the purpose of constructing a building, it considers all costs incurred up to the excavation for the new building as land costs. **Removal of old buildings—clearing, grading, and filling—is a land cost because this activity is necessary to get the land in condition for its intended purpose.** Home Depot treats any proceeds from getting the land ready for its intended use, such as salvage receipts on the demolition of an old building or the sale of cleared timber, as **reductions in the cost of the land**.

In some cases, when Home Depot purchases land, it may assume certain obligations on the land such as back taxes or liens. In such situations, the cost of the land is the cash paid for it, plus the encumbrances. In other words, if the purchase price of the land is \$50,000 cash but Home Depot assumes accrued property taxes of \$5,000 and liens of \$10,000, its land cost is \$65,000.

¹Additional costs to be included in the cost of property, plant, and equipment are those related to asset retirement obligations (AROs). These costs, such as those related to decommissioning nuclear facilities or reclamation or restoration of a mining facility, reflect a legal requirement to retire the asset at the end of its useful life. The expected costs are recorded in the asset cost and depreciated over the useful life (see an expanded discussion of AROs in Chapter 13).

Home Depot also might incur **special assessments** for local improvements, such as pavements, street lights, sewers, and drainage systems. It should charge these costs to the Land account because they are relatively permanent in nature. That is, after installation, they are maintained by the local government. In addition, Home Depot should charge any permanent improvements it makes, such as landscaping, to the Land account. It records separately any **improvements with limited lives**, such as private driveways, walks, fences, and parking lots, as Land Improvements. These costs are depreciated over their estimated lives.

Generally, land is part of property, plant, and equipment. However, if the major purpose of acquiring and holding land is speculative, a company more appropriately classifies the land as an **investment**. If a real estate concern holds the land for resale, it should classify the land as **inventory**.

In cases where land is held as an investment, what accounting treatment should be given for taxes, insurance, and other direct costs incurred while holding the land? Many believe these costs should be capitalized. The reason: They are not generating revenue from the investment at this time. Companies generally use this approach except when the asset is currently producing revenue (such as rental property).

Cost of Buildings

The cost of buildings should include all expenditures related directly to their acquisition or construction. These costs include (1) materials, labor, and overhead costs incurred during construction, and (2) professional fees and building permits. Generally, companies contract others to construct their buildings. Companies consider all costs incurred, from excavation to completion, as part of the building costs.

But how should companies account for an old building that is on the site of a newly proposed building? Is the cost of removal of the old building a cost of the land or a cost of the new building? Recall that **if a company purchases land with an old building on it, then the cost of demolition less its salvage value is a cost of getting the land ready for its intended use and relates to the land rather than to the new building.** In other words, all costs of getting an asset ready for its intended use are costs of that asset.

Cost of Equipment

The term “equipment” in accounting includes delivery equipment, office equipment, machinery, furniture and fixtures, furnishings, factory equipment, and similar fixed assets. The cost of such assets includes the purchase price, freight and handling charges incurred, insurance on the equipment while in transit, cost of special foundations if required, assembling and installation costs, and costs of conducting trial runs. Costs thus include all expenditures incurred in acquiring the equipment and preparing it for use.

What Do the Numbers Mean? Robbing Peter to Pay Paul

As discussed in the opening story, capital spending is a company’s lifeblood. It is essential for expanding and refurbishing operations and buying critical new machinery. However, companies must effectively manage capital spending—both the total amount and to where the spending is directed. A good example is the case of **Cedar Fair LP**. For a number of years, it spent profits (and cash flows) from its 111-year-old hotel at its flagship Ohio amusement park on new rides, letting sections of the hotel go untouched. Customers noticed and with mounting complaints, Cedar Fair was forced to spend more than \$50 million on a 2½-year renovation. According to the company CFO, “We had been robbing Peter to pay Paul,” referring to its use of hotel revenue to build new roller coasters.

A similar balance is in play for retailers. Shabby fixtures, rusty shelves, broken floor tiles, and threadbare carpets can hurt

retail sales, most of which still take place in a store (in a recent year, online transactions made up only 10 percent of retail sales). As the CFO of **Home Depot** emphasized, “You need to keep your stores relevant.”

So while capital expenditures show up on the cash flow statements, neglect of important reinvestment may not. While investors might not peek behind factory doors to check for aging equipment, spending shortfalls by retailers and other consumer businesses are on public display. If companies are not keeping their stores continually fresh, they will pay a price in terms of lower sales in the near term and big cash flow demands in future years to take care of the deferred maintenance.

Self-Constructed Assets

Occasionally, companies construct their own assets. Determining the cost of such machinery and other fixed assets can be a problem. Without a purchase price or contract price, the company must allocate costs and expenses to arrive at the cost of the **self-constructed asset**. Materials and direct labor used in construction pose no problem. A company can trace these costs directly to work and material orders related to the fixed assets constructed.

However, the assignment of indirect costs of manufacturing creates special problems. These indirect costs, called **overhead** or burden, include power, heat, light, insurance, property taxes on factory buildings and equipment, factory supervisory labor, depreciation of fixed assets, and supplies.

Companies can handle indirect costs in one of two ways:

1. **Assign no fixed overhead to the cost of the constructed asset.** The major argument for this treatment is that indirect overhead is generally fixed in nature. It does not increase as a result of a company constructing its own plant or equipment. This approach assumes that the company will have the same costs regardless of whether it constructs the asset or not. Therefore, to charge a portion of the overhead costs to the equipment will normally reduce current expenses and consequently overstate income of the current period. However, the company would assign to the cost of the constructed asset variable overhead costs that increase as a result of the construction.
2. **Assign a portion of all overhead to the construction process.** This approach, called a **full-costing approach**, follows the belief that costs should attach to all products and assets manufactured or constructed. Under this approach, a company assigns a portion of all overhead to the construction process, as it would to normal production. Advocates say that failure to allocate overhead costs understates the initial cost of the asset and results in an inaccurate future allocation.

Companies should assign to the asset a **pro rata portion** of the fixed overhead to determine its cost. Companies use this treatment extensively because many believe that it results in a better recognition of these costs in periods benefited.

If the allocated overhead results in recording construction costs in excess of the costs that an outside independent producer would charge, the company should record the excess overhead as a period loss rather than capitalize it. This avoids capitalizing the asset at more than its probable fair value.²

Interest Costs During Construction

LEARNING OBJECTIVE 2

Discuss the accounting problems associated with interest capitalization.

The proper accounting for interest costs has been a long-standing controversy. Three approaches have been suggested to account for the interest incurred in financing the construction of property, plant, and equipment:

1. **Capitalize no interest charges during construction.** Under this approach, interest is considered a cost of financing and not a cost of construction. Some contend that

²A committee of the AICPA argues against allocation of overhead. Instead, it supports capitalization of only direct costs (costs directly related to the specific activities involved in the construction process). This committee was concerned that the allocation of overhead costs may lead to overly aggressive allocations and therefore misstatements of income. In addition, not reporting these costs as period costs during the construction period may affect comparisons of period costs and resulting net income from one period to the next. See Accounting Standards Executive Committee, "Accounting for Certain Costs and Activities Related to Property, Plant, and Equipment," Exposure Draft (New York: AICPA, June 29, 2001).

if a company had used stock (equity) financing rather than debt, it would not incur this cost. The major argument against this approach is that the use of cash, whatever its source, has an associated implicit interest cost, which should not be ignored.

2. **Charge construction with all costs of funds employed, whether identifiable or not.** This method maintains that the cost of construction should include the cost of financing, whether by cash, debt, or stock. Its advocates say that all costs necessary to get an asset ready for its intended use, including interest, are part of the asset's cost. Interest, whether actual or imputed, is a cost, just as are labor and materials. A major criticism of this approach is that imputing the cost of equity capital (stock) is subjective and outside the framework of an historical cost system.
3. **Capitalize only the actual interest costs incurred during construction.** This approach agrees in part with the logic of the second approach—that interest is just as much a cost as are labor and materials. But this approach capitalizes only interest costs incurred through debt financing. (That is, it does not try to determine the cost of equity financing.) Under this approach, a company that uses debt financing will have an asset of higher cost than a company that uses stock financing. Some consider this approach unsatisfactory because they believe the cost of an asset should be the same whether it is financed with cash, debt, or equity.

Illustration 10.1 shows how a company might add interest costs (if any) to the cost of the asset under the three capitalization approaches.

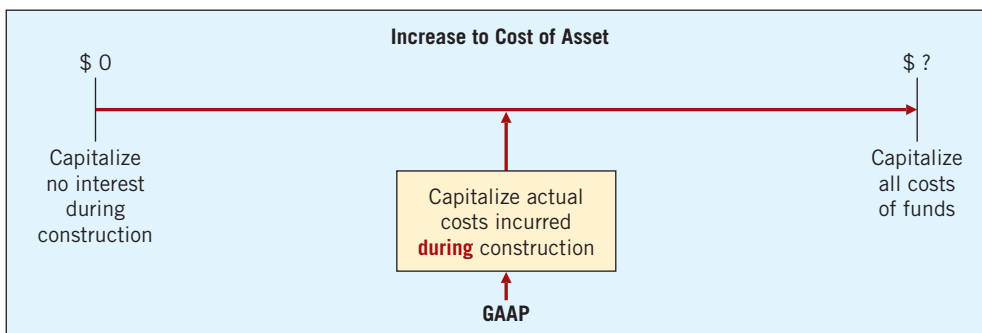

ILLUSTRATION 10.1

Capitalization of Interest Costs

GAAP requires the third approach—capitalizing actual interest (with modification). This method follows the concept that the **historical cost of acquiring an asset includes all costs (including interest) incurred to bring the asset to the condition and location necessary for its intended use**. The rationale for this approach is that during construction, the asset is not generating revenues. Therefore, a company should defer (capitalize) interest costs. [2] Once construction is complete, the asset is ready for its intended use and a company can earn revenues. At this point, the company should report interest as an expense in future periods, when the asset contributes to these revenues. It follows that the company should expense any interest cost incurred in purchasing an asset that is ready for its intended use (see **Underlying Concepts**).

To implement this general approach, companies consider three items:

1. Qualifying assets.
2. Capitalization period.
3. Amount to capitalize.

Underlying Concepts

The objective of capitalizing interest is to obtain a measure of acquisition cost that reflects a company's total investment in the asset and to charge that cost to future periods benefited.

Qualifying Assets

To qualify for interest capitalization, assets must require a period of time to get them ready for their intended use. A company capitalizes interest costs starting with the first expenditure related to the asset. Capitalization continues until the company substantially readies the asset for its intended use.

Assets that qualify for interest cost capitalization include assets under construction for a company's own use (including buildings, plants, and large machinery) and assets intended for

sale or lease that are constructed or otherwise produced as discrete projects (e.g., ships or real estate developments).

Examples of assets that do not qualify for interest capitalization are (1) assets that are in use or ready for their intended use, and (2) assets that the company does not use in its earnings activities and that are not undergoing the activities necessary to get them ready for use. Examples of this second type include land remaining undeveloped and assets not used because of obsolescence, excess capacity, or need for repair.

Capitalization Period

The **capitalization period** is the period of time during which a company must capitalize interest. It begins with the presence of three conditions:

1. Expenditures for the asset have been made.
2. Activities that are necessary to get the asset ready for its intended use are in progress.
3. Interest cost is being incurred.

Interest capitalization **continues as long as these three conditions are present**. The capitalization period ends when the asset is substantially complete and ready for its intended use.

Amount to Capitalize

The amount of interest to capitalize is limited to the lower of actual interest cost incurred during the period or avoidable interest. **Avoidable interest** is the amount of interest cost during the period that a company could theoretically avoid if it had not made expenditures for the asset. If the actual interest cost for the period is \$90,000 and the avoidable interest is \$80,000, the company capitalizes only \$80,000. Or, if the actual interest cost is \$80,000 and the avoidable interest is \$90,000, it still capitalizes only \$80,000. In no situation should interest cost include a cost of capital charge for stockholders' equity. Furthermore, GAAP requires interest capitalization for a qualifying asset only if its effect, compared with the effect of expensing interest, is material. [3]

To apply the avoidable interest concept, a company determines the potential amount of interest that it may capitalize during an accounting period by multiplying the interest rate(s) by the **weighted-average accumulated expenditures** for qualifying assets during the period.

Weighted-Average Accumulated Expenditures

In computing the weighted-average accumulated expenditures, a company weights the construction expenditures by the amount of time (fraction of a year or accounting period) that it can incur interest cost on the expenditure.

To illustrate, assume a 17-month bridge construction project with current-year payments to the contractor of \$240,000 on March 1, \$480,000 on July 1, and \$360,000 on November 1. The company computes the weighted-average accumulated expenditures for the year ended December 31 as shown in **Illustration 10.2**.

ILLUSTRATION 10.2

Computation of Weighted-Average Accumulated Expenditures

| Expenditures | | × | Capitalization Period* | = | Weighted-Average Accumulated Expenditures |
|--------------|--------------------|---|---------------------------|---|--|
| Date | Amount | | | | |
| March 1 | \$ 240,000 | | 10/12 | | \$200,000 |
| July 1 | 480,000 | | 6/12 | | 240,000 |
| November 1 | 360,000 | | 2/12 | | 60,000 |
| | <u>\$1,080,000</u> | | | | <u>\$500,000</u> |

*Months between date of expenditure and date interest capitalization stops or end of year, whichever comes first (in this case, December 31).

To compute the weighted-average accumulated expenditures, a company weights the expenditures by the amount of time that it can incur interest cost on each one. For the March 1 expenditure, the company associates 10 months' interest cost with the expenditure. For the expenditure on July 1, it incurs only 6 months' interest costs. For the expenditure made on November 1, the company incurs only 2 months of interest cost.

Interest Rates

Companies follow the below principles in selecting the appropriate interest rates to be applied to the weighted-average accumulated expenditures:

1. For the portion of weighted-average accumulated expenditures that is less than or equal to any amounts borrowed specifically to finance construction of the assets, **use the interest rate incurred on the specific borrowings.**
2. For the portion of weighted-average accumulated expenditures that is greater than any debt incurred specifically to finance construction of the assets, **use a weighted average of interest rates incurred on all other outstanding debt during the period.**³

Illustration 10.3 shows the computation of a weighted-average interest rate for debt greater than the amount incurred specifically to finance construction of the assets.

| | Principal | Interest |
|---|--------------------|------------------|
| 12%, 2-year note | \$ 600,000 | \$ 72,000 |
| 9%, 10-year bonds | 2,000,000 | 180,000 |
| 7.5%, 20-year bonds | 5,000,000 | 375,000 |
| | <u>\$7,600,000</u> | <u>\$627,000</u> |
| Weighted-average interest rate = $\frac{\text{Total interest}}{\text{Total principal}} = \frac{\$627,000}{\$7,600,000} = 8.25\%$ | | |

ILLUSTRATION 10.3

Computation of Weighted-Average Interest Rate

Comprehensive Example of Interest Capitalization

To illustrate the issues related to interest capitalization, assume that on November 1, 2019, Shalla Company contracted Pfeifer Construction Co. to construct a building for \$1,400,000 on land costing \$100,000 (purchased from the contractor and included in the first payment). Shalla made the following payments to the construction company during 2020.

| January 1 | March 1 | May 1 | December 31 | Total |
|-----------|-----------|-----------|-------------|-------------|
| \$210,000 | \$300,000 | \$540,000 | \$450,000 | \$1,500,000 |

Pfeifer Construction completed the building, ready for occupancy, on December 31, 2020. Shalla had the following debt outstanding at December 31, 2020.

| <u>Specific Construction Debt</u> | | |
|-----------------------------------|---|-----------|
| 1. | 15%, 3-year note to finance purchase of land and construction of the building, dated December 31, 2019, with interest payable annually on December 31 | \$750,000 |
| <u>Other Debt</u> | | |
| 2. | 10%, 5-year note payable, dated December 31, 2016, with interest payable annually on December 31 | \$550,000 |
| 3. | 12%, 10-year bonds issued December 31, 2015, with interest payable annually on December 31 | \$600,000 |

³The interest rate to be used may rely exclusively on an average rate of all the borrowings, if desired. For our purposes, we use the specific borrowing rate followed by the average interest rate because we believe it to be more conceptually consistent. Either method can be used; GAAP does not provide explicit guidance on this measurement. For a discussion of this issue and others related to interest capitalization, see Kathryn M. Means and Paul M. Kazenski, "SFAS 34: Recipe for Diversity," *Accounting Horizons* (September 1988); and Wendy A. Duffy, "A Graphical Analysis of Interest Capitalization," *Journal of Accounting Education* (Fall 1990).

Shalla computed the weighted-average accumulated expenditures during 2020 as shown in **Illustration 10.4**.

ILLUSTRATION 10.4
Computation of Weighted-Average Accumulated Expenditures

| Expenditures | | × | Current-Year | = | Weighted-Average |
|--------------|--------------------|---|----------------|---|------------------|
| Date | Amount | | Capitalization | | Period |
| January 1 | \$ 210,000 | | 12/12 | | \$210,000 |
| March 1 | 300,000 | | 10/12 | | 250,000 |
| May 1 | 540,000 | | 8/12 | | 360,000 |
| December 31 | 450,000 | | 0 | | 0 |
| | <u>\$1,500,000</u> | | | | <u>\$820,000</u> |

Note that the expenditure made on December 31, the last day of the year, does not have any interest cost.

Shalla computes the avoidable interest as shown in **Illustration 10.5**.

ILLUSTRATION 10.5
Computation of Avoidable Interest

| Weighted-Average | × | Interest Rate | = | Avoidable Interest |
|--------------------------|---|---|---|--------------------|
| Accumulated Expenditures | | | | |
| \$750,000 | | .15 (construction note) | | \$112,500 |
| 70,000 ^a | | .1104 (weighted average of other debt) ^b | | 7,728 |
| <u>\$820,000</u> | | | | <u>\$120,228</u> |

^aThe amount by which the weighted-average accumulated expenditures exceeds the specific construction loan.
^bWeighted-average interest rate computation:

| | Principal | Interest |
|--------------------|--------------------|------------------|
| 10%, 5-year note | \$ 550,000 | \$ 55,000 |
| 12%, 10-year bonds | 600,000 | 72,000 |
| | <u>\$1,150,000</u> | <u>\$127,000</u> |

Weighted-average interest rate = $\frac{\text{Total interest}}{\text{Total principal}} = \frac{\$127,000}{\$1,150,000} = 11.04\%$

The company determines the actual interest cost, which represents the maximum amount of interest that it may capitalize during 2020, as shown in **Illustration 10.6**.

ILLUSTRATION 10.6
Computation of Actual Interest Cost

| | | | |
|------------------------|-----------------|---|-------------------------|
| Construction note | \$750,000 × .15 | = | \$112,500 |
| 5-year note | 550,000 × .10 | = | 55,000 |
| 10-year bonds | 600,000 × .12 | = | 72,000 |
| Actual interest | | | <u>\$239,500</u> |

The interest cost that Shalla capitalizes is the lesser of \$120,228 (avoidable interest) and \$239,500 (actual interest), or \$120,228.

Shalla records the following journal entries during 2020.

| | | | |
|--|------------------|---------|---------|
| | January 1 | | |
| Land | | 100,000 | |
| Buildings (or Construction in Process) | | 110,000 | |
| Cash | | | 210,000 |
| | March 1 | | |
| Buildings | | 300,000 | |
| Cash | | | 300,000 |
| | May 1 | | |
| Buildings | | 540,000 | |
| Cash | | | 540,000 |

| December 31 | | |
|--|----------------|---------|
| Buildings | 450,000 | |
| Cash | | 450,000 |
| Buildings (Capitalized Interest) | 120,228 | |
| Interest Expense (\$239,500 – \$120,228) | 119,272 | |
| Cash (\$112,500 + \$55,000 + \$72,000) | | 239,500 |

Shalla should write off capitalized interest cost as part of depreciation over the useful life of the assets involved and not over the term of the debt. It should disclose the total interest cost incurred during the period, with the portion charged to expense and the portion capitalized indicated.

At December 31, 2020, Shalla discloses the amount of interest capitalized either as part of the nonoperating section of the income statement or in the notes accompanying the financial statements. We illustrate both forms of disclosure, in **Illustration 10.7** and **Illustration 10.8**.⁴

| | | |
|----------------------------|----------------|----------------|
| Income from operations | | XXXX |
| Other expenses and losses: | | |
| Interest expense | \$239,500 | |
| Less: Capitalized interest | <u>120,228</u> | <u>119,272</u> |
| Income before income taxes | | XXXX |
| Income taxes | | <u>XXX</u> |
| Net income | | <u>XXXX</u> |

ILLUSTRATION 10.7

Capitalized Interest Reported in the Income Statement

Note 1: Accounting Policies. *Capitalized Interest.* During 2020, total interest cost was \$239,500, of which \$120,228 was capitalized and \$119,272 was charged to expense.

ILLUSTRATION 10.8

Capitalized Interest Disclosed in a Note

What Do the Numbers Mean? What's in Your Interest?

The requirement to capitalize interest can significantly impact financial statements. For example, when earnings of building manufacturer **Jim Walter's Corporation** dropped from \$1.51 to \$1.17 per share, the company offset 11 cents per share of the decline by capitalizing the interest on coal mining projects and several plants under construction.

How do statement users determine the impact of interest capitalization on a company's bottom line? They examine the notes to the financial statements. Companies with material interest capitalization must disclose the amounts of capitalized interest relative to total interest costs.

For example, **Anadarko Petroleum Corporation** capitalized nearly 30 percent of its total interest costs in a recent year and provided the following footnote related to capitalized interest.

Financial Footnotes

Total interest costs incurred during the year were \$82,415,000. Of this amount, the Company capitalized \$24,716,000. Capitalized interest is included as part of the cost of oil and gas properties. The capitalization rates are based on the Company's weighted-average cost of borrowings used to finance the expenditures.

Special Issues Related to Interest Capitalization

Two issues related to interest capitalization merit special attention:

1. Expenditures for land.
2. Interest revenue.

⁴In subsequent years of a multi-year project, Shalla would follow the same procedures as presented for year 1. That is, interest to be capitalized each year is determined, based on weighted-average expenditures *in that year* multiplied by the appropriate interest rate, and then compared to actual interest. Total interest for the year is then allocated to interest expense and capitalized interest.

Expenditures for Land

When a company purchases land with the intention of developing it for a particular use, interest costs associated with those expenditures qualify for interest capitalization. If it purchases land as a site for a structure (such as a plant site), **interest costs capitalized during the period of construction are part of the cost of the plant, not the land**. Conversely, if the company develops land for lot sales, it includes any capitalized interest cost as part of the acquisition cost of the developed land. However, it should **not** capitalize interest costs involved in purchasing land held **for speculation** because the asset is ready for its intended use.

Global View

IFRS requires that interest revenue earned on specific borrowings should offset interest costs capitalized. The rationale is that the interest revenue earned is directly related to the interest cost incurred on the specific borrowing.

Interest Revenue

Companies frequently borrow money to finance construction of assets. They temporarily invest the excess borrowed funds in interest-bearing securities until they need the funds to pay for construction. During the early stages of construction, interest revenue earned may exceed the interest cost incurred on the borrowed funds.

Should companies offset interest revenue against interest cost when determining the amount of interest to capitalize as part of the construction cost of assets? In general, **companies should not net or offset interest revenue against interest cost**. Temporary or short-term investment decisions are not related to the interest incurred as part of the acquisition cost of assets. Therefore, companies should capitalize the interest incurred on qualifying assets whether or not they temporarily invest excess funds in short-term securities (see **Global View**). Some criticize this approach because a company can defer the interest cost but report the interest revenue in the current period.

Observations

The interest capitalization requirement is still debated. From a conceptual viewpoint, many believe that, for the reasons mentioned earlier, companies should either capitalize **no interest cost** or **all interest costs**, actual or imputed.

Valuation of Property, Plant, and Equipment

LEARNING OBJECTIVE 3

Explain the accounting issues related to acquiring and valuing plant assets.

Like other assets, **companies should record property, plant, and equipment at the fair value of what they give up or at the fair value of the asset received, whichever is more clearly evident**. However, the process of asset acquisition sometimes obscures fair value. For example, if a company buys land and buildings together for one price, how does it determine separate values for the land and buildings? We examine these types of accounting problems in the following sections.

Cash Discounts

When a company purchases plant assets subject to cash discounts for prompt payment, how should it report the discount? If it takes the discount, the company should consider the discount as a reduction in the purchase price of the asset. But should the company reduce the asset cost even if it does not take the discount?

Two points of view exist on this question. One approach considers the discount—whether taken or not—as a reduction in the cost of the asset. The rationale for this approach is that the real cost of the asset is the cash or cash equivalent price of the asset. In addition, some argue that the terms of cash discounts are so attractive that failure to take them indicates management error or inefficiency.

Proponents of the other approach argue that failure to take the discount should not always be considered a loss. The terms may be unfavorable, or it might not be prudent for the company to take the discount. At present, companies use both methods though most prefer the method that considers all discounts, whether taken or not.

Deferred-Payment Contracts

Companies frequently purchase plant assets on long-term credit contracts, using notes, mortgages, bonds, or equipment obligations. **To properly reflect cost, companies account for assets purchased on long-term credit contracts at the present value of the consideration exchanged between the contracting parties at the date of the transaction.**

For example, Greathouse Company purchases an asset today in exchange for a \$10,000 zero-interest-bearing note payable four years from now. The company would not record the asset at \$10,000. Instead, the present value of the \$10,000 note establishes the exchange price of the transaction (the purchase price of the asset). Assuming an appropriate interest rate of 9 percent at which to discount this single payment of \$10,000 due four years from now, Greathouse records this asset at \$7,084.30 ($\$10,000 \times .70843$). [See Table 6.2 for the present value of a single sum, $PV = \$10,000 (PVF_{4,9\%})$.]

When no interest rate is stated or if the specified rate is unreasonable, the company imputes an appropriate interest rate. The objective is to approximate the interest rate that the buyer and seller would negotiate at arm's length in a similar borrowing transaction. In imputing an interest rate, companies consider such factors as the borrower's credit rating, the amount and maturity date of the note, and prevailing interest rates. **The company uses the cash exchange price of the asset acquired (if determinable) as the basis for recording the asset and measuring the interest element.**

To illustrate, Sutter Company purchases a specially built robot spray painter for its production line. The company issues a \$100,000, five-year, zero-interest-bearing note to Wrigley Robotics, Inc. for the new equipment. The prevailing market rate of interest for obligations of this nature is 10 percent. Sutter is to pay off the note in five \$20,000 installments, made at the end of each year. Sutter cannot readily determine the fair value of this specially built robot. Therefore, Sutter approximates the robot's value by establishing the fair value (present value) of the note. Entries for the date of purchase and dates of payments, plus computation of the present value of the note, are as follows.

| | | | |
|---------------------------|--------------------------|----------------------------------|---------|
| | Date of Purchase | | |
| Equipment | | 75,816* | |
| Discount on Notes Payable | | 24,184 | |
| Notes Payable | | | 100,000 |
| *Present value of note | = | $\$20,000 (PVF-OA_{5,10\%})$ | |
| | = | $\$20,000 (3.79079)$; Table 6-4 | |
| | = | \$75,816 | |
| | End of First Year | | |
| Interest Expense | | 7,582 | |
| Notes Payable | | 20,000 | |
| Cash | | | 20,000 |
| Discount on Notes Payable | | | 7,582 |

Interest expense in the first year under the effective-interest approach is \$7,582 [$(\$100,000 - \$24,184) \times .10$]. The entry at the end of the second year to record interest and principal payment is as follows.

| | | | |
|---------------------------|---------------------------|--------|--------|
| | End of Second Year | | |
| Interest Expense | | 6,340 | |
| Notes Payable | | 20,000 | |
| Cash | | | 20,000 |
| Discount on Notes Payable | | | 6,340 |

Interest expense in the second year under the effective-interest approach is \$6,340 $\{[(\$100,000 - \$24,184) - (\$20,000 - \$7,582)] \times .10\}$.

If Sutter did not impute an interest rate for deferred-payment contracts, it would record the asset at an amount greater than its fair value and overstate depreciation expense. In addition, Sutter would understate interest expense in the income statement for all periods involved.

Lump-Sum Purchases

A special problem of valuing fixed assets arises when a company purchases a group of plant assets at a single **lump-sum price**. When this common situation occurs, the company allocates the total cost among the various assets on the basis of their relative fair values. The assumption is that costs will vary in direct proportion to fair value. This is the same principle that companies apply to allocate a lump-sum cost among different inventory items.

To determine fair value, a company should use valuation techniques that are appropriate in the circumstances. In some cases, a single valuation technique will be appropriate. In other cases, multiple valuation approaches might have to be used.⁵

To illustrate, Norduct Homes, Inc. decides to purchase several assets of a small heating concern, Comfort Heating, for \$80,000. Comfort Heating is in the process of liquidation. Its assets sold are as follows.

| | Book Value | Fair Value |
|-----------|-----------------|------------------|
| Inventory | \$30,000 | \$ 25,000 |
| Land | 20,000 | 25,000 |
| Building | 35,000 | 50,000 |
| | <u>\$85,000</u> | <u>\$100,000</u> |

Norduct Homes allocates the \$80,000 purchase price on the basis of the relative fair values (assuming specific identification of costs is impracticable) as shown in **Illustration 10.9**.

ILLUSTRATION 10.9

Allocation of Purchase Price— Relative Fair Value Basis

| | |
|-----------|---|
| Inventory | $\frac{\$25,000}{\$100,000} \times \$80,000 = \$20,000$ |
| Land | $\frac{\$25,000}{\$100,000} \times \$80,000 = \$20,000$ |
| Building | $\frac{\$50,000}{\$100,000} \times \$80,000 = \$40,000$ |

Issuance of Stock

When companies acquire property by issuing securities, such as common stock, the par or stated value of such stock fails to properly measure the property cost. If trading of the stock is active, **the market price of the stock issued is a fair indication of the cost of the property acquired. The stock is a good measure of the current cash equivalent price.**

For example, Upgrade Living Co. decides to purchase some adjacent land for expansion of its carpeting and cabinet operation. In lieu of paying cash for the land, the company issues

⁵The valuation approaches that should be used are the market, income, or cost approach, or a combination of these approaches. The *market approach* uses observable prices and other relevant information generated by market transactions involving comparable assets. The *income approach* uses valuation techniques to convert future amounts (for example, cash flows or earnings) to a single present value amount (discounted). The *cost approach* is based on the amount that currently would be required to replace the service capacity of an asset (often referred to as current replacement cost). In determining the fair value, the company should assume the highest and best use of the asset. [4]

to Deedland Company 5,000 shares of common stock (par value \$10) that have a fair value of \$12 per share. Upgrade Living Co. records the following entry.

| | | |
|---|--------|--------|
| Land (5,000 × \$12) | 60,000 | |
| Common Stock (5,000 × \$10) | | 50,000 |
| Paid-in Capital in Excess of Par—Common Stock | | 10,000 |

If the company cannot determine the market price of the common stock exchanged, it establishes the fair value of the property. It then uses the value of the property as the basis for recording the asset and issuance of the common stock.

Exchanges of Nonmonetary Assets

The proper accounting for exchanges of nonmonetary assets, such as property, plant, and equipment, is controversial.⁶ Some argue that companies should account for these types of exchanges based on the fair value of the asset given up or the fair value of the asset received, with a gain or loss recognized. Others believe that they should account for exchanges based on the recorded amount (book value) of the asset given up, with no gain or loss recognized. Still others favor an approach that recognizes losses in all cases but defers gains in special situations.

Ordinarily, companies account for the exchange of **nonmonetary assets** on the basis of **the fair value of the asset given up or the fair value of the asset received, whichever is clearly more evident.** [5] Thus, companies **should recognize immediately** any gains or losses on the exchange. The rationale for immediate recognition is that most transactions have **commercial substance**, and therefore gains and losses should be recognized.

Meaning of Commercial Substance

As indicated above, fair value is the basis for measuring an asset acquired in a nonmonetary exchange if the transaction has commercial substance. An exchange has **commercial substance** if the future cash flows change as a result of the transaction. That is, if the two parties' economic positions change, the transaction has commercial substance (see **Global View**).

For example, Andrew Co. exchanges some of its equipment for land held by Roddick Inc. It is likely that the timing and amount of the cash flows arising for the land will differ significantly from the cash flows arising from the equipment. As a result, both Andrew Co. and Roddick Inc. are in different economic positions. Therefore, the exchange has commercial substance, and the companies recognize a gain or loss on the exchange.

What if companies exchange similar assets, such as one truck for another truck? Even in an exchange of similar assets, a change in the economic position of the company can result. For example, let's say the useful life of the truck received is significantly longer than that of the truck given up. The cash flows for the trucks can differ significantly. As a result, the transaction has commercial substance, and the company should use fair value as a basis for measuring the asset received in the exchange.

However, it is possible to exchange similar assets but not have a significant difference in cash flows. That is, the company is in the same economic position as before the exchange. In that case, the company recognizes a loss but generally defers a gain.

As we will see in the following examples, use of fair value generally results in recognizing a gain or loss at the time of the exchange. Consequently, companies must determine if the transaction has commercial substance. To make this determination, they must carefully evaluate the cash flow characteristics of the assets exchanged.⁷

Global View

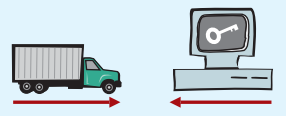

The FASB changed its accounting for exchanges to converge with IFRS. Previously, the FASB used a "similar in nature" criterion for exchanged assets to determine whether gains should be recognized. With use of the commercial substance test, GAAP and IFRS are now very similar.

⁶Nonmonetary assets are items whose price in terms of the monetary unit may change over time. Monetary assets—cash and short- or long-term accounts and notes receivable—are fixed in terms of units of currency by contract or otherwise.

⁷The determination of the commercial substance of a transaction requires significant judgment. In determining whether future cash flows change, it is necessary to do one of two things. (1) Determine whether the risk, timing, and amount of cash flows arising for the asset received differ from the cash flows associated with the outbound asset. Or, (2) evaluate whether cash flows are affected with the exchange versus without the exchange. Also note that if companies cannot determine fair values of the assets exchanged, then they should use recorded book values in accounting for the exchange.

Illustration 10.10 summarizes asset exchange situations and the related accounting.

ILLUSTRATION 10.10**Accounting for Exchanges**

|  | Type of Exchange | Accounting Guidance |
|---|---|--|
| | Exchange has commercial substance. | Recognize gains and losses immediately. |
| | Exchange lacks commercial substance—no cash received. | Defer gains; recognize losses immediately. |
| | Exchange lacks commercial substance—cash received. | Recognize partial gain; recognize losses immediately.* |

*If cash is 25% or more of the fair value of the exchange, recognize entire gain because earnings process is complete.

As Illustration 10.10 indicates, companies immediately recognize losses they incur on all exchanges. The accounting for gains depends on whether the exchange has commercial substance. If the exchange has commercial substance, the company recognizes the gain immediately. However, the profession modifies the rule for immediate recognition of a gain when an exchange lacks commercial substance: **If the company receives no cash in such an exchange, it defers recognition of a gain. If the company receives cash in such an exchange, it recognizes part of the gain immediately.**

To illustrate the accounting for these different types of transactions, we examine various loss and gain exchange situations.

Exchanges—Loss Situation

When a company exchanges nonmonetary assets and a loss results, the company recognizes the loss immediately. The rationale: Companies should not value assets at more than their cash equivalent price. If the loss were deferred, assets would be overstated. Therefore, companies recognize a loss immediately whether the exchange has commercial substance or not.

For example, Information Processing, Inc. trades its used machine for a new model at Jerrod Business Solutions Inc. The exchange has commercial substance. The used machine has a book value of \$8,000 (original cost \$12,000 less \$4,000 accumulated depreciation) and a fair value of \$6,000. The new model lists for \$16,000. Jerrod gives Information Processing a trade-in allowance of \$9,000 for the used machine. Information Processing computes the cost of the new asset as shown in **Illustration 10.11**.

ILLUSTRATION 10.11**Computation of Cost of New Machine**

| | |
|---|------------------------|
| List price of new machine | \$16,000 |
| Less: Trade-in allowance for used machine | <u>9,000</u> |
| Cash payment due | 7,000 |
| Fair value of used machine | <u>6,000</u> |
| Cost of new machine | <u>\$13,000</u> |

Information Processing records this transaction as follows.

| | | |
|------------------------------------|--------|--------|
| Equipment | 13,000 | |
| Accumulated Depreciation—Equipment | 4,000 | |
| Loss on Disposal of Equipment | 2,000 | |
| Equipment | | 12,000 |
| Cash | | 7,000 |

We verify the loss on the disposal of the used machine as shown in **Illustration 10.12**.

ILLUSTRATION 10.12**Computation of Loss on Disposal of Used Machine**

| | |
|---|-----------------------|
| Fair value of used machine | \$6,000 |
| Less: Book value of used machine | <u>8,000</u> |
| Loss on disposal of used machine | <u>\$2,000</u> |

Why did Information Processing not use the trade-in allowance or the book value of the old asset as a basis for the new equipment? The company did not use the trade-in allowance because it included a price concession (similar to a price discount). Few individuals pay list price for a new car. Dealers such as Jerrod often inflate trade-in allowances on the used car so that actual selling prices fall below list prices. To record the car at list price would state it at an amount in excess of its cash equivalent price because of the new car's inflated list price. Similarly, use of book value in this situation would overstate the value of the new machine by \$2,000.⁸

Exchanges—Gain Situation

Has Commercial Substance Now let's consider the situation in which a nonmonetary exchange has commercial substance and a gain is realized. In such a case, a company usually records the cost of a nonmonetary asset acquired in exchange for another nonmonetary asset at the **fair value of the asset given up** and immediately recognizes a gain. The company should use the **fair value of the asset received** only if it is more clearly evident than the fair value of the asset given up.

To illustrate, Interstate Transportation Company exchanged a number of used trucks plus cash for a semi-truck. The used trucks have a combined book value of \$42,000 (cost \$64,000 less \$22,000 accumulated depreciation). Interstate's purchasing agent, experienced in the secondhand market, indicates that the used trucks have a fair value of \$49,000. In addition to the trucks, Interstate must pay \$11,000 cash for the semi-truck. Interstate computes the cost of the semi-truck as shown in **Illustration 10.13**.

| | |
|--------------------------------|------------------------|
| Fair value of trucks exchanged | \$49,000 |
| Cash paid | <u>11,000</u> |
| Cost of semi-truck | <u>\$60,000</u> |

ILLUSTRATION 10.13

Computation of Semi-Truck Cost

Interstate records the exchange transaction as follows.

| | | |
|---------------------------------|--------|--------|
| Trucks (semi) | 60,000 | |
| Accumulated Depreciation—Trucks | 22,000 | |
| Trucks (used) | | 64,000 |
| Gain on Disposal of Trucks | | 7,000 |
| Cash | | 11,000 |

The gain is the difference between the fair value of the used trucks and their book value. We verify the computation as shown in **Illustration 10.14**.

| | | |
|--|---------------|------------------------|
| Fair value of used trucks | | \$49,000 |
| Cost of used trucks | \$64,000 | |
| Less: Accumulated depreciation | <u>22,000</u> | |
| Book value of used trucks | | <u>(42,000)</u> |
| Gain on disposal of used trucks | | <u>\$ 7,000</u> |

ILLUSTRATION 10.14

Computation of Gain on Disposal of Used Trucks

In this case, Interstate is in a different economic position, and therefore the transaction has commercial substance. Thus, it **recognizes a gain**.

Lacks Commercial Substance—No Cash Received We now assume that the Interstate Transportation Company exchange lacks commercial substance. That is, the

⁸Recognize that for Jerrod (the dealer), the asset given up in the exchange is considered inventory. As a result, Jerrod records a sale and related cost of goods sold. The used machine received by Jerrod is recorded at fair value.

economic position of Interstate did not change significantly as a result of this exchange. In this case, Interstate defers the gain of \$7,000 and reduces the basis of the semi-truck. **Illustration 10.15** shows two different but acceptable computations to illustrate this reduction.

ILLUSTRATION 10.15
Basis of Semi-Truck—Fair Value vs. Book Value

| | | | | |
|----------------------------|------------------------|----|----------------------------|------------------------|
| Fair value of semi-truck | \$60,000 | OR | Book value of used trucks | \$42,000 |
| Less: Gain deferred | <u>7,000</u> | | Plus: Cash paid | <u>11,000</u> |
| Basis of semi-truck | <u>\$53,000</u> | | Basis of semi-truck | <u>\$53,000</u> |

Interstate records this transaction as follows.

| | | |
|---------------------------------|--------|--------|
| Trucks (semi) | 53,000 | |
| Accumulated Depreciation—Trucks | 22,000 | |
| Trucks (used) | | 64,000 |
| Cash | | 11,000 |

If the exchange lacks commercial substance, the company recognizes the gain (reflected in the basis of the semi-truck) through lower depreciation expense or when it later sells the semi-truck, not at the time of the exchange.

Lacks Commercial Substance—Some Cash Received When a company receives cash (sometimes referred to as “boot”) in an exchange that lacks commercial substance, it must immediately recognize a portion of the gain.⁹ **Illustration 10.16** shows the general formula for gain recognition when an exchange includes some cash.

ILLUSTRATION 10.16
Formula for Gain Recognition, Some Cash Received

$$\frac{\text{Cash Received (Boot)}}{\text{Cash Received (Boot) + Fair Value of Other Assets Received}} \times \text{Total Gain} = \text{Recognized Gain}$$

To illustrate, assume that Queenan Corporation traded in used machinery with a book value of \$60,000 (cost \$110,000 less accumulated depreciation \$50,000) and a fair value of \$100,000. It receives in exchange a machine with a fair value of \$90,000 plus cash of \$10,000. **Illustration 10.17** shows the calculation of the total gain on the exchange.

ILLUSTRATION 10.17
Computation of Total Gain

| | |
|--------------------------------------|-------------------------|
| Fair value of machine given up | \$100,000 |
| Less: Book value of machine given up | <u>60,000</u> |
| Total gain | <u>\$ 40,000</u> |

Generally, when a transaction lacks commercial substance, a company defers any gain. But because Queenan received \$10,000 in cash, it recognizes a partial gain. The portion of the gain a company recognizes is the ratio of monetary assets (cash in this case) to the total consideration received. Queenan computes the partial gain as shown in **Illustration 10.18**.

ILLUSTRATION 10.18
Computation of Gain Based on Ratio of Cash Received to Total Consideration Received

$$\frac{\$10,000}{\$10,000 + \$90,000} \times \$40,000 = \$4,000$$

⁹When the monetary consideration is significant, i.e., **25 percent or more** of the fair value of the exchange, both parties consider the transaction a **monetary exchange**. Such “monetary” exchanges rely on the fair values to measure the gains or losses that are recognized in their entirety. [6]

Because Queenan recognizes only a gain of \$4,000 on this transaction, it defers the remaining \$36,000 (\$40,000 – \$4,000) and reduces the basis (recorded cost) of the new machine. **Illustration 10.19** shows the computation of the basis.

| | | | | |
|-----------------------------|------------------------|----|---|--|
| Fair value of new machine | \$90,000 | OR | Book value of old machine | \$60,000 |
| Less: Gain deferred | <u>36,000</u> | | Less: Portion of book value presumed sold | <u>6,000*</u> |
| Basis of new machine | <u>\$54,000</u> | | Basis of new machine | <u>\$54,000</u> |
| | | | | $\frac{\$10,000}{\$100,000} \times \$60,000 = \$6,000$ |

ILLUSTRATION 10.19**Computation of Basis**

Queenan records the transaction with the following entry.

| | | |
|------------------------------------|--------|---------|
| Cash | 10,000 | |
| Machinery (new) | 54,000 | |
| Accumulated Depreciation—Machinery | 50,000 | |
| Machinery (old) | | 110,000 |
| Gain on Disposal of Machinery | | 4,000 |

The rationale for the treatment of a partial gain is as follows. Before a nonmonetary exchange that includes some cash, a company has an unrecognized gain, which is the difference between the book value and the fair value of the old asset. When the exchange occurs, a portion of the fair value is converted to a more liquid asset. The ratio of this liquid asset to the total consideration received is the portion of the total gain that the company realizes. Thus, the company recognizes and records that amount.

Illustration 10.20 presents in summary form the accounting requirements for recognizing gains and losses on exchanges of nonmonetary assets.¹⁰

1. Compute the total gain or loss on the transaction. This amount is equal to the difference between the fair value of the asset given up and the book value of the asset given up.
2. If a loss is computed in Step 1, always recognize the entire loss.
3. If a gain is computed in Step 1,
 - (a) and the exchange has commercial substance, recognize the entire gain.
 - (b) and the exchange lacks commercial substance,
 - (1) and no cash is involved, no gain is recognized.
 - (2) and some cash is given, no gain is recognized.
 - (3) and some cash is received, the following portion of the gain is recognized:

$$\frac{\text{Cash Received (Boot)}}{\text{Cash Received (Boot) + Fair Value of Other Assets Received}} \times \text{Total Gain}^*$$

*If the amount of cash exchanged is 25% or more, both parties recognize entire gain or loss.

ILLUSTRATION 10.20**Summary of Gain and Loss Recognition on Exchanges of Nonmonetary Assets**

Companies disclose in their financial statements nonmonetary exchanges during a period. Such disclosure indicates the nature of the transaction(s), the method of accounting for the assets exchanged, and gains or losses recognized on the exchanges. [7]

Other Asset Valuation Methods

The exception to the historical cost principle for assets acquired through donation is based on fair value. Another exception is the **prudent cost** concept. This concept states that if for some reason a company ignorantly paid too much for an asset originally, it is theoretically preferable to charge a loss immediately.

¹⁰Adapted from an article by Robert Capettini and Thomas E. King, "Exchanges of Nonmonetary Assets: Some Changes," *The Accounting Review* (January 1976).

For example, assume that a company constructs an asset at a cost much greater than its present economic usefulness. It would be appropriate to charge these excess costs as a loss to the current period, rather than capitalize them as part of the cost of the asset. In practice, the need to use the prudent cost approach seldom develops. Companies typically either use good reasoning in paying a given price or fail to recognize that they have overpaid.

What happens, on the other hand, if a company makes a bargain purchase or internally constructs a piece of equipment at a cost savings? Such savings should not result in immediate recognition of a gain under any circumstances.

Costs Subsequent to Acquisition

LEARNING OBJECTIVE 4

Describe the accounting treatment for costs subsequent to acquisition.

After installing plant assets and readying them for use, a company incurs additional costs that range from ordinary repairs to significant additions. The major problem is allocating these costs to the proper time periods. **In general, costs incurred to achieve greater future benefits should be capitalized, whereas expenditures that simply maintain a given level of services should be expensed.** In order to capitalize costs, one of three conditions must be present:

1. The useful life of the asset must be increased.
2. The quantity of units produced from the asset must be increased.
3. The quality of the units produced must be enhanced.

For example, a company like **Boeing** should expense expenditures that do not increase an asset's future benefits. That is, it expenses immediately ordinary repairs that maintain the existing condition of the asset or restore it to normal operating efficiency.

Companies expense most expenditures below an established arbitrary minimum amount, say, \$100 or \$500. Although conceptually this treatment may be incorrect, expediency demands it. Otherwise, companies would set up depreciation schedules for an item such as a wastepaper basket (see **Underlying Concepts**).

The distinction between a **capital expenditure (asset)** and a **revenue expenditure (expense)** is not always clear-cut. Yet, in most cases, **consistent application of a capital/expense policy** is more important than attempting to provide general theoretical guidelines for each transaction. Generally, companies incur four major types of expenditures relative to existing assets.

Underlying Concepts

Expensing long-lived wastepaper baskets is an application of the materiality concept.

Major Types of Expenditures

Additions. Increase or extension of existing assets.

Improvements and Replacements. Substitution of an improved asset for an existing one.

Rearrangement and Reinstallation. Movement of assets from one location to another.

Repairs. Expenditures that maintain assets in condition for operation.

What Do the Numbers Mean? Disconnected

It all started with a check of the books by an internal auditor for **WorldCom Inc.** The telecom giant's newly installed chief executive had asked for a financial review, and the auditor was spot-checking records of capital expenditures. She found the

company was using an unorthodox technique to account for one of its biggest expenses: charges paid to local telephone networks to complete long-distance calls.

Instead of recording these charges as operating expenses, WorldCom recorded a significant portion as capital expenditures. The maneuver was worth hundreds of millions of dollars to WorldCom's bottom line. It effectively turned a loss for

all of 2001 and the first quarter of 2002 into a profit. The following illustration compares WorldCom's accounting to that under GAAP. Soon after this discovery, WorldCom filed for bankruptcy.

Such inappropriate expense capitalization practices have persisted—even after increased regulation under Sarbanes-Oxley in response to the frauds at WorldCom and **Enron**. Indeed, analysts commonly watch out for some of the following red flags to detect inappropriate capitalizing of expenses:

- Changes in accounting policy related to expense recognition.
- New asset line items on the balance sheet—where did that new asset come from?

- Capitalized development costs. In general, development costs should be expensed as incurred (see discussion in Chapter 12).
- Different capitalization policies relative to other companies in the same industry. Why would the company you are analyzing be different?

Sources: Adapted from Jared Sandberg, Deborah Solomon, and Rebecca Blumenstein, "Inside WorldCom's Unearthing of a Vast Accounting Scandal," *Wall Street Journal* (June 27, 2002), p. A1; and J. Jun, "How Companies Misuse Capitalizing of Expenses," <https://www.oldschoolvalue.com/blog/valuation-methods/misuse-expensing-capitalizing-cost/> (May 9, 2011).

Additions

Additions should present no major accounting problems. By definition, **companies capitalize any addition to plant assets because a new asset is created**. For example, the addition of a wing to a hospital, or of an air conditioning system to an office, increases the service potential of that facility. Companies should capitalize such expenditures and record expense with the revenues that will result in future periods.

One problem that arises in this area is the accounting for any changes related to the existing structure as a result of the addition. Is the cost incurred to tear down an old wall, to make room for the addition, a cost of the addition or an expense or loss of the period? The answer is that it depends on the original intent. If the company had anticipated building an addition later, then this cost of removal is a proper cost of the addition. But if the company had not anticipated this development, it should properly report the removal as a loss in the current period on the basis of inefficient planning. Normally, the company retains the carrying amount of the old wall in the accounts, although theoretically the company should remove it.

Improvements and Replacements

Companies substitute one asset for another through **improvements** and **replacements**. What is the difference between an improvement and a replacement? An **improvement (betterment)** is the substitution of a **better asset** for the one currently used (say, a concrete floor

for a wooden floor). A **replacement**, on the other hand, is the substitution of a **similar asset** (a wooden floor for a wooden floor).

Many times improvements and replacements result from a general policy to modernize or rehabilitate an older building or piece of equipment. The problem is differentiating these types of expenditures from normal repairs. Does the expenditure increase the **future service potential** of the asset? Or does it merely **maintain the existing level** of service? Frequently, the answer is not clear-cut. Good judgment is required to correctly classify these expenditures.

If the expenditure increases the future service potential of the asset, a company should capitalize it. The accounting is therefore handled in one of three ways, depending on the circumstances:

1. **Use the substitution approach.** Conceptually, the **substitution approach** is correct if the carrying amount of the old asset is available. It is then a simple matter to remove the cost of the old asset and replace it with the cost of the new asset.

To illustrate, Instinct Enterprises decides to replace the pipes in its plumbing system. A plumber suggests that the company use plastic tubing in place of the cast iron pipes and copper tubing. The old pipe and tubing have a book value of \$15,000 (cost of \$150,000 less accumulated depreciation of \$135,000), and a scrap value of \$1,000. The plastic tubing costs \$125,000. If Instinct pays \$124,000 for the new tubing after exchanging the old tubing, it makes the following entry:

| | | |
|---------------------------------------|---------|---------|
| Plant Assets (plumbing system) | 125,000 | |
| Accumulated Depreciation—Plant Assets | 135,000 | |
| Loss on Disposal of Plant Assets | 14,000 | |
| Plant Assets | | 150,000 |
| Cash (\$125,000 – \$1,000) | | 124,000 |

The problem is determining the book value of the old asset. Generally, the components of a given asset depreciate at different rates. However, generally no separate accounting is made. For example, the tires, motor, and body of a truck depreciate at different rates, but most companies use one rate for the entire truck. Companies can set separate depreciation rates, but it is often impractical. If a company cannot determine the carrying amount of the old asset, it adopts one of two other approaches.

2. **Capitalize the new cost.** Another approach capitalizes the improvement and keeps the carrying amount of the old asset on the books. The justification for this approach is that the item is sufficiently depreciated to reduce its carrying amount almost to zero. Although this assumption may not always be true, the differences are often insignificant. Companies usually handle improvements in this manner.
3. **Charge to accumulated depreciation.** In cases when a company does not improve the quantity or quality of the asset itself but instead extends its useful life, the company debits the expenditure to Accumulated Depreciation rather than to an asset account. The theory behind this approach is that the replacement extends the useful life of the asset and thereby recaptures some or all of the past depreciation. The net carrying amount of the asset is the same whether debiting the asset or accumulated depreciation.

Rearrangement and Reinstallation

Companies incur **rearrangement and reinstallation costs** to benefit future periods. An example is the rearrangement and reinstallation of machines to facilitate future production.

If a company like **The Coca-Cola Company** can determine or estimate the original installation cost and the accumulated depreciation to date, it handles the rearrangement and reinstallation cost as a replacement. If not, which is generally the case, Coca-Cola should capitalize the new costs (if material in amount) as an asset to be amortized over future periods expected to benefit. If these costs are immaterial, if they cannot be separated from other operating expenses, or if their future benefit is questionable, the company should immediately expense them.

Repairs

A company makes **ordinary repairs** to maintain plant assets in operating condition. It charges ordinary repairs to an expense account in the period incurred, on the basis that **it is the primary period benefited**. Maintenance charges that occur regularly include replacing minor parts, lubricating and adjusting equipment, repainting, and cleaning. A company treats these as ordinary operating expenses.

It is often difficult to distinguish a repair from an improvement or replacement. The major consideration is whether the expenditure benefits more than one year or one operating cycle, whichever is longer. If a **major repair** (such as an overhaul) occurs, several periods will benefit. A company should handle the cost as an addition, improvement, or replacement.¹¹

An interesting question is whether a company can accrue planned maintenance overhaul costs *before* the actual costs are incurred. For example, assume that **Southwest Airlines** schedules major overhauls of its planes every three years. Should Southwest be permitted to accrue these costs and related liability over the three-year period? Some argue that this accrue-in-advance approach better matches expenses to revenues and reports Southwest’s obligation for these costs. However, reporting a liability is inappropriate. To whom does Southwest owe? In other words, Southwest has no obligation to an outside party until it has to pay for the overhaul costs, and therefore it has no liability. As a result, companies are not permitted to accrue in advance for planned major overhaul costs either for interim or annual periods. [8]

Summary of Costs Subsequent to Acquisition

Illustration 10.21 summarizes the accounting treatment for various costs incurred subsequent to the acquisition of capitalized assets.

| Type of Expenditure | Normal Accounting Treatment |
|---|---|
| <p>Additions</p> <p>Improvements and replacements</p> | <p>Capitalize cost of addition to asset account.</p> <p>(a) Carrying value known: Remove cost of and accumulated depreciation on old asset, recognizing any gain or loss. Capitalize cost of improvement/replacement.</p> <p>(b) Carrying value unknown:</p> <ol style="list-style-type: none"> 1. If the asset’s useful life is extended, debit accumulated depreciation for cost of improvement/replacement. 2. If the quantity or quality of the asset’s productivity is increased, capitalize cost of improvement/replacement to asset account. |
| <p>Rearrangement and reinstallation</p> | <p>(a) If original installation cost is known, account for cost of rearrangement/reinstallation as a replacement (carrying value known).</p> <p>(b) If original installation cost is unknown and rearrangement/reinstallation cost is material in amount and benefits future periods, capitalize as an asset.</p> <p>(c) If original installation cost is unknown and rearrangement/reinstallation cost is not material or future benefit is questionable, expense the cost when incurred.</p> |
| <p>Repairs</p> | <p>(a) Ordinary: Expense cost of repairs when incurred.</p> <p>(b) Major: As appropriate, treat as an addition, improvement, or replacement.</p> |

ILLUSTRATION 10.21

Summary of Costs Subsequent to Acquisition of Property, Plant, and Equipment

¹¹A committee of the AICPA has proposed (see footnote 2) that companies expense as incurred costs involved for planned major expenditures unless they represent an *additional* component or the *replacement* of an existing component.

Disposition of Property, Plant, and Equipment

LEARNING OBJECTIVE 5

Describe the accounting treatment for the disposal of property, plant, and equipment.

A company, like **Intel**, may retire plant assets voluntarily or dispose of them by sale, exchange, involuntary conversion, or abandonment. Regardless of the type of disposal, depreciation must be taken up to the date of disposition. Then, Intel should remove all accounts related to the retired asset. Generally, the book value of the specific plant asset does not equal its disposal value. As a result, a gain or loss develops.

The reason: Depreciation is an estimate of cost allocation and not a process of valuation. **The gain or loss is really a correction of net income** for the years during which Intel used the fixed asset.

Intel should show gains or losses on the disposal of plant assets in the income statement along with other items from customary business activities. However, if it sold, abandoned, spun off, or otherwise disposed of the “operations of a component of a business (and considered a strategic shift),” then it should report the results separately in the discontinued operations section of the income statement (as discussed in Chapter 4). That is, Intel should report any gain or loss from disposal of a business component with the related results of discontinued operations.

Sale of Plant Assets

Companies record depreciation for the period of time between the date of the last depreciation entry and the date of sale. To illustrate, assume that Barret Company recorded depreciation on a machine costing \$18,000 for nine years at the rate of \$1,200 per year. If it sells the machine in the middle of the tenth year for \$7,000, Barret records depreciation to the date of sale as:

| | | |
|---|-----|-----|
| Depreciation Expense ($\$1,200 \times \frac{1}{2}$) | 600 | |
| Accumulated Depreciation—Machinery | | 600 |

The entry for the sale of the asset then is:

| | | |
|------------------------------------|--------|--------|
| Cash | 7,000 | |
| Accumulated Depreciation—Machinery | 11,400 | |
| [($\$1,200 \times 9$) + \$600] | | |
| Machinery | | 18,000 |
| Gain on Disposal of Machinery | | 400 |

The book value of the machinery at the time of the sale is \$6,600 ($\$18,000 - \$11,400$). Because the machinery sold for \$7,000, the amount of the gain on the sale is \$400.

Involuntary Conversion

Sometimes an asset’s service is terminated through some type of **involuntary conversion** such as fire, flood, theft, or condemnation. Companies report the difference between the amount recovered (e.g., from a condemnation award or insurance recovery), if any, and the asset’s book value as a gain or loss. They treat these gains or losses like any other type of disposition. These gains or losses are reported as other revenues and gains or other expenses and losses in the income statement.

To illustrate, Camel Transport Corp. had to sell a plant located on company property that stood directly in the path of an interstate highway. For a number of years, the state had sought to purchase the land on which the plant stood, but the company resisted. The state ultimately

exercised its right of eminent domain, which the courts upheld. In settlement, Camel received \$500,000, which substantially exceeded the \$200,000 book value of the plant and land (cost of \$400,000 less accumulated depreciation of \$200,000). Camel made the following entry.

| | | |
|---------------------------------------|---------|---------|
| Cash | 500,000 | |
| Accumulated Depreciation—Plant Assets | 200,000 | |
| Plant Assets | | 400,000 |
| Gain on Disposal of Plant Assets | | 300,000 |

Some object to the recognition of a gain or loss in certain *involuntary* conversions. For example, the federal government often condemns forests for national parks. The paper companies that owned these forests must report a gain or loss on the condemnation. However, companies such as **Georgia-Pacific** contend that no gain or loss should be reported because they must replace the condemned forest land immediately and so are in the same economic position as they were before. The issue is whether condemnation and subsequent purchase should be viewed as one or two transactions. GAAP requires “that a gain or loss be recognized when a nonmonetary asset is involuntarily converted to monetary assets even though an enterprise reinvests or is obligated to reinvest the monetary assets in replacement nonmonetary assets.” [9]

Miscellaneous Problems

If a company scraps or abandons an asset without any cash recovery, it recognizes a loss equal to the asset’s book value. If scrap value exists, the gain or loss that occurs is the difference between the asset’s scrap value and its book value. If an asset still can be used even though it is fully depreciated, it may be kept on the books at historical cost less depreciation.

Companies must disclose in notes to the financial statements the amount of fully depreciated assets in service. For example, **Petroleum Equipment Tools Inc.** in its annual report disclosed, “The amount of fully depreciated assets included in property, plant, and equipment at December 31 amounted to approximately \$98,900,000.”

APPENDIX 10A

Accounting for Contributions

LEARNING OBJECTIVE *6

Describe the accounting for contributions.

Companies sometimes receive or make contributions (often referred to as grants, donations, or gifts). A **contribution** is often some type of asset (such as cash, securities, land, or buildings), services, or use of facilities, but it also could be the forgiveness of a debt. The accounting for contributions is generally straightforward in that the recipient records the asset received and contribution revenue at the fair value of the asset(s) received. The donor (resource provider) records a contribution expense for the fair value of the asset(s) donated.¹²

Contributions are either unconditional or conditional. The criteria for evaluating whether contributions are unconditional (and thus recognized immediately in income) or conditional (for which income recognition is deferred) depend on the terms of the gift or grant agreement. The focus is whether a gift or grant agreement has the following terms.

¹²The accounting for contributions applies to both business entities and not-for-profits.[10] Although GAAP is silent on how to account for the transfers of assets **from governmental units to business enterprises**, the FASB is working on a project to develop disclosure requirements about government assistance (see the FASB website; click on the Presentation and Disclosure tab under the Technical Agenda). However, we believe that these basic recognition requirements should also hold for these types of contributions. Therefore, companies should record all assets at fair value and all credits as revenue.

1. Specifies a “barrier or hurdle” that the recipient must overcome to be entitled to the resources. A barrier is the inclusion of a measurable performance requirement such as degree of completion or specific output or outcome.
2. Releases the donor from its obligation to transfer resources (or if assets are advanced, a right to demand their return) if the barrier or hurdle is not achieved by the recipient.

An agreement that contains both terms is a conditional contribution. An agreement that omits one or both is unconditional. [11]¹³ The distinction between a conditional and unconditional contribution is important from an accounting point of view because it affects when expense and revenue are reported.

Conditional Contribution

Presented in **Illustration 10A.1** is analysis of a contribution made by State Insurance Company to Disabled Veterans (DV), a not-for-profit (NFP) organization.

ILLUSTRATION 10A.1 Conditional Contribution

Conditional Contribution

Facts: State Insurance Company agrees to contribute \$1,000,000 to DV to provide specific career training to disabled veterans. The contribution requires DV to provide training to at least 8,000 disabled veterans during the next fiscal year, with specified minimum targets that must be met each quarter. State Insurance Company requires a right of release stipulation from the obligation in that it will only give DV \$250,000 each quarter if DV demonstrates that those services have been provided to at least 2,000 disabled veterans during the quarter. State Insurance makes the payments at the end of each quarter.

Question: Is the arrangement between State Insurance Company and DV a conditional contribution? Explain.

Solution: State Insurance Company and DV conclude that this contribution is conditional. The agreement contains a right of release from the obligation because State Insurance will only transfer assets if DV provides training to 8,000 disabled veterans during the year (with a minimum requirement of 2,000 disabled veterans per quarter). State Insurance requires DV to achieve a specific level of service that would be considered a measurable performance-related barrier (in the form of milestones by specifying 2,000 disabled veterans per quarter).

In the situation described in Illustration 10A.1, assuming the first quarter milestone is met, State Insurance Company would make the following entry.

| | | |
|----------------------|---------|---------|
| Contribution Expense | 250,000 | |
| Cash | | 250,000 |

DV would also make an entry in the first quarter as follows.

| | | |
|----------------------|---------|---------|
| Cash | 250,000 | |
| Contribution Revenue | | 250,000 |

If the arrangement between State Insurance and DV is such that the contribution is unconditional, the entries are as follows at the time of the agreement.

¹³The FASB decided that including both a barrier and either a right of return of assets transferred or a right of release of the promisor’s obligation to transfer assets better reflects the economics of the transaction. That is, without barriers, the right of return or right of release has little substance. Similarly, without right of return or right of release, failure to meet barriers has little substance. See Accounting Standards Update 2018-08, *Clarifying the Scope and the Accounting Guidance for Contributions Received and Contributions Made* (Norwalk, Conn.: FASB, June 2018), par. BC 18.

| | | | |
|-----------------------|--------------------------------|-----------|-----------|
| | State Insurance Company | | |
| Contribution Expense | | 1,000,000 | |
| Accounts Payable (DV) | | | 1,000,000 |
| | DV | | |
| Accounts Receivable | | 1,000,000 | |
| Contribution Revenue | | | 1,000,000 |

Unconditional Contribution

Presented in **Illustration 10A.2** is a contribution made by Progress Pharma Company to Gillar Science (a not-for-profit).

Unconditional Contribution

Facts: Gillar Science receives a grant of land with a fair value of \$1 million (cost of \$600,000) from Progress Pharma Company to build additional research facilities to advance Gillar Science's study on stem cell adaptations. Progress Pharma does not specify any restrictions to the grant.

Question: Is the arrangement between Gillar Science and Progress Pharma unconditional? If so, prepare the journal entry for Gillar Science.

Solution: This grant is unconditional, as there are no restrictions associated with the contribution. Gillar Science records the land received at its fair value and contribution revenue as follows.

| | | |
|----------------------|-----------|-----------|
| Land | 1,000,000 | |
| Contribution Revenue | | 1,000,000 |

When Progress Pharma contributes this land, it records the donation as contribution expense at \$1,000,000 (the fair value of the land). Because a difference exists between the fair value of the land and its book value, Progress Pharma should record a gain of \$400,000. As indicated, the land has a cost basis of \$600,000. The entry to record this contribution is as follows.

| | | |
|--------------------------|-----------|---------|
| Contribution Expense | 1,000,000 | |
| Land | | 600,000 |
| Gain on Disposal of Land | | 400,000 |

ILLUSTRATION 10A.2

Unconditional Contribution

Exchange Transactions

In the examples thus far, the contributions arose because both State Insurance and Progress Pharma did not receive any value in exchange for the assets transferred, or the value received was incidental to the potential public benefit using the asset transferred. What happens, however, if both the recipient and the resource provider agree on the amount of assets transferred in goods or services—which are essentially of the same value? In this case, the gift or grant is no longer considered a contribution for accounting purposes but is accounted for as an exchange.

Presented in **Illustration 10A.3** is a grant made by Precision Company (a pharmaceutical company) to Outstanding University, a not-for-profit organization.¹⁴

¹⁴The examples for conditional contribution arrangements and exchange transactions are adapted from Accounting Standards Update 2018-08, *Clarifying the Scope and the Accounting Guidance for Contributions Received and Contributions Made* (Norwalk, Conn.: FASB, June 2018), par. BC 18, Examples 13 and 8, respectively.

ILLUSTRATION 10A.3**Contribution or Exchange?****Contribution or Exchange?**

Facts: Outstanding University is a large research university with a cancer research department. Outstanding University receives \$800,000 from Precision Company to finance the cost of a clinical trial of an experimental cancer drug that Precision developed. Precision specifies the protocol of the testing, including the number of participants to be tested, the dosages to be administered, and the frequency of follow-up examinations. Precision requires a detailed report of the test outcomes within three months of the test's conclusions; the rights to the results of the study belong to Outstanding University.

Question: Should this arrangement be considered an exchange? Explain.

Solution: Outstanding University and Precision Company should consider this grant to be an exchange transaction. Because the results of the clinical trial have commercial value for Precision, Precision is receiving commensurate value as the resource provider. Therefore, the receipt of the resources is not a contribution received by Outstanding University, nor is the disbursement of the resources a contribution made by Precision. The accounting for this transaction would follow the normal rules for exchanges using the revenue recognition guidelines discussed in Chapters 4 and 18 [12].

In summary, if the resource provider has full discretion in determining the amount of the transferred assets, the transaction is considered a contribution. If both the recipient and the resource provider agree on the amount of assets transferred in exchange for goods and services that are of commensurate value, the transaction is an exchange transaction.

Review and Practice

Learning Objectives Review

1 Identify property, plant, and equipment and its related costs.

The major characteristics of property, plant, and equipment are as follows. (1) They are acquired for use in operations and not for resale. (2) They are long-term in nature and usually subject to depreciation. (3) They possess physical substance. The costs included in initial valuation of property, plant, and equipment are as follows.

Cost of land. Includes all expenditures made to acquire land and to ready it for use. Land costs typically include (1) the purchase price; (2) closing costs, such as title to the land, attorney's fees, and recording fees; (3) costs incurred in getting the land in condition for its intended use, such as grading, filling, draining, and clearing;

(4) assumption of any liens, mortgages, or encumbrances on the property; and (5) any additional land improvements that have an indefinite life.

Cost of buildings. Includes all expenditures related directly to their acquisition or construction. These costs include (1) materials, labor, and overhead costs incurred during construction, and (2) professional fees and building permits.

Cost of equipment. Includes the purchase price, freight and handling charges incurred, insurance on the equipment while in transit, cost of special foundations if required, assembling and installation costs, and costs of conducting trial runs.

Self-constructed assets. Indirect costs of manufacturing create special problems because companies cannot easily trace these costs directly to work and material orders related to the constructed assets.

Companies might handle these costs in one of two ways: (1) assign no fixed overhead to the cost of the constructed asset, or (2) assign a portion of all overhead to the construction process. Companies use the second method extensively.

2 Discuss the accounting problems associated with interest capitalization.

Only actual interest (with modifications) should be capitalized. The rationale for this approach is that during construction, the asset is not generating revenue and therefore companies should defer (capitalize) interest cost. Once construction is completed, the asset is ready for its intended use and revenues can be recognized. Any interest cost incurred in purchasing an asset that is ready for its intended use should be expensed.

3 Explain the accounting issues related to acquiring and valuing plant assets.

The following issues relate to acquiring and valuing plant assets. (1) *Cash discounts*: Whether taken or not, they are generally considered a reduction in the cost of the asset; the real cost of the asset is the cash or cash equivalent price of the asset. (2) *Deferred-payment contracts*: Companies account for assets purchased on long-term credit contracts at the present value of the consideration exchanged between the contracting parties. (3) *Lump-sum purchase*: Allocate the total cost among the various assets on the basis of their relative fair values. (4) *Issuance of stock*: If the stock is actively traded, the market price of the stock issued is a fair indication of the cost of the property acquired. If the market price of the common stock exchanged is not determinable, establish the fair value of the property and use it as the basis for recording the asset and issuance of the common stock. (5) *Exchanges of nonmonetary assets*: The accounting for exchanges of nonmonetary assets depends on whether the exchange has commercial substance. See Illustrations 10.10 and 10.20 for summaries of how to account for exchanges. (6) *Contributions*: Record at the fair value of the asset received, and credit revenue for the same amount.

4 Describe the accounting treatment for costs subsequent to acquisition.

Illustration 10.21 summarizes how to account for costs subsequent to acquisition.

5 Describe the accounting treatment for the disposal of property, plant, and equipment.

Regardless of the time of disposal, companies take depreciation up to the date of disposition and then remove all accounts related to the retired asset. Gains or losses on the retirement of plant assets are shown in the income statement along with other items that arise from customary business activities. Gains or losses on involuntary conversions are reported as other revenues and gains or other expenses and losses in the income statement.

*6 Describe the accounting for contributions.

Recipients of contributions record the asset received and contribution revenue at the fair value of the asset(s) received. The donor records Contribution Expense for the fair value of the asset(s) donated. The timing of recognition of revenue and expense depends on whether the contribution (1) includes a hurdle and (2) releases the donor from any obligation if the hurdle is not met by the recipient. An agreement that contains both terms is a conditional contribution. An agreement that omits one or both is unconditional. If the contribution arrangement is such that both the recipient and the donor agree on the amount of assets transferred in goods or services that are essentially of the same value, the gift or grant is no longer considered a contribution but is accounted for as an exchange.

Enhanced Review and Practice

Go online for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Practice Problem

Columbia Company, which manufactures machine tools, had the following transactions related to plant assets in 2020.

Asset A: On June 2, 2020, Columbia purchased a stamping machine at a retail price of \$12,000. Columbia paid 6% sales tax on this purchase. Columbia paid a contractor \$2,800 for a specially wired platform for the machine, to ensure noninterrupted power to the machine. Columbia estimates the machine will have a 4-year useful life, with a salvage value of \$2,000 at the end of 4 years. The machine was put into use on July 1, 2020.

Asset B: On January 1, 2020, Columbia, Inc. signed a fixed-price contract for construction of a warehouse facility at a cost of \$1,000,000. It was estimated that the project will be completed by December 31, 2020. On March 1, 2020, to finance the construction cost, Columbia borrowed \$1,000,000 payable April 1, 2021, plus interest at the rate of 10%. During 2020, Columbia made deposit and progress payments totaling \$750,000 under the contract; the weighted-average amount of accumulated expenditures was \$400,000 for the year. The excess-borrowed funds were invested in short-term securities, from which Columbia realized investment revenue of \$13,000. The warehouse was completed on December 1, 2020, at which time Columbia made the final payment to the contractor. Columbia estimates the warehouse will have a 25-year useful life, with a salvage value of \$20,000.

Columbia uses straight-line depreciation and employs the “half-year” convention in accounting for partial-year depreciation. (Under this straight-line approach, a half-year of depreciation is recorded in the first and last year of the asset’s useful life.) Columbia’s fiscal year ends on December 31.

Instructions

- At what amount should Columbia record the acquisition cost of the machine?
- What amount of capitalized interest should Columbia include in the cost of the warehouse?
- On July 1, 2022, Columbia decides to outsource its stamping operation to Medek, Inc. As part of this plan, Columbia sells the machine (and the platform) to Medek, Inc. for \$7,000. What is the impact of this disposal on Columbia’s 2022 income before taxes?

Solution

- Historical cost is measured by the cash or cash equivalent price of obtaining the asset and bringing it to the location and condition for its intended use. For Columbia, this is:

| | |
|-------------------------------------|-----------------|
| Price | \$12,000 |
| Sales tax ($\$12,000 \times .06$) | 720 |
| Platform | <u>2,800</u> |
| Total | <u>\$15,520</u> |

- \$40,000 ($\$400,000 \times .10$)—Weighted-Average Accumulated Expenditures \times Interest Rate = Avoidable Interest

Since Columbia has outstanding debt incurred specifically for the construction project, in an amount greater than the weighted-average accumulated expenditures of \$400,000, the interest rate of 10% is used for capitalization purposes. Capitalization stops upon completion of the project at December 31, 2020. Therefore, the avoidable interest is \$40,000, which is less than the actual interest ($\$1,000,000 \times .10 = \$100,000$). The investment revenue of \$13,000 is irrelevant to the question addressed in this problem because such interest earned on the unexpended portion of the loan is not to be offset against the amount eligible for capitalization.

- The income effect is a gain or loss, determined by comparing the book value of the asset to the disposal value:

| | |
|---|-----------------|
| Cost | \$15,520 |
| Less: Accumulated depreciation ($\$1,690 + \$3,380 + \$1,690$) | <u>6,760*</u> |
| Book value of machine and platform | 8,760 |
| Less: Cash received for machine and platform | <u>7,000</u> |
| Loss on disposal of equipment before income taxes | <u>\$ 1,760</u> |

*Depreciable base: $\$15,520 - \$2,000 = \$13,520$. Depreciation expense:
 $\$13,520 \div 4 = \$3,380$ per year.

| | |
|---|----------------|
| 2020: $\frac{1}{2}$ year ($\$3,380 \times .50$) | \$1,690 |
| 2021: full year | 3,380 |
| 2022: $\frac{1}{2}$ year | <u>1,690</u> |
| Total | <u>\$6,760</u> |

WileyPLUS

Exercises, Problems, Problem Solution Walkthrough Videos, and many more assessment tools and resources are available for practice in WileyPLUS.

Note: All asterisked Questions, Exercises, and Problems relate to the material in the appendix to the chapter.

Questions

- What are the major characteristics of plant assets?
- Mickelson Inc. owns land that it purchased on January 1, 2000, for \$450,000. At December 31, 2020, its current value is \$770,000 as determined by appraisal. At what amount should Mickelson report this asset on its December 31, 2020, balance sheet? Explain.

3. Name the items, in addition to the amount paid to the former owner or contractor, that may properly be included as part of the acquisition cost of the following plant assets.

- a. Land.
- b. Machinery and equipment.
- c. Buildings.

4. Indicate where the following items would be shown on a balance sheet.

- a. A lien that was attached to the land when purchased.
- b. Landscaping costs.
- c. Attorney's fees and recording fees related to purchasing land.
- d. Variable overhead related to construction of machinery.
- e. A parking lot servicing employees in the building.
- f. Cost of temporary building for workers during construction of building.
- g. Interest expense on bonds payable incurred during construction of a building.
- h. Assessments for sidewalks that are maintained by the city.
- i. The cost of demolishing an old building that was on the land when purchased.

5. Two positions have normally been taken with respect to the recording of fixed manufacturing overhead as an element of the cost of plant assets constructed by a company for its own use:

- a. It should be excluded completely.
- b. It should be included at the same rate as is charged to normal operations.

What are the circumstances or rationale that support or deny the application of these methods?

6. The Buildings account of Postera Inc. includes the following items that were used in determining the basis for depreciating the cost of a building.

- a. Organization and promotion expenses.
- b. Architect's fees.
- c. Interest and taxes during construction.
- d. Interest revenue on investments held to fund construction of a building.

Do you agree with these charges? If not, how would you deal with each of the items above in the corporation's books and in its annual financial statements?

7. Burke Company has purchased two tracts of land. One tract will be the site of its new manufacturing plant, while the other is being purchased with the hope that it will be sold in the next year at a profit. How should these two tracts of land be reported in the balance sheet?

8. One financial accounting issue encountered when a company constructs its own plant is whether the interest cost on funds borrowed to finance construction should be capitalized and then amortized over the life of the assets constructed. What is the justification for capitalizing such interest?

9. Provide examples of assets that do not qualify for interest capitalization.

10. What interest rates should be used in determining the amount of interest to be capitalized? How should the amount of interest to be capitalized be determined?

11. How should the amount of interest capitalized be disclosed in the notes to the financial statements? How should interest revenue from

temporarily invested excess funds borrowed to finance the construction of assets be accounted for?

12. Discuss the basic accounting problem that arises in handling each of the following situations.

- a. Assets purchased by issuance of common stock.
- b. Acquisition of plant assets by gift or donation.
- c. Purchase of a plant asset subject to a cash discount.
- d. Assets purchased on a long-term credit basis.
- e. A group of assets acquired for a lump sum.
- f. An asset traded in or exchanged for another asset.

13. Magilke Industries acquired equipment this year to be used in its operations. The equipment was delivered by the suppliers, installed by Magilke, and placed into operation. Some of it was purchased for cash with discounts available for prompt payment. Some of it was purchased under long-term payment plans for which the interest charges approximated prevailing rates. What costs should Magilke capitalize for the new equipment purchased this year? Explain.

14. Schwartzkopf Co. purchased for \$2,200,000 property that included both land and a building to be used in operations. The seller's book value was \$300,000 for the land and \$900,000 for the building. By appraisal, the fair value was estimated to be \$500,000 for the land and \$2,000,000 for the building. At what amount should Schwartzkopf report the land and the building at the end of the year?

15. Pueblo Co. acquires machinery by paying \$10,000 cash and signing a \$5,000, 2-year, zero-interest-bearing note payable. The note has a present value of \$4,208, and Pueblo purchased a similar machine last month for \$13,500. At what cost should the new equipment be recorded?

16. Stan Ott is evaluating two recent transactions involving exchanges of equipment. In one case, the exchange has commercial substance. In the second situation, the exchange lacks commercial substance. Explain to Stan the differences in accounting for these two situations.

17. Crowe Company purchased a heavy-duty truck on July 1, 2017, for \$30,000. It was estimated that it would have a useful life of 10 years and then would have a trade-in value of \$6,000. The company uses the straight-line method. It was traded on August 1, 2021, for a similar truck costing \$42,000; \$16,000 was allowed as trade-in value (also fair value) on the old truck and \$26,000 was paid in cash. A comparison of expected cash flows for the trucks indicates the exchange lacks commercial substance. What is the entry to record the trade-in?

18. Once equipment has been installed and placed in operation, subsequent expenditures relating to this equipment are frequently thought of as repairs or general maintenance and, hence, chargeable to operations in the period in which the expenditure is made. Actually, determination of whether such an expenditure should be charged to operations or capitalized involves a much more careful analysis of the character of the expenditure. What are the factors that should be considered in making such a decision? Discuss fully.

19. What accounting treatment is normally given to the following items in accounting for plant assets?

- a. Additions.
- b. Major repairs.
- c. Improvements and replacements.

20. New machinery, which replaced a number of employees, was installed and put in operation in the last month of the fiscal year. The employees had been dismissed after payment of an extra month's wages, and this amount was added to the cost of the machinery.

Discuss the propriety of the charge. If it was improper, describe the proper treatment.

21. To what extent do you consider the following items to be proper costs of the fixed asset? Give reasons for your opinions.

- a. Overhead of a business that builds its own equipment.
- b. Cash discounts on purchases of equipment.
- c. Interest paid during construction of a building.
- d. Cost of a safety device installed on a machine.
- e. Freight on equipment returned before installation, for replacement by other equipment of greater capacity.
- f. Cost of moving machinery to a new location.
- g. Cost of plywood partitions erected as part of the remodeling of the office.

h. Replastering of a section of the building.

i. Cost of a new motor for one of the trucks.

22. Neville Enterprises has a number of fully depreciated assets that are still being used in the main operations of the business. Because the assets are fully depreciated, the president of the company decides not to show them on the balance sheet or disclose this information in the notes. Evaluate this procedure.

23. What are the general rules for how gains or losses on retirement of plant assets should be reported in income?

*24. What is the difference between a conditional and unconditional contribution?

*25. Why is the distinction between a conditional and unconditional contribution important for accounting purposes?

Brief Exercises

BE10.1 (LO 1) Previn Brothers Inc. purchased land at a price of \$27,000. Closing costs were \$1,400. An old building was removed at a cost of \$10,200. What amount should be recorded as the cost of the land?

BE10.2 (LO 2) Hanson Company is constructing a building. Construction began on February 1 and was completed on December 31. Expenditures were \$1,800,000 on March 1, \$1,200,000 on June 1, and \$3,000,000 on December 31. Compute Hanson's weighted-average accumulated expenditures for interest capitalization purposes.

BE10.3 (LO 2) Hanson Company (see BE10.2) borrowed \$1,000,000 on March 1 on a 5-year, 12% note to help finance construction of the building. In addition, the company had outstanding all year a 10%, 5-year, \$2,000,000 note payable and an 11%, 4-year, \$3,500,000 note payable. Compute the weighted-average interest rate used for interest capitalization purposes.

BE10.4 (LO 2) Use the information for Hanson Company from BE10.2 and BE10.3. Compute avoidable interest for Hanson Company.

BE10.5 (LO 3) Garcia Corporation purchased a truck by issuing an \$80,000, 4-year, zero-interest-bearing note to Equinox Inc. The market rate of interest for obligations of this nature is 10%. Prepare the journal entry to record the purchase of this truck.

BE10.6 (LO 3) Mohave Inc. purchased land, building, and equipment from Laguna Corporation for a cash payment of \$315,000. The estimated fair values of the assets are land \$60,000, building \$220,000, and equipment \$80,000. At what amounts should each of the three assets be recorded?

BE10.7 (LO 3) Fielder Company obtained land by issuing 2,000 shares of its \$10 par value common stock. The land was recently appraised at \$85,000. The common stock is actively traded at \$40 per share. Prepare the journal entry to record the acquisition of the land.

BE10.8 (LO 3) Navajo Corporation traded a used truck (cost \$20,000, accumulated depreciation \$18,000) for a small computer with a fair value of \$3,300. Navajo also paid \$500 in the transaction. Prepare the journal entry to record the exchange. (The exchange has commercial substance.)

BE10.9 (LO 3) Use the information for Navajo Corporation from BE10.8. Prepare the journal entry to record the exchange, assuming the exchange lacks commercial substance.

BE10.10 (LO 3) Mehta Company traded a used welding machine (cost \$9,000, accumulated depreciation \$3,000) for office equipment with an estimated fair value of \$5,000. Mehta also paid \$3,000 cash in the transaction. Prepare the journal entry to record the exchange. (The exchange has commercial substance.)

BE10.11 (LO 3) Cheng Company traded a used truck for a new truck. The used truck cost \$30,000 and has accumulated depreciation of \$27,000. The new truck is worth \$37,000. Cheng also made a cash payment of \$36,000. Prepare Cheng's entry to record the exchange. (The exchange lacks commercial substance.)

BE10.12 (LO 3) Slaton Corporation traded a used truck for a new truck. The used truck cost \$20,000 and has accumulated depreciation of \$17,000. The new truck is worth \$35,000. Slaton also made a cash payment of \$33,000. Prepare Slaton's entry to record the exchange. (The exchange has commercial substance.)

BE10.13 (LO 4) Indicate which of the following costs should be expensed when incurred.

- \$13,000 paid to rearrange and reinstall machinery.
- \$200,000 paid for addition to building.
- \$200 paid for tune-up and oil change on delivery truck.
- \$7,000 paid to replace a wooden floor with a concrete floor.
- \$2,000 paid for a major overhaul on a truck, which extends the useful life.

BE10.14 (LO 5) Ottawa Corporation owns machinery that cost \$20,000 when purchased on July 1, 2017. Depreciation has been recorded at a rate of \$2,400 per year, resulting in a balance in accumulated depreciation of \$8,400 at December 31, 2020. The machinery is sold on September 1, 2021, for \$10,500. Prepare journal entries to (a) update depreciation for 2021 and (b) record the sale.

BE10.15 (LO 5) Use the information presented for Ottawa Corporation in BE10.14, but assume the machinery is sold for \$5,200 instead of \$10,500. Prepare journal entries to (a) update depreciation for 2021 and (b) record the sale.

***BE10.16 (LO 6)** Research Science Inc. provides funding to University Hospital to perform a research study on the benefits of a new drug for insomnia. The agreement requires University Hospital to plan the study, perform the research, and summarize and submit the research to Research Science. Research Science retains all rights to the study. Explain whether this is an exchange transaction or a contribution.

***BE10.17 (LO 6)** Pet Aware is an animal shelter and receives an upfront, unsolicited 2-year grant of \$800,000 from Kindig Company (the owner of Kindig is a dog lover). The grant specifies that the money should be used to expand Pet Aware's operations. The agreement indicates that Pet Aware must expand its operations by 6,000 square feet to accommodate additional animals by the end of 2 years. The grant contains a right of return for any unused assets. Explain whether this grant is an unconditional or conditional grant.

***BE10.18 (LO 6)** Knowledge University received a grant from a private foundation to conduct scientific research for purposes of discovering planets potentially habitable to humans. Knowledge University is required to submit a summary of research findings to the foundation at the end of the study, but Knowledge University retains all rights to the findings and has permission to publish them, if desired. Is this an exchange or nonexchange arrangement? Explain.

Exercises

E10.1 (LO 1) (Acquisition Costs of Realty) The following expenditures and receipts are related to land, land improvements, and buildings acquired for use in a business enterprise. The receipts are enclosed in parentheses.

| | |
|---|-------------|
| a. Money borrowed to pay building contractor (signed a note) | \$(275,000) |
| b. Payment for construction from note proceeds | 275,000 |
| c. Cost of land fill and clearing | 8,000 |
| d. Delinquent real estate taxes on property assumed by purchaser | 7,000 |
| e. Premium on 6-month insurance policy during construction | 6,000 |
| f. Refund of 1-month insurance premium because construction completed early | (1,000) |
| g. Architect's fee on building | 22,000 |
| h. Cost of real estate purchased as a plant site (land \$200,000 and building \$50,000) | 250,000 |
| i. Commission fee paid to real estate agency | 9,000 |
| j. Installation of fences around property | 4,000 |
| k. Cost of razing and removing building | 11,000 |
| l. Proceeds from salvage of demolished building | (5,000) |
| m. Interest paid during construction on money borrowed for construction | 13,000 |
| n. Cost of parking lots and driveways | 19,000 |
| o. Cost of trees and shrubbery planted (permanent in nature) | 14,000 |
| p. Excavation costs for new building | 3,000 |

Instructions

Identify each item by letter and list the items in columnar form, using the headings shown below. All receipt amounts should be reported in parentheses. For any amounts entered in the Other Accounts column, also indicate the account title.

Item Land Land Improvements Buildings Other Accounts

E10.2 (LO 1) Excel (Acquisition Costs of Realty) Martin Buber Co. purchased land as a factory site for \$400,000. The process of tearing down two old buildings on the site and constructing the factory required 6 months.

The company paid \$42,000 to raze the old buildings and sold salvaged lumber and brick for \$6,300. Legal fees of \$1,850 were paid for title investigation and drawing the purchase contract. Martin Buber paid \$2,200 to an engineering firm for a land survey, and \$68,000 for drawing the factory plans. The land survey had to be made before definitive plans could be drawn. Title insurance on the property cost \$1,500, and a liability insurance premium paid during construction was \$900. The contractor's charge for construction was \$2,740,000. The company paid the contractor in two installments: \$1,200,000 at the end of 3 months and \$1,540,000 upon completion. Interest costs of \$170,000 were incurred to finance the construction.

Instructions

Determine the cost of the land and the cost of the building as they should be recorded on the books of Martin Buber Co. Assume that the land survey was for the building.

E10.3 (LO 1) Excel (Acquisition Costs of Trucks) Kelly Clarkson Corporation operates a retail computer store. To improve delivery services to customers, the company purchases four new trucks on April 1, 2020. The terms of acquisition for each truck are described below.

- Truck #1 has a list price of \$15,000 and is acquired for a cash payment of \$13,900.
- Truck #2 has a list price of \$16,000 and is acquired for a down payment of \$2,000 cash and a zero-interest-bearing note with a face amount of \$14,000. The note is due April 1, 2021. Clarkson would normally have to pay interest at a rate of 10% for such a borrowing, and the dealership has an incremental borrowing rate of 8%.
- Truck #3 has a list price of \$16,000. It is acquired in exchange for a computer system that Clarkson carries in inventory. The computer system cost \$12,000 and is normally sold by Clarkson for \$15,200. Clarkson uses a perpetual inventory system.
- Truck #4 has a list price of \$14,000. It is acquired in exchange for 1,000 shares of common stock in Clarkson Corporation. The stock has a par value per share of \$10 and a market price of \$13 per share.

Instructions

Prepare the appropriate journal entries for the above transactions for Clarkson Corporation.

E10.4 (LO 1) (Purchase and Self-Constructed Cost of Assets) Worf Co. both purchases and constructs various equipment it uses in its operations. The following items for two different types of equipment were recorded in random order during the calendar year 2020.

Purchase

| | |
|--|-----------|
| Cash paid for equipment, including sales tax of \$5,000 | \$105,000 |
| Freight and insurance cost while in transit | 2,000 |
| Cost of moving equipment into place at factory | 3,100 |
| Wage cost for technicians to test equipment | 4,000 |
| Insurance premium paid during first year of operation on this equipment | 1,500 |
| Special plumbing fixtures required for new equipment | 8,000 |
| Repair cost incurred in first year of operations related to this equipment | 1,300 |

Construction

| | |
|--|-----------|
| Material and purchased parts (gross cost \$200,000; failed to take 2% cash discount) | \$200,000 |
| Imputed interest on funds used during construction (stock financing) | 14,000 |
| Labor costs | 190,000 |
| Allocated overhead costs (fixed—\$20,000; variable—\$30,000) | 50,000 |
| Profit on self-construction | 30,000 |
| Cost of installing equipment | 4,400 |

Instructions

Compute the total cost for each of these two pieces of equipment. If an item is not capitalized as a cost of the equipment, indicate how it should be reported.

E10.5 (LO 1, 2) (Treatment of Various Costs) Ben Sisko Supply Company, a newly formed corporation, incurred the following expenditures related to Land, to Buildings, and to Machinery and Equipment.

| | | |
|---|--------------|---------|
| Abstract company's fee for title search | \$ | 520 |
| Architect's fees | | 3,170 |
| Cash paid for land and dilapidated building thereon | | 87,000 |
| Removal of old building | \$20,000 | |
| Less: Salvage | <u>5,500</u> | 14,500 |
| Interest on short-term loans during construction | | 7,400 |
| Excavation before construction for basement | | 19,000 |
| Machinery purchased (subject to 2% cash discount, which was not taken) | | 55,000 |
| Freight on machinery purchased | | 1,340 |
| Storage charges on machinery, necessitated by noncompletion of building when machinery was delivered | | 2,180 |
| New building constructed (building construction took 6 months from date of purchase of land and old building) | | 485,000 |
| Assessment by city for drainage project | | 1,600 |
| Hauling charges for delivery of machinery from storage to new building | | 620 |
| Installation of machinery | | 2,000 |
| Trees, shrubs, and other landscaping after completion of building (permanent in nature) | | 5,400 |

Instructions

Determine the amounts that should be debited to Land, to Buildings, and to Machinery and Equipment. Assume the benefits of capitalizing interest during construction exceed the cost of implementation. Indicate how any costs not debited to these accounts should be recorded.

E10.6 (LO 1, 3) (Correction of Improper Cost Entries) Plant acquisitions for selected companies are as follows.

- Belanna Industries Inc. acquired land, buildings, and equipment from a bankrupt company, Torres Co., for a lump-sum price of \$700,000. At the time of purchase, Torres's assets had the following book and appraisal values.

| | <u>Book Values</u> | <u>Appraisal Values</u> |
|-----------|--------------------|-------------------------|
| Land | \$200,000 | \$150,000 |
| Buildings | 250,000 | 350,000 |
| Equipment | 300,000 | 300,000 |

To be conservative, the company decided to take the lower of the two values for each asset acquired. The following entry was made.

| | | |
|-----------|---------|---------|
| Land | 150,000 | |
| Buildings | 250,000 | |
| Equipment | 300,000 | |
| Cash | | 700,000 |

- Harry Enterprises purchased store equipment by making a \$2,000 cash down payment and signing a 1-year, \$23,000, 10% note payable. The purchase was recorded as follows.

| | | |
|------------------|--------|--------|
| Equipment | 27,300 | |
| Cash | | 2,000 |
| Notes Payable | | 23,000 |
| Interest Payable | | 2,300 |

- Kim Company purchased office equipment for \$20,000, terms 2/10, n/30. Because the company intended to take the discount, it made no entry until it paid for the acquisition. The entry was:

| | | |
|--------------------|--------|--------|
| Equipment | 20,000 | |
| Cash | | 19,600 |
| Purchase Discounts | | 400 |

- Kaisson Inc. recently received at zero cost land from the Village of Cardassia as an inducement to locate its business in the Village. The appraised value of the land is \$27,000. The company made no entry to record the land because it had no cost basis.

- Zimmerman Company built a warehouse for \$600,000. It could have purchased the building for \$740,000. The controller made the following entry.

| | | |
|------------------------|---------|---------|
| Buildings | 740,000 | |
| Cash | | 600,000 |
| Profit on Construction | | 140,000 |

Instructions

Prepare the entry that should have been made at the date of each acquisition.

E10.7 (LO 2) (Capitalization of Interest) Harrisburg Furniture Company started construction of a combination office and warehouse building for its own use at an estimated cost of \$5,000,000 on January 1, 2020. Harrisburg expected to complete the building by December 31, 2020. Harrisburg has the following debt obligations outstanding during the construction period.

| | |
|--|-------------|
| Construction loan—12% interest, payable semiannually, issued December 31, 2019 | \$2,000,000 |
| Short-term loan—10% interest, payable monthly, and principal payable at maturity on May 30, 2021 | 1,400,000 |
| Long-term loan—11% interest, payable on January 1 of each year. Principal payable on January 1, 2024 | 1,000,000 |

Instructions

(Carry all computations to two decimal places.)

- Assume that Harrisburg completed the office and warehouse building on December 31, 2020, as planned at a total cost of \$5,200,000, and the weighted-average amount of accumulated expenditures was \$3,600,000. Compute the avoidable interest on this project.
- Compute the depreciation expense for the year ended December 31, 2021. Harrisburg elected to depreciate the building on a straight-line basis and determined that the asset has a useful life of 30 years and a salvage value of \$300,000.

E10.8 (LO 2) (Capitalization of Interest) On December 31, 2019, Main Inc. borrowed \$3,000,000 at 12% payable annually to finance the construction of a new building. In 2020, the company made the following expenditures related to this building: March 1, \$360,000; June 1, \$600,000; July 1, \$1,500,000; December 1, \$1,500,000. The building was completed in February 2021. Additional information is provided as follows.

- Other debt outstanding

| | |
|--|-------------|
| 10-year, 13% bond, December 31, 2013, interest payable annually | \$4,000,000 |
| 6-year, 10% note, dated December 31, 2017, interest payable annually | \$1,600,000 |
- March 1, 2020, expenditure included land costs of \$150,000
- Interest revenue earned in 2020 \$49,000

Instructions

- Determine the amount of interest to be capitalized in 2020 in relation to the construction of the building.
- Prepare the journal entry to record the capitalization of interest and the recognition of interest expense, if any, at December 31, 2020.

E10.9 (LO 2) (Capitalization of Interest) On July 31, 2020, Amsterdam Company engaged Minsk Tooling Company to construct a special-purpose piece of factory machinery. Construction began immediately and was completed on November 1, 2020. To help finance construction, on July 31 Amsterdam issued a \$300,000, 3-year, 12% note payable at Netherlands National Bank, on which interest is payable each July 31. \$200,000 of the proceeds of the note was paid to Minsk on July 31. The remainder of the proceeds was temporarily invested in short-term marketable securities (trading securities) at 10% until November 1. On November 1, Amsterdam made a final \$100,000 payment to Minsk. Other than the note to Netherlands, Amsterdam's only outstanding liability at December 31, 2020, is a \$30,000, 8%, 6-year note payable, dated January 1, 2017, on which interest is payable each December 31.

Instructions

- Calculate weighted-average accumulated expenditures, avoidable interest, and total interest cost to be capitalized during 2020. (Round all computations to the nearest dollar.)
- Prepare the journal entries needed on the books of Amsterdam Company at each of the following dates.
 - July 31, 2020.
 - November 1, 2020.
 - December 31, 2020.

E10.10 (LO 2) (Capitalization of Interest) The following three situations involve the capitalization of interest.

Situation I: On January 1, 2020, Ohno, Inc. signed a fixed-price contract to have Builder Associates construct a major plant facility at a cost of \$4,000,000. It was estimated that it would take 3 years to complete the project. Also on January 1, 2020, to finance the construction cost, Ohno borrowed \$4,000,000 payable in 10 annual installments of \$400,000, plus interest at the rate of 10%. During 2020, Ohno made deposit and progress payments totaling \$1,500,000 under the contract; the weighted-average amount of accumulated expenditures was \$800,000 for the year. The excess borrowed funds were invested in short-term securities, from which Ohno realized investment income of \$250,000.

Instructions

What amount should Ohno report as capitalized interest at December 31, 2020?

Situation II: During 2020, Zagitova Corporation constructed and manufactured certain assets and incurred the following interest costs in connection with those activities.

| | Interest Costs Incurred |
|---|----------------------------|
| Warehouse constructed for Zagitova's own use | \$30,000 |
| Special-order machine for sale to unrelated customer, produced according to customer's specifications | 9,000 |
| Inventories routinely manufactured, produced on a repetitive basis | 8,000 |

All of these assets required an extended period of time for completion.

Instructions

Assuming the effect of interest capitalization is material, what is the total amount of interest costs to be capitalized?

Situation III: Fleming, Inc. has a fiscal year ending April 30. On May 1, 2020, Fleming borrowed \$10,000,000 at 11% to finance construction of its own building. Repayments of the loan are to commence the month following completion of the building. During the year ended April 30, 2021, expenditures for the partially completed structure totaled \$7,000,000. These expenditures were incurred evenly throughout the year. Interest earned on the unexpended portion of the loan amounted to \$650,000 for the year.

Instructions

How much should be shown as capitalized interest on Fleming's financial statements at April 30, 2021?

(CPA adapted)

E10.11 (LO 1, 3) (Entries for Equipment Acquisitions) Geddes Engineering Corporation purchased conveyor equipment with a list price of \$10,000. Presented below are three independent cases related to the equipment. (Round to the nearest dollar.)

- Geddes paid cash for the equipment 8 days after the purchase. The vendor's credit terms are 2/10, n/30. Assume that equipment purchases are initially recorded gross.
- Geddes traded in equipment with a book value of \$2,000 (initial cost \$8,000), and paid \$9,500 in cash one month after the purchase. The old equipment could have been sold for \$400 at the date of trade. (The exchange has commercial substance.)
- Geddes gave the vendor a \$10,800 zero-interest-bearing note for the equipment on the date of purchase. The note was due in one year and was paid on time. Assume that the effective-interest rate in the market was 9%.

Instructions

Prepare the general journal entries required to record the acquisition and payment in each of the independent cases above.

E10.12 (LO 1, 3) (Entries for Asset Acquisition, Including Self-Construction) Below are transactions related to Duffner Company.

- The City of Pebble Beach gives the company 5 acres of land as a plant site. The fair value of this land is determined to be \$81,000.
- 13,000 shares of common stock with a par value of \$50 per share are issued in exchange for land and buildings. The property has been appraised at a fair value of \$810,000, of which \$180,000 has been allocated to land and \$630,000 to buildings. The stock of Duffner Company is not listed on any exchange, but a block of 100 shares was sold by a stockholder 12 months ago at \$65 per share, and a block of 200 shares was sold by another stockholder 18 months ago at \$58 per share.

- c. No entry has been made to remove from the accounts for Materials, Direct Labor, and Overhead the amounts properly chargeable to plant asset accounts for machinery constructed during the year. The following information is given relative to costs of the machinery constructed.

| | |
|---|--------------------------|
| Materials used | \$12,500 |
| Factory supplies used | 900 |
| Direct labor incurred | 15,000 |
| Additional overhead (over regular) caused by construction of machinery, excluding factory supplies used | 2,700 |
| Fixed overhead rate applied to regular manufacturing operations | 60% of direct labor cost |
| Cost of similar machinery if it had been purchased from outside suppliers | 44,000 |

Instructions

Prepare journal entries on the books of Duffner Company to record these transactions.

E10.13 (LO 1, 3) (Entries for Acquisition of Assets) Presented below is information related to Zonker Company.

1. On July 6, Zonker Company acquired the plant assets of Doonesbury Company, which had discontinued operations. The appraised value of the property is:

| | |
|-----------|--------------------|
| Land | \$ 400,000 |
| Buildings | 1,200,000 |
| Equipment | 800,000 |
| Total | <u>\$2,400,000</u> |

Zonker Company gave 12,500 shares of its \$100 par value common stock in exchange. The stock had a market price of \$168 per share on the date of the purchase of the property.

2. Zonker Company expended the following amounts in cash between July 6 and December 15, the date when it first occupied the building.

| | |
|--|-----------|
| Repairs to building | \$105,000 |
| Construction of bases for equipment to be installed later | 135,000 |
| Driveways and parking lots | 122,000 |
| Remodeling of office space in building, including new partitions and walls | 161,000 |
| Special assessment by city on land | 18,000 |

3. On December 20, the company paid cash for equipment, \$260,000, subject to a 2% cash discount, and freight on equipment of \$10,500.

Instructions

Prepare entries on the books of Zonker Company for these transactions.

E10.14 (LO 3) (Purchase of Equipment with Zero-Interest-Bearing Debt) Chippewas Inc. has decided to purchase equipment from Central Michigan Industries on January 2, 2020, to expand its production capacity to meet customers' demand for its product. Chippewas issues an \$800,000, 5-year, zero-interest-bearing note to Central Michigan for the new equipment when the prevailing market rate of interest for obligations of this nature is 12%. The company will pay off the note in five \$160,000 installments due at the end of each year over the life of the note.

Instructions

(Round to nearest dollar in all computations.)

- Prepare the journal entry(ies) at the date of purchase.
- Prepare the journal entry(ies) at the end of the first year to record the payment and interest, assuming that the company employs the effective-interest method.
- Prepare the journal entry(ies) at the end of the second year to record the payment and interest.
- Assuming that the equipment had a 10-year life and no salvage value, prepare the journal entry necessary to record depreciation in the first year. (Straight-line depreciation is employed.)

E10.15 (LO 3) (Purchase of Computer with Zero-Interest-Bearing Debt) Cardinals Corporation purchased a computer on December 31, 2019, for \$105,000, paying \$30,000 down and agreeing to pay the balance in five equal installments of \$15,000 payable each December 31 beginning in 2020. An assumed interest rate of 10% is implicit in the purchase price.

Instructions

(Round to two decimal places.)

- Prepare the journal entry(ies) at the date of purchase.
- Prepare the journal entry(ies) at December 31, 2020, to record the payment and interest (effective-interest method employed).
- Prepare the journal entry(ies) at December 31, 2021, to record the payment and interest (effective-interest method employed).

E10.16 (LO 2, 3) Groupwork (Asset Acquisition) Hayes Industries purchased the following assets and constructed a building as well. All this was done during the current year.

Assets 1 and 2: These assets were purchased as a lump sum for \$100,000 cash. The following information was gathered.

| Description | Initial Cost on Seller's Books | Depreciation to Date on Seller's Books | Book Value on Seller's Books | Appraised Value |
|-------------|--------------------------------|--|------------------------------|-----------------|
| Machinery | \$100,000 | \$50,000 | \$50,000 | \$90,000 |
| Equipment | 60,000 | 10,000 | 50,000 | 30,000 |

Asset 3: This machine was acquired by making a \$10,000 down payment and issuing a \$30,000, 2-year, zero-interest-bearing note. The note is to be paid off in two \$15,000 installments made at the end of the first and second years. It was estimated that the asset could have been purchased outright for \$35,900.

Asset 4: This machinery was acquired by trading in used machinery. (The exchange lacks commercial substance.) Facts concerning the trade-in are as follows.

| | |
|--|-----------|
| Cost of machinery traded | \$100,000 |
| Accumulated depreciation to date of sale | 40,000 |
| Fair value of machinery traded | 80,000 |
| Cash received | 10,000 |
| Fair value of machinery acquired | 70,000 |

Asset 5: Equipment was acquired by issuing 100 shares of \$8 par value common stock. The stock had a market price of \$11 per share.

Construction of Building: A building was constructed on land purchased last year at a cost of \$150,000. Construction began on February 1 and was completed on November 1. The payments to the contractor were as follows.

| Date | Payment |
|------|-----------|
| 2/1 | \$120,000 |
| 6/1 | 360,000 |
| 9/1 | 480,000 |
| 11/1 | 100,000 |

To finance construction of the building, a \$600,000, 12% construction loan was taken out on February 1. The loan was repaid on November 1. The firm had \$200,000 of other outstanding debt during the year at a borrowing rate of 8%.

Instructions

Record the acquisition of each of these assets.

E10.17 (LO 3) (Nonmonetary Exchange) Busytown Corporation, which manufactures shoes, hired a recent college graduate to work in its accounting department. On the first day of work, the accountant was assigned to total a batch of invoices with the use of an adding machine. Before long, the accountant, who had never before seen such a machine, managed to break the machine. Busytown Corporation gave the machine plus \$340 to Dick Tracy Business Machine Company (dealer) in exchange for a new machine. Assume the following information about the machines.

| | Busytown Corp. (Old Machine) | Dick Tracy Co. (New Machine) |
|--------------------------|---------------------------------|---------------------------------|
| Machine cost | \$290 | \$270 |
| Accumulated depreciation | 140 | -0- |
| Fair value | 85 | 425 |

Instructions

For each company, prepare the necessary journal entry to record the exchange. (The exchange has commercial substance.)

E10.18 (LO 3) (Nonmonetary Exchange) Cannondale Company purchased an electric wax melter on April 30, 2020, by trading in its old gas model and paying the balance in cash. The following data relate to the purchase.

| | |
|---|----------|
| List price of new melter | \$15,800 |
| Cash paid | 10,000 |
| Cost of old melter (5-year life, \$700 salvage value) | 11,200 |
| Accumulated depreciation—old melter (straight-line) | 6,300 |
| Secondhand fair value of old melter | 5,200 |

Instructions

Prepare the journal entry(ies) necessary to record this exchange, assuming that the exchange (a) has commercial substance, and (b) lacks commercial substance. Cannondale's fiscal year ends on December 31, and depreciation has been recorded through December 31, 2019.

E10.19 (LO 3) (Nonmonetary Exchange) Arruza Company exchanged equipment used in its manufacturing operations plus \$3,000 in cash for similar equipment used in the operations of LoBianco Company. The following information pertains to the exchange.

| | Arruza Co. | LoBianco Co. |
|--------------------------|------------|--------------|
| Equipment (cost) | \$28,000 | \$28,000 |
| Accumulated depreciation | 19,000 | 10,000 |
| Fair value of equipment | 12,500 | 15,500 |
| Cash given up | 3,000 | |

Instructions

- Prepare the journal entries to record the exchange on the books of both companies. Assume that the exchange lacks commercial substance.
- Prepare the journal entries to record the exchange on the books of both companies. Assume that the exchange has commercial substance.

E10.20 (LO 3) (Nonmonetary Exchange) Ashbrook Inc. has negotiated the purchase of a new piece of automatic equipment at a price of \$8,000 plus trade-in, f.o.b. factory. Ashbrook Inc. paid \$8,000 cash and traded in used equipment. The used equipment had originally cost \$62,000; it had a book value of \$42,000 and a secondhand fair value of \$47,800, as indicated by recent transactions involving similar equipment. Freight and installation charges for the new equipment required a cash payment of \$1,100.

Instructions

- Prepare the general journal entry to record this transaction, assuming that the exchange has commercial substance.
- Assuming the same facts as in (a) except that fair value information for the assets exchanged is not determinable, prepare the general journal entry to record this transaction.

E10.21 (LO 4) Groupwork (Analysis of Subsequent Expenditures) Donovan Resources Group has been in its plant facility for 15 years. Although the plant is quite functional, numerous repair costs are incurred to maintain it in sound working order. The company's plant asset book value is currently \$800,000, as indicated below.

| | |
|--------------------------|-------------------|
| Original cost | \$1,200,000 |
| Accumulated depreciation | 400,000 |
| Book value | <u>\$ 800,000</u> |

During the current year, the following expenditures were made to the plant facility.

- Because of increased demands for its product, the company increased its plant capacity by building a new addition at a cost of \$270,000.
- The entire plant was repainted at a cost of \$23,000.
- The roof was an asbestos cement slate. For safety purposes, it was removed and replaced with a wood shingle roof at a cost of \$61,000. Book value of the old roof was \$41,000.

- d. The electrical system was completely updated at a cost of \$22,000. The cost of the old electrical system was not known. It is estimated that the useful life of the building will not change as a result of this updating.
- e. A series of major repairs were made at a cost of \$47,000, because parts of the wood structure were rotting. The cost of the old wood structure was not known. These extensive repairs are estimated to increase the useful life of the building.

Instructions

Indicate how each of these transactions would be recorded in the accounting records.

E10.22 (LO 4, 5) (Analysis of Subsequent Expenditures) The following transactions occurred during 2020. Assume that depreciation of 10% per year is charged on all machinery and 5% per year on buildings, on a straight-line basis, with no estimated salvage value. Depreciation is charged for a full year on all fixed assets acquired during the year, and no depreciation is charged on fixed assets disposed of during the year.

- Jan. 30 A building that cost \$132,000 in 2003 is torn down to make room for a new building. The wrecking contractor was paid \$5,100 and was permitted to keep all materials salvaged.
- Mar. 10 Machinery that was purchased in 2013 for \$16,000 is sold for \$2,900 cash, f.o.b. purchaser's plant. Freight of \$300 is paid on the sale of this machinery.
- Mar. 20 A gear breaks on a machine that cost \$9,000 in 2012. The gear is replaced at a cost of \$2,000. The replacement does not extend the useful life of the machine but does make the machine more efficient.
- May 18 A special base installed for a machine in 2014 when the machine was purchased has to be replaced at a cost of \$5,500 because of defective workmanship on the original base. The cost of the machinery was \$14,200 in 2014. The cost of the base was \$3,500, and this amount was charged to the Machinery account in 2014.
- June 23 One of the buildings is repainted at a cost of \$6,900. It had not been painted since it was constructed in 2016.

Instructions

Prepare general journal entries for the transactions. (Round to the nearest dollar.)

E10.23 (LO 4) (Analysis of Subsequent Expenditures) Plant assets often require expenditures subsequent to acquisition. It is important that they be accounted for properly. Any errors will affect both the balance sheets and income statements for a number of years.

Instructions

For each of the following items, indicate whether the expenditure should be capitalized (C) or expensed (E) in the period incurred.

- a. _____ Improvement.
- b. _____ Replacement of a minor broken part on a machine.
- c. _____ Expenditure that increases the useful life of an existing asset.
- d. _____ Expenditure that increases the efficiency and effectiveness of a productive asset but does not increase its salvage value.
- e. _____ Expenditure that increases the efficiency and effectiveness of a productive asset and increases the asset's salvage value.
- f. _____ Expenditure that increases the quality of the output of the productive asset.
- g. _____ Improvement to a machine that increased its fair market value and its production capacity by 30% without extending the machine's useful life.
- h. _____ Ordinary repairs.

E10.24 (LO 5) (Entries for Disposition of Assets) On December 31, 2020, Tritt Inc. has a machine with a book value of \$940,000. The original cost and related accumulated depreciation at this date are as follows.

| | |
|--------------------------------|-------------------|
| Machine | \$1,300,000 |
| Less: Accumulated depreciation | <u>360,000</u> |
| Book value | <u>\$ 940,000</u> |

Depreciation is computed at \$60,000 per year on a straight-line basis.

Instructions

Presented below is a set of independent situations. For each independent situation, indicate the journal entry to be made to record the transaction. Make sure that depreciation entries are made to update the book value of the machine prior to its disposal.

- A fire completely destroys the machine on August 31, 2021. An insurance settlement of \$430,000 was received for this casualty. Assume the settlement was received immediately.
- On April 1, 2021, Tritt sold the machine for \$1,040,000 to Yoakam Company.
- On July 31, 2021, the company donated this machine to the Mountain King City Council. The fair value of the machine at the time of the donation was estimated to be \$1,100,000.

E10.25 (LO 5) (Disposition of Assets) On April 1, 2020, Estefan Company received a condemnation award of \$430,000 cash as compensation for the forced sale of the company's land and building, which stood in the path of a new state highway. The land and building cost \$60,000 and \$280,000, respectively, when they were acquired. At April 1, 2020, the accumulated depreciation relating to the building amounted to \$160,000. On August 1, 2020, Estefan purchased a piece of replacement property for cash. The new land cost \$90,000, and the new building cost \$400,000.

Instructions

Prepare the journal entries to record the transactions on April 1 and August 1, 2020.

Problems

P10.1 (LO 1) Excel (Classification of Acquisition and Other Asset Costs) At December 31, 2019, certain accounts included in the property, plant, and equipment section of Reagan Company's balance sheet had the following balances.

| | |
|------------------------|-----------|
| Land | \$230,000 |
| Buildings | 890,000 |
| Leasehold improvements | 660,000 |
| Equipment | 875,000 |

During 2020, the following transactions occurred.

- Land site number 621 was acquired for \$850,000. In addition, to acquire the land Reagan paid a \$51,000 commission to a real estate agent. Costs of \$35,000 were incurred to clear the land. During the course of clearing the land, timber and gravel were recovered and sold for \$13,000.
- A second tract of land (site number 622) with a building was acquired for \$420,000. The closing statement indicated that the land value was \$300,000 and the building value was \$120,000. Shortly after acquisition, the building was demolished at a cost of \$41,000. A new building was constructed for \$330,000 plus the following costs.

| | |
|--|----------|
| Excavation fees | \$38,000 |
| Architectural design fees | 11,000 |
| Building permit fee | 2,500 |
| Imputed interest on funds used during construction (stock financing) | 8,500 |

The building was completed and occupied on September 30, 2020.

- A third tract of land (site number 623) was acquired for \$650,000 and was put on the market for resale.
- During December 2020, costs of \$89,000 were incurred to improve leased office space. The related lease will terminate on December 31, 2022, and is not expected to be renewed. (*Hint:* Leasehold improvements should be handled in the same manner as land improvements.)
- A group of new machines was purchased under a royalty agreement that provides for payment of royalties based on units of production for the machines. The invoice price of the machines was \$87,000, freight costs were \$3,300, installation costs were \$2,400, and royalty payments for 2020 were \$17,500.

Instructions

- Prepare a detailed analysis of the changes in each of the following balance sheet accounts for 2020.

| | |
|-----------|------------------------|
| Land | Leasehold Improvements |
| Buildings | Equipment |

Disregard the related accumulated depreciation accounts.

- List the items in the situation that were not used to determine the answer to (a) above, and indicate where, or if, these items should be included in Reagan's financial statements.

(AICPA adapted)

P10.2 (LO 1, 5) (Classification of Acquisition Costs) Selected accounts included in the property, plant, and equipment section of Lobo Corporation's balance sheet at December 31, 2019, had the following balances.

| | |
|-------------------|------------|
| Land | \$ 300,000 |
| Land improvements | 140,000 |
| Buildings | 1,100,000 |
| Equipment | 960,000 |

During 2020, the following transactions occurred.

1. A tract of land was acquired for \$150,000 as a potential future building site.
2. A plant facility consisting of land and building was acquired from Mendota Company in exchange for 20,000 shares of Lobo's common stock. On the acquisition date, Lobo's stock had a closing market price of \$37 per share on a national stock exchange. The plant facility was carried on Mendota's books at \$110,000 for land and \$320,000 for the building at the exchange date. Current appraised values for the land and building, respectively, are \$230,000 and \$690,000.
3. Items of machinery and equipment were purchased at a total cost of \$400,000. Additional costs were incurred as follows.

| | |
|-----------------------|----------|
| Freight and unloading | \$13,000 |
| Sales taxes | 20,000 |
| Installation | 26,000 |

4. Expenditures totaling \$95,000 were made for new parking lots, streets, and sidewalks at the corporation's various plant locations. These expenditures had an estimated useful life of 15 years.
5. A machine costing \$80,000 on January 1, 2012, was scrapped on June 30, 2020. Double-declining-balance depreciation has been recorded on the basis of a 10-year life.
6. A machine was sold for \$20,000 on July 1, 2020. Original cost of the machine was \$44,000 on January 1, 2017, and it was depreciated on the straight-line basis over an estimated useful life of 7 years and a salvage value of \$2,000.

Instructions

(Round to the nearest dollar.)

- a. Prepare a detailed analysis of the changes in each of the following balance sheet accounts for 2020.

| | |
|-------------------|-----------|
| Land | Buildings |
| Land Improvements | Equipment |

(Hint: Disregard the related accumulated depreciation accounts.)

- b. List the items in the fact situation that were not used to determine the answer to (a), showing the pertinent amounts and supporting computations in good form for each item. In addition, indicate where, or if, these items should be included in Lobo's financial statements.

(AICPA adapted)

P10.3 (LO 1, 3) (Classification of Land and Building Costs) Spitfire Company was incorporated on January 2, 2021, but was unable to begin manufacturing activities until July 1, 2021, because new factory facilities were not completed until that date.

The Land and Buildings account reported the following items during 2021.

| | | |
|-------------------|-------------------------------------|------------------|
| January 31 | Land and buildings | \$160,000 |
| February 28 | Cost of removal of building | 9,800 |
| May 1 | Partial payment of new construction | 60,000 |
| May 1 | Legal fees paid | 3,770 |
| June 1 | Second payment on new construction | 40,000 |
| June 1 | Insurance premium | 2,280 |
| June 1 | Special tax assessment | 4,000 |
| June 30 | General expenses | 36,300 |
| July 1 | Final payment on new construction | 30,000 |
| December 31 | Asset write-up | 53,800 |
| | | <u>399,950</u> |
| December 31 | Depreciation—2021 at 1% | (4,000) |
| December 31, 2021 | Account balance | <u>\$395,950</u> |

The following additional information is to be considered.

- To acquire land and building, the company paid \$80,000 cash and 800 shares of its 8% cumulative preferred stock, par value \$100 per share. Fair value of the stock is \$117 per share.
- Cost of removal of old buildings amounted to \$9,800, and the demolition company retained all materials of the building.
- Legal fees covered the following.

| | |
|---|----------------|
| Cost of organization | \$ 610 |
| Examination of title covering purchase of land | 1,300 |
| Legal work in connection with construction contract | <u>1,860</u> |
| | <u>\$3,770</u> |

- Insurance premium covered the building for a 2-year term beginning May 1, 2021.
- The special tax assessment covered street improvements that are permanent in nature.
- General expenses covered the following for the period from January 2, 2021, to June 30, 2021.

| | |
|---|-----------------|
| President's salary | \$32,100 |
| Plant superintendent's salary—supervision of new building | <u>4,200</u> |
| | <u>\$36,300</u> |

- Because of a general increase in construction costs after entering into the building contract, the board of directors increased the value of the building \$53,800, believing that such an increase was justified to reflect the current market at the time the building was completed. Retained earnings was credited for this amount.
- Estimated life of building—50 years.
Depreciation for 2021—1% of asset value (1% of \$400,000, or \$4,000).

Instructions

- Prepare entries to reflect correct land, buildings, and depreciation accounts at December 31, 2021.
- Show the proper presentation of land, buildings, and depreciation on the balance sheet at December 31, 2021.

(AICPA adapted)

P10.4 (LO1,3,5) Groupwork (Dispositions, Including Condemnation, Demolition, and Trade-In) Presented below is a schedule of property dispositions for Hollerith Co.

| Schedule of Property Dispositions | | | | | |
|-----------------------------------|----------|-----------------------------|------------------|---------------|--------------------------|
| | Cost | Accumulated Depreciation | Cash Proceeds | Fair Value | Nature of Disposition |
| Land | \$40,000 | — | \$31,000 | \$31,000 | Condemnation |
| Building | 15,000 | — | 3,600 | — | Demolition |
| Warehouse | 70,000 | \$16,000 | 74,000 | 74,000 | Destruction by fire |
| Machine | 8,000 | 2,800 | 900 | 7,200 | Trade-in |
| Furniture | 10,000 | 7,850 | — | 3,100 | Contribution |
| Automobile | 9,000 | 3,460 | 2,960 | 2,960 | Sale |

The following additional information is available.

Land: On February 15, a condemnation award was received as consideration for unimproved land held primarily as an investment, and on March 31, another parcel of unimproved land to be held as an investment was purchased at a cost of \$35,000.

Building: On April 2, land and building were purchased at a total cost of \$75,000, of which 20% was allocated to the building on the corporate books. The real estate was acquired with the intention of demolishing the building, and this was accomplished during the month of November. Cash proceeds received in November represent the net proceeds from demolition of the building.

Warehouse: On June 30, the warehouse was destroyed by fire. The warehouse was purchased January 2, 2017, and had depreciated \$16,000. On December 27, the insurance proceeds and other funds were used to purchase a replacement warehouse at a cost of \$90,000.

Machine: On December 26, the machine was exchanged for another machine having a fair value of \$6,300 and cash of \$900 was received. (The exchange lacks commercial substance.)

Furniture: On August 15, furniture was contributed to a qualified charitable organization. No other contributions were made or pledged during the year.

Automobile: On November 3, the automobile was sold to Jared Winger, a stockholder.

Instructions

Indicate how these items would be reported on the income statement of Hollerith Co.

(AICPA adapted)

P10.5 (LO 1, 2) Excel (Classification of Costs and Interest Capitalization) On January 1, 2020, Blair Corporation purchased for \$500,000 a tract of land (site number 101) with a building. Blair paid a real estate broker's commission of \$36,000, legal fees of \$6,000, and title guarantee insurance of \$18,000. The closing statement indicated that the land value was \$500,000 and the building value was \$100,000. Shortly after acquisition, the building was razed at a cost of \$54,000.

Blair entered into a \$3,000,000 fixed-price contract with Slatkin Builders, Inc. on March 1, 2020, for the construction of an office building on land site number 101. The building was completed and occupied on September 30, 2021. Additional construction costs were incurred as follows.

| | |
|---|----------|
| Plans, specifications, and blueprints | \$21,000 |
| Architects' fees for design and supervision | 82,000 |

The building is estimated to have a 40-year life from date of completion and will be depreciated using the 150% declining-balance method.

To finance construction costs, Blair borrowed \$3,000,000 on March 1, 2020. The loan is payable in 10 annual installments of \$300,000 starting on March 1, 2021, plus interest at the rate of 10%. Blair's weighted-average amounts of accumulated building construction expenditures were as follows.

| | |
|--|-------------|
| For the period March 1 to December 31, 2020 | \$1,300,000 |
| For the period January 1 to September 30, 2021 | 1,900,000 |

Instructions

- Prepare a schedule that discloses the individual costs making up the balance in the land account in respect of land site number 101 as of September 30, 2021.
- Prepare a schedule that discloses the individual costs that should be capitalized in the office building account as of September 30, 2021. Show supporting computations in good form.

(AICPA adapted)

P10.6 (LO 1, 2) (Interest During Construction) Grieg Landscaping began construction of a new plant on December 1, 2020. On this date, the company purchased a parcel of land for \$139,000 in cash. In addition, it paid \$2,000 in surveying costs and \$4,000 for a title insurance policy. An old dwelling on the premises was demolished at a cost of \$3,000, with \$1,000 being received from the sale of materials.

Architectural plans were also formalized on December 1, 2020, when the architect was paid \$30,000. The necessary building permits costing \$3,000 were obtained from the city and paid for on December 1 as well. The excavation work began during the first week in December with payments made to the contractor in 2021 as follows.

| <u>Date of Payment</u> | <u>Amount of Payment</u> |
|------------------------|--------------------------|
| March 1 | \$240,000 |
| May 1 | 330,000 |
| July 1 | 60,000 |

The building was completed on July 1, 2021.

To finance construction of this plant, Grieg borrowed \$600,000 from the bank on December 1, 2020. Grieg had no other borrowings. The \$600,000 was a 10-year loan bearing interest at 8%.

Instructions

Compute the balance in each of the following accounts at December 31, 2020, and December 31, 2021. (Round amounts to the nearest dollar.)

- a. Land.
- b. Buildings.
- c. Interest Expense.

P10.7 (LO 2) Groupwork (Capitalization of Interest) Laserwords Inc. is a book distributor that had been operating in its original facility since 1990. The increase in certification programs and continuing education requirements in several professions has contributed to an annual growth rate of 15% for Laserwords since 2015. Laserwords' original facility became obsolete by early 2020 because of the increased sales volume and the fact that Laserwords now carries CDs in addition to books.

On June 1, 2020, Laserwords contracted with Black Construction to have a new building constructed for \$4,000,000 on land owned by Laserwords. The payments made by Laserwords to Black Construction are shown in the schedule below.

| <u>Date</u> | <u>Amount</u> |
|------------------|--------------------|
| July 30, 2020 | \$ 900,000 |
| January 30, 2021 | 1,500,000 |
| May 30, 2021 | 1,600,000 |
| Total payments | <u>\$4,000,000</u> |

Construction was completed and the building was ready for occupancy on May 27, 2021. Laserwords had no new borrowings directly associated with the new building but had the following debt outstanding at May 31, 2021, the end of its fiscal year.

- 10%, 5-year note payable of \$2,000,000, dated April 1, 2017, with interest payable annually on April 1.
- 12%, 10-year bond issue of \$3,000,000 sold at par on June 30, 2013, with interest payable annually on June 30.

The new building qualifies for interest capitalization. The effect of capitalizing the interest on the new building, compared with the effect of expensing the interest, is material.

Instructions
