In unusual instances in which a dividend exceeds the balance in retained earnings, the excess is referred to as a **liquidating dividend** because some of the invested capital is being liquidated. This might occur when a corporation is being dissolved and assets (not subject to a superior claim by creditors) are distributed to shareholders. Any portion of a dividend not representing a distribution of earnings should be debited to additional paid-in capital rather than retained earnings.

Any dividend not representing a distribution of earnings should be debited to paid-in capital.

Retained Earnings Restrictions

Sometimes the amount available for dividends purposely is reduced by management. A restriction of retained earnings designates a portion of the balance in retained earnings as being *unavailable for dividends*. A company might restrict retained earnings to indicate management's intention to withhold for some specific purpose the assets represented by that

A restriction of retained earnings communicates management's intention to withhold assets represented by a specified portion of the retained earnings balance.

portion of the retained earnings balance. For example, management might anticipate the need for a specific amount of assets in upcoming years to repay a maturing debt, to cover a contingent loss, or to finance expansion of the facilities. Be sure to understand that the restriction itself does not set aside cash for the designated event but merely communicates management's intention not to distribute the stated amount as a dividend.

A restriction of retained earnings normally is indicated by a disclosure note to the financial statements. Although instances are rare, a formal journal entry may be used to reclassify a portion of retained earnings to an "appropriated" retained earnings account.

Normally a restriction of retained earnings is indicated by a disclosure note.

Cash Dividends

You learned in  **Chapter 14** that paying interest to creditors is a contractual obligation. No such legal obligation exists for paying dividends to shareholders. A liability is not recorded until a company's board of directors votes to declare a dividend. In practice, though, corporations ordinarily try to maintain a stable dividend pattern over time.

When directors declare a cash dividend, we reduce retained earnings and record a liability. Before the payment actually can be made, a listing must be assembled of shareholders entitled to receive the dividend. A specific date is stated as to when the determination will be made of the recipients of the dividend. This date is called the **date of record**. Registered owners of shares of stock on this date are entitled to receive the dividend—even if they sell those shares prior to the actual cash payment. To be a registered owner of shares on the date of record, an investor must purchase the shares before the **ex-dividend date**. This date usually is one business day before the date of record. Shares purchased on or after that date are purchased ex dividend—without the right to receive the declared dividend. As a result, the market price of a share typically will decline by the amount of the dividend, other things being equal, on the ex-dividend date. Consider  **Illustration 18-12**.

Illustration 18-12 Cash Dividends

At the declaration date, retained earnings is reduced and a liability is recorded.

Registered owners of shares on the date of record are entitled to receive the dividend.

On June 1, the board of directors of Craft Industries declares a cash dividend of \$2 per share on its 100 million shares, payable to shareholders of record June 15, to be paid July 1.

| | (\$ in millions) | |
|--|------------------|-----|
| June 1—Declaration Date | | |
| Retained earnings | 200 | |
| Cash dividends payable (100 million shares at \$2 per share) | | 200 |
| June 14—Ex-Dividend Date | | |
| No entry | | |
| June 15—Date of Record | | |
| No entry | | |
| July 1—Payment Date | | |
| Cash dividends payable | 200 | |
| Cash | | 200 |

A sufficient balance in retained earnings permits a dividend to be declared. Note that retained earnings is a shareholders' equity account representing a dollar claim on assets in general, but not on any specific asset in particular. Sufficient retained earnings does not ensure sufficient cash to make payment. These are two separate accounts having no necessary connection with one another.

DIVIDENDS ON PREFERRED SHARES

As mentioned in Part A, preferred shares can be cumulative or noncumulative. Cumulative means that if the specified dividend is not paid for a given year, the unpaid dividends (called *dividends in arrears*) accumulate and must be made up in a later dividend year before any dividends are paid on common shares.  **Illustration 18-13** provides an example.

Illustration 18-13 Distribution of Dividends to Preferred Shareholders

The shareholders' equity section of Corbin Enterprises includes the items shown below. The board of directors declared cash dividends of \$360,000, \$500,000, and \$700,000 in its first three years of operation—2023, 2024, and 2025, respectively.

| | |
|--|-------------|
| Common stock | \$3,000,000 |
| Paid-in capital—excess of par, common | 9,800,000 |
| Preferred stock, 8% | 6,000,000 |
| Paid-in capital—excess of par, preferred | 780,000 |

The preferred shareholders are entitled to dividends of \$480,000 (8% × \$6,000,000).

Determine the amount of dividends to be paid to preferred and common shareholders in each of the three years, assuming that the preferred stock is cumulative and nonparticipating.

| | Preferred | Common |
|------|----------------------|---------------------|
| 2023 | \$ 360,000* | \$0 |
| 2024 | 500,000** | 0 |
| 2025 | 580,000 [†] | 120,000 (remainder) |

*Only \$360,000 dividends are declared in 2023 so dividends in arrears are \$120,000.

**\$120,000 dividends in arrears plus \$380,000 of the \$480,000 current preference.

[†]\$100,000 dividends in arrears (\$480,000 – \$380,000) plus the \$480,000 current preference

Property Dividends

Because cash is the asset most easily divided and distributed to shareholders, most corporate dividends are cash dividends. In concept, though, any asset can be distributed to shareholders as a dividend. When a noncash asset is distributed, it is referred to as a **property dividend** (often called a *dividend in kind* or a *nonreciprocal transfer to owners*). **Gold Resource Corp.**, a Colorado gold mining company, will make dividend payments in gold bullion instead of cash.

RFM Corporation conferred a property dividend to its shareholders when it distributed shares of **Philippine Townships, Inc.**, stock that RFM was holding as an investment. Securities held as investments are the assets most often distributed in a property dividend due to the relative ease of dividing these assets among shareholders and determining their fair values.

A property dividend should be recorded at the fair value of the assets to be distributed, measured at the

The *fair value* of the assets to be distributed is the amount

date of declaration. This may require revaluing the asset to fair value prior to recording the dividend. If so, a gain or loss is recognized for the difference between book value and fair value. This is demonstrated in [Illustration 18-14](#).

recorded for a property dividend.

Illustration 18-14 Property Dividends

Before recording the property dividend, the asset first must be written up to fair value.

On October 1 the board of directors of Craft Industries declares a property dividend of 2 million shares of Beaman Corporation's preferred stock.

- Craft had purchased the Beaman shares in March as an investment (book value: \$9 million).
- The investment shares have a fair value of \$5 per share, \$10 million.
- The property dividend is payable to shareholders of record October 15, to be distributed November 1.

| October 1—Declaration Date | (\$ in millions) | |
|---|------------------|-----------|
| Investment in equity securities* | 1 | |
| Gain on investments (\$10 – \$9) | | 1 |
| Retained earnings (2 million shares at \$5 per share) | 10 | |
| Property dividends payable | | 10 |
| October 15—Date of Record | | |
| No entry | | |
| November 1—Payment Date | | |
| Property dividends payable | 10 | |
| Investment in equity securities | | 10 |

*As an alternative to using a fair value adjustment account, we adjust for fair value directly to the investment account.

Stock Dividends and Splits

Stock Dividends

LO18–8 Explain stock dividends and stock splits and how we account for them.

A **stock dividend** is the distribution of additional shares of stock to current shareholders of the corporation. Be sure to note the contrast between a stock dividend and either a cash or property dividend. A stock dividend affects neither the assets nor the liabilities of the firm. Also, because each shareholder receives the same percentage increase in shares, shareholders' proportional interest in (percentage ownership of) the firm remains unchanged. For example, if a 5% stock dividend is declared, every shareholder will receive additional shares of stock to equal 5% of the shares they currently own.

The prescribed accounting treatment of a stock dividend requires that shareholders' equity items be reclassified by reducing one or more shareholders' equity accounts and simultaneously increasing one or more paid-in capital accounts. The amount reclassified depends on the size of the stock dividend. For a "small" stock dividend, typically less than 25%, the fair value of the additional shares distributed is transferred from retained earnings to paid-in capital, as demonstrated in  **Illustration 18-15**.¹⁸

Page 1070

Illustration 18-15 Stock Dividend

A "small" stock dividend requires reclassification to paid-in capital of retained earnings equal to the fair value of the additional shares distributed.

Craft declares and distributes a 10% common stock dividend (10 million shares) when the market value of the \$1 par common stock is \$12 per share.

| | (\$ in millions) |
|---|------------------|
| Retained earnings (10 million shares at \$12 per share) | 120 |
| Common stock (10 million shares at \$1 par per share) | 10 |

Additional Consideration

The entry above is recorded on the declaration date. Since the additional shares are not yet issued, some accountants would prefer to credit “common stock dividends distributable” at this point, instead of common stock. In that case, when the shares are issued, common stock dividends distributable is debited and common stock credited. The choice really is inconsequential; either way, the \$10 million amount would be reported as part of paid-in capital on a balance sheet prepared between the declaration and distribution of the shares.

STOCK MARKET REACTION TO STOCK DISTRIBUTIONS

As a Craft shareholder owning 10 shares at the time of the 10% stock dividend, you would receive an 11th share. Since each is worth \$12, would you benefit by \$12 when you receive the additional share from Craft? Of course not. If the value of each share were to remain \$12 when the 10 million new shares are distributed, the total market value of the company would grow by \$120 million (10 million shares \times \$12 per share).

A corporation cannot increase its market value simply by distributing additional stock certificates. Because all shareholders receive the same percentage increase in their respective holdings, you, and all other shareholders, still would own the same percentage of the company as before the distribution. Accordingly, the per share value of your shares should decline from \$12 to \$10.91 so that your 11 shares would be worth \$120 — precisely what your 10 shares were worth prior to the stock dividend. You might compare Craft Industries to a pizza. Cutting the pizza into 16 slices instead of 12 doesn't create more to eat; you still have the same pizza, just a higher number of smaller slices. Any failure of the stock price to actually adjust in proportion to the

The market price per share will decline in proportion to the increase in the number of shares distributed in a stock dividend.

additional shares issued probably would be due to information other than the distribution reaching shareholders at the same time.

Then, what justification is there for recording the additional shares at market value? In 1941 (and reaffirmed in 1953), accounting rule-makers felt that many shareholders are deceived by small stock dividends, believing they benefit by the market value of their additional shares. Furthermore, they erroneously felt that these individual beliefs are collectively reflected in the stock market by per share prices that remain unchanged by stock dividends. Consequently, their prescribed accounting treatment is to reduce retained earnings by the same amount as if cash dividends were paid equal to the market value of the shares issued.¹⁹

Early rule-makers felt that per share market prices do not adjust in response to an increase in the number of shares.

This obsolete reasoning is inconsistent with our earlier conclusion that the market price per share *will* decline in approximate proportion to the increase in the number of shares distributed. Our intuitive conclusion is supported also by formal research.²⁰

Besides being based on fallacious reasoning, accounting for stock dividends by artificially reclassifying “earned” capital as “invested” capital conflicts with the reporting objective of reporting shareholders’ equity by source. Despite these limitations, this outdated accounting standard still applies.

Capitalizing retained earnings for a stock dividend artificially reclassifies earned capital as invested capital.

REASONS FOR STOCK DIVIDENDS

Since neither the corporation nor its shareholders apparently benefit from stock dividends, why do companies declare them?²¹ Occasionally, a company tries to give shareholders the illusion that they are receiving a real dividend.

Companies sometimes declare a stock dividend in lieu of a real dividend.

Another reason is merely to enable the corporation to take advantage of the accepted accounting practice of capitalizing retained earnings. Specifically, a company might wish to reduce an existing balance in retained earnings—otherwise available for *cash* dividends—so it can reinvest the assets represented by that balance.

Companies sometimes declare a stock dividend so they can capitalize retained earnings.

Stock Splits

A frequent reason for issuing a stock dividend is actually to induce the per share market price decline it causes. For instance, after a company declares a 100% stock dividend on 100 million shares of common stock, with a per share market price of \$12, it then has 200 million shares, each with an approximate market value of \$6. The motivation for reducing the per share market price is to increase the stock's *marketability* by making it attractive to a larger number of potential investors.

A large stock dividend is known as a *stock split*.

A stock distribution of 25% or higher can be accounted for in one of two ways: (1) as a “large” stock dividend or (2) as a **stock split**.²² Thus, a 100% stock dividend could be labeled a 2-for-1 stock split and accounted for as such. Conceptually, the proper accounting treatment of a stock distribution is to make no journal entry. This, in fact, is the prescribed accounting treatment for a stock split.

Additional Consideration

No cash dividends are paid on treasury shares. Usually stock dividends aren't paid on treasury shares either. Treasury shares are essentially equivalent to shares that never have been issued. In some circumstances, though, the intended use of the repurchased shares will give a reason for the treasury shares to participate in a stock dividend. For instance, if the treasury shares have been specifically designated for issuance to executives in a stock option plan or stock award plan, it would be appropriate to adjust the number of shares by the stock distribution.

Since the same common stock account balance (total par) represents twice as many shares in a 2-for-1 stock split, the par value per share will be reduced by one-half. In the previous example, if the par were \$1 per share before the stock distribution, then after the 2-for-1 stock split, the par would be \$0.50 per share.

As you might expect, having the par value per share change in this way is cumbersome and expensive. All records, printed or electronic, that refer to the previous amount must be

changed to reflect the new amount. The practical solution is to account for the large stock distribution as a stock dividend rather than a stock split.

Stock Splits Effected in the Form of Stock Dividends (Large Stock Dividends)

To avoid changing the par value per share, a company can refer to the stock distribution as a *stock split effected in the form of a stock dividend*, or simply a *stock dividend*. In that case, a journal entry increases the common stock account by the par value of the additional shares. Instead of reducing retained earnings in these instances, most companies reduce (debit) paid-in capital—excess of par to offset the credit to common stock (🔗 [Illustration 18-16](#)).

Illustration 18-16 Stock Split Effected in the Form of a Stock Dividend

If a *stock split* is effected in the form of a stock dividend, a journal entry prevents the par per share from changing.

Craft declares and distributes a 2-for-1 stock split effected in the form of a 100% stock dividend (100 million shares) when the market value of the \$1 par common stock is \$12 per share.

| | (\$ in millions) | |
|--|------------------|-----|
| Paid-in capital—excess of par | 100 | |
| Common stock (100 million shares at \$1 par per share) | | 100 |

Notice that this entry does not reclassify earned capital as invested capital. Some companies, though, choose to debit retained earnings instead.

Some companies capitalize retained earnings when recording a stock split effected in the form of a stock dividend.

| | (\$ in millions) | |
|---|------------------|-----|
| Retained earnings | 100 | |
| Common stock (100 million shares × \$1 par per share) | | 100 |

In 2020, Tesla, Inc. distributed a 5-for-1 stock split as described in the news release shown in  **Illustration 18-17**.

Illustration 18-17 Stock Split Disclosure—Tesla

Real World Financials

Tesla, Inc. (“Tesla”) announced today that the Board of Directors has approved and declared a five-for-one split of Tesla’s common stock in the form of a stock dividend to make stock ownership more accessible to employees and investors. Each stockholder of record on August 21, 2020, will receive a dividend of four additional shares of common stock for each then-held share, to be distributed after close of trading on August 28, 2020. Trading will begin on a stock split-adjusted basis on August 31, 2020.

Source: Netflix

In 2015, **Netflix** distributed a rare 7-for-1 stock split that dropped the price of Netflix shares from about \$700 all the way down to about \$100. Three years later, that stock price was \$350 per share. If there had been no split in 2015, the price of one share would have been around \$2,450.

Page 1073

Additional Consideration

A company choosing to capitalize retained earnings when recording a stock split effected in the form of a stock dividend may elect to capitalize an amount other than par value. Accounting guidelines are vague in this regard, stating only that legal amounts are minimum requirements and do not prevent the capitalization of a larger amount per share.

Source: FASB ASC 505-20-30-4: Equity—Stock Dividends and Stock Splits—Initial Measurement [previously “Restatement and Revision of Accounting Research Bulletins,” *Accounting Research Bulletin* No. 43 (New York: AICPA, 1961), Chap. 7, sec. B, par. 14].

REVERSE STOCK SPLIT

A **reverse stock split** occurs when a company decreases, rather than increases, its outstanding shares. After a 1-for-4 reverse stock split, for example, 100 million shares, \$1 par per share, would become 25 million shares, \$4 par per share. No journal entry is necessary. Of course, the market price per share theoretically would quadruple, which usually is the motivation for declaring a reverse stock split. Companies that reverse split their shares frequently are struggling companies trying to accomplish with the split what the market has been unwilling to do—increase the stock price. Often this is to prevent the stock’s price from becoming so low that it is delisted from a market exchange. Reverse splits are not unusual occurrences, particularly during stock market downturns. In 2020, **ToughBuilt Industries** declared a 1-for-10 reverse split.

FRACTIONAL SHARES

Typically, a stock dividend or stock split results in some shareholders being entitled to fractions of whole shares. For example, if a company declares a 25% stock dividend, or equivalently a 5-for-4 stock split, a shareholder owning 10 shares would be entitled to 2 1/2 shares. Another shareholder with 15 shares would be entitled to 3 3/4 shares.

Cash payments usually are made to shareholders for *fractional* shares and are called “cash in lieu of payments.” In the situation described above, for instance, if the market price at declaration is \$12 per share, the shareholder with 15 shares would receive 3 additional shares and \$9 in cash ($\$12 \times 3/4$).

Cash payments usually are made when shareholders are entitled to fractions of whole shares.

Decision Maker’s Perspective

Profitability is the key to a company’s long-run survival. A summary measure of profitability often used by investors and potential investors, particularly common shareholders, is the return on shareholders’ equity, or simply return on equity. This ratio measures the ability of company management to generate net income from the resources that owners provide. The ratio is computed by dividing net income by average shareholders’ equity. A variation of this ratio often is used when a company has both preferred and common stock outstanding. The return to common shareholders’ equity is calculated by subtracting dividends to preferred shareholders from the numerator and using

The return on equity is a popular measure of profitability.

average common shareholders' equity as the denominator. The modified ratio focuses on the profits generated on the assets provided by common shareholders.

Although the ratio is useful when evaluating the effectiveness of management in employing resources provided by owners, analysts must be careful not to

Book value measures have limited use in financial analysis.

view it in isolation or without considering how the ratio is derived. Keep in mind that shareholders' equity is a measure of the book value of equity, equivalent to the book value of net assets. Book value measures quickly become out of line with market values. An asset's book value usually equals its market value on the date it's purchased; the two aren't necessarily the same after that. Equivalently, the market value of a share of stock (or of total shareholders' equity) usually is different from its book value. As a result, to supplement the return on equity ratio, analysts often relate earnings to the market value of equity, calculating the earnings-price ratio. This ratio is simply the earnings per share divided by the market price per share.

To better understand the differences between the book value ratio and the market value ratio, let's consider the following condensed information reported by Sharp-Novell Industries for 2024 and 2023:

Page 1074

Share retirement and treasury stock transactions can affect the return to owners.

| (\$ in thousands, except per share amounts) | 2024 | 2023 |
|---|-----------------|-----------------|
| Sales | \$ 3,500 | \$ 3,100 |
| Net income | 125 | 114 |
| Current assets | \$ 750 | \$ 720 |
| Property, plant, and equipment (net) | 900 | 850 |
| Total assets | <u>\$ 1,650</u> | <u>\$ 1,570</u> |
| Current liabilities | \$ 550 | \$ 530 |
| Long-term liabilities | 540 | 520 |
| Paid-in capital | 210 | 210 |
| Retained earnings | 350 | 310 |
| Liabilities and shareholders' equity | <u>\$ 1,650</u> | <u>\$ 1,570</u> |
| Shares outstanding | 50,000 | 50,000 |
| Stock price (average) | \$ 42.50 | \$ 42.50 |

The 2024 return on shareholders' equity is computed by dividing net income by average shareholders' equity:

$$\$125 \div [(\$560 + \$520) \div 2] = \underline{23.1\%}$$

The earnings-price ratio is the earnings per share divided by the market price per share:

$$\text{Earnings per share (2024)} = \$125 \div 50 = \$2.50$$

$$\text{Earnings-price ratio} = \$2.50 \div \$42.50 = \underline{5.9\%}$$

A variation of this ratio often used by analysts is the price-earnings ratio, which is simply the inverse of the earnings-price ratio: the market price per share divided by the earnings per share.

Obviously, the return on the market value of equity is much lower than on the book value of equity. This points out the importance of looking at more than a single ratio when making decisions. While 23.1% may seem like a desirable return, 5.9% is not nearly so attractive. Companies often emphasize the return on shareholders' equity in their annual reports. Alert investors should not accept this measure of achievement at face value. For some companies, this is a meaningful measure of performance; but for others, the market-based ratio means more, particularly for a mature firm whose book value and market value are more divergent.

Share retirement and treasury stock transactions can affect the return to owners.

Decisions managers make with regard to shareholders' equity transactions can significantly impact the return to shareholders. For example, when a company buys back shares of its own stock, the return on equity goes up. Net income is divided by a smaller amount of shareholders' equity. On the other hand, the share buyback uses assets, reducing the resources available to earn net income in the future. So, managers as well as outside analysts must carefully consider the decision to reacquire shares in light of the current economic environment, the firm's investment opportunities, and cost of capital to decide whether such a transaction is in the long-term best interests of owners. Investors should be wary of buybacks during downturns because the resulting decrease in shares and increase in earnings per share can be used to mask a slowdown in earnings growth.

The decision to pay dividends requires similar considerations. When earnings are high, are

Dividend decisions should be evaluated in light of prevailing

shareholders better off receiving substantial cash dividends or having management reinvest those funds to finance future growth (and future dividends)? The answer, of course, depends on the particular circumstances involved. Dividend decisions should reflect managerial strategy concerning the mix of internal versus external financing, alternative investment opportunities, and industry conditions. High dividends often are found in mature industries and low dividends in growth industries. ●

circumstances.

Ethical Dilemma

Interworld Distributors has paid quarterly cash dividends since 1985. The dividends have steadily increased from \$0.25 per share to the latest dividend declaration of \$2.00 per share. The board of directors is eager to continue this trend despite the fact that revenues fell significantly during recent months as a result of worsening economic conditions and increased competition. The company founder and member of the board proposes a solution. He suggests a 5% stock dividend in lieu of a cash dividend to be accompanied by the following press announcement:

In lieu of our regular \$2.00 per share cash dividend, Interworld will distribute a 5% stock dividend on its common shares, currently trading at \$40 per share. Changing the form of the dividend will permit the Company to direct available cash resources to the modernization of physical facilities in preparation for competing in the 21st century.

What do you think?

Concept Review Exercise

CHANGES IN RETAINED EARNINGS

Situation: The shareholders' equity section of the balance sheet of National Foods, Inc. included the following accounts at December 31, 2024:

Shareholders' Equity

(\$ in millions)

Paid-in capital

| Shareholders' Equity | (\$ in millions) |
|--|-----------------------|
| Preferred stock, 9.09%, 11 million shares at \$1 par | \$ 11 |
| Common stock, 122 million shares at \$1 par | 122 |
| Paid-in capital—excess of par, preferred | 479 |
| Paid-in capital—excess of par, common | 854 |
| Retained earnings | 3,245 |
| Treasury stock, at cost, 2 million common shares | (20) |
| Total shareholders' equity | <u>\$4,691</u> |

Required:

1. During 2025, several events and transactions affected the retained earnings of National Foods. Prepare the appropriate entries for these events.
 - a. On March 1, the board of directors declared a cash dividend of \$1 per share on its 120 million outstanding shares (122 million - 2 million treasury shares), payable on April 3 to shareholders of record March 11.
 - b. On March 5, the board of directors declared a property dividend of 120 million shares of **Kroger** common stock that National Foods had purchased in February as an investment (book value: \$900 million). The investment shares had a fair value of \$8 per share and were distributed March 30 to shareholders of record March 15.
 - c. On April 13, a 3-for-2 stock split was declared and distributed. The stock split was effected in the form of a 50% stock dividend. The market value of the \$1 par common stock was \$20 per share.
 - d. On October 13, a 10% common stock dividend was declared and distributed when the market value of the \$1 par common stock was \$12 per share. Cash in lieu of payments was distributed for fractional shares equivalent to 1 million whole shares.
 - e. On December 1, the board of directors declared the 9.09% cash dividend on the 11 million preferred shares, payable on December 23 to shareholders of record December 11.
2. Prepare a statement of shareholders' equity for National Foods reporting the changes in shareholders' equity accounts for 2023, 2024, and 2025. Refer to the previous two Concept Reviews in this chapter for the 2023 and 2024 changes. For

2024, assume that shares were reacquired as treasury stock. Also, look back to the statement of shareholders' equity in [Illustration 18-4](#) for the format of the statement. Assume that net income for 2025 is \$225 million.

Solution:

1. During 2025, several events and transactions affected the retained earnings of National Foods. Prepare the appropriate entries for these events.

Page 1076

- a. Cash dividend of \$1 per share on its 120 million *outstanding* common shares (122 million – 2 million treasury shares), payable on April 3 to shareholders of record March 11. (Note: Dividends aren't paid on treasury shares.)

The declaration of a dividend reduces retained earnings and creates a liability.

| March 1—Declaration Date | | (\$ in millions) |
|--|--|------------------|
| Retained earnings | | 120 |
| Cash dividends payable (120 million shares at \$1 per share) | | 120 |
| March 11—Date of Record | | |
| No entry | | |
| April 3—Payment Date | | |
| Cash dividends payable | | 120 |
| Cash | | 120 |

- b. Property dividend of 120 million shares of Kroger common stock:

The investment first must be written up to the \$960 million fair value (\$8 × 120 million shares).

The liability is satisfied when the Kroger shares are distributed to shareholders.

| March 5—Declaration Date | | (\$ in millions) |
|-------------------------------------|--|------------------|
| Investment in equity securities | | 60 |
| Gain on investments (\$960 – \$900) | | 60 |

| | | |
|---|-----|-----|
| Retained earnings (fair value of asset to be distributed) | 960 | |
| Property dividends payable | | 960 |
| March 15—Date of Record | | |
| No entry | | |
| March 30—Payment Date | | |
| Property dividends payable | 960 | |
| Investment in equity securities | | 960 |

c. 3-for-2 stock split effected in the form of a 50% stock dividend:

120 million shares times 50% equals 60 million new shares—recorded at par.

| | | |
|---|----|------------------|
| April 13 | | (\$ in millions) |
| Paid-in capital—excess of par* | 60 | |
| Common stock (60 million shares at \$1 par per share) | | 60 |

*Alternatively, retained earnings may be debited.

d. 10% common stock dividend—with cash in lieu of payments for shares equivalent to 1 million whole shares:

The stock dividend occurs after the 3-for-2 stock split; thus 18 million shares are distributed.

The \$12 fair value of the additional shares is capitalized in this small stock dividend.

| | | |
|---|-----|------------------|
| October 13 | | (\$ in millions) |
| Retained earnings (18 million shares* at \$12 per share) | 216 | |
| Common stock (17 million shares at \$1 par per share) | | 17 |

Financial Reporting Case Solution

Samuel Borges Photography/Shutterstock

- 1. Do you think the stock price increase is related to Nike's share repurchase plan?** The stock price increase probably is related to Nike's buyback plan. The marketplace realizes that decreasing the supply of shares supports the price of remaining shares. However, the repurchase of shares is not necessarily the best use of a company's cash. Whether it is in the shareholders' best interests depends on what other opportunities the company has for the cash available.
- 2. What are Nike's choices in accounting for the share repurchases?** When a corporation reacquires its own shares, those shares assume the same status as authorized but unissued shares, just as if they never had been issued. However, for exactly the same transaction, companies can choose between two accounting alternatives: (a) formally retiring them or (b) accounting for the shares repurchased as treasury stock. In actuality, Nike uses alternative (a).
- 3. What effect does the quarterly cash dividend of 21 cents per share have on Nike's assets? Its liabilities? Its shareholders' equity?** Each quarter, when directors declare a cash dividend, retained earnings are reduced, and a liability is recorded. The liability is paid with cash on the payment date. So, the net effect is a decrease in Nike's assets and its shareholders' equity. The effect on liabilities is temporary.

The Bottom Line

-  **LO18-1** Shareholders' equity is the owners' residual interest in a corporation's assets. It arises primarily from (1) amounts invested by shareholders and (2) amounts earned by the corporation on behalf of its shareholders. These are reported as (1) paid-in capital and (2) retained earnings in a balance sheet. A statement of shareholders' equity reports the sources of the changes in individual shareholders' equity accounts. (*p. 1045*)
-  **LO18-2** Comprehensive income encompasses all changes in equity except those caused by transactions with owners (like dividends and the sale or purchase of shares). It includes traditional net income as well as "other comprehensive income." (*p. 1048*)
-  **LO18-3** A corporation is a separate legal entity—separate and distinct from its owners. A corporation is well suited to raising capital and has limited liability. However, it gives rise to "double taxation." Common shareholders usually have voting rights; preferred shareholders usually have a preference to a specified amount of dividends and to assets in the event of liquidation. (*p. 1049*)
-  **LO18-4** Shares sold for consideration other than cash (maybe services or a noncash asset) should be recorded at the fair value of the shares or the noncash consideration, whichever seems more clearly evident. (*p. 1057*)
-  **LO18-5** When a corporation retires previously issued shares, those shares assume the same status as authorized but unissued shares—just the same as if they had never been issued. Payments made to retire shares are viewed as a distribution of corporate assets to shareholders. When reacquired shares are viewed as treasury stock, the cost of acquiring the shares is temporarily debited to the treasury stock account. Recording the effects on specific shareholders' equity accounts is delayed until later when the shares are reissued. (*p. 1061*)
-  **LO18-6** Retained earnings represents, in general, a corporation's accumulated, undistributed, or reinvested net income (or net loss). Distributions of assets are dividends. (*p. 1067*)
-  **LO18-7** Most corporate dividends are paid in cash. When a noncash asset is distributed, it is referred to as a property dividend. The fair value of the

assets to be distributed is the amount recorded for a property dividend. (*p. 1067*)

LO18-8

A stock dividend is the distribution of additional shares of stock to current shareholders. For a small stock dividend (25% or less), the fair value of the additional shares distributed is transferred from retained earnings to paid-in capital. For a stock distribution of 25% or higher, the par value of the additional shares is reclassified within shareholders' equity if referred to as a stock split effected in the form of a stock dividend, but if referred to merely as a stock split, no journal entry is recorded. (*p. 1069*)

LO18-9

U.S. GAAP and IFRS are generally compatible with respect to accounting for shareholders' equity. Some differences exist in presentation format and terminology. (*pp. 1050 and 1057*) ●

APPENDIX 18 Quasi Reorganizations

A firm undergoing financial difficulties, but with favorable future prospects, may use a **quasi reorganization** to write down inflated asset values and eliminate an accumulated deficit (debit balance in retained earnings). To effect the reorganization, these procedures are followed:

1. The firm's assets (and perhaps liabilities) are revalued (up or down) to reflect fair values, with corresponding credits or debits to retained earnings. This process typically increases the deficit.
2. The debit balance in retained earnings (deficit) is eliminated against additional paid-in capital. If additional paid-in capital is not sufficient to absorb the entire deficit, a reduction in stock may be necessary (with an appropriate restating of the par amount per share).
3. Retained earnings is dated. That is, disclosure is provided to indicate the date the deficit was eliminated and when the new accumulation of earnings began.

The procedure is demonstrated in  **Illustration 18A-1**. The shareholders approved the quasi reorganization effective January 1, 2024. The plan was to be accomplished by a reduction of inventory by \$75 million, a reduction in property, plant, and equipment (net) of \$175 million, and appropriate adjustments to shareholders' equity.

Illustration 18A-1 Quasi Reorganization

When assets are revalued to reflect fair values, the process often increases the deficit.

The deficit, \$550 ($\$300 + \$75 + \175), can be only partially absorbed by the balance of additional paid-in capital.

The remaining deficit, \$400 ($\$300 + \$75 + \$175 - \150), must be absorbed by reducing the balance in common stock.

The Emerson-Walsch Corporation has incurred operating losses for several years. A newly elected board of directors voted to implement a quasi reorganization, subject to shareholder approval. The balance sheet, on December 31, 2023, immediately prior to the restatement, includes the data shown below.

| | | (\$ in millions) |
|--|-----|-----------------------|
| Cash | | \$ 75 |
| Receivables | | 200 |
| Inventory | | 375 |
| Property, plant, and equipment (net) | | 400 |
| | | <u>\$1,050</u> |
| Liabilities | | \$ 400 |
| Common stock (800 million shares at \$1 par) | | 800 |
| Additional paid-in capital | | 150 |
| Retained earnings (deficit) | | (300) |
| | | <u><u>\$1,050</u></u> |
| To revalue assets: | | |
| Retained earnings | 75 | |
| Inventory | | 75 |
| Retained earnings | 175 | |
| Property, plant, and equipment | | 175 |
| To eliminate a portion of the deficit against available additional paid-in capital: | | |
| Additional paid-in capital | 150 | |
| Retained earnings | | 150 |
| To eliminate the remainder of the deficit against common stock: | | |
| Common stock | 400 | |
| Retained earnings | | 400 |

The balance sheet immediately after the restatement would include the following:

Assets and liabilities reflect current values.

Because a reduced balance represents the same 800 million shares, the par amount per share must be reduced.

The deficit is eliminated.

| | (\$ in millions) |
|---|---------------------|
| Cash | \$75 |
| Receivables | 200 |
| Inventory | 300 |
| Property, plant, and equipment (net) | 225 |
| | <u>\$800</u> |
| Liabilities | \$400 |
| Common stock (800 million shares at \$0.50 par) | 400 |
| Additional paid-in capital | 0 |
| Retained earnings (deficit) | 0 |
| | <u><u>\$800</u></u> |

Note A: Upon the recommendation of the board of directors and approval by shareholders, a quasi reorganization was implemented January 1, 2024. The plan was accomplished by a reduction of inventory by \$75 million, a reduction in property, plant, and equipment (net) of \$175 million, and appropriate adjustments to shareholders' equity. The balance in retained earnings reflects the elimination of a \$300 million deficit on that date. ●

Questions For Review of Key Topics

- Q 18–1** Identify and briefly describe the two primary sources of shareholders' equity.
- Q 18–2** Identify the three common forms of business organization and the primary difference between the way they are accounted for.
- Q 18–3** Corporations offer the advantage of limited liability. Explain what is meant by that statement.
- Q 18–4** Distinguish between not-for-profit and for-profit corporations.
- Q 18–5** Distinguish between publicly held and privately (or closely) held corporations.
- Q 18–6** How does the Model Business Corporation Act affect the way corporations operate?
- Q 18–7** The owners of a corporation are its shareholders. If a corporation has only one class of shares, they typically are labeled common shares. Indicate the ownership rights held by common shareholders, unless specifically withheld by agreement.
- Q 18–8** What is meant by a shareholder's preemptive right?
- Q 18–9** Terminology varies in the way companies differentiate among share types. But many corporations designate shares as common or preferred. What are the two special rights usually given to preferred shareholders?
- Q 18–10** Most preferred shares are cumulative. Explain what this means.
- Q 18–11** The par value of shares historically indicated the real value of shares and all shares were issued at that price. The concept has changed with time. Describe the meaning of par value as it has evolved to today.
- Q 18–12** What is comprehensive income? How does comprehensive income differ from net income? Where do companies report it in a balance sheet?
- Q 18–13** How do we report components of comprehensive income *created during the reporting period*?

- Q 18–14** The balance sheet reports the balances of shareholders' equity accounts. What additional information is provided by the statement of shareholders' equity?
- Q 18–15** At times, companies issue their shares for consideration other than cash. What is the measurement objective in those cases?
- Q 18–16** Companies occasionally sell more than one security for a single price. How is the issue price allocated among the separate securities?
- Q 18–17** The costs of legal, promotional, and accounting services necessary to effect the sale of shares are referred to as share issue costs. How are these costs recorded? Compare this approach to the way debt issue costs are recorded.
- Q 18–18** When a corporation acquires its own shares, those shares assume the same status as authorized but unissued shares, as if they never had been issued. Explain how this is reflected in the accounting records if the shares are formally retired.
- Q 18–19** Discuss the conceptual basis for accounting for a share buyback as treasury stock.
- Q 18–20** The prescribed accounting treatment for stock dividends implicitly assumes that shareholders are fooled by small stock dividends and benefit by the market value of their additional shares. Explain this statement. Is it logical?
- Q 18–21** Brandon Components declares a 2-for-1 stock split. What will be the effects of the split, and how should it be recorded?
- Q 18–22** What is a reverse stock split? What would be the effect of a reverse stock split on one million \$1 par shares? On the accounting records?
- Q 18–23** Suppose you own 80 shares of **Facebook** common stock when the company declares a 4% stock dividend. What will you receive as a result?
- Q 18–24** (Based on Appendix 18) A quasi reorganization is sometimes employed by a firm undergoing financial difficulties but with favorable future prospects. What are two objectives of this procedure? Briefly describe the procedural steps.

Brief Exercises

BE 18–1 Comprehensive income LO18–2

Wong Corporation reports \$50 million accumulated other comprehensive income in its balance sheet as a component of shareholders' equity. In a related statement reporting comprehensive income for the year, the company reveals net income of \$400 million and other comprehensive income of \$15 million. What was the balance in accumulated other comprehensive income in last year's balance sheet?

BE 18–2 Stock issued LO18–4

Penne Pharmaceuticals sold 8 million shares of its \$1 par common stock to provide funds for research and development. If the issue price is \$12 per share, what is the journal entry to record the sale of the shares?

Page 1081

BE 18–3 Stock issued LO18–4

Brown Company issued 100,000 shares of its \$1 par common stock to the Mary Keim law firm as compensation for 4,000 hours of legal services performed. Keim's usual rate is \$240 per hour. By what amount should Brown's paid-in capital—excess of par increase as a result of this transaction?

BE 18–4 Stock issued LO18–4

Hamilton Boats issued 175,000 shares of its no-par common stock to Sudoku Motors in exchange for 1,000 four-stroke outboard motors that normally sell in quantity for \$3,500 each. By what amount should Hamilton's shareholders' equity increase as a result of this transaction?

BE 18–5 Retirement of shares LO18–5

Horton Industries' shareholders' equity included 100 million shares of \$1 par common stock and a balance in paid-in capital—excess of par of \$900 million. Assuming that Horton retires shares it reacquires (restores their status to that of authorized but unissued shares), by what amount will Horton's total paid-in capital decline if it reacquires 2 million shares at \$8.50 per share?

BE 18–6 Retirement of shares **LO18–5**

Agee Storage issued 35 million shares of its \$1 par common stock at \$16 per share several years ago. Last year, for the first time, Agee retired 1 million shares at \$14 per share. If Agee now retires 1 million shares at \$19 per share, by what amount will Agee's total paid-in capital decline?

BE 18–7 Treasury stock **LO18–5**

The Basu Group reacquired 2 million of its shares at \$70 per share as treasury stock. Last year, for the first time, Basu sold 1 million treasury shares at \$71 per share. If Basu now sells the remaining 1 million treasury shares at \$67 per share, by what amount will retained earnings decline?

BE 18–8 Treasury stock **LO18–5**

In previous years, Cox Transport reacquired 2 million treasury shares at \$20 per share and, later, 1 million treasury shares at \$26 per share. If Cox now sells 1 million treasury shares at \$29 per share and determines cost as the weighted-average cost of treasury shares, by what amount will Cox's paid-in capital—share repurchase increase?

BE 18–9 Treasury stock **LO18–5**

Refer to the situation described in  **BE 18–8**. By what amount will Cox's paid-in capital—share repurchase increase if it determines the cost of treasury shares by the FIFO method?

BE 18–10 Cash dividend **LO18–7**

Real World Financials

Following is a recent **Target** press release:

MINNEAPOLIS, March 12, 2020 /PRNewswire/—The board of directors of Target Corporation (NYSE:TGT) has declared a quarterly dividend of 66 cents per common share. The dividend is payable June 10, 2020, to shareholders of record at the close of business May 20, 2020.

Prepare the journal entries Target used to record the declaration and payment of the cash dividend for its 500 million shares.

Source: Target

BE 18–11 Effect of preferred stock on dividends **LO18–7**

The shareholders' equity of MLS Enterprises includes \$200 million of no par common stock and \$400 million of 6% cumulative preferred stock. The board of directors of MLS declared cash dividends of \$50 million in 2024 after paying \$20 million cash dividends in both 2023 and 2022. What is the amount of dividends common shareholders will receive in 2024?

BE 18–12 Property dividend **LO18–7**

Adams Moving and Storage, a family-owned corporation, declared a property dividend of 1,000 shares of **GE** common stock that Adams had purchased in February for \$37,000 as an investment. GE's shares had a market value of \$35 per share on the declaration date. Prepare the journal entries to record the property dividend on the declaration and payment dates.

BE 18–13 Stock dividend **LO18–8**

On June 13, the board of directors of Siewert Inc. declared a 5% stock dividend on its 60 million, \$1 par, common shares, to be distributed on July 1. The market price of Siewert common stock was \$25 on June 13. Prepare a journal entry that summarizes the declaration and distribution of the stock dividend.

BE 18–14 Stock split **LO18–8**

Refer to the situation described in  **BE 18-13**, but assume a 2-for-1 stock split instead of the 5% stock dividend. Prepare a journal entry that summarizes the declaration and distribution of the stock split if it is to be effected in the form of a 100% stock dividend. What is the par per share after the split?

BE 18-15 Stock split  **LO18-8**

Refer to the situation described in  **BE 18-13**, but assume a 2-for-1 stock split instead of the 5% stock dividend. Prepare a journal entry that summarizes the declaration and distribution of the stock split if it is *not* to be effected in the form of a stock dividend. What is the par per share after the split?

BE 18-16 IFRS; reporting shareholders' equity  **LO18-9**

IFRS

Nestlé S.A., the largest food and beverage company in the world, prepares its financial statements according to International Financial Reporting Standards. Its financial statements include ordinary share capital, translation reserve, and share premium. If Nestlé used U.S. GAAP, what would be the likely account titles for these accounts?

Exercises

E 18–1 Comprehensive income LO18–2

The following is from the 2024 annual report of Kaufman Chemicals, Inc.:

| Statements of Comprehensive Income | Years Ended December 31 | | |
|---|----------------------------|--------------|--------------|
| | 2024 | 2023 | 2022 |
| Net income | \$856 | \$766 | \$594 |
| Other comprehensive income: | | | |
| Change in net unrealized gains on AFS investments, net of tax of \$22, (\$14), and \$15 in 2024, 2023, and 2022, respectively | 34 | (21) | 23 |
| Other | (2) | (1) | 1 |
| <i>Total comprehensive income</i> | <u>\$888</u> | <u>\$744</u> | <u>\$618</u> |

Kaufman reports accumulated other comprehensive income in its balance sheet as a component of shareholders' equity as follows:

| (\$ in millions) | 2024 | 2023 |
|--|-----------------|-----------------|
| Shareholders' equity: | | |
| Common stock | \$ 355 | \$ 355 |
| Additional paid-in capital | 8,567 | 8,567 |
| Retained earnings | 6,544 | 5,988 |
| Accumulated other comprehensive income | 107 | 75 |
| <i>Total shareholders' equity</i> | <u>\$15,573</u> | <u>\$14,985</u> |

Required:

1. What is comprehensive income and how does it differ from net income?
2. How is comprehensive income reported in a balance sheet?

3. From the information provided, determine how Kaufman calculated the \$107 million accumulated other comprehensive income in 2024.

E 18–2 FASB codification research; reporting other comprehensive income in shareholders' equity LO18–2

Companies are required to transfer “other comprehensive income” each period to shareholders' equity. The *FASB Accounting Standards Codification* represents the single source of authoritative U.S. generally accepted accounting principles. Obtain the relevant authoritative literature on reporting other comprehensive income in shareholders' equity using the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org) and select Basic View for free access.

Required:

1. What is the specific nine-digit Codification citation (XXX-XX-XX-XX) that describes the guidelines for reporting that component of shareholders' equity?
2. What is the specific nine-digit Codification citation (XXX-XX-XX-XX) that describes the guidelines for presenting accumulated other comprehensive income on the statement of shareholders' equity?

E 18–3 Earnings or OCI? LO18–2

Indicate by letter whether each of the items listed below most likely is reported in the income statement as Net Income (NI) or in the statement of comprehensive income as Other Comprehensive Income (OCI).

| | Items |
|----------|--|
| _____ 1. | Increase in the fair value of available-for-sale (AFS) debt securities |
| _____ 2. | Gain on sale of land |
| _____ 3. | Loss on pension plan assets (actual return less than expected) |
| _____ 4. | |
| _____ 5. | |

| Items | |
|-----------|---|
| _____ 6. | Adjustment for foreign currency translation |
| _____ 7. | Increase in the fair value of investments in common stock securities |
| _____ 8. | Loss from revising an assumption related to a pension plan |
| _____ 9. | Loss on sale of patent |
| _____ 10. | Prior service cost in defined benefit pension plan |
| | Increase in the fair value of bonds outstanding due to change in general interest rates; fair value option |
| | Gain on postretirement plan assets (actual return more than expected) |

E 18–4 Stock issued for cash; Wright Medical Group **LO18–4**

Real World Financials

The following is a news item reported by Reuters:

WASHINGTON, Jan 29 (Reuters)—**Wright Medical Group**, a maker of reconstructive implants for knees and hips, on Tuesday filed to sell 3 million shares of common stock.

In a filing with the U.S. Securities and Exchange Commission, it said it plans to use the proceeds from the offering for general corporate purposes, working capital, research and development, and acquisitions.

After the sale there will be about 31.5 million shares outstanding in the Arlington, Tennessee-based company, according to the SEC filing.

Wright shares closed at \$17.15 on Nasdaq.

The common stock of Wright Medical Group has a par of \$0.01 per share.

Required:

Prepare the journal entry to record the sale of the shares assuming the price existing when the announcement was made and ignoring share issue costs.

Source: Reuters

E 18–5 Issuance of shares; noncash consideration **LO18–4**

During its first year of operations, Eastern Data Links Corporation entered into the following transactions relating to shareholders' equity. The articles of incorporation authorized the issue of 8 million common shares, \$1 par per share, and 1 million preferred shares, \$50 par per share.

Required:

Prepare the appropriate journal entries to record each transaction.

- Feb. 12** Sold 2 million common shares, for \$9 per share.
- 13** Issued 40,000 common shares to attorneys in exchange for legal services.
- 13** Sold 80,000 of its common shares and 4,000 preferred shares for a total of \$945,000.
- Nov. 15** Issued 380,000 of its common shares in exchange for equipment for which the cash price was known to be \$3,688,000.

E 18–6 Redeemable shares **LO18–4**

Williams Industries has outstanding 30 million common shares, 20 million Class A shares, and 20 million Class B shares. Williams has the right but not the obligation to repurchase the Class A shares if a change in ownership of the voting common shares causes J. P. Williams, founder and CEO, to have less than 50% ownership. Williams has the unconditional obligation to repurchase the Class B shares upon the death of J. P. Williams.

Required:

Which, if any, of the shares should be reported in Williams's balance sheet as liabilities?

E 18–7 Share issue costs; issuance **LO18–4**

Liu Industries issued 15 million of its \$1 par common shares for \$424 million on April 11. Legal, promotional, and accounting services necessary to effect the sale cost \$2 million.

Required:

1. Prepare the journal entry to record the issuance of the shares.

2. Explain how recording the share issue costs differs from the way debt issue costs are recorded.

E 18–8 Reporting preferred shares; disclosure note  **LO18–4**,  **LO18–7**

Ozark Distributing Company is primarily engaged in the wholesale distribution of consumer products in the Ozark Mountain regions. The following disclosure note appeared in the company's 2024 annual report:

Page 1084

Note 5. Convertible Preferred Stock (in part):

The Company has the following Convertible Preferred Stock outstanding as of September 2024:

| | |
|---|---------------|
| Date of issuance: | June 17, 2021 |
| Optionally redeemable beginning: | June 18, 2023 |
| Par value (gross proceeds): | \$2,500,000 |
| Number of shares: | 100,000 |
| Liquidation preference per share: | \$25.00 |
| Conversion price per share: | \$30.31 |
| Number of common shares in which to be converted: | 82,481 |
| Dividend rate: | 6.785% |

The Preferred Stock is convertible at any time by the holders into a number of shares of Ozark's common stock equal to the number of preferred shares being converted times a fraction equal to \$25.00 divided by the conversion price. The conversion prices for the Preferred Stock are subject to customary adjustments in the event of stock splits, stock dividends and certain other distributions on the Common Stock. Cumulative dividends for the Preferred Stock are payable in arrears, when, as, and if declared by the Board of Directors, on March 31, June 30, September 30, and December 31 of each year.

The Preferred Stock is optionally redeemable by the Company beginning on various dates, as listed above, at redemption prices equal to 112% of the liquidation preference. The redemption prices decrease 1% annually thereafter

until the redemption price equals the liquidation preference, after which date it remains the liquidation preference.

Required:

1. What amount of dividends is paid annually to a preferred shareholder owning 100 shares of the Series A preferred stock?
2. If dividends are not paid in 2025 and 2026, but are paid in 2027, what amount of dividends will the shareholder receive?
3. If the investor chooses to convert the shares in 2025, how many shares of common stock will the investor receive for his/her 100 shares?
4. If Ozark chooses to redeem the shares on June 18, 2025, what amount will the investor be paid for his/her 100 shares?

E 18–9 New equity issues; offerings announcements  **LO18–4**

When companies offer new equity security issues, they publicize the offerings in the financial press and on Internet sites. Assume the following were among the equity offerings reported in December 2024:

New Securities Issues

Equity

American Materials Transfer Corporation (AMTC)—7.5 million common shares, \$.001 par, priced at \$13.546 each through underwriters led by Second Tennessee Bank N.A. and Morgan, Dunavant & Co., according to a syndicate official.

Proactive Solutions Inc. (PSI)—Offering of 9 million common shares, \$0.01 par, was priced at \$15.20 a share via lead manager Stanley Brothers, Inc., according to a syndicate official.

Required:

Prepare the appropriate journal entries to record the sale of both issues to underwriters. Ignore share issue costs.

E 18–10 Retirement of shares  **LO18–5**

Borner Communications' articles of incorporation authorized the issuance of 130 million common shares. The transactions described below effected changes in Borner's outstanding shares. Prior to the transactions, Borner's shareholders' equity included the following:

| Shareholders' Equity | (\$ in millions) |
|--|------------------|
| Common stock, 100 million shares at \$1 par | \$100 |
| Paid-in capital—excess of par | 300 |
| Retained earnings | 210 |

Required:

Assuming that Borner Communications retires shares it reacquires (restores their status to that of authorized but unissued shares), record the appropriate journal entry for each of the following transactions:

1. On January 7, 2024, Borner reacquired 2 million shares at \$5 per share.
2. On August 23, 2024, Borner reacquired 4 million shares at \$3.50 per share.
3. On July 25, 2025, Borner sold 3 million common shares at \$6 per share.

E 18–11 Retirement of shares  **LO18–5**

In 2024, Borland Semiconductors entered into the transactions described below. In 2021, Borland had issued 170 million shares of its \$1 par common stock at \$34 per share.

Required:

Assuming that Borland retires shares it reacquires, record the appropriate journal entry for each of the following transactions:

1. On January 2, 2024, Borland reacquired 10 million shares at \$32.50 per share.
2. On March 3, 2024, Borland reacquired 10 million shares at \$36 per share.
3. On August 13, 2024, Borland sold 1 million shares at \$42 per share.
4. On December 15, 2024, Borland sold 2 million shares at \$36 per share.

E 18–12 Treasury stock  **LO18–5**

In 2024, Western Transport Company entered into the treasury stock transactions described below. In 2022, Western Transport had issued 140 million shares of its \$1 par common stock at \$17 per share.

Required:

Prepare the appropriate journal entry for each of the following transactions:

1. On January 23, 2024, Western Transport reacquired 10 million shares at \$20 per share.
2. On September 3, 2024, Western Transport sold 1 million treasury shares at \$21 per share.
3. On November 4, 2024, Western Transport sold 1 million treasury shares at \$18 per share.

E 18–13 Treasury stock; weighted-average and FIFO cost

 **LO18–5**

At December 31, 2023, the balance sheet of Meca International included the following shareholders' equity accounts:

| Shareholders' Equity | (\$ in millions) |
|--|------------------|
| Common stock, 60 million shares at \$1 par | \$ 60 |
| Paid-in capital—excess of par | 300 |
| Retained earnings | 410 |

Required:

Assuming that Meca International views its share buybacks as treasury stock, record the appropriate journal entry for each of the following transactions:

1. On February 12, 2024, Meca reacquired 1 million common shares at \$13 per share.
2. On June 9, 2025, Meca reacquired 2 million common shares at \$10 per share.
3. On May 25, 2026, Meca sold 2 million treasury shares at \$15 per share. Determine cost as the weighted-average cost of treasury shares.
4. For the previous transaction, assume Meca determines the cost of treasury shares by the FIFO method.

E 18–14 Reporting shareholders' equity after share repurchase

 **LO18–5**

On two previous occasions, the management of Dennison and Company, Inc. repurchased some of its common shares. Between buyback transactions, the corporation issued common shares under its management incentive plan. Shown below is shareholders' equity following

these share transactions, as reported by two different methods of accounting for reacquired shares.

| (\$ in millions) | Method A | Method B |
|-----------------------------------|-----------------------|-----------------------|
| Shareholders' equity | | |
| Paid-in capital: | | |
| Preferred stock, \$10 par | \$ 150 | \$ 150 |
| Common stock, \$1 par | 200 | 197 |
| Additional paid-in capital | 1,204 | 1,201 |
| Retained earnings | 2,994 | 2,979 |
| Less: Treasury stock | (21) | |
| Total shareholders' equity | <u>\$4,527</u> | <u>\$4,527</u> |

Required:

1. Infer from the presentation which method of accounting for required shares is represented by Method A.
2. Infer from the presentation which method of accounting for required shares is represented by Method B.

E 18–15 Change from treasury stock to retired stock  **LO18–5**

In keeping with a modernization of corporate statutes in its home state, Miller-Li Corporation decided in 2024 to discontinue accounting for reacquired shares as treasury stock. Instead, shares repurchased will be viewed as having been retired, reassuming the status of unissued shares. As part of the change, treasury shares held were reclassified as retired stock. At December 31, 2023, Miller-Li's balance sheet reported the following shareholders' equity:

| | (\$ in millions) |
|--|-----------------------|
| Common stock, \$1 par | \$ 200 |
| Paid-in capital—excess of par | 800 |
| Retained earnings | 956 |
| Treasury stock (4 million shares at cost) | (25) |
| Total shareholders' equity | <u>\$1,931</u> |

Required:

Identify the type of accounting change this decision represents, and prepare the journal entry to effect the reclassification of treasury shares as retired shares.

E 18–16 Stock buyback; Ford press announcement  **LO18–5**

Real World Financials

The following excerpt is from an article reported in an online issue of **Bloomberg**.

(Bloomberg) **Ford Motor Co.** (F) said it will repurchase \$1.8 billion of its shares to reduce dilution from recent stock grants to executives.

The par amount per share for Ford’s common stock is \$0.01. Paid-in capital—excess of par is \$5.39 per share on average. The market price was \$16.

Required:

1. Suppose Ford reacquires 112 million shares through repurchase on the open market at \$16 per share. Prepare the appropriate journal entry to record the purchase. Ford considers the shares it buys back to be treasury stock.
2. Suppose Ford considers the shares it buys back to be retired rather than treated as treasury stock. Prepare the appropriate journal entry to record the purchase.
3. What does the company mean by saying that the buyback will serve “to offset dilution from executive compensation?”

Source: Bloomberg

E 18–17 Transactions affecting retained earnings  **LO18–6,**
 **LO18–7**

Shown below in T-account format are the changes affecting the retained earnings of Brenner-Jude Corporation during 2024. On January 1, 2024, the corporation had outstanding 105 million common shares, \$1 par per share.

| Retained Earnings (\$ in millions) | |
|------------------------------------|--|
|------------------------------------|--|

| | |
|--|-----------------------------|
| | 90 Beginning balance |
|--|-----------------------------|

| Retained Earnings (\$ in millions) | |
|---|-------------------------|
| Retirement of 5 million common shares for \$22 million | 2 |
| Declaration and payment of a \$0.33 per share cash dividend | 33 |
| Declaration and distribution of a 4% stock dividend | 20 |
| | 88 |
| | Net income for the year |
| | 123 |
| | Ending balance |

Required:

1. From the information provided by the account changes, you should be able to recreate the transactions that affected Brenner-Jude's retained earnings during 2024. Prepare the journal entries that Brenner-Jude must have recorded during the year for these transactions. (*Hint:* In lieu of revenues and expenses, use an account titled "Income summary" to close net income or net loss.)
2. Prepare a statement of retained earnings for Brenner-Jude for the year ended 2024.

E 18–18 Effect of cumulative, nonparticipating preferred stock on dividends—3 years  **LO18–7**

The shareholders' equity of ILP Industries includes the items shown below. The board of directors of ILP declared cash dividends of \$8 million, \$20 million, and \$150 million in its first three years of operation—2024, 2025, and 2026, respectively.

| | (\$ in millions) |
|--|------------------|
| Common stock | \$100 |
| Paid-in capital—excess of par, common | 980 |
| Preferred stock, 8% | 200 |
| Paid-in capital—excess of par, preferred | 555 |

Required:

- Determine the amount of dividends to be paid to preferred and common shareholders in each of the three years, assuming that the preferred stock is cumulative and nonparticipating.

| | Preferred | Common |
|-------------|-----------|--------|
| 2024 | | |
| 2025 | | |
| 2026 | | |

- Repeat requirement 1 assuming that the preferred stock is noncumulative and nonparticipating.

E 18–19 Stock dividend **LO18–8**

The shareholders' equity of Core Technologies Company on June 30, 2023, included the following:

| | |
|---|---------------------|
| Common stock, \$1 par; authorized, 8 million shares; | |
| issued and outstanding, 3 million shares | \$ 3,000,000 |
| Paid-in capital—excess of par | 12,000,000 |
| Retained earnings | 14,000,000 |

On April 1, 2024, the board of directors of Core Technologies declared a 10% stock dividend on common shares, to be distributed on June 1. The market price of Core Technologies' common stock was \$30 on April 1, 2024, and \$40 on June 1, 2024.

Required:

Prepare the journal entry to record the declaration and distribution of the stock dividend.

E 18–20 Stock split; Hanmi Financial Corporation **LO18–8**

Real World Financials

Hanmi Financial Corporation is the parent company of Hanmi Bank. The company's stock split was announced in the following wire:

LOS ANGELES Jan. 20 BUSINESS WIRE—Hanmi Financial Corporation (Nasdaq), announced that the Board of Directors has approved a two-for-one stock split, to be effected in the form of a 100 percent common stock dividend. Hanmi Financial Corporation stockholders of record at the close of business on January 31 will receive one additional share of common stock for every share of common stock then held. Distribution of additional shares issued as a result of the split is expected to occur on or about February 15.

At the time of the stock split, 24.5 million shares of common stock, \$.001 par per share, were outstanding.

Required:

1. Prepare the journal entry, if any, that Hanmi recorded at the time of the stock split.
2. If Hanmi's stock price had been \$36 at the time of the split, what would be its approximate value after the split (other things equal)?

Source: Business Wire

E 18–21 Cash in lieu of fractional share rights  **LO18–8**

Douglas McDonald Company's balance sheet included the following shareholders' equity accounts at December 31, 2023:

| | (\$ in millions) |
|--|------------------------|
| Paid-in capital: | |
| Common stock, 900 million shares at \$1 par | \$ 900 |
| Paid-in capital—excess of par | 15,800 |
| Retained earnings | 14,888 |
| <i>Total shareholders' equity</i> | <u>\$31,588</u> |

On March 16, 2024, a 4% common stock dividend was declared and distributed. The market value of the common stock was \$21 per share. Fractional share rights represented 2 million equivalent whole shares. Cash was paid in lieu of the fractional share rights.

Required:

1. What is a fractional share right?
2. Prepare the appropriate entries for the declaration and distribution of the stock dividend.

E 18–22 FASB codification research  **LO18–1**,  **LO18–5**,
 **LO18–8**

Access the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org) and select Basic View for free access. Determine the specific eight-digit Codification citation (XXX-XX-XX-X) for accounting for each of the following items:

1. Requirements to disclose within the financial statements the pertinent rights and privileges of the various securities outstanding.
2. Requirement to record a “small” stock dividend at the fair value of the shares issued.
3. Requirement to exclude from the determination of net income gains and losses on transactions in a company’s own stock.

E 18–23 Transactions affecting retained earnings; financial statement effects  **LO18–6** through  **LO18–8**

The balance sheet of Consolidated Paper, Inc. included the following shareholders’ equity accounts at December 31, 2023:

| | |
|---|----------------------------|
| Paid-in capital: | |
| Preferred stock, 8.8%, 90,000 shares at \$1 par | \$ 90,000 |
| Common stock, 364,000 shares at \$1 par | 364,000 |
| Paid-in capital—excess of par, preferred | 1,437,000 |
| Paid-in capital—excess of par, common | 2,574,000 |
| Retained earnings | 9,735,000 |
| Treasury stock, at cost; 4,000 common shares | (44,000) |
| Total shareholders’ equity | <u>\$14,156,000</u> |

During 2024, several events and transactions affected the retained earnings of Consolidated Paper.

Required:

1. Prepare the appropriate entries for these events:
 - a. On March 3, the board of directors declared a property dividend of 240,000 shares of Leasco International common stock that Consolidated Paper had purchased in January as an investment (book value: \$700,000). The investment shares had a fair value of \$3 per share and were distributed March 31 to shareholders of record March 15.
 - b. On May 3, a 5-for-4 stock split was declared and distributed. The stock split was effected in the form of a 25% stock dividend. The market value of the \$1 par common stock was \$11 per share.
 - c. On July 5, a 2% common stock dividend was declared and distributed. The market value of the common stock was \$11 per share.
 - d. On December 1, the board of directors declared the 8.8% cash dividend on the 90,000 preferred shares, payable on December 28 to shareholders of record December 20.
 - e. On December 1, the board of directors declared a cash dividend of \$0.50 per share on its common shares, payable on December 28 to shareholders of record December 20.
2. Prepare the shareholders' equity section of the balance sheet for Consolidated Paper, Inc. on December 31, 2024. Net income for the year was \$810,000.

E 18–24 Profitability ratio  **LO18–1**

Comparative balance sheets for Softech Canvas Goods for 2024 and 2023 are shown below. Softech pays no dividends and instead reinvests all earnings for future growth.

Comparative Balance Sheets (\$ in thousands)

| | December 31 | |
|-------------------------------|--------------------|--------------|
| | 2024 | 2023 |
| Assets: | | |
| Cash | \$ 50 | \$ 40 |
| Accounts receivable | 100 | 120 |
| Short-term investments | 50 | 40 |
| Inventory | 200 | 140 |

| | | |
|--|----------------|--------------|
| Property, plant, and equipment (net) | 600 | 550 |
| | <u>\$1,000</u> | <u>\$890</u> |
| Liabilities and Shareholders' Equity: | | |
| Current liabilities | \$ 240 | \$210 |
| Bonds payable | 160 | 160 |
| Paid-in capital | 400 | 400 |
| Retained earnings | 200 | 120 |
| | <u>\$1,000</u> | <u>\$890</u> |

Required:

1. Determine the return on shareholders' equity for 2024.
2. What does the ratio measure?

E 18–25 IFRS; equity terminology  **LO18–9**

Indicate by letter whether each of the terms or phrases listed below is more associated with financial statements prepared in accordance with U.S. GAAP (U) or International Financial Reporting Standards (I).

| Terms and phrases | |
|-------------------|---|
| _____ 1. | Common stock |
| _____ 2. | Preference shares |
| _____ 3. | Liabilities often listed before equity in the balance sheet |
| _____ 4. | (statement of financial position) |
| _____ 5. | Asset revaluation reserve |
| _____ 6. | Accumulated other comprehensive income |
| _____ 7. | Share premium |
| _____ 8. | Equity often listed before liabilities in the balance sheet |
| _____ 9. | (statement of financial position) |
| _____ 10. | Translation reserve |
| _____ 11. | Ordinary shares |
| _____ 12. | Paid-in capital—excess of par |
| _____ 13. | Net gains (losses) on investments—AOCI |
| | Investment revaluation reserve |
| | Preferred stock |

E 18–26 General ledger exercise; bonds; installment note, early extinguishment  **LO18–4**,  **LO18–5**,  **LO18–7**

On January 1, 2024, the general ledger of Freedom Fireworks includes the following account balances:

| Accounts | Debit | Credit |
|-------------------------------|-----------|-----------|
| Cash | \$ 42,700 | |
| Accounts Receivable | 44,500 | |
| Supplies | 7,500 | |
| Equipment | 64,000 | |
| Accumulated Depreciation | | \$ 9,000 |
| Accounts Payable | | 14,600 |
| Common Stock, \$1 par value | | 10,000 |
| Paid-in Capital—Excess of Par | | 80,000 |
| Retained Earnings | | 45,100 |
| Totals | \$158,700 | \$158,700 |

During January 2024, the following transactions occur:

- January 2** Issue an additional 2,000 shares of \$1 par value common stock for \$40,000.
- January 9** Provide services to customers on account, \$14,300.
- January 10** Purchase additional supplies on account, \$4,900.
- January 12** Repurchase 1,000 shares of treasury stock for \$18 per share.
- January 15** Pay cash on accounts payable, \$16,500.
- January 21** Provide services to customers for cash, \$49,100.
- January 22** Receive cash on accounts receivable, \$16,600.
- January 29** Declare a cash dividend of \$0.30 per share to all shares outstanding on January 29. The dividend is payable on February 15.

(Hint: Freedom Fireworks had 10,000 shares outstanding on January 1, 2024, and dividends are not paid on treasury stock.)

January 30 Reissue 600 shares of treasury stock for \$20 per share.

January 31 Pay cash for salaries during January, \$42,000.

The following information is available on January 31, 2024.

Page 1090

1. Unpaid utilities for the month of January are \$6,200.
2. Supplies at the end of January total \$5,100.
3. Depreciation on the equipment for the month of January is calculated using the straight-line method. At the time the equipment was purchased, the company estimated a service life of three years and a residual value of \$10,000.
4. Accrued income taxes at the end of January are \$2,000.

Required:

1. Record each of the transactions listed above in the “General Journal” tab (these are shown as items 1–10) assuming a FIFO perpetual inventory system. Review the “General Ledger” and the “Trial Balance” tabs to see the effect of the transactions on the account balances.
2. Record adjusting entries on January 31, in the “General Journal” tab (these are shown as items 11–14).
3. Review the adjusted “Trial Balance” as of January 31, 2024, in the “Trial Balance” tab.
4. Prepare a multiple-step income statement for the period ended January 31, 2024, in the “Income Statement” tab.
5. Prepare a classified balance sheet as of January 31, 2024, in the “Balance Sheet” tab.
6. Record closing entries in the “General Journal” tab (these are shown as items 15 and 16).
7. Using the information from the requirements above, complete the “Analysis” tab.
 - a. Calculate the return on equity for the month of January. If the average return on equity for the industry for January is 2.5%, is the company more or less profitable than other companies in the same industry?
 - b. How many shares of common stock are outstanding as of January 31, 2024?
 - c. Calculate earnings per share for the month of January. (*Hint:* To calculate average shares of common stock outstanding take the beginning shares outstanding plus the ending shares outstanding and divide the total by 2.) If earnings per share was \$3.60

last year (i.e., an average of \$0.30 per month), is earnings per share for January 2024 better or worse than last year's average?

E 18-27 Effect on shareholders' equity of PSP note; disclosure note; financial statement effects; American Airlines; COVID-19
 **LO18-4**

Real World Financials

COVID-19

Like the rest of the airline industry, **American Airlines** was dealt a cruel blow in 2020 by the COVID-19 pandemic. Struggling to cope with plummeting demand for air travel and the resulting financial impact, American took advantage of a provision in the CARES Act to avail itself of funds provided by the Payroll Support Program. The following disclosure note appeared in the company's second quarter 2020 quarterly report:

**1. Basis of Presentation and Recent Accounting Pronouncement (in part) (b)
Impact of Coronavirus (COVID-19)**

Payroll Support Program Agreement

In connection with the Payroll Support Program, we are required to comply with the relevant provisions of the CARES Act, including the requirement that funds provided pursuant to the PSP Agreement be used exclusively for the continuation of payment of employee wages, salaries and benefits . . .

Pursuant to the PSP Agreement, Treasury is to provide us financial assistance to be paid in installments . . . As partial compensation to the U.S. Government for the provision of financial assistance under the Payroll Support Program, we expect to issue a total aggregate principal amount of approximately \$1.7 billion under the PSP Promissory Note and issue warrants (each a PSP Warrant and, collectively, the PSP Warrants) to Treasury to purchase up to an aggregate of approximately 13.7 million shares of AAG common stock. . . . The PSP Promissory Note will be recorded as unsecured long-term debt, and the total fair value of the PSP Warrants, estimated using a Black-Scholes option pricing model, will be recorded in stockholders' equity in the condensed consolidated balance sheet.

The fair value of the warrants was estimated at \$0.1 billion.

Required:

1. Re-create the journal entry that American used to record the \$1.8 billion loan with PSP warrants and receipt of the funds.
2. By how much, if any, did American's shareholders' equity increase at the time of the loan?

Problems

P 18–1 Various stock transactions; correction of journal entries

LO18–4

Part A

During its first year of operations, the A. Clem Corporation entered into the following transactions relating to shareholders' equity. The corporation was authorized to issue 100 million common shares, \$1 par per share.

Required:

Prepare the appropriate journal entries to record each transaction.

Jan. 9 Issued 40 million common shares for \$20 per share.

Mar. 11 Issued 5,000 shares in exchange for custom-made equipment. A. Clem shares have traded recently on the stock exchange at \$20 per share.

Part B

A new staff accountant for the A. Clem Corporation recorded the following journal entries during the second year of operations. A. Clem retires shares that it reacquires (restores their status to that of authorized but unissued shares).

Required:

Prepare the journal entries that should have been recorded for each of the transactions.

| | | (\$ in millions) | |
|----------------|--------------------------|------------------|-----------|
| Sept. 1 | Common stock | 2 | |
| | Retained earnings | 48 | |
| | Cash | | 50 |
| Dec. 1 | Cash | 26 | |

| | |
|---|-----------|
| Common stock | 1 |
| Gain on sale of previously issued shares | 25 |

P 18–2 Share buyback—comparison of retirement and treasury stock treatment; financial statement effects  **LO18–5**

The shareholders' equity section of the balance sheet of TNL Systems Inc. included the following accounts at December 31, 2023:

| Shareholders' Equity | (\$ in millions) |
|--|-------------------------|
| Common stock, 240 million shares at \$1 par | \$ 240 |
| Paid-in capital—excess of par | 1,680 |
| Paid-in capital—share repurchase | 1 |
| Retained earnings | 1,100 |

Required:

- During 2024, TNL Systems reacquired shares of its common stock and later sold shares in two separate transactions. Prepare the entries for both the purchase and subsequent resale of the shares assuming the shares are (a) retired and (b) viewed as treasury stock.
 - On February 5, 2024, TNL Systems purchased 6 million shares at \$10 per share.
 - On July 9, 2024, the corporation sold 2 million shares at \$12 per share.
 - On November 14, 2026, the corporation sold 2 million shares at \$7 per share.
- Prepare the shareholders' equity section of TNL Systems' balance sheet at December 31, 2026, comparing the two approaches. Assume all net income earned in 2024–2026 was distributed to shareholders as cash dividends.

P 18–3 Reacquired shares—comparison of retired shares and treasury shares; financial statement effects  **LO18–5**

National Supply's shareholders' equity included the following accounts at December 31, 2023:

| | |
|--|---------------------|
| Shareholders' Equity | |
| Common stock, 6 million shares at \$1 par | \$ 6,000,000 |

| | |
|-------------------------------|------------|
| Paid-in capital—excess of par | 30,000,000 |
| Retained earnings | 86,500,000 |

Required:

1. National Supply reacquired shares of its common stock in two separate transactions and later sold shares. Prepare the entries for each of the transactions under each of two separate assumptions: the shares are (a) retired and (b) accounted for as treasury stock.

February 15, 2024 Reacquired 300,000 shares at \$8 per share.

February 17, 2025 Reacquired 300,000 shares at \$5.50 per share.

November 9, 2026 Sold 200,000 shares at \$7 per share (assume FIFO cost).

2. Prepare the shareholders' equity section of National Supply's balance sheet at Page 1092
December 31, 2026, assuming the shares are (a) retired and (b) accounted for as treasury stock. Net income was \$14 million in 2024, \$15 million in 2025, and \$16 million in 2026. No dividends were paid during the three-year period.

P 18–4 Statement of retained earnings; financial statement effects  **LO18–5**,  **LO18–7**

Comparative statements of retained earnings for Renn-Dever Corporation were as follows.

| RENN-DEVER CORPORATION | | | |
|---|--------------------|--------------------|--------------------|
| Statements of Retained Earnings | | | |
| For the Years Ended December 31 | | | |
| | 2026 | 2025 | 2024 |
| Balance at beginning of year | \$6,794,292 | \$5,464,052 | \$5,624,552 |
| Net income (loss) | 3,308,700 | 2,240,900 | (160,500) |
| Deductions: | | | |
| Stock dividend (34,900 shares) | 242,000 | | |
| Common shares retired (110,000 shares) | | 212,660 | |
| Common stock cash dividends | 889,950 | 698,000 | 0 |
| Balance at end of year | \$8,971,042 | \$6,794,292 | \$5,464,052 |

At December 31, 2023, common shares consisted of the following:

| | |
|--|--------------------|
| Common stock, 1,855,000 shares at \$1 par | \$1,855,000 |
| Paid-in capital—excess of par | 7,420,000 |

Required:

Infer from the reports the events and transactions that affected Renn-Dever Corporation's retained earnings during 2024, 2025, and 2026. Prepare the journal entries that reflect those events and transactions. (*Hint:* In lieu of revenues and expenses, use an account titled "Income summary" to close net income or net loss.)

P 18–5 Shareholders' equity transactions; statement of shareholders' equity; financial statement effects  **LO18–6**
through  **LO18–8**

Listed below are the transactions that affected the shareholders' equity of Branch-Rickie Corporation during the period 2024–2026. At December 31, 2023, the corporation's accounts included:

| | (\$ in thousands) |
|--|-------------------|
| Common stock, 105 million shares at \$1 par | \$105,000 |
| Paid-in capital—excess of par | 630,000 |
| Retained earnings | 970,000 |

- a. November 1, 2024, the board of directors declared a cash dividend of \$0.80 per share on its common shares, payable to shareholders of record November 15, to be paid December 1.
- b. On March 1, 2025, the board of directors declared a property dividend consisting of corporate bonds of Warner Corporation that Branch-Rickie was holding as an investment. The bonds had a fair value of \$1.6 million, but were purchased two years previously for \$1.3 million. Because they were intended to be held to maturity, the bonds had not been previously written up. The property dividend was payable to shareholders of record March 13, to be distributed April 5.

- c. On July 12, 2025, the corporation declared and distributed a 5% common stock dividend (when the market value of the common stock was \$21 per share). Cash was paid in lieu of fractional shares representing 250,000 equivalent whole shares.
- d. On November 1, 2025, the board of directors declared a cash dividend of \$0.80 per share on its common shares, payable to shareholders of record November 15, to be paid December 1.
- e. On January 15, 2026, the board of directors declared and distributed a 3-for-2 stock split effected in the form of a 50% stock dividend when the market value of the common stock was \$22 per share.
- f. On November 1, 2026, the board of directors declared a cash dividend of \$0.65 per share on its common shares, payable to shareholders of record November 15, to be paid December 1.

Required:

1. Prepare the journal entries that Branch-Rickie recorded during the three-year period for these transactions.
2. Prepare comparative statements of shareholders' equity for Branch-Rickie for the three-year period (\$ in 000s). Net income was \$330 million, \$395 million, and \$455 million for 2024, 2025, and 2026, respectively.

P 18–6 Statement of shareholders' equity; financial statement effects  **LO18–1**,  **LO18–3** through  **LO18–8**

Comparative statements of shareholders' equity for Anaconda International Corporation were reported as follows for the fiscal years ending December 31, 2024, 2025, and 2026.

ANACONDA INTERNATIONAL CORPORATION
Statements of Shareholders' Equity
For the Years Ended Dec. 31, 2024, 2025, and 2026
(\$ in millions)

| Preferred Stock \$10 par | Common Stock \$1 par | Additional Paid-In Capital | Retained Earnings |
|--------------------------------|----------------------------|----------------------------------|----------------------|

1. How does Cisco account for its share buybacks? Treasury stock or retired shares?
2. For its share buybacks in the period shown, was the price Cisco paid for the shares repurchased (a) more or (b) less than the average price at which Cisco had sold the shares previously?
3. Reconstruct the journal entry Cisco used to record the buyback. The par amount of Cisco's shares is \$0.001.
4. What two amounts comprise Cisco's comprehensive income for the period shown?
5. What was the amount of Accumulated other comprehensive income (loss) that Cisco reported in its July 25, 2020 balance sheet?

Source: Cisco Systems

P 18-8 Share issue costs; issuance; dividends; early retirement
LO18-3, LO18-4, LO18-7

During its first year of operations, Cupola Fan Corporation issued 30,000 of \$1 par Class B shares for \$385,000 on June 30, 2024. Share issue costs were \$1,500. One year from the issue date (July 1, 2025), the corporation retired 10% of the shares for \$39,500.

Required:

1. Prepare the journal entry to record the issuance of the shares.
2. Prepare the journal entry to record the declaration of a \$2 per share dividend on December 1, 2024.
3. Prepare the journal entry to record the payment of the dividend on December 31, 2024.
4. Prepare the journal entry to record the retirement of the shares.

(Note: You may wish to compare your solution to this problem with that of P 14–16, which deals with parallel issues of debt issue costs and the retirement of debt.)

P 18–9 Effect of preferred stock characteristics on dividends

LO18–7

The shareholders' equity of Wang Industries includes the data shown below. During 2025, cash dividends of \$150 million were declared. Dividends were not declared in 2023 or 2024.

| | (\$ in millions) |
|---|------------------|
| Common stock | \$200 |
| Paid-in capital—excess of par, common | 800 |
| Preferred stock, 10%, nonparticipating | 100 |
| Paid-in capital—excess of par, preferred | 270 |

Required:

Determine the amount of dividends payable to preferred shareholders and to common shareholders under each of the following two assumptions regarding the characteristics of the preferred stock.

Assumption A –The preferred stock is noncumulative.

Assumption B –The preferred stock is cumulative.

P 18–10 Transactions affecting retained earnings **LO18–4**

through **LO18–8**

Indicate by letter whether each of the transactions listed below increases (I), decreases (D), or has no effect (N) on retained earnings. Assume the shareholders' equity of the transacting company includes only common stock, paid-in capital—excess of par, and

retained earnings at the time of each transaction. (Some transactions have two possible answers. Indicate both.)

| Transactions | |
|--------------|---|
| ___N___ 1. | Sale of common stock |
| _____ 2. | Purchase of treasury stock at a cost <i>less</i> than the original |
| _____ 3. | issue price |
| _____ 4. | Purchase of treasury stock at a cost <i>greater</i> than the original |
| _____ 5. | issue price |
| _____ 6. | Declaration of a property dividend |
| _____ 7. | Sale of treasury stock for <i>more</i> than cost |
| _____ 8. | Sale of treasury stock for <i>less</i> than cost |
| _____ 9. | Net income for the year |
| _____ 10. | Declaration of a cash dividend |
| _____ 11. | Payment of a previously declared cash dividend |
| _____ 12. | Issuance of convertible bonds for cash |
| _____ 13. | Declaration and distribution of a 5% stock dividend |
| _____ 14. | Retirement of common stock at a cost <i>less</i> than the original |
| _____ 15. | issue price |
| _____ 16. | Retirement of common stock at a cost <i>greater</i> than the |
| | original issue price |
| | A stock split effected in the form of a stock dividend |
| | A stock split in which the par value per share is reduced (not |
| | effected in the form of a stock dividend) |
| | A net loss for the year |

P 18–11 Stock dividends received on investments; integrative problem  **LO18–8**

Ellis Transport Company acquired 1.2 million shares of stock in L&K Corporation at \$44 per share. They are reported by Ellis at “fair value through net income.” Ellis sold 200,000 shares at \$46, received a 10% stock dividend, and then later in the year sold another 100,000 shares at \$43. (*Hint:* There is no entry for the stock dividend, but a new investment per share must be calculated for use later when the shares are sold.)

Required:

Prepare journal entries to record these transactions.

P 18–12 Various shareholders' equity topics; comprehensive; financial statement effects  **LO18–1**,  **LO18–4** through  **LO18–8**

Part A

In late 2023, the Nicklaus Corporation was formed. The corporate charter authorizes the issuance of 5,000,000 shares of common stock carrying a \$1 par value, and 1,000,000 shares of \$5 par value, noncumulative, nonparticipating preferred stock. On January 2, 2024, 3,000,000 shares of the common stock are issued in exchange for cash at an average price of \$10 per share. Also on January 2, all 1,000,000 shares of preferred stock are issued at \$20 per share.

Required:

1. Prepare journal entries to record these transactions.
2. Prepare the shareholders' equity section of the Nicklaus balance sheet as of March 31, 2024. (Assume net income for the first quarter 2024 was \$1,000,000.)

Part B

During 2024, the Nicklaus Corporation participated in three treasury stock transactions:

- a. On June 30, 2024, the corporation reacquires 200,000 shares for the treasury at a price of \$12 per share.
- b. On July 31, 2024, 50,000 treasury shares are reissued at \$15 per share.
- c. On September 30, 2024, 50,000 treasury shares are reissued at \$10 per share.

Required:

1. Prepare journal entries to record these transactions.
2. Prepare the Nicklaus Corporation shareholders' equity section as it would appear in a balance sheet prepared at September 30, 2024. (Assume net income for the second and third quarter was \$3,000,000.)

Part C

On October 1, 2024, Nicklaus Corporation receives permission to replace its \$1 par value common stock (5,000,000 shares authorized, 3,000,000 shares issued, and 2,900,000 shares outstanding) with a new common stock issue having a \$0.50 par value. Since the new par value is one-half the amount of the old, this represents a 2-for-1 stock split. That is, the shareholders will receive two shares of the \$0.50 par stock in exchange for each share of the \$1 par stock they own. The \$1 par stock will be collected and destroyed by the issuing corporation.

On November 1, 2024, the Nicklaus Corporation declares a \$0.05 per share cash dividend on common stock and a \$0.25 per share cash dividend on preferred stock. Payment is scheduled for December 1, 2024, to shareholders of record on November 15, 2024.

On December 2, 2024, the Nicklaus Corporation declares a 1% stock dividend payable on December 28, 2024, to shareholders of record on December 14. At the date of declaration, the common stock was selling in the open market at \$10 per share. The dividend will result in 58,000 ($0.01 \times 5,800,000$) additional shares being issued to shareholders.

Required:

1. Prepare journal entries to record the declaration and payment of these stock and cash dividends.
2. Prepare the December 31, 2024, shareholders' equity section of the balance sheet for the Nicklaus Corporation. (Assume net income for the fourth quarter was \$2,500,000.)
3. Prepare a statement of shareholders' equity for Nicklaus Corporation for 2024.

P 18–13 Quasi reorganization; financial statement effects
(based on  **Appendix 18**)  **Appendix 18**)

A new CEO was hired to revive the floundering Champion Chemical Corporation. The company had endured operating losses for several years, but confidence was emerging that better times were ahead. The board of directors and shareholders approved a quasi reorganization for the corporation. The reorganization included devaluing inventory for obsolescence by \$105 million and increasing land by \$5 million. Immediately prior to the restatement, at December 31, 2024, Champion Chemical Corporation's balance sheet appeared as follows (in condensed form):

CHAMPION CHEMICAL CORPORATION

Balance Sheet

At December 31, 2024

(\$ in millions)

| | |
|---|---------------------|
| Cash | \$20 |
| Receivables | 40 |
| Inventory | 230 |
| Land | 40 |
| Buildings and equipment (net) | 90 |
| | <u>\$420</u> |
| Liabilities | \$240 |
| Common stock (320 million shares at \$1 par) | 320 |
| Additional paid-in capital | 60 |
| Retained earnings (deficit) | (200) |
| | <u>\$420</u> |

Required:

1. Prepare the journal entries appropriate to record the quasi reorganization on January 1, 2025.
2. Prepare a balance sheet as it would appear immediately after the restatement.

Decision Makers' Perspective

Ed Telling/Getty Images

Apply your critical-thinking ability to the knowledge you've gained. These cases will provide you an opportunity to develop your research, analysis, judgment, and communication skills. You also will work with other students, integrate what you've learned, apply it in real-world situations, and consider its global and ethical ramifications. This practice will broaden your knowledge and further develop your decision-making abilities.

Real World Case 18–1 Initial public offering of common stock; Dolby Laboratories  **LO18–4**

Real World Financials

Ray Dolby started **Dolby Laboratories** and since then has been a leader in the entertainment industry and consumer electronics. Closely held since its founding in 1965, Dolby decided to go public. Here's an AP news report:

DOLBY'S IPO EXPECTED TO PLAY SWEET MUSIC—The initial public offering market is hoping for a big bang this week from Dolby Laboratories Inc. The San Francisco company, whose sound systems and double-D logo are ubiquitous in the movie industry as well as in consumer electronics, plans to sell 27.5 million shares for \$13.50 to \$15.50 each. Founded by Cambridge-trained scientist Ray Dolby 39 years ago, the company started out manufacturing noise-reduction equipment for the music industry that eliminated the background “hiss” on recordings, and has since expanded to encompass everything from digital audio systems to Dolby Surround sound. The company's IPO, which is lead-managed by underwriters Morgan Stanley

and Goldman Sachs Group Inc. is expected to do well not only because of its brand recognition, but also because of its strong financials. (AP)

Required:

1. Assuming the shares are issued at the midpoint of the price range indicated, how much capital did the IPO raise for Dolby Laboratories before any underwriting discount and offering expenses?
2. If the par amount is \$0.01 per share, what journal entry did Dolby use to record the sale?

Analysis Case 18–2 Statement of shareholders’ equity; financial statement effects [LO18–1](#), [LO18–3](#), [LO18–6](#), [LO18–7](#)

The shareholders’ equity portion of the balance sheet of Sessel’s Department Stores, Inc., a large regional specialty retailer, is as follows:

| SESSEL’S DEPARTMENT STORES, INC. | | |
|--|--------------------------|--------------------------|
| Comparative Balance Sheets | | |
| Shareholders’ Equity Section | | |
| (values and shares in thousands, except per share amounts) | Dec. 31, 2025 | Dec. 31, 2024 |
| Shareholders’ Equity | | |
| Preferred stock—\$1 par value; 20,000 total shares authorized, Series A—600 shares authorized, issued, and outstanding, | \$ 57,700 | \$ — |
| \$50 per share liquidation preference | | |
| Series B—33 shares authorized, no shares outstanding | | |
| Common stock—\$0.10 par; 200,000 shares authorized, 19,940 and 18,580 shares issued and outstanding at Dec. 31, 2025, and Dec. 31, 2024, respectively | 1,994 | 1,858 |
| Additional paid-in capital | 227,992 | 201,430 |

SESSEL'S DEPARTMENT STORES, INC.

Comparative Balance Sheets

Shareholders' Equity Section

| (values and shares in thousands, except per share amounts) | Dec. 31, 2025 | Dec. 31, 2024 |
|--|--------------------------|--------------------------|
| Retained income | <u>73,666</u> | <u>44,798</u> |
| Total shareholders' equity | \$361,352 | \$248,086 |

Disclosures elsewhere in Sessel's annual report revealed the following changes in shareholders' equity accounts for 2025, 2024, 2023 (values and shares in whole dollars):

2025:

1. The only changes in retained earnings during 2025 were preferred dividends on preferred stock of \$3,388,000 and net income.
2. The preferred stock is convertible. During the year, 6,592 shares were issued. All shares were converted into 320,000 shares of common stock. No gain or loss was recorded on the conversion.
3. Common shares were issued in a public offering and upon the exercise of stock options. On the statement of shareholders' equity, Sessel's reports these two items on a single line entitled: "Issuance of shares."

2024:

1. Net income: \$12,126,000.
2. Issuance of common stock: 5,580,000 shares at \$112,706,000.

2023:

1. Net income: \$13,494,000.
2. Issuance of common stock: 120,000 shares at \$826,000.

Required:

From these disclosures, prepare comparative statements of shareholders' equity for 2025, 2024, and 2023.

Research Case 18–3 FASB codification; comprehensive income; locate and extract relevant information and authoritative

support for a financial reporting issue; integrative; Cisco Systems

 **LO18-2**

Real World Financials

Titan Networking became a public company through an IPO (initial public offering) two weeks ago. You are looking forward to the challenges of being assistant controller for a publicly owned corporation. One such challenge came in the form of a memo in this morning's in-box. "We need to start reporting comprehensive income in our financials," the message from your boss said. "Do some research on that, will you? That concept didn't exist when I went to school." In response, you sought out the financial statements of **Cisco Systems**, the networking industry leader. The following is an excerpt from Cisco's 2020 annual report:

| | Years Ended | | |
|---|--------------------|-------------------|---------------------|
| | July 25, 2020 | July 27, 2019 | July 28, 2018 |
| Net income | \$11,214 | \$11,621 | \$110 |
| Available-for-sale investments: | 336 | 459 | (554) |
| Change in net unrealized gains and losses, net of tax benefit (expense) of \$(84), \$(101), and \$(11) for fiscal 2020, 2019, and 2018, respectively | | | |
| Net (gains) losses reclassified into earnings, net of tax expense (benefit) of \$21, \$6, and \$104 for fiscal 2020, 2019, and 2018, respectively | <u>(21)</u> | <u>19</u> | <u>(183)</u> |
| | 315) | 478 | (737) |
| Cash flow hedging instruments: | 7 | — | 18 |
| Change in unrealized gains and losses, net of tax benefit (expense) of \$0, \$0, and \$(3) for fiscal 2020, 2019, and 2018, respectively | | | |
| Net (gains) losses reclassified into earnings, net of tax (benefit) expense of \$0, \$0, and \$7 for fiscal | <u>1</u> | <u>(3)</u> | <u>(61)</u> |

| | Years Ended | | |
|---|------------------|------------------|------------------|
| | July 25, 2020 | July 27, 2019 | July 28, 2018 |
| 2020, 2019, and 2018, respectively | | | |

| Other comprehensive income (loss) | 273 | 225 | (940) |
| Comprehensive income (loss) | \$11,487 | \$11,846 | \$(830) |

Required:

Page 1098

1. Locate the financial statements of Cisco in the Investor Relations section of Cisco's website. Search the 2020 annual report for information about how Cisco accounts for comprehensive income. What does Cisco report in its balance sheet for 2020 Accumulated other comprehensive income?
2. From the information Cisco's financial statements provide, determine the three components of other comprehensive Income (loss) and their amounts that constitute the change in the accumulated other comprehensive income from the end of fiscal 2019 to the end of fiscal 2020.
3. Access the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org) and select Basic View for free access. Identify the specific eight-digit Codification citation (XXX-XX-XX-X) from the authoritative literature that describes the two alternative formats for reporting comprehensive income.

Source: Cisco Systems

Real World Case 18–4 Share repurchase; stock split; cash dividends; Nike, Inc.  **LO18–5** through  **LO18–8**

Real World Financials

Nike is the world's leading designer, marketer, and distributor of authentic athletic footwear, apparel, equipment, and accessories. The following is a press release from the company:

NIKE, INC. ANNOUNCES 11 PERCENT INCREASE IN QUARTERLY DIVIDEND

BEAVERTON, Ore.—(BUSINESS WIRE)—NIKE, Inc. (NYSE: NKE) announced today that its Board of Directors has approved a quarterly cash dividend of \$0.20 per share. . . . This represents an increase of 11 percent versus the prior quarterly dividend rate of \$0.18 per share. The dividend declared today is payable on January 2, to shareholders of record at the close of business December 4. “Today’s announcement, combined with the four-year \$12 billion share repurchase program we announced . . . , demonstrates our continued confidence in generating strong cash flow and returns for shareholders through our new Consumer Direct Offense as we continue to invest in fueling sustainable, long-term growth and profitability.”

When the share repurchase program was announced the company also declared a stock split distributed in the form of a 100% stock dividend. At that time Nike’s 1,200 million shares were trading at \$130 per share. Nike’s shares have a stated value of \$0.001 per share.

Required:

1. Prepare the journal entry that Nike recorded to account for the stock split?
2. Assume Nike repurchased 50 million shares after the stock split at an average price of \$59 per share. The original issue price of the shares, after adjusting for the six stock splits since the shares were issued, was \$0.15 per share. What entry would Nike have recorded to account for the repurchase? Nike views the repurchase of stock as a formal retirement of shares.
3. Suppose Nike views the repurchase of stock as an acquisition of treasury stock. What entry would Nike have recorded to account for the repurchase?
4. Prepare the entries for the declaration and for the payment of the cash dividend announced in the press release.

Source: Nike, Inc.

Analysis Case 18–5 Issuance of shares; share issue costs; disclosure note prepare a report  **LO18–4**

You are the newest member of the staff of Brinks & Company, a medium-size investment management firm. You are supervised by Les Kramer, an employee of two years. Les has a

reputation as being technically sound but has a noticeable gap in his accounting education. Knowing you are knowledgeable about accounting issues, he requested you provide him with a synopsis of accounting for share issue costs.

“I thought the cost of issuing securities is recorded separately and expensed over time,” he stated in a handwritten memo. “But I don’t see that for IBR’s underwriting expenses. What gives?”

Page 1099

He apparently was referring to a disclosure note on a page of a prospective investee’s annual report, photocopied and attached to his memo. To raise funds for expansion, the company sold additional shares of its \$0.10 par common stock. The following disclosure note appeared in the company’s most recent annual report:

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Note 10—Stock Transactions (in part)

In February and March, the Company sold 2,395,000 shares of Common Stock at \$22.25 per share in a public offering. Net proceeds to the Company were approximately \$50.2 million after the underwriting discount and offering expenses.

Required:

1. How did IBR account for the share issue costs?
2. At what total amount did the shares sell to the public?
3. Prepare the appropriate journal entry to record the sale of the shares.

Analysis Case 18–6 Analyzing financial statements; price-earnings ratio; dividend payout ratio; financial statement effects

LO18–1

AGF Foods Company is a large, primarily domestic, consumer foods company involved in the manufacture, distribution, and sale of a variety of food products. Industry averages are derived from Troy’s *The Almanac of Business and Industrial Financial Ratios* and Dun and Bradstreet’s *Industry Norms and Key Business Ratios*. Following are the 2024 and 2023 comparative income statements and balance sheets for AGF. The market price of AGF’s common stock is \$47 at the end of 2024. (The financial data we use are from actual

financial statements of a well-known corporation, but the company name used in our illustration is fictitious and the numbers and dates have been modified slightly to disguise the company's identity.)

Profitability is the key to a company's long-run survival. Profitability measures focus on a company's ability to provide an adequate return relative to resources devoted to company operations.

Required:

1. Calculate the return on shareholders' equity for AGF. The average return for the stocks listed on the New York Stock Exchange in a comparable period was 18.8%.
2. Calculate the return on assets for AGF.
3. Calculate AGF's earnings per share. The average return for the stocks listed on the New York Stock Exchange in a comparable time period was 5.4%.
4. Calculate AGF's earnings-price ratio.

Communication Case 18–7 IFRS; Is preferred stock debt or equity? Group interaction  **LO18–1**,  **LO18–9**

IFRS

An unsettled question in accounting for stock is this: Should preferred stock be recognized as a liability, or should it be considered equity? Under International Financial Reporting Standards, preferred stock (preference shares) often is reported as debt with the dividends reported in the income statement as interest expense. Under U.S. GAAP, that is the case only for “mandatorily redeemable” preferred stock.

Two opposing viewpoints are:

View 1: Preferred stock should be considered equity.

View 2: Preferred stock should be reported as a liability.

In considering this question, focus on conceptual issues regarding the practicable and theoretically appropriate treatment, unconstrained by GAAP.

Required:

1. Which view do you favor? Develop a list of arguments in support of your view prior to the class session for which the case is assigned.
2. In class, your instructor will pair you (and everyone else) with a classmate (who also has independently developed an argument).
 - a. You will be given three minutes to argue your view to your partner. Your partner likewise will be given three minutes to argue his or her view to you. During these three-minute presentations, the listening partner is not permitted to speak.
 - b. Then after each person has had a turn attempting to convince his or her partner, the two partners will have a three-minute discussion in which they will decide which view is more convincing and arguments will be merged into a single view for each pair.
3. After the allotted time, a spokesperson for each of the two views will be selected by the instructor. Each spokesperson will field arguments from the class in support of that view's position and list the arguments on the board. The class then will discuss the merits of the two lists of arguments and attempt to reach a consensus view, though a consensus is not necessary.

Ethics Case 18–8 The Swiss label maker; value of shares issued for equipment  **LO18–4**

Bricker Graphics is a privately held company specializing in package labels. Representatives of the firm have just returned from Switzerland, where a Swiss firm is manufacturing a custom-made high speed, color labeling machine. Confidence is high that the new machine will help rescue Bricker from sharply declining profitability. Bricker's chief operating officer, Don Benson, has been under fire for not reaching the company's performance goals of achieving a rate of return on assets of at least 12%.

The afternoon of his return from Switzerland, Benson called Susan Sharp into his office. Susan is Bricker's Controller.

Benson: I wish you had been able to go. We have some accounting issues to consider.

Sharp: I wish I'd been there, too. I understand the food was marvelous. What are the accounting issues?

Benson: They discussed accepting our notes at the going rate for a face amount of \$12.5 million. We also discussed financing with stock.

Sharp: I thought we agreed; debt is the way to go for us now.

Benson: Yes, but I've been thinking. We can issue shares for a total of \$10 million. The labeler is custom made and doesn't have a quoted selling price, but the domestic labelers we considered went for around \$10 million. It sure would help our rate of return if we keep the asset base as low as possible.

Required:

1. How will Benson's plan affect the return measure? What accounting issue is involved?
2. Is the proposal ethical?
3. Who would be affected if the proposal is implemented?

Data Analytics & Excel

Visit Connect to find a variety of Data Analytics activities that help build Excel, Tableau, and data visualization skills. Assignable materials **include Integrated Excel, Data Visualizations, Tableau Dashboard Activities, and Applying Tableau Cases.**

Continuing Cases

Target Case LO18-1, LO18-5

Target Corporation prepares its financial statements according to U.S. GAAP. Target's financial statements and disclosure notes for the year ended February 1, 2020, are available in Connect. This material also is available under the Investor Relations link at the company's website ( www.target.com). Target refers to its Shareholders' Equity as Shareholders' Investment.

Required:

1. Note 20, "Share Repurchase," provides the information we need to reconstruct the journal entry that summarizes Target's share repurchases in the year ended February 1, 2020. Provide that entry (dollars in millions, rounded to the nearest million).
2. Does Target account for share repurchases as (a) treasury stock or (b) retired shares?

Air France-KLM Case LO18-9

IFRS

Air France-KLM (AF), a Franco-Dutch company, prepares its financial statements according to International Financial Reporting Standards. AF's financial statements and disclosure notes for the year ended December 31, 2019, are available in Connect. This material is also available under the Finance link at the company's website (www.airfranceklm.com).

Required:

1. Locate Note 28.5 in AF's financial statements. What items comprise "Reserves and retained earnings" as reported in the balance sheet?
2. In its presentation of the components of the balance sheet, which is listed first, current assets or non-current assets? Does this approach differ from U.S. GAAP?
3. In its presentation of the components of the balance sheet, which is listed first, current liabilities or non-current liabilities? Does this approach differ from U.S. GAAP?

4. In its presentation of the components of the balance sheet, which is listed first, liabilities or shareholders' equity? Does this approach differ from U.S. GAAP?

CHAPTER 19

Share-Based Compensation and Earnings per Share

OVERVIEW

We've discussed a variety of employee compensation plans in prior chapters, including pension and other postretirement benefits in [Chapter 17](#). In this chapter, we look at some common forms of compensation in which the amount of the compensation employees receive is tied to the market price of company stock. We will see that these *share-based* compensation plans—restricted stock awards, restricted stock units, stock options, and stock appreciation rights—create shareholders' equity, which was the topic of the previous chapter, and which also often affects the way we calculate earnings per share, the topic of the second part of the current chapter. Specifically, we view these as *potential common shares* along with convertible securities, and we calculate earnings per share as if the securities already had been exercised or converted into additional common shares.

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

-  **LO19-1** Explain and implement the accounting for restricted stock plans. (p. 1104)
-  **LO19-2** Explain and implement the accounting for stock options. (p. 1106)
-  **LO19-3** Explain and implement the accounting for employee share purchase plans. (p. 1114)
-  **LO19-4** Distinguish between a simple and a complex capital structure. (p. 1116)
-  **LO19-5** Describe what is meant by the weighted-average number of common shares. (p. 1117)

-  **LO19-6** Differentiate the effect on EPS of the sale of new shares, a stock dividend or stock split, and the reacquisition of shares. (p. 1117)
-  **LO19-7** Describe how preferred dividends affect the calculation of EPS. (p. 1119)
-  **LO19-8** Describe how options, rights, and warrants are incorporated in the calculation of EPS. (p. 1120)
-  **LO19-9** Describe how convertible securities are incorporated in the calculation of EPS. (p. 1123)
-  **LO19-10** Determine whether potential common shares are antidilutive. (p. 1125)
-  **LO19-11** Describe the two components of the proceeds used in the treasury stock method and how restricted stock is incorporated in the calculation of EPS. (p. 1130)
-  **LO19-12** Explain the way contingently issuable shares are incorporated in the calculation of EPS. (p. 1131)
-  **LO19-13** Describe the way EPS information should be reported in an income statement. (p. 1133)
-  **LO19-14** Discuss the primary differences between U.S. GAAP and IFRS with respect to accounting for share-based compensation and earnings per share. (pp. 1110, 1112, and 1116)

FINANCIAL REPORTING CASE

Fabio Cardoso/Getty Images

Proper Motivation?

The coffee room discussion Thursday morning was particularly lively. Yesterday's press release describing National Electronic Ventures' choice of Sandra Veres as its president and chief operating officer was today's hot topic in all the company's departments. The press release noted that Ms. Veres's compensation package includes elements beyond salary that are intended to not only motivate her to accept the offer, but also to remain with the company and work to increase shareholder value. Excerpts from the release follow:

National Electronic Ventures, Inc., today announced it had attracted G. Sandra Veres, respected executive from the wireless communications industry, to succeed chairman Walter Kovac. Veres will assume the new role as CEO on Jan. 1, 2024. Ms. Veres will receive a compensation package at NEV of more than \$1 million in salary, stock options to buy more than 800,000 shares of NEV stock, and a grant of restricted stock.

QUESTIONS

By the time you finish this chapter, you should be able to respond appropriately to the questions posed in this case. Compare your response to the solution provided at the end of the chapter.

1. How can a compensation package such as this serve as an incentive to Ms. Veres?

- 2.** Ms. Veres received a “grant of restricted stock.” How should NEV account for the grant?
- 3.** Included were stock options to buy more than 800,000 shares of NEV stock. How will the options affect NEV’s compensation expense?
- 4.** How will the presence of these and other similar stock options affect NEV’s earnings per share?)

PART A

Share-Based Compensation

Employee compensation plans frequently include share-based awards. These awards are forms of payment whose value is dependent on the value of the company's stock. These may be outright awards of shares, stock options, or cash payments tied to the market price of shares. Sometimes only key executives participate in a stock benefit plan. In fact, CEOs often get more than half their total compensation from share-based compensation plans. Typically, an executive compensation plan is tied to performance in a strategy that uses compensation to motivate its recipients. Some firms pay their directors entirely in shares. Actual compensation depends on the market value of the shares. Obviously, that's quite an incentive to act in the best interests of shareholders.

Although the variations of share-based compensation plans are seemingly endless, each shares common goals. Whether the plan is a stock award plan, a stock option plan, a stock appreciation rights (SARs) plan, or one of the several similar plans, the goals are to provide compensation to designated employees, while sometimes providing those employees with some sort of performance incentive. Likewise, our goals in accounting for each of these plans are the same for each: (1) to determine the fair value of the compensation and (2) to expense that compensation over the periods in which participants perform services. The issue is not trivial. Salary often is a minor portion of executive pay relative to stock awards and stock options.

The accounting objective is to record compensation expense over the periods in which related services are performed.

Restricted Stock Plans

LO19–1 Explain and implement the accounting for restricted stock plans.

Executive compensation sometimes includes a grant of shares of stock or the right to receive shares. Usually, such shares are restricted in such a way as to provide some incentive to the recipient. Typically, restricted stock award plans are tied to continued employment. For CEOs in the S&P 500, stock awards represent over 50 percent of their pay.¹ The two primary types of restricted stock plans are (a) restricted stock awards and (b) restricted stock units. Let's compare the two.

Restricted Stock Awards

In a **restricted stock award**, shares actually are awarded in the name of the employee, although the company might retain physical possession of the shares. The employee has all rights of a shareholder, subject to certain restrictions or forfeiture. Ordinarily, the shares are subject to forfeiture by the employee if employment is terminated within some specified number of years from the date of grant. The employee usually is not free to sell the shares during the restriction period, and a statement to that effect often is inscribed on the stock certificates. These restrictions give the employee incentive to remain with the company until rights to the shares vest.

Usually, restricted shares are subject to forfeiture if the employee doesn't remain with the company.

The compensation associated with a share of restricted stock is the market price at the grant date of an unrestricted share of the same stock. This amount is accrued as compensation expense with a credit to paid-in capital—restricted stock, over the service period for which participants receive the shares, usually from the date of grant to when restrictions are lifted (the vesting date).² Once the shares vest and the restrictions are lifted, paid-in capital—restricted stock is replaced by common stock and paid-in capital—excess of par. Any market price changes that might occur after the grant date don't affect the total compensation. This is essentially the same as accounting for restricted stock units to be settled in shares, as demonstrated in the next section.

Restricted Stock Units

An increasingly popular variation of restricted stock awards is **restricted stock units (RSUs)**. In fact, RSUs have become a much more popular form of compensation than their restricted stock award cousins. A restricted stock unit is a right to receive a specified number of shares of company stock. It could be a performance bonus, a signing bonus, or regular compensation. The employee doesn't receive the stock right away. Instead, the shares are distributed as the recipient of RSUs satisfies the vesting requirement.³ So, like restricted stock awards, the recipient benefits by the value of the shares at the end of the vesting period. Unlike restricted stock awards, though, the shares are not issued at the time of the grant. Delaying the payment of dividends to these not yet outstanding shares is more acceptable to other shareholders. As part of its share-based compensation plan, **Apple Inc.** provides compensation to employees in the form of RSUs as we see in  **Illustration 19-1**.

Illustration 19-1 Restricted Stock Units (RSUs); Apple Inc.

Real World Financials

Share-Based Compensation (in part)

Share-based compensation cost for RSUs is measured based on the closing fair market value of the Company's common stock on the date of grant. . . . The Company recognizes share-based compensation expense over the award's requisite service period on a straight-line basis.

Source: Apple Inc.

Terms of RSUs vary.⁴ Sometimes, the recipient is given the *cash equivalent* of the number of shares used to value the RSUs. Or, the terms might stipulate that either the recipient or the company is allowed to choose whether to settle in stock or cash.

Page 1105

Although RSUs delay the issuance of shares and avoid some administrative complexities of outright awards of restricted stock, accounting for RSUs to be settled in stock is essentially the same as for restricted stock awards. We see accounting for award plans or units of restricted stock demonstrated in  **Illustration 19-2**.

Illustration 19-2 Restricted Stock Award Plans or Restricted Stock Units (RSUs)

The total compensation is the market value of the shares (\$12) times 5 million shares.

The \$60 million is accrued to compensation expense over the four-year service period.

When restrictions are lifted, paid-in capital—restricted stock, is replaced by common stock and paid-in capital—excess of par.

Under its restricted stock unit (RSU) plan, Universal Communications grants RSUs representing 5 million of its \$1 par common shares to certain key executives at January 1, 2024.

- The shares are subject to forfeiture if employment is terminated within four years.
- Shares have a current market price of \$12 per share.

January 1, 2024

No entry

Calculate total compensation expense:

$$\begin{array}{r} \$12 \\ \times \quad 5 \text{ million} \\ \hline = \$60 \text{ million} \end{array}$$

The total compensation is to be allocated to expense over the four-year service (vesting) period: 2024–2027.

$$\$60 \text{ million} \div 4 \text{ years} = \$15 \text{ million per year}$$

| December 31, 2024, 2025, 2026, 2027 | (\$ in millions) |
|---|------------------|
| Compensation expense (\$60 million ÷ 4 years) | 15 |
| Paid-in capital—restricted stock | 15 |
| December 31, 2027 | |
| Paid-in capital—restricted stock (5 million shares at \$12) | 60 |
| Common stock (5 million shares at \$1 par) | 5 |

On the other hand, *if the employee will receive cash* or can elect to receive cash, we consider the award to be a *liability* rather than equity, as is the case in  **Illustration 19-2**. When an RSU is considered to be a liability, we determine its fair value at the grant date and recognize that amount as compensation expense over the requisite service period consistent with the way we account for restricted stock awards, RSUs, and other share-based compensation. However, because these plans are considered to be liabilities payable in cash, the credit portion of the entry as we recognize compensation expense each year is to Liability—restricted stock. And, it's necessary to periodically adjust the liability (and corresponding compensation) based on the change in the stock's fair value until the liability is paid. Note that this is consistent with the way we account for other liabilities. Accounting for share-based compensation that's considered to be a liability is demonstrated in Appendix 19B of the chapter.

If restricted stock shares or RSUs are forfeited because, say, the employee leaves the company, entries previously made related to that specific employee simply would be reversed. This would result in a decrease in compensation expense in the year of forfeiture. The total compensation, adjusted for the forfeited amount, is then allocated over the remaining service period.

Additional Consideration

An alternative way of accomplishing the same result is to debit deferred compensation for the full value of the RSUs (\$60 million in the illustration) on the date they are granted.

| | (\$ in millions) |
|--|------------------|
| Deferred compensation (5 million shares at \$12) | 60 |
| Common stock (5 million shares at \$1 par) | 5 |

Paid-in capital—excess of par
(difference)

55

If so, deferred compensation (a term used for delayed recognition of compensation expense) is reported as a reduction in shareholders' equity, resulting in a zero net effect on shareholders' equity. Then, deferred compensation is credited when compensation expense is debited over the service period. Just as in  **Illustration 19–2**, the result is an increase in both compensation expense and paid-in capital each year over the vesting period.

Stock Option Plans

LO19–2 Explain and implement the accounting for stock options.

Often, employees aren't actually awarded shares, but rather are given the option to buy shares in the future. For CEOs in the S&P 500, stock options represent about 13% percent of their pay.⁵ As with any compensation plan, the accounting objective for stock options is to report compensation expense during the period of service for which the compensation is given.

Recognizing the Fair Value of Options

Accounting for stock options parallels the accounting for restricted stock we discussed in the first part of this chapter. That is, we measure compensation as the fair value of the stock options at the grant date and then record that amount as compensation expense over the service period for which employees receive the options. Estimating the fair value requires the use of one of several option pricing models. These mathematical models assimilate a variety of information about a company's stock and the terms of the stock option to estimate the option's fair value. The model should take into account the following:

The fair value of a stock option can be determined by employing a recognized option pricing model.

- Exercise price of the option.
- Expected term of the option.
- Current market price of the stock.
- Expected dividends.
- Expected risk-free rate of return during the term of the option.
- Expected volatility of the stock.

An option pricing model takes into account several variables.

Current GAAP accounting for employee stock options modified the way companies actually measure fair value. It calls for using models that permit greater flexibility in modeling the ways employees are expected to exercise options and their expected employment termination

patterns after options vest.⁶ Option-pricing theory, on which the pricing models are based, is a topic explored in depth in finance courses and is subject to active empirical investigation and development. A simplified discussion is provided in Appendix 19A.⁷

The total compensation, as estimated by the options' fair value, is reported as compensation expense over the period of service for which the options are given. Recipients normally are not allowed to exercise their options for a specified number of years. This delay provides added incentive to remain with the company. The time between the date options are granted and the first date they can be exercised is the vesting period and usually is considered to be the service period over which the compensation expense is reported. The process is demonstrated in  **Illustration 19-3**.

Illustration 19-3 Stock Options

Fair value is estimated at the date of grant.

The value of the award is expensed over the service period for which the compensation is provided.

At January 1, 2024, Universal Communications grants 10 million options to key executives.

- The options permit recipients to acquire 10 million of the company's \$1 par common shares within the next eight years, but not before December 31, 2027 (the vesting date).
- The exercise price is the market price of the shares on the date of grant, \$35 per share.
- The fair value of the options, estimated by an appropriate option pricing model, is \$8 per option.

January 1, 2024

No entry

Calculate total compensation expense:

| | |
|----------------|---------------------------------|
| \$ 8 | Estimated fair value per option |
| × 10 million | Options granted |
| = \$80 million | Total compensation |

The total compensation is allocated to expense over the four-year service (vesting) period: 2024–2027.

$$\text{\$80 million} \div 4 \text{ years} = \text{\$20 million per year}$$

| December 31, 2024, 2025, 2026, 2027 | (\$ in millions) |
|--|------------------|
| Compensation expense (\\$80 million ÷ 4 years) | 20 |
| Paid-in capital—stock options | 20 |

Forfeitures

If previous experience indicates that a material number of the options will be forfeited before they vest (due to employee turnover or violation of other terms of the options), we adjust the amount of compensation recorded (a) by estimating forfeitures or (b) as forfeitures occur.

Option compensation expense is based on the number of options expected to vest.

The default approach is to *estimate the percentage* of options that will be forfeited and adjust grant date calculation of the fair value of the options to reflect that expectation. For instance, if a forfeiture rate of 5% is expected, Universal’s estimated total compensation would be 95% of \$80 million, or \$76 million. In that case, the annual compensation expense in [Illustration 19-3](#) would have been **\\$19 million** ($\$76 \div 4$) instead of \$20 million. We see the effect of that possibility in [Illustration 19-3A](#).

Illustration 19-3A Default Approach: Forfeiture Estimates with Revisions

The value of the compensation is originally estimated to be **\\$76 million**, or **\\$19 million per year**.

The expense each year is the current estimate of total compensation that should have been recorded to date less the amount already recorded.

| Initial Expectation: | (\$ in millions) |
|-----------------------------|------------------|
| 2024 | |

| | | |
|---|----|----|
| Compensation expense $([\$80 \times 95\%] \div 4)$ | 19 | |
| Paid-in capital—stock options | | 19 |
| 2025 | | |
| Compensation expense $([\$80 \times 95\%] \div 4)$ | 19 | |
| Paid-in capital—stock options | | 19 |
| Estimate Revision after 2 Years: | | |
| 2026 | | |
| Compensation expense $([\$80 \times 90\% \times 3/4] - (\$19 + \$19))$ | 16 | |
| Paid-in capital—stock options | | 16 |
| 2027 | | |
| Compensation expense $([\$80 \times 90\% \times 4/4] - (\$19 + \$19 + \$16))$ | 18 | |
| Paid-in capital—stock options | | 18 |

What if that expectation changes later? Universal should adjust the cumulative amount of compensation expense recorded to date in the year the estimate changes. Suppose, for instance, that during the third year, Universal revises its estimate of forfeitures from 5% to 10%. The new estimate of total compensation would then be $\$80 \text{ million} \times 90\%$, or $\$72 \text{ million}$. For the first three years, the portion of the total compensation that should have been reported would be $\$72 \text{ million} \times \frac{3}{4}$, or $\$54 \text{ million}$, and since $\$38 \text{ million}$ ($\$19 \times 2$) of that was recorded in 2024–2025 before the estimate changed, an additional $\$16 \text{ million}$ would now be recorded in 2026. Then if the estimate isn't changed again, the remaining $\$18 \text{ million}$ ($\$72 - \54) would be recorded in 2027.

When forfeiture estimates change, the cumulative effect on compensation is reflected in current earnings.

Additional Consideration

Notice that the $\$18 \text{ million}$ in 2027 is the amount that would have been reported in each of the four years if Universal had assumed a 10% forfeiture rate from the beginning. This approach is contrary to the usual way companies account for changes in instance, assume a company acquires a

four-year depreciable asset having an estimated residual value of 5% of cost for \$80 million. The \$76 million depreciable cost would be depreciated straight-line at \$19 million over the four-year useful life. If the estimated residual value changes after two years to 10%, the new estimated depreciable cost of \$72 would be reduced by the \$38 million depreciation recorded the first two years, and the remaining \$34 million would be depreciated equally, \$17 million per year, over the remaining two years.

In an alternative approach, as a practical expedient, companies can elect to account for forfeitures of stock options (or restricted stock) when forfeitures actually occur, rather than estimate forfeitures that will occur during the vesting period. So rather than recording compensation expense and paid-in capital for the *net* amount of awards expected to vest, companies can choose to initially record compensation based on the total amount and then reduce compensation expense and paid-in capital only if and when forfeitures occur.⁸ Once a forfeiture occurs, we adjust the cumulative amount of compensation expense recorded to date in the year the forfeiture occurs and thereafter in a manner similar to the way estimates are adjusted as demonstrated in [Illustration 19-3A](#).

Companies can elect to account for forfeitures when forfeitures actually occur rather than estimate them.

This election applies only to forfeitures related to employee turnover. To demonstrate the alternative approach, let's say Universal Communications recorded compensation of \$20 million in both 2024 and 2025 based on the \$80 million fair value of the stock options issued at the beginning of 2024. Then, in 2026, options with a fair value of \$8 million when granted are forfeited due to executive turnover. Universal's journal entries would look like those in [Illustration 19-3B](#).

Illustration 19-3B Optional Approach: Revisions as Forfeitures Occur

| December 31, 2024 | (\$ in millions) |
|---|------------------|
| Compensation expense (\$80 million ÷ 4 years) | 20 |
| Paid-in capital—stock options | 20 |
| December 31, 2025 (\$ in millions) | |
| Compensation expense (\$80 million ÷ 4 years) | 20 |
| Paid-in capital—stock options | 20 |

When Actual Forfeitures Occur in the Third Year:

December 31, 2026 (\$ in millions)

| | |
|--|----|
| Compensation expense $([(\$80 - \$8) \times \frac{3}{4}] - \$20 - \$20)$ | 14 |
| Paid-in capital—stock options | 14 |

December 31, 2027 (\$ in millions)

| | |
|---|----|
| Compensation expense $([(\$80 - \$8) \times \frac{4}{4}] - \$20 - \$20 - \$14)$ | 18 |
| Paid-in capital—stock options | 18 |

This election applies only to forfeitures related to employee *turnover*. For share-based plans with performance conditions (which we discuss later), companies must assess the probability that such conditions will be achieved. A company must disclose its policy election for forfeitures (estimated, or recorded as they occur).

When Options Are Exercised

If half the options in [Illustration 19-3](#) (5 million shares) are exercised on July 11, 2030, when the market price is \$50 per share, the following journal entry is recorded:

Recording the exercise of options is not affected by the market price on the exercise date.

| July 11, 2030 | (\$ in millions) |
|--|------------------|
| Cash ($\$35$ exercise price \times 5 million shares) | 175 |
| Paid-in capital—stock options ($\frac{1}{2}$ account balance) | 40 |
| Common stock (5 million shares at \$1 par per share) | 5 |
| Paid-in capital—excess of par (to balance) | 210 |

Notice that the market price at exercise is irrelevant. Changes in the market price of underlying shares do not influence the previously measured fair value of options.

When Unexercised Options Expire

If options that have vested expire without being exercised, the following journal entry is made (assuming the remaining 5 million options in our illustration are allowed to expire):

Paid-in capital—stock options becomes paid-in capital—expiration of stock options when options expire without being exercised.

| | (\$ in millions) |
|---|------------------|
| Paid-in capital—stock options (account balance) | 40 |
| Paid-in capital—expiration of stock options | 40 |

In effect, we rename the paid-in capital attributable to the stock option plan. Compensation expense for the four years' service, as of the measurement date, is not affected.

Additional Consideration

Tax Consequences of Stock-Based Compensation Plans In

 **Illustration 19–3**, we ignored the tax effect. To illustrate the effect of taxes, let's assume Universal Communications' income tax rate is 25%.

Tax treatment favors the employer in a nonqualified stock option plan.

For tax purposes, plans can either qualify as “incentive stock option plans” under the Tax Code or be “nonqualified plans.” Among the requirements of a qualified option plan is that the exercise price be equal to the market price at the grant date. Under a qualified **incentive plan**, the recipient pays no income tax until any shares acquired from exercise of stock options are subsequently sold. On the other hand, the company gets no tax deduction at all. With a **nonqualified plan** the employee can't delay paying income tax, but the employer is permitted to deduct the difference between the exercise price and the market price at the exercise date. Let's consider both.

Because an incentive plan provides no tax deduction, it has no deferred tax consequences.

Case 1. With an incentive plan, the employer receives no tax deduction at all. If Universal's plan qualifies as an incentive plan, the company will receive no tax deduction upon exercise of the options and thus no tax consequences.

Case 2. On the other hand, if we assume the plan does not qualify as an incentive plan, Universal will deduct from taxable income the difference between the exercise price and the market price at the exercise date. Recall from Chapter 16 that this creates a temporary difference between accounting income (for which compensation expense is recorded currently) and taxable income (for which the tax deduction is taken later upon the exercise of the

options). We assume the temporary difference is the cumulative amount expensed for the options. The following entries would be recorded on the dates shown:

The difference between the market price at exercise and the eventual tax savings is recognized in income tax expense.

| December 31, 2024, 2025, 2026, 2027 | (\$ in millions) |
|---|-------------------------|
| Compensation expense (\$80 million ÷ 4 years) | 20 |
| Paid-in capital—stock options | 20 |
| Deferred tax asset (25% × \$20 million) | 5 |
| Income tax expense | 5 |

The after-tax effect on earnings is thus \$15 million each year (\$20 – \$5). If all of the options (for 10 million shares) are exercised on April 4, 2029, when the stock’s market price is **\$50** per share:

A deferred tax asset is recognized now for the future tax savings from the tax deduction when the nonqualified stock options are exercised.

| | |
|--|------|
| Cash (\$35 exercise price × 10 million shares) | 350 |
| Paid-in capital—stock options (account balance) | 80 |
| Common stock (10 million shares at \$1 par per share) | 10 |
| Paid-in capital—excess of par (to balance) | 420 |
| Income tax payable [(\$50 – \$35) × 10 million shares × 25%] | 37.5 |
| Deferred tax asset (4 years × \$5 million) | 20.0 |
| Income tax expense (remainder) | 17.5 |

The tax consequences of all nonqualifying stock options as well as restricted stock plans also are accounted for in the manner demonstrated above.

LO19–14 Discuss the primary differences between U.S. GAAP and IFRS with respect to accounting for share-based compensation and earnings per share.

International Financial Reporting Standards

Recognition of Deferred Tax Asset for Stock Options. Under U.S. GAAP, a deferred tax asset (DTA) is created for the cumulative amount of the fair value of the options the company has recorded for compensation expense. The DTA is the tax rate times the amount of compensation.

Under IFRS, the deferred tax asset isn't created until the award is "in the money"; that is, it has intrinsic value. When it is in the money, the addition to the DTA is the portion of the intrinsic value earned to date times the tax rate.

Plans with Graded Vesting

The stock option plans we've discussed so far vest (become exercisable) on one single date (e.g., four years from date of grant). This is referred to as *cliff vesting*. More frequently, though, awards specify that recipients gradually become eligible to exercise their options rather than all at once. This is called *graded vesting*. For instance, a company might award stock options that vest 25% the first year, 25% the second year, and 50% the third year, or maybe 25% each year for four years.

In such a case, the company can choose to account for the options essentially the same as the cliff-vesting plans we've discussed to this point. It can estimate a single fair value for each of the options, even though they vest over different time periods, using a single weighted-average expected life of the options. The company then allocates that total

compensation cost (fair value per option times number of options) over the entire vesting period.

Most companies, though, choose a slightly more complex method because it usually results in a lower expense.⁹ In this approach, we view each vesting group (or tranche) separately, as if it were a separate award. See  **Illustration 19-4**.

Illustration 19-4 Stock Options; Graded Vesting; Separate Valuation Approach

At any given date, a company must have recognized at least the amount vested by that date. The allocation in this instance meets that constraint:

- The \$23 million recognized in 2024 exceeds the \$7 million vested.
- The \$39 million (\$23 + \$16) recognized by 2025 exceeds the \$19 million (\$7 + \$12) vested by the same time.

Companies also can choose to use the straight-line method, which would allocate the \$49 million total compensation cost equally to 2024, 2025, and 2026 at \$16.333 million per year.

LO19-14 Discuss the primary differences between U.S. GAAP and IFRS with respect to accounting for share-based compensation and earnings per share.

International Financial Reporting Standards

When options have graded vesting, U.S. GAAP permits companies to account for each vesting amount separately, for instance, as if there were three separate awards as in the previous illustration, but also allows companies the option to account for the entire award on a straight-line basis over the entire vesting period. Either way, the company must recognize at least the amount of the award that has vested by that date.

Under IFRS, the straight-line choice is not permitted. Also, there's no requirement that the company must recognize at least the amount of the award that has vested by each reporting date.

Plans with Performance or Market Conditions

Stock option (and other share-based) plans often specify a performance condition or a market condition that must be satisfied before employees are allowed the benefits of the award. The objective is to provide employees with additional incentives for managerial achievement. For instance, an option might not be exercisable until a performance target is met. The target could be divisional revenue, earnings per share, sales growth, or rate of return on assets. The possibilities are limitless. On the other hand, the target might be market-related, perhaps a specified stock price or a stock price change exceeding a particular index. The way we account for such plans depends on whether the condition is performance-based or market-based.

The terms of performance options vary with some measure of performance that ties rewards to productivity.

PLANS WITH PERFORMANCE CONDITIONS

Whether we recognize compensation expense for performance-based options depends (a) initially on whether it's probable¹⁰ that the performance target will be met and (b) ultimately on whether the performance target actually is met. Accounting is as

If compensation from a stock option depends on meeting a performance target, compensation is recorded only if we feel it's probable the target will be met.

described earlier for other stock options. Initial estimates of compensation cost, as well as subsequent revisions of that estimate, take into account the likelihood of both forfeitures and achieving performance targets. For example, in [Illustration 19-3](#), if the options described also had included a condition that the options would become exercisable only if sales increase by 10% after four years, we would estimate the likelihood of that occurring; specifically, is it probable? Let's say we initially estimate that it is probable that sales will increase by 10% after four years. Then, our initial estimate of the total compensation would have been unchanged at

$$\begin{array}{rcl}
 10 \text{ million} & \times & \$8 \\
 \text{Options} & & \\
 \text{expected} & & \text{Fair value} \\
 \text{to vest} & & \text{per option} \\
 & = & \$80 \text{ million} \\
 & & \text{Estimated} \\
 & & \text{total} \\
 & & \text{compensation}
 \end{array}$$

Suppose, though, that after two years, we estimate that it is *not* probable that sales will increase by 10% after four years. Then, our new estimate of the total compensation would change to

If it later becomes probable that a performance target will not be met, we reverse any compensation expense already recorded.

$$\begin{array}{rcl}
 0 & \times & \$8 \\
 \text{Options} & & \text{Fair value} \\
 \text{expected} & & \text{per option} \\
 \text{to vest} & & \\
 & = & \$0 \\
 & & \text{Estimated} \\
 & & \text{total} \\
 & & \text{compensation}
 \end{array}$$

In that case, we would reverse the \$40 million expensed in 2024–2025. No compensation can be recognized for options that don't vest due to performance targets not being met, and that's our expectation.

Conversely, assume that our initial expectation is that it is *not* probable that sales will increase by 10% after four years, and so we record no annual compensation expense. But then, in the third year, we estimate that it *is* probable that sales will increase by 10% after four years. At that point, our revised estimate of the total compensation would change to \$80

When we revise our estimate of total compensation because our expectation of probability changes, we record the effect of the change in the current period.

million, and we would reflect the cumulative effect on compensation in 2026 earnings and record compensation thereafter:

If we had begun with our new estimate of total compensation, \$20 million would have been expensed in each of the first three years.

| 2026 | |
|---|----|
| Compensation expense $[(\$80 \times \frac{3}{4}) - \$0]$ | 60 |
| Paid-in capital—stock options | 60 |
| 2027 | |
| Compensation expense $[(\$80 \times \frac{1}{4}) - \$60]$ | 20 |
| Paid-in capital—stock options | 20 |

Additional Consideration

Suppose an executive who is granted some of the performance-based options in this example is eligible to retire on January 1, 2024. So, when the options are granted she would be eligible to receive the options even if the performance target (sales increase by 10%) is met after she retires. In that case, the service period needed to receive compensation effectively is one day. Should compensation for her be measured and expensed over the vesting period as in the example, or should that compensation be measured and recorded all at once (full amount if probable, zero otherwise) on the grant date?

It should be treated the same as the compensation for the other options. It should be treated as a performance condition consistent with those for which the requisite service period is not met prior to the performance target being met. So, we would record no compensation expense until meeting the performance target is probable, even if this is not until *after* the requisite vesting period is completed. An important secondary benefit of this treatment is that the employer doesn't need to assess at the grant date whether certain employees are retirement-eligible or will become retirement-eligible during the performance period in order to value the awards.¹¹

This treatment differs from that of International Financial Reporting Standards, which specifies that if the performance target can be met *after* the requisite vesting period is completed, compensation should be measured and recorded all at once (full amount if probable, zero otherwise) on the grant date.

PLANS WITH MARKET CONDITIONS

If the award contains a market condition (e.g., a share option with an exercisability requirement based on the stock price reaching a specified level), then no special accounting is required. The fair value estimate of the share option already implicitly reflects market

conditions due to the nature of share option pricing models. So, we recognize compensation expense regardless of when, if ever, the market condition is met.

If the target is based on changes in the market rather than on performance, we record compensation as if there were no target.

DECLINE IN POPULARITY OF OPTIONS

Recent years have witnessed a steady shift in the way companies compensate their top executives. At their peak in 1999, stock options represented about 78% of the average executive's incentive pay. In 2019, stock options accounted for 13% of S&P 500 executive pay, while restricted stock accounted for over 50%.¹² In the wake of past notorious accounting scandals, the image of stock options was tarnished in the view of many who believed that the potential to garner millions in stock option gains created incentives for executives to boost company stock prices through risky or fraudulent behavior. That image motivated many firms to move away from stock options in favor of other forms of share-based compensation, particularly restricted stock awards and, restricted stock units. Also contributing to the rise of restricted stock is the feeling by many that it better aligns pay with performance. From the executive's perspective, restricted stock is a more certain, though potentially less lucrative, form of compensation.

Employee Share Purchase Plans

LO19–3 Explain and implement the accounting for employee share purchase plans.

Employee share purchase plans often permit all employees to buy shares directly from their company at favorable terms. The primary intent of these plans is to encourage employee ownership of the company's shares. Presumably, loyalty is enhanced among employee-shareholders. The employee also benefits because, these plans typically allow employees to buy shares from their employer without brokerage fees and, perhaps, at a slight discount. Some companies even encourage participation by matching or partially matching employee purchases.

Share purchase plans permit employees to buy shares directly from the corporation.

When accounting for employee share purchase plans (ESPPs), we need to determine whether or not they provide compensation to employees. If not, we simply record the sale of new shares as employees buy them and do not record compensation expense. An ESPP is considered noncompensatory as long as

1. Substantially all employees can participate.
2. Employees have no longer than one month after the price is fixed to decide whether to participate.
3. The discount is no greater than 5% (or can be justified as reasonable).

If these criteria for the plan being noncompensatory are *not* met, say the discount is 15%, accounting is similar to other share-based plans. The 15% discount to employees, then, is considered to be compensation, and that amount is recorded as expense.¹³ Compensation expense replaces the cash debit for any employer-provided portion. Say an employee buys shares (no-par) under the plan for \$850 rather than the current market price of \$1,000. The \$150 discount is recorded as compensation expense.

| | |
|--|-----|
| Cash (discounted price) | 850 |
| Compensation expense ($\$1,000 \times 15\%$) | 150 |

Decision Makers' Perspective

In several previous chapters, we have revisited the concept of “earnings quality” (as first defined in Chapter 4). We have noted that one rather common practice that negatively influences earnings quality is earnings management, which refers to companies’ use of one or more of several techniques designed to artificially increase (or decrease) earnings. A frequent objective of earnings management is to meet analysts’ expectations regarding projections of income. The share-based compensation plans we discuss in this chapter suggest another motive managers sometimes have to manipulate income. If a manager’s personal compensation includes company stock, stock options, or other compensation based on the value of the firm’s stock, it’s not hard to imagine an increased desire to ensure that market expectations are met and that reported earnings have a positive effect on stock prices. In fact, as we discussed earlier, that is precisely the reaction these incentive compensation plans are designed to elicit. Investors and creditors, though, should be alert to indications of attempts to artificially manipulate income and realize that the likelihood of earnings management is probably higher for companies with generous share-based compensation plans.

Analysts should be aware of the possibility of earnings management as a way to increase managers’ compensation.

One way managers might manipulate numbers is to low ball the data that go into the option-pricing models. The models used to estimate fair value are built largely around subjective assumptions. That possibility emphasizes the need for investors to look closely at the assumptions reported in the stock option disclosure note, and particularly at how those assumptions change from year to year. ●

Concept Review Exercise

SHARE-BASED COMPENSATION PLANS

Listed below are transactions dealing with various stock benefit plans of Fortune-Time Corporation during the period 2024–2026. The market price of the stock is \$45 at January 1, 2024.

- a. On January 1, 2024, the company issued 10 million common shares to divisional managers under its restricted stock award plan. The shares are subject to forfeiture if employment is terminated within three years.
- b. On January 1, 2024, the company granted incentive stock options to its senior management, exercisable for 1.5 million common shares. The options must be exercised within five years, but not before January 1, 2026. The exercise price of the stock options is equal to the fair value of the common stock on the date the options are granted. An option pricing model estimates the fair value of the options to be \$4 per option. All recipients are expected to remain employed through the vesting date.
- c. Recorded compensation expense on December 31, 2024.
- d. A divisional manager holding 1 million of the restricted shares left the company to become CEO of a competitor on September 15, 2025, before the required service period ended.
- e. Recorded compensation expense on December 31, 2025.

Required:

Prepare the journal entries that Fortune-Time recorded for each of these transactions. (Ignore any tax effects.)

Solution:

January 1, 2024

Restricted Stock Award Plan

No entry.

Total compensation is measured as 10 million shares \times \$45 = \$450 million.

Stock Options

No entry.

Total compensation is measured as 1.5 million shares \times \$4 = \$6 million.

December 31, 2024

| | |
|---|-------------------------|
| <i>Restricted Stock</i> | <i>(\$ in millions)</i> |
| Compensation expense ($\$450 \text{ million} \div 3 \text{ years}$) | 150 |

| | |
|---|-----|
| Paid-in capital—restricted stock | 150 |
| <i>Stock Options</i> | |
| Compensation expense (\$6 million ÷ 2 years) | 3 |
| Paid-in capital—stock options | 3 |
| September 15, 2025 | |
| <i>Restricted Stock</i> | |
| Paid-in capital—restricted stock (10% × \$150) | 15 |

| December 31, 2025 | |
| <i>Restricted Stock</i> | |
| Compensation expense [$\$450 - (10\% \times \$450) - \$150 + \15] ÷ 2 years | 135 |
| Paid-in capital—restricted stock | 135 |
| <i>Stock Options</i> | |
| Compensation expense (\$6 million ÷ 2 years) | 3 |
| Paid-in capital—stock options | 3 |

PART B

Earnings per Share

A typical corporate annual report contains four comparative financial statements, an extensive list of disclosure notes and schedules, and several pages of charts, tables, and textual descriptions. Of these

myriad facts and figures, the single accounting number reported most frequently in the media and receives by far the most attention by investors and creditors is **earnings per share** (EPS). The reasons for the considerable attention paid to earnings per share certainly include the desire to find a way to summarize the performance of business enterprises into a single number.

Earnings per share is the single accounting number that receives the most media attention.

Summarizing performance in a way that permits comparisons is difficult because the companies that report the numbers are different from one another. And yet, the desire to condense performance to a single number has created a demand for EPS

information. The profession has responded with rules designed to maximize the comparability of EPS numbers by minimizing the inconsistencies in their calculation from one company to the next.¹⁴

Comparability is an enhancing characteristic of relevant accounting information (Conceptual Framework).

Keep in mind as you study the requirements that a primary goal is comparability. As a result, many of the rules devised to achieve consistency are unavoidably arbitrary, meaning that other choices the FASB might have made in many instances would be equally adequate.

LO19–14 Discuss the primary differences between U.S. GAAP and IFRS with respect to accounting for share-based compensation and earnings per share.

International Financial Reporting Standards

Earnings per Share. The earnings per share requirements of U.S. GAAP, *FASB ASC 260: Earnings per Share*, are a result of the FASB's cooperation with the IASB to narrow the differences between IFRS and U.S. GAAP. A few differences remain. The differences that remain are the result of differences in the application of the treasury stock method, the treatment of contracts that may be settled in shares or cash, and contingently issuable shares.

Basic Earnings per Share

LO19–4 Distinguish between a simple and a complex capital structure.

A firm is said to have a **simple capital structure** if it has no outstanding securities that could potentially dilute earnings per share. In this context, to dilute means to *reduce* earnings per share. For instance, if a firm has convertible bonds outstanding and those bonds are converted, the resulting increase in common shares could decrease (or dilute) earnings per share. That is,

A firm has a simple capital structure if it has no *potential common shares*.

Basic EPS reflects no dilution, only shares now outstanding.

the new shares replaced by the converted bonds might participate in future earnings. So convertible bonds are referred to as **potential common shares**. Other potential common shares are convertible preferred stock, stock options, and contingently issuable shares. We will see how the potentially dilutive effects of these securities are included in the calculation of EPS later in this chapter. Now, though, our focus is on the calculation of EPS for a simple capital structure—when no potential common shares are present. In these cases, the calculation is referred to as **basic EPS** and is simply earnings available to common shareholders divided by the weighted-average number of common shares outstanding.

In the most elemental setting, earnings per share (or net loss per share) is merely a firm's net income (or net loss) divided by the number of shares of common

EPS expresses a firm's profitability on a per share basis.

stock outstanding throughout the year. The calculation becomes more demanding (a) when the number of shares has changed during the reporting period, (b) when the earnings available to common shareholders are diminished by dividends to preferred shareholders, or (c) when we attempt to take into account the impending effect of potential common shares (which we do in a later section of the chapter). To illustrate the calculation of EPS in each of its dimensions, we will use only one example in this chapter. We'll start with the most basic situation and then add one new element at a time until we have considered all the principal ways the calculation can be affected. In this way, you can see the effect of each component of earnings per share, not just in isolation, but in relation to the effects of other components as well. The basic calculation is shown in  **Illustration 19-5**.

Illustration 19-5 Fundamental Calculation

In the most elemental setting, earnings per share is simply a company's earnings divided by the number of shares outstanding.

Sovran Financial Corporation reported net income of \$154 million in 2024 (tax rate 25%). Its capital structure consisted of the following:

Common Stock

Jan. 1 60 million common shares were outstanding
(\$ amounts in millions, except per share amount)

Basic EPS:

$$\frac{\begin{array}{r} \text{Net income} \\ \$154 \end{array}}{\begin{array}{r} 60 \\ \text{Shares} \\ \text{outstanding} \end{array}} = \$2.57$$

Issuance of New Shares

LO19-5 Describe what is meant by the weighted-average number of common shares.

Because the shares discussed in [Illustration 19-5](#) remained unchanged throughout the year, the denominator of the EPS calculation is simply the number of shares outstanding. But if the number of shares has changed, it's necessary to find the *weighted average* of the shares outstanding during the period the earnings were generated. For instance, if an additional 12 million shares had been issued on March 1 of the year just ended, we calculate the weighted-average number of shares to be 70 million, as demonstrated in [Illustration 19-6](#).

Illustration 19–6 Weighted Average

Any new shares issued are time-weighted by the fraction of the period they were outstanding and then added to the number of shares outstanding for the entire period.

Sovran Financial Corporation reported net income of \$154 million for 2024 (tax rate 25%). Its capital structure included the following:

Common Stock

Jan. 1 60 million common shares were outstanding

Mar. 1 12 million new shares were sold

(\$ amounts in millions, except per share amount)

Basic EPS:

$$\frac{\begin{array}{c} \text{Net income} \\ \$154 \end{array}}{\begin{array}{c} 60 \\ \text{Shares} \\ \text{at Jan. 1} \end{array} + \begin{array}{c} 12 \left(\frac{10}{12}\right) \\ \text{New} \\ \text{shares} \end{array}} = \frac{\$154}{70} = \$2.20$$

Because the new shares were outstanding only 10 months, or $\frac{10}{12}$ of the year, we increase the 60 million shares already outstanding by the additional shares—weighted by the fraction of the year ($\frac{10}{12}$) they were outstanding. The weighted average is $60 + 12 \left(\frac{10}{12}\right) = 60 + 10 = 70$ shares. The reason for time-weighting the shares issued is that the resources the stock sale provides the company are available for generating income only after the date the shares are sold. So, weighting is necessary to make the shares in the fraction's denominator consistent with the income in its numerator (see [Illustration 19–6](#)).

Stock Dividends and Stock Splits

LO19–6 Differentiate the effect on EPS of the sale of new shares, a stock dividend or stock split, and the reacquisition of shares.

Recall that a stock dividend or a stock split is a distribution of additional shares to existing shareholders. But there's an important and fundamental difference between the increase in shares caused by a stock dividend and an increase from selling new shares. When new shares are sold, both assets and shareholders' equity are increased by an additional investment in the firm by shareholders. On the other hand, a stock dividend or stock split merely increases the number of shares without affecting the firm's assets. In effect, the same pie is divided into more pieces. The result is a larger number of less valuable shares. This fundamental change in the nature of the shares is reflected in a calculation of EPS by simply increasing the number of shares.

In  **Illustration 19-7**, notice that the additional shares created by the stock dividend are *not* weighted for the time period they were outstanding. Instead, the increase is treated as if it occurred at the beginning of the year.

Illustration 19-7 Stock Dividends and Stock Splits

Shares outstanding prior to the stock dividend are retroactively restated to reflect the 10% increase in shares— that is, treated as if the distribution occurred at the beginning of the period.

Sovran Financial Corporation reported net income of \$154 million in 2024 (tax rate 25%). Its capital structure included the following:

Common Stock

Jan. 1 60 million common shares were outstanding

Mar. 1 12 million new shares were sold

June 17 **A 10% stock dividend was distributed**

(\$ amounts in millions, except per share amount)

Basic EPS:

$$\frac{\text{Net income } \$154}{\text{Shares at Jan. 1 } 60 + \text{New shares } 12 + \text{Stock dividend adjustment } (1.10)} = \frac{\$154}{77} = \$2.00$$

The number of shares outstanding after a 10% stock dividend is **1.10** times higher than before. This multiple is applied to both the beginning shares and the new shares sold before the stock distribution. If this had been a 25% stock dividend, the multiple would have been 1.25; a 2-for-1 stock split means a multiple of 2, and so on.

Notice that EPS without the 10% stock dividend (\$2.20) is 10% more than it is with the stock distribution (\$2). This is caused by the increase in the number of shares. But, unlike a sale of new shares, this should not be interpreted as a “dilution” of earnings per share. Shareholders’ interests in their company’s earnings have not been diluted. Instead, each shareholder’s interest is represented by more—though less valuable—shares.

A simplistic but convenient way to view the effect is to think of the predistribution shares as having been “blue.” After the stock dividend, the more valuable “blue” shares are gone, replaced by a larger number of, let’s say, “green” shares. From now on, we compute the earnings per “green” share, whereas we previously calculated earnings per “blue” share. We restate the number of shares retroactively to reflect the stock dividend, as if the shares always had been “green.” After all, our intent is to let the calculation reflect the fundamental change in the nature of the shares.

Additional Consideration

When last year’s EPS is reported in the current year’s comparative income statements, it also should reflect the increased shares from the stock dividend. For instance, suppose EPS was \$2.09 for 2023: \$115 million net income divided by 55 million weighted-average shares. When reported again for comparison purposes in the 2024 comparative income statements, that figure would be restated to reflect the 10% stock dividend [$\$115 \div (55 \times 1.10) = \1.90], as shown:

| | | |
|----------------------------|-------------|-------------|
| Earnings per Share: | 2024 | 2023 |
| | \$2.00 | \$1.90 |

The EPS numbers now are comparable—both reflect the stock dividend. Otherwise we would be comparing earnings per “green” share with earnings per “blue” share; this way both are earnings per “green” share.

Reacquired Shares

If shares were reacquired during the period (either retired or as treasury stock), the weighted-average number of shares is reduced. The number of reacquired shares is time-weighted for the *fraction of the year they were **not** outstanding*, prior to being *subtracted* from the number of shares outstanding during the period. Let's modify our continuing illustration to assume 8 million shares were reacquired on October 1 as treasury stock (

 **Illustration 19-8**).

Illustration 19-8 Reacquired Shares

The 8 million shares reacquired as treasury stock are weighted by $(\frac{3}{12})$ to reflect the fact they were not outstanding the last three months of the year.

Sovran Financial Corporation reported net income of \$154 million in 2024 (tax rate 25%). Its capital structure included the following:

Common Stock

| | |
|---------|---|
| Jan. 1 | 60 million common shares outstanding |
| Mar. 1 | 12 million new shares were sold |
| June 17 | A 10% stock dividend was distributed |
| Oct. 1 | 8 million shares were reacquired as treasury stock |

(\$ amounts in millions, except per share amounts)

Basic EPS:

$$\frac{\text{Net income } \$154}{\begin{array}{c} 60 \\ \text{Shares} \\ \text{at Jan. 1} \end{array} + \begin{array}{c} (1.10) \\ \text{Stock dividend} \\ \text{adjustment*} \end{array} + \begin{array}{c} 12 \\ \text{New} \\ \text{shares} \end{array} \left(\frac{10}{12}\right) - \begin{array}{c} (1.10) \\ \text{Treasury} \\ \text{shares} \end{array} \left(\frac{3}{12}\right)} = \frac{\$154}{75} = \$2.05$$

*Not necessary for the treasury shares since they were reacquired after the stock dividend and thus already reflect the adjustment (that is, the shares repurchased are 8 million “new, green” shares).

Compare the adjustment for treasury shares with the adjustment for new shares sold. Each is time-weighted for the fraction of the year the shares were or were not outstanding. But also notice two differences. The new shares are added, while the reacquired shares are subtracted. The second difference is that the reacquired shares are not multiplied by 1.10 to adjust for the 10% stock dividend. The reason is the shares were repurchased after the June 17 stock dividend; the

reacquired shares are 8 million of the new post-distribution shares. (To use our earlier representation, these are 8 million “green” shares.) To generalize, when a stock distribution occurs during the reporting period, any sales or purchases of shares that occur *before* the distribution are increased by the distribution. But the stock distribution does not increase the number of shares sold or purchased, if any, *after* the distribution.

The adjustment for reacquired shares is the same as for new shares sold, except the shares are deducted rather than added.

Any sales or purchases of shares that occur before, but not after, a stock dividend or split are affected by the distribution.

Earnings Available to Common Shareholders

LO19-7 Describe how preferred dividends affect the calculation of EPS.

The denominator in an EPS calculation is the weighted-average number of common shares outstanding. Logically, the numerator should similarly represent earnings available to common shareholders. This was automatic in our illustrations to this point because the only shares outstanding were common shares. But when a senior class of shareholders (like preferred shareholders) is entitled to a specified allocation of earnings (like preferred dividends), those amounts are subtracted from earnings before calculating earnings per share.¹⁵ This is demonstrated in  **Illustration 19-9**.

Illustration 19-9 Preferred Dividends

Preferred dividends are subtracted from net income so that “earnings available to common shareholders” is divided by the weighted-average number of common shares.

Sovran Financial Corporation reported net income of \$154 million in 2024 (tax rate 25%). Its capital structure included the following:

Common Stock

- January 1 60 million common shares were outstanding
- March 1 12 million new shares were sold
- June 17 A 10% stock dividend was distributed
- October 1 8 million shares were reacquired as treasury stock

Preferred Stock, Nonconvertible

January 1–December 31 5 million shares 8%, \$10 par

(\$ amounts in millions, except per share amount)

Basic EPS:

$$\frac{\text{Net income } \$154 \quad \text{Preferred dividends } -\$4^*}{60 \text{ (1.10)} + 12 \text{ (}^{10/12}\text{) (1.10)} - 8 \text{ (}^{3/12}\text{)}} = \frac{\$150}{75} = \$2.00$$

Stock dividend adjustment

*8% × \$10 par × 5 million shares.

Suppose no dividends were declared for the year. Should we adjust for preferred dividends? Yes, if the preferred stock is cumulative—and most preferred stock is. This means that when dividends are not declared, the unpaid dividends accumulate to be paid in a future year when (if) dividends are subsequently declared. Obviously, the presumption is that although the year’s dividend preference isn’t distributed this year, it eventually will be paid.

Preferred dividends reduce earnings available to common shareholders unless the preferred stock is noncumulative and no dividends were declared that year.

We have encountered no potential common shares to this point in our continuing illustration. As a result, we have what is referred to as a simple capital structure. (Although, at this point, you may question this label.) For a simple capital structure, a single presentation of basic earnings per common share is appropriate. We turn our attention now to situations described as complex capital structures. In these situations, two separate presentations are required: basic EPS and diluted EPS.

Diluted Earnings per Share

Potential Common Shares

Imagine a situation in which convertible bonds are outstanding that will significantly increase the number of common shares if bondholders exercise their options to exchange their bonds for shares of common stock. Should these potential shares be ignored when earnings per share is calculated? After all, they haven't been converted as yet, so to assume an increase in shares for a conversion that may never occur might mislead investors and creditors. On the other hand, if conversion is imminent, not taking into account the dilutive effect of the share increase might mislead investors and creditors. The profession's solution to the dilemma is to calculate earnings per share twice.

Securities such as these convertible bonds, while not yet common stock, may become common stock through their exercise or conversion. Therefore, they may dilute (reduce) earnings per share and are called **potential common shares**. A firm is said to have a **complex capital structure** if potential common shares are outstanding. Besides convertible bonds, other potential common shares are convertible preferred stock, stock options, and contingently issuable securities. (We'll discuss each of these shortly.) A firm with a complex capital structure reports two EPS calculations. **Basic EPS** ignores the dilutive effect of such securities; **diluted EPS** incorporates the dilutive effect of all potential common shares.

In a complex capital structure, a second EPS computation takes into account the assumed effect of potential common shares, essentially a "worst case scenario."

Options, Rights, and Warrants

LO19–8 Describe how options, rights, and warrants are incorporated in the calculation of EPS.

Stock options, stock rights, and stock warrants are similar. Each gives its holders the right to exercise their option to purchase common stock, usually at a specified exercise price. The

dilution that would result from their exercise should be reflected in the calculation of diluted EPS, but not basic EPS.

To include the dilutive effect of a security means to calculate EPS *as if* the potential increase in shares already has occurred (even though it hasn't yet). So, for stock options (or rights, or warrants), we pretend the options have been exercised. In fact, we assume the

Stock options are assumed to have been exercised when calculating diluted EPS.

options were exercised at the beginning of the reporting period, or when the options were issued if that's later. We then assume the cash proceeds from selling the new shares at the exercise price are used to buy back as many shares as possible at the shares' average market price during the year. This is demonstrated in  **Illustration 19-10**.

Illustration 19-10 Stock Options

Stock options give their holders (company executives in this case) the right to purchase common stock at a specified exercise price (\$20 in this case).

The stock options do not affect the calculation of *basic EPS*.

The calculation of diluted EPS assumes that the shares specified by stock options were issued at the exercise price and that the proceeds were used to buy back (as treasury stock) as many of those shares as can be purchased at the market price during the period.

Sovran Financial Corporation reported net income of \$154 million in 2024 (tax rate 25%). Its capital structure included the following:

Common Stock

| | |
|-----------|--|
| January 1 | 60 million common shares outstanding |
| March 1 | 12 million new shares were sold |
| June 17 | A 10% stock dividend was distributed |
| October 1 | 8 million shares were reacquired as treasury stock |

(The average market price of the common shares during 2024 was \$25 per share.)

Preferred Stock Nonconvertible

January 1–December 31 5 million shares 8%, \$10 par

Incentive Stock Options

Executive stock options granted in 2019, exercisable after 2023 for 15 million common shares* at an exercise price of \$20 per share

(\$ amounts in millions, except per share amounts)

Basic EPS (unchanged)

$$\frac{\text{Net income } \$154}{\text{Shares at Jan. 1 } 60 + \text{New shares } 12 \left(\frac{10}{12}\right) - \text{Treasury shares } 8 \left(\frac{3}{12}\right)} - \frac{\text{Preferred dividends } -\$4}{(1.10)} = \frac{\$150}{75} = \$2.00$$

↑
↑
↑
 Stock dividend adjustment

Diluted EPS

$$\frac{\text{Net income } \$154}{\text{Shares at Jan. 1 } 60 + \text{New shares } 12 \left(\frac{10}{12}\right) - \text{Treasury shares } 8 \left(\frac{3}{12}\right) + \text{Exercise of options } (15^* - 12^\dagger)} - \frac{\text{Preferred dividends } -\$4}{(1.10)} = \frac{\$150}{78} = \$1.92$$

↑
↑
↑
 Stock dividend adjustment

*Adjusted for the stock dividend. Prior to the stock dividend, the options were exercisable for 13 ⁷/₁₁ million of the “old” shares. Upon the stock dividend, the new equivalent of ¹³/₁₁ became 15 million (13 ⁷/₁₁ × 1.10) of the “new” shares.

†Shares Assumed Reacquired for Diluted EPS

15 million shares
 × **\$ 20 (exercise price)**
\$300 million
 ÷ **\$ 25 (average market price)**
12 million shares reacquired

When we simulate the exercise of the stock options, we calculate EPS as if 15 million shares were sold at the beginning of the year. This obviously increases the number of shares in the

denominator by 15 million shares. But it is insufficient to simply add the additional shares without considering the accompanying consequences. If this hypothetical scenario had occurred, the company would have had \$300 million cash proceeds from the exercise of the options (15 million shares \times \$20 exercise price per share). What would have been the effect on earnings per share? This depends on what the company would have done with the \$300 million cash proceeds. Would the proceeds have been used to buy more equipment? Increase the sales force? Expand facilities? Pay dividends?

Obviously, there are literally hundreds of choices, and it's unlikely that any two firms would spend the \$300 million exactly the same way. But remember, our objective is to create some degree of uniformity in the way firms determine earnings per share, so the resulting numbers are comparable. So, standard-setters decided on a single assumption for all firms to enhance comparability.

For diluted EPS, we assume the proceeds from exercise of the options were used to reacquire shares as treasury stock at the average market price of the common stock during the reporting period. Consequently, the weighted-average number of shares is increased by the difference between the shares assumed issued and those assumed reacquired. In our illustration, 15 million shares issued minus 12 million shares reacquired ($\$300 \text{ million} \div \25 per share) equals 3 million net increase in shares.

The way we take into account the dilutive effect of stock options is called the *treasury stock method* because of our assumption that treasury shares are purchased with the cash proceeds of the exercise of the options. Besides providing comparability, this assumption actually is plausible because, if the options were exercised, more shares would be needed to issue to option-holders. And, as discussed in the previous chapter, many firms routinely buy back shares either to issue to option-holders or, equivalently, to offset the issuance of new shares.

Additional Consideration

Actual Exercise of Options. What if options are actually exercised during the reporting period? In that case, we include in the denominator of both basic and diluted EPS the actual shares issued upon the exercise of the options, time-weighted for the fraction of the year the new shares actually are outstanding. This is consistent with the way we include new shares sold under any circumstances.

In addition, we include in diluted EPS only the incremental shares that would have been issued prior to the actual exercise of the options if we pretend the options were exercised at the beginning of the period. We time-weight those shares by the fraction of the year the shares would be outstanding prior to the actual exercise of the options.

Let's say the options in our illustration were exercised on September 1 and that the average per-share price of the stock from the beginning of the year until September 1 was \$24. In that case, we add 5 million shares to the denominator of both basic and diluted EPS: the 15 million shares actually issued $\times 4/12$ of the year actually outstanding = 5 million shares. Then, for *diluted EPS only*, we add the incremental shares that would have been issued *prior to* the actual exercise of the options if we pretend the options were exercised at the beginning of the period. We assume the proceeds (15 million shares \times \$20 = \$300 million) are used to buy shares back at \$24.

$$\begin{array}{r}
 15 \text{ million shares} \\
 \times \$ 20 \text{ (exercise price)} \\
 \hline
 \$300 \text{ million} \\
 \div \$ 24 \text{ (average market price prior to exercise)} \\
 \hline
 12.5 \text{ million shares}
 \end{array}$$

The incremental number of shares to be included in the computation of diluted EPS, then, is weighted for the period the options were outstanding prior to exercise, the 8 months from January 1 to September 1, or $8/12$ of a year.

$$\frac{\text{No adjustment to the numerator}}{+ (15 - 12.5) (8/12)}$$

Convertible Securities

LO19-9 Describe how convertible securities are incorporated in the calculation of EPS.

Sometimes corporations include a conversion feature as part of a bond offering, a note payable, or an issue of preferred stock. Convertible securities can be converted into (exchanged for) shares of stock at the option of the holder of the security. For that reason, convertible securities are potentially dilutive. EPS will be affected if and when such securities are converted and new shares of common stock are issued. In the previous section you learned that the potentially dilutive effect of stock options is reflected in diluted EPS calculations by assuming the options were exercised. Similarly, the potentially dilutive effect of convertible securities is reflected in diluted EPS calculations by assuming they were converted.

By the *if converted method*, as it's called, we assume the conversion into common stock occurred at the beginning of the period (or at the time the convertible security is issued, if that's later). We increase the denominator of the EPS fraction by the additional common shares that would have been issued upon conversion. We increase the numerator by the interest (after-tax) on bonds or other debt or the preferred dividends that would have been avoided if the convertible securities had not been outstanding because they were converted.

When we assume conversion, the denominator of the EPS fraction is increased by the additional common shares that would have been issued upon conversion.

Convertible Bonds

Now, let's return to our continuing illustration and modify it to include the existence of convertible bonds (Illustration 19-11).

Illustration 19-11 Convertible Bonds

The convertible bonds do not affect the calculation of *basic EPS*.

The numerator is increased by the after-tax interest that would have been avoided.

Sovran Financial Corporation reported net income of \$154 million in 2024 (tax rate 25%). Its capital structure included the following:

Common Stock

| | |
|---------|---|
| Jan. 1 | 60 million common shares were outstanding |
| Mar. 1 | 12 million new shares were sold |
| June 17 | A 10% stock dividend was distributed |

Oct. 1 8 million shares were reacquired as treasury stock
 (The average market price of the common shares during 2024 was \$25 per share.)

Preferred Stock, Nonconvertible

January 1–December 31 5 million shares 8%, \$10 par

Incentive Stock Options

Executive stock options granted in 2019, exercisable after 2023 for 15 million common shares* at an exercise price of \$20 per share

Convertible Bonds

8%, \$300 million face amount issued in 2023, convertible into 12 million* common shares

(\$ amounts in millions, except per share amounts)

Basic EPS (unchanged)

$$\frac{\text{Net income } \$154}{\text{Shares at Jan. 1 } 60 + \text{Stock dividend adjustment } (1.10) + \text{New shares } 12 \left(\frac{10}{12}\right) - \text{Treasury shares } 8 \left(\frac{3}{12}\right) - \text{Preferred dividends } -\$4} = \frac{\$150}{75} = \$2.00$$

Diluted EPS

$$\frac{\text{Net income } \$154}{\text{Shares at Jan. 1 } 60 + \text{Stock dividend adjustment } (1.10) + \text{New shares } 12 \left(\frac{10}{12}\right) - \text{Treasury shares } 8 \left(\frac{3}{12}\right) + \text{Exercise of options } (15^* - 12) + \text{Conversion of bonds } +12^* - \text{Preferred dividends } -\$4 + \text{After-tax interest savings } +\$24 - 25\%(\$24)} = \frac{\$168}{90} = \$1.87$$

*Adjusted for the stock dividend. For example, prior to the stock dividend, the bonds were exercisable for 10 million of the “old” shares, which became 12 million (10 million × 1.10) of the “new” shares after the stock dividend.

We increase the denominator by the 12 million shares that would have been issued if the bonds had been converted. However, if that hypothetical conversion had occurred, the bonds would not have been outstanding during the year. What effect would the absence of the bonds have had on income? Obviously, the bond interest expense (8% × \$300

million = \$24 million) would have been saved, causing income to be higher. But saving the interest paid would also have meant losing a \$24 million tax deduction on the income tax return. With a 25% tax rate, that would mean paying \$6 million more income taxes. So, to reflect in earnings the \$18 million after-tax interest that would have been avoided in the event of conversion, we add back the \$24 million of interest expense but deduct 25% × \$24 million for the higher tax expense.

Additional Consideration

The \$300 million of convertible bonds in our illustration were issued at face value. Suppose the bonds had been issued for \$282 million. In that case, the adjustment to earnings would be modified to include the amortization of the \$18 million bond discount. Assuming straight-line amortization and a 10-year maturity, the adjustment to the diluted EPS calculation would have been

$$\frac{+ [\$24 + (\$18 \div 10)] \times (1 - 25\%)*}{12}$$

to reflect the fact that the interest expense would include the \$24 million stated interest plus one-tenth of the bond discount.¹⁶

*This is an alternative way to represent the after-tax adjustment to interest since subtracting 25% of the interest expense is the same as multiplying interest expense by 75%.

Our illustration describes the treatment of convertible bonds. The same treatment pertains to other debt that is convertible into common shares, such as convertible notes payable. Remember from our discussion of debt in earlier chapters that all debt is similar, whether in the form of bonds, notes, or other configurations.

Additional Consideration

We assume convertible securities were converted (or options exercised) at the beginning of the reporting period or at the time the securities are issued, if later.

Notice that we assumed the bonds were converted at the beginning of the reporting period since they were outstanding all year. However, if the convertible bonds had been issued during the reporting period, we would assume their conversion occurred on the date of issue. It would be illogical to assume they were converted before they were issued. If the convertible bonds in our illustration had been sold on **September 1**, for instance, the adjustment to the EPS calculation would have been

$$\frac{+ [\$24 - 25\% (\$24)] (4/12)}{+12 (4/12)}$$

to reflect the fact that the net increase in shares would have been effective for only four months of the year.

Convertible Preferred Stock

The potentially dilutive effect of convertible preferred stock is reflected in EPS calculations in much the same way as convertible debt. That is, we calculate EPS as if conversion already had occurred. Specifically, we add shares to the denominator of the EPS fraction. We do not subtract the preferred dividends in the numerator because those dividends would have been avoided if the preferred stock had been converted. In [Illustration 19-12](#), we assume our preferred stock is convertible into 3 million shares of common stock.

Illustration 19-12 Convertible Preferred Stock

Since diluted EPS is calculated as if the preferred shares had been converted, there are no dividends.

Sovran Financial Corporation reported net income of \$154 million in 2024 (tax rate 25%). Its capital structure included the following:

Common Stock

| | |
|---------|---|
| Jan. 1 | 60 million common shares were outstanding |
| Mar. 1 | 12 million new shares were sold |
| June 17 | A 10% stock dividend was distributed |

Oct. 1 8 million shares were reacquired as treasury stock
 (The average market price of the common shares during 2024 was \$25 per share.)

Preferred Stock, Convertible into 3 million common shares*

January 1–December 31 5 million shares 8%, \$10 par

Incentive Stock Options

Executive stock options granted in 2019, exercisable after 2023 for 15 million common shares* at an exercise price of \$20 per share

Convertible Bonds

8%, \$300 million face amount issued in 2023, convertible into 12 million common shares

(\$ amounts in millions, except per share amounts)

Basic EPS

$$\begin{array}{r}
 \text{Net income} \\
 \$154 \\
 \hline
 \text{Preferred dividends} \\
 -\$4 \\
 \hline
 \text{Shares at Jan. 1} \quad 60 \quad (1.10) \quad + \quad 12 \quad (1\frac{10}{12}) \quad (1.10) \quad - \quad 8 \quad (3\frac{3}{12}) \\
 \text{New shares} \\
 \text{Treasury shares} \\
 \text{Stock dividend adjustment}
 \end{array}
 = \frac{\$150}{75} = \$2.00$$

Diluted EPS

$$\begin{array}{r}
 \text{Net income} \\
 \$154 \\
 \hline
 \text{Preferred dividends} \\
 -\$4 \\
 \hline
 \text{After-tax interest savings} \\
 +\$24 - 25\%(\$24) \\
 +12 \\
 \hline
 \text{Shares at Jan. 1} \quad 60 \quad (1.10) \quad + \quad 12 \quad (1\frac{10}{12}) \quad (1.10) \quad - \quad 8 \quad (3\frac{3}{12}) \quad + \quad (15 - 12) \quad + \quad 3^* \\
 \text{New shares} \\
 \text{Treasury shares} \\
 \text{Exercise of options} \\
 \text{Conversion of bonds} \\
 \text{Conversion of preferred shares} \\
 \text{Stock dividend adjustment}
 \end{array}
 = \frac{\$172}{93} = \$1.85$$

*Adjusted for the stock dividend. For example, prior to the stock dividend, the preferred shares were convertible into 2 2/11 million of the "old" shares, which became 3 million (2 2/11 × 1.10) of the "new" shares after the stock dividend.

The adjustment for the conversion of the preferred stock is applied only to diluted EPS computations. Basic EPS is unaffected.

However, when diluted EPS is calculated, we hypothetically assume the convertible preferred stock was *not* outstanding. Accordingly, no preferred dividends on these shares would have been paid.

Antidilutive Securities

At times, the effect of the conversion or exercise of potential common shares would be to increase, rather than decrease, EPS. These we refer to as **antidilutive securities**. Such securities are ignored when calculating both basic and diluted EPS.

Options, Warrants, Rights

LO19–10 Determine whether potential common shares are antidilutive.

For illustration, recall the way we treated the stock options in our continuing illustration. In applying the treasury stock method, the number of shares assumed repurchased is fewer than the number of shares assumed sold. This is the case any time the buyback (average market) price is higher than the exercise price. Consequently, there will be a net increase in the number of shares, so earnings per share will decline.

On the other hand, when the exercise price is *higher* than the market price, to assume shares are sold at the exercise price and repurchased at the market price would mean buying back *more* shares than were sold.

This would produce a net decrease in the number of shares. So EPS would increase, not decrease. These would have an antidilutive effect and would not be considered exercised. In fact, a rational investor would not exercise options at an exercise price higher than the current market price anyway. Let's look at the example provided by  **Illustration 19–13**.

Page 1126

Antidilutive securities are ignored when calculating both basic and diluted EPS.

Illustration 19–13 Antidilutive Warrants

The \$32.50 exercise price is higher than the market price, \$25, so to assume shares are sold at the exercise price and repurchased at the market price would mean reacquiring more shares than were sold.

Sovran Financial Corporation reported net income of \$154 million in 2024 (tax rate 25%). Its capital structure included the following:

Common Stock

Jan. 1 60 million common shares were outstanding

Mar. 1 12 million new shares were sold

June 17 A 10% stock dividend was distributed

Oct. 1 8 million shares were reacquired as treasury stock

(The average market price of the common shares during 2024 was **\$25** per share.)

Preferred Stock, Convertible into 3 million common shares

January 1–December 31 5 million shares 8%, \$10 par

Incentive Stock Options

Executive stock options granted in 2019, exercisable after 2023 for 15 million common shares at an exercise price of \$20 per share

Convertible Bonds

8%, \$300 million face amount issued in 2023, convertible into 12 million common shares

Stock Warrants

Warrants granted in 2023, exercisable for 4 million common shares* at an exercise price of \$32.50 per share

Calculations

The calculations of both basic and diluted EPS are unaffected by the warrants because the effect of exercising the warrants would be antidilutive

*Adjusted for the stock dividend. For example, prior to the stock dividend, the warrants were exercisable for $3\frac{7}{11}$ million of the “old” shares, which became 4 million ($3\frac{7}{11} \times 1.10$) of the “new” shares after the stock dividend.

To assume 4 million shares were sold at the \$32.50 exercise price and repurchased at the lower market price (**\$25**) would mean reacquiring 5.2 million shares. That’s *more* shares than were assumed sold. Because the effect would be antidilutive, we would simply ignore the warrants in the calculations.

In our continuing illustration, only the stock warrants were antidilutive. The other potential common shares caused EPS to decline when we considered them exercised or converted. In

the case of the executive stock options, it was readily apparent that their effect would be dilutive because the exercise price was less than the market price, indicating that fewer shares could be repurchased (at the average market price) than were assumed issued (at the exercise price). As a result, the denominator increased. When only the denominator of a fraction increases, the fraction itself decreases. On the other hand, in the case of the warrants, it was apparent that their effect would be antidilutive because the exercise price was higher than the market price, which would have decreased the denominator and therefore increased the fraction.

When a company has a *net loss*, rather than net income, it reports a loss per share. In that situation, stock options that otherwise are dilutive will be antidilutive. Here's why. Suppose we have a loss per share of \$2.00 calculated as $(\$150 \text{ million}) \div 75 \text{ million shares} = (\$2.00)$. Now suppose stock options are outstanding that, if exercised, will increase the number of shares by 5 million. If that increase is included in the calculation, the loss per share will be \$1.88, calculated as $(\$150 \text{ million}) \div 80 \text{ million shares} = (\$1.88)$. The *loss* per share *declines*. This represents an *increase* in performance—not a dilution of performance. The options would be considered antidilutive, then, and not included in the calculation of the net loss per share. Any potential common shares not included in dilutive EPS because they are antidilutive should be revealed in the disclosure notes.

Convertible Securities

For convertible securities, though, it's not immediately obvious whether the effect of their conversion would be dilutive or antidilutive because the assumed conversion would affect both the numerator and the denominator of the EPS fraction. We discovered each was dilutive only after including the effect in the calculation and observing the result—a decline in EPS. But there's an easier way.

To determine whether convertible securities are dilutive and should be included in a diluted EPS calculation, we can compare the “incremental effect” of the conversion (expressed as a fraction) with the EPS fraction before the effect of any convertible security is considered.

This, of course, is our basic EPS. Recall from  **Illustration 19-12** that basic EPS is \$2.00.

For comparison, we determine the “earnings per incremental share” of the two convertible securities.

Conversion of bonds

The incremental effect (of conversion) of the bonds is the after-tax interest saved divided by the additional common shares from conversion.

$$\frac{\begin{array}{l} \text{After-tax} \\ \text{interest savings} \\ +\$24 - 25\% (\$24) \end{array}}{\begin{array}{l} +12 \\ \text{Conversion} \\ \text{of bonds} \end{array}} = \frac{\$18}{12} = \$1.50$$

The incremental effect (of conversion) of the preferred stock is the dividends that wouldn't be paid divided by the additional common shares from conversion.

Conversion of preferred stock

$$\frac{\begin{array}{l} \text{Preferred} \\ \text{dividends} \\ +\$4 \end{array}}{\begin{array}{l} +3 \\ \text{Conversion of} \\ \text{preferred shares} \end{array}} = \$1.33$$

If the incremental effect of a security is *higher* than basic EPS, it is antidilutive. That's not the case in our illustration.

Order of Entry for Multiple Convertible Securities

A convertible security might seem to be dilutive when looked at individually but, in fact, may be antidilutive when included in combination with other convertible securities. This is because the *order of entry* for including their effects in the EPS calculation determines by how much, or even whether, EPS decreases as a result of their assumed conversion. Because our goal is to reveal the maximum potential dilution that might result, theoretically we should calculate diluted EPS using every possible combination of potential common shares to find the combination that yields the lowest EPS. But that's not necessary.

We can use the earnings per incremental share we calculated to determine the sequence of including securities' effects in the calculation. We include the securities in reverse order, beginning with the lowest incremental effect (that is, most dilutive), followed by the next lowest, and so on.

Additional Consideration

Because the incremental effect of the convertible bonds (\$1.50) is lower than the incremental effect of the convertible preferred stock (\$1.90), it is included first.

A convertible security might seem to be dilutive when looked at individually but may be antidilutive when included in combination with other convertible securities.

Actually, the order of inclusion made no difference in our example, but would in many instances. For example, suppose the preferred stock had been convertible into 2.1 million shares, rather than 3 million shares. The incremental effect of its conversion would have been as follows:

Conversion of Preferred Stock

$$\frac{\begin{array}{r} \text{Preferred dividends} \\ + \$4 \end{array}}{\begin{array}{r} + 2.1 \\ \text{Conversion of} \\ \text{preferred shares} \end{array}} = \$1.90$$

On the surface, the effect would seem to be dilutive because \$1.90 is less than \$2.00, basic EPS. In fact, if this were the only convertible security, it would be dilutive. But, after the convertible bonds are assumed converted first, then the assumed conversion of the preferred stock would be *antidilutive*.

With Conversion of Bonds

| | | | | | | | | |
|------------------|---------------------------------|---------------------|--------|-----------------|----------------------------|---------------------|---|----------------------|
| Net income | | Preferred dividends | | | After-tax interest savings | | | |
| \$154 | | -\$4 | | | + \$24 - 25% (\$24) | | | |
| 60 | (1.10) | + 12 (1/2) | (1.10) | - 8 (1/2) | + (15 - 12) | + 12 | = | \$168 / 90 = \$1.867 |
| Shares at Jan. 1 | ↑ | New shares | ↑ | Treasury shares | Exercise of options | Conversion of bonds | | |
| | └─ Stock dividend adjustment ─┘ | | | | | | | |

With Conversion of Preferred Stock

| | | | |
|---------------------|---|--|--------------------------------------|
| Net income \$154 | Preferred dividends -\$4 | After-tax interest savings + \$24 - 25% (\$24) | = $\frac{\$172}{92.1} = \1.868 |
| 60 | (1.10) + 12 (1%) (1.10) | - 8 (1%) + (15 - 12) + 12 | + 2.1 |
| Shares at Jan. 1 | New shares | Treasury shares | Conversion of preferred shares |
| | Stock dividend adjustment | Exercise of options | |
| | | Conversion of bonds | |

Although the incremental effect of the convertible preferred stock (\$1.90) is lower than basic EPS (\$2.00), when included in the calculation after the convertible bonds, the effect is antidilutive (EPS increases).

Concept Review Exercise

BASIC AND DILUTED EPS

At December 31, 2024, the financial statements of Clevenger Casting Corporation included the following:

| | | |
|---------------------------------------|-------|----------------|
| Net income for 2024 | \$500 | million |
| Common stock, \$1 par: | | |
| Shares outstanding on January 1 | 150 | million shares |
| Shares retired for cash on February 1 | 24 | million shares |
| Shares sold for cash on September 1 | 18 | million shares |

2-for-1 split on July 23

| | | |
|---|-------|---------|
| Preferred stock, 10%, \$70 par, cumulative, nonconvertible | \$70 | million |
| Preferred stock, 8%, \$50 par, cumulative, convertible into 4 million shares of common stock | \$100 | million |
| Incentive stock options outstanding, fully vested, for 4 million shares of common stock; the exercise price is \$15 | | |
| Bonds payable, 10%, convertible into 20 million shares of common stock | \$200 | million |

Additional data:

The market price of the common stock averaged \$20 during 2024.

The convertible preferred stock and the bonds payable had been issued at par in 2022. The tax rate for the year was 25%.

Required:

Compute basic and diluted earnings per share for the year ended December 31, 2024.

(\$ amounts in millions, except per share amounts)

Solution:

Basic EPS

$$\begin{array}{r}
 \text{Net income} \\
 \$500 \\
 \hline
 150 \text{ Shares at Jan. 1} \quad (2.00) \quad - \quad 24 \text{ (} \frac{1}{2} \text{)} \text{ Retired shares} \quad (2.00) \quad + \quad 18 \text{ (} \frac{1}{2} \text{)} \text{ New shares} \\
 \hline
 = \frac{\$485}{262} = \$1.85
 \end{array}$$

 Stock split adjustment

Diluted EPS

Additional EPS Issues

Components of the “Proceeds” in the Treasury Stock Method

LO19–11 Describe the two components of the proceeds used in the treasury stock method and how restricted stock is incorporated in the calculation of EPS.

In calculating diluted EPS when stock options are outstanding, we assume the options have been exercised. That is, we pretend the company sold the shares specified by the options at the exercise price and that the “proceeds” were used to buy back (as treasury stock) as many shares as can be purchased at the average market price of the stock during the year. The proceeds for the calculation should include the amount received from the hypothetical exercise of the options (\$300 million in [Illustration 19-10](#)). But that’s only the first of two possible components.

The second component of the proceeds is the total compensation from the award that’s *not yet expensed*. If the fair value of an option had been \$4 at the grant date, the total compensation would have been 15 million shares times \$4, or \$60 million. In our illustration, though, we assumed the options were fully vested before 2024, so all \$60 million already had been expensed, and this second component of the proceeds was zero. If the options had been only half vested, half the compensation would have been unexpensed, and \$30 million would have been added to the \$300 million proceeds. This would have been the case, for instance, if our calculation was made after two years of a four-year vesting period.

For the treasury stock method, “proceeds” include:

- 1. The amount, if any, received from the hypothetical exercise of options or vesting of restricted stock.**
- 2. The total compensation from the award that’s not yet expensed.**

Why do the proceeds include these two components? We might think of it like this. The “proceeds” include everything the firm will receive from the award: (1) cash, if any, at

exercise and (2) services from the recipient (value of award given as compensation). We *exclude the expensed portion* because, when it's expensed, earnings are reduced, so that portion of the dilution already is reflected in EPS. Excluding that expensed portion from the proceeds avoids the additional dilution that would occur if we included those additional proceeds in our hypothetical buyback of shares. Hence, we avoid double-counting the dilutive effect of the compensation.

Restricted Stock Awards in EPS Calculations

As we discussed earlier, restricted stock awards and their cousins, restricted stock units (RSUs), have replaced stock options as the share-based compensation plan of choice. Like stock options, they represent potential common shares and their dilutive effect is included in diluted EPS. In fact, they too are included using the treasury stock method. That is, the shares are added to the denominator and then reduced by the number of shares that can be bought back with the “proceeds” at the average market price of the company’s stock during the year. Unlike stock options, though, the first component of the proceeds usually is absent; employees don’t pay to acquire their shares.

Also, only *unvested* restricted stock award shares and RSU shares are included in EPS calculations; fully vested shares are actually distributed and thus outstanding. The proceeds for the EPS calculation include the total compensation from the unvested restricted stock that’s not yet expensed, the second component. For an example, refer back to the restricted stock in [Illustration 19-2](#). The total compensation for the award is \$60 million (\$12 market price per share × 5 million shares). Because the restricted stock vests over four years, it is expensed as \$15 million each year for four years. At the end of 2024, the first year, \$45 million remains unexpensed, so \$45 million would be the assumed proceeds in an EPS calculation. If we assume the average market price that year was, say, \$15, the \$45 million will buy back 3 million shares and we would add to the denominator of diluted EPS 2 million common shares:

$$\begin{array}{r} \text{No adjustment to the numerator} \\ \hline 5 \text{ million} - 3^* \text{ million} = 2 \text{ million} \\ \hline \end{array}$$

*Assumed purchase of treasury shares

$$\begin{array}{r} \$45 \text{ million} \\ \div \$15 \text{ average market price} \\ \hline 3 \text{ million shares} \end{array}$$

At the end of 2025, the *second* year, \$30 million remains unexpensed, so assuming the average market price that year was, say, \$12, we would add to the denominator of diluted EPS 2.5 million common shares:

$$\begin{array}{r} \text{No adjustment to the numerator} \\ \hline 5 \text{ million} - 2.5^* \text{ million} = 2.5 \text{ million} \end{array}$$

$$\begin{array}{r} \text{*Assumed purchase of treasury shares} \\ \$30 \text{ million} \\ \div \$12 \text{ average market price} \\ \hline 2.5 \text{ million shares} \end{array}$$

Contingently Issuable Shares

LO19–12 Explain the way contingently issuable shares are incorporated in the calculation of EPS.

Sometimes an agreement specifies that additional shares of common stock will be issued, contingent on the occurrence of some future circumstance. For instance, in the disclosure note reproduced in  **Illustration 19–14**, **Hunt Manufacturing Co.** reported contingent shares in connection with its acquisition of **Feeny Manufacturing Company**.

Illustration 19–14 Contingently Issuable Shares—Hunt Manufacturing Company

Real World Financials

Note 12: Acquisitions (in part)

The Company acquired Feeny Manufacturing Company of Muncie, Indiana, for 135,000 shares of restricted common stock with a value of \$7.71 per share. Feeny Manufacturing Company is a manufacturer of kitchen storage products. The purchase agreement calls for the issuance of up to 135,000 additional shares of common stock in the next fiscal year based on the earnings of Feeny Manufacturing Company. . . .

Source: Hunt Manufacturing Company

At times, contingent shares are issuable to shareholders of an acquired company, certain key executives, or others in the event a certain level of performance is achieved. Contingent performance may be a desired level of income, a target stock price, or some other measurable activity level.

When calculating EPS, **contingently issuable shares** are considered to be outstanding in the computation of diluted EPS if the target performance level already is being met (assumed to remain at existing levels until the end of the contingency period). For example, if shares will be issued at a future date if a certain level of income is achieved and that level of income or more was already reported this year, those additional shares are simply added to the denominator of the diluted EPS fraction.¹⁷

Contingently issuable shares are considered outstanding in the computation of diluted EPS.

For clarification, refer to our continuing illustration of diluted EPS and assume 3 million additional shares will become issuable to certain executives in the following year (2025) if net income that year is \$150 million or more. Recall that net income for Sovran Financial in 2024 was \$154 million, so the additional shares would be considered outstanding in the computation of diluted EPS by simply adding 3 million additional shares to the denominator of the EPS fraction. Obviously, the 2025 condition (\$150 million net income or more) has not been met yet since it's only 2024. But because that level of income was achieved in 2024, the presumption is that it's likely to be achieved in 2025 as well.

Assumed Issuance of Contingently Issuable Shares (diluted EPS):

No adjustment to the numerator
+3
Additional shares

On the other hand, if the target income next year is \$160 million, the contingent shares would simply be ignored in our calculation.

If a level of income must be attained before the shares will be issued, and income already is that amount or more, the additional shares are simply added to the denominator.

Summary of the Effect of Potential Common Shares on Earnings per Share

You have seen that under certain circumstances, securities that have the potential of reducing earnings per share by becoming common stock are assumed already to have become common stock for the purpose of calculating EPS. The table in

 **Illustration 19-15** summarizes the circumstances under which the dilutive effect of these securities is reflected in the calculation of basic and diluted EPS.

Illustration 19-15 When Potential Common Shares Are Reflected in EPS

| Potential Common Shares | Is the Dilutive Effect Reflected in the Calculation of EPS?* | |
|--|--|-------------|
| | Basic EPS | Diluted EPS |
| • Stock options (or warrants, rights) | no | yes |
| • Restricted stock | no | yes |
| • Convertible securities (bonds, notes, preferred stock) | no | yes |
| • Contingently issuable shares | no | yes† |

*The effect is not included for any security if its effect is antidilutive.

†Unless shares are contingent upon some level of performance not yet achieved.

 **Illustration 19-16** summarizes the specific effects on the diluted EPS fraction when the dilutive effect of a potentially dilutive security is reflected in the calculation.

Illustration 19-16 How Potential Common Shares Are Reflected in a Diluted EPS Calculation

Modification to the Diluted EPS Fractions

| Potential Common Shares | Numerator | Denominator |
|--|---|--|
| <ul style="list-style-type: none"> • Stock options (or warrants, rights) | None | Add the shares that would be created by their exercise,* reduced by shares repurchased at the average share price. |
| <ul style="list-style-type: none"> • Restricted stock | None | Add shares that would be created by their vesting,* reduced by shares repurchased at the average share price. |
| <ul style="list-style-type: none"> • Convertible bonds (or notes) | Add the interest (after-tax) that would have been avoided if the debt had been converted.* | Add shares that would be created by the conversion* of the bonds (or notes). |
| <ul style="list-style-type: none"> • Convertible preferred stock | Do not deduct the dividends that would have been avoided if the preferred stock had been converted. | Add shares that would have been created by the conversion* of the preferred stock. |
| <ul style="list-style-type: none"> • Contingently issuable shares: Issuable when specified conditions are met, and those conditions currently are being met | None | Add shares that are issuable. |
| <ul style="list-style-type: none"> • Contingently issuable shares: Issuable when specified conditions are met, and those conditions are not currently being met | None | None |

Modification to the Diluted EPS Fractions

Potential Common Shares

Numerator

Denominator

*At the beginning of the year or when potential common shares were issued, whichever is later (time-weight the increase in shares if assumed exercised or converted in midyear).

Actual Conversions

When calculating EPS in our example, we “pretended” the convertible bonds had been converted at the beginning of the year. What if they actually had been converted, let’s say on November 1? Interestingly, diluted EPS would be precisely the same. Here’s why:

1. The actual conversion would cause an actual increase in shares of 12 million on November 1. These would be time-weighted so the denominator would increase by 12 ($\frac{2}{12}$). Also, the numerator would be higher because net income actually would be increased by the after-tax interest saved on the bonds for the last two months, $[\$24 - 25\% (\$24)] \times (\frac{2}{12})$. Be sure to note that this would not be an adjustment in the EPS calculation. Instead, net income would actually have been higher by $[\$24 - 25\% (\$24)] \times (\frac{2}{12}) = \3 . That is, reported net income would have been \$157 rather than \$154.
2. We would assume conversion for the period before November 1 because they were potentially dilutive during that period. The 12 million shares assumed outstanding from January 1 to November 1 would be time-weighted for that 10-month period: $12 (\frac{10}{12})$. Also, the numerator would be increased by the after-tax interest assumed saved on the bonds for the first 10 months, $[\$24 - 25\% (\$24)] \times (\frac{10}{12})$.

Notice that the incremental effect on diluted EPS is the same either way.

EPS would be precisely the same whether convertible securities were actually converted or not.

| Not Actually Converted: | Converted on November 1: | | |
|---------------------------------------|--------------------------------------|----------------------|---------------------------------------|
| Assumed after-tax interest savings | Actual after-tax interest savings | | Assumed after-tax interest savings |
| + \$24 - 25% (\$24) | + [\$24 - 25% (\$24)] | × ($\frac{2}{12}$) | + [\$24 - 25% (\$24)] |
| + 12 | + 12 | | + 12 |
| Assumed conversion of bonds | Actual conversion of bonds | | Assumed conversion of bonds |
| \$18 | \$3 | + | \$15 |
| 12 | 2 | + | 10 |

Illustration 19-17 shows the disclosure note **Clorox Company** reported after the conversion of convertible notes during the year.

Illustration 19-17 Conversion of Notes—The Clorox Company

Real World Financials

Note 1: Significant Accounting Policies—Earnings per Common Share (in part)

A \$9,000,000 note payable to Henkel Corporation was converted into 1,200,000 shares of common stock on August 1. . . . Earnings per common share and weighted-average shares outstanding reflect this conversion as if it were effective during all periods presented.

Financial Statement Presentation of Earnings per Share Data

LO19-13 Describe the way EPS information should be reported in an income statement.

Recall from Chapter 4 that if a company disposes of a component of its operations, the company will report “discontinued operations” as a separate item within the income statement as follows:

Income from Continuing Operations

Discontinued operations

Net income

When the income statement includes discontinued operations, EPS data (both basic and diluted) also must be reported separately for income from continuing operations and net income. Per share amounts for discontinued operations would be disclosed either on the face of the income statement or in the notes to financial statements. Presentation on the face of the income statement is illustrated by the partial income statements of **H&R Block, Inc.**, from a recent annual report and exhibited in  **Illustration 19-18**.

Illustration 19-18 EPS Disclosure—H&R Block

Real World Financials

| Consolidated Income Statements (partial) | | |
|--|-----------------|-----------------|
| For the Years Ended April 30, 2019 and 2018 | | |
| | 2019 | 2018 |
| Net income from continuing operations | \$445,256 | \$626,909 |
| Net loss from discontinued operations | <u>(22,747)</u> | <u>(13,760)</u> |
| Net income | \$422,509 | \$613,149 |
| Basic Earnings (Loss) per Share: | | |
| Continuing operations | \$ 2.16 | \$ 2.99 |
| Discontinued operations | <u>(0.11)</u> | <u>(0.06)</u> |
| Consolidated | \$ 2.05 | \$ 2.93 |
| Diluted Earnings (Loss) per Share: | | |
| Continuing operations | \$ 2.15 | \$ 2.98 |
| Discontinued operations | <u>(0.11)</u> | <u>(0.07)</u> |
| Consolidated | \$ 2.04 | \$ 2.91 |

Source: H&R Block

Basic and diluted EPS data should be reported on the face of the income statement for all reporting periods presented in the comparative statements. Businesses without potential common shares present basic EPS only. Disclosure notes should provide additional disclosures including the following:

1. A reconciliation of the numerator and denominator used in the basic EPS computations to the numerator and the denominator used in the diluted EPS computations. An example of this is presented in [Illustration 19-19](#) using the situation described previously in [Illustration 19-12](#).

Illustration 19-19 Reconciliation of Basic EPS Computations to Diluted EPS Computations

| Sovran Financial Corporation | | | |
|--|-----------------------|---------------------|---------------------|
| Earnings per Share Reconciliation | | | |
| (\$ in millions) | Income (Numerator) | Share (Denominator) | Per Share Amount |
| Net income | \$154 | | |
| Preferred dividends | <u>(4)</u> | | |
| Basic earnings per share | 150 | 75 | \$2.00 |
| Stock options | None | 3* | |
| Convertible debt | 18 | 12 | |
| Convertible preferred stock | <u>4</u> | <u>3</u> | |
| Diluted earnings per share | \$172 | 93 | \$1.85 |

Note: Stock warrants to purchase an additional 4 million shares at \$32.50 per share were outstanding throughout the year but were not included in diluted EPS because the warrants' exercise price is greater than the average market price of the common shares.

*15 million - [(15 million × \$20) ÷ \$25] = 3 million net additional shares.

2. Any adjustments to the numerator for preferred dividends.
3. Any potential common shares that weren't included because they were antidilutive.
4. Any transactions that occurred after the end of the most recent period that would materially affect earnings per share.

Additional Consideration

It's possible that potential common shares would have a dilutive effect on one component of net income but an antidilutive effect on another. When the inclusion of the potential common shares has a dilutive effect on "income from continuing operations," the effect should be included in all calculations of diluted EPS. In other words, the same number of potential common shares used in computing the diluted per-share amount for income from continuing operations is used in computing all other diluted per-share amounts, even when amounts are antidilutive to the individual per-share amounts.

Decision Makers' Perspective

We noted earlier in the chapter that investors and creditors pay a great deal of attention to earnings per share information. Because of the importance analysts attach to earnings announcements, companies are particularly eager to meet earnings expectations. As we first noted in Chapter 4, this desire has contributed to a relatively recent trend, especially among technology firms, to report **pro forma** earnings per share. What exactly are pro forma earnings? Unfortunately there is no answer to that question. Essentially, pro forma earnings are actual (GAAP) earnings increased due to the reduction of any expenses the reporting company feels are unusual and should be excluded. Always, though, the pro forma results of a company look better than the real results. **Bristol Myers Squibb**, a global biopharmaceutical company, reported pro forma *earnings* of \$1.63 per share for its second quarter, 2020. However on a GAAP basis, it actually had a *loss* of \$0.04 per share. This is not an isolated example.

Make sure you pay lots of attention to the "man behind the curtain." If any earnings figure says pro forma, you should immediately look for a footnote or explanation telling you just what is and is not included in the calculation.

When companies report pro forma results, they argue they are trying to help investors by giving them numbers that more accurately reflect their normal business activities because they exclude unusual expenses. Analysts should be skeptical, though. Because of the purely discretionary nature of pro forma reporting and several noted instances of abuse, analysts

should, at a minimum, find out precisely what expenses are excluded and what the actual GAAP numbers are.

Another way management might enhance the appearance of EPS numbers is by massaging the denominator of the calculation. Reducing the number of shares increases earnings *per share*. Some companies judiciously use share buyback programs to manipulate the number of shares and therefore EPS. There is nothing inherently wrong with share buybacks, and as we noted in Chapter 18, they can benefit shareholders. The motivation for buybacks, though, can sometimes be detected in the year-to-year pattern of net income and EPS. Companies whose growth rates in earnings per share routinely exceed their growth in net income may be using buybacks to artificially increase EPS.

One way analysts use EPS data is in connection with the price-earnings ratio. This ratio is simply the market price per share divided by the earnings per share. It measures the market's perception of the quality of a company's earnings by indicating the price multiple the capital market is willing to pay for the company's earnings. Presumably, this ratio reflects the information provided by all financial information in that the market price reflects analysts' perceptions of the company's growth potential, stability, and relative risk. The price-earnings ratio relates these performance measures with the external judgment of the marketplace concerning the value of the firm.

The ratio measures the quality of earnings in the sense that it represents the market's expectation of future earnings as indicated by current earnings. Caution is called for in comparing price-earnings ratios. For instance, a ratio might be low, not because earnings expectations are low, but because of abnormally elevated current earnings. On the contrary, the ratio might be high, not because earnings expectations are high, but because the company's current earnings are temporarily depressed. Similarly, an analyst should be alert to differences among accounting methods used to measure earnings from company to company when making comparisons.

The price-earnings ratio measures the quality of a company's earnings.

Another ratio frequently calculated by shareholders and potential shareholders is the dividend payout ratio. This ratio expresses the percentage of earnings that are distributed to shareholders as dividends. The ratio is calculated by dividing dividends per common share by the earnings per share.

The dividend payout ratio indicates the percentage of earnings that is distributed to shareholders as dividends.

This ratio provides an indication of a firm's reinvestment strategy. A low payout ratio suggests that a company is retaining a large portion of earnings for reinvestment for new facilities and other operating needs. Low payouts often are found in growth industries and high payouts in mature industries. Often, though, the ratio is merely a reflection of managerial strategy concerning the mix of internal versus external financing. The ratio also is considered by investors who, for tax or other reasons, prefer current income over market price appreciation, or vice versa.

Concept Review Exercise

ADDITIONAL EPS ISSUES

At December 31, 2024, the financial statements of Bahnson General, Inc. included the following:

| | |
|--|---------------|
| Net income for 2024 (including a net-of-tax loss from discontinued operations of \$10 million) | \$180 million |
| Common stock, \$1 par: | |
| Shares outstanding on January 1 | 44 million |
| The share price was \$25 and \$28 at the beginning and end of the year, respectively | |

Additional data:

- At January 1, 2024, \$200 million of 8% convertible notes were outstanding. The notes were converted on April 1 into 16 million shares of common stock.
 - An agreement with company executives calls for the issuance of up to 12 million - additional shares of common stock in 2025 and 2026 based on Bahnson's net income in those years. Executives will receive 2 million shares at the end of each of those two years if the company's stock price is at least \$26 and another 4 million shares each year if the stock price is at least \$29.50.
- The tax rate is 25%.

Required:

Compute basic and diluted earnings per share for the year ended December 31, 2024.

Solution:

(\$ amounts in millions, except per share amounts)

Basic EPS

$$\frac{\text{Net income } \$180}{\begin{array}{c} 44 \\ \text{Shares} \\ \text{at Jan. 1} \end{array} + \begin{array}{c} 16 \text{ (} \frac{1}{2} \text{)} \\ \text{Actual} \\ \text{conversion} \\ \text{of notes} \end{array}} = \frac{\$180}{56} = \$3.21$$

Diluted EPS

$$\frac{\text{Net income } \$180}{\begin{array}{c} 44 \\ \text{Shares} \\ \text{at Jan. 1} \end{array} + \begin{array}{c} 16 \text{ (} \frac{1}{2} \text{)} \\ \text{Actual} \\ \text{conversion} \\ \text{of notes} \end{array} + \begin{array}{c} 16 \text{ (} \frac{3}{2} \text{)} \\ \text{Assumed} \\ \text{conversion} \\ \text{of notes} \end{array} + \begin{array}{c} (2 + 2) \\ \text{Contingent} \\ \text{shares} \end{array}} + \frac{[\$16 - 25\% (\$16)] \times (\frac{3}{2})}{64} = \frac{\$183}{64} = \$2.86$$

Convertible Notes: Notice that the effect on diluted EPS would be precisely the same whether the convertible notes were actually converted or not.

Converted on April 1:

$$\frac{\begin{array}{c} \text{Net income including} \\ \text{actual after-tax} \\ \text{interest savings} \\ \$180 \end{array}}{\begin{array}{c} 44 \\ \text{Shares} \\ \text{at Jan. 1} \end{array} + \begin{array}{c} 16 \text{ (} \frac{1}{2} \text{)} \\ \text{Actual} \\ \text{conversion} \\ \text{of notes} \end{array}} + \frac{\begin{array}{c} \text{Assumed after-tax} \\ \text{interest savings} \\ + [\$16 - 25\% (\$16)] \times (\frac{3}{2}) \end{array}}{\begin{array}{c} + 16 \text{ (} \frac{3}{2} \text{)} \\ \text{Assumed} \\ \text{conversion} \\ \text{of notes} \end{array}} = \frac{\$183}{60}$$

Not Actually Converted:

$$\frac{\begin{array}{c} \text{Net income without} \\ \text{actual after-tax} \\ \text{interest savings} \\ \$171^* \end{array}}{\begin{array}{c} 44 \\ \text{Shares} \\ \text{at Jan. 1} \end{array} + \begin{array}{c} 16 \\ \text{Assumed} \\ \text{conversion} \\ \text{of notes} \end{array}} + \frac{\begin{array}{c} \text{Assumed after-tax} \\ \text{interest savings} \\ + [\$16 - 25\% (\$16)] \end{array}}{60} = \frac{\$183}{60}$$

*\$180 - [(\$16 - 25% (\$16) × (9/12))] = \$171; after-tax interest incurred from Apr. 1 to Dec. 31.

Contingently Issuable Shares:

Because the conditions are met for issuing 4 million shares (2 million for each of two years), those shares are simply added to the denominator of diluted EPS. The current

share price (\$28) is projected to remain the same throughout the contingency period, so the other 8 million shares (4 million for each of two years) are excluded.

Income Statement Presentation:

To determine the per share amounts for income before discontinued operations, we substitute that amount for net income in the numerator (in this case, that means adding back the \$10 million loss from discontinued operations):

| | | |
|---------------------------------------|---|---|
| | Basic: $\frac{\$180 + \$10}{56} = \$3.39$ | Diluted: $\frac{\$183 + \$10}{64} = \$3.02$ |
| Earnings per Share: | Basic* | Diluted |
| Income before discontinued operations | \$3.39 | \$3.02 |
| Loss from discontinued operations | (0.18) | (0.16) |
| Net income | \$3.21 | \$2.86 |

*Only diluted EPS is required on the face of the income statement. Basic EPS is reported in the EPS reconciliation shown in the disclosure note (below).

Disclosure Note:

Earnings per Share Reconciliation:

Financial Reporting Case Solution

Fabio Cardoso/Getty Images

- 1. How can a compensation package such as this serve as an incentive to Ms. Veres?** Stock-based plans like the restricted stock and stock options that Ms. Veres is receiving are designed to motivate recipients. If the shares awarded are restricted so that Ms. Veres is not free to sell the shares during the restriction period, she has an incentive to remain with the company until rights to the shares vest. Likewise, stock options can be made exercisable only after a specified period of employment. An additional incentive of stock-based plans is that the recipient will be motivated to take actions that will maximize the value of the shares.
- 2. Ms. Veres received a “grant of restricted stock.” How should NEV account for the grant?** The compensation associated with restricted stock is the market price of unrestricted shares of the same stock. NEV will accrue this amount as compensation expense over the service period from the date of grant to when restrictions are lifted.
- 3. Included were stock options to buy more than 800,000 shares of NEV stock. How will the options affect NEV’s compensation expense?** Similar

to the method used for restricted stock, the value of the options is recorded as compensation over the service period, usually the vesting period.

4. How will the presence of these and other similar stock options affect NEV's earnings per share? If outstanding stock options were exercised, the resulting increase in shares would reduce or dilute EPS. If we don't take into account the dilutive effect of the share increase, we might mislead investors and creditors. So, in addition to basic EPS, we also calculate diluted EPS to include the dilutive effect of options and other potential common shares. This means calculating EPS as if the potential increase in shares already has occurred (even though it hasn't yet).

The Bottom Line

- LO19-1** We measure the fair value of stock issued in a restricted stock plan and expense it over the service period, usually from the date of grant to the vesting date. (*p. 1104*)
- LO19-2** Similarly, we estimate the fair value of stock options at the grant date and expense it over the service period, usually from the date of grant to the vesting date. Fair value is estimated at the grant date using an option-pricing model that considers the exercise price and expected term of the option, the current market price of the underlying stock and its expected volatility, expected dividends, and the expected risk-free rate of return. (*p. 1106*)
- LO19-3** Employee share purchase plans allow employees to buy company stock under convenient or favorable terms. Most such plans are considered compensatory and require any discount to be recorded as compensation expense. (*p. 1114*)
- LO19-4** A company has a simple capital structure if it has no outstanding securities that could potentially dilute earnings per share. For such a firm, EPS is simply earnings available to common shareholders divided by the weighted-average number of common shares outstanding. When potential common shares are outstanding, the company is said to have a complex capital structure. In that case, two EPS calculations are reported. Basic EPS assumes no dilution. Diluted EPS assumes maximum potential dilution. (*p. 1116*)
- LO19-5** EPS calculations are based on the weighted-average number of shares outstanding during the period. Any new shares issued during the period are time-weighted by the fraction of the period they were outstanding and then added to the number of shares outstanding for the period. (*p. 1117*)
- LO19-6** For a stock dividend or stock split, shares outstanding prior to the stock distribution are retroactively restated to reflect the increase in shares. When shares are reacquired, as treasury stock or to be retired, they are time-weighted for the fraction of the period they were not outstanding, prior to being subtracted from the number of shares outstanding during the reporting period. (*p. 1117*)

-  **LO19-7** The numerator in the EPS calculation should reflect earnings available to common shareholders. So, any dividends on preferred stock outstanding should be subtracted from reported net income. This adjustment is made for cumulative preferred stock whether or not dividends are declared that period. (*p. 1119*)
-  **LO19-8** For diluted EPS, it is assumed that stock options, rights, and warrants are exercised at the beginning of the period (or at the time the options are issued, if later) and the cash proceeds received are used to buy back (as treasury stock) as many of those shares as can be acquired at the average market price during the period. (*p. 1120*)
-  **LO19-9** To incorporate convertible securities into the calculation of diluted EPS, the conversion is assumed to have occurred at the beginning of the period (or at the time the convertible security is issued, if later). The denominator of the EPS fraction is adjusted for the additional common shares assumed, and the numerator is increased by the interest (after-tax) on bonds and not reduced by the preferred dividends that would have been avoided in the event of conversion. (*p. 1123*)
-  **LO19-10** If including potential common shares in the EPS calculation causes EPS to *increase* rather than decrease, then those potential common shares are considered *antidilutive* and are omitted from the calculation. (*p. 1125*)
-  **LO19-11** For the treasury stock method, “proceeds” include (1) the amount, if any, received from the hypothetical exercise of options or vesting of restricted stock and (2) the total compensation from the award that’s not yet expensed. (*p. 1130*)
-  **LO19-12** Contingently issuable shares are considered outstanding in the computation of diluted EPS when they will later be issued upon the mere passage of time or because of conditions that currently are met. (*p. 1131*)
-  **LO19-13** EPS data (both basic and diluted) must be reported for (a) income before any discontinued operations, (b) the discontinued operations, and (c) net income. Disclosures also should include a reconciliation of the numerator and denominator used in the computations. (*p. 1133*)
-  **LO19-14** When options have graded vesting, unlike under U.S. GAAP, IFRS does not permit the straight-line method for allocating compensation or require that the company recognize at least the amount of the award that has vested by each reporting date. The earnings per share requirements of IFRS and U.S.

GAAP are similar. The few differences that remain are the result of differences in the application of the treasury stock method, the treatment of contracts that may be settled in shares or cash, and contingently issuable shares. (*pp. 1110, 1112, and 1116*)

APPENDIX 19A Option-Pricing Theory

Option values have two essential components: (1) intrinsic value and (2) time value.

Intrinsic Value

Intrinsic value is the benefit the holder of an option would realize by exercising the option rather than buying the underlying stock directly. An option that permits an employee to buy \$25 stock for \$10 has an intrinsic value of \$15. An option that has an exercise price equal to or exceeding the market price of the underlying stock has zero intrinsic value.

Time Value

In addition to their intrinsic value, options also have a time value due to the fact that (a) the holder of an option does not have to pay the exercise price until the option is exercised and (b) the market price of the underlying stock may yet rise and create additional intrinsic value. All options have time value so long as time remains before expiration. The longer the time until expiration, other things being equal, the greater the time value. For instance, the option described above with an intrinsic value of \$15, might have a fair value of, say, \$22 if time still remains until the option expires. The \$7 difference represents the time value of the option. Time value can be subdivided into two components: (1) the effects of time value of money and (2) volatility value.

TIME VALUE OF MONEY

The time value of money component arises because the holder of an option does not have to pay the exercise price until the option is exercised. Instead, the holder can invest funds elsewhere while waiting to exercise the option. For measurement purposes, the time value of money component is assumed to be the rate of return available on risk-free U.S. Treasury Securities. The higher the time value of money, the higher the value of being able to delay payment of the exercise price.

An option's value is enhanced by the delay in paying cash for the shares.

When the underlying stock pays no dividends, the time value of money component is the difference between

The time value of money component is the difference

the exercise price (a future amount) and its discounted present value. Let's say the exercise price is \$30. If the present value (discounted at the risk-free rate) is \$24,

between the exercise price and its discounted present value minus the present value of expected dividends.

the time value of money component is \$6. On the

other hand, if the stock pays a dividend (or is expected to during the life of the option), the time value of money component is lower. The value of being able to delay payment of the exercise price would be partially offset by the cost of forgoing the dividend in the meantime.

For instance, if the stock underlying the options just described were expected to pay dividends, and the discounted present value of the expected dividends were \$2, the time value of money component in that example would be reduced from \$6 to \$4.

VOLATILITY VALUE

The volatility value represents the possibility that the option holder might profit from market price appreciation of the underlying stock while being exposed to the loss of only the value of the option, rather than the full market value of the stock. For example, fair value of an option to buy a share at an exercise price of \$30 might be measured as \$7. The potential profit from market price appreciation is conceptually unlimited. And yet, the potential loss from the stock's value failing to appreciate is only \$7.

A stock's volatility is the amount by which its price has fluctuated previously or is expected to fluctuate in the future. The greater a stock's volatility, the greater the

Volatility enhances the likelihood of stock price appreciation.

potential profit. It usually is measured as one standard deviation of a statistical distribution. Statistically, if the expected annualized volatility is 25%, the probability is approximately 67% that the stock's year-end price will fall within roughly plus or minus 25% of its beginning-of-year price. Stated differently, the probability is approximately 33% that the year-end stock price will fall outside that range.

Option-pricing models make assumptions about the likelihood of various future stock prices by making assumptions about the statistical distribution of future stock prices that take into account the expected volatility of the stock price. One popular option pricing model, the Black-Scholes model, for instance, assumes a log-normal distribution. This assumption posits that the stock price is as likely to fall by half as it is to double and that large price movements are less likely than small price movements. The higher a stock's volatility, the higher the probability of large increases or decreases in market price. Because the cost of large decreases is limited to the option's current value, but the profitability from large

increases is unlimited, an option on a highly volatile stock has a higher probability of a large profit than does an option on a less volatile stock.

Summary

In summary, the fair value of an option is (a) its intrinsic value plus (b) its time value of money component plus (c) its volatility component. The variables that affect an option's fair value and the effect of each are indicated in  **Illustration 19A-1**.

Illustration 19A-1 Effect of Variables on an Option's Fair Value

| All Other Factors Being Equal, If the | The Option Value Will Be |
|---------------------------------------|--------------------------|
| Exercise price is higher | Lower |
| Term of the option is longer | Higher |
| Market price of the stock is higher | Higher |
| Dividends are higher | Lower |
| Risk-free rate of return is higher | Higher |
| Volatility of the stock is higher | Higher |

APPENDIX 19B Stock Appreciation Rights

Stock appreciation rights (SARs) overcome a major disadvantage of stock option plans that require employees to actually buy shares when the options are exercised. Even though the options' exercise price may be significantly lower than the market value of the shares, the employee still must come up with enough cash to take advantage of the bargain. This can be quite a burden if the award is sizable. In a nonqualified stock option plan, income taxes also would have to be paid when the options are exercised.¹⁸

SARs offer a solution. Unlike stock options, these awards enable an employee to benefit by the amount that the market price of the company's stock rises without having to buy shares. Instead, the employee is awarded the share appreciation, which is the amount by which the market price on the exercise date exceeds

a prespecified price (usually the market price at the date of grant). For instance, if the share price rises from \$35 to \$50, the employee receives \$15 cash for each SAR held. The share appreciation usually is payable in cash or the recipient has the choice between cash and shares. A plan of this type offered by **IBM** is described in  **Illustration 19B-1**.

In an SAR plan, the employer pays compensation equal to the increase in share price from a specified level.

Illustration 19B-1 Stock Appreciation Rights—IBM Corporation

Real World Financials

Long-Term Performance Plan (in part)

SARs offer eligible optionees the alternative of electing not to exercise the related stock option, but to receive payment in cash and/or stock, equivalent to the difference between the option price and the average market price of IBM stock on the date of exercising the right.

Source: IBM Corporation

IS IT DEBT OR IS IT EQUITY?

In some plans, the employer chooses whether to issue shares or cash at exercise. In other plans, the choice belongs to the employee.¹⁹ Who has the choice determines the way it's accounted for. More specifically, the accounting treatment depends on whether the award is considered an equity instrument or a liability. If the employer can elect to settle in shares of stock rather than cash, the award is considered to be equity. On the other hand, if the employee will receive cash or can elect to receive cash, the award is considered to be a liability.

If an employer can elect to settle in shares of stock rather than cash, the award is considered to be equity.

A cash SAR requires the transfer of assets, and therefore is a liability. A stock option, on the other hand, is an equity instrument if it requires only the issuance of stock. This does not mean that a stock option whose issuer may later choose to settle in cash is not an equity instrument. Instead, a cash settlement would be considered equivalent to repurchasing an equity instrument for cash.

If an employee can elect to receive cash, the award is considered to be a liability.

SARS PAYABLE IN SHARES (EQUITY)

When a SAR is considered to be equity (because the employer can elect to settle in shares of stock rather than cash), we estimate the fair value of the SARs at the grant date and accrue that compensation to expense over the service period. Normally, the fair value of a SAR is the same as the fair value of a stock option with the same terms. The fair value is determined at the grant date and accrued to compensation expense over the service period the same way as for other share-based compensation plans. The total compensation is not revised for subsequent changes in the price of the underlying stock. This is demonstrated in Case 1 of  **Illustration 19-B2**.

The cash settlement of an equity award is considered the repurchase of an equity instrument

SARS PAYABLE IN CASH (LIABILITY)

When a SAR is considered to be a liability (because the employee can elect to receive cash upon settlement), we estimate the fair value of the SARs and recognize that amount as compensation expense over

Compensation expense reported to date is the estimated total compensation multiplied by the fraction of the service period that has expired.

the requisite service period consistent with the way we account for options and other share-based compensation. However, because these plans are considered to be liabilities, it's necessary to periodically re-estimate the fair value in order to continually adjust the liability (and corresponding compensation) until it is paid. Be sure to note that this is consistent with the way we account for other liabilities. Recall from our discussions in [Chapter 16](#), for instance, that when a tax rate change causes a change in the eventual liability for deferred income taxes, we adjust that liability.

The periodic expense (and adjustment to the liability) is the fraction of the total compensation earned to date by recipients of the SARs (based on the elapsed fraction of the service period) reduced by any amounts expensed in prior periods. For example, if the fair value of SARs at the end of a period is \$8, the total compensation would be **\$80** million if 10 million SARs are expected to vest. Let's say two years of a four-year service period have elapsed, and \$21 million was expensed the first year. Then, compensation expense the second year would be \$19 million, calculated as ($\frac{2}{4}$ of **\$80** million) minus \$21. An example spanning several years is provided in [Illustration 19B-2](#), Case 2.

We make up for incorrect previous estimates by adjusting expense in the period the estimate is revised.

Illustration 19B-2 Stock Appreciation Rights Case 1: Equity

Fair value is estimated at the date of grant.

The value of the compensation is estimated each year at the fair value of the SARs.

The expense each year is the current estimate of total compensation that should have been recorded to date less the amount already recorded.

If the fair value falls below the amount expensed to date, both the liability and expense are reduced.

At January 1, 2024, Universal Communications issued 10 million SARs that, upon exercise, entitle key executives to receive compensation equal in value to the excess of the market price at exercise over the share price at the date of grant.

- The SARs vest at the end of 2027 (cannot be exercised until then) and expire at the end of 2031.
- The fair value of the SARs, estimated by an appropriate option pricing model, is \$8 per SAR at January 1, 2024.

- The fair value re-estimated at December 31, 2024, 2025, 2026, 2027, and 2028, is \$8.40, \$8, \$6, \$4.30, and \$5, respectively.

Case 1: SARs considered to be equity because Universal can elect to settle in shares of Universal stock at exercise

January 1, 2024

No entry

Calculate total compensation expense:

$$\begin{aligned}
 & \$ 8 && \text{Estimated fair value per SAR} \\
 & \times 10 \text{ million} && \text{SARs granted} \\
 & = \text{\$80 million} && \text{Total compensation}
 \end{aligned}$$

Fair value is estimated at the date of grant.

The total compensation is allocated to expense over the four-year service (vesting) period: 2024–2027

$$\text{\$80 million} \div 4 \text{ years} = \text{\$20 million per year}$$

| December 31, 2024, 2025, 2026, 2027 | (\$ in millions) |
|--|------------------|
| Compensation expense (\\$80 million ÷ 4 years) | 20 |
| Paid-in capital—stock options | 20 |

Case 2: SARs considered to be a liability because employees can elect to receive cash at exercise

January 1, 2024

No entry

| December 31, 2024 | (\$ in millions) |
|---|------------------|
| Compensation expense ($\$8.40 \times 10 \text{ million} \times \frac{1}{4}$) | 21 |
| Liability—SAR plan | 21 |
| December 31, 2025 | |
| Compensation expense [$(\$8 \times 10 \text{ million} \times \frac{3}{4}) - \21] | 19 |
| Liability—SAR plan | 19 |
| December 31, 2026 | |
| Compensation expense [$(\$6 \times 10 \text{ million} \times \frac{3}{4}) - \$21 - \$19$] | 5 |
| Liability—SAR plan | 5 |

December 31, 2027

| | | |
|---|---|---|
| Liability—SAR plan | 2 | |
| Compensation expense [(\$4.30 × 10 million × $\frac{1}{4}$) – \$21 – \$19 – \$5] | | 2 |

Note that the way we treat changes in compensation estimates entails a catch-up adjustment in the period of change, *inconsistent* with the usual treatment of a change in estimate.

Remember that for most changes in estimate, revisions are allocated over remaining periods, rather than all at once in the period of change. The treatment is, however, consistent with the way we treat changes in forfeiture rate estimates, as we discussed earlier in the chapter.

Page 1143

The liability continues to be adjusted after the service period if the rights haven't been exercised yet.

Compensation expense and the liability continue to be adjusted until the SARs expire or are exercised.

| | |
|---|------------------|
| December 31, 2028 | (\$ in millions) |
| Compensation expense [(\$5 × 10 million × all) – \$21 – \$19 – \$5 + \$2] | 7 |
| Liability—SAR plan | 7 |

It's necessary to continue to adjust both compensation expense and the liability until the SARs ultimately either are exercised or lapse.²⁰ Assume, for example, that the SARs are exercised on October 11, 2029, when their fair value is \$4.50, and executives choose to receive the market price appreciation in cash.

Adjustment continues after the service period if the SARs have not yet been exercised.

| | |
|---|------------------|
| October 11, 2029 | (\$ in millions) |
| Liability—SAR plan | 5 |
| Compensation expense [(\$4.50 × 10 million × all) – \$50] | 5 |
| Liability—SAR plan (balance) | 45 |
| Cash | 45 |

Let's look at the changes in the liability–SAR plan account during the 2024–2029 period:

The liability is adjusted each period as changes in the fair value estimates cause changes in the liability.

| | | Liability–SAR Plan | |
|------|----|--------------------|------------------------|
| | | (\$ in millions) | |
| | | 21 | 2024 |
| | | 19 | 2025 |
| | | 5 | 2026 |
| 2027 | 2 | | |
| | | 7 | 2028 |
| 2029 | 5 | | |
| 2029 | 45 | | |
| | | 0 | Balance after exercise |

RESTRICTED STOCK UNITS PAYABLE IN CASH (LIABILITY)

Recall from our discussion in the chapter that restricted stock units (RSUs) give the recipient the right to receive a set number of shares of company stock after the vesting requirement is satisfied. But, sometimes, the recipient is given the *cash equivalent* of those shares instead. *If the employee will receive cash* or can elect to receive cash, as in the case of an SAR, we consider the award to be a *liability*. We determine its fair value at the grant date and recognize that amount as compensation expense over the requisite service period and, like SARs payable in cash, we periodically adjust the liability (and corresponding compensation) based on the change in the stock's fair value until the liability is paid. Accounting for RSUs payable in cash (sometimes called phantom shares or phantom performance shares) is quite similar to accounting for the SARs payable in cash in Case 2 of  **Illustration 19B-2**. Of course, though, we would label the liability “Liability–restricted stock.” And, we would determine the periodic value of the liability (and compensation) as the actual fair value of the shares, rather than an *estimated* fair value as is necessary when valuing SARs.

Accounting for RSUs payable in cash is essentially the same as accounting for the SARs payable in cash.

Questions For Review of Key Topics

- Q 19-1** What is restricted stock? How do restricted stock awards differ from restricted stock units (RSUs)? Describe how compensation expense is determined and recorded for a restricted stock award plan.
- Q 19-2** Stock option plans provide employees the option to purchase (a) a specified number of shares of the firm's stock, (b) at a specified price, (c) during a specified period of time. One of the most controversial aspects of accounting for stock-based compensation is how the fair value of stock options should be measured. Describe the general approach to measuring fair value.
- Q 19-3** The Tax Code differentiates between qualified option plans, including incentive plans, and nonqualified plans. What are the major differences in tax treatment between incentive plans and nonqualified plans?
- Q 19-4** Stock option (and other share-based) plans often specify a performance condition or a market condition that must be satisfied before employees are allowed the benefits of the award. Describe the general approach we use to account for performance-based options and options with market-related conditions.
- Q 19-5** What is a simple capital structure? How is EPS determined for a company with a simple capital structure?
- Q 19-6** When calculating the weighted-average number of common shares, how are stock dividends and stock splits treated? Compare this treatment with that of additional shares sold for cash at midyear.
- Q 19-7** Blake Distributors had 100,000 common shares outstanding at the beginning of the year, January 1. On May 13, Blake distributed a 5% stock dividend. Blake retired 1,200 shares on August 1. What is the weighted-average number of shares for calculating EPS?
- Q 19-8** Why are preferred dividends deducted from net income when calculating EPS? Are there circumstances when this deduction is not made?
- Q 19-9** Distinguish between basic and diluted EPS.
- Q 19-10** The treasury stock method is used to incorporate the dilutive effect of stock options, stock warrants, and similar securities. Describe this method as it applies to diluted EPS.

- Q 19-11** The potentially dilutive effect of convertible securities is reflected in EPS calculations by the if-converted method. Describe this method as it relates to convertible bonds.
- Q 19-12** How is the potentially dilutive effect of convertible preferred stock reflected in EPS calculations by the if-converted method? How is this different from the way convertible bonds are considered?
- Q 19-13** A convertible security may appear to be dilutive when looked at individually but might be antidilutive when included in combination with other convertible securities. How should the order be determined for inclusion of convertible securities in an EPS calculation to avoid including an antidilutive security?
- Q 19-14** If stock options and restricted stock are outstanding when calculating diluted EPS, what are the components of the “proceeds” available for the repurchase of shares under the treasury stock method?
- Q 19-15** Wiseman Electronics has an agreement with certain of its division managers that 50,000 contingently issuable shares will be issued next year in the event operating income exceeds \$2.1 million that year. In what way, if any, is the calculation of EPS affected by these contingently issuable shares, assuming this year’s operating income was \$2.2 million? \$2.0 million?
- Q 19-16** Diluted EPS would be precisely the same whether convertible bonds were actually converted or not. Why?
- Q 19-17** When the income statement includes discontinued operations, which amounts require per share presentation?
- Q 19-18** In addition to EPS numbers themselves, what additional disclosures should be provided concerning the EPS information?
- Q 19-19** (Based on  **Appendix 19A**) The fair value of stock options can be considered to comprise two main components. What are they?
- Q 19-20** (Based on  **Appendix 19B**) LTV Corporation grants SARs to key executives. Upon exercise, the SARs entitle executives to receive either cash or stock equal in value to the excess of the market price at exercise over the share price at the date of grant. How should LTV account for the awards?

Brief Exercises

BE 19–1 Restricted stock award LO19–1

First Link Services granted 8 million of its \$1 par common shares to executives, subject to forfeiture if employment is terminated within three years. The common shares have a market price of \$6 per share on the grant date of the restricted stock award. Ignoring taxes, what is the total compensation cost pertaining to the restricted shares? What is the effect on earnings in the year after the shares are granted to executives?

BE 19–2 Restricted stock units; financial statement effects LO19–1

Second Link Services granted restricted stock units (RSUs) representing 16 million of its \$1 par common shares to executives, subject to forfeiture if employment is terminated within four years. After the recipients of the RSUs satisfy the vesting requirement, the company will distribute the shares. The common shares had a market price of \$10 per share on the grant date. Ignoring taxes, what is the total compensation cost pertaining to the restricted stock units? What is the effect on earnings in the year after the shares are granted to executives?

BE 19–3 Stock options; financial statement effects LO19–2

Under its executive stock option plan, National Corporation granted 12 million options on January 1, 2024, that permit executives to purchase 12 million of the company's \$1 par common shares within the next six years, but not before December 31, 2026 (the vesting date). The exercise price is the market price of the shares on the date of grant, \$17 per share. The fair value of the options, estimated by an appropriate option pricing model, is \$5 per option. No forfeitures are anticipated. Ignoring taxes, what is the total compensation cost pertaining to the stock options? What is the effect on earnings in the year after the options are granted to executives?

BE 19–4 Stock options; forfeiture; financial statement effects LO19–2

Refer to the situation described in  **BE 19-3**. Suppose that unexpected turnover during 2025 caused the forfeiture of 5% of the stock options. What is the effect on earnings in 2025? In 2026?

BE 19-5 Stock options; forfeitures **LO19-2**

On January 1, 2024, Hugh Morris Comedy Club (HMCC) granted 1 million stock options to key executives exercisable for 1 million shares of the company's common stock at \$20 per share. The stock options are intended as compensation for the next three years. The options are exercisable within a four-year period beginning January 1, 2027, by the executives still in the employ of the company. No options were terminated during 2024. The market price of the common stock was \$25 per share at the date of the grant. HMCC estimated the fair value of the options at \$9 each. One percent of the options are forfeited during 2025 due to executive turnover. What amount should HMCC record as compensation expense for the year ended December 31, 2025, assuming HMCC chooses the option to record forfeitures as they actually occur?

BE 19-6 Stock options; exercise **LO19-2**

Refer to the situation described in  **BE 19-3**. Suppose that the options are exercised on April 3, 2027, when the market price is \$19 per share. What journal entry will National record?

BE 19-7 Stock options; expiration **LO19-2**

Refer to the situation described in  **BE 19-3**. Suppose that the options expire without being exercised. What journal entry will National record?

BE 19-8 Performance-based options **LO19-2**

On January 1, 2024, Farmer Fabrication issued stock options for 100,000 shares to a division manager. The options have an estimated fair value of \$6 each. To provide additional incentive for managerial achievement, the options are not exercisable unless divisional revenue increases by 5% in three years. Farmer initially estimates that it is probable the goal will be achieved. How much compensation will be recorded in 2024, 2025, 2026?

BE 19-9 Performance-based options **LO19-2**

Refer to the situation described in  **BE 19-8**. Suppose that after one year, Farmer estimates that it is *not* probable that divisional revenue will increase by 5% in three years. What journal entry will be needed to account for the options in 2025?

BE 19-10 Performance-based options **LO19-2**

Refer to the situation described in  **BE 19-8**. Suppose that Farmer initially estimates that it is *not* probable the goal will be achieved, but then after one year, Farmer estimates that it *is* probable that divisional revenue will increase by 5% by the end of 2026. What journal entry(s) will Farmer record to account for the options in 2025 and thereafter?

BE 19-11 Options with market-based conditions **LO19-2**

On January 1, 2024, Farmer Fabrication issued stock options for 100,000 shares to a division manager. The options have an estimated fair value of \$6 each. To provide additional incentive for managerial achievement, the options are not exercisable unless Farmer Fabrication's stock price increases by 5% in three years. Farmer initially estimates that it is not probable the goal will be achieved. How much compensation will be recorded in 2024, 2025, and 2026?

BE 19-12 EPS; shares issued; shares retired **LO19-5,** **LO19-6**

McDonnell-Myer Corporation reported net income of \$741 million. The company had 544 million common shares outstanding at January 1 and sold 36 million shares on February 28. As part of an annual share repurchase plan, 6 million shares were retired on April 30 for \$47 per share. Calculate McDonnell-Myer's earnings per share for the year.

BE 19-13 EPS; nonconvertible preferred shares **LO19-7**

At December 31, 2023 and 2024, Funk & Noble Corporation had outstanding 820 million shares of common stock and 2 million shares of 8%, \$100 par value cumulative preferred stock. No dividends were declared on either the preferred or common stock in 2023 or 2024. Net income for 2024 was \$426 million. The income tax rate is 25%. Calculate earnings per share for the year ended December 31, 2024.

BE 19–14 EPS; stock options  **LO19–8**

Fully vested incentive stock options exercisable at \$50 per share to obtain 24,000 shares of common stock were outstanding during a period when the average market price of the common stock was \$60 and the ending market price was \$60. What will be the net increase in the weighted-average number of shares outstanding due to the assumed exercise of these options when calculating diluted earnings per share?

BE 19–15 EPS; convertible preferred shares  **LO19–9**

Ahnberg Corporation had 800,000 shares of common stock issued and outstanding at January 1. No common shares were issued during the year, but on January 1, Ahnberg issued 100,000 shares of convertible preferred stock. The preferred shares are convertible into 200,000 shares of common stock. During the year Ahnberg paid \$60,000 cash dividends on the preferred stock. Net income was \$1,500,000. What were Ahnberg's basic and diluted earnings per share for the year?

BE 19–16 EPS; restricted stock award  **LO19–11**

Garcia Company granted 9 million of its no par common shares to executives, subject to forfeiture if employment is terminated within three years. The common shares have a market price of \$5 per share on January 1, 2023, the grant date of the restricted stock award. When calculating diluted EPS at December 31, 2024, what will be the net increase in the weighted-average number of shares outstanding if the market price of the common shares averaged \$5 per share during 2024?

Exercises

E 19–1 Restricted stock award plan LO19–1

Allied Paper Products, Inc., offers a restricted stock award plan to its vice presidents. On January 1, 2024, the company granted 16 million of its \$1 par common shares, subject to forfeiture if employment is terminated within two years. The common shares have a market price of \$5 per share on the grant date.

Required:

1. Determine the total compensation cost pertaining to the restricted shares.
2. Prepare the appropriate journal entries related to the restricted stock through December 31, 2025.

E 19–2 Restricted stock units LO19–1

On January 1, 2024, Tru Fashions Corporation awarded restricted stock units (RSUs) representing 12 million of its \$1 par common shares to key personnel, subject to forfeiture if employment is terminated within three years. After the recipients of the RSUs satisfy the vesting requirement, the company will distribute the shares. On the grant date, the shares had a market price of \$2.50 per share.

Required:

1. Determine the total compensation cost pertaining to the RSUs.
2. Prepare the appropriate journal entry to record the award of RSUs on January 1, 2024.
3. Prepare the appropriate journal entry to record compensation expense on December 31, 2024.
4. Prepare the appropriate journal entry to record compensation expense on December 31, 2025.
5. Prepare the appropriate journal entry to record compensation expense on December 31, 2026.

6. Prepare the appropriate journal entry to record the lifting of restrictions on the RSUs and issuing shares at December 31, 2026.

E 19–3 Restricted stock disclosure note; FedEx  **LO19–1**

Real World Financials

FedEx Corporation included the following disclosure note in an annual report:

Stock-Based Compensation (in part)

... Restricted shares of our common stock are awarded to key employees. All restrictions on the shares expire ratably over a four-year period. Shares are valued at the market price on the date of award ... Compensation expense associated with these awards is recognized on a straight-line basis over the shorter of the requisite service period or the stated vesting period.

The following table summarizes information regarding vested and unvested restricted stock for the year ended May 31, 2020:

| | Number of Shares | Weighted Average Grant Date Fair Value |
|--------------------------|------------------|---|
| Unvested at May 31, 2019 | 324,478 | \$217.76 |
| Granted | 207,012 | 158.58 |
| Vested | (154,449) | 200.84 |
| Forfeited | <u>(5,351)</u> | 197.07 |
| Unvested at May 31, 2020 | 371,690 | 192.19 |

Required:

1. Assuming a four-year vesting period, how much compensation expense did FedEx report in the year ended May 31, 2021, for the restricted stock granted during the year ended May 31, 2020? (Round dollar amounts to the nearest million.)
2. Based on the information provided in the disclosure note, prepare the journal entry that summarizes the vesting of restricted stock during the year ended May 31, 2020. (FedEx's common shares have a par amount per share of \$0.10.)

E 19–4 Restricted stock units; forfeitures anticipated **LO19–1**

Magnetic-Optical Corporation offers a variety of share-based compensation plans to employees. Under its restricted stock unit plan, the company on January 1, 2024, granted restricted stock units (RSUs) representing 4 million of its \$1 par common shares to various division managers.

- The shares are subject to forfeiture if employment is terminated within three years.
- The common shares have a market price of \$22.50 per share on the grant date.
- Management’s policy is to estimate forfeitures.

Required:

1. Determine the total compensation cost pertaining to the RSUs.
2. Prepare the appropriate journal entry to record the RSUs on January 1, 2024.
3. Prepare the appropriate journal entry to record compensation expense on December 31, 2024.
4. Suppose Magnetic-Optical expected a 10% forfeiture rate on the RSUs prior to vesting. Determine the total compensation cost.

E 19–5 Restricted stock units; forfeitures **LO19–1**

On January 1, 2024, Vijay Communications granted restricted stock units (RSUs) representing 30 million of its \$1 par common shares to executives, subject to forfeiture if employment is terminated within three years. After the recipients of the RSUs satisfy the vesting requirement, the company will distribute the shares.

- The common shares had a market price of \$12 per share on the grant date.
- At the date of grant, Vijay anticipated that 6% of the recipients would leave the firm prior to vesting.
- On January 1, 2025, 5% of the RSUs are forfeited due to executive turnover.
- Vijay chooses the option to account for forfeitures when they actually occur.

Required:

1. Prepare the appropriate journal entry to record compensation expense on December 31, 2024.

2. Prepare the appropriate journal entry to record compensation expense on December 31, 2025.
3. Prepare the appropriate journal entry to record compensation expense on December 31, 2026.

E 19–6 Stock options **LO19–2**

Heidi Software Corporation provides a variety of share-based compensation plans to its employees. Under its executive stock option plan, the company granted options on January 1, 2024, that permit executives to acquire 4 million of the company's \$1 par common shares within the next five years, but not before December 31, 2025 (the vesting date).

- The exercise price is the market price of the shares on the date of grant, \$14 per share.
- The fair value of the 4 million options, estimated by an appropriate option pricing model, is \$3 per option.
- No forfeitures are anticipated.
- Ignore taxes.

Required:

1. Determine the total compensation cost pertaining to the options.
2. Prepare the appropriate journal entry to record the award of options on January 1, 2024.
3. Prepare the appropriate journal entry to record compensation expense on December 31, 2024.
4. Prepare the appropriate journal entry to record compensation expense on December 31, 2025.

E 19–7 Stock options; forfeiture of options **LO19–2**

On January 1, 2024, Adams-Meneke Corporation granted 25 million incentive stock options to division managers, each permitting holders to purchase one share of the company's \$1 par common shares within the next six years, but not before December 31, 2026 (the vesting date).

- The exercise price is the market price of the shares on the date of grant, currently \$10 per share.

- The fair value of the options, estimated by an appropriate option pricing model, is \$3 per option.
- Management's policy is to estimate forfeitures.
- No forfeitures are anticipated. Ignore taxes.

Required:

1. Determine the total compensation cost pertaining to the options on January 1, 2024.
2. Prepare the appropriate journal entry to record compensation expense on December 31, 2024.
3. Unexpected turnover during 2025 caused an estimate of the forfeiture of 6% of the stock options. Prepare the appropriate journal entry(s) on December 31, 2025 and 2026 in response to the new estimate.

E 19–8 Stock options exercise; expirations  **LO19–2**

Martinez Audio Visual Inc. offers an incentive stock option plan to its regional managers. On January 1, 2024, options were granted for 40 million \$1 par common shares.

- The exercise price is the market price on the grant date—\$8 per share.
- Options cannot be exercised prior to January 1, 2026, and expire December 31, 2030.
- The fair value of the 40 million options, estimated by an appropriate option pricing model, is \$1 per option.

Required:

1. Determine the total compensation cost pertaining to the incentive stock option plan.
2. Prepare the appropriate journal entry to record compensation expense on December 31, 2024.
3. Prepare the appropriate journal entry to record compensation expense on December 31, 2025.
4. Prepare the appropriate journal entry to record the exercise of 75% of the options on March 12, 2026, when the market price is \$9 per share.
5. Prepare the appropriate journal entry on December 31, 2030, when the remaining options that have vested expire without being exercised.

E 19–9 Stock options; exercise  **LO19–2**

SSG Cycles manufactures and distributes motorcycle parts and supplies. Employees are offered a variety of share-based compensation plans. Under its nonqualified stock option plan, SSG granted options to key officers on January 1, 2024.

- The options permit holders to acquire 12 million of the company's \$1 par common shares for \$11 within the next six years, but not before January 1, 2027 (the vesting date).
- The market price of the shares on the date of grant is \$13 per share.
- The fair value of the 12 million options, estimated by an appropriate option pricing model, is \$3 per option.

Required:

1. Determine the total compensation cost pertaining to the incentive stock option plan.
2. Prepare the appropriate journal entries to record compensation expense on December 31, 2024, 2025, and 2026.
3. Record the exercise of the options if all of the options are exercised on May 11, 2028, when the market price is \$14 per share.

E 19–10 Employee share purchase plan  **LO19–3**

In order to encourage employee ownership of the company's \$1 par common shares, Washington Distribution permits any of its employees to buy shares directly from the company through payroll deduction. There are no brokerage fees and shares can be purchased at a 15% discount. During March, employees purchased 50,000 shares at a time when the market price of the shares on the New York Stock Exchange was \$12 per share.

Required:

Prepare the appropriate journal entry to record the March purchases of shares under the employee share purchase plan.

E 19–11 Employee share purchase plan; Microsoft  **LO19–3**

Real World Financials

Microsoft Corporation's disclosure notes for the year ending June 30, 2020, included the following regarding its \$0.00000625 par common stock:

EMPLOYEE STOCK PURCHASE PLAN—We have an ESPP for all eligible employees. Shares of our common stock may be purchased by employees at three-month intervals at 90% of the fair market value on the last trading day of each three-month period. Employees may purchase shares having a value not exceeding 15% of their gross compensation during an offering period. Employees purchased the following shares during the periods presented:

(Shares in millions)

| Year Ended June 30, | 2020 | 2019 | 2018 |
|-------------------------|----------|----------|---------|
| Shares purchased | 9 | 11 | 13 |
| Average price per share | \$142.22 | \$104.85 | \$76.40 |

As of June 30, 2020, 96 million shares of our common stock were reserved for future issuance through the ESPP.

Required:

Prepare the journal entry that summarizes Microsoft's employee share purchases for the year ending June 30, 2020.

Source: Microsoft Corporation

E 19–12 EPS; shares issued; stock dividend  **LO19–5,**
 **LO19–6**

For the year ended December 31, 2024, Norstar Industries reported net income of \$655,000. At January 1, 2024, the company had 900,000 common shares outstanding. The following changes in the number of shares occurred during 2024:

- Apr. 30 Sold 60,000 shares in a public offering
- May 24 Declared and distributed a 5% stock dividend
- June 1 Issued 72,000 shares as part of the consideration for the purchase of assets from a subsidiary

Required:

Compute Norstar's earnings per share for the year ended December 31, 2024.

E 19–13 EPS; treasury stock; new shares; stock dividends; two years, financial statement effects  **LO19–5**,  **LO19–6**

The Li Group had 202,000 shares of common stock outstanding at January 1, 2024. The following activities affected common shares during the year. There are no potential common shares outstanding.

2024

| | |
|---------|--|
| Feb. 28 | Purchased 6,000 shares of treasury stock. |
| Oct. 31 | Sold the treasury shares purchased on February 28. |
| Nov. 30 | Issued 24,000 new shares. |
| Dec. 31 | Net income for 2024 is \$400,000. |

2025

| | |
|---------|--|
| Jan. 15 | Declared and issued a 2-for-1 stock split. |
| Dec. 31 | Net income for 2025 is \$400,000. |

Required:

1. Determine the 2024 EPS.
2. Determine the 2025 EPS.
3. At what amount will the 2024 EPS be presented in the 2025 comparative financial statements?

E 19–14 EPS; stock dividend; nonconvertible preferred stock  **LO19–5**,  **LO19–6**,  **LO19–7**

Hardaway Fixtures' balance sheet at December 31, 2023, included the following:

Shares issued and outstanding:

| | |
|--|-----------|
| Common stock, \$1 par | \$800,000 |
| Nonconvertible preferred stock, \$50 par | 20,000 |

On July 21, 2024, Hardaway issued a 25% stock dividend on its common stock. On December 12, it paid \$50,000 cash dividends on the preferred stock. Net income for the year ended December 31, 2024, was \$2,000,000.

Required:

Compute Hardaway's earnings per share for the year ended December 31, 2024.

E 19–15 EPS; net loss; nonconvertible preferred stock; shares sold  **LO19–5**,  **LO19–6**,  **LO19–7**

At December 31, 2023, Albrecht Corporation had outstanding 373,000 shares of common stock and 8,000 shares of 9.5%, \$100 par value cumulative, nonconvertible preferred stock.

- On May 31, 2024, Albrecht sold for cash 12,000 shares of its common stock.
- No cash dividends were declared for 2024.
- For the year ended December 31, 2024, Albrecht reported a net loss of \$114,000.

Required:

Calculate Albrecht's net loss per share for the year ended December 31, 2024.

E 19–16 EPS; stock dividend; nonconvertible preferred stock; treasury shares; shares sold  **LO19–5**,  **LO19–6**,  **LO19–7**

On December 31, 2023, Berclair Inc. had 200 million shares of common stock and 3 million shares of 9%, \$100 par value cumulative preferred stock issued and outstanding.

- On March 1, 2024, Berclair purchased 24 million shares of its common stock as treasury stock.
- Berclair issued a 5% common stock dividend on July 1, 2024.
- Four million treasury shares were sold on October 1.
- Net income for the year ended December 31, 2024, was \$150 million.

Required:

Compute Berclair's earnings per share for the year ended December 31, 2024.

E 19–17 EPS; stock dividend; nonconvertible preferred stock; treasury shares; shares sold; stock options  **LO19–5 through**  **LO19–8**

[This is a variation of  **E 19–16**, modified to include stock options.]

On December 31, 2023, Berclair Inc. had 200 million shares of common stock and 3 million shares of 9%, \$100 par value cumulative preferred stock issued and outstanding.

- On March 1, 2024, Berclair purchased 24 million shares of its common stock as treasury stock.
- Berclair issued a 5% common stock dividend on July 1, 2024.
- Four million treasury shares were sold on October 1.
- Net income for the year ended December 31, 2024, was \$150 million.
- Also outstanding at December 31 were 30 million incentive stock options granted to key executives on September 13, 2019.
- The options were exercisable as of September 13, 2023, for 30 million common shares at an exercise price of \$56 per share.
- During 2024, the market price of the common shares averaged \$70 per share.

Required:

Compute Berclair's basic and diluted earnings per share for the year ended December 31, 2024. (Shares for stock options and conversion of convertible securities have been adjusted for any stock split of stock dividend.)

E 19–18 EPS; stock dividend; nonconvertible preferred stock; treasury shares; shares sold; stock options exercised  **LO19–5**
through  **LO19–8**

[This is a variation of  **E 19–16**, modified to include the exercise of stock options.]

On December 31, 2023, Berclair Inc. had 200 million shares of common stock and 3 million shares of 9%, \$100 par value cumulative preferred stock issued and outstanding.

- On March 1, 2024, Berclair purchased 24 million shares of its common stock as treasury stock.
- Berclair issued a 5% common stock dividend on July 1, 2024.
- Four million treasury shares were sold on October 1.
- Net income for the year ended December 31, 2024, was \$150 million.
- Also outstanding at December 31 were 30 million incentive stock options granted to key executives on September 13, 2019.

- The options were exercisable as of September 13, 2023, for 30 million common shares at an exercise price of \$56 per share.
- During 2024, the market price of the common shares averaged \$70 per share.
- The options were exercised on September 1, 2024.

Required:

Compute Berclair's basic and diluted earnings per share for the year ended December 31, 2024. (Shares for stock options and conversion of convertible securities have been adjusted for any stock split of stock dividend.)

E 19–19 EPS; stock dividend; nonconvertible preferred stock; treasury shares; shares sold; stock options; convertible bonds
 **LO19–5** through  **LO19–9**

[This is a variation of  **E 19–17** modified to include convertible bonds.]

On December 31, 2023, Berclair Inc. had 200 million shares of common stock and 3 million shares of 9%, \$100 par value cumulative preferred stock issued and outstanding.

- On March 1, 2024, Berclair purchased 24 million shares of its common stock as treasury stock.
- Berclair issued a 5% common stock dividend on July 1, 2024.
- Four million treasury shares were sold on October 1.
- Net income for the year ended December 31, 2024, was \$150 million.
- The income tax rate is 25%.
- Also outstanding at December 31 were incentive stock options granted to key executives on September 13, 2019.
- The options are exercisable as of September 13, 2023, for 30 million common shares at an exercise price of \$56 per share.
- During 2024, the market price of the common shares averaged \$70 per share.
- In 2020, \$50 million of 8% bonds, convertible into 6 million common shares, were issued at face value.

Required:

Compute Berclair’s basic and diluted earnings per share for the year ended December 31, 2024. (Shares for stock options and conversion of convertible securities have been adjusted for any stock split of stock dividend.)

E 19–20 EPS; shares issued; stock options  **LO19–6** through  **LO19–9**

Stanley Department Stores reported net income of \$720,000 for the year ended December 31, 2024.

Additional Information:

| | |
|--|--------|
| Common shares outstanding at Jan. 1, 2024 | 80,000 |
| Incentive stock options (vested in 2023) outstanding throughout 2024 | 24,000 |

(Each option is exercisable for one common share at an exercise price of \$37.50.)

During the year, the market price of Stanley’s common stock averaged \$45 per share.

On Aug. 30, Stanley sold 15,000 common shares.

Stanley’s only debt consisted of \$50,000 of 10% short-term bank notes.

The company’s income tax rate is 25%.

Required:

Compute Stanley’s basic and diluted earnings per share for the year ended December 31, 2024.

E 19–21 EPS; convertible preferred stock; convertible bonds; order of entry  **LO19–7**,  **LO19–9**

Information from the financial statements of Ames Fabricators, Inc., included the following:

| | December 31 | |
|---|-------------|---------|
| | 2024 | 2023 |
| Common shares | 100,000 | 100,000 |
| Convertible preferred shares (convertible into 32,000 shares of common) | 12,000 | 12,000 |

| | December 31 | |
|---|-------------|-------------|
| | 2024 | 2023 |
| 8% convertible bonds (convertible into 30,000 shares of common) | \$1,000,000 | \$1,000,000 |

Ames's net income for the year ended December 31, 2024, is \$500,000. The income tax rate is 25%. Ames paid dividends of \$5 per share on its preferred stock during 2024.

Required:

Compute basic and diluted earnings per share for the year ended December 31, 2024.

E 19–22 EPS; restricted stock  **LO19–11**

As part of its executive compensation plan, Vertovec Inc. granted 54,000 of its no-par common shares to executives, subject to forfeiture if employment is terminated within three years. Vertovec's common shares have a market price of \$5 per share on January 1, 2023, the grant date of the restricted stock award, as well as on December 31, 2024. 800,000 shares were outstanding at January 1, 2024. Net income for 2024 was \$120,000.

Required:

Compute Vertovec's basic and diluted earnings per share for the year ended December 31, 2024.

E 19–23 Record restricted stock; effect on EPS  **LO19–1,**
 **LO19–11**

Justin Short Foods granted 18 million of its no-par common shares to executives, subject to forfeiture if employment is terminated within three years. The common shares have a market price of \$5 per share on January 1, 2023, the grant date.

Required:

1. What journal entry will Justin Short Foods prepare to record executive compensation regarding these restricted shares at December 31, 2023 and December 31, 2024?
2. When calculating diluted EPS at December 31, 2024, what will be the net increase in the weighted average number of common shares with regard to the restricted stock shares if the market price of the common shares averages \$5 per share during 2024?

E 19–24 New shares; contingently issuable shares  **LO19–6**,
 **LO19–12**

During 2024, its first year of operations, Kevin Berry Industries entered into the following transactions relating to shareholders' equity. The corporation was authorized to issue 100 million common shares, \$1 par per share.

- Jan. 2 Issued 35 million common shares for cash.
- 3 Entered an agreement with the company president to issue up to 2 million additional shares of common stock in 2025 based on the earnings of Berry in 2025. If net income exceeds \$140 million, the president will receive 1 million shares; 2 million shares if net income exceeds \$150 million.
- Mar. 31 Issued 4 million shares in exchange for plant facilities.

Net income for 2024 was \$148 million.

Page 1152

Required:

Compute basic and diluted earnings per share for the year ended December 31, 2024.

E 19–25 EPS; new shares; contingent agreements  **LO19–6**,
 **LO19–12**

Anderson Steel Company began 2024 with 600,000 shares of common stock outstanding.

- On March 31, 2024, 100,000 new shares were sold at a price of \$45 per share.
- The market price has risen steadily since that time to a high of \$50 per share at December 31.
- No other changes in shares occurred during 2024, and no securities are outstanding that can become common stock.
- However, there are two agreements with officers of the company for future issuance of common stock.
- Both agreements relate to compensation arrangements reached in 2023.
- The first agreement grants to the company president a right to 10,000 shares of stock each year the closing market price is at least \$48.
- The agreement begins in 2025 and expires in 2028.

- The second agreement grants to the controller a right to 15,000 shares of stock if she is still with the firm at the end of 2032.
- Net income for 2024 was \$2,000,000.

Required:

Compute Anderson Steel Company's basic and diluted EPS for the year ended December 31, 2024.

E 19–26 EPS; concepts; terminology  **LO19–5** through  **LO19–13**

Listed below are several terms and phrases associated with earnings per share. Pair each item from List A with the item from List B (by letter) that is most appropriately associated with it.

| List A | List B |
|--|---|
| _____ 1. Subtract preferred dividends. | a. Options exercised. |
| _____ 2. Time-weighted by 5/12. | b. Simple capital structure. |
| _____ 3. Time-weighted shares assumed issued plus time-weighted actual shares. | c. Basic EPS. |
| _____ 4. Midyear event treated as if it occurred at the beginning of the reporting period. | d. Convertible preferred stock. |
| _____ 5. Preferred dividends do not reduce earnings. | e. Earnings available to common shareholders. |

E 19–27 FASB codification research LO19–2

The *FASB Accounting Standards Codification* represents the single source of authoritative U.S. generally accepted accounting principles. Obtain the relevant authoritative literature on stock compensation using the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org) and select Basic View for free access.

Required:

1. What is the specific eight-digit Codification citation (XXX-XX-XXX) that describes the information that companies must disclose about the exercise prices for their stock option plans?
2. List the disclosure requirements.

E 19–28 FASB codification research LO19–2, LO19–3, LO19–7, LO19–13

Access the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org) and select Basic View for free access. Determine the specific seven-, eight-, or nine-digit Codification citation (XXX-XX-XX-X) for accounting for each of the following items:

1. Initial measurement of stock options.
2. The measurement date for share-based payments classified as liabilities.

3. The formula to calculate diluted earnings per share.
4. The way stock dividends or stock splits in the current year affect the presentation of EPS in the income statement.

E 19–29 Stock appreciation rights; settlement in shares; financial statement effects **Appendix 19B**

As part of its stock-based compensation package, International Electronics (IE) granted 24 million stock appreciation rights (SARs) to top officers on January 1, 2024.

- At exercise, holders of the SARs are entitled to receive stock equal in value to the excess of the market price at exercise over the share price at the date of grant.
- The SARs cannot be exercised until the end of 2027 (vesting date) and expire at the end of 2029.
- The \$1 par common shares have a market price of \$46 per share on the grant date.
- The fair value of the SARs, estimated by an appropriate option pricing model, is \$3 per SAR at January 1, 2024.
- The fair value re-estimated at December 31, 2024, 2025, 2026, 2027, and 2028, is \$4, \$3, \$4, \$2.50, and \$3, respectively.
- All recipients are expected to remain employed through the vesting date.

Required:

1. Prepare any appropriate journal entry to record the award of SARs on January 1, 2024. Will the SARs be reported as debt or as equity?
2. Prepare the appropriate journal entries pertaining to the SARs on December 31, 2024–December 31, 2027.
3. The SARs remain unexercised on December 31, 2028. Prepare the appropriate journal entry on that date.
4. The SARs are exercised on June 6, 2029, when the share price is \$50. Prepare the appropriate journal entry(s) on that date.

E 19–30 Stock appreciation rights; cash settlement **Appendix 19B**

[This is a variation of  **E 19-29**, modified to allow settlement in cash.]

As part of its stock-based compensation package, International Electronics granted 24 million stock appreciation rights (SARs) to top officers on January 1, 2024.

- At exercise, holders of the SARs are entitled to receive cash or stock equal in value to the excess of the market price at exercise over the share price at the date of grant.
- The SARs cannot be exercised until the end of 2027 (vesting date) and expire at the end of 2029.
- The \$1 par common shares have a market price of \$46 per share on the grant date.
- The fair value of the SARs, estimated by an appropriate option pricing model, is \$3 per SAR at January 1, 2024.
- The fair value re-estimated at December 31, 2024, 2025, 2026, 2027, and 2028, is \$4, \$3, \$4, \$2.50, and \$3, respectively.
- All recipients are expected to remain employed through the vesting date.

Required:

1. Prepare any appropriate journal entry to record the award of SARs on January 1, 2024.
2. Prepare the appropriate journal entries pertaining to the SARs on December 31, 2024–December 31, 2027.
3. The SARs remain unexercised on December 31, 2028. Prepare the appropriate journal entry on that date.
4. The SARs are exercised on June 6, 2029, when the share price is \$50, and executives choose to receive the market price appreciation in cash. Prepare the appropriate journal entry(s) on that date.

E 19-31 Restricted stock units; cash settlement

 **Appendix 19B**

As part of its stock-based compensation package, on January 1, 2024, International Electronics granted restricted stock units (RSUs) representing 50 million \$1 par common shares.

- At exercise, holders of the RSUs are entitled to receive cash or stock equal in value to the market price of those shares at exercise.

- The RSUs cannot be exercised until the end of 2027 (vesting date) and expire at the end of 2029.
- The \$1 par common shares have a market price of \$6 per share on the grant date.
- The fair value at December 31, 2024, 2025, 2026, 2027, and 2028, is \$8, \$6, \$8, \$5, and \$6, respectively.
- All recipients are expected to remain employed through the vesting date.
- After the recipients of the RSUs satisfy the vesting requirement, the company will distribute the shares.

Required:

1. Prepare any appropriate journal entry to record the award of RSUs on January 1, 2024.
2. Prepare the appropriate journal entries pertaining to the RSUs on December 31, 2024–December 31, 2027.
3. The RSUs remain unexercised on December 31, 2028. Prepare the appropriate journal entry on that date.
4. The RSUs are exercised on June 6, 2029, when the share price is \$6.50, and executives choose to receive cash. Prepare the appropriate journal entry(s) on that date.

Problems

P 19–1 Stock options; forfeiture; exercise LO19–2

On October 15, 2023, the board of directors of Martinez Materials Corporation approved a stock option plan for key executives. On January 1, 2024, 20 million stock options were granted, exercisable for 20 million shares of Martinez’s \$1 par common stock.

- The options are exercisable between January 1, 2027, and December 31, 2029, at 80% of the quoted market price on January 1, 2024, which was \$15.
- The fair value of the 20 million options, estimated by an appropriate option pricing model, is \$6 per option.
- Martinez chooses the option to recognize forfeitures only when they occur.
- Ten percent (2 million) of the options were forfeited when an executive resigned in 2025.
- All other options were exercised on July 12, 2028, when the stock’s price jumped unexpectedly to \$19 per share.

Required:

1. When is Martinez’s stock option measurement date?
2. Determine the compensation expense for the stock option plan in 2024. (Ignore taxes.)
3. Prepare the journal entries to reflect the effect of forfeiture of the stock options on Martinez’s financial statements for 2025 and 2026.
4. Is this effect consistent with the general approach for accounting for changes in estimates? Explain.
5. Prepare the journal entry to account for the exercise of the options in 2028.

P 19–2 Stock options; graded vesting; financial statement effects LO19–2

Pastner Brands is a calendar-year firm with operations in several countries. As part of its executive compensation plan, at January 1, 2024, the company issued 400,000 executive stock options permitting executives to buy 400,000 shares of Pastner stock for \$34 per

share. One-fourth of the options vest in each of the next four years beginning at December 31, 2024 (graded vesting). Pastner elects to separate the total award into four groups (or tranches) according to the year in which they vest and measures the compensation cost for each vesting date as a separate award. The fair value of each tranche is estimated at January 1, 2024, as follows:

| Vesting Date | Amount Vesting | Fair Value per Option |
|---------------|----------------|-----------------------|
| Dec. 31, 2024 | 25% | \$3.50 |
| Dec. 31, 2025 | 25% | \$4.00 |
| Dec. 31, 2026 | 25% | \$4.50 |
| Dec. 31, 2027 | 25% | \$5.00 |

Required:

1. Determine the compensation expense related to the options to be recorded each year 2024–2027, assuming Pastner allocates the compensation cost for each of the four groups (tranches) separately.
2. Determine the compensation expense related to the options to be recorded each year 2024–2027, assuming Pastner uses the straight-line method to allocate the total compensation cost.

P 19–3 Stock options; graded vesting; measurement using a single fair value per option; financial statement effects

 **LO19–2**

Refer to the situation described in  **P 19–2**. Assume Pastner measures the fair value of all options on January 1, 2024, to be \$4.50 per option using a single weighted-average expected life of the options assumption.

Required:

1. Determine the compensation expense related to the options to be recorded each year 2024–2027, assuming Pastner allocates the compensation cost for each of the four groups (tranches) separately.
2. Determine the compensation expense related to the options to be recorded each year 2024–2027, assuming Pastner uses the straight-line method to allocate the total compensation cost.

P 19–4 Stock options; graded vesting; IFRS; financial statement effects  **LO19–2**,  **LO19–14**

IFRS

Refer to the situation described in  **P 19–2**. Assume Pastner prepares its financial statements using International Financial Reporting Standards (IFRS).

Required:

Determine the compensation expense related to the options to be recorded each year, 2024–2027.

Page 1155

P 19–5 Stock option plan; deferred tax effect recognized  **LO19–2**

Walters Audio Visual, Inc., offers a stock option plan to its regional managers.

- On January 1, 2024, 40 million options were granted for 40 million \$1 par common shares.
- The exercise price is the market price on the grant date, \$8 per share.
- Options cannot be exercised prior to January 1, 2026, and expire December 31, 2030.
- The fair value of the options, estimated by an appropriate option pricing model, is \$2 per option.
- Because the plan does not qualify as an incentive plan, Walters will receive a tax deduction upon exercise of the options equal to the excess of the market price at exercise over the exercise price.
- The income tax rate is 25%.

Required:

1. Determine the total compensation cost pertaining to the stock option plan.
2. Prepare the appropriate journal entries to record compensation expense and its tax effect on December 31, 2024.

3. Prepare the appropriate journal entries to record compensation expense and its tax effect on December 31, 2025.
4. Record the exercise of the options and their tax effect if *all* of the options are exercised on March 20, 2029, when the market price is \$12 per share.
5. Assume the option plan qualifies as an incentive plan. Prepare the appropriate journal entries to record compensation expense and its tax effect on December 31, 2024.
6. Assuming the option plan qualifies as an incentive plan, record the exercise of the options and their tax effect if *all* of the options are exercised on March 20, 2029, when the market price is \$11 per share.

P 19–6 Stock option plan; deferred tax effect of a nonqualifying plan  **LO19–2**

JBL Aircraft manufactures and distributes aircraft parts and supplies. Employees are offered a variety of share-based compensation plans. Under its nonqualified stock option plan, JBL granted options to key officers on January 1, 2024.

- The options permit holders to acquire 6 million of the company's \$1 par common shares for \$22 within the next six years, but not before January 1, 2027 (the vesting date).
- The market price of the shares on the date of grant is \$26 per share.
- The fair value of the 6 million options, estimated by an appropriate option pricing model, is \$6 per option.
- Because the plan does not qualify as an incentive plan, JBL will receive a tax deduction upon exercise of the options equal to the excess of the market price at exercise over the exercise price.
- The tax rate is 25%.

Required:

1. Determine the total compensation cost pertaining to the incentive stock option plan.
2. Prepare the appropriate journal entries to record compensation expense and its tax effect on December 31, 2024, 2025, and 2026.

- Record the exercise of the options and their tax effect if *all* of the options are exercised on August 21, 2028, when the market price is \$27 per share.

P 19–7 Performance option plan **LO19–2**

LCI Cable Company grants 1 million performance stock options to key executives at January 1, 2024.

- The options entitle executives to receive 1 million of LCI \$1 par common shares, subject to the achievement of specific financial goals over the next four years.
- Attainment of these goals is considered probable initially and throughout the service period. The options have a current fair value of \$12 per option.

Required:

- Prepare the appropriate entry when the options are awarded on January 1, 2024.
- Prepare the appropriate entries on December 31 of each year 2024–2027.
- Suppose at the beginning of 2026, LCI decided it is not probable that the performance objectives will be met. Prepare the appropriate entries on December 31 of 2026 and 2027.

P 19–8 Net loss per share; stock dividend; nonconvertible preferred stock; treasury shares; shares sold; discontinued operations; financial statement effects **LO19–5 through** **LO19–7, LO19–13**

On December 31, 2023, Ainsworth, Inc., had 600 million shares of common stock outstanding.

- Twenty million shares of 8%, \$100 par value cumulative, nonconvertible preferred stock were sold on January 2, 2024.
- On April 30, 2024, Ainsworth purchased 30 million shares of its common stock as treasury stock.
- Twelve million treasury shares were sold on August 31.
- Ainsworth issued a 5% common stock dividend on June 12, 2024.
- No cash dividends were declared in 2024.
- For the year ended December 31, 2024, Ainsworth reported a net loss of \$140 million, including an after-tax loss from discontinued operations of \$400 million.

Required:

1. Determine Ainsworth's net loss per share for the year ended December 31, 2024.
2. Determine the per share amount of income or loss from continuing operations for the year ended December 31, 2024.
3. Prepare an EPS presentation that would be appropriate to appear on Ainsworth's 2024 and 2023 comparative income statements. Assume EPS was reported in 2023 as \$0.75, based on net income (no discontinued operations) of \$450 million and a weighted-average number of common shares of 600 million.

P 19–9 EPS from statement of retained earnings  **LO19–4**
through  **LO19–6**

(Note: This problem is based on the same situation described in  **P 18–4** in  **Chapter 18**, modified to focus on EPS rather than recording the events that affected retained earnings.)

Comparative Statements of Retained Earnings for Renn-Dever Corporation were reported as follows for the fiscal years ending December 31, 2022, 2023, and 2024.

| RENN-DEVER CORPORATION | | | |
|--|-------------|-------------|-------------|
| Statements of Retained Earnings | | | |
| For the Years Ended December 31 | | | |
| | 2024 | 2023 | 2022 |
| Balance at beginning of year | \$6,794,292 | \$5,464,052 | \$5,624,552 |
| Net income (loss) | 3,308,700 | 2,240,900 | (160,500) |
| Deductions: | | | |
| Stock dividend (34,900 shares) | 242,000 | | |
| Common shares retired, September 30 (110,000 shares) | | 212,660 | |

| RENN-DEVER CORPORATION | | | |
|--|--------------------|--------------------|--------------------|
| Statements of Retained Earnings | | | |
| For the Years Ended December 31 | | | |
| | 2024 | 2023 | 2022 |
| Common stock | 889,950 | 698,000 | 0 |
| cash dividends | | | |
| Balance at end of year | <u>\$8,971,042</u> | <u>\$6,794,292</u> | <u>\$5,464,052</u> |

At December 31, 2021, paid-in capital consisted of the following:

| | |
|---|-------------|
| Common stock, 1,855,000 shares at \$1 par | \$1,855,000 |
| Paid in capital—excess of par | 7,420,000 |

No preferred stock or potential common shares were outstanding during any of the periods shown.

Required:

Compute Renn-Dever's earnings per share as it would have appeared in income statements for the years ended December 31, 2022, 2023, and 2024.

P 19–10 EPS from statement of shareholders' equity; financial statement effects  **LO19–4** through  **LO19–6**

Comparative Statements of Shareholders' Equity for Locke Intertechnology Corporation were reported as follows for the fiscal years ending December 31, 2022, 2023, and 2024.

LOCKE INTERTECHNOLOGY CORPORATION

Required:

Infer from the statements the events and transactions that affected Locke Intertechnology Corporation's shareholders' equity and compute earnings per share as it would have appeared on the income statements for the years ended December 31, 2022, 2023, and 2024. No potential common shares were outstanding during any of the periods shown.

P 19–11 EPS; nonconvertible preferred stock; treasury shares; shares sold; stock dividend  **LO19–4** through  **LO19–7**

On December 31, 2023, Dow Steel Corporation had 600,000 shares of common stock and 300,000 shares of 8%, noncumulative, nonconvertible preferred stock issued and outstanding.

- Dow issued a 4% common stock dividend on May 15 and paid cash dividends of \$400,000 and \$75,000 to common and preferred shareholders, respectively, on December 15, 2024.
- On February 28, 2024, Dow sold 60,000 common shares.

- In keeping with its long-term share repurchase plan, 2,000 shares were retired on July 1.
- Dow's net income for the year ended December 31, 2024, was \$2,100,000. The income tax rate is 25%.

Required:

Compute Dow's earnings per share for the year ended December 31, 2024.

P 19–12 EPS; nonconvertible preferred stock; treasury shares; shares sold; stock dividend; options  **LO19–4** through  **LO19–8**,  **LO19–10**

[This problem is a variation of  **P 19–11**, modified to include stock options.]

On December 31, 2023, Dow Steel Corporation had 600,000 shares of common stock and 300,000 shares of 8%, noncumulative, nonconvertible preferred stock issued and outstanding.

- Dow issued a 4% common stock dividend on May 15 and paid cash dividends of \$400,000 and \$75,000 to common and preferred shareholders, respectively, on December 15, 2024.
- On February 28, 2024, Dow sold 60,000 common shares.
- In keeping with its long-term share repurchase plan, 2,000 shares were retired on July 1.
- Dow's net income for the year ended December 31, 2024, was \$2,100,000. The income tax rate is 25%.
- As part of an incentive compensation plan, Dow granted incentive stock options to division managers on December 31 of the current and each of the previous two years.
- Each option permits its holder to buy one share of common stock at an exercise price equal to market value at the date of grant and can be exercised one year from that date.

Information concerning the number of options granted and common share prices follows:

| Date Granted | Options Granted | Share Price |
|-------------------|-----------------------------------|-------------|
| | (adjusted for the stock dividend) | |
| December 31, 2022 | 8,000 | \$24 |
| December 31, 2023 | 3,000 | \$33 |
| December 31, 2024 | 6,500 | \$32 |

The market price of the common stock averaged \$32 per share during 2024.

Required:

Compute Dow's earnings per share for the year ended December 31, 2024.

P 19–13 EPS; nonconvertible preferred stock; treasury shares; shares sold; stock dividend; options; convertible bonds; contingently issuable shares  **LO19–4** through  **LO19–11**

[This problem is a variation of  **P 19–12**, modified to include convertible bonds and contingently issuable shares.]

On December 31, 2023, Dow Steel Corporation had 600,000 shares of common stock and 300,000 shares of 8%, noncumulative, nonconvertible preferred stock issued and outstanding.

- Dow issued a 4% common stock dividend on May 15 and paid cash dividends of \$400,000 and \$75,000 to common and preferred shareholders, respectively, on December 15, 2024.
- On February 28, 2024, Dow sold 60,000 common shares.
- **In keeping with its long-term share repurchase plan, 2,000 shares were retired on July 1.** ▶
- Dow's net income for the year ended December 31, 2024, was \$2,100,000.
- The income tax rate is 25%.
- Also, as a part of a 2023 agreement for the acquisition of Merrill Cable Company, another 23,000 shares (already adjusted for the stock dividend) are to be issued to former Merrill shareholders on December 31, 2025, if Merrill's 2025 net income is at least \$500,000.
- In 2024, Merrill's net income was \$630,000.
- As part of an incentive compensation plan, Dow granted incentive stock options to division managers on December 31 of the current and each of the previous two years.
- Each option permits its holder to buy one share of common stock at an exercise price equal to market value at the date of grant and can be exercised one year from that date.

Information concerning the number of options granted and common share prices follows:

| Date Granted | Options Granted | Share Price |
|-------------------|-----------------------------------|-------------|
| | (adjusted for the stock dividend) | |
| December 31, 2022 | 8,000 | \$24 |
| December 31, 2023 | 3,000 | \$33 |
| December 31, 2024 | 6,500 | \$32 |

- The market price of the common stock averaged \$32 per share during 2024.
- On July 12, 2022, Dow issued \$800,000 of convertible 8% bonds at face value.
- Each \$1,000 bond is convertible into 30 common shares (adjusted for the stock dividend).

Required:

Compute Dow's basic and diluted earnings per share for the year ended December 31, 2024.

P 19–14 EPS; convertible preferred stock; convertible bonds; order of entry  **LO19–7**,  **LO19–9**,  **LO19–10**

Information from the financial statements of Park-Rao Industries included the following at December 31, 2024:

| | |
|---|---------------|
| Common shares outstanding throughout the year | 100 million |
| Convertible preferred shares (convertible into 32 million shares of common) | 60 million |
| Convertible 8% bonds (convertible into 13.5 million shares of common) | \$900 million |

Park-Rao's net income for the year ended December 31, 2024, is \$520 million. The income tax rate is 25%. Park-Raos paid dividends of \$2 per share on its preferred stock during 2024.

Required:

Compute basic and diluted earnings per share for the year ended December 31, 2024.

P 19–15 EPS; antidilution  **LO19–4** through  **LO19–10**,  **LO19–13**

Alciatore Company reported a net income of \$150,000 in 2024. The weighted-average number of common shares outstanding for 2024 was 40,000. The average stock price for 2024 was \$33. Assume an income tax rate of 25%.

Required:

For each of the following independent situations, indicate whether the effect of the security is antidilutive for diluted EPS.

1. 10,000 shares of 7.7% of \$100 par convertible, cumulative preferred stock. Each share may be converted into two common shares.
2. 6.4% convertible 10-year, \$500,000 of bonds, issued at face value. The bonds are convertible to 5,000 shares of common stock.
3. Stock options exercisable at \$30 per share after January 1, 2026.
4. Warrants for 1,000 common shares with an exercise price of \$35 per share.
5. A contingent agreement to issue 5,000 shares of stock to the company president if net income is at least \$125,000 in 2025.

P 19–16 EPS; convertible bonds; treasury shares  **LO19–4**
through  **LO19–6**,  **LO19–9**

At December 31, 2024, the financial statements of Hollingsworth Industries included the following:

| | |
|---|------------------|
| Net income for 2024 | \$560 million |
| Bonds payable, 8%, convertible into 36 million shares of common stock | \$300 million |
| Common stock: | |
| Shares outstanding on January 1 | 400 million |
| Treasury shares purchased for cash on September 1 | 30 million |

Additional data:

The bonds payable were issued at par in 2022. The tax rate for 2024 was 25%.

Required:

Compute basic and diluted EPS for the year ended December 31, 2024.

P 19–17 EPS; options; convertible preferred; additional shares
 **LO19–4** through  **LO19–9**

On January 1, 2024, Jaewoo Industries had outstanding 440,000 common shares (\$1 par) that originally sold for \$20 per share, and 4,000 shares of 10% cumulative preferred stock (\$100 par), convertible into 40,000 common shares.

- On October 1, 2024, Jaewoo sold and issued an additional 16,000 shares of common stock at \$33.
- At December 31, 2024, there were 20,000 incentive stock options outstanding, issued in 2023, and exercisable after one year for 20,000 shares of common stock at an exercise price of \$30.
- The market price of the common stock at year-end was \$48.
- During the year, the price of the common shares had averaged \$40.
- Net income was \$650,000. The tax rate for the year was 25%.

Required:

Compute basic and diluted EPS for the year ended December 31, 2024.

P 19–18 EPS; stock options; nonconvertible preferred;
convertible bonds; shares sold  **LO19–4** through  **LO19–9**

At January 1, 2024, M. E. Gainor Corporation had outstanding the following securities:

600 million common shares

20 million 6% cumulative preferred shares, \$50 par

6.4% convertible bonds, \$2,000 million face amount, convertible into 80 million common shares

The following additional information is available:

- On September 1, 2024, M. E. Gainor sold 72 million additional shares of common stock.
- Incentive stock options to purchase 60 million shares of common stock after July 1, 2023, at \$12 per share, were outstanding at the beginning and end of 2024. The average market

price of Gainor's common stock was \$18 per share during 2024.

- Gainor's net income for the year ended December 31, 2024, was \$1,476 million. The effective income tax rate was 25%.

Required:

1. Calculate basic earnings per common share for the year ended December 31, 2024.
2. Calculate the diluted earnings per common share for the year ended December 31, 2024.

P 19–19 EPS; options; restricted stock; additional components for “proceeds” in treasury stock method  **LO19–1**,  **LO19–2**,  **LO19–4**,  **LO19–8**,  **LO19–11**

Witter House is a calendar-year firm with 300 million common shares outstanding throughout 2024 and 2025. As part of its executive compensation plan, at January 1, 2023, the company had issued 30 million executive stock options permitting executives to buy 30 million shares of stock for \$10 within the next eight years, but not prior to January 1, 2026.

- The fair value of the options was estimated on the grant date to be \$3 per option.
- In 2024, Witter House began granting employees stock awards rather than stock options as part of its equity compensation plans and granted 15 million restricted common shares to senior executives at January 1, 2024.
- The shares vest four years later.
- The fair value of the stock was \$12 per share on the grant date.
- The average price of the common shares was \$12 and \$15 during 2024 and 2025, respectively.
- The stock options qualify as an incentive plan.
- The restricted stock does not.
- The company's net income was \$150 million and \$160 million in 2024 and 2025, respectively.

Required:

1. Determine basic and diluted earnings per share for Witter House in 2024.

Decision Makers' Perspective

Apply your critical-thinking ability to the knowledge you've gained. These cases will provide you an opportunity to develop your research, analysis, judgment, and communication skills. You also will work with other students, integrate what you've learned, apply it in real-world situations, and consider its global and ethical ramifications. This practice will broaden your knowledge and further develop your decision-making abilities.

Page 1160

Real World Case 19–1 Restricted stock awards; disclosure note; Microsoft  **LO19–1**

Real World Financials

Microsoft provides compensation to executives in the form of a variety of incentive compensation plans, including restricted stock award grants. The following is an excerpt from a disclosure note from Microsoft's 2020 annual report:

Note 18 Employee Stock and Savings Plans (in part)

Stock awards entitle the holder to receive shares of Microsoft common stock as the award vests. Stock awards generally vest over a five-year period. . . . During fiscal year 2020, the following activity occurred under our plans:

| | Shares (in millions) | Weighted Average Grant-Date Fair Value |
|---|-------------------------|---|
| Stock awards: | | |
| Nonvested balance, beginning of year | 147 | \$ 78.49 |
| Granted | 53 | 140.49 |

| | | |
|--------------------------------|------------|--------|
| Vested | (65) | 75.35 |
| Forfeited | <u>(9)</u> | 90.30 |
| Nonvested balance, end of year | <u>126</u> | 105.23 |

Required:

If all awards are granted, acquired, vested, and forfeited evenly throughout the year, what is the compensation expense in fiscal 2020 pertaining to the previous and current stock awards? Assume forfeited shares were granted evenly throughout the three previous years, and perform all calculations to the nearest one-tenth of \$1 million (e.g., \$7,162,480 = \$7,162.5).

Real World Case 19–2 Per share data; stock options; antidilutive securities; disclosure note; Best Buy Co.  **LO19–8**

Real World Financials

The 2021 annual report of **Best Buy Co., Inc.** reported profitable operations. However, the company has not always been profitable. The company suffered a net loss for the 12 months ended March 3, 2012:

Basic (loss) earnings per share:

| | |
|---------------------------------|-----------------|
| Continuing operations | \$(2.89) |
| Discontinued operations | <u>(0.47)</u> |
| Basic (loss) earnings per share | <u>\$(3.36)</u> |

Diluted (loss) earnings per share:

| | |
|-----------------------------------|-----------------|
| Continuing operations | \$(2.89) |
| Discontinued operations | <u>(0.47)</u> |
| Diluted (loss) earnings per share | <u>\$(3.36)</u> |

Dividends declared per Best Buy Co., Inc., common share \$ 0.62

Weighted average common shares outstanding (in millions)

| | |
|---------|-------|
| Basic | 366.3 |
| Diluted | 366.3 |

Note: The calculation of diluted (loss) per share for the 12 months ended March 3, 2012, does not include potential dilutive shares of common stock because their inclusion would be antidilutive.

Required:

1. The note indicates that “The calculation of diluted (loss) per share for the 12 months ended March 3, 2012, does not include potential dilutive shares of common stock because their inclusion would be antidilutive.” Why would they be antidilutive?
2. Best Buy does not include potentially dilutive shares when calculating EPS for the 12 months ended March 3, 2012. Assume Best Buy had 40 million common equivalent shares and included them in the calculation, what would have been the amount of diluted loss per share?

Source: Best Buy Co., Inc.

Analysis Case 19–3 EPS concepts LO19–4 through LO19–8

The shareholders’ equity of Proactive Solutions, Inc., included the following at December 31, 2024:

Common stock, \$1 par

Paid-in capital—excess of par on common stock

7% cumulative convertible preferred stock, \$100 par value

Paid-in capital—excess of par on preferred stock

Retained earnings

Additional Information:

Page 1161

- Proactive had 7 million shares of preferred stock authorized, of which 2 million were outstanding. All 2 million shares outstanding were issued in 2018 for \$112 a share. The preferred stock is convertible into common stock on a two-for-one basis until December 31, 2026, after which the preferred stock no longer is convertible. None of the preferred stock has been converted into common stock at December 31, 2024. There were no dividends in arrears.
- Of the 13 million common shares authorized, there were 8 million shares outstanding on January 1, 2024. Proactive also sold 3 million shares at the beginning of September 2024

at a price of \$52 a share.

- The company has an employee stock option plan in which certain key employees and officers may purchase shares of common stock at the market price at the date of the option grant. All options are exercisable beginning one year after the date of the grant and expire if not exercised within five years of the grant date. On January 1, 2024, options for 2 million shares were outstanding at \$50 a share. Options for 1 million shares were exercised at the end of June 2024. No options expired during 2024. Additional options for 2 million shares were granted at \$50 a share on July 1. The average price of the common stock was \$60 during the entire year and \$66.67 during the second half of the year.

The only changes in the shareholders' equity for 2024 were those described above, 2024 net income of \$70 million, and cash dividends paid.

Required:

Determine each of the following:

1. Numerator for basic EPS
2. Denominator for basic EPS
3. Numerator for diluted EPS
4. Denominator for diluted EPS

Analysis Case 19–4 EPS ; financial statement effects

LO19–5 through LO19–8

“I guess I’ll win that bet!” you announced to no one in particular.

“What bet?” Renee asked. Renee Patey was close enough to overhear you.

“When I bought my REC stock last year, Randall insisted it was a mistake, that they were going to collapse. I bet a Coke Randall was wrong. This press release says they have positive earnings,” you bragged. Renee was looking over your shoulder now at the article you were pointing to:

CHICAGO (ACCOUNTING WIRE)—July 1, 2024—Republic Enterprise Companies, Inc. (REC), today reported net income attributable to REC of \$3.6 billion for the quarter ended May 31, 2024. . . . Diluted earnings per share attributable to REC were \$1.52 for the second quarter of 2024, compared with \$1.21 for the second quarter of 2023.

Our Board of Directors . . . authorized the repurchase of shares of REC Common Stock, with an aggregate purchase price of up to \$2.0 billion.

“A dollar fifty-two a share, huh?” Renee asked. “How many shares do you have? When do you get the check?”

Required:

1. These questions imply that Renee thinks you will get cash dividends of \$1.52 a share. What does earnings per share tell you?
2. A previous press release indicated that “Share and per share amounts prior to the second quarter of 2022 have been restated to reflect the 1-for-20 reverse stock split effective June 30, 2022.” What does that mean?
3. The press release indicates plans to repurchase shares of its own stock. How would the reduction in shares from a stock repurchase be taken into account when EPS is calculated?

Source: ACCOUNTING WIRE

Judgment Case 19–5 Where are the profits? financial statement effects  **LO19–4** through  **LO19–7**,  **LO19–9**

Del Conte Construction Company has experienced generally steady growth since its inception in 1976. Management is proud of its record of having maintained or increased its earnings per share in each year of its existence.

The economic downturn has led to disturbing dips in revenues the past two years. Despite concerted cost-cutting efforts, profits have declined in each of the two previous years. Net income in 2022, 2023, and 2024 was as follows:

| | |
|------|---------------|
| 2022 | \$145 million |
| 2023 | \$134 million |
| 2024 | \$ 95 million |

A major shareholder has hired you to provide advice on whether to continue her present investment position or to curtail that position. Of particular concern is the declining profitability, despite the fact that earnings per share has continued a pattern of growth:

| | Basic | Diluted |
|------|--------|---------|
| 2022 | \$2.15 | \$1.91 |
| 2023 | \$2.44 | \$2.12 |
| 2024 | \$2.50 | \$2.50 |

She specifically asks you to explain this apparent paradox. During the course of your investigation you discover the following events:

- For the decade ending December 31, 2021, Del Conte had 60 million common shares and 20 million shares of 8%, \$10 par nonconvertible preferred stock outstanding. Cash dividends have been paid quarterly on both.
- On July 1, 2023, half the preferred shares were retired in the open market. The remaining shares were retired on December 30, 2023.
- \$55 million of 8% nonconvertible bonds were issued at the beginning of 2024, and a portion of the proceeds were used to call and retire \$50 million of 8% debentures (outstanding since 2019) that were convertible into 9 million common shares.
- In 2022, management announced a share repurchase plan by which up to 24 million common shares would be retired. 12 million shares were retired on March 1 of both 2023 and 2024.
- Del Conte's income tax rate is 25% and has been for the last several years.

Required:

In preparation for your explanation of the apparent paradox to which your client refers, calculate both basic and diluted earnings per share for each of the three years.

Analysis Case 19–6 Analyzing financial statements; price-earnings ratio; dividend payout ratio  **LO19–13**

IGF Foods Company is a large, primarily domestic, consumer foods company involved in the manufacture, distribution, and sale of a variety of food products. Industry averages are derived from Troy's *The Almanac of Business and Industrial Financial Ratios* and Dun and Bradstreet's *Industry Norms and Key Business Ratios*. Following are the 2024 and 2023 comparative income statements and balance sheets for IGF. The market price of IGF's common stock is \$47 during 2024. (The financial data we use are from actual financial statements of a well-known corporation, but the company name used in our illustration is

fictional and the numbers and dates have been modified slightly to disguise the company's identity.)

| IGF FOODS COMPANY | | |
|---|----------------|----------------|
| Years Ended December 31, 2024 and 2023 | | |
| (\$ in millions) | 2024 | 2023 |
| Comparative Income Statements | | |
| Net sales | \$6,440 | \$5,800 |
| Cost of goods sold | <u>(3,667)</u> | <u>(3,389)</u> |
| Gross profit | 2,773 | 2,411 |
| Operating expenses | <u>(1,916)</u> | <u>(1,629)</u> |

| <i>Total liabilities and shareholders' equity</i> | <u><u>\$5,345</u></u> | <u><u>\$4,684</u></u> |

Some ratios express income, dividends, and market prices on a per share basis. As such, these ratios appeal primarily to common shareholders, particularly when weighing investment possibilities. These ratios focus less on the fundamental soundness of a company and more on its investment characteristics.

Required:

1. Calculate 2024 earnings per share for IGF.
2. Calculate IGF's 2024 price-earnings ratio.
3. Calculate IGF's 2024 dividend payout ratio.

Real World Case 19–7 Kellogg's EPS; PE ratio; dividend payout

Real World Financials

While eating his **Kellogg's** Frosted Flakes one February morning, Tony noticed the following notification on his iPhone:

BATTLE CREEK, Mich., February 11, 2021 /PRNewswire/—Kellogg Company (NYSE: K) today announced fourth quarter and full year 2020 results. . .

A quick click revealed reported earnings per share of \$0.59 and \$3.63 for the quarter and year ended January 2, 2021 respectively. As a shareholder, Tony is well aware that Kellogg pays a regular cash dividend of \$0.57 per share quarterly. A quick click on a price quote service indicated that Kellogg's shares closed at \$62.23 on December 31.

Required:

1. Using the numbers provided, determine the price-earnings ratio for Kellogg Company for the year ended January 2, 2021.
2. What is the dividend payout ratio for Kellogg for the year ended January 2, 2021.

Source: Kellogg

Research Case 19–8 FASB codification; locate and extract relevant information and cite authoritative support for a financial reporting issue; change in classification of a share-based compensation instrument  **LO19–13**

“Now what do I do?” moaned your colleague Matt. “This is a first for me,” he confided. You and Matt are recent hires in the Accounting Division of National Paper. A top executive in the company has been given share-based incentive instruments that permit her to receive shares of National Paper equal in value to the amount the company shares rise above the shares’ value two years ago when the instruments were issued to her as compensation. The instruments vest in three years. A clause was included in the compensation agreement that would permit her to receive cash rather than shares upon exercise if sales revenue in her division were to double by that time. Because that contingency was considered unlikely, the instruments have been accounted for as equity, with the grant date fair value being expensed over the five-year vesting period.

Now, though, surging sales of her division indicate that the contingent event has become probable, and the instruments should be accounted for as a liability rather than equity. The fair value of the award was estimated at \$5 million on the grant date, but now is \$8 million. Matt has asked your help in deciding what to recommend to your controller as the appropriate action to take at this point.

Required:

1. Obtain the relevant authoritative literature on accounting for a change in classification due to a change in probable settlement outcome using the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org) and select Basic View for free access. To help explain to Matt the basic treatment of the situation described, determine the specific

seven-digit Codification citation (XXX-XX-XX) you would rely on in applying that accounting treatment.

2. Prepare the journal entry to record the change in circumstance.

Communication Case 19–9 Stock options; basic concepts; financial statement effects; prepare a memo LO19–2

You are assistant controller of Stamos & Company, a medium-sized manufacturer of machine parts. On October 22, 2023, the board of directors approved a stock option plan for key executives. On January 1, 2024, a specific number of stock options were granted. The options were exercisable between January 1, 2030, and December 31, 2033, at 100% of the quoted market price at the grant date. The service period is from 2024 through 2029.

Your boss, the controller, is one of the executives to receive options. Neither of you have had occasion to deal with GAAP on accounting for stock options. Both of you are aware of the traditional approach your company used years ago but do not know the newer method. Your boss understands how options might be personally beneficial but wants to be aware also of how the options will be reported in the financial statements. Your boss has asked you for a one-page synopsis of accounting for stock options under the fair value approach. Your boss instructed you, “I don’t care about the effect on taxes or earnings per share—just the basics, please.”

Required:

Prepare such a report that includes the following:

1. At what point should the compensation cost be measured? How should it be measured?
2. How should compensation expense be measured for the stock option plan in 2024 and later?
3. If options are forfeited because an executive resigns before vesting, what is the effect of that forfeiture of the stock options on the financial statements?
4. If options are allowed to lapse after vesting, what is the effect on the financial statements?

Communication Case 19–10 Dilution LO19–9

“I thought I understood earnings per share,” lamented Brie Dawson, “but you’re telling me we need to pretend our convertible bonds have been converted! Or maybe not?”

Dawson, your boss, is the new manager of the Fabricating division of BVT Corporation. Dawson's background is engineering and he has only a basic understanding of earnings per share. Knowing you are an accounting graduate, Dawson asks you to explain the calculation of the company's EPS. Dawson's reaction is to your explanation that the company's convertible bonds might be included in this year's calculation.

"Put it in a memo!" Dawson grumbled and left your office.

Required:

Write a memo to Dawson. Explain the effect on earnings per share of each of the following:

1. Convertible securities.
2. Antidilutive securities.

Ethics Case 19–11 Stock options  **LO19–2**

You are in your second year as an auditor with Dantly and Regis, a regional CPA firm. One of the firm's long-time clients is Mayberry-Cleaver Industries, a national company involved in the manufacturing, marketing, and sales of hydraulic devices used in specialized manufacturing applications. Early in this year's audit, you discover that Mayberry-Cleaver has changed its method of determining inventory from LIFO to FIFO. Your client's explanation is that FIFO is consistent with the method used by some other companies in the industry. Upon further investigation, you discover an executive stock option plan whose terms call for a significant increase in the shares available to executives if net income this year exceeds \$44 million. Some quick calculations convince you that without the change in inventory methods, the target will not be reached; with the change, it will.

Required:

Do you perceive an ethical dilemma? What would be the likely impact of following the controller's suggestions? Who would benefit? Who would be injured?

Ethics Case 19–12 International Network Solutions  **LO19–6**

International Network Solutions provides products and services related to remote access networking. The company has grown rapidly during its first 10 years of operations. As its segment of the industry has begun to mature, though, the fast growth of previous years has begun to slow. In fact, this year revenues and profits are roughly the same as last year.

One morning, nine weeks before the close of the fiscal year, Rob Mashburn, CFO, and Jessica Lane, controller, were sharing coffee and ideas in Lane's office.

Lane: About the Board meeting Thursday. You may be right. This may be the time to suggest a share buyback program.

Mashburn: To begin this year, you mean?

Lane: Right! I know Barber will be lobbying to use the funds for our European expansion. She's probably right about the best use of our funds, but we can always issue more notes next year. Right now, we need a quick fix for our EPS numbers.

Mashburn: Our shareholders are accustomed to increases every year.

Required:

1. How will a buyback of shares provide a "quick fix" for EPS?
2. Is the proposal ethical?
3. Who would be affected if the proposal is implemented?

Data Analytics & Excel

Visit Connect to find a variety of Data Analytics activities that help build Excel, Tableau, and data visualization skills. Assignable materials include [Integrated Excel](#), [Data Visualizations](#), [Tableau Dashboard Activities](#), and [Applying Tableau Cases](#).

Continuing Cases

Target Case 19-1, LO19-2, LO19-8

Target Corporation prepares its financial statements according to U.S. GAAP. Target's financial statements and disclosure notes for the year ended February 1, 2020, are available in Connect. This material is also available under the Investor Relations link at the company's website (www.target.com). Target's share-based compensation includes several long-term incentive plans.

Required:

1. What are the three types of awards described in Note 21: Share-Based Compensation?
2. Based on the fair value of the awards granted, what was Target's primary form of share-based compensation for the year ended February 1, 2020?
3. Projections of future performance should be based primarily on continuing operations. What was diluted EPS for continuing operations in each of the most recent three years?
4. How many shares were included in diluted earnings per share but not basic earnings per share due to share-based compensation awards?

Air France-KLM Case LO19-9

IFRS

Air France-KLM (AF), a Franco-Dutch company, prepares its financial statements according to International Financial Reporting Standards. AF's financial statements and disclosure notes for the year ended December 31, 2019, are available in Connect. This material is also available under the Finance link at the company's website (www.airfranceklm-finance.com).

Note 14 in those financial statements provides information on the calculation of earnings per share:

14. EARNINGS PER SHARE (in part)

Results used for the calculation of diluted earnings per share:

In € millions

| As of December 31 | 2019 | 2018 |
|---|-------------------|-----------------|
| Basic net income for the period—Equity holders of Air France-KLM | 273 | 395 |
| Basic net income for the period for continuing operations | 273 | 395 |
| Consequence of potential ordinary shares on net income (after tax) | 6 | - |
| Net income for the period— (taken for calculation of diluted earnings per share) | <u>279</u> | <u>395</u> |
| Reconciliation of the number of shares used to calculate earnings per share | | |
| As of December 31 | 2019 | 2018 |
| Weighted average number of: | | |
| Ordinary shares issued | 428,634,035 | 428,634,035 |
| Treasury stock held regarding stock option plan | (1,116,420) | (1,116,420) |
| Other treasury stock | <u>(85,151)</u> | <u>(85,151)</u> |
| Number of shares used to calculate basic earnings per share | 427,432,464 | 427,432,464 |
| OCEANE conversion | <u>27,901,785</u> | <u>-</u> |
| Number of ordinary and potential ordinary shares used to calculate diluted earnings per share | 455,334,249 | 427,432,464 |

Required:

1. Based on the information provided, what was diluted earnings per share for 2019?
2. Using the information provided by the note, infer the reason for the €6 million “Consequence of potential ordinary shares on net income.”

CHAPTER 20

Accounting Changes and Error Corrections

OVERVIEW

 **Chapter 4** provided a brief overview of accounting changes and error correction. Later, we discussed changes encountered in connection with specific assets and liabilities as we dealt with those topics in subsequent chapters.

Here we revisit accounting changes and error correction to synthesize the way these are handled in a variety of situations that might be encountered in practice. We see that most changes in accounting principle are reported retrospectively. Changes in estimates are accounted for prospectively. A change in depreciation methods is considered a change in estimate resulting from a change in principle. Both changes in reporting entities and the correction of errors are reported retrospectively.

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

-  **LO20-1** Differentiate among the three types of accounting changes and distinguish among the retrospective, modified retrospective, and prospective approaches to accounting for and reporting accounting changes. (p. 1168)
-  **LO20-2** Describe how changes in accounting principle typically are reported. (p. 1170)
-  **LO20-3** Explain how and why some changes in accounting principle are reported prospectively. (p. 1174)
-  **LO20-4** Explain how and why changes in estimates are reported prospectively. (p. 1176)

-  **LO20-5** Describe the situations that constitute a change in reporting entity. (p. 1178)
-  **LO20-6** Understand and apply the four-step process of correcting and reporting errors, regardless of the type of error or the timing of its discovery. (p. 1182)
-  **LO20-7** Discuss the primary differences between U.S. GAAP and IFRS with respect to accounting changes and error corrections. (p. 1188)

FINANCIAL REPORTING CASE

TY Lim/Shutterstock

In a Jam

“What the heck!” Martin yelled as he handed you the annual report of **J.M. Smucker** he’d received in the mail today. “It looks like Smucker found a bunch of lost jelly. It says here that their inventory was \$54 million last year. I distinctly remember them reporting that number last year as \$52 million because my dad was born in ’52, and I did a little wordplay in my mind about him ‘taking inventory’ of his life when he bought the red Mustang.” He had circled the number in the comparative balance sheets. “When I bought Smucker shares last year, I promised myself I would monitor things pretty closely, but it’s not as easy as I thought it would be.”

As an accounting graduate, you can understand Martin’s confusion. Flipping to the disclosure note on accounting changes, you proceed to clear things up for him.

QUESTIONS

By the time you finish this chapter, you should be able to respond appropriately to the questions posed in this case. Compare your response to the solution provided at the end of the chapter.

1. How can an accounting change cause a company to increase a previously reported inventory amount?
2. Are all accounting changes reported this way?

You learned early in your study of accounting that two of the qualitative characteristics of accounting information that contribute to its decision usefulness. Though we strive to achieve and maintain these financial reporting attributes, we cannot ignore the forces of change. Ours is a dynamic business environment. The economy is increasingly a global one. Technological advances constantly transform both day-to-day operations and the flow of information about those operations. The accounting profession's response to the fluid environment often means issuing new standards that require companies to change accounting methods. Often, developments within an industry or the economy will prompt a company to voluntarily switch methods of accounting or to revise estimates or expectations. In short, change is inevitable. The question then becomes a matter of how best to address change when reporting financial information from year to year.

In the first part of this chapter, we differentiate among the various types of accounting changes that businesses face, with a focus on the most meaningful and least disruptive ways to report those changes. Then, in the second part of the chapter, we direct our attention to a closely related circumstance—the correction of errors.

PART A

Accounting Changes

LO20-1 Differentiate among the three types of accounting changes and distinguish among the retrospective, modified retrospective, and prospective approaches to accounting for and reporting accounting changes.

Accounting changes fall into one of the three categories listed in [Illustration 20-1](#).¹

Illustration 20-1 Types of Accounting Changes

| Type of Change | Description | Examples |
|---------------------------------------|---|---|
| Change in accounting principle | Change from one generally accepted accounting principle to another. | <ul style="list-style-type: none">• Adopt a new Accounting Standard.• Change methods of inventory costing.• Change from cost method to equity method, or vice versa. |
| Change in accounting estimate | Revise an estimate because of new information or new experience. | <ul style="list-style-type: none">• Change depreciation methods.*• Change estimate of useful life of depreciable asset.• Change estimate of residual value of depreciable asset.• Change estimate of periods benefited by intangible assets. |

| Type of Change | Description | Examples |
|-----------------------------------|--|---|
| Change in reporting entity | Change from reporting as one type of entity to another type of entity. | <ul style="list-style-type: none"> • Change actuarial estimates pertaining to a pension plan. • Consolidate a subsidiary not previously included in consolidated financial statements. • Report consolidated financial statements in place of individual statements. |

*A change in depreciation methods is a change in estimate that is achieved by a change in accounting principle.

The correction of an error is another adjustment sometimes made to financial statements that is not actually an accounting change but is accounted for similarly. Errors occur when transactions are either recorded incorrectly or not recorded at all, as shown in

 **Illustration 20-2.**

Illustration 20-2 Correction of Errors

| Type of Change | Description | Examples |
|-------------------------|--|--|
| Error correction | Correct an error caused by a transaction being recorded incorrectly or not at all. | <ul style="list-style-type: none"> • Mathematical mistakes. • Inaccurate physical count of inventory. • Change from the cash basis of accounting to the accrual basis. • Failure to record an adjusting entry. • Recording an asset as an expense, or vice versa. |

| Type of Change | Description | Examples |
|----------------|-------------|--|
| | | <ul style="list-style-type: none"> Fraud or gross negligence. |

Three approaches to reporting accounting changes and error corrections are used, depending on the situation.

- Using the **retrospective approach**, financial statements issued prior to the change are adjusted to reflect the impact of the change whenever those statements are presented again for comparative purposes (comparative financial statements). For each year reported in the comparative statements, the balance of each account affected is adjusted to incorporate the change. So for the first period presented in the comparative statements, the adjusted balances include the cumulative effect of the change prior to that date. In other words, those statements are made to appear as if the newly adopted accounting method had been applied all along or that the error had never occurred. To achieve this result, a journal entry is created to adjust all account balances affected to what those amounts would have been. In addition, if retained earnings is one of the accounts that requires adjustment, for presentation purposes, that adjustment is made to the beginning balance of retained earnings for the earliest period reported in the comparative statements of shareholders' equity. An advantage of this retrospective approach is that it achieves comparability among financial statements. All financial statements presented are prepared on the same basis. However, some argue that public confidence in the integrity of financial data suffers when numbers previously reported as correct are later superseded. On the other hand, proponents argue the opposite—that it's impossible to maintain public confidence unless the financial statements are comparable.

The retrospective approach offers consistency and comparability.
- The **modified retrospective approach** requires application of the new standard only to the adoption period (that is, the current period) as well as adjustment of the balance of retained earnings at the beginning of the adoption period to capture the cumulative effects of prior periods without actually adjusting the numbers of the prior periods reported.

Page 1169
- The **prospective approach** requires neither a modification of prior years' financial statements nor a journal entry to adjust account balances. Instead,

The effects of a change are reflected in the financial statements of only the year of

the change is simply implemented in the period of the change, and its effects are reflected in the financial statements of the period of the change and future periods only.

the change and future years
under the *prospective*
approach.

Now, let's look at each type of accounting change, one at a time, focusing on the selective application of these approaches.

Change in Accounting Principle

Accounting is not an exact science. Professional judgment is required to apply a set of principles, concepts, and objectives to specific sets of circumstances. This means choices must be made. In your study of accounting to date, you've encountered many areas where choices are necessary. For example, management must choose whether to use accelerated or straight-line depreciation. Is FIFO, LIFO, or average cost most appropriate to measure inventories? Should we adopt a new accounting standard early or wait until it's mandatory? These are but a few of the accounting choices management makes.

You also probably recall that comparability is an enhancing qualitative characteristic of financial reporting. To achieve this attribute of information, accounting choices, once made, should be consistently followed from year to year. This doesn't mean, though,

Although consistency and comparability are desirable, changing to a new method sometimes is appropriate.

that methods can never be changed. Changing circumstances might make a new method more appropriate. A change in economic conditions, for instance, might prompt a company to change accounting methods. The most extensive voluntary accounting change ever—a switch by hundreds of companies from FIFO to LIFO in the mid-1970s, for example—was a result of heightened inflation. Changes within a specific industry, too, can lead a company to switch methods, often to adapt to new technology or to be consistent with others in the industry. And, of course, a change might be mandated when the FASB codifies a new accounting standard. For these reasons, it's not uncommon for a company to switch from one accounting method to another. This is called a **change in accounting principle**.

Decision Makers' Perspective—Motivation for Accounting Choices

It would be nice to think that all accounting choices are made by management in the best interest of fair and consistent financial reporting. Unfortunately, other motives influence the choices among accounting methods and whether to change methods. It has been suggested that the effect of choices on management compensation, on existing debt agreements, and on union negotiations each can affect management's selection of accounting methods.² For instance, research has suggested that managers of companies with bonus plans are more likely to choose accounting methods that maximize their bonuses (often those that increase

net income).³ Other research has indicated that the existence and nature of debt agreements and other aspects of a firm's capital structure can influence accounting choices.⁴ Whether a company is forbidden from paying dividends if retained earnings fall below a certain level, for example, can affect the choice of accounting methods.

A financial analyst must be aware that different accounting methods used by different firms and by the same firm in different years complicate comparisons. Financial ratios, for example, will differ when different accounting methods are used, even when there are no differences in attributes being compared.

Investors and creditors also should be alert to instances in which companies change accounting methods. They must consider not only the effect on comparability but also possible hidden motivations for making the changes. Are managers trying to compensate for a downturn in actual performance with a switch to methods that artificially inflate reported earnings? Is the firm in danger of violating debt covenants or other contractual agreements regarding financial position? Are executive compensation plans tied to reported performance measures? Fortunately, the nature and effect of changes are reported in the financial statements. Although a justification for a change is provided by management, analysts should be wary of accepting the reported justification at face value without considering a possible hidden agenda.

Choices are not always those that tend to increase income. As you learned in Chapter 8, many companies use the LIFO inventory method because it reduces income and therefore reduces the amount of income taxes that must be paid currently. Also, some very large and visible companies might be reluctant to report high income that might render them vulnerable to union demands, government regulations, or higher taxes.⁵

Another reason managers sometimes choose accounting methods that don't necessarily increase earnings was mentioned earlier. Most managers tend to prefer to report earnings that follow a regular, smooth trend from year to year. The desire to "smooth" earnings means that any attempt to manipulate earnings by choosing accounting methods is not always in the direction of higher income. Instead, the choice might be to avoid irregular earnings, particularly those with wide variations from year to year, a pattern that might be interpreted by analysts as denoting a risky situation.

Obviously, any time managers make accounting choices for any of the reasons discussed here, when the motivation is an objective other than to provide useful information, earnings

quality suffers. As mentioned frequently throughout this text, earnings quality refers to the ability of reported earnings (income) to predict a company's future earnings.

A notable example of alleged “cooking the books” involved **General Electric**. The company was often suspected of using “cookie jar accounting,” the practice of using unrealistic estimates and strategic choices of accounting methods to smooth out its earnings. In 2009, GE appeared to get its hand caught in the cookie jar for going beyond acceptable limits. GE paid a \$50 million civil penalty to settle charges by the Securities and Exchange Commission accusing the company of violating U.S. securities laws four times between 2002 and 2003 to help it maintain a succession of earnings reports that beat Wall Street expectations each quarter from 1995 through 2004.

Let's turn our attention now to situations involving changes in methods and how we account for those changes. ●

The Retrospective Approach: Most Changes in Accounting Principle

LO20-2 Describe how changes in accounting principle typically are reported.

We report most voluntary changes in accounting principles retrospectively.⁶ This means reporting all previous periods' financial statements as if the new method had been used in all prior periods. An example is provided in  **Illustration 20-3**.

Illustration 20-3 Change in Accounting Principle

LIFO usually produces higher cost of goods sold than does FIFO because more recently purchased goods (usually higher priced) are assumed sold first.

Air Parts Corporation used the LIFO inventory costing method. At the beginning of 2024, Air Parts decided to change to the FIFO method. Income components for 2024 and prior years were as follows:

| (\$ in millions) | Previous Years | 2022 | 2023 | 2024 |
|---------------------------|----------------|--------------|--------------|---------------------|
| Cost of goods sold (LIFO) | \$2,000 | \$400 | \$409 | \$418 |
| Cost of goods sold (FIFO) | 1,700 | 360 | 365 | 370 |
| Difference | <u>\$ 300</u> | <u>\$ 40</u> | <u>\$ 44</u> | <u>\$ 48</u> |
| Revenues | \$4,500 | \$875 | \$900 | \$950 |
| Operating expenses | 1,000 | 207 | 211 | 220 |

Air Parts has paid dividends of \$40 million each year beginning in 2017. Its income tax rate is 25%. Retained earnings on January 1, 2022, was \$700 million; inventory was \$500 million.

1. REVISE COMPARATIVE FINANCIAL STATEMENTS

For each year reported in the comparative statements, Air Parts makes those statements appear as if the newly adopted accounting method (FIFO) had been applied all along. As you learned in Chapter 1, comparability is one of the important qualitative characteristics of accounting information.

When accounting changes occur, the usefulness of the comparative financial statements is enhanced with retrospective application of those changes.

Income Statements

The company recasts the comparative statements to appear as if the accounting method adopted in 2024 (FIFO) had been used in 2023 and 2022 as well.

| (\$ in millions) | 2022 | 2023 | 2024 |
|----------------------------------|---------------------|---------------------|---------------------|
| Revenues | \$875 | \$900 | \$950 |
| Cost of goods sold (FIFO) | (360) | (365) | (370) |
| Operating expenses | <u>(207)</u> | <u>(211)</u> | <u>(220)</u> |
| Income before tax | 308 | 324 | 360 |
| Income tax expense (25%) | <u>(77)</u> | <u>(81)</u> | <u>(90)</u> |
| Net income | <u><u>\$231</u></u> | <u><u>\$243</u></u> | <u><u>\$270</u></u> |

Earnings per share each year, of course, also will be based on the revised net income numbers.

Balance Sheets

Inventory. In its comparative balance sheets, Air Parts will report 2024 **inventory** by its newly adopted method, FIFO, and revise the amounts it reported last year for its 2022 and 2023 inventory. Each year, inventory will be higher than it would have been by LIFO. Here's why:

FIFO usually produces *lower* cost of goods sold and thus *higher* inventory than does LIFO.

Since the cost of goods *available for sale* each period is the sum of the cost of goods *sold* and the cost of goods *unsold* (inventory), a difference in cost of goods sold resulting from having used LIFO rather than FIFO means there also is an opposite difference in inventory.

Because cost of goods sold by the FIFO method is *less* than by LIFO, inventory by FIFO is *greater* than by LIFO. The amounts of the differences and also the cumulative differences over the years are calculated in  **Illustration 20-3A**.

Illustration 20-3A Effects of Switch to FIFO

By FIFO, cost of goods sold is lower.

The cumulative income effect increases each year by the annual after-tax difference in COGS.

Inventory, pretax income, income taxes, net income, and retained earnings all are higher.

| (\$ in millions) | Years Ending Dec. 31 | | | |
|--|----------------------|--------------|--------------|--------------|
| | Previous Years | 2022 | 2023 | 2024 |
| Cost of goods sold (LIFO) | \$ 2,000 | \$400 | \$409 | \$418 |
| Cost of goods sold (FIFO) | <u>1,700</u> | <u>360</u> | <u>365</u> | <u>370</u> |
| Differences | \$ 300 | \$ 40 | \$ 44 | \$ 48 |
| <i>Cumulative differences (effect of not having used FIFO previously):</i> | | | | |
| Cost of goods sold (and inventory) | \$ 300 | \$340 | \$384 | \$432 |
| Income taxes (25%) | <u>75</u> | <u>85</u> | <u>96</u> | <u>108</u> |
| Net income and retained earnings | \$ 225 | \$255 | \$288 | \$324 |

Comparative balance sheets, then, will report 2022 inventory **\$340** million higher than it was reported in last year's statements. Likewise, 2023 inventory will be increased by **\$384** million. Inventory for 2024, being reported for the first time, is

| | Years Ending Dec. 31 | | | |
|--|----------------------|------|------|------|
| | Previous Years | 2022 | 2023 | 2024 |

(\$ in millions)

\$432 million higher than it would have been if the switch from LIFO had not occurred.

Inventory, pretax income, income taxes, net income, and retained earnings all are higher.

Retained Earnings. Similarly, Air Parts will report **retained earnings** by FIFO each year as well. Retained earnings is different because the two inventory methods affect income differently. Because cost of goods sold by FIFO is *less* than by LIFO, income and therefore retained earnings by FIFO are *greater* than by LIFO.

When costs are rising, FIFO produces *lower* cost of goods sold than does LIFO and thus *higher* net income and retained earnings.

Retained earnings is revised each year to reflect FIFO.

Comparative balance sheets, then, will report retained earnings for 2022, 2023, and 2024 at amounts \$255, \$288, and \$324 million higher than would have been reported if the switch from LIFO had not occurred. These are the cumulative net income differences shown in [Illustration 20-3A](#).

Statements of Shareholders' Equity. Recall that a statement of shareholders' equity reports changes that occur in each shareholders' equity account starting with the beginning balances in the earliest year reported.

So, if retained earnings is one of the accounts whose balance requires adjustment due to a change in accounting principle (and it usually is), we must adjust the beginning balance of retained earnings for the earliest period reported in the comparative statements of shareholders' equity. The amount of the revision is the cumulative effect of the change on years prior to that date. Air Parts will revise its 2022 beginning retained earnings since that's the earliest year in its comparative statements. That balance had been reported in prior statements as \$700 million. If FIFO had been used for inventory rather than LIFO, that amount would

Because it's the earliest year reported, 2022's beginning retained earnings is increased by the **\$225** million cumulative income effect of the difference in inventory methods that occurred before 2022.

have been higher by \$225 million, as calculated in [Illustration 20-3A](#). The disclosure note pertaining to the inventory change should point out the amount of the adjustment. The January 1, 2022, retained earnings balance reported in the comparative statements of shareholders' equity in [Illustration 20-3B](#) has been adjusted from \$700 million to \$925 million.

Illustration 20-3B Comparative Statements of Shareholders' Equity

A disclosure note should indicate that the beginning retained earnings balance has been increased by \$225 million, from \$700 million to \$925 million.

| (\$ in millions) | Common Stock | Additional Paid-In Capital | Retained Earnings | Total Shareholders' Equity |
|--|-----------------|-------------------------------|-----------------------|----------------------------------|
| Jan. 1, 2022 | | | \$ 925 | |
| Net income <i>(revised to FIFO)</i> | | | 231 | |
| Dividends | | | <u>(40)</u> | |
| Dec. 31, 2022 | | | \$1,116 | |
| Net income <i>(revised to FIFO)</i> | | | 243 | |
| Dividends | | | <u>(40)</u> | |
| Dec. 31, 2023 | | | \$1,319 | |
| Net income <i>(using FIFO)</i> | | | 270 | |
| Dividends | | | <u>(40)</u> | |
| Dec. 31, 2024 | | | <u><u>\$1,549</u></u> | |

2. ADJUST ACCOUNTS FOR THE CHANGE

Besides reporting revised amounts in the comparative financial statements, Air Parts must also adjust the book balances of affected accounts. It does so by creating a journal entry to

change those balances from their current amounts (from using LIFO) to what those balances would have been using the newly adopted method (FIFO). As discussed in the previous section, differences in cost of goods sold and income are reflected in retained earnings, as are the income tax effects of changes in income. So, the journal entry updates inventory, retained earnings, and the income tax liability for the cumulative differences up to the year of the decision to change from the LIFO method to the FIFO method. Adjustments are made in the beginning of the year of change, so in our example, this would be for the differences generated up to January 1, 2024. Repeating a portion of the calculation we made in [Illustration 20-3A](#), we determine the difference in cost of goods sold and therefore in inventory.

Cost of goods sold would have been \$384 million less if FIFO rather than LIFO had been used in years before the change.

| (\$ in millions) | Cumulative Difference | | | Cumulative Difference pre-2024 |
|------------------------------|-----------------------|------------|------------|-----------------------------------|
| | pre-2022 | 2022 | 2023 | |
| Cost of goods sold (LIFO) | \$2,000 | \$400 | \$409 | |
| Cost of goods sold (FIFO) | <u>1,700</u> | <u>360</u> | <u>365</u> | |
| Difference | \$ 300 | \$ 40 | \$ 44 | \$384 |

The **\$384** million cumulative difference in cost of goods sold also is the difference between the balance in inventory and what that balance would have been if the FIFO method, rather than LIFO, had been used before 2024. Inventory must be increased by that amount. Retained earnings also must be increased, but by only 75% of that amount because income taxes would have been higher by 25% of the change in pretax income.

Inventory would have been \$384 million more and cumulative prior earnings \$288 more if FIFO rather than LIFO had been used.

| Journal entry to record the change in principle | |
|---|------------|
| January 1, 2024 | |
| Inventory (additional inventory if FIFO had been used) | 384 |
| Retained earnings (additional net income if FIFO had been used) | 288 |
| Income tax payable (\$384 × 25%) | 96 |

Notice that the income tax effect is reflected in the income tax payable account. The reason is that, unlike for other accounting method changes, the Internal Revenue Code says that if LIFO is used for tax purposes, it must also be used for financial reporting. For that reason, the tax code allows a retrospective change in an inventory method, but then requires that taxes saved previously (\$96 million in this case) from having used another inventory method must now be repaid. However, taxpayers are given up to six years to pay the tax due. As a result, this liability has both a current portion (payable within one year) and a noncurrent portion (payable after one year), but is not a deferred tax liability.

Additional Consideration

What if the tax law did not require a recapture of the tax difference? Then there would be a credit to a deferred tax liability. That's because retrospectively increasing accounting income, but not taxable income, creates a temporary difference between the two that will reverse over time as the unsold inventory becomes cost of goods sold. Recall from Chapter 16 that in the meantime, there is a temporary difference reflected in the deferred tax liability.

If we were switching from FIFO to, say, the average method, we would record a deferred tax asset instead. For financial reporting purposes, but not for tax, we would be retrospectively decreasing accounting income, but not taxable income. This creates a temporary difference between the two that will reverse over time as the unsold inventory becomes cost of goods sold. When that happens, taxable income will be less than accounting income. When taxable income will be less than accounting income as a temporary difference reverses, we have a "future deductible amount" and record a deferred tax asset.

3. DISCLOSURE NOTES

To achieve consistency and comparability, accounting choices once made should be consistently followed from year to year. Any change, then, requires that the new method be justified as clearly more appropriate.

In the first set of financial statements after the change, a disclosure note is needed to provide that justification.

on the face of the primary statements.

The note also should point out that comparative information has been revised, or that retrospective revision has not been made because it is impracticable, and report any per share amounts affected for the current period and all prior periods presented. Disclosure of a change by **Abercrombie & Fitch** in its annual report provides us the example shown in  **Illustration 20-4**.

Illustration 20-4 Disclosure of a Change in Inventory Method—Abercrombie & Fitch

Real World Financials

4. CHANGE IN ACCOUNTING PRINCIPLE

The Company elected to change its method of accounting for inventory from the lower of cost or market utilizing the retail method to the weighted average cost method. . . . In accordance with generally accepted accounting principles, all periods have been retroactively adjusted to reflect the period-specific effects of the change to the weighted average cost method. The Company believes that accounting under the weighted average cost method is preferable as it better aligns with the Company's focus on realized selling margin and improves the comparability of the Company's financial results with those of its competitors. Additionally, it will improve the matching of cost of goods sold with the related net sales and reflect the acquisition cost of inventory outstanding at each balance sheet date. The cumulative adjustment . . . was an increase in its inventory of \$73.6 million and an increase in retained earnings of \$47.3 million.

Source: Abercrombie & Fitch

The Modified Retrospective Approach

When a new FASB accounting standard update mandates a change in accounting principle, the Board typically specifies the way companies should implement the change and often allows companies to choose among multiple ways of accounting for the change. One approach usually allowed is the retrospective approach we discussed for voluntary changes

in accounting principle, by which the new standard is applied retrospectively to all periods presented in the financial statements. And, as we discuss in the next section, sometimes the prospective approach is allowed or mandated for a new standard. A third approach the FASB sometimes allows is a *modified retrospective approach*. By this approach, we apply the new standard only to the adoption period (that is, the current period) and then adjust the balance of retained earnings at the beginning of the adoption period to capture the cumulative effects of prior periods without actually adjusting the numbers in the prior periods reported.

The Prospective Approach

LO20–3 Explain how and why some changes in accounting principle are reported prospectively.

Although we usually report voluntary changes in accounting principles retrospectively, it's not always practicable or appropriate to do so.

THE PROSPECTIVE APPROACH: WHEN RETROSPECTIVE APPLICATION IS IMPRACTICABLE

For some changes in principle, insufficient information is available for retrospective application to be practicable. Revising balances in prior years means knowing what those balances should be. But suppose we're switching from the FIFO method of inventory costing to the LIFO method. Recall from your study of inventory costing methods that LIFO inventory consists of "layers" added in prior years at costs existing in those years. If another method has been used, though, the company likely hasn't kept track of those costs. So, accounting records of prior years usually are inadequate to report the change retrospectively. In that case, a company changing to LIFO usually reports the change prospectively, and the beginning inventory in the year the LIFO method is adopted becomes the base year inventory for all future LIFO calculations. A disclosure note should indicate reasons why retrospective application was impracticable. Prospective changes usually are accounted for as of the beginning of the year of change.

Sometimes a lack of information makes it impracticable to report a change retrospectively so the new method is simply applied prospectively.

When **Mueller Industries, Inc.**, adopted the LIFO cost flow assumption for valuing its inventories, the change was reported in a disclosure note as shown in  **Illustration 20-5**.

Illustration 20-5 Disclosure of a Change to LIFO—Mueller Industries, Inc.

Real World Financials

Inventory Method (in part)

. . . the Company changed its method of valuing the material component of its copper tube and fittings inventories from the FIFO method to the LIFO method. . . . Management believes the LIFO method results in a better matching of current costs with current revenues. Additionally, the LIFO method is widely used within the copper tube and fittings industry.

Source: Mueller Industries, Inc.

When It Is Impracticable to Determine Some Period-

Specific Effects. A company may have some, but not all, the information it needs to account for a change retrospectively. For instance, let's say a company

changes to the LIFO inventory method effective as of

the beginning of 2024. It has information that would allow it to revise all assets and liabilities on the basis of the newly adopted method for 2023 in its comparative statements, but not for 2022. In that case, the company should report 2023 statement amounts (revised) and 2024 statement amounts (reported without restatement for the first time) based on LIFO, but not revise 2022 numbers. Then, account balances should be retrospectively adjusted at the beginning of 2023 since that's the earliest date it's practicable to do so.

If it's impracticable to adjust each year reported, the change is applied retrospectively as of the earliest year practicable.

When It Is Impracticable to Determine the Cumulative

Effect of Prior Years. Another possibility is that the company doesn't have the information necessary to retrospectively adjust retained earnings, but does have information that would allow it to revise all assets and liabilities for one or more specific years. Let's say the

records of inventory purchases and sales are not available for some previous years, which would have allowed it to determine the cumulative effect of applying this change to LIFO

If full retrospective application isn't possible, the new method is applied prospectively beginning in the earliest year practicable.

retrospectively. However, it does have all of the information necessary to apply the LIFO method on a prospective basis beginning in, say, 2022. In that case, the company should report numbers for years beginning in 2022 as if it had carried forward the 2021 ending balance in inventory (measured on the previous inventory costing basis) and then had begun applying LIFO as of January 1, 2022. Of course there would be no adjustment to retained earnings for the cumulative income effect of not using LIFO prior to that.

THE PROSPECTIVE APPROACH: WHEN MANDATED BY AUTHORITATIVE ACCOUNTING LITERATURE

Another exception to retrospective application of voluntary changes in accounting principle is when authoritative literature requires prospective application for specific changes in accounting methods. For

If a new accounting standards update specifically requires prospective accounting, that requirement is followed.

instance, for a change from the equity method to another method of accounting for long-term investments, GAAP requires the prospective application of the new method.⁷ Recall from Chapter 12 that when an investor's level of influence changes, it may be necessary to change from the equity method to another method. This could happen, for instance, if a sale of shares causes the investor's ownership interest to fall from, say, 25% to 15%, resulting in the equity method no longer being appropriate. When this situation happens, no adjustment is made to the remaining book value, sometimes called *carrying value* or *carrying amount* of the investment in equity affiliate account. Instead, the equity method is simply discontinued and the new method applied from then on in an investment in equity securities account. The balance in that investment account when the equity method is discontinued would serve as the new "cost" basis for writing the investment up or down to fair value on the next set of financial statements.

The prospective approach is also appropriate for a change *to* the equity method when, for instance, a purchase of additional stock causes the investor's share of ownership to increase from, say, 15% to 25%. The previous method is discontinued and the balance in the investment account at the date of the change (including any unrealized holding gains or losses that occurred prior to the date the investment qualifies for the equity method) is used as the starting balance for applying the equity method. Any cost of acquiring additional shares is added to that balance, and going forward that balance is adjusted for the investor's portion of investee earnings and dividends.

THE PROSPECTIVE APPROACH: CHANGING DEPRECIATION, AMORTIZATION, AND DEPLETION METHODS

A change in depreciation methods is considered to be a change in accounting estimate that is achieved by a change in accounting principle. As a result, we account for such a change prospectively—precisely the way we account for changes in estimates. We discuss that approach in the next section.

Change in Accounting Estimate

LO20–4 Explain how and why changes in estimates are reported prospectively.

You've encountered many instances during your study of accounting in which it's necessary to make estimates of uncertain future events. Depreciation, for example, entails estimates not only of the useful lives of depreciable assets, but their anticipated residual values as well. Anticipating uncollectible accounts receivable, predicting warranty expenses, amortizing intangible assets, and making actuarial assumptions for pension benefits are but a few of the accounting tasks that require estimates.

Estimates are an inherent and critical aspect of accounting. Unfortunately, though, estimates routinely differ from actual experience. IBM notes in the Management Discussion and Analysis section of its annual report that:

Revisions are viewed as a natural consequence of making estimates.

Real World Financials

... For all of these estimates, it should be noted that future events rarely develop exactly as forecasted, and estimates require regular review and adjustment."...

Source: IBM Corporation

No matter how carefully known facts are considered and forecasts are prepared, new information and experience frequently force the revision of estimates.

Changes in accounting estimates are accounted for prospectively. When a company revises a previous estimate, prior financial statements are *not* revised.

A change in estimate is reflected in the financial statements of the current period and future periods.

That is, they are not restated and not retrospectively adjusted. Instead, the company merely incorporates the new estimate in any related accounting determinations from then on. So, it usually will affect some aspects of both the balance sheet and the income statement in the current period and future periods. If that

effect is considered to be material or will materially affect future periods, a disclosure note should describe the effect of a change in estimate on income from continuing operations, net income, and related per share amounts for the current period.

When **Owens Corning** revised estimates of the useful lives of some of its depreciable assets, the change was disclosed in its annual report as shown in  **Illustration 20-6**.

Illustration 20-6 Change in Estimate—Owens Corning

Real World Financials

Note 6: Depreciation of Plant and Equipment (in part)

. . . the Company completed a review of its fixed asset lives. The Company determined that as a result of actions taken to increase its preventative maintenance and programs initiated with its equipment suppliers to increase the quality of their products, actual lives for certain asset categories were generally longer than the useful lives for depreciation purposes. Therefore, the Company extended the estimated useful lives of certain categories of plant and equipment, effective. . . . The effect of this change in estimate reduced depreciation expense for the year ended . . . , by \$14 million and increased income before cumulative effect of accounting change by \$8 million (\$0.19 per share).

Source: Owens-Corning

An example of another change in estimate is provided in  **Illustration 20-7**.

Illustration 20-7 Change in Accounting Estimate

Universal Semiconductors estimates warranty expense as 2% of sales.

- After a review during 2024, Universal determined that 3% of sales is a more realistic estimate of its payment experience.
- Sales in 2024 are \$400 million.
- The effective income tax rate is 25%.

- No account balances are adjusted.

Prior periods are not revised and no cumulative effect of the estimate change is reported. Rather, in 2024 and later years, the adjusting entry to record warranty expense simply will reflect the new percentage. In 2024, the entry would be as follows:

| | (\$ in millions) | |
|---------------------------------------|------------------|----|
| Warranty expense (3% × \$400 million) | 12 | |
| Warranty liability | | 12 |

The after-tax effect of the change in estimate is **\$3** million [$\$400 \text{ million} \times (3\% - 2\%) = \4 million , less 25% of \$4 million]. Assuming 100 million outstanding shares of common stock, the effect is described in a disclosure note to the financial statements as follows:

Note A: Warranties

In 2024, the company revised the percentage used to estimate warranty expense. The change provides a better indication of cost experience. The effect of the change was to decrease 2024 net income by **\$3** million, or \$0.03 per share.

Changing Depreciation, Amortization, and Depletion Methods

When a company acquires an asset that will provide benefits for several years, it allocates the cost of the asset over the asset's useful life. If the asset is a building, equipment, or other tangible asset, the allocation process is called *depreciation*. It's referred to as *amortization* if an intangible asset or *depletion* if a natural resource. In each case, estimates are essential to the allocation process. How long will benefits accrue? What will be the value of the asset when its use is discontinued? Will the benefits be realized evenly over the asset's life or will they be higher in some years than in others?

The choice of depreciation method and application reflects these estimates. Likewise, when a company changes the way it depreciates an asset in midstream,

An exception to retrospective application of a change in accounting principle is a change

the change would be made to reflect a change in (a) estimated future benefits from the asset, (b) the pattern of receiving those benefits, or (c) the company's knowledge about those benefits. For instance, suppose Universal Semiconductors originally chose an accelerated depreciation method because it expected greater benefits in the earlier years of an asset's life. Then, two years later, when it became apparent that remaining benefits would be realized approximately evenly over the remaining useful life, Universal Semiconductor switched to straight-line depreciation. Even though the company is changing its depreciation method, it is doing so to reflect changes in its estimates of future benefits. As a result, *we report a change in depreciation method as a change in estimate rather than a change in accounting principle.*

in the method of depreciation (or amortization or depletion).

For this reason, a company reports a change in depreciation method (say to straight-line) *prospectively*; previous financial statements are not revised. Instead, the company simply employs the straight-line method from then on. The undepreciated cost remaining at the time of the change would be depreciated straight-line over the remaining useful life.  **Illustration 20-8** provides an example.

Companies report a change in depreciation prospectively.

Illustration 20-8 Change in Depreciation Methods

The \$24 million depreciable cost not yet depreciated is spread over the asset's remaining three years.

Universal Semiconductors switched from the sum-of-the-years'-digits depreciation method to straight-line depreciation in 2024.

- The change affects its precision equipment purchased at the beginning of 2022 at a cost of \$63 million.
- The machinery has an expected useful life of five years and an estimated residual value of \$3 million.

The depreciation prior to the change is as follows:

| Sum-of-the-Years'-Digits Depreciation | (\$ in millions) |
|--|-------------------------------------|
| 2022 depreciation | \$20 ($\$60 \times \frac{2}{15}$) |
| 2023 depreciation | 16 ($\$60 \times \frac{1}{15}$) |
| Accumulated depreciation | <u>\$36</u> |

A change in depreciation method is considered a *change in accounting estimate resulting from a change in accounting principle*. So, Universal Semiconductors reports the change prospectively; previous financial statements are not revised. Instead, the company simply employs the straight-line method from 2024 on. The undepreciated cost remaining at the time of the change is depreciated straight-line over the remaining useful life.

| Calculation of Straight-Line Depreciation | (\$ in millions) |
|---|--------------------|
| Asset's cost | \$63 |
| Accumulated depreciation to date (calculated above) | <u>(36)</u> |
| Undepreciated cost, Jan. 1, 2024 | \$27 |
| Estimated residual value | <u>(3)</u> |
| To be depreciated over remaining 3 years | \$24 |
| | ÷ 3 years |
| Annual straight-line depreciation 2024–2027 | <u><u>\$ 8</u></u> |
| Adjusting Entry (annually, 2024–2026) | |
| Depreciation expense (calculated above) | 8 |
| Accumulated depreciation | 8 |

Is a change in depreciation method a change in accounting principle, or is it a change in estimate? As we've seen, it's both. Even though it's considered to reflect a change in estimate and is accounted for as such, a change to a new depreciation method requires the company to justify the new method as being preferable to the previous method, just as for any other change in principle. A disclosure note should justify that the change is preferable and describe the effect of a change on any financial statement line items and per share amounts affected for all periods reported.

A company must justify any change in principle as preferable to the previous method.

In practice, the situation arises infrequently. Most companies changing depreciation methods do not apply the change to existing assets, but instead to assets placed in service after that date. In those cases, of course, the new method is simply applied prospectively (see  **Illustration 20-9**).

Illustration 20–9 Change in Depreciation Method for Newly Acquired Assets—Rohm and Haas Company

Real World Financials

Note 12: Land, Buildings, and Equipment, Net (in part)

. . . the company changed its method of depreciation for newly acquired buildings and equipment to the straight-line method. The change had no cumulative effect on prior years' earnings but did increase [current year] net earnings by \$9 million, or \$0.14 per share. . . .

Source: Rohm and Haas Company

Sometimes, it's not easy to distinguish between a change in principle and a change in estimate. For example, if a company begins to capitalize rather than expense the cost of tools because their benefits beyond one year become apparent, the change could be construed as either a change in principle or a change in the estimated life of the asset. When the distinction is not possible, the change should be treated as a change in estimate. This treatment also is appropriate when both a change in principle and a change in estimate occur simultaneously.

When it's not possible to distinguish between a change in principle and a change in estimate, the change should be treated as a change in estimate.

Change in Reporting Entity

LO20–5 Describe the situations that constitute a change in reporting entity.

A reporting entity can be a single company, or it can be a group of companies that reports a single set of financial statements. For example, the consolidated financial statements of **PepsiCo Inc.** report the financial position and results of operations not only for the parent company, but also for its subsidiaries which include **Frito-Lay, Quaker, Tropicana,** and **Gatorade.** A **change in reporting entity** occurs as a result of (1) presenting consolidated financial statements in place of statements of individual companies or (2) changing specific companies that constitute the group for which consolidated or combined statements are prepared.⁸

Some changes in reporting entity are a result of changes in accounting rules. For example, companies like **Ford, General Motors,** and **IBM** must consolidate their manufacturing operations with their *financial* subsidiaries, creating a new entity that includes them both.⁹ For those changes in entity, the prior-period financial statements that are presented for comparative purposes must be restated to appear as if the new entity existed in those periods.

However, the more frequent change in entity occurs when one company acquires another one. In those circumstances, the financial statements of the acquirer include the acquiree as of the date of acquisition, and the acquirer's prior-period financial statements that are presented for comparative purposes are not restated. This makes it difficult to make year-to-year comparisons for a company that frequently acquires other companies. Acquiring companies are required to provide a disclosure note that presents key financial statement information as if the acquisition had occurred before the beginning of the previous year. At a minimum, the supplemental pro forma information should display revenue, income from continuing operations, net income, and earnings per share.

A change in reporting entity is reported by recasting all previous periods' financial statements as if the new reporting entity existed in those periods.¹⁰ In the first set of financial statements after the change, a

A change in reporting entity requires that financial statements of prior periods be retrospectively revised to report the financial

disclosure note should describe the nature of the change and the reason it occurred. Also, the effect of the change on net income, income from continuing operations, and related per share amounts should be indicated for all periods presented. These disclosures aren't necessary in subsequent financial statements. **Hartford Life - Insurance Company**, a financial services company, changed the composition of its reporting entity and described it this way (see  **Illustration 20-10**):

information for the new reporting entity in all periods.

Illustration 20-10 Change in Reporting Entity—Hartford Life Insurance

Real World Financials

1. Basis of Presentation and Accounting Policies (in part)

Hartford Life changed its reporting entity structure to contribute certain wholly owned subsidiaries, including Hartford Life's European insurance operations, several broker dealer entities and investment advisory and service entities from Hartford Life and Accident to the Company. The contribution of subsidiaries was effected to more closely align servicing entities with the writing company issuing the business they service as well as to more efficiently deploy capital across the organization. The change in reporting entity was retrospectively applied to the financial statements of the Company for all periods presented. The contributed subsidiaries resulted in an increase in stockholder's equity of approximately \$1.3 billion.

Source: Hartford Life Insurance

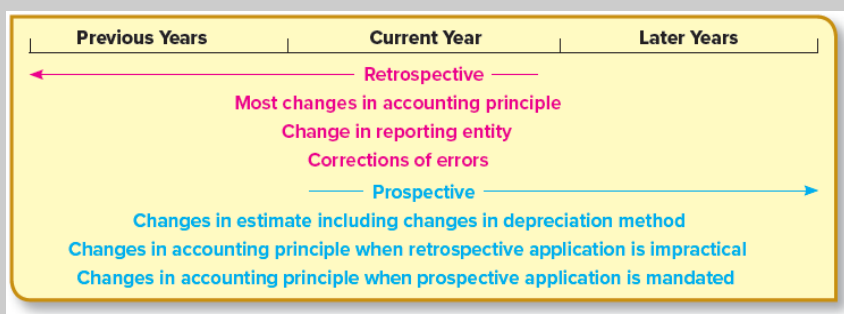

Errors

The correction of an error is not actually an accounting change but is accounted for similarly. In fact, it's accounted for retrospectively, like a change in reporting entity and like most changes in accounting principle.

More specifically, previous years' financial statements that were incorrect as a result of the error are retrospectively restated to reflect the correction. And, of course, any account balances that are incorrect as a result of the error are corrected by a journal entry. If retained earnings is one of the incorrect accounts, the correction is reported as a prior period adjustment to the beginning balance in a statement of shareholders' equity (or statement of retained earnings if that's presented instead).¹¹ And, as for accounting changes, a disclosure note is needed to describe the nature of the error and the impact of its correction on operations. We discuss the correction of errors in more detail in Part B of this chapter. But first, let's compare the two approaches for reporting accounting changes and error corrections (see [Illustration 20-11](#)).

Previous years' financial statements are retrospectively restated to reflect the correction of an error.

Illustration 20-11 Approaches to Reporting Accounting Changes and Error Corrections

A comparison of accounting treatments is provided by [Illustration 20-12](#).

Illustration 20-12 Accounting Changes and Errors: A Summary

| | Change in Accounting Principle | | Change in Estimate (including depreciation changes) | Change in Reporting Entity | Error |
|--|--|---|---|--|--|
| | Most Changes* | Exceptions† | | | |
| Method of accounting: | Retrospective | Prospective | Prospective | Retrospective | Retrospective |
| • Restate prior years' statements? | Yes | No | No | Yes | Yes |
| • Cumulative effect on prior years' income reported: | As adjustment to retained - earnings of earliest year reported‡ | Not reported | Not reported | As adjustment to retained earnings** of earliest year reported‡ | As adjustment to retained earnings of earliest year reported‡ |
| • Journal entry: | To adjust affected balances to new method | None, but subsequent accounting is affected by the change | None, but subsequent accounting is affected by the new estimate | Involves consolidated financial statements discussed in other courses | To correct any balances that are incorrect as a result of the error |
| • Disclosure note? | Yes | Yes | Yes | Yes | Yes |

*Changes in depreciation, amortization, and depletion methods are considered changes in estimates.

†When retrospective application is impracticable, such as most changes to LIFO and certain mandated changes.

‡In the statement of shareholders' equity or statement of retained earnings.

**Except when one company acquires another one. Then the acquirer's prior-period financial statements that are presented for comparative purposes are not restated.

Concept Review Exercise

ACCOUNTING CHANGES

Modern Business Machines recently conducted an extensive review of its accounting and reporting policies. The following accounting changes are an outgrowth of that review:

1. MBM has a patent on a copier design. The patent has been amortized on a straight-line basis since it was acquired at a cost of \$400,000 in 2021. During 2024, MBM decided that the benefits from the patent would be experienced over a total of 13 years rather than the 20-year legal life now being used to amortize its cost.
2. At the beginning of 2024, MBM changed its method of valuing inventory from the FIFO cost method to the average cost method. At December 31, 2023 and 2022, MBM's inventories were \$560 and \$540 million, respectively, on a FIFO cost basis but would have totaled \$500 and \$490 million, respectively, if determined on an average cost basis. MBM's income tax rate is 25%.

Page 1181

Required:

Prepare all journal entries needed in 2024 related to each change. Also, briefly describe any other measures MBM would take in connection with reporting the changes.

Solution:

1. Change in estimate

| | (\$ in millions) |
|--|------------------|
| Patent amortization expense (determined below) | 34 |
| Patent | 34 |

Calculation of Annual Amortization after the Estimate Change

| | |
|---|---|
| \$400,000 Cost | |
| \$20,000 | Old annual amortization ($\$400,000 \div 20$ years) |
| <u>$\times 3$ years</u> (60,000) | Amortization to date (2021, 2022, 2023) |
| \$340,000 | Unamortized cost |
| | $\div 10$ Estimated remaining life (13 years – 3 years) |

Calculation of Annual Amortization after the Estimate Change

\$ 34,000 New annual amortization

A disclosure note should describe the effect of a change in estimate on income from continuing operations, net income, and related per share amounts for the current period.

2. Change in principle

MBM creates a journal entry to bring up to date all account balances affected.

| | (\$ in millions) |
|--|------------------|
| Retained earnings (the difference in net income before 2024) | 45 |
| Deferred tax asset (\$60 million × 25%) | 15 |
| Inventory (\$560 million – \$500 million) | 60 |

For financial reporting purposes, but not for tax, MBM is retrospectively *decreasing* accounting income but not taxable income. This creates a temporary difference between the two that will reverse over time as the unsold inventory becomes cost of goods sold. When that happens, taxable income will be less than accounting income. When taxable income will be less than accounting income as a temporary difference reverses, we have a “future deductible amount” and record a deferred tax asset.

Prior years' financial statements are revised to reflect the use of the new accounting method.

Also, MBM will revise all previous periods' financial statements (in this case, 2022 and 2023) as if the new method (average cost) were used in those periods. In other words, for each year in the comparative statements reported, the balance of each account affected will be revised to appear as if the average method had been applied all along.

Since retained earnings is one of the accounts whose balance requires adjustment (and it usually is), MBM makes an adjustment to the beginning balance of retained earnings for the earliest period (2022 and 2023) reported in the comparative statements of shareholders' equity. Also, in the

Since it's the earliest year reported, 2023's beginning retained earnings is adjusted for the portion of the cumulative income effect of the change attributable to prior years.

PART B

Correction of Accounting Errors

LO20-6 Understand and apply the four-step process of correcting and reporting errors, regardless of the type of error or the timing of its discovery.

Nobody's perfect. People make mistakes, even accountants. When errors are discovered, they should be corrected.¹²  **Illustration 20-13** describes the steps to be taken to correct an error, if the effect of the error is material.¹³

Illustration 20-13 Steps to Correct an Error

The retrospective approach is used for the correction of errors.

The correction of a material error is treated as a prior period adjustment.

- Step 1** A journal entry is made to correct any account balances that are incorrect as a result of the error.
- Step 2** Previous years' financial statements that were incorrect as a result of the error are retrospectively restated to reflect the correction (for all years reported for comparative purposes).
- Step 3** If retained earnings is one of the accounts incorrect as a result of the error, the correction is reported as a prior period adjustment to the beginning balance in a statement of shareholders' equity (or statement of retained earnings if that's presented instead).
- Step 4** A disclosure note should describe the nature of the error and the impact of its correction on each financial statement line item and any per-share amounts affected for each prior period presented.

Prior Period Adjustments

Before we see these steps applied to the **correction of an error**, one of the steps requires elaboration. As discussed in Chapter 4, the correction of errors is the situation that creates prior period adjustments. A **prior period adjustment** refers to an addition to or reduction in the beginning retained earnings balance in a statement of shareholders' equity (or statement of retained earnings if that's presented instead).

In an earlier chapter, we saw that a statement of shareholders' equity is the most commonly used way to report the events that cause components of shareholders' equity to change during a particular reporting period. Some companies, though, choose to report the changes that occur in the balance of retained earnings separately in a statement of retained earnings. When it's discovered that the ending balance of retained earnings in the period prior to the discovery of an error was incorrect as a result of that error, the balance must be corrected when it appears as the beginning balance the following year. However, simply reporting a corrected amount might cause misunderstanding for someone familiar with the previously reported amount. Explicitly reporting a prior period adjustment on the statement itself avoids this confusion. The prior period adjustment is reported the same way whether the change in retained earnings is reported as a column in a statement of shareholders' equity or as a separate statement of retained earnings. For simplicity, our example assumes comparative statements of retained earnings:

A statement of retained earnings (or retained earnings column in a statement of shareholders' equity) reports the events that cause changes in retained earnings.

| STATEMENTS OF RETAINED EARNINGS | | |
|---|------------------|------------------|
| For the Years Ended December 31, 2023 and 2022 | | |
| | 2023 | 2022 |
| Balance at beginning of year | \$600,000 | \$450,000 |
| Net income | 400,000 | 350,000 |
| Less: Dividends | (200,000) | (200,000) |
| Balance at end of year | <u>\$800,000</u> | <u>\$600,000</u> |

Now suppose that in 2024 it's discovered that an error in 2022 caused that year's net income to be overstated by **\$20,000** (net income should have been \$330,000). This means retained earnings in both prior years were overstated. Because comparative financial statements are presented and the current year is the year in which the error was discovered, the prior year would include a prior period adjustment as shown below:

The incorrect balance as previously reported is corrected by the prior period adjustment.

| STATEMENTS OF RETAINED EARNINGS | | |
|---|---------------------------|-------------------------|
| For the Years Ended December 31, 2024 and 2023 | | |
| | 2024 | 2023 |
| Balance at beginning of year | \$ 780,000 | \$600,000 |
| Prior period adjustment | | <u>(20,000)</u> |
| Corrected balance | | 580,000 |
| Net Income | 500,000 | 400,000 |
| Less: Dividends | (200,000) | (200,000) |
| Balance at end of year | <u><u>\$1,080,000</u></u> | <u><u>\$780,000</u></u> |

At least two years' (as in our example) and often three years' statements are reported in comparative financial statements. The prior period adjustment is applied to beginning retained earnings for the year following the error, or for the earliest year being reported in the comparative financial statements when the error occurs prior to the earliest year presented. ¹⁴

Error Correction Illustrated

Now, let's discuss these procedures to correct errors in the context of a variety of the most common types of errors. Since there are literally thousands of possibilities, it's not practical to describe every error in every stage of its discovery. However, by applying the process to the situations described below, you should become sufficiently comfortable with the *process* that you could apply it to whatever situation you might encounter.

You shouldn't try to memorize how specific errors are corrected; you should learn the process needed to analyze whatever errors you might encounter.

As you study these examples, be sure to notice that it's significantly more complicated to deal with an error if (a) it affected net income in the reporting period in which it occurred and (b) it is not discovered until a later period.

Error Discovered in the Same Reporting Period That It Occurred

If an accounting error is made and discovered in the same accounting period, the original erroneous entry should simply be reversed and the appropriate entry recorded. The possibilities are limitless. Let's look at the one in  **Illustration 20-14**.

Illustration 20-14 Error Discovered in the Same Reporting Period That It Occurred

G. H. Little, Inc., paid \$3 million for replacement computers and recorded the expenditure as maintenance expense. The error was discovered a week later.

| To Reverse the Erroneous Entry | | (\$ in millions) |
|---------------------------------------|--|------------------|
| Cash | | 3 |
| Maintenance expense | | 3 |
| To Record the Correct Entry | | |
| Equipment | | 3 |
| Cash | | 3 |

Note: These entries can, of course, be combined.

Error Affecting Previous Financial Statements, but Not Net Income

If an error did *not* affect net income in the year it occurred, it's relatively easy to correct. Examples are incorrectly recording salaries payable as accounts payable, recording a loss as an expense, or classifying a cash flow as an investing activity rather than a financing activity on the statement of cash flows. The 2017 financial statements of **Advanced Drainage Systems** announced that the company will restate its prior period financial statements and related financial information as filed with the Securities and Exchange Commission. The disclosure note reporting that restatement is reproduced in  **Illustration 20-15**.

Illustration 20-15 Error Correction—Advanced Drainage Systems

Real World Financials

23. Restatement of Prior Period Financial Statements (in part)

Subsequent to the issuance of the Original Form 10-K, the Company identified errors in its historical consolidated financial statements related to the accounting for stock-based compensation for awards made to employees along with its accounting for certain executive stock repurchase agreements and executive termination payments, as described below. As a result, the Company has restated its consolidated financial statements for the fiscal years ended March 31, 2016, 2015 and 2014. The restatement also affects periods prior to fiscal year 2014, with the cumulative effect of the errors reflected as an adjustment to the fiscal year 2014 opening stockholders' equity (deficit) balance.

Source: Advanced Drainage Systems

 **Illustration 20-16** provides another example.

Illustration 20-16 Error Affecting Previous Financial Statements, but Not Net Income

MDS Transportation incorrectly recorded a \$2 million note receivable as accounts receivable. The error was discovered a year later.

| To Correct Incorrect Accounts | | (\$ in millions) |
|--------------------------------------|---|------------------|
| Step 1 | Notes receivable | 2 |
| Step 2 | Accounts receivable..... | 2 |
| Step 3 | When reported for comparative purposes in the current year's annual report, last year's balance sheet would be restated to report the note as it should have been reported last year. | |
| Step 4 | Since last year's net income was not affected by the error, the balance in retained earnings was not incorrect. So no prior period adjustment to that account is necessary. | |
| | A disclosure note would describe the nature of the error, but there would be no impact on net income, income from continuing operations, and earnings per share to report. | |

Error Affecting a Prior Year's Net Income

Most errors affect net income in some way. When they do, they affect the balance sheet as well. Both statements must be retrospectively restated; the statement of cash flows sometimes is affected, too. As with any error, all incorrect account balances must be corrected. Because these errors affect income, one of the balances that will require correction is retained earnings. Complicating matters, income taxes often are affected by income errors. In those cases, amended tax returns are prepared either to pay additional taxes or to claim a tax refund for taxes overpaid.

In [Illustration 20-17](#), except as indicated, we ignore the tax effects of the errors and their correction to allow us to focus on the errors themselves rather than their tax aspects.

Illustration 20-17 Error Affecting Net Income: Recording an Asset as an Expense

In 2024, internal auditors discovered that Seidman Distribution, Inc., had debited an expense account for the \$7 million cost of sorting equipment purchased at the beginning of 2022. The equipment's useful life was expected to be five years with no residual value. Straight-line depreciation is used by Seidman.

Analysis

| Correct (Should have been recorded) | | Incorrect (As recorded) | |
|--|-----|-----------------------------------|-----|
| (\$ in millions) | | (\$ in millions) | |
| 2022 Equipment..... | 7.0 | 2022 Expense..... | 7.0 |
| Cash..... | 7.0 | Cash..... | 7.0 |
| 2022 Expense..... | 1.4 | <i>Depreciation entry omitted</i> | |
| Accum. deprec..... | 1.4 | | |
| 2023 Expense..... | 1.4 | <i>Depreciation entry omitted</i> | |
| Accum. deprec..... | 1.4 | | |

During the two-year period, depreciation expense was understated by \$2.8 million, but other expenses were overstated by \$7 million, so net income during the period was understated by **\$4.2 million**. This means retained earnings is currently understated by that amount.

Accumulated depreciation is understated by \$2.8 million.

| To Correct Incorrect Accounts | (\$ in millions) |
|--------------------------------------|------------------|
| Equipment..... | 7.0 |
| Accumulated depreciation..... | 2.8 |
| Retained earnings..... | 4.2 |

Step 1

Step 2

Step 3

Step 4

The 2022 and 2023 financial statements that were incorrect as a result of the error are retrospectively restated to report the equipment acquired and to reflect the correct amount of depreciation expense and accumulated depreciation, assuming both statements are reported again for comparative purposes in the 2024 annual report.

Because retained earnings is one of the accounts that is incorrect as a result of the error, a correction to that account of **\$4.2 million** is reported as a prior period adjustment to the 2024 beginning retained earnings balance in Seidman's comparative statements of shareholders' equity. A correction would be made also to the 2023 beginning retained earnings balance. That prior period adjustment, though, would be for the pre-2023 difference: \$7 million – \$1.4 million = \$5.6 million. If 2022 statements also are included in the comparative report, no adjustment would be necessary for that period because the error didn't occur until after the beginning of 2022.

Also, a disclosure note accompanying Seidman's 2024 financial statements should describe the nature of the error and the impact of its correction on each financial statement line item and any per-share amounts affected for each prior period presented (net income understated by \$5.6 million in 2022 and overstated by \$1.4 million in 2023).

The effect of most errors is different, depending on *when* the error is discovered. For example, if the error in  **Illustration 20-17** is not discovered until 2025, rather than 2024, accumulated depreciation would be understated by another \$1.4 million, or a total of **\$4.2 million**. If not discovered until 2027 or after, no correcting entry at all would be needed. By then, the sum of the omitted depreciation amounts (\$1.4 million × 5 years) would equal the expense incorrectly recorded in 2022 (\$7 million), so the retained earnings balance would be the same as if the error had never occurred. Also, the asset may have been disposed of—if the useful life estimate was correct—so neither the equipment nor accumulated depreciation would need to be recorded. Of course, any statements of prior years that were affected and are reported again in comparative statements still would be restated, and a disclosure note would describe the error and the impact of its correction on each financial statement line item and any per-share amounts affected for each prior period presented.

Most errors, in fact, eventually self-correct. An example of an uncommon instance in which an error never self-corrects would be an expense account debited for the cost of land. Because land doesn't depreciate, the error would continue until the land is sold.

Additional Consideration

We ignored the tax impact of the error and its correction in

 **Illustration 20–17.** To consider taxes, we need to know whether depreciation was also omitted from the tax return and the depreciation methods used for tax reporting. Let's say that depreciation was omitted from the tax return also, and that straight-line depreciation is used by Seidman for both tax and financial reporting. The tax rate is 25%.

Total operating expenses (nontax) still would have been overstated by \$4.2 million over the two-year period. But that would have caused taxable income to be understated and the tax liability and income tax expense to be understated by 25% of \$4.2 million, or \$1.05 million. So, net income and retained earnings would have been understated by only \$3.15 million.

| | |
|---|-----------------------|
| Operating expenses <i>overstated</i> | \$ 4.20 million |
| Income tax expense <i>understated</i> | <u>(1.05) million</u> |
| Net income (and retained earnings) <i>understated</i> | \$ 3.15 million |
| To Correct Incorrect Accounts | (\$ in millions) |
| Equipment | 7.00 |
| Accumulated depreciation | 2.80 |
| Income tax payable (25% × \$4.2 million) | 1.05 |
| Retained earnings | 3.15 |

If depreciation had been omitted from the income statement but not from the tax return, or if accelerated depreciation was used for tax reporting but straight-line depreciation for financial reporting, the credit to income tax

payable in the correcting entry would be replaced by a credit to deferred tax liability.

Some errors correct themselves the following year. For instance, if a company's ending inventory is incorrectly counted or otherwise misstated, the income statement would be in error for the year of the error and the following year, but the balance sheet would be incorrect only for the year the error occurs. After that, all account balances will be correct. This is demonstrated in [Illustration 20-18](#).

Even errors that eventually correct themselves cause financial statements to be misstated in the meantime.

Illustration 20-18 Error Affecting Net Income: Inventory Misstated

When analyzing inventory errors or other errors that affect cost of goods sold, you may find it helpful to visualize the determination of cost of goods sold, net income, and retained earnings.

In early 2024, Overseas Wholesale Supply discovered that \$1 million of inventory had been inadvertently excluded from its 2022 ending inventory count.

Analysis:
U = Understated O = Overstated

| 2022 | | 2023 | |
|--------------------------|---|--------------------------|------------------|
| Beginning inventory | | Beginning inventory | U |
| Plus: Net purchases | | Plus: Net purchases | |
| Less: Ending inventory | U | Less: Ending inventory | |
| Cost of goods sold | O | Cost of goods sold | U |
| Revenues | | Revenues | |
| Less: Cost of goods sold | O | Less: Cost of goods sold | U |
| Less: Other expenses | | Less: Other expenses | |
| Net income | U | Net income | O |
| Retained earnings | U | Retained earnings | <u>corrected</u> |

If Error Is Discovered in 2023 (before closing) (\$ in millions)

| | | |
|-------------------|---|---|
| Inventory | 1 | |
| Retained earnings | | 1 |

If Error Discovered in 2024 or Later

Step 1 No correcting entry needed.

Step 2 If the error is discovered in 2023, the 2022 financial statements that were incorrect as a result of the error are retrospectively restated to reflect the correct inventory amounts, cost of goods sold, and retained earnings when those statements are reported again for comparative purposes in the 2023 annual report. If the error is discovered in 2024, the 2023 financial statements also are retrospectively restated to reflect the correct inventory amounts and cost of goods sold (retained earnings would not require adjustment), even though no correcting entry would be needed at that point.

Step 3 Because retained earnings is one of the accounts incorrect if the error is discovered in 2023, the correction to that account is reported as a prior period adjustment to the 2023 beginning retained earnings balance in Overseas' statement of shareholders' equity. Of course, no prior period adjustment is needed if the error isn't discovered until 2024 or later.

Step 4 Also, a disclosure note in Overseas' annual report should describe the nature of the error and the impact of its correction on each year's net income (understated by \$1 million in 2022, overstated by \$1 million in 2023), income from continuing operations (same as net income), and earnings per share.

Other error corrections that benefit from a similar analysis are the overstatement of ending inventory, the overstatement or understatement of beginning inventory, and errors in recording merchandise purchases (or returns).

An error also would occur if a revenue or an expense is recorded in the wrong accounting period.  **Illustration 20-19** offers an example.

Illustration 20-19 Error Affecting Net Income: Failure to Record Sales Revenue

In 2024, General Paper Company discovered that \$3,000 of merchandise (credit) sales the last week of 2023 were not recorded until the first week of 2024. The merchandise sold was appropriately excluded from 2023 ending inventory.

Analysis

| Correct (Should have been recorded) | | Incorrect (As recorded) | |
|--|----------------------------|--------------------------------|--|
| (\$ in thousands) | | (\$ in thousands) | |
| 2023 | Accounts receivable..... 3 | No entry | |
| | Sales revenue 3 | | |
| 2024 | No entry | Accounts receivable..... 3 | |
| | | Sales revenue 3 | |

2023 sales revenue was incorrectly recorded in 2024, so 2023 net income was understated. Retained earnings is currently understated in 2024. 2024 sales revenue is overstated.

| To Correct Incorrect Accounts | | (\$ in thousands) |
|--------------------------------------|--|-------------------|
| Sales revenue | | 3 |
| Retained earnings..... | | 3 |

Note: If the sales revenue had not been recorded at all, the correcting entry would include a debit to accounts receivable rather than sales revenue.

The 2023 financial statements that were incorrect as a result of the error are retroactively restated to reflect the correct amount of sales revenue and accounts receivable when those statements are reported again for comparative purposes in the 2024 annual report.

Because retained earnings is one of the accounts incorrect as a result of the error, the correction to that account is reported as a prior period adjustment to the 2024 beginning retained earnings balance in General Paper's comparative statements of shareholders' equity.

Also, a disclosure note in General Paper's 2024 annual report should describe the nature of the error and the impact of its correction on each financial statement line item (net income understated by \$3,000 in 2023) and any per-share amounts affected for each prior period presented.

Step 1
Step 2
Step 3
Step 4

Ethical Dilemma 

As a second-year accountant for McCormack Chemical Company, you were excited to be named assistant manager of the Agricultural Chemicals Division. After two weeks in your new position, you were supervising the year-end inventory count when the senior manager mentioned that two carloads of herbicides were omitted from the count and should be added. Upon checking, you confirm your understanding that the inventory in question had been deemed to be unsalable. "Yes," your manager agreed, "but we'll write that off next year when our bottom line won't be so critical to the continued existence of the Agricultural Chemicals Division. Jobs and families depend on our division showing well this year."

 **Illustration 20–20** reports information from a disclosure note in the annual report of The Kraft Heinz Company issued June 7, 2019. It shows how the company corrected its financial statements primarily because of an understatement of cost of products sold.

Illustration 20–20 Error Correction—Kraft Heinz

Real World Financials

Note 2. Restatement of Previously Issued Consolidated Financial Statements (in part)

We have restated herein our audited consolidated financial statements at December 30, 2017 and for the years ended December 30, 2017 and December 31, 2016. We have also restated impacted amounts within the accompanying footnotes to the consolidated financial statements. . . . The following tables represent our restated consolidated statements of income, statements of comprehensive income, statements of equity, and statements of cash flows for the years ended December 30, 2017 and December 31, 2016, as well as our restated consolidated balance sheet at December 30, 2017. Following the restated consolidated financial statement tables, we have presented a reconciliation from our prior periods as previously reported to the restated values. The values as previously reported for fiscal years 2017 and 2016 were derived from our Annual Report on Form 10-K for the fiscal year ended December 30, 2017 filed on February 16, 2018.

Source: Kraft Heinz

As mentioned at the outset, we've made no attempt to demonstrate the correction process for every kind of error in every stage of its discovery. However, after seeing the process applied to the few situations described, you should feel comfortable that the process is the same regardless of the specific situation you might encounter.

LO20–7 Discuss the primary differences between U.S. GAAP and IFRS with respect to accounting changes and error corrections.

International Financial Reporting Standards

Accounting Changes and Error Corrections. U.S. GAAP and International standards are largely converged regarding accounting changes and error corrections, but one difference concerns error corrections. When correcting errors in previously issued financial statements, IFRS (*IAS No. 8*) permits the effect of the error to be reported in the current period if it's not considered practicable to report it retrospectively, as is required by U.S. GAAP.¹⁵

Concept Review Exercise

CORRECTION OF ERRORS

In 2024, the following errors were discovered by the internal auditors of Development Technologies, Inc.

1. 2023 accrued salaries of \$2 million were not recognized until they were paid in 2024.
2. A \$3 million purchase of merchandise in 2024 was recorded as having been purchased in 2023 instead. The physical inventory count at the end of 2023 was correct.

Required:

Prepare the journal entries needed in 2024 to correct each error. Also, briefly describe any other measures Development Technologies would take in connection with

correcting the errors. (Ignore income taxes.)

Solution:

Step 1:

1. To reduce 2024 salaries expense and reduce retained earnings to what it would have been if the expense had reduced net income in 2023.

Page 1189

| (\$ in millions) | |
|-------------------|---|
| Retained earnings | 2 |
| Salaries expense | 2 |

2. To include the \$3 million in 2024 purchases and increase retained earnings to what it would have been if 2023 cost of goods sold had not included the \$3 million purchases.

| Analysis | | | |
|--------------------------|---|---------------------|---|
| U = Understated | | O = Overstated | |
| 2023 | | 2024 | |
| Beginning inventory | | Beginning inventory | |
| Purchases | O | Purchases | U |
| Less: Ending inventory | | | |
| Cost of goods sold | O | | |
| Revenues | | | |
| Less: Cost of goods sold | O | | |
| Less: Other expenses | | | |
| Net income | U | | |
| ↓ | | | |
| Retained earnings | U | | |

| (\$ in millions) | |
|-------------------|---|
| Purchases | 3 |
| Retained earnings | 3 |

Step 2:

The 2023 financial statements that were incorrect as a result of the errors would be *retrospectively restated* to reflect the correct salaries expense, cost of goods sold (income tax expense if taxes are considered), net income, and retained earnings when those statements are reported again for comparative purposes in the 2024 annual report.

Step 3:

Because retained earnings is one of the accounts that is incorrect, the correction to that account is reported as a *prior period adjustment* to the 2024 beginning retained earnings balance in the comparative statements of shareholders' equity.

Step 4:

Also, a *disclosure note* should describe the nature of the error and the impact of its correction on each financial statement line item and any per-share amounts affected for each prior period presented.

Financial Reporting Case Solution

TY Lim/Shutterstock

- 1. How can an accounting change cause a company to increase a previously reported inventory amount?** Smucker didn't find any lost jelly. The company increased last year's inventory number by \$2 million to reflect its change from *LIFO* to *FIFO* this year. If it had not revised the number, last year's inventory would be based on *LIFO* and this year's inventory on *FIFO*. Analysts would be comparing apples and oranges (or apple jelly and orange jelly). Retrospective application of an accounting change provides better comparability in accounting information.
- 2. Are all accounting changes reported this way?** Not all accounting changes are reported retrospectively. Besides most changes in accounting principle, changes in reporting entity and the correction of errors are reported that way, but some changes are reported prospectively instead. Changes in

depreciation method, changes in accounting estimate, and some changes for which retrospective application is either impracticable or prohibited are reported prospectively in current and future periods only. ●

The Bottom Line

- LO20-1** Accounting changes are categorized as (a) changes in *principle*, (b) changes in *estimates*, or (c) changes in *reporting entity*. Accounting changes can be accounted for retrospectively (prior years revised) or prospectively (only year of change and future years affected), or by the modified retrospective approach (apply a new standard only to the adoption period). (p. 1168)
- LO20-2** Most voluntary changes in accounting principles are reported retrospectively. This means for each year reported in the comparative statements, we make those statements appear as if the newly adopted accounting method had been applied all along. A journal entry is created to adjust all account balances affected as of the date of the change. In the first set of financial statements after the change, a disclosure note describes the change and justifies the new method as preferable. It also describes the effects of the change on all items affected, including the fact that the retained earnings balance was revised in the statement of shareholders' equity. (p. 1170)
- LO20-3** Some changes are reported prospectively. These include (a) changes in the method of depreciation, amortization, or depletion; (b) some changes in principle for which retrospective application is impracticable; and (c) a few changes for which an authoritative pronouncement requires prospective application. (p. 1174)
- LO20-4** Changes in estimates are accounted for prospectively. When a company revises a previous estimate, prior financial statements are not revised. Instead, the company merely incorporates the new estimate in any related accounting determinations from then on. (p. 1176)
- LO20-5** A change in reporting entity requires that financial statements of prior periods be retrospectively revised to report the financial information for the new reporting entity in all periods. (p. 1178)
- LO20-6** When errors are discovered, they should be corrected and accounted for retrospectively. Previous years' financial statements that were incorrect as a result of an error are retrospectively restated, and any account balances that are incorrect are corrected by a journal entry. If retained earnings is one of the incorrect accounts, the correction is reported as a prior period adjustment to the beginning balance in a statement of shareholders' equity.

And, a disclosure note should describe the nature of the error and the impact of its correction on operations. (*p. 1182*)

LO20-7

U.S. GAAP and international standards are largely converged with respect to accounting changes and error corrections. One remaining difference is that when correcting errors in previously issued financial statements, IFRS permits the effect of the error to be reported in the current period if it's not considered practicable to report it retrospectively, as is required by U.S. GAAP. (*p. 1188*)

Questions For Review of Key Topics

- Q 20-1** For accounting purposes, we classify accounting changes into three categories. What are they? Provide a short description of each.
- Q 20-2** There are three basic accounting approaches to reporting accounting changes. What are they?
- Q 20-3** We report most changes in accounting principle retrospectively. Describe this general way of recording and reporting changes in accounting principle.
- Q 20-4** Lynch Corporation changes from the sum-of-the-years'-digits method of depreciation for existing assets to the straight-line method. How should the change be reported? Explain.
- Q 20-5** Sugarbaker Designs Inc. changed from the FIFO inventory costing method to the average cost method during 2024. Which items from the 2023 financial statements should be restated on the basis of the average cost method when reported in the 2024 comparative financial statements?
- Q 20-6** Most changes in accounting principles are recorded and reported retrospectively. In a few situations, though, the changes should be reported prospectively. When is prospective application appropriate? Provide examples.
- Q 20-7** Southeast Steel, Inc., changed from the FIFO inventory costing method to the LIFO method during 2024. How would this change likely be reported in the 2024 comparative financial statements?
- Q 20-8** Direct Assurance Company revised the estimates of the useful life of a trademark it had acquired three years earlier. How should Direct account for the change?
- Q 20-9** It's not easy sometimes to distinguish between a change in principle and a change in estimate. In these cases, how should the change be accounted for?
- Q 20-10** For financial reporting, a reporting entity can be a single company, or it can be a group of companies that reports a single set of financial statements. When changes occur that cause the financial statements to be those of a different reporting entity, we account for the situation as a change in reporting entity. What are the situations deemed to constitute a change in reporting entity?
- Q 20-11** The issuance of FASB guidance regarding consolidation of all majority-owned subsidiaries required **Ford Motors** to include a previously unconsolidated

finance subsidiary as part of the reporting entity. How did Ford report the change?

- Q 20-12** Describe the process of correcting an error when it's discovered in a subsequent reporting period.
- Q 20-13** If merchandise inventory is understated at the end of 2023, and the error is not discovered, how will net income be affected in 2024?
- Q 20-14** If it is discovered that an extraordinary repair in the previous year was incorrectly debited to repair expense, how will retained earnings be reported in the current year's statement of shareholders' equity?
- Q 20-15** What action is required when it is discovered that a five-year insurance premium payment of \$50,000 two years ago was debited to insurance expense? (Ignore taxes.)
- Q 20-16** Suppose the error described in the previous question is not discovered until six years later. What action will the discovery of this error require?

IFRS

- Q 20-17** With regard to the correction of accounting errors, what is the difference between U.S. GAAP and IFRS?

Brief Exercises

BE 20–1 Change in inventory methods; FIFO method to the average cost method  **LO20–2**

In 2024, the Barton and Barton Company changed its method of valuing inventory from the FIFO method to the average cost method. At December 31, 2023, B & B's inventories were \$32 million (FIFO). B & B's records indicated that the inventories would have totaled \$23.8 million at December 31, 2023, if determined on an average cost basis. Ignoring income taxes, what journal entry will B & B use to record the adjustment in 2024? Briefly describe other steps B & B should take to report the change.

BE 20–2 Change in inventory methods; average cost method to the FIFO method  **LO20–2**

In 2024, Adonis Industries changed its method of valuing inventory from the average cost method to the FIFO method. At December 31, 2023, Adonis's inventories were \$47.6 million (average cost). Adonis's records indicated that the inventories would have totaled \$64 million at December 31, 2023, if determined on a FIFO basis. Ignoring income taxes, what journal entry will Adonis use to record the adjustment in 2024?

BE 20–3 Change in inventory methods; FIFO method to the LIFO method  **LO20–3**

In 2024, J J Dishes changed its method of valuing inventory from the FIFO method to the LIFO method. At December 31, 2023, J J's inventories were \$96 million (FIFO). J J's records were insufficient to determine what inventories would have totaled if determined on a LIFO cost basis. Briefly describe the steps J J should take to report the change.

BE 20–4 Change in depreciation methods  **LO20–3**

Irwin, Inc. constructed a machine at a total cost of \$35 million. Construction was completed at the end of 2020 and the machine was placed in service at the beginning of

2021. The machine was being depreciated over a 10-year life using the sum-of-the-years'-digits method. The residual value is expected to be \$2 million. At the beginning of 2024, Irwin decided to change to the straight-line method. Ignoring income taxes, what journal entry(s) should Irwin record relating to the machine for 2024?

BE 20–5 Change in depreciation methods **LO20–3**

Refer to the situation described in  **BE 20–4**. Suppose Irwin has been using the straight-line method and switches to the sum-of-the-years'-digits method. Ignoring income taxes, what journal entry(s) should Irwin record relating to the machine for 2024?

BE 20–6 Book royalties **LO20–4**

Three programmers at Feenix Computer Storage, Inc., write an operating systems control manual for Hill-McGraw Publishing, Inc., for which Feenix receives royalties equal to 12% of net sales. Royalties are payable annually on February 1 for sales the previous year. The editor indicated to Feenix on December 31, 2024, that book sales subject to royalties for the year just ended are expected to be \$300,000. Accordingly, Feenix accrued royalty revenue of \$36,000 at December 31 and received royalties of \$36,500 on February 1, 2025. What adjustments, if any, should be made to retained earnings or to the 2024 financial statements?

BE 20–7 Warranty expense **LO20–4**

In 2023, Quapau Products introduced a new line of hot water heaters that carry a one-year warranty against manufacturer's defects. Based on industry experience, warranty costs were expected to approximate 5% of sales revenue. First-year sales of the heaters were \$300,000. An evaluation of the company's claims experience in late 2024 indicated that actual claims were less than expected—4% of sales rather than 5%. Assuming sales of the heaters in 2024 were \$350,000 and warranty expenditures in 2024 totaled \$12,000, what is the 2024 warranty expense?

BE 20–8 Change in estimate; useful life of patent **LO20–4**

Van Frank Telecommunications has a patent on a cellular transmission process. The company has amortized the \$18 million cost of the patent on a straight-line basis since it was acquired at the beginning of 2020. Due to rapid technological advances in the industry, management decided that the patent would benefit the company over a total of six years

rather than the nine-year life being used to amortize its cost. The decision was made at the end of 2024 (before adjusting and closing entries). What is the appropriate adjusting entry for patent amortization in 2024 to reflect the revised estimate?

BE 20–9 Error correction **LO20–6**

When DeSoto Water Works purchased equipment at the end of 2023 at a cost of \$65,000, the company debited Buildings and credited Cash \$65,000. The error was discovered in 2024. What journal entry will DeSoto use to correct the error? What other step(s) would be taken in connection with the error?

BE 20–10 Error correction **LO20–6**

In 2024, internal auditors discovered that PKE Displays, Inc., had debited an expense account for the \$350,000 cost of a machine purchased on January 1, 2021. The machine's useful life was expected to be five years with no residual value. Straight-line depreciation is used by PKE. Ignoring income taxes, what journal entry will PKE use to correct the error?

BE 20–11 Error correction **LO20–6**

Refer to the situation described in  **BE 20–10**. Assume the error was discovered in 2026, after the 2025 financial statements are issued. Ignoring income taxes, what journal entry will PKE use to correct the error?

BE 20–12 Error correction **LO20–6**

In 2024, the internal auditors of Development Technologies, Inc., discovered that (a) 2023 accrued salaries of \$2 million were not recognized until they were paid in 2024 and (b) a \$3 million purchase of merchandise in 2024 was recorded as a debit to Purchases in 2023 instead. The physical inventory count at the end of 2023 was correct. Ignoring income taxes, what journal entries are needed in 2024 to correct each error? Also, briefly describe any other measures Development Technologies would take in connection with correcting the errors.

Exercises

E 20–1 Change in principle; change in inventory methods

LO20–2

During 2022 (its first year of operations) and 2023, Fieri Foods used the FIFO inventory costing method for both financial reporting and tax purposes. At the beginning of 2024, Fieri decided to change to the average method for both financial reporting and tax purposes.

Income components before income tax for 2022, 2023, and 2024 were as follows:

| (\$ in millions) | 2022 | 2023 | 2024 |
|------------------------------|--------|--------|--------|
| Revenues | \$ 380 | \$ 390 | \$ 420 |
| Cost of goods sold (FIFO) | (38) | (40) | (46) |
| Cost of goods sold (average) | (52) | (56) | (62) |
| Operating expenses | (242) | (250) | (254) |

Dividends of \$20 million were paid each year. Fieri's fiscal year ends December 31.

Required:

1. Prepare the journal entry at the beginning of 2024 to record the change in accounting principle. (Ignore income taxes.)
2. Prepare the 2024–2023 comparative income statements.
3. Determine the balance in retained earnings at January 1, 2023, as Fieri reported previously using the FIFO method.
4. Determine the adjustment to the January 1, 2023, balance in retained earnings that Fieri would include in the 2024–2023 comparative statements of retained earnings or retained earnings column of the statements of shareholders' equity to revise it to the amount it would have been if Fieri had used the average method.

E 20–2 Change in principle; change in inventory methods

LO20–2

Aquatic Equipment Corporation decided to switch from the LIFO method of costing inventories to the FIFO method at the beginning of 2024. The inventory as reported at the end of 2023 using LIFO would have been \$60,000 higher using FIFO. Retained earnings at the end of 2023 was reported as \$780,000 (reflecting the LIFO method). The tax rate is 25%.

Required:

1. Calculate the balance in retained earnings at the time of the change (beginning of 2024) as it would have been reported if FIFO had been used in prior years.
2. Prepare the journal entry at the beginning of 2024 to record the change in accounting principle.

E 20–3 Change from the treasury stock method to retired stock

 **LO20–2**

In keeping with a modernization of corporate statutes in its home state, UMC Corporation decided in 2024 to discontinue accounting for reacquired shares as treasury stock. Instead, shares repurchased will be viewed as having been retired, reassuming the status of unissued shares. As part of the change, treasury shares held were reclassified as retired stock. At December 31, 2023, UMC's balance sheet reported the following shareholders' equity:

| | (\$ in millions) |
|---|------------------|
| Common stock, \$1 par | \$ 200 |
| Paid-in capital—excess of par | 800 |
| Retained earnings | 956 |
| Treasury stock (4 million shares at cost) | (25) |
| Total shareholders' equity | <u>\$1,931</u> |

Required:

Identify the type of accounting change this decision represents and prepare the journal entry to effect the reclassification of treasury shares as retired shares.

E 20–4 Change in principle; change to the equity method

 **LO20–2**

The Hoyle Companies, Inc. has ownership interests in several public companies. At the beginning of 2024, the company's ownership interest in the common stock of Paik Properties increased to the point that it became appropriate to begin using the equity method of accounting for the investment. The balance in the investment in equity securities account was \$31 million at the time of the change. Accountants working with company records determined that the balance in an investment in equity affiliate account would have been \$48 million if the equity method had been used previously.

Required:

1. Will Hoyle apply the new method retrospectively or apply the new method prospectively?
2. Suppose Hoyle is changing *from* the equity method rather than *to* the equity method. Will Hoyle apply the new method retrospectively or prospectively?

E 20–5 FASB codification research; change in accounting for investments  **LO20–2**

Companies often invest in the common stock of other corporations. The way we report these investments depends on the nature of the investment and the investor's motivation for the investment. The *FASB Accounting Standards Codification* represents the single source of authoritative U.S. generally accepted accounting principles. Obtain the relevant authoritative literature on the disclosure of accounting policies using the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org and select Basic View for free access).

Required:

1. What is the specific nine-digit Codification citation (XXX-XX-XX-XX) that describes how to account for a change in the level of ownership to a percentage that will mandate use of the equity method for investments in common stock?
2. What are the specific requirements?

E 20–6 FASB codification research  **LO20–2**

Access the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org and select Basic View for free access). Determine the specific eight-digit Codification citation (XXX-XX-XX-X) for accounting for each of the following items:

1. Reporting most changes in accounting principle.
2. Disclosure requirements for a change in accounting principle.
3. Illustration of the application of a retrospective change in the method of accounting for inventory.

E 20–7 Change in principle; change in inventory cost method

LO20–2

Millington Materials is a leading supplier of building equipment, building products, materials, and timber for sale, with over 200 branches across the Mid-South. On January 1, 2024, management decided to change from the average inventory costing method to the FIFO inventory costing method at each of its outlets.

The following table presents information concerning the change. The income tax rate for all years is 25%.

| | Income before Income Tax | | |
|-------------|--------------------------|--------------|--------------|
| | FIFO | Average Cost | Difference |
| Before 2023 | \$30 million | \$16 million | \$14 million |
| 2023 | 16 million | 10 million | 6 million |
| 2024 | 20 million | 18 million | 2 million |

Required:

1. Prepare the journal entry to record the change in accounting principle.
2. Determine the net income to be reported in the 2024–2023 comparative income statements.
3. Which other 2023 amounts would be reported differently in the 2024–2023 comparative income statements and 2024–2023 comparative balance sheets than they were reported the previous year?

4. How would the change be reflected in the 2024–2023 comparative statements of shareholders' equity assuming cash dividends were \$2 million each year and that no dividends were paid prior to 2023?

E 20–8 Change in inventory methods; FIFO method to the LIFO method  **LO20–3**

Flay Foods has always used the FIFO inventory costing method for both financial reporting and tax purposes. At the beginning of 2024, Flay decided to change to the LIFO method. As a result of the change, net income in 2024 was \$80 million. If the company had used LIFO in 2023, its cost of goods sold would have been higher by \$6 million that year. Flay's records of inventory purchases and sales are not available for 2022 and several previous years. Last year, Flay reported the following net income amounts in its comparative income statements:

| (\$ in millions) | 2021 | 2022 | 2023 |
|------------------|------|------|------|
| Net income | \$80 | \$82 | \$84 |

Required:

1. Prepare the journal entry at the beginning of 2024 to record the change in accounting principle. (Ignore income taxes.)
2. Will Flay apply the LIFO cost method retrospectively or apply the LIFO cost method prospectively?
3. What amounts will Flay report for net income in its 2022–2024 comparative income statements?

E 20–9 Change in inventory methods; FIFO method to the LIFO method  **LO20–3**

Wolfgang Kitchens has always used the FIFO inventory costing method for both financial reporting and tax purposes. At the beginning of 2024, Wolfgang decided to change to the LIFO method. Net income in 2024 was correctly stated as \$90 million. If the company had used LIFO in 2023, its cost of goods sold would have been higher by \$7 million that year. Company accountants are able to determine that the cumulative net income for all years prior to 2023 would have been lower by \$23 million if LIFO had been used all along, but have insufficient information to determine specific effects of using LIFO in 2022. Last year, Wolfgang reported the following net income amounts in its comparative income statements:

| (\$ in millions) | 2021 | 2022 | 2023 |
|------------------|------|------|------|
| Net income | \$90 | \$92 | \$94 |

Required:

1. Prepare the journal entry at the beginning of 2024 to record the change in accounting principle. (Ignore income taxes.)
2. Wolfgang should revise reported account balances retrospectively as of the beginning of what year?
3. What amounts will Wolfgang report for net income in its 2022–2024 comparative income statements?

E 20–10 Change in depreciation methods  **LO20–3**

For financial reporting, Kumas Poultry Farms has used the declining-balance method of depreciation for conveyor equipment acquired at the beginning of 2021 for \$2,560,000. Its useful life was estimated to be six years with a \$160,000 residual value. At the beginning of 2024, Kumas decides to change to the straight-line method. The effect of this change on depreciation for each year is as follows:

| (\$ in thousands) | | | |
|-------------------|---------------|-------------------|-------------|
| Year | Straight-Line | Declining Balance | Difference |
| 2021 | \$ 400 | \$ 853 | \$453 |
| 2022 | 400 | 569 | 169 |
| 2023 | <u>400</u> | <u>379</u> | <u>(21)</u> |
| | \$1,200 | \$1,801 | \$601 |

Required:

1. Will Kumas apply the straight-line method retrospectively or apply the straight-line method prospectively?
2. Prepare any 2024 journal entry related to the change.

E 20–11 Change in depreciation methods  **LO20–3**

The Canliss Milling Company purchased machinery on January 2, 2022, for \$800,000. A five-year life was estimated and no residual value was anticipated. Canliss decided to use the

straight-line depreciation method and recorded \$160,000 in depreciation in 2022 and 2023. Early in 2024, the company changed its depreciation method to the sum-of-the-years'-digits (SYD) method.

Required:

1. Will Canliss apply the SYD method retrospectively or apply the method prospectively?
2. Prepare any 2024 journal entry related to the change.

E 20–12 Book royalties  **LO20–4**

S. J. Boylan Engineering Group receives royalties on a technical manual written by two of its engineers and sold to William B. Irving Publishing, Inc. Royalties are 10% of net sales, receivable on October 1 for sales in January through June and on April 1 for sales in July through December of the prior year. Sales of the manual began in July 2023, and Boylan accrued royalty revenue of \$31,000 at December 31, 2023, as follows:

| | | |
|----------------------------|--------|--------|
| Receivable—royalty revenue | 31,000 | |
| Royalty revenue | | 31,000 |

Boylan received royalties of \$36,000 on April 1, 2024, and \$40,000 on October 1, 2024. Irving indicated to Boylan on December 31 that book sales subject to royalties for the second half of 2024 are expected to be \$500,000.

Required:

1. Prepare any journal entries Boylan should record during 2024 related to the royalty revenue.
2. What is the amount of the adjustment, if any, that should be made to retained earnings in the 2023 financial statements?

E 20–13 Loss contingency  **LO20–4**

The Commonwealth of Virginia filed suit in October 2022 against Northern Timber Corporation, seeking civil penalties and injunctive relief for violations of environmental laws regulating forest conservation. When the financial statements were issued in 2023, Northern had not reached a settlement with state authorities, but legal counsel advised Northern Timber that it was probable the ultimate settlement would be \$1,000,000 in penalties. The following entry was recorded:

| | | |
|----------------------|-----------|-----------|
| Loss—litigation | 1,000,000 | |
| Liability—litigation | | 1,000,000 |

Late in 2024, a settlement was reached with state authorities to pay a total of \$600,000 to cover the cost of violations.

Required:

1. Prepare any journal entry(s) related to the change.
2. Is Northern required to revise prior years' financial statements as a result of the change?
3. Is Northern required to provide a disclosure note to report the change?

E 20–14 Warranty expense  **LO20–4**

Duong-Burnett Products introduced a new line of commercial sprinklers in 2023 that carry a one-year warranty against manufacturer's defects. Because this was the first product for which the company offered a warranty, trade publications were consulted to determine the experience of others in the industry. Based on that experience, warranty costs were expected to approximate 2% of sales. Sales of the sprinklers in 2023 were \$2,500,000. Accordingly, the following entries relating to the contingency for warranty costs were recorded during the first year of selling the product:

Accrued liability and expense

| | | |
|-------------------------------------|--------|--------|
| Warranty expense (2% × \$2,500,000) | 50,000 | |
| Warranty liability | | 50,000 |

Actual expenditures (summary entry)

| | | |
|--|--------|--------|
| Warranty liability | 23,000 | |
| Cash (or salaries payable, parts and supplies, etc.) | | 23,000 |

In late 2024, the company's claims experience was evaluated and it was determined that claims were far more than expected—3% of sales rather than 2%.

Required:

1. Assuming sales of the sprinklers in 2024 were \$3,600,000 and warranty expenditures in 2024 totaled \$88,000, prepare any journal entries related to the warranty.

2. Now, instead, assume that sales of the sprinklers were discontinued after 2023, prepare any journal entries in 2024 related to the warranty.

E 20–15 Deferred taxes; change in tax rates **LO20–4**

Boyas Industries reported a deferred tax liability of \$5 million for the year ended December 31, 2023, related to a temporary difference of \$20 million. The tax rate was 25%. The temporary difference is expected to reverse in 2025, at which time the deferred tax liability will become payable. There are no other temporary differences in 2023–2025. Assume a new tax law is enacted in 2024 that causes the tax rate to change from 25% to 20% beginning in 2025. (The rate remains 25% for 2024 taxes.) Taxable income in 2024 is \$60 million.

Required:

1. Determine the effect of the change and prepare the appropriate journal entry to record the company's income tax expense in 2024.
2. Is Boyas required to revise prior years' financial statements as a result of the change?
3. Is Boyas required to provide a disclosure note to report the change?

E 20–16 Accounting change **LO20–4**

The Peridot Company purchased machinery on January 2, 2022, for \$800,000. A five-year life was estimated and no residual value was anticipated. Peridot decided to use the straight-line depreciation method and recorded \$160,000 in depreciation in 2022 and 2023. Early in 2024, the company revised the total estimated life of the machinery to eight years.

Required:

1. What type of change is this?
2. Is Peridot required to revise prior years' financial statements as a result of the change?
3. Is Peridot required to provide a disclosure note to report the change?
4. Determine depreciation for 2024.

E 20–17 Change in estimate; useful life and residual value of equipment **LO20–4**

Wardell Company purchased a mini computer on January 1, 2022, at a cost of \$40,000. The computer has been depreciated using the straight-line method over an estimated five-year

useful life with an estimated residual value of \$4,000. On January 1, 2024, the estimate of useful life was changed to a total of 10 years, and the estimate of residual value was changed to \$900.

Required:

1. Prepare the appropriate adjusting entry for depreciation in 2024 to reflect the revised estimate.
2. Prepare the appropriate adjusting entry for depreciation in 2024 to reflect the revised estimate, assuming that the company uses the sum-of-the-years'-digits method instead of the straight-line method.

E 20–18 Classifying accounting changes  **LO20–1** through  **LO20–5**

Indicate with the appropriate letter the nature of each situation described below:

| Type of Change | |
|----------------|---|
| PR | Change in principle reported retrospectively |
| PP | Change in principle reported prospectively |
| E | Change in estimate |
| EP | Change in estimate resulting from a change in principle |
| R | Change in reporting entity |
| N | Not an accounting change |

- | | | |
|--|---|-----------|
| | 1. Change from declining balance depreciation to straight-line. | Page 1197 |
| | 2. Change in the estimated useful life of office equipment. | |
| | 3. Technological advance that renders worthless a patent with an unamortized cost of \$45,000. | |
| | 4. Change from determining lower of cost or net realizable value (LCNRV) for the inventories by the individual item approach to the aggregate approach. | |
| | 5. Change from LIFO inventory costing to the weighted-average inventory costing. | |
| | 6. Settling a lawsuit for less than the amount accrued previously as a loss contingency. | |

- _____ 7. Including in the consolidated financial statements a subsidiary acquired several years earlier that was appropriately not included in previous years.
- _____ 8. Change by a retail store from reporting warranty expense on a pay-as-you-go basis to estimating the expense in the period of sale.
- _____ 9. A shift of certain manufacturing overhead costs to inventory that previously were expensed as incurred to more accurately measure cost of goods sold. (Either method is generally acceptable.)
- _____ 10. Pension plan assets for a defined benefit pension plan achieving a rate of return in excess of the amount anticipated.

E 20–19 Error correction; inventory error **LO20–6**

During 2024, Lipe and Lipe Corporation discovered that its ending inventories reported on its financial statements were misstated by the following amounts:

| | | |
|------|----------------|-----------|
| 2022 | understated by | \$120,000 |
| 2023 | overstated by | 150,000 |

Lipe and Lipe uses the periodic inventory system and the FIFO cost method.

Required:

1. Determine the effect of these errors on retained earnings at January 1, 2024, before any adjustments. (Ignore income taxes.)
2. Prepare a journal entry to correct the error in 2024.
3. Will Lipe and Lipe account for the error (a) retrospectively or (b) prospectively?

E 20–20 Error corrections; investment **LO20–6**

On December 12, 2024, an investment in equity securities costing \$80,000 was sold for \$100,000. The total of the sale proceeds was credited to the investment in equity securities account.

Required:

1. Prepare the journal entry to correct the error, assuming it is discovered before the books are adjusted or closed in 2024. (Ignore income taxes.)
2. Prepare the journal entry to correct the error assuming it is not discovered until early 2025. (Ignore income taxes.)

E 20–21 Error in amortization schedule LO20–6

Wilkins Food Products Inc. acquired a packaging machine from Lawrence Specialists Corporation. Lawrence completed construction of the machine on January 1, 2022. In payment for the machine Wilkins issued a three-year installment note to be paid in three equal payments at the end of each year. The payments include interest at the rate of 10%. Lawrence made a conceptual error in preparing the amortization schedule, which Wilkins failed to discover until 2024. As a result of the error, Wilkins understated interest expense by \$45,000 in 2022 and \$40,000 in 2023.

Required:

1. Determine which accounts are incorrect as a result of these errors at January 1, 2024, before any adjustments. Explain your answer. (Ignore income taxes.)
2. Prepare a journal entry to correct the error.
3. Will Wilkins account for the error (a) retrospectively or (b) prospectively?

E 20–22 Error correction; accrued interest on bonds

LO20–6

At the end of 2023, Martinez Furniture Company failed to accrue \$61,000 of interest expense that accrued during the last five months of 2023 on bonds payable. The bonds mature in 2035. The discount on the bonds is amortized by the straight-line method. The following entry was recorded on February 1, 2024, when the semiannual interest was paid:

| | | |
|---------------------------|--------|--------|
| Interest expense | 73,200 | |
| Discount on bonds payable | | 1,200 |
| Cash | | 72,000 |

Required:

Prepare any journal entry necessary to correct the error, as well as any adjusting entry for 2024 related to the situation described. (Ignore income taxes.)

E 20–23 Error correction; three errors LO20–6

Below are three independent and unrelated errors.

- a. On December 31, 2023, Wolfe-Bache Corporation failed to accrue salaries expense of \$1,800. In January 2024, when it paid employees for the December 27–January 2 workweek, Wolfe-Bache made the following entry:

| | | |
|------------------|-------|-------|
| Salaries expense | 2,520 | |
| Cash | | 2,520 |

- b. On the last day of 2023, Midwest Importers received a \$90,000 prepayment from a tenant for 2024 rent of a building. Midwest recorded the receipt as rent revenue. The error was discovered midway through 2024.
- c. At the end of 2023, Dinkins-Lowery Corporation failed to accrue interest of \$8,000 on a note receivable. At the beginning of 2024, when the company received the cash, it was recorded as interest revenue.

Required:

For each error:

1. What would be the effect of each error on the income statement and the balance sheet in the 2023 financial statements?
2. Prepare any journal entries each company should record in 2024 to correct the errors.

E 20–24 Inventory errors  **LO20–6**

For each of the following inventory errors occurring in 2024, determine the effect of the error on 2024’s cost of goods sold, net income, and retained earnings. Assume that the error is not discovered until 2025 and that a periodic inventory system is used. Ignore income taxes.

U = Understated

O = Overstated

NE = No effect

| | | Cost of Goods Sold | Net Income | Retained Earnings |
|----|------------------------------------|-----------------------------------|-----------------------|------------------------------|
| 1. | Overstatement of ending inventory. | U | O | O |

| | | Cost of Goods Sold | Net Income | Retained Earnings |
|----|---|-----------------------------------|-----------------------|------------------------------|
| 2. | Overstatement of purchases. | | | |
| 3. | Understatement of beginning inventory. | | | |
| 4. | Freight-in charges are understated. | | | |
| 5. | Understatement of ending inventory. | | | |
| 6. | Understatement of purchases. | | | |
| 7. | Overstatement of beginning inventory. | | | |
| 8. | Understatement of purchases and understatement of ending inventory, by the same amount. | | | |

E 20–25 Classifying accounting changes and errors  **LO20–1**
through  **LO20–6**

Indicate with the appropriate letter the nature of each adjustment described below:

Type of Adjustment

- A. Change in accounting principle (reported retrospectively).
- B. Change in accounting principle (exception reported prospectively).
- C. Change in estimate.
- D. Change in estimate resulting from a change in principle.
- E. Change in reporting entity.
- F. Correction of an error.

- _____ 1. Change from expensing extraordinary repairs to capitalizing the expenditures.
- _____ 2. Change in the residual value of machinery.
- _____ 3. Change from FIFO inventory costing to LIFO inventory costing.
- _____ 4. Change in the percentage used to determine warranty expense.
- _____ 5. Change from LIFO inventory costing to FIFO inventory costing.
- _____ 6. Change from reporting an investment by the equity method due to a reduction in the percentage of shares owned.
- _____ 7. Change in the composition of a group of firms reporting on a consolidated basis.
- _____ 8. Change from sum-of-the-years'-digits depreciation to straight-line.
- _____ 9. Change from FIFO inventory costing to average inventory costing.
- _____ 10. Change in actuarial assumptions for a defined benefit pension plan.

Problems

P 20–1 Change in inventory costing methods; comparative income statements LO20–2

The Cecil-Booker Vending Company changed its method of valuing inventory from the average cost method to the FIFO cost method at the beginning of 2024. At December 31, 2023, inventories were \$120,000 (average cost basis) and were \$124,000 a year earlier. Cecil-Booker's accountants determined that the inventories would have totaled \$155,000 at December 31, 2023, and \$160,000 at December 31, 2022, if determined on a FIFO basis. A tax rate of 25% is in effect for all years.

One hundred thousand common shares were outstanding each year. Income from continuing operations was \$400,000 in 2023 and \$525,000 in 2024. There were no discontinued operations either year.

Required:

1. Prepare the journal entry at January 1, 2024, to record the change in accounting principle. (All tax effects should be reflected in the deferred tax liability account.)
2. Prepare the 2024–2023 comparative income statements beginning with income from continuing operations (adjusted for any revisions). Include per share amounts.

P 20–2 Change in principle; change in inventory costing methods LO20–2

The Coclin Company has used the LIFO method of accounting for inventory during its first two years of operation, 2022 and 2023. At the beginning of 2024, Coclin decided to change to the average cost method for both tax and financial reporting purposes. The following table presents information concerning the change for 2022–2024. The income tax rate for all years is 25%.

| Income before Income Tax | | | | |
|--------------------------|---------------------------------|-------------------------|-----------------|-------------------------|
| | Using Average Cost Method | Using LIFO Method | Difference | Income Tax Effect |
| 2022 | \$ 90,000 | \$60,000 | \$30,000 | \$7,500 |
| 2023 | 45,000 | 36,000 | 9,000 | 2,250 |
| Total | <u>\$135,000</u> | <u>\$96,000</u> | <u>\$39,000</u> | <u>\$9,750</u> |
| 2024 | \$ 51,000 | \$46,000 | \$ 5,000 | \$1,250 |

Coclin issued 50,000 \$1 par, common shares for \$230,000 when the business began, and there have been no changes in paid-in capital since then. Dividends were not paid the first year, but \$10,000 cash dividends were paid in both 2023 and 2024.

Required:

1. Prepare the journal entry at January 1, 2024, to record the change in accounting principle.
2. Prepare the 2024–2023 comparative income statements beginning with income before income taxes.
3. Prepare the 2024–2023 comparative statements of shareholders' equity. [*Hint:* The 2022 statements reported retained earnings of \$45,000. This is $\$60,000 - (\$60,000 \times 25\%)$.]

P 20–3 Change in inventory costing methods; comparative income statements  **LO20–2**,  **LO20–3**

Shown below are net income amounts as they would be determined by Roberti Steel Company by each of three different inventory costing methods (\$ in thousands).

| | FIFO | Average Cost | LIFO |
|----------|----------------|----------------|----------------|
| Pre-2023 | \$2,800 | \$2,540 | \$2,280 |
| 2023 | 750 | 600 | 540 |
| | <u>\$3,550</u> | <u>\$3,140</u> | <u>\$2,820</u> |

Required:

1. Assume that Roberti used FIFO before 2024, and then in 2024 decided to switch to average cost. Prepare the journal entry to record the change in accounting principle and briefly describe any other steps Roberti should take to appropriately report the situation. (Ignore income tax effects.)
2. Assume that Roberti used FIFO before 2024, and then in 2024 decided to switch to LIFO. Assume accounting records are inadequate to determine LIFO information prior to 2024. Therefore, the 2023 (\$540) and pre-2023 (\$2,280) data are not available. Prepare the journal entry to record the change in accounting principle and briefly describe any other steps Roberti should take to appropriately report the situation. (Ignore income tax effects.)
3. Assume that Roberti used FIFO before 2024, and then in 2024 decided to switch to LIFO cost. Roberti's records of inventory purchases and sales are not available for several previous years. Therefore, the pre-2023 LIFO information (\$2,280) is not available. However, Roberti does have the information needed to apply LIFO on a prospective basis beginning in 2023. Prepare the journal entry to record the change in accounting principle, and briefly describe any other steps Roberti should take to appropriately report the situation. (Ignore income tax effects.)

P 20-4 Change in inventory methods LO20-2

The Strawser-Morris Corporation uses a periodic inventory system and has used the FIFO cost method since inception of the company in 1985. In 2024, the company decided to change to the average cost method. Data for 2024 are as follows:

| | | |
|---|----------------|-------------------------|
| Beginning inventory, FIFO (5,000 units @ \$30.00) | | \$150,000 |
| Purchases: | | |
| 5,000 units @ \$36.00 | \$180,000 | |
| 5,000 units @ \$40.00 | <u>200,000</u> | 380,000 |
| Cost of goods available for sale | | <u>\$530,000</u> |
| Sales for 2024 (8,000 units @ \$70.00) | | <u><u>\$560,000</u></u> |

Additional Information:

1. The company's effective income tax rate is 25% for all years.

2. If the company had used the average cost method prior to 2024, ending inventory for 2023 would have been \$130,000.
3. 7,000 units remained in inventory at the end of 2024.

Required:

1. Prepare the journal entry at the beginning of 2024 to record the change in principle.
2. In the 2024–2022 comparative financial statements, what will be the amounts of cost of goods sold and inventory reported for 2024?

P 20–5 Change in inventory methods  **LO20–2**

Fantasy Fashions had used the LIFO method of costing inventories, but at the beginning of 2024 decided to change to the FIFO method. The inventory as reported at the end of 2023 using LIFO would have been \$20 million higher using FIFO.

Retained earnings reported at the end of 2022 and 2023 was \$240 million and \$260 million, respectively (reflecting the LIFO method). Those amounts reflecting the FIFO method would have been \$250 million and \$272 million, respectively. 2023 net income reported at the end of 2023 was \$28 million (LIFO method) but would have been \$30 million using FIFO. After changing to FIFO, 2024 net income was \$36 million. Dividends of \$8 million were paid each year. The tax rate is 25%.

Required:

1. Prepare the journal entry at the beginning of 2024 to record the change in accounting principle.
2. In the 2024–2023 comparative income statements, what will be the amounts of net income reported for 2023 and 2024?
3. Prepare the 2024–2023 retained earnings column of the comparative statements of shareholders' equity.

P 20–6 Change in principle; change in depreciation methods  **LO20–3**

During 2022 and 2023, Faulkner Manufacturing used the sum-of-the-years'-digits (SYD) method of depreciation for its depreciable assets, for both financial reporting and tax purposes. At the beginning of 2024, Faulkner decided to change to the straight-line method for both financial reporting and tax purposes. A tax rate of 25% is in effect for all years.

For an asset that cost \$21,000 with an estimated residual value of \$1,000 and an estimated useful life of 10 years, the depreciation under different methods is as follows:

| Year | Straight Line | SYD | Difference |
|------|---------------|--------------|--------------|
| 2022 | \$2,000 | \$3,636 | \$1,636 |
| 2023 | <u>2,000</u> | <u>3,273</u> | <u>1,273</u> |
| | \$4,000 | \$6,909 | \$2,909 |

Required:

1. Describe the way Faulkner should account for the change described. Include in your answer any journal entry Faulkner will record in 2024 related to the change and any required note disclosures.
2. Suppose instead that Faulkner previously used straight-line depreciation and changed to sum-of-the-years'-digits in 2024. Prepare any journal entry Faulkner will record in 2024 related to the change and any required note disclosures.

P 20–7 Depletion; change in estimate  **LO20–4**

In 2024, the William Jesse Company purchased land containing a mineral mine for \$1,600,000. Additional costs of \$600,000 were incurred to develop the mine. Geologists estimated that 400,000 tons of ore would be extracted. After the ore is removed, the land will have a resale value of \$100,000.

To aid in the extraction, William Jesse built various structures and small storage buildings on the site at a cost of \$150,000. These structures have a useful life of 10 years. The structures cannot be moved after the ore has been removed and will be left at the site. In addition, new equipment costing \$80,000 was purchased and installed at the site. William Jesse does not plan to move the equipment to another site, but estimates that it can be sold at auction for \$4,000 after the mining project is completed.

In 2024, 50,000 tons of ore were extracted and sold. In 2025, the estimate of total tons of ore in the mine was revised from 400,000 to 487,500. During 2025, 80,000 tons were extracted.

Required:

1. Compute depletion and depreciation of the mine and the mining facilities and equipment for 2024 and 2025. William Jesse uses the units-of-production method to determine depreciation on mining facilities and equipment.
2. Compute the book value of the mineral mine, structures, and equipment as of December 31, 2025.

P 20–8 Accounting changes; six situations  **LO20–1**,
 **LO20–3**,  **LO20–4**

Described below are six independent and unrelated situations involving accounting changes. Each change occurs during 2024 before any adjusting entries or closing entries were prepared. Assume the tax rate for each company is 25% in all years. Any tax effects should be adjusted through the deferred tax liability account.

- a. Fleming Home Products introduced a new line of commercial awnings in 2023 that carry a one-year warranty against manufacturer's defects. Based on industry experience, warranty costs were expected to approximate 3% of sales. Sales of the awnings in 2023 were \$3,500,000. Accordingly, warranty expense and a warranty liability of \$105,000 were recorded in 2023. In late 2024, the company's claims experience was evaluated, and it was determined that claims were far fewer than expected: 2% of sales rather than 3%. Sales of the awnings in 2024 were \$4,000,000, and warranty expenditures in 2024 totaled \$91,000.
- b. On December 30, 2020, Rival Industries acquired its office building at a cost of \$1,000,000. It was depreciated on a straight-line basis assuming a useful life of 40 years and no salvage value. However, plans were finalized in 2024 to relocate the company headquarters at the end of 2028. The vacated office building will have a salvage value at that time of \$700,000.
- c. Hobbs-Barto Merchandising, Inc., changed inventory cost methods to LIFO from FIFO at the end of 2024 for both financial statement and income tax purposes. Under FIFO, the inventory at January 1, 2024, is \$690,000.

- d. At the beginning of 2021, the Hoffman Group purchased office equipment at a cost of \$330,000. Its useful life was estimated to be 10 years with no salvage value. The equipment was depreciated by the sum-of-the-years'-digits method. On January 1, 2024, the company changed to the straight-line method.
- e. In November 2022, the State of Minnesota filed suit against Huggins Manufacturing Company, seeking penalties for violations of clean air laws. When the financial statements were issued in 2023, Huggins had not reached a settlement with state authorities, but legal counsel advised Huggins that it was probable the company would have to pay \$200,000 in penalties. Accordingly, the following entry was recorded:

| | | |
|----------------------|---------|---------|
| Loss—litigation | 200,000 | |
| Liability—litigation | | 200,000 |

Late in 2024, a settlement was reached with state authorities to pay a total of \$350,000 in penalties.

- f. At the beginning of 2024, Jantzen Specialties, which uses the sum-of-the-years'-digits method, changed to the straight-line method for newly acquired buildings and equipment. The change increased current year net earnings by \$445,000.

Required:

For each situation:

1. Identify the type of change.
2. Prepare any journal entry necessary as a direct result of the change, as well as any adjusting entry for 2024 related to the situation described.
3. Briefly describe any other steps that should be taken to appropriately report the situation.

P 20–9 Accounting changes; identify type and reporting approach  **LO20–1** through  **LO20–4**

At the beginning of 2024, Wagner Implements undertook a variety of changes in accounting methods, corrected several errors, and instituted new accounting policies.

Required:

Indicate for each item 1 to 10 below the type of change and the reporting approach Wagner would use.

| Type of Change (choose one) | Reporting Approach (choose one) |
|---|---------------------------------|
| P. Change in accounting principle | R. Retrospective approach |
| E. Change in accounting estimate | P. Prospective approach |
| EP. Change in estimate resulting from a change in principle | |
| X. Correction of an error | |
| N. Neither an accounting change nor an accounting error | |

Change:

1. By acquiring additional stock, Wagner increased its investment in Wise, Inc., from a 12% interest to 25% and changed its method of accounting for the investment to the equity method.
2. Wagner instituted a postretirement benefit plan for its employees in 2024. Wagner did not previously have such a plan.
3. Wagner changed its method of depreciating computer equipment from the SYD method to the straight-line method.
4. Wagner determined that a liability insurance premium it both paid and expensed in 2023 covered the 2023–2025 period.
5. By selling shares in Launch Corp, Wagner decreased its investment in the company from a 23% interest to 15% and changed its method of accounting for the investment from the equity method to the fair value through net income method.
6. Due to an unexpected relocation, Wagner determined that its office building, previously depreciated using a 45-year life, should be depreciated using an 18-year life.
7. Wagner offers a three-year warranty on the farming equipment it sells. Manufacturing efficiencies caused Wagner to reduce its expectation of warranty costs from 2% of sales to 1% of sales.
8. Wagner changed from LIFO to FIFO to account for its materials and work-in-process inventories.
9. Wagner changed from FIFO to average cost to account for its equipment inventory.

10. Wagner sells extended service contracts on some of its equipment sold. Wagner performs services related to these contracts over several years, so in 2024, Wagner changed from recognizing revenue from these service contracts on a cash basis to the accrual basis.

P 20–10 Inventory errors **LO20–6**

You have been hired as the new controller for the Ralston Company. Shortly after joining the company in 2024, you discover the following errors related to the 2022 and 2023 financial statements:

- a. Inventory at 12/31/2022 was understated by \$6,000.
- b. Inventory at 12/31/2023 was overstated by \$9,000.
- c. On 12/31/2023, inventory was purchased for \$3,000. The company did not record the purchase until the inventory was paid for early in 2024. At that time, the purchase was recorded by a debit to purchases and a credit to cash.

The company uses a periodic inventory system.

Required:

1. Assuming that the errors were discovered after the 2023 financial statements were issued, analyze the effect of the errors on 2023 and 2022 cost of goods sold, net income, and retained earnings. (Ignore income taxes.)
2. Prepare a journal entry to correct the errors.
3. Will Ralston account for the change (a) retrospectively or (b) prospectively?

P 20–11 Error correction; change in depreciation method **LO20–6**

The Collins Corporation purchased office equipment at the beginning of 2022 and capitalized a cost of \$2,000,000. This cost included the following expenditures:

| | |
|---------------------------|---------------------------|
| Purchase price | \$1,850,000 |
| Freight charges | 30,000 |
| Installation charges | 20,000 |
| Annual maintenance charge | 100,000 |
| Total | <u><u>\$2,000,000</u></u> |

The company estimated an eight-year useful life for the equipment. No residual value is anticipated. The double-declining-balance method was used to determine depreciation expense for 2022 and 2023.

In 2024, after the 2023 financial statements were issued, the company decided to switch to the straight-line depreciation method for this equipment. At that time, the company's controller discovered that the original cost of the equipment incorrectly included one year of annual maintenance charges for the equipment.

Required:

1. Ignoring income taxes, prepare the appropriate correcting entry for the equipment capitalization error discovered in 2024.
2. Ignoring income taxes, prepare any 2024 journal entries related to the change in depreciation methods.

P 20–12 Accounting changes and error correction; seven situations; tax effects ignored  **LO20–1** through  **LO20–4**,  **LO20–6**

Williams-Santana Inc. is a manufacturer of high-tech industrial parts that was started in 2012 by two talented engineers with little business training. In 2024, the company was acquired by one of its major customers. As part of an internal audit, the following facts were discovered. The audit occurred during 2024 before any adjusting entries or closing entries were prepared.

- a. A five-year casualty insurance policy was purchased at the beginning of 2022 for \$35,000. The full amount was debited to insurance expense at the time.
- b. Effective January 1, 2024, the company changed the salvage value used in calculating depreciation for its office building. The building cost \$600,000 on December 29, 2013, and has been depreciated on a straight-line basis assuming a useful life of 40 years and a salvage value of \$100,000. Declining real estate values in the area indicate that the salvage value will be no more than \$25,000.
- c. On December 31, 2023, merchandise inventory was overstated by \$25,000 due to a mistake in the physical inventory count using the periodic inventory system.

- d. The company changed inventory cost methods to FIFO from LIFO at the end of 2024 for both financial statement and income tax purposes. The change will cause a \$960,000 increase in the beginning inventory on January 1, 2025.
- e. At the end of 2023, the company failed to accrue \$15,500 of sales commissions earned by employees during 2023. The expense was recorded when the commissions were paid in early 2024.
- f. At the beginning of 2022, the company purchased a machine at a cost of \$720,000. Its useful life was estimated to be 10 years with no salvage value. The machine has been depreciated by the double-declining balance method. Its book value on December 31, 2023, was \$460,800. On January 1, 2024, the company changed to the straight-line method.
- g. Warranty expense is determined each year as 1% of sales. Actual payment experience of recent years indicates that 0.75% is a better indication of the actual cost. Management effects the change in 2024. Credit sales for 2024 are \$4,000,000; in 2023 they were \$3,700,000.

Required:

For each situation

1. Identify whether it represents an accounting change or an error. If an accounting change, identify the type of change.
2. Prepare any journal entry necessary as a direct result of the change or error correction, as well as any adjusting entry for 2024 related to the situation described. (Ignore tax effects.)

P 20–13 Accounting changes and error correction; seven situations; tax effects considered  **LO20–1** through  **LO20–4**,  **LO20–6**

[This problem is a variation of  **P 20–12**, modified to consider income tax effects.]

Williams-Santana Inc. is a manufacturer of high-tech industrial parts that was started in 2009 by two talented engineers with little business training. In 2024, the company was acquired by one of its major customers. As part of an internal audit, the following facts were

discovered. The audit occurred during 2024 before any adjusting entries or closing entries were prepared. The income tax rate is 25% for all years.

- a. A five-year casualty insurance policy was purchased at the beginning of 2022 for \$35,000. The full amount was debited to insurance expense at the time.
- b. Effective January 1, 2024, the company changed the salvage values used in calculating depreciation for its office building. The building cost \$600,000 on December 29, 2013, and has been depreciated on a straight-line basis assuming a useful life of 40 years and a salvage value of \$100,000. Declining real estate values in the area indicate that the salvage value will be no more than \$25,000.
- c. On December 31, 2023, merchandise inventory was overstated by \$25,000 due to a mistake in the physical inventory count using the periodic inventory system.
- d. The company changed inventory cost methods to FIFO from LIFO at the end of 2024 for both financial statement and income tax purposes. The change will cause a \$960,000 increase in the beginning inventory at January 1, 2025.
- e. At the end of 2023, the company failed to accrue \$16,400 of sales commissions earned by employees during 2023. The expense was recorded when the commissions were paid in early 2024.
- f. At the beginning of 2022, the company purchased a machine at a cost of \$720,000. Its useful life was estimated to be ten years with no salvage value. The machine has been depreciated by the double-declining balance method. Its book value on December 31, 2023, was \$460,800. On January 1, 2024, the company changed to the straight-line method.
- g. Warranty expense is determined each year as 1% of sales. Actual payment experience of recent years indicates that 0.75% is a better indication of the actual cost. Management effects the change in 2024. Credit sales for 2024 are \$4,000,000; in 2023 they were \$3,700,000.

Required:

For each situation

1. Identify whether it represents an accounting change or an error. If an accounting change, identify the type of change.
2. Prepare any journal entry necessary as a direct result of the change or error correction, as well as any adjusting entry for 2024 related to the situation described. Any tax effects should be adjusted for through Income tax payable or Refund—income tax.

P 20–14 Errors; change in estimate; change in principle; restatement of previous financial statements  **LO20–1**,  **LO20–3**,  **LO20–4**,  **LO20–6**

Whaley Distributors is a wholesale distributor of electronic components. Financial statements for the years ended December 31, 2022 and 2023, reported the following amounts and subtotals (\$ in millions):

| | Assets | Liabilities | Shareholders' Equity | Net Income |
|------|--------|-------------|----------------------|------------|
| 2022 | \$740 | \$330 | \$410 | \$210 |
| 2023 | 820 | 400 | 420 | 230 |

In 2024, the following situations occurred or came to light:

- Internal auditors discovered that ending inventories reported on the financial statements the two previous years were misstated due to faulty internal controls. The errors were in the following amounts:

| | |
|----------------|-----------------------------|
| 2022 inventory | Overstated by \$12 million |
| 2023 inventory | Understated by \$10 million |
- A liability was accrued in 2022 for a probable payment of \$7 million in connection with a lawsuit ultimately settled in December 2024 for \$4 million.
- A patent costing \$18 million at the beginning of 2022, expected to benefit operations for a total of six years, has not been amortized since acquired.
- Whaley's conveyer equipment was depreciated by the sum-of-the-years'-digits (SYD) basis since it was acquired at the beginning of 2022 at a cost of \$30 million. It has an expected useful life of five years and no expected residual value. At the beginning of 2024, Whaley decided to switch to straight-line depreciation.

Required:

For each situation

- Prepare any journal entry necessary as a direct result of the change or error correction, as well as any adjusting entry for 2024 related to the situation described. (Ignore tax effects.)

2. Determine the amounts to be reported for each of the five accounts shown above from the 2022 and 2023 financial statements when those amounts are reported again in the 2022–2024 comparative financial statements.

P 20–15 Correction of errors; six errors  **LO20–6**

Conrad Playground Supply underwent a restructuring in 2024. The company conducted a thorough internal audit, during which the following facts were discovered. The audit occurred during 2024 before any adjusting entries or closing entries are prepared.

- a. Additional computers were acquired at the beginning of 2022 and added to the company’s office network. The \$45,000 cost of the computers was inadvertently recorded as maintenance expense. Computers have five-year useful lives and no material salvage value. This class of equipment is depreciated by the straight-line method.
- b. Two weeks prior to the audit, the company paid \$17,000 for assembly tools and recorded the expenditure as office supplies. The error was discovered a week later.
- c. On December 31, 2023, merchandise inventory was understated by \$78,000 due to a mistake in the physical inventory count. The company uses the periodic inventory system.
- d. Two years earlier, the company recorded a 4% stock dividend (2,000 common shares, \$1 par) as follows:

| | | |
|-------------------|-------|-------|
| Retained earnings | 2,000 | |
| Common stock | | 2,000 |

The shares had a market price at the time of \$12 per share.

- e. At the end of 2023, the company failed to accrue \$104,000 of interest expense that accrued during the last four months of 2023 on bonds payable. The bonds, which were issued at face value, mature in 2028. The following entry was recorded on March 1, 2024, when the semiannual interest was paid, as well as on September 1 of each year:

| | | |
|------------------|---------|---------|
| Interest expense | 156,000 | |
| Cash | | 156,000 |

- f. A three-year liability insurance policy was purchased at the beginning of 2023 for \$72,000. The full premium was debited to insurance expense at the time.

Required:

For each error, prepare any journal entry necessary to correct the error, as well as any year-end adjusting entry for 2024 related to the situation described. (Ignore income taxes.)

P 20–16 Integrating problem; errors; deferred taxes; contingency; change in tax rates  **LO20–6**

You are internal auditor for Shannon Supplies, Inc., and are reviewing the company's preliminary financial statements. The statements, prepared after making the adjusting entries, but before closing entries for the year ended December 31, 2024, are as follows:

| SHANNON SUPPLIES, INC. | |
|---|--------------------------|
| Balance Sheet | |
| December 31, 2024 | |
| Assets | (\$ in thousands) |
| Cash | \$2,400 |
| Investment in equity securities | 250 |
| Accounts receivable, net | 810 |
| Inventory | 1,060 |
| Equipment | 1,240 |
| Less: Accumulated depreciation | (560) |
| Total assets | <u>\$5,200</u> |
| Liabilities and Shareholders' Equity | |
| Accounts payable and accrued expenses | \$3,220 |
| Income tax payable | 320 |
| Common stock, \$1 par | 200 |
| Additional paid-in capital | 750 |
| Retained earnings | 710 |
| Total liabilities and shareholders' equity | <u>\$5,200</u> |

SHANNON SUPPLIES, INC.
Income Statement
For the Year Ended December 31, 2024

| | | |
|----------------------------|-----------|----------------------|
| Sales revenue | | \$3,400 |
| Operating expenses: | | |
| Cost of goods sold | \$1,140 | |
| Selling and administrative | 896 | |
| Depreciation | <u>84</u> | <u>2,120</u> |
| Income before income tax | | 1,280 |
| Income tax expense | | <u>(320)</u> |
| Net income | | <u><u>\$ 960</u></u> |

Shannon's income tax rate was 25% in 2024 and previous years. During the course of the audit, the following additional information (not considered when the above statements were prepared) was obtained:

- a. Shannon's investment portfolio consists of blue chip stocks held for long-term appreciation. To raise working capital, some of the shares with an original cost of \$180,000 were sold in May 2024. Shannon accountants debited cash and credited investment in equity securities for the \$220,000 proceeds of the sale.
- b. At December 31, 2024, the fair value of the remaining equity securities in the investment portfolio was \$274,000.
- c. The state of Alabama filed suit against Shannon in October 2022, seeking civil penalties and injunctive relief for violations of environmental regulations regulating emissions. Shannon's legal counsel previously believed that an unfavorable outcome of this litigation was not probable, but based on negotiations with state attorneys in 2024, now believes eventual payment to the state of \$130,000 is probable, most likely to be paid in 2027.
- d. The \$1,060,000 inventory total, which was based on a physical count at December 31, 2024, was priced at cost. Based on your conversations with company accountants, you determined that the inventory cost was overstated by \$132,000.
- e. A new tax law was enacted in 2024, which will cause Shannon's income tax rate to change from 25% to 20% beginning in 2025.

Required:

Prepare journal entries to record the effects on Shannon's accounting records at December 31, 2024, for each of the items described above.

P 20–17 Integrating problem; error; depreciation; deferred taxes  **LO20–6**

George Young Industries (GYI) acquired industrial robots at the beginning of 2022 and added them to the company's assembly process. During 2024, management became aware that the \$1 million cost of the equipment was inadvertently recorded as repair expense on GYI's books and on its income tax return. The industrial robots have 10-year useful lives and no material salvage value. This class of equipment is depreciated by the straight-line method for financial reporting purposes and for tax purposes it is considered to be MACRS 7-year property. Cost deducted over 7 years by the modified accelerated recovery system as follows:

| Year | MACRS Deductions |
|--------|---------------------------|
| 2021 | \$ 142,900 |
| 2022 | 244,900 |
| 2023 | 174,900 |
| 2024 | 124,900 |
| 2025 | 89,300 |
| 2026 | 89,200 |
| 2027 | 89,300 |
| 2028 | 44,600 |
| Totals | <u><u>\$1,000,000</u></u> |

The tax rate is 25% for all years involved.

Required:

1. Prepare any journal entry necessary as a direct result of the error described.
2. Will GYI account for the change (a) retrospectively or (b) prospectively?
3. Prepare the adjusting entry for 2024 depreciation.

Decision Makers' Perspective

Ed Telling/Getty Images

Apply your critical-thinking ability to the knowledge you've gained. These cases will provide you an opportunity to develop your research, analysis, judgment, and communication skills. You also will work with other students, integrate what you've learned, apply it in real-world situations, and consider its global and ethical ramifications. This practice will broaden your knowledge and further develop your decision-making abilities.

Integrating Case 20–1 Change to dollar-value LIFO LO20–3

Webster Products, Inc., adopted the dollar-value LIFO method of determining inventory costs for financial and income tax reporting on January 1, 2024. Webster continues to use the FIFO method for internal decision-making purposes. Webster's FIFO inventories at December 31, 2024, 2025, and 2026, were \$300,000, \$412,500, and \$585,000, respectively. Internally generated cost indexes are used to convert FIFO inventory amounts to dollar-value LIFO amounts. Webster estimated these indexes as follows:

| | |
|------|------|
| 2024 | 1.00 |
| 2025 | 1.25 |
| 2026 | 1.50 |

Required:

1. Determine Webster's dollar-value LIFO inventory at December 31, 2025 and 2026.
2. Will Webster account for the change (a) retrospectively or (b) prospectively?

Judgment Case 20–2 Change in inventory method; disclosure note LO20–2

Mayfair Department Stores operates over 30 retail stores in the Pacific Northwest. Prior to 2024, the company used the FIFO method to value its inventory. In 2024, Mayfair decided to switch to the dollar-value LIFO retail inventory method. One of your responsibilities as assistant controller is to prepare the disclosure note describing the change in method that will be included in the company's 2024 financial statements. Kenneth Meier, the controller, provided the following information:

- Internally developed retail price indexes are used to adjust for the effects of changing prices.
- If the change had not been made, cost of goods sold for the year would have been \$22 million lower. The company's income tax rate is 25%, and there were 100 million shares of common stock outstanding during 2024.
- The cumulative effect of the change on prior years' income is not determinable.
- The reasons for the change were (a) to provide a more consistent matching of merchandise costs with sales revenue, and (b) the new method provides a more comparable basis of accounting with competitors that also use the LIFO method.

Required:

1. The disclosure note that will be included in the 2024 financial statements will include the impact of the change on 2024 net income and earnings per share. What was the impact of the change on 2024 net income?
2. Will Mayfair account for the change (a) retrospectively or (b) prospectively?

Analysis Case 20–3 Two wrongs make a right? disclosure note

LO20–4

Early one Wednesday afternoon, Ken and Larry studied in the dormitory room they shared at Fogelman College. Ken, an accounting major, was advising Larry, a management major, regarding a project for Larry's Business Policy class. One aspect of the project involved analyzing the 2024 annual report of Craft Paper Company. Though not central to his business policy case, a footnote had caught Larry's attention.

| Depreciation and Cost of Timber Harvested (in part) | | | |
|---|------|------|------|
| (\$ in millions) | 2024 | 2023 | 2022 |
| | | | |

| Depreciation and Cost of Timber Harvested (in part) | | | |
|--|------------|------------|------------|
| Depreciation of buildings, machinery and equipment | \$260.9 | \$329.8 | \$322.5 |
| Cost of timber harvested and amortization of logging roads | <u>4.9</u> | <u>4.9</u> | <u>4.9</u> |
| | \$265.8 | \$334.7 | \$327.4 |

Beginning in 2024, the Company revised the estimated average useful lives used to compute depreciation for most of its pulp and paper mill equipment from 16 years to 20 years and for most of its finishing and converting equipment from 12 years to 15 years. These revisions were made to more properly reflect the true economic lives of the assets and to better align the Company's depreciable lives with the predominant practice in the industry. The change had the effect of increasing net income by approximately \$55 million.

“If I understand this right, Ken, the company is not going back and recalculating a lower depreciation for earlier years. Instead they seem to be leaving depreciation overstated in earlier years and making up for that by understating it in current and future years,” Larry mused. “Is that the way it is in accounting? Two wrongs make a right?”

Required:

What are the two wrongs to which Larry refers? Is he right? What is the accounting profession's justification for the accounting treatment prescribed for this type of change?

Analysis Case 20–4 Various changes  **LO20–1** through  **LO20–4**

DRS Corporation changed the way it depreciates its computers from the sum-of-the-year's-digits method to the straight-line method beginning January 1, 2024. DRS also changed its estimated residual value used in computing depreciation for its office building. At the end of 2024, DRS changed the specific subsidiaries constituting the group of companies for which its consolidated financial statements are prepared.

Required:

1. For each accounting change DRS undertook, indicate the type of change and how DRS should report the change. Be specific.
2. Why should companies disclose changes in accounting principles?

Judgment Case 20–5 Accounting changes; independent situations LO20–1 through LO20–5

Sometimes a business entity will change its method of accounting for certain items. The change may be classified as a change in accounting principle, a change in accounting estimate, or a change in reporting entity. Listed below are three independent, unrelated sets of facts relating to accounting changes.

Situation I: A company determined that the depreciable lives of its fixed assets are presently too long to fairly match the cost of the fixed assets with the revenue produced. The company decided at the beginning of the current year to reduce the depreciable lives of all of its existing fixed assets by five years.

Situation II: On December 31, 2023, Gary Company owned 51% of Allen Company, at which time Gary reported its investment on a nonconsolidated basis due to political uncertainties in the country in which Allen was located. On January 2, 2024, the management of Gary Company was satisfied that the political uncertainties were resolved and the assets of the company were in no danger of nationalization. Accordingly, Gary will prepare consolidated financial statements for Gary and Allen for the year ended December 31, 2024.

Situation III: A company decides in January 2024 to adopt the straight-line method of depreciation for plant equipment. The straight-line method will be used for new acquisitions as well as for previously acquired plant equipment, for which depreciation had been provided on an accelerated basis.

Required:

For each of the situations described above, provide the information indicated below. Complete your discussion of each situation before going on to the next situation.

1. Type of accounting change
2. Manner of reporting the change under current generally accepted accounting principles: retrospectively or prospectively?
3. Should a disclosure note be provided in connection with the change?

Analysis Case 20–6 Inventory errors LO20–6

Some inventory errors are said to be “self-correcting” in that the error has the opposite financial statement effect in the period following the error, thereby “correcting,” the original account balance errors. Despite this self-correcting feature, these errors should not be ignored. An example would be an overstatement of ending inventory at the end of 2023.

Required:

1. What is the impact of an overstatement of ending inventory at the end of 2023?
2. If a material inventory error is discovered in an accounting period subsequent to the period in which the error is made, describe the steps required to account for the error correction.

Analysis Case 20–7 Various changes  **LO20–1** through  **LO20–4**

Ray Solutions decided to make the following changes in its accounting policies on January 1, 2024:

- a. Changed from the cash to the accrual basis of accounting for recognizing revenue on its service contracts.
- b. Adopted straight-line depreciation for all future equipment purchases, but continued to use accelerated depreciation for all equipment acquired before 2024.
- c. Changed from the LIFO inventory method to the FIFO inventory method.

Required:

For each accounting change Ray undertook, indicate (a) the type of change and (b) whether Ray should report the change retrospectively or prospectively.

Communication Case 20–8 Change in inventory methods; concepts  **LO20–2**,  **LO20–3**

Generally accepted accounting principles should be applied consistently from period to period. However, changes within a company, as well as changes in the external economic environment, may force a company to change an accounting method. The specific reporting requirements when a company changes from one generally accepted inventory method to another depend on the methods involved.

Required:

Explain the accounting treatment for a change in inventory method (a) not involving LIFO, (b) from the LIFO method, and (c) to the LIFO method. Explain the logic underlying those treatments. Also, describe how disclosure requirements are designed to address the departure from consistency and comparability of changes in accounting principle.

Communication Case 20–9 Change in loss contingency; write a memo LO20–4

Late in 2024, you and two other officers of Curbo Fabrications Corporation just returned from a meeting with officials of the City of Jackson. The meeting was unexpectedly favorable even though it culminated in a settlement with city authorities that your company pay a total of \$475,000 to cover the cost of violations of city construction codes. Jackson filed suit in November 2022 against Curbo Fabrications Corporation, seeking civil penalties and injunctive relief for violations of city construction codes regulating earthquake damage standards. Alleged violations involved several construction projects completed during the previous three years. When the financial statements were issued in 2023, Curbo had not reached a settlement with state authorities, but legal counsel had advised the company that it was probable the ultimate settlement would be \$750,000 in penalties. The following entry was recorded:

| | | |
|----------------------|---------|---------|
| Loss—litigation | 750,000 | |
| Liability—litigation | | 750,000 |

The final settlement, therefore, was a pleasant surprise. While returning from the meeting, conversation turned to reporting the settlement in the 2024 financial statements. You drew the short straw and were selected to write a memo to Janet Zeno, the financial vice president, advising the proper course of action.

Required:

Write the memo. Include descriptions of any journal entries related to the change in amounts. Briefly describe other steps Curbo should take to report the settlement.

Ethics Case 20–10 Softening the blow LO20–1, LO20–2, LO20–3

Late one Thursday afternoon, Joy Martin, a veteran audit manager with a regional CPA firm, was reviewing documents for a long-time client of the firm, AMT Transport. The year-

end audit was scheduled to begin Monday.

For three months, the economy had been in a down cycle, and the transportation industry was particularly hard hit. As a result, Joy expected AMT's financial results would not be pleasant news to shareholders. However, what Joy saw in the preliminary statements made her sigh aloud. Results were much worse than she feared.

"Larry (the company president) already is in the doghouse with shareholders," Joy thought to herself. "When they see these numbers, they'll hang him out to dry."

"I wonder if he's considered some strategic accounting changes," she thought, after reflecting on the situation. "The bad news could be softened quite a bit by changing inventory methods from LIFO to FIFO or reconsidering some of the estimates used in other areas."

Required:

1. How would the actions contemplated contribute toward "softening" the bad news?
2. Do you perceive an ethical dilemma? What would be the likely impact of following up on Joy's thoughts? Who would benefit? Who would be injured?

Ethics Case 20–11 Overstatement of ending inventory

LO20–6

Danville Bottlers is a wholesale beverage company. Danville uses the FIFO inventory method to determine the cost of its ending inventory. Ending inventory quantities are determined by a physical count. For the fiscal year-end June 30, 2024, ending inventory was originally determined to be \$3,265,000. However, on July 17, 2024, John Howard, the company's controller, discovered an error in the ending inventory count. He determined that the correct ending inventory amount should be \$2,600,000.

Danville is a privately owned corporation with significant financing provided by a local bank. The bank requires annual audited financial statements as a condition of the loan. By July 17, the auditors had completed their review of the financial statements, which are scheduled to be issued on July 25. They did not discover the inventory error.

John's first reaction was to communicate his finding to the auditors and to revise the financial statements before they are issued. However, he knows that his and his fellow

workers' profit-sharing plans are based on annual pretax earnings and that if he revises the statements, everyone's profit-sharing bonus will be significantly reduced.

Required:

1. Why will bonuses be negatively affected? What is the effect on pretax earnings?
2. If the error is not corrected in the current year and is discovered by the auditors during the following year's audit, how will the error be reported in the company's financial statements?
3. Discuss the ethical dilemma Howard faces.

Data Analytics & Excel

Visit Connect to find a variety of Data Analytics activities that help build Excel, Tableau, and data visualization skills. Assignable materials include [Integrated Excel](#), [Data Visualizations](#), [Tableau Dashboard Activities](#), and [Applying Tableau Cases](#).

Continuing Cases

Target Case LO20–2, LO20–4

Target Corporation prepares its financial statements according to U.S. GAAP. Target's financial statements and disclosure notes for the year ended February 1, 2020, are available in Connect. This material is also available under the Investor Relations link at the company's website (www.target.com).

Required:

1. Refer to Target's financial statements for the year ended February 1, 2020. Note 8 provides information on Target's inventories. What method does Target use to report most of its inventories?
2. If Target changed that method to another method, how would it account for the change?
3. Suppose that Target uses the FIFO costing method but decided to change to the LIFO method. How would it account for the change?

Air France–KLM Case LO20–2

IFRS

Air France–KLM (AF), a Franco-Dutch company, prepares its financial statements according to International Financial Reporting Standards. AF's financial statements and disclosure notes for the year ended December 31, 2019, are available in Connect. This material also is available under the Finance link at the company's website (www.airfranceklm-finance.com).

Required:

1. Refer to AF's disclosure notes, in particular Note 2: Restatement of Accounts 2018. Was the first of the two changes described in the note a change in estimate, a change in principle, a change in reporting entity, or an error correction?
2. Is this the same approach AF would follow if using U.S. GAAP?

CHAPTER 21

The Statement of Cash Flows Revisited

OVERVIEW

The objective of financial reporting is to provide investors and creditors with useful information, primarily in the form of financial statements. The balance sheet and the income statement—the focus of your study in earlier chapters—do not provide all the information needed by these decision makers. Here you will learn how the statement of cash flows fills the information gap left by the other financial statements.

The statement lists all cash inflows and cash outflows, and classifies them as cash flows from (a) operating, (b) investing, or (c) financing activities. Investing and financing activities that do not directly affect cash also are reported.

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

-  **LO21-1** Explain the usefulness of the statement of cash flows. (p. 1211)
-  **LO21-2** Define cash equivalents. (p. 1215)
-  **LO21-3** Determine cash flows from operating activities by the direct method. (p. 1215)
-  **LO21-4** Determine cash flows from operating activities by the indirect method. (p. 1217)
-  **LO21-5** Identify transactions that are classified as investing activities. (p. 1218)
-  **LO21-6** Identify transactions that are classified as financing activities. (p. 1219)
-  **LO21-7** Identify transactions that represent noncash investing and financing activities. (p. 1220)

 **LO21-8** Prepare a statement of cash flows with the aid of a spreadsheet or T-accounts. (p. 1221)

 **LO21-9** Discuss the primary differences between U.S. GAAP and IFRS with respect to the statement of cash flows. (p. 1239)

FINANCIAL REPORTING CASE

Rawpixel.com/Shutterstock

Where's the Cash?

“What do you mean you can’t afford a wage increase?” union negotiator Vince Barr insisted. “We’ve all seen your income statement. You had record earnings this year.”

This is the first day of company negotiations with union representatives. As company controller, you know it’s going to be up to you to explain the company’s position on the financial aspects of the negotiations. In fact, you’ve known for some time that a critical point of contention would be the moderate increase in this year’s profits after three years of level or slightly declining earnings. Not helping the situation is that the company always used accelerated depreciation on its equipment, which it began replacing this year at considerably higher prices than it cost several years back.

QUESTIONS

By the time you finish this chapter, you should be able to respond appropriately to the questions posed in this case. Compare your response to the solution

provided at the end of the chapter.

- 1.** What are the cash flow aspects of the situation that Mr. Barr may be overlooking in making his case for a wage increase? How can a company's operations generate a healthy profit and yet produce meager or even negative cash flows?
- 2.** What information can a statement of cash flows provide about a company's investing activities that can be useful in decisions such as this?
- 3.** What information can a statement of cash flows provide about a company's financing activities that can be useful in decisions such as this?

PART A

The Content and Value of the Statement of Cash Flows

Decision Makers' Perspective—Usefulness of Cash Flow Information

LO21–1 Explain the usefulness of the statement of cash flows.

A fund manager of a major insurance company considering investing \$8,000,000 in the common stock of **The Coca-Cola Company** ponders, “What are the prospects of future dividends and market-price appreciation? Will we get a return commensurate with the cost and risk of our investment?” A bank officer, examining an application for a business loan, wonders, “If I approve this loan, what is the likelihood of the borrower making interest payments on time and repaying the loan when due?” Investors and creditors continually face these and similar decisions that require projections of the relative ability of a business to generate future cash flows and of the risk associated with those forecasts.

To make these projections, decision makers rely heavily on the information reported in periodic financial statements. In the final analysis, cash flows into and out of a business enterprise are the most fundamental events on which investors and creditors base their decisions. Naturally, these decisions focus on the prospects of the decision makers receiving cash returns from their dealings with the firm. However, it is the ability of the firm to generate cash flows to itself that ultimately determines the potential for cash flows from the firm to investors and creditors.

Investors and creditors require cash flows from the corporation.

Cash flows to investors and creditors depend on the corporation generating cash flows to itself.

The financial statements that have been the focus of your study in earlier chapters—the income statement and the balance sheet—offer information helpful in forecasting future cash-generating ability. Some important questions, however, are not easily answered from the information these statements provide. For example, meaningful projections of a company’s future profitability and risk depend on answers to such questions as the following:

- In what types of activities is the company investing?
- Are these activities being financed with debt? With equity? By cash generated from operations?
- Are facilities being acquired to accommodate future expansion?
- How does the amount of cash generated from operations compare with net income over time?
- Why isn’t the increase in retained earnings reflected as an increase in dividends?
- What happens to the cash received from the sale of assets?
- By what means is debt being retired?

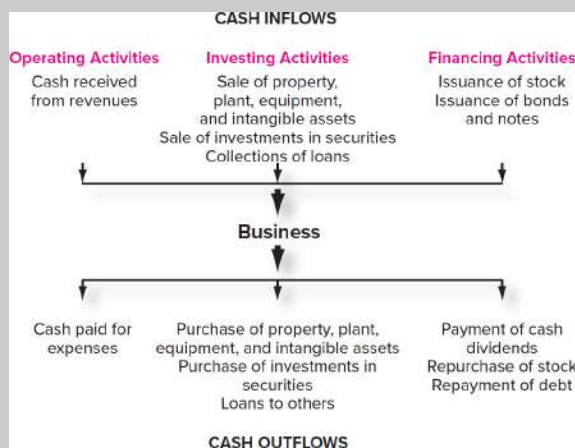

The information needed to answer these and similar questions is found in the continuous series of cash flows that the income statement and the balance sheet describe only indirectly. This underlying cash flow process is considered next. ●

Many decisions benefit from information about the company’s underlying cash flow process.

Cash Inflows and Outflows

Cash continually flows in and out of an active business. Businesses disburse cash to acquire property and equipment to maintain or expand productive capacity. When no longer needed, these assets may be sold for cash. Cash is paid to produce or purchase inventory for resale, as well as to pay for the expenses of selling these goods. The ultimate outcome of these selling activities is an inflow of cash. Cash might be invested in securities of other firms. These investments provide cash inflows during the investment period in the form of dividends or interest and at the end of the investment period when the securities are sold. To raise cash to finance their operations, firms sell stock and/or acquire debt. Cash payments are made as dividends to shareholders and interest to creditors. When debt is repaid or stock repurchased, cash flows out of the firm. To help you visualize the continual process of cash receipts and cash payments, that process is diagrammed in [Illustration 21-1](#). The diagram also previews the way we will later classify the cash flows in a statement of cash flows.

Illustration 21-1 Cash Inflows and Cash Outflows

Embodied in this assortment of cash flows is a wealth of information that investors and creditors require to make educated decisions.

Much of the value of the underlying information provided by the cash flows is lost when reported only

The statement of cash flows provides information about cash

indirectly by the balance sheet and the income statement. Each cash flow eventually impacts decision makers by affecting the balances of various accounts in

the balance sheet. Also, many of the cash flows—those related to income-producing activities—are represented in the income statement. However, they are not necessarily reported in the period the cash flows occur because the income statement measures activities on an accrual basis. The statement of cash flows fills the information gap by reporting the cash flows directly.

flows that is lost when reported only indirectly by the balance sheet and the income statement.

Structure of the Statement of Cash Flows

A statement of cash flows is shown in [Illustration 21-2](#). The statement lists all cash inflows and cash outflows during the reporting period. To enhance the informational value of the presentation, the cash flows are classified according to the nature of the activities that bring about the cash flows. The three primary categories of cash flows are (1) cash flows from operating activities, (2) cash flows from investing activities, and (3) cash flows from financing activities. Classifying each cash flow by source (operating, investing, or financing activities) is more informative than simply listing the various cash flows. Notice, too, that the noncash investing and financing activities—investing and financing activities that do not directly increase or decrease cash—also are reported. The GAAP requirement for the statement of cash flows was issued in direct response to *FASB Concept Statement 1*, which stated that the primary objective of financial reporting is to “provide information to help investors and creditors, and others assess the amounts, timing, and uncertainty of prospective net cash inflows to the related enterprise.”¹

Net cash flows from operating activities \$22

Many companies suffered bankruptcy because they were unable to generate sufficient cash to satisfy their obligations. Even with cash flow information available, cash flow problems can go unheeded or unsuccessfully addressed. An example is the recent demise of **Toys R Us**. The relationship of cash inflows and cash outflows illustrates a major aspect of a leveraged buyout (LBO) which fashioned the latest ownership of the company. Typically, an LBO is followed by layoffs, spending cuts, and other cost-cutting initiatives designed to create enough cash inflow to meet the cash outflow needed to service the massive debt created by the LBO itself. In Toys R Us' final three years (2014–2016), by far, the most notable aspect of its statement of cash flows was a positive cash flow from operations being dwarfed by a huge and accelerating cash outflow for debt repayments.

Realize, too, that an unprofitable company with good cash flow can survive. **Amazon.com** provides an excellent example. Founded as an online seller of books in 1995, Amazon didn't actually make a profit for a decade, but it did raise huge amounts of cash by selling stock, so much so that it was able to weather 10 years of sizable losses. The financing cash inflows funded expansion into many new lines of business and made up for the continual losses. Amazon now has enormously positive operating cash flows and is one of the largest companies in the world.

The statement of cash flows for United Brands Corporation (UBC), shown in **Illustration 21-2**, is intended at this point in the discussion to illustrate the basic

structure and composition of the statement. Later, we will see how the statement of cash flows for UBC is prepared from the information typically available for this purpose. We will refer to UBC's statement of cash flows frequently throughout the chapter as the discussion becomes more specific regarding the criteria for classifying cash flows in the three primary categories and as we identify the specific cash flows to be reported on the statement. We will examine the content of the statement in more detail following a look at how this relatively recent financial statement has evolved to its present form over the course of the last several decades.

Cash, Cash Equivalents, and Restricted Cash

LO21-2 Define cash equivalents.

Skilled cash managers will invest temporarily idle cash in short-term investments to earn interest on those funds rather than maintain an unnecessarily large balance in a checking account. The FASB views short-term, highly liquid investments that can be readily converted to cash, with little risk of loss, as **cash equiva**

lents. Amounts held as investments of this type are essentially equivalent to cash because they are quickly available for use as cash. Therefore, on the statement of cash flows there is no differentiation between amounts held as cash (e.g., currency and checking accounts) and amounts held in cash equivalent investments. Similarly, sometimes companies might have contractual agreements that require specific amounts to be set aside for designated purposes, like debt repayment or workers' compensation claims. Those restricted cash amounts also are part of reported cash balances. So, when we refer in this chapter to cash, we are referring to the total of cash, cash equivalents, and restricted cash.

Examples of cash equivalents are money market funds, Treasury bills, and commercial paper. To be classified as cash equivalents, these investments must have a maturity date not longer than three months from the date of purchase. Flexibility is permitted in designating cash equivalents. Each company must establish a

There is no differentiation between amounts held as cash and amounts held in cash equivalent investments or as restricted cash.

Each firm's policy regarding which short-term, highly liquid investments it classifies as cash equivalents should be disclosed in the notes to the financial statements.

policy regarding which short-term, highly liquid investments it classifies as cash equivalents. The policy should be consistent with the company's customary motivation for acquiring various investments and should be disclosed in the notes to the statement.² A recent annual report of **ExxonMobil Corporation** provides this description of its cash equivalents (

 **Illustration 21-3**):

Illustration 21-3 Disclosure of Cash Equivalents—ExxonMobil Corporation

Real World Financials

Note 4: Cash Flow Information (in part)

The consolidated statement of cash flows provides information about changes in cash and cash equivalents. Highly liquid investments with maturities of three months or less when acquired are classified as cash equivalents.

Source: ExxonMobil Corporation

Transactions that involve merely transfers from cash to cash equivalents (such as the purchase of a three-month Treasury bill), or from cash equivalents to cash (such as the sale of a Treasury bill), should not be reported on the statement of cash flows. The total of cash and cash equivalents is not altered by such transactions.³ The cash balance reported in the balance sheet also represents the total of cash and cash equivalents, which allows us to compare the change in that balance with the net increase or decrease in the cash flows reported on the statement of cash flows.

Primary Elements of the Statement of Cash Flows

LO21-3 Determine cash flows from operating activities by the direct method.

This section describes the three primary activity classifications: (1) operating activities, (2) investing activities, and (3) financing activities. It also describes two other requirements of

the statement of cash flows: (4) the reconciliation of the net increase or decrease in cash with the change in the balance of the cash account and (5) noncash investing and financing activities.

Cash Flows from Operating Activities

The income statement reports the success of a business in generating a profit from its operations. Net income (or loss) is the result of netting together the revenues recognized during the reporting period, regardless of when cash is received, and the expenses incurred in generating those revenues, regardless of when cash is paid. This is the accrual concept of accounting that has been emphasized throughout your study of accounting. Information about net income and its components, measured by the accrual concept, generally provides a better indication of current operating performance than does information about current cash receipts and payments.⁴ Nevertheless, as indicated earlier, the cash effects of earning activities also provide useful information that is not directly accessible from the income statement. The first cash flow classification in the statement of cash flows reports that information.

Cash flows from operating activities are both inflows and outflows of cash that result from activities reported in the income statement. In other words, this classification of cash flows includes the elements of net income, but reported on a cash basis. The components of this section of the statement of cash flows, and their relationship with the elements of the income statement, are illustrated in **Illustration 21-4**.

The cash effects of the elements of net income are reported as cash flows from operating activities.

Illustration 21-4 Relationship between the Income Statement and Cash Flows from Operating Activities (Direct Method)

| Income Statement | Cash Flows from Operating Activities |
|--|---|
| <p>Revenues:</p> <p>Sales and service revenue</p> | <p>Cash inflows:</p> <p>Cash received from customers</p> |

| Income Statement | Cash Flows from Operating Activities |
|--|--|
| Investment revenue | Cash revenue received (e.g., dividends, interest) |
| Noncash revenues and gains (e.g., gain on sale of assets) | (Not reported) |
| Less: Expenses: | Less: Cash outflows: |
| Cost of goods sold | Cash paid to suppliers of inventory |
| Salaries expense | Cash paid to employees |
| Noncash expenses and losses (e.g., depreciation, amortization, loss on sale of assets) | (Not reported) |
| Interest expense | Cash paid to creditors |
| Other operating expenses | Cash paid to insurance companies and others |
| Income tax expense | Cash paid to the government |
| <i>Net income</i> | <i>Net cash flows from operating activities</i> |

To see the concept applied, let's look again at the cash flows from operating activities reported by United Brands Corporation. That section of the statement of cash flows is extracted from  **Illustration 21-2** and reproduced in  **Illustration 21-5**.

Illustration 21-5 Cash Flows from Operating Activities; Direct Method

Cash flows from operating activities are the elements of net income, but reported on a cash basis.

| Cash Flows from Operating Activities: | |
|---------------------------------------|------|
| Cash inflows: | |
| From customers | \$98 |

Cash Flows from Operating Activities:

| | | |
|---|-------------|------|
| From investment revenue | 3 | |
| Cash outflows: | | |
| To suppliers of goods | (50) | |
| To employees | (11) | |
| For interest | (3) | |
| For insurance | (4) | |
| For income tax | <u>(11)</u> | |
| <i>Net cash flows from operating activities</i> | | \$22 |

Cash inflows from operating activities exceeded cash outflows for expenses by \$22 million. We'll see later (in [Illustration 21-9](#)) that UBC's net income from the same operating activities was only \$12 million. Why did operating activities produce net cash inflows greater than net income? The reason will become apparent when we determine, in a later section, the specific amounts of these cash flows.

You also should be aware that the generalization stated earlier that cash flows from operating activities include the elements of net income reported on a cash basis is not strictly true for all elements of the income statement. Notice in [Illustration 21-5](#) that no cash effects are reported for depreciation and amortization of property, plant, and equipment, and intangibles, nor for gains and losses from the sale of those assets. Cash outflows occur when these assets are acquired, and cash inflows occur when the assets are sold. However, as described later, the acquisition and subsequent resale of these assets are classified as investing activities rather than operating activities.

Quite the opposite, the purchase and the sale of inventory are considered operating activities. The cash effects of these transactions—namely, (1) cash payments to suppliers and (2) cash receipts from customers—are included in the determination of cash flows from operating activities. Why are inventories treated differently from property, plant, equipment, and intangible assets when classifying their cash effects if they all are acquired for the purpose of producing revenues? The essential difference is that inventory typically is purchased for the purpose of being sold as part of the firm's current operations, while the other assets are purchased as investments to benefit the business over a relatively long period of time.

DIRECT METHOD OR INDIRECT METHOD OF REPORTING CASH FLOWS FROM OPERATING ACTIVITIES

LO21-4 Determine cash flows from operating activities by the indirect method.

The presentation by UBC of cash flows from operating activities illustrated in [Illustration 21-2](#) and reproduced in [Illustration 21-5](#) is referred to as the **direct method**. The method is named for the fact that the cash effect of each operating activity (i.e., income statement item) is reported *directly* in the statement of cash flows. For instance, UBC reports “cash received from customers” as the cash effect of sales activities, “cash paid to suppliers” as the cash effect of cost of goods sold, and so on. Then, UBC simply omits from the presentation any income statement items that do not affect cash at all, such as depreciation expense.

Another way UBC might have reported cash flows from operating activities is by the **indirect method**. By this approach, the net cash increase or decrease from operating activities (\$22 million in our example) would be derived *indirectly* by starting with reported net income and working backward to convert that amount to a cash basis. As we see later in the chapter, UBC’s net income is \$12 million. Using the indirect method, UBC would replace the previous presentation of net cash flows from operating activities with the one shown in [Illustration 21-6](#).

Illustration 21-6 Cash Flows from Operating Activities—Indirect Method

By the indirect method, UBC derives the net cash increase or decrease from operating activities indirectly, by starting with reported net income and working backward to convert that amount to a cash basis.

Cash Flows from Operating Activities

| | |
|---|-------------|
| Net income | \$12 |
| <i>Adjustments for noncash effects:</i> | |
| Gain on sale of land | (8) |
| Depreciation expense | 3 |

Cash Flows from Operating Activities

| | | |
|---|------------|------|
| Loss on sale of equipment | 2 | |
| <i>Changes in operating assets and liabilities:</i> | | |
| Increase in accounts receivable | (2) | |
| Decrease in inventory | 4 | |
| Increase in accounts payable | 6 | |
| Increase in salaries payable | 2 | |
| Decrease in discount on bonds payable | 2 | |
| Decrease in prepaid insurance | 3 | |
| Decrease in income tax payable | <u>(2)</u> | |
| <i>Net cash flows from operating activities</i> | | \$22 |

Be sure to note that the indirect method generates the same \$22 million net cash flows from operating activities as the direct method. Rather than directly reporting only the components of the income statement that *do* represent increases or decreases in cash, by the indirect method we begin with net income—which includes both cash and noncash components—and back out all amounts that *don't* reflect increases or decreases in cash. Later in the chapter, we explore the specific adjustments made to net income to achieve this result. At this point, it is sufficient to realize that two alternative methods are permitted for reporting net cash flows from operating activities. Either way, we convert accrual-based income to cash flows produced by those same operating activities.

Notice also that the indirect method presentation is identical to what UBC reported earlier as the “Reconciliation of Net Income to Cash Flows from Operating Activities” in Note X of  **Illustration 21-2**. Whether cash flows from operating activities are reported by the direct method or by the indirect method, the financial statements must reconcile the difference between net income and cash flows from operating activities. When a company uses the *direct method*, the company presents the reconciliation in a separate schedule, as UBC does. That presentation is precisely the same as the presentation of net cash flows from operating activities by the indirect method. On the other hand, a company choosing to use the indirect method is not required to provide a separate reconciliation schedule because the “cash flows from operating activities” section of the statement of cash flows serves that purpose. Most companies use the indirect method.⁵

It's important to understand, too, that regardless of which method a company chooses to report *operating* activities, that choice has no effect on the way it identifies and reports cash flows from *investing* and *financing* activities. We turn our attention now to those two sections of the statement of cash flows. Later, in Part C, we'll return for a more thorough discussion of the alternative methods of reporting the operating activities section.

Cash Flows from Investing Activities

LO21-5 Identify transactions that are classified as investing activities.

Companies periodically invest cash to replace or expand production facilities such as property, plant, and equipment. Investments might also be made in other assets, such as securities of other firms, with the expectation of a return on those investments. Information concerning these investing activities can provide valuable insight to decision makers regarding the nature and magnitude of assets being acquired for future use, as well as provide clues concerning the company's ambitions for the future.

Cash flows from investing activities are both outflows and inflows of cash caused by the acquisition and disposition of assets. Included in this classification are cash payments to acquire (1) property, plant, and equipment and other productive assets (except inventories); (2) investments in securities (except cash equivalents and trading securities); and (3) nontrade receivables.^{6,7} When these assets later are liquidated, any cash receipts from their disposition also are classified as investing activities. For instance, cash received from the sale of the assets or the collection of a note receivable (principal amount only) represents cash inflows from investing activities. Be sure to realize that, unlike what the label might imply, any investment revenue like interest, dividends, or other cash return from these investments is not an investing activity. The reason, remember, is that investment revenue is an income statement item and therefore is an operating activity.

Cash outflows and cash inflows due to the acquisition and disposition of assets (other than inventory and assets classified as cash equivalents) are reported as cash flows from investing activities.

For illustration, notice the cash flows reported as investing activities by UBC. That section of the statement of cash flows is extracted from the complete statement in

 **Illustration 21-2** and reproduced in  **Illustration 21-7**.

Illustration 21–7 Cash Flows from Investing Activities

Cash flows from investing activities include investments in assets and their subsequent sale.

Cash Flows from Investing Activities:

| | | |
|---|----------|--------|
| Purchase of land | \$(30) | |
| Purchase of short-term investment | (12) | |
| Sale of land | 18 | |
| Sale of equipment | <u>5</u> | |
| <i>Net cash flows from investing activities</i> | | \$(19) |

UBC reports as investing activities the cash paid to purchase both land and a short-term investment. The other two investing activities reported are cash receipts for the sale of assets—equipment and land—that were acquired in earlier years. The specific transactions creating these cash flows are described in a later section of this chapter.

The purchase and sale of inventories are not considered investing activities.

Page 1219

Inventories are purchased for the purpose of being sold as part of the firm's primary operations, so their purchase and sale are classified as operating activities.

Also, the purchase and sale of assets classified as cash equivalents are not reported as investing activities. In fact, these activities usually are not reported on the statement of cash flows. For example, when temporarily idle cash is invested in a money market fund considered to be a cash equivalent, the total of cash and cash equivalents does not change. Likewise, when the cash is later withdrawn from the money market fund, the total remains unchanged. The exception is when cash equivalents are sold at a gain or a loss. In that case, the total of cash and cash equivalents actually increases or decreases in the process of transferring from one cash equivalent account to another cash equivalent account. As a result, the change in cash would be reported as a cash flow from operating activities. This is illustrated later in the chapter.

Cash Flows from Financing Activities

LO21-6 Identify transactions that are classified as financing activities.

Not only is it important for investors and creditors to be informed about how a company is investing its funds, but also how its investing activities are being financed. Hopefully, the primary operations of the firm provide a source of internal financing. Information revealed in the cash flows from operating activities section of the statement of cash flows lets statement users know the extent of available internal financing. However, a major portion of financing for many companies is provided by external sources, specifically by shareholders and creditors.

Cash flows from financing activities are both inflows and outflows of cash resulting from the external financing of a business. We include in this classification cash inflows from (a) the sale of common and preferred stock and (b) the issuance of bonds and other debt securities. Subsequent transactions related to these financing transactions, such as a buyback of stock (to retire the stock or as treasury stock), the repayment of debt, and the payment of cash dividends to shareholders, also are classified as financing activities.

Cash inflows and cash outflows due to the external financing of a business are reported as cash flows from financing activities.

For illustration, refer to [Illustration 21-8](#) excerpted from the complete statement of cash flows of UBC in [Illustration 21-2](#).

Illustration 21-8 Cash Flows from Financing Activities

Cash flows from financing activities include the sale or repurchase of shares, the issuance or repayment of debt securities, and the payment of cash dividends.

Cash Flows from Financing Activities:

| | |
|---|------------|
| Sale of common shares | \$ 26 |
| Retirement of bonds payable | (15) |
| Payment of cash dividends | <u>(5)</u> |
| <i>Net cash flows from financing activities</i> | \$6 |

The cash received from the sale of common stock is reported as a financing activity. Since the sale of common stock is a financing activity, providing a cash return (dividend) to common shareholders also is a financing activity. Similarly, when the bonds being retired were issued in a prior year, that cash inflow was reported as a financing activity. In the current year, when the bonds are retired, that same amount of the resulting cash outflow is likewise classified as a financing activity.

At first glance, it may appear inconsistent to classify the payment of cash dividends to shareholders as a financing activity when, as stated earlier, paying interest to creditors is classified as an operating activity. But remember, cash flows from operating activities should reflect the cash effects of items that enter into the determination of net income. Interest expense is a determinant of net income. A dividend, on the other hand, is a distribution of net income and not an expense.

Interest, unlike dividends, is a determinant of net income and therefore an operating activity.

Additional Consideration

Sometimes a cash receipt or a cash payment relates to more than one type of activity. For instance, proceeds from an insurance policy might be for a fire loss for a building that contained both equipment in use and inventory for sale. In that case, the cash proceeds pertaining to the building and the equipment is an investing activity, and the part pertaining to inventory is an operating activity. It's not always clear how a cash flow should be allocated. When the "nature of the cash flows" cannot be determined by first looking for GAAP guidance, the classification should be based on the "predominance principle"—that is, judgment based on the activity that is likely to be the predominant source or use of cash flows.

Reconciliation with Change in Cash Balance

One of the first items you may have noticed about UBC's statement of cash flows is that there is a net change in cash of \$9 million. Is this a significant item of information provided

by the statement? The primary objective of the statement of cash flows is not to tell us that cash increased by \$9 million. We can readily see the increase or decrease in cash by comparing the beginning and ending balances in the cash account in comparative balance sheets. Instead, the purpose of the statement of cash flows is to explain *why* cash increased by \$9 million.

To reinforce the fact that the net amount of cash inflows and outflows explains the change in the cash balance, the statement of cash flows includes a reconciliation of the net increase (or decrease) in cash with the company's beginning and ending cash balances. Notice, for instance, that on UBC's statement of cash flows, the reconciliation appears as follows:

The net amount of cash inflows and outflows reconciles the change in the company's beginning and ending cash balances.

| | |
|---------------------------|-------------|
| Net increase in cash | \$ 9 |
| Cash balance, January 1 | 20 |
| Cash balance, December 31 | <u>\$29</u> |

Noncash Investing and Financing Activities

LO21-7 Identify transactions that represent noncash investing and financing activities.

Suppose UBC were to borrow \$20 million cash from a bank, issuing a long-term note payable for that amount. This transaction would be reported on a statement of cash flows as a financing activity. Now suppose UBC used that \$20 million cash to purchase new equipment. This second transaction would be reported as an investing activity.

But, as indicated by  **Illustration 21-2**, UBC instead acquired \$20 million of new equipment by issuing a \$20 million long-term note payable in a single transaction. Undertaking a significant investing activity and a significant financing activity as two parts of a single transaction does not diminish the value of reporting these activities. For that

reason, transactions that do not increase or decrease cash, but that result in significant investing and financing activities, must be reported in related disclosures.

These **noncash investing and financing activities**, such as UBC's acquiring equipment (an investing activity) by issuing a long-term note payable (a financing activity), are reported in a separate disclosure schedule or note. UBC reported this transaction in the following manner:

Significant noncash investing and financing activities are reported also.

Noncash Investing and Financing Activities:

Acquired \$20 million of equipment by issuing a 12%, 5-year note.

It's convenient to report noncash investing and financing activities on the same page as the statement of cash flows, as did UBC, only if there are few such transactions. Otherwise, precisely the same information would be reported in disclosure notes to the financial statements.⁸

Examples of noncash transactions that would be reported in this manner are as follows:

Page 1221

1. Acquiring an asset by incurring a debt payable to the seller.
2. Acquiring use of an asset by entering into a lease agreement.
3. Converting debt into common stock or other equity securities.
4. Exchanging noncash assets or liabilities for other noncash assets or liabilities.

Noncash transactions that do not affect a company's assets or liabilities, such as the distribution of stock dividends, are not considered investing or financing activities and are not reported. Recall from  **Chapter 18** that stock dividends merely increase the number of shares of stock owned by existing shareholders. From an accounting standpoint, the stock dividend causes a dollar amount to be transferred from one part of shareholders' equity (retained earnings) to another part of shareholders' equity (paid-in capital). Neither assets nor liabilities are affected; therefore, no investing or financing activity has occurred.

Preparation of the Statement of Cash Flows

LO21–8 Prepare a statement of cash flows with the aid of a spreadsheet or T-accounts.

The objective in preparing the statement of cash flows is to identify all transactions and events that represent operating, investing, or financing activities and to list and classify those activities in proper statement format. A difficulty in preparing a statement of cash flows is that typical accounting systems are not designed to produce the specific information we need for the statement. At the end of a reporting cycle, balances exist in accounts reported in the income statement (sales revenue, cost of goods sold, etc.) and the balance sheet (accounts receivable, common stock, etc.). However, the ledger contains no balances for cash paid to acquire equipment, cash received from sale of land, or any other cash flow needed for the statement. As a result, it's necessary to find a way of using available information to reconstruct the various cash flows that occurred during the reporting period. Typically, the information available to assist the statement preparer includes an income statement for the year and balance sheets for both the current and preceding years (comparative statements). The accounting records also can provide additional information about transactions that caused changes in account balances during the year.

Additional Consideration

A transaction involving an investing and financing activity may be part cash and part noncash. For example, a company might pay cash for a part of the purchase price of new equipment and issue a long-term note for the remaining amount. In our previous illustration, UBC issued a note payable for the \$20 million cost of the equipment it acquired.

Suppose the equipment were purchased in the following manner:

| | | |
|--------------|----|----|
| Equipment | 20 | |
| Cash | | 6 |
| Note payable | | 14 |

In that case, \$6 million would be reported under the caption “Cash flows from investing activities,” and the noncash portion of the transaction—issuing a \$14 million note payable for \$14 million of equipment—would be reported as a “noncash investing and financing activity.” UBC’s statement of cash flows, if modified by the assumption of a part cash/part noncash transaction, would report these two elements of the transaction as follows:

Cash Flows from Investing Activities:

| | | |
|---|------------|--------|
| Purchase of land | \$ (30) | |
| Purchase of short-term investments | (12) | |
| Sale of land | 18 | |
| Sale of equipment | 5 | |
| Purchase of equipment | <u>(6)</u> | |
| <i>Net cash flows from investing activities</i> | | \$(25) |

Noncash Investing and Financing Activities:

Acquired \$20 million of equipment by paying cash and issuing a 12%, 5-year note as follows:

| | |
|-------------------|--------------------|
| Cost of equipment | \$20 million |
| Cash paid | <u>(6 million)</u> |
| Note issued | \$14 million |

The typical year-end data is provided for UBC in [Illustration 21-9](#). We have referred frequently to the statement of cash flows of UBC to illustrate the nature of the activities the statement reports. Now we’ll see how that statement is developed from the data provided in that illustration.

UNITED BRANDS CORPORATION**Comparative Balance Sheets****December 31, 2024 and 2023**

(\$ in millions)

| Assets | 2024 | 2023 |
|--------------------------------|--------------|--------------|
| Cash | \$ 29 | \$ 20 |
| Accounts receivable | 32 | 30 |
| Short-term investments | 12 | 0 |
| Inventory | 46 | 50 |
| Prepaid insurance | 3 | 6 |
| Land | 80 | 60 |
| Buildings and equipment | 81 | 75 |
| Less: Accumulated depreciation | (16) | (20) |
| | <u>\$267</u> | <u>\$221</u> |
| Liabilities | | |
| Accounts payable | \$ 26 | \$ 20 |
| Salaries payable | 3 | 1 |
| Income tax payable | 6 | 8 |
| Notes payable | 20 | 0 |
| Bonds payable | 35 | 50 |
| Less: Discount on bonds | (1) | (3) |
| Shareholders' Equity | | |
| Common stock | 130 | 100 |
| Paid-in capital—excess of par | 29 | 20 |
| Retained earnings | 19 | 25 |
| | <u>\$267</u> | <u>\$221</u> |

Income Statement**Revenues**

| | | |
|----------------------|----------|-------|
| Sales revenue | \$100 | |
| Investment revenue | 3 | |
| Gain on sale of land | <u>8</u> | \$111 |

Expenses

| | | |
|---------------------------|----------|----------------------------|
| Cost of goods sold | 60 | |
| Salaries expense | 13 | |
| Depreciation expense | 3 | |
| Bond interest expense | 5 | |
| Insurance expense | 7 | |
| Loss on sale of equipment | 2 | |
| Income tax expense | <u>9</u> | <u>99</u> |
| Net income | | <u><u>\$ 12</u></u> |

Additional information from the accounting records:

- a. Company land, purchased in a previous year for \$10 million, was sold for \$18 million.
- b. Equipment that originally cost \$14 million, and which was one-half depreciated, was sold for \$5 million cash.
- c. The common shares of Mazuma Corporation were purchased for \$12 million as a short-term investment.
- d. Property was purchased for \$30 million cash for use as a parking lot.
- e. On December 30, 2024, new equipment was acquired by issuing a 12%, five-year, \$20 million note payable to the seller.
- f. On January 1, 2024, \$15 million of bonds (issued 20 years ago at their face amount) were retired at maturity.
- g. The increase in the common stock account is attributable to the issuance of a 10% stock dividend (1 million shares) and the subsequent sale of 2 million shares of common stock. The market price of the \$10 par value common stock was \$13 per share on the dates of both transactions.
- h. Cash dividends of \$5 million were paid to shareholders.

In situations involving relatively few transactions, it's possible to prepare the statement of cash flows by merely inspecting the available data and logically determining the reportable activities. Few real-life situations are sufficiently simple to be

solved this way. Usually, it is more practical to use some systematic method of analyzing the available data to ensure that all operating, investing, and financing activities are detected. A common approach is to use either a manual or electronic spreadsheet to organize and analyze the information used to prepare the statement.⁹

Whether the statement of cash flows is prepared by an unaided inspection and analysis or with the aid of a systematic technique such as spreadsheet analysis, the analytical process is the same. To identify the activities to be reported in the statement, we use available data to reconstruct the events and transactions that involved operating, investing, and financing activities during the year. It is helpful to reproduce the journal entries that were recorded at the time of the transaction. Examining reconstructed journal entries makes it easier to visualize whether a reportable activity is involved and how that activity is to be classified.

Reconstructing the events and transactions that occurred during the period helps identify the operating, investing, and financing activities to be reported.

Next, in Part B, we see how a spreadsheet simplifies the process of preparing a statement of cash flows. Even if you choose not to use a spreadsheet, the summary entries described can be used to help you find the cash inflows and outflows you need to prepare a statement of cash flows. For this demonstration, we assume the direct method is used to determine and report cash flows from operating activities. Appreciation of the direct method provides the backdrop for a thorough understanding of the indirect method that we explore in Part C.

PART B

Preparing the SCF: Direct Method of Reporting Cash Flows from Operating Activities

Using a Spreadsheet

An important advantage gained by using a spreadsheet is that it ensures that no reportable activities are inadvertently overlooked. Spreadsheet analysis relies on the fact that, in order for cash to increase or decrease, there must be a corresponding change in an account other than cash. Therefore, if we can identify the events and transactions that caused the change in each noncash account during the year, we will have identified all the operating, investing, and financing activities that are to be included in the statement of cash flows.

There can be no cash inflow or cash outflow without a corresponding change in a noncash account.

The beginning and ending balances of each account are entered on the spreadsheet. Then, as journal entries are reconstructed in our analysis of the data, those entries are recorded on the spreadsheet so that the debits and credits of the spreadsheet entries explain the changes in the account balances. Only after spreadsheet entries have explained the changes in all account balances can we feel confident that all operating, investing, and financing activities have been identified. The spreadsheet is designed in such a way that, as we record spreadsheet entries that explain account balance changes, we are simultaneously identifying and classifying the activities to be reported on the statement of cash flows.

Recording spreadsheet entries that explain account balance changes simultaneously identifies and classifies the activities to be reported on the statement of cash flows.

We begin by transferring the comparative balance sheets and income statement to a blank spreadsheet. For illustration, refer to the 2024 and 2023 balances in the completed spreadsheet for UBC, shown in  **Illustration 21-9A**. Notice that the amounts for elements of the income statement are ending balances resulting from accumulations during the year. Beginning balances in each of these accounts are always zero.

X: As explained later, the **Xs** serve as a reminder to report this noncash transaction.

Following the balance sheets and income statement, we allocate space on the spreadsheet for the statement of cash flows. Although at this point we have not yet identified the specific cash flow activities shown in the completed spreadsheet, we can include headings for the major categories of activities: cash flows from operating activities, cash flows from investing activities, and cash flows from financing activities.

The spreadsheet entries shown in the two changes columns, which separate the beginning and ending balances, explain the increase or decrease in each account balance. You will see in the next section how these entries were reconstructed. We number each

entry and enter those numbers on the spreadsheet with the debit(s) and credit(s) of the entry as we go along. Although spreadsheet entries are in the form of debits and credits like journal entries, they are entered on the spreadsheet only. They are not recorded in the formal accounting records. In effect, these entries duplicate, frequently in summary form, the actual journal entries used to record the transactions as they occurred during the year.

Spreadsheet entries duplicate the actual journal entries used to record the transactions as they occurred during the year.

To reconstruct the journal entries, we analyze each account, one at a time, deciding at each step what transaction or event caused the change in that account. Often, the reason for the change in an account balance is readily apparent from viewing the change in conjunction with that of a related account elsewhere in the financial statements. Sometimes it's necessary to consult the accounting records for additional information to explain the transaction that resulted in the change.

You may find it helpful to diagram in T-account format the relationship between accounts to better visualize certain changes, particularly in your initial study of the chapter. The analysis that follows is occasionally supplemented with such diagrams to emphasize *why*, rather than merely *how*, specific cash flow amounts emerge from the analysis.

Although there is no mandatory order in which to analyze the accounts, it is convenient to begin with the income statement accounts, followed by the balance sheet accounts. We analyze the accounts of UBC in that order below. Although our analysis of each account culminates in a spreadsheet entry, keep in mind that the analysis described also is appropriate to identify reportable activities when a spreadsheet is not used.¹⁰

Income Statement Accounts

As described in an earlier section, cash flows from operating activities are inflows and outflows of cash that result from activities reported in the income statement. Thus, to identify those cash inflows and outflows, we begin by analyzing the components of the

Amounts reported in the income statement usually are not the same as the cash effects of the items reported.

income statement. It is important to keep in mind that the amounts reported in the income statement usually do not represent the cash effects of the items reported. For example, UBC reports sales revenue of \$100 million. This does not mean, however, that it collected \$100 million cash from customers during the year. In fact, by referring to the beginning and ending balances in accounts receivable, we see that cash received from customers could not have been \$100 million. Since accounts receivable increased during the year, some of the sales revenue recognized must not yet have been collected. This is explained further in the next section.

The cash effects of other income statement elements can be similarly discerned by referring to changes in the balances of the balance sheet accounts that are directly related to those elements. So, to identify cash flows from operating activities, we examine, one at a time, the elements of the income statement in conjunction with any balance sheet accounts affected by each element.

1. SALES REVENUE

Accounts receivable is the balance sheet account that is affected by sales revenue. Specifically, accounts receivable is increased by credit sales and is decreased as cash is

received from customers. We can compare sales and the change in accounts receivable during the year to determine the amount of cash received from customers. This relationship can be viewed in T-account format as follows:

| Accounts Receivable | | | |
|--|-----|---|---|
| Beginning balance | 30 | | |
| Credit sales <i>(increases A/R)</i> | 100 | ? | Cash received <i>(decreases A/R)</i> |
| Ending balance | 32 | | |

We see from this analysis that cash received from customers must have been \$98 million. Note that even if some of the year's sales were cash sales, say \$40 million cash sales and \$60 million credit sales, the result is the same:

| Accounts Receivable | | | |
|---------------------|----|------|--|
| Beginning balance | 30 | | |
| Credit sales | 60 | 58 → | |
| Ending balance | 32 | | |

| | |
|---------------------|-------------|
| Cash sales | \$40 |
| Received on account | 58 |
| Cash received | \$98 |

Thus, cash flows from operating activities should include cash received from customers of **\$98** million. The net effect of sales revenue activity during the year can be summarized in the following entry:

Relating sales and the *change* in accounts receivable during the period helps determine the amount of cash received from customers.

| | (\$ in millions) |
|---|------------------|
| Entry (1) Cash (received from customers) | 98 |
| Accounts receivable (\$32 - \$30) | 2 |
| Sales revenue (*given) | 100 |

The entry above appears as entry (1) in the completed spreadsheet for UBC, shown in **Illustration 21-9A**. The entry explains the changes in two account balances—accounts receivable and sales revenue. Since the entry affects cash, it also identifies a cash flow to be reported on the statement of cash flows. The **\$98** million debit to cash is therefore entered in the statement of cash flows section of the spreadsheet under the heading of cash flows from operating activities.

Additional Consideration

The preceding discussion describes the most common situation—companies recognize revenue by selling goods and services, increase accounts receivable, and then collect the cash and decrease accounts receivable later. Some companies, though, often collect the cash in advance of satisfying performance obligations and thus record revenue and decrease deferred revenue. In those cases, we need to analyze any changes in the deferred revenue account for differences between revenue reported and cash collected. For instance, if UBC also had a \$1 million increase in deferred revenue, the summary entry would be modified as follows:

| | (\$ in millions) | |
|---|------------------|-----|
| Entry (1) Cash (received from customers) | 99 | |
| Accounts receivable (\$32 - \$30) | 2 | |
| Deferred revenue (given) | | 1 |
| Sales revenue (*given) | | 100 |

Notice that we enter the cash portion of entry (1) as one of several cash flows on the statement of cash flows rather than as a debit to the cash account. Only after all cash inflows and outflows have been identified will the net change in cash be entered as a debit to the cash account. In fact, the entry to reconcile the \$9 million increase in the cash account and the \$9 million net increase in cash on the statement of cash flows will serve as a final check of the accuracy of our spreadsheet analysis.

Additional Consideration

Notice that bad debt expense does not appear in the income statement, and allowance for uncollectible accounts does not appear in the balance sheet. We have assumed that bad debts are immaterial for UBC. When this is not the

case, it's necessary to consider the write-off of bad debts as we determine cash received from customers. Here's why.

When using the allowance method to account for bad debts, a company estimates the dollar amount of customer accounts that will ultimately prove uncollectible and records both bad debt expense and allowance for uncollectible accounts for that estimate.

| | | |
|--------------------------------------|-----|-----|
| Bad debt expense | xxx | |
| Allowance for uncollectible accounts | | xxx |

Then, when accounts actually prove uncollectible, accounts receivable and the allowance are reduced.

| | | |
|--------------------------------------|-----|-----|
| Allowance for uncollectible accounts | xxx | |
| Accounts receivable | | xxx |

In our illustration, we concluded that UBC received \$2 million less cash (\$98 million) than sales for the year (\$100 million) because accounts receivable increased by that amount. However, if a portion of the change in accounts receivable had been due to write-offs of bad debts, that conclusion would be incorrect. Let's say, for instance, that UBC had bad debt expense of \$2 million, and its allowance for uncollectible accounts increased by \$1 million. Because the allowance for uncollectible accounts would be credited by \$2 million in the adjusting entry for bad debt expense, there also would need to be a \$1 million debit to the account in order for there to be a net increase (credit) in its balance of only \$1 million. That debit would occur due to write-offs of bad debts totaling \$1 million.

| | | |
|--------------------------------------|------------------|----------|
| | (\$ in millions) | |
| Allowance for uncollectible accounts | 1 | |
| Accounts receivable | | 1 |

This would indicate that a portion (\$1 million credit) of the total change in accounts receivable (\$2 million debit) would have been due to write-offs of bad debts, and the remaining change (\$3 million debit) would have been due to cash collections being less than sales revenue. Cash received from

customers would have been only \$97 million in that case. We can view this in the framework of our T-account analysis as follows:

| Accounts Receivable | | | |
|----------------------------|-----|----------|---------------------|
| Beginning balance | 30 | | |
| Credit sales | 100 | 97 | Cash received |
| | | 1 | Bad debt write-offs |
| Ending balance | 32 | | |

The effect of write-offs of bad debts can be explicitly considered by combining all the accounts related to sales and collection activities into a single summary spreadsheet entry:

| | (\$ in millions) |
|--|------------------|
| Cash (received from customers) | 97 |
| Accounts receivable (\$32 - \$30) | 2 |
| Bad debt expense (from income statement) | 2 |
| Allowance for uncollectible accounts (\$3 - \$2) | 1 |
| Sales revenue (given) | 100 |

This single entry summarizes all transactions related to sales, bad debt expense, write-offs of accounts receivable, and cash collections from sales.

The remaining summary entries are described in subsections 2 through 19. When including the entries on the spreadsheet, it is helpful to number the entries sequentially to provide a means of retracing the steps taken in the analysis if the need arises. You also may find it helpful to put a check mark (✓) to the right of the ending balance when the change in that balance has been explained. Then, once you have check marks next to every noncash account, you will know you are finished.

2. INVESTMENT REVENUE

The income statement reports investment revenue of \$3 million. Before concluding that this amount was received in cash, we first refer to the balance sheets to

Changes in related accounts might indicate that investment revenue reported in the income

see whether a change in an account there indicates otherwise. A change in either of two balance sheet accounts, (a) investment revenue receivable or (b)

statement is a different amount from cash received from the investment.

long-term investments, might indicate that cash received from investment revenue differs from the amount reported in the income statement.

- a. If we observe either an increase or a decrease in an *investment revenue receivable* account (e.g., interest receivable, dividends receivable), we would conclude that the amount of cash received during the year was less than (if an increase) or more than (if a decrease) the amount of revenue reported. The analysis would be identical to that of sales revenue and accounts receivable. Page 1229
- b. Also, an unexplained increase in a *long-term investment* account might indicate that a portion of investment revenue has not yet been received in cash. Recall from Chapter 12 that when using the equity method to account for investments in the stock of another corporation, investment revenue is recognized as the investor's percentage share of the investee's income, whether or not the revenue is received currently as cash dividends. For example, assume the investor owns 25% of the common stock of a corporation that reports net income of \$12 million and pays dividends of \$4 million. This situation would have produced a \$2 million increase in long-term investments, which can be demonstrated by reconstructing the journal entries for the recognition of investment and the receipt of cash dividends:

| | (\$ in millions) |
|---------------------------------|------------------|
| Long-term investments | 3 |
| Investment revenue (\$12 × 25%) | 3 |
| Cash (\$4 × 25%) | 1 |
| Long-term investments | 1 |

A combined entry would produce the same results:

| | (\$ in millions) |
|---------------------------------|------------------|
| Long-term investments | 2 |
| Cash (\$4 × 25%) | 1 |
| Investment revenue (\$12 × 25%) | 3 |

The \$2 million net increase in long-term investments would represent the investment revenue not received in cash. This would also explain why there is a \$3 million increase (credit) in investment revenue. If these events had occurred, we would prepare a spreadsheet entry identical to the combined entry above. The spreadsheet entry would (a) explain the \$2 million increase in long-term investments, (b) explain the \$3 million increase in investment revenue, and (c) identify a \$1 million cash inflow from operating activities.

However, because neither an investment revenue receivable account nor a long-term investment account appears on the comparative balance sheets, we can conclude that \$3 million of investment revenue was collected in cash. Entry (2) on the spreadsheet is as follows:

Because no other transactions are apparent that would have caused a change in investment revenue, we can conclude that \$3 million of investment revenue was collected in cash.

| | (\$ in millions) |
|--|------------------|
| Entry (2) Cash (received from investment revenue) | 3 |
| Investment revenue (\$3 - \$0) | 3 |

3. GAIN ON SALE OF LAND

The third item reported in the income statement is an \$8 million gain on the sale of land. Recall that our objective in analyzing each element of the statement is to determine the cash effect of that element. To do so, we need additional information about the transaction that caused this gain. The accounting records—item (a) in [Illustration 21-9](#)—indicate that land that originally cost \$10 million was sold for \$18 million. The entry recorded in the journal when the land was sold also serves as our summary entry:

A gain (or loss) is simply the difference between cash received in the sale of an asset and the book value of the asset—not a cash flow.

| | (\$ in millions) |
|--|------------------|
| Entry (3) Cash (received from sale of land) | 18 |
| Land (given) | 10 |
| Gain on sale of land (given) | 8 |

The cash effect of this transaction is a cash increase of \$18 million. We therefore include the debit as a cash inflow in the statement of cash flows section of the spreadsheet. However, unlike the cash effect of the previous two spreadsheet entries, it is not reported as an operating activity. The sale of land is an *investing* activity, so this cash inflow is listed under that heading of the spreadsheet. The entry also accounts for the \$8 million gain on sale of land. The \$10 million credit to land does not, by itself, explain the \$20 million increase in that account. As we will later discover, another transaction also affected the land account.

It is important to understand that the gain is simply the difference between cash received in the sale of land (reported as an investing activity) and the book value of the land. To report the \$8 million gain as a cash flow from operating activities, in addition to reporting \$18 million as a cash flow from investing activities, would be to report the \$8 million twice.

4. COST OF GOODS SOLD

During the year, UBC sold goods that had cost \$60 million. This does not necessarily indicate that \$60 million cash was paid to suppliers of those goods. To determine the amount of cash paid to suppliers, we look to the two current accounts affected by merchandise purchases—inventory and accounts payable. The analysis can be viewed as a two-step process.

First, we compare cost of goods sold with the change in inventory to determine the cost of goods *purchased* (not necessarily cash paid) during the year. To facilitate our analysis, we can examine the relationship in T-account format:

| Inventory | | | |
|---|----|----|---|
| Beginning balance | 50 | | |
| Cost of goods purchased (<i>increases inventory</i>) | ? | 60 | Cost of goods sold (<i>decreases inventory</i>) |
| Ending balance | 46 | | |

From this analysis, we see that **\$56** million of goods were *purchased* during the year. It is not necessarily true, though, that **\$56** million cash was paid to suppliers of these goods. By looking in accounts payable, we can determine the cash paid to suppliers:

Determining the amount of cash paid to suppliers means looking at not only the cost of goods sold, but also the changes in both inventory and accounts payable.

Accounts Payable

| | | |
|--|-----------|---|
| | 20 | Beginning balance |
| Cash paid to suppliers <i>(decreases A/P)</i> | 56 | Cost of goods purchased <i>(increases A/P)</i> |
| | 26 | Ending Balance |

We now see that cash paid to suppliers was **\$50** million. The entry that summarizes merchandise acquisitions is as follows:

Although \$60 million of goods were sold during the year, only \$50 million cash was paid to suppliers of these goods.

| | (\$ in millions) |
|---|------------------|
| Entry (4) Cost of goods sold (given) | 60 |
| Inventory (\$46 - \$50) | 4 |
| Accounts payable (\$26 - \$20) | 6 |
| Cash (paid to suppliers of goods) | 50 |

5. SALARIES EXPENSE

The balance sheet account affected by salaries expense is salaries payable. By analyzing salaries expense in relation to the change in salaries payable, we can determine the amount of cash paid to employees:

Salaries Payable

| | | |
|--|----------|---|
| | 1 | Beginning balance |
| Cash paid to employees <i>(decreases salaries payable)</i> | ? | 13 Salaries expense <i>(increases salaries payable)</i> |
| | 3 | Ending Balance |

This analysis indicates that only **\$11** million cash was paid to employees; the remaining \$2 million of salaries expense is reflected as an increase in salaries payable.

Viewing the relationship in journal entry format provides the same conclusion and also gives us the entry in our spreadsheet analysis:

Although salaries expense was \$13 million, only \$11 million cash was paid to employees.

| | (\$ in millions) | |
|---|------------------|-----------|
| Entry (5) Salaries expense (given) | 13 | |
| Salaries payable (\$3 - \$1) | | 2 |
| Cash (paid to employees) | | 11 |

6. DEPRECIATION EXPENSE

The income statement reports depreciation expense of \$3 million. The entry used to record depreciation, which also serves as our summary entry, is

Depreciation expense does not require a current cash expenditure.

| | (\$ in millions) | |
|---|------------------|---|
| Entry (6) Depreciation expense (given) | 3 | |
| Accumulated depreciation | | 3 |

Depreciation is a noncash expense. It is merely an allocation in the current period of a prior cash expenditure (for the depreciable asset). Therefore, unlike the other entries to this point, the depreciation entry has no effect on the statement of cash flows. However, it does explain the change in the depreciation expense account and a portion of the change in accumulated depreciation.

7. INTEREST EXPENSE

Recall from  **Chapter 14** that bond interest expense differs from the amount of cash paid to bondholders when bonds are issued at either a premium or a discount. The difference between the two amounts is the reduction of the premium or discount. By referring to the balance sheet, we see that UBC's bonds were issued at a discount. Since we know that interest expense is \$5 million and that \$2 million of the discount was reduced in 2024, we can determine that \$3 million cash was paid to bondholders by recreating the entry that summarizes the recording of bond interest expense.

When bonds are issued at either a premium or a discount, bond interest expense is not the same as the amount of cash interest paid to bondholders.

| | (\$ in millions) | |
|---|------------------|--|
| Entry (7) Interest expense (given) | 5 | |

| | |
|---------------------------------------|---|
| Discount on bonds payable (\$1 - \$3) | 2 |
| Cash (paid for interest) | 3 |

Recording this entry on the spreadsheet explains the change in both the interest expense and discount on bonds payable accounts. It also provides us with another cash outflow from operating activities. Of course, if a premium were being reduced, rather than a discount, the outflow of cash would be *greater* than the expense.

Additional Consideration

If the balance sheet had revealed an increase or decrease in an accrued bond interest payable account, the entry calculating cash paid to bondholders would require modification. For example, if UBC had a bond interest payable account, and that account had increased (a credit) by \$1 million, the entry would have been as follows:

| | (\$ in millions) | |
|-------------------------------------|------------------|---|
| Entry (7) Interest expense | 5 | |
| (revised) Discount on bonds payable | | 2 |
| Interest payable | | 1 |
| Cash (paid to bondholders) | | 2 |

If the amount owed to bondholders increased by \$1 million, they obviously were paid \$1 million less cash than if there had been no change in the amount owed them. Similarly, if bond interest payable decreased by \$1 million, the opposite would be true; that is, cash paid to them would have been \$1 million more.

8. INSURANCE EXPENSE

A decrease of \$3 million in the prepaid insurance account indicates that cash paid for insurance coverage was \$3 million less than the \$7 million insurance expense for the year. Viewing prepaid insurance in T-account format clarifies this point.

Prepaid Insurance

| | | | |
|--|---|---|--|
| Beginning balance | 6 | | |
| Cash paid for insurance (<i>increases prepaid insurance</i>) | ? | 7 | Insurance expense (<i>decreases prepaid insurance</i>) |
| Ending balance | 3 | | |

From this analysis, we can conclude that **\$4** million was paid for insurance. We reach the same conclusion by preparing the following spreadsheet entry:

Since **\$3** million of prepaid insurance was allocated to insurance expense, only **\$4** million of the expense was paid in cash during the period.

| | (\$ in millions) | |
|--|------------------|----------|
| Entry (8) Insurance expense (given) | 7 | |
| Prepaid insurance (\$3 - \$6) | | 3 |
| Cash (paid for insurance) | | 4 |

The entry accounts for the change in both the insurance expense and prepaid insurance accounts and also identifies a cash outflow from operating activities.

9. LOSS ON SALE OF EQUIPMENT

A \$2 million loss on the sale of equipment is the next item reported in the income statement. To determine the cash effect of the sale of equipment, we need additional information about the transaction. The information we need is provided in item (b) of **Illustration 21-9**. Recreating the journal entry for the transaction described gives us the following entry:

Recreating the journal entry for the sale of equipment reveals a **\$5** million cash inflow from investing activities.

| | (\$ in millions) | |
|--|------------------|----|
| Entry (9) Cash (from the sale of equipment) | 5 | |
| Loss on sale of equipment (given) | 2 | |
| Accumulated depreciation (\$14 × 50%) | 7 | |
| Buildings and equipment (given) | | 14 |

The \$5 million cash inflow is entered in the statement of cash flows section of the spreadsheet as an investing activity. The \$2 million debit to the loss on sale of equipment explains the change in that account balance. Referring to the spreadsheet, we see that a portion of the change in accumulated depreciation was accounted for in entry (6). The debit to accumulated depreciation in the entry above completes the explanation for the change in that account. However, the credit to buildings and equipment only partially justifies the change in that account. We must assume that the analysis of a subsequent transaction will account for the unexplained portion of the change.

Recognize too that the loss, like the gain in entry (3), has no cash effect in the current period. Therefore, it is not reported in the statement of cash flows when using the direct method.

10. INCOME TAX EXPENSE

The final expense reported in the income statement is income tax expense. Since income tax payable is the balance sheet account affected by this expense, we look to the change in that account to help determine the cash paid for income tax. A T-account analysis can be used to find the cash effect as follows:

| Income Tax Payable | | |
|---|---|--------------------|
| | 8 | Beginning balance |
| Cash paid for income tax (<i>decreases the liability</i>) | 9 | Income tax expense |
| | 6 | Ending Balance |

This analysis reveals that \$11 million cash was paid for income tax, \$2 million more than the year's expense. The overpayment explains why the liability for income tax decreased by \$2 million.

The same conclusion can be reached from the following summary entry, which represents the net effect of income tax on UBC's accounts.

| | (\$ in millions) |
|--|------------------|
| Entry (10) Income tax expense (given) | 9 |
| Income tax payable (\$6 - \$8) | 2 |

Additional Consideration

Entry (10) would require modification in the situation described below. Note that UBC does not have a deferred tax account. Recall from Chapter 16 that temporary differences between taxable income and pretax accounting income give rise to deferred tax. If temporary differences had been present, which would be evidenced by a change in a deferred tax account, the calculation of cash paid for income tax would require modification. Assume, for example, that a deferred tax liability account had experienced a credit change of \$1 million for the year. In that case, the previous spreadsheet entry would be revised as follows:

| | (\$ in millions) |
|--|------------------|
| Entry (10) Interest tax expense | 9 |
| (revised) Income tax payable | 2 |
| Deferred tax liability | 1 |
| Cash (paid for income tax) | 10 |

As the revised entry indicates, only \$10 million cash would have been paid in this situation, rather than \$11 million. The \$1 million difference represents the portion of the income tax expense whose payment is deferred to a later year.

11. NET INCOME

The balance in the retained earnings account at the end of the year includes an increase due to net income. If we are to account for all changes in each of the accounts, we must include the following entry on the spreadsheet, which represents the closing of net income to retained earnings.

This entry partially explains the change in the retained earnings account.

| | (\$ in millions) |
|------------------------------|------------------|
| Entry (11) Net income | 12 |

This entry does not affect amounts reported on the statement of cash flows. We include the entry on the spreadsheet analysis only to help explain account balance changes.

Balance Sheet Accounts

To identify all the operating, investing, and financing activities when using a spreadsheet, we must account for the changes in each account for both the income statement and the balance sheet. Thus far, we have explained the change in each income statement account. Since the transactions that gave rise to some of those changes involved balance sheet accounts as well, some changes in balance sheet accounts have already been explained. We now reconstruct the transactions that caused changes in the remaining balances.

With the exception of the cash account, the accounts are analyzed in the order of their presentation in the balance sheet. As noted earlier, we save the entry that reconciles the change in the cash account with the net change in cash from the statement of cash flows as a final check on the accuracy of the spreadsheet.

12. SHORT-TERM INVESTMENTS

Since the change in accounts receivable was explained previously [in entry (1)], we proceed to the next asset in the balance sheet. The balance in short-term investments increased from zero to \$12 million. In the absence of evidence to the contrary, we could assume that the increase is due to the purchase of short-term investments during the year. This assumption is confirmed by item (c) of  **Illustration 21-9**.

The entry to record the investment and our summary entry is as follows:

The \$12 million increase in the short-term investments account is due to the purchase of short-term investments during the year.

| | (\$ in millions) | |
|---|------------------|----|
| Entry (12) Short-term investments (\$12 - \$0) | 12 | |
| Cash (purchase of short-term investment) | | 12 |

The \$12 million cash outflow is entered in the statement of cash flows section of the spreadsheet as an investing activity. An exception is when an investment is classified as a “trading security,” in which case the cash outflow is reported as an operating activity.

Additional Consideration

Recall that some highly liquid, short-term investments such as money market funds, Treasury bills, or commercial paper might be classified as cash equivalents. If the short-term investment above were classified as a cash equivalent, its purchase would have no effect on the total of cash and cash equivalents. In other words, since cash would include this investment, its purchase would constitute both a debit and a credit to cash. We would neither prepare a spreadsheet entry nor report the transaction on the statement of cash flows.

Likewise, a sale of a cash equivalent would not affect the total of cash and cash equivalents and would not be reported.

An exception would be if the cash equivalent investment were sold for either more or less than its acquisition cost. For example, assume a Treasury bill classified as a cash equivalent was sold for \$1 million more than its \$2 million cost. The sale would constitute both a \$3 million increase and a \$2 million decrease in cash. We see the effect more clearly if we reconstruct the transaction in journal entry format:

| | (\$ in millions) |
|-----------------------------------|------------------|
| Cash | 3 |
| Gain on sale of cash equivalent | 1 |
| Cash (cash equivalent investment) | 2 |

The spreadsheet entry to reflect the net increase in cash would be:

| | |
|---|---|
| Entry (X) Cash (from sale of cash equivalents) | 1 |
| Gain on sale of cash equivalent | 1 |

The \$1 million net increase in cash and cash equivalents would be reported as a cash inflow from *operating* activities.

When we discuss the “indirect method” of reporting operating activities later in the chapter, we will be adding noncash losses and subtracting noncash gains when adjusting net income for noncash income items. Unlike most losses and gains, though, we would not add a loss or deduct a gain on cash equivalents because they *do* affect “cash” as defined.

13. LAND

The changes in the balances of both inventory and prepaid insurance were accounted for in previous summary entries (4) and (8). Land is the next account whose change has yet to be fully explained. We discovered in a previous transaction that a sale of land caused a \$10 million reduction in the account. Yet, the account shows a net *increase* of \$20 million. It would be logical to assume that the unexplained increase of \$30 million was due to a purchase of land. The transaction described in item (d) of [Illustration 21-9](#) supports that assumption and is portrayed in the following summary entry:

A \$30 million purchase of land accounts for the portion of the \$20 million increase in the account that was not previously explained by the sale of land.

| | (\$ in millions) |
|--------------------------------|------------------|
| Entry (13) Land (given) | 30 |
| Cash (purchase of land) | 30 |

The \$30 million payment is reported as a cash outflow from investing activities.

14. BUILDINGS AND EQUIPMENT

When examining a previous transaction [entry (9)], we determined that the buildings and equipment account was reduced by \$14 million from the sale of used equipment. And yet, the account shows a net *increase* of \$6 million for the year. The accounting records [item (e) of [Illustration 21-9](#)] reveal the remaining unexplained cause of the net increase. New equipment costing \$20 million was purchased by issuing a \$20 million note payable. Recall from the discussion in a previous section of this chapter that, although this is a noncash transaction, it represents both a significant investing activity (investing in new equipment) and a significant financing activity (financing the acquisition with long-term debt).

The journal entry used to record the transaction when the equipment was acquired also serves as our summary entry:

Investing in new equipment is a significant investing activity and financing the acquisition with long-term debt is a significant financing activity.

| | (\$ in millions) |
|---|------------------|
| Entry (14) Buildings and equipment (given) | 20 |
| Notes payable (given) | 20 |

Remember that the statement of cash flows section of the spreadsheet will serve as the basis for our preparation of the formal statement. But the noncash entry above will not affect the cash flows section of the spreadsheet. Because we want to report this noncash investing and financing activity when we prepare the statement of cash flows, it is helpful to “mark” the spreadsheet entry as a reminder not to overlook this transaction when the statement is prepared. Crosses (X) serve this purpose on the spreadsheet in

 **Illustration 21-9A.**

Additional Consideration

Leases

When a lessee acquires an asset and related liability as a result of a lease agreement, there is no inflow or outflow of cash. However, because a primary purpose of the statement of cash flows is to report significant operating, investing, and financing activities, the initial transaction is reported in the disclosure notes as a significant noncash investing activity (investing in the asset) and financing activity (financing it with debt). Then, the lessee’s cash payments for leases are classified as financing activities in its statement of cash flows and presented separately from other financing cash flows. The lessor classifies its cash receipts from lease payments as operating activities in its statement of cash flows, after initially reporting its acquisition of a lease receivable and derecognition of the asset under lease as a significant noncash investing and financing activity in its cash flow disclosure note.

15. BONDS PAYABLE

The balance in the bonds payable account decreased during the year by \$15 million.

 **Illustration 21-9**, item (f), reveals the cause. Cash was paid to retire \$15 million face value of bonds. The spreadsheet entry that duplicates the journal entry that was recorded when the bonds were retired is as follows:

| | (\$ in millions) |
|---|------------------|
| Entry (15) Bonds payable (\$35 - \$50) | 15 |
| Cash (retirement of bonds payable) | 15 |

The cash outflow is reported as a financing activity.

16–17. COMMON STOCK

The comparative balance sheets indicate that the common stock account balance increased by \$30 million. We look to the accounting records— **Illustration 21-9**, item (g)—for an explanation. Two transactions, a stock dividend and a sale of new shares of common stock, combined to cause the increase. To create the summary entries for our analysis, we replicate the journal entries for the two transactions as described below.

Remember from  **Chapter 18** that to record a small stock dividend, we capitalize retained earnings for the market value of the shares distributed—in this case, 1 million shares times \$13 per share, or \$13 million. The entry is as follows:

Although this transaction does not identify a cash flow, nor does it represent an investing or financing activity, we include the summary entry to help explain changes in the three account balances affected.

| | (\$ in millions) |
|---|------------------|
| Entry (16) Retained earnings (1 million shares × \$13) | 13 |
| Common stock (1 million shares × \$10 par) | 10 |
| Paid-in capital—excess of par (difference) | 3 |

Also recall from the discussion of noncash investing and financing activities earlier in the chapter that stock dividends do not represent a significant investing or financing activity. Therefore, this transaction is not reported in the statement of cash flows. We include the entry in our spreadsheet analysis only to help explain changes in the account balances affected.

The sale of 2 million shares of common stock at \$13 per share is represented by the following spreadsheet entry:

The sale of common shares explains the remaining increase in the common stock account and the remaining increase in paid-in capital—excess of par.

| | (\$ in millions) | |
|--|------------------|----|
| Entry (17) Cash (from sale of common stock) | 26 | |
| Common stock ([$\$130 - \100] - $\$10$) | | 20 |
| Paid-in capital—excess of par ([$\$29 - \20] - $\$3$) | | 6 |

The cash inflow is reported in the statement of cash flows as a financing activity.

Additional Consideration

If cash is paid to retire outstanding shares of stock or to purchase those shares as treasury stock, the cash outflow would be reported in a statement of cash flows as a financing activity.

Together, the two entries above account for both the \$30 million increase in the common stock account and the \$9 million increase in paid-in capital—excess of par.

18. RETAINED EARNINGS

The stock dividend in entry (16) above includes a \$13 million reduction of retained earnings. Previously, we saw in entry (11) that net income increased retained earnings by \$12 million. The net reduction of \$1 million accounted for by these two entries leaves \$5 million of the \$6 million net decrease in the account unexplained.

| Retained Earnings | | | |
|---------------------|----|----|-------------------|
| | | 25 | Beginning balance |
| (16) Stock dividend | 13 | 12 | Net income (11) |
| (18) ? | ? | | |
| | | 19 | Ending balance |

Without additional information about the \$5 million decrease in retained earnings, we might assume it was due to a \$5 million cash dividend. This assumption is unnecessary, though, because the cash dividend is described in  **Illustration 21-9**, item (h).

| Retained Earnings | | | |
|---------------------------|----------|----|-------------------|
| | | 25 | Beginning balance |
| (16) Stock dividend | 13 | 12 | Net income (11) |
| (18) Cash dividend | 5 | | |
| | | 19 | Ending balance |

The summary entry for the spreadsheet is as follows:

The cash dividend accounts for the previously unexplained change in retained earnings.

| | | (\$ in millions) |
|-------------------|----------------------------------|------------------|
| Entry (18) | Retained earnings | 5 |
| | Cash (payment of cash dividends) | 5 |

19. COMPLETING THE SPREADSHEET

In preparing the spreadsheet to this point, we have analyzed each noncash account on both the income statement and the balance sheet. Our purpose was to identify the transactions that, during the year, had affected each account. By recreating each transaction in the form of a summary entry—in effect, duplicating the journal entry used to record the transaction—we were able to explain the change in the balance of each account. That is, the debits and credits in the changes columns of the spreadsheet account for the increase or decrease in each noncash account. When a transaction entered on the spreadsheet included an operating, investing, or financing activity, we entered that portion of the entry under the corresponding heading of the statement of cash flows section of the spreadsheet. Since, as

noted earlier, there can be no operating, investing, or financing activity without a corresponding change in one or more of the noncash accounts, we should feel confident at this point that we have identified all of the activities that should be reported on the statement of cash flows.

To check the accuracy of the analysis, we compare the change in the balance of the cash account with the net change in cash flows produced by the activities listed in the statement of cash flows section of the

The cash flows section of the spreadsheet provides the information to be reported in the statement of cash flows.

spreadsheet. The net increase or decrease in cash flows from each of the statement of cash flows categories is extended to the extreme right column of the spreadsheet. By reference to [Illustration 21-9A](#), we see that net cash flows from operating, investing, and financing activities are: \$22 million, (\$19 million), and \$6 million, respectively. Together these activities provide a net increase in cash of \$9 million. This amount corresponds to the increase in the balance of the cash account from \$20 million to \$29 million. To complete the spreadsheet, we include the final summary entry:

| | (\$ in millions) |
|--|------------------|
| Entry (19) Cash | 9 |
| Net increase in cash (from statement of cash flows activities) | 9 |

As a final check of accuracy, we can confirm that the total of the debits is equal to the total of the credits in the changes columns of the spreadsheet.¹¹

Ethical Dilemma

“We must get it,” Courtney Lowell, president of Industrial Fasteners, roared.

“Without it, we’re in big trouble.” The “it” Lowell referred to is the renewal of a \$14 million loan with Community First Bank. The big trouble feared is the lack of funds necessary to repay the existing debt and few, if any, prospects for raising the funds elsewhere.

Lowell had just hung up the phone after a conversation with a bank vice president in which it was made clear that this year’s statement of cash flows must look better than

last year's. Lowell knows that improvements are not on course to happen. In fact, cash flow projections were dismal.

Later that day, Tim Cratchet, assistant controller, was summoned to Lowell's office. "Cratchet," Lowell barked, "I've looked at our accounts receivable. I think we can generate quite a bit of cash by selling or factoring most of those receivables. I know it will cost us more than if we collect them ourselves, but it sure will make our cash flow picture look better."

Is there an ethical question facing Cratchet?

LO21-9 Discuss the primary differences between U.S. GAAP and IFRS with respect to the statement of cash flows.

International Financial Reporting Standards

Classification of Cash Flows. Like U.S. GAAP, international standards also require a statement of cash flows. Consistent with U.S. GAAP, cash flows are classified as operating, investing, or financing. However, the U.S. standard designates cash outflows for interest payments and cash inflows from interest and dividends received as operating cash flows. Dividends paid to shareholders are classified as financing cash flows.

IAS No. 7, on the other hand, allows more flexibility. Companies can report interest and dividends paid as either operating or financing cash flows and interest and dividends received as either operating or investing cash flows. Interest and dividend payments usually are reported as financing activities. Interest and dividends received normally are classified as investing activities.

Typical Classification of Cash Flows from Interest and Dividend

U.S. GAAP

Operating Activities

Dividends received

IFRS

Operating Activities

| | |
|-----------------------------|-----------------------------|
| Interest received | |
| Interest paid | |
| Investing Activities | Investing Activities |
| | Dividends received |
| | Interest received |
| Financing Activities | Financing Activities |
| Dividends paid | Dividends paid |
| | Interest paid |

The spreadsheet is now complete. The statement of cash flows can now be prepared directly from the spreadsheet simply by presenting the items included in the statement of cash flows section of the spreadsheet in the appropriate format of the statement. It will be the statement of cash flows we first saw in [Illustration 21-2](#) early in this chapter.

The statements of cash flows from an annual report of **CVS Health Corp.** are shown in [Illustration 21-10](#). Notice that the reconciliation schedule was reported by CVS in the statement of cash flows itself. Many companies report the schedule separately in the disclosure notes.

Concept Review Exercise

COMPREHENSIVE REVIEW

The comparative balance sheets for 2024 and 2023 and the income statement for 2024 are given below for Beneficial Drill Company. Additional information from Beneficial Drill's accounting records is provided also.

Required:

Prepare the statement of cash flows of Beneficial Drill Company for the year ended December 31, 2024. Present cash flows from operating activities by the direct method and use a spreadsheet to assist in your analysis.

BENEFICIAL DRILL COMPANY**Comparative Balance Sheets****December 31, 2024 and 2023**

(\$ in millions)

| Assets | 2024 | 2023 |
|--------------------------------|--------------|--------------|
| Cash | \$ 24 | \$ 41 |

BENEFICIAL DRILL COMPANY
Income Statement
For Year Ended December 31, 2024
(\$ in millions)

Revenues

| | | |
|--------------------------------|-------|-------|
| Sales revenue | \$200 | |
| Investment revenue | 6 | |
| Gain on sale of treasury bills | 1 | \$207 |

Expenses and losses

| | | |
|---------------------------|-----|-------|
| Cost of goods sold | 110 | |
| Salaries expense | 30 | |
| Depreciation expense | 5 | |
| Amortization expense | 1 | |
| Insurance expense | 3 | |
| Interest expense | 14 | |
| Loss on sale of equipment | 10 | |
| Income tax expense | 7 | (180) |

Net income

\$ 27

Additional information from the accounting records:

Page 1242

- a. Investment revenue includes Beneficial Drill Company's \$3 million share of the net income of Hammer Company, an equity method investee.
- b. Treasury bills were sold during 2024 at a gain of \$1 million. Beneficial Drill Company classifies its investments in Treasury bills as cash equivalents.

- c. Equipment that originally cost \$60 million and was one-half depreciated was rendered unusable by a bolt of lightning. Most major components of the machine were unharmed and were sold for \$20 million.
- d. Temporary differences between pretax accounting income and taxable income caused the deferred tax liability to increase by \$1 million.
- e. The common stock of Wrench Corporation was purchased for \$14 million as a long-term investment.
- f. Land costing \$30 million was acquired by paying \$15 million cash and issuing a 13%, seven-year, \$15 million note payable to the seller.
- g. New equipment was purchased for \$40 million cash.
- h. \$20 million of bonds were issued at face value.
- i. On January 19, Beneficial issued a 5% stock dividend (1 million shares). The market price of the \$10 par value common stock was \$14 per share at that time.
- j. Cash dividends of \$10 million were paid to shareholders.
- k. In November, 500,000 common shares were repurchased as treasury stock at a cost of \$7 million.

| Note issued | <u>\$ 15</u> |

PART C

Preparing the SCF: Indirect Method of Reporting Cash Flows from Operating Activities

Getting There through the Back Door

The presentation of cash flows from operating activities illustrated in Part B is referred to as the *direct method*. By this method, the cash effect of each operating activity (i.e., income statement item) is reported directly on the statement of cash flows. For instance, cash received from customers is reported as the cash effect of sales activities, and cash paid to suppliers is reported as the cash effect of cost of goods sold. Income statement items that have *no* cash effect, such as depreciation expense, gains, and losses, are simply not reported.

As we discussed previously, a permissible alternative is the *indirect method*, by which the net cash increase or decrease from operating activities is derived indirectly by starting with reported net income and working backward to convert that amount to a cash basis. The derivation by the indirect method of net cash flows from operating activities for UBC is shown in  **Illustration 21-9B**. For the adjustment amounts, you may wish to refer back to UBC's balance sheets and income statement presented in  **Illustration 21-9**.

Illustration 21-9B Indirect Method

The indirect method derives the net cash increase or decrease from operating activities indirectly, by starting with reported net income and “working backward” to convert that amount to a cash basis.

| Cash Flows from Operating Activities—Indirect Method | |
|---|------|
| <i>and</i> | |
| Reconciliation of Net Income to Net Cash Flows from Operating Activities | |
| Net Income | \$12 |
| <i>Adjustments for noncash effects:</i> | |
| Gain on sale of land | (8) |
| Depreciation expense | 3 |
| Loss on sale of equipment | 2 |
| <i>Changes in operating assets and liabilities:</i> | |
| Increase in accounts receivable | (2) |
| Decrease in inventory | 4 |

Cash Flows from Operating Activities—Indirect Method
and
Reconciliation of Net Income to Net Cash Flows from Operating Activities

| | |
|---|-------------|
| Decrease in prepaid insurance | 3 |
| Increase in accounts payable | 6 |
| Increase in salaries payable | 2 |
| Decrease in income tax payable | (2) |
| Decrease in discount on bonds payable | <u>2</u> |
| <i>Net cash flows from operating activities</i> | \$22 |

Notice that the indirect method yields the same \$22 million net cash flows from operating activities as does the direct method. This is understandable when you consider that the indirect method simply reverses the differences between the accrual-based income statement and cash flows from operating activities. We accomplish this as described in the next two sections.

Components of Net Income That Do Not Increase or Decrease Cash

Amounts that were subtracted in determining net income but did not reduce cash are *added back* to net income to reverse the effect of their having been subtracted. For example, depreciation expense and the loss on sale of equipment are added back to net income. Other things being equal, this restores net income to what it would have been had depreciation and the loss not been subtracted at all.

Similarly, amounts that were added in determining net income but did not increase cash are subtracted from net income to reverse the effect of their having been added. For example, UBC's gain on sale of land is deducted from net income. Here's why. UBC sold for \$18 million land that originally cost \$10 million. Recording the sale produced a gain of \$8 million, which UBC appropriately included in its income statement. But did this gain increase UBC's cash? No. Certainly selling the land increased cash—by \$18 million. We therefore include the \$18 million as a cash inflow in the statement of cash flows. However, the sale of land is an investing activity. The gain itself, though, is simply the difference between cash received in the sale of land (reported as an investing activity) and the original cost of the land. If UBC also reported the \$8 million gain as a cash flow from operating activities, in addition to reporting \$18 million as a cash flow from investing activities, UBC would report the \$8 million twice. So, because UBC added the gain in determining its net income but the gain had no effect on cash, the gain must now be subtracted from net income to reverse the effect of its having been added.

Components of Net Income That Do Increase or Decrease Cash

For components of net income that increase or decrease cash, but by an amount different from that reported in the income statement, net income is adjusted for changes in the balances of related balance sheet accounts to *convert the effects of those items to a cash basis*. For example, sales of \$100 million are included in the income statement as a component of net income, and yet, since accounts receivable increased by \$2 million, only \$98 million cash was collected from customers during the reporting period. Sales are converted to a cash basis by subtracting the \$2 million increase in accounts receivable.

Here's another example. The income statement reports salaries expense as \$13 million. Just because employees earned \$13 million during the reporting period, though, doesn't necessarily mean UBC paid those employees \$13 million in cash during the same period. In fact, we see in the comparative balance sheets that salaries payable increased from \$1 million to \$3 million; UBC owes its employees \$2 million more than before the year started. The company must not have paid the entire \$13 million expense. By analyzing salaries expense in relation to the change in salaries payable, we can determine the amount of cash paid to employees, as shown next:

Salaries Payable

| | | | |
|-------------------------------------|---|----|-------------------------------------|
| | | 1 | Beginning balance |
| Cash paid to employees | ? | 13 | Salaries expense |
| <i>(decreases salaries payable)</i> | | | <i>(increases salaries payable)</i> |
| | | 3 | Ending balance |

This inspection indicates that UBC paid only \$11 million cash to its employees; the remaining \$2 million of salaries expense is reflected as an increase in salaries payable. From a cash perspective, then, by subtracting \$13 million for salaries in the income statement, UBC has subtracted \$2 million more than the reduction in cash. Adding back the \$2 million leaves UBC in the same position as if it had deducted only the \$11 million cash paid to employees.

Following a similar analysis of the cash effects of the remaining components of net income, those items are likewise converted to a cash basis by adjusting net income for increases and

decreases in related accounts.

For components of net income that increase or decrease cash by an amount exactly the same as that reported in the income statement, no adjustment of net income is required. For example, investment revenue of \$3 million is included in UBC's \$12 million net income amount. Because \$3 million also is the amount of cash received from that activity, this element of net income already represents its cash effect and needs no adjustment.¹²

Comparison with the Direct Method

The indirect method is compared with the direct method in [Illustration 21-11](#), using the data of UBC. To better illustrate the relationship between the two methods, the adjustments to net income using the indirect method are presented parallel to the related cash inflows and cash outflows of the direct method. The income statement is included in the graphic to demonstrate that the indirect method also serves to reconcile differences between the elements of that statement and the cash flows reported by the direct method.

Illustration 21-11 Comparison of the Indirect Method and the Direct Method of Determining Cash Flows from Operating Activities

| Income Statement | Cash Flows from Operating Activities | | | | |
|----------------------|--------------------------------------|---|---------------|--------------------------------------|------|
| | Indirect Method | | Direct Method | | |
| | | Net income | \$12 | | |
| | | Adjustments: | | | |
| Sales | \$100 | Increase in accounts receivable | (2) | Cash received from customers | \$98 |
| Investment revenue | 3 | <i>(No adjustment—no receivable or long-term investments)</i> | | Cash received from investments | 3 |
| Gain on sale of land | 8 | Gain on sale of land | (8) | <i>(Not reported—no cash effect)</i> | |
| Cost of goods sold | (60) | Decrease in inventory | 4 | | |
| | | Increase in accounts payable | 6 | Cash paid to suppliers | (50) |
| Salaries expense | (13) | Increase in salaries payable | 2 | Cash paid to employees | (11) |
| Depreciation expense | (3) | Depreciation expense | 3 | <i>(Not reported—no cash effect)</i> | |

| Income Statement | Cash Flows from Operating Activities | | | | |
|---------------------------|--------------------------------------|---|---------------|---|-------------|
| | Indirect Method | | Direct Method | | |
| Interest expense | (5) | Decrease in bond discount | 2 | Cash paid for interest | (3) |
| Insurance expense | (7) | Decrease in prepaid insurance | 3 | Cash paid for insurance | (4) |
| Loss on sale of equipment | (2) | Loss on sale of equipment | 2 | <i>(Not reported—no cash effect)</i> | |
| Income tax expense | <u>(9)</u> | Decrease in income tax payable | <u>(2)</u> | Cash paid for income taxes | <u>(11)</u> |
| Net Income | \$ 12 | Net cash flows from operating activities | \$22 | Net cash flows from operating activities | \$22 |

As a practical consideration, you might notice that the adjustments to net income using the indirect method follow a convenient pattern. *Increases* in related assets are deducted from net income (i.e., the increase in accounts receivable) when converting to cash from operating activities. Conversely, *decreases* in assets are added (inventory and prepaid insurance in this case). Changes in related liabilities are handled in just the opposite way. Increases in related liabilities are *added* to net income (i.e., the increases in accounts payable and salaries payable) while decreases in liabilities are subtracted (i.e., decrease in income tax payable).¹³

Of course, these are adjustments to net income that effectively convert components of income from reported accrual amounts to a cash basis. The other adjustments to net income (gain, depreciation, loss), as pointed out earlier, are to remove the three income statement components that have no effect at all on cash. This pattern is summarized in

 **Illustration 21-12.**

| Type of Adjustment | To Adjust for Noncash Effect |
|---|------------------------------|
| Adjustments for Noncash Effects: | |
| Income statement components that have <i>no effect</i> at all on cash but are <i>additions</i> to income | Deduct from net income |
| Income statement components that have <i>no effect</i> at all on cash but are <i>deductions</i> from income | Add to net income |
| Changes in Operating Assets and Liabilities: | |
| <i>Increases in assets</i> related to an income statement component | Deduct from net income |
| <i>Decreases in assets</i> related to an income statement component | Add to net income |
| <i>Increases in liabilities</i> related to an income statement component | Add to net income |
| <i>Decreases in liabilities</i> related to an income statement component | Deduct from net income |

Although either the direct method or the indirect method is permitted, the FASB strongly encourages companies to report cash flows from operating activities by the direct method. The obvious appeal of this approach is that it reports specific operating cash receipts and operating cash payments, which is consistent with the primary objective of the statement of cash flows. Investors and creditors gain additional insight into the specific sources of cash receipts and payments from operating activities revealed by this reporting method. Also, statement users can more readily interpret and understand the information presented because the direct method avoids the confusion caused by reporting noncash items and other reconciling adjustments under the caption *cash flows from operating activities*. Nonetheless, the vast majority of companies choose to use the indirect method. Reasons for this choice range from longstanding tradition to the desire to withhold as much information as possible from competitors.

Reconciliation of Net Income to Cash Flows from Operating Activities

As we discussed earlier, whether cash flows from operating activities are reported by the direct method or by the indirect method, the financial statements must report a reconciliation of net income to net cash flows from operating activities.¹⁴ When the direct method is used, the reconciliation is presented in a separate schedule and is identical to the presentation of net cash flows from operating activities by the indirect method. In other words,  **Illustration 21-9B** also serves as the reconciliation schedule to accompany a statement of cash flows using the direct method. Obviously, a separate reconciliation schedule is not required when using the indirect method because the cash flows from operating activities section of the statement of cash flows *is* a reconciliation of net income to net cash flows from operating activities.¹⁵

Remember that the direct and indirect methods are alternative approaches to deriving net cash flows from *operating* activities only. The choice of which method is used for that purpose does not affect the way cash flows from *investing* and *financing* activities are identified and reported.

The statements of cash flows from the annual report of **Amazon.com, Inc.**, which uses the indirect method, are shown in  **Illustration 21-13**.

Illustration 21-13 Statement of Cash Flows—Indirect Method; **Amazon.com, Inc.**

Source: **Amazon.com, Inc.**

For most companies, expenditures for interest and taxes are significant. Cash payments for interest and for taxes usually are specifically indicated when the direct method is employed, as is the case for **CVS Health Corp.** reported earlier in

 **Illustration 21-10**. When the indirect method is used, those amounts aren't readily

apparent and must be *separately reported*, either on the face of the statement as Amazon.com does or in an accompanying disclosure note.

We use a spreadsheet to help prepare a statement of cash flows by the indirect method in  [Appendix 21A](#).

Decision Makers' Perspective—Cash Flow Ratios

We have emphasized the analysis of financial statements from a decision maker's perspective throughout this text. Often that analysis included the development and comparison of financial ratios. Ratios based on income statement and balance sheet amounts enjoy a long tradition of acceptance, from which several standard ratios, including those described in earlier chapters, have evolved. To gain another viewpoint, some analysts supplement their investigation with cash flow ratios. Some cash flow ratios are derived by simply substituting cash flow from operations (CFFO) from the statement of cash flows in place of net income in many ratios, not to replace those ratios, but to complement them. For example, the times interest earned ratio can be modified to reflect the number of times the cash outflow for interest is provided by cash inflow from operations, and any of the profitability ratios can be modified to determine the cash generated from assets, shareholders' equity, sales, and so on.

 **Illustration 21-14** summarizes the calculation and usefulness of several representative cash flow ratios.

Illustration 21-14 Cash Flow Ratios

| | Calculation | Measures |
|---------------------------|---|-------------------------------------|
| Performance Ratios | | |
| Cash flow to sales | $\frac{\text{CFFO}}{\text{Net sales}}$ | Cash generated by each sales dollar |
| Cash return on assets | $\frac{\text{CFFO}}{\text{Average total assets}}$ | Cash generated from all resources |

| | Calculation | Measures |
|-------------------------------------|---|---|
| Cash return on shareholders' equity | $\frac{\text{CFFO}}{\text{Average shareholders' equity}}$ | Cash generated from owner-provided resources |
| Cash to income | $\frac{\text{CFFO}}{\text{Income from continuing operations}}$ | Cash-generating ability of continuing operations |
| Cash flow per share | $\frac{\text{CFFO} - \text{preferred dividends}}{\text{Weighted-average shares}}$ | Operating cash flow on a per share basis |
| Sufficiency Ratios | | |
| Debt coverage | $\frac{\text{Total liabilities}}{\text{CFFO}}$ | Financial risk and financial leverage |
| Interest coverage | $\frac{\text{CFFO} + \text{interest} + \text{taxes}}{\text{Interest}}$ | Ability to satisfy fixed obligations |
| Reinvestment | $\frac{\text{CFFO}}{\text{Cash outflow for noncurrent assets}}$ | Ability to acquire assets with operating cash flows |
| Debt payment | $\frac{\text{CFFO}}{\text{Cash outflow for LT debt repayment}}$ | Ability to pay debts with operating cash flows |
| Dividend payment | $\frac{\text{CFFO}}{\text{Cash outflow for dividends}}$ | Ability to pay dividends with operating cash flows |

| | Calculation | Measures |
|----------------------------------|---|--|
| Investing and financing activity | $\frac{\text{CFFO}}{\text{Cash outflows for investing and financing activities}}$ | Ability to acquire assets, pay debts, and make distributions to owners |

Cash flow ratios have received limited acceptance to date, due in large part to the long tradition of accrual-based ratios coupled with the relatively brief time that all companies have published statements of cash flows. A lack of consensus on cash flow ratios by which to make comparisons also has slowed their acceptance. In fact, companies are prohibited from reporting cash flow per share in the statement of cash flows. Nevertheless, cash flow ratios offer insight in the evaluation of a company's profitability and financial strength.¹⁶

To supplement their analysis of profitability or to provide another perspective, many analysts like to look at "free cash flow." A popular way to measure this metric is cash flow from operations minus capital expenditures. Free cash flow is the cash left over after a company pays for its operating expenses and capital expenditures. It shows how efficient a company is at generating cash and whether a company might have enough cash, after funding operations and capital expenditures, to pay investors through dividends and share buybacks. ●

Rawpixel.com/Shutterstock

- 1. What are the cash flow aspects of the situation that Mr. Barr may be overlooking in making his case for a wage increase? How can a company's operations generate a healthy profit and yet produce meager or even negative cash flows?** Positive net income does not necessarily indicate a healthy cash position. A statement of cash flows provides information about cash flows not seen when looking only at the balance sheet and the income statement. Although cash flows from operating activities result from the same activities reported in the income statement, the income statement reports the activities on an accrual basis. That is, revenues reported are those earned during the reporting period, regardless of when cash is received, and the expenses incurred in generating those revenues, regardless of when cash is paid. Thus, the very same operations can generate a healthy profit and yet produce meager or even negative cash flows.
- 2. What information can a statement of cash flows provide about a company's investing activities that can be useful in decisions such as this?** Cash flows from investing activities result from the acquisition and disposition of assets. Information about investing activities is useful to decision makers regarding the nature and magnitude of productive assets being acquired for future use. In the union negotiations, for instance, Mr. Barr may not be aware of the substantial investments under way to replace and update equipment and the cash requirements of those investments. Relatedly, the relatively low depreciation charges accelerated depreciation

provides in the later years of assets' lives may cause profits to seem artificially high given the necessity to replace those assets at higher prices.

3. What information can a statement of cash flows provide about a company's financing activities that can be useful in decisions such as this? Information about financing activities provides insights into sources of a company's external financing. Recent debt issues, for instance, might indicate a need for higher cash flows to maintain higher interest charges. Similarly, recent external financing activity may suggest that a company might be near its practical limits from external sources and, therefore, may need a greater reliance on internal financing through operations. ●

The Bottom Line

-  **LO21-1** Decision makers focus on the prospects of receiving a cash return from their dealings with a firm. But it is the ability of the firm to generate cash flows to itself that ultimately determines the potential for cash flows to investors and creditors. The statement of cash flows fills an information gap left by the balance sheet and the income statement by presenting information about cash flows that the other statements either do not provide or provide only indirectly. (*p. 1211*)
-  **LO21-2** Cash includes cash equivalents. These are short-term, highly liquid investments that can readily be converted to cash with little risk of loss. (*p. 1215*)
-  **LO21-3** Cash flows from operating activities are both inflows and outflows of cash that result from activities reported in the income statement. (*p. 1215*)
-  **LO21-4** Unlike the direct method, which directly lists cash inflows and outflows, the indirect method derives cash flows indirectly, by starting with reported net income and working backward to convert that amount to a cash basis. (*p. 1217*)
-  **LO21-5** Cash flows from investing activities are related to the acquisition and disposition of assets, other than inventory and assets classified as cash equivalents. (*p. 1218*)
-  **LO21-6** Cash flows from financing activities result from the external financing of a business. (*p. 1219*)
-  **LO21-7** Noncash investing and financing activities, such as acquiring equipment (an investing activity) by issuing a long-term note payable (a financing activity), are reported in a related disclosure schedule or note. (*p. 1220*)
-  **LO21-8** A spreadsheet provides a systematic method of preparing a statement of cash flows by analyzing available data to ensure that all operating, investing, and financing activities are detected. Recording spreadsheet entries that explain account balance changes simultaneously identifies and classifies the activities to be reported on the statement of cash flows. (*p. 1221*)
-  **LO21-9** IFRS allows more flexibility than U.S. GAAP in the classification of cash flows. Companies can report interest and dividends paid as either operating

or financing cash flows and interest and dividends received as either operating or investing cash flows. (*p. 1239*)

APPENDIX 21A Spreadsheet for the Indirect Method

A spreadsheet is equally useful in preparing a statement of cash flows whether we use the direct or the indirect method of determining cash flows from operating activities. The format of the spreadsheet differs only with respect to operating activities. The analysis of transactions for the purpose of identifying cash flows to be reported is the same. To illustrate,  **Illustration 21A-1** provides a spreadsheet analysis of the data for UBC.

Two differences should be noted between the spreadsheet in [Illustration 21A-1](#) and the spreadsheet we used earlier for the direct method. First, in the statement of cash flows section of the spreadsheet, under the heading of “cash flows from operating activities,” specific cash inflows and cash outflows are replaced by net income and the required adjustments for noncash effects. Second, we do not include an income statement section. This section is unnecessary because, using the indirect method, we are not interested in identifying specific operating activities that cause increases and decreases in cash. Instead, we need from the income statement only the amount of net income, which is converted to a cash basis by adjusting for any noncash amounts included in net income. The spreadsheet entries in journal entry form for the indirect method are illustrated in [Illustration 21A-2](#).

Illustration 21A-2 Spreadsheet Entries for the Indirect Method

| | | | |
|------------------|---|----|----|
| Entry (1) | Net income—CFOA | 12 | |
| | Retained earnings | | 12 |
| | <i>Establishes net income as the initial amount of cash flows from operating activities, to be adjusted to a cash basis by subsequent entries.</i> | | |
| Entry (2) | Cash (received from sale of land) | 18 | |
| | Land | | 10 |
| | Gain on sale of land—CFOA | | 8 |
| | <i>Deducts the noncash gain added in determining net income, explains a portion of the change in land, and identifies a cash inflow from investing activities.</i> | | |
| Entry (3) | Cash (received from sale of equipment) | 5 | |
| | Loss on sale of equipment—CFOA | | 2 |
| | Accumulated depreciation | | 7 |
| | Buildings and equipment | | 14 |
| | <i>Adds back the noncash loss subtracted in determining net income, explains portions of the changes in accumulated depreciation and buildings and equipment, and identifies a cash inflow from investing activities.</i> | | |
| Entry (4) | Depreciation expense—CFOA | 3 | |
| | Accumulated depreciation | | 3 |

| | | | |
|-------------------|--|----|----|
| | <i>Adds back the noncash expense subtracted in determining net income.</i> | | |
| Entry (5) | Accounts receivable | 2 | |
| | Increase in accounts receivable—CFOA | | 2 |
| | <i>Reduces net income to reflect \$98 million cash received from customers rather than \$100 million sales.</i> | | |
| Entry (6) | Decrease in inventory—CFOA | 4 | |
| | Inventory | | 4 |
| | <i>Increases net income to reflect a deduction of \$56 million cost of goods purchased rather than \$60 million cost of goods sold.</i> | | |
| Entry (7) | Increase in accounts payable—CFOA | 6 | |
| | Accounts payable | | 6 |
| | <i>Increases net income to reflect a deduction of \$50 million cash paid to suppliers rather than \$56 million cost of goods purchased.</i> | | |
| Entry (8) | Decrease in prepaid insurance—CFOA | 3 | |
| | Prepaid insurance | | 3 |
| | <i>Increases net income to reflect a deduction of \$4 million cash paid for insurance rather than \$7 million insurance expense.</i> | | |
| Entry (9) | Increase in salaries payable—CFOA | 2 | |
| | Salaries payable | | 2 |
| | <i>Increases net income to reflect a deduction of \$11 million cash paid to employees rather than \$13 million salaries expense.</i> | | |
| Entry (10) | Amortization of discount on bonds—CFOA | 2 | |
| | Discount on bonds | | 2 |
| | <i>Increases net income to reflect a deduction of \$3 million cash paid for bond interest rather than \$5 million bond interest expense.</i> | | |
| Entry (11) | Income tax payable | 2 | |
| | Decrease in income tax payable—CFOA | | 2 |
| | <i>Reduces net income to reflect a deduction of \$11 million cash paid for income taxes rather than \$9 million income tax expense.</i> | | |
| Entry (12) | Short-term investment | 12 | |
| | Cash (purchase of short-term investment) | | 12 |

Explains the increase in the short-term investment account and identifies a cash outflow from investing activities.

| | | | |
|-------------------|-------------------------|----|----|
| Entry (13) | Land | 30 | |
| | Cash (purchase of land) | | 30 |

Explains a portion of the change in the land account and identifies a cash outflow from investing activities.

| | | | |
|-------------------|-------------------------|----|----|
| Entry (14) | Buildings and equipment | 20 | |
| | Notes payable | | 20 |

Partially explains the changes in the buildings, equipment, and notes payable accounts and identifies a significant noncash investing and financing activity.

| | | | |
|-------------------|------------------------------------|----|----|
| Entry (15) | Bonds payable | 15 | |
| | Cash (retirement of bonds payable) | | 15 |

Explains the decrease in the bonds payable account and identifies a cash outflow from financing activities.

| | | | |
|-------------------|-------------------------------|----|----|
| Entry (16) | Retained earnings | 13 | |
| | Common stock | | 10 |
| | Paid-in capital—excess of par | | 3 |

Partially explains the changes in the retained earnings, common stock, and paid-in capital—excess of par accounts.

| | | | |
|-------------------|----------------------------------|----|----|
| Entry (17) | Cash (from sale of common stock) | 26 | |
| | Common stock | | 20 |
| | Paid-in capital—excess of par | | 6 |

Partially explains the changes in the common stock and paid-in capital—excess of par accounts and identifies a cash inflow from financing activities.

| | | | |
|-------------------|----------------------------------|---|---|
| Entry (18) | Retained earnings | 5 | |
| | Cash (payment of cash dividends) | | 5 |

Partially explains the change in the retained earnings account and identifies a cash outflow from financing activities.

| | | | |
|-------------------|------|---|--|
| Entry (19) | Cash | 9 | |
|-------------------|------|---|--|

Net increase in cash (from statement of cash flows activities) 9

Reconciles the net increase in cash from operating, investing, and financing activities to the increase in the cash balance.

Remember that there is no mandatory order in which the account changes must be analyzed. However, since we determine net cash flows from operating activities by working backward from net income when using the indirect method, it is convenient to start with the spreadsheet entry that represents the credit to retained earnings due to net income. This entry corresponds to summary entry (11) using the direct method. By entering the debit portion of the entry as the first item under the cash flows from operating activities (CFOA), we establish net income as the initial amount of cash flows from operating activities, which is then adjusted to a cash basis by subsequent entries. Entries (2)-(4) duplicate the transactions that involve noncash components of net income. Changes in current assets and current liabilities that represent differences between revenues and expenses and the cash effects of those revenues and expenses are accounted for by entries (5)-(11). Summary entries (12)-(19) explain the changes in the balance sheet not already accounted for by previous entries, and are identical to entries (12)-(19) recorded using the direct method.

The statement of cash flows presenting net cash flows from operating activities by the indirect method is illustrated in  **Illustration 21A-3**.

Illustration 21A-3 Statement of Cash Flows—Indirect Method

All parts of the statement of cash flows except operating activities are precisely the same as in the direct method.

APPENDIX 21B The T-Account Method of Preparing the Statement of Cash Flows

This chapter demonstrated the use of a spreadsheet to prepare the statement of cash flows. A second systematic approach to the preparation of the statement is referred to as the T-account method. The two methods are identical in concept. Both approaches reconstruct the transactions that caused changes in each account balance during the year, simultaneously identifying the operating, investing, and financing activities reported on the statement of cash flows. The form of the two methods differs only by whether the entries for those transactions are recorded on a spreadsheet or in T-accounts. In both cases, entries are recorded until the net change in each account balance has been explained.

The T-account method serves the same purpose as a spreadsheet in assisting in the preparation of a statement of cash flows.

Some accountants feel that the T-account method is less time-consuming than preparing a spreadsheet but accomplishes precisely the same goal. Since both methods are simply analytical techniques to assist in statement preparation, the choice is a matter of personal preference. The following five steps outline the T-account method:

1. Draw T-accounts for each income statement and balance sheet account.
2. The T-account for cash should be drawn considerably larger than other T-accounts because more space is required to accommodate the numerous debits and credits to cash. Also, the cash T-account will serve the same purpose as the statement of cash flows section of the spreadsheet in that the formal statement of cash flows is developed from the cash flows reported there. Therefore, it is convenient to partition the cash T-account with headings for "Operating Activities," "Investing Activities," and "Financing Activities" before entries are recorded.
3. Enter each account's net change on the appropriate side (debit or credit) of the uppermost portion of each T-account. These changes will serve as individual check figures for determining whether the increase or decrease in each account balance has been explained. These first three steps establish the basic work form for the T-account method.
4. Reconstruct the transactions that caused changes in each account balance during the year and record the entries for those transactions directly in the T-accounts. Again using UBC

as an example, the entries we record in the T-accounts are exactly the same as the spreadsheet entries we created in the chapter when using the spreadsheet method. The analysis we used in creating those spreadsheet entries is equally applicable to the T-account method. For that reason, that analysis is not repeated here. The complete T-account work form for UBC is presented below. Account balance changes are provided from balances given in [Illustration 21-9](#).

5. After all account balances have been explained by T-account entries, prepare the statement of cash flows from the cash T-account, being careful also to report noncash investing and financing activities. The statement of cash flows for UBC appears in [Illustration 21-2](#).

| BALANCE SHEET ACCOUNTS Cash (statement of cash flows) | | | | | |
|--|------|----------|----|------|-----------------------------------|
| | | 9 | | | |
| Operating Activities: | | | | | |
| From customers | (1) | 98 | 50 | (4) | To suppliers of goods |
| From investment revenue | (2) | 3 | 11 | (5) | To employees |
| | | | 3 | (7) | For interest |
| | | | 4 | (8) | For insurance |
| | | | 11 | (10) | For income taxes |
| Investing Activities: | | | | | |
| Sale of land | (3) | 18 | 12 | (12) | Purchase of short-term investment |

Questions For Review of Key Topics

- Q 21-1** Effects of all cash flows affect the balances of various accounts reported in the balance sheet. Also, the activities that cause some of these cash flows are reported in the income statement. What, then, is the need for an additional financial statement that reports cash flows?
- Q 21-2** The statement of cash flows provides a list of all the cash inflows and cash outflows during the reporting period. To make the list more informative, the cash flows are classified according to the nature of the activities that create the cash flows. What are the three primary classifications?
- Q 21-3** Is an investment in Treasury bills always classified as a cash equivalent? Explain.
- Q 21-4** Transactions that involve merely purchases or sales of cash equivalents generally are not reported in a statement of cash flows. Describe an exception to this generalization. What is the essential characteristic of the transaction that qualifies as an exception?
- Q 21-5** What are the differences between cash flows from operating activities and the elements of an income statement?
- Q 21-6** Do cash flows from operating activities report all the elements of the income statement on a cash basis? Explain.
- Q 21-7** Investing activities include the acquisition and disposition of assets. Provide three specific examples. Identify two exceptions.
- Q 21-8** The issuance of stock and the issuance of bonds are reported as financing activities. Are payments of dividends to shareholders and payments of interest to bondholders also reported as financing activities? Explain.
- Q 21-9** Does the statement of cash flows report only transactions that cause an increase or a decrease in cash? Explain.
- Q 21-10** How would the acquisition of a building be reported on a statement of cash flows if purchased by issuing a mortgage note payable in addition to a significant cash down payment?
- Q 21-11** Perhaps the most noteworthy item reported on an income statement is net income—the amount by which revenues exceed expenses. The most noteworthy item reported on a statement of cash flows is *not* the amount of net cash flows. Explain.

- Q 21-12** What is the purpose of the “changes” columns of a spreadsheet to prepare a statement of cash flows?
- Q 21-13** Given sales revenue of \$200,000, how can it be determined whether or not \$200,000 cash was received from customers?
- Q 21-14** When an asset is sold at a gain, why is the gain not reported as a cash inflow from operating activities?
- Q 21-15** When determining the amount of cash paid for income taxes, what would be indicated by an increase in the deferred income tax liability account?
- Q 21-16** When using the indirect method of determining net cash flows from operating activities, how is depreciation expense reported? Why? What other expenses are reported in a like manner?
- Q 21-17** When using the indirect method of determining net cash flows from operating activities, how are revenues and expenses reported on the statement of cash flows if their cash effects are identical to the amounts reported in the income statement?
- Q 21-18** Why does the FASB recommend the direct method over the indirect method?
- Q 21-19** Compare the manner in which investing activities are reported on a statement of cash flows prepared by the direct method and by the indirect method.
-  **IFRS**
- Q 21-20** Where can we find authoritative guidance for the statement of cash flows under IFRS?
-  **IFRS**
- Q 21-21** U.S. GAAP designates cash outflows for interest payments and cash inflows from interest and dividends received as operating cash flows. Dividends paid to shareholders are classified as financing cash flows. How are these cash flows reported under IFRS?

Brief Exercises

BE 21-1 Determine cash received from customers **LO21-3**

Horton Housewares' accounts receivable decreased during the year by \$5 million. What is the amount of cash Horton received from customers during the reporting period if its sales were \$33 million? Prepare a summary entry that represents the net effect of the selling and collection activities during the reporting period.

Page 1259

BE 21-2 Determine cash received from customers **LO21-3**

April Wood Products' accounts receivable increased during the year by \$4 million. What is the amount of cash April Wood Products received from customers during the reporting period if its sales were \$44 million? Prepare a summary entry that represents the net effect of the selling and collection activities during the reporting period.

BE 21-3 Determine cash paid to suppliers **LO21-3**

LaRoe Lawns' inventory increased during the year by \$6 million. Its accounts payable increased by \$5 million during the same period. What is the amount of cash LaRoe paid to suppliers of merchandise during the reporting period if its cost of goods sold was \$25 million? Prepare a summary entry that represents the net effect of merchandise purchases during the reporting period.

BE 21-4 Determine cash paid to employees **LO21-3**

Sherriane Baby Products' salaries expense was \$17 million. What is the amount of cash Sherriane paid to employees during the reporting period if its salaries payable increased by \$3 million? Prepare a summary entry that represents the net effect of salaries expense incurred and paid during the reporting period.

BE 21-5 Bond interest and discount **LO21-3**, **LO21-6**

Agee Technology, Inc., issued 9% bonds, dated January 1, with a face amount of \$400 million on July 1, 2024, at a price of \$380 million. For bonds of similar risk and maturity, the market yield is 10%. Interest is paid semi-annually on June 30 and December 31. Prepare the journal entry to record interest at the effective interest rate at December 31. What would be the amount(s) related to the bonds that Agee would report in its statement of cash flows for the year ended December 31, 2024, if it uses the direct method?

BE 21-6 Bond interest and discount  **LO21-4**,  **LO21-6**

Refer to the situation described in BE 21-5. What would be the amount(s) related to the bonds that Agee would report in its statement of cash flows for the year ended December 31, 2024, if it uses the indirect method?

BE 21-7 Installment note  **LO21-3**,  **LO21-6**

On January 1, 2024, the Merit Group issued to its bank a \$41 million, five-year installment note to be paid in five equal payments at the end of each year. Installment payments of \$10 million annually include interest at the rate of 7%. What would be the amount(s) related to the note that Merit would report in its statement of cash flows for the year ended December 31, 2024?

BE 21-8 Sale of land  **LO21-3**,  **LO21-4**,  **LO21-5**

On July 15, 2024, M.W. Morgan Distribution sold land for \$35 million that it had purchased in 2019 for \$22 million. What would be the amount(s) related to the sale that Morgan would report in its statement of cash flows for the year ended December 31, 2024, using the direct method? The indirect method?

BE 21-9 Investing activities  **LO21-5**

Carter Containers sold marketable equity securities, land, and common stock for \$30 million, \$15 million, and \$40 million, respectively. Carter also purchased treasury stock, equipment, and a patent for \$21 million, \$25 million, and \$12 million, respectively. What amount should Carter report as net cash from investing activities?

BE 21-10 Financing activities  **LO21-6**

Refer to the situation described in BE 21-9. What amount should Carter report as net cash from financing activities?

BE 21-11 Indirect method  **LO21-4**

Sanders Awnings reported net income of \$90 million. Included in that number were depreciation expense of \$3 million and a loss on the sale of equipment of \$2 million. Records reveal increases in accounts receivable, accounts payable, and inventory of \$1 million, \$4 million, and \$3 million, respectively. What were Sanders' cash flows from operating activities?

BE 21-12 Indirect method  **LO21-4**

Sunset Acres reported net income of \$60 million. Included in that number were trademark amortization expense of \$2 million and a gain on the sale of land of \$1 million. Records reveal decreases in accounts receivable, accounts payable, and inventory of \$2 million, \$5 million, and \$4 million, respectively. What were Sunset's cash flows from operating activities?

Exercises

E 21-1 Classification of cash flows LO21-3 through LO21-6

Listed below are several transactions that typically produce either an increase or a decrease in cash. Indicate by letter whether the cash effect of each transaction is reported on a statement of cash flows as an operating (**O**), investing (**I**), or financing (**F**) activity.

| Transactions | |
|--------------|--|
| F | 1. Sale of common stock. |
| _____ | 2. Sale of land. |
| _____ | 3. Purchase of treasury stock. |
| _____ | 4. Merchandise sales. |
| _____ | 5. Issuance of a long-term note payable. |
| _____ | 6. Purchase of merchandise. |
| _____ | 7. Repayment of a note payable. |
| _____ | 8. Employee salaries. |
| _____ | 9. Sale of equipment at a gain. |
| _____ | 10. Issuance of bonds. |
| _____ | 11. Acquisition of bonds of another corporation. |
| _____ | 12. Payment of semiannual interest on bonds payable. |
| _____ | 13. Payment of a cash dividend. |
| _____ | 14. Purchase of a building. |
| _____ | 15. Collection of nontrade note receivable (principal amount). |
| _____ | 16. Loan to another company. |
| _____ | 17. Retirement of common stock. |
| _____ | 18. Income taxes. |
| _____ | 19. Issuance of a short-term note payable. |

Transactions

_____ 20. Sale of a copyright.

E 21-2 Determine cash paid to suppliers of merchandise

 **LO21-3**,  **LO21-6**

Shown below in T-account format are the beginning and ending balances (\$ in millions) of both inventory and accounts payable.

| Inventory | |
|-------------------|----|
| Beginning balance | 90 |
| Ending balance | 93 |
| Accounts Payable | |
| | 14 |
| | 16 |

Required:

1. Use a T-account analysis to determine the amount of cash paid to suppliers of merchandise during the reporting period if cost of goods sold was \$300 million.
2. Prepare a summary entry that represents the net effect of merchandise purchases during the reporting period.

E 21-3 Determine cash received from customers  **LO21-3**

Determine the amount of cash received from customers for each of the three independent situations below. All dollars are in millions.

| Situation | Sales Revenue | Accounts Receivable Increase (Decrease) | Cash Received from Customers |
|-----------|---------------|--|------------------------------|
| 1 | 100 | -0- | ? |
| 2 | 100 | 5 | ? |
| 3 | 100 | (5) | ? |

E 21-4 Summary entries for cash received from customers

 **LO21-3**

For each of the three independent situations below, prepare journal entries that summarize the selling and collection activities for the reporting period in order to determine the amount of cash received from customers and to explain the change in each account shown. All dollars are in millions.

| Situation | Sales Revenue | Accounts Receivable Increase (Decrease) | Cash Received from Customers |
|-----------|---------------|---|------------------------------|
| 1 | 200 | -0- | ? |
| 2 | 200 | 10 | ? |
| 3 | 200 | (10) | ? |

Page 1261

E 21-5 Determine cash paid to suppliers of merchandise

 **LO21-3**

Determine the amount of cash paid to suppliers of merchandise for each of the nine independent situations below. All dollars are in millions.

| Situation | Cost of Goods Sold | Inventory Increase (Decrease) | Accounts Payable Increase (Decrease) | Cash Paid to Suppliers |
|-----------|--------------------|-------------------------------|--------------------------------------|------------------------|
| 1 | 100 | 0 | 0 | ? |
| 2 | 100 | 3 | 0 | ? |
| 3 | 100 | (3) | 0 | ? |
| 4 | 100 | 0 | 7 | ? |
| 5 | 100 | 0 | (7) | ? |
| 6 | 100 | 3 | 7 | ? |
| 7 | 100 | 3 | (7) | ? |
| 8 | 100 | (3) | (7) | ? |
| 9 | 100 | (3) | 7 | ? |

E 21-6 Summary entries for cash paid to suppliers of merchandise  **LO21-3**

For each of the five independent situations below, prepare a journal entry that summarizes the purchases, sales, and payments related to inventories in order to determine the amount

of cash paid to suppliers and explain the change in each account shown. All dollars are in millions.

| Situation | Cost of Goods Sold | Inventory Increase (Decrease) | Accounts Payable Increase (Decrease) | Cash Paid to Suppliers |
|-----------|--------------------|-------------------------------|--------------------------------------|------------------------|
| 1 | 200 | 0 | 0 | ? |
| 2 | 200 | 6 | 0 | ? |
| 3 | 200 | 0 | 14 | ? |
| 4 | 200 | 6 | 14 | ? |
| 5 | 200 | (6) | (14) | ? |

E 21-7 Determine cash paid for bond interest LO21-3

Determine the amount of cash paid to bondholders for bond interest for each of the six independent situations below. All dollars are in millions.

| Situation | Interest Expense | Interest Payable Increase (Decrease) | Unamortized Discount Increase (Decrease) | Cash Paid for Interest |
|-----------|------------------|--------------------------------------|--|------------------------|
| 1 | 10 | 0 | 0 | ? |
| 2 | 10 | 2 | 0 | ? |
| 3 | 10 | (2) | 0 | ? |
| 4 | 10 | 0 | (3) | ? |
| 5 | 10 | 2 | (3) | ? |
| 6 | 10 | (2) | (3) | ? |

E 21-8 Determine cash paid for bond interest LO21-3

For each of the four independent situations below, prepare a single journal entry that summarizes the recording and payment of interest in order to determine the amount of cash paid for bond interest and explain the change (if any) in each of the accounts shown. All dollars are in millions.

| Situation | Interest Expense | Interest Payable Increase (Decrease) | Unamortized Discount Increase (Decrease) | Cash Paid for Interest |
|-----------|------------------|--------------------------------------|--|------------------------|
| 1 | 20 | 0 | 0 | ? |

| Situation | Interest Expense | Interest Payable Increase (Decrease) | Unamortized Discount Increase (Decrease) | Cash Paid for Interest |
|-----------|------------------|--------------------------------------|--|------------------------|
| 2 | 20 | 4 | 0 | ? |
| 3 | 20 | 0 | (6) | ? |
| 4 | 20 | (4) | (6) | ? |

E 21-9 Determine cash paid for income taxes  **LO21-3**

Determine the amount of cash paid for income taxes in each of the nine independent situations below. All dollars are in millions.

| Situation | Income Tax Expense | Income Tax Payable Increase (Decrease) | Deferred Tax Liability Increase (Decrease) | Cash Paid for Taxes |
|-----------|--------------------|--|--|---------------------|
| 1 | 10 | 0 | 0 | ? |
| 2 | 10 | 3 | 0 | ? |
| 3 | 10 | (3) | 0 | ? |
| 4 | 10 | 0 | 2 | ? |
| 5 | 10 | 0 | (2) | ? |
| 6 | 10 | 3 | 2 | ? |
| 7 | 10 | 3 | (2) | ? |
| 8 | 10 | (3) | (2) | ? |
| 9 | 10 | (3) | 2 | ? |

E 21-10 Summary entries for cash paid for income taxes  **LO21-3**

For each of the five independent situations below, prepare a single journal entry that summarizes the recording and payment of income taxes in order to determine the amount of cash paid for income taxes and explain the change (if any) in each of the accounts shown. All dollars are in millions.

| Situation | Income Tax Expense | Income Tax Payable Increase (Decrease) | Deferred Tax Liability Increase (Decrease) | Cash Paid for Taxes |
|-----------|--------------------|--|--|---------------------|
| 1 | 10 | 0 | 0 | ? |
| 2 | 10 | 3 | 0 | ? |
| 3 | 10 | 0 | (2) | ? |
| 4 | 10 | 3 | 2 | ? |
| 5 | 10 | (3) | (2) | ? |

E 21-11 Bonds; financial statement effects LO21-3

Most Solutions, Inc., issued 10% bonds, dated January 1, with a face amount of \$640 million on January 1, 2024. The bonds mature in 2034 (10 years). For bonds of similar risk and maturity the market yield is 12%. Interest expense is recorded at the effective interest rate. Interest is paid semiannually on June 30 and December 31. Most recorded the sale as follows:

| January 1, 2024 | | |
|--------------------------------|-------------|-------------|
| Cash (price) | 566,589,440 | |
| Discount on bonds (difference) | 73,410,560 | |
| Bonds payable (face amount) | | 640,000,000 |

Required:

What would be the amount(s) related to the bonds that Most would report in its statement of cash flows for the year ended December 31, 2024?

E 21-12 Installment note; financial statement effects LO21-3, LO21-6

National Food Services, Inc., borrowed \$4 million from its local bank on January 1, 2024, and issued a four-year installment note to be paid in four equal payments at the end of each year. The payments include interest at the rate of 10%. Installment payments are \$1,261,881 annually.

Required:

What would be the amount(s) related to the note that National would report in its statement of cash flows for the year ended December 31, 2024?

E 21–13 Identifying cash flows from investing activities and financing activities  **LO21–5**,  **LO21–6**

In preparation for developing its statement of cash flows for the year ended December 31, 2024, Rapid Pac, Inc., collected the following information:

| | (\$ in millions) |
|--|------------------|
| Fair value of shares issued in a stock dividend | \$ 65 |
| Payment for the early extinguishment of long-term bonds (book value: \$97 million) | 102 |
| Proceeds from the sale of treasury stock (cost: \$17 million) | 22 |
| Gain on sale of land | 4 |
| Proceeds from sale of land | 12 |
| Purchase of Microsoft common stock | 160 |
| Declaration of cash dividends | 44 |
| Distribution of cash dividends declared in 2023 | 40 |

Required:

1. In Rapid Pac's statement of cash flows, what were net cash inflows (or outflows) from investing activities for 2024?
2. In Rapid Pac's statement of cash flows, what were net cash inflows (or outflows) from financing activities for 2024?

E 21–14 Identifying cash flows from investing activities and financing activities  **LO21–5**,  **LO21–6**

In preparation for developing its statement of cash flows for the year ended December 31, 2024, D-Krug Solutions, Inc. collected the following information:

| | (\$ in millions) |
|---|------------------|
| Payment for the early extinguishments of long-term notes (book value: \$50 million) | \$ 54 |

| | |
|--|-----|
| Sale of common shares | 176 |
| Retirement of common shares | 122 |
| Loss on sale of equipment | 2 |
| Proceeds from sale of equipment | 8 |
| Issuance of short-term note payable for cash | 10 |
| Acquisition of building for cash | 7 |
| Purchase of marketable securities (not a cash equivalent) | 5 |
| Purchase of marketable securities (considered a cash equivalent) | 1 |
| Cash payment for 3-year insurance policy | 3 |
| Collection of note receivable with interest (principal amount, \$11) | 13 |
| Declaration of cash dividends | 33 |
| Distribution of cash dividends declared in 2023 | 30 |

Required:

1. In D-Krug's statement of cash flows, what were net cash inflows (or outflows) from investing activities for 2024?
2. In D-Krug's statement of cash flows, what were net cash inflows (or outflows) from financing activities for 2024?

E 21-15 Lease; lessee; financial statement effects  **LO21-3**,
 **LO21-5**,  **LO21-6**

Neri Foods Corporation leased a commercial food processor on September 30, 2024. The five-year finance lease agreement calls for Neri to make quarterly lease payments of \$195,774, payable each September 30, December 31, March 31, June 30, with the first payment at September 30, 2024. Neri's incremental borrowing rate is 12%. Neri records amortization on a straight-line basis at the end of each fiscal year. Neri recorded the lease as follows:

| September 30, 2024 | | |
|---------------------------------------|-----------|-----------|
| Right-of-use asset (calculated below) | 3,000,000 | |
| Lease payable (calculated below) | | 3,000,000 |
| Lease payable | 195,774 | |

September 30, 2024

Cash (first payment)

195,774

Calculation of the present value of lease payments

$$\$195,774 \times 15.32380^* = \$3,000,000$$

(rounded)

*Present value of an annuity due of \$1: $n = 20, i = 3\%$ (from Table 6).

Required:

What would be the pretax amounts related to the lease that Neri would report in its statement of cash flows for the year ended December 31, 2024?

E 21-16 Equity method investment; financial statement effects

 **LO21-3**,  **LO21-5**

On January 1, 2024, Clor-Proell Enterprises bought 20% of the outstanding common stock of Chen Construction Company for \$600 million cash. Chen's net income for the year ended December 31, 2024, was \$300 million. During 2024, Chen declared and paid cash dividends of \$60 million. Clor-Proell recorded the investment as follows:

| | (\$ in millions) |
|--|------------------|
| Purchase | |
| Investment in Chen Construction shares | 600 |
| Cash | 600 |
| Net income | |
| Investment in Chen Construction shares (20% × \$300 million) | 60 |
| Investment revenue | 60 |
| Dividends | |
| Cash (20% × \$60 million) | 12 |
| Investment in Chen Construction shares | 12 |

Required:

What would be the pretax amounts related to the investment that Clor-Proell would report in its statement of cash flows for the year ended December 31, 2024?

E 21–17 Indirect method; reconciliation of net income to net cash flows from operating activities  **LO21–4**

The accounting records of EZ Company provided the data below. Prepare a reconciliation of net income to net cash flows from operating activities.

| | |
|----------------------------------|----------|
| Net income | \$50,000 |
| Depreciation expense | 7,000 |
| Increase in inventory | 1,500 |
| Decrease in salaries payable | 800 |
| Decrease in accounts receivable | 2,000 |
| Amortization of patent | 500 |
| Amortization of premium on bonds | 1,000 |
| Increase in accounts payable | 4,000 |
| Cash dividends | 12,000 |

E 21–18 Spreadsheet entries from statement of retained earnings; financial statement effects  **LO21–3 through**
 **LO21–8**

The statement of retained earnings of Gary Larson Publishers is presented below.

| GARY LARSON PUBLISHERS | |
|---|--------------|
| Statement of Retained Earnings | |
| For the Year Ended December 31, 2024 | |
| (\$ in millions) | |
| Retained earnings, January 1 | \$200 |
| Add: Net income | 75 |
| Deduct: Cash dividend | (25) |
| Stock dividend (1 million shares of \$1 par common stock) | (16) |

GARY LARSON PUBLISHERS
Statement of Retained Earnings
For the Year Ended December 31, 2024
(\$ in millions)

| | |
|--|---------------------|
| Property dividend (Garfield Company preferred stock held as a short-term investment) | (12) |
| Sale of treasury stock (cost \$53 million) | (10) |
| Retained earnings, December 31 | <u><u>\$212</u></u> |

Required:

For the transactions that affected Larson’s retained earnings, reconstruct the journal entries that can be used to determine cash flows to be reported in a statement of cash flows. Also indicate any investing and financing activities you identify from this analysis that should be reported on the statement of cash flows.

E 21–19 Relationship between the income statement and cash flows from operating activities (direct method and indirect method)  **LO21–3**,  **LO21–4**

The following schedule relates the income statement with cash flows from operating activities, derived by both the direct and indirect methods, in the format illustrated by  **Illustration 21-11** in the chapter. The amounts for income statement elements are missing.

| | Cash Flows from Operating Activities | | | | |
|-------------------------|---|---------------------------------|----------------------|------------------------------|--------|
| Income Statement | Indirect Method | | Direct Method | | |
| | Net income | \$? | | | |
| | Adjustments: | | | | |
| Sales | \$? | Decrease in accounts receivable | 12 | Cash received from customers | \$ 612 |
| Cost of goods sold | ? | Increase in inventory | (24) | | |
| | | Decrease in accounts payable | (36) | Cash paid to suppliers | (420) |

| Cash Flows from Operating Activities | | | | | |
|--------------------------------------|------------|---|--------------|---|--------------|
| Income Statement | | Indirect Method | | Direct Method | |
| Salaries expense | ? | Increase in salaries payable | 12 | Cash paid to employees | (66) |
| Depreciation expense | ? | Depreciation expense | 18 | (Not reported—no cash effect) | |
| Insurance expense | ? | Decrease in prepaid insurance | 18 | Cash paid for insurance | (24) |
| Loss on sale of land | ? | Loss on sale of land | 12 | (Not reported—no cash effect) | |
| Income tax expense | ? | Increase in income tax payable | 12 | Cash paid for income taxes | (42) |
| Net income | \$? | Net cash flows from operating activities | \$ 60 | Net cash flows from operating activities | \$ 60 |

Required:

Deduce the missing amounts and prepare the income statement.

E 21–20 Reconciliation of net cash flows from operating activities to net income  **LO21–3**,  **LO21–4**

The income statement and the cash flows from operating activities section of the statement of cash flows are provided below for Syntric Company. The merchandise inventory account balance neither increased nor decreased during the reporting period. Syntric had no liability for insurance, deferred income taxes, or interest at any time during the period.

| SYNTRIC COMPANY | |
|--------------------------------------|--------------|
| Income Statement | |
| For the Year Ended December 31, 2024 | |
| (\$ in thousands) | |
| Sales | \$ 312 |
| Cost of goods sold | <u>(188)</u> |
| Gross margin | 124 |
| Salaries expense | \$41 |

SYNTRIC COMPANY
Income Statement
For the Year Ended December 31, 2024
(\$ in thousands)

| | | |
|---|---------------------|------|
| Insurance expense | 22 | |
| Depreciation expense | 11 | |
| Depletion expense | 5 | |
| Interest expense | <u>10</u> | (89) |
| Gains and losses: | | |
| Gain on sale of equipment | 25 | |
| Loss on sale of land | <u>(8)</u> | |
| Income before tax | 52 | |
| Income tax expense | <u>(26)</u> | |
| Net income | <u><u>\$ 26</u></u> | |
| Cash Flows from Operating Activities: | | |
| Cash received from customers | \$ 258 | |
| Cash paid to suppliers | (175) | |
| Cash paid to employees | (37) | |
| Cash paid for interest | (9) | |
| Cash paid for insurance | (16) | |
| Cash paid for income tax | (14) | |
| Net cash flows from operating activities | <u><u>\$ 7</u></u> | |

Required:

Prepare a schedule to reconcile net income to net cash flows from operating activities.

E 21–21 Cash flows from operating activities (direct method) derived from an income statement; cash flows from operating activities (indirect method)  **LO21–3**,  **LO21–4**

The income statement and a schedule reconciling cash flows from operating activities to net income are provided below (\$ in thousands) for Peach Computers.

PEACH COMPUTERS
Income Statement
For the Year Ended December 31, 2024

| | | |
|----------------------|------------|----------------------------|
| Sales | \$305 | |
| Cost of goods sold | <u>185</u> | |
| Gross margin | 120 | |
| Salaries expense | \$41 | |
| Insurance expense | 19 | |
| Depreciation expense | 11 | |
| Loss on sale of land | <u>5</u> | <u>76</u> |
| Income before tax | | 44 |
| Income tax expense | | <u>22</u> |
| Net income | | <u><u>\$ 22</u></u> |

Reconciliation of Net Income
To Net Cash Flows from Operating Activities

| | | |
|---|--|----------------------------|
| Net income | | \$ 22 |
| Adjustments for Noncash Effects | | |
| Depreciation expense | | 11 |
| Loss on sale of land | | 5 |
| Changes in operating assets and liabilities: | | |
| Decrease in accounts receivable | | 6 |
| Increase in inventory | | (13) |
| Decrease in accounts payable | | (8) |
| Increase in salaries payable | | 5 |
| Decrease in prepaid insurance | | 9 |
| Increase in income tax payable | | <u>20</u> |
| Net cash flows from operating activities | | <u><u>\$ 57</u></u> |

Required:

1. Calculate each of the following amounts for Peach Computers:
 - a. Cash received from customers during the reporting period.

- b. Cash paid to suppliers of goods during the reporting period.
 - c. Cash paid to employees during the reporting period.
 - d. Cash paid for insurance during the reporting period.
 - e. Cash paid for income taxes during the reporting period.
2. Prepare the cash flows from operating activities section of the statement of cash flows (direct method).

E 21–22 Indirect method; reconciliation of net income to net cash flows from operating activities  **LO21–4**

The accounting records of Baddour Company provided the data below. Prepare a reconciliation of net income to net cash flows from operating activities.

| | |
|---------------------------------|---------|
| Net loss | \$5,000 |
| Depreciation expense | 6,000 |
| Increase in salaries payable | 500 |
| Decrease in accounts receivable | 2,000 |
| Increase in inventory | 2,300 |
| Amortization of patent | 300 |
| Reduction in discount on bonds | 200 |

E 21–23 Cash flows from operating activities (direct method)  **LO21–3**

Portions of the financial statements for Myriad Products are provided below.

| MYRIAD PRODUCTS COMPANY | |

E 21–26 Cash flows from operating activities (indirect method) —includes sale of cash equivalent  **LO21–4**

Refer to the data provided in E 21–25 for Clear Transmissions Company.

Required:

Prepare the cash flows from operating activities section of the statement of cash flows for Clear Transmissions Company using the *indirect method*.

E 21–27 Statement of cash flows; direct method  **LO21–3**,  **LO21–5**,  **LO21–6**,  **LO21–8**

Comparative balance sheets for 2024 and 2023, a statement of income for 2024, and additional information from the accounting records of Red, Inc., are provided below.

RED, INC.
Comparative Balance Sheets
December 31, 2024 and 2023
(\$ in millions)

| | 2024 | 2023 |
|--------------------------------|---------------|---------------|
| Assets | | |
| Cash | \$ 24 | \$ 110 |
| Accounts receivable | 178 | 132 |
| Prepaid insurance | 7 | 3 |
| Inventory | 285 | 175 |
| Buildings and equipment | 400 | 350 |
| Less: Accumulated depreciation | (119) | (240) |
| | \$ 775 | \$ 530 |
| Liabilities | | |
| Accounts payable | \$ 87 | \$100 |
| Accrued liabilities | 6 | 11 |
| Notes payable | 50 | 0 |
| Bonds payable | 160 | 0 |
| Shareholders' Equity | | |
| Common stock | 400 | 400 |
| Retained earnings | 72 | 19 |
| | \$ 775 | \$ 530 |

RED, INC.
Statement of Income
For Year Ended December 31, 2024
(\$ in millions)

| | |
|----------------------|---------|
| Revenues | |
| Sales revenue | \$2,000 |
| Expenses | |
| Cost of goods sold | \$1,400 |
| Depreciation expense | 50 |

RED, INC.
Statement of Income
For Year Ended December 31, 2024
(\$ in millions)

| | | |
|--------------------|-----|---------------|
| Operating expenses | 447 | 1,897 |
| | | |
| Net income | | \$ 103 |

Additional information from the accounting records:

- a. During 2024, \$230 million of equipment was purchased to replace \$180 million of equipment (95% depreciated) sold at book value.
- b. In order to maintain the usual policy of paying cash dividends of \$50 million, it was necessary for Red to borrow \$50 million from its bank.

Required:

Prepare the statement of cash flows of Red, Inc., for the year ended December 31, 2024. Present cash flows from operating activities by the direct method. (You may omit the schedule to reconcile net income with cash flows from operating activities.)

E 21–28 Pension plan funding  **LO21–3**

Hutchison-Sun Corporation has a defined benefit pension plan. Hutchison-Sun’s policy is to fund the plan annually, cash payments being made at the end of each year. Data relating to the pension plan for 2024 are as follows:

| | December 31, (\$ in millions) | |
|---|---|-------------|
| | 2024 | 2023 |
| Plan assets | \$1,080 | \$900 |
| Net pension expense for 2024: | | |
| Service cost | \$ 112 | |
| Interest cost (6% × \$850) | 51 | |
| Actual return on the plan assets (11% × \$900 = \$99) | | |
| Adjusted for: \$9 gain on the plan assets* | (90) | |
| Amortization of prior service cost | 8 | |

| | December 31, (\$ in millions) | |
|--------------------------|----------------------------------|--------------|
| | 2024 | 2023 |
| Amortization of net loss | | 1 |
| | | <u>\$ 82</u> |

*(11% × \$900) – (10% – \$900)

Required:

Re-create the journal entries used to record Hutchison-Sun’s 2024 pension expense, gain on plan assets, and funding of plan assets in order to determine the cash paid to the pension trustee as reported in the statement of cash flows.

E 21–29 FASB codification research  **LO21–2**

The statement of cash flows (as well as the balance sheet) includes within cash the notion of cash equivalents. The *FASB Accounting Standards Codification* represents the single source of authoritative U.S. generally accepted accounting principles.

Required:

Obtain the relevant authoritative literature on cash equivalents using the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org) and select Basic View for free access.. What is the specific seven-digit Codification citation (XXX-XX-XX) that describes the guidelines for determining what items should be deemed cash equivalents?

E 21–30 FASB codification research  **LO21–1**,  **LO21–4**,
 **LO21–7**

Access the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org) and select Basic View for free access. Determine the specific eight-digit Codification citation (XXX-XX-XX-X) for accounting for each of the following items:

1. Disclosure of interest and income tax paid if the indirect method is used.
2. Primary objectives of a statement of cash flows.
3. Disclosure of noncash investing and financing activities.

E 21–31 Statement of cash flows; indirect method  **LO21–4**,  **LO21–5**,  **LO21–6**,  **LO21–8**,  **Appendix 21A**

Refer to the data provided in E 21–27 for Red, Inc.

Required:

Prepare the statement of cash flows for Red, Inc., using the indirect method to report operating activities.

E 21–32 Statement of cash flows; T-account method  **LO21–8**,  **Appendix 21B**

Refer to the data provided in E 21–27 for Red, Inc.

Required:

Prepare the statement of cash flows (direct method) for Red, Inc. Use the T-account method to assist in your analysis.

Problems

P 21–1 Classification of cash flows from investing and financing activities LO21–2, LO21–5 through LO21–7

Listed below are transactions that might be reported as investing and/or financing activities on a statement of cash flows. Possible reporting classifications of those transactions are provided also.

Required:

Indicate the reporting classification of each transaction by entering the appropriate classification code.

Classifications

- +I Investing activity (cash inflow)
- I Investing activity (cash outflow)
- +F Financing activity (cash inflow)
- F Financing activity (cash outflow)
- N Noncash investing and financing activity
- X Not reported as an investing and/or a financing activity

Transactions

- +I 1. Sale of land.
- 2. Issuance of common stock for cash.
- 3. Purchase of treasury stock.
- 4. Conversion of bonds payable to common stock.
- 5. Lease of equipment.
- 6. Sale of patent.
- 7. Acquisition of building for cash.
- 8. Issuance of common stock for land.

Transactions

- _____ 9. Collection of note receivable (principal amount).
- _____ 10. Issuance of bonds.
- _____ 11. Issuance of stock dividend.
- _____ 12. Payment of property dividend.
- _____ 13. Payment of cash dividends.
- _____ 14. Issuance of short-term note payable for cash.
- _____ 15. Issuance of long-term note payable for cash.
- _____ 16. Purchase of marketable debt securities (“available for sale”).
- _____ 17. Payment of note payable.
- _____ 18. Cash payment for five-year insurance policy.
- _____ 19. Sale of equipment.
- _____ 20. Issuance of note payable for equipment.
- _____ 21. Acquisition of common stock of another corporation.
- _____ 22. Repayment of long-term debt by issuing common stock.
- _____ 23. Payment of semiannual interest on bonds payable.
- _____ 24. Retirement of preferred stock.
- _____ 25. Loan to another company.
- _____ 26. Sale of inventory to customers.
- _____ 27. Purchase of marketable securities (cash equivalents).

P 21–2 Statement of cash flows; direct method **LO21–3,** **LO21–8**

The comparative balance sheets for 2024 and 2023 and the statement of income for 2024 are given below for Wright Company. Additional information from Wright’s accounting records is provided also.

WRIGHT COMPANY
Comparative Balance Sheets
December 31, 2024 and 2023
(\$ in thousands)

| | 2024 | 2023 |
|--------------------------------|---------------|--------------|
| Assets | | |
| Cash | \$ 42 | \$ 30 |
| Accounts receivable | 73 | 75 |
| Short-term investment | 40 | 15 |
| Inventory | 75 | 70 |
| Land | 50 | 60 |
| Buildings and equipment | 550 | 400 |

| Income before tax | | 42 |
| Income tax expense | | 20 |
| Net income | | <u><u>\$ 22</u></u> |

Additional information from the accounting records:

- a. Investment revenue includes National Intercable Company's \$6 million share of the net income of Central Fiber Optics Corporation, an equity method investee.

- b. A long-term investment in bonds, originally purchased for \$30 million, was sold for \$35 million.
- c. Pretax accounting income exceeded taxable income, causing the deferred income tax liability to increase by \$3 million.
- d. A building that originally cost \$60 million, and which was one-fourth depreciated, was destroyed by fire. Some undamaged sections were sold for \$3 million.
- e. The right to use a building was acquired with a seven-year lease agreement; present value of lease payments, \$80 million. Annual lease payments of \$12 million are paid on Jan. 1 of each year starting in 2024.
- f. \$130 million of bonds were retired at maturity.
- g. \$20 million par value of common stock was sold for \$30 million, and \$50 million of preferred stock was sold at par.
- h. Shareholders were paid cash dividends of \$30 million.

Required:

1. Prepare a spreadsheet for preparation of the statement of cash flows (direct method) of National Intercable Company for the year ended December 31, 2024.
2. Prepare the statement of cash flows. (A reconciliation schedule is not required.)

P 21–4 Statement of cash flows; direct method  **LO21–3,**

P 21–10 Relationship between the income statement and cash flows from operating activities (direct method and indirect method)  **LO21–3**,  **LO21–4**

The following schedule relates the income statement with cash flows from operating activities, derived by both the direct and indirect methods, in the format illustrated in  **Illustration 21–11**. Some elements necessary to complete the schedule are missing.

| Cash Flows from Operating Activities | | | | | |
|---|-------|---------------------------------|-------------|-------------------------------|------|
| Income Statement | | Indirect Method | | Direct Method | |
| | | Net income | \$? | | |
| | | <i>Adjustments:</i> | | | |
| Sales | \$300 | Decrease in accounts receivable | 6 | Cash received from customers | \$? |
| Gain on sale of equipment | 24 | Gain on sale of equipment | (24) | (Not reported—no cash effect) | |
| Cost of goods sold | (?) | Increase in inventory | (12) | | |
| Salaries expense | (42) | ? in salaries payable | 6 | Cash paid to employees | (36) |
| Depreciation expense | (9) | Depreciation expense | 9 | Cash paid for depreciation | ? |
| Interest expense | (?) | Decrease in bond discount | 3 | Cash paid for interest | (9) |
| Insurance expense | (21) | Decrease in prepaid insurance | 9 | Cash paid for insurance | (?) |
| Loss on sale of land | (6) | Loss on sale of land | 6 | (Not reported—no cash effect) | |

| Cash Flows from Operating Activities | | | | | |
|--------------------------------------|-------------|---|--------------|---|--------------|
| Income Statement | | Indirect Method | | Direct Method | |
| Income tax expense | (27) | Increase in income tax payable | ? | Cash paid for income taxes | (21) |
| Net Income | \$? | Net cash flows from operating activities | \$ 54 | Net cash flows from operating activities | \$ 54 |

Required:

Complete the schedule by determining each of the following missing elements:

1. Cash received from customers.
2. Cost of goods sold.
3. ? in salaries payable (Increase? Or decrease?).
4. Cash paid for depreciation.
5. Interest expense.
6. Cash paid for insurance.
7. Increase in income tax payable.
8. Net income.

P 21–11 Prepare a statement of cash flows; direct method
 LO21–3, LO21–8

The comparative balance sheets for 2024 and 2023 and the income statement for 2024 are given below for Arduous Company. Additional information from Arduous’s accounting records is provided also.

ARDUOUS COMPANY

December 31, 2024 and 2023
(\$ in millions)

| | 2024 | 2023 |
|----------------------|----------------|----------------|
| Retained earnings | 242 | 227 |
| Less: Treasury stock | (9) | 0 |
| | <u>\$1,211</u> | <u>\$1,074</u> |

ARDUOUS COMPANY
Income Statement For Year Ended
December 31, 2024
(\$ in millions)

| | | |
|--------------------------------|-----------|---------------------|
| Revenues and gain: | | |
| Sales revenue | \$410 | |
| Investment revenue | 11 | |
| Gain on sale of Treasury bills | <u>2</u> | \$423 |
| Expenses and loss: | | |
| Cost of goods sold | 180 | |
| Salaries expense | 73 | |
| Depreciation expense | 12 | |
| Amortization expense | 2 | |
| Insurance expense | 7 | |
| Interest expense | 28 | |
| Loss on sale of equipment | 18 | |
| Income tax expense | <u>36</u> | 356 |
| Net income | | <u><u>\$ 67</u></u> |

Additional information from the accounting records:

- a. Investment revenue includes Arduous Company's \$6 million share of the net income of Demur Company, an equity method investee.
- b. Treasury bills were sold during 2024 at a gain of \$2 million. Arduous Company classifies its investments in Treasury bills as cash equivalents.

- c. Equipment originally costing \$70 million that was one-half depreciated was rendered unusable by a flood. Most major components of the equipment were unharmed and were sold for \$17 million.
- d. Temporary differences between pretax accounting income and taxable income caused the deferred tax liability to increase by \$3 million.
- e. The preferred stock of Tory Corporation was purchased for \$25 million as a long-term investment.
- f. Land costing \$46 million was acquired by issuing \$23 million cash and a 15%, four-year, \$23 million note payable to the seller.
- g. The right to use a building was acquired with a 15-year lease agreement; present value of lease payments, \$82 million. Annual lease payments of \$7 million are paid at the beginning of each year starting January 1, 2024.
- h. \$60 million of bonds were retired at maturity.
- i. In February, Arduous issued a stock dividend (4 million shares). The market price of the \$5 par value common stock was \$7.50 per share at that time.
- j. In April, 1 million shares of common stock were repurchased as treasury stock at a cost of \$9 million.

Required:

Prepare the statement of cash flows of Arduous Company for the year ended December 31, 2024. Present cash flows from operating activities by the direct method. (A reconciliation schedule is not required.)

P 21–12 Transactions affecting retained earnings; financial statement effects LO21–5, LO21–6, LO21–8

Shown below in T-account format are the changes affecting the retained earnings of Brenner-Jude Corporation during 2024. At January 1, 2024, the corporation had outstanding 105 million common shares, \$1 par per share.

| Retained Earnings (\$ in millions) | |
|--|-------------------------|
| | 90 Beginning balance |
| Retirement of 5 million common shares for \$22 million | 2 |

| | | | |
|---|----|-----|-------------------------|
| | | 88 | Net income for the year |
| Declaration and payment of a \$0.33 per share cash dividend | 33 | | |
| Declaration and distribution of a 4% stock dividend | 20 | | |
| | | 123 | Ending balance |

Required:

1. From the information provided by the account changes you should be able to re-create the transactions that affected Brenner-Jude's retained earnings during 2024. Reconstruct the journal entries which can be used as spreadsheet entries in the preparation of a statement of cash flows. Also indicate any investing and financing activities you identify from this analysis that should be reported on the statement of cash flows.
2. Prepare a statement of retained earnings for Brenner-Jude for the year ended 2024. (You may wish to compare your solution to this problem with the parallel situation described in Exercise 18-17.)

P 21-13 Various cash flows  **LO21-3** through  **LO21-8**

Following are selected balance sheet accounts of Del Conte Corp. at December 31, 2024 and 2023, and the increases or decreases in each account from 2023 to 2024. Also presented is selected income statement information for the year ended December 31, 2024, and additional information.

| Selected Balance Sheet Accounts | 2024 | 2023 | Increase (Decrease) |
|---|-----------|-----------|---------------------|
| Assets | | | |
| Accounts receivable | \$ 34,000 | \$ 24,000 | \$10,000 |
| Property, plant, and equipment | 277,000 | 247,000 | 30,000 |
| Accumulated depreciation | (178,000) | (167,000) | 11,000 |
| Liabilities and Stockholders' Equity | | | |
| Bonds payable | 49,000 | 46,000 | 3,000 |
| Dividends payable | 8,000 | 5,000 | 3,000 |
| Common stock, \$1 par | 22,000 | 19,000 | 3,000 |
| Additional paid-in capital | 9,000 | 3,000 | 6,000 |

| Selected Balance Sheet Accounts | 2024 | 2023 | Increase (Decrease) |
|---------------------------------|---------|--------|---------------------|
| Retained earnings | 104,000 | 91,000 | 13,000 |

Selected Income Statement Information for the Year Ended December 31, 2024

| | |
|---------------------------|-----------|
| Sales revenue | \$155,000 |
| Depreciation | 33,000 |
| Gain on sale of equipment | 13,000 |
| Net income | 28,000 |

Additional Information:

- Accounts receivable relate to sales of merchandise.
- During 2024, equipment costing \$40,000 was sold for cash.
- During 2024, bonds payable with a face value of \$20,000 were issued in exchange for property, plant, and equipment. There was no amortization of bond discount or premium.

Required:

Items 1 through 5 represent activities that will be reported in Del Conte's statement of cash flows for the year ended December 31, 2024. The following two responses are required for each item:

- Determine the amount that should be reported in Del Conte's 2024 statement of cash flows.
- Using the list below, determine the category in which the amount should be reported in the statement of cash flows.
 - Operating activity
 - Investing activity
 - Financing activity

| | Amount | Category |
|---|--------|----------|
| 1. Cash collections from customers (direct method). | _____ | _____ |
| 2. Payments for purchase of property, plant, and equipment. | _____ | _____ |
| 3. Proceeds from sale of equipment. | _____ | _____ |
| 4. Cash dividends paid. | _____ | _____ |
| 5. Redemption of bonds payable. | _____ | _____ |

(AICPA adapted)

P 21–14 Statement of cash flows; indirect method; limited information  **LO21–4**,  **LO21–8**

The comparative balance sheets for 2024 and 2023 are given below for Surmise Company. Net income for 2024 was \$50 million.

| SURMISE COMPANY | | |
|--|---------------|---------------|
| Comparative Balance Sheets | | |
| December 31, 2024 and 2023 | | |
| (\$ in millions) | | |
| | 2024 | 2023 |
| Assets | | |
| Cash | \$ 36 | \$ 40 |
| Accounts receivable | 92 | 96 |
| Less: Allowance for uncollectible accounts | (12) | (4) |
| Prepaid expenses | 8 | 5 |
| Inventory | 145 | 130 |
| Long-term investment | 80 | 40 |
| Land | 100 | 100 |
| Buildings and equipment | 420 | 300 |

| Bonds payable | 65 | 125 |
| Shareholders' Equity | | |

SURMISE COMPANY
Comparative Balance Sheets
December 31, 2024 and 2023
(\$ in millions)

| | 2024 | 2023 |
|-------------------------------|---------------|---------------|
| Common stock | 60 | 50 |
| Paid-in capital—excess of par | 245 | 205 |
| Retained earnings | 212 | 182 |
| | <u>\$ 743</u> | <u>\$ 604</u> |

Required:

Prepare the statement of cash flows of Surmise Company for the year ended December 31, 2024. Use the indirect method to present cash flows from operating activities because you do not have sufficient information to use the direct method. You will need to make reasonable assumptions concerning the reasons for changes in some account balances. A spreadsheet or T-account analysis will be helpful. (*Hint:* The right to use a building was acquired with a seven-year lease agreement. Annual lease payments of \$9 million are paid at January 1 of each year starting in 2024.)

P 21–15 Integrating problem; bonds; lease transactions; lessee and lessor; financial statement effects  **LO21–3**,  **LO21–5**,  **LO21–6**

Digital Telephony issued 10% bonds, dated January 1, with a face amount of \$32 million on January 1, 2024. The bonds mature in 2034 (10 years). For bonds of similar risk and maturity the market yield is 12%. Interest is paid semiannually on June 30 and December 31. Digital recorded the issue as follows:

| | | |
|-------------------|------------|------------|
| Cash | 28,329,472 | |
| Discount on bonds | 3,670,528 | |
| Bonds payable | | 32,000,000 |

Digital also leased switching equipment to Midsouth Communications, Inc., on September 30, 2024. Digital purchased the equipment from MDS Corp. at a cost of \$6 million. The five-year lease agreement calls for Midsouth to make quarterly lease payments of \$391,548, payable each September 30, December 31, March 31, and June 30, with the first payment on September 30, 2024. Digital's implicit interest rate is 12%.

Required:

1. What would be the amount(s) related to the bonds that Digital would report in its statement of cash flows for the year ended December 31, 2024, if Digital uses the direct method? The indirect method?
2. What would be the amounts related to the lease that *Midsouth* would report in its statement of cash flows for the year ended December 31, 2024?
3. What would be the amounts related to the lease that *Digital* would report in its statement of cash flows for the year ended December 31, 2024?
4. Assume *MDS* manufactured the equipment at a cost of \$5 million and that *Midsouth* leased the equipment directly from *MDS*. What would be the amounts related to the lease that *MDS* would report in its statement of cash flows for the year ended December 31, 2024?

P 21-16 Statement of cash flows; indirect method  **LO21-4,**
 **LO21-8**

Refer to the data provided in the P 21-4 for Dux Company.

Required:

Prepare the statement of cash flows for Dux Company using the *indirect method*.

P 21-17 Statement of cash flows; indirect method  **LO21-4,**
 **LO21-8**

Refer to the data provided in the P 21-5 for Metagrobolize Industries.

Required:

Prepare the statement of cash flows for Metagrobolize Industries using the *indirect method*.

P 21-18 Statement of cash flows; indirect method  **LO21-4**,
 **LO21-8**

Refer to the data provided in the P 21-11 for Arduous Company.

Required:

Prepare the statement of cash flows for Arduous Company using the *indirect method*.

(Note: The following problems use the technique learned in Appendix 21B.)

P 21-19 Statement of cash flows; T-account method  **LO21-3**,
 **LO21-8**

Refer to the data provided in the P 21-4 for Dux Company.

Required:

Prepare the statement of cash flows for Dux Company. Use the T-account method to assist in your analysis.

P 21-20 Statement of cash flows; T-account method
 **LO21-3**,  **LO21-8**

Refer to the data provided in the P 21-5 for Metagrobolize Industries.

Decision Makers' Perspective

Ed Telling/Getty Images

Apply your critical-thinking ability to the knowledge you've gained. These cases will provide you an opportunity to develop your research, analysis, judgment, and communication skills. You also will work with other students, integrate what you've learned, apply it in real-world situations, and consider its global and ethical ramifications. This practice will broaden your knowledge and further develop your decision-making abilities.

Analysis Case 21–1 Distinguish income and cash flows

 **LO21–1**,  **LO21–3**,  **LO21–4**

“Why can’t we pay our shareholders a dividend?” shouted your new boss. “This income statement you prepared for me says we earned \$5 million in our first half-year!”

You were hired last month as the chief accountant for Enigma Corporation, which was organized on July 1 of the year just ended. You recently prepared the financial statements below.

ENIGMA CORPORATION
Income Statement
For the Six Months Ended December 31, 2024
(\$ in millions)

| | |
|----------------------|-------------|
| Sales revenue | \$75 |
| Cost of goods sold | (30) |
| Depreciation expense | (5) |
| Remaining expenses | (35) |
| Net income | <u>\$ 5</u> |

ENIGMA CORPORATION
Income Statement
For the Six Months Ended December 31, 2024
(\$ in millions)

ENIGMA CORPORATION
Balance Sheet
December 31, 2024
(\$ in millions)

| | |
|---------------------------|--------------------|
| Cash | \$ 1 |
| Accounts receivable (net) | 20 |
| Merchandise inventory | 15 |
| Equipment (net) | 44 |
| Total | <u>\$80</u> |
| Accounts payable | \$ 2 |
| Accrued liabilities | 7 |
| Notes payable | 36 |
| Common stock | 30 |
| Retained earnings | 5 |
| Total | <u><u>\$80</u></u> |

You just explained to your boss, Robert James, that although net income was \$5 million, operating activities produced a net decrease in cash. Unable to understand your verbal explanation, he asked you to prepare a written report explaining the apparent discrepancy between Enigma's profitability and its cash flows. To increase the chances of your boss's understanding the situation, you want to include in your report a determination of net cash flows from operating activities demonstrating how it is possible for operating activities to simultaneously produce a positive net income and negative net cash flows.

Required:

Determine net cash flows from operating activities by both the direct and indirect methods.

Judgment Case 21-2 Distinguish income and cash flows

 **LO21-3**,  **LO21-8**

You are a loan officer for First Benevolent Bank. You have an uneasy feeling as you examine a loan application from Daring Corporation. The application included the following financial statements.

DARING CORPORATION
Income Statement
For the Year Ended December 31, 2024

| | |
|----------------------|-------------------------|
| Sales revenue | \$100,000 |
| Cost of goods sold | (50,000) |
| Depreciation expense | (5,000) |
| Remaining expenses | <u>(25,000)</u> |
| Net income | <u><u>\$ 20,000</u></u> |

DARING CORPORATION
Balance Sheet
December 31, 2024

| | |
|--------------------------|-------------------------|
| Cash | \$ 5,000 |
| Accounts receivable | 25,000 |
| Inventory | 20,000 |
| Operational assets | 55,000 |
| Accumulated depreciation | <u>(5,000)</u> |
| Total | <u><u>\$100,000</u></u> |
| Accounts payable | \$ 10,000 |
| Interest payable | 5,000 |
| Note payable | 45,000 |
| Common stock | 20,000 |
| Retained earnings | <u>20,000</u> |
| Total | <u><u>\$100,000</u></u> |

It is not Daring's profitability that worries you. The income statement submitted with the application shows net income of \$20,000 in Daring's first year of operations. By referring to the balance sheet, you see that this net income represents a 20% rate of return on assets of \$100,000. Your concern stems from the recollection that the note payable reported on Daring's balance sheet is a two-year loan you approved earlier in the year.

You also recall another promising new company that, just last year, defaulted on another of your bank's loans when it failed due to its inability to generate sufficient cash flows to meet its obligations. Before requesting additional information from Daring, you decide to test your memory of the intermediate accounting class you took in night school by attempting to prepare a statement of cash flows from the information available in the loan application.

Real World Case 21–3 Information from cash flow activities; disclosure note; FedEx LO21–3 through LO21–8

Real World Financials

Locate the financial statements and related disclosure notes of **FedEx Corporation** for the fiscal year ended May 31, 2020. You can locate the report online at www.fedex.com. Use the information provided in the statement of cash flows to respond to the questions below.

Required:

1. Is FedEx expanding its business or contracting its business, as evidenced by the investing activities?
2. In 2019, did FedEx raise as much cash through financing activities as the amount needed to fund its investing activities?
3. Determine the activities listed under financing activities for the most recent fiscal year. [Hint: FedEx's Statement of Changes in Common Stockholders' Investment (statement of shareholders' equity) will help you determine the nature of the stock activity.] What is the most notable financing activity reported over the most recent three years? What was the amount of cash received or paid for that activity each year?
4. What are the cash payments FedEx made for interest and for income taxes in the three years reported? (Hint: See the disclosure notes.)

Source: FedEx Corporation

Analysis Case 21–4 Smudged ink; find missing amounts

 LO21–3,  LO21–4

“Be careful with that coffee!” Your roommate is staring in disbelief at the papers in front of her. “This was my contribution to our team project,” she moaned. “When you spilled your coffee, it splashed on this page. Now I can’t recognize some of these numbers, and Craig has my source documents.”

Knowing how important this afternoon’s presentation is to your roommate, you’re eager to see what can be done. “Let me see that,” you offer. “I think we can figure this out.” The statement of cash flows and income statement are intact. The reconciliation schedule and the comparative balance sheets are coffee casualties.

DISTINCTIVE INDUSTRIES
Statement of Cash Flows
For the Year Ended December 31, 2024
(\$ in millions)

| | | |
|--|--------------------------|--------------------------|
| Cash Flows from Operating Activities: | | |
| Collections from customers | \$213 | |
| Payment to suppliers | (90) | |
| Payment of general & administrative expenses | (54) | |
| Payment of income taxes | (27) | |
| Net cash flows from operating activities | | \$ 42 |
| Cash Flows from Investing Activities: | | |

| Net income | <u><u>\$ 84</u></u> |

DISTINCTIVE INDUSTRIES
Comparative Balance Sheets
At December 31
(\$ in millions)

| | 2024 | 2023 |
|--|--------------|------------|
| Assets: | | |
| Cash | \$ 360 | □ |
| Accounts receivable (net) | □ | 252 |
| Inventory | 180 | □ |
| Property, plant, and equipment | 450 | 600 |
| Less: Accumulated depreciation | <u>(120)</u> | <u>□</u> |
| Total assets | □ | □ |
| Liabilities and shareholders' equity: | | |
| Accounts payable | \$ 120 | \$ 90 |
| General and administrative expenses payable | 27 | 27 |
| Income tax payable | 66 | □ |
| Common stock | 720 | 690 |
| Retained earnings | <u>□</u> | <u>141</u> |
| Total liabilities and shareholders' equity | □ | □ |

Required:

1. Determine the missing amounts, and reconstruct the comparative balance sheets.
2. Reconstruct the reconciliation of net income to cash flows from operating activities (operating cash flows using the indirect method).

Real World Case 21–5 Information from cash flow activities;
General Mills  **LO21–3** through  **LO21–8**

Real World Financials

“I doubt my eating these Cheerios will boost their ability to pay me dividends,” you quip, referring to **General Mills**, the maker of the best-selling breakfast cereal. It’s General Mills’ dividend-paying ability, in fact, that you plan to investigate right after breakfast.

After discovering that General Mills provides shareholders a 3.6% dividend yield and its stock price had increased by 20% this year, you decided to look at the company as a potential investment target. But you also heard that the dividend yield was supported by General Mills paying out more than half its income as dividends, and that its net income followed “an inconsistent pattern” over the last three years. “Maybe I should take a closer look,” you decided.

You decided that cash flow generated by operations would provide another perspective beyond net income. Also, you know from your experience as an auditor that many analysts like to look at “free cash flow”—cash flow from operations minus capital expenditures—to evaluate how efficient a company is at generating cash and whether a company might have enough cash, after funding operations and capital expenditures, to pay investors through dividends and share buybacks.

Swapping your cereal bowl for your laptop, you locate the statement of cash flows from General Mill’s 2020 10-K for the year ended May 31, 2020, from “investor relations” at www.generalmills.com.

Required:

1. How does the pattern of cash flows from operating activities compare with that of net income for the most recent three years?
2. Determine free cash flows for General Mills in each of the three years reported.
3. Compare that amount with cash flows from operating activities each year. What pattern do you detect?

Source: General Mills

Research Case 21–6 FASB codification; locate and extract relevant information and cite authoritative support for a financial reporting issue; cash flow classification  **LO21–4** through  **LO21–6**

“This one’s got me stumped,” you say to no one in particular. “First day on the job; I’d better get it right.” It’s the classification of notes payable in the statement of cash flows that has

you in doubt. Having received an “A” in Intermediate Accounting, you know that a note payable representing a bank loan is a financing activity, but this one is a note payable to your employer’s primary merchandise supplier. “I wonder if the accounting is the same.”

Required:

1. Obtain the relevant authoritative literature on cash flow classification using the *FASB Accounting Standards Codification*. You might gain access at the FASB website (www.fasb.org) and select Basic View for free access. What is the specific nine-digit Codification citation (XXX-XX-XX-X) that specifies the classification of notes payable to suppliers?
2. Is accounting the same for both short-term and long-term notes payable to suppliers?

Real World Case 21–7 Reporting leases in a statement of cash flows; disclosure note; Microsoft

 **LO21–3**,  **LO21–6**,  **LO21–7**

Real World Financials

“I’m so confused,” your study partner snarls, throwing up his hands in exasperation. “As part of our team’s group project, I need to find out how much cash **Microsoft** spent on leases last year, and their statement of cash flows doesn’t even mention leases.” Tossing a sheet of paper in front of you, he mutters, “I found this disclosure note to their financial statements that promises ‘supplemental cash flow information related to leases,’ but it just confuses me more. I think I know the difference between operating leases and finance leases, but why are there operating cash flows for both types, but only financing cash flows for finance leases? And why are new leases listed in connection with cash flows? Did they pay all this cash in addition to incurring lease liabilities for the right-of-use assets? You’re the accounting major; help me out here.”

Page 1285

Eager to show off what you learned in Intermediate Accounting, you pick up the disclosure note:

Note 12—LEASES (in part)

Supplemental cash flow information related to leases was as follows:

| (in millions) | Fiscal Year Ended June 30, 2020 |
|---------------|------------------------------------|
|---------------|------------------------------------|

Cash paid for amounts included in the measurement of lease liabilities:

Note 12—LEASES (in part)

Supplemental cash flow information related to leases was as follows:

| (in millions) | Fiscal Year Ended June 30, 2020 |
|--|------------------------------------|
| Operating cash flows from operating leases | \$1,829 |
| Operating cash flows from finance leases | 336 |
| Financing cash flows from finance leases | 409 |
| <i>Right-of-use assets obtained in exchange for lease obligations:</i> | |
| Operating leases | 3,677 |
| Finance leases | 3,467 |

Required:

1. Why are there are operating cash flows for both types of leases, but only financing cash flows for finance leases?
2. To aid in your explanation, prepare a journal entry that summarizes the cash payments for operating leases during the year.
3. To aid in your explanation, prepare a journal entry that summarizes the cash payments for finance leases during the year.
4. Did Microsoft pay the amounts indicated in addition to incurring lease liabilities for the right-of-use assets for finance leases and operating leases? Why or why not?
5. To aid in your explanation, prepare a journal entry that summarizes the acquisition of assets by operating leases during the year.

IFRS Case 21–8 Statement of cash flows presentation, British Telecommunications  **LO21–3** through  **LO21–6**,  **LO21–9**

Real World Financials

British Telecommunications Plc (BT), a U.K. company, is the world's oldest communications company. The company prepares its financial statements in accordance with International Financial Reporting Standards. Locate BT's statement of cash flows from its website at www.bt.com/about.

Required:

1. What are the primary classifications into which BT's cash inflows and cash outflows are separated?
2. How are cash inflows from dividends and interest and cash outflows for dividends and interest classified in BT's cash flow statements?

Source: British Telecommunications Plc (BT)

Ethics Case 21–9 Where's the cash? LO21–1, LO21–3

After graduating near the top of his class, Ben Naegle was hired by the local office of a Big 4 CPA firm in his hometown. Two years later, impressed with his technical skills and experience, Park Electronics, a large regional consumer electronics chain, hired Ben as assistant controller. This was last week. Now Ben's initial excitement has turned to distress.

The cause of Ben's distress is the set of financial statements he's stared at for the last four hours. For some time prior to his recruitment, he had been aware of the long trend of moderate profitability of his new employer. The reports on his desk confirm the slight, but steady, improvements in net income in recent years. The trend he was just now becoming aware of, though, was the decline in cash flows from operations.

Ben had sketched out the following comparison (\$ in millions):

Page 1286

| | 2024 | 2023 | 2022 | 2021 |
|---------------------------|---------|---------|---------|---------|
| Income from operations | \$140.0 | \$132.0 | \$127.5 | \$127.0 |
| Net income | 38.5 | 35.0 | 34.5 | 29.5 |
| Cash flow from operations | 1.6 | 17.0 | 12.0 | 15.5 |

Profits? Yes. Increasing profits? Yes. The cause of his distress? The ominous trend in cash flow which is consistently lower than net income.

Upon closer review, Ben noticed three events in the last two years that, unfortunately, seemed related:

- a. Park's credit policy had been loosened; credit terms were relaxed and payment periods were lengthened.
- b. Accounts receivable balances had increased dramatically.

c. Several of the company's compensation arrangements, including that of the controller and the company president, were based on reported net income.

Required:

1. What is so ominous about the combination of events Ben sees?
2. What course of action, if any, should Ben take?

Data Analytics & Excel

Visit Connect to find a variety of Data Analytics activities that help build Excel, Tableau, and data visualization skills. Assignable materials include [Integrated Excel](#), [Data Visualizations](#), [Tableau Dashboard Activities](#), and [Applying Tableau Cases](#).

Continuing Cases

Target Case  LO21-2,  LO21-3,  LO21-4,  LO21-5,  LO21-6,  LO21-7

Target Corporation prepares its financial statements according to U.S. GAAP. Target's financial statements and disclosure notes for the year ended February 1, 2020, are available in Connect. This material is also available under the Investor Relations link at the company's website (www.target.com).

Required:

1. Did Target's cash provided by operating activities in fiscal 2019 increase or decrease from the previous year?
2. Is Target's cash provided by operating activities more or less than net income in fiscal 2019?
3. What is Target's largest investing activity?
4. Is Target increasing or decreasing its long-term debt?
5. Some transactions that don't increase or decrease cash must be reported in conjunction with a statement of cash flows. What activity of this type did Target report during each of the three years presented?

Air France–KLM Case  LO21-9

Air France–KLM (AF), a Franco-Dutch company, prepares its financial statements according to International Financial Reporting Standards. AF's financial statements and disclosure notes for the year ended December 31, 2019, are provided in Connect. This material is also available under the Finance link at the company's website (www.airfranceklm-finance.com).

Required:

1. What are the three primary classifications into which AF's cash inflows and cash outflows are separated?
2. Is this classification different than cash flow statements prepared in accordance with U.S. GAAP?
3. In which classification are cash inflows from dividends included in AF's cash flow statements?
4. Is this classification different than cash flow statements prepared in accordance with U.S. GAAP?

APPENDIX A

Derivatives

OVERVIEW

A complex class of financial instruments exists in financial markets in response to the desire of firms to manage risks. In fact, these financial instruments have been created solely to hedge against risks created by other financial instruments or by forecasted transactions that have yet to occur. These financial instruments often are called derivatives because they “derive” their values or contractually required cash flows from the value of some underlying security or index. Accounting for derivatives is the focus of this Appendix.

LEARNING OBJECTIVES

After studying this Appendix, you should be able to:

-  **LOA-1** Identify the major derivative securities used to hedge against risk. (p. A-3)
-  **LOA-2** Understand the way we account for fair value hedges. (p. A-8)
-  **LOA-3** Understand the way we account for cash flow hedges. (p. A-12)
-  **LOA-4** Understand the way we account for foreign currency hedges. (p. A-16)
-  **LOA-5** Describe disclosure requirements for derivatives and risk. (p. A-18)
-  **LOA-6** Understand the extended method for interest rate swap accounting. (p. A-18)

“ . . . derivatives are financial weapons of mass destruction . . . ”

– Warren Buffett, Berkshire Hathaway CEO

“. . . the growing use of complex financial instruments known as derivatives does not pose a threat to the country’s financial system . . .”

– Alan Greenspan, Federal Reserve Chair

“Used properly, derivative instruments don’t create surprises. They help minimize them.”

– David Weinberger, PAAMCO, Managing Director

In today’s global economy and evolving financial markets, businesses are increasingly exposed to a variety of risks, which, unmanaged, can have major impacts on earnings. Risk management, then, has become critical. Derivative financial instruments have become the key tools of risk management.¹

Derivatives are financial instruments that “derive” their values or contractually required cash flows from some other security or index. For instance, a contract allowing a company to buy a particular asset (for example, steel, gold, or wheat) at a designated future date at a *predetermined price* is a financial instrument that derives its value from

expected and actual changes in the price of the underlying asset. Financial futures, forward contracts, options, and interest rate swaps are the most frequently used derivatives. We discuss each of these in the paragraphs that follow. Derivatives are valued as tools to manage or hedge companies’ increasing exposures to risk, including interest rate risk, price risk, and foreign exchange risk. Companies may enter into derivatives to entirely or partially offset these risk exposures. The variety, complexity, and magnitude of derivatives have grown rapidly in recent years. Accounting standard-setters have scrambled to keep pace.

Multimillion-dollar losses by a number of high profile companies and the financial collapse of Bear Stearns and AIG² makes it tempting to conclude that derivatives are

risky business indeed. Certainly they can be quite risky if misused, but the fact is, these financial instruments exist to lessen, not increase, risk. Properly used, they serve as a form of “insurance” against risk. In fact, if a company is exposed to a substantial risk and does not hedge that risk, it is taking a gamble. On the other hand, if a derivative is used improperly, it can be a huge gamble itself.

Many observers are fearful that the size of the derivatives market poses significant risk to the economy. Some caution that the vast derivatives market could even cause the entire global financial system to crash, particularly if a large portion of the derivatives contracts are held for speculative purposes or are poorly conceived positions. Why? If interest rates rise, then many speculative interest rate swaps would incur losses. But it’s also the size of the interest rate swap

Derivatives are financial instruments that “derive” their values from some other security or index.

Derivatives serve as a form of “insurance” against risk.

market and the size of the resultant losses that prompts the anxiety. At the end of June 2020, the over-the-counter derivatives market was \$607 trillion. Yes, that's 607 with twelve zeroes (\$607,000,000,000,000). And, that's nearly over 31 times the U.S. gross domestic product. Eighty-two percent of those derivatives (\$495 trillion) are interest rate contracts.³ Our focus here, though, is not on the risk posed by the speculative use of derivatives, but instead on the use of derivatives to reduce company risk.

Derivatives Used to Hedge Risk

LOA-1 Identify the major derivative securities used to hedge against risk.

Hedging means taking an action that is expected to produce exposure to a particular type of risk that is *opposite* of a risk to which the company already is exposed.

Hedging means taking a risk position that is opposite to an actual position that is exposed to risk.

For instance, the volatility of interest rates creates exposure to interest-rate risk for companies that issue debt—which, of course, includes most companies. A company that arranges loans with floating (variable) interest rates is exposed to the risk that interest rates might increase and adversely affect borrowing costs. Similarly, a company that regularly reissues commercial paper (short-term notes) as it matures faces the possibility that new rates will be higher and cut into forecasted income. When borrowings are large, the potential cost can be substantial. So, the firm might choose to hedge its position by entering into a transaction that would produce a *gain* of roughly the same amount as the potential loss if interest rates do, in fact, increase. A way to do this is to enter into a contract that exchanges (swaps) floating rate payments for fixed interest payments, or vice versa, without exchanging the underlying notes.

Hedging is most commonly used to manage three areas of risk exposure: fair value risk, cash flow risk, and foreign currency risk. Hedging against *fair value risk* protects the existing financial instrument against changes in its fair value. Hedging against *cash flow risk* protects against market related fluctuations in the cash to be paid or cash to be received for items such as interest receivable and payable. Hedging against *foreign currency risk* protects against exchange rate fluctuations that would change the dollar equivalent that must be repaid or will be received on a contract denominated in a foreign currency. Let's look at some of the more common derivatives.

FUTURES

A **futures contract** is an agreement between a seller and a buyer that requires the seller to deliver a particular *commodity* (a nonfinancial asset such as corn, gold, or cattle) at a designated future date, at a *predetermined* price.

A **futures contract** allows a firm to sell (or buy) a commodity or a financial instrument at a designated future date, at today's price.

When the contract involves a *financial instrument*, such as a Treasury bond, Treasury bill, commercial paper, or a certificate of deposit, the agreement is referred to as a *financial futures contract*.⁴ These contracts are actively traded on regulated futures exchanges.

To appreciate the way these hedges work, let's think about a financial instrument. Recall that when interest rates *rise*, the market price of interest-bearing securities *goes down*. For instance, if you have an investment in a 10% bond and market interest rates go up to, say, 12%, your 10% bond is less valuable relative to other bonds paying the higher rate. Conversely, when interest rates *decline*, the market price of interest-bearing securities *goes up*. This risk that the investment's value might change is referred to as *fair value risk*. The company that issued the securities is faced with fair value risk also. If interest rates decline, the fair value of that company's debt would rise, a risk the borrower may want to hedge against. Later in this section, we'll look at an illustration of how the borrower would account for and report such a hedge.

Now let's look at the effect on a contract to sell or buy securities (or any asset for that matter) at preset prices. A party who contracts to *sell* securities at a *preset* price benefits when interest rates rise and the market price of

The seller in a financial futures contract realizes a gain (loss) when interest rates rise (decline).

those securities falls. Consequently, the value of the contract that gives one the right to sell securities at a preset price goes up as the market price declines. Thus, the seller in a futures contract derives a gain (loss) when interest rates rise (decline).⁵ Conversely, the party obligated to buy securities at a preset price experiences a loss. This risk of having to pay more cash or receive less cash is referred to as *cash flow risk*.

A common example of cash flow risk is borrowing money by issuing a variable (floating) rate note. If market interest rates rise, the borrower has to pay more interest. Similarly, the lender (investor) in the variable (floating) rate note transaction faces cash flow risk that interest rates will decline, resulting in lower cash interest receipts.

Let's look closer at how a financial futures contract can mitigate risk. Consider a company in April that will replace the \$10 million of 3.5% notes it owes to its bank with a new issuance of bonds to the public when the notes mature in June. The company is exposed to the risk that interest rates in June will rise, increasing borrowing costs. To counteract that possibility, the firm might enter a contract in April to deliver (sell) bonds in June at their *current* price.

Here's what happens then. If interest rates rise, borrowing costs will go up for our example company because it will have to issue debt securities (like notes payable or bonds payable) at a higher interest cost (or lower price). But that loss will be offset (approximately) by the gain produced by being in the opposite position on Treasury bond futures. Take note, though, this works both ways. If interest rates go down causing debt security prices to rise, the potential benefit of being able to issue debt at that lower interest rate (higher price) will be offset by a loss on the futures position.

Since there are no corporate bond futures contracts, the company trades Treasury bond futures, which will accomplish essentially the same purpose. In essence, the firm agrees to sell Treasury bonds in June at a price established now (April). Let's say it's April 6 and the price of Treasury bond futures on the Chicago Mercantile Exchange is quoted as 153.66.⁶ Since the trading unit of Treasury bond futures is a 15-year, \$100,000, 6% Treasury bond, the company might sell 65 Treasury bond futures to hedge the June issuance of debt. This would effectively provide a hedge of $65 \times \$100,000 \times 153.66\% = \$9,987,900$.⁷

A very important point about futures contracts is that the seller does not need to have actual possession of the commodity or financial instrument (the Treasury bonds, in this case), nor is the purchaser of the contract required to take possession of the commodity. In fact, virtually all financial futures contracts are "netted out" before the actual transaction is to take place. This is simply a matter of reversing the original position through an offsetting transaction. A seller closes out his transaction with a purchase. Likewise, a purchaser would close out her transaction with a sale. After all, the objective is not to actually buy or sell Treasury bonds (or whatever the commodity or financial instrument might be), but to incur the financial impact of movements in interest rates as reflected in changes in Treasury bond prices. Specifically, it will buy treasury bonds contracts at the lower price (to reverse its original position) at the same time it's issuing (selling) its new corporate bond issue at that same lower price. The financial futures market is an "artificial" exchange in that its reason for existing is to provide a mechanism to transfer risk from those exposed to it to those willing to accept the risk, not to actually buy and sell the underlying financial instruments.

If the impending debt issue being hedged is a short-term issue, the company may attain a more effective hedge by selling short-term futures, such as those based on Eurodollars or the secured overnight financing rate (SOFR), that also are traded in futures markets. The object is to get the closest association between the financial effects of interest rate movements on the actual transaction and the effects on the financial instrument used as a hedge.

The effectiveness of a hedge is influenced by the closeness of the match between the designated risk being hedged and the financial instrument chosen as a hedge.

FORWARD CONTRACTS

A **forward contract** is similar to a futures contract, but a forward contract is a customized contract between two parties that calls for either physical delivery or cash settlement on a designated date, whereas a futures contract permits the seller to decide later which specific day within the specified month will be the delivery date (if it gets as far as actual delivery before it is closed out). Also, unlike a futures contract, a forward contract usually is not traded on a market exchange. Instead, a forward contract usually is traded in an over-the-counter market using an “intermediary” that will find a seller for a buyer or a buyer for a seller (and who will customize the contract for the exact day, etc.)

To illustrate a nonfinancial forward contract, let’s say a large restaurant chain uses 500,000 pounds of avocados each year during the week of Cinco de Mayo to satisfy demand for its famous guacamole. In recent years, the price of avocados has fluctuated significantly. To reduce the *cash flow risk* associated with price volatility, the restaurant chain enters into a forward contract with an intermediary on October 31 to buy 500,000 pounds of avocados at a set price of \$2.80/lb, with delivery in six months (April 30). The *hedged transaction* is the forecasted purchase of avocados from suppliers. The *hedging instrument* is the forward contract arranged with an intermediary, and the *hedged risk* is the change in purchase price.

As we saw with the financial futures contract, the seller and purchaser do not need to exchange possession of the underlying commodity or financial instrument. Rather, the forward contract will settle by an exchange of cash between the restaurant chain and the intermediary based on the current market price for avocados on the date the contract is settled (April 30).

How does this impact the restaurant chain? If avocado prices rise and the restaurant chain pays more to suppliers of avocados, this increased cost will be offset by the gain from being in the opposite position in the forward contract. For example, assume the current market price on April 30 is \$3.00/lb. The company would receive cash from the settlement of the forward contract of \$100,000 ($[\$3.00 - \$2.80] \times 500,000$ pounds). At the same time, if avocado prices fall and the restaurant pays less to purchase avocados, this decrease in cost will be offset by the loss on the settlement of the forward position. In either scenario, however, the restaurant chain achieves its goal of reducing the cash flow risk related to price volatility—when considering the purchase of avocados from suppliers and the settlement of the forward contract with the intermediary, the restaurant ends up paying \$2.80/lb for avocados on April 30, regardless of the actual price movement.

OPTIONS

Options frequently are purchased to hedge exposure to the effects of changing interest rates. In that respect, options serve the same purpose as futures but are fundamentally different. An option

on a financial instrument—such as a U.S. Treasury bond—gives its holder the right either to buy (call option) or to sell (put option) the Treasury bond at a specified price and within a given time period. Importantly, though, the option holder has no obligation to exercise the option. In contrast, the holder of a futures contract must buy or sell within a specified period unless the contract is closed out before delivery comes due.

To illustrate a nonfinancial option contract, let's reconsider the example of the restaurant chain that wants to protect itself from rising avocado prices. Let's say the restaurant chain is able to enter into a contract that gives it the *option* to purchase 500,000 pounds of avocados in six months at the price of \$2.80/lb. Assume this option contract has an initial premium of \$0.02 per avocado, or \$10,000. That is, the restaurant pays a premium for the *right* (but not the obligation) to buy avocados in the future at the current market price. If the price of avocados increases to \$3.00/lb, then the outcome of an option contract will be similar to what we saw with the forward contract: the restaurant chain will exercise its option and receive \$100,000 ($[\$3.00 - \$2.80] \times 500,000$ pounds) upon settlement of the option. Because the restaurant chain paid an initial premium, the net cash effect of the option contract ($\$90,000 = \$100,000$ cash settlement $- \$10,000$ premium) would be less than in the forward contract example ($\$100,000$ cash settlement). Unlike the forward contract, however, if avocado prices fall, then the restaurant chain does not have to pay to settle the option contract. Rather, it will let the option expire, and the restaurant chain will only be “out” the option premium.

FOREIGN CURRENCY FUTURES

Foreign loans frequently are denominated in the currency of the lender (Japanese yen, Mexican peso, Euro, and so on). When loans must be repaid in foreign currencies, a new element of risk is introduced. This exposure occurs because when exchange rates change, the U.S. dollar equivalent of the foreign currency that must be repaid differs from the U.S. dollar equivalent of the foreign currency borrowed.

To hedge against “foreign exchange risk” exposure, some firms buy or sell **foreign currency futures** contracts. These are similar to financial futures except specific foreign currencies are specified as the underlying in the futures contracts rather than specific debt instruments. They work the same way to protect against foreign exchange risk as financial futures protect against fair value or cash flow risk.

Foreign exchange risk often is hedged in the same manner as interest rate risk.

INTEREST RATE SWAPS

Over 82% of derivatives are interest rate contracts, of which 75% are **interest rate swaps**. These contracts

Interest rate swaps exchange fixed interest payments for floating rate

exchange (swap) fixed interest payments for floating rate payments, or vice versa, without exchanging the underlying debt instruments. For example, suppose you owe \$100,000

payments, or vice versa, without exchanging the underlying notional (principal) amounts.

on a 10% fixed rate home loan. You envy your neighbor who also is paying 10% on her \$100,000 mortgage, but hers is a floating rate loan, so if market rates fall, so will her loan rate. To the contrary, she is envious of your fixed rate, fearful that rates will rise, increasing her payments. A solution would be for the two of you to effectively swap interest payments using an interest rate swap agreement. The way a swap works, you both would continue to actually make your own interest payments to your respective lenders, but you would exchange with each other the net cash difference between payments at specified intervals. In this case, if market rates (and thus floating payments) increase, you would pay your neighbor; if rates fall, she pays you. The net effect is to exchange the consequences of rate changes: you have effectively converted your fixed rate debt to floating rate debt, and your neighbor has done the opposite.

Of course, this technique is not dependent on happening into such a fortuitous pairing of two borrowers with opposite philosophies on interest rate risk. Instead, banks or other intermediaries (such as hedge funds) offer, for a fee, one-sided swap agreements to companies desiring to be either fixed-rate payers or variable-rate payers. Intermediaries usually strive to maintain a balanced portfolio of matched, offsetting swap agreements.

Theoretically, the two parties in a swap transaction exchange principal amounts, like the \$100,000 amount above, in addition to the interest on those amounts. However, it makes no practical sense for the companies to send each other \$100,000. Instead, the principal amount is not actually exchanged but serves merely as the computational base for interest calculations and is called the *notional amount*. Similarly, the two parties typically do not send each other the full interest payments being swapped. Rather, only the net amount is exchanged. For example,

Illustration A-1 provides a visualization of an interest rate swap. In this example, Company A pays its lender a fixed rate of 10%, and Company B pays its lender a floating rate that is currently 9%. The two companies enter into an interest rate swap. Company A will receive a fixed rate payment from Company B and will pay Company B the floating rate (and Company B will receive and pay the opposite). However, Company A and Company B don't actually send each other the notional amounts, nor will they exchange full interest payments. Instead, on the payment date, only the net amount (in this case, a \$1,000 net payment from Company B to Company A) is exchanged.

Swap of annual payments on \$100,000 notional amount. Fixed interest rate: 10% (\$10,000)

Creativa Images/Shutterstock

At the time of the settlement date, assume the floating rate is 9% (\$9,000). Company B pays Company A \$1,000.

The result of the swap:

Company A: Pays \$10,000 to lender – \$1,000 net cash settlement on swap = \$9,000 floating amount

Company B: Pays \$9,000 to lender + \$1,000 net cash settlement on swap = \$10,000 fixed amount

From an accounting standpoint, however, the central issue is not the operational differences among various hedge instruments. Instead, the accounting focuses on their similarities in functioning as hedges against risk.

Accounting for Derivatives

A key to accounting for derivatives is knowing the purpose for which a company holds them and whether the company is effective in serving that purpose. When derivatives are held for risk management (hedging activities), the intended effect is a reduction in risk. On the other hand, derivatives sometimes are held for speculative position taking, hoping for large profits. The effect of speculative activity often *increases* risk.

It's important to understand that, serving as investments rather than as hedges, derivatives are extremely speculative. This is due to the high leverage inherent in derivatives. While the investment outlay usually is negligible, the potential gain or loss on the investment can be quite high. A small change in interest rates or another underlying event can trigger a large change in the fair value of the derivative. Because the initial investment was minimal, the change in value relative to the investment itself represents a huge percentage gain or loss. The extraordinarily risky nature of derivative investments prompted Warren Buffett, one of the

Derivatives not serving as hedges are extremely speculative due to the high leverage inherent in such investments.

country's most celebrated financiers, to refer to derivatives as "financial weapons of mass destruction." To better reflect differences in underlying economics and risks, accounting for derivatives is designed to treat differently (a) derivatives designated as hedges and those not designated as hedges, as well as (b) intended hedges that are highly effective and those that are not.⁸

The basic approach to accounting for derivatives is fairly straightforward, although implementation can be quite cumbersome. All derivatives, no exceptions, are carried on the balance sheet as either assets or liabilities at fair (or market) value.⁹ The reasoning is that (a) derivatives create either rights or obligations that meet the definition of assets or liabilities, and (b) fair value is the most meaningful measurement.

Each derivative contract has a "fair value," which is an amount that one side owes the other at a particular moment.

Accounting for the gain or loss on a derivative depends on how it is used. Specifically, if the derivative is not designated as a hedging instrument or doesn't qualify as one, any gain or loss from fair value changes is recognized immediately in earnings. On the other hand, if a derivative is used to hedge against exposure to risk, any gain or loss from fair value changes is either (a) recognized immediately in earnings along with an offsetting loss or gain on the item being hedged or (b) deferred in comprehensive income until it can be recognized in earnings at the same time as earnings are affected by a hedged transaction. Which way depends on whether the derivative is designated as a (a) fair value hedge, (b) cash flow hedge, or (c) foreign currency hedge. Let's look now at each of the three hedge designations.

FAIR VALUE HEDGES

LOA-2 Understand the way we account for fair value hedges.

A company can be adversely affected when a change in either prices or interest rates causes a change in the fair value of one of its assets, its liabilities, or a commitment to buy or sell assets or liabilities. If a derivative is used to hedge against the exposure to changes in the fair value of an asset, liability, or a firm commitment, it can be designated as a **fair value hedge**. In that case, when the derivative is adjusted to reflect changes in fair value, the other side of the entry recognizes a gain or loss to be included *currently* in earnings. At the same time, though, the loss or gain from changes in the fair value of the hedged item due to the specific risk being hedged¹⁰ also

A gain or loss from a *fair value hedge* is recognized immediately in earnings, along with the loss or gain from the item being hedged.

is included currently in earnings. This means that to the extent the hedge is effective in serving its purpose, the gain or loss on the derivative will be offset by the loss or gain on the item being hedged. In fact, this is precisely the concept behind the procedure, and offsetting effects of the derivative and the hedged item are reported in the same line item in the income statement.

Hedge accounting rules require that changes in the fair value of the hedged item be recognized in income, even if that item (say, notes payable) is typically measured at amortized cost. This offsetting allows for a better reflection of the intent and effect of having the hedging instrument.

The income effects of the hedge instrument and the income effects of the item being hedged should affect earnings at the same time and in the same income statement line item.

Without these special hedge accounting rules, measuring the derivative at fair value with changes going into earnings would result in a mismatch between the gains and losses on the hedging instrument and the timing of gains and losses on the hedged item.

Some of the more common uses of fair value hedges are:

- An interest rate swap to synthetically convert fixed-rate debt (for which interest rate changes could change the fair value of the debt) into floating-rate debt.
- A futures contract to hedge changes in the fair value (due to price changes) of aluminum, sugar, or some other type of inventory.
- A futures contract to hedge the fair value (due to price changes) of a firm commitment to sell natural gas or some other asset.

ILLUSTRATION OF FAIR VALUE HEDGE

Because interest rate swaps comprise the majority of derivatives in use, we will use swaps to illustrate accounting for derivatives. Let's look at the example in  **Illustration A-2**, which illustrates the shortcut method. The shortcut method can be used only for an interest-bearing asset or liability that meets certain criteria. Under the shortcut method, the hedge is assumed to be perfectly effective and, therefore, the change in the fair value of the hedged item due to interest rate risk is assumed to be the same as the change in the fair value of the interest rate swap.

Illustration A-2 Interest Rate Swap—Shortcut Method

Summer Semiconductors issued \$1 million of 18-month, 10% notes payable to Third Bank on January 1, 2024. Summer is exposed to the risk that general interest rates will decline, causing the fair value of its debt to rise. (If the fair value of Summer's debt increases, its effective borrowing cost is higher relative to the market.)

- To hedge against this fair value risk, the firm also enters into an 18-month interest rate swap agreement and designated the swap as a hedge against changes in the fair value of the note. The fair value of the swap at inception is zero.
- Summer will pay the 10% fixed rate to the bank on its notes payable obligation. The swap calls for the company to *receive payment* from the intermediary based on a 10% fixed interest rate on a notional (principal) amount of \$1 million and to *make payment* based on a floating interest rate tied to changes in general rates.* The actual cash settlement on the swap will be a net payment to the appropriate party.

As the Illustration shows, this effectively converts Summer's fixed-rate debt to floating-rate debt. Cash settlement of the net interest amount is made semiannually at June 30 and December 31 of each year, with the net interest being the difference between the \$50,000 fixed interest [$\$1 \text{ million} \times (10\% \times \frac{1}{2})$] and the floating interest rate at the beginning of the period.

Floating (market) settlement rates were 9% at June 30, 2024, 8% at December 31, 2024, and 9% at June 30, 2025. Net interest receipts can be calculated as shown below. Fair values of the derivative resulting from those market rate changes are assumed to be quotes obtained from securities dealers. For simplicity, this example also assumes a flat yield curve and that the change in the benchmark rate and the change in the benchmark swap rate are the same.

| | 1/1/24 | 6/30/24 | 12/31/24 | 6/30/25 |
|---|--------|---------------|---------------|---------------|
| Fixed rate - notes payable | 10% | 10% | 10% | 10% |
| Receive fixed rate - swap | 10% | 10% | 10% | 10% |
| Pay floating rate - swap | 10% | 9% | 8% | 9% |
| Fixed-rate receipts [$\$1 \text{ million} \times (10\% \times \frac{1}{2})$] | | \$ 50,000 | \$ 50,000 | \$ 50,000 |
| Floating-rate payments [$\$1 \text{ million} \times \frac{1}{2}$ floating rate at beginning of period] | | <u>50,000</u> | <u>45,000</u> | <u>40,000</u> |
| Net interest receipts on swap | | \$ 0 | \$ 5,000 | \$ 10,000 |
| Fair value of interest rate swap | \$ 0 | \$ 9,363 | \$ 9,615 | \$ 0 |

*A common measure for benchmarking variable interest rates is SOFR, the Secured Overnight Financing Rate, a base rate at which large financial institutions lend funds to each other. Prior to 2021, LIBOR (the London Interbank Offered Rate) was a commonly used benchmark in contracts. However, it was recently phased out due to concerns about its reliability.

When the floating rate declined from 10% to 9%, the fair values of both the derivative (swap) and the note increased. The shortcut method allows the company to assume that the carrying amount of its debt increased by the same amount as the fair value of the swap. This created an offsetting holding gain on the derivative and a holding loss on the note. Both are recognized in earnings at the same time (at June 30, 2024). The changes in fair value are presented in the same line item as the earnings effect of the underlying hedged item. In this example, then, we record these holding gains and losses as decreases or increases in interest expense.

The interest rate swap is designated as a fair value hedge on this note at issuance.

The fair value of derivatives is recognized in the balance sheet.

The change in fair value of the derivative and of the hedged liability are reported in the same income statement line item as the earnings effect of the hedged item.

| | | |
|--|-----------|-----------|
| January 1, 2024 | | |
| Cash | 1,000,000 | |
| Notes payable | | 1,000,000 |
| <i>To record the issuance of the note.</i> | | |
| June 30, 2024 | | |
| Interest expense (10% × ½ × \$1 million) | 50,000 | |
| Cash | | 50,000 |
| <i>To record interest on the note.</i> | | |
| Interest rate swap* (\$9,363 – \$0) | 9,363 | |
| interest expense | | 9,363 |
| <i>To record change in fair value of the derivative.</i> | | |
| Interest expense | 9,363 | |
| Notes payable (same as swap adjustment) | | 9,363 |
| <i>To record change in fair value of the note due to interest rate changes.</i> | | |
| *This would be a liability rather than an investment (asset) if the fair value had declined. | | |

In a typical swap agreement, the rates are determined or “reset” at the beginning of the settlement period, but the net cash settlement occurs at the end of the period based on those beginning-of-period rates. Therefore, at June 30, 2024, the net interest settlement is \$0 because the fixed rate and the floating rate are both 5% (half of the 10% annual rate) at the beginning of the period (at January 1, 2024).

As with any debt, interest expense is the effective rate times the outstanding balance.

The swap settlement is the difference between the fixed interest (5%) and variable interest (4.5%).

The derivative is increased by the change in fair value. The note is increased by the same change in fair value.

| December 31, 2024 | | |
|---|--------|--------|
| Interest expense | 50,000 | |
| Cash ($10\% \times \frac{1}{2} \times \$1,000,000$) | | 50,000 |
| <i>To record interest on the note.</i> | | |
| Cash [\$50,000 – ($9\% \times \frac{1}{2} \times \1 million)] | 5,000 | |
| Interest expense | | 5,000 |
| <i>To record the net cash settlement on the swap.</i> | | |
| Interest rate swap ($\$9,615 - \$9,363$) | 252 | |
| Interest expense | | 252 |
| <i>To record the change in fair value of the derivative.</i> | | |
| Interest expense | 252 | |
| Notes payable (same as swap adjustment) | | 252 |
| <i>To record the change in fair value of the note due to interest rate changes.</i> | | |

On December 31, 2024, the net interest settlement (receipts) is \$5,000 because the fixed rate is 5% (half of the 10% annual rate) and the floating rate is 4.5% (half of the 9% annual rate) at the beginning of the period. The fair value of the swap increased by \$252 (from \$9,363 to \$9,615). Similarly, we adjust the note's carrying value by that same change under the shortcut method.

In other words, we assume there is a holding loss on the note that exactly offsets the gain on the swap. This result is the hedging effect that motivated Summer to enter the fair value hedging arrangement in the first place.

At June 30, 2025, Summer repeats the process of adjusting to fair value both the derivative investment and the note being hedged.

The net interest received is the difference between the fixed interest (5%) and floating interest (4%).

The swap's fair value now is zero.

| June 30, 2025 | | |
|---|--------|--------|
| Interest expense | 50,000 | |
| Cash ($10\% \times \frac{1}{2} \times \$1,000,000$) | | 50,000 |
| <i>To record interest on the note.</i> | | |

| | | |
|---|-----------|-----------|
| Cash [\$50,000 - (8% × ½ × \$1 million)] | 10,000 | |
| Interest expense | | 10,000 |
| <i>To record the change in fair value of the derivative.</i> | | |
| Interest expense | 9,615 | |
| Interest rate swap (\$0 - \$9,615) | | 9,615 |
| <i>To record the change in fair value of the derivative.</i> | | |
| Notes payable (same as swap adjustment) | 9,615 | |
| Interest expense | | 9,615 |
| <i>To record the change in fair value of the note due to interest rate changes.</i> | | |
| Notes payable | 1,000,000 | |
| Cash | | 1,000,000 |
| <i>To repay the loan.</i> | | |

The net interest received is the difference between the fixed rate (5%) and floating rate (4%) times \$1 million. The fair value of the swap decreased by \$9,615 (from \$9,615 to zero).¹¹ That decline represents a holding *loss* that we recognize in earnings. Again, under the shortcut method, we record a perfectly offsetting holding gain on the note for the change in fair value due to changes in interest rates.

Here is an illustration of how the carrying values changed for the swap account and the note:

| | Swap | | Note | |
|---------------|-------|-------|-----------|-----------|
| Jan. 1, 2024 | | | | 1,000,000 |
| June 30, 2024 | 9,363 | | | 9,363 |
| Dec. 31, 2024 | 252 | | | 252 |
| June 30, 2025 | | 9,615 | 9,615 | |
| | | | 1,000,000 | |
| | 0 | | | 0 |

The income statement is affected as follows:

| Income Statement + (-) | | |
|------------------------|-------------------|---|
| June 30, 2024 | \$(50,000) | Interest expense—fixed payment to lender |
| | 9,363 | Interest expense—gain on interest rate swap |
| | (9,363) | Interest expense—loss on hedged note |
| | \$(50,000) | Net effect—same as floating interest payment |

| | | |
|---------------|-------------------|---|
| Dec. 31, 2024 | \$(50,000) | Interest expense—fixed payment to lender |
| | 5,000 | Interest expense—net cash settlement on swap |
| | 252 | Interest expense—gain on interest rate swap |
| | <u>(252)</u> | Interest expense—loss on hedged note |
| | \$(45,000) | Net effect—same as floating interest payment |
| June 30, 2025 | \$(50,000) | Interest expense—fixed payment to lender |
| | 10,000 | Interest expense—net cash settlement on swap |
| | (9,615) | Interest expense—loss on interest rate swap |
| | <u>9,615</u> | Interest expense—gain on hedged note |
| | \$(40,000) | Net effect—same as floating interest payment |

As this demonstrates, the swap effectively converts fixed-interest debt to floating-interest debt. More importantly, the swap allows the company to hedge against changes in the fair value of its debt due to changing interest rates with offsetting changes in the fair value of the interest rate swap.

Additional Consideration

Fair Value of the Swap

The fair value of a derivative typically is based on a quote obtained from a derivatives dealer. That fair value will approximate the present value of the expected net interest settlement receipts for the remaining term of the swap. In fact, we can actually calculate the fair value of the swap that we accepted as given in our illustration.

Since the June 30, 2024, floating rate of 9% caused the cash settlement on that date to be \$5,000, it's reasonable to look at 9% as the best estimate of future floating rates and therefore assume the remaining two cash settlements also will be \$5,000 each. We can then calculate at June 30, 2024, the present value of those expected net interest settlement receipts for the remaining term of the swap.

| | | |
|---|--|--------------------|
| Fixed interest | $10\% \times \frac{1}{2} \times \1 million | \$ 50,000 |
| Expected floating interest | $9\% \times \frac{1}{2} \times \1 million | <u>45,000</u> |
| Expected cash receipts for both Dec. 31, 2024 and June 30, 2025 | | \$ 5,000 |
| | | $\times 1.87267^*$ |

Present value of expected net interest settlement receipts for the remaining term

\$ 9,363

*Present value of an ordinary annuity of \$1: $n = 2, i = 4.5\%$ ($\frac{1}{2}$ of 9%) (from Table 4)

Fair Value of the Notes

The fair value of the note payable will be the present value of principal and remaining interest payments discounted at the market rate. The market rate will vary with the designated floating rate. Under the shortcut method, we assume a perfect hedge and that the market rate only varies with the floating rate. (We ignore variations due to changes in default risk and/or interest rate term structure.) Assuming it's 9% at June 30, 2024, we can calculate the fair value (present value) of the notes.

| | | |
|--|---|--------------------|
| Interest | $\$50,000^* \times 1.87267^\dagger =$ | \$ 93,633 |
| Principal | $\$1,000,000 \times 0.91573^\ddagger =$ | 915,730 |
| Present value of remaining principal and interest payments | | <u>\$1,009,363</u> |

* $\frac{1}{2}$ of $10\% \times \$1,000,000$

† Present value of an ordinary annuity of \$1: $n = 2, i = 4.5\%$ (from Table 4)

‡ Present value of \$1: $n = 2, i = 4.5\%$ (from Table 2)

Note: This illustration featured a “plain-vanilla” interest rate swap, where the swap’s variable interest rate is determined (reset) at the beginning of the period, and payment occurs at the end of the period. However, there also can be interest rate swap-in-arrears, where the swap’s variable interest rate is determined at the end of the period and is applied retroactively to calculate the swap settlement. Had this arrangement been in effect in the current illustration, the first cash settlement would have been received on June 30, 2024, and there would have been a total of three cash settlements. It would not have affected the changes in the fair value of the hedge or the assumptions of the shortcut method. Also, in this example, all terms of the swap exactly match the terms of the underlying hedged item, including the interest rate. Thus, the calculated change in the fair value of the debt exactly matches the change in the fair value of the hedging instrument. However, this does not have to be true to qualify for the shortcut method. For instance, the interest rate on the hedged item and the interest rate on the swap can differ, as long as it’s by a constant amount throughout the contract.

CASH FLOW HEDGES

LOA-3 Understand the way we account for cash flow hedges.

The risk in some transactions or events is the risk of a change in cash flows, rather than a change in fair values. We noted earlier that *fixed-rate* debt subjects a company to the risk that interest rate changes could change the fair value of the debt. If the obligation is *floating-rate* debt, the fair value of the debt will *not* change when interest rates

do, but cash flows *will* change. If a derivative is used to hedge against the exposure to changes in cash inflows or cash outflows of an asset or liability or a forecasted transaction (like a future purchase or sale), it can be designated as a **cash flow hedge**. In a cash flow hedge, when the derivative is adjusted to reflect changes in fair value, the gain or loss on the derivative instrument is *deferred* as a component of other comprehensive income. It's included in earnings later, at the same time as earnings are affected by the hedged transaction. At that date, it's reported in the same income statement line item as the effects of the hedged item.

A gain or loss from a *cash flow hedge* is deferred as other comprehensive income until it can be recognized in earnings along with the earnings effect of the item being hedged.

Let's consider a cash flow hedge of a commodity purchase. Assume we purchase and hold an inventory of oats for use in our manufacturing process. Any changes in the price of oats will affect cost of goods sold when we sell our food items produced with oats. Thus, we would enter into a derivative contract to hedge against the risk of rising oats prices. As prices increase between the inception of the contract and the sale of inventory, we will defer (with a credit to Other comprehensive income) any increase in the value of the hedging contract. Then, when the product is sold, we *debit* Other comprehensive income and reduce (*credit*) cost of goods sold. Once again, the effect of hedging to match the earnings effect of the derivative (reduce cost of goods sold, increasing earnings) with the earnings effect of the item being hedged (increase cost of goods sold, decreasing earnings). Stated differently, when it's time for income statement recognition of the item being hedged, the accumulated change in the hedging contract that's been reflected in accumulated other comprehensive income will be reclassified out of that account and into the income statement along with effect of the item being hedged.

To understand the deferral of the gain or loss, we need to revisit the concept of comprehensive income. Comprehensive income, as you may recall from [15 Chapters 4](#), [12](#), [17](#), and [18](#), is a more expansive view of the change in shareholders' equity than traditional net income. It encompasses all changes in equity other than from transactions with owners.¹² In addition to net income itself, comprehensive income includes up to four other changes in equity that don't (yet)

belong in net income, namely, net holding gains (losses) on investments in debt securities ( **Chapter 12**), gains (losses) from, and amendments to, postretirement benefit plans ( **Chapter 17**), gains (losses) from foreign currency translation, and deferred gains (losses) from derivatives designated as cash flow hedges and those designated as qualifying hedging relationships.¹³

Some of the more commonly used cash flow hedges are

- An interest rate swap to synthetically convert floating-rate debt (for which interest rate changes could change the cash interest payments) into fixed-rate debt.
- A futures contract to hedge a forecasted sale (for which price changes could change the cash receipts) of natural gas, crude oil, or some other asset.
- A forward contract to hedge a forecasted purchase (for which price changes could change the cash payments) of a commodity.

A company can designate the hedged risk as the overall change in cash flows of a hedged item or the change in cash flows attributable to a contractually specified component of a forecasted purchase or sale or a contractually specified interest rate in floating-rate debt.

ILLUSTRATION OF CASH FLOW HEDGE—INTEREST RATE SWAP

Let's assume once again that we have a company that enters into an interest rate swap. However, in  **Illustration A-3**, the company seeks to hedge exposure to cash flow risk from interest rate volatility.

Illustration A-3 Cash Flow Hedge; Interest Rate Swap (Floating Rate to Fixed Rate)—Shortcut Method

On January 1, 2024, Desai Company issues \$2 million of floating-rate debt based on SOFR, with interest paid annually.

- The debt has 3 years to maturity, and the SOFR rate is 5% at issuance.
- Interest payments on the debt, based on beginning-of-year rates, are due on December 31 of each year, and the variable rate is reset after the payment is made.
- Desai is exposed to the risk that interest rates will rise, which will increase its periodic interest payments.
- To hedge against this cash flow risk, the firm entered into a 3-year interest rate swap agreement on January 1 and designated the swap as a cash flow hedge because it

protects Desai from having to make higher cash outflows for interest if interest rates do rise. At inception, the fair value of the hedge is zero.

- The swap calls for the company to pay a fixed interest rate of 5% and receive SOFR based on a notional amount of \$2 million.
- Settlements on the interest rate swap will be made annually on December 31, with interest rate resets after settlement at beginning-of-year rates.
- Assume that SOFR rates are reset to 5.5% at December 31, 2024, 4.75% at December 31, 2025, and 6.5% at December 31, 2026.
- The market value of the note in this case does not change as interest rate fluctuates, because the note carries a variable interest rate.
- Fair values of the interest rate swap at the end of each accounting period are assumed to be quotes by securities dealers.
- Net cash settlements for the swap are calculated as shown below:

| | 1/1/24 | 12/31/24 | 12/31/25 | 12/31/26 |
|---|--------|----------------|----------------|---------------|
| Floating rate - \$2 million debt to lender | 5% | 5.5% | 4.75% | 6.5% |
| Pay fixed rate - swap | 5% | 5% | 5% | 5% |
| Receive floating rate - swap | 5% | 5.5% | 4.75% | 6.5% |
| Fixed-rate payments | | | | |
| Fixed-rate payments (\$2 million × 5%) | | \$ 100,000 | \$ 100,000 | \$ 100,000 |
| Floating-rate receipts (\$2 million × floating rate at beginning of period) | | <u>100,000</u> | <u>110,000</u> | <u>95,000</u> |
| Net interest receipts (payments) on swap | | \$ 0 | \$ 10,000 | \$ (5,000) |
| Fair value of interest rate swap | \$0 | \$ 18,463 | \$ (4,773) | \$ 0 |

As the illustration shows, this swap effectively converts Desai's variable-rate debt to fixed-rate debt. Assume that Desai qualifies to apply the shortcut method to assess hedge effectiveness.

January 1, 2024

| | | |
|---------------|-----------|-----------|
| Cash | 2,000,000 | |
| Notes payable | | 2,000,000 |

To record the issuance of the floating-rate debt.

December 31, 2024

| | | |
|--|---------|---------|
| Interest expense (5% × \$2 million) | 100,000 | |
| Cash | | 100,000 |
| <i>To record interest on the note.</i> | | |
| Interest rate swap | 18,463 | |
| Other comprehensive income (OCI)—gain | | 18,463 |
| <i>To record the change in the fair value of the derivative.</i> | | |

At December 31, 2024, there is no cash exchanged for settlement of the interest rate swap, because the cash settlement is based on beginning-of-year rates (when both the fixed and floating rates were 5%). Desai does recognize an increase in the fair value of the interest rate swap, related to the rising interest rates in the upcoming year. This increase in fair value is recognized in other comprehensive income.

December 31, 2025

| | | |
|--|---------|---------|
| Interest expense (5.5% × \$2 million) | 110,000 | |
| Cash | | 110,000 |
| <i>To record interest on the note.</i> | | |
| Cash [(5.5% × \$2 million) - \$100,000] | 10,000 | |
| Interest expense | | 10,000 |
| <i>To record the net cash settlement on the swap.</i> | | |
| Other comprehensive income (OCI)—loss | 23,236 | |
| Interest rate swap | | 23,236 |
| <i>To record the change in the fair value of the derivative from an asset of \$18,463 to a liability of \$4,773.</i> | | |

The net cash settlement received on the swap is the difference between the floating rate at the beginning of (5.5%) and the fixed rate (5%) times \$2 million notional amount. The effect of the net cash settlement is to set total cash outflows related to interest at \$100,000, which is equivalent to paying the fixed rate of 5%. This result is the cash flow hedging effect that motivated Desai to enter the derivative arrangement.

At December 31, 2025, Desai repeats the process of adjusting the derivative to fair value. Because interest rates have decreased and Desai anticipates a future net cash payment, the swap represents a liability to the company. Once again, the change in the fair value of the derivative (from an asset to a liability) is recognized into other comprehensive income.

| December 31, 2026 | | |
|---|-----------|-----------|
| Interest expense (4.75% × \$2 million) | 95,000 | |
| Cash | | 95,000 |
| <i>To record interest on the note.</i> | | |
| Interest expense | 5,000 | |
| Cash [(4.75% × \$2 million) - \$100,000] | | 5,000 |
| <i>To record the net cash settlement on the swap.</i> | | |
| Notes payable | 2,000,000 | |
| Cash | | 2,000,000 |
| <i>To repay the debt.</i> | | |
| Interest rate swap | 4,773 | |
| Other comprehensive income | | 4,773 |
| <i>To close out the swap contract account; the swap contract was a liability of \$4,773 and now has a fair value of zero.</i> | | |

At December 31, 2026, the fair value of the interest rate swap has decreased to zero because there are no additional cash settlements expected, and the debt and the swap have now matured. All earnings effects of the hedged item and derivative instrument have been recorded in the income statement as interest expense.

Total cash flows are affected as follows:

Page A-15

| | | |
|-------------------|---------------------------------------|--------------------|
| December 31, 2024 | Payment on floating rate debt (5%) | (\$100,000) |
| | Net settlement on interest rate swap | <u>0</u> |
| | Total cash outflow | (\$100,000) |
| December 31, 2025 | Payment on floating rate debt (5.5%) | (\$110,000) |
| | Net settlement on interest rate swap | <u>10,000</u> |
| | Total cash outflow | (\$100,000) |
| December 31, 2026 | Payment on floating rate debt (4.75%) | (\$ 95,000) |
| | Net settlement on interest rate swap | <u>(5,000)</u> |
| | Total cash outflow | (\$100,000) |

This demonstrates that the interest rate swap designated as a cash flow hedge effectively converts the floating-rate debt to fixed-rate debt.

A company also can use a forward contract to hedge the risk of change in cash flows attributable to a component of a forecasted purchase of a commodity.

ILLUSTRATION OF CASH FLOW HEDGE—FORWARD CONTRACT

Let's assume that we have a company that seeks to hedge exposure to cash flow risk, this time from a forecasted purchase of a commodity. We see this scenario in  **Illustration A-4**. The shortcut method is not available because that can only be used for hedging relationships involving an interest-bearing asset or liability. A forecasted transaction of a nonfinancial commodity does not fit that category. However, the company can assume the hedge is perfectly effective using the critical-terms match.

Illustration A-4 Cash Flow Hedge; Forward Contract

Cavalier Bicycles uses carbon fiber to produce its high-performance road and mountain bikes. Cavalier anticipates it will need to purchase 45,000 pounds of carbon fiber in July 2025 to make enough bikes to meet its fourth quarter sales demand. However, if the price of carbon fiber increases, the cost to produce the bikes will increase and, in turn, lower Cavalier's profit margins.

To hedge against the risk of rising carbon fiber prices, on June 1, 2025, Cavalier enters into a forward contract with a third-party intermediary to buy 45,000 pounds of carbon fiber at the current spot price of \$10 per pound. It designates the contract as a cash flow hedge of the anticipated carbon fiber purchase because the hedged risk is attributable to the volatility in carbon fiber prices.

The price in the contract expires on July 31, 2025, and the contract will settle by an exchange of cash with the intermediary based on the spot price on the settlement date. As the illustration will show, Cavalier uses this forward contract to lock in the cost of its inventory at the prevailing market price of \$450,000 (45,000 pounds \times \$10 per pound).

June 1, 2025 No entry is required, because the current spot price equals the contract price. Thus, the forward contract has no value.

June 30, 2025

| | | |
|--|--------|--------|
| Forward contract $[(\$10.50 - \$10.00) \times 45,000]$ | 22,500 | |
| Other comprehensive income (OCI)—gain | | 22,500 |

To record the change in the fair value of the

derivative.

At June 30, 2025, the spot price of carbon fiber has increased. Therefore, the value of the forward contract to Cavalier Bicycles has increased, as Cavalier is able to buy carbon fiber at a lower price than current market prices. Thus, Cavalier reports the forward contract in the balance sheet as an asset, with the gain on the derivative deferred as a component of other comprehensive income. Cavalier will recognize this gain in current earnings when the hedged item—in this case the cost of carbon fiber—is recognized in earnings (when the produced inventory is sold).

If Cavalier purchases 45,000 pounds of carbon fiber on July 2, 2025, for \$10.50, it would make the following entries to record the purchase of inventory and the settlement of the forward contract:

Page A-16

| July 2, 2025 | | |
|--|---------|---------|
| Inventory—Carbon Fiber | 472,500 | |
| Cash ($\$10.50 \times 45,000$ pounds) | | 472,500 |
| <i>To record purchase of inventory.</i> | | |
| Cash [$(\$10.50 - \$10.00) \times 45,000$] | 22,500 | |
| Forward contract | | 22,500 |
| <i>To record settlement of the forward contract.</i> | | |

The \$22,500 forward contract settlement offsets the amount paid to purchase the inventory at the prevailing market price of \$472,500. The result is a net cash outflow of \$10 per pound, and an effective hedge of the cash flow for the purchase of inventory.

Cavalier defers the income effects of the forward contract in other comprehensive income until the period in which it sells the inventory, affecting earnings through the same line item as the hedged item—cost of goods sold. That is, the higher purchase price (\$472,500) is reflected in cost of goods sold as the inventory is sold, but that higher price is offset by the previously deferred gain on the forward contract (\$22,500) as Cavalier debits other comprehensive income and credits (decreases) cost of goods sold to recognize the gain into income.

For example, let's say that Cavalier manufactures the carbon fiber into bicycles and sells those bikes during the fourth quarter of 2025 for \$1,200,000. The total value of the inventory, which includes the cost of the carbon fiber purchase made on July 2, 2025, is \$650,000. The sale is recorded as follows:

| Fourth Quarter 2025 | |
|----------------------------|-----------|
| Cash | 1,200,000 |

| | | |
|---|---------|-----------|
| Sales revenue | | 1,200,000 |
| <i>To record sales.</i> | | |
| Cost of goods sold | 650,000 | |
| Inventory—Bikes | | 650,000 |
| <i>To record cost of goods sold.</i> | | |
| Accumulated other comprehensive | | |
| income (AOCI)—gain on forward contract | 22,500 | |
| Cost of goods sold | | 22,500 |
| <i>To match the earnings effect of the hedged item (cost of carbon fiber) and the forward contract.</i> | | |

Because the hedged purchase of carbon fiber has now affected earnings, Cavalier also recognizes the previously deferred gain on the value of the forward contract into earnings.

FOREIGN CURRENCY HEDGES

LOA-4 Understand the way we account for foreign currency hedges.

Today's economy is increasingly a global one. The majority of large "U.S." companies are, in truth, multinational companies that receive a significant portion of their revenues from non-U.S. operations. Foreign operations often are denominated in the currency of the foreign country (the Euro, Japanese yen, Emirati dirham, and so on). Even companies without foreign operations sometimes hold investments, issue debt, or conduct other transactions denominated in foreign currencies. As exchange rates change, the dollar equivalent of the foreign currency changes. The possibility of currency rate changes exposes these companies to the risk that some transactions require settlement in a currency other than the entities' functional currency or that foreign operations will require translation adjustments to reported amounts.

The possibility that foreign currency exchange rates might change exposes many companies to foreign currency risk.

A **foreign currency hedge** is a hedge of foreign currency exposure of the following:

Page A-17

- A fair value hedge of a firm commitment or a recognized asset or liability (including an available-for-sale debt security).
- A cash flow hedge of a forecasted transaction or a firm commitment.

- A hedge of a net investment in a foreign operation—the gain or loss is reported in *other comprehensive income* as part of unrealized gains and losses from foreign currency translation. ¹⁴

HEDGE EFFECTIVENESS

When a company elects to apply hedge accounting, it must establish at the inception of the hedge the method it will use to assess the effectiveness of the hedging derivative. ¹⁵

Hedge accounting is only permitted if the hedging relationship is “highly effective” in achieving offsetting changes in fair values or cash flows based on the hedging company’s specified risk management objective and strategy.

To qualify as a hedge, the hedging relationship must be highly effective in achieving offsetting changes in fair values or cash flows.

An assessment of this effectiveness must be made prospectively and retrospectively at least every three months and whenever financial statements are issued or earnings are reported. There are no precise guidelines for assessing effectiveness, but it generally means a high correlation between changes in the fair value or cash flows of the derivative and of the item being hedged. Initial hedge effectiveness assessments are performed quantitatively unless certain conditions apply. The conditions include whether the company applies the shortcut method or determines that the critical terms of the hedged item and the hedging instrument match (and can assume a perfect hedge). At hedge inception, the company must also document the qualitative or quantitative methods that will be used to assess effectiveness in the future. Hedge accounting must be terminated for hedging relationships that no longer are highly effective.

In [Illustration A-2](#) (and [Illustration A-3](#)), the loss on the hedged note exactly offset the gain on the swap. This is because the swap in this instance was perfectly effective in hedging the risk due to interest rate changes.

Imperfect hedges result in part of the derivative gain or loss being included in current earnings.

However, the loss and gain would not have exactly offset each other if there were differences in critical terms of the swap and the hedged note. For instance, suppose the swap’s term had been different from that of the note (say, a three-year swap term compared with the 18-month term of the note) or if the notional amount of the swap differed from that of the note (say, \$500,000 rather than \$1 million). In that case, changes in the fair value of the swap and changes in the fair value of the note would not be the same. The result would be a greater (or lesser) amount recognized in earnings for the swap than for the note. Because there would not be an exact offset, earnings would be affected. As long as the hedge is still considered “highly effective,” the company may still use hedge accounting.

Hedge accounting also allows a company to exclude certain components of the change in the value of the derivative from the calculation of hedge effectiveness, including components of the

change in time value, as well as differences in spot and forward or futures prices. If a company has excluded components, it recognizes the initial value in earnings over the life of the hedging instrument with subsequent changes in fair value included in other comprehensive income. Alternatively, it might elect to recognize all fair value changes in the excluded component in earnings immediately. Regardless of the option chosen, amounts related to the excluded components that are recognized in income are included in the same line item on the income statement as the earnings effect of the hedged item (for example, interest expense or cost of goods sold).

FAIR VALUE CHANGES UNRELATED TO THE RISK BEING HEDGED

In [Illustration A-2](#), the fair value of the hedged note and the fair value of the swap changed by the same amounts each year because we assumed the fair values changed only due to interest rate changes. It's also possible, though, that the note's fair value would change by an amount different from that of the swap for reasons unrelated to interest rates. For instance, the market's perception of a company's creditworthiness, and thus its ability to pay interest and principal when due, also can affect the value of debt whether interest rates change or not. In hedge accounting, we ignore those changes. We recognize only the fair value changes in the hedged item that we can attribute to the risk being hedged (interest rate risk in this case). For example, if a changing perception of default risk had caused the note's fair value to increase by an additional, say \$5,000, our journal entries in [Illustration A-2](#) would have been unaffected. Notice, then, that although we always mark a *derivative* to fair value, the reported amount of the *item being hedged* (e.g., the notes payable in [Illustration A-2](#)) may not be its fair value. We mark a hedged item to fair value only to the extent that its fair value changed due to the risk being hedged.

Fair value changes unrelated to the risk being hedged are ignored.

COVID-19: Accounting and Reporting Implications

The COVID-19 pandemic disrupted the normal operations of a variety of businesses through its dramatic impact on consumer behavior and supply chains. As a result, many businesses had to cancel or delay expected purchases and sales that were part of designated cash flow hedge transactions. Topic 815, *Derivatives and Hedging*, requires that hedge accounting be discontinued prospectively if forecasted transactions, such as commodity purchases and sales, are no longer

probable to occur within the time frame specified at hedge inception. Moreover, if it is probable that the transactions will not occur within the specified time frame or an additional period thereafter, then the company must reclassify deferred gains and losses on the related hedging derivatives from AOCI to earnings immediately. Typically, the “additional period” is two months. However, in April 2020, the FASB deemed the COVID-19 pandemic to be a rare and extenuating circumstance. This determination allows companies to extend the two-month window when evaluating the deferred amounts in AOCI (ASC 815-30). In other words, for a discontinued cash flow hedge, where the forecasted transaction is delayed due to COVID-19 but is still probable of occurring, the net derivative gain or loss may remain in AOCI until the transaction actually occurs (e.g., the commodity purchase is made).

Disclosure of Derivatives and Risk

LOA-5 Describe disclosure requirements for derivatives and risk.

To be adequately informed about the effectiveness of a company’s risk management, investors and creditors need information about (a) how and why the company uses derivatives, (b) how derivatives and related hedging items are accounted for, and (c) how derivatives and related hedging activities affect the company’s financial position, financial performance, and cash flows. Toward that end, extensive disclosure requirements provide information that includes the following:

- Objectives and strategies for holding and issuing derivatives by risk exposure (interest rate, price change, etc.).
- The accounting designations of derivative instruments (cash flow hedge, fair value hedge, net investment hedge, or non-hedge).
- The volume of derivative activity.
- The location and fair values of derivative instruments in the balance sheet, the location and amount of gains and losses on derivative instruments and related hedged items reported in the income statement and in other comprehensive income, and the total amount of each income and expense line item presented in the income statement that includes gains or losses on fair value or cash flow hedges by type of contract—interest rate contracts, foreign exchange contract, commodity contract, etc. This information must be presented in a quantitative tabular format.

- The recognition policy for excluded components and changes in the fair value of excluded components.

Extended Method for Interest Rate Swap Accounting

LOA-6 Understand the extended method for interest rate swap accounting.

A shortcut method for assessing the effectiveness of and accounting for an interest rate swap is permitted when a hedge meets certain criteria. In general, the criteria are designed to see if the hedge supports the assumption of “perfect effectiveness.”  **Illustration A-2** of a fair value hedge met those criteria, in particular, (a) the swap’s notional amount matches the note’s principal amount, (b) the swap’s expiration date matches the note’s maturity date, (c) the fair value of the swap is zero at inception, and (d) the floating payment is at the market rate.¹⁶ Because Summer qualifies for the shortcut method, it can assume that the swap will be perfectly effective in offsetting changes in the fair value of the debt, it can use the changes in the fair value of the swap to measure the offsetting changes in the fair value of the debt. That’s the essence of the shortcut method used in  **Illustration A-2**. The extended or “long-haul” method of assessing hedge effectiveness required when the criteria are *not* met for the shortcut method (or critical-terms match) is described in this section ( **Illustration A-5** begins by describing the same scenario as in  **Illustration A-2**). It produces the same effect on earnings and in the balance sheet as does the procedure shown in  **Illustration A-2**.

Illustration A-5 Interest Rate Swap (Fixed Rate to Variable Rate)—Extended Method

Summer Semiconductors issued \$1 million of 18-month, 10% notes payable to Third Bank on January 1, 2024. Summer is exposed to the risk that general interest rates will decline, causing the fair value of its debt to rise. (If the fair value of Summer’s debt increases, its effective borrowing cost is higher relative to the market.)

- To hedge against this fair value risk, the firm also enters into an 18-month interest rate swap agreement through an intermediary and designated the swap as a hedge against changes in the fair value of the note. The fair value of the swap at inception is zero.

- Summer will pay the 10% fixed rate to the bank on its notes payable obligation. The swap calls for the company to *receive payment* from the intermediary based on a 10% fixed interest rate on a notional (principal) amount of \$1 million and to *make payment* based on a floating interest rate tied to changes in general rates.
- Cash settlement of the net interest amount is made semiannually at June 30 and December 31 of each year, with the net interest being the difference between the \$50,000 fixed interest [$\$1 \text{ million} \times (10\% \times \frac{1}{2})$] and the floating interest rate the beginning of the period. That is, if the floating rate is less than the fixed rate, Summer will collect cash. If the floating rate is more than the fixed rate, Summer will pay cash.
- Floating (market) settlement rates were 9% at June 30, 2024, 8% at December 31, 2024, and 9% at June 30, 2025.

Net interest receipts can be calculated as shown below. Fair values of both the derivative and the note resulting from those market rate changes are assumed to be quotes obtained from securities dealers. The example assumes a flat yield curve and a parallel change in interest rates between the market rate and the swap rate.

| | 1/1/24 | 6/30/24 | 12/31/24 | 6/30/25 |
|---|--------------|---------------|---------------|---------------|
| Fixed rate—notes payable | 10% | 10% | 10% | 10% |
| Fixed rate—swap | 10% | 10% | 10% | 10% |
| Floating rate—swap | 10% | 9% | 8% | 9% |
| Fixed-rate receipts [$\$1 \text{ million} \times (10\% \times \frac{1}{2})$] | | \$ 50,000 | \$ 50,000 | \$ 50,000 |
| Floating-rate payments [$\$1 \text{ million} \times \frac{1}{2}$ floating rate at beginning of period] | | <u>50,000</u> | <u>45,000</u> | <u>40,000</u> |
| Net interest receipts on swap | | \$ 0 | \$ 5,000 | \$ 10,000 |
| Fair value of interest rate swap | \$ 0 | \$ 9,363 | \$ 9,615 | \$ 0 |
| Fair value of notes payable | \$ 1,000,000 | \$ 1,009,363 | \$ 1,009,615 | \$ 0 |

When the floating rate declined in [Illustration A-5](#) from 10% to 9% at the end of the period, the fair values of both the derivative (swap) and the note increased.

Because the shortcut method is not applied, Summer must determine the change in the fair value of the notes payable resulting from the change in the benchmark (SOFR) swap rate to assess the effectiveness of the hedge. Here, we assume Summer receives dealer quotes for the fair value of the notes payable (in addition to the swap). The fair value of the notes payable also can

be calculated as the present value of the cash flows remaining at the end of the period, discounted at the end of period rates. As long as the hedge is determined to be highly effective, we record gains and losses in the fair value of the note as increases or decreases to interest expense, and they will substantially offset the changes in the fair value of the hedging instrument.

The interest rate swap is designated as a fair value hedge on this note at issuance.

The fair value of derivatives is recognized in the balance sheet. All changes in fair value are presented in the same line item as the earnings effect of the hedged item.

The hedged liability (or asset) is adjusted to fair value for changes in the benchmark interest rate.

| | | |
|---|-----------|-----------|
| January 1, 2024 | | |
| Cash | 1,000,000 | |
| Notes payable | | 1,000,000 |
| <i>To record the issuance of the note.</i> | | |
| June 30, 2024 | | |
| Interest expense (10% × ½ × \$1 million) | 50,000 | |
| Cash | | 50,000 |
| <i>To record interest to Third Bank.</i> | | |
| Interest rate swap (\$9,363 - \$0) | 9,363 | |
| Interest expense change in fair value | | 9,363 |
| <i>To record the change in the fair value of the derivative.</i> | | |
| Interest expense | 9,363 | |
| Notes payable (\$1,009,363 - \$1,000,000) | | 9,363 |
| <i>To record change in fair value of the note due to interest rate changes.</i> | | |

No net interest settlement is received or paid on June 30, 2021 because the fixed and floating rates at the beginning of the period were both 5% (half of the 10% annual rate). The decline in rates at the end of the period, however, increase the value of the derivative security. We record that holding gain, or increases in fair value, in earnings.

We also have a holding loss of the same amount. because the terms of the debt and the swap match. In other words, our hedge is 100% effective. A holding loss occurs because the interest rate change caused the debt's fair value to increase as well. The changes in fair value (holding gains and losses) are presented in the same line item as the earnings effect of the underlying hedged item (interest expense).

Interest expense is the effective rate times the outstanding balance.

The cash settlement is the difference between the fixed interest (5%) and variable interest (4.5%).

Interest (\$421) accrues on the derivative asset.

The note is increased by the change in fair value.

| December 31, 2024 | | |
|---|--------|--------|
| Interest expense ($9\% \times \frac{1}{2} \times \$1,009,363$) | 45,421 | |
| Notes payable (difference)* | 4,579 | |
| Cash ($10\% \times \frac{1}{2} \times \$1,000,000$) | | 50,000 |
| <i>To record interest to Third Bank.</i> | | |
| Cash [\$50,000 – ($9\% \times \frac{1}{2} \times \1 million)] | 5,000 | |
| Interest rate swap ($\$9,615 - \$9,363$) | 252 | |
| Interest expense (interest on swap: $9\% \times \frac{1}{2} \times \$9,363$) | | 421 |
| Interest expense (change in fair value) | | 4,831 |
| <i>To record the net cash settlement, accrued interest on the swap, and change in the fair value of the derivative.</i> | | |
| Interest expense | 4,831 | |
| Notes payable [$\$1,009,615 - (\$1,009,363 - \$4,579)$] | | 4,831 |
| <i>To record the change in fair value of the note due to interest rate changes.</i> | | |

We determine interest on the note the same way we do for any liability, as you learned earlier—at the effective rate ($9\% \times \frac{1}{2}$) times the outstanding balance (\$1,009,363). This results in reducing the note’s carrying value for the cash interest paid in excess of the interest expense.

Page A-21

The fair value of the swap increased by \$252 (from \$9,363 to \$9,615). That increase in fair value consists of (a) an increase of \$4,831 due to the change in interest rates, (b) a decrease of \$5,000 due to the net cash settlement received, and (c) the \$421 increase that results from interest accruing on the asset.¹⁷ Similarly, we adjust the note’s carrying value by the amount necessary to increase it to fair value. Again, all amounts recognized in earnings are presented as interest expense.

At June 30, 2025, Summer repeats the process of adjusting to fair value both the derivative investment and the note being hedged.

The net interest received is the difference between the fixed interest (5%) and floating interest (4%).

| June 30, 2025 | |
|--|--------|
| Interest expense ($8\% \times \frac{1}{2} \times \$1,009,615$) | 40,385 |

| | | |
|---|-----------|-----------|
| Notes payable (difference) | 9,615 | |
| Cash ($10\% \times \frac{1}{2} \times \$1,000,000$) | | 50,000 |
| <i>To record interest to Third Bank.</i> | | |
| Cash [$\$50,000 - (8\% \times \frac{1}{2} \times \$1 \text{ million})$] | 10,000 | |
| Interest rate swap ($\$0 - \$9,615$) | | 9,615 |
| Interest expense (interest on swap: $8\% \times \frac{1}{2} \times \$9,615$) | | 385 |
| <i>To record the net cash settlement, accrued interest on the swap, and change in the fair value of the derivative.</i> | | |
| Note payable | 1,000,000 | |
| Cash | | 1,000,000 |
| <i>To repay the loan from Third Bank.</i> | | |

The net interest settlement received is the difference between the fixed rate (5%) and floating rate (4%), times \$1 million. The fair value of the swap decreased by \$9,615 (from \$9,615 to zero).¹⁸ That decrease in fair value consists of (a) a decrease of \$10,000 due to the net cash settlement received, and (b) an increase of \$385 that results from interest accruing on the asset.

Here's how the book values changed for the swap account and the note.

| | Swap | | Note | |
|---------------|-------|-------|-----------|-----------|
| Jan. 1, 2024 | | | | 1,000,000 |
| June 30, 2024 | 9,363 | | | 9,363 |
| Dec. 31, 2024 | 252 | | 4,579 | 4,831 |
| June 30, 2025 | | 9,615 | 9,615 | |
| | | | 1,000,000 | |
| | 0 | | 1,000,000 | 0 |

The income statement is affected as follows:

| Income Statement + (–) | | |
|------------------------|-------------------|---|
| June 30, 2024 | \$(50,000) | Interest expense |
| | 0 | Interest expense (no time has passed) |
| | 9,363 | Interest expense—gain on interest rate swap |
| | (9,363) | Interest expense—loss on hedged note |
| | \$(50,000) | Net effect—same as floating interest payment |

| | | |
|---------------|-------------------|---|
| Dec. 31, 2024 | \$(45,421) | Interest expense |
| | 421 | Interest expense (passage of time on swap) |
| | 4,831 | Interest expense—gain on interest rate swap |
| | <u>(4,831)</u> | Interest expense—loss on hedged note |
| | \$(45,000) | Net effect—same as floating interest payment |
| June 30, 2025 | \$(40,385) | Interest expense |
| | 385 | Interest expense (passage of time on swap) |
| | <u> </u> | Interest expense—hedged note |
| | \$(40,000) | Net effect—same as floating interest payment |

This demonstrates that swap effectively converts Summer’s fixed-interest debt to floating interest debt and hedges changes in the fair value of the notes payable against offsetting changes in the fair value of the hedging instrument.

Additional Consideration

Private Company GAAP—Derivatives and Hedging. The Private Company Council (PCC) sought feedback from private company stakeholders and found that most users of private company financial statements find it difficult to obtain fixed-rate borrowing and often enter into an interest rate swap to economically convert their variable-rate borrowing into a fixed-rate borrowing. However, this arrangement caused significant variability in the income statements. The PCC concluded that the cost and complexity of hedge accounting outweighed the benefits for private companies.

In response to the PCC’s conclusion, the FASB issued an Accounting Standards Update in 2014 that allows a simplified approach to make it easier for certain interest rate swaps to qualify for hedge accounting for private companies that is quite different from what is required for public companies.¹⁹ This alternative allows a nonpublic company (that’s not a financial institution) to apply hedge accounting to its interest rate swaps as long as the terms of the swap and the related debt are aligned. If the conditions are met, the company can assume the cash flow hedge is fully effective. Those applying the simplified hedge accounting approach will be able to recognize the swap at its settlement value instead of at its fair value. As a result, the amount of interest expense recorded in the income statement

The Bottom Line

-  **LOA-1** A variety of derivative securities are used to hedge against risk. These include futures contracts, forward contracts, and options.
-  **LOA-2** A fair value hedge is used to hedge against the exposure to changes in the fair value of an asset, liability, or a firm commitment.
-  **LOA-3** A cash flow hedge is used to hedge against the exposure to changes in cash inflows or cash outflows of an asset or liability or a forecasted transaction (like a future purchase or sale).
-  **LOA-4** A foreign currency hedge is used to hedge against the possibility that movements in foreign currency exchange rates could affect the entity's financial statements because it has transactions, assets or liabilities, or a net investment in a foreign operation that is denominated in a currency other than the entity's functional currency.
-  **LOA-5** Ample disclosures about derivatives are essential to maintain awareness of potential opportunities and problems with risk management.
-  **LOA-6** The extended method of assessing hedge effectiveness and hedge accounting for an interest rate swap must be used unless (a) the swap's notional amount matches the note's principal amount, (b) the swap's expiration date matches the note's maturity date, (c) the fair value of the swap is zero at inception, and (d) the swap's floating payment is at a market rate and its index matches the benchmark interest rate designated as the hedged interest rate. ●

Questions For Review of Key Topics

- Q A-1** Some financial instruments are called derivatives. Why?
- Q A-2** Should gains and losses on a fair value hedge be recorded as they occur, or should they be recorded to coincide with losses and gains on the item being hedged?
- Q A-3** Hines Moving Company held a fixed-rate debt of \$2 million. The company wanted to hedge its fair value exposure with an interest rate swap. However, the only notional available at the time, on the type of swap it desired, was \$2.5 million. What will be the effect of any gain or loss on the \$500,000 notional difference?
- Q A-4** What is a futures contract?
- Q A-5** What is the effect on interest of an interest rate swap?
- Q A-6** How are derivatives reported on the balance sheet? Why?
- Q A-7** When is a gain or a loss from a cash flow hedge reported in earnings?

E A-1 Derivatives; hedge classification LOA-1

Indicate (by abbreviation) the type of hedge each activity described below would represent.

Hedge Type

| | |
|----|------------------------------|
| FV | Fair value hedge |
| CF | Cash flow hedge |
| FC | Foreign currency hedge |
| N | Would not qualify as a hedge |

Activity

- _____ 1. An options contract to hedge possible future price changes of inventory.
- _____ 2. A futures contract to hedge exposure to interest rate changes prior to replacing bank notes when they mature.
- _____ 3. An interest rate swap to synthetically convert floating rate debt into fixed rate debt.
- _____ 4. An interest rate swap to synthetically convert fixed rate debt into floating rate debt.
- _____ 5. A futures contract to hedge possible future price changes of timber covered by a firm commitment to sell.
- _____ 6. A futures contract to hedge possible future price changes of a forecasted sale of aluminum.
- _____ 7. ExxonMobil's net investment in offshore drilling operations in Brazil.
- _____ 8. An interest rate swap to synthetically convert floating rate interest on an available-for-sale debt investment into fixed rate interest.

- _____ 9. An interest rate swap to synthetically convert fixed rate interest on a held-to-maturity debt investment into floating rate interest.
- _____ 10. An interest rate swap to synthetically convert fixed rate interest on an available-for-sale debt investment into floating rate interest.

E A-2 Derivatives; interest rate swap; fixed rate debt **LOA-2**

On January 1, 2024, LLB Industries borrowed \$200,000 from Trust Bank by issuing a two-year, 10% note, with interest payable quarterly.

- LLB entered into a two-year interest rate swap agreement on January 1, 2024, and designated the swap as a fair value hedge. Its intent was to hedge the risk that general interest rates will decline, causing the fair value of its debt to increase.
- The agreement called for the company to receive payment based on a 10% fixed interest rate on a notional amount of \$200,000 and to pay interest based on a floating interest rate. The contract called for cash settlement of the net interest amount quarterly and rates reset at the beginning of each period.
- Floating (SOFR) settlement rates were 10% at January 1, 8% at March 31, and 6% at June 30 and September 30, 2024. The fair values of the swap are quotes obtained from a derivatives dealer. Those quotes and the fair values of the note are as indicated below. Assume LLB uses the shortcut method.

| | January 1 | March 31 | June 30 | September 30 |
|----------------------------------|------------------|-----------------|----------------|---------------------|
| Fair value of interest rate swap | \$ 0 | \$ 6,472 | \$ 11,394 | \$ 9,565 |
| Fair value of notes payable | \$200,000 | \$206,472 | \$211,394 | \$209,565 |

Required:

1. Calculate the net cash settlement at March 31, June 30, and September 30, 2024.
2. Prepare the journal entries through September 30, 2024, to record the issuance of the note, interest, and necessary adjustments for changes in fair value.
3. Repeat requirements 1 and 2 through June 30, 2024, assuming that rates reset in arrears.

E A-3 Derivatives; interest rate swap; fixed rate debt; fair value change unrelated to hedged risk **LOA-2**

[This is a variation of  **E A-2**, modified to consider fair value change unrelated to hedged risk.]

LLB Industries borrowed \$200,000 from Trust Bank by issuing a two-year, 10% note, with interest payable quarterly.

- LLB entered into a two-year interest rate swap agreement on January 1, 2024, and designated the swap as a fair value hedge. Its intent was to hedge the risk that general interest rates will decline, causing the fair value of its debt to increase.
- The agreement called for the company to receive payment based on a 10% fixed interest rate on a notional amount of \$200,000 and to pay interest based on a floating interest rate and rates reset at the beginning of each period.
- Floating (SOFR) settlement rates were 10% at January 1, 8% at March 31, and 6% at June 30, 2024. The fair values of the swap are quotes obtained from a derivatives dealer. Those quotes and the fair values of the note are as indicated below. The additional rise in the fair value of the note (higher than that of the swap) on June 30 was due to investors' perceptions that the creditworthiness of LLB was improving. Assume LLB uses the shortcut method.

| | January 1 | March 31 | June 30 | September 30 |
|----------------------------------|-----------|-----------|-----------|--------------|
| Fair value of interest rate swap | \$ 0 | \$ 6,472 | \$ 11,394 | \$ 9,565 |
| Fair value of notes payable | \$200,000 | \$206,472 | \$220,000 | \$209,565 |

Required:

1. Calculate the net cash settlement at June 30, 2024.
2. Prepare the journal entries on June 30, 2024, to record the interest and necessary adjustments for changes in fair value.

E A-4 Derivatives; interest rate swap; fixed rate debt; extended method **LOA-6**

[This is a variation of [E A-2](#), modified to consider the extended method.]

On January 1, 2024, LLB Industries borrowed \$200,000 from Trust Bank by issuing a two-year, 10% note, with interest payable quarterly.

- LLB entered into a two-year interest rate swap agreement on January 1, 2024, and designated the swap as a fair value hedge. Its intent was to hedge the risk that general interest rates will decline, causing the fair value of its debt to increase.
- The agreement called for the company to receive payment based on a 10% fixed interest rate on a notional amount of \$200,000 and to pay interest based on a floating interest rate. The contract called for cash settlement of the net interest amount quarterly and rates reset at the beginning of each period..
- Floating (SOFR) settlement rates were 10% at January 1, 8% at March 31, and 6% at June 30 and September 30, 2024. The fair values of the swap are quotes obtained from a derivatives dealer. Assume that LLB does not elect to use the shortcut method. The swap is deemed highly effective, but it is not assumed to be perfectly effective. Those quotes and the fair values of the note are as follows:

| | January 1 | March 31 | June 30 | September 30 |
|----------------------------------|-----------|-----------|-----------|--------------|
| Fair value of interest rate swap | \$ 0 | \$ 6,472 | \$ 11,394 | \$ 9,565 |
| Fair value of notes payable | \$200,000 | \$206,472 | \$211,394 | \$209,565 |

Page A-25

Required:

Prepare the journal entries through September 30, 2024, to record the issuance of the note, interest, and necessary adjustments for changes in fair value. Use the extended method demonstrated in [Illustration A-5](#).

E A-5 Derivatives; interest rate swap; fixed-rate debt; fair value change unrelated to hedged [LOA-6](#)

[This is a variation of [E A-5](#), modified to consider fair value change unrelated to hedged risk.]

On January 1, 2024, LLB Industries borrowed \$200,000 from Trust Bank by issuing a two-year, 10% note, with interest payable quarterly.

- LLB entered into a two-year interest rate swap agreement on January 1, 2021, and designated the swap as a fair value hedge. Its intent was to hedge the risk that general interest rates will decline, causing the fair value of its debt to increase.
- The agreement called for the company to receive payment based on a 10% fixed interest rate on a notional amount of \$200,000 and to pay interest based on a floating interest rate. The contract called for cash settlement of the net interest amount quarterly and rates reset at the beginning of each period.
- Floating (SOFR) settlement rates were 10% at January 1, 8% at March 31, and 6% at June 30 and September 30, 2024. The fair values of the swap are quotes obtained from a derivatives dealer. Those quotes and the fair values of the note are as indicated below. The additional rise in the fair value of the note (higher than that of the swap) on June 30 was due to investors' perceptions that the creditworthiness of LLB was improving. Assume that LLB does not elect to use the shortcut method. The swap is deemed highly effective, but it is not assumed to be perfectly effective.

| | January 1 | March 31 | June 30 | September 30 |
|----------------------------------|-----------|----------|-----------|--------------|
| Fair value of interest rate swap | \$ 0 | \$ 6,472 | \$ 11,394 | \$ 9,565 |
| Fair value of note payable | \$200,000 | 206,472 | 220,000 | \$209,565 |

Required:

1. Calculate the net cash settlement at June 30, 2024.
2. Prepare the journal entries on June 30, 2024, to record the interest and necessary adjustments for changes in fair value. Use the extended method demonstrated in  [Illustration A-5](#).

E A-6 Derivatives; interest rate swap; fixed rate investment

LOA-2

On January 1, 2024, Oriole Company purchased \$500,000 of Nest Corporation's five-year, 4% notes at par, with interest receivable semiannually. The company classified the investment as available-for-sale.

- To hedge the risk that general interest rates will increase and the fair market value of its investment in AFS debt securities will decrease, Oriole entered into a five-year plain vanilla interest rate swap agreement on January 1, 2024, and designated the swap as a fair value hedge.
- The agreement called for the company to make payments based on a 4% fixed interest rate on a notional amount of \$500,000 and to receive interest based on a floating interest rate (SOFR). The contract called for cash settlement of the net interest amount semiannually on June 30 and December 31, based on beginning-of-period rates.
- Oriole qualifies for and elects to use the shortcut method.
- Floating (market) settlement rates were 3% at June 30, 2024, 5% at December 31, 2024, and 5.5% at June 30, 2025. The fair values of the swap on those dates are quotes obtained from a derivatives dealer and are listed below.

| | 1/1/24 | 6/30/24 | 12/31/24 | 6/30/25 |
|----------------------------------|--------|-------------|-----------|----------|
| Interest revenue—AFS security | | \$ 10,000 | \$ 10,000 | \$10,000 |
| Fixed rate—swap | 4% | 4% | 4% | 4% |
| Floating rate—swap | 4% | 3% | 5% | 5.5% |
| Fair value of interest rate swap | \$ 0 | \$ (20,901) | \$ 17,925 | \$23,585 |

Required:

1. Calculate the net cash settlement at June 30 and December 31, 2024, and June 30, 2025.
2. Prepare the journal entries through June 30, 2025, to record the investment in available-for-sale debt securities, interest, and necessary adjustments for changes in fair value.

E A-7 Derivatives; fair value hedge; futures contract; firm commitment  **LOA-2**

Arlington Steel Company is a producer of raw steel and steel-related products.

- On January 3, 2025, Arlington enters into a firm commitment to purchase 10,000 tons of iron ore pellets from a supplier to satisfy spring production demands. The purchase is to be at a fixed price of \$63 per ton on April 30, 2025.

- To protect against the risk of changes in the fair value of the commitment contract, Arlington enters into a futures contract to sell 10,000 tons of iron ore on April 30 for \$63/ton (the current price).
- The contract calls for net cash settlement, and the company must report changes in the fair values of its hedging instruments each quarter. On March 31, the price of iron ore fell to \$61/ton, and then to \$60/ton on April 30.

Required:

1. Calculate the net cash settlement at April 30, 2025.
2. Prepare the journal entries for the period January 3 to April 30, 2025, to record the firm commitment, necessary adjustments for changes in fair value, and settlement of the futures contract.

E A-8 Derivatives; cash flow hedge; futures contract; forecasted purchase  **LOA-3**

Snackums, Inc., purchases wheat for use in its food manufacturing process. Snackums operates in a highly competitive industry and is rarely able to increase its sales price.

- On January 1, 2024, Snackums estimates that it only has enough wheat inventory to meet its manufacturing needs for the first half of 2024, and forecasts the purchase of 20,000 bushels of wheat on June 30, 2024, from its supplier, Trigo Farms.
- Because Snackums is concerned that the price of wheat will increase during the coming months it enters into four June wheat futures contracts on January 1, 2024, to purchase wheat.
- Each futures contract is based on the purchase of 5,000 bushels of wheat at \$6.73 per bushel on June 30, 2024, and will settle in cash at maturity. (For purposes of this problem, the daily margin accounts with the clearinghouse are ignored.)
- The company must report changes in the fair value of its hedging instruments each quarter. The fair value of the futures contract at inception is zero.
- Snackums designates the futures contract as a hedge of the variability of cash flows attributed to changes in the spot price of wheat for its forecasted purchase of wheat.
- Since the critical terms of the forward contract and the forecasted purchase are exactly the same, Snackums concludes that the hedging relationship is expected to be 100% effective.

The spot and forward prices per bushel of wheat and the fair value of the forward contract are as follows:

| Date | Spot Price (per bushel) | Futures Price (per bushel) |
|-----------------|-------------------------|----------------------------|
| January 1, 2024 | \$6.68 | \$6.73 |
| March 31, 2024 | \$6.72 | \$6.77 |
| June 30, 2024 | \$6.90 | n/a |

Required:

1. Calculate the net cash settlement at June 30, 2024.
2. Prepare the journal entries for the period January 1 to June 30, 2024, to record the forecasted purchase transaction, necessary adjustment for changes in the fair value of the futures contract, and settlement of the contract. Assume that Snackums purchases the wheat inventory from Trigo Farms on June 30, 2024, as anticipated.
3. During the third quarter, Snackums uses all of the wheat it purchases in production and sells the related inventory. What entry would Snackums make during the quarter ended September 30, 2024, related to the hedged transaction?

E A-9 Derivatives; foreign currency; cash flow hedge  **LOA-4**

Cleveland Company is a U.S. firm with a U.S. dollar functional currency that manufactures copper-related products. It forecasts that it will sell 5,000 feet of copper tubing to one of its largest customers at a price of ¥50,000,000. Although this sale has not been firmly committed, Cleveland expects that the sale will occur in six months on June 30, 2024. Thus, Cleveland is exposed to changes in foreign currency exchange rates. To reduce this exposure, Cleveland enters into a six-month foreign currency exchange forward contract with a third-party dealer on January 1, 2024, to deliver ¥ and receive US\$. The foreign exchange contract has the following terms:

Contract amount: ¥50,000,000
Maturity date: June 30, 2024
Forward contract rate: ¥105.00 = US \$1.00

Yen / US\$ Exchange rates:

| Date | Spot Rate | Forward Rate for June 30 |
|-----------|-------------------|--------------------------|
| January 1 | ¥100.00/US \$1.00 | ¥105.00/US \$1.00 |
| March 31 | ¥102.00/US \$1.00 | ¥108.00/US \$1.00 |
| June 30 | ¥110.00/US \$1.00 | |

Cleveland obtains the fair values of the forward exchange contract from the third-party dealer.

| | January 1 | March 31 | June 30 |
|-----------------|-----------|----------|----------|
| Swap fair value | \$0 | \$13,227 | \$21,645 |

Required:

1. Calculate the net settlement on June 30, 2024.
2. Prepare the journal entries for the period January 1 to June 30, 2024, to record the forward contract, necessary adjustments for changes in fair value, and settlement.

E A–10 Derivatives; cash flow hedge; interest rate swap; shortcut method  **LOA–3**

On January 1, 2024, JPS Industries borrowed \$300,000 from Austin Bank by issuing a three-year, floating rate note based on SOFR, with interest payable semiannually on June 30 and December of each year.

- JPS entered into a three-year interest rate swap agreement on January 1, 2024, and designated the swap as a cash flow hedge. The intent was to hedge the risk that interest rates will rise, increasing its semi-annual interest payments.
- The swap agreement called for the company to receive payment based on a floating interest rate on a notional amount of \$300,000 and to pay a 6% fixed interest rate.
- The contract called for cash settlement of the net interest amount semiannually, and the rate on each reset date (June 30 and December 31) determines the variable interest rate for the following six months. In other words, the net cash settlement is based on beginning-of-period rates.

SOFR rates in 2024 were 6% at January 1, 5.5% at June 30, and 7% at December 31. The fair values of the swap on those dates, obtained by dealer quotes, were as follows:

| | January 1 | June 30 | December 31 |
|-----------------|-----------|-----------|-------------|
| Swap fair value | \$0 | \$(3,459) | \$5,510 |

Required:

1. Calculate the net settlement on June 30 and December 31, 2024.
2. Prepare journal entries for the period January 1 to December 31, 2024, to record the note payable and hedging instrument, necessary adjustments for changes in fair value, and settlement of the swap contract.

Problems

PA-1 Derivatives; interest rate swap LOA-2

On January 1, 2024, Avalanche Corporation borrowed \$100,000 from First Bank by issuing a two-year, 8% fixed-rate note with annual interest payments. The principal of the note is due on December 31, 2025.

- Avalanche wanted to hedge against declines in general interest rates, so it also entered into a two-year SOFR-based interest rate swap agreement on January 1, 2024, and designates it as a fair value hedge. Because the swap is entered at market rates, the fair value of the swap is zero at inception.
- The agreement called for the company to receive fixed interest at the current SOFR swap rate of 5% and pay floating interest tied to SOFR. This arrangement results in an effective variable rate on the note of SOFR + 3%.
- The contract specifies that the floating rate resets each year on June 30 and December 31 for the net settlement that is due the following period. In other words, the net cash settlement is calculated using beginning-of-period rates.

The SOFR rates on the swap reset dates and the fair values of the swap obtained from a derivatives dealer are as follows:

Page A-28

| | 1/1/24 | 6/30/24 | 12/31/24 | 6/30/25 | 12/31/25 |
|----------------------------------|--------|------------|----------|---------|----------|
| floating rate (SOFR) | 5% | 6% | 4% | 3% | 3% |
| Fair value of interest rate swap | \$ 0 | \$ (1,414) | \$ 971 | \$ 985 | \$ 0 |

Avalanche meets all criteria for hedge accounting using the shortcut method.

Required:

1. What does the shortcut method allow Avalanche to assume? How does this assumption affect the application of hedge accounting?

2. Calculate the net cash settlement at each settlement date during 2024 and 2025.
3. Prepare the journal entries during 2024 to record the issuance of the note, interest, net cash settlement for the interest rate swap, and necessary adjustments for changes in fair value under the shortcut method.
4. Prepare the journal entries during 2025 to record interest, net cash settlement for the interest rate swap, necessary adjustments for changes in fair value, and repayment of the debt.
5. Rollforward both the swap account and the notes payable account at each settlement/interest payment date.
6. Calculate the net effect on earnings of the hedging arrangement for the six-month periods ending June 30 and December 31, 2024, and June 30 and December 31, 2025.

PA-2 Derivatives; interest rate swap; fair value hedge; extended method **LOA-2**; **LOA-6**

[This is a variation of  **PA-1**, modified to consider the extended method demonstrated in  **Illustration A-5**.]

On January 1, 2024, Avalanche Corporation borrowed \$100,000 from First Bank by issuing a two-year, 8% fixed-rate note with annual interest payments. The principal of the note is due on December 31, 2025.

- Avalanche wanted to hedge against declines in general interest rates, so it also entered into a two-year SOFR-based interest rate swap agreement on January 1, 2024, and designates it as a fair value hedge. Because the swap is entered at market rates, the fair value of the swap is zero at inception.
- The agreement called for the company to receive fixed interest at the current SOFR swap rate of 5% and pay floating interest tied to SOFR. This arrangement results in an effective variable rate on the note of SOFR + 3%.
- The contract specifies that the floating rate resets each year on June 30 and December 31 for the net settlement that is due the following period. In other words, the net cash settlement is calculated using beginning-of-period rates.

The SOFR rates on the swap reset dates and the fair values of the swap obtained from a derivatives dealer are as follows:

| | 1/1/24 | 6/30/24 | 12/31/24 | 6/30/25 | 12/31/25 |
|---|--------|------------|----------|----------|----------|
| Floating rate (SOFR)–swap | 5% | 6% | 4% | 3% | n/a |
| Fair value of interest rate swap | \$ 0 | \$ (1,414) | \$ 971 | \$ 985 | \$ 0 |
| Cumulative change in the fair value of debt due to changes in SOFR—gain (loss) | \$ 0 | \$ 1,374 | \$ (950) | \$ (971) | \$ 0 |

Avalanche will assess hedge effectiveness by comparing the cumulative change in the fair value of the swap to the cumulative change in the fair value of the debt due to changes in the benchmark interest rate. It will consider a ratio between 80–120% to be highly effective.

Required:

Use the extended or “long-haul” method demonstrated in  **Illustration A-5**.

1. Calculate the effectiveness of the hedging relationship each period. Is the hedge highly effective?
2. Calculate the net cash settlement at each settlement date during 2024 and 2025.
3. Prepare the journal entries during 2024 to record the issuance of the note, interest, net cash settlement for the interest rate swap, and necessary adjustments for changes in fair value.
4. Prepare the journal entries during 2025 to record interest, net cash settlement for the interest rate swap, necessary adjustments for changes in fair value, and repayment of the debt.
5. Rollforward both the swap account and the notes payable account at each settlement/interest payment date.
6. Calculate the net effect on earnings of the hedging arrangement for the six-month periods ending June 30 and December 31, 2024, and June 30 and December 31, 2025.

CMOS Chips is hedging a 20-year, \$10 million, 7% bond payable with a 20-year interest rate swap and has designated the swap as a fair value hedge. The agreement called for CMOS to receive payment based on a 7% fixed interest rate on a notional amount of \$10 million and to pay interest based on a floating interest rate tied to SOFR. The contract calls for cash settlement of the net interest amount on December 31 of each year.

At December 31, 2024, the fair value of the derivative and of the hedged bonds has increased by \$100,000 because interest rates declined during the reporting period.

Required:

1. Does CMOS have an unrealized gain or loss on the derivative for the period? On the bonds? Will earnings increase or decrease due to the hedging arrangement? Why?
2. Suppose interest rates increased, rather than decreased, causing the fair value of both the derivative and of the hedged bonds to decrease by \$100,000. Would CMOS have an unrealized gain or loss on the derivative for the period? On the bonds? Would earnings increase or decrease due to the hedging arrangement? Why?
3. Suppose the fair value of the bonds at December 31, 2024, had increased by \$110,000 rather than \$100,000, with the additional increase in fair value due to investors' perceptions that the creditworthiness of CMOS was improving. Would CMOS have an unrealized gain or loss on the derivative for the period? On the bonds? Would earnings increase or decrease due to the hedging arrangement? Why?
4. Suppose the notional amount of the swap had been \$10.5 million, rather than the \$10 million principal amount of the bonds. As a result, at December 31, 2024, the swap's fair value increased by \$105,000 rather than \$100,000. Would CMOS have an unrealized gain or loss on the derivative for the period? On the bonds? Would earnings increase or decrease due to the hedging arrangement? Why?
5. Suppose BIOS Corporation is an investor, having purchased all \$10 million of the bonds issued by CMOS as described in the original situation above. BIOS is hedging its investment, classified as available-for-sale, with a 20-year interest rate swap and has designated the swap as a fair value hedge. The agreement called for BIOS to make *payment* based on a 7% fixed interest rate on a notional amount of \$10 million and to *receive* interest based on a floating interest rate tied to SOFR. Would BIOS have an unrealized gain or loss on the derivative for the period due to interest rates having declined? On the bonds? Would earnings increase or decrease due to the hedging arrangement? Why?

Decision Makers' Perspective

©ImageGap/Getty Images

Apply your critical-thinking ability to the knowledge you've gained. These cases will provide you an opportunity to develop your research, analysis, judgment, and communication skills. You also will work with other students, integrate what you've learned, apply it in real-world situations, and consider its global and ethical ramifications. This practice will broaden your knowledge and further develop your decision-making abilities.

Real World Case A-1 Derivative losses; recognition in earnings

LOA-4

The following is an excerpt from a disclosure note of **Johnson & Johnson**:

6. Fair Value Measurements (in part)

As of January 3, 2021, the balance of deferred net gains on derivatives included in accumulated other comprehensive income was \$652 million after-tax. The Company expects that substantially all of the amounts related to forward foreign exchange contracts will be reclassified into earnings over the next 12 months as a result of transactions that are expected to occur over that period.

Required:

1. Johnson & Johnson indicates that it expects that substantially all of the balance of deferred net gains on derivatives will be reclassified into earnings over the next 12 months as a result of transactions that are expected to occur over that period. What is meant by “reclassified into earnings”?

2. What type(s) of hedging transaction might be accounted for in this way?

Communication Case A-2 Derivatives; hedge accounting

LOA-3

A conceptual question in accounting for derivatives is this: Should gains and losses on a hedge instrument be recorded as they occur, or should they be recorded to coincide (match) with income effects of the item being hedged?

ABI Wholesalers plans to issue long-term notes in May that will replace its \$20 million of 5% bonds when they mature in July. ABI is exposed to the risk that interest rates in July will rise, increasing borrowing costs (reducing the selling price of its notes). To hedge that possibility, ABI entered a (Treasury bond) futures contract in May to deliver (sell) bonds in July at their *current* price.

As a result, if interest rates rise, borrowing costs will go up for ABI because it will Page A-30 issue notes at a higher interest cost (or a lower price to increase the yield.) But that loss will be offset (approximately) by the gain produced by being in the opposite position on Treasury bond futures.

Two opposing viewpoints are:

View 1: Gains and losses on derivative instruments designed to hedge anticipated transactions should be recorded as they occur.

View 2: Gains and losses on derivative instruments designed to hedge anticipated transactions should be recorded to coincide (match) with income effects of the item being hedged.

In considering this question, focus on conceptual issues regarding the practicable and theoretically appropriate treatment, unconstrained by GAAP. Your instructor will divide the class into two to six groups, depending on the size of the class. The mission of your group is to reach consensus on the appropriate accounting for the gains and losses on instruments designed to hedge anticipated transactions.

Required:

1. Each group member should deliberate the situation independently and draft a tentative argument prior to the class session for which the case is assigned.

2. In class, each group will meet for 10 to 15 minutes in different areas of the classroom. During that meeting, group members will take turns sharing their suggestions for the purpose of arriving at a single group treatment.
3. After the allotted time, a spokesperson for each group (selected during the group meetings) will share the group's solution with the class. The goal of the class is to incorporate the views of each group into a consensus approach to the situation.

Continuing Cases

Target Case LOA-1, LOA-2, LOA-5

Target Corporation prepares its financial statements according to U.S. GAAP. Target's financial statements and disclosure notes for the year ended February 1, 2020, are available in Connect. This material is also available under the Investor Relations link at the company's website (www.target.com).

Required:

1. Note 16 indicates that Target has derivative instruments consisting of interest rate swaps that are designated as fair value hedges. The total notional amount of the existing swap agreements is \$1,500 million. According to the note, how is the net settlement determined under these agreements?
2. Target has designated its interest rate swaps as fair value hedges. What interest rate risk is Target concerned about?
3. Does Target have a gain or a loss on its interest rate swaps for the fiscal year ended February 1, 2020, and where in the financial statements was the gain or loss recorded? On the bond? Did earnings increase or decrease due to the hedging arrangement? Why?
4. Based on information in Note 6 and Note 15, what are the balance sheet effects of the hedging relationships described in Note 16 at February 1, 2020?

Air France–KLM Case LOA-1, LOA-5

Air France–KLM (AF), a Franco-Dutch company, prepares its financial statements according to International Financial Reporting Standards. AF's financial statements and disclosure notes for the year ended December 31, 2019, are available in Connect. This material is also available under the Finance link at the company's website (www.airfranceklm.com.)

Required:

1. In Note 36.1: Risk management and Note 36.2: Derivative instruments, AF discusses its various risk exposures and strategies to reduce its exposure to such risks. Based on the detailed disclosures in Note 36.2, what are the three largest risk exposures (based on the

fair value of its derivative instruments)? For each risk exposure, list one derivative instrument it uses to hedge that risk.

2. Per Note 36.2, what is the fair value of AF's derivative instruments on the balance sheet? (*Hint: This information is also provided in Notes 26 and 35.*)

APPENDIX B

GAAP Comprehensive Case

Target Corporation prepares its financial statements according to U.S. GAAP. Target's financial statements and disclosure notes for the year ended February 1, 2020, are available under the Investor Relations link at the company's website (www.target.com). This case addresses a variety of characteristics of financial statements prepared using U.S. GAAP. Questions are grouped in parts according to various sections of the textbook.

Part A: Financial Statements, Income Measurement, and Current Assets

- A1. What amounts did Target report for the following items for the year ended February 1, 2020?
- Total revenues
 - Income from current operations
 - Net income or net loss
 - Total assets
 - Total equity
- A2. What was Target's basic earnings per share for the year ended February 1, 2020?
- A3. What is Target's fiscal year-end? Why do you think Target chose that year-end?
- A4. Regarding Target's audit report:
- Who is Target's auditor?
 - Did Target receive a "clean" (unmodified) audit opinion?
 - How many critical audit matters were discussed in Target's audit report?
- A5. What amount did Target report for total assets, total liabilities, and total shareholders' equity (labeled "Shareholders' investment") in the most recent year? Show that the basic accounting equation remains in balance.
- A6.
- Find sales revenue (labeled "Sales") in the income statement (labeled "Consolidated Statement of Operations") and record sales for the year, assuming all sales were for cash.
 - Find total cost of goods sold (labeled "Cost of sales") in the income statement and record the journal entry for cost of goods sold for the year.
 - Record inventory purchases for the year, assuming all were on account. [*Hint:* To calculate the amount of purchases, use a T-account for inventory and input the beginning and ending balances of inventory from the balance sheet. Input the credit to inventory from requirement 2(b) and solve for the missing amount to calculate inventory purchases.]
- A7. Note 9 provides information on Target's current assets. Assume all prepaid expenses are for prepaid insurance and that insurance expense comprises \$50 million of the \$16,233 million of selling, general, and administrative expenses reported in the income statement

for the year ended February 1, 2020. How much cash did Target pay for insurance coverage during the year? Prepare the adjusting entry Target would make to record all insurance expense for the year. What would be the effect on the income statement and balance sheet if Target didn't record an adjusting entry for prepaid expenses?

- A8.
- a. By how much did retained earnings increase/decrease in the most recent year compared to the previous year?
 - b. Target reduces retained earnings for "Dividends declared" and "Repurchase of stock." These two amounts totaled \$2,865 million in the most recent year. Using this amount and your answer in (a), compute Target's net income. Verify your answer by finding net income (labeled "Net earnings") in the income statement.
- A9. By what name does Target label its balance sheet?
- A10. What amounts did Target report for the following items on February 1, 2020?
- a. Current assets
 - b. Long-term assets
 - c. Total assets
 - d. Current liabilities
 - e. Long-term liabilities
 - f. Total liabilities
 - g. Total shareholders' equity
- A11. What was Target's largest current asset? What was its largest current liability?
- A12. Compute Target's current ratio and debt to equity ratio in 2020?
- A13. Assuming Target's industry had an average current ratio of 1.0 and an average debt to equity ratio of 2.5, comment on Target's liquidity and long-term solvency.
- A14. By what name does Target label its income statement?
- A15. What amounts did Target report for the following items for the year ended February 1, 2020?
- a. Sales
 - b. Cost of goods sold (labeled cost of sales)
 - c. Earnings from continuing operations before income taxes
 - d. Net earnings from continuing operations
 - e. Net earnings
- A16. Does Target report any items as part of its comprehensive income? If so, what are they.

- A17. Does Target prepare the statement of cash flows using the direct method or the indirect method?
- A18. Which is higher, net earnings or operating cash flows? Which line item is the biggest reason for this difference? Explain why.
- A19. What are the largest investing cash flow and the largest financing cash flow reported by the company for the year ended February 1, 2020?
- A20. Refer to Disclosure Note 17 following Target's financial statements. Find the schedule showing the lease payments over the next five years and beyond. What are the total lease payments for operating leases and finance leases? What are the present values of those lease payments for each type of lease? What accounts for the difference between the two amounts?
- A21. What are the weighted-average discount rates used to calculate the present value of each type of lease?
- A22. Does Target report its lease liabilities for the total amount of the lease payments or the present value of those lease payments?
- A23. What was the amount of revenue Target reported in its income statement for the fiscal year ended February 1, 2020?
- A24. Disclosure Note 2 indicates that Target generally records revenue in retail stores at the point of sale. Does that suggest that Target generally records revenue at a point in time or over a period of time? Explain.
- A25. Disclosure Note 2 indicates that customers ("guests") can return some merchandise within 90 days of purchase and can return other merchandise within a year of purchase. How are Target's revenue and net income affected by returns, given that it does not know at the time a sale is made which items will be returned?
- A26. Disclosure Note 2 discusses Target's accounting for gift card sales. Does Target recognize revenue when it sells a gift card to a customer? If not, when does it recognize revenue? Explain.
- A27. Disclosure Note 4 discussed how Target accounts for consideration received from vendors, which they call "vendor income." Does that consideration produce revenue for Target? Does that consideration produce revenue for Target's vendors? Explain.
- A28. In what note does Target disclose its policy for designating investments as cash equivalents?
- A29. What is Target's balance of cash equivalents for the fiscal year ended February 1, 2020?
- A30. In what note does Target disclose its policy with respect to accounting for merchandise returns?
- A31. Does Target have accounts receivable? Speculate as to why it has the balance that it has. (*Hint: See Disclosure Notes 2, 7, and 9.*)

- A32. Does Target use average cost, FIFO, or LIFO as its inventory cost flow assumption?
- A33. In addition to the purchase price, what additional expenditures does the company include in the initial cost of inventory?
- A34. Calculate the gross profit ratio and the inventory turnover ratio for the fiscal year ended February 1, 2020. Compare Target's ratios with the industry averages of 24.5% and 7.1 times. Determine whether Target's ratios indicate the company is more/less profitable and sells its inventory more/less frequently compared to the industry average.
- A35. What retail indices (internally measured or externally measured) does Target use to measure the LIFO provision?
- A36. Does Target adjust the retail value of inventory for permanent markups or permanent markdowns to effectively report inventory at the lower of cost or market?
- A37. Target has agreements with certain vendors whereby Target does not purchase or pay for merchandise until the merchandise is ultimately sold to a customer. See Revenue Note 2. Are sales and cost of sales of this inventory included in Target's income statement? Is unsold inventory at the end of the year included as part of ending inventory in the balance sheet?

Part B: Property, Plant, and Equipment and Intangible Assets

- B1. What amount (\$ in millions) does Target report for net property and equipment for the year ended February 1, 2020? What is the largest category of property and equipment reported on the face of the balance sheet?
- B2. What amount (\$ in millions) of cash was used in the fiscal year ended February 1, 2020, to purchase property and equipment? Is this an increase or decrease compared to the previous year?
- B3. Do you think a company like Target would have more research and development costs or more advertising costs? Explain.
- B4. What is Target's fixed-asset turnover ratio for the fiscal year ended February 1, 2020? What is the ratio intended to measure?
- B5. Does Target include any intangible assets in total assets (yes/no)? (*Hint*: see Notes 11 and 12.)
- B6. Compare the property and equipment listed in the balance sheet with the list in Note 10. What are the estimated useful lives for recording depreciation? Is land listed in Note 10 (yes/no)?
- B7. In Note 10, which depreciation method does Target use for property and equipment for financial reporting? Which depreciation method is used for tax purposes? Why might these methods be chosen?
- B8. In Note 10, how does Target record repairs and maintenance expense?
- B9. In Note 10, does Target report any impairment of property and equipment for the year ended February 1, 2020? If so, what was the amount and what were the reasons for the impairments?
- B10. From Notes 11 and 12, were any impairments related to intangible assets recorded for the year ended February 1, 2020? If so, what was the amount and what were the reasons for the impairments?

Part C: Investments

Target does not have investments in stock or bonds. However, **CVS Health Corp.**, which purchased Target's pharmacy and clinical business during 2015, does have some investments. Access CVS's 2019 10K at investors.cvshealth.com to answer the following questions:

- C1. Regarding CVS's investments in debt securities:
- Turn to Note 1: Significant accounting policies. What approach is CVS using to account for its investments in debt securities—are they HTM, TS, or AFS?
 - Turn to Note 3: Investments. What is the total amount of CVS's investments as of 12/31/2019, and where are those investments shown on CVS's balance sheet?
 - What is the total amount of CVS's debt investments that are classified as available-for-sale as of 12/31/2019, and how much of that total is amortized cost as opposed to accumulated fair value adjustment that account for unrealized gains and losses?
 - Turn to Note 4: Fair Value. What is the amount of CVS's investments in debt securities that is categorized as Level 1, Level 2, and Level 3 of the fair value hierarchy?
- C2. Per Note 1, CVS has equity-method investments in SureScripts, LLC, and in Heartland Healthcare Services. CVS indicates that those investments are immaterial for the year ended December 31, 2019. Assuming that the Heartland investment is material:
- How would Heartland's earnings affect CVS's income statement?
 - How would Heartland's earnings affect CVS's balance sheet?

Part D: Liabilities

- D1. Target's Consolidated Statement of Financial Position (its balance sheet) discloses its current assets and current liabilities.
- What are the three components of Target's current liabilities?
 - Are current assets sufficient to cover current liabilities? What is the current ratio for the year ended February 1, 2020? How does the ratio compare with the prior year?
- D2. Disclosure Note 2 discusses Target's accounting for gift card sales.
- By how much did Target's gift card liability change between February 1, 2020, and February 2, 2019?
 - How would the following affect Target's gift card liability (indicate "increase," "decrease," or "no change" for each):
 - Sale of a gift card
 - Redemption of a gift card (the holder using it to acquire goods or services)
 - Increase in breakage estimated for gift cards already sold
- D3. Disclosure Note 14 discusses Target's accounting for contingencies. Is its approach appropriate?
- D4. Calculate the debt to equity ratio for Target at February 1, 2020. The average ratio for companies in the Discount Retailers industry sector in a comparable time period was 1.95.
- D5. Calculate Target's times interest earned ratio for the year ended February 1, 2020. The coverage for companies in the Discount Retailers industry sector in a comparable time period was 6.5.

Part E: Leases,” Income Taxes, and Pensions

- E1.
- Note 17 indicates that Target’s finance lease liability at February 1, 2020, is \$1,370 (= \$67 current + \$1,303 noncurrent) while its finance lease assets are \$1,180. Why do the asset and liability amounts differ?
 - Target’s finance lease assets are listed on February 1, 2020, at \$1,180 million. What was the original amount recorded for these specific right-of-use assets when the leases commenced?
 - Refer to Target’s Statement of Cash Flows. Prepare a journal entry that summarizes Target’s acquisition of assets by operating lease for the 12 months ended February 1, 2020.
- E2. From the income statement, determine the income tax expense for the year ended February 1, 2020. Tie that number to the second table in Disclosure Note 18, “Provision for Income Taxes,” and prepare a summary journal entry that records Target’s tax expense from continuing operations for the year ended February 1, 2020.
- E3. Focusing on the third table in Disclosure Note 18, “Net Deferred Tax Asset/(Liability),” calculate the change in net deferred tax assets or liability. By how much did that amount change? To what extent did you account for that change in the journal entry you wrote in your answer to question E2? List possible causes of any difference.
- E4. Target’s Note 18 indicates that “We recognized a net tax benefit of \$36 million and \$372 million in 2018 and 2017, respectively, primarily because we remeasured our net deferred tax liabilities using the new lower U.S. corporate tax rate.” What was the effect of the tax rate change on 2018 net income?
- E5. What is Target’s liability for unrecognized tax benefits as of February 1, 2020? If Target were to prevail in court and realize \$50 million more in tax savings than it thought more likely than not to occur, what would be the effect on the liability for unrecognized tax benefits and on net income?
- E6. What were the changes in Target’s Projected Benefits Obligation in the fiscal years ended February 1, 2020 (fiscal 2019), and February 2, 2019 (fiscal 2018), for its qualified pension plans?
- E7. What were the changes in Target’s Pension Plan Assets in the fiscal years ended February 1, 2020, and February 2, 2019, for its qualified pension plans?
- E8. Were these pension plans overfunded or underfunded for the fiscal years ended February 1, 2020, and February 2, 2019?

E9. What were the components of Target's Pension Expense in the fiscal years 2019, 2018, and 2017?

Part F: Shareholders' Equity and Additional Financial Reporting Issues

- F1. Note 25, "Share Repurchase," provides the information we need to reconstruct the journal entry that summarizes Target's share repurchases in the year ended February 1, 2020. Provide that entry (dollars in millions, rounded to the nearest million). Page B-6
- F2. Does Target account for share repurchases as (a) treasury stock or (b) retired shares?
- F3. What are the three types of awards described in Note 21, "Share-Based Compensation"?
- F4. Based on the fair value of the awards granted, what was Target's primary form of share-based compensation for the year ended February 1, 2020?
- F5. Projections of future performance should be based primarily on continuing operations. What was diluted EPS for continuing operations in each of the most recent three years?
- F6. How many shares were included in diluted earnings per share but not basic earnings per share due to share-based compensation awards?
- F7. Refer to Target's financial statements for the year ended February 1, 2020. Note 8 provides information on Target's inventories. What method does Target use to report most of its inventories?
- F8. If Target changed that method to another method, how would it account for the change?
- F9. Suppose Target uses the FIFO costing method but decided to change to the LIFO method. How would it account for the change?
- F10. Did Target's cash provided by operating activities in fiscal 2019 increase or decrease from the previous year?
- F11. Is Target's cash provided by operating activities more or less than net income in fiscal 2019?
- F12. What is Target's largest investing activity?
- F13. Is Target increasing or decreasing its long-term debt?
- F14. Some transactions that don't increase or decrease cash must be reported in conjunction with a statement of cash flows. What activity of this type did Target report during each of the three years presented?
- F15. Note 16 indicates that Target has derivative instruments consisting of interest rate swaps that are designated as fair value hedges. The total notional amount of the existing swap agreements is \$1,500 million. According to the note, how is the net settlement determined under these agreements?
- F16. Target has designated its interest rate swaps as fair value hedges. What interest rate risk is Target concerned about?

- F17. Does Target have a gain or a loss on its interest rate swaps for the fiscal year ended February 1, 2020, and where in the financial statements was the gain or loss recorded? On the bond? Did earnings increase or decrease due to the hedging arrangement? Why?
- F18. Based on information in Note 6 and Note 15, what are the balance sheet effects of the hedging relationships described in Note 16 at February 1, 2020?

APPENDIX C

IFRS Comprehensive Case

Air France-KLM (AF), a Franco-Dutch company, prepares its financial statements - according to International Financial Reporting Standards. AF's financial statements and disclosure notes for the year ended December 31, 2019, are available under the Finance link at the company's website (www.airfranceklm.com). This case addresses a variety of characteristics of financial statements prepared using IFRS, often comparing and contrasting those attributes of statements prepared under U.S. GAAP. Questions are grouped in parts according to various sections of the textbook.

Part A: Financial Statements, Income Measurement, and Current Assets

- A1. What amounts did AF report for the following items for the fiscal year ended December 31, 2019?
- a. Total revenues
 - b. Income from current operations
 - c. Net income or net loss (Group part)
 - d. Total assets
 - e. Total equity
- A2. What was AF's basic earnings or loss per share for the year ended December 31, 2019?
- A3. What amount did AF report for total assets, total liabilities, and total equity in the balance sheet? Show that the basic accounting equation remains in balance.
- A4. Find sales revenue (labeled "Sales") in the income statement. Using this amount, (a) prepare the journal entry for the sale of tickets, assuming all tickets are sold for cash and before the day of the flight, and (b) prepare the journal entry on the day of the flight.
- A5. Among the items listed under "External expenses" in the income statement is aircraft fuel (see Note 7). Using this amount, (a) prepare the journal entry for the prepayment of aircraft fuel in advance of flights and (b) prepare the journal entry on the day of the flight.
- A6. The statement of cash flows lists the purchase of property, plant, and equipment. Assuming this full amount was for the purchase of flight equipment, prepare the journal entry.
- A7. Describe the similarities and differences in the order of presentation of the components of the balance sheet between IFRS as applied by Air France-KLM (AF) and a typical balance sheet prepared in accordance with U.S. GAAP.
- A8. What amounts did Air France-KLM (AF) report for the following items (a) Current assets, (b) Long-term assets, (c) Total assets, (d) Current liabilities, (e) Long-term liabilities, (f) Total liabilities, and (g) Total shareholders' equity on December 31, 2019?
- A9. What was Air France-KLM's (AF) largest current asset other than "Other current liabilities"?
- A10. Compute Air France-KLM's (AF) current ratio and debt to equity ratio in 2019.
- A11. Assuming Air France-KLM's (AF) industry had an average current ratio of 1.0 and an average debt to equity ratio of 2.5, comment on AF's liquidity and long-term solvency.
- A12. What amount does AF report in the income statement for (a) sales and for external expenses related to (b) aircraft fuel and (c) aircraft maintenance (see Note 7)?

- A13. What amount does AF report for amortization, depreciation, and provisions in the income statement? How is this amount listed in the statement of cash flows?
- A14. Under which account title in the income statement does AF include interest expense and interest revenue?
- A15. Under which activities in the statement of cash flows are interest paid and interest received included? Under IFRS, what other classifications for these items are allowed?
- A16. Under which activities in the statement of cash flows are dividends paid and dividends received included? Under IFRS, what other classifications for these items are allowed?
- A17. Refer to AF's Note 29.2 "Description of the actuarial assumptions and related sensitivities."
- What are the average discount rates used to measure AF's (a) 10–15 year and (b) 15-year and more pension obligations in the "euro" geographic zone in 2019?
 - If the rate used had been 1% (100 basis points) higher, what change would have occurred in the pension obligation in 2019? What if the rate had been 1% lower?
- A18. In Note 4.6, AF indicates that "Sales related to air transportation, which consist of passenger and freight transportation, are recognized when the transportation service is provided, so passenger and freight tickets are consequently recorded as 'Deferred revenue upon issuance.'"
- Examine AF's balance sheet. What is the total amount of deferred revenue on ticket sales as of December 31, 2019?
 - When transportation services are provided with respect to the deferred revenue on ticket sales, what journal entry would AF make to reduce deferred revenue?
 - Does AF's treatment of deferred revenue under IFRS appear consistent with how these transactions would be handled under U.S. GAAP? Explain.
- A19. Assume that AF is forced to cancel a flight due to mechanical trouble, requiring it to promise €50,000 of compensation to affected passengers. Prepare the journal entry that AF would make to record this event.
- A20. AF has a frequent flyer program (also called a "loyalty program"), "Flying Blue," which allows members to acquire "miles" as they fly on Air France or partner airlines that are redeemable for free flights or other benefits.
- Does AF treat "Miles" as a separate performance obligation?
 - Does AF report any liability associated with these miles as of December 31, 2019?
 - Is AF's accounting for its frequent flier program consistent with *IFRS 15*?
- A21. In Note 4.11, AF describes how it values trade receivables. Is this approach consistent with U.S. GAAP?

- A22. In Note 25, AF reconciles the beginning and ending balances of its valuation allowance for trade accounts receivable. Prepare a T-account for the valuation allowance and include entries for the beginning and ending balances and any reconciling items that affected the account during 2019.
- A23. Examine Note 27. Does AF have any bank overdrafts? If so, are the overdrafts shown in the balance sheet the same way they would be shown under U.S. GAAP?
- A24. What method does the company use to value its inventory? What other alternatives are available under IFRS? Under U.S. GAAP?
- A25. AF's inventories are valued at the lower of cost or net realizable value. Does this approach differ from U.S. GAAP?

Part B: Property, Plant, and Equipment and Intangible Assets

- B1. How does AF account for information technology (IT) development costs before and during its development phase?
- B2. AF does not report any research and development expenditures. If it did, its approach to accounting for research and development would be significantly different from U.S. GAAP. Describe the differences between IFRS and U.S. GAAP in accounting for research and development expenditures.
- B3. AF does not report the receipt of any government grants. If it did, its approach to accounting for government grants would be significantly different from U.S. GAAP. Describe the differences between IFRS and U.S. GAAP in accounting for government grants. If AF received a grant for the purchase of assets, what alternative accounting treatments are available under IFRS?
- B4. AF's property, plant, and equipment is reported at cost. The company has a policy of not revaluing property, plant, and equipment. Suppose AF decided to revalue its flight equipment on December 31, 2019, and that the fair value of the equipment on that date was €14,000 million. Prepare the journal entry to record the revaluation, assuming the journal entry to record annual depreciation had already been recorded. (*Hint:* You will need to locate the original cost and accumulated depreciation of the equipment at the end of the year in the appropriate disclosure note.)
- B5. Under U.S. GAAP, what alternatives do companies have to value their property, plant, and equipment?
- B6. AF calculates depreciation of plant and equipment on a straight-line basis, over the useful life of the asset. Describe any differences between IFRS and U.S. GAAP in the calculation of depreciation.
- B7. When does AF test for the possible impairment of fixed assets? How does this approach differ from U.S. GAAP?
- B8. Describe the approach AF uses to determine fixed asset impairment losses. (*Hint:* See Note 4.16.) How does this approach differ from U.S. GAAP?
- B9. The following is included in AF's Disclosure Note 4.13: "Intangible assets are recorded at initial cost less accumulated amortization and any accumulated impairment losses." Assume that on December 31, 2019, AF decided to revalue its Other intangible assets (see Note 16), and that the fair value on that date was determined to be €500 million. Amortization expense for the year already has been recorded. Prepare the journal entry to record the revaluation.

Part C: Investments

- C1. Read Notes 23 and 36.4. Focusing on debt investments accounted for at fair value through profit loss (FVPL):
- As of December 31, 2019, what is the total balance of those investments in the balance sheet?
 - How much of that balance is classified as current and how much as noncurrent?
 - How much of the fair value of those investments is accounted for using level 1, level 2, and level 3 inputs of the fair value hierarchy? Given that information, assess the reliability (representational faithfulness) of this fair value estimate.
- C2. Complete C1 again, but for equity investments accounted for as either FVPL or FVOVI.
- C3. Read Notes 4.3. and 21.
- When AF can exercise significant influence over an investee, what accounting approach does it use to account for the investment? How does AF determine if it can exercise significant influence?
 - If AF is involved in a joint venture, what accounting approach does it use to account for the investment?
 - What is the carrying value of AF's equity-method investments in its December 31, 2019, balance sheet?
 - How did AF's equity-method investments affect AF's 2019 net income from continuing operations?

Part D: Liabilities

- D1. Read Notes 4.6 and the Consolidated Balance Sheet. What do you think gave rise to total deferred income of €3,289 as of the end of fiscal 2019? Would transactions of this type be handled similarly under U.S. GAAP?
- D2. Is the threshold for recognizing a provision under IFRS different than it is under U.S. GAAP? Explain.
- D3. Note 30 lists “Return obligation liability and provision for leased aircraft and other provisions” (hereafter, “other provisions”).
- Do the beginning and ending balances of total provisions shown in Note 30 for fiscal 2019 tie to the balance sheet? By how much has the total amount of AF’s “other provisions” increased or decreased during fiscal 2019?
 - Write journal entries for the following changes in the litigation provision that occurred during fiscal 2019, assuming any amounts recorded on the income statement are recorded as “provision expense” and any use of provisions is paid for in cash. In each case, provide a brief explanation of the event your journal entry is capturing.
 - New provision.
 - Use of provision.
 - Reversal of unnecessary provisions
 - Is AF’s treatment of its litigation provision under IFRS similar to how it would be treated under U.S. GAAP?
- D4. Note 30.2 lists a number of contingent liabilities. Are amounts for those items recognized as a liability on AF’s balance sheet? Explain.
- D5. Examine the long-term borrowings described in AF’s Note 31.3. Note that AF has convertible bonds outstanding that it issued in 2019 (Ou d’Echange En Actions Nouvelles ou Existantes—OCEANE). Prepare the journal entry AF would use to record the issue of convertible bonds. Prepare the journal entry AF would use to record the issue of the convertible bonds if AF used U.S. GAAP.
- D6. AF does not elect the fair value option (FVO) to report its financial liabilities. Examine Note 36.3, “Market value of financial instruments.” If the company had elected the FVO for all of its debt measured at amortized cost, what would be the balance at December 31, 2019, in the fair value adjustment account?

Part E: Leases, Income Taxes, and Pensions

E1. In Note 4.15: Lease contracts, AF states that “leases recorded in the balance sheet and lead to the recognition of:

- an asset representing a right of use of the asset leased during the lease term of the contract and
- a liability related to the payment obligation.”

Is this policy generally consistent with U.S. GAAP?

- E2. From your reading of Note 4.15, “Lease Contracts,” what would you say is the primary difference between *IFRS 16* and U.S. GAAP in the way lessees account for leases?
- E3. What amounts are shown in AF’s December 31, 2019, balance sheet for deferred taxes?
- E4. Here’s an excerpt from one of AF’s notes to its financial statements:

Deferred taxes (in part)

The Group records deferred taxes using the balance sheet liability method, providing for any temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for taxation purposes, except for exceptions described in IAS 12 “Income taxes.” The tax rates used are those enacted or substantively enacted at the balance sheet date.

Is this policy consistent with U.S. GAAP? Explain.

Page C-5

E5. Below is an excerpt from one of AF’s notes to its financial statements:

Deferred taxes (in part)

Deferred tax assets related to temporary differences and tax losses carried forward are recognized only to the extent it is probable that a future taxable profit will be available against which the asset can be utilized at the tax entity level.

Is this policy consistent with U.S. GAAP? Explain.

- E6. AF reported past service cost (called prior service cost under U.S. GAAP) in its income statement as part of net periodic pension cost. How does that reporting method compare with the way we report prior service cost under U.S. GAAP?
- E7. Look at AF’s balance sheet. How does the way that AF reports Pension assets and Pension liabilities (provisions) compare with the way we report those amounts under U.S. GAAP?
- E8. See Note 29.3, “Evolution of Commitments.” For its Netherlands operations, did AF report (a) net interest *cost* or (b) net interest *income* in 2019?

Part F: Shareholders' Equity and Additional Financial Reporting Issues

- F1. Locate Note 28.5 in AF's financial statements. What items comprise "Reserves and retained earnings," as reported in the balance sheet?
- F2. In its presentation of the components of the balance sheet, which is listed first, current assets or non-current assets? Does this approach differ from U.S. GAAP?
- F3. In its presentation of the components of the balance sheet, which is listed first, current liabilities or non-current liabilities? Does this approach differ from U.S. GAAP?
- F4. In its presentation of the components of the balance sheet, which is listed first, liabilities or shareholders' equity? Does this approach differ from U.S. GAAP?
- F5. Note 14 in the financial statements provides information on the calculation of earnings per share:

| 14. EARNINGS PER SHARE (in part) | | | |
|--|--------------------------|-------------------|-----------------|
| Results used for the calculation of diluted earnings per share: | | | |
| In € millions | | | |
| | As of December 31 | 2019 | 2018 |
| Basic net income for the period—Equity holders of Air France—KLM | | 273 | 395 |
| Basic net income for the period for continuing operations | | 273 | 395 |
| Consequence of potential ordinary shares on net income (after tax) | | <u>6</u> | <u>-</u> |
| Net income for the period—(taken for calculation of diluted earnings per share) | | 279 | 395 |
| Reconciliation of the number of shares used to calculate earnings per share | | | |
| | As of December 31 | 2019 | 2018 |
| Weighted average number of: | | | |
| - Ordinary shares issued | | 428,634,035 | 428,634,035 |
| - Treasury stock held regarding stock option plan | | (1,116,420) | (1,116,420) |
| - Other treasury stock | | <u>(85,151)</u> | <u>(85,151)</u> |
| Number of shares used to calculate basic earnings per share | | 427,432,464 | 427,432,464 |
| OCEANE conversion | | <u>27,901,785</u> | - |

Number of ordinary and potential ordinary shares used to
calculate diluted earnings per share

455,334,249 427,432,464

Page C-6

- a. Based on the information provided, what was diluted earnings per share for 2019?
- b. Using the information provided by the note, infer the reason for the €6 million “Consequence of potential ordinary shares on net income.”
- F6. Refer to AF’s disclosure notes, in particular Note 2, “Restatement of Accounts 2018.” Was the first of the two changes described in the note a change in estimate, a change in principle, a change in reporting entity, or an error correction?
- F7. Is this the same approach AF would follow if using U.S. GAAP?
- F8. In its statement of cash flows, what are the three primary classifications into which AF’s cash inflows and cash outflows are separated?
- F9. Is this classification the same as or different from cash flow statements prepared in accordance with U.S. GAAP?
- F10. In which classification are cash inflows from dividends included in AF’s cash flow statements?
- F11. Is this classification different from cash flow statements prepared in accordance with U.S. GAAP?
- F12. In Note 36.1, “Risk Management,” and Note 36.2, “Derivative Instruments,” AF discusses its various risk exposures and strategies to reduce its exposure to such risks. Based on the detailed disclosures in Note 36.2, what are the three largest risk exposures (based on the fair value of its derivative instruments)? For each risk exposure, list one derivative instrument it uses to hedge that risk.
- F13. Per Note 36.2, what is the fair value of AF’s derivative instruments on the balance sheet? (*Hint:* This information is also provided in Notes 26 and 35.)

Glossary

Accounting equation Assets = Liabilities + Shareholders' Equity.

Accounting principles board (APB) the second private sector body delegated the task of setting accounting standards.

Accounts storage areas used to keep track of how transactions and events cause increases and decreases in the balances of financial elements.

Accounts payable obligations to suppliers of merchandise or of services purchased on account.

Accounts receivable amounts to be received from the sale of goods or services on account.

Accounts receivable aging schedule calculating the necessary allowance for uncollectible accounts by applying different percentages to accounts receivable balances depending on the length of time outstanding.

Accretion expense the increase in an asset retirement obligation that accrues as an operating expense.

Accrual accounting measures income according to the entity's accomplishments and resource sacrifices during the period from transactions related to providing goods and services to customers, regardless of when cash is received or paid.

Accruals when the cash flow comes after either expense or revenue recognition.

Accrued interest interest that has accrued since the last interest date.

Accrued liabilities expenses already incurred but not yet paid (accrued expenses).

Accrued receivables recognition of revenue for goods or services transferred to customers before cash is received.

Accumulated benefit obligation (ABO) the discounted present value of estimated retirement benefits earned so far by employees, applying the plan's pension formula using existing compensation levels.

Accumulated other comprehensive income (AOCI) a component of shareholders' equity that reports the accumulated amount of other comprehensive income items in the current and prior periods.

Acid-test ratio measure of a company's liquidity; computed as current assets, excluding inventories and prepaid items, divided by current liabilities.

Acquisition costs the amounts paid to acquire the rights to explore for undiscovered natural resources or to extract proven natural resources.

Activity-based method allocates an asset's cost base using a measure of the asset's input or output.

Actuary a professional trained in a particular branch of statistics and mathematics to assess the various uncertainties and to estimate the company's obligation to employees in connection with its pension plan.

Additions the adding of a new major component to an existing asset.

Adjusted trial balance trial balance after adjusting entries have been recorded.

Adjusting entries internal transactions recorded at the end of any period when financial statements are prepared.

Advance payment payment made at the beginning of the lease that represents prepaid rent

Agent facilitates transfers of goods and services between sellers and customers.

Allocation base cost of the asset expected to be consumed during its service life.

Allocation method the pattern in which the allocation base is expected to be consumed.

Allowance for uncollectible accounts contra account that reduces accounts receivable to the net amount expected to be collected. Also called the allowance for bad debts, the allowance for doubtful accounts, or the allowance for credit losses.

Allowance method recording bad debt expense and reducing accounts receivable indirectly by crediting the allowance for uncollectible accounts, a contra account to accounts receivable, for an estimate of the amount that eventually will prove uncollectible.

American Institute of Accountants (AIA)/American Institute of Certified Public Accountants (AICPA) national organization of professional public accountants.

Amortization cost allocation for intangibles.

Annual bonuses annual bonuses are one-time payments in addition to normal salary, typically tied to performance of the individual or company during a period

Annuity cash flows received or paid in the same amount each period.

Annuity due cash flows occurring at the beginning of each period.

Antidilutive securities the effect of the conversion or exercise of potential common shares would be to increase, rather than decrease, EPS.

Articles of incorporation statement of the nature of the firm's business activities, the shares to be issued, and the composition of the initial board of directors.

Asset retirement obligations (AROs) obligations associated with the disposition of an operational asset.

Asset turnover ratio measure of a company's efficiency in using assets to generate revenue; computed as net sales divided by average total assets.

Asset/liability approach recognition and measurement of assets and liabilities drives revenue and expense recognition.

Assigning using receivables as collateral for loans; nonpayment of a debt will require the proceeds from collecting the assigned receivables to go directly toward repayment of the debt.

Auditor's report report issued by CPAs who audit the financial statements that informs users of the audit findings.

Auditors independent professionals who render an opinion about whether the financial statements fairly present the company's financial position, performance, and cash flows in compliance with GAAP.

Average collection period indication of the number of days the average accounts receivable balance is outstanding.

Average cost method assumes cost of goods sold and ending inventory consist of a mixture of all the goods available for sale.

Average days in inventory indicates the average number of days it normally takes to sell inventory.

Balance sheet a financial statement that presents an organized list of assets, liabilities, and equity at a particular point in time.

Balance sheet approach determining an income statement amount by estimating the appropriate carrying value of a balance sheet account and then adjusting the account as necessary to reach that carrying value.

Bank reconciliation comparison of the bank balance with the balance in the company's own records.

Basic EPS computed by dividing income available to common shareholders (net income less any preferred stock dividends) by the weighted-average number of common shares outstanding for the period.

Bill-and-hold occurs when a customer purchases goods but requests that the seller retain physical possession of the goods until a later date.

Billings on construction contract contra account to the asset *construction in progress* recognizing that a customer has been billed for work performed; subtracted from construction in progress to determine balance sheet presentation.

Board of directors establishes corporate policies and appoints officers who manage the corporation.

Bond indenture document that describes specific promises made to bondholders.

Bonds A form of debt consisting of separable units (bonds) that obligates the issuing corporation to repay a stated amount at a specified maturity date and to pay interest to bondholders between the issue date and maturity.

Book value assets minus liabilities as shown in the balance sheet.

Callable allows the issuing company to buy back, or call, outstanding bonds from the bondholders before their scheduled maturity date.

Capital budgeting the process of evaluating the purchase of operational assets.

Capital markets mechanisms that foster the allocation of resources efficiently.

Capital structure the mixture of liabilities and shareholders' equity in a company.

Cash currency and coins, balances in checking accounts, and items acceptable for deposit in these accounts, such as checks and money orders received from customers.

Cash disbursements journal record of cash disbursements.

Cash equivalents short-term investments that have a maturity date no longer than three months from the date of purchase.

Cash flow hedge a derivative used to hedge against the exposure to changes in cash inflows or outflows of an asset or liability or a forecasted transaction.

Cash flows from financing activities both inflows and outflows of cash resulting from the external financing of a business.

Cash flows from investing activities both outflows and inflows of cash caused by the acquisition and disposition of assets.

Cash flows from operating activities both inflows and outflows of cash that result from activities reported on the income statement.

Cash receipts journal record of cash receipts.

Cash surrender value a determinable amount of money that can be received in exchange for surrendering a life insurance policy while the insured is still alive.

Cash-basis accounting measures income as the difference between cash receipts and cash disbursements during a reporting period from transactions related to providing goods and services to customers.

Certified Public Accountants (CPAs) licensed individuals who can represent that the financial statements have been audited in accordance with generally accepted auditing standards.

Change in accounting estimate a change in an estimate when new information comes to light.

Change in accounting principle switch by a company from one accounting method to another.

Change in reporting entity presentation of consolidated financial statements in place of statements of individual companies, or a change in the specific companies that constitute the group for which consolidated or combined statements are prepared.

Closing entries transfer the balances of temporary accounts to the retained earnings account and reduce the balances of temporary accounts to zero.

Closing process the temporary accounts are reduced to zero balances, and these temporary account balances are closed (transferred) to retained earnings to reflect the changes that have occurred in that account during the period.

Commercial paper unsecured notes sold in minimum denominations of \$25,000 with maturities ranging from 30 to 270 days.

Committee on Accounting Procedure (CAP) first private sector body that was delegated the task of setting accounting standards.

Comparability the ability to help users see similarities and differences among events and conditions.

Comparative financial statements corresponding financial statements from the previous years accompanying the issued financial statements.

Compensating balance specified balance (usually some percentage of the committed amount) a borrower of a loan is asked to maintain in a low-interest or noninterest-bearing account at the bank.

Complete depiction is complete if it includes all information necessary for faithful representation.

Complex capital structure potential common shares are outstanding.

Composite depreciation method physically dissimilar assets are aggregated to gain the convenience of group depreciation.

Compound interest interest computed not only on the initial investment but also on the accumulated interest in previous periods.

Comprehensive income change in shareholders' equity for the period from nonowner sources; equal to net income plus other comprehensive income. Traditional net income plus other nonowner changes in equity.

Conceptual framework deals with theoretical and conceptual issues and provides an underlying structure for current and future accounting and reporting standards.

Confirmatory value confirmation of investor expectations about future cash-generating ability.

Conservatism practice followed in an attempt to ensure that uncertainties and risks inherent in business situations are adequately considered.

Consignment a selling arrangement whereby the consignor physically transfers goods to another company ("consignee") to sell, while legal title and risk of ownership of those goods remain with the consignor during the consignment period.

Consistency permits valid comparisons between different periods.

Consolidated financial statements combination of the separate financial statements of the parent and subsidiary each period into a single aggregate set of financial statements, as if there were only one company.

Construction in progress asset account equivalent to the asset work-in-process inventory in a manufacturing company.

Contingently issuable shares additional shares of common stock to be issued contingent on the occurrence of some future circumstance.

Contract an agreement that creates legally enforceable rights and obligations. Contracts can be explicit or implicit.

Contract asset asset recognizing that a seller has a conditional right to receive payment after satisfying a performance obligation.

Contract liability a label given to deferred revenue or unearned revenue accounts.

Control usually an investor can control the investee if it owns more than 50% of the investee's voting shares.

Conventional retail method application of the retail inventory method that excludes markdowns in the calculation of the cost-to-retail percentage, as a way to approximate the lower of average cost or market.

Convertible bonds bonds for which bondholders have the option to convert the bonds into shares of stock.

Copyright exclusive right of protection given to a creator of a published work, such as a song, painting, photograph, or book.

Corporation dominant form of business organization that acquires capital from investors in exchange for ownership interest and from creditors by borrowing.

Correction of an error an adjustment a company makes due to an error made and later discovered.

Cost effectiveness the perceived benefit of increased decision usefulness exceeds the anticipated cost of providing that information.

Cost of goods sold cost of the inventory sold during the period.

Cost recovery method deferral of all gross profit recognition until the cost of the item sold has been recovered.

Cost-to-retail percentage ratio found by dividing goods available for sale at cost by goods available for sale at retail.

Coupons bonds name of the owner was not registered; the holder actually clipped an attached coupon and redeemed it in accordance with instructions on the indenture.

Credit losses losses due to failure by customers to pay amounts owed for purchase of goods or services; also called bad debts, impairments of receivables, and uncollectible accounts.

Credits represent the right side of the account.

Cumulative if the specified dividend is not paid in a given year, the unpaid dividends accumulate and must be made up in a later dividend year before any dividends are paid on common shares.

Current assets includes assets that are cash, will be converted into cash, or will be used up within one year from the balance sheet date (or operating cycle, if longer).

Current costs are the costs that would be incurred to purchase or reproduce an asset.

Current expected credit loss (CECL) model a model used to estimate credit losses (bad debts) for receivables as well as those debt investments that are accounted for as held to maturity.

Current liabilities expected to require the use of current assets for payment, and usually are payable within one year from the balance sheet date (or operating cycle, if longer).

Current maturities of long-term debt the portion of long-term notes, loans, mortgages, and bonds payable that is payable within the next year (or operating cycle, if longer), reported as a current liability.

Current ratio measure of a company's liquidity; computed as current assets divided by current liabilities.

Date of record specific date stated as to when the determination will be made of the recipient of the dividend.

Debenture bond backed only by the "full faith and credit" of the issuing corporation.

Debits represent the left side of the account.

Debt issue costs Costs of issuing debt securities are called *debt issue costs* and are accounted for the same way as bond discount.

Debt to equity ratio compares resources provided by creditors with resources provided by owners; computed as total liabilities divided by shareholders' equity.

Decision usefulness the quality of being useful to decision making.

Default risk a company's ability to pay its obligations when they come due.

Deferred annuity first cash flow occurs more than the one period after the date the agreement begins.

Deferred revenues cash received from a customer for goods or services to be provided in a future period.

Deferred tax asset taxes to be saved in the future when future deductible amounts reduce taxable income (when the temporary differences reverse).

Deferred tax liability taxes to be paid in the future when future taxable amounts become taxable (when the temporary differences reverse).

Deficit debit balance in retained earnings.

Defined benefit pension plans fixed retirement benefits defined by a designated formula, based on employees' years of service and annual compensation.

Defined contribution pension plans fixed annual contributions to a pension fund; employees choose where funds are invested—usually stocks or fixed-income securities.

Depletion allocation of the cost of natural resources.

Depreciation cost allocation for plant and equipment.

Derivatives financial instruments usually created to hedge against risks created by other financial instruments or by transactions that have yet to occur but are anticipated and that "derive" their values or contractually required cash flows from some other security or index.

Detachable stock purchase warrants the investor has the option to purchase a stated number of shares of common stock at a specified option price, within a given period of time.

Development costs for natural resources, costs incurred after the resource has been discovered but before production begins.

Diluted EPS incorporates the dilutive (reducing) effect of all potential common shares in the calculation of EPS.

Direct financing lease lease in which the lessor finances the asset for the lessee and earns interest revenue over the lease term.

Direct method cash effect of each operating activity (i.e., income statement item) is reported directly on the statement of cash flows.

Direct write-off method an allowance for uncollectible accounts is not used; instead bad debts that do arise are written off as bad debt expense.

Disclosure including pertinent information in the financial statements and accompanying notes.

Disclosure notes additional insights about company operations, accounting principles, contractual agreements, and pending litigation written in notes that accompany the financial statements.

Discontinued operations the discontinuance of a component of an entity whose operations and cash flows can be clearly distinguished from the rest of the entity.

Discount arises when bonds are sold for less than face amount.

Discounting the transfer of a note receivable to a financial institution.

Distinct a good or service is *distinct* if it is both *capable of being distinct* and *separately identifiable from other goods or services in the contract*. It is capable of being distinct if the customer could use the good or service on its own or in combination with other goods and services it could obtain elsewhere. It is separately identifiable if the good or service is distinct in the context of the contract because it is not highly interrelated with other goods and services in the contract. Distinct goods and services are accounted for as separate performance obligations.

Dividend distribution to shareholders of a portion of assets earned.

Dollar-value LIFO (DVL) an inventory costing method comprising layers of dollar value from different periods and using cost indexes to adjust for changes in price levels over time.

Dollar-value LIFO retail method LIFO retail method combined with dollar-value LIFO.

Double-declining-balance (DDB) method 200% of the straight-line rate is multiplied by book value.

Double-entry system dual effect that each transaction has on the accounting equation when recorded.

DuPont framework depicts return on equity as determined by profit margin (representing profitability), asset turnover (representing efficiency), and the equity multiplier (representing leverage).

Early extinguishment of debt debt is retired prior to its scheduled maturity date.

Earnings per share (EPS) the amount of income earned by a company expressed on a per share basis.

Earnings quality refers to the ability of reported earnings (income) to predict a company's future earnings.

Economic entity assumption presumes that economic events can be identified specifically with an economic entity.

Economic events events that directly affect the financial position of the company.

Effective interest method calculates interest revenue by multiplying the outstanding balance of the investment by the relevant interest rate.

Effective rate the actual rate at which money grows per year.

Effective tax rate equals tax expense divided by pretax accounting income.

Emerging Issues Task Force (EITF) responsible for providing timely responses to emerging financial reporting issues.

Employee share purchase plans permit all employees to buy shares directly from their company, often at favorable terms.

Equity method used when an investor can't control, but can significantly influence, the investee. Under the equity method, the investor recognizes in its own income statement its proportionate share of the investee's income.

Estimates predictions of future events.

Ethics a code or moral system that provides criteria for evaluating right and wrong.

Ex-dividend date usually one business day before the date of record, and is the first day the stock trades without the right to receive the declared dividend.

Expected cash flow approach adjusts the cash flows, not the discount rate, for the uncertainty or risk of those cash flows.

Expected return on plan assets estimated long-term return on invested assets.

Expenses outflows or other using up of assets or incurrences of liabilities from delivering or producing goods, rendering services, or other activities that constitute the entity's ongoing operations.

Exploration costs for natural resources, expenditures such as drilling a well, or excavating a mine, or any other costs of searching for natural resources.

Extended warranties additional, extended service that covers new problems arising after the buyer takes control of the product.

External events exchanges between the company and separate economic entities.

F.O.B. (free on board) destination legal title to the goods does not pass from the seller to the buyer until the goods arrive at their destination (the customer's location); the seller is responsible for shipping costs and transit insurance.

F.O.B. (free on board) shipping point legal title to the goods passes from the seller to the buyer at the point of shipment (when the seller delivers the goods to the common carrier); the buyer is responsible for shipping costs and transit insurance .

Factor financial institution that buys receivables for cash, handles the billing and collection of the receivables, and charges a fee for this service.

Fair value bases measurements on the price that would be received to sell assets or transfer liabilities in an orderly market transaction.

Fair value hedge a derivative is used to hedge against the exposure to changes in the fair value of an asset or liability or a firm commitment.

Fair value option allows companies to report specified financial assets and liabilities at fair value.

Faithful representation exists when there is agreement between a measure or description and the phenomenon it purports to represent.

Finance leases lessee has, in substance, purchased the lease asset; assumed when one of five classification criteria is met.

Financial accounting provides relevant financial information to various external users.

Financial Accounting Foundation (FAF) responsible for selecting the members of the FASB and its Advisory Council, ensuring adequate funding of FASB activities, and exercising general oversight of the FASB's activities.

Financial Accounting Standards Board (FASB) the current private sector body that has been delegated the task of setting accounting standards.

Financial instrument cash; evidence of an ownership interest in an entity; a contract that imposes on one entity an obligation to deliver cash or another financial instrument, and conveys to the second entity a right to receive cash or another financial instrument; and a contract that imposes on one entity an obligation to exchange financial instruments on potentially unfavorable terms and conveys to a second entity a right to exchange other financial instruments on potentially favorable terms.

Financial leverage by earning a return on borrowed funds that exceeds the cost of borrowing the funds, a company can provide its shareholders with a total return higher than it could achieve by employing equity funds alone.

Financial reporting process of providing financial statement information to external users.

Financial statements primary means of communicating financial information to external parties.

Financing activities involve cash inflows and outflows from transactions with creditors (excluding trade creditors) and owners.

Finished goods products that have been completed in the manufacturing process but have not yet been sold.

First-in, first-out (FIFO) method assumes that the first inventory units purchased are the first ones sold.

Fixed-asset turnover ratio the effectiveness of managers to use fixed assets to generate sales, measured as net sales divided by average fixed assets.

Foreign currency futures contract agreement that requires the seller to deliver a specific foreign currency at a designated future date at a specific price.

Foreign currency hedge a derivative is used to offset the risk that changes in foreign currency exchange rates will affect the entity's positions, operations, or transactions that are denominated in a currency other than the its functional currency.

Forward contract calls for delivery on a specific date; is not traded on a market exchange; does not call for a daily cash settlement for price changes in the underlying contract.

Franchise contractual arrangement under which the franchisor grants the franchisee the exclusive right to use the franchisor's trademark or tradename within a geographical area, usually for a specified period of time.

Franchisee individual or corporation given the right to operate a business involving the franchisor's products or services and use its name and other symbols for a specific period of time.

Franchisor grants to the franchisee the right to operate a business involving the franchisor's products or services and use its name and other symbols for a specific period of time.

Fraud an intentional act by one or more individuals among management, those charged with governance, employees, or third parties, involving the use of deception that results in a misstatement in the financial statements that are the subject of an audit.

Free cash flow the cash left over after a company pays for its operating expenses and capital expenditures, often measured as cash flow from operations minus capital expenditures.

Free from error information is free from error if it contains no errors or omissions.

Freight-in transportation-in; in a periodic system, freight costs generally are added to this temporary account, which is added to purchases in determining net purchases.

Full-cost method allows costs incurred in searching for oil and gas within a large geographical area to be capitalized as assets and expensed in the future as oil and gas from the successful wells are removed from that area.

Full-disclosure principle financial reports should include any information that could affect the decisions made by external users.

Functional intellectual property has significant stand-alone functionality, such that the intellectual property can perform a function or task, be played, or be aired over various types of media; the seller typically recognizes revenue at the point in time the customer can start using functional intellectual property.

Future deductible amounts the future tax consequence of a temporary difference will be to decrease taxable income relative to accounting income; result in recognition of deferred tax assets.

Future taxable amounts the future tax consequence of temporary difference will be to increase taxable income relative to accounting income; result in recognition of deferred tax liabilities.

Future value amount of money that a dollar will grow to at some point in the future.

Futures contract agreement traded on an organized exchange; calls for delivery of a specific commodity or financial instrument at a predetermined price on a specific date or during a specific month.

Gains increases in equity from peripheral, or incidental, transactions of an entity.

General journal used to record any type of transaction.

General ledger collection of accounts that organizes the accounts and allows for keeping track of increases and decreases and resulting balances

Generally accepted accounting principles (GAAP) set of both broad and specific guidelines that companies should follow when measuring and reporting the information in their financial statements and related notes.

Gift card transferable prepayments for a specified dollar value of goods or services to be delivered at a future date. Gift cards give rise to deferred revenue liabilities until they are redeemed or viewed as not going to be redeemed (broken).

Going concern assumption in the absence of information to the contrary, it is anticipated that a business entity will continue to operate indefinitely.

Goodwill intangible asset equal to the fair value of the consideration given to acquire a company (the acquisition price) minus the fair value of the acquired company's identifiable net assets.

Governmental Accounting Standards Board (GASB) responsible for developing accounting standards for governmental units such as states and cities.

Gross method The buyer views a discount not taken as part of the cost of inventory; the seller views a discount not taken by the customer as part of sales of revenue.

Gross profit method (gross margin method) estimates cost of goods sold, which is then subtracted from cost of goods available for sale to estimate ending inventory.

Gross profit ratio gross profit (net sales minus cost of goods sold) divided by net sales.

Group depreciation method collection of assets defined as depreciable assets that share similar service lives and other attributes.

Half-year convention record one-half of a full year's depreciation in the year of acquisition and another half year in the year of disposal.

Hedging taking an action that is expected to produce exposure to a particular type of risk that is opposite of an actual risk to which the company already is exposed.

Historical cost original transaction value.

Horizontal analysis comparison by expressing each item as a percentage of that same item in the financial statements of another year (base amount) in order to more easily see year-to-year changes.

Illegal acts violations of the law, such as bribes, kickbacks, and illegal contributions to political candidates.

Implicit rate of interest rate implicit in the agreement.

Improvements replacement of a major component of an operational asset.

Income from continuing operations revenues, expenses (including income taxes), gains, and losses, excluding those related to discontinued operations and extraordinary items.

Income statement statement of operations or statement of earnings that is used to summarize the profit-generating activities that occurred during a particular reporting period.

Income statement approach estimating an income statement amount directly, rather than basing it on the change in a balance sheet account.

Indirect method the net cash increase or decrease from operating activities is derived indirectly by starting with reported net income and working backwards to convert that amount to a cash basis.

Initial direct costs costs incurred by the lessor that are associated directly with originating a lease and are essential to acquire the lease.

Installment sales method recognizes revenue and costs only when cash payments are received.

Institute of Internal Auditors national organization of accountants providing internal auditing services for their own organizations.

Institute of Management Accountants (IMA) primary national organization of accountants working in industry and government.

Intangible assets operational assets that lack physical substance and often involve an exclusive right to a company to provide a product or service; examples include patents, copyrights, franchises, and goodwill.

Interest “rent” paid for the use of money for some period of time.

Interest cost interest accrued on the projected benefit obligation calculated as the discount rate multiplied by the projected benefit obligation at the beginning of the year.

Interest rate swap agreement to exchange fixed interest payments for floating rate payments, or vice versa, without exchanging the underlying principal amounts.

Interest-bearing note receivable notes that state a principal and interest rate to be paid by a debtor to a creditor.

Internal control a company’s system to encourage adherence to company policies and procedures, promote operational efficiency, minimize errors and theft, and enhance the reliability and accuracy of accounting data.

Internal events events that directly affect the financial position of the company but don’t involve an exchange transaction with another entity.

International Accounting Standards Board (IASB) objectives are to develop a single set of high-quality, understandable global accounting standards, to promote the use of those standards, and to bring about the convergence of national accounting standards and International Accounting Standards.

International Accounting Standards Committee (IASC) umbrella organization formed to develop global accounting standards.

International Financial Reporting Standards (IFRS) developed by the IASB and used by more than 100 countries.

Intrinsic value difference between the market price of the shares and the option price at which they can be acquired.

Inventory goods awaiting sale (finished goods), goods in the course of production (work in process), and goods to be consumed directly or indirectly in production (raw materials). Goods acquired, manufactured, or in the process of being manufactured for sale.

Inventory turnover ratio measures a company's efficiency in managing its investment in inventory; computed as cost of goods sold divided by average inventory.

Investing activities involve the acquisition and sale of long-term assets used in the business and nonoperating investment assets.

Journal a chronological record of all economic events affecting the financial position of a company.

Journal entry captures the effect of a transaction on financial position in debit/credit form.

Just-in-time (JIT) system a system used by a manufacturer to coordinate production with suppliers so that raw materials or components arrive just as they are needed in the production process.

Land improvements the cost of parking lots, driveways, and private roads and the costs of fences and lawn and garden sprinkler systems.

Last-in, first-out (LIFO) method assumes that the last inventory units purchased are the first ones sold.

Lease payments payments the lessee is required to make in connection with the lease.

Leasehold improvement account title when a lessee makes improvements to leased property that reverts back to the lessor at the end of the lease.

Lessee user of a leased asset.

Lessor owner of a leased asset.

Liabilities probable future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or provide services to other entities in the future as a result of past transactions or events.

Licenses allow the customer to access the seller's intellectual property.

LIFO conformity rule if a company uses LIFO to measure taxable income, the company also must use LIFO for external financial reporting.

LIFO inventory pools groups of inventory units based on physical similarities of the individual units.

LIFO liquidation the decline in inventory quantity during the period.

LIFO reserve contra account to inventory used to record the difference between the internal method and LIFO.

Limited liability company owners are not liable for the debts of the business, except to the extent of their investment; all members can be involved with managing the business without losing liability protection; no limitations on the number of owners.

Limited liability partnership similar to a limited liability company, except it doesn't offer all the liability protection available in the limited liability company structure.

Line of credit allows a company to borrow cash without having to follow formal loan procedures and paperwork.

Liquidating dividend when a dividend exceeds the balance in retained earnings and returns invested capital to owners

Liquidity the ability of a company to convert its assets to cash to pay its current liabilities.

Long-term solvency an assessment of whether a company will be able to pay all its liabilities, which includes long-term liabilities.

Loss contingency existing, uncertain situation involving potential loss which will be resolved when some future event occurs.

Losses decreases in equity from peripheral, or incidental, transactions of the entity.

Lower of cost or market subsequent measurement of inventory applied by companies that use LIFO or the retail inventory method. This approach requires companies to report ending inventory at the lower of cost or market.

Lower of cost or net realizable value (NRV) subsequent measurement of inventory applied by companies that use FIFO, average cost, or any other method besides LIFO or the retail inventory

method. This approach requires companies to report ending inventory at the lower of cost or net realizable value.

Management's discussion and analysis (MDA) provides a biased but informed perspective of a company's operations, liquidity, and capital resources.

Market (for inventory reporting) Current replacement cost of inventory, not to exceed net realizable value (NRV) or to be lower than NRV minus a normal profit margin.

Material has qualitative or quantitative characteristics that make it matter for decision making.

Measurement process of associating numerical amounts with the elements.

Model Business Corporation Act designed to serve as a guide to states in the development of their corporation statutes.

Modified accelerated cost recovery system (MACRS) federal income tax code allows taxpayers to compute depreciation for their tax returns using this method.

Modified retrospective approach accounting change is applied only to the adoption period with adjustment of the balance of retained earnings at the beginning of the adoption period to capture the cumulative effects of prior periods.

Monetary assets money and claims to receive money, the amount of which is fixed or determinable.

Monetary liabilities obligations to pay amounts of cash, the amount of which is fixed or determinable.

Monetary unit assumption states that financial statement elements should be measured in a particular monetary unit (in the United States, the U.S. dollar).

Mortgage bond backed by a lien on specified real estate owned by the issuer.

Multiple-step income statement format that includes a number of intermediate subtotals before arriving at income from continuing operations.

Natural resources oil and gas deposits, timber tracts, and mineral deposits.

Net income all revenues and gains minus all expenses and losses reported in the income statement.

Net markdown net effect of the change in selling price (increase, decrease, increase).

Net markup net effect of the change in selling price (increase, increase, decrease).

Net method The buyer considers the cost of inventory to include the net, after-discount amount, and any discounts not taken are reported as interest expense; the seller considers sales revenue to

be the net amount, after discount, and any discounts not taken by the customer are included in sales revenue.

Net operating cash flow difference between cash receipts and cash disbursements from providing goods and services.

Net operating loss negative taxable income because tax-deductible expenses exceed taxable revenues.

Net operating loss carryforward offsets future taxable income with an NOL to provide a reduction of taxes payable in that future period; therefore, gives rise to a deferred tax asset because it is a future deductible amount.

Net realizable value estimated selling prices of inventory in the ordinary course of business, less reasonably predictable costs of completion, disposal, and transportation.

Neutral implies freedom from bias.

Non-GAAP earnings actual (GAAP) earnings reduced by any expenses the reporting company feels are unusual and should be excluded.

Noncash investing and financing activities transactions that do not increase or decrease cash but that result in significant investing and financing activities.

Noncumulative if the specified dividend is not declared in any given year, it need never be paid.

Noninterest-bearing note notes for which the interest is deducted from the face amount of the note to determine the cash proceeds made available to the borrower at the outset.

Nonoperating income includes revenues, expenses, gains, and losses related to peripheral or incidental activities of the company.

Nonparticipating preferred shareholder dividends are limited to the stated amount.

Notes payable promissory notes (essentially an IOU) that obligate the issuing corporation to repay a stated amount at or by a specified maturity date and to pay interest to the lender between the issue date and maturity.

Notes receivable receivables supported by a formal agreement or note that specifies payment terms.

Objectives-oriented/principles-based accounting standards approach to standard setting stresses professional judgment, as opposed to following a list of rules.

Operating activities inflows and outflows of cash related to transactions entering into the determination of net income.

Operating cycle period of time necessary to convert cash to raw materials, raw materials to finished product, the finished product to receivables, and then finally receivables back to cash.

Operating income includes revenues, expenses, gains, and losses directly related to the principal revenue-generating activities of the company.

Operating leases fundamental rights and responsibilities of ownership are retained by the lessor and the lessee merely is using the asset temporarily.

Operating segment a component of an enterprise that engages in business activities from which it may earn revenues and incur expenses (including revenues and expenses relating to transactions with other companies of the same enterprise); whose operating results are regularly reviewed by the enterprise's chief operating decision maker to make decisions about resources to be allocated to the segment and assess its performance; for which discrete financial information is available.

Operational risk how adept a company is at withstanding various events and circumstances that might impair its ability to earn profits.

Option gives the holder the right either to buy or sell a financial instrument at a specified price.

Option pricing models statistical models that incorporate information about a company's stock and the terms of the stock option to estimate the option's fair value.

Ordinary annuity cash flows occur at the end of each period.

Organization costs costs related to organizing a new entity, such as legal fees and state filing fees to incorporate.

Other comprehensive income (OCI) changes in shareholders' equity other than transactions with owners and other than items that affect net income.

Paid-in capital invested capital consisting primarily of amounts invested by shareholders when they purchase shares of stock from the corporation.

Parenthetical comments/modifying comments supplemental information disclosed on the face of financial statements.

Participating preferred shareholders are allowed to receive additional dividends beyond the stated amount.

Patent exclusive right to manufacture a product or to use a process.

Pension plan assets employer contributions and accumulated earnings on the investment of those contributions to be used to pay retirement benefits to retired employees.

Performance obligations promises to transfer goods and services to a customer; they are satisfied when the seller transfers *control* of goods or services to the customer.

Periodic inventory system a system of accounting for inventory that involves an adjusting entry at the end of the period to update the balances of the inventory account and the cost of goods sold account for purchases, sales, and returns during the period.

Periodicity assumption allows the life of a company to be divided into artificial time periods to provide timely information.

Permanent accounts represent assets, liabilities, and shareholders' equity at a point in time.

Permanent difference difference between pretax accounting income and taxable income and, consequently, between the reported amount of an asset or liability in the financial statements and its tax basis that will not "reverse" resulting from transactions and events that under existing tax law will never affect taxable income or taxes payable.

Perpetual inventory system a system of accounting for inventory by continuously adjusting the balance of the inventory account for each purchase, sale, or return of inventory; the cost of goods sold account is adjusted for each sale or return of inventory by customers.

Pledging a promise to relinquish control of an asset (or assets) in payment (or partial payment) of an amount due.

Post-closing trial balance list of all permanent accounts and their balances after closing entries have been recorded.

Posting transferring debits and credits recorded in individual journal entries to the specific accounts affected.

Potential common shares securities that, while not being common stock, may become common stock through their exercise, conversion, or issuance and therefore dilute (reduce) earnings per share.

Predictive value confirmation of investor expectations about future cash-generating ability.

Preferred stock typically has a preference (a) to a specified amount of dividends (stated dollar amount per share or percentage of par value per share) and (b) to distribution of assets in the event the corporation is dissolved.

Premium arises when bonds are sold for more than face amount.

Prepaid expenses costs of assets acquired in one period and expensed in a future period.

Prepayments/deferrals the cash flow precedes either expense or revenue recognition.

Present value Present value is today's equivalent of a particular amount in the future, after backing out the time value of money.

Principal controls goods or services and is responsible for providing them to the customer.

Prior period adjustment addition to or reduction in the beginning retained earnings balance in a statement of shareholders' equity due to a correction of an error in a prior period.

Prior service cost the cost of credit given for an amendment to a pension plan to employee service rendered in prior years.

Product costs costs associated with products and expensed as cost of goods sold only when the related products are sold.

Profit margin on sales net income divided by net sales; measures the amount of net income achieved per sales dollar.

Projected benefit obligation (PBO) the discounted present value of estimated retirement benefits earned so far by employees, applying the plan's pension formula using projected future compensation levels.

Property dividend when a noncash asset is distributed.

Property, plant, and equipment tangible, long-lived assets used in the operations of the business, such as land, buildings, equipment, machinery, furniture, and vehicles, as well as natural resources, such as mineral mines, timber tracts, and oil wells.

Prospective approach effects of an accounting change are reflected in the financial statements of only the year of the change and future years.

Proxy statement contains disclosures on compensation to directors and executives; sent to all shareholders each year.

Purchase commitments contracts that obligate a company to purchase a specified amount of inventory or raw materials at specified prices on or before specified dates.

Purchase discounts reductions in the amount to be paid if remittance is made within a designated period of time.

Purchase option a provision of some lease contracts that gives the lessee the option of purchasing the leased property during, or at the end of, the lease term at a specified price.

Purchase return a reduction in both inventory and accounts payable (if the account has not yet been paid) at the time of the return.

Purchases journal records the purchase of inventory on account.

Quality-assurance warranty obligation by the seller to make repairs or replace products that are later demonstrated to be defective for some period of time after the sale.

Quasi reorganization a firm undergoing financial difficulties, but with favorable future prospects, may use a quasi reorganization to write down inflated asset values and eliminate an accumulated deficit.

Rate of return on stock investment

$$\frac{\text{Dividends} + \text{Share price appreciation}}{\text{Initial investment}}$$

Ratio analysis comparison of accounting numbers to evaluate the performance and risk of a firm.

Raw materials components purchased from suppliers that will become part of the finished product.

Realization principle bases revenue recognition on completion of the earnings process and reasonable certainty about collectibility.

Rearrangements expenditures made to restructure an asset without addition, replacement, or improvement.

Receivables a company's claims to the future collection of cash, other assets, or services.

Receivables turnover ratio indicates how quickly a company is able to collect its accounts receivable; computed as net sales divided by average accounts receivable (net).

Recognition process of admitting information into the basic financial statements.

Redemption privilege might allow preferred shareholders the option, under specified conditions, to return their shares for a predetermined redemption price.

Refund liability amount the seller estimates will be refunded to customers who make returns.

Related-party transactions transactions with owners, management, families of owners or management, affiliated companies, and other parties that can significantly influence or be influenced by the company.

Relevance one of the primary decision-specific qualities that make accounting information useful; made up of predictive value and/or feedback value and timeliness.

Replacement depreciation method depreciation is recorded when assets are replaced.

Residual asset carrying amount of a leased asset not transferred to the lessee.

Residual value or salvage value, the amount the company expects to receive for the asset at the end of its service life less any anticipated disposal costs.

Restoration costs costs to restore land or other property to its original condition after extraction of the natural resource ends.

Restricted stock shares issued in the name of the employee, subject to forfeiture by the employee if employment is terminated within some specified number of years from the date of grant.

Restricted stock units right to receive shares, subject to forfeiture by the employee if employment is terminated within some specified number of years from the date of grant.

Restructuring costs costs associated with plans by management to materially change either the scope or manner in which its company's operations are conducted.

Retained earnings amounts earned by the corporation on behalf of its shareholders and not (yet) distributed to them as dividends.

Retired stock shares repurchased and not designated as treasury stock, assuming the same status as authorized but unissued shares, as if never issued.

Retirement depreciation method records depreciation when assets are disposed of and measures depreciation as the difference between the proceeds received and cost.

Retrospective approach financial statements issued in previous years are revised to reflect the impact of an accounting change whenever those statements are presented again for comparative purpose.

Return on assets (ROA) a company's profitability in relation to overall resources, measured as net income divided by average total assets.

Return on equity (ROE) amount of profit management can generate from shareholders' equity, measured as net income divided by average shareholders' equity.

Revenue/expense approach recognition and measurement of revenues and expenses are emphasized; with balance sheet accounts adjusted as necessary to reflect revenues and expenses.

Revenues inflows of assets or settlements of liabilities (or a combination of both) from delivering or producing goods, rendering services, or other activities that constitute the entity's ongoing major or central operations.

Reverse stock split when a company decreases, rather than increases, its outstanding shares.

Reversing entries optional entries that remove the effects of some of the adjusting entries made at the end of the previous reporting period for the sole purpose of simplifying journal entries made during the new period.

Right of conversion shareholders' right to exchange shares of preferred stock for common stock at specified conversion ratio.

Right of return customers' right to return merchandise to retailers if they are not satisfied.

Rules-based accounting standards a list of rules for choosing the appropriate accounting treatment for a transaction.

S corporation has characteristics of both regular corporations and partnerships.

Sale-leaseback transaction the owner of an asset sells it and immediately leases it back from the new owner.

Sales discounts cash discounts; represent reductions not in the selling price of a good or service but in the amount to be received from a credit customer if the amount is paid within a specific period of time.

Sales journal records credit sales.

Sales return the return of merchandise for a refund or for credit to be applied to other purchases.

Sales-type lease lessor transfers control of lease asset to lessee, with or without a selling profit on the sale of the asset.

Securities and Exchange Commission (SEC) has the authority to set accounting standards for companies, but it relies on the private sector to do so.

Securities available-for-sale debt securities the investor acquires for purposes other than active trading or to be held to maturity.

Securities to be held to maturity debt securities for which the investor has the "positive intent and ability" to hold the securities to maturity.

Securitization the company creates a special purpose entity (SPE), usually a trust or a subsidiary; the SPE buys a pool of trade receivables, credit card receivables, or loans from the company and then sells related securities.

Selling profit when the fair value of the asset (usually the present value of the lease payments, or "selling price") exceeds the cost or carrying value of the asset sold.

Separation of duties an internal control technique in which various functions are distributed amongst employees to provide cross-checking that encourages accuracy and discourages fraud.

Serial bonds more structured (and less popular) way to retire bonds on a piecemeal basis.

Service cost increase in the projected benefit obligation attributable to employee service performed during the period.

Service life (useful life) the estimated use that the company expects to receive from the asset.

Service method allocation approach that reflects the declining service pattern of the prior service cost.

Short-term investments investments not classified as cash equivalents that the company has the ability and intent to sell within one year (or operating cycle if longer).

Significant influence effective control is absent but the investor is able to affect the operating and financial policies of the investee (usually is the case when investor holds between 20% and 50% of the investee's voting shares).

Simple capital structure a firm that has no potential common shares (outstanding securities that could potentially dilute earnings per share).

Simple interest computed by multiplying an initial investment times both the applicable interest rate and the period of time for which the money is used.

Single-step income statement format that groups all revenues and gains together and all expenses and losses together.

Sinking fund debentures bonds that must be redeemed on a prespecified year-by-year basis; administered by a trustee who repurchases bonds in the open market.

Source documents relay essential information about each transaction to the accountant, e.g., sales invoices, bills from suppliers, cash register tapes.

Special journal record of a repetitive type of transaction, e.g., a sales journal.

Specific identification method each unit of inventory sold during the period or each unit on hand at the end of the period is matched with its actual cost.

Specific interest method for interest capitalization, rates from specific construction loans to the extent of specific borrowings are used before using the average rate of other debt.

Stand-alone selling price the amount at which the good or service is sold separately under similar circumstances.

Start-up costs whenever a company introduces a new product or service, or commences business in a new territory or with a new customer, it incurs one-time costs that are expensed in the period incurred.

Statement of cash flows statement summarizing the transactions that caused cash to change during the period.

Statement of shareholders' equity statement disclosing the source of changes in the shareholders' equity accounts during the period.

Stock appreciation rights (SARS) awards that enable an employee to benefit by the amount that the market price of the company's stock rises above a specified amount, without having to buy shares.

Stock dividend distribution of additional shares of stock to current shareholders of the corporation.

Stock options employees aren't actually awarded shares, but rather are given the option to buy shares at a specified exercise price within some specified number of years from the date of grant.

Stock split stock distribution of 25% or higher, sometimes called a *large* stock dividend.

Straight-line method (interest) recording interest each period at the same dollar amount.

Straight-line method (depreciation) allocation of an equal amount to each year. For depreciation of plant and equipment or amortization of intangible assets, an equal amount of the allocation base is allocated to each year of the asset's service life.

Subordinated debenture the holder is not entitled to receive any liquidation payments until the claims of other specified debt issues are satisfied.

Subsequent event a significant development that takes place after the company's fiscal year-end but before the financial statements are issued.

Subsidiary ledger record of a group of subsidiary accounts associated with a particular general ledger control account.

Successful efforts method requires that exploration costs that are known not to have resulted in the discovery of oil or gas be included as expense in the period the expenditures are made.

Sum-of-the-years'-digits (SYD) method systematic acceleration of depreciation by multiplying the depreciable base by a fraction that declines each year.

Supplemental schedules and tables reports containing more detailed information than is shown in the primary financial statements.

Symbolic intellectual property has usefulness to the customer that depends on the seller's ongoing activities, so it transfers a right of access; the seller recognizes revenue over the period of time the customer accesses the IP.

T-account informal account format with space at the top for the account title and two sides for recording increases and decreases.

Tax basis of an asset or liability is its original value for tax purposes reduced by any amounts included to date on tax returns.

Technological feasibility established when the enterprise has completed all planning, designing, coding, and testing activities that are necessary to establish that the product can be produced to meet its design specifications including functions, features, and technical performance requirements.

Temporary accounts represent changes in the retained earnings component of shareholders' equity for a corporation caused by revenue, expense, gain, and loss transactions.

Temporary difference difference between pretax accounting income and taxable income and, consequently, between the reported amount of an asset or liability in the financial statements and its tax basis which will "reverse" in later years.

Time value of money money can be invested today to earn interest and grow to a larger dollar amount in the future.

Time-based methods allocates an asset's cost base according to the passage of time.

Timeliness information that is available to users early enough to allow its use in the decision process.

Times interest earned ratio a way to gauge the ability of a company to satisfy its fixed debt obligations by comparing interest charges with the income available to pay those charges.

Trade discounts percentage reduction from the list price.

Trade notes payable formally recognized by a written promissory note.

Trademark (tradename) exclusive right to display a word, a slogan, a symbol, or an emblem that distinctively identifies a company, a product, or a service.

Trading securities debt securities the investor (usually a financial institution) acquires principally for the purpose of selling in the near term.

Transaction analysis process of reviewing the source documents to determine the dual effect on the accounting equation and the specific elements involved.

Transaction price the amount the seller expects to be entitled to receive from the customer in exchange for providing goods and services.

Transactions economic events.

Transportation-in freight-in; in a periodic system, freight costs generally are added to this temporary account, which is added to purchases in determining net purchases.

Treasury stock shares of a company's own stock repurchased and not retired.

Troubled debt restructuring the original terms of a debt agreement are changed as a result of financial difficulties experienced by the debtor (borrower).

Trustee person who accepts employer contributions, invests the contributions, accumulates the earnings on the investments, and pays benefits from the plan assets to retired employees or their beneficiaries.

Unadjusted trial balance a list of the general ledger accounts and their balances after recording all transactions during the period but before any adjusting entries.

Understandability users must understand the information within the context of the decision being made.

Units-of-production method computes a depreciation rate per measure of activity and then multiplies this rate by actual activity to determine periodic depreciation.

Unrealized holding gains and losses gains and losses that arise from holding an investment during a period in which its fair value changes.

Valuation allowance indirect reduction (contra account) in a deferred tax asset when it is more likely than not that some portion or all of the deferred tax asset will not be realized.

Variable consideration transaction price is uncertain because it includes an amount that varies depending on the occurrence or nonoccurrence of a future event.

Verifiability implies a consensus among different measurers.

Vertical analysis expression of each item in the financial statements as a percentage of an appropriate corresponding total, or base amount, but within the same year.

Vested benefits benefits that employees have the right to receive even if their employment were to cease today.

Weighted-average interest method for interest capitalization, weighted-average rate on all interest-bearing debt, including all construction loans, is used.

With recourse the seller retains the risk of uncollectibility.

Without recourse the buyer assumes the risk of bad debts.

Work-in-process inventory products that are not yet complete in the manufacturing process.

Working capital differences between current assets and current liabilities.

Worksheet used to organize the accounting information needed to prepare adjusting and closing entries and the financial statements.

A box is titled Covid 19 (Frontmatter)

[Return to A box is titled Covid 19.](#)

The first paragraph reads as follows: Recall from Chapter 1 that political pressures sometimes affect accounting standards. As an example, the Coronavirus Aid, Relief, and Economic Security (CARES) Act included a provision that enabled banks and some other financial institutions to avoid applying the provisions of A S U Number 2016 hyphen 13 between March 27, 2020, and December 31, 2020. That delay would enable banks to avoid recognizing large losses on outstanding receivables that they would have to recognize if applying C E C L. In response to this provision, the American Accounting Association issued a resolution indicating that it “opposes direct action by Congress or other regulators outside of the established independent standards setting framework. Such intervention undermines the authority of independent boards, does not allow for full participation of all stakeholders and is less transparent.” The next paragraph reads as follows: Despite the flexibility provided by the CARES Act, many banks did not delay their planned C E C L implementation. As a consequence, this provision of the CARES Act created non comparability between the financial statements of banks that dis and didn’t adopt C E C L.

A box is titled Financial Reporting Case Solution. (Frontmatter)

 [Return to A box is titled Financial Reporting Case Solution..](#)

A photograph on the right shows a group of people seated around a table with notes in front of them. The box reads as follows: 1. What are the cash flow aspects of the situation that Mister Barr may be overlooking in making his case for a wage increase? How can a company's operations generate a healthy profit and yet produce meager or even negative cash flows? Positive net income does not necessarily indicate a healthy cash position. A statement of cash flows provides information about cash flows not seen when looking only at the balance sheet and the income statement. Although cash flows from operating activities result from the same activities reported in the income statement, the income statement reports the activities on an accrual basis. That is, revenues reported are those earned during the reporting period, regardless of when cash is received, and the expenses incurred in generating those revenues, regardless of when cash is paid. Thus, the very same operations can generate a healthy profit and yet produce meager.

A box is titled **Where We're Headed.** (Frontmatter)

 [Return to A box is titled Where We're Headed..](#)

The box reads as follows: “Disclosure overload” is a frequent complaint by companies and investors alike. The notes to the financial statements can be very useful, but they are costly for companies to prepare and difficult for many users to sift through and understand. In response to the concern, the F A S B has been developing a framework intended to make disclosures more effective and less redundant. In August of 2018, the F A S B issued an addition to Concepts Statement Number 8, titled Chapter 8: Notes to Financial Statements, which suggests a series of questions that the F A S B and its staff should consider when determining what notes should be required by new standards. Footnote 40. A separate part of the project will develop further guidance to help companies apply judgment when meeting disclosure requirements.

 [Return to A box is titled Where We're Headed..](#)

A box is titled Additional Consideration. (Frontmatter)

Return to A box is titled Additional Consideration..

The box reads as follows: In Illustration 5 dash 5, if Sporting Goods Incorporation had prepaid The Shoe Company for delivery of the shoes in two years, rather than buying now and paying later, Sporting Goods Incorporation would be viewed as providing a two year loan to The Shoe Company. Assuming that Sporting Goods Incorporation pays The Shoe Company 41,323 dollars, the present value of 50,000 dollars for two periods at 10 percent, The Shoe Company would record interest expense and Sporting Goods Incorporation would record interest revenue of 8,677 dollars (50,000 dollars minus 41,323 dollars) over the two year period. When delivery occurs in two years, The Shoe Company records sales revenue of 50,000 dollars and Sporting Goods Incorporation values the inventory acquired at 50,000 dollars.

Return to A box is titled Additional Consideration..

A section is titled Decision Makers' Perspective. (Frontmatter)

 [Return to A section is titled Decision Makers' Perspective..](#)

Highlighted text to the left of the paragraphs reads, Management must evaluate the costs and benefits of any change in credit and collection policies. The paragraphs of the section read as follows: Receivables management: A company's investment in receivables is influenced by several variables, including the level of sales, the nature of the product or service sold, and credit and collection policies. These variables are, of course, related. For example, a change in credit policies could affect sales. In fact, more liberal credit policies, allowing customers a longer time to pay or offering cash discounts for early payment, often are initiated with the specific objective of increasing sales volume. Next paragraph. Management's choice of credit and collection policies often involves trade offs. For example, offering cash discounts may increase sales volume, accelerate customer payment, and reduce bad debts. These benefits are not without cost. The cash discounts reduce the amount of cash collected from customers who take advantage of the discounts. Extending payment terms also may increase sales volume. However, this creates an increase in the required investment in receivables and may increase bad debts.

 [Return to A section is titled Decision Makers' Perspective..](#)

A box is titled Ethical Dilemma. (Frontmatter)

 [Return to A box is titled Ethical Dilemma..](#)

The content of the box reads as follows: The Raintree Cosmetic Company has several loans outstanding with a local bank. The debt agreements all contain a covenant stipulating that Raintree must maintain a current ratio of at least 0.9. Jackson Philips, company controller, estimates that the 2024 year end current assets and current liabilities will be 2,100,000 dollars and 2,400,000 dollars, respectively. These estimates provide a current ratio of only 0.875. Violation of the debt agreement will increase Raintree's borrowing costs as the loans are renegotiated at higher rates. Next paragraph. Jackson proposes to the company president that Raintree purchase inventory of 600,000 dollars on credit before year end. This will cause both current assets and current liabilities to increase by the same amount, but the current ratio will increase to 0.9. The extra 600,000 dollars in inventory will be used over the later part of 2025. However, the purchase will cause warehousing costs and financing costs to increase. Next paragraph. Jackson is concerned about the ethics of his proposal. What do you think?

Return to A box is titled Illustration 7 dash 5.

The heading of the content reads Revenue Recognition and Accounts Receivable (in part): Returns. The content reads as follows: Sales revenue and cost of sales reported in the statement of operations are reduced to reflect estimated returns. We record an estimated right of return liability for returns at the time of sale based on historical trends, current pricing and volume information, other market specific information, and input from sales, marketing, and other key management personnel. The liability accrued reflects the variable consideration not expected to be received. The estimated value of the return to the customer's inventory is recorded as an asset. These procedures require the exercise of significant judgments. We believe these procedures enable us to make reliable estimates of future returns. Our actual results have historically approximated our estimates. When the product is returned and verified, the customer is given credit against their accounts receivable. Source: A V X Corporation.

A screenshot shows Tableau visualization (Frontmatter)

 [Return to A screenshot shows Tableau visualization.](#)

On the left, a vertical bar shows total accounts receivable as 160,000 dollars. The amount reads from 0 dollar to 160,000 dollars in increments of 10,000 dollars along the vertical axis. At top center, a vertical bar graph shows accounts receivable by age category. The vertical axis represents accounts receivable ranging from 0 dollar to 100,000 dollars in increments of 20,000 dollars. The data are shown as follows: Not yet due, 110,000 dollars. 1 to 60 days past due, 30,000 dollars. Greater than 60 days past due, 10,000 dollars. At bottom center, a vertical bar graph shows average percentage uncollectible by age category. The vertical axis represents percentage ranging from 0 percent to 50 percent in increments of 10 percent. The data are shown as follows: Not yet due, 5 percent. 1 to 60 days past due, 20 percent. Greater than 60 days past due, 50 percent. At top right, under age, not yet due, 1 to 60 days past due, and greater than 60 days past due are the radio buttons shown in which not yet due radio button is selected. On the right, a horizontal bar graph shows customer individual account balance. The horizontal axis represents amount reading 0 dollar, 1,000 dollars, and 2,000 dollars from left to right. The account balances are shown from top to bottom for each three digit individual customer numbers. In the bottom section, Required is the section head. Required 1, required 2, required 3, required 4, and required 5 are the tabs shown in which Required 1 tab is selected. In the Required 1 tab, a table is shown under the text, Estimate the amount of uncollectible receivables. The table consists of two columns. Column 2 is blank and age group is the heading of column 1. Not yet due, 1 to 60 days past due, and greater than 60 days past due are the row entries of column 1. All data are approximate.

A screenshot shows general journal of a company (Frontmatter)

 [Return to A screenshot shows general journal of a company.](#)

The question reads On August 31, year 1, the company borrowed 88,000 dollars from a local bank. The note requires principal and interest at 9 percent to be paid on August 31, year 2. In the general journal of Azmie Wholesale Food Company, on June 30, interest expense of 1,980 is debited and interest payable of 1,980 is credited. At the bottom, principal of 88,000 dollars times interest rate of 9 percent times time of 3 over 12 equals 1,980 dollars.

 [Return to A screenshot shows general journal of a company.](#)

A screenshot shows the transactions occurring during the month of August (Frontmatter)

 [Return to A screenshot shows the transactions occurring during the month of August.](#)

The Wyndham Wholesale Company began operations on August 1. The following transactions occur during the month of August. a. The company receives 50,000 dollars cash from owners and issues 5,000 shares of common stock. b. Equipment is purchased for 20,000 dollars cash. c. On the first day of August, 6,000 dollars rent on office space is paid for the months of August, September, and October (2,000 dollars per month). d. Inventory costing 38,000 dollars is purchased on account. The company uses the perpetual inventory system. e. 30,000 dollars is borrowed from a local bank, and a note payable is signed. f. Credit sales for the month are 40,000 dollars. The cost of inventory sold is 22,000 dollars. g. 15,000 dollars is collected on account from customers. h. 20,000 dollars is paid on account to suppliers of inventory. i. Cash of 2,000 dollars was received from a customer for consulting services to be provided later in August and completed in early September. j. Salaries of 7,000 dollars are paid to employees for August. k. A bill for 2,000 dollars is received from the local utility company for the month of August. l. 20,000 dollars cash is loaned to another company, evidenced by a note receivable. m. The company pays its shareholders a cash dividend of 1,000 dollars.

- APB (years 1959–1973)
- FASB (years 1973–Present)

 [Return to Illustration 1.5.](#)

Illustration 1.10 Text Alternative (Chapter 1)

Return to Illustration 1.10.

In the diagram, the top center box is Objective: To provide financial information that is useful to capital providers. (SFAC 8)

A line with an arrow points to the box below it: Elements (SFAC 6)

- Assets
- Liabilities
- Equity
- Investments by owners
- Distributions to owners
- Revenues
- Expenses
- Gains
- Losses
- Comprehensive income

A box to the right has a line with an arrow pointing to the Elements box:

Recognition, Measurement and Disclosure Concepts (SFAC 5, SFAC 7):

- Assumptions: Economic entity; Going concern; Periodicity; Monetary unit
- Principles: Revenue recognition; Expense recognition; Mixed-attribute measurement; Full disclosure

A box to the left also has a line with an arrow pointing to the Elements box:

Qualitative Characteristics (SFAC 8):

- Fundamental: Relevance (Predictive value, Confirmatory value, Materiality); Faithful Representation (Completeness, Neutrality, Free from Error)
- Enhancing: Comparability (including consistency); Verifiability; Timeliness; Understandability

A line with an arrow extends from Qualitative Characteristics extends to the box below:

Constraints: Cost effectiveness (SFAC 8)

A line with an arrow extends from each the four previous boxes (Elements; Qualitative Characteristics; Recognition, Measurement and Disclosure Concepts; Constraints) into the bottom center box:

Financial Statements:

- Balance sheet
- Income statement
- Statement of comprehensive income
- State of cash flows
- Statement of shareholders' equity
- Related disclosures

Illustration 2.1 Text Alternative (Chapter 2)

 Return to Illustration 2.1.

The basic accounting equation shows $\text{assets} = \text{liabilities} + \text{shareholders' equity}$. The expanded accounting equation shows that shareholders' equity consists of + paid-in capital and + retained earnings. The + retained earnings consists of + revenues + gains - expenses - losses - dividends.

 Return to Illustration 2.1.

Illustration 2.3 Text Alternative (Chapter 2)

Return to Illustration 2.3.

The diagram shows the basic accounting equation along with the expanded accounting system containing debits and credits. The basic accounting equation shows $\text{assets} = \text{liabilities} + \text{shareholders' equity}$. Under assets are 2 columns, the column on the left shows debit with a plus sign, the column on the right shows credit with a negative sign. Under liabilities are 2 columns, the column on the left shows debit with a minus sign, the column on the right shows credit with a plus sign. Under shareholders' equity are 2 columns, the column on the left shows debit with a minus sign, the column on the right shows credit with a plus sign. In the expanded accounting equation, the shareholders' equity consists of paid-in capital and retained earnings. Paid-in capital has 2 columns, the column on the left shows debit with a minus sign, the column on the right shows credit with a plus sign. Retained earnings has 2 columns, the column on the left shows debit with a minus sign, the column on the right shows credit with a plus sign. Under retained earnings are 3 boxes contains the following: Revenues and gains; Expenses and losses; Dividends. Under revenues and gains are 2 columns, the column on the left shows debit with a minus sign, the column on the right shows credit with a plus sign. Under expenses and losses are 2 columns, the column on the left shows debit with a plus sign, the column on the right shows credit with a minus sign. Under dividends are 2 columns, the column on the left shows debit with a plus sign, the column on the right shows credit with a minus sign. On the top right is the summary which shows assets, expenses, losses, and dividends. Under assets, expenses, losses, and dividends are 2 columns, the column on the left shows debit with a plus sign, the column on the right shows credit with a minus sign. Below is liabilities, paid-in capital, revenues, and gains. Under liabilities, paid-in capital, revenues, and gains are 2 columns, the column on the left shows debit with a minus sign, the column on the right shows credit with a plus sign.

Illustration 2.4 Text Alternative (Chapter 2)

Return to Illustration 2.4.

Three boxes distinctly show the steps in each phase of the cycle:

During the accounting period:

- Step 1. Obtain information about external transactions from source documents.
- Step 2. Analyze the transaction.
- Step 3. Record the transaction in a journal.
- Step 4. Post from the journal to the general ledger accounts.

At the end of the accounting period:

- Step 5. Prepare an unadjusted trial balance.
- Step 6. Record adjusting entries and post to the general ledger accounts.
- Step 7. Prepare an adjusted trial balance.
- Step 8. Prepare financial statements.

At the end of the year:

- Step 9. Close the temporary accounts to retained earnings.
- Step 10. Prepare a post-closing trial balance.

Return to Illustration 2.4.

Illustration 2.10 Text Alternative (Chapter 2)

 **Return to Illustration 2.10.**

In the diagram, adjusting entries shows the effects for prepayments. For Prepaid Expenses, adjusting entries have a credit to asset accounts and a debit to expense accounts. The resulting financial statement effects are reduction in Income Statement income and a reduction in Balance Sheet assets. For Deferred Revenues, adjusting entries have a debit to liability accounts and a credit to revenue accounts. The resulting financial statement effects are increase in Income Statement income and a reduction in Balance Sheet liabilities.

Adjusting entries also show the effects for accruals. For Accrued Expenses, adjusting entries have a debit to expense accounts and a credit to liability accounts. The resulting financial statement effects are reduction in Income Statement income and an increase in Balance Sheet liabilities. For Accrued Receivables, adjusting entries have a debit to asset accounts and a credit to revenue accounts. The resulting financial statement effects are increase in Income Statement income and an increase in Balance Sheet assets.

Illustration 6.1 Text Alternative (Chapter 6)

Return to Illustration 6.1.

Core Revenue Recognition Principle Companies recognize revenue when goods or services are transferred to customers for the amount the company expects to be entitled to receive in exchange for those goods or services.* Five Steps Used to Apply the Principle Step 1: Identify the contract with a customer. Step 2: Identify the performance obligation(s) in the contract. Step 3: Determine the transaction price. Step 4: Allocate the transaction price to each performance obligation. Step 5: Recognize revenue when (or as) each performance obligation is satisfied. *FASB ASC 606-10-05-4: Revenue from Contracts with Customers-Overall-Overview and Background-General (previously “Revenue from Contracts with Customer (Topic 606)” Accounting Standards Update 2014-09 (Norwalk, Conn: FASB, 2014)).

Return to Illustration 6.1.

Illustration 6.2 Text Alternative (Chapter 6)

Return to Illustration 6.2.

For each of the five steps to recognizing revenue, considerations are listed for transactions involving single and multiple performance obligations.

Step 1: Identify the contract with a customer.

- Legal rights of seller and customer established.

Step 2: Identify the performance obligation(s) in the contract.

- Single performance obligation and multiple performance obligations.

Step 3: Determine the transaction price.

- Amount seller is entitled to receive from customer for both single and multiple performance obligations.

Step 4: Allocate the transaction price to each performance obligation.

- For single performance obligation, no allocation required.
- For multiple performance obligations, allocate a portion to each performance obligation.

Step 5: Recognize revenue when (or as) each performance obligation is satisfied.

- For single performance obligation, determine whether obligation is at a point in time or over a period of time.
- For multiple performance obligations, determine obligation at whatever time is appropriate for each performance obligation.

Return to Illustration 6.2.

Illustration 6.11 Text Alternative (Chapter 6)

Return to Illustration 6.11.

For each of the five steps to recognizing revenue, the fundamental issues are as follow:

Step 1: Identify the contract.

- A contract establishes the legal rights and obligations of the seller and customer with respect to one or more performance obligations.

Step 2: Identify the performance obligation(s).

- A performance obligation is a promise to transfer a good or service that is distinct, which is the case if the good or service is both (a) capable of being distinct, and (b) separately identifiable.

Step 3: Determine the transaction price.

- The transaction price is the amount the seller is entitled to receive from the customer.

Step 4: Allocate the transaction price.

- The seller allocates the transaction price to performance obligations based on the relative stand-alone selling prices of the goods or services in each performance obligation.

Step 5: Recognize revenue when (or as) each performance obligation is satisfied.

- The seller recognizes revenue at a single point in time when control passes to the customer, which is more likely if the customer has: obligation to pay the seller; legal title to the asset; possession of the asset; assumed the risks and rewards of ownership; accepted the asset.
- The seller recognizes revenue over a period of time if: customer consumes benefit as work performed; customer controls asset as it's created; or seller is creating an asset that has no alternative use to the seller and the seller has right to receive payment for work completed.

Return to Illustration 6.11.

Illustration 6.25 Text Alternative (Chapter 6)

Return to Illustration 6.25.

For each of the five steps to recognizing revenue, the fundamental issues (Part A) and special issues (Part B) are as follow:

Step 1: Identify the contract.

- Part A: A contract establishes the legal rights and obligations of the seller and customer with respect to one or more performance obligations.
- Part B: A contract exists if it (a) has commercial substance, (b) has been approved by both the seller and the customer, (c) specifies the seller's and customer's rights and obligations, (d) specifies payment terms, and (e) is probable that the seller will collect the amounts it is entitled to receive. A contract does not exist if (a) neither the seller nor the customer has performed any obligations under the contract, and (b) both the seller and the customer can terminate the contract without penalty.

Step 2: Identify the performance obligation(s).

- Part A: A performance obligation is a promise to transfer a good or service that is distinct, which is the case if the good or service is both (a) capable of being distinct, and (b) separately identifiable.
- Part B: The following do not qualify as performance obligations: quality assurance warranties; and customer prepayments. The following do qualify as performance obligations: extended warranties; and customer options for additional goods and services that provide a material right.

Step 3: Determine the transaction price.

- Part A: The transaction price is the amount the seller is entitled to receive from the customer.
- Part B: The seller adjusts the transaction price for:
 - o Variable consideration (estimated as either the expected value or the most likely amount). Constraint Variable consideration is recognized only to the extent it is probable that a

significant revenue reversal will not occur in the future.

- o Whether the seller is acting as a principal or agent.
- o A significant financing component.
- o Any payments by the seller to the customer.

Step 4: Allocate the transaction price.

- Part A: The seller allocates the transaction price to performance obligations based on the relative stand-alone selling prices of the goods or services in each performance obligation.
- Part B: Various approaches are available to estimate stand-alone selling prices:
 - o Adjusted market assessment approach.
 - o Expected cost plus margin approach.
 - o Residual approach.

Step 5: Recognize revenue when (or as) each performance obligation is satisfied.

- Part A: The seller recognizes revenue at a single point in time when control passes to the customer, which is more likely if the customer has: obligation to pay the seller; legal title to the asset; possession of the asset; assumed the risks and rewards of ownership; accepted the asset.

The seller recognizes revenue over a period of time if: customer consumes benefit as work performed; customer controls asset as it's created; or seller is creating an asset that has no alternative use to the seller and the seller has right to receive payment for work completed.

- Part B: The seller must determine the timing of revenue recognition for:
 - o License (if functional intellectual property, usually recognize revenue at beginning of license; if symbolic intellectual property, recognize revenue over license period).
 - o Franchises (initial fees recognized when goods and services are transferred; continuing fees recognize over time).
 - o Bill-and-hold arrangements (typically do not transfer control, so recognize upon delivery of goods to customer).
 - o Consignment arrangements (do not transfer control, so recognize after sale to end customer occurs).

o Gift cards (initially deferred and then recognized as redeemed or expire).

Illustration 7.23 Text Alternative (Chapter 7)

 [Return to Illustration 7.23.](#)

In the diagram, the first question for a decision about financing with receivables is:

Is the arrangement a transfer of specific receivables or simply a pledging of receivables in general as collateral for a loan?

- If a pledging: Disclose arrangement in debt note.
- If a transfer: Does the transfer meet three conditions for treatment as sale?
 - o If YES, record as sale: (1) remove receivables; (2) record proceeds; (3) recognize gain or loss.
 - o If NO, record as a secured borrowing: (1) record liability; (2) recognize interest expense.

 [Return to Illustration 7.23.](#)

Illustration 8.2 Text Alternative (Chapter 8)

Return to Illustration 8.2.

The diagram contains five T-accounts.

1. In the Raw Materials account, raw materials purchased are debited and raw materials used are credited.
2. In the Direct Labor account, direct labor incurred is debited and direct labor applied is credited.
3. In the Manufacturing Overhead account, manufacturing overhead incurred is debited and manufacturing overhead applied is credited.
4. In the Work in Process account, raw materials used, direct labor applied, and manufacturing overhead applied are all debited and work in process transferred to finished goods is credited.
5. In the Finished Goods account, work in process transferred to finished goods is debited and finished goods sold is debited, which is the cost of goods sold.

Illustration 9.19 Text Alternative (Chapter 9)

 **Return to Illustration 9.19.**

The diagram shows the analysis of inventory errors. The beginning inventory and net purchases are added in the calculation of cost of goods sold deducting the ending inventory to show the cost of goods. The cost of goods and other expenses are deducted from revenues thereby giving the net income. Net income is added to the beginning retained earnings and dividends are deducted thereby giving the ending retained earnings.

 **Return to Illustration 9.19.**

Illustration 10.21 Text Alternative (Chapter 10)

 [Return to Illustration 10.21.](#)

A timeline is divided into two sections. On the left, at the beginning of the first section, is start of R&D activity. At dividing point between the two sections is the start of commercial production; and at the end of the second section, on the right, is sale of product or process.

Examples of R&D Costs:

- Laboratory research aimed at discovery of new knowledge
- Searching for applications of new research findings or other knowledge
- Design, construction, and testing of preproduction prototypes and models
- Modification of the formulation or design of a product or process

Examples of Non-R&D Costs:

- Engineering follow-through in an early phase of commercial production
- Quality control during commercial production including routine testing of products
- Routine ongoing efforts to refine, enrich, or otherwise improve on the qualities of an existing product
- Adaptation of an existing capability to a particular requirement or customer's need as a part of a continuing commercial activity

 [Return to Illustration 10.21.](#)

Illustration 11.1 Text Alternative (Chapter 11)

 [Return to Illustration 11.1.](#)

A timeline is divided into three sections. On the left, at the beginning of the first section, is start of R&D activity. During that time period, costs are expensed as R&D. At dividing point between the first and second sections is the point of technological feasibility, after which point in that time period costs are capitalized. Date of product release occurs at the dividing point between the second and third sections. During this third time period, costs are not R&D. At the end of this section, on the right, is the sale of product.

 [Return to Illustration 12B.3.](#)

Question 1: Is fair value less than amortized cost?

Answer is NO: No impairment; recognize any unrealized gains in OCI

Answer is YES: Question 2: Does the investor intend to sell the investment? Or Is it more likely than not that the investor will have to sell the investment before fair value recovers?

Answer is YES: Recognize entire unrealized loss in earnings and reduce amortized cost to fair value

Answer is NO: Question 3: Is some of the unrealized loss a credit loss?

Answer is NO: Recognize entire unrealized loss in OCI.

Answer is YES: Option 1 of 2: Recognize credit loss in earnings and use allowance for credit losses to reduce carrying value of investment. (Note: The amount of credit loss is limited to the amount by which fair value is lower than amortized cost.)

Option 2 of 2: Recognize non-credit portion of unrealized loss in OCI and use fair value adjustment to reduce carrying value of investment.

 [Return to Illustration 14.10.](#)

In the line graph, two dates are given on the horizontal axis: January 1, 2021, and December 31, 2023.

A horizontal line through the middle of graph is issuance at \$700,000.

A downward-sloping curve that represents premium amortization begins at \$735,533 on January 1, 2021, and ends at \$700,000 on December 31, 2023.

A upward-sloping curve that represents discount amortization begins at \$666,633 on January 1, 2021, and ends at \$700,000 on December 31, 2023.

 [Return to Illustration 14.10.](#)

Lease payable or receivable is shown. (Chapter 15)

21 Return to Lease payable or receivable is shown.

479,079 dollars minus first payment of 100,000 gives 379,079 dollars, from which minus second payment of 62,092 gives 316,987 dollars.

22 Return to Lease payable or receivable is shown.

Elements of Pension Text Alternative (Chapter 17)

Return to Elements of Pension.

Margin note: Each component of the pension expense is recorded in the journal entry to record pension expense.

- Service cost, \$41
- Plus Interest cost, \$24
- Plus Expected return on assets, -\$27
- Plus Amortization of prior service cost, \$4
- Plus Amortization of net loss, \$1
- Equals Pension expense, \$43

To record pension expense (in millions of dollars)

- Pension expense (total), debit 43
- Plan assets (\$27 expected return on assets), debit 27
- PBO (41 service cost plus \$24 interest cost), credit 65
- Amortization of prior service cost—OCI (2021 amortization), credit 4
- Amortization of net loss—OCI (2021 amortization), credit 1

Margin note: Service cost and interest cost increase the PBO. The return on assets increases plan assets.

Return to Elements of Pension.

Concept Review Exercise Text Alternative (Chapter 17)

 [Return to Concept Review Exercise.](#)

All values are in millions. Pretax accounting income for current year 2025 is \$88

Permanent difference:

Life insurance premium is 2 in 2025.

Temporary difference:

Prepaid insurance is (28) in 2025; Future Taxable (Deductible) Amounts \$14 for 2026 and 2027. Total future taxable amount is \$28.

Depreciation is (114) in 2025; Future Taxable (Deductible) Amounts 60 for 2026 and 102 for 2027. Total future taxable amount is 162.

Advance rent received is 20 in 2025; Future Taxable (Deductible) Amounts (20) for 2026. Total Future deductible amount is (20).

Net operating loss (tax return) is \$(32) in 2025

NOL carryforward is 32 in 2025. Total current year 2025 0; Total future taxable amount is \$190; Total Future deductible amount is (52).

Enacted tax rate is 25% for current and future years.

Tax payable in 2025 is 0; Total future taxable amount is \$47.5 (shown as ending balance credit in T account for deferred tax liability); Total Future deductible amount is 13 (shown as ending balance debit in T account for deferred tax asset).

T account for deferred tax liability has the following entries: opening credit of 12 (note: The opening balance of the deferred tax liability related to the temporary difference for the depreciation in 2024, and is $(\$48 \text{ times } 25\%) = \12). Credit entry of 35. \$47.5 ending balance credit. T account for deferred tax asset has beginning debit balance of 0 and a debit entry of 13. Ending debit balance is 13.

Journal entry at the end of 2025.

Income tax expense (to balance) 22.5.

Deferred tax asset (determined above) 13.0.

Deferred tax liability (determined above) 35.5.

Illustration 17.22 Text Alternative (Chapter 17)

 [Return to Illustration 17.22.](#)

Jessica Farrow was hired by Global Communications at age 22 at the beginning of 2013 and is expected to retire at the end of 2052 at age 62. The retirement period is estimated to be 20 years. Note: You probably recognize this as the situation used earlier in the chapter to illustrate pension accounting.

Global's employees are eligible for postretirement health care benefits after both reaching age 56 while in service and having worked 20 years.

Since Farrow becomes fully eligible at age 56 (the end of 2047), retiree benefits are attributed to the 35-year period from her date of hire through that date. Graphically, the situation can be described as follows:

Attribution Period 35 years from age 22 in 2013 (date hired) to age 56 in 2047 (full eligible date). Retirement Period 20 years. From age 62 in 2052 (retirement) to age 82 in 2072.

 [Return to Illustration 17.22.](#)

Illustration 17.23 Text Alternative (Chapter 17)

 [Return to Illustration 17.23.](#)

Line graph for pension benefits shows a gradually upward-sloping line to indicate employees earn benefits gradually.

In the second line graph for other postretirement benefits, the line in the graph is horizontal and labeled 0%, it then becomes vertical until it returns to horizontal at 100% to indicate that no benefits are available until full eligibility.

 [Return to Illustration 17.23.](#)

A change in computation is shown. (Chapter 19)

 Return to A computation is shown.

The numerator reads as follows: net income of 154 dollars plus after tax interest savings of 24 dollars minus 25 percent times 24 dollars. Preferred dividends of 4 dollars are removed. The denominator reads as follows: Shares at January 1 of 60 times stock dividend adjustment of 1.10 plus new shares of 12 times the whole of 10 over 12 times stock dividend adjustment of 1.10 minus treasury shares of 8 times the whole of 3 over 12 plus exercise of options of 15 minus 12 in parenthesis plus conversion of bonds of 12 plus conversion of preferred shares of 2.1. The numerator and the denominator read 172 dollars over 92.1, which in turn equals 1.868 dollars.

 Return to A computation is shown.

A change in computation is shown. (Chapter 19)

 Return to A change in computation is shown.

The numerator reads as follows: net income of 154 dollars plus after tax interest savings of 24 dollars minus 25 percent times 24 dollars. Preferred dividends of 4 dollars are removed. The denominator reads as follows: Shares at January 1 of 60 times stock dividend adjustment of 1.10 plus new shares of 12 times the whole of 10 over 12 times stock dividend adjustment of 1.10 minus treasury shares of 8 times the whole of 3 over 12 plus exercise of options of 15 minus 12 in parenthesis plus conversion of bonds of 12 plus conversion of preferred shares of 2.1. The numerator and the denominator read 172 dollars over 92.1, which in turn equals 1.868 dollars.

A computation is shown in the form of an equation. (Chapter 19)

 Return to A computation is shown in the form of an equation.

Not actually converted is indicated on the left and converted on November 1 is indicated on the right. Assumed after tax interest savings of plus 24 dollars minus 25 percent times 24 dollars the whole over plus 12 equals actual after tax interest savings of plus open bracket 24 dollars minus 25 percent open parenthesis 24 dollars close parenthesis close bracket times 2 over 12 the whole over plus 12 times 2 over 12 plus assumed after tax interest savings of plus open bracket 24 dollars minus 25 percent open parenthesis 24 dollars close parenthesis close bracket times 10 over 12 the whole over plus 12 times 10 over 12. At the bottom, assumed conversion of bonds of 18 dollars over 12 equals actual conversion of bonds of 3 dollars over 2 plus assumed conversion of bonds of 15 dollars over 10.

 Return to A computation is shown in the form of an equation.

Illustration 21.1 Text Alternative (Chapter 21)

Return to Illustration 21.1.

The cash inflows to a business come from three types of activities:

- Operating activities: Cash received from revenues
- Investing activities: Sale of property, plant, equipment, and intangible assets; sale of investments in securities; collections of loans
- Financing activities: Issuance of stock; issuance of bonds and notes

The cash outflows from the business occur in the same three types of activities:

- Operating activities: Cash paid for expenses
- Investing activities: Purchase of property, plant, equipment, and intangible assets; purchase of investments in securities; loans to others
- Financing activities: Payment of cash dividends; repurchase of stock; repayment of debt

Illustration A.1 Text Alternative (Appendix A)

 [Return to Illustration A.1.](#)

Swap of annual payments on \$100,000 notional amount. Fixed interest rate: 10% (\$10,000). A diagram shows the following. Company A lends to lender A at 10%. Company B lends to lender B at floating %. Company A swaps floating interest rate for fixed 10% with company B. At the time of the settlement date, assume the floating rate is 9% (\$9,000). Company B pays Company A \$1,000. The result of the swap: Company A: Pays \$10,000 to lender minus \$1,000 net cash settlement on swap = \$9,000 floating amount; Company B: Pays \$9,000 to lender + \$1,000 net cash settlement on swap = \$10,000 fixed amount

Glossary

economic events

events that directly affect the financial position of the company.

External events

exchanges between the company and separate economic entities.

Internal events

events that directly affect the financial position of the company but don't involve an exchange transaction with another entity.

Paid-in capital

invested capital consisting primarily of amounts invested by shareholders when they purchase shares of stock from the corporation.

retained earnings

amounts earned by the corporation on behalf of its shareholders and not (yet) distributed to them as dividends.

transaction

each event, or *transaction*, has a dual effect on the accounting equation.

general ledger

collection of accounts that organizes the accounts and allows for keeping track of increases and decreases and resulting balances.

accounts

storage areas used to keep track of how transactions and events cause increases and decreases in the balances of financial elements.

double-entry system

dual effect that each transaction has on the accounting equation when recorded.

debits

represent the left side of the account.

credits

represent the right side of the account.

Permanent accounts

represent assets, liabilities, and shareholders' equity at a point in time.

Temporary accounts

represent changes in the retained earnings component of shareholders' equity for a corporation caused by revenue, expense, gain, and loss

transactions.

Prepayments

the cash flow precedes either expense or revenue recognition.

Prepaid expenses

costs of assets acquired in one period and expensed in a future period.

Deferred revenues

cash received from a customer for goods or services to be provided in a future period.

Accruals

when the cash flow comes after either expense or revenue recognition.

accrued liabilities

expenses already incurred but not yet paid (accrued expenses).

Accrued receivables

recognition of revenue for goods or services transferred to customers before cash is received.

estimates

predictions of future events.

income statement

statement of operations or statement of earnings that is used to summarize the profit-generating activities that occurred during a particular reporting period.

statement of cash flows (SCF)

statement summarizing the transactions that caused cash to change during the period.

statement of shareholders' equity

statement disclosing the source of changes in the shareholders' equity accounts during the period.

post-closing trial balance

list of all permanent accounts and their balances after closing entries have been recorded.

balance sheet

a financial statement that presents an organized list of assets, liabilities, and equity at a particular point in time.

operating cycle

period of time necessary to convert cash to raw materials, raw materials to finished product, the finished product to receivables, and then finally receivables back to cash.

Investments

are assets not used directly in operations.

property, plant, and equipment

tangible, long-lived assets used in the operations of the business, such as land, buildings, equipment, machinery, furniture, and vehicles, as well as natural resources, such as mineral mines, timber tracts, and oil wells.

Intangible assets

operational assets that lack physical substance and often involve an exclusive right to a company to provide a product or service; examples include patents, copyrights, franchises, and goodwill.

summary of significant accounting policies

the *summary of significant accounting policies* conveys valuable information about the company's choices from among various alternative accounting methods.

subsequent event

a significant development that takes place after the company's fiscal year-end but before the financial statements are issued.

related-party transactions

transactions with owners, management, families of owners or management, affiliated companies, and other parties that can significantly influence or be influenced by the company.

Management's discussion and analysis

provides a biased but informed perspective of a company's operations.

proxy statement

contains disclosures on compensation to directors and executives; sent to all shareholders each year.

working capital

differences between current assets and current liabilities.

acid-test ratio

measure of a company's liquidity; computed as current assets, excluding inventories and prepaid items, divided by current liabilities.

debt to equity ratio

compares resources provided by creditors with resources provided by owners; computed as total liabilities divided by shareholders' equity.

times interest earned ratio

a way to gauge the ability of a company to satisfy its fixed debt obligations by comparing interest charges with the income available to

pay those charges.

inventory

goods awaiting sale (finished goods), goods in the course of production (work in process), and goods to be consumed directly or indirectly in production (raw materials). Goods acquired, manufactured, or in the process of being manufactured for sale.

accounting equation

assets = Liabilities + Shareholders' Equity.

liquidity

the ability of a company to convert its assets to cash to pay its current liabilities.

long-term solvency

an assessment of whether a company will be able to pay all its liabilities, which includes long-term liabilities.

financial accounting

provides relevant financial information to various external users.

capital markets

mechanisms that foster the allocation of resources efficiently.

corporation

dominant form of business organization that acquires capital from investors in exchange for ownership interest and from creditors by borrowing.

rate of return

$$\frac{\text{Dividends} + \text{Share price appreciation}}{\text{Initial investment}}$$

net operating cash flow

difference between cash receipts and cash disbursements from providing goods and services.

net income

all revenues and gains minus all expenses and losses reported in the income statement.

Securities and Exchange Commission (SEC)

has the authority to set accounting standards for companies, but it relies on the private sector to do so.

FASB

the current private sector body that has been delegated the task of setting accounting standards.

FASB Accounting Standards Codification

the *FASB Accounting Standards Codification* is the only source of authoritative U.S. GAAP, other than rules and interpretive releases of the SEC.

International Accounting Standards Board (IASB)

objectives are to develop a single set of high-quality, understandable global accounting standards, to promote the use of those standards, and to bring about the convergence of national accounting standards and International Accounting Standards.

International Financial Reporting Standards (IFRS)

developed by the IASB and used by more than 100 countries.

auditors

independent professionals who render an opinion about whether the financial statements fairly present the company's financial position, performance, and cash flows in compliance with GAAP.

certified public accountants (CPAs)

licensed individuals who can represent that the financial statements have been audited in accordance with generally accepted auditing standards.

principles-based

approach to standard setting stresses professional judgment, as opposed to following a list of rules.

Ethics

a code or moral system that provides criteria for evaluating right and wrong.

conceptual framework

deals with theoretical and conceptual issues and provides an underlying structure for current and future accounting and reporting standards.

relevance

one of the primary decision-specific qualities that make accounting information useful; made up of predictive value and/or feedback value and timeliness.

material

has qualitative or quantitative characteristics that make it matter for decision making.

Faithful representation

exists when there is agreement between a measure or description and the phenomenon it purports to represent.

complete

depiction is complete if it includes all information necessary for faithful representation.

neutral

implies freedom from bias.

free from error

information is free from error if it contains no errors or omissions.

conservatism

practice followed in an attempt to ensure that uncertainties and risks inherent in business situations are adequately considered.

Comparability

the ability to help users see similarities and differences among events and conditions.

consistency

permits valid comparisons between different periods.

Verifiability

implies a consensus among different measurers.

Timeliness

information that is available to users early enough to allow its use in the decision process.

Understandability

users must understand the information within the context of the decision being made.

Cost effectiveness

the perceived benefit of increased decision usefulness exceeds the anticipated cost of providing that information.

SFAC 6

the 10 elements of financial statements defined in *SFAC 6* describe financial position and periodic performance.

economic entity assumption

presumes that economic events can be identified specifically with an economic entity.

going concern assumption

in the absence of information to the contrary, it is anticipated that a business entity will continue to operate indefinitely.

periodicity assumption

allows the life of a company to be divided into artificial time periods to provide timely information.

monetary unit assumption

states that financial statement elements should be measured in a particular monetary unit (in the United States, the U.S. dollar).

Revenues

inflows of assets or settlements of liabilities (or a combination of both) from delivering or producing goods, rendering services, or other activities that constitute the entity's ongoing major or central operations.

Expenses

outflows or other using up of assets or incurrences of liabilities from delivering or producing goods, rendering services, or other activities that constitute the entity's ongoing operations.

historical cost

original transaction value.

depreciated (or amortized) cost

Depreciated (or amortized) cost reduces historical cost to reflect depreciation (or amortization) recognized to date.

net realizable value

estimated selling prices of inventory in the ordinary course of business, less reasonably predictable costs of completion, disposal, and transportation.

current cost

are the costs that would be incurred to purchase or reproduce an asset.

present value (PV)

present value is today's equivalent of a particular amount in the future, after backing out the time value of money.

Fair value

bases measurements on the price that would be received to sell assets or transfer liabilities in an orderly market transaction.

fair value option

allows companies to report specified financial assets and liabilities at fair value.

full-disclosure principle

financial reports should include any information that could affect the decisions made by external users.

revenue/expense approach

recognition and measurement of revenues and expenses are emphasized; with balance sheet accounts adjusted as necessary to reflect revenues and expenses.

asset/liability approach

recognition and measurement of assets and liabilities drives revenue and expense recognition.

Income from continuing operations

revenues, expenses (including income taxes), gains, and losses, excluding those related to discontinued operations and extraordinary items.

return on assets (ROA)

a company's profitability in relation to overall resources, measured as net income divided by average total assets.

single-step

income statement format that groups all revenues and gains together and all expenses and losses together.

multiple-step

income statement format that includes a number of intermediate subtotals before arriving at income from continuing operations.

earnings quality

refers to the ability of reported earnings (income) to predict a company's future earnings.

restructuring costs

costs associated with plans by management to materially change either the scope or manner in which its company's operations are conducted.

non-GAAP earnings

actual (GAAP) earnings reduced by any expenses the reporting company feels are unusual and should be excluded.

comprehensive income

change in shareholders' equity for the period from nonowner sources; equal to net income plus other comprehensive income. Traditional net income plus other nonowner changes in equity.

operating activities

inflows and outflows of cash related to transactions entering into the determination of net income.

investing activities

involve the acquisition and sale of long-term assets used in the business and nonoperating investment assets.

Financing activities

involve cash inflows and outflows from transactions with creditors (excluding trade creditors) and owners.

asset turnover ratio

measure of a company's efficiency in using assets to generate revenue; computed as net sales divided by average total assets.

receivables turnover ratio

indicates how quickly a company is able to collect its accounts receivable; computed as net sales divided by average accounts receivable (net).

average collection period

indication of the number of days the average accounts receivable balance is outstanding.

inventory turnover ratio

measures a company's efficiency in managing its investment in inventory; computed as cost of goods sold divided by average inventory.

profit margin on sales

net income divided by net sales; measures the amount of net income achieved per sales dollar.

return on equity (ROE)

amount of profit management can generate from shareholders' equity, measured as net income divided by average shareholders' equity.

DuPont framework

depicts return on equity as determined by profit margin (representing profitability), asset turnover (representing efficiency), and the equity multiplier (representing leverage).

performance obligations

promises to transfer goods and services to a customer; they are satisfied when the seller transfers *control* of goods or services to the customer.

Licenses

allow the customer to access the seller's intellectual property.

construction in progress

Construction in progress (CIP) is the contractor's work-in-process inventory.

Inventory

inventories consist of assets that a retail or wholesale company acquires for resale or goods that manufacturers produce for sale.

Raw materials

components purchased from suppliers that will become part of the finished product.

Work-in-process inventory

products that are not yet complete in the manufacturing process.

Finished goods

products that have been completed in the manufacturing process but have not yet been sold.

perpetual inventory system

a system of accounting for inventory by continuously adjusting the balance of the inventory account for each purchase, sale, or return of inventory; the cost of goods sold account is adjusted for each sale or return of inventory by customers.

periodic inventory system

a system of accounting for inventory that involves an adjusting entry at the end of the period to update the balances of the inventory account and the cost of goods sold account for purchases, sales, and returns during the period.

f.o.b. (free on board) shipping point

legal title to the goods passes from the seller to the buyer at the point of shipment (when the seller delivers the goods to the common carrier); the buyer is responsible for shipping costs and transit insurance .

f.o.b. destination

legal title to the goods does not pass from the seller to the buyer until the goods arrive at their destination (the customer's location); the seller is responsible for shipping costs and transit insurance.

consignment

a selling arrangement whereby the consignor physically transfers goods to another company ("consignee") to sell, while legal title and risk of ownership of those goods remain with the consignor during the consignment period.

freight-in

transportation-in; in a periodic system, freight costs generally are added to this temporary account, which is added to purchases in determining net purchases.

Purchase discounts

reductions in the amount to be paid if remittance is made within a designated period of time.

specific identification method

each unit of inventory sold during the period or each unit on hand at the end of the period is matched with its actual cost.

average cost method

assumes cost of goods sold and ending inventory consist of a mixture of all the goods available for sale.

first-in, first-out (FIFO) method

assumes that the first inventory units purchased are the first ones sold.

last-in, first-out (LIFO) method

assumes that the last inventory units purchased are the first ones sold.

LIFO conformity rule

if a company uses LIFO to measure taxable income, the company also must use LIFO for external financial reporting.

LIFO reserve

contra account to inventory used to record the difference between the internal method and LIFO.

LIFO liquidation

the decline in inventory quantity during the period.

gross profit ratio

gross profit (net sales minus cost of goods sold) divided by net sales.

LIFO inventory pools

groups of inventory units based on physical similarities of the individual units.

dollar-value LIFO (DVL)

an inventory costing method comprising layers of dollar value from different periods and using cost indexes to adjust for changes in price levels over time.

Market

Current replacement cost of inventory, not to exceed net realizable value (NRV) or to be lower than NRV minus a normal profit margin.

net markup

net effect of the change in selling price (increase, increase, decrease).
net markdown

net effect of the change in selling price (increase, decrease, increase).
dollar-value LIFO retail method

LIFO retail method combined with dollar-value LIFO.

Purchase commitments

contracts that obligate a company to purchase a specified amount of inventory or raw materials at specified prices on or before specified dates.

Acquisition costs

the amounts paid to acquire the rights to explore for undiscovered natural resources or to extract proven natural resources.

Exploration costs

for natural resources, expenditures such as drilling a well, or excavating a mine, or any other costs of searching for natural resources.

Development costs

for natural resources, costs incurred after the resource has been discovered but before production begins.

Restoration costs

costs to restore land or other property to its original condition after extraction of the natural resource ends.

asset retirement obligations (AROs)

obligations associated with the disposition of an operational asset.

Intangible assets

operational assets that lack physical substance and often involve an exclusive right to a company to provide a product or service; examples include patents, copyrights, franchises, and goodwill.

trademark

exclusive right to display a word, a slogan, a symbol, or an emblem that distinctively identifies a company, a product, or a service.

tradenname

Trademarks or tradenames often are considered to have indefinite useful lives.

franchise

contractual arrangement under which the franchisor grants the franchisee the exclusive right to use the franchisor's trademark or

tradename within a geographical area, usually for a specified period of time.

Goodwill

intangible asset equal to the fair value of the consideration given to acquire a company (the acquisition price) minus the fair value of the acquired company's identifiable net assets.

fixed-asset turnover ratio

the effectiveness of managers to use fixed assets to generate sales, measured as net sales divided by average fixed assets.

technological feasibility

established when the enterprise has completed all planning, designing, coding, and testing activities that are necessary to establish that the product can be produced to meet its design specifications including functions, features, and technical performance requirements.

start-up costs

whenever a company introduces a new product or service, or commences business in a new territory or with a new customer, it incurs one-time costs that are expensed in the period incurred.

Depreciation

Depreciation, depletion, and amortization are processes that allocate an asset's cost to periods of benefit.

depletion

allocation of the cost of natural resources.

amortization

cost allocation for intangibles.

service life

the estimated use that the company expects to receive from the asset.

useful life

the estimated use that the company expects to receive from the asset.

allocation base

cost of the asset expected to be consumed during its service life.

residual value

or salvage value, the amount the company expects to receive for the asset at the end of its service life less any anticipated disposal costs.

straight-line method

allocation of an equal amount to each year. For depreciation of plant and equipment or amortization of intangible assets, an equal amount of the

allocation base is allocated to each year of the asset's service life.

sum-of-the-years'-digits (SYD) method
systematic acceleration of depreciation by multiplying the depreciable base by a fraction that declines each year.

units-of-production method
computes a depreciation rate per measure of activity and then multiplies this rate by actual activity to determine periodic depreciation.

group depreciation method
collection of assets defined as depreciable assets that share similar service lives and other attributes.

composite depreciation method
physically dissimilar assets are aggregated to gain the convenience of group depreciation.

additions
the adding of a new major component to an existing asset.

improvements
replacement of a major component of an operational asset.

rearrangements
expenditures made to restructure an asset without addition, replacement, or improvement.

retirement depreciation method
records depreciation when assets are disposed of and measures depreciation as the difference between the proceeds received and cost.

Held-to-maturity (HTM)
held-to-maturity (HTM) investments require the "positive intent and ability" to hold the investments to maturity.

control
usually an investor can control the investee if it owns more than 50% of the investee's voting shares.

consolidated financial statements
combination of the separate financial statements of the parent and subsidiary each period into a single aggregate set of financial statements, as if there were only one company.

significant influence
effective control is absent but the investor is able to affect the operating and financial policies of the investee (usually is the case when investor holds between 20% and 50% of the investee's voting shares).

equity method

used when an investor can't control, but can significantly influence, the investee. Under the equity method, the investor recognizes in its own income statement its proportionate share of the investee's income.

Derivatives

financial instruments usually created to hedge against risks created by other financial instruments or by transactions that have yet to occur but are anticipated and that "derive" their values or contractually required cash flows from some other security or index.

AFS

AFS investments aren't held for trading or designated as held-to-maturity.

Current liabilities

expected to require the use of current assets for payment, and usually are payable within one year from the balance sheet date (or operating cycle, if longer).

accounts payable

obligations to suppliers of merchandise or of services purchased on account.

line of credit

allows a company to borrow cash without having to follow formal loan procedures and paperwork.

commercial paper

unsecured notes sold in minimum denominations of \$25,000 with maturities ranging from 30 to 270 days.

loss contingency

existing, uncertain situation involving potential loss which will be resolved when some future event occurs.

bond indenture

document that describes specific promises made to bondholders.

sinking fund

mandatory sinking fund redemptions retire a bond issue gradually over its term to maturity.

effective interest

the *effective interest* on debt is the market rate of interest multiplied by the outstanding balance of the debt.

lease

an apartment rental is a contractual arrangement constituting a *lease*.

purchase option

a provision of some lease contracts that gives the lessee the option of purchasing the leased property during, or at the end of, the lease term at a specified price.

leasehold improvement

account title when a lessee makes improvements to leased property that reverts back to the lessor at the end of the lease.

temporary differences

difference between pretax accounting income and taxable income and, consequently, between the reported amount of an asset or liability in the financial statements and its tax basis which will "reverse" in later years.

tax basis

of an asset or liability is its original value for tax purposes reduced by any amounts included to date on tax returns.

effective tax rate

equals tax expense divided by pretax accounting income.

accumulated benefit obligation (ABO)

the discounted present value of estimated retirement benefits earned so far by employees, applying the plan's pension formula using existing compensation levels.

projected benefit obligation (PBO)

the discounted present value of estimated retirement benefits earned so far by employees, applying the plan's pension formula using projected future compensation levels.

prior service cost

the cost of credit given for an amendment to a pension plan to employee service rendered in prior years.

trustee

person who accepts employer contributions, invests the contributions, accumulates the earnings on the investments, and pays benefits from the plan assets to retired employees or their beneficiaries.

accumulated other comprehensive income (AOCI)

a component of shareholders' equity that reports the accumulated amount of other comprehensive income items in the current and prior periods.

Model Business Corporation Act

designed to serve as a guide to states in the development of their corporation statutes.

distinct

a good or service is distinct if it is both *capable of being distinct* and *separately identifiable from other goods or services in the contract*. It is capable of being distinct if the customer could use the good or service on its own or in combination with other goods and services it could obtain elsewhere. It is separately identifiable if the good or service is distinct in the context of the contract because it is not highly interrelated with other goods and services in the contract. Distinct goods and services are accounted for as separate performance obligations.

transaction price

the amount the seller expects to be entitled to receive from the customer in exchange for providing goods and services.

contract

an agreement that creates legally enforceable rights and obligations. Contracts can be explicit or implicit.

prepayments

the cash flow precedes either expense or revenue recognition.

quality-assurance warranties

obligation by the seller to make repairs or replace products that are later demonstrated to be defective for some period of time after the sale.

Extended warranties

additional, extended service that covers new problems arising after the buyer takes control of the product.

variable consideration

transaction price is uncertain because it includes an amount that varies depending on the occurrence or nonoccurrence of a future event.

right of return

customers' right to return merchandise to retailers if they are not satisfied.

principal

controls goods or services and is responsible for providing them to the customer.

agent

facilitates transfers of goods and services between sellers and customers.

Functional intellectual property

has significant stand-alone functionality, such that the intellectual property can perform a function or task, be played, or be aired over various types of media; the seller typically recognizes revenue at the point in time the customer can start using functional intellectual property.

Symbolic intellectual property

has usefulness to the customer that depends on the seller's ongoing activities, so it transfers a right of access; the seller recognizes revenue over the period of time the customer accesses the IP.

franchisee

individual or corporation given the right to operate a business involving the franchisor's products or services and use its name and other symbols for a specific period of time.

bill-and-hold

occurs when a customer purchases goods but requests that the seller retain physical possession of the goods until a later date.

gift card

transferable prepayments for a specified dollar value of goods or services to be delivered at a future date. Gift cards give rise to deferred revenue liabilities until they are redeemed or viewed as not going to be redeemed (broken).

restricted stock units

right to receive shares, subject to forfeiture by the employee if employment is terminated within some specified number of years from the date of grant.

Employee share purchase plans

permit all employees to buy shares directly from their company, often at favorable terms.

earnings per share (EPS)

the amount of income earned by a company expressed on a per share basis.

simple capital structure

a firm that has no potential common shares (outstanding securities that could potentially dilute earnings per share).

potential common shares

securities that, while not being common stock, may become common stock through their exercise, conversion, or issuance and therefore dilute (reduce) earnings per share.

Basic EPS

computed by dividing income available to common stockholders (net income less any preferred stock dividends) by the weighted-average number of common shares outstanding for the period.

complex capital structure

potential common shares are outstanding.

Diluted EPS

incorporates the dilutive (reducing) effect of all potential common shares in the calculation of EPS.

antidilutive securities

the effect of the conversion or exercise of potential common shares would be to increase, rather than decrease, EPS.

Contingently issuable shares

additional shares of common stock to be issued, contingent on the occurrence of some future circumstance.

retrospective approach

financial statements issued in previous years are revised to reflect the impact of an accounting change whenever those statements are presented again for comparative purpose.

Modified retrospective approach

accounting change is applied only to the adoption period with adjustment of the balance of retained earnings at the beginning of the adoption period to capture the cumulative effects of prior periods.

prospective approach

effects of an accounting change are reflected in the financial statements of only the year of the change and future years.

change in accounting principle

switch by a company from one accounting method to another.

change in reporting entity

presentation of consolidated financial statements in place of statements of individual companies, or a change in the specific companies that constitute the group for which consolidated or combined statements are prepared.

correction of an error

an adjustment a company makes due to an error made and later discovered.

prior period adjustment

addition to or reduction in the beginning retained earnings balance in a statement of shareholders' equity due to a correction of an error in a prior period.

cash equivalents

short-term investments that have a maturity date no longer than three months from the date of purchase.

Cash flows from operating activities

both inflows and outflows of cash that result from activities reported on the income statement.

direct method

cash effect of each operating activity (i.e., income statement item) is reported directly on the statement of cash flows.

indirect method

the net cash increase or decrease from operating activities is derived indirectly by starting with reported net income and working backwards to convert that amount to a cash basis.

Cash flows from investing activities

both outflows and inflows of cash caused by the acquisition and disposition of assets.

Cash flows from financing activities

both inflows and outflows of cash resulting from the external financing of a business.

noncash investing and financing activities

transactions that do not increase or decrease cash but that result in significant investing and financing activities.

Hedging

taking an action that is expected to produce exposure to a particular type of risk that is opposite of an actual risk to which the company already is exposed.

forward contract

calls for delivery on a specific date; is not traded on a market exchange; does not call for a daily cash settlement for price changes in the underlying contract.

Option

gives the holder the right either to buy or sell a financial instrument at a specified price.

foreign currency futures contract

agreement that requires the seller to deliver a specific foreign currency at a designated future date at a specific price.

interest rate swap

agreement to exchange fixed interest payments for floating rate payments, or vice versa, without exchanging the underlying principal amounts.

fair value hedge

a derivative is used to hedge against the exposure to changes in the fair value of an asset or liability or a firm commitment.

foreign currency hedge

a derivative is used to offset the risk that changes in foreign currency exchange rates will affect the entity's positions, operations, or transactions that are denominated in a currency other than the its functional currency.

transaction

economic events.

futures contract

agreement traded on an organized exchange; calls for delivery of a specific commodity or financial instrument at a predetermined price on a specific date or during a specific month.

cash flow hedge

a derivative used to hedge against the exposure to changes in cash inflows or outflows of an asset or liability or a forecasted transaction.

book value

assets minus liabilities as shown in the balance sheet.

short-term investments

investments not classified as cash equivalents that the company has the ability and intent to sell within one year (or operating cycle if longer).

Accounts receivable

amounts to be received from the sale of goods or services on account.

Other comprehensive income (OCI)

changes in shareholders' equity other than transactions with owners and other than items that affect net income.

stand-alone selling price

the amount at which the good or service is sold separately under similar circumstances.

compensating balances

specified balance (usually some percentage of the committed amount) a borrower of a loan is asked to maintain in a low-interest or noninterest-bearing account at the bank.

effective interest method

calculates interest revenue by multiplying the outstanding balance of the investment by the relevant interest rate.

Model Business Corporation Act

designed to serve as a guide to states in the development of their corporation statutes.

Financial Accounting Standards Board (FASB)

the current private sector body that has been delegated the task of setting accounting standards.

cash receipts journal

record of cash receipts.

pledge

when companies *pledge* accounts receivable as collateral for debt, a disclosure note describes the arrangement.

securitization

the company creates a special purpose entity (SPE), usually a trust or a subsidiary; the SPE buys a pool of trade receivables, credit card receivables, or loans from the company and then sells related securities.

accrual accounting

measures income according to the entity's accomplishments and resource sacrifices during the period from transactions related to providing goods and services to customers, regardless of when cash is received or paid.

cash-basis accounting

measures income as the difference between cash receipts and cash disbursements during a reporting period from transactions related to providing goods and services to customers.

financial reporting

process of providing financial statement information to external users.

Generally accepted accounting principles

set of both broad and specific guidelines that companies should follow when measuring and reporting the information in their financial statements and related notes.

GAAP

set of both broad and specific guidelines that companies should follow when measuring and reporting the information in their financial statements and related notes.

Committee on Accounting Procedure (CAP)

first private sector body that was delegated the task of setting accounting standards.

American Institute of Accountants (AIA)

national organization of professional public accountants.

American Institute of Certified Public Accountants (AICPA)

national organization of professional public accountants.

Accounting Principles Board (APB)

the second private sector body delegated the task of setting accounting standards.

Financial Accounting Foundation (FAF)

responsible for selecting the members of the FASB and its Advisory Council, ensuring adequate funding of FASB activities, and exercising general oversight of the FASB's activities.

Emerging Issues Task Force (EITF)

responsible for providing timely responses to emerging financial reporting issues.

Governmental Accounting Standards Board (GASB)

responsible for developing accounting standards for governmental units such as states and cities.

International Accounting Standards Committee (IASC)

umbrella organization formed to develop global accounting standards.

Generally accepted accounting principles

set of both broad and specific guidelines that companies should follow when measuring and reporting the information in their financial statements and related notes.

GAAP

Set of both broad and specific guidelines that companies should follow when measuring and reporting the information in their financial statements and related notes.

Committee on Accounting Procedure (CAP)

first private sector body that was delegated the task of setting accounting standards.

American Institute of Accountants (AIA)

national organization of professional public accountants.

American Institute of Certified Public Accountants (AICPA)

national organization of professional public accountants.

Accounting Principles Board (APB)

the second private sector body delegated the task of setting accounting standards.

Financial Accounting Foundation (FAF)

responsible for selecting the members of the FASB and its Advisory Council, ensuring adequate funding of FASB activities, and exercising general oversight of the FASB's activities.

Emerging Issues Task Force (EITF)

responsible for providing timely responses to emerging financial reporting issues.

Governmental Accounting Standards Board (GASB)

responsible for developing accounting standards for governmental units such as states and cities.

International Accounting Standards Committee (IASC)

umbrella organization formed to develop global accounting standards.

rules-based accounting standards

a list of rules for choosing the appropriate accounting treatment for a transaction.

Institute of Management Accountants (IMA)

primary national organization of accountants working in industry and government.

Institute of Internal Auditors

national organization of accountants providing internal auditing services for their own organizations.

decision usefulness

the quality of being useful to decision making.

predictive value

confirmation of investor expectations about future cash-generating ability.

confirmatory value

confirmation of investor expectations about future cash-generating ability.

Recognition

process of admitting information into the basic financial statements.

Measurement

process of associating numerical amounts with the elements.

Disclosure

including pertinent information in the financial statements and accompanying notes.

Disclosure notes

additional insights about company operations, accounting principles, contractual agreements, and pending litigation written in notes that accompany the financial statements.

Supplemental schedules and tables

reports containing more detailed information than is shown in the primary financial statements.

accounting equation

$Assets = Liabilities + Shareholders' Equity.$

Source documents

relay essential information about each transaction to the accountant, e.g., sales invoices, bills from suppliers, cash register tapes.

transaction analysis

process of reviewing the source documents to determine the dual effect on the accounting equation and the specific elements involved.

journal

a chronological record of all economic events affecting the financial position of a company.

special journal

record of a repetitive type of transaction, e.g., a sales journal.

general journal

used to record any type of transaction.

journal entry

captures the effect of a transaction on financial position in debit/credit form.

Posting

transferring debits and credits recorded in individual journal entries to the specific accounts affected.

unadjusted trial balance

a list of the general ledger accounts and their balances after recording all transactions during the period but before any adjusting entries.

Adjusting entries

internal transactions recorded at the end of any period when financial statements are prepared.

adjusted trial balance

trial balance after adjusting entries have been recorded.

financial statements

primary means of communicating financial information to external parties.

Closing entries

transfer the balances of temporary accounts to the retained earnings account and reduce the balances of temporary accounts to zero.

unadjusted trial balance

a list of the general ledger accounts and their balances after recording all transactions during the period but before any adjusting entries.

adjusting entries

internal transactions recorded at the end of any period when financial statements are prepared.

adjusted trial balance

trial balance after adjusting entries have been recorded.

financial statements

primary means of communicating financial information to external parties.

other comprehensive income (OCI) or loss

changes in shareholders' equity other than transactions with owners and other than items that affect net income.

comprehensive income

change in shareholders' equity for the period from nonowner sources; equal to net income plus other comprehensive income. Traditional net income plus other nonowner changes in equity.

current assets

includes assets that are cash, will be converted into cash, or will be used up within one year from the balance sheet date (or operating cycle, if longer).

current liabilities

expected to require the use of current assets for payment, and usually are payable within one year from the balance sheet date (or operating cycle, if longer).

operating activities

inflows and outflows of cash related to transactions entering into the determination of net income.

investing activities

involve the acquisition and sale of long-term assets used in the business and nonoperating investment assets.

financing activities

involve cash inflows and outflows from transactions with creditors (excluding trade creditors) and owners.

closing process

the temporary accounts are reduced to zero balances, and these temporary account balances are closed (transferred) to retained earnings to reflect the changes that have occurred in that account during the period.

worksheet

used to organize the accounting information needed to prepare adjusting and closing entries and the financial statements.

reversing entries

optional entries that remove the effects of some of the adjusting entries made at the end of the previous reporting period for the sole purpose of simplifying journal entries made during the new period.

subsidiary ledger

record of a group of subsidiary accounts associated with a particular general ledger control account.

cash receipts journal

record of cash receipts.

cash disbursements journal

record of cash disbursements.

sales journal

records credit sales.

purchases journal

records the purchase of inventory on account.

sales journal

records credit sales.

book value

assets minus liabilities as shown in the balance sheet.

accounting equation

assets = Liabilities + Shareholders' Equity.

short-term investments

investments not classified as cash equivalents that the company has the ability and intent to sell within one year (or operating cycle if longer).

Accounts receivable

amounts to be received from the sale of goods or services on account.

Cash equivalents

short-term investments that have a maturity date no longer than three months from the date of purchase.

Accounts payable

obligations to suppliers of merchandise or of services purchased on account.

Notes payable

promissory notes (essentially an IOU) that obligate the issuing corporation to repay a stated amount at or by a specified maturity date and to pay interest to the lender between the issue date and maturity.

Deferred revenues

cash received from a customer for goods or services to be provided in a future period.

Accrued liabilities

expenses already incurred but not yet paid (accrued expenses).

Current maturities of long-term debt

the portion of long-term notes, loans, mortgages, and bonds payable that is payable within the next year (or operating cycle, if longer), reported as a current liability.

fraud

an intentional act by one or more individuals among management, those charged with governance, employees, or third parties, involving the use of deception that results in a misstatement in the financial statements that are the subject of an audit.

illegal acts

violations of the law, such as bribes, kickbacks, and illegal contributions to political candidates.

management's discussion and analysis (MD&A)

provides a biased but informed perspective of a company's operations, liquidity, and capital resources.

auditor's report

report issued by CPAs who audit the financial statements that informs users of the audit findings.

default risk

a company's ability to pay its obligations when they come due.

operational risk

how adept a company is at withstanding various events and circumstances that might impair its ability to earn profits.

Comparative financial statements

corresponding financial statements from the previous years accompanying the issued financial statements.

Horizontal analysis

comparison by expressing each item as a percentage of that same item in the financial statements of another year (base amount) in order to more easily see year-to-year changes.

Vertical analysis

expression of each item in the financial statements as a percentage of an appropriate corresponding total, or base amount, but within the same year.

Ratio analysis

comparison of accounting numbers to evaluate the performance and risk of a firm.

current ratio

measure of a company's liquidity; computed as current assets divided by current liabilities.

capital structure

the mixture of liabilities and shareholders' equity in a company.

financial leverage

by earning a return on borrowed funds that exceeds the cost of borrowing the funds, a company can provide its shareholders with a total return higher than it could achieve by employing equity funds alone.

operating segment

a component of an enterprise that engages in business activities from which it may earn revenues and incur expenses (including revenues and

expenses relating to transactions with other companies of the same enterprise); whose operating results are regularly reviewed by the enterprise's chief operating decision maker to make decisions about resources to be allocated to the segment and assess its performance; for which discrete financial information is available.

other comprehensive income (OCI)

changes in shareholders' equity other than transactions with owners and other than items that affect net income.

Gains

increases in equity from peripheral, or incidental, transactions of an entity.

losses

decreases in equity from peripheral, or incidental, transactions of the entity.

Operating income

includes revenues, expenses, gains, and losses directly related to the principal revenue-generating activities of the company.

Nonoperating income

includes revenues, expenses, gains, and losses related to peripheral or incidental activities of the company.

discontinued operations

the discontinuance of a component of an entity whose operations and cash flows can be clearly distinguished from the rest of the entity.

Income from continuing operations

revenues, expenses (including income taxes), gains, and losses, excluding those related to discontinued operations and extraordinary items.

prior period adjustment

addition to or reduction in the beginning retained earnings balance in a statement of shareholders' equity due to a correction of an error in a prior period.

earnings per share (EPS)

the amount of income earned by a company expressed on a per share basis.

Basic EPS

computed by dividing income available to common shareholders (net income less any preferred stock dividends) by the weighted-average

number of common shares outstanding for the period.

Diluted EPS

incorporates the dilutive (reducing) effect of all potential common shares in the calculation of EPS.

other comprehensive income

changes in shareholders' equity other than transactions with owners and other than items that affect net income.

Retained Earnings

amounts earned by the corporation on behalf of its shareholders and not (yet) distributed to them as dividends.

Other comprehensive income

changes in shareholders' equity other than transactions with owners and other than items that affect net income.

Accumulated other comprehensive income

a component of shareholders' equity that reports the accumulated amount of other comprehensive income items in the current and prior periods.

Other comprehensive income

changes in shareholders' equity other than transactions with owners and other than items that affect net income.

average days in inventory

indicates the average number of days it normally takes to sell inventory.

time value of money

money can be invested today to earn interest and grow to a larger dollar amount in the future.

Interest

"rent" paid for the use of money for some period of time.

Simple interest

computed by multiplying an initial investment times both the applicable interest rate and the period of time for which the money is used.

Compound interest

interest computed not only on the initial investment but also on the accumulated interest in previous periods.

effective rate

the actual rate at which money grows per year.

future value (FV)

amount of money that a dollar will grow to at some point in the future.

future value (FV)

amount of money that a dollar will grow to at some point in the future.

Monetary assets

money and claims to receive money, the amount of which is fixed or determinable.

Monetary liabilities

obligations to pay amounts of cash, the amount of which is fixed or determinable.

ordinary annuity

cash flows occur at the end of each period.

annuity due

cash flows occurring at the beginning of each period.

deferred annuity

first cash flow occurs more than the one period after the date the agreement begins.

revenue

inflows of assets or settlements of liabilities (or a combination of both) from delivering or producing goods, rendering services, or other activities that constitute the entity's ongoing major or central operations.

franchisor

grants to the franchisee the right to operate a business involving the franchisor's products or services and use its name and other symbols for a specific period of time.

contract liability

a label given to deferred revenue or unearned revenue accounts.

contract asset

asset recognizing that a seller has a conditional right to receive payment after satisfying a performance obligation.

construction in progress

asset account equivalent to the asset work-in-process inventory in a manufacturing company.

billings on construction contract

contra account to the asset *construction in progress* recognizing that a customer has been billed for work performed; subtracted from construction in progress to determine balance sheet presentation.

billings on construction contract

contra account to the asset *construction in progress* recognizing that a customer has been billed for work performed; subtracted from construction in progress to determine balance sheet presentation.

Cash

currency and coins, balances in checking accounts, and items acceptable for deposit in these accounts, such as checks and money orders received from customers.

Internal control

a company's system to encourage adherence to company policies and procedures, promote operational efficiency, minimize errors and theft, and enhance the reliability and accuracy of accounting data.

Separation of duties

an internal control technique in which various functions are distributed amongst employees to provide cross-checking that encourages accuracy and discourages fraud.

Receivables

a company's claims to the future collection of cash, other assets, or services.

accounts receivable

amounts to be received from the sale of goods or services on account.

trade discounts

percentage reduction from the list price.

Sales discounts

cash discounts; represent reductions not in the selling price of a good or service but in the amount to be received from a credit customer if the amount is paid within a specific period of time.

gross method

the buyer views a discount not taken as part of the cost of inventory; the seller views a discount not taken by the customer as part of sales of revenue.

refund liability

amount the seller estimates will be refunded to customers who make returns.

credit losses

losses due to failure by customers to pay amounts owed for purchase of goods or services; also called bad debts, impairments of receivables, and uncollectible accounts.

allowance method

recording bad debt expense and reducing accounts receivable indirectly by crediting the allowance for uncollectible accounts, a contra account to accounts receivable, for an estimate of the amount that eventually will prove uncollectible.

allowance for uncollectible accounts

contra account that reduces accounts receivable to the net amount expected to be collected. Also called the allowance for bad debts, the allowance for doubtful accounts, or the allowance for credit losses.

estimate

predictions of future events.

balance sheet approach

determining an income statement amount by estimating the appropriate carrying value of a balance sheet account and then adjusting the account as necessary to reach that carrying value.

CECL (Current Expected Credit Loss) model.

a model used to estimate credit losses (bad debts) for receivables as well as those debt investments that are accounted for as held to maturity.

income statement approach

estimating an income statement amount directly, rather than basing it on the change in a balance sheet account.

Notes receivable

receivables supported by a formal agreement or note that specifies payment terms.

interest-bearing note receivable

notes that state a principal and interest rate to be paid by a debtor to a creditor.

noninterest-bearing note

notes for which the interest is deducted from the face amount of the note to determine the cash proceeds made available to the borrower at the outset.

without recourse

the buyer assumes the risk of bad debts.

with recourse

the seller retains the risk of uncollectibility.

without recourse

the seller retains the risk of uncollectibility.

with recourse

the seller retains the risk of uncollectibility.

discounting

the transfer of a note receivable to a financial institution.

bank reconciliation

comparison of the bank balance with the balance in the company's own records.

troubled debt restructuring

the original terms of a debt agreement are changed as a result of financial difficulties experienced by the debtor (borrower).

Inventory

goods awaiting sale (finished goods), goods in the course of production (work in process), and goods to be consumed directly or indirectly in production (raw materials). Goods acquired, manufactured, or in the process of being manufactured for sale.

Cost of goods sold

cost of the inventory sold during the period.

product costs

costs associated with products and expensed as cost of goods sold only when the related products are sold.

transportation-in

freight-in; in a periodic system, freight costs generally are added to this temporary account, which is added to purchases in determining net purchases.

purchase return

a reduction in both inventory and accounts payable (if the account has not yet been paid) at the time of the return.

purchase discounts

reductions in the amount to be paid if remittance is made within a designated period of time.

gross method

the buyer views a discount not taken as part of the cost of inventory; the seller views a discount not taken by the customer as part of sales of revenue.

net method

the buyer considers the cost of inventory to include the net, after-discount amount, and any discounts not taken are reported as interest

expense; the seller considers sales revenue to be the net amount, after discount, and any discounts not taken by the customer are included in sales revenue.

just-in-time (JIT) system

a system used by a manufacturer to coordinate production with suppliers so that raw materials or components arrive just as they are needed in the production process.

average days in inventory

indicates the average number of days it normally takes to sell inventory.

lower of cost or net realizable value

subsequent measurement of inventory applied by companies that use FIFO, average cost, or any other method besides LIFO or the retail inventory method. This approach requires companies to report ending inventory at the lower of cost or net realizable value.

gross profit method

estimates cost of goods sold, which is then subtracted from cost of goods available for sale to estimate ending inventory.

gross margin method

estimates cost of goods sold, which is then subtracted from cost of goods available for sale to estimate ending inventory.

cost-to-retail percentage

ratio found by dividing goods available for sale at cost by goods available for sale at retail.

conventional retail method

application of the retail inventory method that excludes markdowns in the calculation of the cost-to-retail percentage, as a way to approximate the lower of average cost or market.

Natural resources

oil and gas deposits, timber tracts, and mineral deposits.

land improvements

the cost of parking lots, driveways, and private roads and the costs of fences and lawn and garden sprinkler systems.

Natural resources

oil and gas deposits, timber tracts, and mineral deposits.

expected cash flow approach

adjusts the cash flows, not the discount rate, for the uncertainty or risk of those cash flows.

accretion expense

the increase in an asset retirement obligation that accrues as an operating expense.

patent

exclusive right to manufacture a product or to use a process.

copyright

exclusive right of protection given to a creator of a published work, such as a song, painting, photograph, or book.

capital budgeting

the process of evaluating the purchase of operational assets.

organization costs

costs related to organizing a new entity, such as legal fees and state filing fees to incorporate.

successful efforts method

requires that exploration costs that are known not to have resulted in the discovery of oil or gas be included as expense in the period the expenditures are made.

full-cost method

allows costs incurred in searching for oil and gas within a large geographical area to be capitalized as assets and expensed in the future as oil and gas from the successful wells are removed from that area.

Allocation method

the pattern in which the allocation base is expected to be consumed.

Time-based methods

allocates an asset's cost base according to the passage of time.

double-declining-balance (DDB) method

200% of the straight-line rate is multiplied by book value.

half-year convention

record one-half of a full year's depreciation in the year of acquisition and another half year in the year of disposal.

modified accelerated cost recovery system (MACRS)

federal income tax code allows taxpayers to compute depreciation for their tax returns using this method.

replacement depreciation method

depreciation is recorded when assets are replaced.

effective interest method

calculates interest revenue by multiplying the outstanding balance of the investment by the relevant interest rate.

unrealized holding gains and losses

gains and losses that arise from holding an investment during a period in which its fair value changes.

held-to-maturity (HTM)

Held-to-maturity (HTM) investments require the “positive intent and ability” to hold the investments to maturity.

Held-to-maturity (HTM) investments are reported at amortized cost in the balance sheet.

trading securities

debt securities the investor (usually a financial institution) acquires principally for the purpose of selling in the near term.

available-for-sale (AFS) securities

aFS investments aren't held for trading or designated as held-to-maturity.

AFS investments are reported at their fair values.

financial instrument

cash; evidence of an ownership interest in an entity; a contract that imposes on one entity an obligation to deliver cash or another financial instrument, and conveys to the second entity a right to receive cash or another financial instrument; and a contract that imposes on one entity an obligation to exchange financial instruments on potentially unfavorable terms and conveys to a second entity a right to exchange other financial instruments on potentially favorable terms.

fair value option

allows companies to report specified financial assets and liabilities at fair value.

cash surrender value

a determinable amount of money that can be received in exchange for surrendering a life insurance policy while the insured is still alive.

liability

recognition and measurement of assets and liabilities drives revenue and expense recognition.

Trade notes payable

formally recognized by a written promissory note.

interest

“rent” paid for the use of money for some period of time.

noninterest-bearing note

notes for which the interest is deducted from the face amount of the note to determine the cash proceeds made available to the borrower at the outset.

Accrued liabilities

expenses already incurred but not yet paid (accrued expenses).

Annual bonuses

annual bonuses are one-time payments in addition to normal salary, typically tied to performance of the individual or company during a period.

Bonds

A form of debt consisting of separable units (bonds) that obligates the issuing corporation to repay a stated amount at a specified maturity date and to pay interest to bondholders between the issue date and maturity.

debenture bond

backed only by the “full faith and credit” of the issuing corporation.

subordinated debenture

the holder is not entitled to receive any liquidation payments until the claims of other specified debt issues are satisfied.

mortgage bond

backed by a lien on specified real estate owned by the issuer.

callable

allows the issuing company to buy back, or call, outstanding bonds from the bondholders before their scheduled maturity date.

Serial bonds

more structured (and less popular) way to retire bonds on a piecemeal basis.

Convertible bonds

bonds for which bondholders have the option to convert the bonds into shares of stock.

premium

arises when bonds are sold for more than face amount.

discount

arises when bonds are sold for less than face amount.

Debt issue costs

costs of issuing debt securities are called *debt issue costs* and are accounted for the same way as bond discount.

implicit rate of interest

rate implicit in the agreement.

early extinguishment of debt

debt is retired prior to its scheduled maturity date.

Convertible bonds

bonds for which bondholders have the option to convert the bonds into shares of stock.

detachable stock purchase warrants

the investor has the option to purchase a stated number of shares of common stock at a specified option price, within a given period of time.

accrued interest

interest that has accrued since the last interest date.

troubled debt restructuring

the original terms of a debt agreement are changed as a result of financial difficulties experienced by the debtor (borrower).

lessor

owner of a leased asset.

lessee

user of a leased asset.

finance lease

lessee has, in substance, purchased the lease asset; assumed when one of five classification criteria is met.

sales-type lease

lessor transfers control of lease asset to lessee, with or without a selling profit on the sale of the asset.

operating leases

fundamental rights and responsibilities of ownership are retained by the lessor and the lessee merely is using the asset temporarily.

lease payments

payments the lessee is required to make in connection with the lease.

Selling profit

when the fair value of the asset (usually the present value of the lease payments, or "selling price") exceeds the cost or carrying value of the

asset sold.

operating lease

fundamental rights and responsibilities of ownership are retained by the lessor and the lessee merely is using the asset temporarily.

residual asset

carrying amount of a leased asset not transferred to the lessee.

direct financing lease

lease in which the lessor finances the asset for the lessee and earns interest revenue over the lease term.

initial direct costs

costs incurred by the lessor that are associated directly with originating a lease and are essential to acquire the lease.

advance payments

payment made at the beginning of the lease that represents prepaid rent.

Leasehold Improvements

account title when a lessee makes improvements to leased property that reverts back to the lessor at the end of the lease.

sale-leaseback transaction

the owner of an asset sells it and immediately leases it back from the new owner.

future taxable amounts

the future tax consequence of temporary difference will be to increase taxable income relative to accounting income; result in recognition of deferred tax liabilities.

deferred tax asset

taxes to be saved in the future when future deductible amounts reduce taxable income (when the temporary differences reverse).

future deductible amounts

the future tax consequence of a temporary difference will be to decrease taxable income relative to accounting income; result in recognition of deferred tax assets.

future deductible amounts

the future tax consequence of a temporary difference will be to decrease taxable income relative to accounting income; result in recognition of deferred tax assets.

valuation allowance

indirect reduction (contra account) in a deferred tax asset when it is more likely than not that some portion or all of the deferred tax asset will not be realized.

permanent difference

difference between pretax accounting income and taxable income and, consequently, between the reported amount of an asset or liability in the financial statements and its tax basis that will not “reverse” resulting from transactions and events that under existing tax law will never affect taxable income or taxes payable.

net operating loss

negative taxable income because tax-deductible expenses exceed taxable revenues.

net operating loss carryforward

offsets future taxable income with an NOL to provide a reduction of taxes payable in that future period; therefore, gives rise to a deferred tax asset because it is a future deductible amount.

Defined contribution pension plans

fixed annual contributions to a pension fund; employees choose where funds are invested—usually stocks or fixed-income securities.

Defined benefit pension plans

fixed retirement benefits defined by a designated formula, based on employees’ years of service and annual compensation.

actuary

a professional trained in a particular branch of statistics and mathematics to assess the various uncertainties and to estimate the company’s obligation to employees in connection with its pension plan.

service cost

increase in the projected benefit obligation attributable to employee service performed during the period.

interest cost

interest accrued on the projected benefit obligation calculated as the discount rate multiplied by the projected benefit obligation at the beginning of the year.

pension plan assets

employer contributions and accumulated earnings on the investment of those contributions to be used to pay retirement benefits to retired employees.

expected return on plan assets

estimated long-term return on invested assets.

service method

allocation approach that reflects the declining service pattern of the prior service cost.

Retained earnings

amounts earned by the corporation on behalf of its shareholders and not (yet) distributed to them as dividends.

Paid-in capital

invested capital consisting primarily of amounts invested by shareholders when they purchase shares of stock from the corporation.

Comprehensive income

change in shareholders' equity for the period from nonowner sources; equal to net income plus other comprehensive income. Traditional net income plus other nonowner changes in equity.

accumulated other comprehensive income (AOCI)

a component of shareholders' equity that reports the accumulated amount of other comprehensive income items in the current and prior periods.

S corporation

has characteristics of both regular corporations and partnerships.

limited liability company

owners are not liable for the debts of the business, except to the extent of their investment; all members can be involved with managing the business without losing liability protection; no limitations on the number of owners.

limited liability partnership (LLP)

similar to a limited liability company, except it doesn't offer all the liability protection available in the limited liability company structure.

articles of incorporation

statement of the nature of the firm's business activities, the shares to be issued, and the composition of the initial board of directors.

board of directors

establishes corporate policies and appoints officers who manage the corporation.

preferred stock

typically has a preference (a) to a specified amount of dividends (stated dollar amount per share or percentage of par value per share) and (b) to distribution of assets in the event the corporation is dissolved.

right of conversion

shareholders' right to exchange shares of preferred stock for common stock at specified conversion ratio.

redemption privilege

might allow preferred shareholders the option, under specified conditions, to return their shares for a predetermined redemption price.

cumulative

if the specified dividend is not paid in a given year, the unpaid dividends accumulate and must be made up in a later dividend year before any dividends are paid on common shares.

noncumulative

if the specified dividend is not declared in any given year, it need never be paid.

participating

preferred shareholders are allowed to receive additional dividends beyond the stated amount.

nonparticipating

preferred shareholder dividends are limited to the stated amount.

treasury stock

shares of a company's own stock repurchased and not retired.

deficit

debit balance in retained earnings.

dividend

distribution to shareholders of a portion of assets earned.

liquidating dividend

when a dividend exceeds the balance in retained earnings and returns invested capital to owners

date of record

specific date stated as to when the determination will be made of the recipient of the dividend.

property dividend

when a noncash asset is distributed.

stock dividend

distribution of additional shares of stock to current shareholders of the corporation.

stock split

stock distribution of 25% or higher, sometimes called a *large* stock dividend.

reverse stock split

when a company decreases, rather than increases, its outstanding shares.

quasi reorganization

a firm undergoing financial difficulties, but with favorable future prospects, may use a quasi reorganization to write down inflated asset values and eliminate an accumulated deficit.

diluted EPS

incorporates the dilutive (reducing) effect of all potential common shares in the calculation of EPS.

contingently issuable shares

additional shares of common stock to be issued contingent on the occurrence of some future circumstance.

Stock appreciation rights (SARs)

awards that enable an employee to benefit by the amount that the market price of the company's stock rises above a specified amount, without having to buy shares.

modified retrospective approach

accounting change is applied only to the adoption period with adjustment of the balance of retained earnings at the beginning of the adoption period to capture the cumulative effects of prior periods.

free cash flow

the cash left over after a company pays for its operating expenses and capital expenditures, often measured as cash flow from operations minus capital expenditures.

Parenthetical comments

supplemental information disclosed on the face of financial statements.

modifying comments

supplemental information disclosed on the face of financial statements.

future value

amount of money that a dollar will grow to at some point in the future.

future value

amount of money that a dollar will grow to at some point in the future.

special journals

record of a repetitive type of transaction, e.g., a sales journal.

lower of cost or market

subsequent measurement of inventory applied by companies that use LIFO or the retail inventory method. This approach requires companies to report ending inventory at the lower of cost or market.

specific interest method

for interest capitalization, rates from specific construction loans to the extent of specific borrowings are used before using the average rate of other debt.

Activity-based methods

allocates an asset's cost base using a measure of the asset's input or output.

coupon bonds

name of the owner was not registered; the holder actually clipped an attached coupon and redeemed it in accordance with instructions on the indenture.

Vested benefits

benefits that employees have the right to receive even if their employment were to cease today.

ex-dividend date

usually one business day before the date of record, and is the first day the stock trades without the right to receive the declared dividend.

restricted stock award

shares issued in the name of the employee, subject to forfeiture by the employee if employment is terminated within some specified number of years from the date of grant.

Factor

financial institution that buys receivables for cash, handles the billing and collection of the receivables, and charges a fee for this service.

Remarks

¹ “Target Through the Years” at

<https://corporate.target.com/about/history/Target-through-the-years>.

² Risk refers to the variability of possible outcomes from an investment. Return is the amount received over and above the investment.

⁴ In contrast, *managerial* accounting deals with the concepts and methods used to provide information to an organization’s *internal users*, that is, its managers. You study managerial accounting elsewhere in your curriculum.

⁵ FASB ASC 220-45: Comprehensive Income—Other Presentation Matters [originally “Presentation of Comprehensive Income,” *Accounting Standards Update No. 2011-05* (Norwalk, CT: FASB, June 2011)].

⁶ If cash flow from operating the company is negative, the company can continue to operate by using cash obtained from investors or creditors to make up the difference.

⁷ Net income also includes gains and losses, which are discussed later in the chapter.

⁸ Empirical evidence that accrual accounting provides a better measure of short-term performance than cash flows is provided by Patricia Dechow, “Accounting Earnings and Cash Flows as Measures of Firm Performance: The Role of Accrual Accounting,” *Journal of Accounting and Economics* 18 (1994), pp. 3–42.

⁹ The statement of cash flows is discussed in detail in Chapters 4 and 21.

¹⁰ Reporting requirements for SEC registrants include Form 10-K, the annual report form, and Form 10-Q, the report that must be filed for the first three quarters of each fiscal year.

¹¹ The SEC issues *Financial Reporting Releases (FRRs)*, which regulate what information companies must report. The SEC staff also issues *Staff Accounting Bulletins* that provide the SEC's interpretation of standards previously issued by the private sector. To learn more about the SEC, consult its Internet site at www.sec.gov.

¹² The FAF's primary sources of funding are fees assessed against issuers of securities under the *Public Company Accounting Reform and Investor Protection Act of 2002*, commonly referred to as the *Sarbanes-Oxley Act*. The FAF is governed by trustees, the majority of whom are appointed from the membership of eight sponsoring organizations. These organizations represent important constituencies involved with the financial reporting process. For example, one of the founding organizations is the CFA Institute which represents financial information users, and another is the Financial Executives International which represents financial information preparers. The FAF also raises funds to support the activities of the Governmental Accounting Standards Board (GASB).

¹³ The major responsibility of the FASAC is to advise the FASB on the priorities of its projects, including the suitability of new projects that might be added to its agenda. FASAC includes approximately 35 representatives from auditing firms, private companies, various user groups, and academia.

These steps are consistent with those provided by the American Accounting Association's Advisory Committee on Professionalism and Ethics in their publication *Ethics in the Accounting Curriculum: Cases and Readings*, 1990.

²⁵ "Conceptual Framework for Financial Accounting and Reporting: Elements of Financial Statements and Their Measurement," *Discussion Memorandum* (Stamford, CT: FASB, 1976), p. 2.

²⁶ Companies occasionally do change their accounting practices, which makes it difficult for users to make comparisons among different reporting periods. Chapter 4 and Chapter 20 describe the disclosures that a company makes in this situation to restore consistency among periods.

²⁷ FASB ASC 280: Segment Reporting [previously “Disclosures about Segments of an Enterprise and Related Information,” *Statement of Financial Accounting Standards No. 131* (Norwalk, CT: FASB, 1997)].

²⁸ “Elements of Financial Statements,” *Statement of Financial Accounting Concepts No. 6* (Stamford, CT: FASB, 1985), par. 5.

²⁹ The report that must be filed for the first three quarters of each fiscal year is Form 10-Q and the annual report is Form 10-K.

³⁰ “Recognition and Measurement in Financial Statements,” *Statement of Financial Accounting Concepts No. 5* (Stamford, CT: FASB, 1984), par. 63. *SFAC 8* has replaced reliability with faithful representation as the second primary qualitative characteristic of financial information.

³¹ “Revenue from Contracts with Customers (Topic 606),” *Accounting Standards Update 2014-09* (Norwalk, CT: FASB, 2014).

³² The term *matching principle* is sometimes used to refer to the practice of first recognizing revenue and then recognizing all expenses that were incurred to generate that revenue. However, the conceptual framework does not include that term. Rather, *SFACs 5* and *6* discuss matching as a result of recognizing expenses and revenues that arise from the same underlying transactions or events. Standard setters are reluctant to apply matching more broadly, because they are concerned that doing so could result in inappropriately recognizing as assets some amounts that do not provide “probable future economic benefits,” and therefore don’t meet the definition of an asset. We discuss this topic more in the “Evolving GAAP” section at the end of this chapter.

³³ “Elements of Financial Statements—a replacement of FASB Concepts Statement No. 3 (incorporating an amendment of FASB Concepts Statement

No. 2)," *Statement of Financial Accounting Concepts No. 6* (Norwalk, CT: FASB, 1985).

³⁸ FASB ASC 825-10-25-1: Financial Instruments—Overall—Recognition—Fair Value Option.

³⁹ The fair value option does not apply to certain specified financial instruments, including pension obligations and assets or liabilities arising from leases.

⁴⁰ "Conceptual Framework for Financial Reporting—Chapter 8, *Notes to Financial Statements*" *Statement of Financial Accounting Concepts No. 8* (Norwalk, CT: FASB, 2018).

⁴¹ Some assets and liabilities aren't related to revenue or expense. For example, the issuance of shares of stock increases cash as well as shareholders' equity. The treatment of these sorts of transactions is not affected by whether GAAP emphasizes revenues and expenses or assets and liabilities.

⁴² International Accounting Standards Board, *Conceptual Framework for Financial Reporting*, 2018.

⁴³ Financial Accounting Standards Board, *Proposed Statement of Financial Accounting Concepts: Concepts Statement No. 8, Conceptual Framework for Financial Reporting; Chapter 4: Elements of Financial Statements*, July 16, 2020.

¹ There are many economic events that affect a company *indirectly* and are not recorded. For example, when the Federal Reserve changes its discount rate, it is an important economic event that can affect the company in many ways, but it is not recorded by the company.

² The different types of stock are discussed in Chapter 18. Also, some stock has a stated par value. In that case, the amount recorded to common stock is the par value, and the amount of the issue price above par value is recorded to a separate account, Paid-in capital—excess of par.

³ An alternative is to debit retained earnings at the time the dividend is distributed.

⁴ Dress Right Clothing is a corporation. Corporations are income-tax-paying entities. Income taxes—federal, state, and local—are assessed on an annual basis and payments are made throughout the year. An additional adjusting entry would be required for Dress Right to accrue the amount of estimated income taxes payable that are applicable to the month of July. Accounting for income taxes is introduced in Chapter 4 and covered in depth in Chapter 16.

⁵ FASB ASC 220-10-45-1: Comprehensive Income—Overall—Other Presentation Matters [*Accounting Standards Update No. 2011-05* (Norwalk, CT: FASB, June 2011)].

²⁰ For income tax purposes, revenue can be recognized at completion for home construction contracts and certain other real estate construction contracts. All other contracts must recognize revenue over time according to percentage of completion.

⁶ Some companies choose to disclose the changes in the retained earnings component of shareholders' equity in a separate statement or in a combined statement of income and retained earnings.

⁷ Generally accepted accounting principles require the use of the accrual basis. Some small, nonpublic companies might use the cash basis in preparing their financial statements as an other basis of accounting.

⁸ For example, end-of-period adjusting entries would be recorded in the general journal.

¹ Another way the balance sheet is useful is in combination with income statement items. We explore some of these relationships in Chapter 4.

² Companies often include prepayments for benefits extending beyond one year in the other assets category. When amounts are not material, some companies simply report all prepayments as current assets.

³ Payment can be with current assets or the creation of other current liabilities.

²¹ The cost of construction for 2025 also can be determined as follows:

| | | |
|--|------------------|-----------|
| Loss to date (100% recognized) | | \$ |
| 100,000 | | |
| Add: | | |
| Remaining total project cost, not including the loss | \$5,000,000 | |
| (\$5,100,000 - 100,000) | | |
| Multiplied by the percentage of completion | <u>×</u> | |
| <u>.5412*</u> | <u>2,706,000</u> | |
| Total | | |
| 2,806,000 | | |
| Less: Cost of construction recognized in 2024 | | |
| <u>(1,500,000)</u> | | |
| Cost of construction recognized in 2025 | | <u>\$</u> |
| <u>1,306,000</u> | | |

*\$2,760,000 ÷ 5,100,000

⁵ Balance sheet presentation under IFRS is guided by IAS No. 1.

⁶ FASB ASC 235-10-50: Notes to Financial Statements—Overall—Disclosure [previously “Disclosure of Accounting Policies,” *Accounting Principles Board Opinion No. 22* (New York: AICPA, 1972)].

⁷ Financial statements are viewed as issued if they have been widely distributed to financial statement users in a format consistent with GAAP. Some entities (for example, private companies) don’t widely distribute their financial statements to users. For those entities, the key date for subsequent events is not the date of issuance but rather the date upon which the financial statements are “available to be issued,” which occurs when the financial statements are complete, in a format consistent with GAAP, and have obtained the necessary approvals for issuance. Companies must disclose the date through which subsequent events have been evaluated. FASB ASC 855: Subsequent Events [previously “Subsequent Events,” *Statement of Financial Accounting Standards No. 165* (Stamford, CT: FASB, 2009)].

⁸ FASB ASC 850-10-50: Related Party Disclosures—Overall—Disclosure [previously “Related Party Disclosures,” *Statement of Financial Accounting Standards No. 57* (Stamford, CT: FASB, 1982)].

¹¹ FASB ASC 250-10-S99-1, SAB Topic 1.M: Assessing Materiality [originally “Materiality,” *Staff Accounting Bulletin No. 99* (Washington, D.C.: SEC, August 1999)].

¹² <https://aflcio.org/paywatch/company-pay-ratios>

¹³ The auditors' reports of public companies must be in compliance with the specifications of the PCAOB as specified in AS 2201: An Audit of Internal Control over Financial Reporting That Is Integrated with An Audit of Financial Statements.

¹⁴ "The Auditor's Consideration of an Entity's Ability to Continue as a Going Concern (Redrafted)," *Statement on Auditing Standards No. 126, AICPA Professional Standards AU 570* (New York: AICPA, 2012). Management is also required to assess the company's ability to continue as a going concern and provide certain disclosures when substantial doubt exists (ASC 205-40).

¹⁵ A commonly used variation of the debt to equity ratio is found by dividing total liabilities by *total assets*, rather than by shareholders' equity only. Of course, in this configuration the ratio measures precisely the same attribute of the firm's capital structure but can be interpreted as the percentage of a company's total assets provided by funds from creditors, rather than by owners.

¹⁶ Of course, interest is paid with cash, not with "income." The times interest earned ratio often is calculated by using cash flow from operations before subtracting either interest payments or tax payments as the numerator and interest payments as the denominator.

¹⁷ If return is calculated on *average* shareholders' equity, we're technically assuming that all income is paid to shareholders in cash dividends, so that beginning, ending, and average shareholders' equity are the same. If we assume *no* dividends are paid, rates of return would be

| | | |
|--------------------|---|---|
| | Alternative 1 | Alternative 2 |
| | \$5,400,000 | \$4,200,000 |
| Return on equity = | $\frac{\$5,400,000}{(\$40,000,000 + \$45,400,000)/2}$ | $\frac{\$4,200,000}{(\$20,000,000 + \$24,200,000)/2}$ |
| = | 12.65% | 19.00% |

In any case,

our conclusions are the same.

¹⁸ If we assume *no* dividends are paid, rates of return would be

| | Alternative 1 | Alternative 2 |
|--------------------|---|---|
| Return on equity = | $\frac{\$1,650,000}{(\$40,000,000 + \$41,650,000)/2}$ | $\frac{\$450,000}{(\$20,000,000 + \$20,450,000)/2}$ |
| = | 4.04% | 2.22% |

In any case,

our conclusions are the same.

¹⁹ FASB ASC 280-10-50-1: Segment Reporting—Overall—Disclosure [previously “Disclosures about Segments of an Enterprise and Related Information,” *Statement of Financial Accounting Standards No. 131* (Norwalk, CT: FASB, 1997), par. 10)].

¹⁰ <https://www.sec.gov/divisions/corpfin/guidance/nongaapinterp.htm>

¹¹ We discussed the concept of materiality in Chapter 1.

¹² The presentation of discontinued operations is the same for single-step and multiple-step income statement formats. The single-step versus multiple-step distinction applies to items included in income from continuing operations.

¹³ A discontinued operation is also defined as business or nonprofit activity that is considered held for sale *when acquired* (FASB ASC 205-20-15-2). A business is a set of activities and assets that is managed for purposes of providing economic benefits to the company. A nonprofit activity is similar to a business but is not intended to provide goods and services to customers at a profit.

¹⁴ FASB ASC 205-20-20 : Presentation of Financial Statements—Discontinued Operations—Glossary.

¹⁵ Equity method investments are discussed in Chapter 12.

¹⁶ “Noncurrent Assets Held for Sale and Discontinued Operations,” *International Financial Reporting Standard No. 5* (IASCF).

¹⁷ The presentation of discontinued operations in comparative income statements enhances the qualitative characteristics of comparability and consistency. We discussed the concepts of comparability and consistency in Chapter 1.

¹⁸ Six criteria are used to determine whether the component is likely to be sold and therefore considered “held for sale.” You can find these criteria in FASB ASC 360-10-45-9: Property, Plant, and Equipment—Overall—Other Presentation Matters—Long-Lived Assets Classified as Held for Sale [previously “Accounting for the Impairment or Disposal of Long-Lived Assets,” *Statement of Financial Accounting Standards No. 144* (Norwalk, CT: FASB, 2001), par. 30].

¹⁹ For a complete list of disclosure requirements, see FASB ASC 205-20-50: Presentation of Financial Statements—Discontinued Operations—Disclosure.

²⁰ The assets and liabilities held for sale are not offset and presented as a single net amount, but instead are listed separately (ASC 205-20-45-10).

²¹ FASB ASC 250-10-45-5: Accounting Changes and Error Corrections—Overall—Other Presentation Matters [previously “Accounting Changes and Error Corrections—a replacement of APB Opinion No. 20 and FASB Statement No. 3,” *Statement of Financial Accounting Standard No. 154* (Norwalk, CT: FASB, 2005)].

²² Sometimes a lack of information makes it impracticable to report a change retrospectively so the new method is simply applied prospectively; that is, we simply use the new method from now on. Also, if a new standard specifically requires prospective accounting, that requirement is followed.

²³ If the original estimate had been based on erroneous information or calculations or had not been made in good faith, the revision of that estimate would constitute the correction of an error (discussed in the next section).

²⁴ FASB ASC 250-10-45-23: Accounting Changes and Error Corrections-Overall-Other Presentation Matters [previously "Prior Period Adjustments," *Statement of Financial Accounting Standards No. 16* (Norwalk, CT: FASB, 1977)].

²⁵ FASB ASC 220-10-45-1A and 1B: Comprehensive Income-Overall-Other Presentation Matters [previously "Reporting Comprehensive Income," *Statement of Financial Accounting Standards No. 130* (Norwalk, CT: FASB, 1997)].

²⁶ GAAP does not require the reporting of comprehensive earnings per share.

²⁷ "Property, Plant and Equipment," *International Accounting Standard No. 16* (IASCF).

²⁸ "Intangible Assets," *International Accounting Standard No. 38* (IASCF).

³⁰ FASB ASC 230-10-45: Statement of Cash Flows-Overall-Other Presentation Matters [previously "Statement of Cash Flows," *Statement of Financial Accounting Standards No. 95* (Norwalk, CT: FASB, 1987)].

³¹ Cash flows related to gains and losses from the sale of assets shown in the income statement are reported as investing activities in the SCF.

³² "Statement of Cash Flows," *International Accounting Standard No. 7* (IASCF).

³³ Although net accounts receivable typically is used in practice for the denominator of receivables turnover, some prefer to use gross accounts receivable. Why? As the allowance for bad debts increases, net accounts receivable decreases, so if net accounts receivable is in the denominator, more bad debts have the effect of decreasing the denominator and therefore increasing receivables turnover. All else equal, an analyst would rather see receivables turnover improve because of more sales or less gross receivables, and not because of an increase in the allowance for bad debts.

³⁴ Notice the consistency in the measure used for the numerator and denominator of the two turnover ratios. For the receivables turnover ratio, both numerator and denominator are based on sales dollars, whereas they are both based on cost for the inventory turnover ratio.

³⁵ DuPont analysis is so named because the basic model was developed by F. Donaldson Brown, an electrical engineer who worked for DuPont in the early part of the twentieth century.

³⁶ Walmart's financial statements are for the fiscal year ended January 31, 2020. Walmart refers to this as its 2020 fiscal year. Costco's financial statements are for the fiscal year ended August 30, 2020.

³⁷ Quarterly reports are filed with the SEC on Form 10-Q. Annual reports to the SEC are on Form 10-K.

³⁸ Interim Financial Reporting," *International Accounting Standard No. 34* (IASCF).

³⁹ FASB ASC 270-10-50: Interim Reporting—Overall—Disclosure [previously "Interim Financial Reporting," *Accounting Principles Board Opinion No 28* (New York: AICPA, 1973)].

¹ When interest is compounded more frequently than once a year, the effective annual interest rate, or yield, can be determined using the following equation:

$$\text{Yield} = \left(1 + \frac{i}{p}\right)^p - 1$$

with i being the annual interest rate and p the number of compounding periods per year. In this example, the annual yield would be 12.55%, calculated as follows:

$$\text{Yield} = \left(1 + \frac{0.12}{4}\right)^4 - 1 = 1.1255 - 1 = 0.1255$$

Determining the yield is useful when comparing returns on investment instruments with different compounding period length.

² The factors in Table 2 are the reciprocals of those in Table 1. For example, the future value factor for 10%, three periods is 1.331, while the present value factor is .75131. $\$1 \div 1.331 = \$.75131$, and $\$1 \div 0.75131 = \1.331 .

³ The interest rate used to find the present value sometimes is called the *discount rate*, and finding the present value is sometimes called “discounting” a future amount to its present value.

⁴ If the calculated factor lies between two table factors, interpolation is useful in finding the unknown value. For example, if the future value in our example is \$600, instead of \$605, the calculated PV factor is 0.83333 ($\$500 \div \600). This factor lies between the 9% factor of 0.84168 and the 10% factor of 0.82645. The total difference between these factors is 0.01523 ($0.84168 - 0.82645$). The difference between the calculated factor of 0.83333 and the 10% factor of 0.82645 is 0.00688. This is 45% of the difference between the 9% and 10% factors:

$$\frac{0.00688}{0.01523} = 0.45$$

Therefore, the interpolated interest rate is 9.55% ($10 - 0.45$).

⁵ FASB ASC 835–30: Interest—Imputation of Interest [previously “Interest on Receivables and Payables,” *Accounting Principles Board Opinion No. 21* (New York: AICPA, 1971)]. As you will learn in Chapter 7, we value normal trade accounts receivable and accounts payable at the amounts expected to be received or paid, not the present value of those amounts. The difference between the amounts expected to be received or paid and present values often is immaterial.

⁶ The future value of a deferred annuity is the same as the future amount of an annuity not deferred. That’s because there are no interest compounding periods prior to the beginning of the annuity period.

⁷ In Chapters 12 and 14, we refer to the process of determining interest as the effective interest rate times the loan balance as the *effective interest method*.

⁸ This case is based on actual events.

¹ “Elements of Financial Statements,” *Statement of Financial Concepts No. 6* (Stamford, CT: FASB, 1985, par. 78).

² For SEC guidance that provides examples of appropriate and inappropriate revenue recognition, see FASB ASC 605–10–S99: Revenue Recognition—Overall—SEC Materials [originally “Revenue Recognition in Financial Statements,” *Staff Accounting Bulletin No. 101* (Washington, D.C.: SEC, December 1999); and *Staff Accounting Bulletin No. 104* (Washington, D.C.: SEC, December 2003)].

³ “Revenue from Contracts with Customers (Topic 606),” *Accounting Standards Update 2014–09* (Norwalk, CT: FASB, 2014).

⁴ If, for some reason, the seller can’t make a reasonable estimate of progress to completion using either input or output methods, the seller must wait to recognize revenue until the performance obligation has been completely satisfied. However, if the seller expects to be able to at least recover its costs from the customer, the seller can recognize an amount of revenue equal to the costs incurred until it can make a reasonable estimate of progress toward completion.

⁵ Sellers also treat as a single performance obligation a series of distinct goods or services that are substantially the same and have the same pattern of transfer.

⁶ Normally, sellers are immediately or eventually paid in cash, but sometimes sellers are paid with other assets like property. In that case, the seller measures the assets received at fair value at the start of the contract.

⁷ A contractually stated “list price” doesn’t necessarily represent a stand-alone selling price because the seller might actually sell the good or service for a different amount. The seller has to reference actual stand-alone selling prices or estimate those prices.

⁸ Specifically, *ASC Topic 606* indicates that a contract exists for purposes of revenue recognition only if it (a) has commercial substance, affecting the risk, timing, or amount of the seller’s future cash flows, (b) has been approved by

both the seller and the customer, indicating commitment to fulfilling their obligations, (c) specifies the seller's and customer's rights regarding the goods or services to be transferred, (d) specifies payment terms, and (e) is probable that the seller will collect substantially all of the amount it is entitled to receive. These criteria are very similar to requirements previously indicated by the SEC in the Staff Accounting Bulletins No. 101 and No. 104 mentioned earlier in this chapter.

⁹ Be careful not to confuse these types of options with stock options, which are financial instruments that allow the purchase of shares of stock at a specific price at a future date.

¹⁰ In Chapter 8 we'll distinguish between situations in which title transfers before shipment and after shipment.

¹² FASB ASC 606-10-55-59-62: Revenue from Contracts with Customers—Overall— Implementation Guidance and Illustrations—Determining the Nature of the Entity's Promise.

¹³ FASB ASC 605-10-S99: Revenue Recognition—Overall—SEC Materials [originally "Revenue Recognition in Financial Statements," *Staff Accounting Bulletin No. 101* (Washington, D.C.: SEC, 1999); and *Staff Accounting Bulletin No. 104* (Washington, D.C.: SEC, 2003)].

¹⁴ This is sometimes referred to as "breakage" of the gift card.

¹⁵ *U.S. GAAP Financial Statements—Best Practices in Presentation and Disclosure—2013* (New York: AICPA, 2013).

¹⁶ If the company is engaged in more than one long-term contract, all contracts for which construction in progress exceeds billings are reported in the balance sheet as contract assets, and all contracts for which billings exceed construction in progress are reported as contract liabilities.

¹⁷ Number of units produced or delivered is not an appropriate basis for measuring progress toward completion if these measures are distorted by the seller having material amounts of work-in-progress or finished-goods inventory at the end of the period.

¹⁸ R. K. Larson and K. L. Brown, "Where Are We with Long-Term Contract Accounting?" *Accounting Horizons*, September 2004, pp. 207–219.

¹⁹ In most cases, cost of construction also equals the construction costs incurred during the period. Cost of construction does not equal the construction costs incurred during the year when a loss is projected on the entire project. This situation is illustrated later in the chapter.

²⁰ For income tax purposes, revenue can be recognized at completion for home construction contracts and certain other real estate construction contracts. All other contracts must recognize revenue over time according to percentage of completion.

²¹ The cost of construction for 2025 also can be determined as follows:

| | | |
|--|-----------------|---------------------|
| Loss to date (100% recognized) | | \$ 100,000 |
| Add: | | |
| Remaining total project cost, not including the loss | \$5,000,000 | |
| (\$5,100,000 – 100,000) | | |
| Multiplied by the percentage of completion | <u>× .5412*</u> | <u>2,706,000</u> |
| Total | | <u>2,806,000</u> |
| Less: Cost of construction recognized in 2024 | | <u>(1,500,000)</u> |
| Cost of construction recognized in 2025 | | <u>\$ 1,306,000</u> |

*\$2,760,000 ÷ 5,100,000

¹ PCAOB AS 2201 emphasizes audit efficiency with a focused, risk-based testing approach that is intended to reduce the total costs of 404 compliance.

³ www.coso.org.

⁴ FASB ASC 210-10-S99-2: SAB Topic 6.H-Balance Sheet—Overall—SEC Materials, *Accounting Series Release 148*.

⁵ “Statement of Cash Flows,” *International Accounting Standard No. 7* (IASCF), as amended effective January 1, 2018, par. 8.

⁶ FASB ASC 606-10-32-15: Revenue from Contracts with Customers—Overall—Measurement—The Existence of a Significant Financing Component [previously “Revenue from Contracts with Customers (Topic 606),” *Accounting Standards Update 2014-09* (Norwalk, CT: FASB, 2014)].

⁷ Conceptually, sales discounts forfeited is similar to interest revenue, since it is extra revenue received because a receivable is outstanding for a longer period of time. In fact, prior to the effective date of *ASU 2014-09* (which specified how variable consideration should be treated in revenue recognition), sales discounts forfeited were often disclosed as interest revenue or other revenue in the income statement.

⁸ Price reductions sometimes are referred to as *sales allowances* and are distinguished from situations when the products actually are returned for a refund or credit (sales returns).

⁹ ASC 606-10-32-10 requires that sellers recognize a refund liability even if the seller has not yet been paid and has a receivable outstanding. That may seem odd, as the seller is showing a liability to refund cash it has not yet received. Depending on the specifics of the sales contract, some sellers may conclude that offsetting the refund liability against the receivable is appropriate, such that accounts receivable are shown net of refund liabilities in the balance sheet.

¹⁰ As indicated in Chapter 6, companies technically should estimate all variable consideration, including sales returns, at the time a sale is made. The financial statement outcomes of that approach are the same as those shown in Illustration 7-4, but the journal entries that get us there are somewhat different. To adapt our example to account for estimated returns at the time of sale, look at the journal entries that Hawthorne makes at the end of 2024 to account for estimated future returns. Hawthorne would record the same

journal entries at the time of sale, but for the full amount of estimated sales returns (\$200,000) and estimated inventory to be returned ($\$200,000 \times 60\% = \$120,000$). After recording the estimated returns at the time of the sale, all *actual* returns would be accounted for as shown in our example for actual returns occurring in 2025, debiting the refund liability and crediting cash as individual returns occur.

¹¹ You may see this carrying value referred to as “net realizable value.” However, as you will learn in Chapter 9, that term has a very specific definition in GAAP that should not be misused.

¹² “Financial Instruments—Credit Losses (Topic 326),” *Accounting Standards Update 2016-13* (Norwalk, CT: FASB, 2016).

¹³ American Accounting Association, “Resolution in Support of Independent Private Sector Accounting Standard-Setting,” September 2020.

¹⁴ The entries shown assume the note is recorded by the gross method. By the net method, the interest component is netted against the face amount of the note as follows:

| | | |
|--|---------|---------|
| May 1, 2024 | | |
| Notes receivable | 658,000 | |
| Sales revenue..... | | 658,000 |
| November 1, 2024 | | |
| Cash..... | 700,000 | |
| Notes receivable..... | | 658,000 |
| Interest revenue ($\$700,000 \times 12\% \times \frac{1}{2}$)..... | | 42,000 |

¹⁵ This assumes that no other present or future considerations are included in the agreement. For example, a noninterest-bearing note might be given to a vendor in exchange for cash *and* a promise to provide future inventories at prices lower than anticipated market prices. The issuer values the note at the present value of cash payments using a realistic interest rate, and the difference between present value and cash payments is recognized as interest revenue over the life of the note. This difference also increases future inventory purchases to realistic market prices.

¹⁶ FASB ASC 825-10-50-10: Financial Instruments—Overall—Disclosure—Fair Value of Financial Instruments.

¹⁷ FASB ASC 825–10–25: Financial Instruments—Overall—Recognition Fair Value Option.

¹⁸ “Financial Instruments,” *International Financial Reporting Standard No. 9* (IASCF), as amended effective January 1, 2018.

¹⁹ Although SPEs usually aren’t viewed as separate entities for accounting purposes, they typically are separate entities for legal purposes. As a consequence, an SPE typically is viewed as “bankruptcy remote,” meaning that the transferor’s creditors can’t access the receivables if the transferor goes bankrupt. This increases the safety of the SPE’s assets and typically allows it to obtain more favorable financing terms than could the transferor.

²⁰ FASB ASC 860: Transfers and Servicing.

²¹ FASB ASC 860–10–40: Transfers and Servicing—Overall—Derecognition [previously “Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities,” *Statement of Financial Accounting Standards No. 140* (Norwalk, CT: FASB, 2000), as amended by *SFAS No. 166*].

²² FASB ASC 860–10–40: Transfers and Servicing—Overall—Derecognition [previously “Accounting for Transfers of Financial Assets, an amendment of FASB Statement No. 140,” *Statement of Financial Accounting Standards No. 166* (Norwalk, CT: FASB, 2009), par. 17].

²³ “Financial Instruments,” *International Financial Reporting Standard No. 9* (IASCF), as amended effective January 1, 2018.

²⁴ FASB ASC 860: Transfers and Servicing.

²⁵ S. B. Jackson and X. Liu, “The Allowance for Uncollectible Accounts, Conservatism, and Earnings Management,” *Journal of Accounting Research* 48, No. 3 (2010). pp. 565–601.

²⁶ P. M. Dechow, L. A. Myers, and C. Shakespeare, “Fair Value Accounting and Gains from Asset Securitizations: A Convenient Earnings Management Tool

with Compensation Side-Benefits," *Journal of Accounting and Economics* 49, No. 2 (2010), pp. 2–25.

²⁷ Other recent research provides evidence that investors treat securitizations as loans rather than asset sales, suggesting that they are unconvinced that a sale has truly taken place. For example, see W. R. Landsman, K. Peasnell, and C. Shakespeare, "Are Asset Securitizations Sales or Loans?" *The Accounting Review* 83, No. 5 (2008), pp. 1251–72.

²⁸ When a receivable has been securitized, or when a company has elected to account for a receivable under the fair value option, the receivable is viewed as an investment and different GAAP applies, as described in Appendix 12B.

²⁹ These terms have been clarified (ASC 310–40–15: Receivables—Troubled Debt Restructurings by Creditors—Scope and Scope Exceptions). A debtor is viewed as experiencing *financial difficulties* if it is probable that the debtor will default on any of its liabilities unless the creditor restructures the debt. A *concession* has occurred if, as a result of the restructuring, the creditor does not expect to collect all amounts due, including accrued interest. A concession also can occur if the creditor restructures the terms of the debt in a way that provides the debtor with funds at a better rate of interest than the debtor could receive if the debtor tried to obtain new debt with similar terms (for example, a similar payment schedule, collateral, and guarantees) as the restructured debt. But, not all changes are concessions. For example, a restructuring that results in an insignificant delay of payment is not a concession.

¹ We discussed accounting for sales returns in Chapter 7.

² In Chapter 9 we discuss inventory estimation techniques that avoid the necessity of a physical count to determine ending inventory and cost of goods sold.

³ Generally accepted accounting principles require that abnormal amounts of certain costs be recognized as current period expenses rather than being included in the cost of inventory, specifically idle facility costs, freight,

handling costs, and waste materials (spoilage). FASB ASC 330–10–30: Inventory—Overall—Initial Measurement.

⁴ For practical reasons, though, some of these expenditures often are not included in inventory cost and are treated as **period costs**. They often are immaterial, or it is impractical to associate the expenditures with particular units of inventory (for example, unloading and unpacking costs). Period costs are not associated with products and are expensed in the *period* incurred.

⁵ FASB ASC 605–45–50–2: Revenue Recognition—Principal Agent Considerations—Disclosure—Shipping and Handling Fees and Costs.

⁶ There is variation in practice of how the purchase discounts lost account is classified. Many companies report this account as part of other expenses, similar to the treatment of interest expense. Other companies include the discount lost as part of goods sold, either at the time of payment or once those goods are sold.

⁷ The differences between the various methods also hold when a perpetual inventory system is used.

⁸ *U.S. GAAP Financial Statements—Best Practices in Presentation and Disclosure—2013* (New York: AICPA, 2013).

⁹ “Inventories,” *International Accounting Standard No. 2* (IASCF).

¹⁰ Andrew Lundeen, “Proposed Tax Changes in President Obama’s Fiscal Year 2016 Budget,” taxfoundation.org.

¹¹ For example, a corporation can take advantage of incentives offered by Congress by deducting more depreciation in the early years of an asset’s life in its federal income tax return than it reports in its income statement.

¹² The concept of capital market efficiency has been debated for many years. In an efficient capital market, the market is not fooled by differences in accounting method choice that do not translate into real cash flow differences. The only apparent cash flow difference caused by different

inventory methods is the amount of income taxes paid currently. In an efficient market, we would expect the share price of a company that switched its method to LIFO and saved tax dollars to increase even though it reported lower net income than if LIFO had not been adopted. Research on this issue is mixed. For example, see William E. Ricks, "Market's Response to the 1974 LIFO Adoptions," *Journal of Accounting Research*, Autumn 1982; and Robert Moren Brown, "Short-Range Market Reaction to Changes to LIFO Using Preliminary Earnings Announcement Dates," *Journal of Accounting Research*, Spring 1980.

¹³ For example, see P. M. Healy, "The Effect of Bonus Schemes on Accounting Decisions," *Journal of Accounting and Economics*, April 1985; and D. Dhaliwal, G. Salamon, and E. Smith, "The Effect of Owner versus Management Control on the Choice of Accounting Methods," *Journal of Accounting and Economics*, July 1982.

¹⁴ The cost of carrying inventory includes the possible loss from the write-down of obsolete inventory. We discuss inventory write-downs in Chapter 9. There are analytical models available to determine the appropriate amount of inventory a company should maintain. A discussion of these models is beyond the scope of this text.

¹⁵ Eugene Brigham and Joel Houston, *Fundamentals of Financial Management*, 12th ed. (Florence, KY: South-Western, 2010).

¹⁶ B. Lev and S. R. Thiagarajan, "Fundamental Information Analysis," *Journal of Accounting Research*, Autumn 1993. The main conclusion of the study was that fundamental variables, not just earnings, are useful in firm valuation, particularly when examined in the context of macroeconomic conditions such as inflation.

¹⁷ Unit LIFO sometimes is called *specific goods LIFO*.

¹⁸ It is important to note that the costs of the year's layer are only an approximation of actual acquisition cost. DVL assumes that all inventory quantities added during a particular year were acquired at a single cost.

¹ FASB ASC 330-10-35-1A through 35-1C: Inventory—Overall—Subsequent Measurement.

² Interestingly, the two approaches to subsequent measurement of inventory arose out of *Accounting Standards Update (ASU) No. 2015-11*, which was part of the FASB's Simplification Initiative aimed at *reducing* reporting complexity. However, *ASU 2015-11* *increases* the number of subsequent measurement approaches. Prior to *ASU 2015-11*, all companies reported inventory using a single approach—the lower of cost or market. Some may argue that the introduction of a second approach increases reporting complexity. Some companies use multiple inventory methods and may need to use both approaches, and financial statement users must be aware of different methods when comparing companies.

³ In other words, if the inventory was not written down to NRV (and instead remained at cost) at the end of the current period, the full cost amount would become cost of goods sold and thus reduce net income when the inventory is sold in a subsequent period.

⁴ FASB ASC 330-10-35-8: Inventory—Overall—Subsequent Measurement. In addition, for income tax purposes, the rule must be applied on an individual item basis.

⁵ The SEC, in *Staff Accounting Bulletin No. 100, "Restructuring and Impairment Charges"* (Washington, D.C.: SEC, November 1999), paragraph B.B. (FASB ASC 330-10-S35-1: SAB Topic 5.BB), reaffirmed the provisions of GAAP literature on this issue. For interim reporting purposes, however, recoveries of losses on the same inventory in subsequent interim periods of the same fiscal year through market price recoveries should be recognized as gains in the later interim period, not to exceed the previously recognized losses.

⁶ "Inventories," *International Accounting Standard No. 2* (IASCF).

⁷ The retail inventory method is acceptable for external financial reporting if the results of applying the method are sufficiently close to what would have been achieved using a more rigorous determination of the cost of ending

inventory. Also, it's allowed by the Internal Revenue Service as a method that can be used to determine cost of goods sold for income tax purposes.

⁸ The retail inventory method also is allowable under IFRS. "*Inventories*," *International Accounting Standard No. 2* (IASCF).

⁹ We also implicitly assumed no net markups or markdowns in Illustration 9-6.

¹⁰ Of course, any number of layers at different costs can actually be added through the years. When using the regular LIFO method, rather than LIFO retail, we would keep track of each of those layers.

¹¹ The index used here is analogous to the cost index used in regular DVL except that it reflects the change in retail prices rather than in acquisition costs.

¹² A change to LIFO is handled the same way for income tax purposes.

¹³ If the effect of the error is not material, it is simply corrected in the year of discovery.

¹⁴ The prior period adjustment is applied to beginning retained earnings for the year following the error or for the earliest year being reported in the comparative financial statements when the error occurs prior to the earliest year presented. The retained earnings balances in years after the first year also are adjusted to what those balances would be if the error had not occurred, but a company may choose not to explicitly report those adjustments as separate line items.

¹⁵ In each of the following situations, if a periodic inventory system is used, purchases is debited instead of inventory.

¹⁶ Recall from the chapter that one method of recording losses from inventory write-downs is to report the loss as a line item in the income statement.

¹ These are sometimes called *plant assets* or *fixed assets*.

² Exceptions are land and certain intangible assets that have indefinite useful lives. Costs to acquire these assets also produce future benefits and therefore are capitalized, but unlike other property, plant, and equipment and intangible assets, their costs are not systematically expensed in future periods as depreciation or amortization.

³ Because of this characteristic, natural resources sometimes are called *wasting assets*.

⁴ FASB ASC 410–20–25: Asset Retirement and Environmental Obligations—Asset Retirement Obligations—Recognition.

⁵ “Using Cash Flow Information and Present Value in Accounting Measurements,” *Statement of Financial Accounting Concepts No. 7* (Norwalk, CT: FASB, 2000).

⁶ FASB ASC 350–30–35–1: Intangibles—Goodwill and Other—General Intangibles Other Than Goodwill—Subsequent Measurement, and FASB ASC 350–20–35–1: Intangibles—Goodwill and Other—Goodwill—Subsequent Measurement [previously “Goodwill and Other Intangible Assets,” *Statement of Financial Accounting Standards No. 142* (Norwalk, CT: FASB, 2001)].

⁷ Ibid.

⁸ An assembled workforce is an example of an intangible asset that is not recognized as a separate asset. A workforce does not represent a contractual or legal right, nor is it separable from the company as a whole.

⁹ FASB ASC 805: Business Combinations.

¹⁰ The entry shown assumes the note is recorded using the gross method. By the net method, a discount account is not used and the note is simply recorded at present value.

| | | |
|---------------|--------|--------|
| Equipment | 41,323 | |
| Notes payable | | 41,323 |

¹² "Government Grants," *International Accounting Standard No. 20* (IASCF).

¹³ If intangible assets are significant, their book value could be added to the denominator to produce a turnover that reflects all long-revenue-producing assets. The use of book value provides an approximation of the company's current investment in these assets.

¹⁴ Monetary items are assets and liabilities whose *amounts are fixed*, by contract or otherwise, in terms of a specific number of dollars. Other assets are considered nonmonetary.

¹⁵ If the amount of monetary consideration received is deemed significant, the transaction is considered to be monetary, and the entire gain is recognized. In other words, the transaction is accounted for as if it had commercial substance. GAAP defines "significance" in this situation as 25% or more of the fair value of the exchange. FASB ASC 845-10-25-6: Nonmonetary transactions—Overall—Recognition.

¹⁶ There is a third situation which precludes the use of fair value in a nonmonetary exchange. The transaction is an exchange of inventories to facilitate sales to customers other than the parties to the exchange.

¹⁷ FASB ASC 835-20-25: Interest—Capitalization of Interest—Recognition.

¹⁸ The same result can be obtained simply by multiplying the individual debt interest rates by the relative amount of debt at each rate. In this case, one-third of total debt is at 6% and two-thirds of the total debt is at 12% $[(1/3 \times 6\%) + (2/3 \times 12\%) = 10\%]$.

⁵ "IFRS Accounting Trends and Techniques" (New York: AICPA, 2011), p. 328.

⁶ Another common method is the modified half-year convention. This method records a full year's depreciation when the asset is acquired in the first half of the year or sold in the second half. No depreciation is recorded if the asset is acquired in the second half of the year or sold in the first half. These half-year conventions are simple and, in most cases, will not result in material differences from a more precise calculation.

⁷ FASB ASC 360-10-45-9: Property, Plant, and Equipment-Overall-Other Presentation Matters-Impairment or Disposal of Long-Lived Assets.

⁸ A declining balance method could also be used with either the group or composite method by applying a multiple (e.g., 200%) to the straight-line group or composite rate.

⁹ "Property, Plant and Equipment," *International Accounting Standard No. 16* (IASCF).

¹⁰ *IAS No. 16* allows companies to choose between the method illustrated here and an alternative. The second method eliminates the entire accumulated depreciation account and adjusts the asset account (equipment in this illustration) to fair value. Using either method the revaluation surplus (or expense) would be the same.

¹¹ "*IFRS Accounting Trends and Techniques*" (New York: AICPA, 2011), p. 171.

¹⁷ FASB ASC 360-10-35-21: Property, Plant, and Equipment—Overall—Subsequent Measurement—Impairment or Disposal of Long-Lived Assets.

¹⁸ "Impairment of Assets," *International Accounting Standard No. 36* (IASCF).

¹⁹ Until recently, the measurement of impairment for goodwill was a more complicated, two-step process. Step 1 was a recoverability test which involved comparing the fair value of the reporting unit to its book value. If step 1 indicated impairment, step 2 then required calculation of the goodwill's *implied fair value*. The implied fair value was computed as the fair value of the reporting unit minus the fair value of the reporting unit's net assets excluding goodwill. If the implied goodwill was less than the book value of goodwill, an impairment loss was recognized. Accounting Standards Update 2017-04 eliminated step 2 for measurement of impairment for goodwill. Now, the one-step process involves comparing only the fair value of the reporting unit to its book value, as described in the text.

²⁰ *Accounting Standards Update No. 2014-02, "Intangibles—Goodwill and Other (Topic 350): Accounting for Goodwill"* (Norwalk, CT: FASB, January 2014).

²¹ If the asset is unsold at the end of a subsequent reporting period, a gain is recognized for any increase in fair value less cost to sell, but not in excess of the loss previously recognized.

²² "Intangible Assets," *International Accounting Standard No. 38* (IASCF), par. 20.

²³ For assets acquired between 1981 and 1986, tax depreciation is calculated using the accelerated cost recovery system (ACRS), which is similar to MACRS. For assets acquired before 1981, tax depreciation can be calculated using any

of the depreciation methods discussed in the chapter. Residual values are used in the calculation of depreciation for pre-1981 assets.

²⁴ In certain situations, mid-quarter and mid-month conventions are used.

¹ This is called the gross method. An alternative would be to record the cost (\$666,633 or \$725,000) directly in the investment account, called the net method.

² FASB ASC 320-10-25-1: Investments-Debt Securities-Overall-Recognition.

³ If United had chosen the fair value option for this investment, it would classify the investment as a trading security rather than as an HTM security. We'll illustrate the fair value option when we discuss trading securities.

⁴ GAAP (FASB ASC 320-10-25-6: Investments—Debt Securities—Overall—Recognition, previously *Statement of Financial Accounting Standards No. 115*) lists major unforeseen events that could justify sale of an HTM investment. Sale for other reasons could call into question whether the company actually had the intent and ability to hold the investment to maturity. In that case, the company's HTM classification is viewed as "tainted," and the company can be required to reclassify *all* of its HTM investments as AFS investments and avoid using the HTM classification for two years. Similar provisions exist under IFRS for public companies.

⁵ For purposes of this example, we ignore any interest accrued for the first five days of 2025. In practice, United would accrue five days of interest revenue and record five days of amortization of the discount, which would produce a revised amortized cost of the bonds that would be used to calculate any gain or loss on sale.

As noted in FASB ASC 320-10-40: Investments—Debt Securities—Overall—Derecognition, for expediency companies may not update the fair value adjustment to the fair value as of the date of sale before recording the sale. In that case, the investment is carried at fair value as of the last balance sheet date, and this second entry would include a gain or loss based on the difference between the cash received and the carrying value of the

investment. In our example, the fair value adjustment balance was \$43,646 on December 31, 2024, and United would record the following sale entry on January 5, 2025:

Transactions with owners primarily include dividends and the sale or purchase of shares of the company's stock.

"Messenger, Shot," *The Economist*, April 8, 2009.

Sarah Johnson, "The Fair Value Blame Game," CFO.com, March 19, 2008.

Of course, one could counterargue that these unrealized holding gains and losses still are relevant, given that each period an investor has discretion over whether or not to continue holding the security or sell that security to realize a gain or loss. For that reason, many accountants would prefer that the FASB do away with the AFS approach and just treat these investments as trading securities.

This description of accounting for sales of AFS investments is adapted from the example of journal entries and financial statement presentation shown by FASB ASC 220-10-55 (para. 24–27): Comprehensive Income—Overall—Implementation Guidance and Illustrations—Case B: Available-for-Sale Debt Securities. The three journal entries we describe could be combined into one or two entries in practice.

As noted in FASB ASC 320-10-40: Investments—Debt Securities—Overall—Derecognition, for expediency companies might not update the fair value adjustment to fair value before recording the sale. In that case, this second entry would be based on the fair value adjustment as of the last balance sheet date. In our example, the fair value adjustment balance would be \$43,646, so that is the amount by which it would be reduced and that is the amount of reclassification adjustment that would be recorded in OCI.

Companies may choose to make this journal entry at the end of the reporting period when they update their fair value adjustment. The order doesn't matter, so long as the journal entry is recorded in the correct reporting period.

“Financial Instruments,” *International Financial Reporting Standard No. 9* (IASCF).

FASB ASC 320-10-45-13: Investments—Debt and Equity Securities—Overall—Other Presentation Matters.

FASB ASC 321-10-35-1: Investments—Equity Securities—Overall—General.

¹⁷ FASB ASC 321-10-40: Investments—Equity Securities—Overall—Derecognition.

As noted in FASB ASC 321-10-40: Investments—Equity Securities—Overall—Derecognition, for expediency companies may not update the fair value adjustment to the fair value that exists on the date of sale before recording the sale. In that case, this second entry would include a realized gain or loss based on the difference between the cash received and the fair value of the investment recorded on the last balance sheet date. In our example, the fair value adjustment balance was \$50,000 as of December 31, 2024, and United would record the following sale entry on January 5, 2025:

| | | |
|---|-----------|-----------|
| Cash | 1,446,000 | |
| Fair value adjustment (account balance) | 50,000 | |
| Loss on investments (NI) | 4,000 | |
| Investment in equity securities | | 1,500,000 |

“Financial Instruments,” *International Financial Reporting Standard No. 9* (IASCF).

This avoids double counting those amounts in the consolidated statements. For example, amounts owed by one company to the other are represented by accounts payable in one set of financial statements and accounts receivable in the other. These amounts are not included in the statements of the consolidated entity because a company can’t “owe itself.”

Shareholders are the owners of the corporation. By voting their shares, it is they who determine the makeup of the board of directors—who, in turn, appoint officers—who, in turn, manage the company. Common stock usually is the class of shares that has voting privileges. However, a corporation can

create classes of preferred shares that also have voting rights. This is discussed at greater length in Chapter 18.

FASB ASC 323-10-15-10: Investments—Equity Method and Joint Ventures—Overall—Scope and Scope Exceptions.

Goodwill is not amortized but instead is tested annually for impairment. If the asset's value is judged to be impaired, all or a portion of the recorded amount be charged against earnings (FASB ASC 350-20-35: Intangibles—Goodwill and Other—Goodwill—Subsequent Measurement). For review, see Chapter 11.

Most companies prepare a statement of cash flows using the indirect method of reporting operating activities. In that case, the operating section begins with net income and adjustments are made to back out the effects of accrual accounting and calculate cash from operations. For companies with equity method investments, net income will include investment revenue and gains or losses associated with sold investments, but cash from operations should include only cash dividends. As an example, because United's 2024 net income includes \$120,000 of investment revenue from Arjent (\$150,000 portion of income - \$30,000 depreciation adjustment), but United received only \$75,000 of dividends from Arjent, an indirect method statement of cash flows would include an adjustment, often titled "undistributed earnings of investee," that reduces net income by \$45,000 (\$75,000 - \$120,000) when determining cash from operations.

FASB ASC 323-10-35-31: Investments—Equity Method and Joint Ventures—Overall—Decrease in Investment Value.

Retroactive restatement used to be required when a company changed to the equity method, but as of 2017 that is no longer necessary, per FASB ASC 323-10-35-33: Investments—Equity Method and Joint Ventures—Overall—Increase in Level of Ownership or Degree of Influence.

FASB ASC 825-10-50-28: Financial Instruments—Overall—Disclosure—Fair Value Option.

"Investments in Associates," *International Accounting Standard 28* (London, UK: IASCF, 2003).

²⁹ For example, in 2000, analysts were accustomed to including **Intel's** investment gains as ordinary income, because those amounts were not particularly large and could be viewed as part of Intel's business. However, in the 2nd quarter of 2000, Intel recorded a net \$2.1 billion gain from selling securities in its available-for-sale portfolio. Analysts were surprised and confused, with some eliminating the gain from their earnings estimates but others including them ("Intel Says Net Jumped 79%; Analysts Upset," *The Wall Street Journal*, July 19, 2000, p, A3).

³⁰ E. E. Comiskey and C. W. Mulford, "Investment Decisions and the Equity Accounting Standard," *The Accounting Review* 61, no. 3 (July 1986), pp. 519–525.

³¹ This category includes not just shares of stock, but also partnership agreements and stock options.

³² FASB ASC Master Glossary: Financial Instrument.

³³ Interest rate futures were traded for the first time in 1975 on the Chicago Board of Trade. Interest rate swaps were invented in the early 1980s. They now comprise over 70% of derivatives in use.

The amount of the credit loss is limited to the amount by which fair value is lower than amortized cost, because the company can always sell the investment at fair value to avoid additional credit losses.

⁵ The concepts of the time value of money and the mechanics of present value calculations are covered in Chapter 5.

⁶ In fact, those arising in connection with suppliers in the normal course of business and due within a year are specifically exempted from present value reporting by FASB ASC 835-30-15-3: Interest—Imputation of Interest—Scope and Scope Exceptions.

⁷ A compensating balance is a deposit kept by a company in a low-interest or noninterest-bearing account at the bank. The required deposit usually is some percentage of the committed amount or the amount used (say, 2% to 5%). The effect of the compensating balance is to increase the borrower's effective interest rate and the bank's effective rate of return.

⁸ Be sure to understand that we are actually recording the note at 658,000, *not* 700,000, but are recording the interest portion separately in a contra-liability account, *discount on notes payable*. The entries shown reflect the gross method. By the net method, the interest component is netted against the face amount of the note as follows:

⁹ Both methods of accounts receivable financing are discussed in Chapter 7.

¹⁰ We discuss pensions in Chapter 17 and share-based compensation plans in Chapter 19.

¹¹ Actually, FASB ASC 710-10-25: Compensation—General—Overall—Recognition is silent on how the liability should be measured. In practice, most companies accrue at the current rate because it avoids estimates and usually produces a lower expense and liability. Then, later, they remeasure periodically at updated rates.

¹² C. D. Ittner, D. F. Larcker, and M. V. Rajan, "The Choice of Performance Measures in Annual Bonus Contracts," *The Accounting Review*, 72, no. 2 (April 1997), pp. 231–255.

¹³ *SFAC 6* specifically identifies customer advances and deposits as liabilities under the definition provided in that statement. “Elements of Financial Statements,” *Statement of Financial Accounting Concepts No. 6* (Stamford, CT: FASB, 1985), par. 197.

¹⁴ FASB ASC 606-10-32-16: Revenue from Contracts with Customers—Overall-Measurement—The Existence of a Significant Financing Component in the Contract.

¹⁵ Debt to be refinanced is an exception we discuss later.

¹⁶ FASB ASC 470-10-45: Debt—Overall—Other Presentation Matters.

¹⁷ FASB ASC 470-10-45-14: Debt—Overall—Other Presentation Matters.

¹⁸ “Presentation of Financial Statements” *International Accounting Standard No. 1* (IASCF), as amended effective January 1, 2021.

¹⁹ Because FASB ASC 740-10-25: Income Taxes—Overall—Recognition provides guidance on accounting for uncertainty in income taxes, FASB ASC 450-10: Contingencies—Loss Contingencies does not apply to income taxes. GAAP regarding uncertainty in income taxes changes the threshold for recognition of tax positions from the most probable amount to the amount that has a “more likely than not” chance of being sustained upon examination. We discuss accounting for uncertainty in income taxes in Chapter 16.

²⁰ FASB ASC 450-20-30: Contingencies—Loss Contingencies—Initial Measurement.

²¹ FASB ASC 310-10-35-7: Receivables—Overall—Subsequent Measurement—Losses from Uncollectible Receivables.

²² Using Cash Flow Information and Present Value in Accounting Measurements,” *Statement of Financial Accounting Concepts No. 7* (Norwalk, CT: FASB, 2000). Recall that Concept Statements do not directly prescribe GAAP, but instead provide structure and direction to financial accounting.

²³ For research indicating incomplete disclosure of litigation-related contingent liabilities, see R. Desir, K. Fanning, and R. Pfeiffer, "Are Revisions to SFAS No. 5 Needed?" *Accounting Horizons* 24, no. 4 (December 2010), pp. 525–546.

²⁴ Financial statements are viewed as *issued* if they have been widely distributed to financial statement users in a format consistent with GAAP. Some entities (for example, private companies) do not widely distribute their financial statements to users. For those entities, the key date for subsequent events is not the date of issuance but rather the date upon which the financial statements are *available to be issued*, which occurs when the financial statements are complete, in a format consistent with GAAP, and have obtained the necessary approvals for issuance. Entities must disclose the date through which subsequent events have been evaluated (FASB ASC 855: Subsequent Events).

²⁵ FASB ASC 450–20–50v9: Contingencies—Loss Contingencies—Disclosure.

²⁶ FASB ASC 805-20-25: Business Combinations—Identifiable Assets and Liabilities, and Any Noncontrolling Interest—Recognition.

³¹ FASB ASC 460-10-25: Guarantees—Overall—Recognition.

³² Marcus Caylor, "Strategic Revenue Recognition to Achieve Earnings Benchmarks," *Journal of Accounting and Public Policy*, January–February 2010,

pp. 82–95.

³³ All states presently have unemployment tax programs.

³⁴ Remember when you were studying algebra and you wondered if you would ever use it?

¹ You should recall from Chapter 12 that investments in bonds that are to be held to maturity by the investor are reported at amortized cost, which is the method described here. However, also remember that investments in debt securities *not* to be held to maturity are reported at the fair value of the securities held, as described in Chapter 12, with the interest determined by the effective interest method.

² The present value of \$1.901M, discounted at 8.5% for 25 years, is \$247M. The bonds actually were issued in exchange for company warrants valued at \$241M.

³ Only about 1% of corporate bonds are issued at a premium. D. Amiram, A. Kalay, and B Ozel, “The Bond Discount Puzzle,” *Financial Accounting eJournal*, March 25, 2013.

⁴ Rule 144A of the Securities Act of 1933, as amended, allows for the private resale of unregistered securities to “qualified institutional buyers,” which are generally large institutional investors with assets exceeding \$100 million.

⁵ Accounting Standards Update 2015-03: “Interest—Imputation of Interest (Subtopic 835-30) Simplifying the Presentation of Debt Issuance Costs,” FASB, April 2015. This approach is consistent with the treatment of issue costs when equity securities are sold. You will see in Chapter 18 that the effect of share issue costs is to reduce the amount credited to stock accounts. It also is consistent with IFRS.

⁶ If we have a premium instead of a discount, the valuation account is the premium reduced by the debt issue costs.

⁷ If the debt instrument is negotiable and a dependable exchange price is readily available, the market value of the debt may be better evidence of the value of the transaction than the value of a noncash asset, particularly if it has no established cash selling price. The value of the asset or the debt, whichever is considered more reliable, should be used to record the transaction.

⁸ The method shown is the *gross method*. Alternatively, the *net method* can be used as follows:

| | | |
|--------------------------------------|---------|---------|
| Skill Graphics (Buyer/Issuer) | | |
| Machinery (cas price) | 666,633 | |
| Notes payable | | 666,633 |
| Hughes-Barker (Seller/Lender) | | |
| Notes receivable | 666,633 | |
| Sales revenue (cash price) | | 666,633 |

Under the net method, the note is recorded at the face amount reduced by the discount on notes payable, which is the difference between face value and present value. As cash interest is paid, the note balance increases by the difference between the cash interest payment and the interest revenue (and interest expense). After the last payment, the note account balance will be equal to the face amount of the note.

⁹ The creation of amortization schedules is simplified by an electronic spreadsheet such as Microsoft Excel.

¹⁰ FASB ASC 825-10-50-10: Financial Instruments—Overall—Disclosure.

¹¹ A more accurate way to calculate this ratio is: $\text{Rate of return on assets} = \frac{\text{Net income} + \text{Interest expense} (1 - \text{tax rate})}{\text{Average total assets}}$. The reason for adding back interest expense (net of tax) is that interest represents a return to suppliers of debt capital and should not be deducted in the computation of net income when computing the return on total assets. In other words, the numerator is the total amount of income available to both debt and equity capital.

¹² Remember, there is an inverse relationship between bond prices and interest rates. When the price is higher, the rate (yield) is lower, and vice versa.

¹³ FASB ASC 470-20-25: Debt—Debt with Conversion Options—Recognition.

¹⁴ FASB ASC 470–20–25–5: Debt—Debt with Conversion and Other Options—Recognition—Beneficial Conversion Features.

¹⁵ “Financial Statements: Presentation,” *International Accounting Standard (IAS) No. 32* (IASCF).

¹⁶ FASB ASC 470–20–40: Debt—Debt with Conversion Options—Derecognition.

¹⁷ FASB ASC 825–10–25–1: Financial Instruments—Overall—Recognition—Fair Value Option.

¹⁸ The current market rate would consist of the general risk-free rate at the time, increased by a risk premium for the credit risk of the bonds.

¹ Yun Li, “A Big Change in Accounting Will Put \$3 Trillion In Liabilities on Corporate Balance Sheets,” CNBC.com, February 16, 2019.

² An “Additional Consideration” in Part B describes a very specific situation in which a lease that doesn’t qualify as a sales-type lease might be classified as a “direct financing” lease rather than an operating lease.

³ ASC Topic 842: “Leases” specifies that one reasonable approach to determining whether this exception should be applied would be to conclude that a lease that commences in the final 25% of an asset’s economic life is “at or near the end” of the underlying asset’s economic life.

⁴ Instead, rent payments were simply reported as lease expense.

⁵ It is common for debt agreements, particularly long-term ones, to include restrictions on the debtor as a way to provide some degree of protection to the creditor. Sometimes a minimum level is specified for current assets relative to current liabilities, debt as a ratio of equity, return on net assets, or many other financial ratios. Typically, the debt becomes due on demand when the debtor becomes in violation of such a debt covenant, often after a specified grace period.

⁶ We see later in the chapter that sometimes the lessee and lessor have accounting that is not a mirror image, particularly when the lease is either a sales-type lease with a selling profit or an operating lease. However, even when the two sides are not mirror images, there are many similarities, so the comparison still is helpful.

⁷ Another way to view this is to think of the first \$100,000 as a down payment with the remaining \$379,079 financed by 5 (i.e., 6 - 1) *year-end* lease payments.

⁸ Output measures such as units produced or input measures such as hours used might provide a better indication of the reduction in some leased assets.

⁹ Under the GAAP in place prior to ASU 2016-02, this type of lease (no selling profit) was referred to as a *direct financing lease*. While that label still exists in the new lease guidance, it now refers to a situation that happens only when the lease includes a residual value and the residual value is *guaranteed by a third party* (not the lessee). We consider guaranteed residual values later in the chapter when we look at uncertainties in lease accounting.

¹⁰ It's possible that the asset's carrying value will exceed its fair value, in which case a selling loss should be recorded.

¹¹ The term *operating lease* got its name long ago when a lessee routinely received from the lessor an operator along with leased equipment.

¹² The FASB decided not to require companies to separately disclose interest and amortization components because, for many companies, it would be costly due to the fact that it would require new systems capabilities and processes.

¹³ Because the lessor, First LeaseCorp, removed the asset from its records at the beginning of the finance lease, it would not have depreciation (amortization) to record.

¹⁴ Disclosure requirements provide that the lessor must disclose the components of its investments in nonoperating leases, which would include

any estimated residual values. But the disclosures are aggregate amounts, not amounts of individual leased assets.

¹⁵ *Incremental borrowing rate* refers to the fact that lending institutions tend to view debt as being increasingly risky as the level of debt increases. Thus, additional (i.e., incremental) debt is likely to be loaned at a higher interest rate than existing debt, other things being equal.

¹⁶ Reasonably certain is a high threshold, essentially the same as “reasonably assured.”

¹⁷ The lease payment can also decrease. The decrease in the lease payments is reported as a reduction in lease expense (lessee) and a reduction in lease revenue (lessor).

¹⁸ \$479,079 cost minus \$159,693 accumulated depreciation ($\$479,079 \div 6 \times 2$ years) = \$319,386.

¹⁹ Present value of \$1: $n = 6, i = 10\%$.

²⁰ Remember, in an *operating* lease, the lessor doesn't record a receivable nor remove the asset from its books.

²¹ As explained in more detail in Chapter 6, “control” requires that the customer has direct influence over the use of the good or service and obtains its benefits.

²² Referred to as a “substantive substitution right.”

²³ FASB ASC 842-10-15-42A: Leases—Overall—Scope and Scope Exceptions—Lessor.

²⁴ Also, traditionally, depreciation sometimes is labeled amortization when in connection with leased assets and leasehold improvements. This is of little consequence. Remember, both depreciation and amortization refer to the process of allocating an asset's cost over its useful life.

²⁵ David Trainer, "New Operating Lease Disclosures: The Good, The Bad & The Non-Compliant," *Forbes.com*, October 12, 2020.

²⁶ More specifically, *none* of the following conditions can be present if sale-leaseback accounting is to be used:

The seller-lessee has an option to buy back the asset at any price other than fair value (and other similar items must be available to buy).

The buyer-lessor has the option to sell the asset back to the seller-lessee that the buyer-lessor is "reasonably certain" to exercise.

The leaseback term is for 75% of the remaining economic life of the asset.

The present value of the lease payments accounts for 90% of the fair value of the asset.

²⁷ The lease term is less than the major part of the expected useful life of the warehouses (67%). Also, the present value of lease payments (\$800,000) is less than substantially all of the fair value of the warehouses (\$1,000,000). None of the other three of the five criteria is present.

¹ The accelerated depreciation method prescribed by the tax code is the modified accelerated cost recovery system (MACRS). However, the tax legislation passed in December 2017 permits companies to deduct 100% of the cost of many relatively short-lived assets in the year the asset is purchased. See Chapter 11's Appendix 11A for further discussion.

² What if Watson sold the asset instead of using it? Watson's gain or loss on sale for tax purposes will be based on the asset's tax basis, so Watson will recognize \$40 more gain (or less loss) for tax purposes. Watson once again will have a higher tax bill of $\$40 \times 25\% = \10 , again implying a deferred tax liability of \$10. Regardless of whether Watson keeps or sells the asset, Watson's \$40 book-tax difference implies a deferred tax liability of \$10.

³ Unless the deductibility itself is uncertain. In that case, whether we recognize a deferred tax asset (and if so, its amount) is determined in accordance with FASB ASC 740-10-25: Income Taxes—Overall—Recognition, discussed in Part D of this chapter.

⁴ “More likely than not” means a likelihood of more than 50%, FASB ASC 740-10-30: Income Taxes—Overall—Initial Measurement.

⁵ “Income Taxes,” *International Accounting Standard No. 12* (IASCF).

⁶ The current U.S. federal corporate tax rate is 21% (having been revised downward from the 35% rate that applied to 2017). Most states tax corporate income at rates less than 10%. We use 25% as a combined rate in most of our illustrations to simplify calculations.

⁷ FASB ASC 740-10-35: Income Taxes—Overall—Subsequent Measurement.

⁸ Prior to 2017, companies were required to classify deferred tax assets and liabilities as current or noncurrent. To simplify presentation, the FASB required that all deferred tax items be classified as noncurrent when it issued “Balance Sheet Classification of Deferred Taxes,” *Accounting Standards Update No. 2015-17: (Topic 740)* (Norwalk, CT: FASB, 2015).

⁹ FASB ASC 740: Income Taxes—Overall.

¹⁰ For illustration, if pretax accounting income is \$128 million, the tax rate is 25%, and the questionable deduction is \$32 million, income tax payable would be $(\$128 \text{ million} - \$32 \text{ million}) \times 25\% = \24 million .

¹¹ If a company has any deferred tax assets from net operating loss carryforwards, it generally nets the liability for uncertain tax positions against those deferred tax assets for presentation in the balance sheet, rather than presenting the liability separately. Why? The liability indicates that future tax will be *paid*, and the operating loss carryforward indicates that future tax will be *saved*, so the two are netted.

¹² Until recently, GAAP included another category, extraordinary items, for which income was shown separately net of tax. The FASB eliminated the concept of extraordinary items starting in 2016 when it issued “Income Statement—Extraordinary and Unusual Items,” *Accounting Standards Update No. 2015-01* (Subtopic 225-20) (Norwalk, CT: FASB, 2015).

¹³ As discussed in Chapter 4, companies separately report (a) any gain or loss from running a discontinued operation prior to disposal and (b) any gain or loss on disposal of a discontinued operation's assets. For simplicity we report a combined number.

¹⁴ This can be accomplished by (a) presenting components of other comprehensive income net of related income tax effects or (b) presenting a single tax amount for all, and individual components shown before income tax effects with disclosure of the income taxes allocated to each component either in a disclosure note or parenthetically in the statement.

¹⁵ "Income Statement—Reporting Comprehensive Income (Topic 220): Reclassification of Certain Tax Effects from Accumulated Other Comprehensive Income," *Accounting Standards Update No. 2018-02*: (Norwalk, CT: FASB, 2018).

¹ Brendan McFarland, "Retirement Offerings in the Fortune 500: 1998–2022," *Willis Towers Watson Insider*, June 25, 2020.

² One popular way for employer companies to provide contributions is with shares of its own common stock. If so, the arrangements usually are designed to comply with government requirements to be designated an employee stock ownership plan (ESOP).

³ Of course, this is not entirely unappealing to the employee. Defined contribution plans allow an employee to select investments in line with his or her own risk preferences and often provide greater retirement benefits and flexibility than defined benefit plans.

⁴ We discuss changes in more detail in Chapter 20.

⁵ To project future salaries for a group of employees, actuaries usually assume some percentage rate of increase in compensation levels in upcoming years. Recent estimates of the rate of compensation increase have ranged from 1.3% to 6% with 3.7% being the most commonly reported expectation (Pension/OPEB 2020 Assumption and Disclosure Survey, PWC, 2020).

⁶ Discount rates recently reported have ranged from 3.6% to 1.6% with 3.3% being the most commonly assumed rate (Pension/OPEB 2020 Assumption and Disclosure Survey, PWC, 2020).

⁷ Prior service cost also is created if a defined benefit pension plan is initially adopted by a company that previously did not have one, and the plan itself is made retroactive to give credit for prior years' service. Prior service cost is created by plan amendments far more often than by plan adoptions because most companies already have pension plans, and new pension plans in recent years have predominantly been defined contribution plans.

⁸ The increase in the PBO due to amending the pension formula (prior service cost) occurred in 2023.

⁹ Pension/OPEB 2020 Assumption and Disclosure Survey, PWC, 2020.

¹⁰ Goldman Sachs, "Global Markets Institute Accounting Policy Update: Pension Review 2009—Fallout from Funded Status Decline Just Beginning," Global Markets Institute, June 4, 2009.

¹¹ FASB ASC 715–30–25: Compensation—Retirement Benefits—Defined Benefit Plans—Pension—Recognition.

¹² As we discussed earlier and will revisit later, the PBO is combined with pension assets with the net difference reported in the balance sheet as either a net pension liability or a net pension asset.

¹³ An alternative to this straight-line approach, called the *service method*, attempts to allocate the prior service cost to each year in proportion to the fraction of the total remaining service years worked in each of those years. This method is described in the chapter appendix.

¹⁴ For this purpose, the FASB specifies the market-related value of plan assets. This can be either the fair value or a weighted-average fair value over a period not to exceed five years. We will uniformly assume fair value in this chapter.

¹⁵ The increase in plan assets is the \$30 million *actual* return, but the \$27 million *expected* return is the component of pension expense because the \$3 million gain isn't included in expense. We saw in the previous section that the \$3 million gain also increases plan assets.

¹⁶ Accounting Standards Update No. 2017-07, *Compensation—Retirement Benefits (Topic 715): Improving the Presentation of Net Periodic Pension Cost and Net Periodic Postretirement Benefit Cost* (Norwalk, CT: FASB, March 2017).

¹⁷ "Employee Benefits," *International Accounting Standard No. 19* (IASCF).

¹⁸ Transactions with owners primarily include dividends and the sale or purchase of shares of the company's stock.

¹⁹ Companies can present net income and other comprehensive income either in a single continuous statement of comprehensive income or in two separate but consecutive statements.

²⁰ Similarly, if any new prior service cost should arise due to a plan amendment, it too would be reported net of tax or with tax effects shown parenthetically.

²¹ FASB ASC 715-20-50: Compensation—Retirement Benefits—Defined Benefit Plans—General—Disclosure.

²² FASB ASC 715-30-35: Compensation—Retirement Benefits—Defined Benefit Plans—Pension—Subsequent Measurement.

²³ FASB ASC 715-60: Compensation—Retirement Benefits—Defined Benefit Plans—Postretirement.

²⁴ For convenience, our discussion focuses on health care benefits because these are by far the most common type of postretirement benefits other than pensions. But the concepts we discuss apply equally to other forms of postretirement benefits.

²⁵ Health care cost trend rates recently reported have ranged from 3.4% to 9%, with 6.5% being the most commonly assumed rate. (Pension/OPEB 2020 Assumption and Disclosure Survey, PWC, 2020).

²⁶ Assigning the costs to particular service years is referred to as the *attribution* of the costs to the years the benefits are assumed earned. We discuss attribution in the next section.

²⁷ If the plan specifically grants credit only for service from a date after the employee's date of hire, the beginning of the attribution period is considered to be the beginning of that credited service period, rather than the employee's date of hire.

²⁸ Or any beneficiaries and covered dependents.

²⁹ FASB ASC 715-60-50: Compensation—Retirement Benefits—Defined Benefit Plans—Other Postretirement—Disclosure.

³⁰ FASB ASC 715-30-35-13: Compensation—Retirement Benefits—Defined Benefit Plans—Pension—Subsequent Measurement—Prior Service Costs.

¹ Comprehensive income was introduced in Chapter 4 and revisited in Chapters 12 and 17.

² This can be accomplished by presenting components of other comprehensive income, either net of related income tax effects (as in this presentation) or before income tax effects with disclosure of the income taxes allocated to each component either in a disclosure note or parenthetically in the statement.

³ FASB ACS 505-10-50: Equity—Overall—Disclosure.

⁹ FASB Accounting Standards Update (ASU) No. 2018-07, Compensation—Stock Compensation (Topic 718): Improvements to Nonemployee Share-Based Payment Accounting.

¹⁰ Daisuke Wakabayashi, "Apple Boosts Buyback, Splits Stock to Reward Investors," *Dow Jones Business Report*, www.nasdaq.com, April 23, 2014.

¹¹ A corporate takeover occurs when an individual or group of individuals acquires a majority of a company's outstanding common stock from present shareholders. Corporations that are the object of a hostile takeover attempt—

a public bid for control of a company's stock against the company's wishes—often take evasive action involving the reacquisition of shares.

¹² The concept of treasury shares originated long ago when new companies found they could sell shares at an unrealistically low price equal to par value to incorporators, who then donated those shares back to the company. Since these shares already had been issued (though not outstanding), they could be sold at whatever the real market price was without adjusting stated capital. Because treasury shares are already issued, different rules apply to their purchase and resale than to unissued shares. Companies can (1) issue shares without regard to preemptive rights of shareholders, or (2) distribute shares as a dividend to shareholders even without a balance in retained earnings.

¹³ The *Revised Model Business Corporation Act* eliminated the concept of treasury shares in 1984, after 1980 revisions had eliminated the concepts of par value and legal capital. Most state laws have since followed suit.

¹⁴ In the next section of this chapter, you will be reminded that dividends reduce retained earnings. (You first learned this in your introductory accounting course.)

¹⁵ Retained earnings also can be affected by some changes in accounting principles and for some corrections of errors, as we will see in Chapter 20. And, too, retained earnings can be affected by the repurchase of shares, as discussed in Part A of this chapter.

¹⁶ Dividends are not the only return shareholders earn; when market prices of their shares rise, shareholders benefit also. Indeed, many companies have adopted policies of never paying dividends but reinvesting all assets they earn. The motivation is to accommodate more rapid expansion and thus, presumably, increases in the market price of the stock.

¹⁷ Ordinarily, this is not the legal limit. Most states permit a company to pay dividends so long as, after the dividend, its assets would not be “less than the sum of its total liabilities plus the amount that would be needed, if the corporation were to be dissolved at the time of the distribution, to satisfy the preferential rights upon dissolution of shareholders whose preferential rights

are superior to those receiving the distribution." (*Revised Model Business Corporation Act*, American Bar Association, 2020.) Thus, legally, a corporation can distribute amounts equal to total shareholders' equity less dissolution preferences of senior equity securities (usually preferred stock).

¹⁸ FASB ASC 505–20: Equity—Stock Dividends and Stock Splits. In this pronouncement, a small stock dividend is defined as one 20% to 25% or less. For filings with that agency, the SEC has refined the definition to comprise stock distributions of less than 25%.

¹⁹ FASB ASC 505–20–30–3: Equity—Stock Dividends and Stock Splits—Initial Measurement.

²⁰ Taylor W. Foster III and Don Vickrey, "The Information Content of Stock Dividend Announcements," *Accounting Review*, April 1978; and J. David Spiceland and Alan J. Winters, "The Market Reaction to Stock Distributions: The Effect of Market Anticipation and Cash Returns," *Accounting and Business Research*, Summer 1986.

²¹ After hitting a high in the 1940s, the number of stock dividends has declined significantly. Currently, about 3% of companies declare stock dividends in any given year.

²² FASB ASC 505–20–25–2: Equity—Stock Dividends and Stock Splits—Recognition.

¹ CEO and Executive Compensation Practices, The Conference Board, 2019.

² Restricted stock plans usually are designed to comply with Tax Code Section 83 to allow employee compensation to be nontaxable to the employee until the date the shares become substantially vested, which is when the restrictions are lifted. Likewise, the employer gets no tax deduction until the compensation becomes taxable to the employee.

³ Sometimes, the shares to be issued depend upon achieving specific performance targets.

⁴ Typically, but not always, RSUs have no voting privileges and receive no dividends until the shares are issued at vesting. Sometimes, restricted stock does have voting privileges and receives dividends during the vesting period even though recipients are restricted from selling the shares until vesting.

⁵ CEO and Executive Compensation Practices, The Conference Board, 2019.

⁶ FASB ASC 718-10-55-30 to 32: Compensation—Stock Compensation—Overall—Implementation and Guidance Illustrations—Selecting or Estimating the Expected Term.

⁷ An expanded discussion is provided in FASB ASC 718-10-55: Compensation—Stock Compensation—Overall—Implementation and Guidance Illustrations.

⁸ ASC 718-10-35-3: Compensation—Stock Compensation—Overall—Subsequent Measurement Recognition of Compensation Costs over the Requisite Service Period.

⁹ The fair value of the options usually is higher when estimated using a single weighted-average expected life of the options rather than when estimated as the total of fair values of the multiple vesting groups.

¹⁰ “Probable” means the same as it did in Chapter 13, when we were estimating the likelihood that payment would be made for a loss contingency, and elsewhere when making accounting estimates. Probable is a matter of professional judgment (often 70–75%).

¹¹ FASB Emerging Issues Task Force, *Accounting Standards Update No. 2014-12*, “Compensation—Stock Compensation (Topic 718): Accounting for Share-Based Payments When the Terms of an Award Provide That a Performance Target Could Be Achieved after the Requisite Service Period,” June 2017.

¹² CEO and Executive Compensation Practices, The Conference Board, 2019.

¹³ FASB ASC 718-50-25-1 and 2: Compensation—Stock Compensation—Employee Share Purchase Plans—Recognition.

¹⁴ FASB ASC 260: Earnings per Share. The guidance is applicable only for public companies.

¹⁵ You learned in Chapter 18 that when dividends are declared, preferred shareholders have a preference (over common shareholders) to a specified amount.

¹⁶ See Chapter 14 if you need to refresh your memory about bond discount amortization.

¹⁷ The shares should be included in both basic and diluted EPS if all conditions have actually been met so that there is no *circumstance* under which those shares would not be issued. In essence, these *are no longer contingent shares*.

¹⁸ The tax treatment of share-based plans is discussed an earlier Additional Consideration box.

¹⁹ Many such plans are called tandem plans and award an employee both a cash SAR and an SAR that calls for settlement in an equivalent amount of shares. The exercise of one cancels the other.

²⁰ Except that the cumulative compensation expense cannot be negative; that is, the liability cannot be reduced below zero.

¹ FASB ASC 250: Accounting Changes and Error Corrections.

² R. L. Watts and J. L. Zimmerman, "Towards a Positive Theory of the Determination of Accounting Standards," *The Accounting Review*, January 1978, and "Positive Accounting Theory: A Ten Year Perspective," *The Accounting Review*, January 1990.

³ For example, see D. Dhaliwal, G. Salamon, and E. Smith, "The Effect of Owner versus Management Control on the Choice of Accounting Methods," *Journal of Accounting and Economics*, July 1992; and T. W. Koch, D. F. Waggoner, and L. D. Wall, "Incentive Compensation, Accounting Discretion and Bank Capital," - *Journal of Economics and Business*, January–February 2018.

⁴ R. W., Holthausen., "Accounting Method Choice: Opportunistic Behavior, Efficient Contracting, and Information Perspectives," *Journal of Accounting and Economics*, January 1990.

⁵ This political cost motive is suggested by R. L. Watts and J. L. Zimmerman, "Positive Accounting Theory: A Ten Year Perspective," *The Accounting Review*, January 1990.

⁶ FASB ASC 250-10-45: Accounting Changes and Error Corrections—Overall—Other Presentation Matters.

⁷ FASB ASC 323-10-35-36: Investments—Equity Method and Joint Ventures—Overall—Subsequent Measurement—Decrease in Level of Ownership or Degree of Influence.

⁸ FASB ASC 810: Consolidation.

⁹ SFAS No. 94, "Consolidation of All Majority-Owned Subsidiaries."

¹⁰ Any prior periods' statements are recast when those statements are presented again for comparative purposes.

¹¹ FASB ASC 250-10-45: Accounting Changes and Error Corrections—Overall—Other Presentation Matters.

¹² Interestingly, it appears that not all accounting errors are unintentional. Research has shown that firms with errors that overstate income are more likely "to have diffuse ownership, lower growth in earnings and fewer income-increasing GAAP alternatives available, and are less likely to have audit committees," suggesting that "overstatement errors are the result of managers responding to economic incentives." M. L. DeFond and J. Jiambalvo, "Incidence and Circumstances of Accounting Errors," *The Accounting Review*, July 1991.

¹³ In practice, the vast majority of errors are not material with respect to their effect on the financial statements and are, therefore, simply corrected in the year discovered (step 1 only).

¹⁴ The retained earnings balances in years after the first year also are adjusted to what those balances would be if the error had not occurred, but a company may choose not to explicitly report those adjustments as separate line items.

¹⁵ "Accounting Policies, Changes in Accounting Estimates and Errors," *International Accounting Standard No. 8* (IASCF).

¹ FASB Concepts Statement No. 8, *Conceptual Framework for Financial Reporting*—Chapter 1, "The Objective of General Purpose Financial Reporting," and Chapter 3, "Qualitative Characteristics of Useful Financial Information" (a replacement of FASB Concepts Statements No. 1 and No. 2), September 2010.

² A change in that policy is treated as a change in accounting principle.

³ An exception is the sale of a cash equivalent at a gain or loss. This exception is described in more detail later in the chapter.

⁴ FASB Concepts Statement No. 8, *Conceptual Framework for Financial Reporting*—Chapter 1, "The Objective of General Purpose Financial Reporting," and Chapter 3, "Qualitative Characteristics of Useful Financial Information" (a replacement of FASB Concepts Statements No. 1 and No. 2), September 2010.

⁵ According to the AICPA, *U.S. GAAP Financial Statements—Best Practices in Presentation and Disclosure*, a survey of 500 companies showed that 495 companies chose to use the indirect method, only 5 the direct method.

⁶ Inflows and outflows of cash from buying and selling trading securities typically are considered operating activities because financial institutions that routinely transact in trading securities consider them an appropriate part of their normal operations.

⁷ A nontrade receivable differs from a trade receivable in that it is not one associated with the company's normal trade; that is, it's not received from a customer. A trade receivable, or accounts receivable, is an *operating asset*. A nontrade receivable, on the other hand, might be a loan to an affiliate company or an officer of the firm. To understand how the creation of a

nontrade receivable is an *investing* activity, you might view such a loan as an investment in the receivable.

⁸ FASB ASC 230-10-50-6: Statement of Cash Flows—Overall—Disclosure—Noncash Investing and Financing Activities.

⁹ The T-account method is a second systematic approach to the preparation of the statement of cash flows. This method is identical in concept and similar in application to the spreadsheet method. The T-account method is used to prepare the statement of cash flows for UBC in Appendix 21B.

¹⁰ The spreadsheet entries also are used to record the same transactions when the T-account method is used. We refer again to these entries when that method is described in Appendix 21B.

¹¹ The mechanical and computational aspects of the spreadsheet analysis are simplified greatly when performed on an electronic spreadsheet such as Microsoft Excel.

¹² We determined in Part B (subsection 2) that there is no evidence that cash received from investments differs from investment revenue.

¹³ The adjustment for the decrease in bond discount is logically consistent with this pattern as well. Bond discount is a contra liability. It's logical, then, that an adjustment for a decrease in this account be added—the opposite of the way a decrease in a liability is treated.

¹⁴ Not-for-profit entities using the direct method don't have to provide a reconciliation, FASB ASC 230-10-40-29.

¹⁵ It is permissible to present the reconciliation in a separate schedule.

¹⁶ Proposals for informative sets of cash flow ratios are offered by Charles Carslaw and John Mills, "Developing Ratios for Effective Cash Flow Analysis," *Journal of Accountancy*, November 1991; Don Giacomino and David Mielke, "Cash Flows: Another Approach to Ratio Analysis," *Journal of Accountancy*,

March 1993; and John Mills and Jeanne Yamamura, "The Power of Cash Flows Ratios," *Journal of Accountancy*, October 1998.

¹ Almost all financial institutions and over half of all nonfinancial companies use derivatives.

² Bear Sterns was sold to JPMorgan Chase, and AIG worked with regulators, reduced its risk, and has since recovered from its difficulties.

³ Bank for International Settlements, *BIS Quarterly Review*, November 2020.

⁴ Note that a financial futures contract meets the definition of a financial instrument because it entails the exchange of financial instruments (cash for Treasury bonds, for instance). But, a futures contract for the sale or purchase of a nonfinancial commodity like corn or gold does not meet the definition because one of the items to be exchanged is not a financial instrument.

⁵ The seller of a futures contract is obligated to sell the bonds at a future date. The buyer of a futures contract is obligated to buy the bonds at a future date. The company in our example, then, is the seller of the futures contract.

⁶ Price quotes are expressed as a percentage of par.

⁷ This is a simplification of the more sophisticated way financial managers determine the optimal number of futures.

⁸ Accounting Standards Update No. 2017-12, Derivatives and Hedging (Topic 815): Targeted Improvements to Accounting for Hedging Activities (Norwalk, CT: FASB, January 2017).

⁹ FASB ASC 815-10: Derivatives and Hedging—Overall.

¹⁰ The fair value of a hedged item might also change for reasons other than from effects of the risk being hedged. For instance, the hedged risk may be that a change in interest rates will cause the fair value of a bond to change. The bond price might also change, though, if the market perceives that the bond's default risk has changed.

¹¹ Because there are no future cash receipts from the swap arrangement at this point, the fair value of the swap is zero.

¹² Transactions with owners primarily include dividends and the sale or purchase of shares of the company's stock.

¹³ FASB ASC 220-10-55: Comprehensive Income—Overall—Implementation Guidance and Illustrations and Accounting Standards Update No. 2017-12, Derivatives and Hedging (Topic 815): Targeted Improvements to Accounting for Hedging Activities, (Norwalk, CT: FASB, January 2017).

¹⁴ This is the same treatment previously prescribed for these translation adjustments by FASB ASC 830: Foreign Currency Matters.

¹⁵ Remember, if a derivative is not designated as a hedge, any gains or losses from changes in its fair value are recognized immediately in earnings.

¹⁶ There is no precise minimum interval, though it generally is three to six months or less. Other criteria are specified by FASB ASC 815-20-25-104: Derivatives and Hedging—Hedging—General—Recognition—Shortcut Method, *SFAS No. 133* (para. 68), in addition to the key conditions listed here.

¹⁷ The investment in the interest rate swap represents the present value of expected future net interest receipts. As with other such assets, interest accrues at the effective rate times the outstanding balance. You also can think of the accrued interest mathematically as the increase in present value of the future cash flows as we get one period nearer to the dates when the cash will be received.

¹⁸ Because there are no future cash receipts or payments from the swap arrangement at this point, the fair value of the swap is zero.

¹⁹ *Accounting Standards Update No. 2014-03, "Derivatives and Hedging (Topic 815): Accounting for Certain Receive-Variable, Pay-Fixed Interest Rate Swaps—Simplified Hedge Accounting Approach (a consensus of the Private Company Council)"* (Norwalk, CT: FASB, January 2014).

⁵ FASB ASC 220-45: Comprehensive Income—Other Presentation Matters [originally “Presentation of Comprehensive Income,” *Accounting Standards Update* No. 2011-05 (Norwalk, CT: FASB, June 2011)].

⁴² International Accounting Standards Board, *Conceptual Framework for Financial Reporting*, 2018.

²⁵ S. B. Jackson and X. Liu, “The Allowance for Uncollectible Accounts, Conservatism, and Earnings Management,” *Journal of Accounting Research* 48, no. 3 (2010), pp. 565–601.

²⁶ P. M. Dechow, L. A. Myers, and C. Shakespeare, “Fair Value Accounting and Gains from Asset Securitizations: A Convenient Earnings Management Tool with Compensation Side-Benefits,” *Journal of Accounting and Economics* 49, no. 2 (2010), pp. 2–25.

²⁷ Other recent research provides evidence that investors treat securitizations as loans rather than asset sales, suggesting that they are unconvinced that a sale has truly taken place. For example, see W. R. Landsman, K. Peasnell, and C. Shakespeare, “Are Asset Securitizations Sales or Loans?” *The Accounting Review* 83, no. 5 (2008), pp. 1251–72.

⁴ “Financial Statement Presentation,” *International Accounting Standard No. 1* (IASCF).

²⁷ The lease term is less than the major part of the expected useful life of the warehouses (67%). Also, the present value of lease payments (\$800,000) is less than substantially all of the fair value of the warehouses (\$1,000,000). None of the other three of the five criteria is present.
