On the one hand, we might point to interest charges to finance inventories during their period of manufacture or to finance the purchase of plant assets from others and argue that construction period interest charges are merely costs of financing the asset that should be expensed as incurred like all other interest costs.

On the other hand, we might argue that self-constructed assets are different in that during the construction period, they are not yet ready for their intended use for producing revenues. And, so, in keeping with the historical cost principle, all costs during this period, including interest, should be capitalized. Those costs are then allocated as depreciation during later periods when the assets are providing benefits.

QUALIFYING ASSETS

Generally accepted accounting principles are consistent with the second argument. Specifically, interest is capitalized during the construction period for (a) assets built for a company's own use as well as for (b) assets constructed *as discrete projects* for sale or lease (a ship or a real estate development, for example). This excludes from interest capitalization consideration inventories that are routinely manufactured in large quantities on a repetitive basis and

Only assets that are constructed as discrete projects qualify for interest capitalization.

assets that already are in use or are ready for their intended use.^{1/} Interest costs incurred during the productive life of the asset are expensed as incurred.

PERIOD OF CAPITALIZATION

The capitalization period for a self-constructed asset starts with the first expenditure (materials, labor, or overhead) and ends either when the asset is substantially complete and ready for use or when interest costs no longer are being incurred. Interest

costs incurred can pertain to borrowings other than those obtained specifically for the construction project. However, interest costs can't be imputed; actual interest costs must be incurred.

The interest capitalization period begins when construction begins and the first expenditure is made as long as interest costs are actually being incurred.

AVERAGE ACCUMULATED EXPENDITURES

Because we consider interest to be a necessary cost of getting a self-constructed asset ready for use, the amount capitalized is only that portion of interest cost incurred during the construction period that *could*

have been avoided if expenditures for the asset had not

been made. In other words, if construction had not been undertaken, debt incurred for the project would not have been necessary and/or other interest-bearing debt could have been liquidated or employed elsewhere.

Average accumulated expenditures approximates the average debt necessary for construction.

As a result, interest should be determined for only the construction expenditures *actually incurred* during the capitalization period. And unless all expenditures are made at the outset of the period, it's necessary to determine the *average* amount outstanding during the period. This is the amount of debt that would be required to finance the expenditures and thus the amount on which interest would accrue. For instance, if a company accumulated \$1,500,000 of construction expenditures fairly evenly throughout the construction period, the average expenditures would be

Total accumulated expenditures incurred evenly throughout the period

\$1,500,000

Page 533

Average accumulated expenditures

$\div 2$
\$ 750,000

At the beginning of the period, no expenditures have accumulated, so no interest has accrued (on the equivalent amount of debt). But, by the end of the period, interest is accruing on the total amount, \$1,500,000. On average, then, interest accrues on half the total or \$750,000.

If expenditures are not incurred evenly throughout the period, a simple average is insufficient. In that case, a *weighted average* is determined by time-weighting individual expenditures or groups of expenditures by the number of months from their incurrence to the end of the construction period.

Let's use the expenditures and loan information in **Illustration 10-17** to demonstrate the calculation of interest capitalization. This calculation will involve three steps: (1) determine the weighted-average accumulated expenditures, (2) calculate the amount of interest to be capitalized, and (3) compare calculated interest with actual interest incurred.

Average accumulated expenditures is determined by time-weighting individual expenditures made during the construction period.

ILLUSTRATION 10-17 Expenditures and Loan Information for Interest Capitalization

On January 1, 2024, the Mills Conveying Equipment Company began construction of a building to be used as its office headquarters. The building was completed on June 30, 2025. Expenditures on the project, mainly payments to subcontractors, were as follows:

| | |
|--|----------------|
| January 1, 2024 | \$ 500,000 |
| March 31, 2024 | 400,000 |
| September 30, 2024 | <u>600,000</u> |
| Accumulated expenditures at December 31, 2024 (before interest capitalization) | \$1,500,000 |
| January 31, 2025 | 600,000 |
| April 30, 2025 | 300,000 |

On January 1, 2024, the company obtained a \$1 million construction loan with an 8% interest rate. The loan was outstanding during the entire construction period. The company's other interest-bearing debt included two long-term notes of \$2,000,000 and \$4,000,000 with interest rates of 6% and 12%, respectively. Both notes were outstanding during the entire construction period.

The weighted-average accumulated expenditures by the end of 2024 are shown below:

| | Actual Expenditures | | Portion of Year Outstanding | |
|--------------------|---------------------------|---|-----------------------------|---|
| January 1, 2024 | \$ 500,000 | × | $\frac{12}{12}$ | = |
| March 31, 2024 | 400,000 | × | $\frac{9}{12}$ | = |
| September 30, 2024 | 600,000 | × | $\frac{3}{12}$ | = |
| | <u><u>\$1,500,000</u></u> | | | |

Notice that the weighted-average accumulated expenditures of **\$950,000** are less than the actual accumulated expenditures of **\$1,500,000**. If Mills had borrowed exactly the amount necessary to finance the project, it would not have incurred interest on a loan of \$1,500,000 for the whole year but only on an average loan of \$950,000. The next step is to determine the interest to be capitalized for the weighted-average accumulated expenditures.

STEP 1: Determine the weighted-average accumulated expenditures.

INTEREST RATES

In this situation, debt financing was obtained specifically for the construction project, and the amount borrowed is sufficient to cover the average accumulated expenditures. To determine the interest capitalized, then, we simply multiply the construction loan rate of 8% by the weighted-average accumulated expenditures.

STEP 2: Calculate the amount of interest to be capitalized.

$$\text{Interest capitalized for 2024} = \$950,000 \times 8\% = \$76,000$$

Additional Consideration

Notice that this is the same answer we would get by assuming separate 8% construction loans were made for each expenditure at the time each expenditure was made.

| Actual Expenditures | | Annual Rate | | Portion of Year Outstanding | | Calculated Interest |
|-------------------------------|---|-------------|---|-----------------------------|---|---------------------|
| \$500,000 | × | 8% | × | $\frac{12}{12}$ | = | |
| 400,000 | × | 8% | × | $\frac{9}{12}$ | = | |
| 600,000 | × | 8% | × | $\frac{3}{12}$ | = | |
| Interest capitalized for 2024 | | | | | | |

The interest of **\$76,000** is added to the cost of the building, bringing accumulated expenditures at December 31, 2024, to \$1,576,000 (**\$1,500,000** + **\$76,000**). The remaining interest cost incurred but not capitalized is expensed.

It should be emphasized that interest capitalization does not require that funds actually be borrowed for this specific purpose, only that the company does have outstanding debt. The presumption is that even if the company doesn't borrow specifically for the project, funds from other borrowings must be diverted to finance the construction. Either way—directly or indirectly—interest costs are incurred. In our illustration, for instance, even without the construction loan, interest would be capitalized because other debt was outstanding. The capitalized interest would be the average accumulated expenditures multiplied by the weighted-average rate on these other loans. The weighted-average interest rate on all debt other than the construction loan would be 10%, calculated as follows:¹⁸

| Loans | | Annual Rate | | Interest |
|-------------|---|-------------|---|-----------|
| \$2,000,000 | × | 6% | = | \$120,000 |
| 4,000,000 | × | 12% | = | 480,000 |

\$6,000,000

\$600,000

$$\text{Weighted-average rate: } \frac{\$600,000}{\$6,000,000} = 10\%$$

This is a weighted average because total interest is \$600,000 on total debt of \$6,000,000. Therefore, in our illustration, without any specific construction loan, interest capitalized for 2024 would have been \$95,000 (\$950,000 × 10%).

Additional Consideration

The weighted-average rate isn't used for 2024 in our illustration because the specific construction loan is sufficient to cover the average accumulated expenditures. If the specific construction loan had been insufficient to cover the average accumulated expenditures, its 8% interest rate would be applied to the average accumulated expenditures up to the amount of the specific borrowing, and any remaining average accumulated expenditures in excess of specific borrowings would be multiplied by the weighted-average rate on all other outstanding interest-bearing debt. Suppose, for illustration, that the 8% construction loan had been only \$500,000 rather than \$1,000,000. We would calculate capitalized interest using both the specific rate and the weighted-average rate:

| | Time- Weighted Expenditures | | Annual Rate | |
|-------------------------|--|---|------------------------|---|
| Total | \$950,000 | | | |
| Specific borrowing | <u>500,000</u> | × | 8% | = |
| Excess | \$450,000 | × | 10% | = |
| Capitalized interest | | | | |

In our illustration, it's necessary to use this approach in 2025.

It's possible that the amount of interest calculated to be capitalized exceeds the amount of interest actually incurred. If that's the case, we limit the interest capitalized to the actual interest incurred. In our illustration, total interest cost incurred during 2024 far exceeds the **\$76,000** of capitalized interest calculated, so it's not necessary to limit the capitalized amount.

Interest capitalized is limited to interest incurred.

STEP 3: Compare calculated interest with actual interest incurred.

| Loans | | Annual Rate | | Actual Interest | Calculated Interest |
|-------------|---|-------------|---|------------------|------------------------|
| \$1,000,000 | × | 8% | = | \$ 80,000 | |
| 2,000,000 | × | 6% | = | 120,000 | |
| 4,000,000 | × | 12% | = | 480,000 | |
| | | | | <u>\$680,000</u> | <u>\$76,000</u> |
| | | | | | ↑ Use lower amount |

Continuing the example based on the information in [Illustration 10-17](#), let's determine the amount of interest capitalized during 2025 for the building. The total accumulated expenditures by the end of the project follow:

| | |
|---|---------------------------|
| Accumulated expenditures at the beginning of 2025 (including interest capitalization) | \$1,576,000 |
| January 31, 2025 expenditures | 600,000 |
| April 30, 2025 expenditures | 300,000 |
| Accumulated expenditures at June 30, 2025 (before 2025 interest capitalization) | <u>\$2,476,000</u> |

The weighted-average accumulated expenditures by the end of the project are as follows:

STEP 1: Determine the weighted-average accumulated expenditures.

| | Actual Expenditures | | Portion of Year by End of Project | | Weighted Expenditures |
|--|---------------------|---|-----------------------------------|---|-----------------------|
| January 1, 2025 | \$1,576,000 | × | 6/12 | = | \$788,000 |
| January 31, 2025 | 600,000 | × | 6/12 | = | 300,000 |
| April 30, 2025 | 300,000 | × | 6/12 | = | 150,000 |
| Weighted-average accumulated expenditures for 2025 | | | | | <u>\$1,238,000</u> |

Notice that the 2025 expenditures are weighted relative to the construction period of six months because the project was finished on June 30, 2025. Interest capitalized for 2025 would be **\$98,800**, calculated as follows:

STEP 2: Calculate the amount of interest to be capitalized.

| | Time-Weighted Expenditures | | Annual Rate | | Portion of Year Outstanding |
|-------------------------------|----------------------------|---|-------------|---|-----------------------------|
| Total | \$2,176,000 | | | | |
| Specific borrowing | <u>1,000,000</u> | × | 8% | × | 6/12 |
| Excess | \$1,176,000 | × | 10% | × | 6/12 |
| Interest capitalized for 2025 | | | | | <u>\$98,800</u> |

Multiplying by six-twelfths reflects the fact that the interest rates are annual rates (12-month rates) and the construction period is only 6 months. Next, we compare the calculated interest with the actual interest incurred.

STEP 3: Compare calculated interest with actual interest incurred.

| Loans | | Annual Rate | | Portion of Year Outstanding | |
|-------------|---|-------------|---|-----------------------------|---|
| \$1,000,000 | × | 8% | × | $\frac{6}{12}$ | = |
| 2,000,000 | × | 6% | × | $\frac{6}{12}$ | = |
| 4,000,000 | × | 12% | × | $\frac{6}{12}$ | = |

For the first six months of 2025, **\$98,800** of interest would be capitalized, bringing the total capitalized cost of the building to \$2,574,800 (**\$2,476,000** + \$98,800), and \$241,200 in interest would be expensed (\$340,000 – \$98,800).

Additional Consideration

To illustrate how the actual interest limitation might come into play, let's assume the nonspecific borrowings in our illustration were \$200,000 and \$400,000 (instead of \$2,000,000 and \$4,000,000). Our comparison would change as follows:

| Loans | | Annual Rate | | Portion of Year Outstanding | |
|-------------|---|-------------|---|-----------------------------|---|
| \$1,000,000 | × | 8% | × | $\frac{6}{12}$ | = |
| 200,000 | × | 6% | × | $\frac{6}{12}$ | = |
| 400,000 | × | 12% | × | $\frac{6}{12}$ | = |

| Loans | Annual Rate | Portion of Year Outstanding |
|-------|-------------|-----------------------------|
|-------|-------------|-----------------------------|

The method of determining interest to capitalize that we've discussed is called the **specific interest method** because we use rates from specific construction loans to the extent of specific borrowings before using the average rate of other debt. Sometimes, though, it's difficult to associate specific borrowings with projects. In these situations, it's acceptable to just use the weighted-average rate on all interest-bearing debt, including all construction loans. This is known as the **weighted-average method**. In our illustration, for example, if the \$1,000,000, 8% loan had not been specifically related to construction, we would calculate a single weighted-average rate as shown below.

Weighted-average method

| Loans | | Annual Rate | | Interest |
|--------------------|---|-------------|---|------------------|
| \$1,000,000 | × | 8% | = | \$ 80,000 |
| 2,000,000 | × | 6% | = | 120,000 |
| 4,000,000 | × | 12% | = | 480,000 |
| <u>\$7,000,000</u> | | | | <u>\$680,000</u> |

$$\text{Weighted-average rate: } \frac{\$680,000}{\$7,000,000} = 9.7\%$$

If we were using the weighted-average method rather than the specific interest method, we would simply multiply this single rate times the average accumulated expenditures to determine capitalizable interest.

DISCLOSURE For an accounting period in which interest costs are capitalized, the total amount of interest costs capitalized, if the amount is material,

If material, the amount of interest capitalized during the period must

should be disclosed.  **Illustration 10-18** shows an interest capitalization disclosure note that was included in a recent annual report of **Johnson & Johnson**. | be disclosed.

ILLUSTRATION 10-18 Capitalized Interest Disclosure—Johnson & Johnson.

Real World Financials

Property and equipment (in part)

The Company capitalizes interest expense as part of the cost of construction of facilities and equipment. Interest expense capitalized in fiscal years 2020, 2019 and 2018 was \$63 million, \$70 million and \$86 million, respectively.

Research and Development (R&D)

LO10–8 Explain the difference in the accounting treatment of costs incurred to purchase intangible assets versus the costs incurred to internally develop intangible assets.

“Innovation” is a word commonly used in the marketing and production departments of most companies. Companies compete fiercely to dream up the next top-selling product or service. In 2019, **Volkswagen** spent more than \$14 billion to research new technology for its hybrid vehicles and improve CO₂ emissions. **Microsoft** spent \$16.9 billion on discovering new technology products. Of the 163,000 people employed by Microsoft, 55,000 are in product research and development. **Alphabet (Google)** spent \$26.0 billion on futuristic ideas such as self-driving cars and robotics. **Merck** invested \$9.8 billion to test new drugs related to oncology, infectious diseases, vaccines, and diabetes.

Companies are willing to spend huge amounts on R&D because they believe the project will eventually provide benefits that exceed the current expenditures. Unfortunately, though, it’s difficult to predict which individual R&D projects will ultimately provide benefits. Will Google’s expenditures on self-driving cars ever generate enough revenue to cover its costs?

R&D costs entail a high degree of uncertainty of future benefits and are difficult to match with future revenues.

R&D costs are expensed in the periods incurred.

Moreover, even for those projects that pan out, a direct relationship between R&D costs and specific future revenue is difficult to establish. In other words, even if R&D costs do lead to future benefits, it’s difficult to objectively determine the size of the benefits and in which periods the costs should be expensed if they are capitalized. For these reasons, *the FASB takes a conservative approach and requires R&D costs to be expensed immediately.*¹⁹

The FASB’s decision is controversial. Many companies would prefer to delay the recognition of these expenses until later years when presumably the expenditures bear fruit. In other words, many companies would prefer to record R&D expenditures initially as an asset, because at least some of the R&D expenditures will likely produce future benefits. The

requirement to expense R&D immediately leads to assets being understated and expenses being overstated in the current period.

Determining R&D Costs

GAAP distinguishes research and development as follows:

- **Research** is planned search or critical investigation aimed at discovery of new knowledge with the hope that such knowledge will be useful in developing a new product or service or a new process or technique or in bringing about a significant improvement to an existing product or process.
- **Development** is the translation of research findings or other knowledge into a plan or design for a new product or process or for a significant improvement to an existing product or process whether intended for sale or use.²⁰

COSTS INCLUDED

R&D costs include salaries, wages, and other labor costs of personnel engaged in R&D activities, the costs of materials consumed, equipment, facilities, and intangibles used in R&D projects, the costs of services performed by others in connection with R&D activities, and a reasonable allocation of indirect costs related to those activities. General and administrative costs should not be included unless they are clearly related to the R&D activity.

SINGLE-USE VERSUS ALTERNATIVE-USE ASSET

If an asset is purchased specifically for a single R&D project, its cost is considered R&D and expensed immediately even though the asset's useful life extends beyond the current year. However, the cost of an asset that has an alternative future use beyond the current R&D project is *not* a current R&D expense. For example, a small building might be purchased to conduct R&D projects but will then be used for general storage once the projects are complete. The depreciation or amortization of these alternative-use assets is included as R&D expenses only in the periods the assets are used for R&D activities.

R&D expense includes the depreciation and amortization of assets used in R&D activities.

TIME PERIOD INCLUDED

In general, R&D costs pertain to activities that occur prior to the start of commercial production.

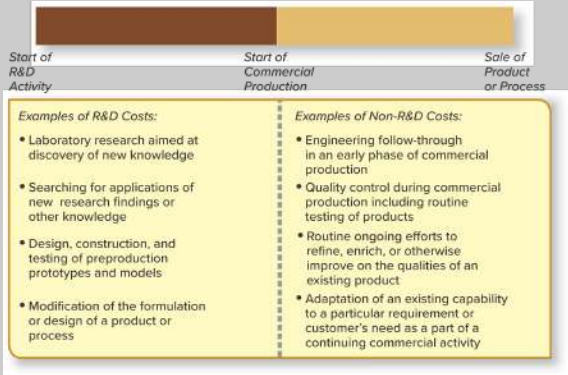

Commercial production most often refers to the point in time where the company has no other plans to materially change the product prior to beginning production for intended sales to customers. Any costs incurred after the start of commercial production are not classified as R&D costs. These costs would be either expensed or treated as manufacturing overhead and included in the cost of inventory.

Costs incurred *before* the start of commercial production are expensed as R&D.

Illustration 10-19 captures this concept with a time line beginning with the start of an R&D project and ending with the ultimate sale of a developed product or the use of a developed process. The illustration also provides examples of activities typically included as R&D and examples of activities typically excluded from R&D.²¹

Costs incurred *after* commercial production begins would be either expensed or included in the cost of inventory.

ILLUSTRATION 10-19 Research and Development Expenditures

Let's look at an example in **Illustration 10-20**.

ILLUSTRATION 10-20 Research and Development Costs

The Askew Company made the following cash expenditures during 2024 related to the development of a new industrial plastic:

| | |
|-----------------------------------|--------------|
| R&D salaries and wages | \$10,000,000 |
| R&D supplies consumed during 2024 | 3,000,000 |

| | |
|---|---------------------|
| Purchase of R&D equipment | 5,000,000 |
| Patent filing and legal costs | 100,000 |
| Payments to others for services in connection with R&D activities | 1,200,000 |
| Total | <u>\$19,300,000</u> |

The project resulted in a new product to be manufactured in 2025 (next year). A patent was filed with the U.S. Patent Office. Amortization of the patent's filing and legal costs will begin in 2025. The equipment purchased will be employed in other projects. Depreciation on the equipment for 2024 was \$500,000.

The salaries and wages, supplies consumed, and payments to others for R&D services are expensed in 2024 as R&D. The equipment is capitalized and the 2024 depreciation is expensed as R&D. Even though the costs to develop the patented product are expensed, the filing and legal costs for the patent are capitalized and amortized in future periods, just as similar costs are capitalized for purchased intangibles. Amortization of the patent is discussed in  **Chapter 11**.

Filing and legal costs for patents, copyrights, and other developed intangibles are capitalized and amortized in future periods.

The various expenditures would be recorded as follows:

| | |
|--|------------|
| R&D expense (\$10,000,000 + \$3,000,000 + \$1,200,000) | 14,200,000 |
| Cash | 14,200,000 |
| <i>To record R&D expenses for salaries, wages, and payments to others.</i> | |
| Equipment | 5,000,000 |
| Cash | 5,000,000 |
| <i>To record the purchase of equipment with alternative future use.</i> | |
| R&D expense | 500,000 |
| Accumulated depreciation—equipment | 500,000 |
| <i>To record R&D depreciation of equipment.</i> | |
| Patent | 100,000 |

| | |
|---|---------|
| Cash | 100,000 |
| <i>To capitalize the patent filing and legal costs.</i> | |

Expenditures reconciliation:

| | |
|---------------------------|----------------------------|
| Recorded as R&D expense | \$14,200,000 |
| Capitalized as equipment* | 5,000,000 |
| Capitalized as patent | 100,000 |
| Total expenditures | <u><u>\$19,300,000</u></u> |

* \$500,000 of the initial capitalized amount will be depreciated as R&D expense in the first year.

GAAP requires that total R&D expense incurred must be disclosed either as a line item in the income statement or in a disclosure note. In our illustration, total R&D expense disclosed in 2024 would be \$14,700,000 (\$14,200,000 in expenditures and \$500,000 in depreciation). Note that if Askew later sells this patent to another company for, say, \$20 million, the buyer would capitalize the entire purchase price rather than only the filing and legal costs. Once again, the reason for the apparent inconsistency in accounting treatment of internally generated intangibles and externally purchased intangibles is the difficulty of associating costs and benefits.

GAAP requires disclosure of total R&D expense incurred during the period.

LO10–9 Discuss the primary differences between U.S. GAAP and IFRS with respect to the acquisition of property, plant, and equipment and intangible assets.

International Financial Reporting Standards

IFRS requires companies to capitalize development expenditures that meet specified criteria.

IAS No. 38 draws a distinction between research activities and development activities.²² Research expenditures are *expensed* in the period incurred. However, development expenditures that meet specified criteria are *capitalized* as an intangible asset. Under both U.S. GAAP and IFRS, any direct costs to secure a patent, such as legal and filing fees, are capitalized.

Heineken, a company based in Amsterdam, prepares its financial statements according to IFRS. The following disclosure note describes the company's adherence to *IAS No. 38*.

Software, Research and Development and Other Intangible Assets (in part)

Expenditures on research activities, undertaken with the prospect of gaining new technical knowledge and understanding, are recognized in the income statement when incurred. Development activities involve a plan or design for the production of new or substantially improved products and processes. Development expenditures are capitalized only if development costs can be measured reliably, the product or process is technically and commercially feasible, future economic benefits are probable, and Heineken intends to, and has sufficient resources to, complete development and to use or sell the asset. The expenditures capitalized include the cost of materials, direct labor and overhead costs that are directly attributable to preparing the asset for its intended use, and capitalized borrowing costs.

Amortization of capitalized development costs begins when development is complete and the asset is available for use. Heineken disclosed that it amortizes its capitalized development costs using the straight-line method over an estimated three-year useful life.

Source: Heineken

We've just discussed that U.S. GAAP requires R&D costs to be expensed immediately. There are three types of costs related to R&D, however, that are capitalized (recorded as an asset). These exceptions are shown below:

Page 540

1. Development costs for software that has reached the point of technological feasibility
2. R&D performed by the company for sale to others
3. R&D purchased in a business acquisition

Software Development Costs

The computer software industry has become a large and important U.S. business over the last two decades. Companies in this multibillion dollar industry include **Microsoft**, **Oracle**, **IBM**, **Adobe Systems**, and **Intuit**. A significant expenditure for these companies is the cost of developing software. In the early years of the software industry, some software companies

were capitalizing software development costs and expensing them in future periods, and others were expensing these costs in the period incurred.

Now GAAP establishes a timeline for purposes of accounting for software development costs. Any software costs incurred from initial development activity until **technological feasibility** of the software are treated like all other R&D costs (expensed as incurred).

Technological feasibility refers to the point in time “when the enterprise has completed all planning, designing, coding, and testing activities that are necessary to establish that the product can be produced to meet its design specifications, including functions, features, and technical performance requirements.”²³

Costs incurred after technological feasibility but before the software is available for general release to customers are capitalized as an intangible asset. These costs include items such as further coding and testing and the production of product masters. Any costs incurred after the software release date generally are expensed but not as part of R&D.

Costs incurred after technological feasibility but before product release are capitalized.

 **Illustration 10-21** shows the R&D timeline introduced earlier in the chapter modified to include the point at which technological feasibility is established. Only the costs incurred between technological feasibility and the software release date are capitalized.

ILLUSTRATION 10-21 Research and Development Expenditures—Computer Software

 **Illustration 10-22** shows the software disclosure included in a recent annual report of **Square, Inc.** The note provides a good summary of the accounting treatment of software development costs.

ILLUSTRATION 10-22 Software Disclosure—Square, Inc.

The Company capitalizes certain costs incurred in developing internal-use software when capitalization requirements have been met. Costs prior to meeting the capitalization requirements are expensed as incurred. Capitalized costs are included in property and equipment, net, and amortized on a straight-lined basis over the estimated useful life of the software and included in product development costs on the consolidated statements of operations. The Company capitalized \$42.0 million and \$22.5 million of internally developed software during the years ended December 31, 2020 and 2019, respectively, and recognized \$19.8 million, \$18.9 million and \$10.6 million of amortization expense during the years ended December 31, 2020, 2019 and 2018, respectively.

Source: CA, Inc.

Why do generally accepted accounting principles allow this exception to the general rule of expensing all R&D? We could attribute it to the political process. Software is a very important industry to our economy, and perhaps its lobbying efforts resulted in the standard allowing software companies to capitalize certain R&D costs.

We could also attribute the exception to the nature of the software business. Recall that R&D costs in general are expensed in the period incurred for two reasons: (1) They entail a high degree of uncertainty of future benefits, and (2) they are difficult to match with future benefits. With software, there is an important identifiable engineering milestone, technological feasibility. When this milestone is attained, the probability of the software product's success increases significantly. And because the useful life of software is fairly short (one to five years in most cases), it is much easier to determine the periods of increased revenues than for R&D projects in other industries. Compare this situation with, say, the development of a new drug. Even after the drug has been developed, it must go through extensive testing to meet approval by the Food and Drug Administration (FDA), which may never be attained. If attained, the useful life of the drug could be anywhere from a few months to many years.

The discussion above relates to costs incurred to develop or purchase computer software to be sold, leased, or otherwise marketed (that is, *for external purposes*).²⁴ We account for the costs incurred to develop computer software *to be used internally* in a similar manner. Costs incurred during the preliminary project stage are expensed as R&D. After the application development stage is reached (for example, at the coding stage or installation stage), we

capitalize any further costs.⁴⁵ If, instead, we *purchase* computer software for internal use, those costs generally are capitalized.

Cloud Computing Arrangements. Cloud computing arrangements are becoming increasingly popular as a way for companies to utilize software without having to maintain the software and related hardware. These arrangements involve a company using software by accessing (via the Internet or dedicated line) a vendor's or a third party's hardware. The costs of cloud computing arrangements are treated as the purchase of intangible assets if both:

1. The customer has a contractual right to take possession of the software without significant penalty, and
2. The customer could run the software on its own or with an unrelated vendor.

If either of these criteria is not met, the arrangement is treated as a service contract, and costs are expensed as incurred.

Any implementation costs incurred during the application development phase (integration with the company's own software, coding, and configuration or customization) are capitalized. Interestingly, even if the arrangement itself does not qualify for capitalization as an intangible asset (because one of the two criteria above is not met), implementation costs still can be capitalized. Any costs related to preliminary planning or the post-implementation operation, however, would be expensed as incurred.

R&D Performed for Others

The principle requiring the immediate expensing of R&D does not apply to companies that perform R&D for other companies under contract. In these situations, the R&D costs are capitalized as inventory and carried forward into future years until the project is completed. Of course, justification is that the benefits of these expenditures are the contract revenues that will eventually be recognized. Revenue from these contracts can be recognized over time or at a point in time, depending on the specifics of the contract. We discussed these alternatives in [Chapter 6](#).

R&D Purchased in Business Acquisitions

It's not unusual for one company to buy another company in order to obtain technology that the acquired company has developed or is in the process of developing. Any time a company

buys another, it values the tangible and intangible assets acquired at fair value. When part of the acquisition price involves technology, we distinguish between:

1. Developed technology.
2. In-process research and development.

To distinguish these two types of technology acquired, we borrow a criterion used in accounting for software development costs, and determine whether *technological feasibility* has been achieved. If it has, the technology is considered “developed,” and we capitalize its fair value (record it as an asset) and amortize that amount over its useful life just like any other *finite-life* intangible asset. For example, in 2019, **Salesforce** acquired all of the outstanding stock of **Tableau Software** for \$14.8 billion. Salesforce assigned \$2 billion of that amount to developed technology, to be amortized over the subsequent five years.

In business acquisitions, the fair value of developed technology is capitalized as an finite-life intangible asset.

For in-process R&D (technology that has not reached the feasibility stage), GAAP also requires capitalization of its fair value. However, unlike developed technology, we view in-process research and development (IPR&D) as an *indefinite-life* intangible asset.²⁶ As you will learn in  **Chapter 11**, we don’t amortize indefinite-life intangibles. Instead, we monitor these assets and test them for impairment when required by GAAP.

In business acquisitions, the fair value of in-process research and development is capitalized as an indefinite-life intangible asset.

If the acquired R&D project is completed successfully, we switch to the way we account for developed technology and amortize the capitalized amount over the estimated period the product or process developed will provide benefits. If the project instead is abandoned, we expense the entire balance immediately.

R&D costs incurred after the acquisition to complete the project are expensed as incurred, consistent with the treatment of usual R&D expenditures. Similarly, the purchase of R&D from third parties not associated with a business combination is expensed as incurred, just as if the company had performed the R&D activity itself. An exception is when the purchased R&D has an alternative use beyond a specific project.

As an example of R&D associated with a business acquisition, **AbbVie Inc.**, a global research-based biopharmaceutical company, acquired **Pharmacyclics Inc.**, for approximately \$20.8 billion. The fair values assigned included finite-life intangible assets of \$11.4 billion, in-process R&D of \$7.2 billion, and goodwill of \$7.6 billion (as well as other identifiable assets

of \$1.7 billion and liabilities of \$7.1 billion). As shown in [Illustration 10-23](#), AbbVie classified projects acquired that have not yet received regulatory approval as in-process R&D.

ILLUSTRATION 10-23 Acquired In-Process Research and Development—AbbVie, Inc.

Real World Financials

Acquired In-Process Research and Development

The initial costs of rights to IPR&D projects acquired in an asset acquisition are expensed as IPR&D in the consolidated statements of earnings unless the project has an alternative future use. These costs include initial payments incurred prior to regulatory approval in connection with research and development collaboration agreements that provide rights to develop, manufacture, market and/or sell pharmaceutical products. The fair value of IPR&D projects acquired in a business combination are capitalized and accounted for as indefinite-lived intangible assets until the underlying project receives regulatory approval, at which point the intangible asset will be accounted for as a definite-lived intangible asset, or discontinuation, at which point the intangible asset will be written off. Development costs incurred after the acquisition are expensed as incurred. Indefinite- and definite-lived assets are subject to impairment reviews as discussed previously.

Source: AbbVie, Inc.

Start-Up Costs

Whenever a company introduces a new product or service, or commences business in a new territory or with a new customer, it incurs **start-up costs**. Start-up costs also include **organization costs** related to organizing a new entity, such as legal fees and state filing fees to incorporate. As with R&D expenditures, companies are required to expense all the costs related to a company's start-up and organization activities in the period incurred, rather than capitalize those costs as an asset.²⁷

Start-up costs are expensed in the period incurred.

For the year ended December 31, 2020, **Chipotle Mexican Grill, Inc.**, opened 161 new restaurants. The company incurred a variety of one-time preopening costs for wages, benefits and travel for the training and opening teams, food, and other restaurant operating costs totaling \$16 million. These costs were expensed immediately.

Financial Reporting Case Solution

VDB Photos/Shutterstock

- 1. Describe to your friends the various costs to include in the initial cost of property and equipment.** In addition to the purchase price, the cost of property and equipment might include the cost of transportation, installation, testing, legal fees to establish title, and any other costs of bringing the asset to its condition and location for use.
- 2. What are some common types of intangible assets, and what is the accounting treatment for purchased versus internally developed intangible assets?** Intangible assets generally represent exclusive rights that provide benefits to the owner. They include items such as patents, copyrights, trademarks, franchises, and goodwill. Reporting purchased intangibles is similar to reporting purchased property, plant, and equipment. We record purchased intangible assets at their original cost plus all other costs, such as legal fees, necessary to get the asset ready for use. Reporting intangible assets that are developed internally is quite different. Rather than reporting these in the balance sheet as assets, we typically expense them in the income statement in the period we incur those internal development costs.

3. What is goodwill and how is it measured? Goodwill represents the unique value of a company as a whole over and above its identifiable tangible and intangible assets. Because goodwill can't be separated from a company, it's not possible for a buyer to acquire it without also acquiring the whole company or a controlling portion of it. Goodwill will appear as an asset in a balance sheet only when purchased in connection with the acquisition of another company. In that case, the capitalized cost of goodwill equals the fair value of the consideration exchanged for the company less the fair value of the net assets acquired. Goodwill is a residual asset; it's the amount left after other assets are identified and valued.

4. Why are expenditures for research and development reported in the income statement instead of the balance sheet? The reasons for this approach include: (1) the difficulty in predicting which individual research and development projects will ultimately provide benefits and (2) the difficulty in establishing a direct relationship between research and development costs and specific future revenue. In other words, even if R&D costs do lead to future benefits, it's difficult to objectively determine the size of the benefits and in which periods the costs should be expensed if they are capitalized. For these reasons, *the FASB takes a conservative approach and requires R&D costs to be expensed immediately.* ●

The Bottom Line

- LO10-1** The initial cost of property, plant, and equipment and intangible assets acquired in an exchange transaction includes the purchase price and all expenditures necessary to bring the asset to its desired condition and location for use. The cost of a natural resource includes the acquisition costs for the use of land, the exploration and development costs incurred before production begins, and restoration costs incurred during or at the end of extraction. Purchased intangible assets are valued at their original cost to include the purchase price and legal and filing fees. (*p. 512*)
- LO10-2** If a lump-sum purchase involves different assets, it is necessary to allocate the lump-sum acquisition price among the separate items according to some logical allocation method. A widely used allocation method is to divide the lump-sum purchase price according to the individual asset's relative fair values. (*p. 521*)
- LO10-3** Assets acquired in exchange for deferred payment contracts are valued at their fair value or the present value of payments using a realistic interest rate. (*p. 522*)
- LO10-4** Assets acquired through the issuance of equity securities are valued at the fair value of the securities if known; if not known, the fair value of the assets received is used. Donated assets are valued at their fair value. (*p. 524*)
- LO10-5** A key to profitability is how well a company manages and utilizes its assets. Financial analysts often use activity, or turnover, ratios to evaluate a company's effectiveness in managing its assets. Property, plant, and equipment (PP&E) usually are a company's primary revenue-generating assets. Their efficient use is critical to generating a satisfactory return to owners. One ratio that analysts often use to measure how effectively managers use PP&E is the fixed-asset turnover ratio. This ratio is calculated by dividing net sales by average fixed assets. (*p. 526*)
- LO10-6** The basic principle used for nonmonetary exchanges is to value the asset(s) received based on the fair value of the asset(s) given up. In certain situations, the valuation of the asset(s) received is based on the book value of the asset(s) given up. (*p. 527*)

- LO10-7** The cost of a self-constructed asset includes identifiable materials and labor and a portion of the company's manufacturing overhead costs. In addition, GAAP provides for the capitalization of interest incurred during construction. The amount of interest capitalized is equal to the average accumulated expenditures for the period multiplied by the appropriate interest rates, not to exceed actual interest incurred. (p. 531)
- LO10-8** Research and development costs incurred to internally develop an intangible asset are expensed in the period incurred. Filing and legal costs for developed intangibles are capitalized. (p. 537)
- LO10-9** *IAS No. 20* requires that government grants be recognized in income over the periods necessary to match them on a systematic basis with the related costs that they are intended to compensate. Other than software development costs incurred after technological feasibility has been established, U.S. GAAP requires all research and development expenditures to be expensed in the period incurred. *IAS No. 38* draws a distinction between research activities and development activities. Research expenditures are expensed in the period incurred. However, development expenditures that meet specified criteria are capitalized as an intangible asset. (pp. 525 and 539) ●

APPENDIX 10 Oil and Gas Accounting

There are two generally accepted methods that companies can use to account for oil and gas exploration costs. The **successful efforts method** requires that exploration costs that are known *not* to have resulted in the discovery of oil or gas (sometimes referred to as *dry holes*) be included as expenses in the period the expenditures are made. The alternative, the **full-cost method**, allows costs incurred in searching for oil and gas within a large geographical area to be capitalized as assets and expensed in the future as oil and gas from the successful wells are removed from that area. Both of these methods are widely used. [Illustration 10A-1](#) compares the two alternatives.

Illustration 10A-1 Oil and Gas Accounting

The Shannon Oil Company incurred \$2,000,000 in exploration costs for each of 10 oil wells in west Texas. Eight of the 10 wells were dry holes.

The accounting treatment of the \$20 million in total exploration costs will vary significantly depending on the accounting method used. The summary journal entries using each of the alternative methods are shown below.

| | Successful Efforts | | Full Cost |
|---------------------|--------------------|-------------|------------|
| Oil Deposit | 4,000,000 | Oil Deposit | 20,000,000 |
| Exploration Expense | 16,000,000 | Cash | |
| Cash | | | 20,000,000 |

Using the full-cost method, Shannon would capitalize the entire \$20 million which is expensed as oil from the two successful wells is depleted. On the other hand, using the successful efforts method, the cost of the unsuccessful wells is expensed in 2024, and only the \$4 million cost related to the successful wells is capitalized and expensed in future periods as the oil is depleted.

Chapter 1 characterized the establishment of accounting and reporting standards as a political process. Standards, particularly changes in standards, can have significant differential effects on companies, investors and creditors, and other interest groups. The

FASB must consider potential economic consequences of a change in an accounting standard or the introduction of a new standard. The history of oil and gas accounting provides a good example of this political process and the effect of possible adverse economic consequences on the standard-setting process.

In 1977, the FASB attempted to establish uniformity in the accounting treatment of oil and gas exploration costs. An accounting standard was issued requiring all companies to use the successful efforts method.³⁰

This standard met with criticism from the oil and gas companies that were required to switch from full cost to successful efforts accounting. These companies felt that the switch would seriously depress their reported income over time. As a result, they argued, their ability to raise capital in the securities markets would be inhibited, which would result in a cutback of new exploration. The fear that the standard would cause domestic companies to significantly reduce oil and gas exploration and thus increase our dependence on foreign oil was compelling to Congress, the SEC, and the U.S. Department of Energy.

Many feared that the requirement to switch to successful efforts accounting would cause a significant cutback in the exploration for new oil and gas in the United States.

Extensive pressure from Congress, the SEC, and affected companies forced the FASB to rescind the standard. Presently, oil and gas companies can use either the successful efforts or full-cost method to account for oil and gas exploration costs. Of course, the method used must be disclosed. For example,  **Illustration 10A-2** shows how **Chevron Corp.** disclosed its use of the successful efforts method in its summary of significant accounting policies.

Illustration 10A-2 Oil and Gas Accounting Disclosure—Chevron Corp.

Questions For Review of Key Topics

- Q 10-1** Explain the difference between tangible and intangible long-lived, revenue-producing assets.
- Q 10-2** What is included in the original cost of property, plant, and equipment and intangible assets acquired in an exchange transaction?
- Q 10-3** Identify the costs associated with the initial valuation of a developed natural resource.
- Q 10-4** Briefly summarize the accounting treatment for intangible assets, explaining the difference between purchased and internally developed intangible assets.
- Q 10-5** What is goodwill, and how is it measured?
- Q 10-6** Explain the method generally used to allocate the cost of a lump-sum purchase to the individual assets acquired.
- Q 10-7** When an asset is acquired and a note payable is assumed, explain how acquisition cost of the asset is determined when the interest rate for the note is less than the current market rate for similar notes.
- Q 10-8** Explain how assets acquired in exchange for equity securities are valued.
- Q 10-9** Explain how property, plant, and equipment and intangible assets acquired through donation are valued.
- Q 10-10** What account is credited when a company receives donated assets? What is the rationale for this choice?
- Q 10-11** What is the basic principle for valuing property, plant, and equipment and intangible assets acquired in exchange for other nonmonetary assets?
- Q 10-12** Identify the two exceptions to valuing property, plant, and equipment and intangible assets acquired in nonmonetary exchanges at the fair value of the asset(s) given up.
- Q 10-13** In what situations is interest capitalized?
- Q 10-14** Define average accumulated expenditures and explain how the amount is computed.
- Q 10-15** Explain the difference between the specific interest method and the weighted-average method in determining the amount of interest to be capitalized.
- Q 10-16** Define R&D according to U.S. GAAP.
- Q 10-17** Explain the accounting treatment of equipment acquired for use in R&D projects.

- Q 10-18** Explain the accounting treatment of costs incurred to develop computer software.
- Q 10-19** Explain the difference in the accounting treatment of the cost of developed technology and the cost of in-process R&D in an acquisition.
-  **IFRS**
- Q 10-20** Identify any differences between U.S. GAAP and International Financial Reporting Standards in accounting for government grants received.
-  **IFRS**
- Q 10-21** Identify any differences between U.S. GAAP and International Financial Reporting Standards in the treatment of research and development expenditures.
-  **IFRS**
- Q 10-22** Identify any differences between U.S. GAAP and International Financial Reporting Standards in the treatment of software development costs.
- Q 10-23** (Based on  **Appendix 10**) Explain the difference between the successful efforts and the full-cost methods of accounting for oil and gas exploration costs.

Brief Exercises

BE 10–1 Acquisition cost; equipment LO10–1

Beaverton Lumber purchased milling equipment for \$35,000. In addition to the purchase price, Beaverton made the following expenditures: freight, \$1,500; installation, \$3,000; testing, \$2,000; personal property tax on the equipment for the first year, \$500. What is the initial cost of the equipment?

Page 547

BE 10–2 Acquisition cost; land and building LO10–1

Falcon Waste Management purchased land and a warehouse for \$600,000. In addition to the purchase price, Falcon made the following expenditures related to the acquisition: broker's commission, \$30,000; title insurance, \$3,000; miscellaneous closing costs, \$6,000. The warehouse was immediately demolished at a cost of \$18,000 in anticipation of the building of a new warehouse. Determine the amounts Falcon should capitalize as the cost of the land and the building.

BE 10–3 Lump-sum acquisition LO10–2

Refer to the situation described in  BE 10–2. Assume that Falcon decides to use the warehouse rather than demolish it. An independent appraisal estimates the fair values of the land and warehouse at \$420,000 and \$280,000, respectively. Determine the amounts Falcon should capitalize as the cost of the land and the building.

BE 10–4 Cost of a natural resource; asset retirement obligation LO10–1

Smithson Mining operates a silver mine in Nevada. Acquisition, exploration, and development costs totaled \$5.6 million. After the silver is extracted in approximately five years, Smithson is obligated to restore the land to its original condition, including constructing a wildlife preserve. The company's controller has provided the following three cash flow possibilities for the restoration costs: (1) \$500,000, 20% probability; (2) \$550,000,

45% probability; and (3) \$650,000, 35% probability. The company's credit-adjusted, risk-free rate of interest is 6%. What is the initial cost of the silver mine?

BE 10–5 Asset retirement obligation **LO10–1**

Refer to the situation described in  **BE 10–4**. What is the book value of the asset retirement liability at the end of one year? Assuming that the actual restoration costs incurred after five years are \$596,000, what amount of gain or loss will Smithson recognize on retirement of the liability?

BE 10–6 Patent **LO10–1**

On March 17, Advanced Technologies purchased a patent related to laser surgery techniques. The purchase price of the patent is \$1,200,000. The patent is expected to benefit the company for the next five years. The company had the following additional costs: \$20,000 in legal fees associated with the purchase and filing of the patent, \$35,000 to advertise its new laser surgery techniques, and \$45,000 to train employees. None of these additional costs were included in the purchase price or paid to the seller. What is the recorded cost of the patent?

BE 10–7 Patent; research and development **LO10–1**, **LO10–8**

Refer to the information in  **BE 10–6**. Now assume that instead of purchasing the patent, Advanced Technologies spent \$1,200,000 to develop the patent internally, consisting of personnel (\$800,000), equipment (\$300,000), and materials (\$100,000). All additional costs were incurred for the same amount. What is the recorded cost of the patent?

BE 10–8 Goodwill **LO10–1**

Pro-tech Software acquired all of the outstanding stock of Reliable Software for \$14 million. The book value of Reliable's net assets (assets minus liabilities) was \$8.3 million. The fair values of Reliable's assets and liabilities equaled their book values with the exception of certain intangible assets whose fair values exceeded book values by \$2.5 million. Calculate the amount paid for goodwill.

BE 10–9 Acquisition cost; noninterest-bearing note **LO10–3**

On June 30, 2024, Countryside Farms purchased custom-made harvesting equipment from a local producer. In payment, Countryside signed a noninterest-bearing note requiring the payment of \$60,000 in two years. The fair value of the equipment is not known, but an 8% interest rate properly reflects the time value of money for this type of loan agreement. At what amount will Countryside initially value the equipment? How much interest expense will Countryside recognize in its income statement for this note for the year ended December 31, 2024?

BE 10–10 Acquisition cost; noninterest-bearing note  **LO10–3**

On September 30, 2024, Crown Corporation purchased franchise rights from a national restaurant chain. In payment, Crown has the option of paying \$356,000 immediately or \$400,000 in two years by signing a noninterest-bearing note. Crown chooses the option of paying \$400,000 in two years. At what amount will Crown initially value the franchise? How much interest expense will Crown recognize in its income statement for this note for the year ended December 31, 2024?

BE 10–11 Acquisition cost; issuance of equity securities  **LO10–4**

Diamond Corporation acquired a patent in exchange for 50,000 shares of the company’s no-par common stock. On the date of the exchange, the common stock had a fair value of \$22 per share. Determine the cost of the patent.

BE 10–12 Fixed-asset turnover ratio  **LO10–5**

Huebert Corporation and Winslow Corporation reported the following information:

| | (\$ in millions) | | | |
|--------------------------------------|------------------|-------|---------|-------|
| | Huebert | | Winslow | |
| | 2024 | 2023 | 2024 | 2023 |
| Property, plant, and equipment (net) | \$210 | \$220 | \$680 | \$650 |
| Net sales—2024 | \$1,850 | | \$5,120 | |

Calculate each companies fixed-asset turnover ratio and determine which company utilizes its fixed assets most efficiently to generate sales.

BE 10–13 Fixed-asset turnover ratio; solve for unknown

 **LO10–5**

The balance sheets of Pinewood Resorts reported net fixed assets of \$740,000 and \$940,000 at the end of 2023 and 2024, respectively. The fixed-asset turnover ratio for 2024 was 3.25. Calculate Pinewood's net sales for 2024.

BE 10–14 Nonmonetary exchange  **LO10–6**

Calaveras Tire exchanged equipment for two pickup trucks. The book value and fair value of the equipment given up were \$20,000 (original cost of \$65,000 less accumulated depreciation of \$45,000) and \$17,000, respectively. Assume Calaveras paid \$8,000 in cash and the exchange has commercial substance. (1) At what amount will Calaveras value the pickup trucks? (2) How much gain or loss will the company recognize on the exchange?

BE 10–15 Nonmonetary exchange  **LO10–6**

Refer to the situation described in  **BE 10–14**. Answer the questions assuming that the fair value of the equipment was \$24,000, instead of \$17,000.

BE 10–16 Nonmonetary exchange  **LO10–6**

Refer to the situation described in  **BE 10–15**. Answer the questions assuming that the exchange lacks commercial substance.

BE 10–17 Interest capitalization  **LO10–7**

A company constructs a building for its own use. Construction began on January 1 and ended on December 30. The expenditures for construction were as follows: January 1, \$500,000; March 31, \$600,000; June 30, \$400,000; October 30, \$600,000. To help finance construction, the company arranged a 7% construction loan on January 1 for \$700,000. The company's other borrowings, outstanding for the whole year, consisted of a \$3 million loan and a \$5 million note with interest rates of 8% and 6%, respectively. Assuming the company uses the *specific interest method*, calculate the amount of interest capitalized for the year.

BE10–18 Interest capitalization  **LO10–7**

Refer to the situation described in  **BE 10-17**. Assuming the company uses the *weighted-average method*, calculate the amount of interest capitalized for the year.

BE 10-19 Research and development **LO10-8**

Maxtor Technology incurred the following costs during the year related to the creation of a new type of personal computer monitor:

| | |
|---|-----------|
| Salaries | \$220,000 |
| Depreciation on R&D facilities and equipment | 125,000 |
| Utilities and other direct costs incurred for the R&D facilities | 66,000 |
| Patent filing and related legal costs | 22,000 |
| Payment to another company for performing a portion of the development work | 120,000 |
| Costs of adapting the new monitor for the specific needs of a customer | 80,000 |

What amount should Maxtor report as research and development expense in its income statement?

BE 10-20 Software development costs; external purposes **LO10-8**

In February 2024, Culverson Company began developing a new software package to be sold to customers. The software allows people to enter health information and daily eating and exercise habits to track their health status. The project was completed in November 2024 at a cost of \$800,000. Of this amount, \$300,000 was spent before technological feasibility was established. Culverson expects a useful life of two years for the new product and total revenues of \$1,500,000. Determine the amount that Culverson should capitalize as software development costs in 2024.

BE 10-21 Software development costs; internal purposes **LO10-8**

In March 2024, Price Company began developing a new software system to be used internally for managing its inventory. The software integrates customer orders with

inventory on hand to automatically place orders for additional inventory when needed. The software then automatically records inventory as the shipment is received and read by scanners. The software development was completed in October 2024 at a cost of \$150,000. Of this amount, \$25,000 was spent before the application development stage was established. Price expects to use the software for at least five years. Determine the initial amount that Price should capitalize as software development costs.

BE 10–22 Software development costs; cloud computing arrangements  **LO10–8**

Garrett Corporation began operations in 2024. To maintain its accounting records, Garrett entered into a two-year agreement with Accurite Company. The agreement specifies that Garrett will pay \$35,000 to Accurite immediately, and in return, Accurite will make its accounting software accessible via the Internet to Garrett and maintain all infrastructure necessary to run the software and store records. At any time, Garrett Corporation can freely remove its records and run the software on its own hardware or that of another accounting services company. In addition to the cost of the agreement, Garrett incurred \$5,000 early in the year devising a plan for its accounting software needs, \$15,000 for customizing its own computers for integration with Accurite’s software, and \$10,000 after the software was implemented to train its employees. Determine the initial amount that Garrett should capitalize related to the software development costs.

BE 10–23 Research and development; various types  **LO10–8**

Maltese Laboratories incurred the following research and developments costs related to its pharmaceutical business:

| | |
|--|-----------|
| Internal projects (salaries, supplies, overhead for R&D facilities) | \$620,000 |
| Payment to acquire R&D from a third party related to a specific project | 75,000 |
| Costs of an R&D project to be sold under contract to Libo Pharmacy, a third party | 82,000 |
| In-process R&D associated with the acquisition of Curatics, an independent research company. | 148,000 |

What amount should Maltese report as research and development expense in its income statement?

BE 10–24 Start-up costs  **LO10–8**

In the current year, Big Burgers, Inc., expanded its fast-food operations by opening several new stores in Texas. The company incurred the following costs in the current year: market appraisal (\$50,000), consulting fees (\$72,000), advertising (\$47,000), and traveling to train employees (\$31,000). The company is willing to incur these costs because it foresees strong customer demand in Texas for the next several years. What amount should Big Burgers report as an expense in its income statement associated with these costs?

Exercises

E 10–1 Acquisition costs; land and building LO10–1

On March 1, 2024, Beldon Corporation purchased land as a factory site for \$60,000. An old building on the property was demolished, and construction began on a new building that was completed on December 15, 2024. Costs incurred during this period are listed below:

| | |
|---|----------|
| Demolition of old building | \$ 4,000 |
| Architect's fees (for new building) | 12,000 |
| Legal fees for title investigation of land | 2,000 |
| Property taxes on land (for period beginning March 1, 2024) | 3,000 |
| Construction costs | 500,000 |
| Interest on construction loan | 5,000 |

Salvaged materials resulting from the demolition of the old building were sold for \$2,000.

Required:

Determine the amounts that Beldon should capitalize as the cost of the land and the new building.

E 10–2 Acquisition cost; equipment LO10–1

Oaktree Company purchased new equipment and made the following expenditures:

| | |
|---|----------|
| Purchase price | \$45,000 |
| Sales tax | 2,200 |
| Freight charges for shipment of equipment | 700 |
| Insurance on the equipment for the first year | 900 |
| Installation of equipment | 1,000 |

The equipment, including sales tax, was purchased on open account, with payment due in 30 days. The other expenditures listed above were paid in cash.

Required:

Prepare the necessary journal entries to record the above expenditures.

E 10–3 Acquisition costs; lump-sum acquisition  **LO10–1,**
 **LO10–2**

Samtech Manufacturing purchased land and a building for \$4 million. In addition to the purchase price, Samtech made the following expenditures in connection with the purchase of the land and building:

| | |
|---|----------|
| Title insurance | \$16,000 |
| Legal fees for drawing the contract | 5,000 |
| Pro-rated property taxes for the period after acquisition | 36,000 |
| State transfer fees | 4,000 |

An independent appraisal estimated the fair values of the land and building, if purchased separately, at \$3.3 and \$1.1 million, respectively. Shortly after acquisition, Samtech spent \$82,000 to construct a parking lot and \$40,000 for landscaping.

Required:

1. Determine the initial valuation of each asset Samtech acquired in these transactions.
2. Repeat requirement 1, assuming that immediately after acquisition, Samtech demolished the building. Demolition costs were \$250,000 and the salvaged materials were sold for \$6,000. In addition, Samtech spent \$86,000 clearing and grading the land in preparation for the construction of a new building.

E 10–4 Cost of a natural resource; asset retirement obligation
 **LO10–1**

Jackpot Mining Company operates a copper mine in central Montana. The company paid \$1,000,000 in 2024 for the mining site and spent an additional \$600,000 to prepare the mine for extraction of the copper. After the copper is extracted in approximately four years, the company is required to restore the land to its original condition, including repaving of

roads and replacing a greenbelt. The company has provided the following three cash flow possibilities for the restoration costs:

| | Cash Outflow | Probability |
|---|--------------|-------------|
| 1 | \$300,000 | 25% |
| 2 | 400,000 | 40% |
| 3 | 600,000 | 35% |

To aid extraction, Jackpot purchased some new equipment on July 1, 2024, for \$120,000. After the copper is removed from this mine, the equipment will be sold. The credit-adjusted, risk-free rate of interest is 10%.

Required:

1. Determine the cost of the copper mine.
2. Prepare the journal entries to record the acquisition costs of the mine and the purchase of equipment.

E 10–5 Intangibles **LO10–1**

In 2024, Bratten Fitness Company made the following cash purchases:

1. The exclusive right to manufacture and sell the X-Core workout equipment from Symmetry Corporation for \$200,000. Symmetry created the unique design for the equipment. Bratten also paid an additional \$10,000 in legal and filing fees to attorneys to complete the transaction.
2. An initial fee of \$300,000 for a three-year agreement with Silver’s Gym to use its name for a new facility in the local area. Silver’s Gym has locations throughout the country. Bratten is required to pay an additional fee of \$5,000 for each month it operates under the Silver’s Gym name, with payments beginning in March 2024. Bratten also purchased \$400,000 of exercise equipment to be placed in the new facility.
3. The exclusive right to sell *Healthy Choice*, a book authored by Kent Patterson, for \$25,000. The book includes healthy recipes, recommendations for dietary supplements, and natural remedies. Bratten plans to display the book at the check-in counter at its new facility, as well as make it available online.

Required:

Prepare a summary journal entry to record expenditures related to initial acquisitions.

E 10–6 Goodwill LO10–1

On March 31, 2024, Wolfson Corporation acquired all of the outstanding common stock of Barney Corporation for \$17,000,000 in cash. The book values and fair values of Barney's assets and liabilities were as follows:

| | Book Value | Fair Value |
|--------------------------------|--------------|--------------|
| Current assets | \$ 6,000,000 | \$ 7,500,000 |
| Property, plant, and equipment | 11,000,000 | 14,000,000 |
| Other assets | 1,000,000 | 1,500,000 |
| Current liabilities | 4,000,000 | 4,000,000 |
| Long-term liabilities | 6,000,000 | 5,500,000 |

Required:

Calculate the amount paid for goodwill.

E 10–7 Goodwill LO10–1

Janzen Corporation acquired all of the outstanding common stock of Steinbeck Corporation for \$11,000,000 in cash. The book values and fair values of Steinbeck's assets and liabilities were the following:

| | Book Value | Fair Value |
|---------------------|-------------|-------------|
| Accounts receivable | \$1,300,000 | \$1,100,000 |
| Land | 1,200,000 | 1,500,000 |
| Equipment | 6,800,000 | 7,900,000 |
| Patent | 200,000 | 1,200,000 |
| Accounts payable | 1,700,000 | 1,700,000 |

Required:

1. Calculate the amount paid for goodwill.
2. Record the acquisition of Steinbeck Corporation.

E 10–8 Lump-sum acquisition LO10–2

Pinewood Company purchased two buildings on four acres of land. The lump-sum purchase price was \$900,000. According to independent appraisals, the fair values were \$450,000 (building A) and \$250,000 (building B) for the buildings and \$300,000 for the land.

Required:

Determine the initial valuation of the buildings and the land.

E 10–9 Acquisition cost; noninterest-bearing note LO10–3

On January 1, 2024, Byner Company purchased a used tractor. Byner paid \$5,000 down and signed a noninterest-bearing note requiring \$25,000 to be paid on December 31, 2026. The fair value of the tractor is not determinable. An interest rate of 10% properly reflects the time value of money for this type of loan agreement. The company's fiscal year-end is December 31.

Required:

1. Prepare the journal entry to record the acquisition of the tractor. Round computations to the nearest dollar.
2. How much interest expense will the company include in its 2024 and 2025 income statements for this note?
3. What is the amount of the liability the company will report in its 2024 and 2025 balance sheets for this note?

E 10–10 Acquisition costs; noninterest-bearing note LO10–1, LO10–3

Teradene Corporation purchased land as a factory site and contracted with Maxtor Construction to construct a factory. Teradene made the following expenditures related to the acquisition of the land, building, and equipment for the factory:

| | |
|---|-------------|
| Purchase price of the land | \$1,200,000 |
| Demolition and removal of old building | 80,000 |
| Clearing and grading the land before construction | 150,000 |
| Various closing costs in connection with acquiring the land | 42,000 |

| | |
|--|-----------|
| Architect's fee for the plans for the new building | 50,000 |
| Payments to Maxtor for building construction | 3,250,000 |
| Equipment purchased | 860,000 |
| Freight charges on equipment | 32,000 |
| Trees, plants, and other landscaping | 45,000 |
| Installation of a sprinkler system for the landscaping | 5,000 |
| Cost to build special platforms and install wiring for the equipment | 12,000 |
| Cost of trial runs to ensure proper installation of the equipment | 7,000 |
| Fire and theft insurance on the factory for the first year of use | 24,000 |

In addition to the above expenditures, Teradene purchased four forklifts from **Caterpillar**. In payment, Teradene paid \$16,000 cash and signed a noninterest-bearing note requiring the payment of \$70,000 in one year. An interest rate of 7% properly reflects the time value of money for this type of loan.

Required:

Determine the amount Teradene would record for each of the assets acquired in the above transactions.

E 10–11 IFRS; acquisition cost; issuance of equity securities and donation  **LO10–4**,  **LO10–9**

IFRS

On February 1, 2024, the Xilon Corporation issued 50,000 shares of its no-par common stock in exchange for five acres of land located in the city of Monrovia. On the date of the acquisition, Xilon's common stock had a fair value of \$18 per share. An office building was constructed on the site by an independent contractor. The building was completed on November 2, 2024, at a cost of \$6,000,000. Xilon paid \$4,000,000 in cash and the remainder was paid by the city of Monrovia.

Required:

1. Assuming that Xilon prepares its financial statements according to U.S. GAAP, prepare the journal entries to record the acquisition of the land and the building.

2. Assuming that Xilon prepares its financial statements according to International Financial Reporting Standards, explain the alternatives the company has for recording the acquisition of the office building.

E 10–12 IFRS; acquisition cost; acquisition by donation; government grant  **LO10–9**

IFRS

Cranston LTD prepares its financial statements according to International Financial Reporting Standards. In October 2024, the company received a \$2 million government grant. The grant represents 20% of the total cost of equipment that will be used to improve the roads in the local area. Cranston recorded the grant and the purchase of the equipment as follows:

| | | |
|-----------|------------|------------|
| Cash | 2,000,000 | |
| Revenue | | 2,000,000 |
| Equipment | 10,000,000 | |
| Cash | | 10,000,000 |

Required:

1. Explain the alternative accounting treatments available to Cranston for accounting for this government grant.
2. Prepare any necessary correcting entries under each of the alternatives described in requirement 1.

E 10–13 Fixed-asset turnover ratio; Nvidia  **LO10–5**

Real World Financials

Nvidia Corporation, a global technology company located in Santa Clara, California, reported the following information in its financial statements for the fiscal year ending January 26, 2020 (\$ in millions):

| | 2020 | 2019 |
|-----------------------|------|------|
| Balance sheets | | |

| | 2020 | 2019 |
|--------------------------------------|----------|---------|
| Property, plant, and equipment (net) | \$1,674 | \$1,404 |
| Income statement | | |
| Net sales for 2020 | \$10,918 | |

Required:

1. Calculate the company's 2020 fixed-asset turnover ratio.
2. How would you interpret this ratio?

E 10–14 Nonmonetary exchange  **LO10–6**

Cedric Company recently traded in an older model of equipment for a new model. The old model's book value was \$180,000 (original cost of \$400,000 less \$220,000 in accumulated depreciation) and its fair value was \$200,000. Cedric paid \$60,000 to complete the exchange which has commercial substance.

Required:

Prepare the journal entry to record the exchange.

E 10–15 Nonmonetary exchange  **LO10–6**

Assume the same facts as in  **E 10-14**, except that the fair value of the old equipment is \$170,000.

Required:

Prepare the journal entry to record the exchange.

E 10–16 Nonmonetary exchange  **LO10–6**

The Bronco Corporation exchanged land for equipment. The land had a book value of \$120,000 and a fair value of \$150,000. Bronco paid the owner of the equipment \$10,000 to complete the exchange which has commercial substance.

Required:

1. What is the fair value of the equipment?
2. Prepare the journal entry to record the exchange.

E 10-17 Nonmonetary exchange LO10-6

Assume the same facts as in  E 10-16 except that Bronco *received* \$10,000 from the owner of the equipment to complete the exchange.

Required:

1. What is the fair value of the equipment?
2. Prepare the journal entry to record the exchange.

E 10-18 Nonmonetary exchange LO10-6

The Tinsley Company exchanged land that it had been holding for future plant expansion for a more suitable parcel located farther from residential areas. Tinsley carried the land at its original cost of \$30,000. According to an independent appraisal, the land currently is worth \$72,000. Tinsley paid \$14,000 in cash to complete the transaction.

Required:

1. What is the fair value of the new parcel of land received by Tinsley?
2. Prepare the journal entry to record the exchange assuming the exchange has commercial substance.
3. Prepare the journal entry to record the exchange assuming the exchange lacks commercial substance.
4. Prepare the journal entry to record the exchange except that Tinsley *received* \$9,000 in the exchange, and the exchange lacks commercial substance.

E 10-19 Acquisition cost; multiple methods LO10-1, LO10-3, LO10-4, LO10-6

Connors Corporation acquired manufacturing equipment for use in its assembly line. Below are four *independent* situations relating to the acquisition of the equipment.

1. The equipment was purchased on account for \$25,000. Credit terms were 2/10, n/30. Payment was made within the discount period and the company records the purchases of equipment net of discounts.
2. Connors gave the seller a noninterest-bearing note. The note required payment of \$27,000 one year from date of purchase. The fair value of the equipment is not determinable. An interest rate of 10% properly reflects the time value of money in this situation.

3. Connors traded in old equipment that had a book value of \$6,000 (original cost of \$14,000 and accumulated depreciation of \$8,000) and paid cash of \$22,000. The old equipment had a fair value of \$2,500 on the date of the exchange. The exchange has commercial substance.
4. Connors issued 1,000 shares of its no-par common stock in exchange for the equipment. The market value of the common stock was not determinable. The equipment could have been purchased for \$24,000 in cash.

Required:

For each of the above situations, prepare the journal entry required to record the acquisition of the equipment. Round computations to the nearest dollar.

E 10–20 FASB codification research  **LO10–6**

Access the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org) and select Basic View for free access. Determine the specific eight-digit Codification citation (XXX-XX-XX-X) that describes each of the following items:

1. The basic principle for recording nonmonetary transactions at fair value.
2. Modifications of the basic principle for recording nonmonetary transactions when fair value is not determinable or the exchange lacks commercial substance.
3. The concept of commercial substance.
4. The required disclosures for nonmonetary transactions.

E 10–21 FASB codification research  **LO10–1**,  **LO10–6**,  **LO10–7**,  **LO10–8**

Access the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org) and select Basic View for free access. Determine the specific eight-digit Codification citation (XXX-XX-XX-X) that describes each of the following items:

1. The disclosure requirements in the notes to the financial statements for depreciation on property, plant, and equipment.
2. The criteria for determining commercial substance in a nonmonetary exchange.
3. The disclosure requirements for interest capitalization.
4. The elements of costs to be included as R&D activities.

E 10–22 Interest capitalization **LO10–7**

On January 1, 2024, the Marjlee Company began construction of an office building to be used as its corporate headquarters. The building was completed early in 2025. Construction expenditures for 2024, which were incurred evenly throughout the year, totaled \$6,000,000. Marjlee had the following debt obligations which were outstanding during all of 2024:

| | |
|------------------------|-------------|
| Construction loan, 10% | \$1,500,000 |
| Long-term note, 9% | 2,000,000 |
| Long-term note, 6% | 4,000,000 |

Required:

Calculate the amount of interest capitalized in 2024 for the building using the specific interest method.

E 10–23 Interest capitalization **LO10–7**

On January 1, 2024, the Shagri Company began construction on a new manufacturing facility for its own use. The building was completed in 2025. The only interest-bearing debt the company had outstanding during 2024 was long-term bonds with a book value of \$10,000,000 and an effective interest rate of 8%. Construction expenditures incurred during 2024 were as follows:

| | |
|--------------|-----------|
| January 1 | \$500,000 |
| March 1 | 600,000 |
| July 31 | 480,000 |
| September 30 | 600,000 |
| December 31 | 300,000 |

Required:

Calculate the amount of interest capitalized for 2024.

E 10–24 Interest capitalization  **LO10–7**

On January 1, 2024, the Highlands Company began construction on a new manufacturing facility for its own use. The building was completed in 2025. The company borrowed \$1,500,000 at 8% on January 1 to help finance the construction. In addition to the construction loan, Highlands had the following debt outstanding throughout 2024:

\$5,000,000, 12% bonds
\$3,000,000, 8% long-term note

Construction expenditures incurred during 2024 were as follows:

| | |
|--------------|------------|
| January 1 | \$ 600,000 |
| March 31 | 1,200,000 |
| June 30 | 800,000 |
| September 30 | 600,000 |
| December 31 | 400,000 |

Required:

Calculate the amount of interest capitalized for 2024 using the specific interest method.

E 10–25 Interest capitalization; multiple periods  **LO10–7**

Thornton Industries began construction of a warehouse on July 1, 2024. The project was completed on March 31, 2025. No new loans were required to fund construction. Thornton does have the following two interest-bearing liabilities that were outstanding throughout the construction period:

\$2,000,000, 8% note
\$8,000,000, 4% bonds

Construction expenditures incurred were as follows:

| | |
|--------------------|-----------|
| July 1, 2024 | \$400,000 |
| September 30, 2024 | 600,000 |
| November 30, 2024 | 600,000 |
| January 30, 2025 | 540,000 |

The company's fiscal year-end is December 31.

Required:

Calculate the amount of interest capitalized for 2024 and 2025.

E 10–26 Research and development  **LO10–8**

In 2024, Space Technology Company modified its model Z2 satellite to incorporate a new communication device. The company made the following expenditures:

| | |
|---|--------------------|
| Basic research to develop the technology | \$2,000,000 |
| Engineering design work | 680,000 |
| Development of a prototype device | 300,000 |
| Acquisition of equipment | 60,000 |
| Testing and modification of the prototype | 200,000 |
| Legal and other fees for patent application on the new communication system | 40,000 |
| Legal fees for successful defense of the new patent | 20,000 |
| Total | <u>\$3,300,000</u> |

The equipment will be used on this and other research projects. Depreciation on the equipment for 2024 is \$10,000.

During your year-end review of the accounts related to intangibles, you discover that the company has capitalized all of the above as costs of the patent. Management contends that the device simply represents an improvement of the existing communication system of the satellite and, therefore, should be capitalized.

Required:

Prepare correcting entries that reflect the appropriate treatment of the expenditures.

E 10–27 Research and development LO10–8

Delaware Company incurred the following research and development costs during 2024:

| | |
|---|---------------------------|
| Salaries and wages for lab research | \$ 400,000 |
| Materials used in R&D projects | 200,000 |
| Purchase of equipment | 900,000 |
| Fees paid to third parties for R&D projects | 320,000 |
| Patent filing and legal costs for a developed product | 65,000 |
| Salaries, wages, and supplies for R&D work performed for another company under a contract | 350,000 |
| Total | <u><u>\$2,235,000</u></u> |

The equipment has a seven-year life and will be used for a number of research projects. Depreciation for 2024 is \$120,000.

Required:

Calculate the amount of research and development expense that Delaware should report in its 2024 income statement.

E 10–28 IFRS; research and development LO10–8, LO10–9

Janson Pharmaceuticals incurred the following costs in 2024 related to a new cancer drug:

| | |
|--|---------------------------|
| Research for new formulas | \$2,425,000 |
| Development of a new formula | 1,600,000 |
| Legal and filing fees for a patent for the new formula | 60,000 |
| Total | <u><u>\$4,085,000</u></u> |

The development costs were incurred after technological and commercial feasibility was established and after the future economic benefits were deemed probable. The project was successfully completed and the new drug was patented before the end of the 2024 fiscal year.

Required:

1. Calculate the amount of research and development expense Janson should report in its 2024 income statement related to this project.
2. Repeat requirement 1 assuming that Janson prepares its financial statements according to International Financial Reporting Standards.

E 10–29 IFRS; research and development LO10–9

IFRS

NXS Semiconductor prepares its financial statements according to International Financial Reporting Standards. The company incurred the following expenditures during 2024 related to the development of a chip to be used in mobile devices:

| | |
|---|-------------|
| Salaries and wages for basic research | \$3,450,000 |
| Materials used in basic research | 330,000 |
| Other costs incurred for basic research | 1,220,000 |
| Development costs | 1,800,000 |
| Legal and filing fees for a patent for the new technology | 50,000 |

The development costs were incurred after NXS established technological and commercial feasibility and after NXS deemed the future economic benefits to be probable. The project was successfully completed, and the new chip was patented near the end of the 2024 fiscal year.

Required:

1. Which of the expenditures should NXS expense in its 2024 income statement?
2. Explain the accounting treatment of the remaining expenditures.

E 10–30 Concepts; terminology LO10–1, LO10–4, LO10–6, LO10–7

Listed below are several terms and phrases associated with property, plant, and equipment and intangible assets. Pair each item from List A with the item from List B (by letter) that is most appropriately associated with it.

| List A | | List B |
|-----------|----------------------------------|--|
| _____ 1. | Property, plant, and equipment | a. Exclusive right to display a word, a symbol, or an emblem. |
| _____ 2. | Land improvements | b. Exclusive right to benefit from a creative work. |
| _____ 3. | Capitalize | c. Assets that represent rights. |
| _____ 4. | Average accumulated expenditures | d. Costs of establishing parking lots, driveways, and private roads. |
| _____ 5. | Revenue | e. Purchase price less fair value of net identifiable assets. |
| _____ 6. | Nonmonetary exchange | f. Assets such as land, buildings, and machinery. |
| _____ 7. | Natural resources | g. Approximation of average amount of debt if all construction funds were borrowed. |
| _____ 8. | Intangible assets | h. Account credited when assets are donated to a corporation. |
| _____ 9. | Copyright | i. Term meaning to record the cost as an asset. |
| _____ 10. | Trademark | j. Basic principle is to value assets acquired using fair value of assets given other than cash. |
| _____ 11. | Goodwill | k. Assets such as timber tracts and mineral deposits. |

E 10–31 Software development costs **LO10–8**

Early in 2024, the Excalibur Company began developing a new software package to be marketed. The project was completed in December 2024 at a cost of \$6 million. Of this amount, \$4 million was spent before technological feasibility was established. Excalibur expects a useful life of five years for the new product with total revenues of \$10 million. During 2025, revenue of \$3 million was recognized.

Required:

Prepare a journal entry to record the 2024 development costs.

E 10–32 Software development costs **LO10–8**

On September 30, 2024, Athens Software began developing a software program to shield personal computers from malware and spyware. Technological feasibility was established on February 28, 2025, and the program was available for release on April 30, 2025.

Development costs were incurred as follows:

| | |
|--|-------------|
| September 30 through December 31, 2024 | \$2,200,000 |
| January 1 through February 28, 2025 | 800,000 |
| March 1 through April 30, 2025 | 400,000 |

Athens expects a useful life of four years for the software and total revenues of \$5,000,000 during that time. During 2025, revenue of \$1,000,000 was recognized.

Required:

Prepare a journal entry in each year to record development costs for 2024 and 2025.

E 10–33 Intangibles; start-up costs **LO10–1,** **LO10–8**

Freitas Corporation was organized early in 2024. The following expenditures were made during the first few months of the year:

| | |
|--|------------------|
| Attorneys' fees in connection with the organization of the corporation | \$ 12,000 |
| State filing fees and other incorporation costs | 3,000 |
| Purchase of a patent | 20,000 |
| Legal and other fees for transfer of the patent | 2,000 |
| Purchase of equipment | 30,000 |
| Preopening salaries and employee training | 40,000 |
| Total | <u>\$107,000</u> |

Required:

Prepare a summary journal entry to record the \$107,000 in cash expenditures.

E 10–34 Full-cost and successful efforts methods compared

Appendix

The Manguino Oil Company incurred exploration costs in 2024 searching and drilling for oil as follows:

| | |
|-----------------|------------------|
| Well 101 | \$ 50,000 |
| Well 102 | 60,000 |
| Well 103 | 80,000 |
| Wells 104 - 108 | 260,000 |
| Total | <u>\$450,000</u> |

It was determined that Wells 104–108 were dry holes and were abandoned. Wells 101, 102, and 103 were determined to have sufficient oil reserves to be commercially successful.

Required:

1. Prepare a summary journal entry to record the indicated costs assuming that the company uses the full-cost method of accounting for exploration costs. All of the exploration costs were paid in cash.
2. Prepare a summary journal entry to record the indicated costs assuming that the company uses the successful efforts method of accounting for exploration costs. All of the exploration costs were paid in cash.

Problems

P 10–1 Acquisition costs LO10–1 through LO10–4

Tristar Production Company began operations on September 1, 2024. Listed below are a number of transactions that occurred during its first four months of operations.

1. On September 1, the company acquired five acres of land with a building that will be used as a warehouse. Tristar paid \$100,000 in cash for the property. According to appraisals, the land had a fair value of \$75,000 and the building had a fair value of \$45,000.
2. On September 1, Tristar signed a \$40,000 noninterest-bearing note to purchase equipment. The \$40,000 payment is due on September 1, 2025. Assume that 8% is a reasonable interest rate.
3. On September 15, a truck was donated to the corporation. Similar trucks were selling for \$2,500.
4. On September 18, the company paid its lawyer \$3,000 for organizing the corporation.
5. On October 10, Tristar purchased equipment for cash. The purchase price was \$15,000 and \$500 in freight charges also were paid.
6. On December 2, Tristar acquired equipment. The company was short of cash and could not pay the \$5,500 normal cash price. The supplier agreed to accept 200 shares of the company's no-par common stock in exchange for the equipment. The fair value of the stock is not readily determinable.
7. On December 10, the company acquired a tract of land at a cost of \$20,000. It paid \$2,000 down and signed a 10% note with both principal and interest due in one year. Ten percent is an appropriate rate of interest for this note.

Required:

Prepare journal entries to record each of the above transactions.

P 10–2 Acquisition costs; land and building LO10–1, LO10–2, LO10–7

On January 1, 2024, the Blackstone Corporation purchased a tract of land (site number 11) with a building for \$600,000. Additionally, Blackstone paid a real estate broker's commission of \$36,000, legal fees of \$6,000, and title insurance of \$18,000. The closing statement indicated that the land value was \$500,000 and the building value was \$100,000. Shortly after acquisition, the building was razed at a cost of \$75,000.

Blackstone entered into a \$3,000,000 fixed-price contract with Barnett Builders, Inc., on March 1, 2024, for the construction of an office building on land site 11. The building was completed and occupied on September 30, 2025. Additional construction costs were incurred as follows:

| | |
|---|----------|
| Plans, specifications, and blueprints | \$12,000 |
| Architects' fees for design and supervision | 95,000 |

To finance the construction cost, Blackstone borrowed \$3,000,000 on March 1, 2024. The loan is payable in 10 annual installments of \$300,000 plus interest at the rate of 14%.

Blackstone's average amounts of accumulated expenditures were as follows:

| | |
|--|------------|
| For the period March 1 to December 31, 2024 | \$ 900,000 |
| For the period January 1 to September 30, 2025 | 1,200,000 |

Required:

1. Prepare a schedule that discloses the individual costs making up the balance in the land account in respect of land site 11 as of September 30, 2025.
2. Prepare a schedule that discloses the individual costs that should be capitalized in the office building account as of September 30, 2025.

Source: AICPA adapted

P 10–3 Acquisition costs  **LO10–1**,  **LO10–4**,  **LO10–6**

The plant asset and accumulated depreciation accounts of Pell Corporation had the following balances at December 31, 2023:

| | Plant Asset | Accumulated Depreciation |
|-------------------|-------------|-----------------------------|
| Land | \$ 350,000 | \$ — |
| Land improvements | 180,000 | 45,000 |
| Building | 1,500,000 | 350,000 |
| Equipment | 1,158,000 | 405,000 |
| Automobiles | 150,000 | 112,000 |

Transactions during 2024 were as follows:

- a. On January 2, 2024, equipment were purchased at a total invoice cost of \$260,000, which included a \$5,500 charge for freight. Installation costs of \$27,000 were incurred in addition to the invoice cost.
- b. On March 31, 2024, a small storage building was donated to the company. The person donating the building originally purchased it three years ago for \$25,000. The fair value of the building on the day of the donation was \$17,000.
- c. On May 1, 2024, expenditures of \$50,000 were made to repave parking lots at Pell’s plant location. The work was necessitated by damage caused by severe winter weather. The repair doesn’t provide future benefits beyond those originally anticipated.
- d. On November 1, 2024, Pell acquired a tract of land with an existing building in exchange for 10,000 shares of Pell’s common stock that had a market price of \$38 per share. Pell paid legal fees and title insurance totaling \$23,000. Shortly after acquisition, the building was razed at a cost of \$35,000 in anticipation of new building construction in 2025.
- e. On December 31, 2024, Pell purchased a small storage building by giving \$15,250 cash and an old automobile purchased for \$18,000 in 2017. Depreciation on the old automobile recorded through December 31, 2024, totaled \$13,500. The fair value of the old automobile was \$3,750.

Required:

Prepare a schedule analyzing the changes in each of the plant assets during 2024, with detailed supporting computations.

(AICPA adapted)

The Horstmeyer Corporation commenced operations early in 2024. A number of expenditures were made during 2024 that were debited to one account called *intangible asset*. A recap of the \$144,000 balance in this account at the end of 2024 is as follows:

| Date | Transaction | Amount |
|--------------|--|-----------|
| February 3 | State incorporation fees and legal costs related to organizing the corporation | \$ 7,000 |
| March 1 | Fire insurance premium for three-year period | 6,000 |
| March 15 | Purchased a copyright | 20,000 |
| April 30 | Research and development costs | 40,000 |
| June 15 | Legal fees for filing a patent on a new product resulting from an R&D project | 3,000 |
| September 30 | Legal fee for successful defense of patent developed above | 12,000 |
| October 13 | Entered into a 10-year franchise agreement with franchisor | 40,000 |
| Various | Advertising costs | 16,000 |
| | Total | \$144,000 |

Required:

Prepare the necessary journal entry to clear the intangible asset account and to set up accounts for separate intangible assets, other types of assets, and expenses indicated by the transactions.

P 10–5 Acquisition costs; journal entries LO10–1, LO10–3, LO10–6, LO10–8

Consider each of the transactions below. All of the expenditures were made in cash.

1. The Edison Company spent \$12,000 during the year for experimental purposes in connection with the development of a new product.
2. In April, the Marshall Company lost a patent infringement suit and paid \$7,500 in legal fees to the plaintiff.

3. In March, the Cleanway Laundromat bought equipment. Cleanway paid \$6,000 down and signed a noninterest-bearing note requiring the payment of \$18,000 in nine months. The cash price for this equipment was \$23,000.
4. On June 1, the Jamsen Corporation installed a sprinkler system throughout the building at a cost of \$28,000.
5. The Mayer Company, plaintiff, paid \$12,000 in legal fees in November, in connection with a successful infringement suit on its patent.
6. The Johnson Company traded its old equipment for new equipment. The new equipment has a fair value of \$10,000. The old equipment had an original cost of \$7,400 and a book value of \$3,000 at the time of the trade. Johnson also paid cash of \$8,000 as part of the trade. The exchange has commercial substance.

Required:

Prepare journal entries to record each of the above transactions.

P 10–6 Nonmonetary exchange  **LO10–6**

Southern Company owns a building that it leases to others. The building's fair value is \$1,400,000 and its book value is \$800,000 (original cost of \$2,000,000 less accumulated depreciation of \$1,200,000). Southern exchanges this for a building owned by the Eastern Company. The building's book value on Eastern's books is \$950,000 (original cost of \$1,600,000 less accumulated depreciation of \$650,000). Eastern also gives Southern \$140,000 to complete the exchange. The exchange has commercial substance for both companies.

Required:

Prepare the journal entries to record the exchange on the books of both Southern and Eastern.

P 10–7 Nonmonetary exchange  **LO10–6**

On September 3, 2024, the Robers Company exchanged equipment with Phifer Corporation. The facts of the exchange are as follows:

| | Robers' Asset | Phifer's Asset |
|---------------|---------------|----------------|
| Original cost | \$120,000 | \$140,000 |

| | Robers' Asset | Phifer's Asset |
|--------------------------|---------------|----------------|
| Accumulated depreciation | 55,000 | 63,000 |
| Fair value | 75,000 | 70,000 |

To equalize the exchange, Phifer paid Robers \$5,000 in cash.

Required:

Record the exchange for both Robers and Phifer. The exchange has commercial substance for both companies.

P 10–8 Nonmonetary exchange  **LO10–6**

Case A. Kapono Farms exchanged an old tractor for a newer model. The old tractor had a book value of \$12,000 (original cost of \$28,000 less accumulated depreciation of \$16,000) and a fair value of \$9,000. Kapono paid \$20,000 cash to complete the exchange. The exchange has commercial substance.

Required:

Page 559

1. What is the amount of gain or loss that Kapono would recognize on the exchange? What is the initial value of the new tractor?
2. Repeat requirement 1 assuming that the fair value of the old tractor is \$14,000 instead of \$9,000.

Case B. Kapono Farms exchanged 100 acres of farmland for similar land. The farmland given had a book value of \$500,000 and a fair value of \$700,000. Kapono paid \$50,000 cash to complete the exchange. The exchange has commercial substance.

Required:

1. What is the amount of gain or loss that Kapono would recognize on the exchange? What is the initial value of the new land?
2. Repeat requirement 1 assuming that the fair value of the farmland given is \$400,000 instead of \$700,000.
3. Repeat requirement 1 assuming that the exchange lacked commercial substance.

4. Repeat requirement 2 assuming that the exchange lacked commercial substance.

P 10–9 Interest capitalization; specific interest method

 LO10–7

On January 1, 2024, the Mason Manufacturing Company began construction of a building to be used as its office headquarters. The building was completed on September 30, 2025. Expenditures on the project were as follows:

| | |
|------------------|-------------|
| January 1, 2024 | \$1,000,000 |
| March 1, 2024 | 600,000 |
| June 30, 2024 | 800,000 |
| October 1, 2024 | 600,000 |
| January 31, 2025 | 270,000 |
| April 30, 2025 | 585,000 |
| August 31, 2025 | 900,000 |

On January 1, 2024, the company obtained a \$3 million construction loan with a 10% interest rate. The loan was outstanding all of 2024 and 2025. The company's other interest-bearing debt included two long-term notes of \$4,000,000 and \$6,000,000 with interest rates of 6% and 8%, respectively. Both notes were outstanding during all of 2024 and 2025. Interest is paid annually on all debt. The company's fiscal year-end is December 31.

Required:

1. Calculate the amount of interest that Mason should capitalize in 2024 and 2025 using the specific interest method.
2. What is the total cost of the building?
3. Calculate the amount of interest expense that will appear in the 2024 and 2025 income statements.

P 10–10 Interest capitalization; weighted-average method

 LO10–7

[This is a variation of the previous problem, modified to focus on the weighted-average interest method.]

Required:

Refer to the facts in [P 10-9](#) but now assume the \$3 million loan is not specifically tied to construction of the building. Using the weighted-average interest method, answer the following questions:

1. Calculate the amount of interest that Mason should capitalize in 2024 and 2025 using the weighted-average method.
2. What is the total cost of the building?
3. Calculate the amount of interest expense that will appear in the 2024 and 2025 income statements.

P 10-11 Research and development  **LO10-8**

In 2024, Starsearch Corporation began work on three research and development projects. One of the projects was completed and commercial production of the developed product began in December. The company's fiscal year-end is December 31. All of the following 2024 expenditures were included in the R&D expense account:

Salaries and wages for:

| | |
|--|------------|
| Lab research | \$ 300,000 |
| Design and construction of preproduction prototype | 160,000 |
| Quality control during commercial production | 20,000 |

Materials and supplies consumed for:

| | |
|--|--------------------|
| Lab research | 60,000 |
| Construction of preproduction prototype | 30,000 |
| Purchase of equipment | 600,000 |
| Patent filing and legal fees for completed project | 40,000 |
| Payments to others for research | 120,000 |
| Total | <u>\$1,330,000</u> |

A total of \$200,000 of equipment was purchased solely for use in one of the projects. After the project is completed, the equipment will be abandoned. The remaining \$400,000 in equipment will be used on future R&D projects. The useful life of equipment is five years. Assume that all of the equipment was acquired at the beginning of the year.

Required:

Prepare journal entries, reclassifying amounts in R&D expense, to reflect the appropriate treatment of the expenditures.

P 10–12 Acquisition costs; lump-sum acquisition; noninterest-bearing note; interest capitalization  **LO10–1**,  **LO10–2**,  **LO10–3**,  **LO10–7**

Early in its fiscal year ending December 31, 2024, San Antonio Outfitters finalized plans to expand operations. The first stage was completed on March 28 with the purchase of a tract of land on the outskirts of the city. The land and existing building were purchased by paying \$200,000 immediately and signing a noninterest-bearing note requiring the company to pay \$600,000 on March 28, 2026. An interest rate of 8% properly reflects the time value of money for this type of loan agreement. Title search, insurance, and other closing costs totaling \$20,000 were paid at closing.

At the end of April, the old building was demolished at a cost of \$70,000, and an additional \$50,000 was paid to clear and grade the land. Construction of a new building began on May 1 and was completed on October 29. Construction expenditures were as follows:

| | |
|-------------|-------------|
| May 1 | \$1,200,000 |
| July 30 | 1,500,000 |
| September 1 | 900,000 |
| October 1 | 1,800,000 |

San Antonio borrowed \$3,000,000 at 8% on May 1 to help finance construction. This loan, plus interest, will be paid in 2025. The company also had a \$5,250,000, 8% long-term note payable outstanding throughout 2024.

In November, the company purchased 10 identical pieces of equipment and office furniture and fixtures for a lump-sum price of \$600,000. The fair values of the equipment and the furniture and fixtures were \$455,000 and \$245,000, respectively. In December, San Antonio paid a contractor \$285,000 for the construction of parking lots and for landscaping.

Required:

1. Determine the initial values of the various assets that San Antonio acquired or constructed during 2024. The company uses the specific interest method to determine the amount of interest capitalized on the building construction. (Hint: Expenditures on March 28 and April 30 to acquire land on which to construct the building are included as part of accumulated expenditures for determine the amount of interest capitalized on the building. This means the interest capitalization period begins on March 28.)
2. How much interest expense will San Antonio report in its 2024 income statement?

Decision Makers' Perspective

Ed Telling/Getty Images

Apply your critical-thinking ability to the knowledge you've gained. These cases will provide you an opportunity to develop your research, analysis, judgment, and communication skills. You also will work with other students, integrate what you've learned, apply it in real-world situations, and consider its global and ethical ramifications. This practice will broaden your knowledge and further develop your decision-making abilities.

Judgment Case 10–1 Acquisition costs **LO10–1**, **LO10–3**, **LO10–6**

A company may acquire property, plant, and equipment and intangible assets for cash, in exchange for a deferred payment contract, by exchanging other assets, or by a combination of these methods.

Required:

1. Identify costs that should be capitalized as the cost of a parcel of land. For your answer, assume that the land has an existing building that is to be removed in the immediate future in order that a new building can be constructed on the site.
2. At what amount should a company record an asset acquired in exchange for a deferred payment contract?
3. In general, at what amount should assets received in exchange for other nonmonetary assets be valued? Specifically, at what amount should a company value new equipment acquired by exchanging older, similar equipment and paying cash?

(AICPA adapted)

Research Case 10–2 FASB codification; locate and extract relevant information and cite authoritative support for a financial reporting issue; restoration costs; asset retirement obligation

LO10–1

Your client, Hazelton Mining, recently entered into an agreement to obtain the rights to operate a copper mine in West Virginia for \$15 million. Hazelton incurred development costs of \$6 million in preparing the mine for extraction, which began on July 1, 2024. The contract requires Hazelton to restore the land and surrounding area to its original condition after extraction is complete in three years.

The company controller, Alice Cushing, is not sure how to account for the restoration costs and has asked your advice. Alice is aware of an accounting standard addressing this issue, but is not sure of its provisions. She has narrowed down the possible cash outflows for the restoration costs to four possibilities.

| Cash Outflow | Probability |
|--------------|-------------|
| \$3 million | 20% |
| 4 million | 30% |
| 5 million | 25% |
| 6 million | 25% |

Alice also informs you that the company's credit-adjusted risk-free interest rate is 9%. Before responding to Alice, you need to research the issue.

Required:

1. Access the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org) and select Basic View for free access. Determine the specific Codification citation for each of the following, based on the format indicated: (a) accounting for asset retirement obligations (XXX-XX), (b) recognition criteria related to asset retirement obligations (XXX-XX-XX), (c) the requirement to recognize the fair value of the asset retirement obligation as a liability (XXX-XX-XX-X), and (d) how to treat the capitalized cost of the asset retirement obligation for the related tangible long-lived asset (XXX-XX-XX-X).

2. Determine the capitalized cost of the copper mine.
3. Prepare a summary journal entry to record the acquisition costs of the mine.
4. How much accretion expense will the company record in its income statement for the 2024 fiscal year, related to this transaction? Determine the specific Codification citation for each of the following, based on the format indicated: (a) the calculation of accretion expense (XXX-XX-XX-X) and (b) the classification of accretion expense in the income statement (XXX-XX-XX-X).
5. Prepare the journal entry to record the payment of the retirement obligation in three years assuming that the actual restoration costs were \$4.7 million.
6. Describe to Alice the necessary disclosure requirements for the obligation. What specific Codification citation contains these disclosure requirements (XXX-XX-XX-X)?

Real World Case 10–3 Property, plant, and equipment; Norfolk Southern Corporation LO10–1

Real World Financials

Norfolk Southern Corporation, one of the nation’s premier transportation companies, reported the following amounts in the asset section of its balance sheets:

| | (\$ in millions) | |
|-----------------------------|-------------------|-------------------|
| | December 31, 2019 | December 31, 2018 |
| Property and equipment, net | \$31,614 | \$31,091 |

In addition, information from the 2019 statement of cash flows and related notes reported the following items (\$ in millions):

| | |
|---------------------------------------|---------|
| Depreciation | \$1,139 |
| Additions to property and equipment | 2,019 |
| Sales price of property and equipment | 377 |

Required:

What is the gain on the sale of property and equipment for the year ended December 31, 2019?

Analysis Case 10–4 Fixed-asset turnover ratio; Darden Restaurants, Inc. LO10–5

Real World Financials

Darden Restaurants, Inc., is a full-service restaurant company, including brands such as Olive Garden, LongHorn Steakhouse, and Bahama Breeze. The company's fixed-asset turnover ratio, using the average book value of property, plant, and equipment (PP&E) as the denominator, was approximately 2.94. Additional information taken from the company's annual report is as follows:

| | Page 562 |
|--|------------------|
| | (\$ in millions) |
| Book value of PP&E—beginning of the year | \$2,552.6 |
| Net purchases of PP&E during the year* | 454.1 |
| Depreciation of PP&E for the year | 249.8 |

*Net purchases include book value of equipment purchased minus book value of equipment sold.

Required:

1. How is the fixed-asset turnover ratio computed? If the industry average ratio is 4.0, would Darden's ratio be considered more or less favorable?
2. Use the data to determine Darden's net sales for the year.

Judgment Case 10–5 Self-constructed assets; interest capitalization LO10–7

Chilton Peripherals manufactures printers, scanners, and other computer peripheral equipment. In the past, the company purchased equipment used in manufacturing from an outside vendor. In March 2024, Chilton decided to design and build equipment to replace some obsolete equipment. A section of the manufacturing plant was set aside to develop and produce the equipment. Additional personnel were hired for the project. The equipment was completed and ready for use in September.

Required:

1. In general, what costs should be capitalized for a self-constructed asset?

2. Discuss two alternatives for the inclusion of overhead costs in the cost of the equipment constructed by Chilton. Which alternative is generally accepted for financial reporting purposes?
3. Under what circumstance(s) would interest be included in the cost of the equipment?
4. Over what period should interest be capitalized?
5. Describe the three steps used to determine the amount of interest capitalized during a reporting period.

Real World Case 10–6 Property, plant, and equipment; intangible assets Salesforce.com LO10–1

Real World Financials

EDGAR, the Electronic Data Gathering, Analysis, and Retrieval system, performs automated collection, validation, indexing, and forwarding of submissions by companies and others who are required by law to file forms with the U.S. Securities and Exchange Commission (SEC). All publicly traded domestic companies use EDGAR to make the majority of their filings. (Some foreign companies file voluntarily.) Form 10-K, which includes the annual report, is required to be filed on EDGAR. The SEC makes this information available on the Internet.

Access EDGAR on the Internet. The web address is www.sec.gov. Search for Salesforce.com. Access the 10-K filing for the January 31, 2020, fiscal year. Search or scroll to find the financial statements and related notes.

Required:

Answer the following questions related to the company's property, plant, and equipment and intangible assets for the most recent year:

1. In the consolidated balance sheet, what amount did the company report for property and equipment, net?
2. Find note 6 for property and equipment. What is the gross amount of property and equipment?
3. In the consolidated balance sheet, what amount did the company report for goodwill?
4. Find note 7 for business combinations. Salesforce acquired Tableau for \$14.8 billion. How much of the purchase price was allocated to goodwill?

5. In the consolidated balance sheet, what amount did the company report for intangible assets associated with business combinations?
6. Find note 8 for intangible assets. What is the net amount reported for customer relationships?

Judgment Case 10–7 Research and development **LO10–8**

Clonal, Inc., a biotechnology company, developed and patented a diagnostic product called Trouver. Clonal purchased some research equipment to be used for Trouver and subsequent research projects. Clonal defeated a legal challenge to its Trouver patent, and began production and marketing operations for the project.

Corporate headquarters' costs were allocated to Clonal's research division as a percentage of the division's salaries.

Required:

1. How should the equipment purchased for Trouver be reported in Clonal's income statement and balance sheet?
2. a. Describe the accounting treatment of research and development costs.
b. What is the justification for the accounting treatment of research and development costs?
3. How should corporate headquarters' costs allocated to the research division be classified in Clonal's income statements? Why?
4. How should the legal expenses incurred in defending Trouver's patent be reported in Clonal's financial statements?

(AICPA adapted)

Ethics Case 10–8 Research and development **LO10–8**

Mayer Biotechnical, Inc., develops, manufactures, and sells pharmaceuticals. Significant research and development (R&D) expenditures are made for the development of new drugs and the improvement of existing drugs. During 2024, \$220 million was spent on R&D. Of this amount, \$30 million was spent on the purchase of equipment to be used in a research project involving the development of a new antibiotic. The equipment likely will be used on only this one project.

The company president has asked the controller to make every effort to increase 2024 earnings because in 2025 the company will be seeking significant new financing from both debt and equity sources. “I guess we might use the equipment in other projects later,” the controller wondered.

Required:

1. Assuming that the equipment was purchased at the beginning of 2024, how much should the controller record for research and development expense in 2024?
2. What amount would be reported for research and development expense in 2024 under the controller’s alternative assumption that the equipment will be used for other projects evenly over five years?
3. Does the need for financing justify the controller making the alternative assumption in requirement 2?

IFRS Case 10–9 Research and development; comparison of U.S. GAAP and IFRS; Siemens AG  **LO10–8**,  **LO10–9**

Siemens AG, a German company, is Europe’s largest engineering and electronics company. The company prepares its financial statements according to IFRS. Use the Internet to locate the most recent annual financial report for Siemens. The address is www.siemens.com. Locate the note titled, “Material Accounting Policies and Critical Estimates.”

Required:

How does the company account for research and development expenditures? Does this policy differ from U.S. GAAP?

Judgment Case 10–10 Computer software costs  **LO10–8**

The Elegant Software Company recently completed the development and testing of a new software program for sale to customers that provides the ability to transfer data from among a variety of operating systems. The company believes this product will generate significant revenues in future years and capitalized all of the costs of designing, developing, coding, and testing the software. These costs will be amortized over the expected useful life of the software.

Required:

1. Was Elegant correct in its treatment of the software development costs? Why?

2. Suppose the software was developed for internal use instead of external sales to customers. Was Elegant correct in its treatment of the software development costs? Why?
3. What if the same amount of cost was incurred to purchase the internal-use software in its completed form from a vendor?

Communication Case 10–11 Research and development

LO10–8

Prior to 1974, accepted practice was for companies to either expense or capitalize R&D costs. In 1974, the FASB issued a Standard that requires all research and development costs to be charged to expense when incurred. This was a controversial standard, opposed by many companies who preferred delaying the recognition of these expenses until later years when presumably the expenditures bear fruit.

Several research studies have been conducted to determine if the Standard had any impact on the behavior of companies. One interesting finding was that, prior to 1974, companies that expensed R&D costs were significantly larger than those companies that capitalized R&D costs.

Required:

1. Explain the FASB's logic in deciding to require all companies to expense R&D costs in the period incurred.
2. Identify possible reasons to explain why, prior to 1974, companies that expensed R&D costs were significantly larger than those companies that capitalized R&D costs.

Communication Case 10–12 Research and development

LO10–8

The focus of this case is the situation described in Case 10–7. What is the appropriate accounting for R&D costs? Do you believe that (1) capitalization is the correct treatment of R&D costs, (2) expensing is the correct treatment of R&D costs, or (3) that companies should be allowed to choose between expensing and capitalizing R&D costs?

Required:

1. Develop a list of arguments in support of your view prior to the class session for which the case is assigned. Do not be influenced by the method required by the FASB. Base your opinion on the conceptual merit of the options.

2. In class, your instructor will pair you (and everyone else) with a classmate who also has independently developed a position.
 - a. You will be given three minutes to argue your view to your partner. Your partner likewise will be given three minutes to argue his or her view to you. During these three-minute presentations, the listening partner is not permitted to speak.
 - b. Then after each person has had a turn attempting to convince his or her partner, the two partners will have a three-minute discussion in which they will decide which alternative is more convincing and arguments will be merged into a single view for each pair.
3. After the allotted time, a spokesperson for each of the three alternatives will be selected by the instructor. Each spokesperson will field arguments from the class as to the appropriate alternative. The class will then discuss the merits of the alternatives and attempt to reach a consensus view, though a consensus is not necessary.

Communication Case 10–13 Research and development

LO10–8

Thomas Plastics is in the process of developing a revolutionary new plastic valve. A new division of the company was formed to develop, manufacture, and market this new product. As of year-end (December 31, 2024), the new product has not been manufactured for sale; however, prototype units were built and are in operation.

Throughout 2024, the new division incurred a variety of costs. These costs included expenses (including salaries of administrative personnel) and market research costs. In addition, approximately \$500,000 in equipment (estimated useful life of 10 years) was purchased for use in developing and manufacturing the new valve. Approximately \$200,000 of this equipment was built specifically for developing the design of the new product; the remaining \$300,000 of the equipment was used to manufacture the preproduction prototypes and will be used to manufacture the new product once it is in commercial production.

The president of the company, Selina Rashid, has been told that research and development costs must be expensed as incurred, but she does not understand this treatment. She believes the research will lead to a profitable product and to increased future revenues. Also, she wonders how to account for the \$500,000 of equipment purchased by the new division. “I

thought I understood accounting,” she growled. “Explain to me why expenditures that benefit our future revenues are expensed rather than capitalized!”

Required:

Write a one-to two-page report to Selina Rashid explaining the generally accepted accounting principles relevant to this issue. The report also should address the treatment of the equipment purchases.

(AICPA adapted)

Data Analytics & Excel

Continuing Cases

Target Case LO10–1, LO10–5

Target Corporation prepares its financial statements according to U.S. GAAP. Target's financial statements and disclosure notes for the year ended February 1, 2020, are available in Connect. This material is also available under the Investor Relations link at the company's website (www.target.com).

Required:

1. What amount (\$ in millions) does Target report for net property and equipment for the year ended February 1, 2020? What is the largest category of property and equipment reported on the face of the balance sheet?
2. What amount (\$ in millions) of cash was used in the fiscal year ended February 1, 2020, to purchase property and equipment? Is this an increase or decrease compared to the previous year?
3. Do you think a company like Target would have more research and development costs or more advertising costs? Explain.
4. What is Target's fixed-asset turnover ratio for the fiscal year ended February 1, 2020? What is the ratio intended to measure?
5. Does Target include any intangible assets in total assets (yes/no)? (*Hint:* See Notes 11 and 12.)

Air France–KLM Case LO10–9

Air France–KLM (AF), a Franco-Dutch company, prepares its financial statements according to International Financial Reporting Standards. AF's financial statements and disclosure notes for the year ended December 31, 2019, are available in Connect. This material is also available under the Finance link at the company's website (www.airfranceklm.com).

IFRS

Required:

1. How does AF account for information technology (IT) development costs before and during its development phase?
2. AF does not report any research and development expenditures. If it did, its approach to accounting for research and development would be significantly different from U.S. GAAP. Describe the differences between IFRS and U.S. GAAP in accounting for research and development expenditures.
3. AF does not report the receipt of any governments grants. If it did, its approach to accounting for government grants would be significantly different from U.S. GAAP. Describe the differences between IFRS and U.S. GAAP in accounting for government grants. If AF received a grant for the purchase of assets, what alternative accounting treatments are available under IFRS?

CHAPTER 11

Property, Plant, and Equipment and Intangible Assets: Utilization and Disposition

OVERVIEW

This chapter completes our discussion of accounting for property, plant, and equipment and intangible assets. We address the allocation of the cost of these assets to the periods benefited by their use.

The usefulness of most of these assets is consumed as the assets are applied to the production of goods or services. Cost allocation corresponding to this consumption of usefulness is known as *depreciation* for plant and equipment, *depletion* for natural resources, and *amortization* for intangibles.

We also consider other issues until final disposal, such as impairment of these assets and the treatment of expenditures subsequent to acquisition.

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

-  **LO11-1** Explain the concept of cost allocation as it pertains to property, plant, and equipment and intangible assets. (p. 567)
-  **LO11-2** Determine periodic depreciation using both time-based and activity-based methods and account for dispositions. (p. 570)
-  **LO11-3** Calculate the periodic depletion of a natural resource. (p. 585)
-  **LO11-4** Calculate the periodic amortization of an intangible asset. (p. 587)
-  **LO11-5** Explain the appropriate accounting treatment required when a change is made in the service life or residual value of property, plant, and equipment and intangible assets. (p. 592)

-  **LO11-6** Explain the appropriate accounting treatment required when a change in depreciation, amortization, or depletion method is made. (p. 594)
-  **LO11-7** Explain the appropriate treatment required when an error in accounting for property, plant, and equipment and intangible assets is discovered. (p. 595)
-  **LO11-8** Identify situations that involve a significant impairment of the value of property, plant, and equipment and intangible assets and describe the required accounting procedures. (p. 596)
-  **LO11-9** Discuss the accounting treatment of repairs and maintenance, additions, improvements, and rearrangements to property, plant, and equipment and intangible assets. (p. 589)
-  **LO11-10** Discuss the primary differences between U.S. GAAP and IFRS with respect to the utilization and impairment of property, plant, and equipment and intangible assets. (pp. 576, 583, 587, 589, 590, 599, 601, 603, and 610)

FINANCIAL REPORTING CASE

Jacob Lund/Shutterstock

What's in a Name?

“I don’t understand this at all,” your friend moaned. “Depreciation, depletion, amortization; what’s the difference? Aren’t they all the same thing?” The two of you are

part of a class team working on a case involving **Weyerhaeuser Company**, a large forest products company. Part of the project involves comparing reporting methods over a three-year period. “Look at these disclosure notes from last year’s annual report. Besides mentioning those three terms, they also talk about asset impairment. How is that different?” The company reported the following disclosure notes.

Property and Equipment and Timber and Timberlands (in part)

Depreciation is calculated using a straight-line method at rates based on estimated service lives. Logging roads are generally amortized—as timber is harvested—at rates based on the volume of timber estimated to be removed. We carry timber and timberlands at cost less depletion.

Depletion (in part)

To determine depletion rates, we divide the net carrying value by the related volume of timber estimated to be available over the growth cycle.

Impairment of Long-Lived Assets (in part)

We review long-lived assets—including certain identifiable intangibles—for impairment whenever events or changes in circumstances indicate that the carrying amount of the assets may not be recoverable.

QUESTIONS

By the time you finish this chapter, you should be able to respond appropriately to the questions posed in this case. Compare your response to the solution provided at the end of the chapter.

1. Do the terms *depreciation*, *depletion*, and *amortization* all mean the same thing?
2. Weyerhaeuser determines depletion based on the “volume of timber estimated to be available.” Explain this approach.

3. Explain how asset impairment differs from depreciation, depletion, and amortization. How do companies measure impairment losses for property, plant, and equipment and intangible assets with finite useful lives?

PART A

Depreciation, Depletion, and Amortization

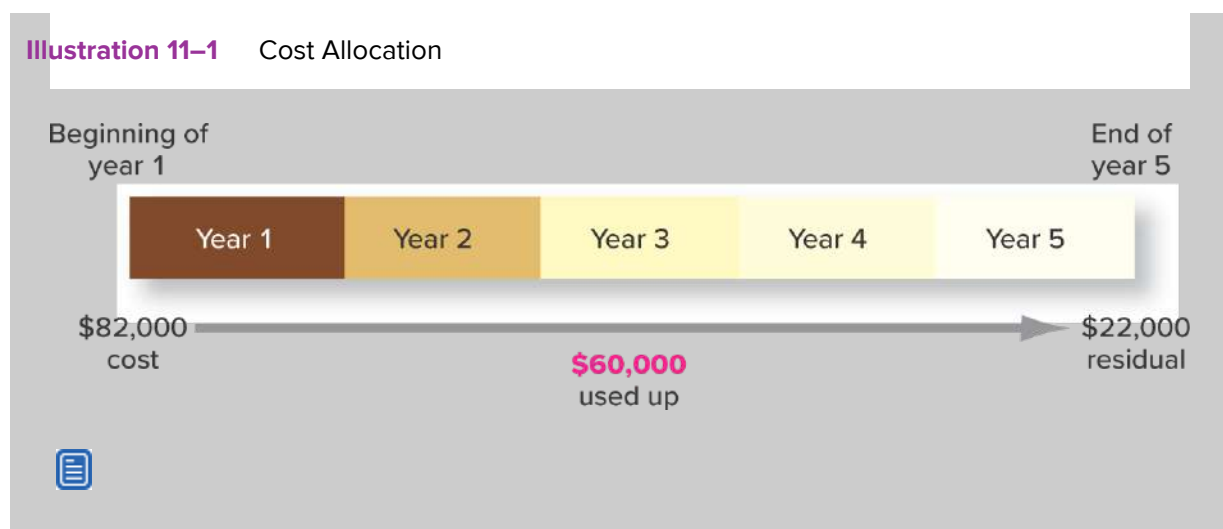

Cost Allocation—An Overview

LO11-1 Explain the concept of cost allocation as it pertains to property, plant, and equipment and intangible assets.

Property, plant, and equipment and intangible assets are purchased with the expectation that they will provide future benefits. Specifically, they are acquired to be used as part of the revenue-generating operations, usually for several years. Logically, then, the cost of these acquisitions initially should be recorded as assets (as we saw in Chapter 10), and then these costs should be allocated to expense over the reporting periods benefited by their use. That is, their costs are reported with the revenues they help generate.

Let's suppose that a company purchases a truck for \$82,000 to deliver products to customers. The company estimates that five years from the acquisition date the truck will be sold for \$22,000. It is estimated, then, that **\$60,000** (= \$82,000 - \$22,000) of the truck's purchase cost will be used up (consumed) during a five-year useful life. The situation is portrayed in  **Illustration 11-1**.

Page 568

Because the truck will help to produce revenues over the next five years, an asset of \$82,000 is recorded at the time of acquisition. Over the subsequent five years, **\$60,000** of the truck's costs is expected to be consumed and, conceptually, should be allocated to expense in those years in direct proportion to the role the asset played in revenue production. However, very

seldom is there a clear-cut relationship between the use of the asset and revenue production. In other words, we can't tell precisely the portion of the total benefits of the asset that was consumed in any particular period. As a consequence, we must resort to allocation methods to approximate the portion of the asset's cost used each period.

Contrast this situation with the \$24,000 prepayment of one year's rent on an office building at \$2,000 per month. In that case, we know precisely that the benefits of the asset (prepaid rent) are consumed at a rate of \$2,000 per month. That's why we allocate \$2,000 of prepaid rent to rent expense for each month that passes.

Depreciation is the process of allocating the cost of plant and equipment over the periods they are used to produce revenues. The process of depreciation often is confused with measuring a decline in fair value of an asset. For example, let's say our delivery truck purchased for \$82,000 can be sold for \$62,000 at the end of one year but we intend to keep it for the full five-year estimated life. The truck has experienced a decline in value of \$20,000 (= \$82,000 - \$62,000). However, *depreciation is a process of cost allocation, not valuation*. We would not record depreciation expense of \$20,000 for year one of the truck's life. Instead, we would distribute the cost of the asset, less any anticipated residual value, over the estimated service life in a systematic and rational manner that attempts to associate revenues with the *use* of the asset, not the decline in its value. After all, the truck is purchased to be used in operations, not to be sold.

For natural resources, we refer to cost allocation as **depletion**, and for intangible assets, we refer to it as **amortization**. While the terms *depreciation*, *depletion*, and *amortization* differ across types of assets, they conceptually refer to the same idea—the process of allocating an asset's cost over the periods it is used to produce revenues.

Depreciation, depletion, and amortization are processes that allocate an asset's cost to periods of benefit.

For assets used in the manufacture of a product, depreciation, depletion, or amortization is considered a product cost to be included as part of the cost of inventory. Eventually, when the product is sold, it becomes part of the cost of goods sold. For assets *not* used in production, primarily plant and equipment and certain intangibles used in the selling and administrative functions of the company, depreciation and amortization are reported as period expenses in the income statement. You might recognize this distinction between a product cost and a period cost. A product cost is reported as an expense (cost of goods sold) when the related product is sold; a period cost is reported as an expense in the reporting period in which it is incurred.

Measuring Cost Allocation

The process of cost allocation requires that three factors be established at the time the asset is put into use. These factors are:

1. **Service life**—The estimated use that the company expects to receive from the asset.
2. **Allocation base**—The cost of the asset expected to be consumed during its service life.
3. **Allocation method**—The pattern in which the allocation base is expected to be consumed.

Page 569

Let's consider these one at a time.

Service Life

The **service life**, or **useful life**, is the amount of use that the company expects to obtain from the asset before disposing of it. This use can be expressed in units of time or in units of activity. For example, the estimated service life of a delivery truck could be expressed in terms of years or in terms of the number of miles the company expects the truck to be driven before disposition. We use the terms service life and useful life interchangeably throughout the chapter.

The *service life, or useful life*, can be expressed in units of time or in units of activity.

Physical life provides the upper bound for service life of tangible, long-lived assets. Physical life will vary according to the purpose for which the asset is acquired and the environment in which it is operated. For example, a diesel-powered electric generator may last for many years if it is used only as an emergency backup or for only a few years if it is used regularly.

The service life of a tangible asset may be less than physical life for a variety of reasons. For example, the expected rate of technological change may shorten service life. If suppliers are expected to develop new technologies that are more efficient, the company may keep an asset for a period of time much shorter than physical life. Likewise, if the company sells its product in a market that frequently demands new products, the machinery and equipment used to produce products may be useful only for as long as its output can be sold. Similarly, a mineral deposit might be

Expected obsolescence can shorten service life below physical life.

projected to contain 4 million tons of a mineral, but it may be economically feasible with existing extraction methods to mine only 2 million tons.

For intangible assets, legal or contractual life often is a limiting factor. For instance, a patent might be capable of providing enhanced profitability for 50 years, but the legal life of a patent is only 20 years.

Management intent also may shorten the period of an asset's usefulness below its physical, legal, or contractual life. For example, a company may have a policy of using its delivery trucks for a five-year period and then trading the trucks for new models.

Companies quite often disclose the range of service lives for different categories of assets. For example,  **Illustration 11-2** shows how **IBM Corporation** disclosed its service lives in a note accompanying recent financial statements.

Illustration 11-2 Service Life Disclosure—International Business Machines Corporation

Real World Financials

Summary of Significant Accounting Policies (in part)

Depreciation and Amortization

The estimated useful lives of certain depreciable assets are as follows: buildings, 30 to 50 years; building equipment, 10 to 20 years; land improvements, 20 years; plant, laboratory, and office equipment, 2 to 20 years; and computer equipment, 1.5 to 5 years.

Source: International Business Machines Corporation

Allocation Base

The **allocation base** is the amount of cost to be allocated over an asset's service life. The amount is the difference between the asset's capitalized cost at the date placed in service and the asset's estimated **residual**

l value. Residual value (sometimes called *salvage value*) is the amount the company expects to receive for the asset at the end of its service life, less any anticipated disposal costs.

Allocation base is the difference between the cost of the asset and its estimated residual value.

For plant and equipment, we commonly refer to the allocation base as the *depreciable base*. In our delivery truck example above, the depreciable base is \$60,000 (\$82,000 cost less \$22,000 estimated residual value). We will allocate a portion of the \$60,000 to each year of the truck's service life. For the depletion of natural resources, we refer to the allocation base as the *depletion base*. For amortization of an intangible asset, we refer to the allocation base as the *amortization base*.

In certain situations, residual value can be estimated by referring to a company's prior experience or to publicly available information concerning resale values of various types of assets. For example, if a company intends to trade its delivery truck in three years for the new model, approximations of the three-year residual value for that type of truck can be obtained from used truck values.

However, estimating residual value for many assets can be very difficult due to the uncertainty about the future. For this reason, along with the fact that residual values often are immaterial, many companies simply assume a residual value of zero. Companies usually do not disclose estimated residual values.

Allocation Method

In determining how much cost to allocate to periods of an asset's use, a method should be selected that corresponds to the pattern of benefits received from the asset's use. Generally accepted accounting principles state that the chosen method should allocate the asset's cost "as equitably as possible to the periods during which services are obtained from [its] use." GAAP further specifies that the method should produce a cost allocation in a "systematic and rational manner."¹ The objective is to try to allocate cost to the period in an amount that is proportional to the amount of benefits generated by the asset during the period relative to the total benefits provided by the asset during its life.

The allocation method used should be systematic and rational and correspond to the pattern of asset use.

In practice, there are two general approaches that attempt to obtain this systematic and rational allocation.

1. **Time-based methods** allocate the cost base according to the *passage of time*.
2. **Activity-based methods** allocate an asset's cost base using a measure of the asset's *input or output*.

We compare these approaches first in the context of depreciation. Later we see that depletion of natural resources typically follows an activity-based approach, while the amortization of intangibles typically follows a time-based approach.

Depreciation

LO11-2 Determine periodic depreciation using both time-based and activity-based methods and account for dispositions.

To demonstrate and compare the most common depreciation methods, we refer to the situation described in  **Illustration 11-3**.

Illustration 11-3 Depreciation Methods

At the beginning of year 1, Hover Manufacturing Company purchased a machine for \$250,000 and made the following estimates at that time:

- Estimated residual value of \$40,000.
- Estimated service life of 5 years.
- Estimated production of 140,000 units.

Actual production during the five years of the asset's life was as follows:

| Year | Units Produced |
|-------|----------------|
| 1 | 20,000 |
| 2 | 32,000 |
| 3 | 44,000 |
| 4 | 28,000 |
| 5 | 26,000 |
| Total | <u>150,000</u> |

Time-Based Depreciation Methods

STRAIGHT-LINE METHOD

By far the most easily understood and widely used technique for calculating depreciation is the **straight-line method**. In this approach, an equal amount of the depreciable base (or allocation base) is allocated to each year of the asset's service life. The depreciable base is simply divided by the number of years in the asset's life to determine annual depreciation. Using the information given in  **Illustration 11-3**, straight-line depreciation expense in each year is \$42,000, calculated as follows:

The *straight-line method* depreciates an equal amount of the depreciable base to each year of the asset's service life.

$$\frac{\$250,000 - \$40,000}{5 \text{ years}} = \$42,000 \text{ per year}$$

The calculation of depreciation over the entire five-year life is demonstrated in detail in  **Illustration 11-3A**. Notice the last three columns. **Depreciation expense** is the portion of the asset's cost that is allocated to an expense *in the current year*. **Accumulated depreciation** (a contra-asset account) represents the cumulative amount of the asset's cost that has been depreciated *in all prior years including the current year*. **Book value** (sometimes called *carrying value* or carrying amount) is the asset's cost minus accumulated depreciation. This is the asset's reported amount in the balance sheet. The residual value (\$40,000 in this example) does not affect the calculation of book value, but the residual value does set a limit on which book value cannot go below.

Illustration 11-3A Straight-Line Depreciation

Using the information given in  **Illustration 11-3**:

| Year | Depreciable Base (\$250,000- \$40,000) | × Depreciation Rate per Year | = Depreciation Expense | Accumulated Depreciation | Book Value End of Year (\$250,000 less Accum. Depreciation) |
|------|--|------------------------------|------------------------|--------------------------|--|
| 1 | \$210,000 | 1/5* | \$ 42,000 | \$ 42,000 | \$208,000 |
| 2 | 210,000 | 1/5 | 42,000 | 84,000 | 166,000 |
| 3 | 210,000 | 1/5 | 42,000 | 126,000 | 124,000 |
| 4 | 210,000 | 1/5 | 42,000 | 168,000 | 82,000 |

| | | | | | |
|--------|---------|-----|------------------|---------|--------|
| 5 | 210,000 | 1/5 | 42,000 | 210,000 | 40,000 |
| Totals | | | <u>42,000</u> | | |
| | | | <u>\$210,000</u> | | |

*The rate equals 1 divided by the asset's 5-year estimated service life (1/5=20%).

The entry to record depreciation at the end of each year using the straight-line method would be:

| | |
|--------------------------|---------|
| Depreciation expense | 42,000* |
| Accumulated depreciation | 42,000 |

*\$42,000 = (\$250,000 - \$40,000) ÷ 5 years.

The effect of the entry is a decrease to total assets in the balance sheet and an increase to total expenses in the income statement.

ACCELERATED METHODS

Using the straight-line method implicitly assumes that the benefits derived from the use of the asset are the same each year. In some situations it might be more appropriate to assume that the asset will provide greater benefits in the early years of its life than in the later years. In these cases, a more appropriate matching of depreciation with revenues is achieved with higher depreciation in the early years of the asset's life and lower depreciation in later years.

Accelerated depreciation methods report higher depreciation in earlier years.

Declining-Balance Methods. One way to calculate higher depreciation in the early years of the asset's life is to multiply the asset's book value (cost less accumulated depreciation) at the beginning of the year by a constant percentage rate. Annual depreciation reduces book value each year. Therefore, multiplying a declining book value by a constant rate results in declining depreciation expense in each successive year.

Declining-balance depreciation methods multiply beginning-of-year book value, not depreciable base, by an annual rate that is a multiple of the straight-line rate.

Perhaps the most common declining-balance method is known as the **double-declining-balance (DDB) method**. Under this method, we multiply the asset's beginning-of-year book value by *double* (or 200%) the straight-line rate. For example, in our previous example

using a five-year asset, the straight-line rate was 20% (= 1/5). For the double-declining-balance method, we double that rate and use 40%. Various other multiples are used in practice, such as 125% or 150% of the straight-line rate.

Depreciation using the double-declining-balance method is calculated in

 **Illustration 11-3B** for the five years of the machine's life. Notice that the starting point for calculating depreciation is book value at the beginning of the year, rather than the depreciable base. As book value decreases each year, so does depreciation. Further, notice that in year 4, we did not multiply \$54,000 by 40%. If we had, annual depreciation would have been \$21,600. This amount would have resulted in accumulated depreciation by the end of year 4 of \$217,600 and a book value of \$32,400, which is below the asset's expected residual value of \$40,000. Therefore, we instead solve for the amount of depreciation that reduces book value to the expected residual value (book value beginning of year, \$54,000, minus expected residual value, \$40,000 = **\$14,000**). This also means there is no depreciation in year 5 since book value has already been reduced to the expected residual value. Declining balance methods often allocate the asset's depreciable base over fewer years than the expected service life.

Illustration 11-3B Double-Declining-Balance Depreciation

Using the information given in  **Illustration 11-3**:

| Year | Book Value Beginning of Year | × Depreciation Rate per Year | = Depreciation Expense | Accumulated Depreciation | Book Value End of Year (\$250,000 less Accum. Depreciation) |
|-------|------------------------------------|---------------------------------|---------------------------|-----------------------------|--|
| 1 | \$250,000 | 40%* | \$100,000 | \$100,000 | \$150,000 |
| 2 | 150,000 | 40% | 60,000 | 160,000 | 90,000 |
| 3 | 90,000 | 40% | 36,000 | 196,000 | 54,000 |
| 4 | 54,000 | | 14,000[†] | 210,000 | 40,000 |
| 5 | 40,000 | | 0 | 210,000 | 40,000 |
| Total | | | <u><u>\$210,000</u></u> | | |

*Double the straight-line rate of 20%. The straight-line rate is 1 divided by the asset's 5-year estimated service life (1/5 = 20%).

*Amount necessary to reduce book value to residual value.

Some argue that accelerated depreciation might be appropriate when benefits derived from the asset are approximately equal over the asset's life, but repair and maintenance costs increase significantly in later years. The early years incur higher depreciation and lower repairs and maintenance expense, while the later years have lower depreciation and higher repairs and maintenance.

Sum-of-the-Years'-Digits Method. Another accelerated depreciation pattern can be achieved by multiplying the depreciable base by a declining fraction. One such method is the **sum-of-the-years'-digits (SYD) method**.

The SYD method multiplies depreciable base by a declining fraction.

This method is seldom used in practice. The denominator of the fraction remains constant and is the *sum of the digits* from one to n , where n is the number of years in the asset's service life. For example, if there are five years in the service life, the denominator is the sum of 1, 2, 3, 4, and 5, which equals 15.² The numerator decreases each year; it begins with the value of n in the first year and decreases by one each year until it equals one in the final year of the asset's estimated service life. The annual fractions for an asset with a five-year life are: 5/15, 4/15, 3/15, 2/15, and 1/15. We calculate depreciation for the five years of the machine's life using the sum-of-the-years'-digits method in [Illustration 11-3C](#).

Illustration 11-3C Sum-of-the-Years'-Digits Depreciation

Using the information given in [Illustration 11-3](#):

| Year | Depreciable Base (\$250,000– \$40,000) | × Depreciation Rate per Year | = Depreciation Expense | Accumulated Depreciation | Book Value End of Year (\$250,000 less Accum. Depreciation) |
|------|--|---------------------------------|------------------------|-----------------------------|---|
| 1 | \$210,000 | 5/15* | \$ 70,000 | \$ 70,000 | \$180,000 |
| 2 | 210,000 | 4/15 | 56,000 | 126,000 | 124,000 |
| 3 | 210,000 | 3/15 | 42,000 | 168,000 | 82,000 |

| | | | | | |
|--|---------|--------------|------------------|---------|--------|
| 4 | 210,000 | 2/15 | 28,000 | 196,000 | 54,000 |
| 5 | 210,000 | 1/15 | 14,000 | 210,000 | 40,000 |
| Totals | | <u>15/15</u> | <u>\$210,000</u> | | |
| * $\frac{n(n+1)}{2} = \frac{5(5+1)}{2} = 15$ | | | | | |

Notice that total depreciation (\$210,000) is the same for accelerated methods like DDB and SYD as it is for the straight-line method, as shown in [Illustration 11-3A](#). The difference is the pattern in which this total cost is allocated to each year of the asset's service life.

SWITCH FROM ACCELERATED TO STRAIGHT-LINE

As a planned approach to depreciation, many companies have a formal policy to use accelerated depreciation for approximately the first half of an asset's service life and then switch to the straight-line method for the remaining life of the asset.

In [Illustration 11-3B](#), the company would switch to the straight-line method in either year 3 or year 4. Assuming the switch is made at the beginning of year 4, and the book value at the beginning of that year is \$54,000, an additional \$14,000 (\$54,000 - \$40,000 in residual value) of depreciation must be recorded over the remaining life of the asset. Applying the straight-line concept, \$7,000 (\$14,000 divided by two remaining years) in depreciation is recorded in both year 4 and year 5.

It should be noted that this switch to straight-line is not a change in depreciation method. The switch is part of the company's planned depreciation approach. However, as you will learn later in the chapter, the accounting treatment is the same as a change in depreciation method.

Activity-Based Depreciation Methods

The most logical way to allocate an asset's cost to periods of an asset's use is to measure the usefulness of the asset in terms of its productivity. For example, we could measure the service life of a machine in terms of its *output* (such as the estimated number of units it will produce) or in terms of its *input* (such as the number of hours it will operate).

Activity-based depreciation methods estimate service life in terms of some measure of productivity.

We have already mentioned that one way to measure the service life of a vehicle is to estimate the number of miles it will be driven. The most common activity-based method is called the **units-of-production method**.

The measure of output used is the estimated number of units (pounds, items, barrels, etc.) to be produced by the machine. By the units-of-production method, we first compute the average depreciation rate per unit by dividing the depreciable base by the number of units expected to be produced. This per unit rate is then multiplied by the actual number of units produced each period. In our illustration, the depreciation rate per unit is \$1.50, computed as follows:

The *units-of-production method* computes a depreciation rate per measure of activity and then multiplies this rate by actual activity to determine periodic depreciation.

$$\frac{\$250,000 - \$40,000}{140,000 \text{ units}} = \$1.50 \text{ per unit}$$

Each unit produced will require \$1.50 of depreciation to be recorded. In other words, each unit produced is assigned \$1.50 of the asset's cost.

 **Illustration 11-3D** shows that depreciation each year is the actual units produced multiplied by the depreciation rate per unit. This means that the amount of depreciation each year varies proportionately with the number of units being produced, with one exception. Notice that the asset produced 26,000 units in year 5, causing total production over the life of the asset (150,000 units) to exceed its estimated production (140,000 units). In this case, we cannot record depreciation for the final 10,000 units produced. Depreciation in year 5 is limited to the amount that brings the book value of the asset down to its residual value (book value beginning of year, \$64,000, minus expected residual value, \$40,000, equals **\$24,000**).

Illustration 11-3D Units-of-Production Depreciation

Using the information given in  **Illustration 11-3**:

| Year | Units Produced | × Depreciation Rate per Unit | = Depreciation Expense | Accumulated Depreciation | Book Value End of Year (\$250,000 less |
|------|----------------|------------------------------|------------------------|--------------------------|--|
|------|----------------|------------------------------|------------------------|--------------------------|--|

| | | | | | Accum. Depreciation) |
|--------|---------|---------|---------------------|-----------|-------------------------|
| 1 | 20,000 | \$1.50* | \$ 30,000 | \$ 30,000 | \$220,000 |
| 2 | 32,000 | 1.50 | 48,000 | 78,000 | 172,000 |
| 3 | 44,000 | 1.50 | 66,000 | 144,000 | 106,000 |
| 4 | 28,000 | 1.50 | 42,000 | 186,000 | 64,000 |
| 5 | 26,000 | | 24,000 [†] | 210,000 | 40,000 |
| Totals | 150,000 | | \$210,000 | | |

*(\$250,000-\$40,000)/140,000 units = \$1.50 per unit.

[†]Amount necessary to reduce book value to residual value.

The machine may produce *fewer than* 140,000 units by the end of its useful life. For example, suppose production in year 5 had been only 6,000 units, bringing total production to 130,000 units, and management has no future plans to use the machine. We would record depreciation in year 5 for \$9,000 (6,000 units × \$1.50). If management then develops a formal plan to sell the machine, the machine is classified as “held for sale” (discussed in more detail below) and reported at the lower of its current book value or its fair value less any cost to sell. If management plans to retire the asset without selling it, a loss is recorded for the remaining book value.

Decision Makers’ Perspective—Selecting a Depreciation Method

 **Illustration 11-3E** compares periodic depreciation calculated using each of the alternatives we discussed and illustrated.

All methods provide the same total depreciation over an asset’s life.

Illustration 11-3E Comparison of Various Depreciation Methods

| Year | Straight-Line | Double-Declining-Balance | Sum-of-the-Years ² -Digits | Units of Production |
|------|---------------|--------------------------|---------------------------------------|---------------------|
| 1 | \$ 42,000 | \$100,000 | \$ 70,000 | \$ 30,000 |

| | | | | |
|--------------|------------------|------------------|------------------|------------------|
| 2 | 42,000 | 60,000 | 56,000 | 48,000 |
| 3 | 42,000 | 36,000 | 42,000 | 66,000 |
| 4 | 42,000 | 14,000 | 28,000 | 42,000 |
| 5 | 42,000 | 0 | 14,000 | 24,000 |
| Total | \$210,000 | \$210,000 | \$210,000 | \$210,000 |

Conceptually, using an activity-based depreciation method provides a better matching of the asset’s cost to the use of that asset to help produce revenues. Clearly, the productivity of an asset is more closely associated with the benefits provided by that asset than the mere passage of time. Also, these methods allow for patterns of depreciation to correspond with the patterns of asset use.

Activity-based methods are conceptually superior to time-based methods but often are impractical to apply in practice.

However, activity-based methods quite often are either infeasible or too costly to use. For example, buildings don’t have an identifiable measure of productivity. Even for machinery, there may be an identifiable measure of productivity such as machine hours or units produced, but it frequently is more costly to determine each period than it is to simply measure the passage of time. For these reasons, most companies use time-based depreciation methods.

 **Illustration 11-4** shows the results of a survey of depreciation methods used by large public companies.³

Illustration 11-4 Use of Various Depreciation Methods

Real World Financials

| Depreciation Method | Number of Companies |
|----------------------------------|---------------------|
| Straight-line | 490 |
| Declining-balance | 9 |
| Sum-of-the-years’-digits | 2 |
| Accelerated method—not specified | 9 |
| Units of production | 12 |

Why do so many companies use the straight-line method as opposed to other time-based methods? Many companies perhaps consider the benefits derived from the majority of depreciable assets to be realized approximately evenly over these assets' useful lives. Certainly, a contributing factor is that straight-line is the easiest method to understand and apply.

Another motivation is the positive effect on reported income. Straight-line depreciation produces a higher net income than accelerated methods in the early years of an asset's life. In [Chapter 8](#), we pointed out that reported net income can affect bonuses paid to management or debt agreements with lenders.

Conflicting with the desire to report higher profits is the desire to reduce taxes by reducing taxable income. An accelerated method serves this objective by reducing taxable income more in the early years of an asset's life than straight-line. You probably recall a similar discussion from [Chapter 8](#) in which the benefits of using the LIFO inventory method during periods of increasing costs were described. However, remember that the LIFO conformity rule requires companies using LIFO for income tax reporting to also use LIFO for financial reporting. *No such conformity rule exists for depreciation methods.* Income tax regulations allow firms to use different approaches to computing depreciation in their tax returns and in their financial statements. The method used for tax purposes is therefore not a constraint in the choice of depreciation methods for financial reporting. As a result, most companies use the straight-line method for financial reporting and an accelerated method for tax reporting (discussed in [Appendix 11A](#)). For example, [Illustration 11-5](#) shows **Merck & Co.**'s depreciation policy as reported in a disclosure note accompanying recent financial statements.

A company does not have to use the same depreciation method for both financial reporting and income tax purposes.

Illustration 11-5 Depreciation Method Disclosure—Merck & Co.

Real World Financials

Summary of Accounting Policies (in part):

Depreciation

Depreciation is provided over the estimated useful lives of the assets, principally using the straight-line method. For tax purposes, accelerated tax methods are used. The estimated useful lives primarily range from 25 to 45 years for Buildings, and from 3 to 15 years for Machinery, equipment, and office furnishings.

Source: Merck & Co.

It is not unusual for a company to use different depreciation methods for different classes of assets. For example,  **Illustration 11-6** illustrates the **International Paper Company** depreciation policy disclosure contained in a note accompanying recent financial statements.

Illustration 11-6 Depreciation Method Disclosure—International Paper Company

Real World Financials

Summary of Accounting Policies (in part):

Plants, Properties, and Equipment

Plants, properties, and equipment are stated at cost, less accumulated depreciation. The units-of-production method of depreciation is used for pulp and paper mills, and the straight-line method is used for other plants and equipment.

Source: International Paper Company

LO11-10 Discuss the primary differences between U.S. GAAP and IFRS with respect to the utilization and impairment of property, plant, and equipment and intangible assets.

International Financial Reporting Standards

Depreciation. *IAS No. 16* requires that each component of an item of property, plant, and equipment must be depreciated separately if its cost is significant in relation to the total cost of the item.⁴ In the United States, component depreciation is allowed but is not often used in practice.

Consider the following illustration:

Cavandish LTD. purchased a delivery truck for \$62,000. The truck is expected to have a service life of six years and a residual value of \$12,000. At the end of three years, the oversized tires, which have a cost of \$6,000 (included in the \$62,000 purchase price), will be replaced.

Under U.S. GAAP, the typical accounting treatment is to depreciate the \$50,000 (\$62,000 - \$12,000) depreciable base of the truck over its six-year useful life. Using IFRS, the depreciable base of the truck is \$44,000 (\$62,000 - \$12,000 - \$6,000) and is depreciated over the truck's six-year useful life, and the \$6,000 cost of the tires is depreciated separately over a three-year useful life.

U.S. GAAP and IFRS determine depreciable base in the same way, by subtracting estimated residual value from cost. However, IFRS requires a review of residual values at least annually.

Sanofi, a French pharmaceutical company, prepares its financial statements using IFRS. In its property, plant, and equipment note, the company discloses its use of the component-based approach to accounting for depreciation.

Property, plant, and equipment (in part)

The component-based approach to accounting for property, plant, and equipment is applied. Under this approach, each component of an item of property, plant, and equipment with a cost which is significant in relation to the total cost of the item and which has a different useful life from the other components must be depreciated separately.

Depreciation Methods. *IAS No. 16* specifically mentions three depreciation methods: straight-line, units-of-production, and the diminishing balance method. The diminishing balance method is similar to the declining balance method sometimes used by U.S. companies. As in the United States, the straight-line method is used by most companies. A survey of large companies that prepare their financial statement according to IFRS reports 93% of the surveyed companies used the straight-line method.⁵

Concept Review Exercise

DEPRECIATION METHODS

The Sprague Company purchased a fabricating machine on January 1, 2024, at a net cost of \$130,000. At the end of its four-year useful life, the company estimates that the machine will be worth \$30,000. Sprague also estimates that the machine will run for 25,000 hours during its four-year life. The company's fiscal year ends on December 31.

Required:

Compute depreciation expense for 2024 through 2027 using each of the following methods:

1. Straight-line
2. Double-declining-balance
3. Sum-of-the-years'-digits
4. Units of production (using machine hours); actual production was as follows:

| Year | Machine Hours |
|------|---------------|
| 2024 | 6,000 |
| 2025 | 8,000 |
| 2026 | 5,000 |
| 2027 | 7,000 |

Solution:

1. Straight-line:

$$\frac{\$130,000 - \$30,000}{4 \text{ years}} = \$25,000 \text{ per year}$$

2. Double-declining balance:

| Year | Book Value Beginning of Year | × Depreciation Rate per Year | = Depreciation Expense | Book Value End of Year |
|-------|---------------------------------|---------------------------------|---------------------------|---------------------------|
| 2024 | \$130,000 | 50%* | \$ 65,000 | \$65,000 |
| 2025 | 65,000 | 50% | 32,500 | 32,500 |
| 2026 | 32,500 | | 2,500 [†] | 30,000 |
| 2027 | 30,000 | | 0 | 30,000 |
| Total | | | <u>\$100,000</u> | |

*Double the straight-line rate of 25%. The straight-line rate is 1 divided by the asset's 4-year estimated service life (1/4 = 25%).

[†]Amount necessary to reduce book value to residual value.

3. Sum-of-the-years'-digits:

| Year | Depreciable Base | × Depreciation Rate per Year | = Depreciation Expense |
|-------|------------------|------------------------------|------------------------|
| 2024 | \$100,000 | 4/10 | \$ 40,000 |
| 2025 | 100,000 | 3/10 | 30,000 |
| 2026 | 100,000 | 2/10 | 20,000 |
| 2027 | 100,000 | 1/10 | 10,000 |
| Total | | | <u>\$100,000</u> |

4. Units of production (using machine hours):

| Year | Machine Hours | × Depreciation Rate per Hour | = Depreciation Expense | Book Value End of Year |
|------|------------------|---------------------------------|---------------------------|---------------------------|
| 2024 | 6,000 | \$4* | \$ 24,000 | \$106,000 |
| 2025 | 8,000 | 4 | 32,000 | 74,000 |

| | | | | |
|-------|-------|---|---------------------|--------|
| 2026 | 5,000 | 4 | 20,000 [†] | 54,000 |
| 2027 | 7,000 | | 24,000 [†] | 30,000 |
| Total | | | <u>\$100,000</u> | |

*(\$13,000–\$30,000)/25,000 hours = \$4 per hour.

[†]Amount necessary to reduce book value to residual value.

Partial Period Depreciation

When acquisition and disposal of property, plant, and equipment occur at times other than the very beginning or very end of a company's fiscal year, a company theoretically must determine how much depreciation to record for the part of the year that each asset actually is used.

Let's repeat the Hover Manufacturing Company illustration used earlier in [Illustration 11-3](#) but modify it in [Illustration 11-7](#) to assume that the asset was acquired *during* the company's fiscal year.

Illustration 11-7 Depreciation Methods—Partial Year

On April 1, 2024, Hover Manufacturing Company purchased a machine for \$250,000 and made the following estimates at that time:

- Estimated residual value of \$40,000.
- Estimated service life of five years.
- Estimated production of 140,000 units.

The company has a December 31 year-end. Actual production during the five years of the asset's life was as follows:

| Year | Units Produced* |
|--------------------------|-----------------|
| 2024 (beginning April 1) | 16,000 |
| 2025 | 30,000 |
| 2026 | 40,000 |

| | |
|-----------------------|----------------|
| 2027 | 32,000 |
| 2028 | 24,000 |
| 2029 (ending April 1) | 8,000 |
| Total | <u>150,000</u> |

*The units produced in each year do not correspond to Years 1–5 in Illustration 11–3 because the asset was not purchased at the beginning of the first year. In both illustrations, total production occurs over five years for the same total amount of 150,000 units.

Depreciation per year of the asset’s life calculated earlier in [Illustration 11-3A](#), [Illustration 11-3B](#), and [Illustration 11-3D](#) is summarized in [Illustration 11-7A](#).

Illustration 11–7A Yearly Depreciation

| Year | Straight-Line | Double-Declining-Balance | Units-of-Production |
|-------|------------------|--------------------------|---------------------|
| 1 | \$ 42,000 | \$100,000 | \$ 30,000 |
| 2 | 42,000 | 60,000 | 48,000 |
| 3 | 42,000 | 36,000 | 66,000 |
| 4 | 42,000 | 14,000 | 42,000 |
| 5 | 42,000 | 0 | 24,000 |
| Total | <u>\$210,000</u> | <u>\$210,000</u> | <u>\$210,000</u> |

[Illustration 11-7B](#) shows how Hover would depreciate the machinery by these three methods, assuming an April 1 acquisition date.

Illustration 11–7B Partial-Year Depreciation

| Year | Straight-Line | Double-Declining-Balance |
|------|---|---|
| 2024 | $\$42,000 \times \frac{3}{4} = \$ 31,500$ | $\$250,000 \times \frac{2}{5} \times \frac{3}{4} = \$ 75,000$ |
| 2025 | 42,000 | $\$175,000 \times \frac{2}{5} = 70,000^*$ |
| 2026 | 42,000 | $\$105,000 \times \frac{2}{5} = 42,000$ |
| 2027 | 42,000 | 23,000 [†] |

| Year | Straight-Line | Double-Declining-Balance |
|--------|---|--------------------------|
| 2028 | 42,000 | 0 |
| 2029 | $\$42,000 \times \frac{1}{4} =$ 10,500 | 0 |
| Totals | <u><u>\$210,000</u></u> | <u><u>\$210,000</u></u> |

*Book value at the beginning of the year times double the straight-line rate: $(\$250,000 - \$75,000) \times \frac{2}{5} =$
 $^{\wedge}(\$250,000 - \$40,000) / 140,000 \text{ units} = \1.50 per unit . Depreciation each year equals actual units produced.

[†]Amount necessary to reduce book value to residual value.

The first thing to notice is that even with partial-year depreciation, the total depreciation over the asset's total life (\$210,000) is the same whether the asset is purchased at the beginning of a year or during the year. For straight-line, depreciation is $\frac{3}{4}$ of a full year's depreciation for the first year of the asset's life because the asset was used only nine months, or $\frac{3}{4}$ of the year. The asset is depreciated for one full year in the following four years, and then the remaining $\frac{1}{4}$ of the asset's five-year useful life is depreciated in the final year.

For double-declining-balance, recall that depreciation equals the asset's book value at the beginning of the year times double the straight-line rate. In the first year, depreciation is $\frac{3}{4}$ of the full year's depreciation. After that, we calculate depreciation for a full year using the updated beginning-of-year book value. We continue each year until a final plug amount is needed to reduce book value to residual value. That final plug was reached in 2027 so no further depreciation is recorded over the remaining life of the asset (2028 and 2029).

Page 579

For units-of-production, depreciation is not calculated based on time, so the portion of the year the asset is in operation does not matter. Instead, depreciation is calculated as the estimated depreciation rate per unit of output multiplied by the actual output for the year. Once the full allocation base has been depreciated, no further depreciation is recorded. For the example in  **Illustration 11-7B**, the full allocation based was reached in 2028 (when actual production reached 140,000 units), so any further production does not affect depreciation.

Sometimes companies adopt a simplifying assumption, or convention, for computing partial year's depreciation and use it consistently. A common convention is to record one-half of a full year's depreciation in the year of acquisition and another half year in the year of disposal. This is known as the **half-year convention**.⁶

Dispositions

After using property, plant, and equipment, companies will sell or retire those assets. When selling property, plant, and equipment for monetary consideration (cash or a receivable), the seller recognizes a **gain** or **loss** for the difference between the consideration received and the book value of the asset sold.

A gain or loss is recognized for the difference between the consideration received and the asset's book value.

| | | |
|--|--------------|----------------------|
| Selling price (consideration received) | | \$ xxx |
| Less: Book value of asset sold | | |
| Original cost | \$ xxx | |
| Accumulated depreciation | <u>(xxx)</u> | <u>(xxx)</u> |
| Gain/loss on sale of asset | | <u><u>\$ xxx</u></u> |

We'll demonstrate this calculation next in [Illustration 11-7C](#) by modifying our earlier straight-line method example of Hover Manufacturing Company in [Illustration 11-3A](#). In [Illustration 11-7C](#), Hover sells a machine before the end of its service life and receives more cash than the asset's book value (cost minus accumulated depreciation) at the time of the sale. This causes a gain to be recognized.

Illustration 11-7C Sale of Property, Plant, and Equipment

On January 1, 2024, Hover Manufacturing Company purchased a machine for \$250,000. The company expects the service life of the machine to be five years. The estimated residual value is \$40,000. Hover uses the straight-line depreciation method for machines recorded in the equipment account.

Suppose Hover decides not to hold the machine for the expected five years but instead sells it on December 31, 2026 (three years later), for \$140,000. We first need to update depreciation to the date of sale. Since depreciation for 2024 and 2025 has already been recorded in those years, we need to update depreciation only for the current year, 2026.

The entry to update depreciation for 2026:

| | |
|--------------------------|---------------|
| Depreciation expense | 42,000* |
| Accumulated depreciation | 42,000 |

*\$42,000 = (\$250,000 - \$40,000) ÷ 5 years. See also [Illustration 11-3A](#).

The balance of accumulated depreciation equals depreciation that has already been recorded in 2024 and 2025 (\$42,000 + \$42,000) plus the depreciation recorded above in 2026 (\$42,000).

Accumulated Depreciation

| | | |
|--|----------------|------|
| | 42,000 | 2024 |
| | 42,000 | 2025 |
| | 42,000 | 2026 |
| | 126,000 | |

We can now calculate the gain or loss on the sale as the difference between the selling price and the asset's book value. In this example, the amount of cash received is greater than the asset's book value, so a gain is recognized.

| | | |
|-------------------------------------|------------------|-------------------------|
| Selling price (cash received) | | \$ 140,000 |
| Less: Book value of asset sold | | |
| Original cost | \$ 250,000 | |
| Accumulated depreciation | <u>(126,000)</u> | <u>(124,000)</u> |
| Gain on sale of equipment (machine) | | <u>\$ 16,000</u> |

Finally, the sale of the equipment requires that we do the following:

1. Record the cash received.
2. Remove the book value of the asset sold with a credit to the asset account and a debit to its accumulated depreciation.
3. Record the gain or loss.

The entry to record the sale on December 31, 2026, for \$140,000:

| | | |
|--|----------------|---------------|
| Cash | 140,000 | |
| Accumulated depreciation (account balance) | 126,000 | |
| Equipment (account balance) | | 250,000 |
| Gain on sale of equipment (selling price - book value) | | 16,000 |

The balances of the equipment account and the accumulated depreciation account for the machine will be \$0 after this entry. The gain on the sale normally is reported in the income statement as a separate component of operating income.

Now, assume that Hover sold the machine on December 31, 2026, for only \$110,000. This amount is less than book value by **\$14,000** and a loss on the sale would be recorded.

| | | |
|-------------------------------------|------------------|---------------------------|
| Selling price (cash received) | | \$ 110,000 |
| Less: Book value of asset sold | | |
| Original cost | \$ 250,000 | |
| Accumulated depreciation | <u>(126,000)</u> | <u>(124,000)</u> |
| Loss on sale of equipment (machine) | | <u><u>\$ (14,000)</u></u> |

Page 581

The entry to record the sale on December 31, 2026, for \$110,000:

| | |
|--|----------------|
| Cash | 110,000 |
| Accumulated depreciation (account balance) | 126,000 |
| Loss on sale of equipment (selling price – book value) | 14,000 |
| Equipment (account balance) | 250,000 |

Notice that the amounts of the equipment and accumulated depreciation removed from the books upon sale of the asset do not depend on whether a gain or loss is recorded; the asset's book value is written off completely. It's the amount of cash received relative to the asset's book value that determines the amount of the gain or loss.

Decision Makers' Perspective—Understanding Gains and Losses

It's tempting to think of a "gain" and "loss" on the sale of a depreciable asset as "good" and "bad" news. For example, we commonly use the term "gain" in everyday language to mean we sold something for more than we bought it. Gain could also be misinterpreted to mean the asset was sold for more than its fair value (we got a "good deal"). However, neither of these represents the meaning of a gain on the sale of assets. Refer back to our example in [Illustration 11-7C](#). The sale of the machine

resulted in a gain, but the machine was sold for *less than* its original cost, and there is no indication that Hover sold the machine for more than its fair value.

A gain on the sale of a depreciable asset simply means the asset was sold for more than its book value. In other words, the asset being received and recorded (such as cash) is greater than the recorded book value of the asset being sold and written off. The net increase in the book value of total assets is an accounting gain (not an economic gain).

The same is true for losses. A loss signifies that the cash received is less than the book value of the asset being sold; there is a net decrease in the book value of total assets.

ASSETS HELD FOR SALE

Sometimes management plans to sell property, plant, and equipment or an intangible asset but that sale hasn't yet happened. In this case, the asset is classified as "held for sale" in the period in which all of the following criteria are met:⁷

Property, plant, and equipment or an intangible asset to be disposed of by sale is classified as held for sale and measured at the lower of the asset's book value or the asset's fair value less cost to sell.

1. Management commits to a plan to sell the asset.
2. The asset is available for immediate sale in its present condition.
3. An active plan to locate a buyer and sell the asset has been initiated.
4. The completed sale of the asset is probable and typically expected to occur within one year.
5. The asset is being offered for sale at a reasonable price relative to its current fair value.
6. Management's actions indicate the plan is unlikely to change significantly or be withdrawn.

An asset that is classified as held for sale is no longer depreciated or amortized. *An asset classified as held for sale is reported at the lower of its current book value or its fair value less any cost to sell.* If the fair value less cost to sell is below book value, we recognize a loss in the current period. If financial statements are again prepared prior to the sale, we reassess the asset's fair value less selling costs. If a further decline has occurred, we recognize another loss. If the fair value less selling costs has increased since the previous measurement, we recognize a gain, but limited to the cumulative amount of any previous losses.

RETIREMENTS

Sometimes instead of selling a used asset, a company will retire (or abandon) the asset. Retirements are treated similarly to selling for monetary consideration. At the time of retirement, the asset account and the corresponding accumulated depreciation account are removed from the books, and a loss equal to the remaining book value of the asset is recorded because there will be no monetary consideration received. When there is a formal plan to retire an asset, but before the actual retirement, there may be some revision in depreciation due to a change in the estimated service life or residual value.

Group and Composite Depreciation Methods

As you might imagine, depreciation records could become quite cumbersome and costly if a company has hundreds, or maybe thousands, of depreciable assets. However, the burden can be lessened if the company uses the group or composite method to depreciate assets collectively rather than individually. The two

Group and composite depreciation methods aggregate assets to reduce the recordkeeping costs of determining periodic depreciation.

methods are the same except for the way the collection of assets is aggregated for depreciation. The **group depreciation method** defines the collection as depreciable assets that share similar service lives and other attributes. For example, group depreciation could be used for fleets of vehicles or collections of machinery. The **composite depreciation method** is used when assets are physically dissimilar but are aggregated anyway to gain the convenience of a collective depreciation calculation. For instance, composite depreciation can be used for all of the depreciable assets in one manufacturing plant, even though individual assets in the composite may have widely diverse service lives.

Both approaches are similar in that they involve applying a single straight-line rate based on the average service lives of the assets in the group or composite.⁸ The process is demonstrated using  **Illustration 11-8**.

Illustration 11-8 Group Depreciation

The Express Delivery Company began operations in 2024. It will depreciate its fleet of delivery vehicles using the group method. The cost of vehicles purchased early in

2024, along with residual values, estimated lives, and straight-line depreciation per year by type of vehicle, are as follows:

| Asset | Cost | Residual Value | Depreciable Base | Estimated Life (years) | Depreciation per Year (straight line) |
|--------|------------------|-----------------|------------------|------------------------|---------------------------------------|
| Vans | \$150,000 | \$30,000 | \$120,000 | 6 | \$20,000 |
| Trucks | 120,000 | 16,000 | 104,000 | 5 | 20,800 |
| Wagons | 60,000 | 12,000 | 48,000 | 4 | 12,000 |
| Totals | <u>\$330,000</u> | <u>\$58,000</u> | <u>\$272,000</u> | | <u>\$52,800</u> |

The *group depreciation* rate is determined by dividing the depreciation per year by the total cost. The group's *average service* life is calculated by dividing the depreciable base by the depreciation per year:

$$\text{Group depreciation rate} = \frac{\$52,800}{\$330,000} = 16\%$$

$$\text{Average service life} = \frac{\$272,000}{\$52,800} = 5.15 \text{ years (rounded)}$$

If there are no changes in the assets contained in the group, depreciation of **\$52,800** per year ($\$330,000 \times 16\%$) will be recorded for 5.15 years. This means the depreciation in the sixth year will be \$7,920 (0.15 of a full year's depreciation = $15\% \times \$52,800$), which depreciates the cost of the group down to its estimated residual value. In other words, the group will be depreciated over the average service life of the assets in the group.

The depreciation rate is applied to the total cost of the group or composite for the period.

In practice, there very likely will be changes in the assets constituting the group as new assets are added and others are retired or sold. Additions are recorded by increasing the group asset account for the cost of the addition. Depreciation is determined by multiplying the group rate by the total cost of assets in the group for that period. Once the group or composite rate and the average service life are determined, they normally are continued despite the addition and disposition of individual assets. This implicitly assumes that the service lives of new assets approximate those of individual assets they replace.

Because depreciation records are not kept on an individual asset basis, dispositions are recorded under the assumption that the book value of the disposed item exactly equals any proceeds received and no gain

No gain or loss is recorded when a group or composite asset is retired or sold.

or loss is recorded. For example, if a delivery truck in the above illustration that cost \$15,000 is sold for \$3,000 in the year 2027, the following journal entry is recorded:

| | | |
|---------------------------------------|--------|--------|
| Cash | 3,000 | |
| Accumulated depreciation (difference) | 12,000 | |
| Vehicles | | 15,000 |

Any actual gain or loss is included in the accumulated depreciation account. This practice generally will not distort income as the unrecorded gains tend to offset unrecorded losses.

The group and composite methods simplify the recordkeeping of depreciable assets. This simplification justifies any immaterial errors in income determination.  **Illustration 11-9** shows a disclosure note accompanying recent financial statements of the **Kinder Morgan, Inc.**, describing the use of the group depreciation method for its property that is regulated by federal statutes.

Illustration 11-9 Disclosure of Depreciation Method—Kinder Morgan, Inc.

Real World Financials

Summary of Significant Accounting Policies (in part)

Property, Plant, and Equipment, net (in part)

We generally compute depreciation using either the straight-line method based on estimated economic lives or the composite depreciation method, which applies a single depreciation rate for a group of assets. Generally, we apply composite depreciation rates to functional groups of property having similar economic characteristics. The rates range from 1.01% to 23.0% excluding certain short-lived assets such as vehicles.

A loss on the sale of property, plant and equipment is calculated as the difference between the cost of the asset disposed of, net of depreciation, and the sales proceeds received or the market value if the asset is being held for sale. For our pipeline system assets under the composite method of depreciation, we generally

charge the original cost of property sold or retired to accumulated depreciation and amortization, net of salvage and cost of removal.

Source: Kinder Morgan, Inc.

Additional group-based depreciation methods, the retirement and replacement methods, are discussed in [Appendix 11B](#).

LO11–10 Discuss the primary differences between U.S. GAAP and IFRS with respect to the utilization and impairment of property, plant, and equipment and intangible assets.

International Financial Reporting Standards

Valuation of Property, Plant, and Equipment. As we've discussed, under U.S. GAAP a company reports property, plant, and equipment (PP&E) in the balance sheet at cost less accumulated depreciation (book value). *IAS No. 16* allows a company to report property, plant, and equipment at that amount or, alternatively, at its fair value (revaluation).⁹ If a company chooses revaluation, all assets within a class of PP&E must be revalued on a regular basis. U.S. GAAP prohibits revaluation.

If the revaluation option is chosen, the way the company reports the difference between fair value and book value depends on which amount is higher:

- If fair value is higher than book value, the difference is reported as *other comprehensive income (OCI)*, which then accumulates in a “revaluation surplus” (sometimes called revaluation reserve) account in equity.
- If book value is higher than fair value, the difference is reported as an *expense in the income statement*. An exception is when a revaluation surplus account relating to the same asset has a balance from a previous *increase* in fair value, that balance is eliminated before debiting revaluation expense.

Consider the following illustration:

Candless Corporation prepares its financial statements according to IFRS. At the beginning of its 2024 fiscal year, the company purchased equipment for \$100,000. The equipment is expected to have a five-year useful life with no residual value, so depreciation for 2024 is \$20,000. At the end of the year, Candless chooses to revalue the equipment as permitted by *IAS No. 16*. Assuming that the fair value of the equipment at year-end is \$84,000, Candless records depreciation and the revaluation using the following journal entries:

| | |
|--|--------|
| (a) Depreciation expense ($\$100,000 \div 5$ years) | 20,000 |
| Accumulated depreciation | 20,000 |

After this entry, the book value of the equipment is \$80,000; the fair value is \$84,000. We use the ratio of the two amounts to adjust both the equipment and the accumulated depreciation accounts (and thus the book value) to fair value (\$ in thousands):

| December 31, 2024 | Before Revaluation | | | | After Revaluation |
|------------------------------|-------------------------------|---|-------|---|------------------------------|
| Equipment | \$100 | × | 84/80 | = | \$105 |
| Accumulated depreciation | <u>20</u> | × | 84/80 | = | <u>21</u> |
| Book value | \$ 80 | × | 84/80 | = | \$ 84 |

The entries to revalue the equipment and the accumulated depreciation accounts (and thus the book value) are as follows:

| | |
|---|-------|
| (b) Equipment ($\$105,000 - \$100,000$) | 5,000 |
| Accumulated depreciation ($\$21,000 - \$20,000$) | 1,000 |
| Revaluation surplus—OCI ($\$84,000 - \$80,000$) . | 4,000 |

To record the revaluation of equipment to its fair value.

The new basis for the equipment is its fair value of \$84,000 ($\$105,000 - \$21,000$), and the following years' depreciation is based on that amount. Thus, 2025 depreciation would be \$84,000 divided by the four remaining years, or \$21,000:¹⁰

| | |
|---|--------|
| (a) Depreciation expense ($\$84,000 \div 4$ years) | 21,000 |
| Accumulated depreciation | 21,000 |

After this entry, the accumulated depreciation is \$42,000 and the book value of the equipment is \$63,000. Let's say the fair value now is \$57,000. We use the ratio of the two amounts (fair value of \$57,000 divided by book value of \$63,000) to adjust both the equipment and the accumulated depreciation accounts (and thus the book value) to fair value (\$ in thousands):

| December 31, 2025 | Before Revaluation | | | | After Revaluation |
|-----------------------------|-----------------------|---|-------|---|----------------------|
| Equipment | \$105 | × | 57/63 | = | \$95 |
| Accumulated depreciation | <u>42</u> | × | 57/63 | = | <u>38</u> |
| Book value | \$ 63 | × | 57/63 | = | \$57 |

The entries to revalue the equipment and the accumulated depreciation accounts (and thus the book value) are as follows:

| | |
|---|--------|
| (b) Revaluation surplus—OCI ($\$57,000 - \$63,000 =$ \$6,000; limit: \$4,000 balance) | 4,000 |
| Revaluation expense (to balance) | 2,000 |
| Accumulated depreciation ($\$38,000 - \$42,000$) | 4,000 |
| Equipment ($\$95,000 - \$105,000$) | 10,000 |

A decrease in fair value, as occurred in 2025, is expensed unless it reverses a revaluation surplus account relating to the same asset, as in this illustration. So, of the \$6,000 decrease in value (\$63,000 book value less \$57,000 fair value), \$4,000 is debited to the previously created revaluation surplus and the remaining \$2,000 is recorded as revaluation expense in the income statement.

Investcorp, a provider and manager of alternative investment products headquartered in London, prepares its financial statements according to IFRS. The following disclosure note included in a recent annual report discusses the company's method of valuing its building and certain operating assets.

Premises and Equipment (in part)

The Bank carries its building on freehold land and certain operating assets at revalued amounts, being the fair value of the assets at the date of revaluation less any subsequent

accumulated depreciation and subsequent accumulated impairment losses. Any revaluation surplus is credited to the asset revaluation reserve included in equity, except to the extent that it reverses a revaluation decrease of the same asset previously recognized in profit and loss, in which case the increase is recognized in profit or loss. A revaluation deficit is recognized directly in profit or loss, except that a deficit directly offsetting a previous surplus on the same asset is directly offset against the surplus in the asset revaluation reserve.

The revaluation alternative is used infrequently. A recent survey of large companies that prepare their financial statements according to IFRS reports that only 10 of the 160 surveyed companies used the revaluation alternative for at least one asset class.¹¹

Depletion of Natural Resources

LO11-3 Calculate the periodic depletion of a natural resource.

Allocation of the cost of natural resources is called **depletion**. Because the usefulness of natural resources generally is directly related to the amount of the resources extracted, the activity-based units-of-production method is widely used to calculate periodic depletion. Service life is therefore the estimated amount of natural resource to be extracted (for example, tons of mineral or barrels of oil).

Depletion of the cost of natural resources usually is determined using the units-of-production method.

The depletion base is cost less any anticipated residual value. Residual value could be significant if cost includes land that has a value after the natural resource has been extracted.

The example in [Illustration 11-10](#) was first introduced in [Chapter 10](#) in [Illustration 10-6](#).

Illustration 11-10 Depletion of Natural Resources

In 2024, Canyon Mining Company has the following five costs related to 500 acres of land in Pennsylvania:

| | |
|---|--------------------|
| 1. Payment for the right to explore for a copper deposit. | \$1,000,000 |
| 2. Actual exploration costs for a copper deposit. | 800,000 |
| 3. Intangible development costs in digging and constructing the mine shaft. | 500,000 |
| 4. Expected cost to restore the land after extraction is completed.* | 468,360 |
| | <u>\$2,768,360</u> |
| 5. Purchase of excavation equipment for the project. | <u>\$ 600,000</u> |

* Determined using the expected cash flow approach.

The company's geologist estimates that 1,000,000 tons of copper will be extracted over a three-year period. After the copper is removed from the site, the excavation

equipment will be sold for an anticipated residual value of \$60,000. During 2024, 300,000 tons were extracted.

The capitalized cost of the copper mine (natural resource), including the expected restoration costs, is **\$2,768,360**. The \$600,000 cost for equipment is capitalized separately. Since there is no residual value to the copper mine, the depletion base equals cost and the depletion rate per ton is calculated as follows:

$$\begin{aligned} \text{Depletion per ton} &= \frac{\text{Depletion base}}{\text{Estimated extractable tons}} \\ \text{Depletion per ton} &= \frac{\$2,768,360}{1,000,000 \text{ tons}} = \$2.76836 \text{ per ton} \end{aligned}$$

For each ton of copper extracted, \$2.76836 in depletion is recorded. In 2024, the following journal entry records depletion for the 300,000 tons of copper actually extracted.

| | |
|--------------------------------------|---------|
| Depletion (\$2.76836 × 300,000 tons) | 830,508 |
| Copper mine | 830,508 |

Notice that the credit is to the asset, copper mine, rather than to a contra account, accumulated depletion. Although this approach is traditional, the use of a contra account is acceptable.

Depletion is a product cost and is included in the cost of the inventory of copper, just as the depreciation on manufacturing equipment is included in inventory copper. The depletion is then included in cost of goods sold in the income statement when the copper is sold.

What about depreciation on the \$600,000 cost of excavation equipment? If the equipment can be moved from the site and used on future projects, the equipment's depreciable base should be allocated over its useful life. If the asset is not movable, as in our illustration, then it should be depreciated over its useful life or the life of the natural resource, whichever is shorter.

Quite often, companies use the units-of-production method to calculate depreciation and amortization on assets used in the extraction of natural resources. The activity base used is the same as that used to calculate

The units-of-production method often is used to determine depreciation and amortization on assets used in the extraction of natural resources.

depletion, the estimated recoverable natural resource. In our illustration, the depreciation rate would be \$0.54 per ton, calculated as follows.

$$\text{Depreciation per ton} = \$0.54 \text{ per ton} = \frac{\$600,000 - \$60,000}{1,000,000 \text{ tons}}$$

In 2024, depreciation of \$162,000 ($\$0.54 \times 300,000$ tons) is recorded and also included as part of the cost of the copper inventory.

The summary of significant accounting policies disclosure accompanying recent financial statements of **ConocoPhillips** shown in [Illustration 11-11](#) provides a good summary of depletion, amortization, and depreciation for natural resource properties.

Illustration 11-11 Depletion Method Disclosure—ConocoPhillips

Real World Financials

Accounting Policies (in part)

Depletion and Amortization—Leasehold costs of producing properties are depleted using the unit-of-production method based on estimated proved oil and gas reserves. Amortization of intangible development costs is based on the unit-of-production method using estimated proved developed oil and gas reserves.

Depreciation and Amortization—Depreciation and amortization of PP&E on producing hydrocarbon properties and certain pipeline and LNG assets (those which are expected to have a declining utilization pattern) are determined by the unit-of-production method. Depreciation and amortization of all other PP&E are determined by either the individual-unit-straight-line method or the group-straight-line method (for those individual units that are highly integrated with other units).

Source: ConocoPhillips

Additional Consideration

Percentage Depletion

Depletion of cost less residual value required by GAAP should not be confused with percentage depletion (also called *statutory depletion*) allowable for income tax purposes for oil, gas, and most mineral natural resources. Under these tax provisions, a producer is allowed to deduct the greater of cost-based depletion or a fixed percentage of gross income as depletion expense. Over the life of the asset, depletion could exceed the asset's cost. The percentage allowed for percentage-based depletion varies according to the type of natural resource.

Because percentage depletion usually differs from cost depletion, a difference between taxable income and financial reporting income before tax results. Differences between taxable income and financial reporting income are discussed in  **Chapter 16**.

LO11–10 Discuss the primary differences between U.S. GAAP and IFRS with respect to the utilization and impairment of property, plant, and equipment and intangible assets.

International Financial Reporting Standards

Biological Assets. Living animals and plants, including the trees in a timber tract or in a fruit orchard, are referred to as *biological assets*. Under U.S. GAAP, a timber tract is valued at cost less accumulated depletion and a fruit orchard at cost less accumulated depreciation. Under IFRS, biological assets are valued at their fair value less estimated costs to sell, with changes in fair value included in the calculation of net income.¹²

Mondi Limited, an international paper and packing group headquartered in Johannesburg, South Africa, prepares its financial statements according to IFRS. The following disclosure note included in a recent annual report discusses the company's policy for valuing its forestry assets.

Agriculture—Owned Forestry Assets (in part)

Owned forestry assets are biological assets measured at fair value, calculated by applying the expected selling price, less costs to harvest and deliver, to the estimated volume of

timber on hand at each reporting date.

Changes in fair value are recognized in the consolidated income statement within other net operating expenses.

Amortization of Intangible Assets

LO11–4 Calculate the periodic amortization of an intangible asset.

Let's turn now to a third type of long-lived asset—intangible assets. As with other assets we have discussed, we allocate the cost of an intangible asset over its service or useful life. The allocation of intangible asset cost is called **amortization**. Below we distinguish those intangible assets with *finite* versus *indefinite* useful lives. Intangible assets with finite useful lives will be amortized, and those with indefinite useful lives will not be amortized.

Intangible Assets Subject to Amortization

Most intangible assets have a finite useful life. This means their estimated useful life is limited in nature.

We allocate the capitalized cost less any estimated residual value of an intangible asset to the periods in

which the asset is expected to contribute to the company's revenue-generating activities. This requires that we determine the asset's useful life, its amortization base (cost less estimated residual value), and the appropriate allocation method, similar to our depreciating tangible assets.

The cost of an intangible asset with a *finite* useful life is *amortized*.

USEFUL LIFE

Legal, regulatory, or contractual provisions often limit the useful life of an intangible asset. On the other hand, useful life might sometimes be less than the asset's legal or contractual life. For example, the useful life of a patent would be considerably less than its legal life of 20 years if obsolescence were expected to limit the longevity of a protected product.

RESIDUAL VALUE

We discussed the cost of intangible assets in  **Chapter 10**. The expected residual value of an intangible asset usually is zero. This might not be the case, though, if at the end of its useful life to the reporting entity the asset will benefit another entity. For example, if Quadra

Corp. has a commitment from another company to purchase one of Quadra's patents at the end of its useful life at a determinable price, we use that price as the patent's residual value.

ALLOCATION METHOD

The method of amortization should reflect the pattern of use of the asset in generating benefits. Most companies use the straight-line method to calculate amortization expense.

Like depletion, amortization traditionally is credited to the asset account itself rather than to accumulated amortization. However, the use of a contra account is acceptable. Many companies choose to report intangible assets for their net amount on the face of the balance sheet and then report the amount of amortization in a disclosure note. Let's look at an example in [Illustration 11-12](#).

Illustration 11-12 Amortization of Intangibles—Franchise and Patent

International Diners Corporation (IDC) began operations in 2024. Early in January, the company purchased the following two intangible assets:

1. A franchise from Ajax Industries for \$200,000. The franchise agreement is for a period of 10 years.
2. A patent for \$50,000. The remaining legal life of the patent is 13 years. However, due to expected technological obsolescence, the company estimates that the useful life of the patent is only 8 years.

IDC uses the straight-line amortization method for all intangible assets. The company's fiscal year-end is December 31.

The journal entries to record a full year of amortization each year for these intangible assets are as follows:

| | | |
|---|--------|--------|
| Amortization expense ($\$200,000 \div 10$ years) | 20,000 | |
| Franchise | | 20,000 |

To record amortization of franchise.

| | | |
|---|-------|-------|
| Amortization expense ($\$50,000 \div 8$ years) | 6,250 | |
| Patent | | 6,250 |

To record amortization of patent.

IDC decided to sell the patent on December 31, 2028 (five years after acquisition), for \$21,000. IDC had recorded annual amortization in each of the four prior years (2024–2027).

The journal entries to update amortization of the patent in 2028 and to sell the patent are as follows:

| | | |
|---|-------|-------|
| Amortization expense ($\$50,000 \div 8$ years) | 6,250 | |
| Patent | | 6,250 |

To record amortization of patent in 2028.

| | | |
|---|--------|--------|
| Cash | 21,000 | |
| Patent (account balance)* | | 18,750 |
| Gain on sale of patent (selling price – book value) | | 2,250 |

To record sale of patent.

* $\$50,000 - (\$6,250 \times 5$ years)

Similar to depreciation, amortization is either a product cost or a period cost depending on the use of the asset. For intangibles used in the manufacture of a product, amortization is a product cost and is included in the cost of inventory (and doesn't become an expense until the inventory is sold). For intangible assets not used in production, such as the franchise cost in our illustration, periodic amortization is expensed in the period incurred.

In  **Chapter 10** we discussed that any software development costs incurred after the point of technological feasibility and before the product is available for sale are capitalized. These capitalized software development costs are amortized based on whichever of the following two methods produces a *greater* amount:

1. The ratio of current revenues to current and anticipated revenues (percentage of revenue method), or
2. The straight-line method based on the estimated useful life of the asset.

To see an example, let's look at  **Illustration 11-13**.

Illustration 11-13 Amortization of Intangibles—Software Development Costs for External Purposes

The Astro Corporation develops computer software graphics programs for sale. A new development project started in 2023 and reached the point of technological feasibility on June 30, 2024. Costs in 2024 were as follows:

| | |
|-----------------------------------|-------------|
| Prior to June 30, 2024 | \$1,200,000 |
| From June 30 to December 31, 2024 | 800,000 |

The software was available for sale on January 1, 2025, and has the following related sales information:

| | |
|---------------------------------------|------------------|
| Sales in 2025 | \$ 3,000,000 |
| Estimated sales in 2026-2028 | <u>7,000,000</u> |
| Total estimates sales over four years | \$10,000,000 |

In 2024, Astro Corporation would expense the \$1,200,000 in costs incurred prior to the establishment of technological feasibility and capitalize the \$800,000 in costs incurred between technological feasibility and the product availability date. In 2025, amortization of the intangible asset, software development costs, is calculated as follows:

1. Percentage-of-revenue method:

$$\frac{\$3,000,000}{\$3,000,000 + \$7,000,000} = 30\% \times \$800,000 = \$240,000$$

2. Straight-line method:

$$\frac{1}{4} \text{ or } 25\% \times \$800,000 = \$200,000.$$

The percentage-of-revenue method is used because it produces the greater amortization, \$240,000.

| | | |
|------------------------------|---------|---------|
| Amortization expense (above) | 240,000 | |
| Software development costs | | 240,000 |

To record amortization of software development costs in 2025.

The capitalized cost of software developed for internal purposes or as part of cloud computing arrangements is amortized over the software's expected useful life, generally using straight-line amortization.

LO11–9 Discuss the accounting treatment of repairs and maintenance, additions, improvements, and rearrangements to property, plant, and equipment and intangible assets.

International Financial Reporting Standards

Software Development Costs. The percentage we use to amortize computer software development costs under U.S. GAAP is the greater of (1) the ratio of current revenues to current and anticipated revenues or (2) the straight-line percentage over the useful life of the software. This approach is allowed under IFRS, but not required. Amortization under IFRS typically occurs over the useful life of the software, based on the pattern of benefits, with straight-line as the default.

Page 590

Intangible Assets Not Subject to Amortization

Intangible assets with an indefinite useful life are those with no foreseeable limit on the period of time over which the asset is expected to contribute to the cash flows of the entity.¹³ In other words, there are no legal, contractual, or economic factors that are expected to limit their useful life to a company. Because of their indefinite lives, these intangible assets are not subject to periodic amortization.

The cost of an intangible asset with an *indefinite* useful life is *not* amortized.

For example, suppose Transit Corporation acquired a trademark in conjunction with the acquisition of a tire company. Transit plans to continue to produce the line

Trademarks or tradenames often are considered to have indefinite useful lives.

of tires marketed under the acquired company's trademark. Recall from our discussion in **Chapter 10** that trademarks have a legal life of 10 years, but the registration can be renewed for an indefinite number of 10-year periods. Therefore, the life of the purchased trademark is initially considered to be indefinite and the cost of the trademark is not amortized. However, if after several years management decides to phase out production of the tire line over the next three years, Transit would amortize the remaining book value over a three-year period.

 **Illustration 11-14** provides another example in a disclosure made in a recent annual report by **The Estee Lauder Companies Inc.** These indefinite-lived intangibles consist primarily of brand and trade names acquired in business combinations.

Illustration 11-14 Indefinite-Life Intangibles Disclosure—The Estee Lauder Companies Inc.

Real World Financials

Other Intangible Assets

Indefinite-lived intangible assets (e.g., trademarks) are not subject to amortization and are assessed at least annually for impairment during the fiscal fourth quarter, or more frequently if certain events or circumstances exist.

Source: The Estee Lauder Companies Inc.

Goodwill is the most common intangible asset with an indefinite useful life. Recall that goodwill is measured as the difference between the purchase price of a company and the fair value of all of the identifiable net assets acquired (tangible and intangible assets minus the fair value of liabilities assumed). Does this mean that goodwill and other intangible assets with indefinite useful lives will remain in a company's balance sheet at their original capitalized values indefinitely? Not necessarily. Like other assets, intangibles are subject to the impairment rules we discuss in a subsequent section of this chapter.

Goodwill is an intangible asset whose cost is *not* expensed through periodic amortization.

LO11-10 Discuss the primary differences between U.S. GAAP and IFRS with respect to the utilization and impairment of property, plant, and equipment

and intangible assets.

International Financial Reporting Standards

Valuation of Intangible Assets. *IAS No. 38* allows a company to value an intangible asset subsequent to initial valuation at (1) cost less accumulated amortization or (2) fair value, if fair value can be determined by reference to an active market.¹⁴ If revaluation is chosen, all assets within that class of intangibles must be revalued on a regular basis. Goodwill, however, cannot be revalued. U.S. GAAP prohibits revaluation of any intangible asset.

Notice that the revaluation option is possible only if fair value can be determined by reference to an active market, making the option relatively uncommon. However, the option possibly could be used for intangibles such as franchises and certain license agreements.

If the revaluation option is chosen, the accounting treatment is similar to the way we applied the revaluation option for property, plant, and equipment earlier in this chapter. Recall that the way the company reports the difference between fair value and book value depends on which amount is higher. If fair value is higher than book value, the difference is reported as other comprehensive income (OCI) and then accumulates in a revaluation surplus account in equity. On the other hand, if book value is higher than fair value, the difference is expensed after reducing any existing revaluation surplus for that asset.

Consider the following illustration:

Page 591

Amershan LTD. prepares its financial statements according to IFRS. At the beginning of its 2024 fiscal year, the company purchased a franchise for \$500,000. The franchise has a 10-year contractual life and no residual value, so amortization in 2024 is \$50,000. The company does not use an accumulated amortization account and credits the franchise account directly when amortization is recorded. At the end of the year, Amershan chooses to revalue the franchise as permitted by *IAS No. 38*. Assuming that the fair value of the franchise at year-end, determined by reference to an active market, is \$600,000, Amershan records amortization and the revaluation using the following journal entries:

To record the revaluation of franchise to its fair value.

| | | |
|---|---------|---------|
| Amortization expense ($\$500,000 \div 10$ years) | 50,000 | |
| Franchise | | 50,000 |
| Franchise ($\$600,000 - \$450,000$) | 150,000 | |
| Revaluation surplus—OCI | | 150,000 |

With the second entry Amershan increases the book value of the franchise from \$450,000 ($\$500,000 - \$50,000$) to its fair value of \$600,000 and records a revaluation surplus for the difference. The new basis for the franchise is its fair value of \$600,000, and the following years' amortization is based on that amount. Thus, 2025 amortization would be \$600,000 divided by the nine remaining years, or \$66,667.

Concept Review Exercise

DEPLETION AND AMORTIZATION

Part A:

On March 29, 2024, the Horizon Energy Corporation purchased the mineral rights to a copper deposit in New Mexico for \$2 million. Development costs and the present value of estimated land restoration costs totaled an additional \$3.4 million. The company removed 200,000 tons of copper during 2024 and estimated that an additional 1,600,000 tons would be removed over the next 15 months.

Required:

Compute depletion on the mine for 2024.

Solution:

| Cost of Copper Mine: | (\$ in millions) |
|-----------------------------------|-------------------------|
| Purchase price of mineral rights | \$2.0 |
| Development and restoration costs | 3.4 |
| | <u>\$5.4</u> |
| Depletion: | |

$$\text{Depletion per ton} = \frac{\$5.4 \text{ million}}{1.8 \text{ million tons}^*} = \$3 \text{ per ton}$$

*200,000 + 1,600,000

$$\text{2024 depletion} = \$3 \times 200,000 \text{ tons} = \$600,000$$

Part B:

On October 1, 2024, Advanced Micro Circuits, Inc., completed the purchase of Zotec Corporation for \$200 million. Included in the allocation of the purchase price were the following identifiable intangible assets (\$ in millions), along with the fair values and estimated useful lives:

| Intangible Asset | Fair value | Useful Life (in years) |
|----------------------|------------|------------------------|
| Patent | \$10 | 5 |
| Developed technology | 50 | 4 |
| Customer list | 10 | 2 |

In addition, the fair value of acquired tangible assets was \$100 million.

Page 592

Goodwill was valued at \$30 million. Straight-line amortization is used for all purchased intangibles.

During 2024, Advanced finished work on a software development project. Development costs incurred after technological feasibility was achieved and before the product release date totaled \$2 million. The software was available for release to the general public on September 29, 2024. At that time, the company estimates that the software will generate total revenue of \$40 million over four years. For the final three months of 2024, revenue from the sale of the software was \$4 million.

Required:

Compute amortization for purchased intangibles and software development costs for 2024.

Solution:

Amortization of Purchased Intangibles:

PART B

Additional Issues

In this part of the chapter, we discuss the following issues related to cost allocation:

1. Change in estimates
2. Change in method
3. Error correction
4. Impairment of value

Change in Estimates

LO11–5 Explain the appropriate accounting treatment required when a change is made in the service life or residual value of property, plant, and equipment and intangible assets.

The calculation of depreciation, depletion, or amortization requires estimates of both service life and residual value. It's inevitable that at least some estimates will prove incorrect.  **Chapter 4** briefly introduced the topic of changes in estimates along with coverage of changes in accounting principles and the correction of errors. Here and in subsequent sections of this chapter, we provide overviews of the accounting treatment and disclosures required for these changes and errors when they involve property, plant, and equipment and intangible assets.

Changes in estimates are accounted for prospectively. When a company revises a previous estimate based on new information, prior financial statements are not restated. Instead, the company merely incorporates the new estimate in any related accounting determinations from then on. So, it usually will affect some aspects of both the balance sheet and the income statement in the current and future periods. Companies typically make these changes at the beginning of the year of the change, but they could be made at other times. A disclosure note should describe the effect of a change in estimate on net income and per share amounts for the current period.

A change in estimate should be reflected in the financial statements of the current period and future periods.

Consider the example in  **Illustration 11–15**.

Page 593

Illustration 11–15 Change in Accounting Estimate

On January 1, 2022, the Hover Manufacturing Company purchased a machine for \$250,000. At the time of purchase, the company estimated the following:

1. Service life of the machine to be 5 years.
2. Residual value to be \$40,000.

On January 1, 2024 (two years later), the company revised its estimates as follows:

1. Service life from a total of **5 to 8 years**.
2. Residual value from **\$40,000 to \$22,000**.

The company's fiscal year-end is December 31 and the straight-line depreciation method is used for all depreciable assets.

Prior to the revision (2022 and 2023), depreciation was \$42,000 per year [$(\$250,000 - \$40,000) \div 5$ years] or \$84,000 for the 2 years. The remaining book value at the beginning of 2024 is \$166,000 ($\$250,000 - \$84,000$). Depreciation for 2024 and subsequent years is determined by allocating the remaining book value less the revised residual value equally over the remaining service life of 6 years (8 total years - 2 years completed). Depreciation for 2024 and subsequent years is recorded as follows:

| | | |
|------------------------------|-------------------------|---|
| Depreciation expense (below) | 24,000 | |
| Accumulated depreciation | | 24,000 |
| \$42,000 | \$250,000 | Cost |
| <u>× 2 years</u> | <u>(84,000)</u> | Previous annual depreciation ($\$210,000 \div 5$ years) |
| | 166,000 | Less: Depreciation to date (2022-2023) |
| | <u>(22,000)</u> | Book value as of January 1, 2024 |
| | 144,000 | Less: Revised residual value |
| | ÷6 | Revised depreciable base |
| | <u>\$ 24,000</u> | Estimated remaining life (8 years - 2 years) |
| | | New annual depreciation |

The asset's book value is depreciated down to the anticipated residual value of \$22,000 at the end of the revised eight-year service life. In addition, a note discloses the effect of the change in estimate on income, if material. The before-tax effect is an increase in income of \$18,000 (depreciation of \$42,000 if the change had not been made, less \$24,000 depreciation after the change).

Verizon Communications Inc. recently revised its estimates of the service lives of certain property, plant, and equipment.  **Illustration 11-16** shows the note that disclosed the change.

Illustration 11-16 Change in Estimate Disclosure—Verizon Communications Inc.

Real World Financials

Plant and Depreciation (in part)

In connection with our ongoing review of the estimated useful lives of property, plant and equipment during 2018, we determined that the average useful lives of certain assets would be increased. These changes in estimates were applied prospectively and resulted in a decrease to depreciation expense of \$0.3 billion for the year ended 2018. In addition, during 2016 we determined that the average useful lives of certain leasehold improvements would be increased from 5 to 7 years. This change resulted in decreases to depreciation expense of \$0.1 billion, \$0.1 billion and \$0.2 billion in 2018, 2017 and 2016, respectively. We determined that changes were also necessary to the remaining estimated useful lives of certain assets as a result of technology changes, enhancements and planned retirements. These changes resulted in increases in depreciation expense of \$0.5 billion, \$0.3 billion and \$0.3 billion in 2018, 2017 and 2016, respectively. While the timing and extent of current deployment plans are subject to ongoing analysis and modification, we believe that the current estimates of useful lives are reasonable.

Change in Depreciation, Amortization, or Depletion Method

LO11-6 Explain the appropriate accounting treatment required when a change in depreciation, amortization, or depletion method is made.

Generally accepted accounting principles allow a company to change from one depreciation method to another if the company can justify the change. For example, new information might become available to suggest that a different depreciation method would better represent the pattern of the asset's consumption relative to revenue production.

Changes in depreciation, amortization, or depletion methods are accounted for the same way as a change in accounting estimate.

We account for these changes prospectively, exactly as we would any other change in estimate. One difference is that most changes in estimate do not require a company to justify the change. However, this change in estimate is a result of changing an accounting principle and therefore requires a clear justification as to why the new method is preferable. Consider the example in  **Illustration 11-17**.

Illustration 11-17 Change in Depreciation Method

On January 1, 2022, the Hover Manufacturing Company purchased a machine for \$250,000. The company expects the service life of the machine to be five years and its anticipated residual value to be \$30,000. The company's fiscal year-end is December 31 and the double-declining-balance (DDB) depreciation method is used. During 2024, the company switched from the DDB to the straight-line method. In 2024, the adjusting entry is

| | | |
|------------------------------|-----------|--------------------|
| Depreciation expense (below) | 20,000 | |
| Accumulated depreciation | | 20,000 |
| DDB depreciation: | | |
| 2022 | \$100,000 | (\$250,000 × 40%*) |

| | |
|-------|---|
| 2023 | 60,000 [(\$250,000 – \$100,000) × 40%*] |
| Total | <u>\$160,000</u> |

*Double the straight-line rate for 5 years [(1/5 = 20%) × 2 = 40%]

| | |
|------------------|--|
| \$ 250,000 | Cost |
| <u>(160,000)</u> | Less: Depreciation to date, DDB (2022–2023) |
| 90,000) | Undepreciated cost as of January 1, 2024 |
| <u>(30,000)</u> | Less: Residual value |
| 60,000 | Depreciable base |
| ÷ 3 yrs. | Remaining life (5 years – 2 years) |
| <u>\$ 20,000</u> | New annual depreciation, straight- line |

A disclosure note reports the effect of the change on net income and earnings per share along with clear justification for changing depreciation methods.

 **Illustration 11-18** shows a disclosure note describing a recent change in depreciation method made by **Nutrien, Inc.**

Illustration 11-18 Change in Depreciation Method—Nutrien, Inc.

Real World Financials

Accounting standards and policy changes (in part)

We changed the method of depreciation from the straight-line basis to the units of production basis for our potash facility mining and milling assets beginning January 1, 2015, and our nitrogen and phosphate mining and plant assets beginning October 1, 2015. The change in method of depreciation reflects anticipated changes to our production schedule due to facility expansions, volatility in market conditions, and the frequency and duration of plant turnarounds. The current and expected reduction in depreciation expense is 2015 – \$30 million and 2016 – \$7 million.

Source: Agrium Inc.

Frequently, when a company changes depreciation method, the change will be effective only for assets placed in service after that date. Of course, that means depreciation schedules do not require revision because the change does not affect assets depreciated in prior periods. A disclosure note still is required to provide justification for the change and to report the effect of the change on the current year's income.

Error Correction

LO11-7 Explain the appropriate treatment required when an error in accounting for property, plant, and equipment and intangible assets is discovered.

Errors involving property, plant, and equipment and intangible assets include computational errors in the calculation of depreciation, depletion, or amortization and mistakes made in determining whether expenditures should be capitalized or expensed. These errors can affect many years. For example, let's say a major addition to equipment should be capitalized but incorrectly is expensed. Not only is income in the year of the error understated, but subsequent years' income is overstated because depreciation is omitted.

Recall from our discussion of inventory errors in  **Chapter 9** that if a material error is discovered in an accounting period subsequent to the period in which the error is made, any previous years' financial statements that were incorrect as a result of the error are retrospectively restated to reflect the correction. Any account balances that are incorrect as a result of the error are corrected by journal entry. If retained earnings is one of the incorrect accounts, the correction is reported as a *prior period adjustment* to the beginning balance in the statement of shareholders' equity.¹⁵ In addition, a disclosure note is needed to describe the nature of the error and the impact of its correction on net income and earnings per share.

Here is a summary of the treatment of material errors occurring in a previous year:

- Previous years' financial statements are retrospectively restated.
- Account balances are corrected.
- If retained earnings requires correction, the correction is reported as a prior period adjustment.
- A note describes the nature of the error and the impact of the correction on income.

Consider  **Illustration 11-19**.

Sometimes, the analysis is easier if you re-create the entries actually recorded incorrectly and those that would have been recorded if the error hadn't occurred, and then compare them.

In 2024, the controller of the Hathaway Corporation discovered an error in recording \$300,000 in legal fees to successfully defend a patent infringement suit in 2022. The \$300,000 was charged to legal fee expense but should have been capitalized and amortized over the five-year remaining life of the patent. Straight-line amortization is used by Hathaway for all intangibles.

| | | Correct (Should Have Been Recorded) | | InCorrect (As Recorded) | |
|------|---------|--|---------|-------------------------------|---------|
| 2022 | Patent | 300,000 | | Legal fee expense | 300,000 |
| | Cash | | 300,000 | Cash | 300,000 |
| 2022 | Expense | 60,000 | | Amortization entry omitted | |
| | Patent | | 60,000 | | |
| 2023 | Expense | 60,000 | | Amortization entry omitted | |
| | Patent | | 60,000 | | |

During the two-year period (2022 and 2023), amortization expense was *understated* by \$120,000, but legal fee expenses were *overstated* by \$300,000, so net income during the period was *understated* by \$180,000 (ignoring income taxes). This means retained earnings by the end of 2023 is *understated* by \$180,000. Patent is understated by \$180,000. To correct each of these accounts in 2024, we need the following entry:

| | | |
|-------------------|---------|----------------|
| Patent | 180,000 | |
| Retained earnings | | 180,000 |

To correct incorrect accounts.

Because retained earnings is one of the accounts incorrect as a result of the error, a correction to that account of **\$180,000** is reported as a prior period adjustment to the 2024 beginning retained earnings balance in Hathaway's statements of shareholders' equity.

If Hathaway is providing comparative financial statements for 2023 and 2024, then the correction would instead be made to the 2023 beginning retained earnings balance, and the corrected 2023 ending balance would roll forward to 2024. The 2023 prior period adjustment, though, would be for the pre-2023 difference: $\$300,000 - \$60,000 = \$240,000$.

The 2022 and 2023 balance sheet and income statement that were incorrect as a result of the error are *retrospectively restated* to report the addition to the patent and to reflect the correct amount of amortization expense.

Also, a disclosure note accompanying Hathaway's 2024 financial statements should describe the nature of the error and the impact of its correction on each year's net income (understated by \$240,000 in 2022 and overstated by \$60,000 in 2023), and earnings per share.

 **Chapter 20** provides in-depth coverage of changes in estimates and methods, and of accounting errors. We cover the tax effect of these changes and errors in that chapter.

Impairment of Value

LO11–8 Identify situations that involve a significant impairment of the value of property, plant, and equipment and intangible assets and describe the required accounting procedures.

Depreciation, depletion, and amortization reflect a gradual consumption of the benefits inherent in property, plant, and equipment and intangible assets. An implicit assumption in allocating the cost of an asset over its useful life is that there has been no significant reduction in the anticipated total benefits or service potential of the asset. Situations can arise, however, that cause a significant decline or impairment of those benefits or service potential. An extreme case would be the destruction of a plant asset—say, a building destroyed by fire—before the asset is fully depreciated. The remaining book value of the asset, in that case, should be written off as a loss. Sometimes, though, the impairment of future value is more subtle.

The way we recognize and measure an impairment loss differs depending on whether the assets are classified as (1) held and used or (2) held for sale. Accounting is different, too, for assets with finite lives and those with indefinite lives. We consider those differences now.

Assets Held and Used

An increasingly common occurrence in practice is the partial write-down of property, plant, and equipment and intangible assets that remain in use. Conceptually, there is considerable merit for a policy requiring the write-down of an asset when there has been a significant decline in value. A write-down can provide important information about the future cash flows that a company can generate from using the asset. However, in practice, this process is very subjective. Even if it appears certain that significant impairment of value has occurred, it often is difficult to measure the amount of the required write-down.

An asset held for use should be written down if there has been a significant impairment of value.

For example, let's say a company purchased \$2,000,000 of equipment to be used in the production of a new type of laser printer. Depreciation is determined using the straight-line

method over a useful life of six years and the residual value is estimated at \$200,000. At the beginning of year 3, the machine's book value has been depreciated to \$1,400,000 [$\$2,000,000 - (\$300,000 \times 2)$]. At that time, new technology is developed causing a significant reduction in the selling price of the new laser printer as well as a reduction in anticipated demand for the product. Management estimates that the equipment will be useful for only two more years and will have no significant residual value.

This situation is not simply a matter of a change in the estimates of useful life and residual value. Management must decide if the events occurring in year 3 warrant a write-down of the asset below \$1,400,000. A write-down would be appropriate if the company decided that it would be unable to fully recover this amount through future use.

For assets to be held and used, different guidelines apply to (1) property, plant, and equipment and intangible assets with finite useful lives (subject to depreciation, depletion, or amortization) and (2) intangible assets with indefinite useful lives (not subject to amortization).

PROPERTY, PLANT, AND EQUIPMENT AND FINITE-LIFE INTANGIBLE ASSETS

Generally accepted accounting principles provide guidelines for when to recognize and how to measure impairment losses of long-lived tangible assets and intangible assets with finite useful lives.¹⁶ For purposes of this recognition and measurement, assets are grouped at the lowest level for which identifiable cash flows are largely independent of the cash flows of other assets. In simpler terms, assets should not be grouped for determining impairment unless those assets are dependent on one another. Determining which assets can or cannot be grouped requires considerable judgment by management.

When to Test for Impairment. It would be impractical to test all assets or asset groups for impairment at the end of every reporting period. GAAP requires investigation of possible impairment only *if events or changes in circumstances indicate that the book value of the asset or asset group may not be recoverable*. This might happen from the following:

- a. A significant decrease in market price.
- b. significant adverse change in how the asset is being used or in its physical condition.

Property, plant, and equipment and finite-life intangible assets are tested for impairment only when events or changes in circumstances indicate book value may not be recoverable.

- c. A significant adverse change in legal factors or in the business climate.
- d. An accumulation of costs significantly higher than the amount originally expected for the acquisition or construction of an asset.
- e. A current-period loss combined with a history of losses or a projection of continuing losses associated with the asset.
- f. A realization that the asset will be disposed of significantly before the end of its estimated useful life.¹⁷

Determining whether an impairment loss has occurred and for how much to record the loss is a two-step process.

- Step 1 Recoverability Test.** An impairment occurs when the undiscounted sum of estimated future cash flows from an asset is less than the asset's book value.
- Step 2 Measurement.** If the recoverability test from step 1 indicates an impairment has occurred, an impairment loss is recorded for the amount by which the asset's fair value is less than its book value.

For step 2, fair value is the amount at which the asset could be bought or sold in a current transaction between willing parties. Quoted market prices could be used if they're available. If fair value is not determinable, it must be estimated.

If an impairment loss is recognized, the written-down book value becomes the new cost base for future cost allocation. Later recovery of an impairment loss is prohibited.

The process is best described by an example. Consider  **Illustration 11-20.**

Illustration 11-20 Impairment Loss—Property, Plant, and Equipment

The Dakota Corporation operates several factories that manufacture medical equipment. Near the end of the company's 2024 fiscal year, a change in business climate related to a competitor's innovative products indicated to management that the \$170 million book value (original cost of \$300 million less accumulated depreciation of \$130 million) of the assets of one of Dakota's factories may not be recoverable.

Management is able to identify cash flows from this factory and estimates that future cash flows over the remaining useful life of the factory will be \$150 million.

The fair value of the factory's assets is not readily available but is estimated to be \$135 million.

Change in circumstances. A change in the business climate related to a competitor's innovative products requires Dakota to investigate for possible impairment.

Step 1. Recoverability Test. Because the undiscounted future cash flows of \$150 million are less than book value of \$170 million, an impairment loss is indicated.

Step 2. Measurement of Impairment Loss. The impairment loss is \$35 million, determined as follows:

| (\$ in millions) | | |
|--------------------------|--------------|-----------------------|
| Fair value | | \$ 135 |
| Less: Book value | | |
| Original cost | \$ 300 | |
| Accumulated depreciation | <u>(130)</u> | <u>(170)</u> |
| Impairment loss | | <u><u>\$ (35)</u></u> |

The entry to record the loss is (\$ in millions):

| | | |
|--|-----|-----|
| Loss on impairment (above). | 35 | |
| Accumulated depreciation (reduce to zero) | 130 | |
| Factory assets (decrease to fair value; \$300 – \$135) | | 165 |

The effect of the entry is a decrease to total assets in the balance sheet and a loss being recorded in the income statement. The loss normally is reported as a separate component of operating expenses.

In the entry in  **Illustration 11-20**, we reduce accumulated depreciation to zero and decrease the cost base of the assets by \$165 million (from book value of \$300 million to fair value of \$135 million). The new carrying value of \$135 million serves as the revised basis for subsequent depreciation over the remaining useful life of the assets, just as if the assets had been acquired on the impairment date for their fair values.

Because the fair value of the factory assets was not readily available to Dakota in  **Illustration 11-20**, the \$135 million had to be estimated. One method that can be used to estimate fair value is to compute the discounted present value of future cash flows expected from the asset. Keep in mind that we

The present value of future cash flows often is used as a measure of fair value.

use *undiscounted* estimates of cash flows in step 1 to determine whether an impairment loss is indicated, but *discounted* estimates of cash flows in step 2 to determine the amount of the loss. In calculating present value, either a traditional approach or an expected cash flow approach can be used. The traditional approach is to incorporate risk and uncertainty into the discount rate. Recall from discussions in previous chapters that the expected cash flow approach incorporates risk and uncertainty instead into a determination of a probability-weighted cash flow expectation, and then discounts this expected cash flow using a risk-free interest rate. We discussed and illustrated the expected cash flow approach in previous chapters.

A disclosure note is needed to describe the impairment loss. The note should include a description of the impaired asset or asset group, the facts and circumstances leading to the impairment, the amount of the loss if not separately disclosed on the face of the income statement, and the method used to determine fair value.

 **Illustration 11-21** provides an example of the impairment policy and impairment charges disclosed by **Starbucks Corporation** related to the COVID-19 pandemic.

Illustration 11-21 Asset Impairment Disclosure—Starbucks Corporation

Real World Financials

Property and Equipment (in part)

We evaluate property, plant and equipment when facts and circumstances indicate that the carrying values of such assets may not be recoverable. When evaluating for impairment, we first compare the carrying value of the asset to the asset's estimated future undiscounted cash flows. If the estimated undiscounted future cash flows are less than the carrying value of the asset, we determine if we have an impairment loss by comparing the carrying value of the asset to the asset's estimated fair value and recognize an impairment charge when the asset's carrying value exceeds its estimated fair value. The adjusted carrying amount of the asset becomes its new cost basis and is depreciated over the asset's remaining useful life.

Impairments, Store Closing and Other Costs (in part)

Given the substantial reduction in our revenues and cash flows as a result of the COVID-19 pandemic, primarily in the third quarter of fiscal 2020, along with our announced restructuring plans to close up to 800 of our company-operated stores in the U.S. and Canada in the next 18 months, we identified triggering events that

required us to assess the need for potential impairment charges for a larger number of company-operated stores in fiscal 2020 than in prior years. As a result of these activities, we recorded store impairment charges of \$298.9 million in fiscal 2020, of which \$239.3 million was included in restructuring and impairment expenses on our consolidated statement of earnings.

LO11–10 Discuss the primary differences between U.S. GAAP and IFRS with respect to the utilization and impairment of property, plant, and equipment and intangible assets.

International Financial Reporting Standards

Impairment of Value: Property, Plant, and Equipment and Finite-Life Intangible Assets. Highlighted below are some important differences in accounting for impairment of value for property, plant, and equipment and finite-life intangible assets between U.S. GAAP and *IAS No. 36*.¹⁸

| | U.S. GAAP | IFRS |
|-----------------------|--|--|
| When to Test | When events or changes in circumstances indicate that book value may not be recoverable. | Assets must be assessed for indicators of impairment at the end of each reporting period. Indicators of impairment are similar to U.S. GAAP. |
| Recoverability | An impairment loss is required when the undiscounted sum of estimated future cash | There is no equivalent recoverability test. An impairment loss is required when the “recoverable amount” (the |

| | | |
|------------------------------------|--|--|
| | flows from an asset is less than the asset's book value. | higher of the asset's value-in-use and fair value less costs to sell) is less than the asset's book value. An asset's value-in-use is calculated as the present value of estimated future cash flows. |
| Measurement | The impairment loss is the amount by which fair value is less than book value. | The impairment loss is the amount by which the recoverable amount is less than book value. |
| Subsequent Reversal of Loss | Prohibited. | Required if the circumstances that caused the impairment are resolved. |

Let's look at an illustration highlighting the important differences described above. The Jasmine Tea Company has a factory that has significantly decreased in value due to technological innovations in the industry. Below are data related to the factory's assets:

| | (\$ in millions) |
|--|------------------|
| Book value | \$18.5 |
| Undiscounted sum of estimated future cash flows | 19.0 |
| Value-in-use (present value of future cash flows) | 16.0 |
| Fair value less cost to sell (determined by appraisal) | 15.5 |

What amount of impairment loss should Jasmine Tea recognize, if any, under U.S. GAAP? Under IFRS?

- U.S. GAAP** There is no impairment loss. The sum of undiscounted estimated future cash flows exceeds the book value.
- IFRS** Jasmine should recognize an impairment loss of \$2.5 million. Indicators of impairment are present and book value exceeds both value-in-use (present value of cash flows) and fair value less costs to sell. The recoverable amount is \$16 million, the higher of value-in-use (\$16 million) and fair value less costs to sell (\$15.5 million). The

impairment loss is the difference between book value of \$18.5 million and the \$16 million recoverable amount.

Nokia, a Finnish company, prepares its financial statements according to IFRS. The following disclosure note describes the company's impairment policy:

Assessment of the Recoverability of Long-Lived Assets, Intangible Assets, and Goodwill (in part)

The carrying value of identifiable intangible assets and long-lived assets is assessed if events or changes in circumstances indicate that such carrying value may not be recoverable. Factors that trigger an impairment review include, but are not limited to, underperformance relative to historical or projected future results, significant changes in the manner of the use of the acquired assets or the strategy for the overall business and significant negative industry or economic trends.

Nokia conducts its impairment testing by determining the recoverable amount for the asset. The recoverable amount of an asset is the higher of its fair value less costs to sell and its value-in-use. The recoverable amount is then compared to the asset's book value and an impairment loss is recognized if the recoverable amount is less than the book value. Impairment losses are recognized immediately in the income statement.

COVID-19: Accounting and Reporting Implications

The COVID-19 pandemic had negative effects on the real operations of many companies. These businesses, either on their own or as required by the government, reduced customer capacity to a significant extent or paused operations altogether. The resulting effect was a severe reduction in cash inflows from customers. GAAP requires property, plant, and equipment to be tested for impairment whenever events or changes in circumstances indicate that an asset's carrying amount may not be recoverable. Recoverability is measured as the sum of the undiscounted cash flows expected to be received from the use and eventual disposal of the asset. The COVID-19 pandemic represented a clear triggering event requiring companies to test their property, plant, and equipment for impairment. The reduction in expected undiscounted cash flows from loss of customers led to many

companies recognizing impairment losses in their quarterly and annual reports.

INDEFINITE-LIFE INTANGIBLE ASSETS

Intangible assets with indefinite useful lives should be tested for impairment *annually and more frequently if events or changes in circumstances indicate that it is more likely than not that the asset is impaired.*

A company has the option of first undertaking a qualitative assessment. Companies selecting this option will evaluate relevant events and circumstances to determine whether it is “more likely than not” (a likelihood of more than 50 percent) that the fair value of the asset is less than its book value. Only if that’s determined to be the case will the company move forward with measuring the impairment. A list of possible events and circumstances that a company should consider in this qualitative assessment is provided in ASC 350-20-35-3C.

The measurement of an impairment loss for indefinite-life intangible assets is a one-step process. If fair value is less than book value, an impairment loss is recognized for the difference. Notice that we omit the cash flow recoverability test with these assets. Because we anticipate cash flows to continue indefinitely, recoverability is not a good indicator of impairment.¹⁹

Page 601

If fair value is less than book value, an impairment loss is recognized for the difference.

Similar to property, plant, and equipment and finite-life intangible assets, if an impairment loss is recognized, the written-down book value becomes the new cost base for future cost allocation. Recovery of the impairment loss is prohibited. Disclosure requirements also are similar.

LO11–10 Discuss the primary differences between U.S. GAAP and IFRS with respect to the utilization and impairment of property, plant, and equipment and intangible assets.

International Financial Reporting Standards

Impairment of Value: Indefinite-Life Intangible Assets. Similar to U.S. GAAP, IFRS requires indefinite-life intangible assets to be tested for impairment at least annually. However, under U.S. GAAP, a company can choose first to provide only a qualitative assessment of the likelihood of impairment to determine if quantitative measurement is then necessary. Also, under U.S. GAAP, the impairment loss is measured as the difference between book value and fair value, while under IFRS the impairment loss is the difference between book value and the recoverable amount. The recoverable amount is the higher of the asset's value-in-use (present value of estimated future cash flows) and fair value less costs to sell.

IFRS requires the reversal of an impairment loss (other than for goodwill) if the circumstances that caused the impairment are resolved. Reversals are prohibited under U.S. GAAP.

Also, indefinite-life intangible assets may not be combined with other indefinite-life intangible assets for the required annual impairment test. Under U.S. GAAP, though, if certain criteria are met, indefinite-life intangible assets should be combined for the required annual impairment test.

Goodwill. Recall that goodwill is a unique intangible asset that is recorded only when one company acquires control of another company. Unlike other assets, its cost (a) can't be directly associated with any specific identifiable right and (b) is not separable from the company as a whole. Because of these unique characteristics, we discuss goodwill separately, although conceptually the measurement of impairment for goodwill is the same as for other indefinite-life intangible assets.

For all classifications of assets, we decide whether a write-down due to impairment is required by determining whether the value of an asset has fallen below its book value. However, in this comparison, the value of assets for property, plant, and equipment and finite-life intangible assets is considered to be value-in-use as measured by the sum of undiscounted cash flows expected from the asset. But due to its unique characteristics, the

A goodwill impairment loss is indicated when the fair value of the reporting unit is less than its book value.

value of goodwill is not associated with any specific cash flows. By its very nature, goodwill is inseparable from a particular *reporting unit*. A reporting unit is an operating segment of a company or a component of an operating segment for which discrete financial information is available and segment management regularly reviews the operating results of that component. So, for purposes of impairment testing, we compare the value of the reporting unit itself with its book value. If the fair value of the reporting unit is less than its book value, an impairment loss is indicated.

The impairment loss recognized can't exceed the book value of goodwill. In other words, the impairment loss can't reduce the book value of goodwill below zero.

The goodwill impairment loss can't exceed the book value of goodwill.

Also, if goodwill is tested for impairment at the same time as other assets of the reporting unit, the other assets must be tested first, and any impairment losses and asset write-downs are recorded prior to testing goodwill. Subsequent reversal (recovery) of a previous goodwill impairment loss is not allowed. A goodwill impairment example is provided in [Illustration 11-22](#).

Illustration 11-22 Impairment Loss—Goodwill

In 2023, the Upjane Corporation acquired Pharmacopia Corporation for \$500 million. Upjane recorded \$100 million in goodwill related to this acquisition because the fair value of the identifiable net assets of Pharmacopia was \$400 million. After the acquisition, Pharmacopia continues to operate as a separate company and is considered a reporting unit.

At the end of 2024, events and circumstances indicated that it is more likely than not that the fair value of Pharmacopia is less than its book value requiring Upjane to perform the goodwill impairment test. The book value of Pharmacopia's net assets at the end of 2024 is \$440 million, including the \$100 million in goodwill. On that date, the fair value of Pharmacopia is estimated to be \$360 million.

Measurement of the impairment loss:

| | |
|---|-------------------------------|
| Fair value of Pharmacopia | \$360 million |
| Book value of the net assets of Pharmacopia | 440 million |
| Impairment loss | <u><u>\$ (80) million</u></u> |

The entry to record the loss is (\$ in millions):

Loss on impairment of goodwill

80

Goodwill

80

Recall that Upjane recorded \$100 million in goodwill related to the initial acquisition of Pharmacopia. After the impairment loss of \$80 million is recorded, the balance of goodwill is reduced to \$20 million. If Pharmacopia's fair value was less than its book value by more than \$100 million, then the goodwill impairment loss would have been limited to only \$100 million to reduce the balance of goodwill to zero. The goodwill impairment loss normally is reported in the income statement as a separate component of operating expenses.

Some examples of multibillion dollar goodwill impairment losses in recent years are shown in  **Illustration 11-23**.

Illustration 11-23 Goodwill Impairment Losses

Real World Financials

| Company | Goodwill Impairment Loss |
|--------------------------|--------------------------|
| General Motors | \$27.1 billion |
| Hewlett-Packard | 13.7 billion |
| Microsoft | 11.3 billion |
| Yahoo | 4.5 billion |
| Boston Scientific | 4.4 billion |
| Community Health Systems | 1.4 billion |

Carnival Corporation incurred goodwill impairment related to the impact of COVID-19 on the cruise industry.  **Illustration 11-24** provides the disclosure note.

Illustration 11-24 Goodwill Impairment Disclosure—Carnival Corporation

Real World Financials

Goodwill Impairment Charge (in part)

As a result of the effect of COVID-19 on our expected future operating cash flows, we performed interim discounted cash flow analyses for certain reporting units with goodwill as of February 29, 2020, and for all reporting units with goodwill as of May 31, 2020. During the six months ended May 31, 2020, we determined that the estimated fair values of two of our North America & Australia (“NAA”) segment reporting units and two of our Europe & Asia (“EA”) segment reporting units no longer exceeded their carrying values. We recognized goodwill impairment charges of \$1.4 billion and \$2.1 billion during the three and six months ended May 31, 2020, respectively, and have no remaining goodwill for those reporting units.

Where We're Headed

In January 2017, the Financial Accounting Standards Board (FASB) completed Phase 1 of its two-phase project on goodwill by issuing ASU 2017-04. This phase involved simplifying the measurement of goodwill impairment, as described in  **Illustration 11–22**.

In Phase 2 of the project (which is not part of the ASU discussed earlier), the FASB will consider permitting or requiring companies to amortize goodwill and also consider making other changes in the impairment testing methodology.

Additional Consideration

Private Company GAAP—Accounting for Goodwill. The Private Company Council (PCC) sought feedback from private company stakeholders on the issue of goodwill accounting and found that most users of private company financial statements disregard goodwill and goodwill impairment losses. As a

result, the PCC concluded that the cost and complexity of goodwill accounting outweigh the benefits for private companies.

In response to the PCC's conclusion, the FASB issued an Accounting Standards Update in 2014 that allows an accounting alternative for the subsequent measurement of goodwill for private companies that calls for goodwill to be amortized and also simplifies the goodwill impairment test.²⁰

The main provisions of the alternative are

1. Amortizing goodwill on a straight-line basis over a maximum of 10 years.
2. Testing goodwill for impairment at either the company level or the reporting unit level.
3. Testing goodwill for impairment only when a triggering event occurs, indicating that goodwill may be impaired.
4. The option of determining whether a quantitative impairment test is necessary when a triggering event occurs.
5. If a quantitative test is necessary, measuring the goodwill impairment loss as the amount by which fair value of the company (or reporting unit) is less than its book value, not to exceed the book value of goodwill.

The first provision is now being considered for public companies. We discussed this in the previous "Where We're Headed" box.

LO11-10 Discuss the primary differences between U.S. GAAP and IFRS with respect to the utilization and impairment of property, plant, and equipment and intangible assets.

International Financial Reporting Standards

Impairment of Value—Goodwill. Highlighted below are some important differences in accounting for the impairment of goodwill between U.S. GAAP and *IAS No. 36*.

U.S. GAAP

IFRS

| | | |
|-------------------------|--|--|
| Level of Testing | <i>Reporting unit</i> —a segment or a component of an operating segment for which discrete financial information is available. | <i>Cash-generating unit (CGU)</i> —the lowest level at which goodwill is monitored by management. A CGU can't be lower than a segment. |
| Measurement | Compare the fair value of the reporting unit with its book value. A loss is indicated if fair value is less than book value. Other assets must be tested first and any impairment loss and asset write-down is recorded prior to testing goodwill. | Compare the recoverable amount of the CGU to book value. If the recoverable amount is less, reduce goodwill first, then other assets. The recoverable amount is the higher of the asset's value-in-use and fair value less costs to sell. An asset's value-in-use is calculated as the present value of estimated future cash flows. |

IAS No. 36 requires goodwill to be tested for impairment at least annually. However, under U.S. GAAP, a company can choose first to provide only a qualitative assessment of the likelihood of goodwill impairment to determine if quantitative measurement is then necessary. Both U.S. GAAP and *IAS No. 36* prohibit the reversal of goodwill impairment losses.

Let's look at an illustration highlighting these differences.

Canterbury LTD. has \$38 million of goodwill in its balance sheet from the 2022 acquisition of Denton, Inc. At the end of 2024, Canterbury's management provided the following information for the year-end goodwill impairment test (\$ in millions):

| | |
|--|-------|
| Fair value of Denton (determined by appraisal) | \$132 |
| Fair value of Denton's net assets (excluding goodwill) | 120 |
| Book value of Denton's net assets (including goodwill) | 150 |
| Value-in-use (present value of Denton's estimated future cash flows) | 135 |

Assume that Denton is considered a reporting unit under U.S. GAAP and a cash-generating unit under IFRS, and that its fair value approximates fair value less costs to sell. What is the amount of goodwill impairment loss that Canterbury should recognize, if any, under U.S. GAAP? Under IFRS?

| | | |
|-------------|---|----------------|
| U.S. | Fair value of Denton (determined by appraisal) | \$ 132 |
| GAAP | | |
| | Book value of Denton's net assets (including goodwill) | 150 |
| | Impairment loss | <u>\$ (18)</u> |
| IFRS | The recoverable amount is \$135 million, the higher of the \$135 million value-in-use (present value of estimated future cash flows) and the \$132 million fair value less costs to sell. | |
| | Recoverable amount | \$ 135 |
| | Book value of Denton's net assets (including goodwill) | (150) |
| | Impairment loss | <u>\$ (15)</u> |

Deutsche Bank is the largest bank in Germany and one of the largest financial institutions in Europe and the world. The company prepares its financial statements according to IFRS. The following disclosures describe the company's goodwill impairment policy as well as goodwill impairment loss:

Impairment of Goodwill (in part)

Goodwill is tested for impairment annually in the fourth quarter by comparing the recoverable amount of each goodwill-carrying cash-generating unit (CGU) with its carrying amount. In addition, in accordance with IAS 36, the Group tests goodwill whenever a triggering event is identified. The recoverable amount is the higher of a CGU's fair value less costs of disposal and its value in use.

Impairment Charge during the Period (in part)

The goodwill impairment test resulted in goodwill impairments totaling € 4,933 million, consisting of € 2,168 million, and € 2,765 million in the former CGUs, CB&S, and PBC, respectively. The impairment in CB&S was mainly driven by changes to the business mix in light of expected higher regulatory capital requirements, leading to a recoverable amount of approximately € 26.1 billion. The impairment in PBC was, in addition to the changed capital requirements, mainly driven by the disposal expectations regarding Hua Xia Bank Co. Ltd. and Postbank, which resulted in a recoverable amount of approximately € 12.3 billion for the CGU.

The COVID-19 pandemic caused a downturn in the overall economy (e.g., higher unemployment, disrupted supply chains, government restrictions, reduced sales in certain industries, etc.). GAAP requires companies to test goodwill for impairment whenever an event occurs or circumstances change indicating that more likely than not the fair value of a reporting unit has fallen below its carrying amount. A reporting unit is an operating segment of a company or a component of an operating segment for which discrete financial information is available and segment management regularly reviews the operating results of that segment. There are many indications a reporting segment's fair value may have fallen below its carrying value, such as worsening macroeconomic conditions, reduced financial performance, changes in customer demand, or a sustained decrease in share price. Some industries were particularly hard hit by the pandemic (cruise ships, airlines, hotels, movie theatres, travel booking sites, and auto dealers), while other industries actually benefitted (grocery stores, technology, video communications, home delivery services, and streaming services). In those industries with sharp declines in customer sales and falling share prices, many companies reported goodwill impairments in their quarterly and annual reports.

Assets Held for Sale

We have been discussing the recognition and measurement for the impairment of value of assets to be held and used. We also test for impairment of assets held for sale. These are assets management has actively committed to immediately sell in their present condition and for which sale is probable.

An asset or group of assets classified as held for sale is measured at the lower of its book value, or fair value minus cost to sell. An impairment loss is recognized for any write-down to fair value minus cost to sell.²¹

Except for including the cost to sell, notice the similarity to impairment of assets to be held and used. We don't depreciate or amortize these assets while classified as held for sale and we report them separately in the balance

For assets held for sale, if fair value minus cost to sell is less than book value, an impairment loss is recognized for the difference.

sheet. Recall from our discussion of discontinued operations in [Chapter 4](#) that similar rules apply for a component of an entity that is classified as held for sale.

[Illustration 11-25](#) summarizes the guidelines for the recognition and measurement of impairment losses.

Illustration 11-25 Summary of Asset Impairment Guidelines

| Asset Classification | When to Test for Impairment | Impairment Test |
|--|--|---|
| Held and Used | | |
| Property, plant, and equipment and finite-life intangible assets | When events or circumstances indicate book value may not be recoverable. | <p>Step 1—An impairment loss is required only when book value is not recoverable (undiscounted sum of estimated future cash flows less than book value).</p> <p>Step 2—The impairment loss is the amount by which fair value is less than book value.</p> |
| Indefinite-life intangible assets (other than goodwill) | At least annually, and more frequently if indicated. Option to first choose qualitative assessment to determine if quantitative measurement is then necessary. | If fair value is less than book value, an impairment loss is recognized for the difference. |
| Goodwill | At least annually, and more frequently if indicated. Option to first choose qualitative assessment to determine if quantitative measurement is then necessary. | If fair value of the reporting unit is less than its book value, a goodwill impairment loss is recognized for the difference. Impairment Losses and Earnings Quality

What do losses from the write-down of inventory and restructuring costs have in common? The presence of these items in a corporate income statement presents a challenge to an analyst trying to determine a company’s permanent earnings—those likely to continue in the future. We discussed these issues in prior chapters.

We now can add asset impairment losses to the list of “big bath” accounting techniques some companies use to manipulate earnings. By writing off large amounts of assets, companies significantly reduce earnings in the year of the write-off but are able to increase future earnings by lowering future depreciation, depletion, or amortization. Here’s how. We measure the impairment loss as the amount by which an asset’s fair value is less than its book value. However, in most cases, fair value must be estimated, and the estimation process usually involves a forecast of future net cash flows the company expects to generate from the asset’s use. If a company underestimates future net cash flows, fair value is understated. This has two effects: (1) current year’s income is unrealistically low due to the impairment loss being overstated and (2) future income is unrealistically high because depreciation, depletion, and amortization are based on understated asset values.

An analyst must decide whether to consider asset impairment losses as temporary in nature or as a part of permanent earnings.

Concept Review Exercise

IMPAIRMENT

Part A:

Illumination Inc. owns a factory in Wisconsin that makes light bulbs. During 2024, due to increased competition from LED light bulb manufacturers, the company

determined that an impairment test was appropriate. Management has prepared the following information for the assets of the factory (\$ in millions):

| | |
|---|-------|
| Cost | \$345 |
| Accumulated depreciation | 85 |
| Estimated future undiscounted cash flows to be generated by the factory | 230 |
| Estimated fair value of the factory assets | 170 |

Required:

1. Determine the amount of impairment loss Illumination should recognize, if any.
2. If a loss is indicated, prepare the journal entry to record the loss.
3. Repeat requirement 1, assuming that the estimated undiscounted future cash flows are \$270 million instead of \$230 million.

Solution:

1. Determine the amount of impairment loss Illumination should recognize, if any.

Recoverability Test: Because the undiscounted future cash flows of \$230 million are less than book value of \$260 (\$345 - \$85) million, an impairment loss is indicated.

Measurement: The impairment loss is \$90 million, determined as follows:

| | (\$ in millions) |
|------------------|----------------------|
| Fair value | \$170 |
| Less: Book value | 260 |
| Impairment loss | <u><u>\$(90)</u></u> |

2. If a loss is indicated, prepare the journal entry to record the loss.

| | (\$ in millions) |
|---------------------------------------|------------------|
| Loss on impairment (determined above) | 90 |
| Accumulated depreciation (balance) | 85 |
| Factory assets (\$345 - \$170) | 175 |

3. Repeat requirement 1, assuming that the estimated undiscounted future cash flows are \$270 million instead of \$230 million.

Because the undiscounted future cash flows of \$270 million exceed book value of \$260 million, the recoverability test indicates that there is no impairment, so no impairment loss is recorded.

Part B:

In 2022, Illumination Inc. acquired Zapo Lighting Company for \$620 million, of which \$80 million was allocated to goodwill. After the acquisition, Zapo continues to operate a separate company and is considered a reporting unit. At the end of 2024, management provided the following information for a required goodwill impairment test (\$ in millions):

| | |
|--|-------|
| Fair value of Zapo Lighting | \$540 |
| Book value of Zapo's net assets (including goodwill) | 600 |

Required:

Determine the amount of goodwill impairment loss that Illumination should recognize at the end of 2024, if any.

Solution:

| Measurement of goodwill impairment loss: | (\$ in millions) |
|--|------------------|
| Fair value of Zapo | \$540 |
| Book value of Zapo's net assets (including goodwill) | 600 |
| Impairment loss | <u>\$ (60)</u> |

PART C

Subsequent Expenditures

Now that we have acquired and measured assets, we can address accounting issues incurred subsequent to their acquisition. This part of the chapter deals with the treatment of expenditures made over the life of these assets to maintain and/or improve them.

Expenditures Subsequent to Acquisition

LO11–9 Discuss the accounting treatment of repairs and maintenance, additions, improvements, and rearrangements to property, plant, and equipment and intangible assets.

Many long-lived assets require expenditures to repair, maintain, or improve them after their acquisition. These expenditures can present accounting problems if they are material. In general, a choice must be made between capitalizing the expenditures by either increasing the asset's book value or creating a new asset, or expensing them in the period in which they are incurred. Typically, we capitalize expenditures that are expected to produce benefits beyond the current fiscal year. In contrast, expenditures that simply maintain a given level of benefits are expensed in the period they are incurred.

Expenditures related to assets can increase future benefits in the following ways:

1. An extension of the *useful life* of the asset.
2. An increase in the *operating efficiency* of the asset resulting in either an increase in the quantity of goods or services produced or a decrease in future operating costs.
3. An increase in the *quality* of the goods or services produced by the asset.

Expenditures that cause any of these results should be capitalized initially and then expensed in future periods through depreciation, depletion, or amortization. Of course, materiality is an important factor in the practical application of this approach.

Page 608

For convenience, many companies set materiality thresholds for the capitalization of any expenditure. For example, a company might decide to expense all expenditures under \$1,000 regardless of whether or not future benefits are increased. Judgment is required

Many companies do not capitalize any expenditure unless it exceeds a predetermined amount that is considered material.

to determine the appropriate materiality threshold, as well as the appropriate treatment of expenditures over \$1,000. There often are practical problems in capitalizing these expenditures. For example, even if future benefits are increased by the expenditure, it may be difficult to determine how long the benefits will last. It's important for a company to establish a policy for treating these expenditures and apply it consistently.

We classify subsequent expenditures as (1) repairs and maintenance, (2) additions, (3) improvements, or (4) rearrangements.

Repairs and Maintenance

These expenditures are made to *maintain* a given level of benefits provided by the asset and do not *increase* future benefits. For example, the cost of an engine tune-up or the repair of an engine part for a delivery truck allows the truck to continue its productive activity. If the maintenance is not performed, the truck will not provide the benefits originally anticipated. In that sense, future benefits are provided; without the repair, the truck will no longer operate. The key, though, is that future benefits are not provided *beyond those originally anticipated*. Expenditures for these activities should be expensed in the period incurred.

Expenditures for repairs and maintenance generally are expensed when incurred.

Additional Consideration

If repairs and maintenance costs are seasonal, interim financial statements may be misstated. For example, suppose annual maintenance is performed on a company's fleet of delivery trucks. The annual income statement correctly includes one year's maintenance expense. However, for interim reporting purposes, if the entire expenditure is made in one quarter, should that quarter's income statement include as expense the entire cost of the annual maintenance? If these expenditures can be anticipated, they should be accrued evenly throughout the year by crediting an allowance account. The allowance account is then debited when the maintenance is performed.

Additions

As the term implies, **additions** involve adding a new major component to an existing asset and should be capitalized because future benefits are increased. For example, adding a refrigeration unit to a delivery truck increases the capability of the truck, thus increasing its

future benefits. Other examples include the construction of a new wing on a building and the addition of a security system to an existing building.

The capitalized cost includes all necessary expenditures to bring the addition to a condition and location for use. For a building addition, this might include the costs of tearing down and removing a wall of the existing building. The capitalized cost of additions is depreciated over the remaining useful life of the original asset or its own useful life, whichever is shorter.

The costs of *additions* usually are capitalized.

Improvements

Expenditures classified as **improvements** involve the replacement of a major component of an asset. The replacement can be a new component with the same characteristics as the old component or a new component with enhanced operating capabilities. For example, an existing refrigeration unit in a delivery truck could be replaced with a new but similar unit or with a new and improved refrigeration unit. In either case, the cost of the improvement usually increases future benefits and should be capitalized by increasing the book value of the related asset (the delivery truck) and depreciated over the useful life of the improved asset. There are three methods used to record the cost of improvements.

The costs of *improvements* usually are capitalized.

1. *Substitution.* The improvement can be recorded as both (a) a disposition of the old component and (b) the acquisition of the new component. This approach is conceptually appealing but it is practical only if the original cost and accumulated depreciation of the old component can be separately identified.
2. *Capitalization of new cost.* Another way to record an improvement is to include the cost of the improvement (net of any consideration received from the disposition of the old component) as a debit to the related asset account, without removing the original cost and accumulated depreciation of the original component. This approach is acceptable only if the book value of the original component has been reduced to an immaterial amount through prior depreciation.
3. *Reduction of accumulated depreciation.* Another way to increase an asset's book value is to leave the asset account unaltered but decrease its related accumulated depreciation. The argument for this method is that many improvements extend the useful life of an asset and are equivalent to a partial recovery of previously recorded depreciation. This approach

produces the same book value as the capitalization of cost to the asset account. However, cost and accumulated depreciation amounts will differ under the two methods.

The three methods are compared in  **Illustration 11-26**.

Illustration 11-26 Improvements

1. Substitution

(a) Disposition of old component.

(b) Acquisition of new component.

2. Capitalization of new cost.

3. Reduction of accumulated depreciation.

The Palmer Corporation replaced the air conditioning system in one of its office buildings that it leases to tenants. The cost of the old air conditioning system, \$200,000, is included in the cost of the building. However, the company has separately depreciated the air conditioning system. Depreciation recorded up to the date of replacement totaled \$160,000. The old system was removed and the new system installed at a cost of \$230,000, which was paid in cash. Parts from the old system were sold for \$12,000.

Accounting for the improvement differs depending on the alternative chosen.

Alternative 1—Substitution

| | | |
|---|---------|---------|
| Cash | 12,000 | |
| Accumulated depreciation—buildings (remove old) | 160,000 | |
| Loss on disposal (difference) | 28,000 | |
| Buildings (remove old) | | 200,000 |
| Buildings (add new) | 230,000 | |
| Cash | | 230,000 |

Alternative 2—Capitalization of new cost

| | | |
|-----------------------------|---------|---------|
| Buildings | 218,000 | |
| Cash (\$230,000 – \$12,000) | | 218,000 |

Alternative 3—Reduction of accumulated depreciation

| | | |
|------------------------------------|---------|--|
| Accumulated depreciation—buildings | 218,000 | |
|------------------------------------|---------|--|

Rearrangements

Expenditures made to restructure an asset without addition, replacement, or improvement are termed **rear** **rangements**. The objective is to create a new capability for the asset and not necessarily to extend its useful life. Examples include the rearrangement of machinery

on the production line to increase operational efficiency and the relocation of a company's operating plant or office building. If these expenditures are material and they clearly increase future benefits, they should be capitalized and expensed in the future periods benefited. If the expenditures are not material or if it's not certain that future benefits have increased, they should be expensed in the period incurred.

The costs of material rearrangements should be capitalized if they clearly increase future benefits.

 **Illustration 11-27** provides a summary of the accounting treatment for the various types of expenditures related to property, plant, and equipment.

Illustration 11-27 Expenditures Subsequent to Acquisition

| Type of Expenditure | Definition | Usual Accounting Treatment |
|-------------------------|--|---|
| Repairs and maintenance | Expenditures to maintain a given level of benefits | Expense in the period incurred |
| Additions | The addition of a new major component to an existing asset | Capitalize and depreciate over the remaining useful life of the <i>original asset or its own useful life</i> , whichever is shorter |
| Improvements | The replacement of a major component | Capitalize and depreciate over the useful life of the improved asset |
| Rearrangements | Expenditures to restructure an asset without addition, | If expenditures are material and clearly increase future benefits, |

| Type of Expenditure | Definition | Usual Accounting Treatment |
|---------------------|-----------------------------|---|
| | replacement, or improvement | capitalize and depreciate over the future periods benefited |

Costs of Defending Intangible Rights

Repairs, additions, improvements, and rearrangements generally relate to property, plant, and equipment. A possible significant expenditure incurred subsequent to the acquisition of intangible assets is the cost of defending the right that gives the intangible asset its value. If an intangible right is *successfully* defended, the litigation costs should be capitalized and amortized over the remaining useful life of the related intangible. This is the appropriate treatment of these expenditures even if the intangible asset was originally developed internally rather than purchased.

The costs incurred to *successfully* defend an intangible right should be capitalized.

If the defense of an intangible right is *unsuccessful*, then the intangible asset has no future value. In this case, the litigation costs provide no future benefit and should be expensed immediately. In addition, the book value of the intangible asset should be reduced to realizable value. For example, if a company is unsuccessful in defending a patent infringement suit, the patent's value may be eliminated and a loss recorded.

The costs incurred to *unsuccessfully* defend an intangible right should be expensed.

LO11–10 Discuss the primary differences between U.S. GAAP and IFRS with respect to the utilization and impairment of property, plant, and equipment and intangible assets.

International Financial Reporting Standards

Costs of Defending Intangible Rights. Under U.S. GAAP, litigation costs to successfully defend an intangible right are capitalized and amortized over the remaining useful life of the related intangible. Under IFRS, these costs are expensed except in rare situations when an expenditure increases future benefits.²²

Financial Reporting Case Solution

Jacob Lund/Shutterstock

- 1. Do the terms *depreciation*, *depletion*, and *amortization* all mean the same thing?** Each of these terms refers to the cost allocation of assets over their service lives. The term *depreciation* is used for plant and equipment, *depletion* for natural resources, and *amortization* for intangible assets.
- 2. Weyerhaeuser determines depletion based on the “volume of timber estimated to be available.” Explain this approach.** **Weyerhaeuser** is using the units-of-production method to determine depletion. The units-of-production method is an activity-based method that computes a depletion (or depreciation or amortization) rate per measure of activity and then multiplies this rate by actual activity to determine periodic cost allocation. The method is used by Weyerhaeuser to measure depletion of the cost of timber harvested and the amortization of logging roads. Logging roads are intangible assets because the company does not own the roads.
- 3. Explain how asset impairment differs from depreciation, depletion, and amortization. How do companies measure impairment losses for**

property, plant, and equipment and intangible assets with finite useful lives? Depreciation, depletion, and amortization reflect a gradual consumption of the benefits inherent in a long-lived asset. An implicit assumption in allocating the cost of an asset over its useful life is that there has been no significant reduction in the anticipated total benefits or service potential of the asset. Situations can arise, however, that cause a significant decline or *impairment* of those benefits or service potentials. Determining whether to record an impairment loss for an asset and actually recording the loss is a two-step process. The first step is a recoverability test—an impairment loss is required only when the undiscounted sum of estimated future cash flows from an asset is less than the asset's book value. The measurement of impairment loss—step 2—is the difference between the asset's book value and its fair value. If an impairment loss is recognized, the written-down book value becomes the new cost base for future cost allocation.

The Bottom Line

-  **LO11-1** The use of property, plant, and equipment and intangible assets represents a consumption of benefits, or service potentials, inherent in the assets. The cost of these inherent benefits or service potentials should be recognized as an expense over the periods they help to produce revenues. As there very seldom is a direct relationship between the use of assets and revenue production, accounting resorts to arbitrary methods to allocate these costs over the periods of their use. (*p. 567*)
-  **LO11-2** The allocation process for plant and equipment is called *depreciation*. Time-based depreciation methods estimate service life in years and then allocate depreciable base, cost less estimated residual value, using either a straight-line or accelerated pattern. Activity-based depreciation methods allocate the depreciable base by estimating service life according to some measure of productivity. When an item of property, plant, and equipment or an intangible asset is sold, a gain or loss is recognized for the difference between the consideration received and the asset's book value. (*p. 570*)
-  **LO11-3** The allocation process for natural resources is called *depletion*. The activity-based method called units-of-production usually is employed to determine periodic depletion. (*p. 585*)
-  **LO11-4** The allocation process for intangible assets is called *amortization*. For an intangible asset with a finite useful life, the capitalized cost less any estimated residual value must be allocated to periods in which the asset is expected to contribute to the company's revenue-generating activities. An intangible asset that is determined to have an indefinite useful life is not subject to periodic amortization. Goodwill is perhaps the most typical intangible asset with an indefinite useful life. (*p. 587*)
-  **LO11-5** A change in either the service life or residual value of property, plant, and equipment and intangible assets should be reflected in the financial statements of the current period and future periods by recalculating periodic depreciation, depletion, or amortization. (*p. 592*)
-  **LO11-6** A change in depreciation, depletion, or amortization method is considered a change in accounting estimate that is achieved by a change in accounting principle. We account for these changes prospectively, exactly as we would

any other change in estimate. One difference is that most changes in estimate do not require a company to justify the change. However, this change in estimate is a result of changing an accounting principle and therefore requires a clear justification as to why the new method is preferable. (p. 594)

 LO11-7

A material error in accounting for property, plant, and equipment and intangible assets that is discovered in a year subsequent to the year of the error requires that previous years' financial statements that were incorrect as a result of the error be retrospectively restated to reflect the correction. Any account balances that are incorrect as a result of the error are corrected by journal entry. If retained earnings is one of the incorrect accounts, the correction is reported as a prior period adjustment to the beginning balance in the statement of shareholders' equity. In addition, a disclosure note is needed to describe the nature of the error and the impact of its correction on income. (p. 595)

 LO11-8

Conceptually, there is considerable merit for a policy requiring the write-down of an asset when there has been a *significant* decline in value below book value. The write-down provides important information about the future cash flows to be generated from the use of the asset. However, in practice this policy is very subjective. GAAP [FASB ASC 360] establishes guidance for when to recognize and how to measure impairment losses of property, plant, and equipment and intangible assets that have finite useful lives. GAAP [FASB ASC 350] also provides guidance for the recognition and measurement of impairment for indefinite-life intangibles and goodwill. (p. 596)

 LO11-9

Expenditures for repairs and maintenance generally are expensed when incurred. The costs of additions and improvements usually are capitalized. The costs of material rearrangements should be capitalized if they clearly increase future benefits. (p. 607)

 LO11-10

Among the several differences between U.S. GAAP and IFRS with respect to the utilization and impairment of property, plant, and equipment and intangible assets pertains to reporting assets in the balance sheet. IFRS allows a company to value property, plant, and equipment (PP&E) and intangible assets subsequent to initial valuation at (1) cost less accumulated depreciation/amortization or (2) fair value (revaluation). U.S. GAAP

prohibits revaluation. There also are differences in accounting for the impairment of property, plant, and equipment and intangible assets. (*pp. 576, 583, 587, 589, 590, 599, 601, 603, and 610*)

APPENDIX 11A Comparison with MACRS (Tax Depreciation)

Depreciation for financial reporting purposes is an attempt to distribute the cost of the asset, less any anticipated residual value, over the estimated useful life in a systematic and rational manner that attempts to match revenues with the use of the asset. Depreciation for income tax purposes is influenced by the revenue needs of government as well as the desire to influence economic behavior. For example, accelerated depreciation schedules currently allowed are intended to provide incentive for companies to expand and modernize their facilities, thus stimulating economic growth.

The federal income tax code allows taxpayers to compute depreciation for their tax returns on assets acquired after 1986 using the **modified accelerated cost recovery system (MACRS)**.²³ Key differences between the calculation of depreciation for financial reporting and the calculation using MACRS are

1. Estimated useful lives and residual values are not used in MACRS.
2. Firms can't choose among various accelerated methods under MACRS.
3. A half-year convention is used in determining the MACRS depreciation amounts.

Under MACRS, each asset generally is placed within a recovery period category. The six categories for personal property are 3, 5, 7, 10, 15, and 20 years. For example, the 5-year category includes automobiles, light trucks, and computers.

Depending on the category, fixed percentage rates are applied to the original cost of the asset. The rates for the 5-year asset category are as follows:

| Year | Rate |
|-------------|----------------|
| 1 | 20.00% |
| 2 | 32.00 |
| 3 | 19.20 |
| 4 | 11.52 |
| 5 | 11.52 |
| 6 | 5.76 |
| Total | <u>100.00%</u> |

These rates are equivalent to applying the double-declining-balance (DDB) method with a switch to straight-line in the year straight-line yields an equal or higher deduction than DDB. In most cases, the half-year convention is used regardless of when the asset is placed in service.²⁴ The first-year rate of 20% for the five-year category is one-half of the DDB rate for an asset with a five-year life ($2 \times 20\%$). The sixth-year rate of 5.76% is one-half of the straight-line rate established in year 4, the year straight-line depreciation exceeds DDB depreciation.

Companies have the option to use the straight-line method for the entire tax life of the asset, applying the half-year convention, rather than using MACRS depreciation schedules. Because of the differences discussed above, tax depreciation for a given year will likely be different from GAAP depreciation.

In December 2017, Congress passed the Tax Cuts and Jobs Act that substantially impacts a company's depreciation deduction for tax purposes. Under the new tax law, companies could choose to deduct 100% of the cost of many assets purchased between September 27, 2017, and December 31, 2022. This is called *bonus depreciation*, and for these assets, the MACRS depreciation schedule did not apply because the asset was fully depreciated in the year it was purchased. After 2022 and before 2027, the bonus deduction will still be allowed, but in smaller amounts each year. For qualified assets purchased in 2023, the first-year deduction drops to 80% of the asset's cost. The remaining 20% of the asset's cost would then be depreciated according to MACRS. The first-year deduction drops to 60% in 2024, 40% in 2025, and 20% in 2026. Any assets that do not qualify, or are not chosen, for bonus depreciation under the new tax law will be depreciated using MACRS. Beginning January 1, 2027, the first-year bonus depreciation is no longer available, and qualified assets will be depreciated fully using MACRS.

APPENDIX 11B Retirement and Replacement Methods of Depreciation

Retirement and replacement depreciation methods occasionally are used to depreciate relatively low-valued assets with short service lives. Under either approach, an aggregate asset account that represents a group of similar assets is increased at the time the initial collection is acquired.

Retirement Method

Using the **retirement depreciation method**, the asset account also is increased for the cost of subsequent expenditures. When an item is disposed of, the asset account is credited for its cost, and depreciation expense is recorded for the difference between cost and proceeds received, if any. No other entries are made for depreciation. As a consequence, one or more periods may pass without any expense recorded. For example, the following entry records the purchase of 100 handheld calculators at \$50 acquisition cost each:

The retirement depreciation method records depreciation when assets are disposed of and measures depreciation as the difference between the proceeds received and cost.

| | | |
|--|-------|-------|
| Calculators (100 × \$50) | 5,000 | |
| Cash | | 5,000 |
| <i>To record the acquisition of calculators.</i> | | |

If 20 new calculators are acquired at \$45 each, the asset account is increased.

| | | |
|--|-----|-----|
| Calculators (20 × \$45) | 900 | |
| Cash | | 900 |
| <i>To record additional calculator acquisitions.</i> | | |

Thirty calculators are disposed of (retired) by selling them secondhand to a bookkeeping firm for \$5 each. The following entry reflects the retirement method:

| | | |
|-----------------|-----|--|
| Cash (30 × \$5) | 150 | |
|-----------------|-----|--|

| | | |
|--|-------|-------|
| Depreciation expense (difference) | 1,350 | |
| Calculators (30 × \$50) | | 1,500 |
| <i>To record the sale/depreciation of calculators.</i> | | |

Notice that the retirement system assumes a FIFO cost flow approach in determining the cost of assets, \$50 each, that were disposed.

Replacement Method

By the **replacement depreciation method**, the initial acquisition of assets is recorded the same way as by the retirement method; that is, the aggregate cost is increased. However, depreciation expense is the amount paid for new or replacement assets. Any proceeds received from asset dispositions reduces depreciation expense. For our example, the acquisition of 20 new calculators at \$45 each is recorded as depreciation as follows:

By the replacement method, depreciation is recorded when assets are replaced.

| | | |
|---|-----|-----|
| Depreciation expense (20 × \$45) | 900 | |
| Cash | | 900 |
| <i>To record the replacement/depreciation of calculators.</i> | | |

The sale of the old calculators is recorded as a reduction of depreciation:

| | | |
|---|-----|-----|
| Cash (30 × \$5) | 150 | |
| Depreciation expense | | 150 |
| <i>To record the sale of calculators.</i> | | |

The asset account balance remains the same throughout the life of the aggregate collection of assets.

Because these methods are likely to produce aggregate expense measurements that differ from individual calculations, retirement and replacement methods are acceptable only in situations where the distortion in depreciation expense does not have a material effect on income. These methods occasionally are encountered in regulated industries such as utilities.

Questions For Review of Key Topics

- Q 11-1** Explain the similarities in and differences among depreciation, depletion, and amortization.
- Q 11-2** Depreciation is a process of cost allocation, not valuation. Explain this statement.
- Q 11-3** Identify and define the three characteristics of an asset that must be established to determine periodic depreciation, depletion, or amortization.
- Q 11-4** Discuss the factors that influence the estimation of service life for a depreciable asset.
- Q 11-5** What is meant by depreciable base? How is it determined?
- Q 11-6** Briefly differentiate between activity-based and time-based allocation methods.
- Q 11-7** Briefly differentiate between the straight-line depreciation method and accelerated depreciation methods.
- Q 11-8** Why are time-based depreciation methods used more frequently than activity-based methods?
- Q 11-9** What are some factors that could explain the predominant use of the straight-line depreciation method?
- Q 11-10** When an item of property, plant, and equipment is disposed of, how is gain or loss on disposal computed?
- Q 11-11** Briefly explain the differences and similarities between the group approach and composite approach to depreciating aggregate assets.
- Q 11-12** Define depletion and compare it with depreciation.
- Q 11-13** Compare and contrast amortization of intangible assets with depreciation and depletion.
- Q 11-14** What are some of the simplifying conventions a company can use to calculate depreciation for partial years?
- Q 11-15** Explain the accounting treatment required when a change is made to the estimated service life of equipment.
- Q 11-16** Explain the accounting treatment and disclosures required when a change is made in depreciation method.
- Q 11-17** Explain the steps required to correct an error in accounting for property, plant, and equipment and intangible assets that is discovered in a year subsequent to the year the error was made.

Q 11-18 Explain what is meant by the impairment of the value of property, plant, and equipment and intangible assets. How should these impairments be accounted for?

Q 11-19 Explain the differences in the accounting treatment of repairs and maintenance, additions, improvements, and rearrangements.

IFRS

Q 11-20 Identify any differences between U.S. GAAP and International Financial Reporting Standards in the subsequent valuation of property, plant, and equipment and intangible assets.

IFRS

Q 11-21 Briefly explain the difference between U.S. GAAP and IFRS in the *measurement* of an impairment loss for property, plant, and equipment and finite-life intangible assets.

IFRS

Q 11-22 Briefly explain the differences between U.S. GAAP and IFRS in the measurement of an impairment loss for goodwill.

IFRS

Q 11-23 Under U.S. GAAP, litigation costs to successfully defend an intangible right are capitalized and amortized over the remaining useful life of the related intangible. How are these costs typically accounted for under IFRS?

Brief Exercises

BE 11–1 Cost allocation LO11–1

At the beginning of its fiscal year, Koeplin Corporation purchased equipment for \$50,000. At the end of the year, the equipment had a fair value of \$32,000. Koeplin's controller recorded depreciation of \$18,000 for the year, the decline in the equipment's value. Is this the correct approach to measuring periodic depreciation (yes/no)? Discuss.

BE 11–2 Depreciation methods LO11–2

On January 1, 2024, Canseco Plumbing Fixtures purchased equipment for \$30,000. Residual value at the end of an estimated four-year service life is expected to be \$2,000. The company expects the equipment to operate for 10,000 hours. Calculate depreciation expense for 2024 and 2025 using each of the following depreciation methods: (1) straight line, (2) double-declining balance, and (3) units-of-production using hours operated. The equipment operated for 2,200 and 3,000 hours in 2024 and 2025, respectively.

BE 11–3 Depreciation methods; partial periods LO11–2

Refer to the situation described in  BE 11–2. Assume the equipment was purchased on March 31, 2024, instead of January 1. Calculate depreciation expense for 2024 and 2025 using each of the following depreciation methods: (1) straight line, (2) double-declining balance, and (3) units-of-production using hours operated.

BE 11–4 Depreciation method; Sum-of-the-years'-digits LO11–2

Refer to the situation described in  BE 11–2. Calculate depreciation expense for 2024 and 2025 using sum-of-the-years'-digits, assuming the equipment was purchased on (1) January 1, 2024, and (2) March 31, 2024.

BE 11–5 Disposal of property, plant, and equipment LO11–2

Lawler Clothing sold manufacturing equipment for \$16,000. Lawler originally purchased the equipment for \$80,000, and depreciation through the date of sale totaled \$71,000. What was the gain or loss on the sale of the equipment reported in the income statement?

BE 11–6 Disposal of property, plant, and equipment **LO11–2**

Funseth Farms Inc. purchased a tractor in 2021 at a cost of \$30,000. The tractor was sold for \$3,000 in 2024. Depreciation recorded through the disposal date totaled \$26,000. (1) Prepare the journal entry to record the sale. (2) Now assume the tractor was sold for \$10,000; prepare the journal entry to record the sale.

Page 616

BE 11–7 Disposal of property, plant, and equipment and intangible assets **LO11–2**

On July 15, 2024, Cottonwood Industries sold a patent and equipment to Roquemore Corporation for \$750,000 and \$325,000, respectively. On the date of the sale, the book value of the patent was \$120,000, and the book value of the equipment was \$400,000 (cost of \$550,000 less accumulated depreciation of \$150,000). Prepare separate journal entries to record (1) the sale of the patent and (2) the sale of the equipment.

BE 11–8 Assets held for sale **LO11–2**

On December 31, 2024, management of Jines Construction committed to a plan for selling an office building and its related equipment. Both are available for immediate sale. The building has a book value of \$800,000 and a fair value of \$900,000. The equipment has a book value of \$240,000 and a fair value of \$200,000. Calculate the amount that each asset will be reported at in the balance sheet and the amount of any gain or loss that will be reported in the income statement for the year ended December 31, 2024. Management expects to sell both assets in 2025.

BE 11–9 Group depreciation; disposal **LO11–2**

Mondale Winery depreciates its equipment using the group method. The cost of equipment purchased in 2024 totaled \$425,000. The estimated residual value of the equipment was \$40,000 and the group depreciation rate was determined to be 18%. (1) What is the annual depreciation for the group? (2) If equipment that cost \$42,000 is sold in 2025 for \$35,000, what amount of gain or loss will the company recognize for the sale?

BE 11–10 Depletion **LO11–3**

Fitzgerald Oil and Gas incurred costs of \$8.25 million for the acquisition and development of a natural gas deposit. The company expects to extract 3 million cubic feet of natural gas during a four-year period. Natural gas extracted during years 1 and 2 were 700,000 and 800,000 cubic feet, respectively. What was the depletion for year 1 and for year 2?

BE 11–11 Amortization; Partial periods **LO11–4**

On June 28, Lexicon Corporation acquired 100% of the common stock of Gulf & Eastern. The purchase price allocation included the following items: \$4 million, patent; \$3 million, developed technology; \$2 million, indefinite-life trademark; \$5 million, goodwill. Lexicon's policy is to amortize intangible assets using the straight-line method, no residual value, and a five-year useful life. What is the total amount of expenses (ignoring taxes) that would appear in Lexicon's income statement for the year ended December 31 related to these items?

BE 11–12 Amortization; Software development costs **LO11–4**

[This is a continuation of  **Exercise 10–31** in  **Chapter 10** and includes amortization.]

Early in 2024, the Excalibur Company began developing a new software package to be marketed. The project was completed in December 2024 at a cost of \$6 million. Of this amount, \$4 million was spent before technological feasibility was established. Excalibur expects a useful life of five years for the new product with total revenues of \$10 million. During 2025, revenue of \$3 million was recognized.

Required:

(1) Prepare a journal entry to record the 2024 development costs. (2) Calculate the required amortization for 2025, and (3) determine the amount to report for the computer software costs in the December 31, 2025, balance sheet.

BE 11–13 Amortization; Software development costs **LO11–4**

[This is a continuation of  **E 10–32** in  **Chapter 10** and includes amortization.]

On September 30, 2024, Athens Software began developing a software program to shield personal computers from malware and spyware. Technological feasibility was established on

February 28, 2025, and the program was available for release on April 30, 2025.

Development costs were incurred as follows:

| | |
|--|-------------|
| September 30 through December 31, 2024 | \$2,200,000 |
| January 1 through February 28, 2025 | 800,000 |
| March 1 through April 30, 2025 | 300,000 |

Athens expects a useful life of four years for the software and total revenues of \$5,000,000 during that time. During 2025, revenue of \$1,000,000 was recognized.

Required:

- (1) Prepare a journal entry to record the development costs in each year of 2024 and 2025.
- (2) Calculate the required amortization for 2025.

BE 11-14 Change in estimate; useful life of equipment

 **LO11-5**

At the beginning of 2022, Robotics Inc. acquired a manufacturing facility for \$12 million. \$9 million of the purchase price was allocated to the building. Depreciation for 2022 and 2023 was calculated using the straight-line method, a 25-year useful life, and a \$1 million residual value. In 2024, the estimates of useful life and residual value were changed to 20 total years and \$500,000, respectively. What is depreciation on the building for 2024?

BE 11-15 Change in principle; change in depreciation method

 **LO11-6**

Refer to the situation described in  **BE 11-14**. Assume that instead of changing the useful life and residual value, in 2024 the company switched to the double-declining-balance depreciation method. How should Robotics account for the change? What is depreciation on the building for 2024?

BE 11-16 Error correction  **LO11-7**

Refer to the situation described in  **BE 11-14**. Assume that 2022 depreciation was incorrectly recorded as \$32,000. This error was discovered in 2024. (1) Record the journal

entry needed in 2024 to correct the error. (2) What is depreciation on the building for 2024, assuming no change in estimate of useful life or residual value?

BE 11–17 Impairment; property, plant, and equipment  **LO11–8**

Collison and Ryder Company (C&R) has been experiencing declining market conditions for its sportswear division. Management decided to test the assets of the division for possible impairment. The test revealed the following: book value of division's assets, \$26.5 million; fair value of division's assets, \$21 million; undiscounted sum of estimated future cash flows generated from the division's assets, \$28 million. What amount of impairment loss should C&R report in its income statement?

BE 11–18 Impairment; property, plant, and equipment  **LO11–8**

Refer to the situation described in  **BE 11–17**. Assume that the undiscounted sum of estimated future cash flows is \$24 million instead of \$28 million. What amount of impairment loss should C&R report in its income statement?

BE 11–19 IFRS; impairment; property, plant, and equipment
 **LO11–8**,  **LO11–10**

Refer to the situation described in  **BE 11–17**. Assume that the present value of the estimated future cash flows generated from the division's assets is \$22 million and that their fair value approximates fair value less costs to sell. What amount of impairment loss should C&R report if the company prepares its financial statements according to IFRS?

BE 11–20 Impairment; goodwill  **LO11–8**

WebHelper Inc. acquired 100% of the outstanding stock of Silicon Chips Corporation (SCC) for \$45 million, of which \$15 million was allocated to goodwill. At the end of the current fiscal year, an impairment test revealed the following: fair value of SCC, \$40 million; book value of SCC's net assets (including goodwill), \$42 million. What amount of impairment loss should WebHelper report in its income statement?

BE 11–21 Impairment; goodwill  **LO11–8**

Refer to the situation described in  **BE 11-20**. Assume that the fair value of SCC is \$44 million instead of \$40 million. What amount of impairment loss should WebHelper report in its income statement?

BE 11-22 IFRS; impairment; goodwill  **LO11-10**

Refer to the situation described in  **BE 11-20**. Assume that SCC's fair value of \$40 million approximates fair value less costs to sell and that the present value of SCC's estimated future cash flows is \$41 million. If WebHelper prepares its financial statements according to IFRS and SCC is considered a cash-generating unit, what amount of impairment loss, if any, should WebHelper report in its income statement?

BE 11-23 Subsequent expenditures  **LO11-9**

Demmert Manufacturing incurred the following expenditures during the current fiscal year: annual maintenance on its equipment, \$5,400; remodeling of offices, \$22,000; rearrangement of the shipping and receiving area resulting in an increase in productivity, \$35,000; addition of a security system to the manufacturing facility, \$25,000. How should Demmert account for each of these expenditures?

Exercises

E 11-1 Depreciation methods LO11-2

On January 1, 2024, the Excel Delivery Company purchased a delivery van for \$33,000. At the end of its five-year service life, it is estimated that the van will be worth \$3,000. During the five-year period, the company expects to drive the van 100,000 miles.

Required:

Calculate annual depreciation for the five-year life of the van using each of the following methods. Round all computations to the nearest dollar.

1. Straight line
2. Double-declining balance
3. Units of production using miles driven as a measure of output, and the following actual mileage:

| Year | Miles |
|------|--------|
| 2024 | 22,000 |
| 2025 | 24,000 |
| 2026 | 15,000 |
| 2027 | 20,000 |
| 2028 | 21,000 |

E 11-2 Depreciation methods LO11-2

On January 1, 2024, the Allegheny Corporation purchased equipment for \$115,000. The estimated service life of the equipment is 10 years and the estimated residual value is \$5,000. The equipment is expected to produce 220,000 units during its life.

Required:

Calculate depreciation for 2024 and 2025 using each of the following methods. Round all computations to the nearest dollar.

1. Straight line
2. Double-declining balance
3. Units of production (units produced in 2024, 30,000; units produced in 2025, 25,000)

E 11-3 Depreciation methods; partial periods **LO11-2**

[This is a variation of  **E 11-2** modified to focus on depreciation for partial years.]

On October 1, 2024, the Allegheny Corporation purchased equipment for \$115,000. The estimated service life of the equipment is 10 years and the estimated residual value is \$5,000. The equipment is expected to produce 220,000 units during its life.

Required:

Calculate depreciation for 2024 and 2025 using each of the following methods. Partial-year depreciation is calculated based on the number of months the asset is in service. Round all computations to the nearest dollar.

1. Straight line
2. Double-declining balance
3. Units of production (units produced in 2024, 10,000; units produced in 2025, 25,000)

E 11-4 Other depreciation methods **LO11-2**

[This is a variation of  **E 11-2** modified to focus on other depreciation methods.]

On January 1, 2024, the Allegheny Corporation purchased equipment for \$115,000. The estimated service life of the equipment is 10 years and the estimated residual value is \$5,000. The equipment is expected to produce 220,000 units during its life.

Required:

Calculate depreciation for 2024 and 2025 using each of the following methods. Round all computations to the nearest dollar.

1. Sum-of-the-years'-digits
2. 150% declining balance

3. Assume instead the equipment was purchased on October 1, 2024. Calculate depreciation for 2024 and 2025 using each of the two methods. Partial-year depreciation is calculated based on the number of months the asset is in service. Round all computations to the nearest dollar.

E 11–5 Depreciation methods; asset addition; partial period

 **LO11–2**,  **LO11–9**

Tristen Company purchased a five-story office building on January 1, 2022, at a cost of \$5,000,000. The building has a residual value of \$200,000 and a 30-year life. The straight-line depreciation method is used. On June 30, 2024, construction of a sixth floor was completed at a cost of \$1,650,000.

Required:

Calculate the depreciation on the building and building addition for 2024 and 2025, assuming that the addition did not change the life or residual value of the building.

E 11–6 Depreciation methods; solving for unknowns  **LO11–2**

For each of the following depreciable assets, determine the missing amount (?). Abbreviations for depreciation methods are SL for straight-line and DDB for double-declining-balance.

| Asset | Cost | Residual Value | Service Life (Years) | Depreciation Method | Depreciation (Year 2) |
|-------|-----------|----------------|----------------------|---------------------|-----------------------|
| A | ? | \$20,000 | 5 | DDB | \$24,000 |
| B | \$ 40,000 | ? | 8 | SL | 4,500 |
| C | 65,000 | 5,000 | ? | SL | 6,000 |
| D | 230,000 | 10,000 | 10 | ? | 22,000 |
| E | 200,000 | 20,000 | 8 | DDB | ? |

E 11–7 Depreciation methods; partial periods; book values

 **LO11–2**

On March 31, 2024, Susquehanna Insurance purchased an office building for \$12,000,000. Based on their relative fair values, one-third of the purchase price was allocated to the land and two-thirds to the building. Furniture and fixtures were purchased separately from office equipment on the same date for \$1,200,000 and \$700,000, respectively. The company uses the straight-line method to depreciate its buildings and the double-declining-balance method to depreciate all other depreciable assets. The estimated useful lives and residual values of these assets are as follows:

| | Service Life | Residual Value |
|------------------------|-----------------|-------------------|
| Building | 30 | 10% of cost |
| Furniture and fixtures | 10 | 10% of cost |
| Office equipment | 5 | \$30,000 |

Required:

1. Calculate depreciation for the years ended December 31, 2024 and 2025.
2. What book values would be reported in the December 31, 2025, balance sheet (including land)?

E 11-8 IFRS; depreciation; partial periods  **LO11-2,**

 **LO11-10**

On June 30, 2024, Rosetta Granite purchased equipment for \$120,000. The estimated useful life of the equipment is eight years and no residual value is anticipated. An important component of the equipment is a specialized high-speed drill that will need to be replaced in four years. The \$20,000 cost of the drill is included in the \$120,000 cost of the equipment. Rosetta uses the straight-line depreciation method for all equipment.

Required:

1. Calculate depreciation for the years ended December 31, 2024 and 2025, applying the typical U.S. GAAP treatment.
2. Repeat requirement 1 applying IFRS.

E 11–9 IFRS; revaluation of equipment; depreciation; partial periods **LO11–10**

Dower Corporation prepares its financial statements according to IFRS. On March 31, 2024, the company purchased equipment for \$240,000. The equipment is expected to have a six-year useful life with no residual value. Dower uses the straight-line depreciation method for all equipment. On December 31, 2024, the end of the company's fiscal year, Dower chooses to revalue the equipment to its fair value of \$220,000.

Required:

1. Calculate depreciation for 2024.
2. Prepare the journal entry to record the revaluation of the equipment.
3. Calculate depreciation for 2025.
4. Repeat requirement 2, assuming that the fair value of the equipment at the end of 2024 is \$195,000.

E 11–10 Disposal of property, plant, and equipment **LO11–2**

Mercury Inc. purchased equipment in 2022 at a cost of \$400,000. The equipment was expected to produce 700,000 units over the next five years and have a residual value of \$50,000. The equipment was sold for \$210,000 part way through 2024. Actual production in each year was: 2022 = 100,000 units; 2023 = 160,000 units; 2024 = 80,000 units. Mercury uses units-of-production depreciation, and all depreciation has been recorded through the disposal date.

Required:

1. Calculate the gain or loss on the sale.
2. Prepare the journal entry to record the sale.
3. Assuming that the equipment was instead sold for \$245,000, calculate the gain or loss on the sale.
4. Prepare the journal entry to record the sale in requirement 3.

E 11–11 Disposal of property, plant, and equipment; partial periods **LO11–2**

On July 1, 2019, Farm Fresh Industries purchased a specialized delivery truck for \$126,000. At the time, Farm Fresh estimated the truck to have a useful life of eight years and a residual value of \$30,000. On March 1, 2024, the truck was sold for \$58,000. Farm Fresh uses the straight-line depreciation method for all of its plant and equipment. Partial-year depreciation is calculated based on the number of months the asset is in service.

Required:

1. Prepare the journal entry to update depreciation in 2024.
2. Prepare the journal entry to record the sale of the truck.
3. Assuming that the truck was instead sold for \$80,000, prepare the journal entry to record the sale.

E 11–12 Depreciation methods; disposal; partial periods

 **LO11–2**

Howarth Manufacturing Company purchased equipment on June 30, 2020, at a cost of \$800,000. The residual value of the equipment was estimated to be \$50,000 at the end of a five-year life. The equipment was sold on March 31, 2024, for \$170,000. Howarth uses the straight-line depreciation method for all of its plant and equipment. Partial-year depreciation is calculated based on the number of months the asset is in service.

Required:

1. Prepare the journal entry to record the sale.
2. Assuming that Howarth had instead used the double-declining-balance method, prepare the journal entry to record the sale.

E 11–13 Assets held for sale; partial periods  **LO11–2**

On March 31, 2024, management of Quality Appliances committed to a plan to sell equipment. The equipment was available for immediate sale, and an active plan to locate a buyer was initiated. The equipment had been purchased on January 1, 2022, for \$260,000. The equipment had an estimated six-year service life and residual value of \$20,000. The equipment was being depreciated using the straight-line method. Quality's fiscal year ends on December 31.

Required:

1. Calculate the equipment's book value as of March 31, 2024. (*Hint:* Depreciation for 2024 would include up to March 31.)
2. By December 31, 2024, the equipment has not been sold, but management expects that it will be sold in 2025 for \$150,000. For what amount is the equipment reported in the December 31, 2024, balance sheet?

E 11–14 Group depreciation LO11–2

Highsmith Rental Company purchased an apartment building early in 2024. There are 20 apartments in the building and each is furnished with major kitchen appliances. The company has decided to use the group depreciation method for the appliances. The following data are available:

| Appliance | Cost | Residual Value | Service Life (in years) |
|---------------|----------|----------------|-------------------------|
| Stoves | \$15,000 | \$3,000 | 6 |
| Refrigerators | 10,000 | 1,000 | 5 |
| Dishwashers | 8,000 | 500 | 4 |

In 2027, three new refrigerators costing \$2,700 were purchased for cash. In that same year, the old refrigerators, which originally cost \$1,500, were sold for \$200.

Required:

1. Calculate the group depreciation rate, group life, and depreciation for 2024.
2. Prepare the journal entries to record the purchase of the new refrigerators and the sale of the old refrigerators.

E 11–15 Double-declining-balance method; switch to straight line LO11–2, LO11–6

On January 2, 2024, the Jackson Company purchased equipment to be used in its manufacturing process. The equipment has an estimated life of eight years and an estimated residual value of \$30,625. The expenditures made to acquire the asset were as follows:

| | |
|-----------------|-----------|
| Purchase price | \$154,000 |
| Freight charges | 2,000 |

Installation charges

4,000

Jackson's policy is to use the double-declining-balance (DDB) method of depreciation in the early years of the equipment's life and then switch to straight line halfway through the equipment's life.

Required:

1. Calculate depreciation for each year of the asset's eight-year life.
2. Are changes in depreciation methods accounted for retrospectively or prospectively?

E 11–16 Depletion  **LO11–3**

On April 17, 2024, the Loadstone Mining Company purchased the rights to a copper mine. The purchase price plus additional costs necessary to prepare the mine for extraction of the copper totaled \$4,500,000. The company expects to extract 900,000 tons of copper during a four-year period. During 2024, 240,000 tons were extracted and sold immediately.

Required:

1. Calculate depletion for 2024.
2. Is depletion considered part of the product cost and included in the cost of inventory (yes/no)? Discuss.

E 11–17 Depreciation and depletion  **LO11–2,**  **LO11–3**

At the beginning of 2024, Terra Lumber Company purchased a timber tract from Boise Cantor for \$3,200,000. After the timber is cleared, the land will have a residual value of \$600,000. Roads to enable logging operations were constructed and completed on March 30, 2024. The cost of the roads, which have no residual value and no alternative use after the tract is cleared, was \$240,000. During 2024, Terra logged 500,000 of the estimated 5 million board feet of timber.

Required:

Page 621

Calculate the 2024 depletion of the timber tract and depreciation of the logging roads, assuming the units-of-production method is used for both assets.

E 11–18 Cost of a natural resource; depletion and depreciation; Chapters 10 and 11  **LO11–2,**  **LO11–3**

[This exercise is a continuation of [E 10-4](#) in [Chapter 10](#) focusing on depletion and depreciation.]

Jackpot Mining Company operates a copper mine in central Montana. The company paid \$1,000,000 in 2024 for the mining site and spent an additional \$600,000 to prepare the mine for extraction of the copper. After the copper is extracted in approximately four years, the company is required to restore the land to its original condition, including repaving of roads and replacing a greenbelt. The company has provided the following three cash flow possibilities for the restoration costs:

| | Cash Outflow | Probability |
|---|--------------|-------------|
| 1 | \$300,000 | 25% |
| 2 | 400,000 | 40% |
| 3 | 600,000 | 35% |

To aid extraction, Jackpot purchased some new equipment on July 1, 2024, for \$120,000. After the copper is removed from this mine, the equipment will be sold for an estimated residual amount of \$20,000. There will be no residual value for the copper mine. The credit-adjusted risk-free rate of interest is 10%.

The company expects to extract 10 million pounds of copper from the mine. Actual production was 1.6 million pounds in 2024 and 3 million pounds in 2025.

Required:

1. Compute depletion and depreciation on the mine and mining equipment for 2024 and 2025. The units-of-production method is used to calculate depreciation.
2. Discuss the accounting treatment of the depletion and depreciation on the mine and mining equipment.

E 11-19 Amortization [LO11-4](#), [LO11-5](#)

Janes Company provided the following information on intangible assets:

- a. A patent was purchased from the Lou Company for \$700,000 on January 1, 2022. Janes estimated the remaining useful life of the patent to be 10 years. The patent was carried on Lou's accounting records at a net book value of \$350,000 when Lou sold it to Janes.
- b. During 2024, a franchise was purchased from the Rink Company for \$500,000. The contractual life of the franchise is 10 years and Janes records a full year of amortization in

the year of purchase.

c. Janes incurred research and development costs in 2024 as follows:

| | |
|------------------------|------------------|
| Materials and supplies | \$140,000 |
| Personnel | 180,000 |
| Indirect costs | 60,000 |
| Total | <u>\$380,000</u> |

d. Effective January 1, 2024, based on new events that have occurred, Janes estimates that the remaining life of the patent purchased from Lou is only five more years.

Required:

1. Prepare the entries necessary for years 2022 through 2024 to reflect the above information.
2. Prepare a schedule showing the intangible asset section of Janes's December 31, 2024, balance sheet.

E 11-20 Patent amortization; patent defense  **LO11-4,**
 **LO11-9**

On January 2, 2024, David Corporation purchased a patent for \$500,000. The remaining legal life is 12 years, but the company estimated that the patent will be useful only for eight years. In January 2026, the company incurred legal fees of \$45,000 in successfully defending a patent infringement suit. The successful defense did not change the company's estimate of useful life.

Required:

Prepare journal entries related to the patent for 2024, 2025, and 2026.

E 11-21 Change in estimate; useful life of patent  **LO11-4,**
 **LO11-5**

Van Frank Telecommunications has a patent on a cellular transmission process. The company has amortized the patent on a straight-line basis since 2020, when it was acquired at a cost of \$9 million at the beginning of that year. Due to rapid technological advances in

the industry, management decided that the patent would benefit the company over a total of six years rather than the nine-year life being used to amortize its cost. The decision was made at the beginning of 2024.

Required:

Prepare the year-end journal entry for patent amortization in 2024. No amortization was recorded during the year.

E 11–22 IFRS; revaluation of patent; amortization  **LO11–10**

Saint John Corporation prepares its financial statements according to IFRS. On June 30, 2024, the company purchased a franchise for \$1,200,000. The franchise is expected to have a 10-year useful life with no residual value. Saint John uses the straight-line amortization method for all intangible assets. On December 31, 2024, the end of the company's fiscal year, Saint John chooses to revalue the franchise. There is an active market for this particular franchise and its fair value on December 31, 2024, is \$1,180,000.

Required:

1. Calculate amortization for 2024.
2. Prepare the journal entry to record the revaluation of the patent.
3. Calculate amortization for 2025.

E 11–23 Change in estimate; useful life and residual value of equipment  **LO11–2**,  **LO11–5**

Wardell Company purchased a minicomputer on January 1, 2022, at a cost of \$40,000. The computer was depreciated using the straight-line method over an estimated five-year life with an estimated residual value of \$4,000. On January 1, 2024, the estimate of useful life was changed to a total of 10 years, and the estimate of residual value was changed to \$900.

Required:

1. Prepare the year-end journal entry for depreciation on December 31, 2024. No depreciation was recorded during the year.

2. Repeat requirement 1, assuming that the company uses the double-declining-balance method instead of the straight-line method.

E 11–24 Change in principle; change in depreciation methods

 **LO11–2**,  **LO11–6**

Alteran Corporation purchased office equipment for \$1.5 million at the beginning of 2022. The equipment is being depreciated over a 10-year life using the double-declining-balance method. The residual value is expected to be \$300,000. At the beginning of 2024 (two years later), Alteran decided to change to the straight-line depreciation method for this equipment.

Required:

Prepare the journal entry to record depreciation for the year ended December 31, 2024.

E 11–25 Change in principle; change in depreciation methods

 **LO11–2**,  **LO11–6**

For financial reporting, Clinton Poultry Farms has used the declining-balance method of depreciation for conveyor equipment acquired at the beginning of 2021 for \$2,560,000. Its useful life was estimated to be six years, with a \$160,000 residual value. At the beginning of 2024, Clinton decides to change to the straight-line method. The effect of this change on depreciation for each year is as follows:

| | (\$ in thousands) | | |
|------|-------------------|-------------------|-------------|
| Year | Straight Line | Declining Balance | Difference |
| 2021 | \$ 400 | \$ 853 | \$453 |
| 2022 | 400 | 569 | 169 |
| 2023 | <u>400</u> | <u>379</u> | <u>(21)</u> |
| | \$1,200 | \$1,801 | \$601 |

Required:

1. Briefly describe the way Clinton should report this accounting change in the 2022–2024 comparative financial statements.
2. Prepare any 2024 journal entry related to the change.

E 11–26 Error correction LO11–2, LO11–7

In 2024, internal auditors discovered that PKE Displays, Inc., had debited an expense account for the \$350,000 cost of equipment purchased on January 1, 2021. The equipment's life was expected to be five years with no residual value. Straight-line depreciation is used by PKE.

Required:

1. Determine the cumulative effect of the error on net income over the three-year period from 2021 through 2023, and on retained earnings by the end of 2023.
2. Prepare the correcting entry, assuming the error was discovered in 2024 before the adjusting and closing entries. (Ignore income taxes.)
3. Assume instead that the equipment was disposed of in 2025 and the original error was discovered in 2026 after the 2025 financial statements were issued. Prepare the correcting entry in 2026.

E 11–27 Impairment; property, plant, and equipment LO11–8

Chadwick Enterprises, Inc., operates several restaurants throughout the Midwest. Three of its restaurants located in the center of a large urban area have experienced declining profits due to declining population. The company's management has decided to test the assets of the restaurants for possible impairment. The relevant information for these assets is presented below at the end of 2024.

Page 623

| | |
|---|---------------|
| Book value | \$6.5 million |
| Estimated undiscounted sum of future cash flows | 4.0 million |
| Fair value | 3.5 million |

Required:

1. Determine the amount of the impairment loss, if any, reported in the 2024 income statement.
2. Determine the reported book value of the assets in the year-end 2024 balance sheet.
3. Repeat requirements 1 and 2, assuming that the estimated undiscounted sum of future cash flows is \$6.8 million and fair value is \$5 million.

E 11-28 IFRS; impairment; property, plant, and equipment

 LO11-10

Refer to the situation described in  E 11-27.

Required:

How might your solution differ if Chadwick Enterprises, Inc., prepares its financial statements according to International Financial Reporting Standards? Assume that the fair value amount given in the exercise equals both (a) the fair value less costs to sell and (b) the present value of estimated future cash flows.

E 11-29 IFRS; Impairment; property, plant, and equipment

 LO11-8,  LO11-10

Collinsworth LTD, a U.K. company, prepares its financial statements according to International Financial Reporting Standards. Late in its 2024 fiscal year, a significant adverse change in business climate indicated to management that the assets of its appliance division may be impaired. The following data relate to the division's assets:

| | (£ in millions) |
|--|-----------------|
| Book value | £220 |
| Undiscounted sum of estimated future cash flows | 210 |
| Present value of future cash flows | 150 |
| Fair value less cost to sell (determined by appraisal) | 145 |

Required:

1. What amount of impairment loss, if any, should Collinsworth recognize?
2. Assume that Collinsworth prepares its financial statements according to U.S. GAAP and that fair value less cost to sell approximates fair value. What amount of impairment loss, if any, should Collinsworth recognize?

E 11-30 Impairment; property, plant, and equipment LO11-8

General Optic Corporation operates a manufacturing plant in Arizona. Due to a significant decline in demand for the product manufactured at the Arizona site, an impairment test is deemed appropriate. Management has acquired the following information for the assets at the plant:

| | |
|---|----------------|
| Cost | \$32.5 million |
| Accumulated depreciation | \$14.2 million |
| General's estimate of the total cash flows to be generated by selling the products manufactured at its Arizona plant, not discounted to present value | \$15 million |

The fair value of the Arizona plant is estimated to be \$11 million.

Required:

1. Determine the amount of impairment loss, if any.
2. If a loss is indicated, prepare the entry to record the loss.
3. Repeat requirement 1, assuming that the estimated undiscounted sum of future cash flows is \$12 million instead of \$15 million.
4. Repeat requirement 1, assuming that the estimated undiscounted sum of future cash flows is \$19 million instead of \$15 million.

E 11–31 Impairment; goodwill  **LO11–8**

In 2022, Alliant Corporation acquired Centerpoint Inc. for \$300 million, of which \$50 million was allocated to goodwill. At the end of 2024, management has provided the following information for a required goodwill impairment test:

| | |
|---|---------------|
| Fair value of Centerpoint Inc. | \$220 million |
| Book value of Centerpoint's net assets (excluding goodwill) | 200 million |
| Book value of Centerpoint's net assets (including goodwill) | 250 million |

Required:

1. Determine the amount of the impairment loss reported in the 2024 income statement.

2. Determine the amount of goodwill reported in the year-end 2024 balance sheet.
3. Repeat requirements 1 and 2, assuming that the fair value of Centerpoint is \$270 million.

E 11-32 IFRS; impairment; goodwill **LO11-10**

Refer to the situation described in  **E 11-31**, requirement 1. Alliant prepares its financial statements according to IFRS, and Centerpoint is considered a cash-generating unit. Assume that Centerpoint's fair value of \$220 million approximates fair value less costs to sell and that the present value of Centerpoint's estimated future cash flows is \$225 million.

Required:

Determine the amount of goodwill impairment loss Alliant should recognize in its income statement.

E 11-33 Goodwill valuation and impairment; Chapters 10 and 11 **LO11-8**

On May 28, 2024, Pesky Corporation acquired all of the outstanding common stock of Harman, Inc., for \$420 million. The fair value of Harman's identifiable tangible and intangible assets totaled \$512 million, and the fair value of liabilities assumed by Pesky was \$150 million.

Pesky performed a goodwill impairment test at the end of its fiscal year ended December 31, 2024. Management has provided the following information:

| | |
|--|---------------|
| Fair value of Harman, Inc. | \$400 million |
| Fair value of Harman's net assets (excluding goodwill) | 370 million |
| Book value of Harman's net assets (including goodwill) | 410 million |

Required:

1. Determine the amount of goodwill that resulted from the Harman acquisition.
2. Determine the amount of goodwill impairment loss that Pesky should recognize at the end of 2024, if any.
3. If an impairment loss is required, prepare the journal entry to record the loss.

E 11–34 FASB codification research LO11–8

Access the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org) and select Basic View for free access. Determine each of the following:

Required:

1. The topic number (Topic XXX) that provides guidance on accounting for the impairment of long-lived assets.
2. The specific eight-digit Codification citation (XXX-XX-XX-X) that discusses the disclosures required in the notes to the financial statements for the impairment of long-lived assets classified as held and used.
3. Describe the disclosure requirements.

E 11–35 FASB codification research LO11–2, LO11–1, LO11–6, LO11–8

Access the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org) and select Basic View for free access. Determine each of the following:

1. The specific eight-digit Codification citation (XXX-XX-XX-X) that discusses depreciation as a systematic and rational allocation of cost rather than a process of valuation.
2. The specific nine-digit Codification citation (XXX-XX-XX-XX) that involves the calculation of an impairment loss for property, plant, and equipment.
3. The specific nine-digit Codification citation (XXX-XX-XX-XX) that provides guidance on accounting for a change in depreciation method.
4. The specific eight-digit Codification citation (XXX-XX-XX-X) that indicates goodwill should not be amortized.

E 11–36 Subsequent expenditures LO11–9

Belltone Company made the following expenditures related to its 10-year-old manufacturing building:

1. The heating system was replaced at a cost of \$250,000. The cost of the old system was not known. The company accounts for improvements as reductions of accumulated depreciation.
2. A new wing was added at a cost of \$750,000. The new wing substantially increases the productive capacity of the building.
3. Annual building maintenance was performed at a cost of \$14,000.
4. All of the equipment on the assembly line in the building was rearranged at a cost of \$50,000. The rearrangement clearly increases the productive capacity of the equipment.

Required:

Prepare journal entries to record each of the above expenditures.

E 11-37 IFRS; amortization; cost to defend a patent  **LO11-4**,  **LO11-9**,  **LO11-10**

On September 30, 2022, Leeds LTD. acquired a patent in conjunction with the purchase of another company. The patent, valued at \$6 million, was estimated to have a 10-year life and no residual value. Leeds uses the straight-line method of amortization for intangible assets. At the beginning of January 2024, Leeds successfully defended its patent against infringement. Litigation costs totaled \$500,000.

Required:

Page 625

1. Calculate amortization of the patent for 2022 and 2023.
2. Prepare the journal entry to record the 2024 litigation costs.
3. Calculate amortization for 2024.
4. Repeat requirements 1-3, assuming that Leeds prepares its financial statements according to IFRS.

E 11-38 Concepts; terminology  **LO11-1** through  **LO11-6**,  **LO11-8**

Listed below are several items and phrases associated with depreciation, depletion, and amortization. Pair each item from List A with the item from List B (by letter) that is most appropriately associated with it.

| List A | | List B |
|-----------|-------------------------------|--|
| _____ 1. | Depreciation | a. Cost allocation for natural resource |
| _____ 2. | Service life | b. Accounted for prospectively |
| _____ 3. | Depreciable base | c. When there has been a significant decline in value |
| _____ 4. | Activity-based methods | d. The amount of use expected from plant and equipment and finite-life intangible assets |
| _____ 5. | Time-based methods | e. Estimates service life in units of output |
| _____ 6. | Double-declining balance | f. Cost less residual value |
| _____ 7. | Depletion | g. Cost allocation for plant and equipment |
| _____ 8. | Amortization | h. Does not subtract residual value from cost |
| _____ 9. | Change in useful life | i. Accounted for in the same way as a change in estimate |
| _____ 10. | Change in depreciation method | j. Cost allocation for an intangible asset |
| _____ 11. | Write-down of asset | k. Estimates service life in years |

E 11–39 Retirement and replacement depreciation

Appendix B

Cadillac Construction Company uses the retirement method to determine depreciation on its small tools. During 2022, the first year of the company's operations, tools were purchased at a cost of \$8,000. In 2024, tools originally costing \$2,000 were sold for \$250 and replaced with new tools costing \$2,500.

Required:

1. Prepare journal entries to record each of the above transactions.
2. Repeat requirement 1, assuming that the company uses the replacement depreciation method instead of the retirement method.

E 11–40 General ledger exercise; depreciation **LO11–2**

On January 1, 2024, the general ledger of TNT Fireworks included the following account balances:

| Account Title | Debits | Credits |
|---------------------------------------|------------------|------------------|
| Cash | \$ 58,700 | |
| Accounts receivable | 25,000 | |
| Allowance for uncollectible accounts | | \$ 2,200 |
| Inventory | 36,300 | |
| Notes receivable (5%, due in 2 years) | 12,000 | |
| Land | 155,000 | |
| Accounts payable | | 14,800 |
| Common stock | | 220,000 |
| Retained earnings | | 50,000 |
| Totals | <u>\$287,000</u> | <u>\$287,000</u> |

During January 2024, the following transactions occurred:

- Jan. 1 Purchased equipment for \$19,500. The company estimates a residual value of \$1,500 and a five-year service life.
- 4 Paid cash on accounts payable, \$9,500.
- 8 Purchased additional inventory on account, \$82,900.
- 15 Received cash on accounts receivable, \$22,000.
- 19 Paid cash for salaries, \$29,800.
- 28 Paid cash for January utilities, \$16,500.
- 30 Firework sales for January totaled \$220,000. All of these sales were on account. The cost of the units sold was \$115,000.

Required:

1. Record each of the transactions listed above in the “General Journal” tab (these are shown as items 1–8), assuming a perpetual FIFO inventory system. Review the “General Ledger” and the “Trial Balance” tabs to see the effect of the transactions on the account balances.
2. Record adjusting entries on January 31 in the “General Journal” tab (these are shown as items 9–13):
 - a. Depreciation on the equipment for the month of January is calculated using the straight-line method.
 - b. The company records an adjusting entry for \$5,900 for estimated future uncollectible accounts.
 - c. The company has accrued interest on notes receivable for January. Interest will be received each December 31.
 - d. Unpaid salaries owed to employees at the end of January are \$32,600.
 - e. The company accrued income taxes at the end of January of \$9,000.
3. Review the adjusted “Trial Balance” as of January 31, 2024, in the “Trial Balance” tab.
4. Prepare a multiple-step income statement for the period ended January 31, 2024, in the “Income Statement” tab.
5. Prepare a classified balance sheet as of January 31, 2024, in the “Balance Sheet” tab.
6. Record closing entries in the “General Journal” tab (these are shown as items 14–15).
7. Using the information from the requirements above, complete the “Analysis” tab.
 - a. Calculate the return on assets ratio for the month of January. If the average return on assets for the industry in January is 2%, is the company *more* or *less* profitable than other companies in the same industry?
 - b. Calculate the profit margin for the month of January. If the industry average profit margin is 4%, is the company *more* or *less* efficient at converting sales to profit than other companies in the same industry?
 - c. Calculate the asset turnover ratio for the month of January. If the industry average asset turnover is 0.5 times per month, is the company *more* or *less* efficient at producing revenues with its assets than other companies in the same industry?

E 11-41 General ledger exercise; long-term asset transactions
 **LO11-2**,  **LO11-4**,  **LO11-8**,  **LO11-9**

On January 1, 2024, the general ledger of Parts Unlimited included the following account balances:

| Account Title | Debits | Credits |
|--------------------------|------------------|------------------|
| Cash | \$162,400 | |
| Accounts receivable | 12,400 | |
| Inventory | 37,800 | |
| Land | 340,000 | |
| Equipment | 347,500 | |
| Accumulated depreciation | | \$172,000 |
| Accounts payable | | 14,800 |
| Common stock | | 520,000 |
| Retained earnings | | 193,300 |
| Totals | <u>\$900,100</u> | <u>\$900,100</u> |

From January 1 to December 31, the following summary transactions occurred:

- Purchased inventory on account, \$325,800.
- Sold inventory on account, \$567,200. The inventory cost \$342,600.
- Received cash from customers on account, \$558,700.
- Paid cash on account, \$328,500.
- Paid cash for salaries, \$94,700, and for utilities, \$52,700.

In addition, Parts Unlimited had the following transactions during the year:

April 1 Purchased equipment for \$95,000 using a note payable, due in 12 months plus 8% interest. The company also paid cash of \$3,200 for freight and \$3,800 for installation and testing of the equipment. The equipment has an estimated residual value of \$10,000 and a 10-year service life.

| | |
|-------------|---|
| June 30 | Purchased a patent for \$40,000 from a third-party marketing company related to the packaging of the company's products. The patent has a 20-year useful life, after which it is expected to have no value. |
| October 1 | Sold equipment for \$30,200. The equipment cost \$60,700 and had accumulated depreciation of \$37,400 at the beginning of the year. Additional depreciation for 2024 up to the point of the sale is \$8,500. |
| November 15 | Several older pieces of equipment were improved by replacing major components at a cost of \$54,100. These improvements are expected to enhance the equipment's operating capabilities. [Record this transaction using Alternative 2—capitalization of new cost.] |

Required:

1. Record each of the transactions listed above in the “General Journal” tab (these are shown as items 1–11), assuming a perpetual inventory system. Review the “General Ledger” and the “Trial Balance” tabs to see the effect of the transactions on the account balances. Page 627
2. Record adjusting entries on December 31 in the “General Journal” tab (these are shown as items 12–17):
 - a. Depreciation on the equipment purchased on April 1, 2024, calculated using the straight-line method.
 - b. Depreciation on the remaining equipment, \$21,500.
 - c. Amortization of the patent purchased on June 30, 2024, using the straight-line method.
 - d. Accrued interest payable on the note payable.
 - e. Equipment with an original cost of \$65,400 had the following related information at the end of the year: accumulated depreciation of \$40,300, expected cash flows of \$15,700, and a fair value of \$10,800.
 - f. Accrued income taxes at the end of the year are \$12,600.
3. Review the adjusted “Trial Balance” as of December 31, 2024, in the “Trial Balance” tab.
4. Prepare a multiple-step income statement for the period ended December 31, 2024, in the “Income Statement” tab.
5. Prepare a classified balance sheet as of December 31, 2024, in the “Balance Sheet” tab.
6. Record closing entries in the “General Journal” tab (these are shown as items 18–19).
7. Using the information from the requirements above, complete the “Analysis” tab.

- a. Calculate the fixed asset turnover ratio for the year, using the total amount of property, plant, and equipment (net of accumulated depreciation). If the industry average fixed asset turnover is 0.75, is the company *more* or *less* efficient at generating sales with its fixed assets than other companies in the same industry?
- b. Suppose the equipment purchased on April 1, 2024, had been depreciated using the units of production method. At the time of purchase, expected output was 20,000 units, and actual production for 2024 was 2,000 units. Calculate the amount of depreciation expense that would have been recorded and determine the difference in net income and total assets for 2024 (ignoring tax effects).
- c. The transaction on June 30, 2024, shows the company purchased a patent for \$40,000 from a third-party marketing company. Suppose the company instead spent \$40,000 to internally develop the new packaging technology, which it then patented. Calculate the difference in net income and total assets for 2024 (ignoring tax effects).

Problems

P 11–1 Depreciation methods; change in methods LO11–2, LO11–6

The fact that generally accepted accounting principles allow companies flexibility in choosing between certain allocation methods can make it difficult for a financial analyst to compare periodic performance from firm to firm.

Suppose you were a financial analyst trying to compare the performance of two companies. Company A uses the double-declining-balance depreciation method. Company B uses the straight-line method. You have the following information taken from the 12/31/2024 year-end financial statements for Company B:

| Income Statement | |
|-------------------------|------------------|
| Depreciation expense | <u>\$ 10,000</u> |

| Balance Sheet | |
|--------------------------------|------------------|
| Assets: | |
| Plant and equipment, at cost | \$200,000 |
| Less: Accumulated depreciation | (40,000) |
| Net | <u>\$160,000</u> |

You also determine that all of the assets constituting the plant and equipment of Company B were acquired at the same time, and that all of the \$200,000 represents depreciable assets. Also, all of the depreciable assets have the same useful life and residual values are zero.

Required:

1. In order to compare performance with Company A, estimate what B's depreciation expense would have been for 2024 if the double-declining-balance depreciation method had been used by Company B since acquisition of the depreciable assets.

2. If Company B decided to switch depreciation methods in 2024 from the straight line to the double-declining-balance method, prepare the 2024 journal entry to record depreciation for the year, assuming no journal entry for depreciation in 2024 has yet been recorded.

P 11-2 Comprehensive problem; **LO11-2, LO11-4** **Chapters 10 and 11**

At December 31, 2023, Cord Company's plant asset and accumulated depreciation and amortization accounts had balances as follows:

| Category | Plant Asset | Accumulated Depreciation and Amortization |
|------------------------|-------------|---|
| Land | \$ 175,000 | \$ — |
| Buildings | 1,500,000 | 328,900 |
| Equipment | 1,125,000 | 317,500 |
| Automobiles and trucks | 172,000 | 100,325 |
| Leasehold improvements | 216,000 | 108,000 |
| Land improvements | — | — |

Depreciation methods and useful lives:

Buildings—150% declining balance; 25 years.

Equipment—Straight line; 10 years.

Automobiles and trucks—200% declining balance; 5 years, all acquired after 2020.

Leasehold improvements—Straight line.

Land improvements—Straight line.

Depreciation is computed to the nearest month and residual values are immaterial.

Transactions during 2024 and other information:

- a. On January 6, 2024, a plant facility consisting of land and building was acquired from King Corp. in exchange for 25,000 shares of Cord's common stock. On this date, Cord's stock had a fair value of \$50 a share. Current assessed values of land and building for property tax purposes are \$187,500 and \$562,500, respectively.
- b. On March 25, 2024, new parking lots, streets, and sidewalks at the acquired plant facility were completed at a total cost of \$192,000. These expenditures had an estimated useful life of 12 years.
- c. The leasehold improvements were completed on December 31, 2020, and had an estimated useful life of eight years. The related lease, which would terminate on December 31, 2026, was renewable for an additional four-year term. On April 30, 2024, Cord exercised the renewal option.
- d. On July 1, 2024, equipment was purchased at a total invoice cost of \$325,000. Additional costs of \$10,000 for delivery and \$50,000 for installation were incurred.
- e. On September 30, 2024, Cord purchased a new automobile for \$12,500.
- f. On September 30, 2024, a truck with a cost of \$24,000 and a book value of \$9,100 on date of sale was sold for \$11,500. Depreciation for the nine months ended September 30, 2024, was \$2,650.
- g. On December 20, 2024, equipment with a cost of \$17,000 and a book value of \$2,975 at date of disposition was scrapped without cash recovery.

Required:

1. Prepare a schedule analyzing the changes in each of the plant asset accounts during 2024. This schedule should include columns for beginning balance, increase, decrease, and ending balance for each of the plant asset accounts. Do not analyze changes in accumulated depreciation and amortization.
2. For each asset category, prepare a schedule showing depreciation or amortization expense for the year ended December 31, 2024. Round computations to the nearest whole dollar.

(AICPA adapted)

P 11–3 Depreciation methods; partial periods  **Chapters 10**
and  **11**  **LO11–2**

[This problem is a continuation of  **P 10–3** in  **Chapter 10** focusing on depreciation.]

Required:

For each asset classification, prepare a schedule showing depreciation for the year ended December 31, 2024, using the following depreciation methods and useful lives:

Land improvements—Straight line; 15 years

Building—150% declining balance; 20 years

Equipment—Straight line; 10 years

Automobiles—Units-of-production; \$0.50 per mile

Depreciation is computed to the nearest month and whole dollar amount, and no residual values are used. Automobiles were driven 38,000 miles in 2024.

(AICPA adapted)

Page 629

P 11–4 Partial-year depreciation; asset addition; increase in useful life  **LO11–2**,  **LO11–5**,  **LO11–9**

On April 1, 2022, the KB Toy Company purchased equipment to be used in its manufacturing process. The equipment cost \$48,000, has an eight-year useful life, and has no residual value. The company uses the straight-line depreciation method for all manufacturing equipment.

On January 4, 2024, \$12,350 was spent to repair the equipment and to add a feature that increased its operating efficiency. Of the total expenditure, \$2,000 represented ordinary repairs and annual maintenance and \$10,350 represented the cost of the new feature. In addition to increasing operating efficiency, the total useful life of the equipment was extended to 10 years.

Required:

Prepare journal entries for the following:

1. Depreciation for 2022 and 2023.
2. The 2024 expenditure.
3. Depreciation for 2024.

P 11–5 Property, plant, and equipment and intangible assets;
comprehensive  **LO11–2**

The Thompson Corporation, a manufacturer of steel products, began operations on October 1, 2022. The accounting department of Thompson has started the fixed-asset and depreciation schedule presented below. You have been asked to assist in completing this schedule. In addition to ascertaining that the data already on the schedule are correct, you have obtained the following information from the company's records and personnel:

- a. Depreciation is computed from the first of the month of acquisition to the first of the month of disposition.
- b. Land A and Building A were acquired from a predecessor corporation. Thompson paid \$812,500 for the land and building together. At the time of acquisition, the land had a fair value of \$72,000 and the building had a fair value of \$828,000.
- c. Land B was acquired on October 2, 2022, in exchange for 3,000 newly issued shares of Thompson's common stock. At the date of acquisition, the stock had a par value of \$5 per share and a fair value of \$25 per share. During October 2022, Thompson paid \$10,400 to demolish an existing building on this land so it could construct a new building.
- d. Construction of Building B on the newly acquired land began on October 1, 2023. By September 30, 2024, Thompson had paid \$210,000 of the estimated total construction costs of \$300,000. Estimated completion and occupancy are July 2025.
- e. Certain equipment was donated to the corporation by the city. An independent appraisal of the equipment when donated placed the fair value at \$16,000 and the residual value at \$2,000.
- f. Equipment A's total cost of \$110,000 includes installation charges of \$550 and normal repairs and maintenance of \$11,000. Residual value is estimated at \$9,000. Equipment A was sold on February 1, 2024.
- g. On October 1, 2023, Equipment B was acquired with a down payment of \$4,000 and the remaining payments to be made in 10 annual installments of \$4,000 each beginning October 1, 2024. The prevailing interest rate was 8%.

THOMPSON CORPORATION

Fixed Asset and Depreciation Schedule
For Fiscal Years Ended September 30, 2023, and September 30, 2024

| Assets | Acquisition Date | Cost | Residual | Depreciation Method | Estimated Life (in years) |
|-------------------|--------------------|-----------------|----------|---------------------|---------------------------|
| Land A | 10/1/2022 | \$(1) | N/A | N/A | N/A |
| Building A | 10/1/2022 | (2) | \$47,500 | SL | (3) |
| Land B | 10/2/2022 | (5) | N/A | N/A | N/A |
| Building B | Under construction | 210,000 to date | — | SL | 30 |
| Donated Equipment | 10/2/2022 | (7) | 2,000 | DDB | 10 |
| Equipment A | 10/2/2022 | (10) | 9,000 | SL | 10 |
| Equipment B | 10/1/2023 | (13) | — | SL | 15 |

N/A = not applicable

Required:

Supply the correct amount for each numbered item on the schedule. For depreciation methods, SL indicates straight-line and DDB indicates double-declining-balance. Round each answer to the nearest dollar.

(AICPA adapted)

P 11–6 Depreciation methods; partial-year depreciation; sale of assets  **LO11–2**

On March 31, 2024, the Herzog Company purchased a factory complete with vehicles and equipment. The allocation of the total purchase price of \$1,000,000 to the various types of assets along with estimated useful lives and residual values are as follows:

| Asset | Cost | Estimated Residual Value | Estimated Useful Life (in years) |
|-----------|--------------------|--------------------------|----------------------------------|
| Land | \$ 100,000 | N/A | N/A |
| Building | 500,000 | none | 25 |
| Equipment | 240,000 | 10% of cost | 8 |
| Vehicles | | \$12,000 | 8 |
| | 160,000 | | |
| Total | <u>\$1,000,000</u> | | |

On June 29, 2025, equipment included in the March 31, 2024, purchase that cost \$100,000 was sold for \$80,000. Herzog uses the straight-line depreciation method for buildings and equipment and the double-declining-balance method for vehicles. Partial-year depreciation is calculated based on the number of months an asset is in service.

Required:

1. Compute depreciation expense on the building, equipment, and vehicles for 2024.
2. Prepare the journal entries for 2025 to record (a) depreciation on the equipment sold on June 29, 2025, and (b) the sale of the equipment. Round to the nearest whole dollar amount.
3. Compute depreciation expense on the building, remaining equipment, and vehicles for 2025.

P 11–7 Depletion; change in estimate  **LO11–3,**  **LO11–5**

In 2024, the Marion Company purchased land containing a mineral mine for \$1,600,000. Additional costs of \$600,000 were incurred to develop the mine. Geologists estimated that 400,000 tons of ore would be extracted. After the ore is removed, the land will have a resale value of \$100,000.

To aid in the extraction, Marion built various structures and small storage buildings on the site at a cost of \$150,000. These structures have a useful life of 10 years. The structures cannot be moved after the ore has been removed and will be left at the site. In addition, new

equipment costing \$80,000 was purchased and installed at the site. Marion does not plan to move the equipment to another site, but estimates that it can be sold at auction for \$4,000 after the mining project is completed.

In 2024, 50,000 tons of ore were extracted and sold. In 2025, the estimate of total tons of ore in the mine was revised from 400,000 to 487,500. During 2025, 80,000 tons were extracted, of which 60,000 tons were sold.

Required:

1. Compute depletion and depreciation of the mine and the mining facilities and equipment for 2024 and 2025. Marion uses the units-of-production method to determine depreciation on mining facilities and equipment.
2. Compute the book value of the mineral mine, structures, and equipment as of December 31, 2025.
3. Discuss the accounting treatment of the depletion and depreciation on the mine and mining facilities and equipment.

P 11–8 Amortization; partial period  **LO11–4**

The following information concerns the intangible assets of Baez Corporation:

- a. On June 30, 2024, Baez completed the acquisition of the Johnstone Corporation for \$2,000,000 in cash. The fair value of the net identifiable assets of Johnstone was \$1,700,000.
- b. Included in the assets purchased from Johnstone was a patent that was valued at \$80,000. The remaining legal life of the patent was 13 years, but Baez believes that the patent will only be useful for another eight years.
- c. Baez acquired a franchise on October 1, 2024, by paying an initial franchise fee of \$200,000. The contractual life of the franchise is 10 years.

Required:

1. Prepare year-end adjusting journal entries to record straight-line amortization expense of the intangibles at December 31, 2024.
2. Prepare the intangible asset section of the December 31, 2024, balance sheet.

P 11–9 Straight-line depreciation; disposal; partial period; change in estimate  **LO11–2**,  **LO11–5**

The property, plant, and equipment section of the Jasper Company’s December 31, 2023, balance sheet contained the following:

Property, plant, and equipment:

| | | |
|--------------------------------------|------------------|-----------------|
| Land | | \$120,000 |
| Building | \$ 840,000 | |
| Less: Accumulated depreciation | <u>(200,000)</u> | 640,000 |
| Equipment | 180,000 | |
| Less: Accumulated depreciation | <u>?</u> | <u>?</u> |
| Total property, plant, and equipment | | <u><u>?</u></u> |

The land and building were purchased at the beginning of 2019. Straight-line depreciation is used and a residual value of \$40,000 for the building is anticipated.

The equipment is comprised of the following three machines:

| Machine | Cost | Date Acquired | Residual Value | Life (in years) |
|---------|----------|---------------|----------------|-----------------|
| 101 | \$70,000 | 1/1/2021 | \$7,000 | 10 |
| 102 | 80,000 | 6/30/2022 | 8,000 | 8 |
| 103 | 30,000 | 9/1/2023 | 3,000 | 9 |

The straight-line method is used to determine depreciation on the equipment. On March 31, 2024, Machine 102 was sold for \$52,500. Early in 2024, the useful life of machine 101 was revised to seven years in total, and the residual value was revised to zero.

Required:

1. Calculate the accumulated depreciation on the equipment at December 31, 2023.
2. Prepare the journal entry to record 2024 depreciation on machine 102 up to the date of sale.
3. Prepare a schedule to calculate the gain or loss on the sale of machine 102.
4. Prepare the journal entry for the sale of machine 102.

5. Prepare the 2024 year-end journal entries to record depreciation on the building and remaining equipment.

P 11–10 Accounting changes; three accounting situations

 **LO11–2**,  **LO11–5**,  **LO11–6**

Described below are three independent and unrelated situations involving accounting changes. Each change occurs during 2024 before any adjusting entries or closing entries are prepared.

- a. On December 30, 2020, Rival Industries acquired its office building at a cost of \$10,000,000. It has been depreciated on a straight-line basis, assuming a useful life of 40 years and no residual value. Early in 2024, the estimate of useful life was revised to 28 years in total with no change in residual value.
- b. At the beginning of 2020, the Hoffman Group purchased office equipment at a cost of \$330,000. Its useful life was estimated to be 10 years with no residual value. The equipment has been depreciated by the straight-line method. On January 1, 2024, the company changed to the double-declining-balance method.
- c. At the beginning of 2024, Jantzen Specialties, which uses the straight-line method, changed to the double-declining-balance method for newly acquired vehicles. The change decreased current year net income by \$445,000.

Required:

For each situation:

1. Identify the type of change.
2. Prepare any journal entry necessary as a direct result of the change as well as any adjusting entry for 2024 related to the situation described. (Ignore income tax effects.)
3. Briefly describe any other steps that should be taken to appropriately report the situation.

P 11–11 Error correction; change in depreciation method

 **LO11–2**,  **LO11–6**,  **LO11–7**

Collins Corporation purchased office equipment at the beginning of 2022 and capitalized a cost of \$2,000,000. This cost figure included the following expenditures:

| | |
|----------------|-------------|
| Purchase price | \$1,850,000 |
|----------------|-------------|

| | |
|---------------------------|---------------------------|
| Freight charges | 30,000 |
| Installation charges | 20,000 |
| Annual maintenance charge | 100,000 |
| Total | <u><u>\$2,000,000</u></u> |

The company estimated an eight-year useful life for the equipment. No residual value is anticipated. The double-declining-balance method was used to determine depreciation expense for 2022 and 2023.

In 2024, after the 2023 financial statements were issued, the company decided to switch to the straight-line depreciation method for this equipment. At that time, the company's controller discovered that the original cost of the equipment incorrectly included one year of annual maintenance charges for the equipment.

Required:

1. Ignoring income taxes, prepare the appropriate correcting entry for the equipment capitalization error discovered in 2024.
2. Ignoring income taxes, prepare any 2024 journal entry(s) related to the change in depreciation methods.

P 11–12 Depreciation and amortization; impairment  **LO11–2,**
 **LO11–4,**  **LO11–8**

At the beginning of 2022, Metatec Inc. acquired Ellison Technology Corporation for \$600 million. In addition to cash, receivables, and inventory, the following assets and their fair values were also acquired:

| | |
|--|---------------|
| Plant and equipment (depreciable assets) | \$150 million |
| Patent | 40 million |
| Goodwill | 100 million |

The plant and equipment are depreciated over a 10-year useful life on a straight-line basis. There is no estimated residual value. The patent is estimated to have a five-year useful life, no residual value, and is amortized using the straight-line method.

At the end of 2024, a change in business climate indicated to management that the assets of Ellison might be impaired. The following amounts have been determined:

Plant and equipment:

| | |
|---------------------------------------|---------------|
| Undiscounted sum of future cash flows | \$ 80 million |
| Fair value | 60 million |

Patent:

| | |
|---------------------------------------|---------------|
| Undiscounted sum of future cash flows | \$ 20 million |
| Fair value | 13 million |

Goodwill:

| | |
|---|---------------|
| Fair value of Ellison Technology Corporation | \$450 million |
| Book value of Ellison's net assets (excluding goodwill) | 370 million |
| Book value of Ellison's net assets (including goodwill) | 470 million* |

*After first recording any impairment losses on plant and equipment and the patent.

Required:

1. Compute the book value of the plant and equipment and patent at the end of 2024.
2. When should the plant and equipment and the patent be tested for impairment?
3. When should goodwill be tested for impairment?
4. Determine the amount of any impairment loss to be recorded, if any, for the three assets.

P 11–13 Depreciation and depletion; change in useful life; asset retirement obligation;  **Chapters 10** and  **11**  **LO11–2,**  **LO11–3,**  **LO11–5**

On May 1, 2024, Hecala Mining entered into an agreement with the state of New Mexico to obtain the rights to operate a mineral mine in New Mexico for \$10 million. Additional costs and purchases included the following:

| | |
|---|-------------|
| Development costs in preparing the mine | \$3,200,000 |
| Mining equipment | 140,000 |

Construction of various structures on site 68,000

After the minerals are removed from the mine, the equipment will be sold for an estimated residual value of \$10,000. The structures will be torn down.

Geologists estimate that 800,000 tons of ore can be extracted from the mine. After the ore is removed, the land will revert back to the state of New Mexico.

The contract with the state requires Hecala to restore the land to its original condition after mining operations are completed in approximately four years. Management has provided the following possible outflows for the restoration costs:

| Cash Outflow | Probability |
|--------------|-------------|
| \$600,000 | 30% |
| 700,000 | 30% |
| 800,000 | 40% |

Hecala's credit-adjusted risk-free interest rate is 8%. During 2024, Hecala extracted 120,000 tons of ore from the mine. The company's fiscal year ends on December 31.

Required:

1. Determine the amount at which Hecala will record the mine.
2. Calculate the depletion of the mine and the depreciation of the mining facilities and equipment for 2024, assuming that Hecala uses the units-of-production method for both depreciation and depletion. Round depletion and depreciation rates to four decimals.
3. How much accretion expense will the company record in its income statement for the 2024 fiscal year?
4. Are depletion of the mine and depreciation of the mining facilities and equipment reported as separate expenses in the income statement? Discuss the accounting treatment of these items in the income statement and balance sheet.
5. During 2025, Hecala changed its estimate of the total amount of ore originally in the mine from 800,000 to 1,000,000 tons. Briefly describe the accounting treatment the company will employ to account for the change *and* calculate the depletion of the mine and depreciation of the mining facilities and equipment for 2025, assuming Hecala extracted 150,000 tons of ore in 2025.

P 11–14 MACRS versus straight-line depreciation  **LO11–2,**
 **Appendix 11A**

On April 1, 2024, Titan Corporation purchases office equipment for \$50,000. For tax reporting, the company uses MACRS and classifies the equipment as five-year personal property. In 2024, this type of equipment is eligible for 60% first-year bonus depreciation. For financial reporting, the company uses straight-line depreciation. Assume the equipment has no residual value.

Required:

1. Calculate annual depreciation for the five-year life of the equipment according to MACRS. The company uses the half-year convention for tax reporting purposes.
2. Calculate annual depreciation for the five-year life of the equipment according to straight-line depreciation. The company uses partial-year depreciation based on the number of months the asset is in service for financial reporting purposes.
3. In which year(s) is tax depreciation greater than financial reporting depreciation?

Decision Makers' Perspective

Ed Telling/Getty Images

Apply your critical-thinking ability to the knowledge you've gained. These cases will provide you an opportunity to develop your research, analysis, judgment, and communication skills. You also will work with other students, integrate what you've learned, apply it in real-world situations, and consider its global and ethical ramifications. This practice will broaden your knowledge and further develop your decision-making abilities.

Judgment Case 11-1 Depreciation **LO11-1**, **LO11-2**

At the beginning of the year, Patrick Company acquired a computer to be used in its operations. The computer was delivered by the supplier, installed by Patrick, and placed into operation. The estimated useful life of the computer is five years, and its estimated residual value is significant.

Required:

- a. What costs should Patrick capitalize for the computer?
 - b. What is the objective of depreciation accounting?
2. What is the rationale for using accelerated depreciation methods?

(AICPA adapted)

Integrating Case 11-2 Errors; change in estimate; change in principle; inventory, patent, and equipment **LO11-5** through, **LO11-7**

Whaley Distributors is a wholesale distributor of electronic components. Financial statements for the year ended December 31, 2024, reported the following amounts and

subtotals (\$ in millions):

| | Assets | Liabilities | Shareholders' Equity | Net Income | Expenses |
|------|--------|-------------|----------------------|------------|----------|
| 2023 | \$640 | \$330 | \$310 | \$210 | \$150 |
| 2024 | \$820 | \$400 | \$420 | \$230 | \$175 |

In 2025, the following situations occurred or came to light:

a. Internal auditors discovered that ending inventories reported in the financial statements the two previous years were misstated due to faulty internal controls. The errors were in the following amounts:

| | |
|----------------|-----------------------------|
| 2023 inventory | Overstated by \$12 million |
| 2024 inventory | Understated by \$10 million |

b. A patent costing \$18 million at the beginning of 2023, expected to benefit operations for a total of six years, has not been amortized since acquired.

c. Whaley's conveyer equipment has been depreciated by the sum-of-the-years'-digits (SYD) method since constructed at the beginning of 2023 at a cost of \$30 million. It has an expected useful life of five years and no expected residual value. At the beginning of 2025, Whaley decided to switch to straight-line depreciation.

Required:

For each situation:

1. Prepare any journal entry necessary as a direct result of the change or error correction as well as any adjusting entry for 2025 related to the situation described. (Ignore tax effects.)
2. Determine the amounts to be reported for each of the items shown above from the 2023 and 2024 financial statements when those amounts are reported again in the 2025, 2024, and 2023 comparative financial statements.

Judgment Case 11–3 Accounting changes  **LO11–5,**
 **LO11–6**

There are various types of accounting changes, each of which is required to be reported differently.

Required:

1. What type of accounting change is a change from the double-declining-balance method of depreciation to the straight-line method for previously recorded assets as a result of new information related to production patterns? How will this change be accounted for in the financial statements (retrospective, modified retrospective, or prospective)?
2. What type of accounting change is a change in the expected service life of an asset arising because of more experience with the asset? How will this change be accounted for in the financial statements (retrospective, modified retrospective, or prospective)?

(AICPA adapted)

Research Case 11–4 FASB codification; locate and extract relevant information and cite authoritative support for a financial reporting issue; impairment of property, plant, and equipment and intangible assets  **LO11–8**

The company controller, Barry Melrose, has asked for your help in interpreting the authoritative accounting literature that addresses the recognition and measurement of impairment losses for property, plant, and equipment and intangible assets. “We have a significant amount of goodwill on our books from last year’s acquisition of Churchill Corporation. Also, I think we may have a problem with the assets of some of our factories out West. And one of our divisions is currently considering disposing of a large group of depreciable assets.”

Your task as assistant controller is to research the issue. Access the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org). Determine the specific nine-digit Codification citation (XXX-XX-XX-XX) that describes each of the following items:

Required:

1. The measurement of impairment losses for property, plant, and equipment.
2. When to test for impairment of property, plant, and equipment.
3. The new cost basis of impaired property, plant, and equipment and prohibiting later recovery of an impairment loss.

4. The recognition and measurement of impairment losses for intangible assets that are subject to amortization.
5. The requirement that intangible assets not subject to amortization be tested for impairment at least annually.

Ethics Case 11–5 Asset impairment LO11–8

At the beginning of 2022, the Healthy Life Food Company purchased equipment for \$42 million to be used in the manufacture of a new line of gourmet frozen foods. The equipment was estimated to have a 10-year service life and no residual value. The straight-line depreciation method was used to measure depreciation for 2022 and 2023.

Late in 2024, it became apparent that sales of the new frozen food line were significantly below expectations. The company decided to continue production for two more years (2025 and 2026) and then discontinue the line. At that time, the equipment will be sold for minimal scrap values.

The (head accountant) controller was asked by the company’s chief executive officer (CEO) to determine the appropriate treatment of the change in service life of the equipment. The controller determined that there has been an impairment of value requiring an immediate write-down of the equipment of \$12,900,000. The remaining book value would then be depreciated over the equipment’s revised service life.

The CEO does not like this conclusion because of the effect it would have on 2024 income. “Looks like a simple revision in service life from 10 years to 5 years to me,” the CEO concluded. “Let’s go with it that way.”

Required:

1. What is the difference in before-tax income between the CEO’s and the controller’s treatment of the situation?
2. Is GAAP more likely to require the controller’s approach of impairment or the CEO’s approach of change in estimate?

Ethics Case 11–6 Earnings management and accounting changes; impairment LO11–5, LO11–6, LO11–8

Companies often are under pressure to meet or beat Wall Street earnings projections in order to increase stock prices and also to increase the value of stock options. Some resort to

earnings management practices to artificially create desired results.

Required:

1. Do estimates by management affect the amount of depreciation in its company's financial statements?
2. To increase earnings in the initial years following the purchase of a depreciable asset, would management (a) choose straight-line or double-declining balance, (b) estimate a longer or shorter service life, or (c) estimate a higher or lower residual value?
3. Are decisions of investors and creditors affected by accounting estimates?
4. Should a company alter depreciation estimates for the sole purpose of meeting expectations of Wall Street analysts?

Judgment Case 11–7 Subsequent expenditures **LO11–9**

The Cummings Company charged various expenditures made during 2024 to an account called repairs and maintenance expense. You have been asked by your supervisor in the company's internal audit department to review the expenditures to determine if they were appropriately recorded. The amount of each of the transactions included in the account is considered material.

1. Engine tune-up and oil change on the company's 12 delivery trucks—\$1,300.
2. Rearrangement of equipment on the main production line—\$5,500. It is not evident that the rearrangement will increase operational efficiency.
3. Installation of aluminum siding on the manufacturing plant—\$32,000.
4. Replacement of the old air conditioning system in the manufacturing plant with a new system—\$120,000.
5. Replacement of broken parts on three machines—\$1,500.
6. Annual painting of the manufacturing plant—\$11,000.
7. Purchase of new forklift to move finished product to the loading dock—\$6,000.
8. Patching leaks in the roof of the manufacturing plant—\$6,500. The repair work did not extend the useful life of the roof.

Required:

For each of the transactions listed above, indicate whether the expenditure is appropriately charged to the repair and maintenance expense account, and if not, indicate the proper account to be charged.

Real World Case 11–8 Disposition and depreciation; Chapters 10 and 11; Amgen LO11–1

Real World Financials

Amgen, Inc. is an American multinational biopharmaceutical company headquartered in Thousand Oaks, California. Located in the Conejo Valley, Amgen is the world’s largest independent biotechnology firm. Amgen reported the following in a disclosure note accompanying its 2019 financial statements (\$ in millions):

| | 2019 | 2018 |
|------------------------------------|-----------------|-----------------|
| Property and equipment | \$ 13,285 | \$ 12,754 |
| Less: Accumulated depreciation | (8,357) | (7,796) |
| Property, plant, and equipment—Net | <u>\$ 4,928</u> | <u>\$ 4,958</u> |

Also, the company disclosed that the total cost of property and equipment included \$263 and \$265 millions in land at the end of 2019 and 2018, respectively. In addition, the statement of cash flows for the year ended December 31, 2019, reported the following as cash flows from investing activities:

| | (\$ in millions) |
|--|------------------|
| Purchases of property and equipment | \$(618) |
| Proceeds from the sale of property and equipment | 0 |

The statement of cash flows also reported 2019 depreciation and amortization of \$2,206 million (depreciation of \$635 and amortization of \$1,571).

Required:

1. Assume that all property and equipment acquired during 2019 were purchased for cash. Determine the amount of gain or loss from sale of property and equipment that Amgen recognized during 2019.
2. Assume that Amgen uses the straight-line method to depreciate property and equipment (excluding land). What is the approximate average service life of depreciable assets?

Real World Case 11–9 Depreciation and depletion method; asset impairment; subsequent expenditures; Chevron LO11–2, LO11–3, LO11–8, LO11–9

Real World Financials

EDGAR, the Electronic Data Gathering, Analysis, and Retrieval system, performs automated collection, validation, indexing, and forwarding of submissions by companies and others who are required by law to file forms with the U.S. Securities and Exchange Commission (SEC). All publicly traded domestic companies use EDGAR to make the majority of their filings. (Some foreign companies file voluntarily.) Form 10-K, which includes the annual report, is required to be filed on EDGAR. The SEC makes this information available on the Internet.

Access EDGAR on the Internet. The web address is www.sec.gov. Search for **Chevron Corporation**. Access the 10-K filing for most recent fiscal year. Search or scroll to find the financial statements and related notes.

Required:

Answer the following questions related to the company's property, plant, and equipment and intangible assets:

1. Describe the company's depreciation and depletion policies for (a) proved crude oil and natural gas producing properties, (b) plant and equipment in the United States, and (c) international plant and equipment.
2. Describe the company's policy for subsequent expenditures made for (a) maintenance and repairs and (b) major replacements.

Communication Case 11–10 Capitalize or expense; materiality LO11–9

Redline Publishers, Inc. produces various manuals ranging from computer software instructional booklets to manuals explaining the installation and use of large pieces of industrial equipment. At the end of 2024, the company's balance sheet reported total assets of \$62 million and total liabilities of \$40 million. The income statement for 2024 reported net income of \$1.1 million, which represents an approximate 3% increase from the prior year. The company's effective income tax rate is 30%.

Near the end of 2024, a variety of expenditures were made to overhaul the company's manufacturing equipment. None of these expenditures exceeded \$750, the materiality threshold the company has set for the capitalization of any such expenditure. Even though the overhauls extended the service life of the equipment, the expenditures were expensed, not capitalized.

John Henderson, the company's controller, is worried about the treatment of the overhaul expenditures. Even though no individual expenditure exceeded the \$750 materiality threshold, total expenditures were \$70,000.

Required:

Should the overhaul expenditures be capitalized or expensed?

Communication Case 11–11 Depreciation, depletion, and amortization LO11–1

The terms depreciation, depletion, and amortization all refer to the process of allocating the cost of an asset to the periods the asset is used.

Required:

Discuss the differences between depreciation, depletion, and amortization as the terms are used in accounting for property, plant, and equipment and intangible assets.

Communication Case 11–12 Depreciation LO11–1

At a recent luncheon, you were seated next to Mr. Hopkins, the president of a local company that manufactures bicycle parts. He heard that you were a CPA and made the following comments to you:

Why is it that I am forced to recognize depreciation expense in my company's income statement when I know that I could sell many of my assets for more than I paid for them? I thought that the purpose of the balance sheet was to reflect the value of my business and that the purpose of the income statement was to report the net change in value or wealth of a company. It just doesn't make sense to penalize my profits when there hasn't been any loss in value from using the assets.

At the conclusion of the luncheon, you promised to send him a short explanation of the rationale for current depreciation practices.

Required:

Prepare a letter to Mr. Hopkins. Explain the accounting concept of depreciation and include a brief example in your explanation showing that over the life of the asset the change in value approach to depreciation and the allocation of cost approach will result in the same total effect on income.

Data Analytics & Excel

Continuing Cases

Target Case LO11-2, LO11-8, LO11-9

Target Corporation prepares its financial statements according to U.S. GAAP. Target's financial statements and disclosure notes for the year ended February 1, 2020, are available in Connect. This material is also available under the Investor Relations link at the company's website (www.target.com).

Required:

1. Compare the property and equipment listed in the balance sheet with the list in Note 10. What are the estimated useful lives for recording depreciation? Is land listed in Note 10 (yes/no)?
2. In Note 10, which depreciation method does Target use for property and equipment for financial reporting? Which depreciation method is used for tax purposes? Why might these methods be chosen?
3. In Note 10, how does Target record repairs and maintenance expense?
4. In Note 10, does Target report any impairment of property and equipment for the year ended February 1, 2020? If so, what was the amount and what were the reasons for the impairments?
5. From Notes 11 and 12, were any impairments related to intangible assets recorded for the year ended February 1, 2020? If so, what was the amount and what were the reasons for the impairments?

Air France–KLM Case LO11-10

IFRS

Air France–KLM (AF), a Franco-Dutch company, prepares its financial statements according to International Financial Reporting Standards. AF's financial statements and disclosure notes for the year ended December 31, 2020, are available in Connect. This material is also available under the Finance link at the company's website (www.airfranceklm.com).

Required:

1. AF's property, plant, and equipment is reported at cost. The company has a policy of not revaluing property, plant, and equipment. Suppose AF decided to revalue its flight equipment on December 31, 2019, and that the fair value of the equipment on that date was €14,000 million. Prepare the journal entry to record the revaluation, assuming that the journal entry to record annual depreciation had already been recorded. (*Hint:* You will need to locate the original cost and accumulated depreciation of the equipment at the end of the year in the appropriate disclosure note.)
2. Under U.S. GAAP, what alternatives do companies have to value their property, plant, and equipment?
3. AF calculates depreciation of plant and equipment on a straight-line basis, over the useful life of the asset. Describe any differences between IFRS and U.S. GAAP in the calculation of depreciation.
4. When does AF test for the possible impairment of fixed assets? How does this approach differ from U.S. GAAP?
5. Describe the approach AF uses to determine fixed asset impairment losses. (*Hint:* See Note 4.16) How does this approach differ from U.S. GAAP?
6. The following is included in AF's disclosure note 4.13: "Intangible assets are recorded at initial cost less accumulated amortization and any accumulated impairment losses." Assume that on December 31, 2019, AF decided to revalue its Other intangible assets (see Note 16) and that the fair value on that date was determined to be €500 million. Amortization expense for the year already has been recorded. Prepare the journal entry to record the revaluation.

CHAPTER 12

Investments

OVERVIEW

In this chapter, you will learn about various approaches we use to account for investments that companies make in the debt and equity securities of other companies. An investing company always has the option to account for these investments at fair value, with changes in fair values reported in the income statement. However, depending on the nature of a *debt* investment, investors use accounting approaches that either ignore most fair value changes (*held-to-maturity* investments) or that include fair value changes only in other comprehensive income (*available-for-sale* investments) until the debt investment is sold. For an *equity* investment, when an investor owns enough stock to “significantly influence” an investee but does not control it, the investor uses the *equity method* of accounting, which ignores fair value changes but includes a portion of the investee’s income in the investor’s income. In appendices to this chapter, we discuss other types of investments as well as how to deal with an investment whose value has been impaired.

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

-  **LO12-1** Describe the key characteristics of a debt investment and demonstrate how to account for a purchase and for interest revenue. (p. 640)
-  **LO12-2** Demonstrate how to identify and account for debt investments classified for reporting purposes as held-to-maturity. (p. 644)
-  **LO12-3** Demonstrate how to identify and account for debt investments classified for reporting purposes as trading securities. (p. 646)

-  **LO12-4** Demonstrate how to identify and account for debt investments classified for reporting purposes as available-for-sale securities. (*p.* 650)
-  **LO12-5** Demonstrate how to identify and account for equity investments classified for reporting purposes as fair value through net income. (*p.* 663)
-  **LO12-6** Demonstrate how to identify and account for equity investments accounted for under the equity method. (*p.* 668)
-  **LO12-7** Explain the adjustments made in the equity method when the fair value of the net assets underlying an investment exceeds their book value at acquisition. (*p.* 670)
-  **LO12-8** Explain how electing the fair value option affects accounting for investments. (*pp.* 658 and 676)
-  **LO12-9** Discuss the primary differences between U.S. GAAP and IFRS with respect to investments. (*pp.* 657, 658, 659, 667, 676, and 687)

FINANCIAL REPORTING CASE

monticello/Shutterstock

A Case of Coke

You are the lone accounting major in your five-member group in your Business Policy class. A part of the case your group is working on is the analysis of the financial

statements of **The Coca-Cola Company**.

The marketing major in the group is confused by the following disclosure note included in Coca-Cola's 2019 annual report:

NOTE 4: INVESTMENTS (in part)

Investments in debt securities that the Company has the positive intent and ability to hold to maturity are carried at amortized cost and classified as held-to-maturity. Investments in debt securities that are not classified as held-to-maturity are carried at fair value and classified as either trading or available-for-sale. Realized and unrealized gains and losses on trading debt securities as well as realized gains and losses on available-for-sale debt securities are included in net income. Unrealized gains and losses, net of tax, on available-for-sale debt securities are included in our consolidated balance sheet as a component of AOCI

“So they have held-to-maturity securities, trading securities, and available-for-sale securities. What’s the difference? And they say that unrealized gains and losses on available-for-sale securities are reported as part of AOCI. What’s that? I don’t see these gains and losses in the income statement,” your group member complained. “And what about equity method investments? On the balance sheet they have over \$19 *billion* of investments accounted for under the equity method! They made more than \$1 billion on those investments in 2019. Is that cash they can use?”

QUESTIONS

By the time you finish this chapter, you should be able to respond appropriately to the questions posed in this case. Compare your response to the solution provided at the end of the chapter.

1. Why are held-to-maturity securities treated differently from other investment securities?
2. Why are unrealized gains and losses on trading securities reported in the income statement?
3. Why are unrealized gains and losses on available-for-sale securities not reported in the income statement, but instead are reported in other comprehensive

income, and then shown in accumulated other comprehensive income (AOCI) in the balance sheet?

4. Explain why Coke accounts for some of its investments by the equity method and what that means.

Corporations raise funds to finance their operations by selling equity securities (common and preferred stock) and debt securities (bonds and notes). These securities, also called financial instruments, are purchased as investments by individual investors, mutual funds, and also by other corporations. In later chapters we discuss equity and debt securities from the perspective of the issuing company. Our focus in this chapter is on the corporations that invest in debt and equity securities issued by other corporations as well as in debt securities issued by governmental units (bonds, Treasury bills, and Treasury bonds).

Most companies invest in financial instruments issued by other companies. For some investors, these investments represent ongoing affiliations with the companies whose securities are acquired. Examples of those sorts of investments include **T-Mobile**'s acquisition of **Sprint** for \$26 billion and **Bristol-Myers**' acquisition of **Celgene** for \$76 billion. Some investments, though, are not made to obtain a favorable business relationship with another firm. Instead, companies seek only to earn a return from the dividends or interest the securities pay or from increases in the market prices of the securities—the same reasons that might motivate you to buy stocks, bonds, or other investment securities.

With such diversity in investment objectives, it's not surprising that there is diversity in the approaches used to account for investments. As you'll discover when reading this chapter, investments are accounted for in several different ways, depending on whether the investment is in a debt or equity security, the investor's purpose for holding the investment, and the nature of the investment relationship. In Part A, we discuss accounting for debt investments. In Part B, we discuss accounting for equity investments.

PART A

Accounting for Debt Investments

Example of a Debt Investment

LO12-1 Describe the key characteristics of a debt investment and demonstrate how to account for a purchase and for interest revenue.

Have you ever bought a CD (certificate of deposit) at a bank? If so, you've invested in a debt instrument. Let's say you buy a \$500, two-year, 4% CD. What's happened is that you are lending the bank \$500 for two years, and the bank is promising to pay you 4% interest each year before returning your \$500 after two years. The bank's debt (the \$500 borrowed from you) is represented by a debt instrument (the CD), which specifies the maturity date (two years), the principal (\$500), and the annual rate of interest (4%).

Companies invest in debt too. Like a CD, a bond or other debt security has a specified date when it matures, and on that maturity date, the *principal* (also called the *face amount* or *maturity value*) is paid to investors. In the meantime, interest equal to some *stated interest rate* multiplied by the principal is paid to investors on specified interest dates (usually twice a year). Think of the principal and interest payments of the bond as a stream of cash flows that an investor will receive in the future in exchange for purchasing the bond today. The investor values that stream of future cash flows based on the prevailing *market interest rate* for debt of similar risk and maturity at the time the investor purchases the bond.

For an example of how an investor would determine how much to pay for a bond, see  **Illustration 12-1**.

Illustration 12-1 Example of a Debt Investment: Bonds Purchased at a Discount

Because interest is paid semiannually, the present value calculations use:

- a. one-half the stated rate (6%),
- b. one-half the market rate (7%), and
- c. 6 (= 3 × 2) semiannual periods.

On July 1, 2024, Masterwear Industries issued \$700,000 of 12% bonds, dated July 1.

- Interest of \$42,000 is payable semiannually on June 30 and December 31.
- The bonds mature in three years, on June 30, 2027.
- United Intergroup, Inc., purchased the entire bond issue on a date when the market interest rate for bonds of similar risk and maturity was 14%.*

| Calculation of the Price of the Bonds | Present Values |
|---------------------------------------|--|
| Interest | $\$ 42,000 \times 4.76654^{**} = \$200,195$ |
| Principal (face amount) | $\$700,000 \times 0.66634^{\dagger} = 466,438$ |
| Present value (price) of the bonds | <u><u>\$666,633</u></u> |

*The numbers in this illustration are the same as those in [Illustration 14-3](#) in Chapter 14 (except for some differences in dates between the two chapters). This helps us to better appreciate in Chapter 14 how Masterwear's accounting for its bond liability to United compares to United's accounting for its investment in Masterwear bonds. You can find further explanation of why we calculate the bond price this way in Chapter 14.

**Present value of an ordinary annuity of \$1: $n = 6, i = 7\%$ (Table 4).

†Present value of \$1: $n = 6, i = 7\%$ (Table 2).

Note: Present value tables are provided at the end of this textbook. If you need to review the concept of the time value of money, refer to the discussions in Chapter 5.

 **Illustration 12-1** shows that United will pay Masterwear **\$666,633** on July 1, 2024. In return, United expects to receive from Masterwear \$42,000 every six months for the next three years plus the principal of \$700,000 when the bonds mature on June 30, 2027. Of course, if United sells the bonds to another investor, that investor will receive the remaining payments of interest and principal.

Notice that United paid \$666,633 to purchase the \$700,000 bonds. Why the difference? To determine the issue price of the bonds, it's important to understand how investors compare the bond's stated rate with the market rate. If the interest rate paid by the bond (the stated rate) is higher than the market rate, investors are willing to purchase the bond for more than its maturity value (so it's sold at a *premium*). If the bond's stated rate is lower than the market rate, then investors are willing to purchase the bond only at an amount less than its maturity value (so it's sold at a *discount*). Masterwear was offering its

bonds for 12%, but investors could have obtained bonds of similar risk and maturity at a more favorable, higher rate of 14%. To attract investors, Masterwear had to sell its bonds at a discount.

The Masterwear bonds have the key characteristics of all debt investments. Over the three-year life of the bonds, United has to determine how it will account for four events:

1. Purchasing the debt investment.
2. Receiving interest every six months.
3. Holding the bonds during periods in which the bonds' fair value changes (and thus incurring *unrealized holding gains and losses*, since the bonds have not been sold).
4. Either selling the bonds before maturity or receiving the principal payment at their maturity date.

As we discuss below, companies classify debt investments as one of three types: held-to-maturity, trading, or available-for-sale. Accounting for the first two events—the purchase of a bond and the receipt of interest payments—is handled the same way regardless of how the debt investment is classified. We'll look at those events first. Then we'll look at the second two events, which are accounted for differently depending on how the debt investment is classified.

Recording the Purchase of a Debt Investment

When debt investments are purchased, they are recorded at cost—that is, the total amount paid for the investment, including any brokerage fees. Referring

All investment securities are initially recorded at cost.

back to  **Illustration 12-1**, we see that United paid **\$666,633** to purchase Masterwear's \$700,000 bonds. United would record the purchase as follows:

| July 1, 2024 | |
|--|----------------|
| Investment in bonds (face amount) | 700,000 |
| Discount on bond investment (difference) | 33,367 |
| Cash (price paid for the bonds) | 666,633 |

Because United purchased the bonds for an amount that's less than their face amount, it credits *Discount on bond investment* for the difference. Discount on bond investment is a contra-asset to the investment account that serves to reduce the carrying value of the

investment to its cost at the date of purchase. If United instead had purchased the bonds for an amount (say, \$725,000) that is higher than the face amount of the bond (\$700,000), it would instead debit *Premium on bond investment* (for \$25,000) to record the investment at its cost at the date of purchase.¹

Recording Interest Revenue

United will record interest revenue using the **effective interest method**. Here's how it works.

Masterwear's bonds have a *stated rate* of 12%, payable semiannually. This means that every six months, United will receive exactly \$42,000 in cash from Masterwear:

$$\begin{array}{rcccl} \$700,000 & \times & (12\% \div 2) & = & \$42,000 \\ \text{Face amount} & & \text{Stated rate} & & \text{Interest received} \end{array}$$

However, recall that United purchased the \$700,000 bonds at a discounted amount Page 642 of \$666,633. Why could United pay less than the \$700,000 face value for the bonds (and why was Masterwear willing to sell the bonds for less than \$700,000)? At the time United purchased the bonds, the *market rate* of interest for bonds of similar risk was 14%. So, United would only be willing to invest in these bonds if it could earn the 14% it could get elsewhere (not the 12% stated rate). To earn this higher rate, United needed to pay only \$666,633. Paying the lower amount means United lowered its investment cost and effectively increased its rate of return to 14% (refer back to [Illustration 12-1](#) to see the details of this calculation). While United will receive \$42,000 (6%) in interest from Masterwear in the first six months, it will effectively earn interest revenue of \$46,664 (7%) on its investment.

$$\begin{array}{rcccl} \$666,633 & \times & (14\% \div 2) & = & \$46,664 \\ \text{Outstanding balance} & & \text{Market rate} & & \text{Interest revenue} \end{array}$$

The amount by which interest revenue exceeds interest received (\$46,664 - \$42,000 = \$4,664 in the first six months) represents a piece of the cost savings from purchasing the investment at a discount. This piece of the cost savings increases United's investment return from the rate the bond pays (12%) to the higher rate (14%) that investors could have earned on other

Under the *effective interest method*, interest for a period equals the market rate of interest when the debt was purchased multiplied by the outstanding balance of the debt at the beginning of the period.

similar bonds at the time they purchased the bonds. In fact, this approach is called the *effective interest method* because interest revenue is based on the effective interest rate that the investment earns over its lifetime.

The journal entry to record the interest received for the first six months as investment revenue is

| December 31, 2024 | |
|--|---------------|
| Cash (stated rate × face amount) | 42,000 |
| Discount on bond investment (difference) | 4,664 |
| Interest revenue (market rate × outstanding balance) | 46,664 |

| Discount on bond investment | |
|------------------------------------|--------|
| | 33,367 |
| 4,664 | |
| | |
| | 28,703 |

This entry reduces the discount by \$4,664 (from \$33,367 to \$28,703). Because the discount gets smaller, the “amortized cost” of the investment (equal to \$700,000 less discount) gets larger by the same amount (from \$666,633 to **\$671,297**).

 **Illustration 12-2** demonstrates interest revenue being recorded at the effective rate over the life of this investment. As you can see, amortization of the discount gradually increases the amortized cost of the investment, until the investment reaches its principal amount of \$700,000, which is the amount to be received when the debt matures.

Illustration 12-2 Amortization Schedule—Discount

If a bond is purchased at a discount, less cash is received each period than the effective interest earned by the investor, so the unpaid difference increases the outstanding balance of the investment.

| Date | Cash Interest | Effective Interest (Interest Revenue) | Amortization of Discount | Discount Balance | Amortized Cost |
|------|---------------|---------------------------------------|--------------------------|------------------|-------------------|
| | (6% × Face | (7% × Outstanding | (Difference) | | (Face amount less |

| Date | Cash Interest (amount) | Effective Interest (Interest Revenue) (balance) | Amortization of Discount | Discount Balance | Amortized Cost (discount) |
|------------|---------------------------|---|-----------------------------|---------------------|---------------------------------|
| 7/1/2024 | | | | 33,367 | 666,633 |
| 12/31/2024 | 42,000 | 0.07(666,633) = 46,664 | 4,664 | 28,703 | 671,297 |
| 6/30/2025 | 42,000 | 0.07(671,297) = 46,991 | 4,991 | 23,712 | 676,288 |
| 12/31/2025 | 42,000 | 0.07(676,288) = 47,340 | 5,340 | 18,372 | 681,628 |
| 6/30/2026 | 42,000 | 0.07(681,628) = 47,714 | 5,714 | 12,658 | 687,342 |
| 12/31/2026 | 42,000 | 0.07(687,342) = 48,114 | 6,114 | 6,544 | 693,456 |
| 6/30/2027 | 42,000 | 0.07(693,456) = 48,544* | 6,544 | 0 | 700,000 |
| | <u>252,000</u> | <u>285,367</u> | <u>33,367</u> | | |

*Rounded

If the bonds were instead purchased at a premium, a similar amortization schedule would *reduce* the premium over time until the bond's amortized cost reached the face amount of \$700,000, which is the amount to be received when the debt matures.

Three Classifications of Debt Investments

The amortization schedule shown in  **Illustration 12-2** is based on the market interest rate (14%) that prevailed at the time United purchased the Masterwear bonds. United will use that amortization schedule for the life of the investment, and *won't change it* in response to changes in prevailing interest rates. However, the prevailing market rate may not always be 14%. Because market participants will use the prevailing market interest rate to compute the present value of the cash flows provided by the bonds, the fair value of the bonds will change as interest rates change. United will incur **unrealized holding gains and losses** as a result of holding the bonds during periods in which its fair value changes.

If the market rate of interest *rises* after a bond is purchased, the market will compute the present value of the cash flows provided by the bond using that higher discount rate, so the fair value of the bond falls.

The fair value of a fixed-rate investment moves in the opposite direction of market interest rates.

In that case, the person holding the bond suffers an *unrealized holding loss*. The fair value of the bond has decreased, but that loss hasn't been realized, because the investment has not been sold.

Conversely, if the market rate of interest *falls* after a bond is purchased, the market will calculate the present value of the cash flows provided by the bond using that lower rate, so the fair value of the bond rises. In that case, the investor holding the bond enjoys an *unrealized holding gain*. The fair value of the bond has increased but that gain hasn't yet been realized, because the investment hasn't been sold.

Changes in fair value give rise to unrealized holding gains and losses.

Accounting for changes in fair value depends on the classification of the debt investment. As shown in  **Illustration 12-3**, debt investments are classified in one of three categories: held-to-maturity (HTM) securities, trading securities (TS), or available-for-sale (AFS) securities.

Illustration 12-3 Accounting for Unrealized Holding Gains and Losses on Debt Investments

| Reporting Approach | Treatment of Unrealized Holding Gains and Losses | Carried in Balance Sheet at |
|--|---|-----------------------------|
| Held-to-maturity (HTM): used for debt for which the investor has the “positive intent and ability” to hold to maturity. | Not recognized* | Amortized cost |
| Trading (TS): used for debt that is held in an active trading account for immediate resale. | Recognized in net income , and therefore in retained earnings as part of shareholders’ equity. | Fair value |
| Available-for-sale (AFS): used for debt that does not qualify as held-to-maturity or trading. | Recognized in other comprehensive income , and therefore in accumulated other comprehensive income in shareholders’ equity.* | Fair value |

*If the investor elects the *fair value option (FVO)*, this type of investment also can be accounted for using the same approach that’s used for trading securities, with the investment reported at fair value and unrealized holding gains and losses included in net income. Also, as discussed in Appendix 12B, credit losses associated with HTM and AFS investments are recognized in net income, and other impairments of AFS investments are recognized in net income under some circumstances.

 **Illustration 12–4** provides a description from a recent annual report of how **General Motors** accounts for its investments in marketable securities.

Illustration 12–4 Disclosure about Investments—General Motors

Real World Financials

Note 2 (in part): Significant Accounting Policies

Marketable Debt Securities: We classify marketable debt securities as either available-for-sale or trading. Various factors, including turnover of holdings and investment guidelines, are considered in determining the classification of securities. Available-for-sale debt securities are recorded at fair value with unrealized gains and losses recorded net of related income taxes in Accumulated other comprehensive loss until realized. Trading debt

securities are recorded at fair value with changes in fair value recorded in Interest income and other non-operating income, net.

Source: General Motors Company

Why treat unrealized holding gains and losses differently depending on the type of investment? As you know, the primary purpose of accounting is to provide information useful for making decisions. What's most relevant for that purpose is not necessarily the same for each investment a company might make. For example, a company might invest in corporate bonds to provide a steady return until the bonds mature, in which case day-to-day changes in fair value may not be viewed as very relevant, so the held-to-maturity approach is preferable. On the other hand, a company might invest in the same bonds because it plans to sell them at a profit in the near future, in which case the day-to-day changes in fair value could be viewed as very relevant, and the trading security or available-for-sale approach is preferable.

Page 644

We'll discuss each reporting approach in turn, including how that approach accounts for unrealized holding gains and losses.

Debt Investments to Be Held-to-Maturity (HTM)

Unrealized Holding Gains and Losses Are Not Recognized for HTM Investments

LO12–2 Demonstrate how to identify and account for debt investments classified for reporting purposes as held-to-maturity.

Unrealized holding gains and losses are less important if sale before maturity isn't an alternative, because those gains and losses will never be realized by sale.

For this reason, if an investor has the “positive intent and ability” to hold the securities to maturity,

investments in debt securities typically are classified as **held-to-maturity (HTM)** and reported at their *amortized cost* in the balance sheet.² A debt security cannot be classified as held-to-maturity if the investor might sell it before maturity in response to changes in market prices or interest rates, to meet the investor's liquidity needs, or similar factors.

Held-to-maturity (HTM) investments require the “positive intent and ability” to hold the investments to maturity.

To consider accounting for unrealized gains and losses, suppose that on December 31, 2024, the market interest rate for securities similar to the Masterwear bonds has fallen to 11%. An investor valuing the

Masterwear bonds at that time would do so

considering the current market interest rate (11%) because that's the rate of return available for similar bonds. Calculating the present value of the bonds using a lower discount rate results in a higher present value (price).

Held-to-maturity (HTM) investments are reported at amortized cost in the balance sheet.

Let's say that checking market prices in *The Wall Street Journal* indicates that the fair value of the Masterwear bonds on December 31, 2024, is \$714,943. As shown in

 **Illustration 12-2**, those same bonds have an amortized cost of **\$671,297**. This means there is an unrealized gain of \$43,646 for the difference. How will United account for this

increase in the fair value of its debt investment? If United views the bonds as HTM investments, that change in fair value will be *ignored*. The investment simply will be shown in the balance sheet at amortized cost of \$671,297. United will *disclose* the fair value of its HTM investments in a note to the financial statements, but will not recognize any fair value changes in the income statement or balance sheet.³

Sale of HTM Investments

Typically, held-to-maturity investments are—you guessed it—held to maturity. However, suppose that due to unforeseen circumstances the company decided to sell its debt investment for \$725,000 on January 5, 2025.⁴ United would record the sale as follows (for simplicity we ignore interest earned during the first five days of 2025):⁵

| January 5, 2025 | |
|---|---------------|
| Cash | 725,000 |
| Discount on bond investment (account balance) | 28,703 |
| Investment in bonds (account balance) | 700,000 |
| Gain on investments (NI) (to balance) | 53,703 |

In other words, United would record this sale just like any other asset sale, with a realized gain or loss determined by comparing the cash received with the carrying value (in this case, the amortized cost) of the asset sold.

Impairment of HTM Investments

There is one important exception to the general rule that companies don't recognize unrealized gains and losses for HTM investments. You learned in Chapter 7 that companies are required to use the Current Expected Credit Loss (CECL) model to account for bad debts with respect to accounts receivable and notes receivable. Companies likewise are required to use the CECL model to account for credit losses on HTM investments. That requires companies to make an estimate of the amount of interest and principal payments they won't receive in the future. Companies account for that estimate by recognizing a credit loss in net income and reducing the carrying value of the HTM investment with an allowance for credit losses, just like they recognize bad debt expense and an allowance for

uncollectible accounts for accounts receivable. In [Appendix 12B](#) we provide an illustration of recognizing credit losses for HTM investments.

Additional Consideration

Recall from Chapter 1 that GAAP identifies different ways a firm can determine fair value. If the Masterwear bonds are publicly traded, United can find the fair value by looking up the current market price (this way of obtaining fair value is consistent with “level 1” of the fair value hierarchy). On the other hand, if the bonds are not publicly traded, United can calculate the fair value by using the present value techniques shown in [Illustration 12–1](#) (this way of obtaining fair value is consistent with “level 2” of the fair value hierarchy). With five interest periods remaining, and a current market rate of 11% (5.5% semiannually), the present value would be \$714,943.

| | Present Values | |
|----------------------------|-----------------------|------------------|
| Interest | \$ 42,000 × 4.27028* | = \$179,352 |
| Principal | \$700,000 × 0.76513† | = 535,591 |
| Present value of the bonds | | <u>\$714,943</u> |

*Present value of an ordinary annuity of \$1: $n = 5, i = 5.5\%$. (Table 4)

†Present value of \$1: $n = 5, i = 5.5\%$. (Table 2)

Using Excel, enter: = PV(.055,5, - 42000, -700000)

Output: 714,946

Using a calculator:

enter: N 5 I 5.5 PMT
-42000 FM - 700000
Output: = PV 714,946

Financial Statement Presentation

HTM securities appear in the financial statements as follows:

- **Income Statement and Statement of Comprehensive Income:** *Realized* gains and losses are shown in net income in the period in which securities are sold. *Unrealized* holding gains and losses are disclosed in the notes to financial statements. Investments in HTM securities do not affect other comprehensive income.
- **Balance Sheet:** Investments in HTM securities are reported at amortized cost, less any allowance for credit losses. Fair values of those investments are disclosed in the notes to financial statements.
- **Cash Flow Statement:** Cash flows from buying and selling HTM securities typically are classified as investing activities.

Assuming United sold its investment on January 5, 2025, United's 2024 and 2025 financial statements will include the amounts shown in  **Illustration 12-5**.

Illustration 12-5 Reporting Held-to-Maturity Investments

Only *realized* gains and losses are included in net income.

HTM securities are reported at amortized cost less any allowance for credit losses.

Cash flows from buying and selling HTM securities are classified as investing activities.

Debt Investments Classified as Trading Securities

LO12–3 Demonstrate how to identify and account for debt investments classified for reporting purposes as trading securities.

Some companies—primarily financial institutions—actively and frequently buy and sell securities, expecting to earn profits on short-term price fluctuations. Investments in debt acquired principally for the purpose of selling them in the near term are classified as **trading securities**. The holding period for trading securities generally is measured in hours and days rather than months or years. These investments typically are reported among the investor’s current assets. Usually only banks and other financial operations invest in securities in the manner and for the purpose necessary to be categorized as trading securities.

Trading securities are actively managed in a trading account for the purpose of profiting from short-term price changes.

Just like HTM investments, trading securities are recorded at cost when they are purchased, and any discount or premium is amortized to interest revenue over time as periodic interest payments are received. However, in subsequent periods, there are two important differences between trading securities and HTM investments.

1. Trading securities are written up or down to their fair value, or “marked to market,” in the balance sheet. (HTM securities are kept at amortized cost.)
2. Corresponding unrealized holding gains and losses on trading securities are included in net income in the income statement. (HTM securities do not include unrealized holdings gains and losses in net income.)

Be sure to notice that reporting trading securities at their fair value is a departure from amortized cost, which is the way many assets are reported in the balance sheet. Why the difference? For trading securities, fair value information is more relevant than for other assets intended primarily to be used in company operations, like buildings, land and equipment, or for debt investments intended to be held-to-maturity. Changes in fair values provide an indication of management’s success in deciding when to acquire the investment,

when to sell it, whether to invest in fixed-rate or variable-rate securities, and whether to invest in long-term or short-term securities. For that reason, it makes sense to report unrealized holding gains and losses on trading securities in net income during a period that fair values change, even though those gains and losses haven't yet been realized through the sale of the securities.

To see how we account for trading securities, let's return to our Masterwear bond example, but assume that those debt investments are held in an active trading portfolio. As of December 31, 2024, United has recorded the purchase of the bonds as well as receipt of the first semiannual interest payment, so the bonds have an amortized cost of \$671,297 (refer back to [Illustration 12-2](#)).

Adjust Trading Security Investments to Fair Value (2024)

Unlike HTM securities, trading securities are carried at fair value in the balance sheet, so their carrying value must be adjusted to fair value by the end of every reporting period. In fact, many companies adjust trading securities to fair value at the end of every day. Rather than increasing or decreasing the investment account itself, we use a valuation allowance, *fair value adjustment*, to increase or decrease the carrying value of the investment. At the same time, we record an unrealized holding gain or loss that is included in net income in the period in which fair value changes (remember, the gain or loss is *unrealized* because the securities haven't been sold).

Trading securities are adjusted to their fair value in each reporting period.

Assuming the Masterwear bonds have a fair value of \$714,943 as of December 31, 2024, the next table shows the calculation of the balance in the fair value adjustment account that is required on that date.

| December 31, 2024 | | | |
|-------------------|----------------|------------|---|
| Security | Amortized Cost | Fair Value | Necessary Fair Value Adjustment Balance |
| Masterwear | \$671,297 | \$714,943 | \$43,646 |

The bonds need to be reported at their fair value of \$714,943. Because the bonds currently are recorded at their amortized cost of \$671,297, the fair value adjustment account needs a debit balance of **\$43,646**. United will recognize whatever unrealized holding gain or loss is

necessary to move the fair value adjustment from its current balance of \$0 (at purchase date) to \$43,646 (on December 31, 2024). In this case, the calculation is simple:

| | Fair Value Adjustment |
|--|-----------------------|
| Beginning balance on 7/1/2024 | \$ 0 |
| ± Adjustment needed to update fair value | ? |
| Balance needed on 12/31/2024 | <u>\$43,646</u> |

| Fair Value Adjustment | |
|--|--|
| 0 | |
| 43,646 | |
| <u>43,646</u> | |

The journal entry to record the \$43,646 change in United’s fair value adjustment and the corresponding unrealized holding gain is:

| December 31, 2024 | | |
|--|--------|--------|
| Fair value adjustment (calculated above)* | 43,646 | |
| Gain on investments (unrealized, NI)† | | 43,646 |
| <small>*Sometimes companies don’t bother with a separate fair value adjustment account and simply adjust the investment account to fair value. †We indicate “unrealized, NI” to highlight that, for trading securities, unrealized holding gains and losses are included in the income statement in the period in which they occur.</small> | | |

Each period United owns the Masterwear bonds, it will recognize whatever unrealized holding gain or loss is necessary to move the fair value adjustment to the value it needs to have at the end of the accounting period. Increases in the fair value adjustment produce gains on trading securities that increase net income; decreases produce losses that decrease net income.

Unrealized holding gains and losses for trading securities are included in net income in the period in which fair value changes.

Additional Consideration

Accounting for Portfolios

We have focused on accounting for an individual security, but United would use the same approach to account for a *portfolio* of trading securities. For example, assume that United has the following portfolio of trading securities as of December 31, 2024, as shown below:

| Security | Amortized Cost | Fair Value | Necessary Fair Value Adjustment Balance |
|-------------|--------------------|--------------------|---|
| Miley Inc. | \$ 800,000 | \$ 875,000 | \$ 75,000 |
| Perry Corp. | 950,000 | 790,000 | (160,000) |
| Total | <u>\$1,750,000</u> | <u>\$1,665,000</u> | <u>\$ (85,000)</u> |

As of December 31, 2025, the portfolio's status is as follows:

| Security | Amortized Cost | Fair Value | Necessary Fair Value Adjustment Balance |
|------------|---------------------|-------------------|---|
| Miley Inc. | \$ 600,000 | \$ 575,000 | \$ (25,000) |
| Swift Co. | 450,000 | 325,000 | (125,000) |
| Total | <u>\$ 1,050,000</u> | <u>\$ 900,000</u> | <u>\$ (150,000)</u> |

On December 31, 2025, the balance of the fair value adjustment needs to change from a credit of **\$85,000** to a credit of **\$150,000**, requiring an additional credit of **\$65,000** and recognition of a corresponding loss in net income.

To make that happen, United records the following journal entry:

| | | |
|--------------------------------------|--------|---------------|
| Loss on investments (unrealized, NI) | 65,000 | |
| Fair value adjustment | | 65,000 |

Fair Value Adjustment

| | |
|--|---------------|
| | 85,000 |
| | 65,000 |

Fair Value Adjustment

150,000

Sale of Trading Security Investments

Now assume that United sells the bonds for \$725,000 on January 5, 2025. To account for the sale, United needs to do two things. First, United needs to update the carrying value of the bonds to fair value and record in net income any unrealized holding gains and losses that occurred during 2025 up to the date of sale. Second, on the date of sale, United needs to record the receipt of cash and remove the amounts associated with the investment from the relevant balance sheet accounts. Let's record each of these entries. (As in our example for HTM investments, for simplicity we ignore interest earned during the first five days of 2025.)

1. Adjust Trading Securities to Fair Value (2025). We

first need to update the fair value adjustment and recognize any unrealized holding gains or losses that have occurred during the current reporting period prior to the date of sale. We already have accounted for fair value changes that occurred during 2024. Now we need to record the additional fair value changes and their related unrealized holding gains and losses that have occurred each day in 2025 up to the moment of sale. Companies might record these changes in fair value at the end of each day, but we use a single summary entry that captures those changes in fair value up to the moment of sale.

For trading securities, unrealized holding gains and losses from fair value changes are recorded up to the date an investment is sold.

Remember that on December 31, 2024, the amortized cost of the Masterwear bonds was \$671,297, and the fair value was \$714,943. We recorded a fair value adjustment of \$43,646 for this unrealized holding gain. Now, on January 5, 2025, the fair value has increased further to \$725,000, so we need to update the fair value adjustment for the additional **\$10,057** increase in fair value.

| January 5, 2025 | | | |
|-----------------|----------------|------------|---|
| Security | Amortized Cost | Fair Value | Necessary Fair Value Adjustment Balance |
| Masterwear | \$671,297 | \$725,000 | \$53,703 |

| | Fair Value Adjustment |
|--|-----------------------|
| Beginning balance on 12/31/2024 | \$ 43,646 |
| ± Adjustment needed to update fair value | ? |
| Balance needed as of date of sale | <u>\$53,703</u> |

| Fair Value Adjustment | |
|--|--|
| 43,646 | |
| 10,057 | |
| <u>53,703</u> | |

United needs to record an increase in the fair value adjustment and an additional unrealized holding gain of \$10,057 that occurred during the first week of 2025. The journal entry is:

| January 5, 2025 | | |
|---|--------|--------|
| Fair value adjustment | 10,057 | |
| Gain on investments (unrealized, NI) (to balance) | | 10,057 |

2. Record the Sale Transaction. After making the previous journal entry, the investment is carried at its fair value as of the date it is being sold, and already has included in net income any gain or loss arising from the difference between amortized cost and fair value as of the date of sale. All that remains is for United to record receipt of cash and remove the investment-related accounts from the balance sheet (again, for simplicity we ignore interest earned during the first five days of 2025).

When a trading security is sold, all of the gain or loss already has been included in net income, so no additional gain or loss is recognized.

| January 5, 2025 | | |
|---|---------|--|
| Cash | 725,000 | |
| Discount on bond investment (account balance) | 28,703 | |
| Investment in bonds (account balance) | | 700,000 |
| Fair value adjustment (account balance) | | 53,703 |

As with the sale of the HTM investment, we record the receipt of \$725,000 cash and remove all the balance sheet accounts associated with the investment. However, unlike the HTM

investment, our TS investment has an additional balance sheet account, the fair value adjustment, that needs to be removed when we record the sale. Another difference between the HTM and TS approach is that, because we carry trading securities at fair value as of the date of sale and already have included in net income the entire gain associated with changes in the fair value of the investment, there is no gain or loss to recognize on the date of sale.⁶ However, over the life of the investments, United recognized the same amount of gain under the TS approach ($\$43,646 + 10,057 = \$53,703$) as it recognized upon sale under the HTM approach ($\$53,703$). The only difference is timing, with trading securities recognizing unrealized holding gains and losses from fair value changes as they occur but the HTM approach recognizing gains or losses only when they are realized upon sale.

Financial Statement Presentation

Trading securities appear in the financial statements as follows:

- **Income Statement and Statement of Comprehensive Income:** For trading securities, gains and losses are included in the income statement in the periods in which fair value changes, *regardless of whether they are realized or unrealized*. Investments in trading securities do not affect other comprehensive income.
- **Balance Sheet:** Investments in trading securities are reported at fair value, typically as current assets.
- **Cash Flow Statement:** Cash flows from buying and selling trading securities typically are classified as operating activities, because the financial institutions that routinely hold trading securities consider them as part of their normal operations.

Illustration 12–6 Reporting Trading Securities

Assuming United sold its investment on January 5, 2025, United's 2024 and 2025 financial statements will include the amounts shown in  **Illustration 12–6**.

For trading securities, fair value changes affect net income in the period in which they occur.

Trading securities are reported at fair value in the balance sheet.

Cash flows from buying and selling trading securities are classified as operating activities.

| (Ignoring income taxes) Statement of Comprehensive Income | 2024 | 2025 |
|---|------|------|
|---|------|------|

| | | | | |
|--|----|---------------|----|---------------|
| Revenues | \$ | ◆ | \$ | ◆ |
| Expenses | | ◆ | | ◆ |
| Other income (expense): | | | | |
| Interest revenue | | 46,664 | | 0 |
| Gain on investments | | <u>43,646</u> | | <u>10,057</u> |
| Net income | \$ | 90,310 | \$ | 10,057 |
| Other comprehensive income (OCI) | | 0 | | 0 |
| Comprehensive income (Net income + OCI) | \$ | <u>90,310</u> | \$ | <u>10,057</u> |
| Balance Sheet | | | | |
| Assets: | | | | |
| Investments in bonds (TS) | \$ | 714,943 | \$ | 0 |
| Shareholders' equity: | | | | |
| Retained Earnings | | 90,310 | | 100,367* |
| Statement of Cash Flows (direct method) | | | | |
| Operating Activities: | | | | |
| Cash from interest received | \$ | 42,000 | \$ | 0 |
| Purchase of trading securities | | (666,633) | | 0 |
| Sale of trading securities | | 0 | | 725,000 |

*Net income of \$90,310 (2024) + \$10,057 (2025) = \$100,367 accumulates in retained earnings by the end of 2025.

Debt Investments Classified as Available-for-Sale Securities

LO12–4 Demonstrate how to identify and account for debt investments classified for reporting purposes as available-for-sale securities.

The HTM treatment assumes we hold the bonds for their entire life. The trading securities treatment assumes we are planning to sell the bonds in the very near future. Our third treatment, **available-for-sale (AFS) securities**, falls in the middle. We aren't planning to trade the debt investment actively, but the investment is available to sell if, for example, cash needs arise or the market is particularly favorable. In that case, the company classifies its debt investment as AFS. Like trading securities, we report AFS securities in the balance sheet at fair value. Unlike trading securities, though, unrealized holding gains and losses on AFS securities are *not* included in net income. Instead, they are reported in the statement of comprehensive income as other comprehensive income (OCI).

AFS investments aren't held for trading or designated as held-to-maturity.

AFS investments are reported at their fair values.

Comprehensive Income

Recall from Chapter 4 that comprehensive income is a more all-encompassing view of operations than net income. It includes not only net income but also all other changes in equity that do not arise from transactions with owners.⁹ Comprehensive income therefore includes net income as well as *other comprehensive income (OCI)*. You know that net income is closed to retained earnings at the end of each accounting period, and therefore accumulates in retained earnings over time in the shareholders' equity section of the balance sheet. Similarly, OCI is closed to *accumulated other comprehensive income (AOCI)* at the end of each accounting period, and therefore accumulates in AOCI in the shareholders' equity section of the balance sheet. OCI relates to AOCI the same way that net income relates to retained earnings.

Additional Consideration

Don't Shoot the Messenger. Or, as written in *The Economist*, "Messenger, Shot: Accounting rules are under attack. Standard-setters should defend them. Politicians and banks should back off."⁷ Using fair values that are hard to estimate is controversial. For example, during the financial crisis of 2008/2009, many financial-services companies had to recognize huge unrealized losses associated with their investments. Some blamed their losses on GAAP for requiring estimates of fair value that were driven by depressed current market prices, argued that those losses worsened the financial crisis, and lobbied for a move away from fair-value accounting. Others countered that these companies were using GAAP's requirement for fair value accounting as a "scapegoat" for their bad investment decisions. "Fair value accounting . . . does not create losses but rather reflects a firm's present condition," says Georgene Palacky, director of the CFA's financial reporting group."⁸

Rationale for AFS Treatment of Unrealized Holding Gains and Losses

Why use an approach for accounting for AFS securities that differs from that used for trading securities? Because AFS securities are likely to be held for multiple reporting periods, one could argue that there is sufficient time for unrealized holding gains in some periods to balance out with unrealized holding losses in other periods, so including unrealized holding gains and losses in income each period would confuse investors by making income appear more volatile than it really is over the long run.¹⁰ But how can we show AFS investments at fair value in the balance sheet without recording in net income the unrealized gains and losses associated with changes in fair value? The solution is to show those unrealized gains and losses in OCI as they occur and then only include realized gains and losses in net income in the period in which an investment is actually sold.

Adjust AFS Investments to Fair Value (2024)

To see how we adjust AFS investments to their fair value, let's assume the Masterwear bond investment is classified as AFS. As of December 31, 2024, United has recorded the purchase of the bonds on July 1, 2024, as well as receipt of the first semiannual interest payment, so the bonds have an amortized cost of \$671,297 (refer back to [Illustration 12-2](#)). The fair value of the bonds on December 31, 2024, is \$714,943. The next table shows the calculation of the balance in the fair value adjustment account that is required on that date.

| December 31, 2024 | | | |
|-------------------|----------------|------------|---|
| Security | Amortized Cost | Fair Value | Necessary Fair Value Adjustment Balance |
| Masterwear | \$ 671,297 | \$ 714,943 | \$ 43,646 |

United needs to adjust the balance of the fair value adjustment account from its current balance of \$0 (at purchase date) to a debit balance of \$43,646 (on December 31, 2024).

| | Fair Value Adjustment |
|--|-----------------------|
| Beginning balance on 7/1/2024 | \$ 0 |
| ± Adjustment needed to update fair value | ? |
| Balance needed as of 12/31/2024 | <u>\$ 43,646</u> |

| Fair Value Adjustment |
|--|
| 0 |
| 43,646 |
| 43,646 |

The journal entry to record the \$43,646 change in United's fair value adjustment and the corresponding unrealized holding gain is

For AFS securities, unrealized holding gains and losses from fair value changes are not included in net income, but instead are reported as OCI.

| | |
|--|--------|
| December 31, 2024 | |
| Fair value adjustment* | 43,646 |
| Gain on investments (unrealized, OCI)† | 43,646 |

*Sometimes companies don't bother with a separate fair value adjustment account and simply adjust the investment account to fair value.
†We indicate "Unrealized, OCI" to highlight that, for available-for-sale securities, unrealized holding gains and losses are included in other

Notice that the amount of unrealized holding gain is the same for these AFS securities as it was for the trading securities in the previous section. What differs is that the unrealized holding gain is included in OCI for AFS securities instead of net income as it is for trading securities. At the end of the reporting period, the unrealized holding gain is closed to a shareholders' equity account for both approaches. What differs is that net income gets closed to retained earnings, and OCI gets closed to Accumulated Other Comprehensive Income (AOCI). As with trading securities, the fair value adjustment will be adjusted up or down each period, either for individual securities or for a portfolio of securities, and a corresponding unrealized holding gain or loss reported in OCI. Net income normally is not affected by AFS investments until the period an AFS investment is sold, as we'll discuss next.

Sale of AFS Investments

Let's once again assume that United sells its Masterwear bonds for \$725,000 on January 5, 2025 (as with our HTM and TS examples, for simplicity we ignore any interest earned during 2025). For AFS securities, United needs to record three journal entries.¹¹

1. Adjust AFS Investments to Fair Value (2025). As with trading securities, we first need to update the fair value adjustment and recognize any unrealized holding gains or losses that have occurred during the current reporting period prior to the date of

sale. Remember that on December 31, 2024, the amortized cost of the Masterwear bonds was \$671,297, and the fair value was \$714,943. We recorded a fair value adjustment of \$43,646 for this unrealized holding gain. Now, on January 5, 2025, the fair value has increased further to \$725,000, so we need to update the fair value adjustment for the additional \$10,057 increase in fair value.

For AFS investments, unrealized holding gains and losses from fair value changes are recorded up to the date an investment is sold.

| January 5, 2025 | | | |
|-----------------|----------------|------------|---|
| Security | Amortized Cost | Fair Value | Necessary Fair Value Adjustment Balance |
| Masterwear | \$ 671,297 | \$725,000 | \$ 53,703 |

| | Fair Value Adjustment |
|--|-----------------------|
| Balance as of 12/31/2024 | \$ 43,646 |
| ± Adjustment needed to update fair value | ? |
| Balance needed as of date of sale | <u>\$ 53,703</u> |

| Fair Value Adjustment | |
|--|--|
| 43,646 | |
| 10,057 | |
| <u>53,703</u> | |

United needs to record an increase in the fair value adjustment and an additional unrealized holding gain of \$10,057 that occurred during the first week of 2025. The journal entry to record the gain is

January 5, 2025

| | | |
|---------------------------------------|--------|--------|
| Fair value adjustment | 10,057 | |
| Gain on investments (unrealized, OCI) | | 10,057 |

At this point, the investment is carried in the balance sheet at its fair value as of the date it is being sold, and all unrealized gains and losses associated with the investment have been included in OCI. Because OCI gets closed to AOCI, the unrealized gains and losses accumulate in AOCI, which acts as a sort of “holding tank” in the shareholders’ equity section of the balance sheet. Unrealized holding gains in some years offset unrealized losses in other years as they accumulate in the tank.

2. Reverse Previous Fair Value Adjustments. United has been recording changes in fair value over the life of the investment. If United now sells that investment, the effects of those fair value changes must be reversed. United reverses previous unrealized holding gains included in OCI by debiting a reclassification adjustment to OCI for the same amount. Similarly, the account balance of the fair value adjustment is eliminated.

When an AFS investment is sold, accumulated unrealized gains and losses are removed from AOCI using a reclassification entry.

January 5, 2025

| | | |
|-----------------------------------|--------|--|
| Reclassification adjustment (OCI) | 53,703 | |
|-----------------------------------|--------|--|

| Fair Value Adjustment | |
|-----------------------|--------|
| 43,646 | |
| 10,057 | 53,703 |
| 0 | |

| AOCI (after closing) | |
|----------------------|--------|
| | 43,646 |
| 53,703 | 10,057 |
| | 0 |

After this journal entry is recorded, the fair value adjustment account has a zero balance. Also, after the reclassification adjustment is closed to AOCI, all of the unrealized gains that are associated with the investment have been removed from the AOCI holding tank in shareholders' equity.¹² It's as if no accounting for unrealized gains and losses had ever taken place.¹³ That's important, because in the next entry United recognizes in net income a gain or loss on sale. If United didn't use the reclassification entry to back out the unrealized gains and losses from AOCI, it would end up having double counted them in comprehensive income and shareholders' equity after it records the sale in the next entry.

3. Record the Sale Transaction. Now that all of the unrealized holding gains and losses and the fair value adjustment have been cleared away, the final step is to "plug" for the realized gain or loss (a gain in this case).

January 5, 2025

| | | |
|---|---------|---------|
| Cash | 725,000 | |
| Discount on bond investment (account balance) | 28,703 | |
| Investment in bonds (account balance) | | 700,000 |
| Gain on investments (NI) (to balance) | | 53,703 |

This entry is identical to the entry United made to record sale of the investment under the HTM approach. As with the HTM investments, no gain or loss is recognized in net income over the life of the investment. Instead, the

entire gain or loss is recognized in net income at the time of the sale. The difference between HTM and AFS is that unrealized gains and losses are recognized in OCI prior to sale. That requires an investor to remove the amounts that are included in OCI and recognize them in net income at the time of sale. In United's case, the second and third entries essentially reclassify a \$53,703 gain from OCI to net income (and thus to retained earnings). That's why the process is called reclassification.

Additional Consideration

More about Reclassification

Look back through the three entries that are shown for recording a sale of an AFS investment. Think about what has happened. First, United recorded unrealized holding gains in OCI each period as fair value changed over time, and at the end of each period, it closed OCI to AOCI in shareholders' equity. Then, once the investment was sold, United backed those unrealized gains out of OCI (and thus out of AOCI) and included them in net income (which is closed to retained earnings in shareholders' equity). From the perspective of shareholders' equity, the unrealized gains were first accumulated in AOCI and then were reclassified from AOCI to retained earnings in the period of sale. We can rearrange the second and third journal entries to highlight this reclassification process:

| | | |
|---|---------------|---------------|
| Reclassification adjustment (OCI) | 53,703 | |
| Gain on investments (NI) (to balance) | | 53,703 |
| Cash | 725,000 | |
| Discount on bond investment (account balance) | 28,703 | |
| Investment in bonds (account balance) | | 700,000 |
| Fair value adjustment (account balance) | | 53,703 |

Once the investment is sold, all the balance sheet accounts are removed and the unrealized holding gains and losses that have been accumulating in AOCI are transferred out of AOCI (via the reclassification entry) and end up in retained earnings.

It may seem odd that we bother to put all of the unrealized holding gains and losses into OCI and then take them out again. However, that approach makes it very clear how we account for AFS investment over time. We can see that unrealized gains and losses are included in OCI and accumulated in AOCI while an investment is held, and then upon sale are backed out of OCI (and AOCI) and included in net income (and retained earnings).

Impairment of AFS Investments

As with HTM investments, companies are required to account for impairments of AFS investments, but the accounting is somewhat more complex. If fair value is less than amortized cost (such that the fair value adjustment has a credit balance), some impairment exists. In that case, accounting for the impairment depends on management's belief about whether it will sell the investment. If management either intends to sell the investment or believes it is more likely than not that it will have to sell it before fair value recovers, the AFS investment is written down to fair value and the impairment loss recognized in net income. If, on the other hand, management does *not* intend to sell the investment and does not believe it is more likely than not it will have to sell the investment before fair value recovers, management is required to estimate and recognize credit losses and reduce the carrying value of the AFS investment with an allowance for credit losses, just as we do for HTM investments. Any remaining impairment is accounted for normally as an unrealized holding loss in other comprehensive income. In Appendix 12B, we provide an illustration of recognizing impairments of AFS investments.

Financial Statement Presentation

AFS securities appear in the financial statements as follows:

- **Income Statement and Statement of Comprehensive Income:** Gains and losses are shown in OCI in the periods in which changes in fair value occur. Those amounts are reclassified out of OCI and recognized in net income in the periods in which securities are sold.
- **Balance Sheet:** Investments in AFS securities are reported at fair value. *Unrealized* holding gains and losses become part of AOCI in shareholders' equity, and are reclassified out of AOCI in the periods in which securities are sold.
- **Cash Flow Statement:** Cash flows from buying and selling AFS securities typically are classified as investing activities.

Assuming United sold its investment on January 5, 2025, United's 2024 and 2025 financial statements will include the amounts shown in **Illustration 12-7**.

Illustration 12-7 Reporting Available-for-Sale Securities

Only realized gains and losses are included in net income.

Other comprehensive income includes *unrealized* holding gains and losses that occur during the reporting period.

AFS securities are reported at fair value.

AOCI (in shareholders' equity) includes net unrealized holding gains or losses accumulated over the current and prior periods.

Cash flows from buying and selling AFS securities usually are classified as investing activities.

| | Discount | 33,367 | | | | |
| | Cash | 666,633 | | | | |
| Record interest revenue | Cash | 42,000 | Same as HTM | | Same as HTM | |
| | Discount | 4,664 | | | | |
| | Interest rev. | 46,664 | | | | |
| Adjust to fair value, 2024 | No entry | | FV adjustment | 43,646 | FV adjustment | 43,646 |
| | | | Gain (unrealized, NI) | 43,646 | Gain (unrealized, OCI) | 43,646 |
| Sell bonds in 2025 | | | | | | |
| 1. Adjust to fair value, 2025 | No entry | | FV adjustment | 10,057 | FV adjustment | 10,057 |
| | | | Gain (unrealized, NI) | 10,057 | Gain (unrealized, OCI) | 10,057 |
| 2. Reclassify unrealized holding gains/losses | No entry | | No entry | | Reclassification (OCI) | 53,703 |
| | | | | | FV adjustment | 53,703 |
| 3. Record sale of bonds | Cash | 725,000 | Cash | 725,000 | Cash | 725,000 |
| | Discount | 28,703 | Discount | 28,703 | Discount | 28,703 |
| | Investments | 700,000 | Investments | 700,000 | Investments | 700,000 |
| | Gain (NI) | 53,703 | FV Adjustment | 53,703 | Gain (NI) | 53,703 |
| | | | | | | |
| | Note: Total gain of \$53,703 is recognized in net income in the period of the sale. | | Note: Total gain of \$53,703 is recognized in net income over the periods in which the investment is held (43,646 + 10,057). | | Note: Reclassification backs out unrealized gains from OCI (and therefore from AOCI), so total gain of \$53,703 is recognized in net income in the period of the sale. | |

This side-by-side comparison highlights several aspects of these accounting approaches:

- To record the purchase of an investment and the receipt of interest revenue, we use identical entries in all three approaches.
- To record changes in fair value, the entries we use for TS and AFS securities have the same effect on the investment (via the fair value adjustment valuation allowance) and the same eventual effect on total shareholders' equity. What differs is whether the unrealized holding gain or loss is recognized in net income and then in retained earnings (TS) or recognized in OCI and then in AOCI (AFS). No fair value adjustment is reported for HTM securities.
- Regardless of approach, the cash flows are the same, and the same total amount of gain or loss is recognized in the income statement (TS: \$43,646 in 2024 + \$10,057 in 2025 = \$53,703 total; AFS and HTM: \$53,703 in 2025). The question is not *how much* total net income is recognized, but *when* the amounts are recognized in net income.

Additional Consideration

Available-for-Sale Investments and Income Taxes. When comparing accounting for TS and AFS securities, we saw that total shareholders' equity ends up being the same amount, regardless of whether unrealized gains and losses are included in net income and closed to retained earnings in shareholders' equity (for TS) or included only in OCI and shown in AOCI in shareholders' equity (for AFS securities). But what about taxes? Tax expense affects net income, so retained earnings includes after-tax amounts. For AOCI to be equivalent to retained earnings, it also should include only after-tax amounts. Therefore, adjustments must be made to OCI and AOCI to account for tax effects. Typically these adjustments also give rise to deferred tax assets and liabilities, as unrealized holding gains and losses rarely affect the current period's taxes payable. Deferred tax assets and liabilities are discussed in [Chapter 16](#).

Accounting for Debt Investments. *IFRS No. 9* governs the treatment of debt and equity investments.¹⁴ *IFRS No. 9* eliminates the HTM and AFS classifications, replaced by new classifications that are more restrictive. Specifically, under *IFRS No. 9*, investments in debt securities are classified either as amortized cost (accounted for like HTM investments in U.S. GAAP), fair value through other comprehensive income (“FVOCI,” accounted for like AFS investments, except for different impairment recognition criteria), or fair value through profit or loss (“FVPL,” accounted for like trading securities). Classification depends on two criteria: (1) whether the investment’s contractual cash flows consist solely of payments of principal and interest (SPPI) and (2) whether the business purpose of the investment is to hold it for purposes of collecting contractual cash flows, sell the investment at a profit, or both. If the investment qualifies as SPPI and is held only to collect cash flows, it is classified as amortized cost. If it qualifies as SPPI and is held both to collect cash flows and potentially be sold, it is classified as FVOCI. Otherwise, it is classified as FVPL.

One other difference between U.S. GAAP and IFRS is worth noting. U.S. GAAP allows specialized accounting (beyond the scope of this textbook) for particular industries like securities brokers/dealers, investment companies, and insurance companies. IFRS does not.

Transfers between Reporting Categories

At each reporting date, the appropriateness of the classification of a debt investment is reassessed. For instance, if the investor no longer has the ability to hold certain securities to maturity and will now hold them for resale, those securities would be reclassified

A transfer of a security between reporting categories is accounted for at fair value and in accordance with the new reporting classification.

from HTM to AFS. When a security is reclassified between two reporting categories, the security is transferred at its fair value on the date of transfer. Any unrealized holding gain or loss at reclassification should be accounted for *in a manner consistent with the classification into which the security is being transferred*. A summary is provided in  **Illustration 12-10**.

| Transfer from: | To: | Unrealized Gain or Loss from Transfer at Fair Value |
|-----------------------|--------------------|---|
| Either HTM or AFS | Trading | Include in current net income the total unrealized gain or loss, as if it all occurred in the current period. |
| Trading | Either HTM or AFS | Include in current net income any unrealized gain or loss that occurred in the current period prior to the transfer. (Unrealized gains and losses that occurred in prior periods already were included in net income in those periods.) |
| Held-to-maturity | Available-for-sale | No current income effect. Report total unrealized gain or loss as a separate component of shareholders' equity (in AOCI). |
| Available-for-sale | Held-to-maturity | No current income effect. Don't write off any existing unrealized holding gain or loss in AOCI, but amortize it to net income over the remaining life of the security (fair value amount becomes the security's amortized cost basis). |

Reclassifications are quite unusual, so when they occur, disclosure notes should describe the circumstances that resulted in the transfers. Other disclosure notes are described in a later section.

LO12-9 Discuss the primary differences between U.S. GAAP and IFRS with respect to investments.

International Financial Reporting Standards

Transfers between Investment Categories. Under *IFRS No. 9*, transfers of debt investments between the amortized cost, FVOCI, and FVPL categories occurs if and only if the company changes its business model with respect to the debt investment.

Fair Value Option

LO12–8 Explain how electing the fair value option affects accounting for investments.

You may recall from  **Chapter 1** that GAAP allows a **fair value option** (FVO) that permits companies to elect to account for most financial assets and liabilities at fair value. Under the FVO, HTM and AFS

investments are shown in the balance sheet at their fair

values, and unrealized gains and losses are recognized in net income in the period in which they occur. That accounting approach should sound familiar—it’s the same approach we use to account for trading securities. However, unlike trading securities, purchases and sales of investments accounted for under the FVO are likely to be classified as investing activities in the statement of cash flows, because those investments are not held for sale in the near term and therefore are not operational in nature.

Choosing the *fair value option* for HTM and AFS investments means accounting for them like trading securities.

The company decides whether to elect the FVO on the date the company purchases the investment. The company can elect the FVO for some securities and not for identical others—it’s entirely up to the company, but the company has to explain in the notes why it made a partial election. The election is *irrevocable*. So, for example, if a company elects the FVO and later believes that the fair value of an investment is likely to decline, it can’t change the election and discontinue use of fair value accounting to avoid recognizing a loss.

Why allow the FVO? As described in Appendix A of this book, companies

Page 659

sometimes enter into *hedging arrangements* that are intended to reduce earnings volatility by offsetting changes in the fair value of assets with changes in the fair value of liabilities.

Complex rules apply to many hedging arrangements. The FVO simplifies this process by allowing companies to choose whether to use fair value for most types of financial assets and liabilities. Thus, when a company enters into a hedging arrangement, it just has to make sure

to elect the FVO for each asset and liability in the hedging arrangement, and fair value changes of those assets and liabilities will be included in earnings.

LO12–9 Discuss the primary differences between U.S. GAAP and IFRS with respect to investments.

International Financial Reporting Standards

Fair Value Option. International accounting standards are more restrictive than U.S. standards for determining when firms are allowed to elect the FVO. Under *IFRS No. 9*, companies can elect the FVO only in specific circumstances. For example, a firm could elect the FVO for an asset or liability in order to avoid the “accounting mismatch” that occurs when some parts of a fair value risk-hedging arrangement are accounted for at fair value, and others are not. Although U.S. GAAP indicates that the intent of the FVO is to address these sorts of circumstances, it does not require that those circumstances exist.

Concept Review Exercise

DEBT INVESTMENT SECURITIES

Diversified Services, Inc., offers a variety of business services, including financial services through its escrow division. Diversified’s fiscal year ends on December 31.

Diversified entered into the following investment activities during the last month of 2024 and the first week of 2025:

2024

- Dec. 1** Purchased \$30 million of 12% bonds of Vince-Gill Amusement Corporation and \$24 million of 10% bonds of Eastern Waste Disposal Corporation, both at face value. The Vince-Gill bonds are to be held until they mature. The Eastern Waste bonds are to be held but might be sold if cash needs require it. Interest on each bond issue is payable semiannually on November 30 and May 31.
- 30** Purchased U.S. Treasury bonds for \$5.8 million as trading securities hoping to earn profits on short-term differences in prices.
- 31** Recorded the necessary adjusting entries relating to the investments.

As of December 31, 2024, the fair value of the Vince-Gill bonds was \$32 million, the fair value of the Eastern Waste bonds was \$25 million, and the fair value of the Treasury bonds was \$5.7 million.

2025

- Jan. 7** Sold the Eastern Waste bonds for \$22 million and sold the U.S Treasury bonds for \$6 million.

Required:

1. Prepare the appropriate journal entry for each transaction or event and show the amounts that would be reported in the company's 2024 income statement relative to these investments. Record interest accruing in 2024, but ignore any interest accruing in 2025.
2. Determine the effects of the Eastern Waste investment on net income, other comprehensive income, and comprehensive income for 2024, 2025, and combined over both years. Ignore interest revenue.

1. Journal entries:

2024

Dec. 1 Purchased \$30 million of 12% bonds of Vince-Gill Amusement Corporation and \$24 million of 10% bonds of Eastern Waste Disposal Corporation, both at face value. The Vince-Gill bonds are to be held until they mature, but the Eastern Waste bonds are to be held but might be sold if cash needs require it. Interest on each bond issue is payable semiannually on November 30 and May 31.

| | (\$ in millions) |
|--|------------------|
| Investment in bonds (HTM, Vince-Gill) | 30 |
| Investment in bonds (AFS, Eastern Waste) | 24 |
| Cash | 54 |

Dec. 30 Purchased U.S. Treasury bonds for \$5.8 million as trading securities, hoping to earn profits on short-term differences in prices.

| | (\$ in millions) |
|---|------------------|
| Investment in bonds (TS, U.S. Treasury bonds) | 5.8 |
| Cash | 5.8 |

Dec. 31 Recorded the necessary adjusting entries relating to the investments.

| Accrued Interest (one month) | (\$ in millions) |
|--|------------------|
| Interest receivable (Vince-Gill) ($\$30 \text{ million} \times 12\% \times 1/12$) | 0.3 |
| Interest receivable (Eastern Waste) ($\$24 \text{ million} \times 10\% \times 1/12$) | 0.2 |
| Interest revenue | 0.5 |
| Fair Value Adjustments | |
| Loss on investments (unrealized, NI) (TS) ($\$5.7 - \5.8) | 0.1 |
| Fair value adjustment (TS) | 0.1 |
| Fair value adjustment (AFS) | |
| (\$25 million fair value - \$24 million cost) | 1 |

| | |
|--|---|
| Gain on investments (unrealized, OCI) (AFS) | 1 |
|--|---|

Note: Securities held-to-maturity are not adjusted to fair value.

| Reported in the 2024 Income Statement | (\$ in millions) |
|--|------------------|
| Interest revenue (\$0.5 interest) | \$ 0.5 |
| Loss on trading securities | (0.1) |
| Note: The \$1 million unrealized holding gain for the Eastern Waste bonds is not included in net income because it pertains to available-for-sale securities rather than trading securities, and so is reflected in OCI. | |

2025

Jan. 7 Sold the Eastern Waste bonds for \$22 million and sold the U.S Treasury bonds for \$6 million.

First consider the AFS investment (Eastern Waste). The fair value of the Eastern Waste bonds at the time of sale is \$22 million. Those bonds were carried at a fair value of \$25 million as of December 31, 2024, so have suffered an unrealized loss of \$3 million during the first part of 2025.

| | |
|--|------------------|
| | (\$ in millions) |
| Loss on investments (unrealized, OCI) (AFS) (\$25 - \$22) | 3 |
| Fair value adjustment (AFS) | 3 |

Second, given that the fair value adjustment for the Eastern Waste bonds now has a \$2 million credit balance, we need to remove that amount and record the corresponding reclassification entry for OCI:

| FV Adjustment (AFS) | |
|---------------------|-----------------------|
| 1 | 2024 unrealized gain |
| 3 | 2025 unrealized loss |
| 2 | Preadjustment balance |

FV Adjustment (AFS)

| | |
|----------|------------------------|
| 2 | Reclassification entry |
| | 0 |

| | |
|---|------------------|
| | (\$ in millions) |
| Fair value adjustment (AFS) (account balance) | 2 |
| Reclassification adjustment (OCI) | 2 |

Third, we need to record the receipt of cash and the loss realized upon sale of the investment:

| | |
|---|------------------|
| | (\$ in millions) |
| Cash | 22 |
| Loss on Investments (NI) (AFS) (to balance) | 2 |
| Investment in bonds (AFS) (Eastern Waste) | 24 |

Next consider the investment in trading securities (U.S. Treasuries). The fair value of the U.S. Treasury bonds at the time of sale is \$6 million. Those bonds were carried at a fair value of \$5.7 million as of December 31, 2024, so have enjoyed an unrealized holding gain of **\$0.3** million during the first part of 2025.

| | |
|---|------------------|
| | (\$ in millions) |
| Fair value adjustment (TS) | 0.3 |
| Gain on Investments (unrealized, NI) (TS) | 0.3 |

FV Adjustment (TS)

| | | |
|------------|------------|-----------------------|
| | 0.1 | 2024 unrealized loss |
| 0.3 | | 2025 unrealized gain |
| 0.2 | | Preadjustment balance |
| | 0.2 | Sale entry |
| 0 | | |

On the date of sale, we also need to record the receipt of cash and remove the accounts associated with the trading security from the balance sheet:

| | (\$ in millions) |
|--|------------------|
| Cash | 6 |
| Fair value adjustment (TS) (account balance) | 0.2 |
| Investment in bonds (TS) (U.S. Treasury bonds) | 5.8 |

2. Effects of the Eastern Waste investments on net income, other comprehensive income, and comprehensive income for 2024, 2025, and combined over both years. Ignore interest revenue.

| | 2024 | 2025 | Cumulatively |
|-----------------------------|------------|----------------------------|--------------|
| Net Income | \$0 | (\$2) | (\$2) |
| OCI | <u>\$1</u> | <u>(\$3) + \$2 = (\$1)</u> | <u>\$0</u> |
| Comprehensive Income | \$1 | (\$3) | (\$2) |

Financial Statement Presentation and Disclosure

Trading securities, held-to-maturity securities, and available-for-sale securities are either current or noncurrent depending on when they are expected to mature or to be sold. However, it's not necessary that a company report individual amounts for the three categories of investments—held-to-maturity, available-for-sale, or trading—on the face of the balance sheet as long as that information is presented in the disclosure notes.¹⁵

Investors should disclose the following in the disclosure notes for each year presented:

- Aggregate fair value.
- Gross realized and unrealized holding gains.
- Gross realized and unrealized holding losses.
- Change in net unrealized holding gains and losses.
- Amortized cost basis by major security type.

The notes also include disclosures designed to help financial statement users understand the quality of the inputs companies use when determining fair values and to identify parts of the financial statements that are affected by those fair value estimates. For example, the notes should include the level of the fair value hierarchy (levels 1, 2, or 3) in which all fair value measurements fall. For level 2 or 3 fair values, the notes to the financial statements must include a description of the valuation technique(s) and the inputs used in the fair value measurement process. For level 3 fair values, the notes must indicate the significant inputs used in the fair value measurement, the sensitivity of fair values to significant changes in those inputs, and information about the effect of fair value measurements on earnings, including a reconciliation of beginning and ending balances of the investment that identifies the following:

- Total gains or losses for the period (realized and unrealized), unrealized gains and losses associated with assets and liabilities still held at the reporting date, and where those amounts are included in earnings or shareholders' equity.
- Purchases, sales, issuances, and settlements.
- Transfers in and out of the level 3 category.

All of this disclosure is designed to provide financial statement users with information about those fair values that are most vulnerable to bias or error in the estimation process. For example, as shown in [Illustration 12-11](#), note 9 of **HP Inc.**'s 2020 annual report includes the following discussion of fair values.

Illustration 12-11 Fair Value Disclosures of Investment Securities—HP Incorporated

| Foreign currency contracts | — | 191 | — | 191 |
| Other derivatives | — | — | — | — |
| Total Assets | <u>\$1,997</u> | <u>\$2,462</u> | <u>\$—</u> | <u>\$4,459</u> |

Source: HP Incorporated

We can see from these disclosures that HP has no level 3 investments (which are those with the most subjectively estimated fair values). That fact should give financial statement users more faith in the reliability of HP's fair value estimates.

PART B

Accounting for Equity Investments

The critical events over the life of an investment in the equity of another company, such as shares of common stock, include the following:

1. Purchasing the equity security.
2. Receiving dividends (for some equity securities).
3. Holding the investment during periods in which the investment's fair value changes (and thus incurring *unrealized holding* gains and losses, since the security has not yet been sold).
4. Selling the investment (and thus incurring *realized* gains and losses, since the security has been sold and the gains or losses actually incurred).

Also, equity investors typically get to vote on key decisions made by the company, such as who will serve on the company's board of directors. Each share of common stock gets a vote, so if an equity investor owns enough shares, the investor has enough votes to influence the operations of the company whose shares it owns. Therefore, accounting for equity investments also considers the extent to which the investor can influence the activities of the investee. As shown in  **Illustration 12-12**, we use three different approaches to account for equity investments.

Illustration 12-12 Reporting Categories for Equity Investments

| Characteristics of the Equity Investment | Reporting Method Used by the Investor |
|---|--|
| The investor <i>does not have significant influence</i> over the operating and financial policies of the investee (typically owns less than 20% of voting stock). | Fair value through net income —similar to the trading-securities approach used for debt; investment reported at fair value (with unrealized holding gains and losses included in net income), unless fair value is not readily determinable.* |

The investor *has significant influence* over the operating and financial policies of the investee (typically owns between 20% and 50% of the voting stock).

The investor *controls* the investee (typically owns more than 50% of voting stock).

Equity method—investment reported at cost adjusted for investor’s share of subsequent earnings and dividends of the investee.**

Consolidation—the financial statements of the investor and investee are combined as if they are a single company.

*Later in this chapter we discuss in an Additional Consideration box the alternative approach that is used if fair value is not readily determinable.

**If the investor elects the *fair value option*, this type of investment also can be accounted for using the fair-value-through-net-income approach.

We’ll first discuss the *fair value through net income* approach that is used when the investor lacks significant influence over the investee. Then we’ll cover the *equity method* that’s used when the investor does have significant influence. We won’t cover *consolidation accounting*, which is used when the investor controls the investee, as that topic is beyond the scope of this book. However, we will discuss consolidations briefly when we discuss the equity method, as the two approaches are related.

When the Investor Does Not Have Significant Influence: Fair Value through Net Income

LO12–5 Demonstrate how to identify and account for equity investments classified for reporting purposes as fair value through net income.

If an investor owns less than 20% of the voting shares of an investee, the investor is typically presumed to *not* have significant influence over the investee. In other words, the investor is in the same position you would be in if you bought a share of the company’s stock—the investor hopes to receive dividends and that the value of the shares appreciate over time, but can’t really tell the company what to do.

Until very recently, those sorts of equity investments were accounted for as either trading securities or available-for-sale investments, just like we would treat debt investments that weren’t intended to be held to maturity. However, starting in 2018, investors are not allowed to use the AFS approach for equity investments. Instead, all equity investments are accounted for like trading securities, using an approach commonly referred to as *fair value through net income*. That means that equity investments for which the investor lacks significant influence are reported the same way we report debt investments that are classified as trading securities (covered in Part A of this chapter). The equity investments are carried at fair value in the balance sheet, with unrealized holding gains and losses recognized in net income in whatever period they occur.¹⁶  **Illustration 12–13** provides a simple example of an equity investment that we’ll use throughout this section. Let’s walk through the key events in the life of United’s Arjent investment to see how the fair value through net income approach works for an equity investment.

Page 664

Illustration 12–13 Example of an Equity Investment Accounted for as Fair Value through Net Income

The following events during 2024 and 2025 pertain to United Intergroup’s investment in the common stock of Arjent, Inc.

| | |
|--------------------------|--|
| July 1, 2024 | Purchase Arjent, Inc., common stock for \$1,500,000. |
| December 31, 2024 | Recognize investment revenue for a \$75,000 cash dividend received from Arjent. |
| December 31, 2024 | Record a fair value adjustment to recognize a decline in the value of the Arjent stock investment to \$1,450,000. |
| January 5, 2025 | Sell the Arjent stock for \$1,446,000. |

Purchase Investments

The journal entry to record the purchase of an equity investment is simple, just exchanging one asset (cash) for another (investment), as follows:

All equity investments are recorded initially at cost.

| | | |
|---------------------------------|-----------|-----------|
| July 1, 2024 | | |
| Investment in equity securities | 1,500,000 | |
| Cash | | 1,500,000 |

Recognize Investment Revenue

The journal entry to record the receipt of dividends related to the Arjent equity investment also is straightforward.

Equity investments are adjusted to their fair value at each reporting date.

| | | |
|--------------------------|--------|--------|
| December 31, 2024 | | |
| Cash | 75,000 | |
| Dividend revenue | | 75,000 |

Adjust Equity Investments to Fair Value (2024)

The carrying value of equity investments must be adjusted to fair value at the end of every reporting period. As with trading securities, we use a valuation

Equity investments are adjusted to their fair value at each reporting date.

allowance, *fair value adjustment*, to increase or decrease the carrying value of the investment, and we simultaneously record an unrealized holding gain or loss that is included in net income in the period in which fair value changes. The next table shows the calculation of the balance in the fair value adjustment that is required on December 31, 2024.

| December 31, 2024 | | | |
|-------------------|-------------|-------------|---|
| Security | Cost | Fair Value | Necessary Fair Value Adjustment Balance |
| Arjent | \$1,500,000 | \$1,450,000 | \$(50,000) |

United needs to move the fair value adjustment from a balance of \$0 (at purchase date) to a credit balance of **\$50,000**:

Page 665

| | Fair Value Adjustment |
|--|--------------------------|
| Beginning balance | \$ 0 |
| ± Adjustment needed to update fair value | ? |
| Balance needed on 12/31/2024 | <u>\$(50,000)</u> |

| Fair Value Adjustment | |
|-----------------------|---------------|
| 0 | |
| | 50,000 |
| | 50,000 |

The journal entry to record United's unrealized holding loss of **\$50,000** and the corresponding decrease in United's fair value adjustment account is

| December 31, 2024 | |
|---------------------------------------|---------------|
| Loss on investments (unrealized, NI)* | 50,000 |
| Fair value adjustment† | 50,000 |

*We indicate "unrealized, NI" to highlight that, for equity investments accounted for as fair value through net income, unrealized holding gains and losses are included in net income in the period in which they occur.

†Sometimes companies don't bother with a separate fair value adjustment account and simply adjust the investment account to fair value.

What if Arjent's investment instead had a fair value of, say, \$1,550,000 as of December 31, 2024? In that case, United would have an unrealized holding *gain* of \$50,000,

which would require a *debit* to the fair value adjustment account to *increase* the carrying value of the equity to fair value.

Sell the Equity Investment

Now assume United sells the Arjent stock for \$1,446,000 on January 5, 2025. According to the FASB, “because all changes in an equity security’s fair value are reported in earnings as they occur, the sale of an equity security does not necessarily give rise to a gain or loss. Generally, a debit to cash . . . is recorded for the sales proceeds, and a credit is recorded to remove the security at its fair value (or sales price).”¹⁷ Thus, as with trading securities, United will make two journal entries. United first records in net income any unrealized holding gains and losses that occurred during 2025 prior to the date of sale. Then, on the date of sale, United records the receipt of cash and removes the amounts associated with the investment from the relevant balance sheet accounts.

- 1. Adjust Securities to Fair Value (2025).** We first need to update the fair value adjustment and recognize any unrealized holding gains or losses that have occurred during the current reporting period prior to the date of sale.

| January 5, 2025 | | | |
|-----------------|-------------|-------------|---|
| Security | Cost | Fair Value | Necessary Fair Value Adjustment Balance |
| Arjent | \$1,500,000 | \$1,446,000 | \$(54,000) |

United needs to move the fair value adjustment from the credit balance of \$50,000 existing at the end of 2024 to a credit balance of **\$54,000** as of January 5, 2025, which requires a credit of **\$4,000** to this asset valuation account:

| | Fair Value Adjustment |
|--|--------------------------|
| Beginning balance on 1/1/2025 | \$(50,000) |
| ± Adjustment needed to update fair value | <u>?</u> |
| Balance needed as of date of sale | <u>\$(54,000)</u> |

| Fair Value Adjustment | |
|-----------------------|---------------|
| 0 | 50,000 |
| | 4,000 |
| | 54,000 |

The journal entry to record the investment's decrease in fair value is:

| | | |
|--------------------------------------|-------|--------------|
| January 5, 2025 | | |
| Loss on investments (unrealized, NI) | 4,000 | |
| Fair Value Adjustment | | 4,000 |

2. **Record the Sale.** After making the previous journal entry, the investment is carried at its fair value as of the date it is being sold, and all gains and losses associated with the investment have been included in net income over the time the investment was held. All that remains is for United to record receipt of cash and remove the investment-related accounts from the balance sheet:

| | | |
|---|---------------|-----------|
| January 5, 2025 | | |
| Cash | 1,446,000 | |
| Fair value adjustment (account balance) | 54,000 | |
| Investment in equity securities (account balance) | | 1,500,000 |

Because United carries the investment at fair value as of the date of sale, and already included in net income the entire loss associated with the investment, there is no additional gain or loss to recognize on the date of sale.¹⁸ Over the life of the investment, United has recognized a total loss of \$54,000, but that loss is spread over the life of the investment, recognized as the fair value of the investment changes:

If all of the unrealized holding gains or losses have been included in net income up to the time of sale, no additional gain or loss is recognized.

| | |
|-----------------------------|--------------------------|
| 2024 loss recognized in NI: | \$(50,000) |
| 2025 loss recognized in NI: | (4,000) |
| Total over 2024 and 2025: | <u><u>\$(54,000)</u></u> |

Adjust Remaining Equity Investments to Fair Value (2025)

If United hadn't sold the Arjent investment during 2025, it would just keep recording whatever fair value adjustment would be necessary to carry the investment at fair value in

the balance sheet. For example, if the Arjent investment had a fair value of \$1,300,000 at December 31, 2025, United would face the following situation:

| December 31, 2025 | | | |
|-------------------|-------------|-------------|---|
| Security | Cost | Fair Value | Necessary Fair Value Adjustment Balance |
| Arjent | \$1,500,000 | \$1,300,000 | \$(200,000) |

United would need to credit the fair value adjustment account by another **\$150,000** to account for the large drop in fair value that occurred during 2025.

| Fair Value Adjustment | |
|--|---------------------------|
| 12/31/2024 balance | \$ 50,000 |
| ± Adjustment needed to update fair value | <u> ?</u> |
| 12/31/2025 balance | <u>\$(200,000)</u> |

| Fair Value Adjustment | |
|-----------------------|----------------|
| | 50,000 |
| | 150,000 |
| | 200,000 |

The necessary journal entry is shown below:

| December 31, 2025 | |
|--|----------------|
| Loss on investments (unrealized, NI) | 150,000 |
| Fair value adjustment (calculated above) | 150,000 |

Additional Consideration

What if Fair Value Is Not Readily Determinable? Equity investments are accounted for using the *fair value through net income* approach when the fair value of shares is *readily determinable* by referencing prices on a security exchange or over-the-counter market. But what if fair value isn't readily determinable? In that case, investors can elect to base measurement of fair value on an adjusted cost of the security. Specifically, the investor estimates

fair value as cost, minus any impairments that have been recognized previously, and plus or minus adjustments indicated by changes in the prices of similar equity issued by the same investee. Every accounting period, the investor needs to reevaluate whether fair value still is not readily determinable, and also needs to assess whether the investment has been impaired. The investor considers various qualitative factors to assess whether an investment is impaired, such as whether the earnings, cash flows, or business prospects of the investee have deteriorated. If the investor concludes the investment is impaired, it recognizes in net income whatever amount of impairment loss is necessary to reduce the carrying value of the investment to fair value.

LO12–9 Discuss the primary differences between U.S. GAAP and IFRS with respect to investments.

International Financial Reporting Standards

Accounting for Equity Investments When the Investor Does Not Have Significant Influence. *IFRS No. 9* governs treatment of debt and equity investments.¹⁹ Under *IFRS No. 9*, investments in equity securities are classified as either FVPL (fair value through profit or loss) or FVOCI (fair value through other comprehensive income). If the equity is held for trading, it must be classified as FVPL, but otherwise the company can irrevocably elect to classify it as FVOCI. FVOCI is similar to the AFS treatment used for debt investments in U.S. GAAP, and dividend income is included in net income for FVOCI just as interest income is included for AFS. However, unlike AFS, realized gains and losses are not reclassified out of OCI and into net income when the investment is later sold. Rather, the accumulated unrealized gain or loss associated with a sold investment is just transferred from AOCI to retained earnings (both shareholders' equity accounts), without passing through the income statement.

Financial Statement Presentation

Equity investments for which the investor does not have significant influence are classified as either current (short-term) or noncurrent (long-term) in the balance sheet. Those that are held with an intent for short-term profit are normally treated as operating activities in the statement of cash flows, similar to debt investments that are classified as trading securities. Other current equity investments, and long-term equity investments, are classified as investing activities in the statement of cash flows. Notes to the financial statements should disclose the portion of unrealized holding gains and losses for the period that relate to any equity securities still held by the company at the end of the reporting period. Notes also should provide information about how the carrying value was calculated for equity investments for which fair value is not readily determinable.

When the Investor Has Significant Influence: The Equity Method

LO12–6 Demonstrate how to identify and account for equity investments accounted for under the equity method.

Control and Significant Influence

If a company acquires more than 50% of the voting stock of another company, it's said to have **control**, because by voting those shares, the investor actually can control the company acquired. The investor is called the *parent*; the investee is called the *subsidiary*.

Both companies continue to operate as separate legal entities, and the subsidiary reports separate financial statements. However, because of the controlling interest, the parent company reports **consolidated financial statements** which treat the parent and the subsidiary as if there were only one company.

This entails an item-by-item combination of the parent and subsidiary statements (after first eliminating any amounts that are shared by the separate financial statements).²⁰ For instance, if the parent has \$8 million cash and the subsidiary has \$3 million cash, the consolidated balance sheet would report \$11 million cash.

Even if effective control is absent, the investor still may be able to exercise **significant influence** over the operating and financial policies of the investee. This would be the case if the investor owns a large percentage of the outstanding shares relative to other

shareholders. By voting those shares as a block, decisions often can be swayed in the direction the investor desires. It is presumed, in the absence of evidence to the contrary, that the investor exercises significant influence over the investee when it owns at least 20% of the investee's voting shares.²¹

Usually an investor can **control** the investee if it owns more than 50% of the investee's voting shares.

Consolidated financial statements combine the individual elements of the parent and subsidiary statements.

Usually an investor can exercise **significant influence** over the investee when it owns at least 20% of the investee's voting shares.

When significant influence exists but the investor does not have effective control, the investment should be accounted for by the **equity method**. Under the equity method, the investment is initially recorded at cost. After that, the investment balance is

- Increased by the investor's percentage share of the investee's net income (or decreased by its share of a loss).
- Decreased by the investor's percentage share of the investee's dividends paid.
- Potentially adjusted for other items (discussed next).

The *equity method* is used when an investor can't control, but can significantly influence, the investee.

Under the equity method, the investor recognizes on its own income statement its proportionate share of the investee's income.

The rationale for this approach is the presumption that the fortunes of the investor and investee are so intertwined that, as the investee prospers, the investor prospers proportionately. Stated differently, as the investee earns additional net assets (income), the investor's share of those net assets increases. When the investee pays out assets (dividends), the investor's share of the remaining net assets decreases.

To see how the equity method works, let's turn to  **Illustration 12-14**. In that illustration, we assume that United Intergroup purchased 30% of Arjent, Inc.'s, common stock for \$1,500,000 cash on January 2, 2024. Let's start by thinking about Arjent overall, and then we'll account for United's 30% investment.

Illustration 12-14 Information for Arjent, Inc., at the Time United Intergroup Purchased 30% for \$1,500,000

| | Book Value on Arjent's Financial Statements | Fair Value at Time of United's Investment |
|---------------------------------------|--|--|
| Total fair value of Arjent (1/2/2024) | | \$5,000,000* |
| Buildings** | \$1,000,000 | \$2,000,000 |
| Land | 500,000 | 1,000,000 |
| Other identifiable net assets† | 600,000 | 600,000 |
| Identifiable net assets | \$2,100,000 | 3,600,000 |

| | Book Value on Arjent's Financial Statements | Fair Value at Time of United's Investment |
|--|--|--|
| Goodwill | | <u>\$1,400,000</u> |
| Other information (12/31/2024): | | |
| Arjent's 2024 net income: | \$ 500,000 | |
| Arjent's 2024 dividends declared and paid: | \$ 250,000 | |
| * $\$5,000,000 \times 30\%$ purchased = \$1,500,000 purchase price. | | |
| **10-year remaining useful life, no salvage value. | | |
| †Other net assets = other assets - total liabilities. | | |

As shown in [Illustration 12-14](#), buying 30% of Arjent for \$1,500,000 implies that the full (100%) *fair value* of Arjent is \$5,000,000 (because $\$5,000,000 \times 30\%$ purchased = \$1,500,000 purchase price). However, notice that the *book value* of Arjent's net assets is only \$2,100,000. Why is there a difference between the fair value of Arjent and the book value of Arjent's identifiable net assets? Part of the difference represents identifiable assets (in this case, buildings and land) that have fair values greater than their book values. Arjent recorded those assets at historical cost and recognized depreciation of the buildings over time, so the book values of those assets don't reflect their fair values. The remaining difference is previously unrecognized goodwill (e.g., because of loyal customers, well-trained workers, etc.) that GAAP doesn't capture as separate identifiable assets but nevertheless represents value for which United was willing to pay. We will see that, under the equity method, all of these amounts are shown in a single investment account, but we still need to track their individual information to account for them correctly.

Additional Consideration

It's possible that a company owns more than 20% of the voting shares but still cannot exercise significant influence over the investee. If, for instance,

another company or a small group of shareholders owns 51% or more of the shares, they control the investee regardless of how other investors vote their shares. GAAP provides this and other examples of indications that an investor may be unable to exercise significant influence.

- The investee challenges the investor's ability to exercise significant influence (through litigation or complaints to regulators).
- The investor surrenders significant shareholder rights in a signed agreement.
- The investor is unable to acquire sufficient information about the investee to apply the equity method.
- The investor tries and fails to obtain representation on the board of directors of the investee.²²

Conversely, it's also possible that a company owns less than 20% of the voting shares but is able to exercise significant influence over the investee. Ability to exercise significant influence with less than 20% ownership might be indicated, for example, by having an officer of the investor corporation on the board of directors of the investee corporation or by having, say, 18% of the voting shares while no other single investor owns more than 50%. In such cases the equity method would be appropriate.

Purchase of Investment

Recording United's purchase of 30% of Arjent is straightforward. The investment is recorded at cost:

| | |
|--------------------------------|-----------|
| Investment in equity affiliate | 1,500,000 |
| Cash | 1,500,000 |

Recording Investment Revenue

Under the equity method, the investor includes in net income its proportionate share of the investee's net income. The reasoning is that, as the investee's net

As the investee earns additional net assets, the investor's investment in those net assets increases.

assets increase, the value of the investor's share of those net assets also increases, so the investor increases its investment by the amount of income recognized. United's entry would be as follows:

| | | |
|--------------------------------------|----------|---------|
| Investment in equity affiliate | 150,0000 | |
| Investment revenue (30% × \$500,000) | | 150,000 |

Of course, if Arjent had recorded a net loss rather than net income, United would *reduce* its investment in Arjent and recognize a *loss* on investment for its share of the loss. You won't always see these amounts called "investment revenue" or "investment loss." Rather, United might call this line "equity in earnings (losses) of affiliate" or some other title that suggests it is using the equity method.

Receiving Dividends

Because we recognize investment revenue when net income is recognized by the investee, it would be inappropriate to recognize revenue again when that income is distributed as dividends. That would be double counting. Instead, we view the dividend distribution as reducing the investee's net assets. The rationale is that the investee is returning assets to its investors in the form of a cash payment, so each investor's equity interest in the remaining net assets declines proportionately.

As the investee distributes net assets as dividends, the investor does not recognize revenue. Rather, the investor's investment in the investee's net assets is reduced.

| | | |
|--|---------|--------|
| Cash | 75,0000 | |
| Investment in equity affiliate (30% × \$250,000) | | 75,000 |

Further Adjustments

LO12-7 Explain the adjustments made in the equity method when the fair value of the net assets underlying an investment exceeds their book value at acquisition.

When the investor's expenditure to acquire an equity-method investment exceeds the book value of the underlying net assets acquired, additional adjustments to both the investment account and investment revenue might be needed. The purpose is to approximate the effects of consolidation without actually consolidating financial statements. More specifically, both the investment account and investment revenue are adjusted for differences between net income reported by the investee and what that amount would have been if consolidation procedures had been followed. This process is often referred to as "amortizing the differential," because it mimics the process of expensing some of the difference between the price paid for the investment and the book value of the investment. Let's look closer at what that means.

Consolidated financial statements report (a) the acquired company's assets at their fair values on the date of acquisition rather than their book values on the investee's balance sheet and (b) goodwill for the excess of the acquisition price over the fair value of the identifiable net assets acquired. This matters because increasing asset balances to their fair values can result in higher expenses in the future. If it's land or goodwill that's increased, there is no income effect because we don't depreciate or amortize those assets over time.²³ On the other hand, if buildings, equipment, or other depreciable assets are recorded at higher values, depreciation expense will be higher during their remaining useful lives. Likewise, if the recorded amount of inventory is increased, cost of goods sold will be higher when the inventory is sold. When expenses rise, income falls. It is this negative effect on income that the equity method seeks to imitate.

In our example, United needs to make adjustments for the fact that, at the time it purchased its investment in Arjent, the fair values of Arjent's identifiable assets and liabilities were higher than the book values of those assets and liabilities in Arjent's balance sheet (refer back to  **Illustration 12-14**).  **Illustration 12-15** shows United's 30% proportionate share of the amounts shown in  **Illustration 12-14**:

Illustration 12-15 Explanation for Differences Between the Investment and the Book Value of Net Assets Acquired

| | Net Assets of Investee | Proportion Purchased by Investor | Net Assets Purchased by Investor | |
|--|------------------------|----------------------------------|----------------------------------|--|
| Fair value of investee | \$5,000,000 | × 30% = | \$1,500,000 | Difference of \$420,000 attributed to goodwill |
| Fair value of investee's identifiable net assets | \$3,600,000 | × 30% = | \$1,080,000 | |
| Book value of investee's identifiable net assets | \$2,100,000 | × 30% = | \$630,000 | Difference of \$450,000 attributed to buildings (\$300,000) and land (\$150,000) |

Notice in [Illustration 12-15](#) that United paid \$1,500,000 for 30% of the identifiable net assets that, sold separately, would have a fair value of \$1,080,000. The **\$420,000** difference between the price paid and the fair value of United's share of Arjent's identifiable net assets is attributable to goodwill. The 30% of identifiable net assets with a fair value of \$1,080,000 have a book value on Arjent's balance sheet of only \$630,000. The **\$450,000** difference is attributable to undervalued buildings (\$300,000) and land (\$150,000). Now let's see what adjustments, if any, United needs to make for these differences.

Adjustments for Additional Depreciation

When Arjent determines its net income, it bases depreciation expense on the book value of its buildings on its own balance sheet. United, however, needs to depreciate its share of the *fair value* of those buildings at the time it made its investment. To account for this higher amount of depreciation expense, United

The investor adjusts its share of the investee's net income to reflect revenues and expenses associated with differences between the fair value and book value of the investee's assets and liabilities that existed at the time the investment was made.

reduces investment revenue as if Arjent had included the additional expense in its earnings.

As shown in  **Illustration 12-14**, the book value of Arjent's buildings is \$1,000,000 and the fair value is \$2,000,000, which creates a difference of \$1,000,000. United will need to recognize its 30% share of additional depreciation expense for this difference, totaling \$300,000 over the remaining life of the buildings. Assuming a 10-year life of the buildings and straight-line depreciation, United must recognize \$30,000 of additional depreciation each year for ten years. Had Arjent recorded that additional depreciation in its income statement, United's portion of Arjent's net income would have been lower by \$30,000 (ignoring taxes). So, to act as if Arjent had recorded the additional depreciation, United reduces investment revenue and reduces its investment in Arjent stock by \$30,000.

| | |
|--|--------|
| Investment revenue | 30,000 |
| Investment in equity affiliate | |
| [30% × (\$2,000,000 – \$1,000,000) ÷ 10 years] | 30,000 |

No Adjustments for Land or Goodwill

United makes no adjustments for land or goodwill. Land is not an asset we depreciate. As a result, the difference between the fair value and book value of the land would not cause higher expenses, and we have no need to adjust investment revenue or the investment in Arjent stock for the land.

Recall from  **Chapter 11** that goodwill, unlike most other intangible assets, is not amortized. In that sense, goodwill resembles land. Thus, acquiring goodwill will not cause higher expenses, so we have no need to adjust investment revenue or the investment in Arjent stock for goodwill.

Adjustments for Other Assets and Liabilities

Also, because in our example there is no difference between the book value and fair value of the remaining net assets, we don't need an adjustment for them either. However, that often will not be the case. For example, Arjent's inventory could have had a fair value

If the fair value of purchased inventory exceeds its book value, we usually assume the inventory is sold in the next year and reduce investment revenue in the next year by the entire difference.

that exceeded its book value at the time United purchased its Arjent investment. To recognize expense associated with that higher fair value, United would need to identify the period in which that inventory is sold (usually the next year) and, in that period, reduce its investment revenue and its investment in Arjent stock by its 30% share of the difference between the fair value and book value of the inventory. If, for instance, the \$1,000,000 difference between fair value and book value had been attributable to inventory rather than buildings, and that inventory was sold by Arjent in the year following United's investment, United would reduce investment revenue by its 30% share of the difference (\$300,000) in the year following the investment. More generally, an equity method investor needs to make these sorts of adjustments whenever there are revenues or expenses associated with an asset or liability that had a difference between book value and fair value at the time the investment was made.

Additional Consideration

Effect on Deferred Income Taxes. Investment revenue is recorded by the equity method when net income is recognized by the investee, but that revenue is not taxed until it's actually received as cash dividends. This creates a temporary difference between book income and taxable income. You will learn in Chapter 16 that the investor must report a deferred tax liability for the income tax that ultimately will be paid when the income eventually is received as dividends.

Reporting the Investment

The fair value of the investment shares at the end of the reporting period is not reported when using the equity method. The investment account is reported at its original cost, increased by the investor's share of the investee's net income (adjusted for additional expenses like depreciation), and decreased by the portion of those earnings actually received as dividends.

The carrying amount of the investment is its initial cost plus the investor's equity in the undistributed earnings of the investee.

The balance of United’s 30% investment in Arjent at December 31, 2024, would be calculated as follows:

| Investment in Equity Affiliate | |
|--------------------------------|--------------------------------|
| Purchase price | 1,500,000 |
| Share of net income | 150,000 |
| | 75,000 Dividends |
| | 30,000 Depreciation adjustment |
| | <hr/> |
| | 1,545,000 |

In the statement of cash flows, we report the purchase and sale of the investment as outflows and inflows of cash in the investing activities section, and the receipt of dividends is reported as an inflow of cash in the operating activities section.²⁴

Additional Consideration

Much like consolidation, the equity method views the investor and investee collectively as a special type of single entity (as if the two companies were one company). However, the equity method doesn’t require the investor to record separate financial statement items of the investee on an item-by-item basis as in consolidation. Instead, the investor reports its equity interest in the investee as a single investment account. Also, the adjustments that investors make when applying the equity method are designed to mimic what would happen if an investment were consolidated. For those reasons, the equity method sometimes is referred to as a “one-line consolidation,” because it essentially collapses the consolidation approach into single lines in the balance sheet and income statement, while having the same effect on total income and shareholders’ equity.

When the Investment Is Acquired in Mid-Year

Obviously, we’ve simplified the illustration by assuming the investment was acquired at the beginning of 2024, entailing a full year’s income, dividends, and adjustments to account for

the income effects of any differences between book value and fair value on the date the investment was acquired. In the more likely event that an investment is acquired sometime after the beginning of the year, applying the equity method is easily modified to include the appropriate fraction of each of those amounts. For example, if United's purchase of 30% of Arjent had occurred on October 1 rather than January 2, we would simply record income, dividends, and adjustments for three months (3/12) of the year. This would result in the following entries to the investment account:

Changes in the investment account the first year are adjusted for the fraction of the year the investor has owned the investment.

| Investment in Equity Affiliate | |
|---|-------------------------|
| Cost | 1,500,000 |
| Share of net income (3/12 × \$150,000) | 37,500 |
| | Depreciation adjustment |
| | 7,500 (3/12 × \$30,000) |
| | 18,750 Dividends |
| | (3/12 × \$75,000) |
| | 1,511,250 |

AT&T reported its 2019 investments in affiliated companies for which it exercised significant influence using the equity method as shown in [Illustration 12-16](#).

Source: AT&T

When the Investee Reports a Net Loss

Our illustration assumed the investee reported net income. If the investee reports a *net loss* instead, the investment account would be *decreased* by the investor's share of the investee's net loss (adjusted for additional expenses).

Impairment of Equity Method Investments

A series of losses or other factors could indicate that an equity-method investment's fair value has declined to an amount below its current carrying value. If that decline is viewed as other than temporary, the investor should recognize an impairment loss in net income and reduce the carrying value of the investment to fair value in the balance sheet. The investor then continues with accounting under the equity method.²⁵

Additional Consideration

It's possible that the investor's proportionate share of investee losses could exceed the carrying amount of the investment. If this happens, the investor should discontinue applying the equity method until the investor's share of subsequent investee earnings has equaled losses not recognized during the

time the equity method was discontinued. This avoids reducing the investment account below zero.

What If Conditions Change?

A CHANGE FROM THE EQUITY METHOD TO ANOTHER METHOD

When the investor's level of influence changes, it may be necessary to change from the equity method to another method. For example, when **SoftBank** sold two-thirds of its 25% stake in **T-Mobile**, it had to stop using the equity method to account for its investment.

When this situation happens, *no adjustment* is made to the remaining carrying amount of the investment. Instead, the equity method is simply discontinued and the new method applied from then on. The balance in the investment account when the equity method is discontinued would serve as the new cost basis for writing the investment up or down to fair value in the next set of financial statements.

A CHANGE FROM ANOTHER METHOD TO THE EQUITY METHOD

Sometimes companies change from another method to the equity method. For example, when **Toyota** raised its stake in **Subaru** from 17% to 20%, its ownership interest was large enough to qualify for accounting for the investment under the equity method. When a change *to* the equity method is appropriate, the securities are marked to fair value on the date of the change and any unrealized holding gains or losses are recorded on the income statement. That way, the fair value of the securities—as if they had just been acquired—becomes the starting balance in the equity method investment account. Any cost of acquiring additional shares is added to that balance, and going forward that balance is adjusted for the investor's portion of investee earnings and dividends. A disclosure note also should describe the change.²⁶

IF AN EQUITY METHOD INVESTMENT IS SOLD

When an investment reported by the equity method is sold, we recognize a gain or loss if the selling price is more or less than the carrying amount of the investment. For example, let's

continue our illustration and assume United sells its investment in Arjent on January 1, 2025, for \$1,446,000. A journal entry would record a loss as follows:

When an equity method investment is sold, a gain or loss is recognized for the difference between its selling price and its carrying amount.

| | | |
|--|-----------|-----------|
| Cash | 1,446,000 | |
| Loss on investments (NI) (to balance) | 99,000 | |
| Investment in equity affiliate (account balance) | | 1,545,000 |

COMPARISON OF FAIR VALUE AND THE EQUITY METHOD

 **Illustration 12-17** compares accounting for the Arjent investment at fair value through net income and under the equity method (using account title abbreviations):

Illustration 12-17 Comparison of Fair Value and Equity Methods

| | Fair Value through Net Income | | Equity Method | |
|--|---------------------------------|-----------|--------------------------------|---------------|
| Purchase equity investment | Investment in equity securities | 1,500,000 | Investment in equity affiliate | 1,500,000 |
| | Cash | 1,500,000 | Cash | 1,500,000 |
| Recognize proportionate share of investee's net income and any related adjustments | No entry | | Investment in equity affiliate | 150,000 |
| | | | Investment revenue | |
| | | | Investment revenue | 30,000 |
| | | | Investment in equity affiliate | |

| | Fair Value through Net Income | | Equity Method | |
|-------------------------------|---------------------------------|---------------|--------------------------------|---------------|
| Adjust to fair value, 2024 | Loss (unrealized, NI) | 50,000 | | No entry |
| | FV adjustment | 50,000 | | |
| Receive dividend | Cash | 75,000 | Cash | 75,000 |
| | Dividend revenue | 75,000 | Investment in equity affiliate | |
| Sell equity investment | | | | |
| 1. Adjust to fair value, 2025 | Loss (unrealized, NI) | 4,000 | | No entry |
| | FV adjustment | 4,000 | | |
| 2. Record sale | Cash | 1,446,000 | Cash | 1,446,000 |
| | FV adjustment | 54,000 | Loss (NI) (to balance) | 99,000 |
| | Investment in equity securities | 1,500,000 | Investment in equity affiliate | 1,500,000 |

This side-by-side comparison highlights several aspects of these accounting approaches.

- To record the purchase of an investment, we use the same basic entry for both approaches.
- The two approaches differ in whether we record investment revenue when dividends are received and whether we recognize unrealized holding gains and losses associated with changes in the fair value of the investment.

- The differences in how the two approaches account for unrealized holding gains and losses result in different carrying values for the investment at the time the investment is sold, and therefore result in different realized gains or losses when the investment is sold.
- Regardless of approach, the same cash flows occur, and the same total amount of net income is recognized over the life of the investment. In the case of Arjent,
 - **Fair value through net income:** A total of \$21,000 of net income is recognized over the life of the investment, equal to **\$75,000** of dividend revenue minus \$54,000 (**\$50,000** + **\$4,000**) loss on the investment.
 - **Equity method:** A total of \$21,000 of net income is recognized over the life of the investment, equal to **\$150,000** of United's portion of Arjent's net income minus **\$30,000** depreciation adjustment and minus **\$99,000** loss realized on sale of investment.
 - Thus, the question is not how much total net income is recognized, but *when* that net income is recognized.

Fair Value Option

LO12-8 Explain how electing the fair value option affects accounting for investments.

Companies can choose the **fair value option** (FVO) for “significant influence” investments that otherwise would be accounted for under the equity method. The company makes an irrevocable decision about whether to elect the FVO and can make that election for some investments and not for others. As shown in

Illustration 12-17, the company carries the investment at fair value in the balance sheet and includes unrealized gains and losses in net income. These investments are shown on their own line in the balance sheet or are combined with equity method investments with the amount at fair value shown parenthetically. Also, all of the disclosures that are required when reporting fair values as well as some of those that would be required under the equity method still must be provided.²⁷

If the **fair value option** is chosen for investments otherwise accounted for by the equity method, the amount that is reported at fair value is clearly indicated.

Exactly how a company does the bookkeeping necessary to comply with these broad requirements is up to the company. One alternative is to account for the investment using the entries that would be used if the investor lacked significant influence and accounted for it at fair value through net income. A second alternative is to record all of the accounting entries during the period under the equity method, and then record a fair value adjustment at the end of the period. For example, imagine the following scenario:

- An investment is purchased for \$100.
- The investor's share of the investee's net income is \$10.
- The investor's share of the investee's dividends is \$2.
- The investor's amortization of differential is \$3.
- Fair value increases to \$200.

If the investor accounted for the investment as fair value through net income, it would show dividend income of \$2 as well as an unrealized gain of \$100 in the income statement, increasing pre-tax income by a total of \$102. On the other hand, if the investor first accounted for the investment under the equity method, it would show equity method investment income of \$7 (calculated as income of \$10 minus amortization of differential of \$3), which would produce a pre-adjustment investment carrying value of \$105 (calculated as \$100 initial cost plus \$7 income minus \$2 dividends). Therefore, to get to a fair value of \$200, the investor would record a fair value adjustment of \$95. The fair value adjustment of \$95 combines with the \$7 of equity method investment income to increase pre-tax income by a total of \$102. You can see that, regardless of which alternative the investor uses, the same total fair value is reported in the balance sheet at the end of the period, and the same total amount is shown in the income statement.

LO12–9 Discuss the primary differences between U.S. GAAP and IFRS with respect to investments.

International Financial Reporting Standards

Equity Method. Like U.S. GAAP, international accounting standards require the equity method for use with significant influence investees (which they call “associates”), but there are a few important differences. First, *IAS No. 28* governs application of the equity method and requires that the accounting policies of investees be adjusted to correspond to those of the investor when applying the equity method.²⁸ U.S. GAAP has no such requirement.

Second, IFRS does not provide the fair value option for most investments that qualify for the equity method. U.S. GAAP provides the fair value option for all investments that qualify for the equity method.

Concept Review Exercise

THE EQUITY METHOD

Delta Apparatus bought 40% of Clay Crating Corp.’s outstanding common shares on January 2, 2024, for \$540 million. The carrying amount of Clay Crating’s net assets (shareholders’ equity) at the purchase date totaled \$900 million. Book values and fair values were the same for all financial statement items except for inventory and buildings, for which fair values exceeded book values by \$25 million and \$225 million, respectively. All inventory on hand at the acquisition date was sold during 2024. The buildings have average remaining useful lives of 18 years. During 2024, Clay Crating reported net income of \$220 million and paid an \$80 million cash dividend.

Required:

1. Prepare the appropriate journal entries during 2024 for the investment.
2. Determine the amounts relating to the investment that Delta Apparatus should report in the 2024 financial statements
 - a. as an investment in the balance sheet.
 - b. as investment revenue in the income statement.
 - c. as investing and/or operating activities in the statement of cash flows (direct method).

Solution:

1. Prepare the appropriate journal entries during 2024 for the investment.

| Purchase | (\$ in millions) |
|---|------------------|
| Investment in equity affiliate | 540 |
| Cash | 540 |
| Net income | |
| Investment in equity affiliate (40% × \$220 million) | 88 |
| Investment revenue | 88 |
| Dividends | |
| Cash (40% × \$80 million) | 32 |
| Investment in equity affiliate | 32 |
| Inventory | |
| Investment revenue (as if 2024 cost of goods sold is higher because beginning inventory was adjusted to fair value) | 10 |
| Investment in equity affiliate (40% × \$25 million) | 10 |
| Buildings | |
| Investment revenue [(\$225 million × 40%) ÷ 18 years] | 5 |
| Investment in equity affiliate | 5 |

| | Investee Net Assets | | Net Assets Purchased |
|---------------------------|----------------------------|---------|-----------------------------|
| Fair value (identifiable) | \$1,150* | × 40% = | \$460 |
| Book value (identifiable) | 900 | × 40% = | 360 |
| Difference | <u>\$ 250</u> | × 40% = | <u>\$100</u> |
| *(\$900 + \$25 + \$225) | | | |

2. Determine the amounts that Delta Apparatus should report in the 2024 financial statements.

a. As an investment in the balance sheet:

Investment in Equity Affiliate (\$ in millions)

| | | |
|--------------------------------|-------------------|---|
| Purchase price | 540 | |
| 40% of Clay Crating net income | 88 | |
| | | 32 Dividends |
| | | 10 Cost of goods sold adjustment for inventory (all sold in 2024) |
| | | 5 Depreciation adjustment for buildings (\$90,000 ÷ 18) |
| Balance | <u>581</u> | |

b. As investment revenue in the income statement:

Page 678

$$\begin{array}{rcl}
 \$88 \text{ million} & - & (\$10 + \$5) \text{ million} = \$73 \text{ million} \\
 \text{(share of income)} & & \text{(adjustments)}
 \end{array}$$

c. In the statement of cash flows (direct method):

- Investing activities: \$540 million cash outflow to purchase investment
- Operating activities: \$32 million cash inflow from dividends received

Decision Makers' Perspective

The various approaches used to account for investments can have very different effects on an investor's income statement and balance sheet. Consequently, it's critical that both managers and external decision makers clearly understand those effects and make decisions accordingly.

To highlight key considerations, suppose that, on January 1, 2024, BigCo spent \$5,000,000 to purchase 20% of TechStart, a small start-up company that is developing products that apply an exciting new technology. The purchase price included \$500,000 for BigCo's share of the difference between the fair value and book value of TechStart's inventory, all of which was then sold in 2024. TechStart paid a small dividend of \$100,000 in 2024, so BigCo received 20% of it, or \$20,000. TechStart incurs and expenses large amounts of research and

development costs as it develops new technology, so it had a net loss in 2024 of \$1,000,000. Yet, the future income-generating potential of the products that TechStart is developing has made TechStart a hot stock, and the fair value of BigCo's 20% investment increased to \$5,500,000 by the end of 2024.  **Illustration 12-18** shows how BigCo's investment would be accounted for under two alternative approaches.

Illustration 12-18 Comparison of Methods Used to Account for Investments

| | Fair Value through Net | |
|---|------------------------|---------------------|
| | Income | Equity Method |
| Share of investee net income (loss)* | \$ 0 | \$ (700,000) |
| Dividend revenue** | 20,000 | 0 |
| Increase in investee's fair value [†] | 500,000 | 0 |
| Total 2024 effect on net income (loss) | <u>\$ 520,000</u> | <u>\$ (700,000)</u> |
| December 31, 2024 investment book value ^{††} | \$5,500,000 | \$4,280,000 |

*Not recognized if investment accounted for as fair value through net income. Under the equity method, investment revenue (loss) is $20\% \times (\$1,000,000 \text{ loss}) + (\$500,000) \text{ additional expense for fair value inventory adjustment} = (\$700,000)$.

**Not recognized for equity method investments. Instead, dividends reduce book value of the investment.

[†]Recognized in net income if accounted for at fair value through net income. Not recognized under the equity method.

^{††}Equals fair value if accounted for at fair value through net income. Equals initial cost plus income (or minus loss) and minus dividends for equity method.

The accounting method does not affect cash flows, but it has a big effect on net income in current and future periods. Also, because the accounting method affects the book value of the investment, it affects gain or loss on sale of that investment. In our example, if BigCo

sold its TechStart investment at the beginning of 2025 for \$5,000,000, it would recognize a \$720,000 gain on sale if the investment was accounted for under the equity method, but a \$500,000 loss if it was accounted for at fair value through net income. All of these income effects are predictable, but only if a user understands the

The way an investment is accounted for affects net income, investment book value, and the amount of gain or loss recognized when the investment is sold.

relevant accounting methods and the fact that those methods all end up recognizing the same amount of total gain or loss over the life of an investment. Nevertheless, sometimes even experienced analysts get confused.²⁹

One strength of the equity method is that it prevents the income manipulation that would be possible if a company recognized income when it received dividends and could significantly influence an investee to pay dividends whenever the company needed an income boost. Remember, under the equity method dividends aren't income, but rather reduce the book value of the investment. Nevertheless, users still need to realize that managers may choose and apply methods in ways that make their company appear most

Managers may structure equity investments to qualify for their preferred accounting approach.

attractive. For example, research suggests that investments sometimes are structured to avoid crossing the 20 to 25% threshold that typically requires using the equity method, presumably to avoid the negative effect on earnings that comes from having to recognize the investor's share of investee losses and other income adjustments.³⁰ Also, a company might smooth income by timing the sale of equity method investments to realize gains in otherwise poor periods and realize losses in otherwise good periods. While consistent with GAAP, mixing these sorts of one-time gains and losses with operating income could encourage users to think that operating income is less volatile than it really is.

A benefit of fair value accounting is that it prevents managers from timing the sale of investments to recognize gains or losses in particular accounting periods.

Regarding the fair value through net income approach, of particular concern is the potential for inaccurate fair value estimates. Even if management is trying to provide the most accurate fair value estimate possible, there is much potential for error, particularly when

A concern with fair value accounting is that management has much discretion over fair values, and may not be able to estimate fair values accurately.

making estimates at level 3 of the fair value hierarchy. Also, a company conceivably could use the discretion inherent in fair value estimation to manage earnings with respect to trading securities or other investments for which they have elected the fair value option. Given this potential for error and bias, it's not surprising that investors are nervous about the accuracy of fair value estimates. To address these sorts of concerns, the FASB has required extensive note disclosure about the quality of inputs associated with estimates of fair value, but financial statement users need to know to look for those disclosures and still must understand that they cannot assess fully the accuracy of fair value estimates. ●

Financial Instruments and Investment Derivatives

A **financial instrument** is defined as one of the following:

1. Cash.
2. Evidence of an *ownership interest* in an entity.³¹
3. A contract that (a) imposes on one entity an obligation to *deliver* cash (say accounts payable) or another financial instrument and (b) conveys to the second entity a right to *receive* cash (say accounts receivable) or another financial instrument.
4. A contract that (a) imposes on one entity an obligation to *exchange* financial instruments on potentially unfavorable terms (say the issuer of a stock option) and (b) conveys to a second entity a right to *exchange* other financial instruments on potentially favorable terms (say the holder of a stock option).³²

A complex class of financial instruments exists in financial markets in response to the desire of firms to manage risks. In fact, these financial instruments would not exist in their own right, but have been created solely to hedge against risks created by other

financial instruments or by transactions that have yet to occur but are anticipated. Financial futures, interest rate swaps, forward contracts, and options have become commonplace.³³

These financial instruments often are called **derivatives** because they “derive” their values or contractually required cash flows from some other security or index. For instance, an option to buy an asset in the future at a preset price has a value that is dependent on, or derived from, the value of the underlying asset. Their rapid acceptance as indispensable components of the corporate capital structure has left the accounting profession scrambling to keep pace.

Derivatives are financial instruments that “derive” their values from some other security or index.

The urgency to establish accounting standards for financial instruments has been accelerated by headline stories in the financial press reporting multimillion-dollar losses on exotic derivatives by **Enron Corporation, Procter & Gamble, Orange County** (California), **Piper Jaffrey**, and **Gibson Greetings**, to mention a few. The headlines have tended to focus attention on the misuse of these financial instruments rather than their legitimate use in managing risk.

Page 680

The FASB has been involved for many years in a project to provide a consistent framework for resolving financial instrument accounting issues, including those

The FASB’s ongoing financial instruments project is expected to lead to a consistent framework for

related to derivatives and other “off-balance-sheet” instruments. The financial instruments project has

accounting for all financial instruments.

three separate but related parts: disclosure, recognition

and measurement, and distinguishing between liabilities and equities. Unfortunately, the

issues to be resolved are extremely complex and will likely require several more years to

resolve. To help fill the disclosure gap in the meantime, the FASB has offered a series of temporary, “patchwork” solutions. These are primarily in the form of additional disclosures

for financial instruments. More recently, the FASB has tackled the issues of recognition and measurement of derivatives. We discuss these requirements in Appendix A to this book.

Financial Reporting Case Solution

monticello/Shutterstock

- 1. How should you respond? Why are held-to-maturity securities treated differently from other investment securities?** You should explain that if an investor has the positive intent and ability to hold the securities to maturity, investments in debt securities are classified as held-to-maturity and reported at amortized cost in the balance sheet. Increases and decreases in fair value are not reported in the financial statements. The reasoning is that the changes are not as relevant to an investor who will hold a security to its maturity regardless of those changes. Changes in the fair value between the time a debt security is acquired and the day it matures to a prearranged maturity value aren't as important if sale before maturity isn't an alternative.
- 2. Why are unrealized gains and losses on trading securities reported in the income statement?** Trading securities are acquired for the purpose of profiting from short-term market price changes, so gains and losses from holding these securities while prices change are often viewed as relevant performance measures that should be included in net income.

3. Why are unrealized gains and losses on available-for-sale securities not reported in the income statement, but instead are reported in other comprehensive income, and then shown in accumulated other comprehensive income (AOCI) in the balance sheet? Available-for-sale securities are not acquired for the purpose of profiting from short-term market price changes, so gains and losses from holding these securities while prices change are viewed as insufficiently relevant performance measures to be included in net income. Instead, those amounts are shown in other comprehensive income (OCI) and accumulated in an owners' equity account (AOCI). It's likely that holding gains in some periods will be offset by holding losses in other periods. When the investment is sold, the net amount of gain or loss is removed from AOCI and recognized in net income.

4. Explain why Coke accounts for some of its investments by the equity method and what that means. When an investor does not have "control," but still is able to exercise *significant influence* over the operating and financial policies of the investee, the investment should be accounted for by the equity method. Coke owns between 20% and 50% of the voting shares of some of the companies it invests in. By the equity method, Coke recognizes investment income in an amount equal to its percentage share of the net income earned by those companies, instead of the amount of that net income it receives as cash dividends. The rationale is that as the investee earns additional net assets, Coke's share of those net assets increases. ●

The Bottom Line

-  **LO12-1** Key events in the life of a debt investment are purchase, recording interest revenue, incurring unrealized holding gains and losses due to fair value changes, and recording sale or maturity. (*p.* 640)
-  **LO12-2** If an investor has the positive intent and ability to hold the securities to maturity, investments in debt securities are classified as HTM and reported at amortized cost in the balance sheet. These investments are recorded at cost, and holding gains or losses from fair value changes are ignored. (*p.* 644)
-  **LO12-3** Investments in debt securities acquired principally for the purpose of selling them in the near term are classified as trading securities. They are reported at their fair values. Holding gains and losses for trading securities are included in earnings. (*p.* 646)
-  **LO12-4** Investments in debt securities that don't fit the definitions of the other reporting categories are classified as available-for-sale. They are reported at their fair values. Holding gains and losses from retaining securities during periods of price change are not included in the determination of income for the period; they are reported as a separate component of other comprehensive income in shareholders' equity. (*p.* 650)
-  **LO12-5** Investments in equity securities for which the investor lacks the ability to exercise significant influence over the investee are accounted for using a fair value through net income approach. They are reported at their fair values. Holding gains and losses are included in earnings. (*p.* 663)
-  **LO12-6** The equity method requires the investor to recognize investment income equal to its percentage share (based on share ownership) of the net income earned by the investee, rather than the amount received as cash dividends. The investment account is adjusted for the investor's percentage share of net income or loss reported by the investee. When the investor actually receives dividends, the investment account is reduced accordingly. (*p.* 668)
-  **LO12-7** When the fair value of identifiable net assets acquired exceeds the book value of the underlying net assets acquired in the purchase of an equity investment, both the investment account and investment revenue are adjusted for differences between net income reported by the investee and what that

amount would have been if consolidation procedures had been followed. (*p.* 670)

 **LO12-8**

The fair value option allows companies to account for most financial assets and liabilities in the same way they account for trading securities, with unrealized holding gains and losses included in net income and the investment carried at fair value in the balance sheet. (*pp.* 658 and 676)

 **LO12-9**

U.S. GAAP and IFRS are similar in most respects concerning how they account for investments. IFRS is more restrictive in terms of the circumstances in which the fair-value option can be used. IFRS allows accounting similar to AFS treatment for equity investments. Finally, as discussed in Appendix 12B, IFRS uses a somewhat different impairment recognition approach for HTM and AFS investments. (*pp.* 657, 658, 659, 667, 676, and 687) ●

APPENDIX 12A Other Investments (Special Purpose Funds, Investments in Life Insurance Policies)

Special Purpose Funds

It's often convenient for companies to set aside money to be used for specific purposes. You learned about one such special purpose fund in  Chapter 7 when we discussed petty cash funds. Recall that a petty cash fund is money set aside to conveniently make small expenditures using currency rather than having to follow the time-consuming, formal procedures normally used to process checks. Similar funds sometimes are used to pay interest, payroll, or other short-term needs. Like petty cash, these short-term special purpose funds are reported as current assets.

Some special purpose funds—like petty cash—are current assets.

Special purpose funds also are sometimes established to serve longer-term needs. It's common, for instance, to periodically set aside cash into a fund designated to repay bonds and other long-term debt. Such funds usually accumulate cash over the debt's term to maturity and are composed of the company's periodic contributions plus interest or dividends from investing the money in various return-generating investments. In fact, some debt contracts require the borrower to establish such a fund to repay the debt. In similar fashion, management might voluntarily choose to establish a fund to accumulate money to expand facilities, provide for unexpected losses, buy back shares of stock, or any other special purpose that might benefit from an accumulation of funds. Of course, funds that won't be used within the upcoming operating cycle are noncurrent assets. They typically are reported as part of investments. The same criteria for classifying securities into reporting categories that we discussed previously should be used to classify securities in which funds are invested. Any investment revenue from these funds is reported as such in the income statement.

Special purpose funds that serve longer-term needs are reported as noncurrent assets.

Investments in Life Insurance Policies

Companies frequently buy life insurance policies on the lives of their key officers. Under normal circumstances, the company pays the premium for the policy and, as beneficiary, receives the proceeds when the officer dies. Of course, the objective is to

compensate the company for the untimely loss of a valuable resource in the event the officer dies. However, some types of life insurance policies can be surrendered while the insured is still alive in exchange for a determinable amount of money, called the **cash surrender value**. In effect, a portion of each premium payment is not used by the insurance company to pay for life insurance coverage, but instead is invested on behalf of the insured company in a fixed-income investment. Accordingly, the cash surrender value increases each year by the portion of premiums invested plus interest on the previous amount invested. This is simply a characteristic of whole life insurance, unlike term insurance that has lower premiums and provides death benefits only.

From an accounting standpoint, the periodic insurance premium should not be expensed in its entirety. Rather, part of each premium payment, the investment portion, is recorded as an asset.  **Illustration 12A-1** provides an example.

Certain life insurance policies can be surrendered while the *insured is still alive* in exchange for its *cash surrender value*.

Illustration 12A-1 Cash Surrender Value

Part of the annual premium represents a build-up in the cash surrender value.

When the death benefit is paid, the cash surrender value becomes null and void.

APPENDIX 12B Impairment of Debt Investments

We saw in  **Chapter 11** that intangible assets and property, plant, and equipment are subject to impairment losses that reduce earnings. Similarly, you learned in  **Chapter 7** that companies recognize impairment losses for financial assets. These are known as credit losses (or bad debts) and are determined using the CECL (Current Expected Credit Loss) model. Based on historical experience, current conditions, and reasonable forecasts, companies estimate the amount of their accounts receivable they expect to actually receive. They use an allowance for uncollectible accounts to reduce the carrying value of their accounts receivable to that amount, and each period recognize the amount of bad debt expense needed to adjust that allowance to its appropriate balance.

Companies also must account for credit losses with respect to debt investments. They don't need to worry about recognizing credit losses for trading securities or investments for which a company has chosen the fair value option, because all changes in the fair values of those investments, including credit losses, always are recognized in net income. However, that's not the case for held-to-maturity (HTM) and available-for-sale (AFS) debt investments, because changes in the fair value of those investments are not always recognized in net income. Rather, declines in fair value typically are ignored for HTM investments and are recorded in OCI for AFS investments, and only included in net income when HTM and AFS investments are sold. Therefore, companies do need to account for credit losses with respect to HTM and AFS investments. We discuss each in turn.

Credit Losses for Held-to-Maturity Investments

Companies recognize credit losses for HTM investments the same way they recognize bad debts for a note receivable. They use a contra asset account, an allowance for credit losses, to reduce the carrying value of HTM investments to the net amount expected to be collected. Each period they record whatever credit loss expense (bad debt expense) or recovery of credit loss is necessary to adjust that allowance to its appropriate balance.

The CECL model allows companies to choose from various methods to estimate credit losses for HTM debt investments. A very common approach is for the investor to estimate the future cash flows it expects to receive and then discount those cash flows at the effective

interest rate that existed when the debt investment was purchased. The investor then compares that discounted cash flow estimate to the balance (amortized cost) of the debt and adjusts the allowance for credit losses to reduce the carrying value of the debt to that estimate.

In [Illustration 12B-1](#), we modify the Masterwear Industries example from [Illustration 12-1](#) to demonstrate accounting for credit losses for an HTM investment. Later, we do the same for an AFS investment.

Illustration 12B-1 Credit Losses for an HTM Investment

On July 1, 2024, United Industries purchased bonds with a face value of \$700,000 from Masterwear Industries. The stated rate of interest for the bonds is 12%, so \$42,000 of interest is receivable semiannually on June 30 and December 31. The bonds mature in three years, on June 30, 2027. The market interest rate for bonds of similar risk and maturity is 14%. United purchased the bonds for \$666,633, reflecting a discount of \$33,367.

United received its \$42,000 interest payment on December 31, 2024, so it amortized \$4,664 of discount, leaving the amortized cost of the bond investment at \$671,297.* When preparing its 2024 financial statements, United considered whether credit losses had occurred with respect to the Masterwear investment. United concluded that it was likely to receive interest payments of only \$30,000 each period and a return of principal at maturity of only \$600,000. To calculate its credit loss, United discounted those cash flows at the 7% effective interest rate that existed when the bonds were purchased, and compared that discounted amount to the amortized cost of the bonds at 12/31/2024:

Amortized cost of the bonds at 12/31/2024: \$ 671,297

Discounted cash flow of the bond **Present Values**
(using effective interest rate on date of bond purchase):

| | |
|-------------------------|------------------------------------|
| Interest | \$ 30,000 × 4.10020** = |
| | \$123,006 |
| Principal (face amount) | \$600,000 × 0.71299 [†] = |
| | <u>427,794</u> |

| | |
|---|-------------------|
| Total discounted cash flow | (550,800) |
| Necessary balance in the allowance for credit losses: | \$ 120,497 |
| To record the \$120,497 credit loss, United makes the following journal entry: | |
| Credit loss expense | 120,497 |
| Allowance for credit losses | 120,497 |

*Refer to [Illustration 12-2](#) for the amortization table that applies to the Masterwear bonds.

**Present value of an ordinary annuity of \$1: $n = 5, i = 7%$ (Table 4).

†Present value of \$1: $n = 5, i = 7%$ (Table 2).

Note: Present value tables are provided at the end of this textbook. If you need to review the concept of the time value of money, refer to the discussions in [Chapter 5](#).

United's 2024 before-tax net income will be reduced by the **\$120,497** credit loss, and the Masterwear investment will be reported in the balance sheet at a carrying value of \$550,800. In future periods, United will re-estimate the discounted cash flows associated with the Masterwear bonds and adjust the allowance for credit losses up or down as necessary to state the carrying value of the investment at the appropriate amount.

Credit Losses for Available-for-Sale Investments

The FASB requires that investors calculate credit losses for AFS investments using the discounted cash flow approach shown in [Illustration 12B-1](#). However, accounting for credit losses is complicated by the fact that AFS investments must be carried at fair value, with unrealized gains and losses shown in OCI. To help us consider this difference, [Illustration 12B-2](#) modifies [Illustration 12B-1](#) to show how the *fair value* of the Masterwear bonds might be calculated.

Illustration 12B-2 Credit and Noncredit Losses of an AFS Investment

Assume the same facts as in [Illustration 12B-1](#). Also assume that United believes that, given the troubles Masterwear Industries has been facing, a discount rate of 20% (10% every six months) is appropriate for valuing those bonds in the current market. Using a discounted cash flow approach to value the Masterwear bonds,* the fair value of those bonds and the related unrealized loss would be calculated as follows at 12/31/2024:

| | | |
|---|---|-------------------|
| Amortized cost of the bonds at 12/31/2024: | | \$ 671,297 |
| Discounted cash flow of the bond(using prevailing market interest rate): | Present Values | |
| Interest | $\$ 30,000 \times 3.79079^{**} =$ \$113,724 | |
| Principal (face amount) | $\$600,000 \times 0.612092^{\dagger} =$ <u>372,552</u> | |
| Total discounted cash flow (used to estimate fair value) | | <u>(486,276)</u> |
| Unrealized loss | | 185,021 |
| Credit loss (from Illustration 12B-1): | | (120,497) |
| Noncredit loss | | \$ 64,524 |

*United could use other valuation approaches to estimate fair value, but assuming a discounted cash flow approach highlights the difference between credit losses and other unrealized losses.

**Present value of an ordinary annuity of \$1: $n = 5, i = 10\%$ (Table 4).

† Present value of \$1: $n = 5, i = 10\%$ (Table 2).

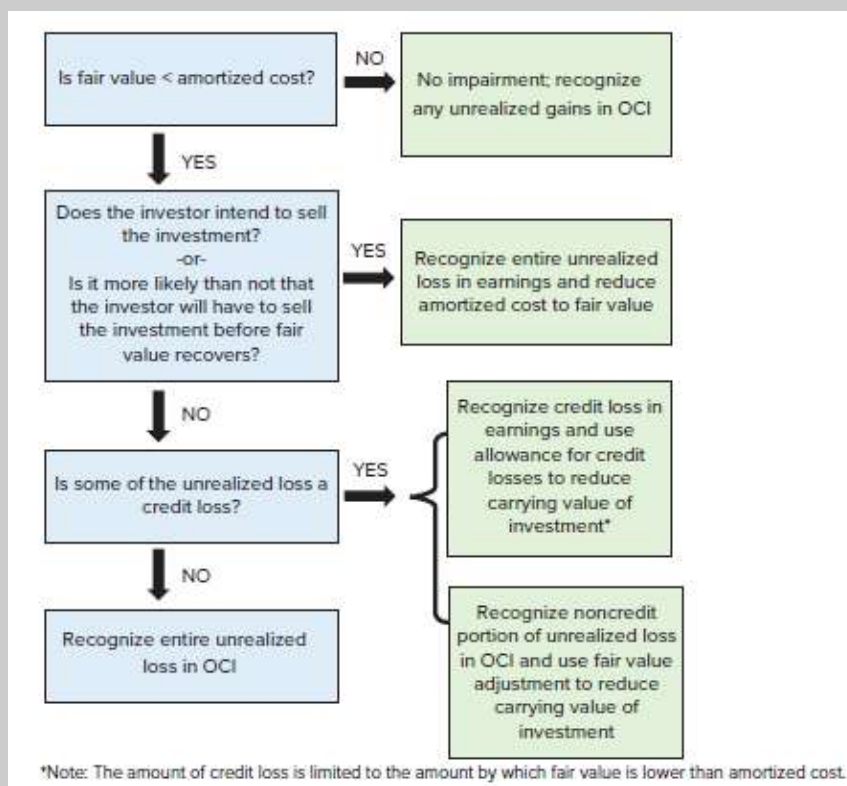

Note: Present value tables are provided at the end of this textbook. If you need to review the concept of the time value of money, refer to the discussions in [Chapter 5](#).

We see from [Illustration 12B-2](#) that the fair value estimate can differ from the value used to calculate credit losses. The credit-loss calculation requires that the discount rate be the effective interest rate as of the date the investment was *purchased*. However, the fair value calculation uses the *current* discount rate appropriate for the investment. Market conditions change over time, so it makes sense that these two discount rates could differ. In this case, because United believes market participants would use a relatively high discount rate

(reflecting higher risk) when valuing the Masterwear investment, it assigns a relatively low fair value to that investment.

How should United account for these losses? The flowchart in [Illustration 12B-3](#) provides guidance:

ILLUSTRATION 12B-3 Decision Tree to Account for Impairment of AFS Investments

As shown in [Illustration 12B-3](#), if an investment's fair value is not less than amortized cost, there is no impairment of the investment, and any unrealized gain should be shown in OCI.

If instead, fair value is less than amortized cost, there is some impairment of the investment. At this point, we need to consider what the investor intends to do with the investment. If the investor intends to sell the investment, or if the investor is more likely than not to have to sell the investment before the fair value of the investment can recover, we act as if the

investor has realized that loss. The investor recognizes the entire loss in earnings and reduces the carrying value of the investment to its fair value. No recovery of that write-down is permitted if fair value recovers in the future. Rather, the new amortized cost will be compared to fair value and any unrealized gains or losses will be recorded in OCI as typically done for AFS investments.

If, on the other hand, the investor does not intend to sell the investment and does *not* believe it is more likely than not the investment will be sold before fair value recovers, the amount of the unrealized loss that is due to a credit loss must be identified. The credit loss portion is recognized in earnings, and an allowance for credit losses is established, just like we did for HTM investments.³³ If the credit loss decreases in the future, a reversal of credit loss can be included in earnings, just like for HTM investments. Any remaining noncredit-loss component is recognized as an unrealized loss in OCI, just as other unrealized losses are recognized for AFS investments.

Returning to [Illustration 12B-2](#), let's consider how United should account for its AFS investment. We can see that the fair value of the Masterwear bonds is less than amortized cost, so it is clear that the investment is impaired. Let's consider two alternative cases.

Case 1: If United intends to sell the bonds, or thinks it will have to sell the bonds before the fair value of the bonds can recover to amortized cost, United would make the following journal entry to write down the investment and recognize a loss in net income:

| December 31, 2024 | |
|-----------------------------|---------|
| Loss on impairment (NI) | 185,021 |
| Discount on bond investment | 185,021 |

By increasing the discount on bond investment, this journal entry reduces the amortized cost of the bonds to their fair value of \$486,276.

An added complication arises if United has already accounted for some of this decline in fair value by reducing the carrying value of the investment and including the unrealized loss in OCI. In that case, United will also have to record a reclassification adjustment to remove those effects from the balance sheet accounts, debiting the fair value adjustment and crediting OCI, just as it would for a loss recognized upon sale of an AFS investment.

If the fair value of the investment increases in the future, United will not be able to reverse that write-off. Rather, it will debit the fair value adjustment to show an increase in fair value

and credit OCI as an unrealized gain, just as it treats other unrealized gains on AFS investments.

Case 2: If United does *not* intend to sell the investment and does *not* believe it is more likely than not that it will have to sell the investment before fair value recovers, it will make the following journal entries:

| December 31, 2024 | | |
|-----------------------------|---------|---------|
| Credit loss expense | 120,497 | |
| Allowance for credit losses | | 120,497 |

| December 31, 2024 | | |
|--|--------|--------|
| Loss on AFS investment (unrealized, OCI) | 64,524 | |
| Fair value adjustment | | 64,524 |

With regard to the impairment, United is separately accounting for the credit loss and the noncredit loss. The credit loss reduces net income, and the noncredit loss reduces OCI. The allowance for credit losses and fair value adjustment are both contra accounts to the investment, and together reduce the carrying value of the bonds to their fair value of \$486,276. Going forward, United will adjust the allowance for credit losses up or down as credit losses increase or are recovered, and will recognize any remaining (noncredit loss) unrealized gains or losses on its AFS investments as it would normally.

You can see that for both cases, United carries its investment at fair value. They differ in how the impairment loss is reported. For case 1, the entire impairment loss reduces current-period earnings, but for case 2, only the credit loss reduces current-period earnings.

Companies are required to show AFS investment at fair value in the balance sheet and to present parenthetically the amortized cost basis and the allowance for credit losses. Let's consider how each of our two cases would be presented in Masterwear's 12/31/2024 balance sheet.

Case 1: In Case 1, United has reduced the amortized cost of its Masterwear investment to fair value. Therefore, United would show its Masterwear investment in the balance sheet as follows:

| | |
|--|-----------|
| AFS Investment (amortized cost: \$486,276) | \$486,276 |
|--|-----------|

Case 2: In Case 2, United has recognized both an allowance for credit losses as well as a fair value adjustment. It must disclose amortized cost and the allowance as well as fair value. Therefore, United would show its Masterwear investment in the balance sheet as follows:

AFS Investment (amortized cost: \$671,297, \$486,276
allowance for credit losses: \$120,497)

COVID-19: Accounting and Reporting Implications

 **Chapter 7** discussed that the *Coronavirus Aid, Relief, and Economic Security (CARES)* Act included a provision that enabled banks and some other financial institutions to avoid adopting the CECL approach to estimating credit losses between March 27, 2020 and December 31, 2020. That delay enabled banks to avoid recognizing large losses on outstanding receivables that they would have to recognize if applying CECL and focus on only those impairment losses that had already been incurred. CECL also requires considering forward-looking information that, given the COVID-19 pandemic, would suggest that additional losses were likely to occur in the future.

LO12–9 Discuss the primary differences between U.S. GAAP and IFRS with respect to investments.

International Financial Reporting Standards

Accounting for Impairments. Under *IFRS No. 9*, companies recognize impairments for debt investments that are accounted for at amortized cost (rather than fair value through net income) or at fair value through other comprehensive income (FVOCI).

The impairment is calculated using the ECL model discussed previously, and is measured either as the 12-month expected credit loss (if the credit risk on the investment has not increased significantly) or the lifetime expected credit loss (if the credit risk on the investment has increased significantly.) Companies can elect to always recognize lifetime credit losses, but only have to do so when a significant increase in credit loss has occurred. As in U.S. GAAP, IFRS allows recoveries of impairments to be recognized in earnings.

IFRS No. 9 requires companies to recognize changes in the ECL as impairment losses or recoveries of impairment losses in the income statement, but the offsetting entry depends on whether the investment is accounted for at amortized cost or FVOCI. If the debt investment is accounted for at amortized cost, the offsetting entry creates or adjusts an impairment allowance account that reduces the carrying value of the investment. However, if the investment is accounted for at FVOCI, the balance sheet already reflects the fair value of the investment. Therefore, the offsetting entry is to OCI, creating a “Reserve for credit losses” as a portion of AOCI. When the FVOCI investment is sold or matures, any accumulated amounts in that AOCI reserve are reclassified to net income.

Questions For Review of Key Topics

- Q 12-1** All investments in *debt* securities are classified for reporting purposes in one of three categories, and can be accounted for differently depending on the classification. What are these three categories?
- Q 12-2** When market rates of interest *rise* after a fixed-rate security is purchased, the value of the now-below-market, fixed-interest payments declines, so the market value of the investment falls. On the other hand, if market rates of interest *fall* after a fixed-rate security is purchased, the fixed-interest payments become relatively attractive, and the market value of the investment rises. Assuming these price changes are not viewed as giving rise to an other-than-temporary impairment, how are they reflected in the investment account for a security classified as held-to-maturity?
- Q 12-3** Does GAAP distinguish between fair values that are readily determinable from current market prices versus those needing to be calculated based on the company's own assumptions? Explain how a user will know about the reliability of the inputs used to determine fair value.
- Q 12-4** When a debt investment is acquired to be held for an unspecified period of time as opposed to being held to maturity, it is reported at the fair value of the investment securities on the reporting date. Why?
- Q 12-5** Reporting an investment at its fair value means adjusting its carrying amount for changes in fair value after its acquisition (or since the last reporting date if it was held at that time). Such changes are called unrealized holding gains and losses because they haven't yet been realized through the sale of the security. If the security is classified as available-for-sale, how are unrealized holding gains and losses typically reported?
- **Page 688**

- Q 12-6** What is "comprehensive income"? Its composition varies from company to company but may include which items related to available-for-sale investments that are not included in net income?
- Q 12-7** Why are holding gains and losses treated differently for trading securities and securities available-for-sale?
- Q 12-8** Western Die-Casting Company holds an investment in unsecured bonds of LGB Heating Equipment, Inc. When the investment was acquired, management's

intention was to hold the bonds for resale. Now management has the positive intent and ability to hold the bonds to maturity. How should Western account for the reclassification of the investment?

Q 12-9 Is it necessary for an investor to report individual amounts for the three categories of investments—held-to-maturity, available-for-sale, or trading—in the financial statements? What information should be disclosed about these investments?

IFRS

Q 12-10 Under *IFRS No. 9*, what reporting categories are used to account for debt investments?

IFRS

Q 12-11 Under *IFRS No. 9*, which reporting categories are used to account for equity investments when the investor lacks the ability to significantly influence the operations of the investee?

Q 12-12 What is the effect of a company electing the fair value option with respect to a held-to-maturity investment or an available-for-sale investment?

IFRS

Q 12-13 Do U.S. GAAP and IFRS differ in the amount of flexibility that companies have in electing the fair value option? Explain.

Q 12-14 Under what circumstances is the equity method used to account for an investment in stock?

Q 12-15 The equity method has been referred to as a *one-line consolidation*. What might prompt this description?

Q 12-16 In the application of the equity method, how should dividends from the investee be accounted for? Why?

Q 12-17 The fair value of depreciable assets of Penner Packaging Company exceeds their book value by \$12 million. The assets' average remaining useful life is 10 years. They are being depreciated by the straight-line method. Finest Foods Industries buys 40% of Penner's common shares. When adjusting investment revenue and the investment by the equity method, how will the situation described affect those two accounts?

Q 12-18 Superior Company owns 40% of the outstanding stock of Bernard Company. During 2024, Bernard paid a \$100,000 cash dividend on its common shares. What effect did this dividend have on Superior's 2024 financial statements?

Q 12-19 Sometimes an investor's level of influence changes, making it necessary to change from the equity method to another method. How should the investor account for this change in accounting method?

IFRS

Q 12-20 How does IFRS differ from U.S. GAAP with respect to using the equity method?

Q 12-21 What is the effect of a company electing the fair value option with respect to an investment that otherwise would be accounted for using the equity method?

Q 12-22 Define a financial instrument. Provide three examples of current liabilities that represent financial instruments.

Q 12-23 Some financial instruments are called derivatives. Why?

Q 12-24 (Based on Appendix 12A) Northwest Carburetor Company established a fund in 2021 to accumulate money for a new plant scheduled for construction in 2024. How should this special purpose fund be reported in Northwest's balance sheet?

Q 12-25 (Based on Appendix 12A) Whole-life insurance policies typically can be surrendered while the insured is still alive in exchange for a determinable amount of money called the *cash surrender value*. When a company buys a life insurance policy on the life of a key officer to protect the company against the untimely loss of a valuable resource in the event the officer dies, how should the company account for the cash surrender value?

Q 12-26 (Based on Appendix 12B) When market rates of interest *rise* after a fixed-rate security is purchased, the value of the now-below-market, fixed-interest payments declines, so the market value of the investment falls. How would that drop in fair value be reflected in the investment account for a security classified as HTM? Would your answer change if the drop in fair value was due to worsened financial conditions at the investee?

Q 12-27 (Based on Appendix 12B) Answer Q 12-26 but assume that the investment is classified as AFS.

IFRS

Q 12-28 (Based on Appendix 12B) How does IFRS differ from current U.S. GAAP with respect to accounting for impairments?

Brief Exercises

BE 12-1 Securities held-to-maturity; bond investment; effective interest **LO12-1**, **LO12-2**

Lance Brothers Enterprises acquired \$720,000 of 3% bonds, dated July 1, on July 1, 2024, as a long-term investment. Management has the positive intent and ability to hold the bonds until maturity. The market interest rate (yield) was 4% for bonds of similar risk and maturity. Lance Brothers paid \$600,000 for the investment in bonds and will receive interest semiannually on June 30 and December 31. Prepare the journal entries (a) to record Lance Brothers' investment in the bonds on July 1, 2024 and (b) to record interest on December 31, 2024, at the effective (market) rate.

Page 689

BE 12-2 Trading securities; financial statement effects **LO12-3**

S&L Financial buys and sells securities expecting to earn profits on short-term differences in price. Assume that on December 27, 2024, S&L purchased **Coca-Cola** bonds at par for \$875,000 and sold the bonds on January 3, 2025, for \$880,000. At December 31, the bonds had a fair value of \$873,000. What pretax amounts did S&L include in its 2024 and 2025 net income as a result of this investment (ignoring interest)?

BE 12-3 Trading securities **LO12-3**

For the **Coca-Cola** bonds described in BE 12-2, prepare journal entries to record (a) any unrealized gains or losses occurring in 2024 and (b) the sale of the bonds in 2025.

BE 12-4 Available-for-sale securities; financial statement effects **LO12-4**

S&L Financial buys and sells securities which it classifies as available-for-sale. Assume that on December 27, 2024, S&L purchased **Coca-Cola** bonds at par for \$875,000 and sold the bonds on January 3, 2025, for \$880,000. At December 31, the bonds had a fair value of

\$873,000, and S&L has the intent and ability to hold the investment until fair value recovers. What pretax amounts did S&L include in its 2024 and 2025 net income as a result of this investment?

BE 12–5 Available-for-sale securities **LO12–4**

For the **Coca-Cola** bonds described in BE 12–4, prepare journal entries to record (a) any unrealized gains or losses occurring in 2024 and (b) the sale of the bonds in 2025, including recognition of any unrealized gains in 2025 prior to sale and reclassification of amounts out of OCI.

BE 12–6 Fair value option; available-for-sale securities; financial statement effects **LO12–8**

S&L Financial buys and sells securities that it typically classifies as available-for-sale. Assume that on December 27, 2024, S&L purchased **Coca-Cola** bonds at par for \$875,000 and sold the bonds on January 3, 2025, for \$880,000. At December 31, the bonds had a fair value of \$873,000. When it purchased the Coca-Cola bonds, S&L Financial decided to elect the fair value option for this investment. What pretax amounts did S&L include in its 2024 and 2025 net income as a result of this investment (ignoring interest)?

BE 12–7 Available-for-sale securities; financial statement effects **LO12–4**

Assume that for several years Fister Links Products has held **Microsoft** bonds, considered by the company to be securities available-for-sale. The bonds were acquired at a cost of \$500,000. At the end of 2024, their fair value was \$610,000 and their amortized cost was \$510,000. At the end of 2025, their fair value was \$600,000 and their amortized cost was \$520,000. At what amount will the investment be reported in the December 31, 2025, balance sheet? What adjusting entry is required to accomplish this objective (ignore interest)?

BE 12–8 Debt investments under IFRS; financial statement effects **LO12–4**, **LO12–9**

Fowler Inc. purchased \$75,000 of bonds on January 1, 2024. The bonds pay interest semiannually and mature in 20 years, at which time the \$75,000 principal will be paid. The bonds do not pay any amounts other than interest and principal. Fowler's intention is to collect contractual cash flows and eventually sell the bonds within the next couple of years if the price is right. During 2024, the fair value of the bonds increased to \$80,000. Fowler reports investments under *IFRS No. 9*. How much unrealized gain or loss will Fowler include in 2024 net income with respect to the bonds?

BE 12-9 Debt investments under IFRS; financial statement effects  **LO12-2**,  **LO12-9**

IFRS

Assume the same facts as in BE 12-8, but that Fowler intends to hold the bonds until maturity. How much unrealized gain or loss would Fowler include in 2024 net income with respect to the bonds?

BE 12-10 Equity securities; financial statement effects  **LO12-5**

Assume that Adams Industries holds 40,000 shares of **FedEx** common stock, which is not a large enough ownership interest to allow Adams to exercise significant influence over FedEx. On December 31, 2024, and December 31, 2025, the market value of the stock is \$95 and \$100 per share, respectively. What is the appropriate reporting category for this investment and at what amount will it be reported in the 2025 balance sheet?

BE 12-11 Equity investments and dividends; financial statement effects  **LO12-5**

Turner Company owns 10% of the outstanding stock of ICA Company. During the current year, ICA paid a \$5 million cash dividend on its common shares. Ignore income taxes. What effect did this dividend have on Turner's 2024 financial statements? Explain the reasoning for this effect.

BE 12-12 Equity method and dividends; financial statement effects  **LO12-6**

Turner Company owns 40% of the outstanding stock of ICA Company. During the current year, ICA paid a \$5 million cash dividend on its common shares. Ignore income taxes. What effect did this dividend have on Turner's 2024 financial statements? Explain the reasoning for this effect.

BE 12–13 Equity method; financial statement effects  **LO12–6**,  **LO12–7**

The fair value of Wallis, Inc.'s depreciable assets exceeds their book value by \$50 million. The assets have an average remaining useful life of 15 years and are being depreciated by the straight-line method. Park Industries buys 30% of Wallis's common shares. When Park adjusts its investment revenue and the investment by the equity method, how will the situation described affect those two accounts?

BE 12–14 Equity method investments; financial statement effects  **LO12–6**,  **LO12–9**

Kim Company bought 30% of the shares of Phelps, Inc., at the start of 2024. Kim paid \$10 million for the shares. Thirty percent of the book value of Phelps's net assets is \$8 million, and the difference of \$2 million is due to land that Phelps owns that has appreciated in value. During 2024, Phelps reported net income of \$1 million and paid a cash dividend of \$0.5 million. At what amount does Kim carry the Phelps investment on its balance sheet as of December 31, 2024?

BE 12–15 Change in principle; change to the equity method; disclosures  **LO12–7**

At the beginning of 2024, Pioneer Products' ownership interest in the common stock of LLB Co. increased to the point that it became appropriate to begin using the equity method of accounting for the investment. The balance in the investment account was \$44 million at the time of the change but would have been \$56 million if Pioneer had used the equity method since first investing in LLB. How should Pioneer report the change? Would your answer be the same if Pioneer is changing *from* the equity method rather than *to* the equity method?

BE 12–16 Fair value option; equity method investments

LO12–8

Turner Company purchased 40% of the outstanding stock of ICA Company for \$10,000,000 on January 2, 2024. Turner elects the fair value option to account for the investment. During 2024, ICA reports \$750,000 of net income, and on December 30 pays a dividend of \$500,000. On December 31, 2024, the fair value of Turner’s investment has increased to \$11,500,000. What journal entries would Turner make to account for this investment during 2024, assuming Turner will account for the investment using the fair value through net income approach?

BE 12–17 HTM investments and impairment; financial statement effects (Appendix 12B) LO12–2, LO12–8

LED Corporation owns \$1,000,000 of Branch Pharmaceuticals bonds and classifies its investment as securities held-to-maturity. The market price of Branch’s bonds fell by \$450,000 due to concerns about one of the company’s principal drugs. The concerns were justified when the FDA banned the drug. LED views \$200,000 of the \$450,000 loss as related to *credit* losses, and the other \$250,000 as *noncredit* losses. LED thinks it is more likely than not that it will have to sell the investment before fair value recovers. What journal entries should LED record to account for any credit or noncredit losses in the current period? How should the decline affect net income and comprehensive income?

BE 12–18 AFS investments and impairment; financial statement effects (Appendix 12B) LO12–4, LO12–8

LED Corporation owns \$1,000,000 of Branch Pharmaceuticals bonds and classifies its investment as securities available-for-sale. The market price of Branch’s bonds fell by \$450,000 due to concerns about one of the company’s principal drugs. The concerns were justified when the FDA banned the drug. \$100,000 of that decline in value already had been included in OCI as a temporary unrealized loss in a prior period. LED views \$200,000 of the \$450,000 loss as related to *credit* losses, and the other \$250,000 as *noncredit* losses. LED thinks it is more likely than not that it will have to sell the investment before fair value recovers. What journal entries should LED record to account for any credit or noncredit losses in the current period? How should the decline affect net income and comprehensive income?

BE 12–19 AFS investments and impairment; financial statement effects (📄 **Appendix 12B**) 📄 **LO12–4**, 📄 **LO12–8**

Assume the same facts as in BE 12–18, but that LED does not plan to sell the investment and does not think it is more likely than not that it will have to sell the investment before fair value recovers. What journal entries should LED record to account for the decline in market value in the current period? How should the decline affect net income and comprehensive income?

BE 12–20 Recovery of impairments under IFRS (📄 **Appendix 12B**) 📄 **LO12–3**, 📄 **LO12–8**, 📄 **LO12–9**

Wickum Corporation reports under IFRS, and recognized a \$500,000 impairment of an HTM debt investment in Right Corporation. Subsequently, the credit loss for Wickum's investment decreased by \$300,000. How would Wickum account for that change?

BE 12–21 Recovery of impairments under IFRS (📄 **Appendix 12B**) 📄 **LO12–3**, 📄 **LO12–8**, 📄 **LO12–9**

Assume the same facts as in BE 12–20, except that Wickum accounts for the investment as FVOCI rather than HTM. How would Wickum record the \$300,000 decrease in credit loss?

Exercises

E 12–1 Securities held-to-maturity; bond investment; effective interest, discount; financial statement effects **LO12–1**

Tanner-UNF Corporation acquired as a long-term investment \$240 million of 6% bonds, dated July 1, on July 1, 2024. Company management has the positive intent and ability to hold the bonds until maturity. The market interest rate (yield) was 8% for bonds of similar risk and maturity. Tanner-UNF paid \$200 million for the bonds. The company will receive interest semiannually on June 30 and December 31. As a result of changing market conditions, the fair value of the bonds at December 31, 2024, was \$210 million.

Required:

1. Prepare the journal entry to record Tanner-UNF's investment in the bonds on July 1, 2024.
2. Prepare the journal entries by Tanner-UNF to record interest on December 31, 2024, at the effective (market) rate.
3. At what amount will Tanner-UNF report its investment in the December 31, 2024, balance sheet? Why?
4. Suppose Moody's bond rating agency downgraded the risk rating of the bonds motivating Tanner-UNF to sell the investment on January 2, 2025, for \$190 million. Prepare the journal entry to record the sale.

E 12–2 Securities held-to-maturity; bond investment; effective interest, premium; financial statement effects **LO12–1**

Mills Corporation acquired as a long-term investment \$240 million of 6% bonds, dated July 1, on July 1, 2024. Company management has the positive intent and ability to hold the bonds until maturity. The market interest rate (yield) was 4% for bonds of similar risk and maturity. Mills paid \$280 million for the bonds. The company will receive interest semiannually on June 30 and December 31. As a result of changing market conditions, the fair value of the bonds at December 31, 2024, was \$270 million.

Required:

1. Prepare the journal entry to record Mills' investment in the bonds on July 1, 2024.
2. Prepare the journal entry by Mills to record interest on December 31, 2024, at the effective (market) rate.
3. At what amount will Mills report its investment in the December 31, 2024, balance sheet? Why?
4. Suppose Moody's bond rating agency upgraded the risk rating of the bonds, and Mills decided to sell the investment on January 2, 2025, for \$290 million. Prepare the journal entry to record the sale.

E 12-3 Securities held-to-maturity  **LO12-1**

FF&T Corporation is a confectionery wholesaler that frequently buys and sells securities to meet various investment objectives. The following selected transactions relate to FF&T's investment activities during the last two months of 2024. At November 1, FF&T held \$48 million of 20-year, 10% bonds of Convenience, Inc., purchased May 1, 2024, at face value. Management has the positive intent and ability to hold the bonds until maturity. FF&T's fiscal year ends on December 31.

- Nov. 1** Received semiannual interest of \$2.4 million from the Convenience, Inc., bonds.
- Dec. 1** Purchased 12% bonds of Facsimile Enterprises at their \$30 million face value, to be held until they mature in 2027. Semiannual interest is payable May 31 and November 30.
- 31** Purchased U.S. Treasury bills to be held until they mature in two months for \$8.9 million.
- 31** Recorded any necessary adjusting entry(s) relating to the investments.

The fair values of the investments at December 31 were:

| | |
|-----------------------------|----------------|
| Convenience bonds | \$44.7 million |
| Facsimile Enterprises bonds | 30.9 million |
| U.S. Treasury bills | 8.9 million |

Required:

Prepare the appropriate journal entry for each transaction or event.

E 12-4 FASB codification research LO12-2

Access the FASB Accounting Standards Codification at the FASB website (www.fasb.org) and select Basic View for free access.

Required:

1. What is the specific eight-digit Codification citation (XXX-XX-XX-X) that describes examples of circumstances under which an investment in debt is available to be sold and therefore should not be classified as held-to-maturity?
2. List the circumstances and conditions.

E 12-5 Trading securities LO12-1, LO12-3

[This is a variation of E 12-1 modified to focus on trading securities.]

Tanner-UNF Corporation acquired as an investment \$240 million of 6% bonds, dated July 1, on July 1, 2024. Company management is holding the bonds in its trading portfolio. The market interest rate (yield) was 8% for bonds of similar risk and maturity. Tanner-UNF paid \$200 million for the bonds. The company will receive interest semiannually on June 30 and December 31. As a result of changing market conditions, the fair value of the bonds at December 31, 2024, was \$210 million.

Required:

1. Prepare the journal entry to record Tanner-UNF's investment in the bonds on July 1, 2024.
2. Prepare the journal entry by Tanner-UNF to record interest on December 31, 2024, at the effective (market) rate.
3. Prepare any additional journal entry necessary for Tanner-UNF to report its investment in the December 31, 2024, balance sheet.
4. Suppose Moody's bond rating agency downgraded the risk rating of the bonds motivating Tanner-UNF to sell the investment on January 2, 2025, for \$190 million. Prepare the journal entries required on the date of sale.

E 12–6 Trading securities LO12–1, LO12–3

[This is a variation of E 12–2 modified to focus on trading securities.]

Mills Corporation acquired as an investment \$240 million of 6% bonds, dated July 1, on July 1, 2024. Company management is holding the bonds in its trading portfolio. The market interest rate (yield) was 4% for bonds of similar risk and maturity. Mills paid \$280 million for the bonds. The company will receive interest semiannually on June 30 and December 31. As a result of changing market conditions, the fair value of the bonds at December 31, 2024, was \$270 million.

Required:

1. Prepare the journal entry to record Mills' investment in the bonds on July 1, 2024.
2. Prepare the journal entry by Mills to record interest on December 31, 2024, at the effective (market) rate.
3. Prepare the journal entry by Mills to record any fair value adjustment necessary for the year ended December 31, 2024.
4. Suppose Moody's bond rating agency upgraded the risk rating of the bonds, and Mills decided to sell the investment on January 2, 2025, for \$290 million. Prepare the journal entries required on the date of sale.

E 12–7 Various transactions relating to trading securities; financial statement effects LO12–1, LO12–3

Rantzow-Lear Company buys and sells debt securities expecting to earn profits on short-term differences in price, and holds these investments in its trading portfolio. The company's fiscal year ends on December 31. The following selected transactions relating to Rantzow-Lear's trading account occurred during December 2024 and the first week of 2025.

2024

- Dec. 17 Purchased 100 Grocers' Supply Corporation bonds at par for \$350,000.**
- 28 Received interest of \$2,000 from the Grocers' Supply Corporation bonds.**
- 31 Recorded any necessary adjusting entry relating to the Grocers' Supply Corporation bonds. The market price of the bond was \$4,000 per bond.**

2025

Jan. 5 Sold the Grocers' Supply Corporation bonds for \$395,000.

Required:

1. Prepare the appropriate journal entry for each transaction.
2. Indicate any amounts that Rantzow-Lear Company would report in its 2024 balance sheet and income statement as a result of this investment. Ignore income taxes.

E 12-8 FASB codification research; disclosures  **LO12-3**,
 **LO12-4**,  **LO12-6**,  **LO12-7**

Access the *FASB's Codification Research System* at the FASB website www.fasb.org and select Basic View for free access.

Required:

Indicate the specific Codification citation (XXX-XX-XX-X or XXX-XX-XX-XX) for accounting for each of the following items:

1. Unrealized holding gains for trading securities should be included in earnings.
2. Under the equity method, the investor accounts for its share of the earnings or losses of the investee in the periods they are reported by the investee in its financial statements.
3. Transfers of securities between categories are accounted for at fair value.
4. Disclosures for available-for-sale securities should include total losses for securities that have net losses included in accumulated other comprehensive income.

E 12-9 Securities available-for-sale; adjusting entries; financial statement effects  **LO12-4**

Loreal-American Corporation purchased several marketable securities during 2024. At December 31, 2024, the company had the investments in bonds listed below. None was held at the last reporting date, December 31, 2023, and all are considered securities available-for-sale.

| | Cost | Fair Value | Unrealized Holding Gain (Loss) |
|-------------------|---------------------|---------------------|--------------------------------|
| Short term: | | | |
| Blair, Inc. | \$ 480,000 | \$ 405,000 | \$ (75,000) |
| ANC Corporation | <u>450,000</u> | <u>480,000</u> | <u>30,000</u> |
| Totals | <u>\$ 930,000</u> | <u>\$ 885,000</u> | <u>\$ (45,000)</u> |
| Long term: | | | |
| Drake Corporation | \$ 480,000 | \$ 560,000 | \$ 80,000 |
| Aaron Industries | <u>720,000</u> | <u>660,000</u> | <u>(60,000)</u> |
| Totals | <u>\$ 1,200,000</u> | <u>\$ 1,220,000</u> | <u>\$ 20,000</u> |

Required:

1. Prepare appropriate adjusting entry at December 31, 2024.
2. What amounts would be reported in the income statement at December 31, 2024, as a result of the adjusting entry?

E 12–10 Available-for-sale securities  **LO12–1**,  **LO12–4**

[This is a variation of E 12-1 modified to focus on available-for-sale securities.]

Tanner-UNF Corporation acquired as a long-term investment \$240 million of 6% bonds, dated July 1, on July 1, 2024. Company management has classified the bonds as an available-for-sale investment. The market interest rate (yield) was 8% for bonds of similar risk and maturity. Tanner-UNF paid \$200 million for the bonds. The company will receive interest semiannually on June 30 and December 31. As a result of changing market conditions, the fair value of the bonds at December 31, 2024, was \$210 million.

Required:

1. Prepare the journal entry to record Tanner-UNF's investment in the bonds on July 1, 2024.
2. Prepare the journal entry by Tanner-UNF to record interest on December 31, 2024, at the effective (market) rate.
3. Prepare any additional journal entry necessary for Tanner-UNF to report its investment in the December 31, 2024, balance sheet.

4. Suppose Moody's bond rating agency downgraded the risk rating of the bonds motivating Tanner-UNF to sell the investment on January 2, 2025, for \$190 million. Prepare the journal entries necessary to record the sale, including updating the fair-value adjustment, recording any reclassification adjustment, and recording the sale.

E 12-11 Available-for-sale securities; financial statement effects

 **LO12-1**,  **LO12-4**

[This is a variation of E 12-2 focusing on available-for-sale securities.]

Mills Corporation acquired as a long-term investment \$240 million of 6% bonds, dated July 1, on July 1, 2024. Company management has classified the bonds as an available-for-sale investment. The market interest rate (yield) was 4% for bonds of similar risk and maturity. Mills paid \$280 million for the bonds. The company will receive interest semiannually on June 30 and December 31. As a result of changing market conditions, the fair value of the bonds at December 31, 2024, was \$270 million.

Required:

1. Prepare the journal entry to record Mills' investment in the bonds on July 1, 2024.
2. Prepare the journal entry by Mills to record interest on December 31, 2024, at the effective (market) rate.
3. At what amount will Mills report its investment in the December 31, 2024, balance sheet?
4. Suppose Moody's bond rating agency upgraded the risk rating of the bonds, and Mills decided to sell the investment on January 2, 2025, for \$290 million. Prepare the journal entries required on the date of sale.

E 12-12 Available-for-sale securities; financial statement effects

 **LO12-1**,  **LO12-4**

Colah Company purchased \$1 million of Jackson, Inc., 5% bonds at par on July 1, 2024, with interest paid semi-annually. Colah determined that it should account for the bonds as an available-for-sale investment. At December 31, 2024, the Jackson bonds had a fair value of \$1.2 million. Colah sold the Jackson bonds on July 1, 2025 for \$900,000.

Required:

1. Prepare Colah's journal entries to record

- a. The purchase of the Jackson bonds on July 1.
 - b. Interest revenue for the last half of 2024.
 - c. Any year-end 2024 adjusting entries.
 - d. Interest revenue for the first half of 2025.
 - e. Any entries necessary upon sale of the Jackson bonds on July 1, 2025, including updating the fair-value adjustment, recording any reclassification adjustment, and recording the sale.
2. Fill out the following table to show the effect of the Jackson bonds on Colah's net income, other comprehensive income, and comprehensive income for 2024, 2025, and cumulatively over 2024 and 2025.

| | 2024 | 2025 | Total |
|-----------------------------|------|------|-------|
| Net Income | | | |
| OCI | | | |
| Comprehensive Income | | | |

E 12-13 Classification of securities; adjusting entries **LO12-4**

On February 18, 2024, Union Corporation purchased 600 **IBM** bonds as a long-term investment at their face value for a total of \$600,000. Union will hold the bonds indefinitely, and may sell them if their price increases sufficiently. On December 31, 2024, and December 31, 2025, the market value of the bonds was \$580,000 and \$610,000, respectively.

Required:

1. What is the appropriate reporting category for this investment? Why?
2. Prepare the adjusting entry for December 31, 2024.
3. Prepare the adjusting entry for December 31, 2025.

E 12-14 Various investment securities; financial statement effects **LO12-2**, **LO12-3**, **LO12-4**

At December 31, 2024, Hull-Meyers Corp. had the following investments that were purchased during 2024, its first year of operations:

| | Amortized Cost | Fair Value |
|---|--------------------|--------------------|
| Trading Securities: | | |
| Security A | \$ 900,000 | \$ 910,000 |
| Security B | <u>105,000</u> | <u>100,000</u> |
| Totals | <u>\$1,005,000</u> | <u>\$1,010,000</u> |
| Securities Available-for-Sale: | | |
| Security C | \$ 700,000 | \$ 780,000 |
| Security D | <u>900,000</u> | <u>915,000</u> |
| Totals | <u>\$1,600,000</u> | <u>\$1,695,000</u> |
| Securities to Be Held-to-Maturity: | | |
| Security E | \$ 490,000 | \$ 500,000 |
| Security F | <u>615,000</u> | <u>610,000</u> |
| Totals | <u>\$1,105,000</u> | <u>\$1,110,000</u> |

No investments were sold during 2024. All securities except Security D and Security F are considered short-term investments. None of the fair value changes is considered permanent.

Required:

Determine the following amounts at December 31, 2024.

1. Investments reported as current assets.
2. Investments reported as noncurrent assets.
3. Unrealized gain (or loss) recognized in net income.
4. Unrealized gain (or loss) in accumulated other comprehensive income in shareholders' equity.

E 12–15 Equity investments; fair value through net income

LO12–5

On March 31, 2024, Chow Brothers, Inc., bought 10% of KT Manufacturing's capital stock for \$50 million. KT's net income for the year ended December 31, 2024, was \$80 million. The fair value of the shares held by Chow was \$35 million at December 31, 2024. KT did not declare or pay a dividend during 2024.

Required:

1. Prepare all appropriate journal entries related to the investment during 2024.
2. Assume that Chow sold the stock on January 20, 2025, for \$30 million. Prepare the journal entry Chow would use to record the sale.

E 12–16 Equity investments; fair value through net income

 **LO12–5**

On January 2, 2024, Sanborn Tobacco Inc. bought 5% of Jackson Industry’s capital stock for \$90 million. Jackson Industry’s net income for the year ended December 31, 2024, was \$120 million. The fair value of the shares held by Sanborn was \$98 million at December 31, 2024. During 2024, Jackson declared a dividend of \$60 million.

Required:

1. Prepare all appropriate journal entries related to the investment during 2024.
2. Assume that Sanborn sold the stock on January 2, 2025 for \$110 million. Prepare the journal entry Sanborn would use to record the sale.

E 12–17 Equity investments; fair value through net income

 **LO12–5**

The accounting records of Jamaican Importers, Inc., at January 1, 2024, included the following:

Assets:

| | |
|--|-------------------------|
| Investment in IBM common shares | \$ 1,345,000 |
| Less: Fair value adjustment | <u>(145,000)</u> |
| | \$ 1,200,000 |

No changes occurred during 2024 in the investment portfolio.

Required:

Prepare appropriate adjusting entry(s) at December 31, 2024, assuming the fair value of the IBM common shares was

1. \$1,175,000

2. \$1,275,000
3. \$1,375,000

E 12–18 Equity investments; fair value through net income; financial statement effects  **LO12–5**

The investments of Harlon Enterprises included the following cost and fair value amounts (\$ in millions):

| Equity Investments | Cost | Fair Value, Dec. 31 | |
|----------------------|--------------|---------------------|--------------|
| | | 2024 | 2025 |
| A Corporation shares | \$ 20 | \$ 14 | na |
| B Corporation shares | 35 | 35 | \$ 37 |
| C Corporation shares | 15 | na | 14 |
| D Industries shares | <u>45</u> | <u>46</u> | <u>50</u> |
| Totals | \$115 | \$95 | \$101 |

Harlon accounts for its equity investment portfolio at fair value through net income. Page 696
 Harlon sold its holdings of A Corporation shares on June 1, 2025, for \$15 million.
 On September 12, it purchased the C Corporation shares.

Required:

1. What is the effect of the sale of the A Corporation shares and the purchase of the C Corporation shares on Harlon’s 2025 pretax earnings?
2. At what amount should Harlon’s securities equity investment portfolio be reported in its 2025 balance sheet?

E 12–19 Investment securities and equity method investments compared  **LO12–5**,  **LO12–6**

As a long-term investment, Painters’ Equipment Company purchased 20% of AMC Supplies Inc.’s 400,000 shares for \$480,000 at the beginning of the fiscal year of both companies. On the purchase date, the fair value and book value of AMC’s net assets were equal. During the year, AMC earned net income of \$250,000 and distributed cash dividends of 25 cents per share. At year-end, the fair value of the shares is \$505,000.

Required:

1. Assume no significant influence was acquired. Prepare the appropriate journal entries from the purchase through the end of the year.
2. Assume significant influence was acquired. Prepare the appropriate journal entries from the purchase through the end of the year.

E 12–20 Equity method; purchase; investee income; dividends
 **LO12–6**

As a long-term investment at the beginning of the 2024 fiscal year, Florists International purchased 30% of Nursery Supplies Inc.'s 8 million shares for \$56 million. The fair value and book value of the shares were the same at that time. During the year, Nursery Supplies earned net income of \$40 million and distributed cash dividends of \$1.25 per share. At the end of the year, the fair value of the shares is \$52 million.

Required:

Prepare the appropriate journal entries from the purchase through the end of the year.

E 12–21 Error corrections; equity method investment
 **LO12–6**,  **LO12–7**

On December 12, 2024, an equity investment costing \$80,000 was sold for \$100,000. The investment was carried in the balance sheet at \$75,000, and was accounted for under the equity method. An error was made in which the total of the sale proceeds was credited to the investment account.

Required:

1. Prepare the journal entry to correct the error assuming it is discovered before the books are adjusted or closed in 2024. (Ignore income taxes.)
2. Prepare the journal entry to correct the error assuming it is not discovered until early 2025. (Ignore income taxes.)

E 12–22 Equity method; adjustment for depreciation
 **LO12–6**,  **LO12–7**

Fizer Pharmaceutical paid \$68 million on January 2, 2024, for 4 million shares of Carne Cosmetics common stock. The investment represents a 25% interest in the net assets of Carne and gave Fizer the ability to exercise significant influence over Carne's operations. Fizer received dividends of \$1 per share on December 21, 2024, and Carne reported net income of \$40 million for the year ended December 31, 2024. The fair value of Carne's common stock at December 31, 2024, was \$18.50 per share.

- The book value of Carne's net assets was \$192 million.
- The fair value of Carne's depreciable assets exceeded their book value by \$32 million. These assets had an average remaining useful life of eight years.
- The remainder of the excess of the cost of the investment over the book value of net assets purchased was attributable to goodwill.

Required:

Prepare all appropriate journal entries related to the investment during 2024.

E 12–23 Equity method; financial statement effects  **LO12–6,**
 **LO12–7**

On January 1, 2024, Cameron Inc. bought 20% of the outstanding common stock of Lake Construction Company for \$300 million cash, giving Cameron the ability to exercise significant influence over Lake's operations. At the date of acquisition of the stock, Lake's net assets had a fair value of \$900 million. Its book value was \$800 million. The difference was attributable to the fair value of Lake's buildings and its land exceeding book value, each accounting for one-half of the difference. Lake's net income for the year ended December 31, 2024, was \$150 million. During 2024, Lake declared and paid cash dividends of \$30 million. The buildings have a remaining life of 10 years.

Required:

1. Prepare all appropriate journal entries related to the investment during 2024, assuming Cameron accounts for this investment by the equity method.
2. Determine the amounts to be reported by Cameron:
 - a. As an investment in Cameron's 2024 balance sheet.
 - b. As net investment revenue in the income statement.
 - c. Among investing activities in the statement of cash flows.

E 12–24 Equity method, partial year; financial statement effects **LO12–6**,  **LO12–7**

On July 1, 2024, Gupta Corporation bought 25% of the outstanding common stock of VB Company for \$100 million cash, giving Gupta the ability to exercise significant influence over VB's operations. At the date of acquisition of the stock, VB's net assets had a total fair value of \$350 million and a book value of \$220 million. Of the \$130 million difference, \$20 million was attributable to the appreciated value of inventory that was sold during the last half of 2024, \$80 million was attributable to buildings that had a remaining depreciable life of 10 years, and \$30 million related to equipment that had a remaining depreciable life of five years. Between July 1, 2024, and December 31, 2024, VB earned net income of \$32 million and declared and paid cash dividends of \$24 million.

Required:

1. Prepare all appropriate journal entries related to the investment during 2024, assuming Gupta accounts for this investment by the equity method.
2. Determine the amounts to be reported by Gupta:
 - a. As an investment in Gupta's December 31, 2024, balance sheet.
 - b. As net investment revenue or loss in Gupta's 2024 income statement.
 - c. Among investing activities in Gupta's 2024 statement of cash flows.

E 12–25 Fair value option; held-to-maturity investments; financial statement effects  **LO12–1**,  **LO12–2**,  **LO12–3**,  **LO12–8**

[This is a variation of E 12-1 modified to focus on the fair value option.]

Tanner-UNF Corporation acquired as a long-term investment \$240 million of 6% bonds, dated July 1, on July 1, 2024. Company management has the positive intent and ability to hold the bonds until maturity, but when the bonds were acquired, Tanner-UNF decided to elect the fair value option for accounting for its investment. The market interest rate (yield) was 8% for bonds of similar risk and maturity. Tanner-UNF paid \$200 million for the bonds. The company will receive interest semiannually on June 30 and December 31. As a result of

changing market conditions, the fair value of the bonds at December 31, 2024, was \$210 million.

Required:

1. Would this investment be classified on Tanner-UNF's balance sheet as held-to-maturity securities, trading securities, available-for-sale securities, significant-influence investments, or other? Would it be reported at amortized cost or fair value?
2. Prepare the journal entry to record Tanner-UNF's investment in the bonds on July 1, 2024.
3. Prepare the journal entries by Tanner-UNF to record interest on December 31, 2024, at the effective (market) rate.
4. Prepare any journal entry necessary to recognize fair value changes as of December 31, 2024.
5. At what amount will Tanner-UNF report its investment in the December 31, 2024, balance sheet? Why?
6. Suppose Moody's bond rating agency downgraded the risk rating of the bonds motivating Tanner-UNF to sell the investment on January 2, 2025, for \$190 million. Prepare the journal entries required on the date of sale.

E 12–26 Fair value option; available-for-sale investments; financial statement effects  **LO12–2**,  **LO12–3**,  **LO12–8**

[This is a variation of E 12-12 modified to focus on the fair value option.]

Colah Company purchased \$1 million of Jackson, Inc., 5% bonds at their face amount on July 1, 2024, with interest paid semi-annually. The bonds mature in 20 years but Colah planned to keep them for less than three years, and classified them as available for sale investments. When the bonds were acquired Colah decided to elect the fair value option for accounting for its investment. At December 31, 2024, the Jackson bonds had a fair value of \$1.2 million. Colah sold the Jackson bonds on July 1, 2025 for \$900,000.

Required:

1. Prepare Colah's journal entries to record
 - a. The purchase of the Jackson bonds on July 1.
 - b. Interest revenue for the last half of 2024.

- c. Any year-end 2024 adjusting entries.
 - d. Interest revenue for the first half of 2025.
 - e. Any entry or entries necessary upon sale of the Jackson bonds on July 1, 2025.
2. Fill out the following table to show the effect of the Jackson bonds on Colah's net income, other comprehensive income, and comprehensive income for 2024, 2025, and cumulatively over 2024 and 2025.

| | 2024 | 2025 | Total |
|-----------------------------|------|------|-------|
| Net Income | | | |
| OCI | | | |
| Comprehensive Income | | | |

E 12–27 Fair value option; equity method investments; financial statement effects  **LO12–6**,  **LO12–8**

[This is a variation of E 12–20 modified to focus on the fair value option.]

As a long-term investment at the beginning of the 2024 fiscal year, Florists International purchased 30% of Nursery Supplies Inc.'s 8 million shares of capital stock for \$56 million. The fair value and book value of the shares were the same at that time. The company realizes that this investment typically would be accounted for under the equity method, but instead chooses to measure the investment at fair value. During the year, Nursery Supplies reported net income of \$40 million and distributed cash dividends of \$1.25 per share. At the end of the year, the fair value of the shares is \$52 million.

Required:

1. Would this investment be classified on Florists' balance sheet as held-to-maturity securities, trading securities, available-for-sale securities, significant influence investments, or other? Explain.
2. Prepare all appropriate journal entries related to the investment during 2024, under the fair value option, and in a manner similar to what Florists would use for investments in equity securities for which it does not have significant influence.
3. Indicate the effect of this investment on 2024 income before taxes.

E 12–28 Life insurance policy (Appendix 12A)

Edible Chemicals Corporation owns a \$4 million whole life insurance policy on the life of its CEO, naming Edible Chemicals as beneficiary. The annual premiums are \$70,000 and are payable at the beginning of each year. The cash surrender value of the policy was \$21,000 at the beginning of 2024.

Required:

1. Prepare the appropriate 2024 journal entry to record insurance expense and the increase in the investment assuming the cash surrender value of the policy increased according to the contract to \$27,000.
2. The CEO died at the end of 2024. Prepare the appropriate journal entry.

E 12–29 Life insurance policy (Appendix 12A)

Below are two unrelated situations relating to life insurance.

Required:

Prepare the appropriate journal entry for each situation.

1. Ford Corporation owns a whole life insurance policy on the life of its president. Ford Corporation is the beneficiary. The insurance premium is \$25,000. The cash surrender value increased during the year from \$2,500 to \$4,600.
2. Petroleum Corporation received a \$250,000 life insurance settlement when its CEO died. At that time, the cash surrender value was \$16,000.

E 12–30 Held-to-maturity securities; impairments; financial statement effects (Appendix 12B) **LO12–2**, **LO12–8**

Bloom Corporation purchased \$1,000,000 of Taylor Company 5% bonds, at their face amount, with the intent and ability to hold the bonds until they matured in 2028, so Bloom classifies its investment as HTM. Unfortunately, a combination of problems at Taylor Company and in the debt securities market caused the fair value of the Taylor investment to decline to \$600,000 during 2024.

Required:

For each of the following scenarios, prepare the appropriate entry(s) at December 31, 2024, and indicate how the scenario will affect the 2024 income statement (ignoring income

taxes).

1. Bloom now believes it is more likely than not that it will have to sell the Taylor bonds before the bonds have a chance to recover their fair value. Of the \$400,000 decline in fair value, Bloom attributes \$250,000 to credit losses, and \$150,000 to noncredit losses.
2. Bloom does not plan to sell the Taylor bonds prior to maturity, and does not believe it is more likely than not that it will have to sell the Taylor bonds before the bonds have a chance to recover their fair value. Of the \$400,000 decline in fair value, Bloom attributes \$250,000 to credit losses, and \$150,000 to noncredit losses.

E 12–31 Available-for-sale debt securities; impairments; financial statement effects (Appendix 12B)  **LO12–4**,  **LO12–8**

Assume all of the same facts and scenarios as E 12–30, except that Bloom Corporation classifies its Taylor investment as AFS.

Required:

1. For each of the scenarios shown in E 12–30, prepare the appropriate entry(s) at December 31, 2024. Indicate how the scenario will affect the 2024 income statement, OCI, and comprehensive income.
2. Repeat requirement 1, but now assume that, at the end of 2023, Bloom had recorded an unrealized loss of \$100,000 on the Taylor investment.

E 12–32 Accounting for impairments under IFRS ( **Appendix 12B**)  **LO12–2**,  **LO12–8**,  **LO12–9**

Rell Corporation reports under *IFRS No. 9*. Rell has an investment in Tirish, Inc., bonds that Rell accounts for at amortized cost, given that the bonds pay only interest and principal and Rell's business purpose is to hold the bonds to maturity. Rell purchased the bonds for €10,000,000. As of December 31, 2024, Rell calculates €750,000 of credit losses expected for default events occurring during 2025 and €450,000 of credit losses expected for default events occurring after 2025.

Required:

1. Assume the Tirish bonds have not had a significant increase in credit risk. Prepare the journal entry to record any impairment loss as of December 31, 2024.
2. Assume the Tirish bonds have had a significant increase in credit risk. Prepare the journal entry to record any impairment loss as of December 31, 2024.
3. Assume again that the Tirish bonds have not had a significant increase in credit risk, and that as of December 31, 2025, Rell calculates €650,000 of credit losses expected for default events occurring during 2026 and €350,000 of credit losses expected for default events occurring after 2026. Prepare the journal entry Rell would make with respect to any impairment loss as of December 31, 2025.

Problems

P 12–1 Securities held-to-maturity; bond investment; effective interest; financial statement effects LO12–1, LO12–2

Fuzzy Monkey Technologies, Inc., purchased as a long-term investment \$80 million of 8% bonds, dated January 1, on January 1, 2024. Management has the positive intent and ability to hold the bonds until maturity. For bonds of similar risk and maturity the market yield was 10%. The price paid for the bonds was \$66 million. Interest is received semiannually on June 30 and December 31. Due to changing market conditions, the fair value of the bonds at December 31, 2024, was \$70 million.

Required:

1. Prepare the journal entry to record Fuzzy Monkey's investment on January 1, 2024.
2. Prepare the journal entry by Fuzzy Monkey to record interest on June 30, 2024 (at the effective rate).
3. Prepare the journal entry by Fuzzy Monkey to record interest on December 31, 2024 (at the effective rate).
4. At what amount will Fuzzy Monkey report its investment in the December 31, 2024 balance sheet? Why?
5. How would Fuzzy Monkey's 2024 statement of cash flows be affected by this investment? (If more than one approach is possible, indicate the one that is most likely.)

P 12–2 Trading securities; bond investment; effective interest; financial statement effects LO12–1, LO12–3

[This problem is a variation of P 12–1, modified to categorize the investment as trading securities.]

Fuzzy Monkey Technologies, Inc., purchased as a short-term investment \$80 million of 8% bonds, dated January 1, on January 1, 2024. Management intends to include the investment in a short-term, active trading portfolio. For bonds of similar risk and maturity the market yield was 10%. The price paid for the bonds was \$66 million. Interest is received

semiannually on June 30 and December 31. Due to changing market conditions, the fair value of the bonds at December 31, 2024, was \$70 million.

Required:

1. Prepare the journal entry to record Fuzzy Monkey's investment on January 1, 2024.
2. Prepare the journal entry by Fuzzy Monkey to record interest on June 30, 2024 (at the effective rate).
3. Prepare the journal entry by Fuzzy Monkey to record interest on December 31, 2024 (at the effective rate).
4. At what amount will Fuzzy Monkey report its investment in the December 31, 2024 balance sheet? Why? Prepare any entry necessary to achieve this reporting objective.
5. How would Fuzzy Monkey's 2024 statement of cash flows be affected by this investment? (If more than one approach is possible, indicate the one that is most likely.)

P 12–3 Securities available-for-sale; bond investment; effective interest; financial statement effects  **LO12–1**,  **LO12–4**

(This problem is a variation of P 12–1, modified to categorize the investment as securities available-for-sale.)

Fuzzy Monkey Technologies, Inc., purchased as a long-term investment \$80 million of 8% bonds, dated January 1, on January 1, 2024. Management intends to have the investment available for sale when circumstances warrant. For bonds of similar risk and maturity the market yield was 10%. The price paid for the bonds was \$66 million. Interest is received semiannually on June 30 and December 31. Due to changing market conditions, the fair value of the bonds at December 31, 2024, was \$70 million.

Required:

1. Prepare the journal entry to record Fuzzy Monkey's investment on January 1, 2024.
2. Prepare the journal entry by Fuzzy Monkey to record interest on June 30, 2024 (at the effective rate).
3. Prepare the journal entries by Fuzzy Monkey to record interest on December 31, 2024 (at the effective rate).
4. At what amount will Fuzzy Monkey report its investment in the December 31, 2024, balance sheet? Why? Prepare any entry necessary to achieve this reporting objective.

5. How would Fuzzy Monkey's 2024 statement of cash flows be affected by this investment?
(If more than one approach is possible, indicate the one that is most likely.)

P 12–4 Fair value option; bond investment; effective interest; financial statement effects  **LO12–1**,  **LO12–2**,  **LO12–4**,  **LO12–8**

[This problem is a variation of P 12–3, modified to cause the investment to be accounted for under the fair value option.]

Fuzzy Monkey Technologies, Inc., purchased as a long-term investment \$80 million of 8% bonds, dated January 1, on January 1, 2024. Management intends to have the investment available for sale when circumstances warrant. When the company purchased the bonds, management elected to account for them under the fair value option. For bonds of similar risk and maturity the market yield was 10%. The price paid for the bonds was \$66 million. Interest is received semiannually on June 30 and December 31. Due to changing market conditions, the fair value of the bonds at December 31, 2024, was \$70 million.

Required:

1. Prepare the journal entry to record Fuzzy Monkey's investment on January 1, 2024.
2. Prepare the journal entry by Fuzzy Monkey to record interest on June 30, 2024 (at the effective rate).
3. Prepare the journal entries by Fuzzy Monkey to record interest on December 31, 2024 (at the effective rate).
4. At what amount will Fuzzy Monkey report its investment in the December 31, 2024, balance sheet? Why? Prepare any entry necessary to achieve this reporting objective.
5. How would Fuzzy Monkey's 2024 statement of cash flows be affected by this investment?
(If more than one approach is possible, indicate the one that is most likely.)
6. How would your answers to requirements 1–5 differ if management had the intent and ability to hold the investments until maturity?

P 12–5 Various transactions related to trading securities; financial statement effects  **LO12–1**,  **LO12–3**

The following selected transactions relate to investment activities of Ornamental Insulation Corporation during 2024. The company buys debt securities, intending to profit from short-term differences in price and maintaining them in an active trading portfolio. Ornamental's fiscal year ends on December 31. No investments were held by Ornamental on December 31, 2023.

- Mar. 31** **Acquired 8% Distribution Transformers Corporation bonds costing \$400,000 at face value.**
- Sep. 1** **Acquired \$900,000 of American Instruments' 10% bonds at face value.**
- Sep. 30** **Received semiannual interest payment on the Distribution Transformers bonds.**
- Oct. 2** **Sold the Distribution Transformers bonds for \$425,000.**
- Nov. 1** **Purchased \$1,400,000 of M&D Corporation 6% bonds at face value.**
- Dec. 31** **Recorded any necessary adjusting entry(s) relating to the investments. The market prices of the investments are**

| | |
|-----------------------------------|--------------------|
| American Instruments bonds | \$ 850,000 |
| M&D Corporation bonds | \$1,460,000 |

(Hint: Interest must be accrued.)

Required:

1. Prepare the appropriate journal entry for each transaction or event during 2024, as well as any adjusting entries necessary at year end.
2. Indicate any amounts that Ornamental Insulation would report in its 2024 income statement, 2024 statement of comprehensive income, and 12/31/2024 balance sheet as a result of these investments. Include totals for net income, comprehensive income, and retained earnings as a result of these investments. Ignore income taxes.

P 12–6 Various transactions related to securities available-for-sale; financial statement effects  **LO12–1**,  **LO12–4**

[This problem is a variation of P 12–5, modified to categorize the investments as securities available-for-sale.]

The following selected transactions relate to investment activities of Ornamental Insulation Corporation during 2024. The company buys debt securities, *not* intending to profit from short-term differences in price and *not* necessarily to hold debt securities to maturity, but to have them available for sale in years when circumstances warrant. Ornamental’s fiscal year ends on December 31. No investments were held by Ornamental on December 31, 2023.

- Mar. 31** Acquired 8% Distribution Transformers Corporation bonds costing \$400,000 at face value.
- Sep. 1** Acquired \$900,000 of American Instruments’ 10% bonds at face value.
- Sep. 30** Received semiannual interest payment on the Distribution Transformers bonds.
- Oct. 2** Sold the Distribution Transformers bonds for \$425,000.
- Nov. 1** Purchased \$1,400,000 of M&D Corporation 6% bonds at face value.
- Dec. 31** Recorded any necessary adjusting entry(s) relating to the investments. The market prices of the investments are:

| | |
|--|-------------|
| American Instruments bonds | \$ 850,000 |
| M&D Corporation bonds | \$1,460,000 |
| <i>(Hint: Interest must be accrued.)</i> | |

Required:

1. Prepare the appropriate journal entry for each transaction or event during 2024, as well as any adjusting entries necessary at year-end. For any sales, prepare entries to update the fair-value adjustment, record any reclassification adjustment, and record the sale.
2. Indicate any amounts that Ornamental Insulation would report in its 2024 income statement, 2024 statement of comprehensive income, and 12/31/2024 balance sheet as a result of these investments. Include totals for net income, comprehensive income, and retained earnings as a result of these investments. Ignore income taxes.

P 12–7 Various transactions related to equity investments: fair value through net income; financial statement effects  **LO12–5**

[This problem is a variation of P 12–5, modified to consider equity investments.]

The following selected transactions relate to investment activities of Ornamental Insulation Corporation during 2024. The company buys equity securities as noncurrent investments. None of Ornamental's investments are large enough to exert significant influence on the investee. Ornamental's fiscal year ends on December 31. No investments were held by Ornamental on December 31, 2023.

- Mar. 31** Acquired Distribution Transformers Corporation common stock for \$400,000.
- Sep. 1** Acquired \$900,000 of American Instruments' common stock.
- Sep. 30** Received a \$16,000 dividend on the Distribution Transformers common stock.
- Oct. 2** Sold the Distribution Transformers common stock for \$425,000.
- Nov. 1** Purchased \$1,400,000 of M&D Corporation common stock.
- Dec. 31** Recorded any necessary adjusting entry(s) relating to the investments. The market prices of the investments are:

| | |
|-----------------------------------|-------------|
| American Instruments common stock | \$ 850,000 |
| M&D Corporation common stock | \$1,460,000 |

Required:

1. Prepare the appropriate journal entry for each transaction or event during 2024, as well as any adjusting entry necessary at year-end.
2. Indicate any amounts that Ornamental Insulation would report in its 2024 income statement, 2024 statement of comprehensive income, and 12/31/2024 balance sheet as a result of these investments. Include totals for net income, comprehensive income, and retained earnings as a result of these investments. Ignore income taxes.

P 12–8 Various transactions relating to trading securities and equity investments; financial statement effects  **LO12–1**,  **LO12–3**,  **LO12–5**

American Surety and Fidelity buys and sells securities expecting to earn profits on short-term differences in price. For the first 11 months of 2024, gains from selling trading securities totaled \$8 million, losses from selling trading securities were \$11 million, and the

company had earned \$5 million in interest revenue. The following selected transactions relate to American's investments in trading securities and equity securities during December 2024, and the first week of 2025. The company's fiscal year ends on December 31. No trading securities or equity investments were held by American on December 1, 2024.

2024

- Dec. 12** Purchased FF&G Corporation bonds for \$12 million.
- 13** Purchased 2 million shares of Ferry Intercommunications common stock for \$22 million.
American does not have significant influence over Ferry's operations or policies.
- 15** Sold the FF&G Corporation bonds for \$12.1 million.
- 22** Purchased U.S. Treasury bills for \$56 million and Treasury bonds for \$65 million.
- 23** Sold half the shares of Ferry Intercommunications common stock for \$10 million.
- 26** Sold the U.S. Treasury bills for \$57.5 million.
- 27** Sold the Treasury bonds for \$63 million.
- 28** Received cash dividends of \$200,000 from the Ferry Intercommunications common stock shares.
- 31** Recorded any necessary adjusting entry relating to the remaining investment. The market price of the Ferry Intercommunications stock was \$10 per share.

2025

- Jan. 2** Sold the remaining Ferry Intercommunications common stock shares for \$10.2 million.
- 5** Purchased Warehouse Designs Corporation bonds for \$34 million.

Required:

1. Prepare the appropriate journal entry for each transaction or event during 2024 including any year-end adjusting entries.
2. Indicate any amounts that American would report in its 2024 balance sheet and income statement as a result of these investments. Ignore income taxes.

3. Prepare the appropriate journal entry for each transaction or event during 2025.

P 12–9 Securities held-to-maturity; trading securities and equity investments  **LO12–1**,  **LO12–2**,  **LO12–3**,  **LO12–5**

Amalgamated General Corporation is a consulting firm that also offers financial services through its credit division. From time to time the company buys and sells securities. The following selected transactions relate to Amalgamated’s investment activities during the last quarter of 2024 and the first month of 2025. The only securities held by Amalgamated at October 1, 2024 were \$30 million of 10% bonds of Kansas Abstractors, Inc., purchased on May 1, 2024 at face value and held in Amalgamated’s trading securities portfolio. The company’s fiscal year ends on December 31.

2024

- Oct. 18** Purchased 2 million shares of Millwork Ventures Company common stock for \$58 million. Millwork has a total of 30 million shares issued.
- 31** Received semiannual interest of \$1.5 million from the Kansas Abstractors bonds.
- Nov. 1** Purchased 10% bonds of Holistic Entertainment Enterprises at their \$18 million face value, to be held until they mature in 2034. Semiannual interest is payable April 30 and October 31.
- 1** Sold the Kansas Abstractors bonds for \$28 million because rising interest rates are expected to cause their fair value to continue to fall. No unrealized gains and losses had been recorded on these bonds previously.
- Dec. 1** Purchased 12% bonds of Household Plastics Corporation at their \$60 million face value, to be held until they mature in 2034. Semiannual interest is payable May 31 and November 30.
- 20** Purchased U. S. Treasury bonds for \$5.6 million as trading securities, hoping to earn profits on shortterm differences in prices.
- 21** Purchased 4 million shares of NXS Corporation’s 50 million shares of common stock for \$44 million, planning to hold these shares until market conditions encourage their sale.
- 23** Sold the Treasury bonds for \$5.7 million.

- 29** Received cash dividends of \$3 million from the Millwork Ventures Company shares of common stock.
- 31** Recorded any necessary adjusting entries relating to the investments. The market price of the Millwork Ventures Company common stock was \$27.50 per share and \$11.50 per share for the NXS Corporation common stock. The fair values of the bond investments were \$58.7 million for Household Plastics Corporation and \$16.7 million for Holistic Entertainment Enterprises.

2025

- Jan. 7** Sold the NXS Corporation common stock shares for \$43.3 million.

Required:

Prepare the appropriate journal entry for each transaction or event. Use one summary entry on December 31 to adjust the portfolio of equity investments to fair value.

P 12–10 Investment securities and equity method investments compared  **LO12–5**,  **LO12–6**,  **LO12–7**

On January 4, 2024, Runyan Bakery paid \$324 million for 10 million shares of Lavery Labeling Company common stock. The investment represents a 30% interest in the net assets of Lavery and gave Runyan the ability to exercise significant influence over Lavery's operations. Runyan received dividends of \$2.00 per share on December 15, 2024, and Lavery reported net income of \$160 million for the year ended December 31, 2024. The market value of Lavery's common stock at December 31, 2024, was \$31 per share. On the purchase date, the book value of Lavery's identifiable net assets was \$800 million and:

- a. The fair value of Lavery's depreciable assets, with an average remaining useful life of six years, exceeded their book value by \$80 million.
- b. The remainder of the excess of the cost of the investment over the book value of net assets purchased was attributable to goodwill.

Required:

1. Prepare all appropriate journal entries related to the investment during 2024, assuming Runyan accounts for this investment by the equity method.
2. Prepare the journal entries required by Runyan, assuming that the 10 million shares represent a 10% interest in the net assets of Lavery rather than a 30% interest.

P 12–11 Fair value option; equity method investments

 LO12–5,  LO12–8

[This problem is a variation of P 12–10 focusing on the fair value option.]

On January 4, 2024, Runyan Bakery paid \$324 million for 10 million shares of Lavery Labeling Company common stock. The investment represents a 30% interest in the net assets of Lavery and gave Runyan the ability to exercise significant influence over Lavery's operations. Runyan chose the fair value option to account for this investment. Runyan received dividends of \$2.00 per share on December 15, 2024, and Lavery reported net income of \$160 million for the year ended December 31, 2024. The market value of Lavery's common stock at December 31, 2024, was \$31 per share. On the purchase date, the book value of Lavery's identifiable net assets was \$800 million and:

- a. The fair value of Lavery's depreciable assets, with an average remaining useful life of six years, exceeded their book value by \$80 million.
- b. The remainder of the excess of the cost of the investment over the book value of net assets purchased was attributable to goodwill.

Required:

Page 703

Assuming Runyan accounts for this investment under the fair value option, prepare all appropriate journal entries in a manner similar to accounting for securities for which there is not significant influence.

P 12–12 Fair value option; equity method investments; financial statement effects LO12–5, LO12–6, LO12–7, LO12–8

[This problem is an expanded version of P 12–11 that considers alternative ways in which a firm might apply the fair value option to account for significant-influence investments that would normally be accounted for under the equity method.]

Companies can choose the fair value option for investments that otherwise would be accounted for under the equity method. If the fair value option is chosen, the investment is shown at fair value in the balance sheet, and unrealized holding gains and losses are recognized in the income statement. However, exactly how a company complies with those broad requirements is up to the company. This problem requires you to consider alternative

ways in which a company might apply the fair value option for investments that otherwise would be accounted for under the equity method.

On January 4, 2024, Runyan Bakery paid \$324 million for 10 million shares of Lavery Labeling Company common stock. The investment represents a 30% interest in the net assets of Lavery and gave Runyan the ability to exercise significant influence over Lavery's operations. Runyan chose the fair value option to account for this investment. Runyan received dividends of \$2.00 per share on December 15, 2024, and Lavery reported net income of \$160 million for the year ended December 31, 2024. The market value of Lavery's common stock at December 31, 2024, was \$31 per share. On the purchase date, the book value of Lavery's identifiable net assets was \$800 million and:

- a. The fair value of Lavery's depreciable assets, with an average remaining useful life of six years, exceeded their book value by \$80 million.
- b. The remainder of the excess of the cost of the investment over the book value of net assets purchased was attributable to goodwill.

Required:

1. Prepare all appropriate journal entries related to the investment during 2024, assuming Runyan accounts for this investment under the fair value option, and accounts for the Lavery investment in a manner similar to what it would use for securities for which there is not significant influence. Indicate the effect of these journal entries on 2024 net income, and indicate the amount at which the investment is carried in the December 31, 2024, balance sheet.
2. Prepare all appropriate journal entries related to the investment during 2024, assuming Runyan accounts for this investment under the fair value option, but uses equity method accounting to account for Lavery's income and dividends, and then records a fair value adjustment at the end of the year that allows it to comply with GAAP. Indicate the effect of these journal entries on 2024 net income, and indicate the amount at which the investment is carried in the December 31, 2024, balance sheet. (Note: You should end up with the same total 2024 income effect and same carrying value on the balance sheet for requirements 1 and 2.)

P 12–13 Equity method; financial statement effects  **LO12–6,**
 **LO12–7**

Northwest Paperboard Company, a paper and allied products manufacturer, was seeking to gain a foothold in Canada. Toward that end, the company bought 40% of the outstanding common shares of Vancouver Timber and Milling, Inc., on January 2, 2024, for \$400 million.

At the date of purchase, the book value of Vancouver's net assets was \$775 million. The book values and fair values for all balance sheet items were the same except for inventory and plant facilities. The fair value exceeded book value by \$5 million for the inventory and by \$20 million for the plant facilities.

The estimated useful life of the plant facilities is 16 years. All inventory acquired was sold during 2024.

Vancouver reported net income of \$140 million for the year ended December 31, 2024. Vancouver paid a cash dividend of \$30 million.

Required:

1. Prepare all appropriate journal entries related to the investment during 2024.
2. What amount should Northwest report as its income from its investment in Vancouver for the year ended December 31, 2024?
3. What amount should Northwest report in its balance sheet as its investment in Vancouver?
4. What should Northwest report in its statement of cash flows regarding its investment in Vancouver?

P 12–14 Equity method; financial statement effects  **LO12–6,**
 **LO12–7**

On January 2, 2024, Miller Properties paid \$19 million for 1 million shares of Marlon Company's 6 million outstanding common shares. Miller's CEO became a member of Marlon's board of directors during the first quarter of 2024.

The carrying amount of Marlon's net assets was \$66 million. Miller estimated the fair value of those net assets to be the same except for a patent valued at \$24 million above cost. The remaining amortization period for the patent is 10 years.

Marlon reported earnings of \$12 million and paid dividends of \$6 million during 2024. On December 31, 2024, Marlon's common stock was trading on the NYSE at \$18.50 per share.

Required:

1. When considering whether to account for its investment in Marlon under the equity method, what criteria should Miller's management apply?
2. Assume Miller accounts for its investment in Marlon using the equity method. Ignoring income taxes, determine the amounts related to the investment to be reported in its 2024
 - a. Income statement.
 - b. Balance sheet.
 - c. Statement of cash flows.

P 12–15 Classifying investments  **LO12–2, through**
 **LO12–6**

Indicate (by letter) the way each of the investments listed below most likely should be accounted for based on the information provided.

| | Item | Reporting Category |
|----------|---|---|
| _____ 1. | 35% of the nonvoting preferred stock of American Aircraft Company. | T. Trading securities |
| _____ 2. | Treasury bills to be held-to-maturity. | M. Securities held-to-maturity |
| _____ 3. | Two-year note receivable from affiliate. | A. Securities available-for-sale |
| _____ 4. | Accounts receivable. | F. Fair value through net income |
| _____ 5. | Treasury bond maturing in one week. | E. Equity method |
| _____ 6. | Common stock held in an investment account for immediate resale. | C. Consolidation |

| | Item | Reporting Category |
|-----------|---|-------------------------|
| _____ 7. | Bonds acquired to profit from short-term differences in price. | N. None of these |
| _____ 8. | 15% of the voting common stock of Computer Storage Devices Company. | |
| _____ 9. | 90% of the voting common stock of Affiliated Peripherals, Inc. | |
| _____ 10. | Corporate bonds of Primary Smelting Company to be sold if interest rates fall ½%. | |
| _____ 11. | 25% of the voting common stock of Smith Foundries Corporation (51% family-owned by Smith family; fair value readily determinable). | |
| _____ 12. | 17% of the voting common stock of Shipping Barrels Corporation (Investor’s CEO on the board of directors of Shipping Barrels Corporation). | |

P 12–16 Fair value option; held-to-maturity investments

 **LO12–1**,  **LO12–2**,  **LO12–8**

On January 1, 2024, Ithaca Corp. purchases Cortland Inc. bonds that have a face value of \$150,000. The Cortland bonds have a stated interest rate of 6%. Interest is paid semiannually on June 30 and December 31, and the bonds mature in 10 years. For bonds of similar risk and maturity, the market yield on particular dates is as follows:

| | |
|------------------------|-------------|
| January 1, 2024 | 7.0% |
| June 30, 2024 | 8.0% |

December 31, 2024 9.0%

Required:

1. Calculate the price Ithaca would have paid for the Cortland bonds on January 1, 2024 (ignoring brokerage fees), and prepare a journal entry to record the purchase.
2. Prepare all appropriate journal entries related to the bond investment during 2024, assuming Ithaca accounts for the bonds as a held-to-maturity investment. Ithaca calculates interest revenue at the effective interest rate as of the date it purchased the bonds.
3. Prepare all appropriate journal entries related to the bond investment during 2024, assuming that Ithaca chose the fair value option when the bonds were purchased, and that Ithaca determines fair value of the bonds semiannually. Ithaca calculates interest revenue at the effective interest rate as of the date it purchased the bonds.

P 12–17 Accounting for debt and equity investments; financial statement effects  **LO12–1**,  **LO12–4**,  **LO12–5**,  **LO12–9**

Feherty, Inc., accounts for its investments under *IFRS No. 9* and purchased the following investments during December 2024:

1. Fifty of Donald Company's \$1,000 bonds. The bonds pay semiannual interest, return principal in eight years, and include no other cash flows or other features. Feherty plans to hold 10 of the bonds to collect contractual cash flows over the life of the investment and to hold 40, both to collect contractual cash flows but also to sell them if their price appreciates sufficiently. Subsequent to Feherty's purchase of the bonds, but prior to December 31, the fair value of the bonds increased to \$1,040 per bond, and Feherty sold 10 of the 40 bonds. Feherty also sold 5 of the 10 bonds it had planned to hold to collect contractual cash flows over the life of the investment. The fair value of the bonds remained at \$1,040 as of December 31, 2024.
2. \$25,000 of Watson Company common stock. Feherty does not have the ability to significantly influence the operations of Watson. Feherty elected to account for this equity investment at fair value through OCI (FVOCI). Subsequent to Feherty's purchase of the stock, the fair value of the stock investment increased to \$30,000 as of December 31, 2024.

Required:

1. Indicate how Feherty would account for its investments when it acquired the Donald bonds and Watson stock.
2. For each of the following categories of Feherty's investments, calculate the effect of realized and unrealized gains and losses on Feherty's net income, other comprehensive income, and comprehensive income for the year ended December 31, 2024:
 - a. any Donald bonds accounted for at amortized cost that were purchased and held at year end,
 - b. any Donald bonds accounted for at amortized cost that were purchased and sold,
 - c. any Donald bonds accounted for at FVOCI that were purchased and held at year end,
 - d. any Donald bonds accounted for at FVOCI that were purchased and sold, and
 - e. the Watson stock. Ignore interest revenue and taxes.

P 12-18 Accounting for impairments (Appendix 12B) **LO12-2**, **LO12-3**, **LO12-4**, **LO12-8**

Stewart Enterprises has the following investments, all purchased prior to 2024:

1. Bee Company 5% bonds, purchased at face value, with an amortized cost of \$4,000,000, and classified as held-to-maturity. At December 31, 2024, the Bee investment had a fair value of \$3,500,000, and Stewart calculated that \$240,000 of the fair value decline is a credit loss and \$260,000 is a noncredit loss. At December 31, 2025, the Bee investment had a fair value of \$3,700,000, and Stewart calculated that \$140,000 of the difference between fair value and amortized cost was a credit loss and \$160,000 was a noncredit loss.
2. Oliver Corporation 4% bonds, purchased at face value, with an amortized cost of \$2,500,000, classified as a trading security. Because of unrealized losses prior to 2024, the Oliver bonds have a fair value adjustment account with a credit balance of \$200,000, such that the carrying value of the Oliver investment is \$2,300,000 prior to making any adjusting entries in 2024. At December 31, 2024, the Oliver investment had a fair value of \$2,200,000, and Stewart calculated that \$120,000 of the difference between amortized cost and fair value is a credit loss and \$180,000 is a noncredit loss. At December 31, 2025, the Oliver investment had a fair value of \$2,700,000.

3. Jones Inc. 6% bonds, purchased at face value, with an amortized cost of \$3,500,000, and classified as an available-for-sale investment. Because of unrealized losses prior to 2024, the Jones bonds have a fair value adjustment account with a credit balance of \$400,000, such that the carrying value of the Jones investment is \$3,100,000 prior to making any adjusting entries in 2024. At December 31, 2024, the Jones investment had a fair value of \$2,700,000, and Stewart calculated that \$225,000 of the difference between amortized cost and fair value is a credit loss and \$575,000 is a noncredit loss. At December 31, 2025, the Jones investment had a fair value of \$2,875,000, and Stewart calculated that \$125,000 of the difference between amortized cost and fair value is a credit loss and \$500,000 is a noncredit loss.

Stewart does not intend to sell any of these investments and does not believe it is more likely than not that it will have to sell any of the bond investments before fair value recovers.

Required:

Prepare the appropriate adjusting journal entries to account for each investment for 2024 and 2025.

Decision Maker's Perspective

Ed Telling/Getty Images

Apply your critical-thinking ability to the knowledge you've gained. These cases will provide you an opportunity to develop your research, analysis, judgment, and communication skills. You also will work with other students, integrate what you've learned, apply it in real world situations, and consider its global and ethical ramifications. This practice will broaden your knowledge and further develop your decision-making abilities.

Research Case 12–1 Classification and accounting for unrealized losses of held-to-maturity, trading, and available-for-sale investments; financial statement effects  **LO12–2**,  **LO12–3**,  **LO12–4**

Imani West, CEO of West Industries, stopped by the company's finance department with a question. "I am considering having West Industries purchase bonds of Triton Corporation as an investment. Our auditor told me that ordinary changes in the market value of this investment may or may not affect our net income, depending how the investment is classified. I don't like going into audit meetings unprepared. I need to know what determines how a bond is treated so I can make sure this investment doesn't produce some income effect that surprises our shareholders. Can you give me the specific standards that apply?"

Required:

Access the FASB Accounting Standards Codification at the FASB website ( www.fasb.org). Determine the specific nine-digit Codification citation (XXX-XX-XX-XX) that indicates the authoritative support in the Codification for each of the following aspects relevant to West's request. If a citation uses letters to indicate sub-paragraphs (e.g., XXX-XX-XX-05b), include the letter in the citation.

1. What Codification citation indicates the criteria for determining whether a debt investment is classified as held-to-maturity?
2. What Codification citation indicates how unrealized gains or losses from changes in fair value affect net income when investments are classified as held-to-maturity?
3. What Codification citation indicates the criteria for determining whether a debt investment is classified as a trading security?
4. What Codification citation indicates how unrealized gains or losses from changes in fair value affect net income when investments are classified as a trading security?
5. What Codification citation indicates the criteria for determining whether a debt investment is classified as available-for-sale?
6. What Codification citation indicates how unrealized gains or losses from changes in fair value affect net income when investments are classified as available-for-sale?

Real World Case 12–2 Available-for-sale investments; disclosures LO12–4

The following disclosure note appeared in the July 27, 2019, annual report of **Cisco Systems, Inc.**

Note 9: Available-for-Sale Debt Investments and Equity Investments (in part)

Available-for-sale investments as of July 27, 2019, and July 28, 2018, were as follows:

| <i>In millions</i> | 7/27/2019 | | | | 7/28/2018 | | |
|-----------------------------------|---------------|------------------------|-------------------------|------------|---------------|------------------------|-------------------------|
| | Adjusted Cost | Gross Unrealized Gains | Gross Unrealized Losses | Fair Value | Adjusted Cost | Gross Unrealized Gains | Gross Unrealized Losses |
| U.S. government securities | \$ 808 | \$ 1 | \$ (1) | \$ 808 | \$ 7,318 | \$ — | \$ (43) |
| U.S. government agency securities | 169 | — | — | 169 | 732 | — | (5) |

| <i>In millions</i> | 7/27/2019 | | | 7/28/2018 | | | |
|---|------------------|------------------------------|-------------------------------|-----------------|------------------|------------------------------|-------------------------------|
| | Adjusted Cost | Gross Unrealized Gains | Gross Unrealized Losses | Fair Value | Adjusted Cost | Gross Unrealized Gains | Gross Unrealized Losses |
| Corporate debt securities | 19,188 | 103 | (29) | 19,262 | 27,765 | 44 | (445) |
| U.S. agency mortgage- backed securities | 1,425 | 7 | (11) | 1,421 | 1,488 | — | (53) |
| Non-U.S. government and agency securities | — | — | — | — | 209 | — | (1) |
| Total | <u>\$ 21,590</u> | <u>\$ 111</u> | <u>\$(41)</u> | <u>\$21,660</u> | <u>\$37,512</u> | <u>\$44</u> | <u>\$(547)</u> |

Note 9 also indicates that, during 2019, the net realized losses on sales of available-for-sale investments were \$13 million. Cisco's Note 16 (Comprehensive Income) indicates unrealized holding gains of \$560 million during 2019, as well as reclassification of \$13 for losses that had previously been included in AOCI and recorded in the fair value adjustment but which were now being included in net income after being realized upon sale.

Required:

1. Draw a T-account that shows the change between the July 28, 2018, and July 27, 2019, balances for the fair value adjustment associated with Cisco's AFS investments for fiscal 2019. By how much did the fair value adjustment change during 2019?
2. Prepare a journal entry that records any unrealized holding gains and losses that occurred during 2019. Ignore income taxes.
3. Prepare a journal entry that records any reclassification adjustment for available-for-sale investments sold during 2019. Ignore income taxes.
4. Using your journal entries from requirements 2 and 3, adjust your T-account from requirement 1. Have you accounted for the entire change in the fair value adjustment that

occurred during 2019? If not, speculate as to the cause of any difference.

Real World Case 12–3 Reconstructing comprehensive income journal entries; disclosures LO12–4

Microsoft's 2020 10-K includes the following information relevant to its available-for-sale investments in Note 17—Accumulated Other Comprehensive Income (Loss):

| Year Ended June 30, | 2020 | 2019 | 2018 |
|---|----------------|-----------------|-----------------|
| Balance, beginning of period | \$1,488 | \$ (850) | \$1,825 |
| Unrealized gains (losses), net of tax of \$1,057, \$616, and \$(427) | 3,987 | 2,331 | (1,146) |
| Reclassification adjustments for (gains) losses included in other income (expense), net | 4 | 93 | (2,309) |
| Tax expense (benefit) included in provision for income taxes | (1) | (19) | 738 |
| Cumulative effect of accounting changes | 0 | (67) | 42 |
| Balance, end of period | <u>\$5,478</u> | <u>\$ 1,488</u> | <u>\$ (850)</u> |

Required:

1. Prepare a journal entry to record unrealized gains for 2020. (*Hint:* \$3,987 is net of tax effects, so you will need to add back tax effects to show the amount of pretax unrealized gain.)
2. Prepare a journal entry to record Microsoft's reclassification adjustment for 2020 (pretax).

Real World Case 12–4 Available-for-sale investments; equity method investments; financial statement effects; disclosures LO12–4, LO12–6

General Motors invests in securities of other companies. Access GM's 2019 10-K (which includes financial statements) using EDGAR at  www.sec.gov.

Required:

1. What is the amount and classification of any AFS investment securities reported in the balance sheet? In which current and noncurrent asset categories are investments reported by GM? Is there an amount you can't find in the balance sheet but that you know must be there?
2. How are unrealized gains or losses on AFS investments reported: in net income or OCI? In what note does GM indicate that policy?
3. Are any investments reported by the equity method? In what note does GM provide an in-depth discussion of them?
4. What amounts from equity method investments are reported in the 2019 income statement?

International Case 12–5 Comparison of equity method between IFRS and U.S. GAAP; disclosures **LO12–6**, **LO12–7**, **LO12–9**

The following are excerpts from the 2019 financial statements of **Renault**, a large French automobile manufacturer.

12-INVESTMENT IN NISSAN

Renault and the Japanese automaker Nissan have developed an alliance between two distinct companies with common interests, uniting forces to achieve optimum performance. The Alliance is organized so as to preserve individual brand identities and respect each company's corporate culture. Consequently:

- Renault is not assured of holding the majority of voting rights in Nissan's Shareholders' Meeting;
- The terms of the Renault-Nissan agreements do not entitle Renault to appoint the majority of Nissan directors, nor to hold the majority of voting rights at meetings of Nissan's Board of Directors; Renault cannot unilaterally appoint the President of Nissan;
- In March 2019, Renault, Nissan and Mitsubishi announced the creation of the new Alliance Board, a supervisory body to oversee Alliance operations and governance involving Renault, Nissan and Mitsubishi. This Board has four members: The Chairman of the Board of Renault, the Chief Executive Officer of Renault, the Chief Executive Officer of Nissan and the Chief Executive Officer of Mitsubishi Motors. Decisions are

taken by consensus. In November 2019, the Board added the post of Alliance General Secretary, who reports to the Alliance Board and the CEOs of the three alliance companies;

- At December 31, 2019, the Renault Group occupied two seats on Nissan's Board of Directors and was represented by Jean-Dominique Senard, Chairman of the Renault Board. The appointment of Pierre Fleuriot to replace Thierry Bolloré will be put to the vote at the next extraordinary general shareholders' meeting to be held on February 18, 2020. Pierre Fleuriot is the senior independent director in the Groupe Renault;
- Renault can neither use nor influence the use of Nissan's assets in the same way as its own assets;
- Renault provides no guarantees in respect of Nissan's debt.

In view of this situation, Renault is considered to exercise significant influence over Nissan, and therefore uses the equity method to include its investment in **Nissan** in the consolidation.

Renault's Note 12-D lists various restatements that Renault makes when accounting for its Nissan investment under the equity method. Some of those changes harmonize Nissan's accounting (under Japanese accounting standards). Others reflect adjustments to fair value of assets and liabilities applied by Renault at the time of acquisitions in 1999 and 2002.

Required:

1. Go to Deloitte's IAS Plus website and examine the summary of the *IASB's IAS No. 28* (<https://www.iasplus.com/en/standards/ias/ias28-2011>), which governs application of the equity method. Focus on two areas: Identification of Associates and Applying the Equity Method of Accounting.
2. Evaluate Renault's decision to use the equity method to account for its investment in Nissan. Does Renault have insignificant influence, significant influence, or control?
3. Evaluate the fact that, when accounting for its investment in Nissan under the equity method, Renault makes adjustments that take into account the fair value of assets and liabilities at the time Renault invested in Nissan. Give an example of the sorts of adjustments that might be made. Are such adjustments consistent with IFRS? With U.S. GAAP? Explain.
4. Evaluate the fact that, when accounting for its investment in Nissan under the equity method, Renault makes adjustments for harmonization of accounting standards. Are such

adjustments consistent with IFRS? With U.S. GAAP? Explain.

International Case 12–6 Comparison of equity method and proportionate consolidation under IFRS LO12–6, LO12–9

Obtain the 2019 annual report of **FCA Group** (archived at www.stellantis.com), which manufactures Fiat-brand automobiles as well as other products.

Required:

Find FCA’s discussion of “Basis of Consolidation” in the “Significant Accounting Policies” note that follows the financial statements. Is FCA accounting for its equity investments in a way that is consistent with U.S. GAAP in effect in 2019? Explain.

Trueblood Accounting Case 12–7 Accounting for equity for which fair value is not readily determinable LO12–5

The following Trueblood case is recommended for use with this chapter. The case provides an excellent opportunity for class discussion, group projects, and writing assignments. The case, along with Professor’s Discussion Material, can be obtained from the Deloitte Foundation at its website  www.deloitte.com/us/truebloodcases.

Case 20-7: *Real Value Corporation*

This case requires students to consider how to account for an equity investment for which fair value is not readily determinable.

Communication Case 12–8 Researching and communicating the way investments are reported; retrieving information from the Internet LO12–2, LO12–3, LO12–4, LO12–5, LO12–6

All publicly traded domestic companies use EDGAR, the Electronic Data Gathering, Analysis, and Retrieval system, to make the majority of their filings with the SEC. You can access EDGAR at  www.sec.gov.

Required:

1. Search for a public company with which you are familiar. Access its most recent 10-K filing. Search or scroll to find financial statements and related notes.
2. Write a memo that includes your answers to the following questions. (If the chosen company does not report investments in the securities of other companies, choose another company.)
 - a. What is the amount and classification of any investment securities reported in the balance sheet? Are unrealized gains or losses reported in the shareholders' equity section?
 - b. Are any investments reported by the equity method?
 - c. What amounts from these investments are reported in the comparative income statements? Has that income increased or decreased over the years reported?
 - d. Are any acquisitions or disposals of investments reported in the statement of cash flows?

Communication Case 12–9 Reporting securities available-for-sale; obtain and critically evaluate an annual report **LO12–4**

All publicly traded domestic companies use EDGAR, the Electronic Data Gathering, Analysis, and Retrieval system, to make the majority of their filings with the SEC. You can access EDGAR at  www.sec.gov.

Required:

1. Locate a recent annual report of a public company that includes a footnote that describes an investment in securities available-for-sale. You can use EDGAR at  www.sec.gov.
2. Under what caption are the investments reported in the comparative balance sheets? Are they reported as current or noncurrent assets?
3. Are realized gains or losses reported in the comparative income statements?
4. Are unrealized gains or losses reported in the comparative statements and shareholders' equity?
5. Are accumulated unrealized gains or losses identifiable in the comparative balance sheets? If so, under what caption? Why are unrealized gains or losses reported here rather in the income statement?
6. Are cash flow effects of these investments reflected in the company's comparative

statements of cash flows? If so, what information is provided by this disclosure?

Data Analytics & Excel

Visit Connect to find a variety of Data Analytics activities that help build Excel, Tableau, and data visualization skills. Assignable materials include [Integrated Excel](#), [Data Visualizations](#), [Tableau Dashboard Activities](#), and [Applying Tableau Cases](#).

Continuing Cases

Target Case LO12-4, LO12-6

Target Corporation prepares its financial statements according to U.S. GAAP. Target's financial statements and disclosure notes for the year ended February 1, 2020, are available in Connect. This material also is available under the Investor Relations link at the company's website (www.target.com). Target does not have investments in stock or bonds. However, **CVS Health Corp.**, which purchased Target's pharmacy and clinical business during 2015, does have some investments. Access CVS's 2019 10K at investors.cvshealth.com to answer the following questions.

Required:

1. Regarding CVS's investments in debt securities:
 - a. Turn to Note 1: Significant accounting policies. What approach is CVS using to account for its investments in debt securities—are they HTM, TS, or AFS?
 - b. Turn to Note 3: Investments. What is the total amount of CVS's investments as of 12/31/2019, and where are those investments shown on CVS's balance sheet?
 - c. What is the total amount of CVS's debt investments that are classified as available-for-sale as of 12/31/2019, and how much of that total is amortized cost as opposed to accumulated fair value adjustment that account for unrealized gains and losses?
 - d. Turn to Note 4: Fair Value. What is the amount of CVS's investments in debt securities that is categorized as Level 1, Level 2, and Level 3 of the fair value hierarchy?
2. Per Note 1, CVS has equity-method investments in SureScripts, LLC, and in Heartland Healthcare Services. CVS indicates that those investments are immaterial for the year ended December 31, 2019. Assuming that the Heartland investment is material,
 - a. How would Heartland's earnings affect CVS's income statement?
 - b. How would Heartland's earnings affect CVS's balance sheet?

Air France-KLM Case LO12-9

Air France-KLM (AF), a Franco-Dutch company, prepares its financial statements according to International Financial Reporting Standards. AF's financial statements and

disclosure notes for the year ended December 31, 2019, are available in Connect. This material is also available under the Finance link at the company's website (www.airfranceklm.com).

Required:

1. Read Notes 23 and 36.4. Focusing on debt investments accounted for at fair value through profit or loss (FVPL),
 - a. As of December 31, 2019, what is the total balance of those investments in the balance sheet?
 - b. How much of that balance is classified as current and how much as noncurrent?
 - c. How much of the fair value of those investments is accounted for using level 1, level 2, and level 3 inputs of the fair value hierarchy? Given that information, assess the reliability (representational faithfulness) of this fair value estimate.
2. Complete requirement 1 again, but for equity investments accounted for as either FVPL or FVOCI.
3. Read Notes 4.3 and 21.
 - a. When AF can exercise significant influence over an investee, what accounting approach does it use to account for the investment? How does AF determine if it can exercise significant influence?
 - b. If AF is involved in a joint venture, what accounting approach does it use to account for the investment?
 - c. What is the carrying value of AF's equity-method investments in its December 31, 2019, balance sheet?
 - d. How did AF's equity-method investments affect AF's 2019 net income from continuing operations?

CHAPTER 13

Current Liabilities and Contingencies

OVERVIEW

 **Chapter 13** is the first of five chapters devoted to liabilities. In Part A of this chapter, we discuss liabilities that are classified appropriately as current. In Part B, we turn our attention to situations in which there is uncertainty as to whether an obligation really exists. These are designated as loss contingencies. Some loss contingencies are accrued as liabilities, but others only are disclosed in the notes.

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

-  **LO13-1** Define liabilities and distinguish between current and long-term liabilities. (p. 712)
-  **LO13-2** Account for the issuance and payment of various forms of notes and record the interest on the notes. (p. 715)
-  **LO13-3** Characterize accrued liabilities and liabilities from advance collection and describe when and how they should be recorded. (p. 718)
-  **LO13-4** Determine when a liability can be classified as a noncurrent obligation. (p. 724)
-  **LO13-5** Identify situations that constitute contingencies and the circumstances under which they should be accrued. (p. 727)
-  **LO13-6** Demonstrate the appropriate accounting treatment for contingencies, including unasserted claims and assessments. (p. 728)
-  **LO13-7** Discuss the primary differences between U.S. GAAP and IFRS with respect to current liabilities and contingencies. (pp. 725, 736, and

FINANCIAL REPORTING CASE

Sam Edwards/age fotostock

Daiya's Dad

“My dad is confused,” your friend Daiya proclaimed at the office one morning. “You see, we’re competing against each other in that investment game I told you about, and one of his hot investments is Syntel Microsystems. When he got their annual report yesterday afternoon, he started analyzing it, you know, really studying it closely. Then he asked me about the current liability section of the balance sheet and related disclosure note.”

SYNTEL MICROSYSTEMS, INC.

Balance Sheet

December 31, 2024 and 2023

(\$ in millions)

| Current Liabilities | 2024 | 2023 |
|-----------------------------------|-------------|-------------|
| Accounts payable | \$233.5 | \$241.6 |
| Short-term borrowings (Note 3) | 187.0 | 176.8 |
| Accrued liabilities | 65.3 | 117.2 |
| Accrued loss contingency | 76.9 | — |
| Other current liabilities | 34.6 | 45.2 |
| Current portion of long-term debt | <u>44.1</u> | <u>40.3</u> |

SYNTEL MICROSYSTEMS, INC.**Balance Sheet****December 31, 2024 and 2023**

(\$ in millions)

| Current Liabilities | 2024 | 2023 |
|----------------------------|-------------|-------------|
| Total current liabilities | \$641.4 | \$621.1 |

Note 3: Short-Term Borrowings (in part)

The components of short-term borrowings and their respective weighted average interest rates at the end of the period are as follows:

| (\$ in millions) | 2024 | | 2023 | |
|--|---------------|-----------------------|---------------|-----------------------|
| | Amount | Average Interest Rate | Amount | Average Interest Rate |
| Commercial paper | \$ 34.0 | 5.2% | \$ 27.1 | 5.3% |
| Bank loans | 218.0 | 5.5 | 227.7 | 5.6 |
| Amount reclassified to long-term liabilities | <u>(65.0)</u> | — | <u>(78.0)</u> | — |
| Total short-term borrowings | \$187.0 | | \$176.8 | |

The Company maintains bank credit lines sufficient to cover outstanding short-term borrowings. As of December 31, 2024, the Company had \$200.0 million fee-paid lines available. At December 31, 2024 and 2023, the Company classified \$65.0 million and \$78.0 million, respectively, of commercial paper and bank notes as long-term debt. The Company has the intent and ability, through formal renewal agreements, to renew these obligations into future periods.

Note 6: Contingencies (in part)

Between 2022 and 2023, the Company manufactured cable leads that, the Company has learned, contribute to corrosion of linked components with which they are installed. At December 31, 2024, the Company accrued \$132.0 million in anticipation of remediation and claims settlement deemed probable, of which \$76.9 million is considered a current liability.

“So, what’s the problem?” you asked.

“Well, he thinks I’m some sort of financial wizard because I’m in business.”

“And because you tell him so all the time,” you interrupted.

“Maybe so, but he’s been told that current liabilities are riskier than long-term liabilities, and now he’s focusing on that. He can’t see why some long-term debt is reported here in the current section. And it also looks like some is reported the other way around; some current liabilities reported as long term. Plus, the contingency amount seems like it’s not even a contractual liability. Then he wants to know what some of those terms mean. Lucky for me, I had to leave before I had to admit I didn’t know the answers. You’re the accountant; help me out.”

QUESTIONS

By the time you finish this chapter, you should be able to respond appropriately to the questions posed in this case. Compare your response to the solution provided at the end of the chapter.

1. What are accrued liabilities? What is commercial paper?
2. Why did Syntel Microsystems include some long-term debt in the current liability section?
3. Did they also report some current amounts as long-term debt? Explain.
4. Must obligations be known contractual debts in order to be reported as liabilities?
5. Is it true that current liabilities are riskier than long-term liabilities?

PART A

Current Liabilities

Before a business can invest in an asset it first must acquire the money to pay for it. This can happen in either of two ways—funds can be provided by owners or the funds must be borrowed. You may recognize this as

a description of the basic accounting equation: $\text{Assets} = \text{Liabilities} + \text{Owners' Equity}$. You studied assets in the chapters prior to this and you will study owners' equity later. This chapter and the next four describe the various liabilities that constitute creditors' claims on a company's assets.

Liabilities and owners' equity accounts represent specific sources of a company's assets.

Characteristics of Liabilities

LO13–1 Define liabilities and distinguish between current and long-term liabilities.

You already know what liabilities are. You encounter them every day. If you are paying for a car or a home with monthly payments, you have a personal liability. Similarly, when businesses issue notes and bonds, their creditors are the banks, individuals, and organizations that exchange cash for those securities. Each of these obligations represents the most common type of liability—one to be paid in cash and for which the amount and timing are specified by a legally enforceable contract.

Most liabilities obligate the debtor to pay cash at specified times and result from legally enforceable agreements.

However, to be reported as a **liability**, an obligation need not be payable in cash. Instead, it may require the company to transfer other assets or to provide services.

Some liabilities are not contractual obligations and may not be payable in cash.

A liability doesn't have to be represented by a written agreement nor be legally enforceable. Even the amount and timing of repayment need not be precisely known.

From a financial reporting perspective, a liability has three essential characteristics.

Liabilities

1. Are *probable, future* sacrifices of economic benefits.
2. Arise from *present* obligations (to transfer assets or provide services) to other entities.
3. Result from *past* transactions or events.¹

Notice that the definition of a liability involves the past, the present, and the future. It is a present responsibility to sacrifice assets in the future because of a transaction or other event that happened in the past.

Where We're Headed

As noted in  **Chapter 1**, the FASB is considering changing the definition of a liability. A proposal defines a liability as having two essential characteristics: (a) it is a present obligation, and (b) the obligation requires an entity to transfer or otherwise provide economic benefits to others.² While similar to the current definition of a liability, the proposed definition removes “probable” from the definition because that term has been sometimes misunderstood as indicating a probability threshold for recognizing a liability. It is unlikely that this change in definition will affect how we account for the liabilities covered in this textbook.

What Is a Current Liability?

In a classified balance sheet, we categorize liabilities as either **current liabilities** or long-term liabilities. We often characterize current liabilities as obligations payable within one year from the balance sheet date or within the firm's operating cycle, whichever is longer.

Current liabilities are expected to require current assets and usually are payable within one year from the balance sheet date.

This general definition usually applies. However, a more discriminating definition identifies current liabilities as those expected to be satisfied with *current assets* or by the creation of other *current liabilities*.³

Classifying liabilities as either current or long-term helps investors and creditors assess the risk that the liabilities will require expenditure of cash or other assets in the near term. Is the due date years in the future permitting resources to be used for other

Classifying liabilities as either current or long-term helps investors and creditors assess the relative risk of a business's liabilities.

purposes without risking default? Or, will payment require the use of current assets and reduce the amount of liquid funds available for other uses? If so, are sufficient liquid funds available to make necessary payments of liabilities in addition to meeting current operating needs, or must additional funds be obtained by raising capital? The answers to these questions can have significant implications. For example, a major factor contributing to the collapse of the financial giant **Bear Stearns** in 2008 was its reliance on short-term liabilities that it couldn't refinance when lenders, clients, and trading partners grew concerned about the quality of Bear's investments.⁴

Conceptually, liabilities should be recorded at their present values. In other words, the amount recorded is the present value of all anticipated future cash

Current liabilities ordinarily are reported at their maturity amounts.

payments resulting from the debt (specifically, principal and interest payments).⁵ However, in practice, liabilities payable within one year from the balance sheet date ordinarily are recorded instead at their maturity amounts.⁶ This inconsistency usually is inconsequential because the relatively short-term maturity of current liabilities makes the interest or time value component immaterial.

The most common obligations reported as current liabilities are accounts payable, notes payable, commercial paper, income tax liability, dividends payable, and accrued liabilities.

Liabilities related to income taxes are the subject of [Chapter 16](#). We discuss the others here.

Before we examine specific current liabilities, let's use the current liability section of the balance sheet of **General Mills, Inc.**, and related disclosure notes to provide perspective on some of the liabilities we discuss ([Illustration 13-1](#)). General Mills's presentation and supplemental note disclosures are fairly typical.

Illustration 13-1 Current Liabilities—General Mills

| institutions | | | | |
| | \$279.0 | 4.6% | \$1,468.7 | 3.4% |

To ensure availability of funds, we maintain bank credit lines and have commercial paper programs available to us in the United States and Europe. We also have uncommitted and asset-backed credit lines that support our foreign operations. The following table details the fee-paid committed and uncommitted credit lines we had available as of May 31, 2020:

| (\$ in millions) | Facility Amount | Borrowed Amount |
|---|--------------------|--------------------|
| Credit facility expiring: | | |
| May 2022 | \$2.7 | \$ – |
| September 2022 | <u>0.2</u> | – |
| Total committed credit facilities | \$2.9 | – |
| Uncommitted credit facilities | <u>0.6</u> | <u>0.2</u> |
| Total committed and uncommitted credit facilities | <u>\$3.5</u> | <u>\$0.2</u> |

Source: General Mills, Inc.

We'll refer back to portions of  **Illustration 13-1** as corresponding liabilities are described later in the chapter.

Open Accounts and Notes

Many businesses buy merchandise or supplies on credit. Most also find it desirable to borrow cash from time to time to finance their activities. In this section, we discuss the liabilities these borrowing activities create: trade accounts and trade notes, bank loans, and commercial paper.

Accounts Payable and Trade Notes Payable

Accounts payable are obligations to suppliers of merchandise or services purchased on *open account*.

Most trade credit is offered on open account. This means that the only formal credit instrument is the

invoice. Because the time until payment usually is short (often 30, 45, or 60 days), these liabilities typically are noninterest-bearing and are reported at their face amounts. As shown in  **Illustration 13-1**, General Mills's accounts payable in 2020 was \$3,247.7 million. The key accounting considerations relating to accounts payable are determining their existence and ensuring that they are recorded in the appropriate accounting period. You studied these issues and learned how cash discounts are handled during your study of inventories in

 **Chapter 8**.

Buying merchandise on account in the ordinary course of business creates *accounts payable*.

Trade notes payable differ from accounts payable in that they are formally recognized by a written promissory note. Often these are of a somewhat longer term than open accounts and bear interest.

Short-Term Notes Payable

LO13-2 Account for the issuance and payment of various forms of notes and record the interest on the notes.

The most common way for a corporation to obtain temporary financing is to arrange a short-term bank loan. When a company borrows cash from a bank and signs a promissory note (essentially an IOU), the firm's liability is reported as *notes payable* (sometimes *bank*

loans or short-term borrowings). About two-thirds of bank loans are short term, but because many are routinely renewed, some tend to resemble long-term debt. In fact, in some cases, we report them as long-term debt (as you'll see later in the chapter).

Very often, smaller firms are unable to tap into the major sources of long-term financing to the extent necessary to provide for their working capital needs. So they must rely heavily on short-term financing. Even large companies typically utilize short-term debt as a significant and indispensable component of their capital structure. One reason is that short-term funds usually offer lower interest rates than long-term debt. Perhaps most importantly, corporations desire flexibility. Managers want as many financing alternatives as possible.

CREDIT LINES

Usually, short-term bank loans are arranged under an existing **line of credit** with a bank or group of banks. A line of credit is an agreement to provide short-term financing, with amounts withdrawn by the borrower only when needed. Even though the loans are short-term, with amounts borrowed and repaid frequently, the agreement to provide a line of credit typically lasts several years. Lines of credit can be noncommitted or committed. A *noncommitted* line of credit is an informal agreement that permits a company to borrow up to a prearranged limit without having to follow formal loan procedures and paperwork. Banks sometimes require the company to maintain a compensating balance on deposit with the bank, say, 5% of the line of credit.⁷ A *committed* line of credit is a more formal agreement that usually requires the company to pay a commitment fee to the bank to keep a credit line amount available to the company. A typical annual commitment fee is ¼% of the total committed funds and may also require a compensating balance. A recent annual report of **IBM Corporation** illustrates noncommitted lines of credit (📄 **Illustration 13-2**).

A *line of credit* allows a company to borrow cash without having to follow formal loan procedures and paperwork.

Illustration 13-2 Disclosure of Credit Lines—IBM Corporation

Note P. Borrowings (in part)

LINES OF CREDIT: On July 18, 2019, the company extended the maturity date of its existing \$10.25 billion Five-Year Credit Agreement by a period of one year. . . . The total expense recorded by the company related to the

Note P. Borrowings (in part)

Five-Year Credit Agreement was \$7.4 million in 2019, \$6.7 million in 2018 and \$6.1 million in 2017. . . . The Five-Year Credit Agreement permits the company and its subsidiary borrowers to borrow up to \$10.25 billion on a revolving basis. Borrowings of the subsidiary borrowers will be unconditionally backed by the company. . . . As of December 31, 2019, there were no borrowings by the company, or its subsidiaries, under these credit facilities.

Source: IBM Corporation

General Mills's disclosure notes that we looked at in  **Illustration 13-1** indicate that the company has both noncommitted and committed lines of credit.

INTEREST

When a company borrows money, it pays the lender **interest** in return for using the lender's money during the term of the loan. You might think of the interest as the "rent" paid for using money. Interest is stated in terms of a percentage rate to be applied to the face amount of the loan, which makes this an interest-bearing note. Because the stated rate typically is an annual rate, when calculating interest for a short-term note we must adjust for the fraction of the annual period the loan spans. Interest on notes is calculated as

Page 716

$$\text{Face amount} \times \text{Annual rate} \times \text{Time to maturity}$$

This is demonstrated in  **Illustration 13-3**.

Illustration 13-3 Interest-Bearing Notes Payable

On May 1, Affiliated Technologies, Inc., a consumer electronics firm, borrowed \$700,000 cash from First BancCorp under a noncommitted short-term line of credit arrangement and issued a **six-month**, 12% promissory note. Interest was payable at maturity.

May 1

| | | |
|--|---------|---------|
| Cash | 700,000 | |
| Notes payable | | 700,000 |
| November 1 | | |
| Interest expense ($\$700,000 \times 12\% \times \frac{6}{12}$) | 42,000 | |
| Notes payable | 700,000 | |
| Cash ($\$700,000 + \$42,000$) | | 742,000 |

Sometimes a note assumes the form of a so-called **noninterest-bearing note**. Obviously, though, nobody will lend money without interest. Noninterest-bearing loans actually do bear interest, but the interest is deducted (or discounted) from the face amount to determine the cash proceeds made available to the borrower at the outset.

You saw this in [Chapter 7](#) when a company sold a product worth \$658,000 and accepted a note receivable from the customer of \$700,000 due in six months. While the note had no stated interest rate, implicit in the higher amount of the note is interest of \$42,000 ($\$700,000 - \$658,000$). We can apply the same concept to our previous example in [Illustration 13-3](#). Suppose Affiliated Technologies bought inventory worth \$658,000 by issuing a \$700,000 noninterest-bearing note due in six months. The difference of \$42,000 is recorded as a discount on notes payable that will be recognized as interest expense over time.⁸

The proceeds of the note are reduced by the interest in a noninterest-bearing note.

| | | |
|--|---------|---------|
| May 1 | | |
| Inventory (difference) | 658,000 | |
| Discount on notes payable (to balance) | 42,000 | |
| Notes payable (face amount) | | 700,000 |
| November 1 | | |
| Interest expense | 42,000 | |
| Discount on notes payable | | 42,000 |
| Notes payable (face amount) | 700,000 | |
| Cash | | 700,000 |

Sometimes interest in such arrangements is described by referring to a discount rate that is applied to the face amount of the note. In this case, the six-month noninterest-bearing note would be described as “being discounted at issuance at a 12% discount rate,” and the amount of interest would be calculated as the face amount times the discount rate times the fraction of the year the note is outstanding ($\$700,000 \times 12\% \times 6/12 = \$42,000$). Notice, though, that the amount borrowed under this arrangement is only \$658,000. This causes the *effective* interest rate to be higher than the 12% stated rate:

When interest is discounted from the face amount of a note, the effective interest rate is higher than the stated discount rate.

$$\frac{\$42,000 \text{ Interest for 6 months}}{\$658,000 \text{ Amount borrowed}} = 6.38\% \text{ Rate for 6 months}$$

To annualize:

$$6.38\% \times \frac{12}{6} = 12.76\% \text{ Effective interest rate}$$

You can refer back to [Chapter 7](#) and verify that the accounting for a note receivable mirrors what we show here for a note payable.

SECURED LOANS

Sometimes short-term loans are *secured*, meaning a specified asset of the borrower is pledged as collateral or security for the loan. Although many kinds of assets can be pledged, the secured loans most frequently

Inventory or accounts receivable often are pledged as security for short-term loans.

encountered in practice are secured by inventory or accounts receivable. For example, **Deere & Company** disclosed the secured notes described in [Illustration 13-4](#).

Illustration 13-4 Disclosure of Notes Secured by Notes Receivable—Deere & Company.

Real World Financials

Note 18. Total Short-Term Borrowings: The short-term securitization borrowings are secured by financing receivables (retail notes) on the

balance sheet.

Source: Deere & Company

When accounts receivable serve as collateral, we refer to the arrangement as *pledging* accounts receivable. Sometimes, the receivables actually are sold outright to a finance company as a means of short-term financing. This is called *factoring* receivables.⁹

Commercial Paper

Some large corporations obtain temporary financing by issuing **commercial paper**, often purchased by other companies as a short-term investment. Commercial paper refers to unsecured notes sold in minimum denominations of \$25,000 with maturities ranging from 1 to 270 days (beyond 270 days, the firm would be required to file a registration statement with the SEC). Interest often is discounted at the issuance of the note. Usually, commercial paper is issued directly to the buyer (lender) and is backed by a line of credit with a bank. This allows the interest rate to be lower than in a bank loan. Commercial paper has become an increasingly popular way for large companies to raise funds, the total amount having expanded over fivefold in the last decade.

Large, highly rated firms sometimes sell *commercial paper* to borrow funds at a lower rate than through a bank loan.

 **Illustration 13-5** includes a disclosure note from the 2019 annual report of **Comcast Corporation** that describes Comcast's commercial paper program.

Illustration 13-5 Disclosure of Commercial Paper—Comcast Corporation

Real World Financials

Note 7. Commercial Paper Programs (in part)

Our commercial paper programs provide a lower-cost source of borrowing to fund our short-term working capital requirements. . . . As of December 31, 2019, amounts available under our revolving credit facilities, net of amounts outstanding under our commercial paper programs and outstanding letters of credit and bank guarantees, totaled \$9.2 billion.

Note 7. Commercial Paper Programs (in part)

Source: Comcast Corporation

The name *commercial paper* refers to the fact that a paper certificate traditionally is issued to the lender to signify the obligation, although there is a trend toward total computerization so that no paper is created. Since commercial paper is a form of notes payable, recording its issuance and payment is exactly the same as our earlier illustration.

In a statement of cash flows, the cash a company receives from using short-term notes to borrow funds as well as the cash it uses to repay the notes are reported among cash flows from financing activities. Most of the other liabilities we study in this chapter, such as accounts payable, interest payable, and bonuses payable, are integrally related to a company's primary operations and thus are part of operating activities. We discuss long-term notes in the next chapter.

Accrued Liabilities

LO13–3 Characterize accrued liabilities and liabilities from advance collection and describe when and how they should be recorded.

Accrued liabilities represent expenses already incurred but not yet paid (accrued expenses). These liabilities are recorded by adjusting entries at the end of the reporting period, prior to preparing financial statements. Common examples are salaries payable, income taxes payable, and interest payable. Although recorded in separate liability accounts, accrued liabilities usually are combined and reported under a single caption or perhaps two accrued liability captions in the balance sheet. General Mills includes accrued liabilities in other current liabilities (totaling \$1,633.3 million as of May 31, 2020).

Liabilities accrue for expenses that are incurred but not yet paid.

Accrued Interest Payable

Accrued interest payable arises in connection with notes payable (as well as other forms of debt). For example, to continue  **Illustration 13-3**, let's assume the fiscal period for Affiliated Technologies ends on June 30, two months after the six-month note is issued. The issuance of the note, intervening adjusting entry, and note payment would be recorded as shown in  **Illustration 13-6**.

Illustration 13-6 Note with Accrued Interest

Issuance of Note on May 1

| | | |
|---------------|---------|---------|
| Cash | 700,000 | |
| Notes payable | | 700,000 |

Accrual of Interest on June 30

| | | |
|--|--------|--------|
| Interest expense ($\$700,000 \times 12\% \times \frac{2}{12}$) | 14,000 | |
| Interest payable | | 14,000 |

Note Payment on November 1

| | |
|---|---------|
| Interest expense ($\$700,000 \times 12\% \times \frac{1}{2}$) | 28,000 |
| Interest payable (from June 30 accrual) | 14,000 |
| Notes payable | 700,000 |
| Cash ($\$700,000 + \$42,000$) | 742,000 |

At June 30, two months' interest has accrued and is recorded to avoid misstating expenses and liabilities on the June 30 financial statements.

Salaries, Commissions, and Bonuses

Compensation for employee services can be in the form of hourly wages, salary, commissions, bonuses, stock compensation plans, and pensions.¹⁰ Accrued liabilities arise in connection with compensation expense when employees have provided services but will be paid after the financial statement date. These accrued expenses/accrued liabilities are recorded by adjusting entries at the end of the reporting period, prior to preparing financial statements.

VACATIONS, SICK DAYS, AND OTHER PAID FUTURE ABSENCES

Suppose a firm grants two weeks of paid vacation each year to employees. Some employees take their vacations during each period in which the vacations are earned and are compensated then. Some instead accumulate those days and use them in a future period. Should the firm recognize compensation expense during the period for only those employees who actually are paid that period for their absence? When you recall what you've learned about accrual accounting, you probably conclude otherwise.

An employer should accrue an expense and the related liability for employees' compensation for future absences (such as vacation pay) if the obligation meets *all* of the four conditions listed in  **Illustration 13-7**.

Illustration 13-7 Conditions for Accrual of Paid Future Absences

1. The obligation is attributable to employees' services already performed.

2. The paid absence can be taken in a later year—the benefit vests (will be compensated even if employment is terminated) or the benefit can be accumulated over time.
3. Payment is probable.
4. The amount can be reasonably estimated.

If these conditions look familiar, it's because they are simply the characteristics of a liability we discussed earlier, adapted to relate to a potential obligation for future absences of employees. Also, these conditions are consistent with the requirement that we accrue loss contingencies only when the obligation is both (a) probable and (b) can be reasonably estimated, as discussed in Part B of this chapter.

The liability for paid absences usually is accrued at the existing wage rate rather than at a rate estimated to be in effect when absences occur.¹¹ So, if wage rates have risen, the difference between the accrual and the amount paid increases compensation expense that year. This situation is demonstrated in [Illustration 13-8](#), in which vacation time carried over from 2024 is taken in 2025, and the actual amount paid to employees is \$5,700,000.

Illustration 13-8 Paid Future Absences

When the necessary conditions are met, compensated future absences are accrued in the year the compensation is earned.

Davidson-Getty Chemicals has 8,000 employees. Each employee earns two weeks of paid vacation per year. Vacation time not taken in the year earned can be carried over to subsequent years. During 2024, 2,500 employees took both weeks' vacation, but at the end of the year, 5,500 employees had vacation time carryovers as follows:

| Employees | Vacation Weeks Earned But Not Taken | Total Carryover Weeks |
|-----------|-------------------------------------|-----------------------|
| 2,500 | 0 | 0 |
| 2,000 | 1 | 2,000 |
| 3,500 | 2 | 7,000 |

| Employees | Vacation Weeks Earned But Not Taken | Total Carryover Weeks | | | | | | | | | | | | |
|--|-------------------------------------|-----------------------|--|-----------|--|----------------------------|--|-----------|---|-----------|--|---------------------------------------|--|-----------|
| <u>8,000</u> | | <u>9,000</u> | | | | | | | | | | | | |
| <p>During 2024, compensation averaged \$600 a week per employee.</p> <p>When Vacations Were Taken in 2024</p> <table> <tr> <td>Salaries expense (2,500 × 2 weeks × \$600) + (2,000 × 1 week × \$600)</td> <td style="text-align: right;">4,200,000</td> <td></td> </tr> <tr> <td style="padding-left: 40px;">Cash (or salaries payable)</td> <td></td> <td style="text-align: right;">4,200,000</td> </tr> </table> <p>December 31, 2024 (adjusting entry)</p> <table> <tr> <td>Salaries expense (9,000 carryover weeks × \$600)</td> <td style="text-align: right;">5,400,000</td> <td></td> </tr> <tr> <td style="padding-left: 40px;">Liability—compensated future absences</td> <td></td> <td style="text-align: right;">5,400,000</td> </tr> </table> | | | Salaries expense (2,500 × 2 weeks × \$600) + (2,000 × 1 week × \$600) | 4,200,000 | | Cash (or salaries payable) | | 4,200,000 | Salaries expense (9,000 carryover weeks × \$600) | 5,400,000 | | Liability—compensated future absences | | 5,400,000 |
| Salaries expense (2,500 × 2 weeks × \$600) + (2,000 × 1 week × \$600) | 4,200,000 | | | | | | | | | | | | | |
| Cash (or salaries payable) | | 4,200,000 | | | | | | | | | | | | |
| Salaries expense (9,000 carryover weeks × \$600) | 5,400,000 | | | | | | | | | | | | | |
| Liability—compensated future absences | | 5,400,000 | | | | | | | | | | | | |

Company policy and actual practice should be considered when deciding whether the rights to payment for absences have been earned by services already rendered. For example, scientists in a private laboratory are eligible for paid sabbaticals every seven years. Should a liability be accrued at the end of a scientist's sixth year? No—if sabbatical leave is granted only to perform research beneficial to the employer. Yes—if past practice indicates that sabbatical leave is intended to provide unrestricted compensated absence for past service and other conditions are met.

Customary practice should be considered when deciding whether an obligation exists.

| When Year 2024 Vacations Are Taken in 2025 | | |
|---|-----------|-----------|
| Liability—compensated future absences (account balance) | 5,400,000 | |
| Salaries expense (difference) | 300,000 | |
| Cash (or salaries payable) (given) | | 5,700,000 |

Custom and practice also influence whether unused rights to paid absences expire or can be carried forward. Obviously, if rights vest (payable even if employment is terminated), they haven't expired. But holiday time, military leave, maternity leave, and jury time typically do not accumulate if unused, so a liability for those benefits usually is not accrued. On the other hand, if it's customary that a particular paid absence, say holiday time, can be carried

forward—if employees work on holidays, in this case—a liability is accrued if it's probable that employees will be compensated in a future year.

Interestingly, sick pay quite often meets the conditions for accrual, but accrual is not mandatory because future absence depends on future illness, which usually is not a certainty. Similar to other forms of paid

Accrual of sick pay is not required, but may be appropriate in some circumstances.

absences, the decision of whether to accrue nonvesting sick pay should be based on actual policy and practice. If company policy or custom is that employees are paid sick pay even when their absences are not due to illness, it's appropriate to record a liability for unused sick pay. For example, some companies routinely allow unused sick pay benefits to be accumulated and paid at retirement (or to beneficiaries if death comes before retirement). If each condition is met except that the company finds it impractical to reasonably estimate the amount of compensation for future absences, a disclosure note should describe the situation.

ANNUAL BONUSES

Sometimes compensation packages include annual bonuses tied to performance objectives designed to provide incentives to executives. The most common

Bonuses sometimes take the place of permanent annual raises.

performance measures are earnings per share, net income, and operating income, each being used by about a quarter of firms having bonus plans. Nonfinancial performance measures, such as customer satisfaction and product or service quality, also are used.¹² **Annual bonuses** also are popular, not just for executives, but for nonmanagerial personnel as well. Unfortunately for employees, bonuses often take the place of annual raises. This allows a company to increase employee pay without permanently locking in the increases in salaries. Bonuses are compensation expense of the period in which they are earned, so unpaid bonuses are accrued as a liability at year-end.

Liabilities from Advance Collections

Deposits and advances from customers, as well as collections for third parties, present situations where liabilities are created to either make payments or provide goods or services in the future.

Deposits and Advances from Customers

Collecting cash from a customer as a refundable deposit or as an advance payment for products or services creates a liability to return the deposit or to supply the products or services.¹³

REFUNDABLE DEPOSITS

In some businesses, it's typical to require customers to pay cash as a deposit that will be refunded when a specified event occurs. You probably have encountered such situations. When apartments are rented, security or damage deposits often are collected. Utility companies frequently collect deposits when service is begun. Similarly, deposits sometimes are required on returnable containers to be refunded when the containers are returned. That situation is demonstrated in  **Illustration 13-9**.

Illustration 13-9 Refundable Deposits

Rancor Chemical Company sells combustible chemicals in expensive, reusable containers. Customers are charged a deposit for each container delivered and receive a refund when the container is returned. Deposits collected on containers delivered during the year were \$300,000. Deposits are forfeited if containers are not returned within one year. Ninety percent of the containers were returned within the allotted time. Deposits charged are twice the actual cost of containers. The inventory of containers remains on the company's books until deposits are forfeited.

When Deposits Are Collected

| | | |
|-------------------------------|---------|---------|
| Cash | 300,000 | |
| Liability—refundable deposits | | 300,000 |

When Containers Are Returned*

| | | |
|-------------------------------|---------|---------|
| Liability—refundable deposits | 270,000 | |
| Cash | | 270,000 |

When Deposits Are Forfeited*

| | | |
|-------------------------------|--------|--------|
| Liability—refundable deposits | 30,000 | |
| Revenue—sale of containers | | 30,000 |
| Cost of goods sold | 15,000 | |
| Inventory of containers | | 15,000 |

*Of course, not all containers are returned at the same time, nor does the allotted return period expire at the same time for all containers not returned. These entries summarize the several individual returns and forfeitures.

ADVANCES FROM CUSTOMERS

At times, businesses require advance payments from customers that will be applied to the purchase price when goods are delivered or services provided. Gift certificates, magazine subscriptions, layaway deposits, special order deposits, and airline tickets are examples. These customer advances, also called *deferred revenue* or *unearned revenue*, represent liabilities until the related product or service is provided. For instance, the **New York Times Company** reports deferred revenue from unexpired subscriptions of over \$88 million in its 2019 balance sheet. Advances are demonstrated in  **Illustration 13-10**.

A customer advance produces an obligation that is satisfied when the product or service is provided.

Illustration 13-10 Customer Advance

Tomorrow Publications collects magazine subscriptions from customers at the time subscriptions are sold. Subscription revenue is recognized over the term of the subscription. Tomorrow collected \$20 million in subscription sales during its first year of operations. At December 31, the average subscription was one-fourth expired.

(\$ in millions)

When Advance Is Collected

| | | |
|----------------------------------|----|----|
| Cash | 20 | |
| Deferred subscription revenue | | 20 |
| When Product Is Delivered | | |
| Deferred subscription revenue | 5 | |
| Subscription revenue | | 5 |

This illustration highlights that deferred revenue gets reduced when the revenue associated with the advance has been recognized, either because the seller has delivered the goods or services as promised or because the buyer has forfeited the advance payment (for example, not redeeming a gift certificate before it expires). Less often, deferred revenue is reduced when an advance payment is returned by the seller to the buyer because the seller didn't deliver the goods or services as promised. This should sound familiar—recall from [Chapter 6](#) that revenue recognition must be delayed until the seller has fulfilled its performance obligation. When revenue recognition is delayed but some advanced payment is received, the seller reports a deferred revenue liability until delivery has occurred.

Additional Consideration

Accounting for Interest on Advances from Customers. Earlier in this chapter, you saw that we calculate interest expense on “noninterest-bearing” notes. After all, there is a “time value of money,” and nobody is willing to loan money for free. The same reasoning suggests that companies should calculate interest expense when a customer pays far in advance of delivery of a product or service. As indicated in [Chapter 6](#), that's what GAAP for revenue recognition requires.¹⁴

For example, assume that on January 1, 2024, Lewis Manufacturing Co. enters into a contract to deliver equipment that has a fair value of \$1,000 to Williams Surgical Supply, Inc., on December 31, 2025. Williams pays \$907 (in thousands) to Lewis at the start of the contract (January 1, 2024). In this arrangement, Williams pays Lewis significantly in advance of delivery, so Williams can be viewed as loaning money to Lewis, and Lewis should

recognize interest expense on the loan. Assuming an effective interest rate of 5%, Lewis would recognize interest expense on its deferred revenue liability as follows:

| | | |
|---|------|-------|
| January 1, 2024 | | |
| <i>When prepayment occurs:</i> | | |
| Cash | 907* | |
| Deferred revenue | | 907 |
| <small>*\$907 = \$1,000 × 0.90703 (present value of \$1, n = 2, I = 5%; from Table 2)</small> | | |
| December 31, 2024 | | |
| <i>Accrual of year 1 interest expense:</i> | | |
| Interest expense (\$907 × 5%) | 45 | |
| Interest payable | | 45 |
| December 31, 2025 | | |
| <i>When subsequent delivery occurs:</i> | | |
| Interest expense [(\$907 + \$45) × 5%] | 48 | |
| Interest payable | 45 | |
| Deferred revenue | 907 | |
| Sales revenue | | 1,000 |

Lewis recognizes revenue of \$1,000 rather than \$907 because that is the fair value it received from Williams, including the \$907 received up front and \$45 + \$48 = \$93 of interest that Williams is allowing Lewis to not pay. Put differently, the equipment must be worth \$1,000 for Williams to be willing to accept it in exchange for giving up \$907 cash and \$93 of interest it is owed by Lewis.

As discussed in [Chapter 6](#), companies can ignore the interest component of advance payments if it is not significant, which is assumed to be the case if the period between payment and delivery is less than one year.

Gift Cards

Gift cards or gift certificates are particularly common forms of advanced payments. As indicated in [Chapter 6](#), when a company sells a gift card, it initially records the cash received as deferred revenue, and then recognizes revenue either when the gift card is redeemed or when the probability of redemption is viewed as remote (called *gift card breakage*, and based on expiration or the company’s experience). The amounts involved can be significant. For example, **Best Buy’s** 2020 annual report lists a \$281 million liability for unredeemed gift cards and \$35 million of income from gift card breakage.

 **Illustration 13-11** shows the journal entries used to account for gift cards.

Illustration 13-11 Accounting for Gift Cards

During May 2024, Great Buy, Inc., sold \$2 million of gift cards. Also during May, \$1.5 million of gift cards sold in May and in prior periods were redeemed by customers, and \$1 million of gift cards sold in prior periods expired and were unused. Great Buy would make the following journal entries:

To record sale of gift cards

| | | |
|----------------------------|-----------|-----------|
| Cash | 2,000,000 | |
| Deferred gift card revenue | | 2,000,000 |

To record redemption of gift cards (ignoring entries to inventory and cost of sales)

| | | |
|----------------------------|-----------|-----------|
| Deferred gift card revenue | 1,500,000 | |
| Revenue—gift cards | | 1,500,000 |

To record expiration of gift cards

| | | |
|----------------------------|-----------|-----------|
| Deferred gift card revenue | 1,000,000 | |
| Revenue—gift cards | | 1,000,000 |

Liabilities for deferred revenue are classified as current or long-term depending on when the obligation is expected to be satisfied.

Collections for Third Parties

Companies often make collections for third parties from customers or from employees and periodically remit these amounts to the appropriate governmental (or other) units. Amounts collected this way represent liabilities until remitted.

Additional Consideration

Escheatment laws specify the rights of a state to claim abandoned property. Unused gift cards are a type of abandoned (or unclaimed) property. While most states exempt gift cards from escheatment laws, some do not. In those states where gift cards are subject to escheatment laws, after a period of three to five years, retailers are required to turn over all or part of the unredeemed value of gift cards to the state. To see how this works, let's modify  **Illustration 13–11** and assume that Great Buy is subject to an escheatment law that requires payment of 100% of unredeemed gift cards to the state in which Great Buy is incorporated. The third journal entry of  **Illustration 13–11** would be modified as follows:

To record expiration of gift cards

| | | |
|---|-----------|-----------|
| Deferred gift card revenue (amount of expired gift cards) | 1,000,000 | |
| Cash (to balance) | | 1,000,000 |

An example is sales taxes. For illustration, assume a state sales tax rate of 4% and local sales tax rate of 3%. Adding the tax to a \$100 sale creates a \$7 liability until the tax is paid.

Sales taxes collected from customers represent liabilities until remitted.

| | | |
|---|-----|-----|
| Cash (or accounts receivable) | 107 | |
| Sales revenue | | 100 |
| Sales taxes payable [(4% + 3%) × \$100] | | 7 |

Payroll-related deductions such as withholding taxes, Social Security taxes, employee insurance, employee contributions to retirement plans, and union dues also

Amounts collected from employees in connection with

create current liabilities until the amounts collected are paid to appropriate parties. These payroll-related liabilities are discussed further in the appendix to this chapter.

payroll represent liabilities until remitted.

A Closer Look at the Current and Noncurrent Classification

LO13–4 Determine when a liability can be classified as a noncurrent obligation.

Given a choice, do you suppose management would prefer to report an obligation as a current liability or as a noncurrent liability? Other things being equal, most would choose the noncurrent classification. The reason is that in most settings, outsiders (like banks, bondholders, and shareholders) consider debt that is payable currently to be riskier than debt that need not be paid for some time, because the current payable requires the company to be able to access the necessary cash relatively soon. Also, the long-term classification enables the company to report higher working capital (current assets minus current liabilities) and a higher current ratio (current assets/current liabilities). Working capital and the current ratio often are explicitly restricted in loan contracts. As you study this section, you should view the classification choice from this perspective. That is, a manager might not so much ask the question “What amount should I report as a current liability?” but rather “What amount can I exclude from classification as a current liability?”

Current Maturities of Long-Term Debt

Long-term obligations (bonds, notes, lease liabilities, deferred tax liabilities) usually are reclassified and reported as current liabilities when they become payable within the upcoming year (or operating cycle, if longer than a year). For example, a 20-year bond issue is reported as a long-term liability for 19 years but normally is reported as a current liability on the balance sheet prepared during the 20th year of its term to maturity.¹⁵ General Mills reported \$2,331.5 million of its long-term debt as a current liability in 2020 (see  **Illustration 13-1**).

Obligations Callable by the Creditor

The requirement to classify currently maturing debt as a current liability includes debt that is *callable* (in other words, due on demand) *by the creditor* in the upcoming year (or operating cycle, if longer), even if the debt is not expected to be called. The current liability classification also is intended to include situations in which the creditor has the right to demand payment because an *existing violation* of a provision of the debt agreement makes it callable (say, working capital has fallen below a minimum covenant specified by a debt agreement). This also includes situations in which debt is not yet callable but will be callable within the year if an existing violation is not corrected within a specified grace period (unless it's probable the violation will be corrected within the grace period or waived by the creditor).¹⁶

The currently maturing portion of a long-term debt must be reported as a current liability.

When Short-Term Obligations Are Expected to Be Refinanced

Reconsider the 20-year bond issue we discussed earlier. Normally we would reclassify it as a current liability on the balance sheet prepared during its 20th year. But suppose a second 20-year bond issue is sold specifically to refund the first issue when it matures. Do we have a long-term liability for 19 years, then a current liability in year 20, and then another long-term liability in years 21 and beyond? Or, do we have a single 40-year, long-term liability? If we look beyond the outward form of the transactions, the substance of the events obviously supports a single, continuing, noncurrent obligation. The concept of substance over form influences the classification of obligations expected to be refinanced.

Short-term obligations (including the callable obligations we discussed in the previous section) that are expected to be refinanced on a long-term basis can be reported as noncurrent, rather than current, liabilities only if two conditions are met:

Short-term obligations can be reported as noncurrent liabilities if the company (a) *intends to refinance on a long-term basis* and (b) *demonstrates the ability to do so by a refinancing agreement or by actual financing.*

- (1) The company must intend to refinance on a long-term basis, and
- (2) the company must actually have demonstrated the ability to refinance on a long-term basis.

The ability to refinance on a long-term basis can be demonstrated by either an existing refinancing agreement or by actual financing prior to the issuance of the financial

statements.¹⁷  **Illustration 13-12** provides an example.

Illustration 13-12 Short-Term Obligations that Are Expected to Be Refinanced on a Long-Term Basis

Brahm Bros. Ice Cream had \$12 million of notes that mature in May 2025 and also had \$4 million of bonds issued in 1995 that mature in February 2025. On December 31, 2024, the company's fiscal year-end, management intended to refinance both on a long-term basis.

On February 7, 2025, the company issued \$4 million of 20-year bonds, applying the proceeds to repay the bond issue that matured that month. In early March, prior to the actual issuance of the 2024 financial statements, Brahm Bros. negotiated a line of credit with a commercial bank for up to \$7 million any time during 2025. Any borrowings will mature two years from the date of borrowing. Interest is at the Secured Overnight Financing Rate (SOFR).*

| | December 31, 2024 |
|------------------------------|------------------------------|
| | (\$ in thousands) |
| <hr/> | |
| Classification | |
| Current Liabilities | |
| Notes payable | \$5,000 |
| Long-Term Liabilities | |
| Notes payable | \$7,000 |
| Bonds payable | 4,000 |

Management's ability to refinance the \$4 million of bonds on a long-term basis was demonstrated by actual financing prior to the issuance of the financial statements. Management's ability to refinance \$7 million of the \$12 million of notes was demonstrated by a refinancing agreement. The remaining \$5 million must be reported as a current liability.

*This is a widely available rate often used as a basis for establishing interest rates on lines of credit.

If shares of stock had been issued to refinance the bonds in the illustration, the bonds still would be excluded from classification as a current liability. The specific form of the long-term refinancing (bonds, bank loans, equity securities) is irrelevant when determining the appropriate classification. Requiring companies to actually demonstrate the ability to refinance on a long-term basis in addition to merely intending to do so avoids intentional or unintentional understatements of current liabilities.

It's important to remember that several weeks usually pass between the end of a company's fiscal year and the date the financial statements for that year actually are issued. Events occurring during that period can be used to clarify the nature of financial statement elements at the reporting date. Here we consider refinancing agreements and actual securities transactions to support a company's ability to refinance on a long-term basis. Later in the chapter, we use information that becomes available during this period to decide how loss contingencies are reported.

LO13–7 Discuss the primary differences between U.S. GAAP and IFRS with respect to current liabilities and contingencies.

International Financial Reporting Standards

Classification of Liabilities to Be Refinanced. Under U.S. GAAP, liabilities payable within the coming year are classified as long-term liabilities if refinancing is completed before the date of issuance of the financial statements. Under IFRS, refinancing must be completed before the balance sheet date.¹⁸

CURRENT LIABILITIES

The following selected transactions relate to liabilities of Southern Communications, Inc., for portions of 2024 and 2025. Southern's fiscal year ends on December 31.

Required:

Prepare the appropriate journal entries for these transactions.

2024

- July 1** Arranged an uncommitted short-term line of credit with First City Bank amounting to \$25,000,000 at the bank's prime rate (11.5% in July). The company will pay no commitment fees for this arrangement.
- Aug 9** Received a \$30,000 refundable deposit from a major customer for copper-lined mailing containers used to transport communications equipment.
- Oct 7** Received most of the mailing containers covered by the refundable deposit and a letter stating that the customer will retain containers represented by \$2,000 of the deposit and will forfeit that amount. The cost of the forfeited containers was \$1,500.
- Nov 1** Borrowed \$7 million cash from First City Bank under the line of credit arranged in July and issued a nine-month promissory note. Interest at the prime rate of 12% was payable at maturity.
- Dec 31** Recorded appropriate adjusting entries for the liabilities described above.

2025

Feb 12 Using the unused portion of the credit line as support, issued \$9 million of commercial paper and issued a six-month promissory note. Interest was discounted at issuance at a 10% discount rate.

Aug 1 Paid the 12% note at maturity.

12 Paid the commercial paper at maturity.

2024

July 1

No entry is made for a line of credit until a loan actually is made. The existence and terms of the line would be described in a disclosure note.

August 9

| | | |
|-------------------------------|--------|--------|
| Cash | 30,000 | |
| Liability—refundable deposits | | 30,000 |

October 7

| | | |
|-------------------------------|--------|--------|
| Liability—refundable deposits | 30,000 | |
| Cash | | 28,000 |
| Revenue—sale of containers | | 2,000 |
| Cost of goods sold | 1,500 | |
| Inventory of containers | | 1,500 |

November 1

| | | |
|---------------|-----------|-----------|
| Cash | 7,000,000 | |
| Notes payable | | 7,000,000 |

December 31

| | | |
|--|---------|---------|
| Interest expense ($\$7,000,000 \times 12\% \times \frac{1}{12}$) | 140,000 | |
| Interest payable | | 140,000 |

2025

February 12

| | | |
|--|-----------|---------|
| Cash [$\$9,000,000 - (\$9,000,000 \times 10\% \times \frac{1}{12})$] | 8,550,000 | |
| Discount on notes payable (difference) | | 450,000 |

| | |
|---------------|-----------|
| Notes payable | 9,000,000 |
|---------------|-----------|

Note that the effective interest rate is $[(\$9,000,000 \times 10\% \times \frac{1}{2}) \div \$8,550,000] \times 2 = 10.53\%$.

August 1

| | |
|---|-----------|
| Interest expense ($\$7,000,000 \times 12\% \times \frac{1}{2}$) | 490,000 |
| Interest payable (from adjusting entry) | 140,000 |
| Notes payable (face amount) | 7,000,000 |
| Cash ($\$7,000,000 + \$630,000$) | 7,630,000 |

August 12

| | |
|---|-----------|
| Interest expense ($\$9,000,000 \times 10\% \times \frac{1}{2}$) | 450,000 |
| Discount on notes payable | 450,000 |
| Notes payable (face amount) | 9,000,000 |
| Cash ($\$8,550,000 + \$450,000$) | 9,000,000 |

Contingencies

The feature that distinguishes the loss contingencies we discuss in this part of the chapter from the liabilities we discussed previously is uncertainty as to whether an obligation really exists. The circumstance giving rise to the contingency already has occurred, but there is uncertainty about whether a liability exists that will be resolved only when some future event occurs (or doesn't occur).

Loss Contingencies

LO13–5 Identify situations that constitute contingencies and the circumstances under which they should be accrued.

General Motors Company's 2019 financial statements indicate a variety of potential obligations, as shown in  **Illustration 13-13**.

Illustration 13-13 Disclosure of Potential Contingent Losses—General Motors Company

Real World Financials

Note 16. Commitments and Contingencies (in part)

Various other legal actions, including class actions, governmental investigations, claims and proceedings are pending against us or our related companies or joint ventures, including matters arising out of alleged product defects; employment related matters; product and workplace safety, vehicle emissions and fuel economy regulations; product warranties; financial services; dealer, supplier and other contractual relationships; government regulations relating to competition issues; tax-related matters not subject to the provision of Accounting Standards Codification 740, Income Taxes (indirect tax-related matters); product design, manufacture and performance; consumer protection laws; and environmental protection laws, including laws regulating air emissions, water discharges, waste management and environmental remediation from stationary sources.

Source: General Motors Company

These “class actions, governmental investigations, claims and proceedings” all relate to situations that already have occurred. However, it isn't clear that these situations have given rise to liabilities, because GM doesn't know if it will have to make future payments. How likely is an unfavorable outcome, and how much will GM have to pay if an unfavorable outcome occurs?

A **loss contingency** is an existing, uncertain situation involving potential loss depending on whether some future event occurs. Whether a contingency is accrued and reported as a liability depends on (a) the likelihood that the confirming event will occur and (b) what can be determined about the amount of loss. For

A loss contingency arises when there is uncertainty about whether a past event will result in a future loss. The uncertainty will be resolved only when some future event occurs.

example, consider lawsuits filed against GM by customers who allege they suffered injuries as a result of faulty ignition switches in GM cars that were recalled in 2014. GM's note 16 discloses much information about such claims, including over 100 class-action lawsuits and several hundred personal-injury lawsuits filed against it. It may take several years for those lawsuits to be settled or litigated. When considering how to account for those lawsuits prior to their resolution, GM must assess the likelihood that it eventually will have to pay damages and, if so, what the amount of those damages will be.

Note that we only account for a loss contingency when the event that gave rise to it occurred before the financial statement date. Otherwise, regardless of the likelihood of the eventual outcome, no liability existed at the statement date. Remember, one of the essential characteristics of a liability is that it results from past transactions or events. In our GM example, GM previously sold the cars to customers, so the event giving rise to potential litigation losses has occurred. The uncertainty relates not to that past event, but to the potential litigation losses that could occur in the future.

Generally accepted accounting principles require that the likelihood that the future event(s) will confirm the incurrence of the liability be (somewhat arbitrarily) categorized as probable, reasonably possible, or remote:¹⁹

| | |
|----------------------------|--|
| Probable | Confirming event is likely to occur. |
| Reasonably possible | The chance the confirming event will occur is more than remote but less than likely. |
| Remote | The chance the confirming event will occur is slight. |

Also key to reporting a contingent liability is its dollar amount. The amount of the potential loss is classified as either known, reasonably estimable, or not reasonably estimable.

LO13–6 Demonstrate the appropriate accounting treatment for

contingencies, including unasserted claims and assessments.

A liability is accrued if it is both probable that the confirming event will occur and the amount can be at least reasonably estimated. A general depiction of the accrual of a loss contingency is:

| | | |
|-------------------|-------|-------|
| Loss (or expense) | X,XXX | |
| Liability | | X,XXX |

If one amount within a range of possible loss appears better than other amounts within the range, that amount is accrued. When no amount within the range appears more likely than others, the minimum amount should be recorded, and the possible additional loss should be disclosed.²⁰

As an example, consider the following disclosure note from Microsoft's 2020 financial statements ([📄 Illustration 13-14](#)).

Illustration 13-14 Accrual of a Loss Contingency—Microsoft Corporation

Real World Financials

Note 15. Contingencies (in part)

As of June 30, 2020, we accrued aggregate legal liabilities of \$306 million. While we intend to defend these matters vigorously, adverse outcomes that we estimate could reach approximately \$500 million in aggregate beyond recorded amounts are reasonably possible.

Source: Microsoft Corporation

Consistent with GAAP, Microsoft accrued and disclosed the \$306 million loss that is probable and reasonably estimable, and then only disclosed the \$500 million estimated range of reasonably possible losses above that amount.

It's important to note that some contingent losses don't involve liabilities at all. Rather, these contingencies, when resolved, cause a noncash asset to be impaired, so accruing the contingency means reducing the related asset rather than recording a liability:

| | |
|------------------------------|-------|
| Loss (or expense) | x,xxx |
| Asset (or valuation account) | x,xxx |

The most common loss contingency of this type is an uncollectible receivable. You have recorded these before without knowing you were accruing a loss contingency (*Debit*: bad debt expense; *Credit*: allowance for uncollectible accounts).²¹

Not all loss contingencies are accrued. If one or both criteria for accrual are not met, but there is at least a reasonable possibility that a loss will occur, a disclosure note should describe the contingency. It also should provide an estimate of the potential loss or range of loss, if possible. If an estimate cannot be made, a statement to that effect is needed.

As an example of only disclosing a contingent loss, consider a disclosure note accompanying a 2019 annual report of **Gilead Sciences, Inc.**, a biopharmaceutical company. As shown in

A loss contingency is disclosed in notes to the financial statements if there is at least a reasonable possibility that the loss will occur.

 **Illustration 13-15**, Gilead considered it impossible to predict the outcome of product liability litigation, and so only disclosed that contingent loss.

Illustration 13-15 Disclosure of Loss Contingency—Gilead Sciences, Inc.

Real World Financials

Note 14. Commitments and Contingencies
Legal Proceedings: Product Liability
 We have been named as a defendant in one class action lawsuit and various product liability lawsuits related to Viread, Truvada, Atripla, Complera and Stribild. . . . The lawsuits, which are pending in state or federal court in California, Delaware or Florida, involve thousands of plaintiffs. Plaintiffs in these cases seek damages and other relief on various grounds for alleged personal injury and economic loss. We intend to vigorously defend ourselves in these actions. While we believe these cases are without merit, we cannot predict the ultimate outcome. If plaintiffs are successful in their claims, we could be required to pay significant monetary damages.

Illustration 13-16 highlights the appropriate accounting treatment for each possible combination of (a) the likelihood of an obligation being confirmed and (b) the determinability of its dollar amount.

Illustration 13-16 Accounting Treatment of Loss Contingencies

| Likelihood | Dollar Amount of Potential Loss | | |
|---------------------|---------------------------------------|---------------------------------------|--------------------------|
| | Known | Reasonably Estimable | Not Reasonably Estimable |
| Probable | Liability accrued and disclosure note | Liability accrued and disclosure note | Disclosure note only |
| Reasonably possible | Disclosure note only | Disclosure note only | Disclosure note only |
| Remote | No disclosure required* | No disclosure required* | No disclosure required* |

*Except for certain guarantees and other specified off-balance-sheet risk situations discussed in the next chapter.

Product Warranties and Guarantees

MANUFACTURER'S QUALITY-ASSURANCE WARRANTY

Satisfaction guaranteed! Your money back if not satisfied! If anything goes wrong in the first five years or 100,000 miles . . . ! Three-year guarantee! These and similar promises accompany most consumer goods. In Chapter 6, we called this sort of guarantee a *quality-assurance warranty*. When this type of warranty is included in a contract between a seller and a customer, it isn't a separate performance obligation for the seller. Rather, it is a guarantee by the seller that the customer will be satisfied with the goods or services that the seller provided.

Most consumer products are accompanied by a guarantee.

Why do sellers offer quality-assurance warranties? To boost sales. It follows, then, that any costs of making good on such guarantees should be estimated and recorded as expenses in the same accounting period the products are sold (matching expenses with revenues). Also, it is in the period of sale that the company becomes obligated to eventually make good on a guarantee, so it makes sense that it recognizes a liability in the period of sale. The challenge is that much of the cost of satisfying a guarantee usually occurs later, sometimes years later. So, this is a loss contingency. There may be a future sacrifice of economic benefits (cost of satisfying the guarantee) due to an existing circumstance (the guaranteed products have been sold) that depends on an uncertain future event (customer claim).

The costs of satisfying guarantees should be recorded as expenses in the same accounting period the products are sold.

The criteria for accruing a contingent loss (rather than only disclosing it) almost always are met for product warranties (or product guarantees). While we usually can't predict the liability associated with an individual sale, reasonably accurate estimates of the *total* liability for a period usually are possible because prior experience makes it possible to predict how many warranties or guarantees (on average) will need to be satisfied. [Illustration 13-17](#) demonstrates accrual of the contingent liability for warranties in the reporting period in which the product under warranty is sold.

The contingent liability for quality-assurance warranties almost always is accrued.

Illustration 13-17 Product Warranty

Caldor Health, a supplier of in-home health care products, introduced a new therapeutic chair carrying a two-year warranty against defects. Estimates based on industry experience indicate warranty costs of 3% of sales during the first 12 months following the sale and 4% the next 12 months. During December 2024, its first month of availability, Caldor sold \$2 million of chairs.

During December

| | | |
|--------------------------------|-----------|-----------|
| Cash (and accounts receivable) | 2,000,000 | |
| Sales revenue | | 2,000,000 |

December 31, 2024 (adjusting entry)

| | |
|--|---------|
| Warranty expense [(3% + 4%) × \$2,000,000] | 140,000 |
|--|---------|

| | |
|--|---------|
| Warranty liability | 140,000 |
| When customer claims are made and costs are incurred to satisfy those claims, the liability is reduced (let's say \$61,000 in 2025): | |
| Warranty liability | 61,000 |
| Cash (or salaries payable, parts and supplies, etc.) | 61,000 |

Estimates of warranty costs cannot be expected to be precise. However, if the estimating method is monitored and revised when necessary, overestimates and underestimates should cancel each other over time. The estimated liability may be classified as current or as part current and part long-term, depending on when warranty claims are expected to be satisfied.

EXPECTED CASH FLOW APPROACH

In [Chapter 5](#), you learned of a framework for using future cash flows as the basis for measuring assets and liabilities, introduced by the FASB in 2000 with *Statement of Financial Accounting Concepts No. 7*,

SFAC No. 7 provides a framework for using future cash flows in accounting measurements.

“Using Cash Flow Information and Present Value in Accounting Measurements.”²² The approach described in the Concept Statement offers a way to take into account *any uncertainty concerning the amounts and timing of the cash flows*. Although future cash flows in many instances are contractual and certain, the amounts and timing of cash flows are less certain in other situations, such as warranty obligations.

As demonstrated in [Illustration 13-17](#), the traditional way of measuring a warranty obligation is to report the “best estimate” of future cash flows, ignoring the time value of money on the basis of immateriality. However, when the warranty obligation spans more than one year and we can associate probabilities with possible cash flow outcomes, the approach described by *SFAC No. 7* offers a more plausible estimate of the warranty obligation. This “expected cash flow approach” incorporates specific probabilities of cash flows into the analysis. [Illustration 13-18](#) provides an example.

The probability-weighted cash outcomes provide the expected cash flows.

The present value of the expected cash flows is the estimated liability.

Caldor Health, a supplier of in-home health care products, introduced a new therapeutic chair carrying a two-year warranty against defects. During December of 2024, its first month of availability, Caldor sold \$2 million of the chairs. Industry experience indicates the following probability distribution for the potential warranty costs:

| Warranty Costs | 2025 | Probability |
|----------------|------|-------------|
| \$50,000 | | 20% |
| 60,000 | | 50% |
| 70,000 | | 30% |
| | 2026 | |
| \$70,000 | | 20% |
| 80,000 | | 50% |
| 90,000 | | 30% |

An arrangement with a service firm requires that costs for the two-year warranty period be settled at the end of 2025 and 2026. The risk-free rate of interest is 5%. Applying the expected cash flow approach, at the end of the 2024 fiscal year, Caldor would record a warranty liability (and expense) of \$131,564, calculated as follows:

| | | | | | |
|-------------|---|------------------|-----------------|------------------------|------------------|
| 2025 | { | \$50,000 × 20% = | \$10,000 | | |
| | | 60,000 × 50% = | 30,000 | | |
| | | 70,000 × 30% = | 21,000 | | |
| | | | <u>\$61,000</u> | | |
| | | | | × 0.95238* | \$ 58,095 |
| 2026 | { | \$70,000 × 20% = | \$14,000 | | |
| | | 80,000 × 50% = | 40,000 | | |
| | | 90,000 × 30% = | 27,000 | | |
| | | | <u>\$81,000</u> | | |
| | | | | × 0.90703 [†] | 73,469 |
| | | | | | <u>\$131,564</u> |

*Present value of \$1, n = 1, i = 5% (from Table 2)
[†]Present value of \$1, n = 2, i = 5% (from Table 2)

| December 31, 2024 (adjusting entry) | |
|--|---------|
| Warranty expense..... | 131,564 |
| Warranty liability (calculated above)..... | 131,564 |

EXTENDED WARRANTY CONTRACTS

It's difficult these days to buy a computer, a digital camera, a car, or almost any durable consumer product without being asked to buy an extended warranty agreement. An extended warranty provides warranty protection beyond the manufacturer's original warranty. As discussed in [Chapter 6](#), because an extended warranty is priced and sold separately from the warranted product, it constitutes a separate performance obligation. So, rather than only worrying about how to recognize the contingent liability associated with an extended warranty, we face another accounting question: When should the revenue from the sale of an extended warranty be recognized?

Revenue is recognized when performance obligations are satisfied, not necessarily when cash is received. Because an extended warranty provides coverage over a period of time,

these arrangements typically qualify for revenue recognition over the period of coverage. However, cash typically is received up front when the extended warranty is sold. Similar to other advanced payments for future products and services, revenue from extended warranty contracts is not recognized immediately, but instead is recorded as a deferred revenue liability at the time of sale and recognized as revenue over the contract period, typically on a straight-line basis. We demonstrate accounting for extended warranties in

 **Illustration 13-19.**

Illustration 13-19 Extended Warranty

Brand Name Appliances sells major appliances that carry a one-year manufacturer's warranty. Customers are offered the opportunity at the time of purchase to also buy a three-year extended warranty for an additional charge. On January 3, 2024, Brand Name sold a \$60 extended warranty, covering years 2025, 2026, and 2027.

January 3, 2024

| | |
|--------------------------------------|----|
| Cash (or accounts receivable) | 60 |
| Deferred revenue—extended warranties | 60 |

December 31, 2025, 2026, 2027 (adjusting entries)

| | |
|---|----|
| Deferred revenue—extended warranties | 20 |
| Revenue—extended warranties ($\$60 \div 3$) | 20 |

The costs incurred to satisfy customer claims under the extended warranties also will be recorded during the same three-year period. That way, net income in each year of the extended warranty will reflect both the warranty revenue recognized and the costs associated with that revenue.

Additional Consideration

Accounting for Rebates, Premiums, and Coupons. Sometimes a company promotes its products in ways that obligate the company to do something in the future. For example, at the time of a sale, customers obtain cash register

receipts, bar codes on the product, or other proofs of purchase that later can be mailed to the manufacturer for *cash rebates*. Also, customers sometimes can show proof of purchase to obtain noncash items (called *premiums*), like toys, small appliances, or dishes. Companies may also mail out *coupons*, which entice customers to buy a company's products and services at a discounted price at some point in the future. How should we account for the future obligations created by these promotions?

Until very recently, all of these promotions were viewed as creating a contingent liability. After all, they obligate the seller to transfer some uncertain amount of cash, goods, or services at a future date. However, with recent changes in accounting for revenue recognition, the accounting in this area has changed. Now we view promises to provide rebates and premiums to be part of agreements between sellers and customers. This means we account for them using the revenue recognition process we learned about in  **Chapter 6**.

Cash rebates are an obligation to return cash in the future, so they represent a reduction in the net amount paid by the customer. To record these, we estimate the amount of cash rebates that customers will take and reduce revenue by the amount of that estimate in the period revenue is recognized. We also recognize a liability for the estimated rebate, similar to how we recognize a refundable deposit.

Premiums obligate a company to provide noncash items and are treated as separate performance obligations. We allocate a portion of the original sales price to the premiums (based on their relative stand-alone selling prices), record that amount as deferred revenue, and recognize that portion as revenue when premiums are delivered. No contingent liability is recognized because, as with extended warranties, we recognize the cost of premiums in the period in which we deliver them and recognize revenue.

Coupons that aren't offered as part of a sales contract do not involve revenue recognition. Instead, issuing coupons creates a contingent liability that is recognized in the period the coupons are issued. In practice, firms typically either (a) recognize the entire expense associated with estimated coupon redemptions in the period the coupons are issued or (b) recognize no liability in the period the coupons are issued and instead record the expense when

coupons are redeemed. The difference between these approaches typically is not viewed as material.

Litigation Claims

Pending litigation is not unusual. In fact, as you saw for **GM**, **Microsoft**, and **Gilead**, most medium and large corporations annually report multiple loss contingencies due to litigation.

In practice, accrual of a loss from pending or ongoing litigation is rare. Can you guess why? Suppose you are chief financial officer of Feinz Foods. Feinz is the defendant in a \$44 million class-action suit. The company's legal counsel informally advises you that the chance the company will win the lawsuit is quite doubtful. Counsel feels the company might lose \$30 million. Now suppose you decide to accrue a \$30 million loss in your financial statements. Later, in the courtroom, your disclosure that Feinz management feels it is probable that the company will lose \$30 million would be welcome ammunition for the opposing legal counsel. Understanding this, most companies rely on the knowledge that in today's legal environment, the outcome of litigation is highly uncertain, making likelihood predictions difficult.

Therefore, while companies may accrue estimated lawyer fees and other legal costs, they usually do not record a loss until after the ultimate settlement has been reached or negotiations for settlement are substantially completed. While companies should provide extensive disclosure of these contingent liabilities, they do not always do so in practice.²³ In 2010, the SEC began pressuring firms for more complete disclosure of litigation, including better descriptions of the range of losses that are reasonably possible to occur. As an example, [Illustration 13-20](#) provides a few excerpts from the eight pages of litigation note appearing in **JP Morgan Chase & Company's** 2019 annual report.

Illustration 13-20 Disclosure of Litigation Contingencies—JP Morgan Chase & Company

Real World Financials

Note 30: Litigation (in part)

As of December 31, 2019, the Firm and its subsidiaries and affiliates are defendants, putative defendants or respondents in numerous legal proceedings, including private, civil litigations and regulatory/government investigations. . . . The Firm

believes the estimate of the aggregate range of reasonably possible losses, in excess of reserves established, for its legal proceedings is from \$0 to approximately \$1.3 billion at December 31, 2019. This estimated aggregate range of reasonably possible losses was based upon information available as of that date for those proceedings in which the Firm believes that an estimate of reasonably possible loss can be made.

Source: JP Morgan Chase & Company

Even after a firm has a judgment issued against it, it may not make an accrual. As you can see in [Illustration 13-21](#), **Yum! Brands'** recent annual report disclosed but did not accrue damages from a regulatory enforcement action it lost, because the company was appealing the verdict.

Illustration 13-21 Disclosure of a Lawsuit—Yum! Brands, Inc.

Real World Financials

Note 19: Contingencies (in part)

On January 29, 2020, the Special Director issued an order imposing a penalty on YRIPL and certain former directors of approximately Indian Rupee 11 billion, or approximately \$156 million. Of this amount, approximately \$150 million relates to the alleged failure to invest a total of \$80 million in India within an initial seven-year period. We have been advised by external counsel that the order is flawed and that several options for appeal exist. We deny liability and intend to continue vigorously defending this matter. We do not consider the risk of any significant loss arising from this order to be probable.

Source: Yum! Brands, Inc.

Subsequent Events

Several weeks usually pass between the end of a company's fiscal year and the date the financial statements for that year actually are issued or available to be issued.²⁴ As shown on the following time line, events occurring during this period can be used to clarify the nature of financial statement elements at the report date.

When the cause of a loss contingency occurs before the year-end, a clarifying event before financial statements are issued can be used to determine how the contingency is reported.

If information becomes available that sheds light on a claim that existed when the fiscal year ended, that information should be used in determining the probability of a loss contingency materializing and in estimating the amount of the loss.

The settlement of a lawsuit after **Starbucks'** September 29, 2013, fiscal year ended apparently influenced its accrual of a loss contingency (see [Illustration 13-22](#)).

Illustration 13-22 Accrual of Litigation Contingencies—Starbucks

Real World Financials

Note 15: Commitments and Contingencies (in part)

Legal Proceedings

On December 6, 2010, Kraft commenced a federal court action against Starbucks, entitled Kraft Foods Global, Inc. v. Starbucks Corporation, in the U.S. District Court for the Southern District of New York. On November 12, 2013, the arbitrator ordered Starbucks to pay Kraft \$2,227.5 million in damages plus prejudgment interest and attorney's fees. We have estimated prejudgment interest, which includes an accrual through the estimated payment date, and attorneys' fees to be approximately \$556.6 million. As a result, we recorded a litigation charge of \$2,784.1 million in our fiscal 2013 operating results.

Source: Starbucks

For a loss contingency to be accrued, the cause of the lawsuit must have occurred before the accounting period ended. It's not necessary that the lawsuit actually was filed during that reporting period.

Sometimes, the cause of a loss contingency occurs after the end of the year but before the financial statements are issued:

If an event giving rise to a contingency occurs after the year-end, a liability should not be accrued.

When a contingency comes into existence after the company’s fiscal year-end, a liability cannot be accrued because it didn’t exist at the end of the year. However, if the failure to disclose the possible loss would cause the financial statements to be misleading, the situation should be described in a disclosure note, including the effect of the possible loss on key accounting numbers affected.²⁵

In fact, *any* event occurring after the fiscal year-end but before the financial statements are issued that has a material effect on the company’s financial position must be disclosed in a subsequent events disclosure note. Examples are an issuance of debt or equity securities, a business combination, and discontinued operations.

A disclosure note from the **Coca-Cola Company**’s 2019 annual report is shown in  **Illustration 13–23** and describes an important acquisition that occurred in the first quarter of 2020.

Illustration 13–23 Subsequent Events—Coca-Cola Company

Real World Financials

Note 23: Subsequent event (in part)

In January 2020, the Company acquired the remaining 57.5 percent stake in fairlife, LLC (“fairlife”) and now owns 100 percent of fairlife. fairlife offers a broad portfolio of products in the value-added dairy category across North America. . . . Under the terms of the agreement, we paid \$1.0 billion upon the close of the transaction and are subject to making future milestone payments which are contingent on fairlife achieving certain financial targets through 2024.

COVID-19: Accounting and Reporting Implications

By March of 2020, the COVID-19 pandemic was flaring up across the world, and firms with a fiscal year ending just prior to that time needed to provide disclosure of that important subsequent event. For example, the financial statements for **Dave & Buster's Entertainment, Inc.**, for the fiscal year ended February 2, 2020 were issued on April 3, 2020, and included the following sobering note:

Note 13: Subsequent Events

During March 2020, the World Health Organization declared the rapidly growing coronavirus outbreak to be a global pandemic. The COVID-19 pandemic has significantly impacted health and economic conditions throughout the United States. Federal, state and local governments took a variety of actions to contain the spread of COVID-19. Many jurisdictions where the Company's stores are located required mandatory store closures or imposed capacity limitations and other restrictions affecting the Company's operations. As of March 20, 2020, all of the Company's 137 operating stores were closed, including its newest store that opened on March 16, 2020. As a result of these developments, the Company expects a material adverse impact on its results of operations, financial condition and cash flows. The situation is rapidly changing, and the Company cannot predict whether, when or the manner in which the conditions surrounding the COVID-19 pandemic will change including the timing of lifting any restrictions or closure requirements, reopening and staffing of our stores and customer re-engagement with its brand.

Additional Consideration

Contingent liabilities that a company takes on when it acquires another company may be treated differently from those that arise during the normal course of business. If the acquirer can determine the fair value of a contingent liability, the liability is measured at fair value. For example, the acquisition-date fair value of a warranty obligation often can be determined. If the acquirer cannot determine the fair value, then the acquirer uses the normal criteria that apply to contingent liabilities. That is, the contingent liability is accrued if (1) available information indicates that it is probable a liability has been incurred as of the acquisition date, and (2) the amount of the liability can be reasonably estimated.²⁵ Because some acquired contingencies could be accounted for at fair value, there could be a lack of comparability between contingencies that arise in the normal course of business and those that are obtained as part of an acquisition.

Unasserted Claims and Assessments

Sometimes companies are aware of a potential claim that has not yet been made. Such unasserted claims may require accrual or disclosure of a contingent liability. A two-step process is involved in deciding how the unasserted claim should be reported:

It must be probable that an unasserted claim or assessment will be asserted before considering whether and how to report the possible loss.

1. Is it probable that a claim will be asserted? If the answer to that question is “no,” stop. No accrual or disclosure is necessary. If the answer is “yes,” go on to step 2.
2. Treat the claim as if the claim has been asserted. That requires evaluating (a) the likelihood of an unfavorable outcome and (b) whether the dollar amount of loss can be estimated, just as we already have discussed for other loss contingencies for which a claim has already been asserted.

For example, suppose a trucking company frequently transports hazardous waste materials and is subject to environmental laws and regulations. Management has identified several sites at which it is or may be liable for remediation. For those sites for which no penalties have been asserted, management must assess the likelihood that a claim will be made, and if so, the likelihood that the company actually will be held liable. If management feels an assessment is probable, an estimated loss and contingent liability would be accrued only if

an unfavorable outcome is probable and the amount can be reasonably estimated. However, a disclosure note alone would be appropriate if an unfavorable settlement is only reasonably possible or if the settlement is probable but cannot be reasonably estimated. No action is needed if chances of that outcome occurring are remote.

As described in a December 31, 2019, disclosure note (see [Illustration 13-24](#)), **Union Pacific** concluded that some unasserted claims met the criteria for accrual under this two-step decision process.

Illustration 13-24 Unasserted Claims—Union Pacific Corporation

Real World Financials

18. Commitments and Contingencies (in part)

Asserted and Unasserted Claims—Various claims and lawsuits are pending against us and certain of our subsidiaries. We cannot fully determine the effect of all asserted and unasserted claims on our consolidated results of operations, financial condition, or liquidity. To the extent possible, we have recorded a liability where asserted and unasserted claims are considered probable and where such claims can be reasonably estimated.

Source: Union Pacific Corporation

Notice that the treatment of contingent liabilities is consistent with the accepted definition of liabilities as (a) probable, future sacrifices of economic benefits (b) that arise from present obligations to other entities and (c) that result from past transactions or events.²⁷ The inherent uncertainty involved with contingent liabilities means additional care is required to determine whether future sacrifices of economic benefits are probable and whether the amount of the sacrifices can be quantified.

LO13-7 Discuss the primary differences between U.S. GAAP and IFRS with respect to current liabilities and contingencies.

International Financial Reporting Standards

Loss Contingencies. Accounting for contingencies is part of a broader international standard, *IAS No. 37*, “Provisions, Contingent Liabilities and Contingent Assets.”

Overall, accounting for contingent losses under IFRS is quite similar to accounting under U.S. GAAP. A contingent loss is accrued if it’s both probable and can be reasonably estimated, and disclosed if it’s of at least a remote probability. However, there are some important differences:

- IFRS refers to accrued liabilities as “provisions,” and refers to possible obligations that are not accrued as “contingent liabilities.” The term “contingent liabilities” is used for all of these obligations in U.S. GAAP.
- IFRS requires disclosure (but not accrual) of two types of contingent liabilities: (1) possible obligations whose existence will be confirmed by some uncertain future events that the company does not control, and (2) a present obligation for which either it is not probable that a future outflow will occur or the amount of the future outflow cannot be measured with sufficient reliability. U.S. GAAP does not make this distinction but typically would require disclosure of the same contingencies.
- IFRS defines “probable” as “more likely than not” (greater than 50%), which is a lower threshold than typically associated with “probable” in U.S. GAAP.
- If a liability is accrued, IFRS measures the liability as the best estimate of the expenditure required to settle the present obligation. If there is a range of equally likely outcomes, IFRS would use the midpoint of the range, while U.S. GAAP requires use of the low end of the range.
- If the effect of the time value of money is material, IFRS requires the liability to be stated at present value. U.S. GAAP allows using present values under some circumstances, but liabilities for loss contingencies like litigation typically are not discounted for time value of money.²⁸
- IFRS recognizes provisions and contingencies for “onerous” contracts, defined as those in which the unavoidable costs of meeting the obligations exceed the expected benefits.²⁹ Under U.S. GAAP, we generally don’t disclose or recognize

losses on such money-losing contracts, although there are some exceptions (for example, losses on long-term construction contracts are accrued, as are losses on contracts that have been terminated).

Here's a portion of a note from the 2019 financial statements of **Vodafone**, which reports under IFRS:

Note 16: Provisions (in part)

Provisions are recognised when the Group has a present obligation (legal or constructive) as a result of a past event, it is probable that the Group will be required to settle that obligation and a reliable estimate can be made of the amount of the obligation. Provisions are measured at the Directors' best estimate of the expenditure required to settle the obligation at the reporting date and are discounted to present value where the effect is material.

Where We're Headed

The controversy over accounting for contingencies and the mixture of approaches is likely to continue. The FASB recently removed from its agenda a project to reconsider the recognition and measurement of contingent losses and has postponed further work on a project intended to enhance note disclosures of contingent losses. The IASB has a project ongoing, but progress on this project has been slow as the IASB has focused on more pressing projects.

Gain Contingencies

LO13–7 Discuss the primary differences between U.S. GAAP and IFRS with respect to current liabilities and contingencies.

A gain contingency is an uncertain situation that might result in a gain. For example, in a pending lawsuit, one side—the defendant—faces a loss contingency; the other side—the plaintiff—has a gain contingency. As we

discussed earlier, loss contingencies are accrued when it's probable that an amount will be paid and the amount can reasonably be estimated. However, gain contingencies are not accrued. The nonparallel treatment of gain contingencies is an example of conservatism, following the reasoning that it's desirable to anticipate losses, but recognizing gains should await their realization.

Gain contingencies are not accrued.

Though gain contingencies are not recorded in the accounts, material ones are disclosed in notes to the financial statements. Care should be taken that the disclosure note not give “misleading implications as to the likelihood of realization.”³⁰

International Financial Reporting Standards

LO13–7 Gain Contingencies. Under U.S. GAAP, gain contingencies are never accrued. Under IFRS, gain contingencies are accrued if their future realization is “virtually certain” to occur. Both U.S. GAAP and IFRS *disclose* contingent gains when future realization is probable, but under IFRS “probable” is defined as “more likely than not” (greater than 50%), and so has a lower threshold than it does under U.S. GAAP.

Additional Consideration

Accounting for contingencies is controversial. Many accountants dislike the idea of only recognizing a liability for a contingent loss when it is probable, and then reporting the liability at the best estimate of the future expenditure. The obvious alternative is fair value, which does not incorporate probability into determining whether to *recognize* a loss but rather considers probability when *measuring* the amount of loss. Recent changes in GAAP have adopted fair value approaches for some types of events that are contingent losses (or appear to be close relatives). Consider the following examples:

-  **Illustration 13–18** uses a discounted expected cash flow approach to measure the contingent liability associated with a warranty. That approach approximates fair value.
- Recall from  **Chapter 10** that asset retirement obligations are recorded at fair value when an asset is acquired. The offsetting liability is similar to a contingent liability because it is an uncertain future amount arising from the past purchase of the asset but is recorded at fair value.
- Sometimes a company provides a guarantee that may require it to make payment to another party based on some future event. For example, a company might guarantee the debt of an affiliated company to make it easier for the affiliate to obtain financing. GAAP views this sort of guarantee as having two parts: (1) a certain “stand ready obligation” to meet the terms of the guarantee, and (2) the uncertain contingent obligation to make future payments depending on future events (for example, the affiliate defaulting on their debt). The “stand ready obligation” is recorded initially at fair value, while the contingent obligation is handled as an ordinary contingent loss.³¹

Concept Review Exercise

CONTINGENCIES

Hanover Industries manufactures and sells food products and food processing machinery. While preparing the December 31, 2024, financial statements for Hanover, the following information was discovered relating to contingencies and possible adjustments to liabilities. Hanover's 2024 financial statements were issued on April 1, 2025.

- a. On November 12, 2024, a former employee filed a lawsuit against Hanover alleging age discrimination and asking for damages of \$750,000. At December 31, 2024, Hanover's attorney indicated that the likelihood of losing the lawsuit was possible but not probable. On March 5, 2025, Hanover agreed to pay the former employee \$125,000 in return for withdrawing the lawsuit.
- b. Hanover believes there is a possibility a service provider may claim that it has been undercharged for outsourcing a processing service based on verbal indications of the company's interpretation of a negotiated rate. The service provider has not yet made a claim for additional fees as of April 2025, but Hanover thinks it will. Hanover's accountants and legal counsel believe the charges were appropriate but that if an assessment is made, there is a reasonable possibility that subsequent court action would result in an additional tax liability of \$55,000.
- c. Hanover grants a two-year warranty for each processing machine sold. Past experience indicates that the costs of satisfying warranties are approximately 2% of sales. During 2024, sales of processing machines totaled \$21,300,000. 2024 expenditures for warranty repair costs were \$178,000 related to 2024 sales and \$220,000 related to 2023 sales. The January 1, 2024, balance of the warranty liability account was \$250,000.
- d. Hanover is the plaintiff in a \$600,000 lawsuit filed in 2023 against Ansdale Farms for failing to deliver on contracts for produce. The suit is in final appeal. Legal counsel advises that it is probable that Hanover will prevail and will be awarded \$300,000 (considered a material amount).

Required:

1. Determine the appropriate reporting for each situation. Briefly explain your reasoning.
2. Prepare any necessary journal entries and state whether a disclosure note is needed.

Solution:

- a. This is a loss contingency. Hanover can use the information occurring after the end of the year in determining appropriate disclosure. The cause for the suit existed at the end of the year. Hanover should accrue the \$125,000 loss because an agreement has been reached confirming the loss and the amount is known.

| | |
|----------------------|---------|
| Loss—litigation | 125,000 |
| Liability—litigation | 125,000 |

A disclosure note also is appropriate.

- b. At the time financial statements are issued, a claim is as yet unasserted. However, an assessment is probable. Thus, (a) the likelihood of an unfavorable outcome and (b) whether the dollar amount can be estimated are considered. No accrual is necessary because an unfavorable outcome is not probable. But because an unfavorable outcome is reasonably possible, a disclosure note is appropriate.

Note: If the likelihood of a claim being asserted is not probable, disclosure is not required even if an unfavorable outcome is thought to be probable in the event of an assessment and the amount is estimable.

- c. The contingency for warranties should be accrued because it is probable that expenditures will be made and the amount can be estimated from past experience. When customer claims are made and costs are incurred to satisfy those claims the liability is reduced.

| | |
|--|---------|
| Warranty expense (2% × \$21,300,000) | 426,000 |
| Warranty liability | 426,000 |
| Warranty liability (\$178,000 + \$220,000) | 398,000 |
| Cash (or salaries payable, parts and supplies, etc.) | 398,000 |

The liability at December 31, 2024, would be reported as \$278,000:

| Warranty Liability | | |
|---------------------------|-----|-----------------|
| (\$ in thousands) | | |
| | 250 | Balance, Jan. 1 |
| | 426 | 2024 expense |
| 2024 expenditures | 398 | |

Warranty Liability
(\$ in thousands)

| | | |
|--|-----|------------------|
| | 278 | Balance, Dec. 31 |
|--|-----|------------------|

A disclosure note explaining the contingency also is appropriate.

- d. This is a gain contingency. Gain contingencies cannot be accrued even if the gain is probable and reasonably estimable. The gain should be recognized only when realized. It can be disclosed, but care should be taken to avoid misleading language regarding the realizability of the gain.

Decision Makers' Perspective

Current liabilities impact a company's liquidity. Liquidity refers to a company's cash position and overall ability to obtain cash in the normal course of business. A company is said to be liquid if it has sufficient cash (or other assets convertible to cash in a relatively short time) to pay currently maturing debts. Because the lack of liquidity can cause the demise of an otherwise healthy company, it is critical that managers, as well as outside investors and creditors, maintain close scrutiny of this aspect of a company's well-being.

Keeping track of the current ratio is one of the most common ways of doing this. The current ratio is intended as a measure of short-term solvency and is determined by dividing current assets by current liabilities.

A risk analyst should be concerned with a company's ability to meet its short-term obligations.

When we compare liabilities that must be satisfied in the near term with assets that either are cash or will be converted to cash in the near term, we get a useful measure of a company's liquidity. A ratio of 1 to 1 or higher often is considered a rule-of-thumb standard, but like other ratios, acceptability should be evaluated in the context of the industry in which the company operates and other specific circumstances. Keep in mind that industry averages are only one indication of adequacy and that the current ratio is but one indication of liquidity.

We can adjust for the implicit assumption of the current ratio that all current assets are equally liquid.

The acid-test, or quick, ratio is similar to the current ratio but is based on a more conservative measure of assets available to pay current liabilities. Specifically, the numerator, quick assets, includes only cash and cash equivalents, short-term investments, and accounts receivable. By eliminating current assets such as inventories and prepaid expenses that are less readily convertible into cash, the acid-test ratio provides a more rigorous indication of a company's short-term solvency than does the current ratio.

A manager should actively monitor a company's liquidity.

If either of these liquidity ratios is less than that of the industry as a whole, does that mean that liquidity is a problem? Not necessarily. It does, though, raise a red flag that suggests caution when assessing other areas.

A liquidity ratio is but one indication of a company's liquidity.

It's important to remember that each ratio is but one piece of the puzzle. For example, profitability is probably the best long-run indication of liquidity. Also, management may be very efficient in managing current assets so that some current assets—receivables or inventory—are converted to cash more quickly than they otherwise would be and are more readily available to satisfy liabilities. The turnover ratios discussed in earlier chapters help measure the efficiency of asset management in this regard.

In fact, some companies view their accounts payable as a free loan from their suppliers, just as they view their accounts receivable as a free loan to their customers.

Some companies maintain relatively high current liabilities as part of a cash-management strategy.

These companies tend to pressure their customers to pay quickly, but try to obtain more extended terms with their suppliers. Although this would produce relatively low current assets and high current liabilities, and therefore a lower current ratio, it could be a very intelligent way to manage cash and decrease the overall amount of capital needed by the company to finance operations.

Given the actual and perceived importance of a company's liquidity in the minds of analysts, it's not difficult to adopt a management perspective and imagine efforts to manipulate the ratios that measure

Analysts should be alert for efforts to manipulate measures of liquidity.

liquidity. For instance, a company might use its economic muscle or persuasive powers to influence the timing of accounts payable recognition by asking suppliers to change their delivery schedules. Because accounts payable is included in the denominator in most measures of liquidity, such as the current ratio, the timing of their recognition could mean the difference between an unacceptable ratio and an acceptable one, or between violating a debt covenant and compliance with the terms of the debt agreement. For example, suppose a company with a current ratio of 1.25 (current assets of \$5 million and current liabilities of \$4 million) is in violation of a debt covenant requiring a minimum current ratio of 1.3. By delaying the delivery of \$1 million of inventory, the ratio would be 1.33 (current assets of \$4 million and current liability of \$3 million).

It's important for creditors and analysts to be attentive for evidence of activities that would indicate timing strategies, such as unusual variations in accounts payable levels. You might notice that such timing strategies are similar to earnings management techniques we discussed previously—specifically, manipulating the timing of revenue and expense recognition in order to “smooth” income over time.

Changes in deferred revenue provide information about future revenue, and may be used to manipulate it.

Finally, all financial statement users need to keep in mind the relation between the recognition of deferred revenue associated with advance payments and the later recognition of revenue. On the one hand, increases in deferred revenue can signal future revenue recognition because the deferred revenue likely will eventually be recognized as revenue. On the other hand, research suggests that some firms that report deferred revenue may manipulate the timing of revenue recognition to manage their earnings.³²

In the next chapter, we continue our discussion of liabilities. Our focus will shift from current liabilities to long-term liabilities in the form of bonds and long-term notes. ●

Financial Reporting Case Solution

Sam Edwards/age fotostock

- 1. What are accrued liabilities? What is commercial paper?** Accrued liabilities are reported for expenses already incurred but not yet paid (accrued expenses). These include salaries and wages payable, income taxes payable, and interest payable. Commercial paper is a form of notes payable sometimes used by large corporations to obtain temporary financing. It is sold to other companies as a short-term investment. It represents unsecured notes sold in minimum denominations of \$25,000 with maturities ranging from 1 to 270 days. Typically, commercial paper is issued directly to the buyer (lender) and is backed by a line of credit with a bank.
- 2. Why did Syntel Microsystems include some long-term debt in the current liability section?** Syntel Microsystems did include some long-term debt in the current liability section. The currently maturing portion of a long-term debt must be reported as a current liability. Amounts are reclassified and reported as current liabilities when they become payable within the upcoming year.
- 3. Did they also report some current amounts as long-term debt? Explain.** Yes they did. It is permissible to report short-term obligations as noncurrent liabilities if the company (a) intends to refinance on a long-term basis and (b) demonstrates the ability to do so by a refinancing agreement or by actual financing. As the disclosure note explains, this is the case for a portion of Syntel's currently payable debt.

4. Must obligations be known contractual debts in order to be reported as liabilities? No. From an accounting perspective, it is not necessary that obligations be known, legally enforceable debts to be reported as liabilities. They must only be probable and the dollar amount reasonably estimable.

5. Is it true that current liabilities are riskier than long-term liabilities? Other things being equal, current liabilities generally are considered riskier than long-term liabilities. For that reason, management usually would rather report a debt as long term. Current debt, though, is not necessarily risky. The liquidity ratios we discussed in the chapter attempt to measure liquidity. Remember, any such measure must be assessed in the context of other factors: industry standards, profitability, turnover ratios, and risk management activities, to name a few. ●

The Bottom Line

-  **LO13-1** Liabilities are present obligations to sacrifice assets in the future because of something that already has occurred. Current liabilities are expected to require current assets (or the creation of other current liabilities) and usually are payable within one year. (*p. 712*)
-  **LO13-2** Short-term bank loans usually are arranged under an ongoing line of credit with a bank or group of banks. When interest is discounted from the face amount of a note (a type of noninterest-bearing note), the effective interest rate is higher than the stated discount rate. Large, highly rated firms sometimes sell commercial paper directly to the buyer (lender) to borrow funds at a lower rate than through a bank loan. (*p. 715*)
-  **LO13-3** Accrued liabilities are recorded by adjusting entries for expenses already incurred but for which cash has yet to be paid (accrued expenses). Familiar examples are advance collections, salaries payable, income taxes payable, and interest payable (*p. 718*)
-  **LO13-4** Short-term obligations can be reported as noncurrent liabilities if the company (a) intends to refinance on a long-term basis and (b) demonstrates the ability to do so by actual financing or a formal agreement to do so. (*p. 724*)
-  **LO13-5** A loss contingency is an existing, uncertain situation involving potential loss depending on whether some future event occurs. Whether a contingency is accrued and reported as a liability depends on (a) the likelihood that the confirming event will occur and (b) what can be determined about the amount of loss. It is accrued if it is both probable that the confirming event will occur and the amount can be at least reasonably estimated. (*p. 727*)
-  **LO13-6** A clarifying event before financial statements are issued, but after the year-end, can be used to determine how a contingency is reported. An unasserted suit, claim, or assessment warrants accrual or disclosure if it is probable it will be asserted. A gain contingency is a contingency that might result in a gain. A gain contingency is not recognized until it actually is realized. (*p. 728*)

LO13-7 IFRS and U.S. GAAP are relatively similar with respect to current liabilities and contingencies. Relatively minor differences relate to when financing must be in place for a liability expected to be refinanced to be classified as long term. Also, with respect to contingent losses, IFRS defines “probable” at a lower threshold, requires the accrual of the expected value of loss, and requires the use of present values when measuring amounts to be accrued. Contingent gains are not accrued under U.S. GAAP, but are accrued under IFRS when they are considered to be virtually certain to occur. (p. 725, 736, and 738) ●

APPENDIX 13 Payroll-Related Liabilities

All firms incur liabilities in connection with their payrolls. These arise primarily from legal requirements to withhold taxes from employees' paychecks and from payroll taxes on the firms themselves. Some payroll-related liabilities result from voluntary payroll deductions of amounts payable to third parties.

EMPLOYEES' WITHHOLDING TAXES

Employers are required by law to withhold federal (and sometimes state) income taxes and Social Security taxes from employees' paychecks and remit these to the Internal Revenue Service. The amount withheld for federal income taxes is determined by a tax table furnished by the IRS and varies according to the amount earned and the number of exemptions claimed by the employee. Also, the Federal Insurance Contributions Act (FICA) requires employers to withhold a percentage of each employee's earnings up to a specified maximum. Both the percentage and the maximum are changed intermittently. As this text went to print, the deduction for Social Security was 6.2% of the first \$142,800 an employee earns, and this ceiling amount changes each year for cost-of-living adjustments. Additionally, a deduction for Medicare tax is 1.45%, with no limit on the base amount. The employer also must pay an equal (matching) amount on behalf of the employee. Individuals also must pay additional Medicare tax of 0.9% on wages in excess of \$200,000 (there is no employer match against that additional Medicare tax). Self-employed persons must pay both the employer and employee portions (12.4% for Social Security and 2.9% for Medicare).

VOLUNTARY DEDUCTIONS

Besides the required deductions for income taxes and Social Security taxes, employees often authorize their employers to deduct other amounts from their paychecks. These deductions might include union dues, contributions to savings or retirement plans, and insurance premiums. Amounts deducted this way represent liabilities until paid to the appropriate organizations.

EMPLOYERS' PAYROLL TAXES

One payroll tax mentioned previously is the employer's matching amount of FICA taxes. The employer also must pay federal and state unemployment taxes on behalf of its

employees. The Federal Unemployment Tax Act (FUTA) requires a tax of 6.0% of the first \$7,000 earned by each employee. This amount is reduced by a 5.4% (maximum) credit for contributions to state unemployment programs, so the net federal rate often is 0.6%.³³ The most common state rate is 5.4%, but rates vary between states and also vary within states for different types of employers.

FRINGE BENEFITS

In addition to salaries, withholding taxes, and payroll taxes, many companies provide employees a variety of fringe benefits. Most commonly, employers pay all or part of employees' insurance premiums and/or contributions to retirement income plans.

Representative payroll-related liabilities are presented in  **Illustration 13A-1**. As you study the illustration, you should note the similarity among all payroll-related liabilities. Amounts withheld from paychecks—voluntarily or involuntarily—are liabilities until turned over to appropriate third parties. Payroll taxes and expenses for fringe benefits are incurred as a result of services performed by employees and also are liabilities until paid to appropriate third parties.

Illustration 13A-1 Payroll-Related Liabilities

Amounts withheld from paychecks represent liabilities until remitted to third parties.

The employer's share of FICA and unemployment taxes constitute the employer's payroll tax expense.

Fringe benefits are part of salaries and wages expense and represent liabilities until remitted to third parties.

Crescent Lighting and Fixtures' payroll for the second week in January was \$100,000. The following deductions, fringe benefits, and taxes apply:

| | |
|---|----------|
| Federal income taxes to be withheld | \$20,000 |
| State income taxes to be withheld | 3,000 |
| Medical insurance premiums (Blue Cross)—70% paid by employer | 1,000 |
| Employee contribution to voluntary retirement plan (Fidelity Investments)—contributions matched by employer | 4,000 |
| Union dues (Local No. 222)—paid by employees | 100 |
| Life insurance premiums (Prudential Life)—100% paid by employer | 200 |
| Social Security tax rate | 6.2% |
| Medicare tax rate | 1.45% |
| Federal unemployment tax rate (after state deduction) | 0.60% |
| State unemployment tax rate | 5.40% |

Crescent's journal entries to record payroll:

| | |
|--|---------|
| Salaries expense (total amount earned) | 100,000 |
| Withholding taxes payable (federal income tax) | 20,000 |
| Withholding taxes payable (state income tax) | 3,000 |
| Social Security taxes payable (employees' portion, 6.2%) | 6,200 |
| Medicare taxes payable (employees' portion, 1.45%) | 1,450 |
| Payable to Blue Cross (employee's portion of insurance premiums—30%) | 300 |
| Payable to Fidelity Investments (employees' investment) | 4,000 |
| Payable to Local No. 222 (union dues) | 100 |
| Salaries payable (net pay) | 64,950 |
| Payroll tax expense (total) | 13,650 |
| Social Security taxes payable (employer's matching amount) | 6,200 |
| Medicare taxes payable (employer's matching amount) | 1,450 |
| FUTA payable (federal unemployment tax: 0.6%) | 600 |
| State unemployment tax payable (5.4%) | 5,400 |
| Salaries expense (fringe benefits) | 4,900 |
| Payable to Blue Cross (insurance premiums—70%) | 700 |
| Payable to Fidelity Investments (employer's matching amount) | 4,000 |
| Payable to Prudential life (insurance premiums) | 200 |

Covid-19: Accounting and Reporting Implications

The COVID-19 pandemic disrupted operations for many businesses, and many struggled to find sufficient cash to stay in business. The *Coronavirus Aid, Relief, and Economic Security (CARES)* Act provided some relief by allowing employers to defer depositing the employer's share of FICA tax that otherwise would be due between March 27 and December 31 of 2020. This amounted to an interest-free loan from the government, as employers had to repay half of the deferred amount in 2021 and the other half in 2022.

Questions For Review of Key Topics

- Q 13-1** What are the essential characteristics of liabilities for purposes of financial reporting?
- Q 13-2** What distinguishes current liabilities from long-term liabilities?
- Q 13-3** Bronson Distributors owes a supplier \$100,000 on open account. The amount is payable in three months. What is the theoretically correct way to measure the reportable amount for this liability? In practice, how will it likely be reported? Why?
- Q 13-4** Bank loans often are arranged under existing lines of credit. What is a line of credit? How does a noncommitted line of credit differ from a committed line?
- Q 13-5** Banks sometimes loan cash under noninterest-bearing notes. Is it true that banks lend money without interest?
- Q 13-6** How does commercial paper differ from a bank loan? Why is the interest rate often less for commercial paper?
- Q 13-7** Salaries of \$5,000 have been earned by employees by the end of the period but will not be paid to employees until the following period. How should the expense and related liability be recorded? Why?
- Q 13-8** Under what conditions should an employer accrue an expense and the related liability for employees' compensation for future absences? How do company customs and practices affect the accrual decision?
- Q 13-9** How are refundable deposits and customer advances similar? How do they differ?
- Q 13-10** How do companies account for gift cards?
- Q 13-11** Amounts collected for third parties represent liabilities until remitted. Provide several examples of this kind of collection.
- Q 13-12** When companies have debt that is not due to be paid for several years, but that is callable (due on demand) by the creditor, do they classify the debt as current or as long-term?
- Q 13-13** Long-term obligations usually are reclassified and reported as current liabilities when they become payable within the upcoming year (or operating cycle, if longer than a year). So, a 25-year bond issue is reported as a long-term liability for 24 years but normally is reported as a current liability on the balance sheet

prepared during the 25th year of its term to maturity. Name a situation in which this would not be the case.

Q 13-14 How do IFRS and U.S. GAAP differ with respect to the classification of debt that is expected to be refinanced?

Q 13-15 Define a loss contingency. Provide three examples.

Q 13-16 List and briefly describe the three categories of likelihood that a future event(s) will confirm the incurrence of the liability for a loss contingency.

Q 13-17 Under what circumstances should a loss contingency be accrued?

Q 13-18 What is the difference between the use of the term *contingent liability* in U.S. GAAP and IFRS?

Q 13-19 Suppose the analysis of a loss contingency indicates that an obligation is not probable. What accounting treatment, if any, is warranted?

Q 13-20 Name a loss contingency that almost always is accrued.

Q 13-21 Distinguish between the accounting treatment of a manufacturer's warranty and an extended warranty. Why the difference?

Q 13-22 At December 31, the end of the reporting period, the analysis of a loss contingency indicates that an obligation is only reasonably possible, though its dollar amount is readily estimable. During February, before the financial statements are issued, new information indicates the loss is probable. What accounting treatment is warranted?

Q 13-23 After the end of the reporting period, a contingency comes into existence. Under what circumstances, if any, should the contingency be reported in the financial statements for the period ended?

Q 13-24 How do U.S. GAAP and IFRS differ in their treatment of a range of equally likely losses?

Q 13-25 How do U.S. GAAP and IFRS differ in their use of present values when measuring contingent liabilities?

Q 13-26 Suppose the Environmental Protection Agency is in the process of investigating Ozone Ruination Limited for possible environmental damage but has not proposed a penalty as of December 31, 2020, the company's fiscal year-end. Describe the two-step process involved in deciding how this unasserted assessment should be reported.

Q 13-27 You are the plaintiff in a lawsuit. Your legal counsel advises that your eventual victory is inevitable. "You will be awarded \$12 million," your attorney confidently asserts. Describe the appropriate accounting treatment.

IFRS

Q 13-28 Answer Q 13-27, but assume that you report under IFRS.

Brief Exercises

BE 13–1 Bank loan; accrued interest **LO13–2**

On October 1, Eder Fabrication borrowed \$60 million and issued a nine-month, 12% promissory note. Interest was payable at maturity. Prepare the journal entry for the issuance of the note and the appropriate adjusting entry for the note at December 31, the end of the reporting period.

BE 13–2 Noninterest-bearing note; accrued interest **LO13–2**

On October 1, Dutta Inc. borrowed \$60 million and issued a nine-month promissory note. Interest was discounted at issuance at a 12% discount rate. Prepare the journal entry for the issuance of the note and the appropriate adjusting entry for the note at December 31, the end of the reporting period.

BE 13–3 Determining accrued interest **LO13–2**

On July 1, Orcas Lab issued a \$100,000, 12%, eight-month note. Interest is payable at maturity. What is the amount of interest expense that should be recorded in a year-end adjusting entry if the fiscal year-end is (a) December 31? (b) September 30?

BE 13–4 Commercial paper **LO13–2**

Wang Corporation issued \$12 million of commercial paper on March 1 on a nine-month note. Interest was discounted at issuance at a 9% discount rate. Prepare the journal entry for the issuance of the commercial paper and its repayment at maturity.

BE 13–5 Noninterest-bearing note; effective interest rate **LO13–2**

Life.com issued \$10 million of commercial paper on April 1 on a nine-month note. Interest was discounted at issuance at a 6% discount rate. What is the effective interest rate on the commercial paper?

BE 13–6 Advance collection **LO13–3**

On December 12, 2024, Park Electronics received \$24,000 from a customer toward a cash sale of \$240,000 of diodes to be completed on January 16, 2025. What journal entries should Park record on December 12 and January 16?

BE 13–7 Advance collection **LO13–3**

In Lizzie Shoes' experience, gift cards that have not been redeemed within 12 months are not likely to be redeemed. Lizzie Shoes sold gift cards for \$18,000 during August 2024. \$4,000 of cards were redeemed in September 2024, \$3,000 in October, \$2,500 in November, and \$2,000 in December 2024. In 2025 an additional \$1,000 of cards were redeemed in January and \$500 in February. How much gift card revenue associated with the August 2024 gift card sales would Lizzie get to recognize in 2024 and 2025?

BE 13–8 Sales tax **LO13–3**

During December, Rainey Equipment made a \$600,000 credit sale. The state sales tax rate is 6% and the local sales tax rate is 1.5%. Prepare the appropriate journal entry.

BE 13–9 Classifying debt; financial statement effects **LO13–4**

Consider the following liabilities of Future Brands, Inc., at December 31, 2024, the company's fiscal year-end. Should they be reported as current liabilities or long-term liabilities?

1. \$77 million of 8% notes are due on May 31, 2028. The notes are callable by the company's bank, beginning March 1, 2025.
2. \$102 million of 8% notes are due on May 31, 2029. A debt covenant requires Future to maintain a current ratio (ratio of current assets to current liabilities) of at least 2 to 1. Future is in violation of this requirement but has obtained a waiver from the bank until May 2025, since both companies feel Future will correct the situation during the first half of 2025.

BE 13–10 Refinancing debt; financial statement effects **LO13–4**

Coulson Company is in the process of refinancing some long-term debt. Its fiscal year ends on December 31, 2024, and its financial statements will be issued on March 15, 2025. Under current U.S. GAAP, how would the debt be classified if the refinancing is completed on December 15, 2024? What if instead it is completed on January 15, 2025?

BE 13–11 Refinancing debt; financial statement effects

 **LO13–4**,  **LO13–7**

IFRS

Fleener Company is in the process of refinancing some long-term debt. Its fiscal year ends on December 31, 2024, and its financial statements will be issued on March 15, 2025. Under current IFRS, how would the debt be classified if the refinancing is completed on December 15, 2024? What if instead it is completed on January 15, 2025?

BE 13–12 Warranties; financial statement effects  **LO13–5**,
 **LO13–6**

Das Medical introduced a new implant that carries a five-year warranty against manufacturer's defects. Based on industry experience with similar product introductions, warranty costs are expected to approximate 1% of sales. Sales were \$15 million and actual warranty expenditures were \$20,000 for the first year of selling the product. What amount (if any) should Das report as a liability at the end of the year?

BE 13–13 Product recall; financial statement effects  **LO13–5**,
 **LO13–6**

Consultants notified management of Goo Goo Baby Products that a crib toy poses a potential health hazard. Counsel indicated that a product recall is probable and is estimated to cost the company \$5.5 million. How will this affect the company's income statement and balance sheet this period?

BE 13–14 Contingency; disclosures  **LO13–5**,  **LO13–6**

Skill Hardware is the plaintiff in a \$16 million lawsuit filed against a supplier. The litigation is in final appeal and legal counsel advises that it is virtually certain that Skill will win the

lawsuit and be awarded \$12 million, which is an amount that is material to Skill. How should Skill account for this event?

BE 13–15 Contingency; disclosures  **LO13–5**,  **LO13–6**

Bell International estimates that a \$10 million loss will occur if a foreign government expropriates some company property. Expropriation is considered reasonably possible. How should Bell report the loss contingency?

BE 13–16 Contingencies  **LO13–5**,  **LO13–6**

Household Solutions manufactures kitchen storage products. During the year, the company became aware of potential costs due to (1) a recently filed lawsuit for patent infringement for which the probability of loss is remote and damages can be reasonably estimated, (2) another recently filed lawsuit for food contamination by the plastics used in Household Solutions' products for which a loss is probable but the amount of loss cannot be reasonably estimated, and (3) a new product warranty that is probable and can be reasonably estimated. Which, if any, of these costs should be accrued?

BE 13–17 Contingencies  **LO13–5**,  **LO13–6**,  **LO13–7**

Quandary Corporation has a major customer who is alleging a significant product defect. Quandary engineers and attorneys have analyzed the claim and have concluded that there is a 51% chance that the customer would be successful in court and that a successful claim would result in a range of damages from \$10 million to \$20 million, with each part of the range equally likely to occur. The damages would need to be paid soon enough that time-value-of-money considerations are not material. Would a liability be accrued under U.S. GAAP? Under IFRS? If a liability were accrued, what amount would be accrued under U.S. GAAP? Under IFRS?

BE 13–18 Unasserted assessment; disclosures  **LO13–5**,
 **LO13–6**

At March 13, 2025, the Securities Exchange Commission is in the process of investigating a possible securities law violation by Now Chemical. The SEC has not yet proposed a penalty

assessment. Now's fiscal year ends on December 31, 2024, and its financial statements are published in March 2025. Management feels an assessment is *reasonably possible*, and if an assessment is made, an unfavorable settlement of \$13 million is *probable*. What, if any, action should Now take for its financial statements?

Exercises

E 13–1 Bank loan; accrued interest LO13–2

On November 1, 2024, Quantum Technology, a geothermal energy supplier, borrowed \$16 million cash to fund a geological survey. The loan was made by Nevada BancCorp under a noncommitted short-term line of credit arrangement. Quantum issued a nine-month, 12% promissory note. Interest was payable at maturity. Quantum’s fiscal period is the calendar year.

Required:

Page 747

1. Prepare the journal entry for the issuance of the note by Quantum Technology.
2. Prepare the appropriate adjusting entry for the note by Quantum on December 31, 2024.
3. Prepare the journal entry for the payment of the note at maturity.

E 13–2 Determining accrued interest in various situations LO13–2

On July 1, 2024, Li-Ma Industries issued nine-month notes in the amount of \$400 million. Interest is payable at maturity.

Required:

Determine the amount of interest expense that should be recorded in a year-end adjusting entry under each of the following independent assumptions:

| | Interest Rate | Fiscal Year-End |
|----|---------------|-----------------|
| 1. | 12% | December 31 |
| 2. | 10% | September 30 |
| 3. | 9% | October 31 |
| 4. | 6% | January 31 |

E 13–3 Short-term notes LO13–2

The following selected transactions relate to liabilities of United Insulation Corporation. United's fiscal year ends on December 31.

Required:

Prepare the appropriate journal entries through the maturity of each liability.

2024

- Jan. 13** Negotiated a revolving credit agreement with Parish Bank that can be renewed annually upon bank approval. The amount available under the line of credit is \$20 million at the bank's prime rate.
- Feb. 1** Arranged a three-month bank loan of \$5 million with Parish Bank under the line of credit agreement. Interest at the prime rate of 10% was payable at maturity.
- May 1** Paid the 10% note at maturity.
- Dec. 1** Supported by the credit line, issued \$10 million of commercial paper on a nine-month note. Interest was discounted at issuance at a 9% discount rate.
- 31** Recorded any necessary adjusting entry(s).

2025

- Sept. 1** Paid the commercial paper at maturity.

E 13–4 Paid future absences  **LO13–3**

JWS Transport Company's employees earn vacation time at the rate of 1 hour per 40-hour work period. The vacation pay vests immediately (that is, an employee is entitled to the pay even if employment terminates). During 2024, total salaries paid to employees equaled \$404,000, including \$4,000 for vacations actually taken in 2024 but not including vacations related to 2024 that will be taken in 2025. All vacations earned before 2024 were taken before January 1, 2024. No accrual entries have been made for the vacations. No overtime premium and no bonuses were paid during the period.

Required:

Prepare the appropriate adjusting entry for vacations earned but not taken in 2024.

E 13–5 Paid future absences  **LO13–3**

On January 1, 2024, Poplar Fabricators Corporation agreed to grant its employees two weeks of vacation each year, with the stipulation that vacations earned each year can be

taken the following year. For the year ended December 31, 2024, Poplar Fabricators' employees each earned an average of \$900 per week. Seven hundred vacation weeks earned in 2024 were not taken during 2024.

Required:

1. Prepare the appropriate adjusting entry for vacations earned but not taken in 2024.
2. Suppose that, by the time vacations actually are taken in 2025, salary rates for employees have risen by an average of 5 percent from their 2024 level. Also, assume salaries earned in 2025 (including vacations earned and taken in 2025) were \$31 million. Prepare a journal entry that summarizes 2025 salaries and the payment for 2024 vacations taken in 2025.

E 13–6 Gift cards; sales taxes; financial statement effects

 **LO13–3**

Bavarian Bar and Grill opened for business in November 2024. During its first two months of operation, the restaurant sold gift cards in various amounts totaling \$5,200, mostly as Christmas presents. They are redeemable for meals within two years of the purchase date, although experience within the industry indicates that 80% of gift cards are redeemed within one year. Gift cards totaling \$1,300 were presented for redemption during 2024 for meals having a total price of \$2,100. The sales tax rate on restaurant sales is 4%, assessed at the time meals (not gift cards) are purchased. Sales taxes will be remitted in January.

Required:

1. Prepare the appropriate journal entries (in summary form) for the gift cards and meals sold during 2024 (keeping in mind that, in actuality, each sale of a gift card or a meal would be recorded individually).
2. Determine the liability for gift cards to be reported on the December 31, 2024, balance sheet.
3. What is the appropriate classification (current or noncurrent) of the liabilities at December 31, 2024? Why?

E 13–7 Customer deposits; financial statement effects

 **LO13–3**

Diversified Semiconductors sells perishable electronic components. Some must be shipped and stored in reusable protective containers. Customers pay a deposit for each container received. The deposit is equal to the container's cost. They receive a refund when the container is returned. During 2024, deposits collected on containers shipped were \$850,000.

Deposits are forfeited if containers are not returned within 18 months. Containers held by customers at January 1, 2024, represented deposits of \$530,000. In 2024, \$790,000 was refunded and deposits forfeited were \$35,000.

Required:

1. Prepare the appropriate journal entries for the deposits received, returned, and forfeited during 2024.
2. Determine the liability for refundable deposits to be reported on the December 31, 2024, balance sheet.

E 13–8 Various transactions involving advance collections  **LO13–3**

The following selected transactions relate to liabilities of Interstate Farm Equipment Company for December 2024. Interstate's fiscal year ends on December 31.

Required:

Prepare the appropriate journal entries for these transactions.

1. On December 15, received \$7,500 from Bradley Farms toward the sale by Interstate of a \$98,000 tractor to be delivered to Bradley on January 6, 2025.
2. During December, received \$25,500 of refundable deposits relating to containers used to transport equipment parts.
3. During December, credit sales totaled \$800,000. The state sales tax rate is 5% and the local sales tax rate is 2%. (This is a summary journal entry for the many individual sales transactions for the period).

E 13–9 Gift cards; financial statement effects  **LO13–3**

CircuitTown commenced a gift card program in January 2024 and sold \$10,000 of gift cards in January, \$15,000 in February, and \$16,000 in March 2024 before discontinuing further

gift card sales. During 2024, gift card redemptions were \$6,000 for the January gift cards sold, \$4,500 for the February cards, and \$4,000 for the March cards. CircuitTown considers gift cards to be “broken” (not redeemable) 10 months after sale.

Required:

1. How much revenue will CircuitTown recognize with respect to January gift card sales during 2024?
2. Prepare journal entries to record the sale of January gift cards, redemption of gift cards (ignore sales tax), and breakage (expiration) of gift cards.
3. How much revenue will CircuitTown recognize with respect to March gift card sales during 2024?
4. What liability for deferred revenue associated with gift card sales would CircuitTown show as of December 31, 2024?

E 13–10 FASB codification research  **LO13–3**,  **LO13–4**,
 **LO13–5**

Access the *FASB Accounting Standards Codification* at the FASB website ( www.fasb.org) and select Basic View for free access.

Required:

Determine the specific eight- or nine-digit Codification citation (XXX-XX-XX-XX) that describes the following items:

1. If it is only reasonably possible that a contingent loss will occur, the contingent loss should be disclosed.
2. Criteria allowing short-term liabilities expected to be refinanced to be classified as long-term liabilities.
3. Accounting for the revenue from separately priced extended warranty contracts.
4. The criteria to determine if an employer must accrue a liability for vacation pay.

E 13–11 Classification of debt; financial statement effects;
Marriott International, Inc.  **LO13–1, LO13–4**

An annual report of **Marriott International, Inc.**, contained a rather lengthy narrative entitled “Liquidity and Capital Resources.” The narrative noted that a revolving credit agreement outstanding at the end of the year aggregated \$4.5 billion and that during the following year, “While any outstanding commercial paper borrowings and/or borrowings under our Credit Facility generally have short-term maturities, we classify the outstanding borrowings as long-term based on our ability and intent to refinance the outstanding borrowings on a long-term basis. The Credit Facility expires on June 28, 2024.”

Required:

How did Marriott report the debt in its balance sheet? Why?

E 13–12 Classification of debt; financial statement effects;
Marriott International, Inc.  **LO13–1**,  **LO13–4**,  **LO13–7**

IFRS

Consider the information presented in  **E 13–11**.

Required:

1. How would Marriott report the debt in its balance sheet if it reported under IFRS? Why?
2. Would your answer to requirement 1 change if Marriott obtained its long-term credit facility after the balance sheet date? Why?

E 13–13 Current–noncurrent classification of debt; financial statement effects  **LO13–1, LO13–4**

At December 31, 2024, Newman Engineering’s liabilities include the following:

1. \$10 million of 9% bonds were issued for \$10 million on May 31, 2002. The bonds mature on May 31, 2032, but bondholders have the option of calling (demanding payment on) the bonds on May 31, 2025. However, the option to call is not expected to be exercised, given prevailing market conditions.
2. \$14 million of 8% notes are due on May 31, 2025. A debt covenant requires Newman to maintain current assets at least equal to 175% of its current liabilities. On December 31,

2024, Newman is in violation of this covenant. Newman obtained a waiver from National City Bank until June 2025, having convinced the bank that the company's normal 2 to 1 ratio of current assets to current liabilities will be reestablished during the first half of 2025.

3. \$7 million of 11% bonds were issued for \$7 million on August 1, 1995. The bonds mature on July 31, 2025. Sufficient cash is expected to be available to retire the bonds at maturity.

Required:

What portion of each liability is reported as a current liability and as a noncurrent liability? Explain.

E 13–14 FASB codification research  **LO13–5**

Access the *FASB Accounting Standards Codification* at the FASB website ( www.fasb.org) and select Basic View for free access.

Required:

1. Obtain the relevant authoritative literature on recognition of contingent losses. What is the specific eight-digit Codification citation (XXX-XX-XX-X) that describes the guidelines for determining when an expense and liability should be accrued for a contingent loss?
2. List the guidelines.

E 13–15 Warranties; financial statement effects

 **LO13–5, LO13–6**

Cupola Awning Corporation introduced a new line of commercial awnings in 2024 that carry a two-year warranty against manufacturer's defects. Based on their experience with previous product introductions, warranty costs are expected to approximate 3% of sales. Sales and actual warranty expenditures for the first year of selling the product were:

| |
|--------------------|
| Sales |
| <hr/> |
| \$5,000,000 |

Actual Warranty Expenditures

\$37,500

Required:

1. Does this situation represent a loss contingency? Why or why not? How should Cupola account for it?
2. Prepare journal entries that summarize sales of the awnings (assume all credit sales) and any aspects of the warranty that should be recorded during 2024.
3. What amount should Cupola report as a liability at December 31, 2024?

E 13–16 Extended warranties LO13–5, LO13–6

Carnes Electronics sells consumer electronics that carry a 90-day manufacturer's warranty. At the time of purchase, customers are offered the opportunity to also buy a two-year extended warranty for an additional charge. During the year, Carnes received \$412,000 for these extended warranties, and on average the warranties were 20% expired by year end.

Required:

1. Does this situation represent a loss contingency? Why or why not? How should it be accounted for?
2. Prepare journal entries that summarize sales of the extended warranties and recognition of any revenue associated with those warranties.

E 13–17 Contingency; product recall; financial statement effects LO13–5, LO13–6

Sound Audio manufactures and sells audio equipment for automobiles. Engineers notified management in December 2024 of a circuit flaw in an amplifier that poses a potential fire hazard. An intense investigation indicated that a product recall is virtually certain, estimated to cost the company \$2 million. The fiscal year ends on December 31.

Required:

1. Should this loss contingency be accrued, only disclosed, or neither? Explain.
2. What loss, if any, should Sound Audio report in its 2024 income statement?
3. What liability, if any, should Sound Audio report in its 2024 balance sheet?

4. Prepare any journal entry needed.

E 13–18 Impairment of accounts receivable; financial statement effects  **LO13–5, LO13–6**

The Manda Panda Company uses the allowance method to account for bad debts. At the beginning of 2024, the allowance account had a credit balance of \$75,000. Credit sales for 2024 totaled \$2,400,000 and the year-end accounts receivable balance was \$490,000. During this year, \$73,000 in receivables were determined to be uncollectible. Manda Panda anticipates that 3% of all credit sales will ultimately become uncollectible. The fiscal year ends on December 31.

Required:

1. Does this situation describe a loss contingency? Explain.
2. What is the bad debt expense that Manda Panda should report in its 2024 income statement?
3. Prepare the appropriate journal entry to record the contingency.
4. What is the net accounts receivable value Manda Panda should report in its 2024 balance sheet?

E 13–19 Unasserted assessment; financial statement effects  **LO13–6**

At April 1, 2025, the Food and Drug Administration is in the process of investigating allegations of false marketing claims by Hulkly Muscle Supplements. The FDA has not yet proposed a penalty assessment. Hulkly's fiscal year ends on December 31, 2024. The company's financial statements are issued in April 2025.

Required:

For each of the following scenarios, determine the appropriate way to report the situation. Explain your reasoning and prepare any necessary journal entry.

1. Management feels an assessment is *reasonably possible*, and if an assessment is made, an unfavorable settlement of \$13 million is *reasonably possible*.
2. Management feels an assessment is *reasonably possible*, and if an assessment is made, an unfavorable settlement of \$13 million is *probable*.

3. Management feels an assessment is *probable*, and if an assessment is made, an unfavorable settlement of \$13 million is *reasonably possible*.
4. Management feels an assessment is *probable*, and if an assessment is made, an unfavorable settlement of \$13 million is *probable*.

E 13–20 Various transactions involving contingencies; disclosures **LO13–5, LO13–6**

The following selected transactions relate to contingencies of Classical Tool Makers, Inc., which began operations in July 2024. Classical's fiscal year ends on December 31. Financial statements are issued in April 2025.

Required:

Prepare the year-end entries for any amounts that should be recorded as a result of each of these contingencies and indicate whether a disclosure note is necessary.

1. Classical's products carry a one-year warranty against manufacturer's defects. Based on previous experience, warranty costs are expected to approximate 4% of sales. Sales were \$2 million (all credit) for 2024. Actual warranty expenditures were \$30,800 and were recorded as warranty expense when incurred.
2. Although no customer accounts have been shown to be uncollectible, Classical estimates that 2% of credit sales will eventually prove uncollectible.
3. In December 2024, the state of Tennessee filed suit against Classical, seeking penalties for violations of clean air laws. On January 23, 2025, Classical reached a settlement with state authorities to pay \$1.5 million in penalties.
4. Classical is the plaintiff in a \$4 million lawsuit filed against a supplier. The suit is in final appeal and attorneys advise that it is virtually certain that Classical will win the case and be awarded \$2.5 million, an amount that is material to Classical.
5. In November 2024, Classical became aware of a design flaw in an industrial saw that poses a potential electrical hazard. A product recall appears unavoidable. Such an action would likely cost the company \$500,000.
6. Classical offered \$25 cash rebates on a new model of jigsaw. Customers must mail in a proof-of-purchase seal from the package plus the cash register receipt to receive the rebate. Experience suggests that 60% of the rebates will be claimed. Ten thousand of the

jigsaws were sold in 2024. Total rebates to customers in 2024 were \$105,000 and were recorded as promotional expense when paid.

E 13–21 Various transactions involving contingencies; financial statement effects **LO13–5, LO13–6**

The following selected circumstances relate to pending lawsuits for Erismus, Inc. Erismus's fiscal year ends on December 31. Financial statements are issued in March 2025. Erismus prepares its financial statements according to U.S. GAAP.

Required:

Indicate the amount of asset or liability that Erismus would record, and explain your answer.

1. Erismus is defending against a lawsuit. Erismus's management believes the company has a slightly worse than 50/50 chance of eventually prevailing in court, and that if it loses, the judgment will be \$1,000,000.
2. Erismus is defending against a lawsuit. Erismus's management believes it is probable that the company will lose in court. If it loses, management believes that damages could fall anywhere in the range of \$2,000,000 to \$4,000,000, with any damage in that range equally likely.
3. Erismus is defending against a lawsuit. Erismus's management believes it is probable that the company will lose in court. If it loses, management believes that damages will eventually be \$5,000,000, with a present value of \$3,500,000.
4. Erismus is a plaintiff in a lawsuit. Erismus's management believes it is probable that the company eventually will prevail in court, and that if it prevails, the judgment will be \$1,000,000. Page 751
5. Erismus is a plaintiff in a lawsuit. Erismus's management believes it is virtually certain that the company eventually will prevail in court, and that if it prevails, the judgment will be \$500,000.

E 13–22 Various transactions involving contingencies; financial statement effects; IFRS **LO13–5**, **LO13–6**, **LO13–7**

[This exercise is a variation of  **E 13–21** focusing on reporting under IFRS].

Refer to the circumstances listed in  **E 13–21**, but assume that Erismus prepares its financial statements according to International Financial Reporting Standards.

Required:

For each circumstance, indicate the amount of asset or liability that Erismus would record, and explain your answer.

Indicate (by letter) the way each of the items listed below should be reported in a balance sheet at December 31, 2024.

E 13–23 Disclosures of liabilities; financial statement effects
 **LO13–1** through  **LO13–6**

| | Item | Reporting Method |
|-----------|--|-------------------------|
| _____ 1. | Commercial paper | N. Not reported |
| _____ 2. | Noncommitted line of credit | C. Current liability |
| _____ 3. | Customer advances | L. Long-term liability |
| _____ 4. | Estimated quality-assurance warranty cost | D. Disclosure note only |
| _____ 5. | Accounts payable | A. Asset |
| _____ 6. | Long-term bonds that will be callable by the creditor in the upcoming year unless an existing violation is not corrected (there is a reasonable possibility the violation will be corrected within the grace period) | |
| _____ 7. | Note due March 3, 2025 | |
| _____ 8. | Interest accrued on note, December 31, 2024 | |
| _____ 9. | Short-term bank loan to be paid with proceeds of sale of common stock | |
| _____ 10. | A determinable gain that is contingent on a future event that appears extremely likely to occur in three months | |
| _____ 11. | Unasserted assessment of taxes owed on prior-year income that probably will be asserted, in which case there would probably be a loss in six months | |

| | Item | Reporting Method |
|-----------|---|-------------------------|
| _____ 12. | Unasserted assessment of taxes owed on prior-year income with a reasonable possibility of being asserted, in which case there would probably be a loss in 13 months | |
| _____ 13. | A determinable loss from a past event that is contingent on a future event that appears extremely likely to occur in three months | |
| _____ 14. | Note payable due April 4, 2027 | |
| _____ 15. | Long-term bonds callable by the creditor in the upcoming year that are not expected to be called | |

E 13–24 Warranty expense; change in estimate

LO13–5, LO13–6

Woodmier Lawn Products introduced a new line of commercial sprinklers in 2023 that carry a one-year warranty against manufacturer’s defects. Because this was the first product for which the company offered a warranty, trade publications were consulted to determine the experience of others in the industry. Based on that experience, warranty costs were expected to approximate 2% of sales. Sales of the sprinklers in 2023 were \$2.5 million. Accordingly, the following entries relating to the contingency for warranty costs were recorded during the first year of selling the product:

| | | |
|--|--------|--------|
| Accrued liability and expense | | |
| Warranty expense (2% × \$2,500,000) | 50,000 | |
| Warranty liability | | 50,000 |
| Actual expenditures (summary entry) | | |
| Warranty liability | 23,000 | |
| Cash | | 23,000 |

In late 2024, the company’s claims experience was evaluated and it was determined that claims were far more than expected—3% of sales rather than 2%.

Required:

1. Assuming sales of the sprinklers in 2024 were \$3.6 million and warranty expenditures in 2024 totaled \$88,000, prepare any journal entries related to the warranty.
2. Assuming sales of the sprinklers were discontinued after 2023, prepare any journal entry(s) in 2024 related to the warranty.

E 13–25 Change in accounting estimate; disclosures  **LO13–3**

The Commonwealth of Virginia filed suit in October 2022 against Northern Timber Corporation, seeking civil penalties and injunctive relief for violations of environmental laws regulating forest conservation. When the 2023 financial statements were issued in 2024, Northern had not reached a settlement with state authorities, but legal counsel advised Northern Timber that it was probable the ultimate settlement would be \$1,000,000 in penalties. The following entry was recorded:

| | | |
|----------------------|-----------|-----------|
| Loss—litigation | 1,000,000 | |
| Liability—litigation | | 1,000,000 |

Late in 2024, a settlement was reached with state authorities to pay a total of \$600,000 to cover the cost of violations.

Required:

1. Prepare any journal entries related to the change.
2. Briefly describe other steps Northern should take to report the change.

E 13–26 Contingency; DuPont Inc. disclosure

 **LO13–5, LO13–6**

Real World Financials

DuPont Inc. provides chemical, plastic, and agricultural products and services to various consumer markets. The following excerpt is taken from the disclosure notes of DuPont’s 2019 annual report:

At December 31, 2019, the Company had accrued obligations of \$77 million for probable environmental remediation and restoration costs, inclusive of \$35 million retained and assumed following the Distributions and \$42 million of indemnified liabilities. These

obligations are included in "Accrued and other current liabilities" and "Other noncurrent obligations" in the Consolidated Balance Sheets. This is management's best estimate of the costs for remediation and restoration with respect to environmental matters for which the Company has accrued liabilities, although it is reasonably possible that the ultimate cost with respect to these particular matters could range up to \$170 million above the amount accrued at December 31, 2019.

Required:

1. Does the excerpt describe a loss contingency?
2. Under what conditions would DuPont accrue such a contingency?
3. What journal entry would DuPont use to record this amount of provision (loss)?

E 13–27 Payroll-related liabilities  **Appendix**

Lee Financial Services pays employees monthly. Payroll information is listed below for January 2024, the first month of Lee's fiscal year. Assume that none of the employees exceeded any relevant base of pay, such that all benefit percentages apply to the entire \$500,000 payroll.

| | |
|--|------------------|
| Salaries | \$500,000 |
| Federal income taxes to be withheld | \$100,000 |
| Federal unemployment tax rate | 0.60% |
| State unemployment tax rate | 5.40% |
| Social Security tax rate | 6.2% |
| Medicare tax rate | 1.45% |

Required:

Prepare the appropriate journal entries to record salaries expense and payroll tax expense for the January 2024 pay period.

Problems

P13–1 Bank loan; accrued interest LO13–2

Blanton Plastics, a household plastic product manufacturer, borrowed \$14 million cash on October 1, 2024, to provide working capital for year-end production. Blanton issued a four-month, 12% promissory note to L&T Bank under a prearranged short-term line of credit. Interest on the note was payable at maturity. Each firm's fiscal period is the calendar year.

Required:

1. Prepare the journal entries to record (a) the issuance of the note by Blanton Plastics and (b) L&T Bank's receivable on October 1, 2024.
2. Prepare the journal entries by both firms to record all subsequent events related to the note through January 31, 2025.
3. Suppose the face amount of the note was adjusted to include interest (a Page 753 noninterest-bearing note) and 12% is the bank's stated discount rate. (a) Prepare the journal entries to record the issuance of the noninterest-bearing note by Blanton Plastics on October 1, 2024, the adjusting entry at December 31, and payment of the note at maturity. (b) What would be the effective interest rate?

P13–2 Various transactions involving liabilities; financial statement effects LO13–2 through LO13–4

Camden Biotechnology began operations in September 2024. The following selected transactions relate to liabilities of the company for September 2024 through March 2025. Camden's fiscal year ends on December 31. Its financial statements are issued in April.

2024

- a. On September 5, opened checking accounts at Second Commercial Bank and negotiated a short-term line of credit of up to \$15,000,000 at the bank's prime rate (10.5% at the time). The company will pay no commitment fees.
- b. On October 1, borrowed \$12 million cash from Second Commercial Bank under the line of credit and issued a five-month promissory note. Interest at the prime rate of 10% was

payable at maturity. Management planned to issue 10-year bonds in February to repay the note.

- c. Received \$2,600 of refundable deposits in December for reusable containers used to transport and store chemical-based products.
- d. For the September–December period, sales on account totaled \$4,100,000. The state sales tax rate is 3% and the local sales tax rate is 3%. (This is a summary journal entry for the many individual sales transactions for the period.)
- e. Recorded the adjusting entry for accrued interest.

2025

- f. In March, paid the entire amount of the note on its March 1 due date, using proceeds from a February issuance of \$10 million of 10-year bonds at face value, along with other available cash.
- g. The storage containers covered by refundable deposits are expected to be returned during the first nine months of the year. Half of the containers were returned in March 2025.

Required:

- 1. Prepare the appropriate journal entries for items a–g.
- 2. Prepare the current and long-term liability sections of the December 31, 2024, balance sheet. Trade accounts payable on that date were \$252,000.

P13–3 Current–noncurrent classification of debt; financial statement effects LO13–1, LO13–4

The balance sheet at December 31, 2024, for Nevada Harvester Corporation includes the liabilities listed below:

- a. 11% bonds with a face amount of \$40 million were issued for \$40 million on October 31, 2015. The bonds mature on October 31, 2035. Bondholders have the option of calling (demanding payment on) the bonds on October 31, 2025, at a redemption price of \$40 million. Market conditions are such that the call is not expected to be exercised.
- b. Management intended to refinance \$6 million of its 10% notes that mature in May 2025. In early March, prior to the actual issuance of the 2024 financial statements, Nevada Harvester negotiated a line of credit with a commercial bank for up to \$5 million any time during 2025. Any borrowings will mature two years from the date of borrowing.

- c. Noncallable 12% bonds with a face amount of \$20 million were issued for \$20 million on September 30, 2005. The bonds mature on September 30, 2025. Sufficient cash is expected to be available to retire the bonds at maturity.
- d. A \$12 million 9% bank loan is payable on October 31, 2030. The bank has the right to demand payment after any fiscal year-end in which Nevada Harvester's ratio of current assets to current liabilities falls below a contractual minimum of 1.7 to 1 and remains so for six months. That ratio was 1.45 on December 31, 2024, due primarily to an intentional temporary decline in inventory levels. Normal inventory levels will be reestablished during the first quarter of 2025.

Required:

1. Determine the amount, for each item a through d, that can be reported as a current liability and as a noncurrent liability. Explain the reasoning behind your classifications.
2. Prepare the liability section of a classified balance sheet and any necessary note disclosure for Nevada Harvester at December 31, 2024. Accounts payable and accruals are \$22 million.

P13–4 Various liabilities; financial statement effects  **LO13–1**
through  **LO13–4**

The unadjusted trial balance of the Manufacturing Equitable at December 31, 2024, the end of its fiscal year, included the following account balances. Manufacturing's 2024 financial statements were issued on April 1, 2025.

| | |
|-----------------------------------|------------------|
| Accounts receivable | \$ 92,500 |
| Accounts payable | 35,000 |
| 10% notes, payable to bank | 600,000 |
| Mortgage note payable | 1,200,000 |

Other information:

- a. The bank notes, issued August 1, 2024, are due on July 31, 2025, and pay interest at a rate of 10%, payable at maturity.
- b. The mortgage note is due on March 1, 2025. Interest at 9% has been paid up to December 31 (assume 9% is a realistic rate). Manufacturing intended at December 31, 2024, to refinance the note on its due date with a new 10-year mortgage note. In fact, on March 1,

Manufacturing paid \$250,000 in cash on the principal balance and refinanced the remaining \$950,000.

- c. Included in the accounts receivable balance at December 31, 2024, were two subsidiary accounts that had been overpaid and had credit balances totaling \$18,000. The accounts were of two major customers who were expected to order more merchandise from Manufacturing and apply the overpayments to those future purchases.
- d. On November 1, 2024, Manufacturing rented a portion of its factory to a tenant for \$30,000 per year, payable in advance. The payment for the 12 months ended October 31, 2025, was received as required and was credited to deferred revenue.

Required:

1. Prepare any necessary adjusting journal entries at December 31, 2024, pertaining to each item of other information (a–d).
2. Prepare the current and long-term liability sections of the December 31, 2024, balance sheet.

P13–5 Bonus compensation; algebra  **LO13–3**

Sometimes compensation packages include bonuses designed to provide performance incentives to employees. The difficulty a bonus can cause accountants is not an accounting problem, but a math problem. The complication is that the bonus formula sometimes specifies that the calculation of the bonus is based in part on the bonus itself. This occurs any time the bonus is a percentage of income because expenses are components of income, and the bonus is an expense.

Regalia Fashions has an incentive compensation plan through which a division manager receives a bonus equal to 10% of the division's net income. Division income in 2024 before the bonus and income tax was \$150,000. The tax rate is 30%.

Required:

1. Express the bonus formula as one or more algebraic equation(s).³⁴
2. Using these formulas, calculate the amount of the bonus.
3. Prepare the adjusting entry to record the bonus compensation.

4. Bonus arrangements take many forms. Suppose the bonus specifies that the bonus is 10% of the division's income before tax, but after the bonus itself. Calculate the amount of the bonus.

P13–6 Various contingencies; disclosures  **LO13–5,**
 **LO13–6**

Eastern Manufacturing is involved with several situations that possibly involve contingencies. Each is described below. Eastern's fiscal year ends December 31, and the 2024 financial statements are issued on March 15, 2025.

- a. Eastern is involved in a lawsuit resulting from a dispute with a supplier. On February 3, 2025, judgment was rendered against Eastern in the amount of \$107 million plus interest, a total of \$122 million. Eastern plans to appeal the judgment and is unable to predict its outcome though it is not expected to have a material adverse effect on the company.
- b. In November 2023, the State of Nevada filed suit against Eastern, seeking civil penalties and injunctive relief for violations of environmental laws regulating hazardous waste. On January 12, 2025, Eastern reached a settlement with state authorities. Based upon discussions with legal counsel, the Company feels it is probable that \$140 million will be required to cover the cost of violations. Eastern believes that the ultimate settlement of this claim will not have a material adverse effect on the company.
- c. Eastern is the plaintiff in a \$200 million lawsuit filed against United Steel for damages due to lost profits from rejected contracts and for unpaid receivables. The case is in final appeal and legal counsel advises that it is probable that Eastern will prevail and be awarded \$100 million.
- d. At March 15, 2025, Eastern knows a competitor has threatened litigation due to Page 755 patent infringement. The competitor has not yet filed a lawsuit. Management believes a lawsuit is reasonably possible, and if a lawsuit is filed, management believes damages of up to \$33 million are reasonably possible.

Required:

Determine the appropriate way to report each situation, and prepare any necessary journal entries and disclosure notes. Explain your reasoning.

P13-7 Various liabilities; financial statement effects  **LO13-4**,
 **LO13-5**,  **LO13-6**,  **LO13-7**

HolmesWatson (HW) is considering what the effect would be of reporting its liabilities under IFRS rather than U.S. GAAP. The following facts apply:

- a. HW is defending against a lawsuit and believes it is virtually certain to lose in court. If it loses the lawsuit, management estimates it will need to pay a range of damages that falls between \$5,000,000 and \$10,000,000, with each amount in that range equally likely.
- b. HW is defending against another lawsuit that is identical to item (a), but the relevant losses will only occur far into the future. The present values of the endpoints of the range are \$3,000,000 and \$8,000,000, with the timing of cash flow somewhat uncertain. HW considers these effects of the time value of money to be material.
- c. HW is defending against another lawsuit for which management believes HW has a slightly better than 50/50 chance of losing in court. If it loses the lawsuit, management estimates HW will need to pay a range of damages that falls between \$3,000,000 and \$9,000,000, with each amount in that range equally likely.
- d. HW has \$10,000,000 of short-term debt that it intends to refinance on a long-term basis. Soon after the balance sheet date, but before issuance of the financial statements, HW obtained the financing necessary to refinance the debt.

Required:

1. For each item, indicate how treatment of the amount would differ between U.S. GAAP and IFRS.
2. Consider the total effect of items a–d. If HW’s goal is to show the lowest total liabilities, which set of standards, U.S. GAAP or IFRS, best helps it meet that goal?

P13-8 Expected cash flow approach; product recall  **LO13-6**

The Heinrich Tire Company recalled a tire in its subcompact line in December 2024. Costs associated with the recall were originally thought to approximate \$50 million. Now, though, while management feels it is probable the company will incur substantial costs, all discussions indicate that \$50 million is an excessive amount. Based on prior recalls in the industry, management has provided the following probability distribution for the potential loss:

| Loss Amount | Probability |
|--------------|-------------|
| \$40 million | 20% |
| \$30 million | 50% |
| \$20 million | 30% |

An arrangement with a consortium of distributors requires that all recall costs be settled at the end of 2025. The risk-free rate of interest is 5%.

Required:

1. By the traditional approach to measuring loss contingencies, what amount would Heinrich record at the end of 2024 for the loss and contingent liability?
2. For the remainder of this problem, apply the expected cash flow approach of *SEAC No. 7*. Estimate Heinrich's liability at the end of the 2024 fiscal year.
3. Prepare the journal entry to record the contingent liability (and loss).
4. Prepare the journal entry to accrue interest on the liability at the end of 2025.
5. Prepare the journal entry to pay the liability at the end of 2025, assuming the actual cost is \$31 million. Heinrich records an additional loss if the actual costs are higher or a gain if the costs are lower.

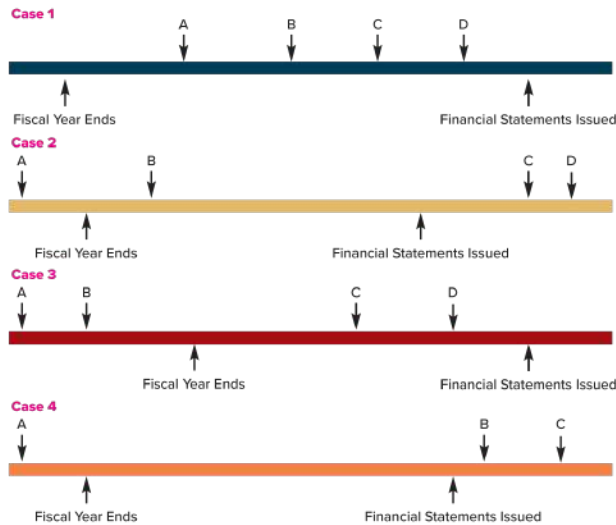

P13–9 Subsequent events; disclosures  **LO13–6**

Lincoln Chemicals became involved in investigations by the U.S. Environmental Protection Agency (EPA) in regard to damages connected to waste disposal sites. Below are four possibilities regarding the timing of (a) the alleged damage caused by Lincoln, (b) an investigation by the EPA, (c) the EPA assessment of penalties, and (d) ultimate settlement. In each case, assume that Lincoln is unaware of any problem until an investigation is begun. Also assume that once the EPA investigation begins, it is probable that a damage assessment

will ensue and that once an assessment is made by the EPA, it is reasonably possible that a determinable amount will be paid by Lincoln.

Required:

For each case, decide whether (1) a loss should be accrued in the financial statements with an explanatory note, (2) a disclosure note only should be provided, or (3) no disclosure is necessary.

P13-10 Subsequent events; classification of debt; loss contingency; financial statement effects  **LO13-4**,  **LO13-5**

Van Rushing Hunting Goods' fiscal year ends on December 31. At the end of the 2024 fiscal year, the company had notes payable of \$12 million due on February 8, 2025. Rushing sold 2 million shares of its \$0.25 par, common stock on February 3, 2025, for \$9 million. The proceeds from that sale along with \$3 million from the maturation of some 3-month CDs were used to pay the notes payable on February 8.

Through his attorney, one of Rushing's construction workers notified management on January 5, 2025, that he planned to sue the company for \$1 million related to a work-site injury on December 20, 2024. As of December 31, 2024, management had been unaware of the injury, but reached an agreement on February 23, 2025, to settle the matter by paying the employee's medical bills of \$75,000.

Rushing's financial statements were finalized on March 3, 2025.

Required:

1. What amount(s) if any, related to the situations described should Rushing report among current liabilities in its balance sheet at December 31, 2024? Why?
2. What amount(s) if any, related to the situations described should Rushing report among long-term liabilities in its balance sheet at December 31, 2024? Why?
3. Assume that, as of March 3, management does not think it is probable that it will suffer a material loss because of the injury. How would your answers to requirements 1 and 2 differ if the settlement agreement had occurred on March 15, 2025? Why?
4. How would your answers to requirements 1 and 2 differ if the work-site injury had occurred on January 3, 2025? Why?

P13–11 Concepts; terminology  **LO13–1** through  **LO13–4**

Listed below are several terms and phrases associated with current liabilities. Pair each item from List A (by letter) with the item from List B that is most appropriately associated with it.

| List A | List B |
|--|--|
| _____ 1. Face amount \times Interest rate \times Time | a. Informal agreement |
| _____ 2. Payable with current assets | b. Secured loan |
| _____ 3. Short-term debt to be refinanced with common stock | c. Refinancing prior to the issuance of the financial statements |
| _____ 4. Present value of interest plus present value of principal | d. Accounts payable |
| _____ 5. Noninterest-bearing | e. Accrued liabilities |
| _____ 6. Noncommitted line of credit | f. Commercial paper |
| _____ 7. Pledged accounts receivable | g. Current liabilities |
| _____ 8. Reclassification of debt | h. Long-term liability |
| | i. Usual valuation of liabilities |
| | j. Interest on debt |
| | k. Customer advances |
| | l. Customer deposits |

| | List A | List B |
|-----------|--|--------|
| _____ 9. | Purchased by other corporations | |
| _____ 10. | Expenses not yet paid | |
| _____ 11. | Liability until refunded | |
| _____ 12. | Liability until satisfy performance obligation | |

P13–12 Various liabilities; balance sheet classification; prepare liability section of balance sheet; write notes  **LO13–4**,  **LO13–5**

Transit Airlines provides regional jet service in the Mid-South. The following is information on liabilities of Transit at December 31, 2024. Transit’s fiscal year ends on December 31. Its annual financial statements are issued in April.

1. Transit has outstanding 6.5% bonds with a face amount of \$90 million. The bonds mature on July 31, 2030. Bondholders have the option of calling (demanding payment on) the bonds on July 31, 2025, at a redemption price of \$90 million. Market conditions are such that the call option is not expected to be exercised.
2. A \$30 million 8% bank loan is payable on October 31, 2027. The bank has the right to demand payment after any fiscal year-end in which Transit’s ratio of current assets to current liabilities falls below a contractual minimum of 1.9 to 1 and remains so for six months. That ratio was 1.75 on December 31, 2024, due primarily to an intentional temporary decline in parts inventories. Normal inventory levels will be reestablished during the sixth week of 2025.
3. Transit management intended to refinance \$45 million of 7% notes that mature in May 2025. In late February 2025, prior to the issuance of the 2024 financial statements, Transit negotiated a line of credit with a commercial bank for up to \$40 million any time during 2025. Any borrowings will mature two years from the date of borrowing.
4. Transit is involved in a lawsuit resulting from a dispute with a food caterer. On February 13, 2025, judgment was rendered against Transit in the amount of \$53 million plus

interest, a total of \$54 million. Transit plans to appeal the judgment and is unable to predict its outcome though it is not expected to have a material adverse effect on the company.

Required:

1. How should the 6.5% bonds be classified by Transit among liabilities in its balance sheet? Explain.
2. How should the 8% bank loan be classified by Transit among liabilities in its balance sheet? Explain.
3. How should the 7% notes be classified by Transit among liabilities in its balance sheet? Explain.
4. How should the lawsuit be reported by Transit? Explain.
5. Prepare the liability section of a classified balance sheet for Transit Airlines at December 31, 2024. Transit's accounts payable and accruals were \$43 million.
6. Draft appropriate note disclosures for Transit's financial statements at December 31, 2024, for each of the five items described.

P13–13 Payroll-related liabilities  **Appendix**

Alamar Petroleum Company offers its employees the option of contributing retirement funds up to 5% of their salaries, with the contribution being matched by Alamar. The company also pays 80% of medical and life insurance premiums. Deductions relating to these plans and other payroll information for the first biweekly payroll period of February are listed as follows:

| | |
|---|--------------------|
| Wages and salaries | \$2,000,000 |
| Employee contribution to voluntary retirement plan | 84,000 |
| Medical insurance premiums | 42,000 |
| Life insurance premiums | 9,000 |
| Federal income taxes to be withheld | 400,000 |
| Local income taxes to be withheld | 53,000 |
| Payroll taxes: | |
| Federal unemployment tax rate | 0.60% |
| State unemployment tax rate | 5.40% |

| | |
|---------------------------------|--------------|
| Social Security tax rate | 6.20% |
| Medicare tax rate | 1.45% |

Required:

Prepare the appropriate journal entries to record salaries expense and payroll tax expense for the biweekly pay period. Assume that all employees' cumulative wages do not exceed the relevant wage bases for Social Security. Also assume that all employees' cumulative wages do exceed the relevant unemployment wage bases at the end of January.

Decision Maker's Perspective

Ed Telling/Getty Images

Apply your critical-thinking ability to the knowledge you've gained. These cases will provide you an opportunity to develop your research, analysis, judgment, and communication skills. You also will work with other students, integrate what you've learned, apply it in real-world situations, and consider its global and ethical ramifications. This practice will broaden your knowledge and further develop your decision-making abilities.

Research Case 13–1 Bank loan; accrued interest  **LO13–1,**
 **LO13–2**

A fellow accountant has solicited your opinion regarding the classification of short-term obligations repaid prior to being replaced by a long-term security. Cheshire Foods, Inc., issued \$5,000,000 of short-term commercial paper during 2023 to finance construction of a plant. At September 30, 2024, Cheshire's fiscal year-end, the company intends to refinance the commercial paper by issuing long-term bonds. However, because Cheshire temporarily has excess cash, in November 2024 it liquidates \$2,000,000 of the commercial paper as the paper matures. In December 2024, the company completes a \$10,000,000 long-term bond issue. Later during December, it issues its September 30, 2024, financial statements. The proceeds of the long-term bond issue are to be used to replenish \$2,000,000 in working capital, to pay \$3,000,000 of commercial paper as it matures in January 2025, and to pay \$5,000,000 of construction costs expected to be incurred later that year to complete the plant.

You initially are hesitant because you don't recall encountering a situation in which short-term obligations were repaid prior to being replaced by a long-term security. However, you are encouraged by a vague memory that this general topic is covered by GAAP literature you came across when reading an Internet article.

Required:

Access the FASB Accounting Standards Codification at the FASB website (www.fasb.org) and select Basic View for free access. Determine how the \$5,000,000 of commercial paper should be classified by citing the specific nine-digit Codification citation (XXX-XX-XX-XX) in the FASB Codification. Before doing so, formulate your own opinion on the proper treatment.

Analysis Case 13–2 Analyzing financial statements; liquidity ratios  **LO13–1**

IGF Foods Company is a large, primarily domestic, consumer foods company involved in the manufacture, distribution, and sale of a variety of food products. Industry averages are derived from Troy's *The Almanac of Business and Industrial Financial Ratios*. Following are the 2024 and 2023 comparative balance sheets for IGF. (The financial data we use are from actual financial statements of a well-known corporation, but the company name used is fictitious, and the numbers and dates have been modified slightly.)

| IGF FOODS COMPANY | | |
|---|-------------|-------------|
| Comparative Balance Sheets Years Ended | | |
| December 31, 2024 and 2023 | | |
| (\$ in millions) | | |
| | 2024 | 2023 |
| Assets | | |
| Current assets: | | |
| Cash | \$ 48 | \$ 142 |
| Accounts receivable | 347 | 320 |
| Marketable securities | 358 | — |
| Inventories | 914 | 874 |
| Prepaid expenses | <u>212</u> | <u>154</u> |
| Total current assets | 1,879 | 1,490 |

| | | |
|---|----------------|----------------|
| Property, plant, and equipment (net) | 2,592 | 2,291 |
| Intangibles (net) | 800 | 843 |
| Other assets | 74 | 60 |
| Total assets | <u>\$5,345</u> | <u>\$4,684</u> |
| Liabilities and Shareholders' Equity | | |
| Current liabilities: | | |
| Accounts payable | \$ 254 | \$ 276 |
| Accrued liabilities | 493 | 496 |
| Notes payable | 518 | 115 |
| Current portion of long-term debt | <u>208</u> | <u>54</u> |
| Total current liabilities | 1,473 | 941 |
| Long-term debt | 534 | 728 |
| Deferred income taxes | <u>407</u> | <u>344</u> |
| Total liabilities | <u>2,414</u> | <u>2,013</u> |
| Shareholders' equity: | | |
| Common stock | 180 | 180 |
| Additional paid-in capital | 21 | 63 |
| Retained earnings | <u>2,730</u> | <u>2,428</u> |
| Total shareholders' equity | 2,931 | 2,671 |
| Total liabilities and shareholders' equity | <u>\$5,345</u> | <u>\$4,684</u> |

Liquidity refers to a company's cash position and overall ability to obtain cash in the normal course of business. A company is said to be liquid if it has sufficient cash or is capable of converting its other assets to cash in a relatively short period of time so that currently maturing debts can be paid.

Required:

1. Calculate the current ratio for IGF for 2024. The average ratio for the stocks listed on the New York Stock Exchange in a comparable time period was 1.5. What information does your calculation provide an investor?
2. Calculate IGF's acid-test or quick ratio for 2024. The ratio for the stocks listed on the New York Stock Exchange in a comparable time period was .80. What does your calculation indicate about IGF's liquidity?

IFRS Case 13–3 Current liabilities and contingencies; financial statement effects; differences between U.S. GAAP and IFRS

 LO13–4,  LO13–5,  LO13–7

IFRS

As a second-year financial analyst for A.J. Straub Investments, you are performing an initial analysis on Reliant Pharmaceuticals. A difficulty you’ve encountered in making comparisons with its chief rival is that Reliant uses U.S. GAAP, and the competing company uses International Financial Reporting Standards. Some areas of concern are the following:

1. Reliant has been designated as a potentially responsible party by the United States Environmental Protection Agency with respect to certain waste sites. These claims are in various stages of administrative or judicial proceedings and include demands for recovery of past governmental costs and for future investigations or remedial actions. Reliant accrues costs associated with environmental matters when they become probable and reasonably estimable. Counsel has advised that the likelihood of payments of about \$70 million is slightly more than 50%. Accordingly, payment is judged reasonably possible, and the contingency was disclosed in a note.
2. Reliant had \$10 million of bonds issued in 1995 that mature in February 2025. On December 31, 2024, the company’s fiscal year-end, management intended to refinance the bonds on a long-term basis. On February 7, 2025, Reliant issued \$10 million of 20-year bonds, applying the proceeds to repay the bond issue that matured that month. The bonds were reported in Reliant’s balance sheet as long-term debt.
3. Reliant reported in its 2024 financial statements a long-term contingency at its face amount rather than its present value even though the difference was considered material. The reason the cash flows were not discounted is that their timing is uncertain.

Required:

If Reliant used IFRS as does its competitor, how would the items described be reported differently?

Real World Case 13–4 Contingencies LO13–5

Real World Financials

The following is an excerpt from *ABC News*:

Microsoft (MSFT) on Thursday extended the warranty on its Xbox 360 video game console (to) pay for shipping and repairs for three years, worldwide, for consoles afflicted with what gamers call “the red ring of death.” The charge will be \$1.05 billion to \$1.15 billion for the quarter ended June 30. Microsoft reports its fourth-quarter results July 19.

Required:

1. Why must Microsoft report this charge of over \$1 billion entirely in one quarter, the last quarter of the company’s fiscal year?
2. When the announcement was made, analyst Richard Doherty stated that either a high number of Xbox 360s will fail or the company is being overly conservative in its warranty estimate. From an accounting standpoint, what will Microsoft do in the future if the estimate of future repairs is overly conservative (too high)?

Real World Case 13–5 Lawsuit settlement; Honda Motor Company, Ltd  **LO13–5**,  **LO13–6**

Real World Financials

Honda Motor Company, Ltd., is a Japanese manufacturer of automobiles, motorcycles, and power equipment. The company’s fiscal year ends March 31, 2020, and it filed its financial statements with the SEC on June 22, 2020. On August 26, 2020, Reuters reported that Honda would make a \$85 million litigation settlement with U.S. states.

Units of Honda Motor Co (7267.T) have agreed to pay \$85 million to settle an investigation by most U.S. states. . . connected with the ongoing recalls of tens of millions of vehicles equipped with potentially defective Takata inflators that were sold by Honda and other major auto manufacturers over the past 20 years.

Required:

1. From an accounting perspective, how should Honda have treated the settlement if it occurred before June 22, 2020?
2. Relying on the information provided by the news article, re-create the journal entry Honda recorded for the settlement. Assume it had not made any prior liability accrual with respect to this litigation.
3. From an accounting perspective, how should Honda have treated the settlement if it

occurred **after** June 22, 2020?

Research Case 13–6 Researching the way contingencies are reported; retrieving information from the Internet LO13–5, LO13–6

EDGAR (Electronic Data Gathering, Analysis, and Retrieval system) performs automated collection, validation, indexing, acceptance, and forwarding of submissions by companies and others who are required by law to file forms with the U.S. Securities and Exchange Commission (SEC). All publicly traded domestic companies use EDGAR to make the majority of their filings. Form 10-K, which includes the annual report, is required to be filed on EDGAR. The SEC makes this information available on the Internet.

Required:

1. Access the *FASB Accounting Standards Codification* at the FASB website ( www.fasb.org) and select Basic View for free access. Determine the specific eight-digit Codification citation (XXX-XX-XX-X) that provides guidance on accounting for contingent losses, and indicate the specific eight-digit Codification citation (XXX-XX-XX-X) citation that describes the guidelines for determining when an expense and liability associated with a contingent loss should be accrued versus only disclosed in the notes.
2. Access EDGAR on the Internet at:  www.sec.gov.
3. Search for a public company with which you are familiar. Access its most recent 10-K filing. Search or scroll to find the financial statements and related notes.
4. Specifically, look for any contingency(s) reported in the disclosure notes. Identify the nature of the contingency(s) described and explain the reason(s) the loss or losses was or was not accrued.
5. Repeat requirements 2 and 3 for two additional companies.

Judgment Case 13–7 Loss contingency and full disclosure LO13–5, LO13–6

In the March 2025 meeting of Valleck Corporation’s board of directors, a question arose as to the way a possible obligation should be disclosed in the forthcoming financial statements

for the year ended December 31. A veteran board member brought to the meeting a draft of a disclosure note that had been prepared by the controller's office for inclusion in the annual report. Here is the note:

On May 9, 2024, the United States Environmental Protection Agency (EPA) issued a Notice of Violation (NOV) to Valleck alleging violations of the Clean Air Act. Subsequently, in June 2024, the EPA commenced a civil action with respect to the foregoing violation seeking civil penalties of approximately \$853,000. The EPA alleges that Valleck exceeded applicable volatile organic substance emission limits. The Company estimates that the cost to achieve compliance will be \$190,000; in addition the Company expects to settle the EPA lawsuit for a civil penalty of \$205,000 which will be paid in 2025.

“Where did we get the \$205,000 figure?” he asked. On being informed that this is the amount negotiated last month by company attorneys with the EPA, the director inquires, “Aren't we supposed to report a liability for that in addition to the note?”

Required:

Should Valleck report a liability in addition to the note? For full disclosure, should anything be added to the disclosure note itself?

Real World Case 13–8 Contingencies LO13–5, LO13-7

Real World Financials

IFRS

Reporting requirements for contingent liabilities under IFRS differ somewhat from those under U.S. GAAP.

Required:

For each of the following, access the online version of the indicated financial report and answer the question. Also compare reporting under IFRS to similar reporting under U.S. GAAP.

1. **AU Optronics** (Form 20-F, filed 3/27/2020): Where there is a continuous range of possible outcomes, with each point in the range as likely as any other, what amount is accrued as the estimate of the obligation?

2. **B Communications LTD** (Form 20-F, filed 4/23/2020): With respect to legal claims, at what probability level would B Communications accrue a liability for a possible litigation loss?

Trueblood Case 13–9 Contingencies LO13–5

The following Trueblood case is recommended for use with this chapter. The case provides an excellent opportunity for class discussion, group projects, and writing assignments. The case, along with Professor’s Discussion Material, can be obtained from the Deloitte Foundation at its website:  www.deloitte.com/us/truebloodcases.

Case 13-8: Accounting for a Loss Contingency for a Verdict Overturned on Appeal

This case gives students the opportunity to apply GAAP regarding accrual and disclosure of contingencies with respect to a complex lawsuit. As an addition to the case, students should cite the appropriate location of relevant GAAP in the FASB Codification.

Trueblood Case 13–10 Subsequent Events LO13–5

The following Trueblood case is recommended for use with this chapter. The case provides an excellent opportunity for class discussion, group projects, and writing assignments. The case, along with Professor’s Discussion Material, can be obtained from the Deloitte Foundation at its website:  www.deloitte.com/us/truebloodcases.

Case 12-02: To Recognize or Not to Recognize, That Is the Question

This case gives students the opportunity to apply GAAP regarding recognition of subsequent events. As an addition to the case, students should cite the appropriate location of relevant GAAP in the FASB Codification.

Trueblood Case 13–11 Contingencies LO13–5, LO13–6, LO13–7

IFRS

The following Trueblood case is recommended for use with this chapter. The case provides an excellent opportunity for class discussion, group projects, and writing assignments. The case, along with Professor's Discussion Material, can be obtained from the Deloitte Foundation at its website: www.deloitte.com/us/truebloodcases.

Case 21-2: Contingencies -Product Recall

This case gives students an opportunity to apply U.S. GAAP as well as IFRS with respect to accounting for contingencies in the case of a voluntary product recall.

Communication Case 13–12 Exceptions to the general classification guideline; financial statement effects; group interaction [LO13–4](#)

Domestic Transfer and Storage is a large trucking company headquartered in the Midwest. Rapid expansion in recent years has been financed in large part by debt in a variety of forms. In preparing the financial statements for 2023, questions have arisen regarding the way certain of the liabilities are to be classified in the company's classified balance sheet.

A meeting of several members of the accounting area is scheduled for tomorrow, April 8, 2024. You are confident that that meeting will include the topic of debt classification. You want to appear knowledgeable at the meeting, but realizing it's been a few years since you have dealt with classification issues, you have sought out information you think relevant. Questionable liabilities at the company's fiscal year-end (January 31, 2024) include the following:

- a. \$15 million of 9% commercial paper is due on July 31, 2024. Management intends to refinance the paper on a long-term basis. In early April 2024, Domestic negotiated a credit agreement with a commercial bank for up to \$12 million any time during the next three years, any borrowings from which will mature two years from the date of borrowing.
- b. \$17 million of 11% notes were issued on June 30, 2021. The notes are due on November 30, 2024. The company has investments of \$20 million classified as "available for sale."
- c. \$25 million of 10% notes were due on February 28, 2024. On February 21, 2024, the company issued 30-year, 9.4% bonds in a private placement to institutional investors.
- d. Recently, company management has considered reducing debt in favor of a greater proportion of equity financing. \$20 million of 12% bonds mature on July 31, 2024.

Discussions with underwriters, which began on January 4, 2024, resulted in a contractual arrangement on March 15 under which new common shares will be sold in July for approximately \$20 million.

In order to make notes to yourself in preparation for the meeting concerning the classification of these items, you decide to discuss them with a colleague. Specifically, you want to know what portion of the debt can be excluded from classification as a current liability (that is, reported as a noncurrent liability) and why.

Required:

1. What is the appropriate classification of each liability? Develop a list of arguments in support of your view prior to the class session for which the case is assigned.
2. In class, your instructor will pair you (and everyone else) with a classmate (who Page 762 also has independently developed a position). You will be given three minutes to argue your view to your partner. Your partner likewise will be given three minutes to argue his or her view to you. During these three-minute presentations, the listening partner is not permitted to speak.
3. Then after each person has had a turn attempting to convince his or her partner, the two partners will have a three-minute discussion to decide which classifications are more convincing. Arguments will be merged into a single view for each pair.
4. After the allotted time, a spokesperson for each of the four liabilities will be selected by the instructor. Each spokesperson will field arguments from the class as to the appropriate classification. The class then will discuss the merits of the classification and attempt to reach a consensus view, though a consensus is not necessary.

Communication Case 13–13 Various contingencies; disclosures

 **LO13–5**,  **LO13–6**

“I see an all-nighter coming on,” Gayle grumbled. “Why did Mitch just now give us this assignment?” Your client, Western Manufacturing, is involved with several situations that possibly involve contingencies. The assignment Gayle refers to is to draft appropriate accounting treatment for each situation described below in time for tomorrow’s meeting of the audit group. Western’s fiscal year is the calendar year 2024, and the 2024 financial statements are issued on March 15, 2025.

1. During 2024, Western experienced labor disputes at three of its plants. Management hopes an agreement will soon be reached. However negotiations between the Company

and the unions have not produced an acceptable settlement and, as a result, strikes are ongoing at these facilities since March 1, 2025. It is virtually certain that material costs will be incurred but the amount of possible costs cannot be reasonably ascertained.

2. In accordance with a 2022 contractual agreement with A. J. Conner Company, Western is entitled to \$37 million for certain fees and expense reimbursements. These were written off as bad debts in 2023. A. J. Conner has filed for bankruptcy. The bankruptcy court on February 4, 2025, ordered A. J. Conner to pay \$23 million immediately upon consummation of a proposed merger with Garner Holding Group.
3. Western warrants most products it sells against defects in materials and workmanship for a period of a year. Based on their experience with previous product introductions, warranty costs are expected to approximate 2% of sales. A warranty liability of \$39 million was reported at December 31, 2023. Sales of warranted products during 2024 were \$2,100 million and actual warranty expenditures were \$40 million.
4. Western is involved in a suit filed in January 2025 by Crump Holdings seeking \$88 million, as an adjustment to the purchase price in connection with the Company's sale of its textile business in 2024. The suit alleges that Western misstated the assets and liabilities used to calculate the purchase price for the textile division. Legal counsel advises that it is reasonably possible that Western could end up losing an indeterminable amount not expected to have a material adverse effect on the Company's financial position.

Required:

1. Determine the appropriate means of reporting each situation.
2. In a memo to the audit manager, Mitch Riley, explain your reasoning. Include any necessary journal entries and drafts of appropriate disclosure notes.

Communication Case 13–14 Change in loss contingency; write a memo LO13–5, LO13–6

Late in 2024, you and two other officers of Curbo Fabrications Corporation just returned from a meeting with officials of the City of Jackson. The meeting was unexpectedly favorable even though it culminated in a settlement with city authorities that required your company pay a total of \$475,000 to cover the cost of violations of city construction codes. Jackson had filed suit in November 2022 against Curbo, seeking civil penalties and injunctive relief for violations of city construction codes regulating earthquake damage standards. Alleged

violations involved several construction projects completed during the previous three years. When the financial statements were issued in 2023, Curbo had not reached a settlement with state authorities, but legal counsel had advised the Company that it was probable the ultimate settlement would be \$750,000 in penalties. The following entry had been recorded:

| | | |
|----------------------|---------|---------|
| Loss—litigation | 750,000 | |
| Liability—litigation | | 750,000 |

The final settlement, therefore, was a pleasant surprise. While returning from the meeting, your conversation turned to reporting the settlement in the 2024 financial statements. You drew the short straw and were selected to write a memo to Janet Zeno, the financial vice president, advising the proper course of action.

Required:

Write the memo. Include descriptions of any journal entries related to the change in amounts. Briefly describe other steps Curbo should take to report the settlement.

Communication Case 13–15 Warranties; litigation  **LO13–5,**
 **LO13–6**

Kevin Brantly is a new hire in the controller’s office of Fleming Home Products. Two events occurred in late 2024 that the company had not previously encountered. The events appear to affect two of the company’s liabilities, but there is some disagreement concerning whether they also affect financial statements of prior years. Each change occurred during 2024 before any adjusting entries or closing entries were prepared. The tax rate for Fleming is 40% in all years.

- Fleming Home Products introduced a new line of commercial awnings in 2023 that carries a one-year warranty against manufacturer’s defects. Based on industry experience, warranty costs were expected to approximate 3% of sales. Sales of the awnings in 2023 were \$3,500,000. Accordingly, warranty expense and a warranty liability of \$105,000 were recorded in 2023. In late 2024, the company’s claims experience was evaluated, and it was determined that claims were far fewer than expected—2% of sales rather than 3%. Sales of the awnings in 2024 were \$4,000,000 and warranty expenditures in 2024 totaled \$91,000.

- In November 2022, the State of Minnesota filed suit against the company, seeking penalties for violations of clean air laws. When the financial statements were issued in 2023, Fleming had not reached a settlement with state authorities, but legal counsel advised Fleming that it was probable the company would have to pay \$200,000 in penalties. Accordingly, the following entry was recorded:

| | | |
|----------------------|---------|---------|
| Loss—litigation | 200,000 | |
| Liability—litigation | | 200,000 |

Late in 2024, a settlement was reached with state authorities to pay a total of \$350,000 in penalties.

Required:

Kevin’s supervisor, perhaps unsure of the answer, perhaps wanting to test Kevin’s knowledge, e-mails the message, “Kevin, send me a memo on how we should handle our awning warranty and that clean air suit.” Wanting to be accurate, Kevin consults his reference materials. What will he find? Prepare the memo requested.

Ethics Case 13–16 Outdoors R Us  **LO13–1**

Outdoors R Us owns several membership-based campground resorts throughout the Southwest. The company sells campground sites to new members, usually during a get-acquainted visit and tour. The campgrounds offer a wider array of on-site facilities than most. New members sign a multiyear contract, pay a down payment, and make monthly installment payments. Because no credit check is made and many memberships originate on a spur-of-the-moment basis, cancellations are not uncommon.

Business has been brisk during its first three years of operations, and since going public in 2012, the market value of its stock has tripled. The first sign of trouble came in 2024 when new sales dipped sharply.

One afternoon, two weeks before the end of the fiscal year, Diane Rice, CEO, and Gene Sun, controller, were having an active discussion in Sun’s office.

Sun: I’ve thought more about our discussion yesterday. Maybe something can be done about profits.

Rice: I hope so. Our bonuses and stock value are riding on this period’s performance.

Sun: We've been recording deferred revenues when new members sign up. Rather than recording liabilities at the time memberships are sold, I think we can justify reporting sales revenue for all memberships sold.

Rice: What will be the effect on profits?

Sun: I haven't run the numbers yet, but let's just say very favorable.

Required:

1. Why do you think liabilities had been recorded previously?
2. Is the proposal ethical?
3. Who would be affected if the proposal is implemented?

Ethics Case 13–17 Profits guaranteed  **LO13–5**

This was Joel Craig's first visit to the controller's corner office since being recruited for the senior accountant position in May. Because he'd been directed to bring with him his preliminary report on year-end adjustments, Craig presumed he'd done something wrong in preparing the report. That he had not was Craig's first surprise. His second surprise was his boss's request to reconsider one of the estimated expenses.

S & G Fasteners was a new company, specializing in plastic industrial fasteners. All products carry a generous long-term warranty against manufacturer's defects. "Don't you think 4% of sales is a little high for our warranty expense estimate?" his boss wondered. "After all, we're new at this. We have little experience with product introductions. I just got off the phone with Blanchard (the company president). He thinks we'll have trouble renewing our credit line with the profits we're projecting. The pressure's on."

Required:

1. Should Craig follow his boss's suggestion?
2. Does revising the warranty estimate pose an ethical dilemma?
3. Who would be affected if the suggestion is followed?

Continuing Cases

Target Case LO13-1, LO13-3, LO13-5

Target Corporation prepares its financial statements according to U.S. GAAP. Target's financial statements and disclosure notes for the year ended February 1, 2020, are available in Connect. This material also is available under the Investor Relations link at the company's website ( www.target.com).

Required:

1. Target's Consolidated Statement of Financial Position (its balance sheet) discloses its current assets and current liabilities.
 - a. What are the three components of Target's current liabilities?
 - b. Are current assets sufficient to cover current liabilities? What is the current ratio for the year ended February 1, 2020? How does the ratio compare with the prior year?
2. Disclosure Note 2 discusses Target's accounting for gift card sales.
 - a. By how much did Target's gift card liability change between February 1, 2020, and February 2, 2019?
 - b. How would the following affect Target's gift card liability (indicate "increase," "decrease," or "no change" for each):
 - i. Sale of a gift card
 - ii. Redemption of a gift card (the holder using it to acquire goods or services)
 - iii. Increase in breakage estimated for gift cards already sold
3. Disclosure Note 14 discusses Target's accounting for contingencies. Is their approach appropriate?

Air France-KLM Case LO13-7

IFRS

Air France-KLM (AF), a Franco-Dutch company, prepares its financial statements according to International Financial Reporting Standards. AF's financial statements and

disclosure notes for the year ended December 31, 2019, are available in Connect. This material is also available under the Finance link at the company's website (www.airfranceklm.com).

Required:

1. Read Notes 4.6 and the Consolidated Balance Sheet. What do you think gave rise to deferred revenue on ticket sales of €3,289 million as of the end of fiscal 2019? Would transactions of this type be handled similarly under U.S. GAAP?
2. Is the threshold for recognizing a provision under IFRS different than it is under U.S. GAAP? Explain.
3. Note 30 lists "Return obligation liability and provision for leased aircraft and other provisions" (hereafter, "other provisions").
 - a. Do the beginning and ending balances of other provisions shown in Note 30 for fiscal 2019 tie to the balance sheet? By how much has the total amount of the AF's "other provisions" increased or decreased during fiscal 2019?
 - b. Prepare journal entries for the following changes in the litigation provision that occurred during fiscal 2019, assuming any amounts recorded on the income statement are recorded as "provision expense," and any use of provision is paid for in cash. In each case, provide a brief explanation of the event your journal entry is capturing.
 - i. New provision
 - ii. Use of provision
 - iii. Reversal of unnecessary provisions
 - c. Is AF's treatment of its litigation provision under IFRS similar to how it would be treated under U.S. GAAP?
4. Note 30.2 lists a number of contingent liabilities. Are amounts for those items recognized as a liability on AF's balance sheet? Explain.

CHAPTER 14

Bonds and Long-Term Notes

OVERVIEW

This chapter continues the presentation of liabilities. While the discussion focuses on the accounting treatment of long-term liabilities, the borrowers' side of the same transactions is presented as well. Long-term notes and bonds are discussed, as well as the extinguishment of debt and debt convertible into stock.

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

-  **LO14-1** Identify the underlying characteristics of debt instruments and describe the basic approach to accounting for debt. (p. 767)
-  **LO14-2** Account for bonds issued at face value, at a discount, or at a premium, recording interest using the effective interest method or using the straight-line method. (p. 769)
-  **LO14-3** Characterize the accounting treatment of notes, including installment notes, issued for cash or for noncash consideration. (p. 781)
-  **LO14-4** Describe the disclosures appropriate to long-term debt in its various forms and calculate related financial ratios. (p. 787)
-  **LO14-5** Record the early extinguishment of debt, its conversion into equity securities, and bond issues with warrants. (p. 790)
-  **LO14-6** Understand the option to report liabilities at their fair values. (p. 796)
-  **LO14-7** Discuss the primary differences between U.S. GAAP and IFRS with respect to accounting for bonds and long-term notes. (p. 792).

FINANCIAL REPORTING CASE

Monkeybusinessimages/Getty Images

Service Leader, Inc.

The mood is both upbeat and focused on this cool October morning. Executives and board members of Service Leader, Inc., are meeting with underwriters and attorneys to discuss the company's first bond offering in its 20-year history. You are attending in the capacity of company controller and two-year member of the board of directors. The closely held corporation has been financed entirely by equity, internally generated funds, and short-term bank borrowings.

Bank rates of interest, though, have risen recently and the company's unexpectedly rapid, but welcome, growth has prompted the need to look elsewhere for new financing. Under consideration are 15-year, 6.25% first mortgage bonds with a principal amount of \$70 million. The bonds would be callable at 103 any time after June 30, 2026, and convertible into Service Leader common stock at the rate of 45 shares per \$1,000 bond.

Other financing vehicles have been discussed over the last two months, including the sale of additional stock, nonconvertible bonds, and unsecured notes. This morning *The Wall Street Journal* indicated that market rates of interest for debt similar to the bonds under consideration are about 6.5%.

QUESTIONS

By the time you finish this chapter, you should be able to respond appropriately to the questions posed in this case. Compare your response to the solution provided at the end of the chapter.

- 1.** What does it mean that the bonds are “first mortgage” bonds? What effect does that have on financing?
- 2.** From Service Leader’s perspective, why are the bonds callable? What does that mean?
- 3.** How will it be possible to sell bonds paying investors 6.25% when other, similar investments will provide the investors a return of 6.5%?
- 4.** Would accounting differ if the debt were designated as notes rather than bonds?
- 5.** Why might the company choose to make the bonds convertible into common stock?

The Nature of Long-Term Debt

LO14–1 Identify the underlying characteristics of debt instruments and describe the basic approach to accounting for debt.

A company must raise funds to finance its operations and often the expansion of those operations. Presumably, at least some of the necessary funding can be provided by the company's own operations, though some funds must be provided by external sources. Ordinarily, external financing includes some combination of equity and debt funding. We explore debt financing first.

In the present chapter, we focus on debt in the form of bonds and notes. The following three chapters deal with liabilities also—namely, those arising in

connection with leases (🔗 Chapter 15), deferred income taxes (🔗 Chapter 16), and pensions and employee benefits (🔗 Chapter 17). Some employee benefits create equity rather than debt, which are discussed in 🔗 Chapter 19. In 🔗 Chapter 18, we examine shareholders' interests arising from external *equity* financing. In 🔗 Chapter 21, we see that cash flows from both debt and equity financing are reported together in a statement of cash flows as “cash flows from financing activities.”

Liabilities signify borrowers' interests in a company's assets.

As you read this chapter, you will find the focus to be on the liability side of the transactions we examine. Realize, though, that the mirror image of a liability is an asset (bonds payable/investment in bonds, note payable/note receivable, etc.). So as we discuss accounting for debts from the viewpoint of the issuers of the debt instruments (borrowers), we also will take the opportunity to see how the lender deals with the corresponding asset. Studying the two sides of the same transaction in tandem will emphasize their inherent similarities.

Page 768

Accounting for a liability is a relatively straightforward concept. This is not to say that all debt instruments are unchallenging, “plain vanilla” loan agreements. Quite the contrary, the financial community continually

A note payable and a note receivable are two sides of the same coin.

devises increasingly exotic ways to flavor financial instruments in the attempt to satisfy the diverse and evolving tastes of both debtors and creditors.

Packaging aside, a liability requires the future payment of cash in specified (or estimated) amounts, at specified (or projected) dates. As time passes, interest accrues on debt. As a general rule, the periodic interest is the effective interest rate times the amount of the debt outstanding during the period. This same principle applies regardless of the specific form of the liability—note payable, bonds payable, lease liability, pension obligation, or other debt instruments. Also, as a general rule, long-term liabilities are reported at their present values. The present value of a liability is the present value of its related cash flows (principal and/or interest payments), discounted at the effective rate of interest at issuance.

Periodic interest is the effective interest rate times the amount of the debt outstanding during the interest period.

We begin our study of long-term liabilities by examining accounting for bonds. We follow that section with a discussion of debt in the form of notes in Part B. It's important to note that, although particulars of the two forms of debt differ, the basic approach to accounting for each type is precisely the same. In Part C, we look at various ways bonds and notes are retired or converted into other securities. Finally, in Part D, we discuss the option - companies have to report liabilities at their fair values.

PART A

Bonds

A company can borrow cash from a bank or other financial institution by signing a promissory note. We discuss notes payable later in the chapter. Medium- and large-sized corporations often choose to borrow

cash by issuing bonds to the public. In fact, the most common form of corporate debt is bonds. A bond issue, in effect, breaks down a large debt (large corporations often borrow hundreds of millions of dollars at a time) into manageable parts—usually \$1,000 or \$5,000 units. This avoids the necessity of finding a single lender who is both willing and able to loan a large amount of money at a reasonable interest rate. So rather than signing a \$400 million note to borrow cash from a financial institution, a company may find it more economical to sell 400,000 \$1,000 bonds to many lenders—theoretically up to 400,000 lenders.

A bond issue divides a large liability into many smaller liabilities.

Bonds obligate the issuing corporation to repay a stated amount (variously referred to as the *principal*, *par value*, *face amount*, or *maturity value*) at a specified *maturity date*. Maturities for bonds typically range from 10 to 40 years. In return for the use of the money borrowed, the company also agrees to pay *interest* to

bondholders between the issue date and maturity. The periodic interest is a stated percentage of face amount (variously referred to as the *stated rate*, *coupon rate*, or *nominal rate*). Ordinarily, interest is paid semiannually on designated interest dates beginning six months after the day the bonds are “dated.”

Corporations issuing bonds are obligated to repay a stated amount at a specified *maturity date* and to pay periodic *interest* between the issue date and maturity.

The Bond Indenture

The specific promises made to bondholders are described in a document called a **bond indenture**.

Because it would be impractical for the corporation to enter into a direct agreement with each of the many

bondholders, the bond indenture is held by a trustee, usually a commercial bank or other financial institution, appointed by the issuing firm to represent the rights of the bondholders. If the company fails to live up to the terms of the bond indenture, the trustee may bring legal action against the company on behalf of the bondholders.

A bond indenture describes the specific promises made to bondholders.

Most corporate bonds are debenture bonds. A **debenture bond** is backed only by the “full faith and credit” of the issuing corporation. No specific assets are pledged as security. Investors in debentures usually have the same standing as the firm’s other general creditors. So in case of bankruptcy, debenture holders won’t have priority over other general creditors. An exception is the **subordinated debenture**, which is not entitled to receive any liquidation payments until the claims of other specified debt issues are satisfied.

A **mortgage bond**, on the other hand, is backed by a lien on specified real estate owned by the issuer. Because a mortgage bond is considered less risky than debentures, it typically will command a lower interest rate. Alternatively, a bond might be “secured” by non-real estate assets, in which case, if in the event the issuer does not pay the holder as promised, the holder has rights to take specified assets belonging to the issuer such as items of property, plant, and equipment.

Page 769

Today most corporate bonds are registered bonds. Interest checks are mailed directly to the owner of the bond, whose name is registered with the issuing company. Years ago, it was typical for bonds to be structured as **coupon bonds** (sometimes called *bearer bonds*). The name of the owner of a coupon bond was not registered. Instead, to collect interest on a coupon bond, the holder actually clipped an attached coupon and redeemed it in accordance with instructions in the indenture. A carryover effect of this practice is that we still sometimes see the term *coupon rate* in reference to the stated interest rate on bonds.

Most corporate bonds are **callable** (or redeemable). The call feature allows the issuing company to buy back, or call, outstanding bonds from bondholders before their scheduled maturity date. This feature affords the company some protection against being stuck with

relatively high-cost debt in the event interest rates fall during the period before maturity. The call price must be prespecified and often exceeds the bond's face amount (a call premium), sometimes declining as maturity is approached.

For example, the 2020 annual report of **Mueller Industries** included this disclosure:

The Debentures ... are callable, in whole or in part, at any time at the option of the Company.

Real World Financials

“No call” provisions usually prohibit calls during the first few years of a bond's life. Very often, calls are mandatory. That is, the corporation may be required to redeem the bonds on a prespecified, year-by-year basis.

Bonds requiring such **sinking fund** redemptions often are labeled *sinking fund debentures*.

Mandatory sinking fund redemptions retire a bond issue gradually over its term to maturity.

Serial bonds provide a more structured (and less popular) way to retire bonds on a piecemeal basis. Serial bonds are retired in installments during all or part of the life of the issue. Each bond has its own specified maturity date. So for a typical 30-year serial issue, 25 to 30 separate maturity dates might be assigned to specific portions of the bond issue.

Convertible bonds are retired as a consequence of bondholders choosing to convert them into shares of stock. We look closer at convertible bonds a little later in the chapter.

Recording Bonds at Issuance

LO14–2 Account for bonds issued at face value, at a discount, or at a premium, recording interest using the effective interest method or using the straight-line method.

Bonds represent a liability to the corporation that issues the bonds and an asset to an investor who buys the bonds as an investment. Each side of the transaction is the mirror image of the other.¹ This is demonstrated in  **Illustration 14-1**.

Illustration 14–1 Bonds Sold at Face Amount

On January 1, 2024, Masterwear Industries issued \$700,000 of 12% bonds.

- Interest of \$42,000 is payable semiannually on June 30 and December 31.
- The bonds mature in three years (an unrealistically short maturity to shorten the illustration).
- The entire bond issue was sold at the face amount.
- United Intergroup, Inc., the sole investor in the bonds, planned to hold the bonds to their maturity.

At Issuance (January 1)

Masterwear (Issuer)

| | | |
|-----------------------------|---------|---------|
| Cash | 700,000 | |
| Bonds payable (face amount) | | 700,000 |

United (Investor)

| | | |
|-----------------------------------|---------|---------|
| Investment in bonds (face amount) | 700,000 | |
| Cash | | 700,000 |

Most bonds these days are issued on the day they are dated (date printed in the indenture contract). On rare occasions, there may be a delay in issuing bonds that causes them to be issued between interest dates, in which case the interest that has accrued since the day they are dated is added to the price of the bonds. We discuss this infrequent event in

 **Appendix 14A** to this chapter.

Determining the Selling Price

The price of a bond issue at any particular time is not necessarily equal to its face amount. The \$700,000, 12% bond issue in the previous illustration, for example, may sell for more than face amount (at a **premium**) or less than face amount (at a **discount**), depending on how the 12% *stated* interest rate compares with the prevailing *market* or *effective rate* of interest (for securities of similar risk and maturity). For instance, if the 12% bonds are competing in a market in which similar bonds are providing a 14% return, the bonds could be sold only at a price less than \$700,000. On the other hand, if the market rate is only 10%, the 12% stated rate would seem relatively attractive, and the bonds would sell at a premium over face amount. The reason the stated rate often differs from the market rate, resulting in a *discount* or *premium*, is the inevitable delay between the date the terms of the issue are established and the date the issue comes to market.

In addition to the characteristic terms of a bond agreement as specified in the indenture, the market rate for a specific bond issue is influenced by the creditworthiness of the company issuing the bonds. To evaluate the risk and quality of an individual bond issue, investors rely heavily on bond ratings provided

by **Standard & Poor's Corporation** and by **Moody's Investors Service, Inc.** See the bond ratings in  **Illustration 14-2**.

Other things being equal, the lower the perceived riskiness of the corporation issuing bonds, the higher the price those bonds will command.

Illustration 14-2 Bond Ratings*

| | CC | Ca |
| | C | C |
| | D | |

*Adapted from  [Moody's.com](https://www.moodys.com) and  [SPRatings.com](https://www.spratings.com).

Forces of supply and demand cause a bond issue to be *priced to yield the market rate*. In other words, an investor paying that price will earn an effective rate of return on the investment equal to the market rate. The price is calculated as the present value of all the cash flows required of the bonds, where the discount rate used in the present value calculation is the market rate. Specifically, the price will be the *present value of the periodic cash interest payments (face amount × stated rate) plus the present value of the principal payable at maturity, both discounted at the market rate*.

A bond issue will be priced by the marketplace to yield the market rate of interest for securities of similar risk and maturity.

Bonds priced at a discount are described in  **Illustration 14-3**.

Illustration 14-3 Bonds Sold at a Discount

Using a calculator:
 Enter: N 6 | 7
 PMT - 42000
 FV - 700000
 Output: PV 666,634

Using Excel, enter:

=PV(.07,6,-42000,

-700000)

Output: 666,634

On January 1, 2024, Masterwear Industries issued \$700,000 of 12% bonds, dated January 1.

- Interest of \$42,000 is payable semiannually on June 30 and December 31.
- The bonds mature in three years.
- The market yield for bonds of similar risk and maturity is 14%.
- United Intergroup, Inc., purchased the entire bond issue, planning to hold the bonds until maturity.

Calculation of the Price of the Bonds

| | Present Values |
|------------------------------------|--|
| Interest | $\$ 42,000 \times 4.76654^* = \$200,195$ |
| Principal (face amount) | $\$700,000 \times 0.66634^\dagger = \underline{466,438}$ |
| Present value (price) of the bonds | \$666,633 |

*Present value of an ordinary annuity of \$1: $n = 6, i = 7\%$ (Table 4).

†Present value of \$1: $n = 6, i = 7\%$ (Table 2).

Because interest is paid semiannually, the present value calculations use: (a) one-half the stated rate (6%) to determine cash payments, (b) one-half the market rate (7%) as the discount rate, and (c) six (3×2) semiannual periods.

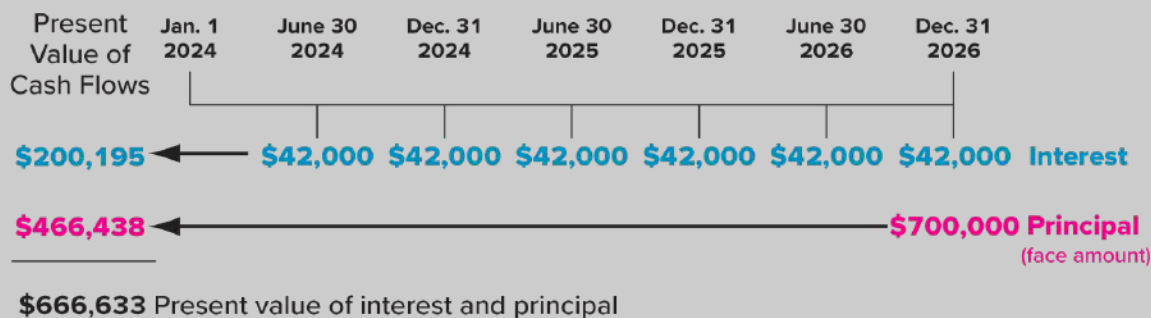

Note: Present value tables are provided at the end of this textbook. If you need to review the concept of the time value of money, refer to the discussions in Chapter 5.

Rounding: Because present value tables truncate decimal places, the solution may be slightly different if you use a calculator or Excel.

Bonds Issued at a Discount

The calculation is illustrated in [Illustration 14-4](#).

Illustration 14-4 Cash Flows from a Bond Issue at a Discount

Although the cash flows total \$952,000, the present value of those future cash flows as of January 1, 2024, is only \$666,633. This is due to the time value of money. These bonds are issued at a discount because the present value of the cash flows is less than the face amount of the bonds.

Journal Entries at Issuance—Bonds Issued at a Discount

Masterwear (Issuer)

| | | |
|--|---------|---------|
| Cash (price calculated above) | 666,633 | |
| Discount on bonds payable (difference) | 33,367 | |
| Bonds payable (face amount) | | 700,000 |

United (Investor)

| | | |
|--|---------|---------|
| Investment in bonds (face amount) | 700,000 | |
| Discount on investment in bonds (difference) | | 33,367 |
| Cash (price calculated above) | | 666,633 |

Note: A sometimes-used alternative way to record bonds is the “net method,” shown next, in which the discount is included directly in the book value.

Masterwear (Issuer)

| Masterwear (Issuer) | | |
|----------------------------|----------------|----------------|
| Cash | 666,633 | |
| Bonds payable | | 666,633 |
| United (Investor) | | |
| Investment in bonds | 666,633 | |
| Cash | | 666,633 |

When bond prices are quoted in financial media, they typically are stated in terms of a percentage of face amounts. Thus, a price quote of 98 means one \$1,000 bond will sell for \$980; a bond priced at 101 will sell for \$1,010.

In one of the largest U.S. corporate bond issuances in history, **CVS Health Corporation** issued \$40,000,000,000 in bonds in 2018. CVS issued the 2.75% bonds to raise funds to pay for its acquisition of **Aetna Inc.** The bonds were priced at 95.97 to provide an annual yield of 3.75%.

In 2020, **Google** owner **Alphabet, Inc.**, issued \$10 billion of bonds, \$5.75 billion of which was used for green initiatives, the largest-ever issue of corporate debt for environment and social endeavors and offering the lowest-ever interest rate of 0.45%.

Determining Interest—Effective Interest Method

Interest accrues on an outstanding debt at a constant percentage of the debt each period. Of course, under the concept of accrual accounting, the periodic effective interest is not affected by the time at which the cash interest actually is paid. Recording interest each period as the *effective market rate of interest multiplied by the outstanding balance of the debt* (during the interest period) is referred to as the **effective interest method**. Although giving this a label—the effective interest method—implies some specialized procedure, this simply is an application of the accrual concept, consistent with accruing all expenses as they are incurred.

The *effective interest* on debt is the market rate of interest multiplied by the outstanding balance of the debt.

Continuing our example, we determined that the amount of debt when the bonds are issued is \$666,633. Since the effective interest rate is 14%, interest recorded (as expense to the issuer and revenue to the investor) for the first six-month interest period is \$46,664:

$$\begin{array}{rcccl} \$666,633 & & (14\% \div 2) & & \$46,664 \\ \text{Outstanding balance} & \times & \text{Effective rate} & = & \text{Effective interest} \end{array}$$

However, the bond indenture calls for semiannual interest payments of only \$42,000—the *stated rate* (6%) times the *face amount* (\$700,000). The remainder, \$4,664, increases the liability and is reflected as a reduction in the discount (a contra-liability account). This is illustrated in  **Illustration 14-5**.

Illustration 14-5 Change in Debt When Effective Interest Exceeds Cash Paid

The difference between the effective interest and the interest paid increases the existing liability.

| Outstanding Balance | Account Balances | |
|------------------------|--------------------------------|-------------|
| | Bonds Payable (face amount) | Dis Bonc |
| | | |

| | Outstanding Balance | Account Balances | |
|-----------------------------------|------------------------|--------------------------------|--------------|
| | | Bonds Payable (face amount) | Dis Bonds |
| January 1 | \$666,633 | = \$700,000 | less \$33,3 |
| Interest accrued at 7% | 46,664 | | |
| Portion of interest paid | <u>(42,000)</u> | | <u>(4,6</u> |
| June 30 | \$671,297 | = \$700,000 | less \$28,7 |

Interest expense (issuer) and revenue (investor) are calculated on the outstanding debt balance at the effective (or market) rate. Interest *paid* is the amount specified in the bond indenture—the *stated* rate times the face amount. These amounts and the change in the outstanding debt are recorded as follows:

Journal Entries—The Interest Method

The effective interest is calculated each period as the market rate times the outstanding balance of the debt during the interest period.

| At the First Interest Date (June 30) | |
|---|---------------|
| Masterwear (Issuer) | |
| Interest expense (effective rate × outstanding balance) | 46,664 |
| Discount on bonds payable (difference) | 4,664 |
| Cash (stated rate × face amount) | 42,000 |
| United (Investor) | |
| Cash (stated rate × face amount) | 42,000 |
| Discount on investment in bonds (difference) | 4,664 |

At the First Interest Date (June 30)

| | |
|---|---------------|
| Interest revenue (effective rate × outstanding balance) | 46,664 |
|---|---------------|

In this example and others in the chapter we look at the investor's entries as well as the issuer's to see both sides of the same transactions. Page 773

Amortization Schedule

Because the balance of the debt changes each period, the dollar amount of interest (balance × rate) also will change each period. To keep up with the changing amounts, it usually is convenient to prepare a schedule that reflects the changes in the debt over its term to maturity. An amortization schedule for the situation under discussion is shown in

 **Illustration 14-6.**

Illustration 14-6 Amortization Schedule—Discount

| Date | Cash Interest (6% × Face amount) | Effective Interest (7% × Outstanding balance) | Increase in Balance (Discount reduction) | Outstanding Balance |
|----------|-------------------------------------|--|---|---------------------|
| 1/1/24 | | | | 666,633 |
| 6/30/24 | 42,000 | 0.07 (666,633) = 46,664 | 4,664 | 671,297 |
| 12/31/24 | 42,000 | 0.07 (671,297) = 46,991 | 4,991 | 676,288 |
| 6/30/25 | 42,000 | 0.07 (676,288) = 47,340 | 5,340 | 681,628 |
| 12/31/25 | 42,000 | 0.07 (681,628) = 47,714 | 5,714 | 687,342 |
| 6/30/26 | 42,000 | 0.07 (687,342) = 48,114 | 6,114 | 693,456 |
| 12/31/26 | <u>42,000</u> | 0.07 (693,456) = <u>48,544*</u> | <u>6,544</u> | 700,000 |
| | 252,000 | 285,367 | 33,367 | |

*Rounded

Amounts for the journal entries each interest date are found in the second, third, and fourth columns of the schedule. The essential point to remember is that the effective interest method is a straightforward application of the accrual concept, whereby interest expense (or revenue) is accrued periodically at the effective rate. We record that amount of interest expense or revenue accrued even though the cash interest is a different amount.

Determining interest in this manner has a convenient side effect. It results in reporting the liability at the present value of future cash payments—the appropriate valuation method for any liability. This is obvious at issuance; we actually calculated the present value to be \$666,633. What perhaps is not quite as obvious is that the outstanding amount of debt each subsequent period (shown in the right-hand column of the amortization schedule) is still the present value of the remaining cash flows, discounted at the original rate. The outstanding amount of the debt is its book value, sometimes called carrying value or carrying amount, which is the face amount minus the balance in the discount.

Before moving on, notice some key characteristics of the amortization schedule. As mentioned earlier, the unpaid interest each period (\$4,664 the first period) adds to the balance. Since this happens each period, the balance continually increases, eventually becoming the face amount at maturity. Conveniently, that's the amount to be paid at maturity. Also, because the balance increases each period, so does the effective interest. That's because effective interest is the same percentage rate times a higher balance each period.

The balance continually increases, eventually becoming the face amount at maturity.

Now, look at the column totals. The total interest expense (from the issuer's perspective) is equal to the sum of the total cash interest plus the total change in the balance (the discount). One way we might view this is to say the total interest paid (\$285,367) is the \$252,000 cash interest paid during the term to maturity plus the "extra" amount paid at maturity. That \$33,367 amount is extra in the sense that, by selling the bonds, we borrow \$666,633 but must repay \$700,000 at maturity. That's why the effective interest on the bonds is 14% even though the cash interest is only 12% annually; the extra interest at maturity makes up the difference.

Additional Consideration

Although the reported amount each period is the present value of the bonds, at any date after issuance, this amount is not necessarily equal to the market value (fair value) of the bonds. This is because the market rate of interest will not necessarily remain the same as the rate implicit in the original issue price (the effective rate). Of course, for negotiable financial instruments, the issue price is the market price at any given time. Differences between market values and present values based on the original rate are holding gains and losses. If we were to use the market rate to revalue bonds on each reporting date—that is, recalculate the present value using the market rate—the reported amount always would be the market value. As we will see later, companies have the option to report their liabilities at fair value.

Zero-Coupon Bonds

A zero-coupon bond pays no interest. Instead, it offers a return in the form of a “deep discount” from the face amount. For illustration, let’s look at the zero-coupon bonds issued by **Coca-Cola Enterprises**. One billion, nine hundred million dollars face amount of the 25-year securities issued for two hundred forty-one million dollars. As the amortization schedule in [Illustration 14-7](#) demonstrates, they were priced to yield 8.5%.²

Illustration 14-7 Zero-Coupon Securities—Coca-Cola Enterprises

Real World Financials

| (\$ in millions) | Cash Interest | Effective Interest | | Increase in Balance | Outstanding Balance |

Zero-coupon bonds provide us with a convenient opportunity to reinforce a key concept we just learned: that we accrue the interest expense (or revenue) each period at the effective rate regardless of how much cash interest actually is paid (zero in this case). An advantage of issuing zero-coupon bonds or notes is that the corporation can deduct for tax purposes the annual interest expense (see schedule) but has no related cash outflow until the bonds mature. However, the reverse is true for investors in “zeros.” Investors receive no periodic cash interest, even though annual interest revenue is reportable for tax purposes. So those who invest in zero-coupon bonds usually have tax-deferred or tax-exempt status, such as pension funds, individual retirement accounts (IRAs), and charitable organizations. Zero-coupon bonds and notes have popularity but still constitute a relatively small proportion of corporate debt.

Bonds Issued at a Premium

In  **Illustration 14-3**, Masterwear Industries sold the bonds at a price that would yield an effective rate higher than the stated rate. The result was a discount. On the other hand, if the 12% bonds had been issued when the market yield for bonds of similar risk and maturity was

lower than the stated rate, say 10%, the issue would have been priced at a *premium*. Because the 12% rate would seem relatively attractive in a 10% market, the bonds would command an issue price of more than \$700,000, calculated in  **Illustration 14-8**.

Illustration 14-8 Bonds Sold at a Premium

Because interest is paid *semiannually*, the present value calculations use

- a. one-half the stated rate (6%),
- b. one-half the market rate (5%), and
- c. 6 (3 × 2) semiannual periods.

On January 1, 2024, Masterwear Industries issued \$700,000 of 12% bonds, dated January 1.

- Interest of \$42,000 is payable semiannually on June 30 and December 31.
- The bonds mature in three years.
- The market yield for bonds of similar risk and maturity is 10%.
- United Intergroup, Inc., purchased the entire bond issue, planning to hold the bonds until maturity.

Calculation of the Price of the Bonds

| | Present Values |
|------------------------------------|--|
| Interest | $\$ 42,000 \times 5.07569^* = \$213,179$ |
| Principal | $\$700,000 \times 0.74622^\dagger = \underline{522,354}$ |
| Present value (price) of the bonds | $\$735,533$ |

*Present value of an ordinary annuity of \$1: $n = 6, i = 5\%$.

†Present value of \$1: $n = 6, i = 5\%$.

Interest on bonds issued at a premium is determined in precisely the same manner as on bonds issued at a discount. Again, interest is the effective interest rate applied to the debt

balance outstanding during each period (balance at the end of the previous interest period), and the cash paid is the stated rate times the face amount, as shown in [Illustration 14-9](#). The difference between the two is the reduction (amortization) of the premium.

Illustration 14-9 Amortization Schedule—Premium

Since *more* cash is paid each period than the effective interest, the debt outstanding is reduced by the overpayment.

| Date | Cash Interest (6% × Face amount) | Effective Interest (5% × Outstanding balance) | Decrease in Balance (Premium reduction) | Outstanding Balance |
|----------|-------------------------------------|--|--|---------------------|
| 1/1/24 | | | | 735,533 |
| 6/30/24 | 42,000 | 0.05 (735,533) = 36,777 | 5,223 | 730,310 |
| 12/31/24 | 42,000 | 0.05 (730,310) = 36,516 | 5,484 | 724,826 |
| 6/30/25 | 42,000 | 0.05 (724,826) = 36,241 | 5,759 | 719,067 |
| 12/31/25 | 42,000 | 0.05 (719,067) = 35,953 | 6,047 | 713,020 |
| 6/30/26 | 42,000 | 0.05 (713,020) = 35,651 | 6,349 | 706,671 |
| 12/31/26 | <u>42,000</u> | 0.05 (706,671) = <u>35,329*</u> | <u>6,671</u> | 700,000 |
| | 252,000 | 216,467 | 35,533 | |

*Rounded

Journal Entries at Issuance—Bonds Sold at Premium

Masterwear (Issuer)

| | |
|---------------------------------------|---------|
| Cash (price calculated above) | 735,533 |
| Bonds payable (face amount) | 700,000 |
| Premium on bonds payable (difference) | 35,533 |

United (Investor)

Masterwear (Issuer)

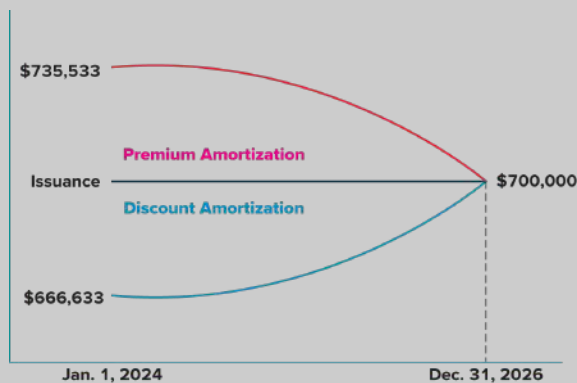

| | |
|---|---------|
| Investment in bonds (face amount) | 700,000 |
| Premium on investment in bonds (difference) | 35,533 |
| Cash (price calculated above) | 735,533 |

Notice that the debt declines each period. As the premium is reduced by amortization, the book value of the bonds declines toward face value. This is because the effective interest each period is less than the cash interest paid. Remember, this is precisely the opposite of when the bonds are at a discount, when the effective interest each period is more than the cash paid. As the discount is reduced by amortization, the book value of the bonds increases toward face value. This is illustrated in

Whether bonds are issued at a premium or a discount, the outstanding balance becomes the face amount at maturity.

Illustration 14-10.

Illustration 14-10 Premium and Discount Amortization Compared

In practice, corporate bonds rarely are issued at a premium.³ Because of the delay between the date the terms of the bonds are established and when the bonds are issued, it's difficult to set the stated rate equal to the ever-changing market rate. Knowing that, for marketing reasons, companies deliberately set the terms to more likely create a small discount rather than a premium at the issue date. Some investors are psychologically prone to prefer buying at a discount rather than a premium even if the yield is the same (the market rate).

Additional Consideration

The preceding illustrations describe bonds sold at a discount and at a premium. The same concepts apply to bonds sold at face amount. But some of the procedures would be unnecessary. For instance, calculating the present value of the interest and the principal always will give us the face amount when the effective rate and the stated rate are the same:

| Calculation of the Price of the Bonds | | | |
|---------------------------------------|----------------------|---|----------------|
| | Present Values | | |
| Interest | \$ 42,000 × | = | \$206,528 |
| | 4.91732* | | |
| Principal | \$700,000 × | = | <u>493,472</u> |
| | 0.70496 [†] | | |
| Present value (price) of the bonds | | | \$700,000 |

*Present value of an ordinary annuity of \$1: $n = 6, i = 6\%$.

†Present value of \$1: $n = 6, i = 6\%$.

When Financial Statements Are Prepared between Interest Dates

When an accounting period ends between interest dates, it is necessary to record interest that has accrued since the last interest date. As an example, refer again to  **Illustration 14-3**. If the fiscal years of Masterwear and United end on October 31 and

interest was last paid and recorded on June 30, four months' interest must be accrued in a year-end adjusting entry. Because interest is recorded for only a portion of a semiannual period, amounts recorded are simply the amounts shown in the amortization schedule (

Any interest that has accrued since the last interest date must be recorded by an adjusting entry prior to preparing financial statements.

 **Illustration 14-6**) times the appropriate fraction of the semiannual period (in this case, $\frac{4}{6}$).

Adjusting Entries—To Accrue Interest

To avoid understating interest in the financial statements, four months' interest is recorded at the end of the reporting period.

| At October 31 | | |
|--|--------|--------|
| Masterwear (Issuer) | | |
| Interest expense ($\frac{4}{6} \times 46,991$) | 31,327 | |
| Discount on bonds payable ($\frac{4}{6} \times 4,991$) | | 3,327 |
| Interest payable ($\frac{4}{6} \times 42,000$) | | 28,000 |
| United (Investor) | | |
| Interest receivable ($\frac{4}{6} \times 42,000$) | 28,000 | |
| Discount on investment in bonds ($\frac{4}{6} \times 4,991$) | 3,327 | |
| Interest revenue ($\frac{4}{6} \times 46,991$) | | 31,327 |

Two months later, when semiannual interest is paid next, the remainder of the interest is allocated to the first two months of the next fiscal year—November and December:

Of the six months' interest paid December 31, only the November and December interest is expensed in the new fiscal year.

| At the December 31 Interest Date | | |
|--|--------|--------|
| Masterwear (Issuer) | | |
| Interest expense ($\frac{2}{6} \times 46,991$) | 15,664 | |
| Interest payable (from adjusting entry) | 28,000 | |
| Discount on bonds payable ($\frac{2}{6} \times 4,991$) | | 1,664 |
| Cash (stated rate \times face amount) | | 42,000 |
| United (Investor) | | |
| Cash (stated rate \times face amount) | 42,000 | |
| Discount on investment in bonds ($\frac{2}{6} \times 4,991$) | 1,664 | |
| Interest receivable (from adjusting entry) | | 28,000 |

Interest revenue ($\frac{2}{6} \times 46,991$)

15,664

The Straight-Line Method—A Practical Expediency

In some circumstances, the profession permits an exception to the conceptually appropriate method of determining interest for bond issues. A company is allowed to determine interest indirectly by allocating a discount or a premium equally to each period over the term to maturity—if doing so produces results that are not materially different from the usual (and preferable) interest method. The decision should be guided by whether the **straight-line method** would tend to mislead investors and creditors in the particular circumstance.

By the straight-line method, the discount in [Illustration 14-3](#) and [Illustration 14-6](#) would be allocated equally to the six semiannual periods (three years):

$$\$33,367 \div 6 \text{ periods} = \mathbf{\$5,561} \text{ per period}$$

Journal Entries—Straight-Line Method

By the **straight-line method**, interest (expense and revenue) is a plug figure, resulting from calculating the amount of discount reduction.

| At Each of the Six Interest Dates | |
|---|---------------|
| Masterwear (Issuer) | |
| Interest expense (to balance) | 47,561 |
| Discount on bonds payable (discount \div 6 periods) | 5,561 |
| Cash (stated rate \times face amount) | 42,000 |
| United (Investor) | |
| Cash (stated rate \times face amount) | 42,000 |
| Discount on bond investment (discount \div 6 periods) | 5,561 |
| Interest revenue (to balance) | 47,561 |

Allocating the discount or premium equally over the life of the bonds by the straight-line method results in a constant dollar amount of interest each period. An amortization schedule, then, would serve little purpose. For example, if we prepared one for the straight-line method in this situation, it would provide the same amounts each period as shown in [Illustration 14-11](#).

Illustration 14-11 Amortization Schedule—Straight-Line Method

By the straight-line method, the amount of the discount to be reduced periodically is calculated, and the recorded interest is the plug figure.

| | Cash Interest | Recorded Interest | Increase in Balance | Outstanding Balance |
|----------|--------------------|----------------------------------|---------------------|---------------------|
| | (6% × Face amount) | (Cash + Discount reduction) | (\$33,367 ÷ 6) | |
| 1/1/24 | | | | 666,633 |
| 6/30/24 | 42,000 | (42,000 + 5,561) = 47,561 | 5,561 | 672,194 |
| 12/31/24 | 42,000 | (42,000 + 5,561) = 47,561 | 5,561 | 677,755 |
| 6/30/25 | 42,000 | (42,000 + 5,561) = 47,561 | 5,561 | 683,316 |
| 12/31/25 | 42,000 | (42,000 + 5,561) = 47,561 | 5,561 | 688,877 |
| 6/30/26 | 42,000 | (42,000 + 5,561) = 47,561 | 5,561 | 694,438 |
| 12/31/26 | <u>42,000</u> | (42,000 + 5,561) = <u>47,561</u> | <u>5,561</u> | 700,000* |
| | 252,000 | 285,366 | 33,366 | |

*Rounded

Remember, constant dollar amounts are not produced when the effective interest method is used. By that method, the dollar amounts of interest vary over the term to maturity because the percentage rate of interest remains constant but is applied to a changing debt balance.

Determining interest by allocating the discount (or premium) on a straight-line basis is a practical expediency permitted in some situations by the materiality concept.

Also, be sure to realize that the straight-line method is not an alternative method of determining interest in a conceptual sense. Instead, it is an application of the materiality concept, by which an appropriate application of GAAP (e.g., the effective interest method) can be bypassed for reasons of practical expediency in situations when doing so has no material effect on the results. Based on the frequency with which the straight-line method is used in practice, we can infer that managers very frequently conclude that its use has no material impact on investors' decisions.

Concept Review Exercise

ISSUING BONDS AND RECORDING INTEREST

On January 1, 2024, the Meade Group issued \$8,000,000 of 11% bonds, dated January 1. Interest is payable semiannually on June 30 and December 31. The bonds mature in four years. The market yield for bonds of similar risk and maturity is 10%.

Required:

1. Determine the price these bonds issued to yield the 10% market rate and record their issuance by the Meade Group.
2. Prepare an amortization schedule that determines interest at the effective rate and record interest on the first interest date, June 30, 2024.

Solution:

1. Determine the price these bonds sold for to yield the 10% market rate and record their issuance by the Meade Group.

Calculation of the Price of the Bonds

There are eight semiannual periods and one-half the market rate is 5%.

| | | | |
|------------------------------------|------------------------------------|---|------------------|
| Interest | \$ 440,000 × 6.46321* | = | \$2,843,812 |
| Principal | \$8,000,000 × 0.67684 [†] | = | <u>5,414,720</u> |
| Present value (price) of the bonds | | | \$8,258,532 |

*Present value of an ordinary annuity of \$1: $n = 8, i = 5\%$.

†Present value of \$1: $n = 8, i = 5\%$.

Journal Entries at Issuance

Page 779

| | |
|--|-----------|
| Cash (price calculated above) | 8,258,532 |
| Bonds payable (face amount) | 8,000,000 |
| Premium on bonds payable (difference) | 258,532 |

2. Prepare an amortization schedule that determines interest at the effective rate and record interest on the first interest date, June 30, 2024.

More cash is paid each period than the effective interest, so the debt outstanding is reduced by the “overpayment.”

Amortization Schedule

| Date | Cash Interest | Effective Interest |
|----------|----------------------------|-------------------------------|
| | (5.5% × Face amount) | (5% × Outstanding balance) |
| 1/1/24 | | |
| 6/30/24 | 440,000 | 0.05 = 412,927 (8,258,532) |
| 12/31/24 | 440,000 | 0.05 = 411,573 (8,231,459) |
| 6/30/25 | 440,000 | 0.05 = 410,152 (8,203,032) |

Amortization Schedule

| Date | Cash Interest | Effective Interest |
|----------|------------------|---------------------------------------|
| 12/31/25 | 440,000 | 0.05 = 408,659 (8,173,184) |
| 6/30/26 | 440,000 | 0.05 = 407,092 (8,141,843) |
| 12/31/26 | 440,000 | 0.05 = 405,447 (8,108,935) |
| 6/30/27 | 440,000 | 0.05 = 403,719 (8,074,382) |
| 12/31/27 | <u>440,000</u> | 0.05 = <u>401,899*</u> (8,038,101) |
| | 3,520,000 | 3,261,468 |

*Rounded

| | |
|---|---------|
| Interest expense (5% × \$8,258,532) | 412,927 |
| Premium on bonds payable (difference) | 27,073 |
| Cash (5.5% × \$8,000,000) | 440,000 |
| <i>To record interest for six months.</i> | |

Debt Issue Costs

Rather than sell bonds directly to the public, corporations usually sell an entire issue to an underwriter, who then resells them to other security dealers and the public. By committing to purchase bonds at a set price, investment banks such as **JPMorgan Chase** and **Goldman Sachs** are said to underwrite any risks associated with a new issue. The underwriting fee is the spread between the price the underwriter pays and the resale price.

Alternatively, the issuing company may choose to sell the debt securities directly to a single investor (as we assumed in previous illustrations)—often a pension fund or an insurance company. This is referred to as *private placement*. Issue costs are less because privately placed securities are not subject to the costly and lengthy process of registering with the SEC that is required of public offerings. Underwriting fees also are avoided.⁴

When issuing bonds or notes, the issuing company will incur costs, such as legal and accounting fees, printing costs, and registration and underwriting fees. These costs are recorded by combining them with any discount (or subtracting them from any premium) on the debt. The combined valuation account is reported in the balance sheet as a direct deduction from the liability and then amortized over the life of the debt.⁵

Costs of issuing debt securities are called “debt issue costs” and are accounted for the same way as bond discount.

This approach has the appeal of reflecting the effect that debt issue costs have on the effective interest rate. **Debt issue costs** reduce the cash proceeds from the issuance of debt, so it makes sense that they should reflect a higher cost of borrowing. By deducting debt issue costs, we lower the carrying amount of the debt, which effectively increases the interest rate on that debt. In other words, with debt issue costs, the net amount borrowed is less, but interest payments are the same, so the effective rate of borrowing is higher.

For example, let’s assume that in  **Illustration 14-11**, we had debt issue costs of \$14,000. The debt issue costs reduce the net cash the issuing company receives from the issuance of the bonds. The entry for the issuance would reflect the lower net cash proceeds and the higher valuation account for the discount and the debt issue costs:

The price discount and the debt issue costs reduce the cash proceeds from the issuance of the bonds.

| Masterwear (Issuer) | | |
|---|---------|---------|
| Cash (\$666,633 price minus \$14,000 issue costs) | 652,633 | |
| Discount and debt issue costs (difference) | 47,367 | |
| Bonds payable (face amount) | | 700,000 |

Interest expense is determined in the usual way; that is, the effective interest rate times the outstanding balance. The outstanding balance is the “net” liability, the face amount reduced by the discount and debt issue costs (\$652,633 for the first interest period).⁶ The debt issue costs of \$14,000 have the effect of increasing the effective rate from 7% semiannually (as in [Illustration 14-4](#)) to 7.4389% semiannually (rounded). To see how the effective rate is determined, see the next Additional Consideration box. The first semiannual interest payment would be recorded as follows:

| | | |
|--|--------|--------|
| Interest expense (\$652,633 x 7.4389%) | 48,549 | |
| Discount and debt issue costs (difference) | | 6,549 |
| Cash (\$700,000 x 6% stated rate) | | 42,000 |

The corporate bond is the basic long-term debt instrument for most large companies. But for many firms, the debt instrument often used is a *note*. We discuss notes next.

Additional Consideration

One important effect of the debt issue costs is that they reduce the amount of cash Masterwear is borrowing with the bond issuance (from \$666,633 to \$652,633). A lower (net) amount is borrowed at the same cost, making the *effective* interest rate higher than it would be without the debt issue costs. Previously, in [Illustration 14-4](#) when we had no debt issue costs, the effective (market) rate was 14% (7% semiannually). That was the discount rate that caused the present value of the six interest payments and the maturity amount of \$700,000 to be \$666,633. Now, though, the effective rate is the one that would cause the present value of the six interest payments and the maturity amount of \$700,000 to be \$652,633. That annual rate is 14.8778% instead of 14%, and thus is a semiannual rate of 7.4389%, up from 7%. The following amortization schedule demonstrates this:

| Cash Payments | | | | | Effective Interest | Incr (Dec in Ba |
|--------------------------|---------|---|---------|---|---------------------------|--------------------------------|
| 6.0% | | | | | 7.4389% × Balance | |
| 42,000 | 7.4389% | × | 652,633 | = | 48,549 | 6, |
| 42,000 | 7.4389% | × | 659,182 | = | 49,036 | 7, |
| 42,000 | 7.4389% | × | 666,218 | = | 49,559 | 7, |
| 42,000 | 7.4389% | × | 673,777 | = | 50,122 | 8, |
| 42,000 | 7.4389% | × | 681,898 | = | 50,726 | 8, |
| 42,000 | 7.4389% | × | 690,624 | = | 51,376 | 9, |

You should note that the balance in the last column of the schedule is the amount reported in the balance sheet for the bonds, reduced by both the discount and debt issue costs.

Long-Term Notes

LO14–3 Characterize the accounting treatment of notes, including installment notes, issued for cash or for noncash consideration.

When a company borrows cash from a bank and signs a promissory note, the firm's loan liability is reported as a *note payable*. Or a note might be issued in exchange for a noncash asset—perhaps to purchase equipment on credit. In concept, notes are accounted for in precisely the same way as bonds. In fact, we could properly substitute notes payable for bonds payable in each of our previous illustrations. For comparison, we continue to also present the lenders' entries (in blue) in the illustrations to follow.

As we discuss accounting for the borrower's notes *payable*, we also will consider the lender's perspective and look at notes *receivable* at the same time. By considering both sides of each transaction at the same time, we will see that the two sides are essentially mirror images of one another. This coverage of long-term notes complements our [Chapter 7](#) discussion of *short-term* notes receivable.

Note Issued for Cash

The interest rate stated in a note is likely to be equal to the market rate because the rate usually is negotiated at the time of the loan. So discounts and premiums are less likely for notes than for bonds. Accounting for a note issued for cash is demonstrated in

 **Illustration 14-12.**

Illustration 14-12 Note Issued for Cash

On January 1, 2024, Skill Graphics, Inc., a product-labeling and graphics firm, borrowed \$700,000 cash from First BancCorp and issued a three-year, \$700,000 promissory note. Interest of \$42,000 was payable semiannually on June 30 and December 31.

At Issuance

Note Exchanged for Assets or Services

Occasionally the *stated* interest rate is not indicative of the *market* rate at the time a note is negotiated. The value of the asset (cash or noncash) or service exchanged for the note establishes the market rate.⁷ For example, let's assume Skill Graphics purchased a package-labeling machine from Hughes-Barker Corporation by issuing a 12%, \$700,000, three-year note that requires interest to be paid semiannually. Let's also assume that the machine could have been purchased at a cash price of \$666,633. You probably recognize this numerical situation as the one used earlier to illustrate bonds sold at a discount (🔗 **Illustration 14-3**). Reference to the earlier example will confirm that exchanging this \$700,000 note for a machine with a cash price of \$666,633 implies an annual market rate of interest of 14%. That is, 7% is one-half the discount rate that yields a present value of \$666,633 for the note's cash flows (interest plus principal):

| | Present Values | | |
|---------------------------|----------------------|---|----------------|
| Interest | \$ 42,000 × | = | \$200,195 |
| | 4.76654* | | |
| Principal | \$700,000 × | = | <u>466,438</u> |
| | 0.66634 [†] | | |
| Present value of the note | | | \$666,633 |

*Present value of an ordinary annuity of \$1: $n = 6, i = 7\%$.

†Present value of \$1: $n = 6, i = 7\%$.

This is referred to as the **implicit rate of interest**—the rate implicit in the agreement. It may be that the implicit rate is not apparent. Sometimes the value of the asset (or service) is not readily determinable, but the interest rate stated in the transaction is unrealistic relative to the rate that would be expected in a similar transaction under similar circumstances.

Deciding what the appropriate rate should be is called *imputing* an interest rate.

For example, suppose the machine exchanged for the 12% note is custom-made for Skill Graphics so that no customary cash price is available with which to work

A basic concept of accounting is *substance over form*.

backwards to find the implicit rate. In that case, the appropriate rate would have to be found externally. It might be determined, for instance, that a more realistic interest rate for a transaction of this type, at this time, would be 14%. Then it would be apparent that Skill Graphics actually paid less than \$700,000 for the machine and that part of the face amount of the note in effect makes up for the lower than normal interest rate. You learned early in your study of accounting that the economic essence of a transaction should prevail over its outward appearance. In keeping with this basic precept, the accountant should look beyond the *form* of this transaction and record its *substance*. The amount actually paid for the machine is the present value of the cash flows called for by the loan agreement, discounted at the market rate—imputed in this case to be 14%. So both the asset acquired and the liability used to purchase it should be recorded at the real cost, \$666,633.

Additional Consideration

For another example, let's assume the more realistic interest rate for a transaction of this type is, say, 16%. In that case we would calculate the real cost of the machine by finding the present value of both the interest and the principal, discounted at half the 16% rate (because interest is paid semiannually):

| | Present Values |
|---------------------------|--|
| Interest | \$ 42,000 × 4.62288* = \$194,161 |
| Principal | \$ 700,000 × 0.63017 [†] = <u>441,119</u> |
| Present value of the note | \$635,280 |

*Present value of an ordinary annuity of \$1: $n = 6, i = 8\%$.

[†]Present value of \$1: $n = 6, i = 8\%$.

Both the asset acquired and the liability used to purchase it would be recorded at \$635,280.

The accounting treatment is the same whether the amount is determined directly from the market value of the machine (and thus the note) or indirectly as the present value of the note (and thus the value of the asset):⁸

Journal Entries at Issuance—Note with Unrealistic Interest Rate

Skill Graphics (Buyer/Issuer)

| | | |
|--|---------|---------|
| Machinery (cash price) | 666,633 | |
| Discount on notes payable (difference) | 33,367 | |
| Notes payable (face amount) | | 700,000 |

Hughes-Barker (Seller/Lender)

| | | |
|---|----------------|----------------|
| Notes receivable (face amount) | 700,000 | |
| Discount on notes receivable (difference) | | 33,367 |
| Sales revenue (cash price) | | 666,633 |

Note: The seller also would debit cost of goods sold and credit inventory for the amount spent to construct the machine.

Likewise, whether the effective interest rate is determined as the rate implicit in the agreement, given the asset's market value, or whether the effective rate is imputed as the appropriate interest rate if the asset's value is unknown, both parties to the transaction should record periodic interest (interest expense to the borrower, interest revenue to the lender) at the effective rate, rather than the stated rate.

Journal Entries—The Interest Method

The effective interest (expense to the issuer; revenue to the investor) is calculated each period as the effective rate times the amount of the debt outstanding during the interest period.

At the First Interest Date (June 30)

Skill Graphics (Borrower)

| | | |
|---|--------|--------|
| Interest expense (effective rate × outstanding balance) | 46,664 | |
| Discount on notes payable (difference) | | 4,664 |
| Cash (stated rate × face amount) | | 42,000 |

Hughes-Barker (Seller/Lender)

| | | |
|---|---------------|--------------|
| Cash (stated rate × face amount) | 42,000 | |
| Discount on notes receivable (difference) | | 4,664 |

At the First Interest Date (June 30)

| | |
|---|---------------|
| Interest revenue (effective rate × outstanding balance) | 46,664 |
|---|---------------|

The interest expense (interest revenue for the lender) varies as the balance of the note changes over time. See the amortization schedule in [Illustration 14-13](#).⁹ Be sure to notice that this amortization schedule is identical to the one in [Illustration 14-6](#) for bonds issued at a discount.

Illustration 14-13 Amortization Schedule—Note

Since less cash is paid each period than the effective interest, the unpaid difference (the discount reduction) increases the outstanding balance (book value) of the note.

| Date | Cash Interest (6% × Face amount) | Effective Interest (7% × Outstanding balance) | Increase in Balance (Discount reduction) | Outstanding Balance |
|----------|-------------------------------------|--|---|---------------------|
| 1/1/24 | | | | 666,633 |
| 6/30/24 | 42,000 | 0.07 (666,633) = 46,664 | 4,664 | 671,297 |
| 12/31/24 | 42,000 | 0.07 (671,297) = 46,991 | 4,991 | 676,288 |
| 6/30/25 | 42,000 | 0.07 (676,288) = 47,340 | 5,340 | 681,628 |
| 12/31/25 | 42,000 | 0.07 (681,628) = 47,714 | 5,714 | 687,342 |
| 6/30/26 | 42,000 | 0.07 (687,342) = 48,114 | 6,114 | 693,456 |
| 12/31/26 | <u>42,000</u> | 0.07 (693,456) = <u>48,544*</u> | <u>6,544</u> | 700,000 |
| | 252,000 | 285,367 | 33,367 | |

*Rounded

Installment Notes

You may have recently purchased a car, or maybe a house. If so, unless you paid cash, you signed a note promising to pay a portion of the purchase price over, say, five years for the car or 30 years for the house. Car and house notes usually call for payment in monthly installments rather than by a single amount at maturity. Corporations, too, often borrow using installment notes. Typically, installment payments are equal amounts each period. Each payment includes both an amount that represents interest and an amount that represents a reduction of the outstanding balance (principal reduction). The periodic reduction of the balance is sufficient that at maturity, the note is completely paid. This amount is easily calculated by dividing the amount of the loan by the appropriate discount factor for the present value of an annuity. The installment payment amount that would pay the note described in the previous section is as follows:

$$\begin{array}{rcccl} \$666,633 & \div & 4.76654 & = & \mathbf{\$139,857} \\ \text{Amount of loan} & & \text{(from Table 4} & & \text{Installment} \\ & & \text{\textit{n} = 6, \textit{i} = 7.0\%)} & & \text{payment} \end{array}$$

Consider  **Illustration 14-14**.

Illustration 14-14 Amortization Schedule—Installment Note

**Each installment payment includes interest on the outstanding debt at the effective rate.
The remainder of each payment reduces the outstanding balance.**

| Date | Cash Payment | Effective Interest (7% × Outstanding balance) | Decrease in Balance | Outstanding Balance |
|----------|----------------|---|---------------------------|------------------------|
| 1/1/24 | | | | 666,633 |
| 6/30/24 | 139,857 | 0.07 (666,633) = 46,664 | 93,193 | 573,440 |
| 12/31/24 | 139,857 | 0.07 (573,440) = 40,141 | 99,716 | 473,724 |
| 6/30/25 | 139,857 | 0.07 (473,724) = 33,161 | 106,696 | 367,028 |

| Date | Cash Payment | Effective Interest | | Decrease in Balance | Outstanding Balance |
|----------|--------------|--------------------|---------|---------------------|---------------------|
| 12/31/25 | 139,857 | 0.07 (367,028) = | 25,692 | 114,165 | 252,863 |
| 6/30/26 | 139,857 | 0.07 (252,863) = | 17,700 | 122,157 | 130,706 |
| 12/31/26 | 139,857 | 0.07 (130,706) = | 9,151* | 130,706 | 0 |
| | 839,142 | | 172,509 | 666,633 | |

*Rounded

For installment notes, the outstanding balance of the note does not eventually become its face amount as it does for notes with designated maturity amounts. Instead, at the maturity date the balance is zero. The procedure is the same as for a note whose principal is paid at maturity, but for an installment note, the periodic cash payments are larger, and there is no lump-sum payment at maturity. We calculated the amount of the payments so that after covering the interest on the existing debt each period, the excess would exactly amortize the installment debt balance to zero at maturity (rather than to a designated maturity amount).

Consequently, the significance is lost of maintaining separate balances for the face amount (in a note account) and the discount (or premium). So an installment note typically is recorded at its net book value in a single note payable (or receivable) account:

Journal Entries at Issuance—Installment Note

Skill Graphics (Buyer/Issuer)

| | | |
|---------------|---------|---------|
| Machinery | 666,633 | |
| Notes payable | | 666,633 |

Hughes-Barker (Seller/Lender)

| | | |
|------------------|---------|---------|
| Notes receivable | 666,633 | |
| Sales revenue | | 666,633 |

Each payment includes both an amount that represents interest and an amount that represents a reduction of principal.

At the First Interest Date (June 30)

Skill Graphics (Borrower)

| | | |
|---|--------|---------|
| Interest expense (effective rate × outstanding balance) | 46,664 | |
| Notes payable (difference) | 93,193 | |
| Cash (installment payment calculated above) | | 139,857 |

Hughes-Barker (Seller/Lender)

| | | |
|---|---------|--------|
| Cash (installment payment calculated above) | 139,857 | |
| Notes receivable (difference) | | 93,193 |
| Interest revenue (effective rate × outstanding balance) | | 46,664 |

Additional Consideration

You will learn in the next chapter that the liability associated with a lease is accounted for the same way as this installment note. In fact, if the asset described above had been leased rather than purchased, the cash payments would be designated lease payments rather than installment loan payments, and a virtually identical amortization schedule would apply.

The reason for the similarity is that we view a finance lease as being, in substance, equivalent to an installment purchase of the right to use an asset. Naturally, then, accounting treatment of the two essentially identical transactions should be consistent. Be sure to notice the parallel treatment as you study leases in the next chapter.

Concept Review Exercise

NOTE WITH AN UNREALISTIC INTEREST RATE

Cameron-Brown, Inc., constructed for Kumara Distributors a warehouse that was completed and ready for occupancy on January 2, 2024.

NOTE WITH AN UNREALISTIC
INTEREST RATE

- Harmon paid for the warehouse by issuing a \$900,000, four-year note that required 7% interest to be paid on December 31 of each year.
- The warehouse was custom-built for Kumara, so its cash price was not known.
- By comparison with similar transactions, it was determined that an appropriate interest rate was 10%.

Required:

1. Prepare the journal entry for Kumara's purchase of the warehouse on January 2, 2024.
2. Prepare (a) an amortization schedule for the four-year term of the note and (b) the journal entry for Kumara's first interest payment on December 31, 2024.
3. Suppose Kumara's note had been an installment note to be paid in four equal payments. What would be the amount of each installment if payable (a) at the end of each year, beginning December 31, 2024? or (b) at the beginning of each year, beginning on January 2, 2024?

Solution:

1. Prepare the journal entry for Kumara's purchase of the warehouse on January 2, 2024.

| Present Values | |
|---------------------------|---|
| Interest | \$ 63,000 × 3.16987* = \$199,702 |
| Principal | \$900,000 × 0.68301 [†] = <u>614,709</u> |
| Present value of the note | \$814,411 |

*Present value of an ordinary annuity of \$1: $n = 4, i = 10\%$.

[†]Present value of \$1: $n = 4, i = 10\%$.

Page 786

| | | |
|--|----------------|---------|
| Warehouse (price determined above) | 814,411 | |
| Discount on notes payable (difference) | 85,589 | |
| Notes payable (face amount) | | 900,000 |

2. Prepare (a) an amortization schedule for the four-year term of the note and (b) the journal entry for Kumara's first interest payment on December 31, 2024.

Each period the unpaid interest increases the outstanding balance of the debt.

| Dec. 31 | Cash (7% × Face amount) | Effective Interest (10% × Outstanding balance) | Increase in Balance (Discount reduction) | Outst Bal |
|------------|--------------------------------------|--|--|--------------|
| | | | | 81,441 |
| 2024 | 63,000 | 0.10 (814,411) = 81,441 | 18,441 | 832,852 |
| 2025 | 63,000 | 0.10 (832,852) = 83,285 | 20,285 | 853,137 |
| 2026 | 63,000 | 0.10 (853,137) = 85,314 | 22,314 | 875,451 |
| 2027 | <u>63,000</u> | 0.10 (875,451) = <u>87,549*</u> | <u>24,549</u> | 900,000 |
| | 252,000 | 337,589 | 85,589 | |

*Rounded

The effective interest is the market rate times the amount of the debt outstanding during the year.

| | |
|---|--------|
| Interest expense (effective rate × outstanding balance) | 81,441 |
| Discount on notes payable (difference) | 18,441 |
| Cash (stated rate × face amount) | 63,000 |

3. Suppose Kumara's note had been an installment note to be paid in four equal payments. What would be the amount of each installment if payable (a) at the end of each year, beginning December 31, 2024? or (b) at the beginning of each year, beginning on January 2, 2024?

Because money has a time value, installment payments delayed until the end of each period must be higher than if the payments are made at the

beginning of each period.

$$\begin{array}{lclclcl} \text{a.} & \$814,411 & \div & 3.16987 & = & \$256,923 \\ & \text{Amount of loan} & & \text{(from Table 4 } n=4, i=10\%) & & \text{Installment payment} \\ \text{b.} & \mathbf{\$814,411} & \div & 3.48685 & = & \mathbf{\$233,566} \\ & \text{Amount of loan} & & \text{(from Table 6 } n=4, i=10\%) & & \text{Installment payment} \end{array}$$

COVID-19: Accounting and Reporting Implications

The *Coronavirus Aid, Relief, and Economic Security (CARES) Act* was designed to provide stimulus relief to businesses affected by COVID-19 in the form of loans, grants, and tax changes.

One provision of the CARES Act was the **Paycheck Protection Program**, which provided small businesses with funds in the form of loans that will be fully forgiven when used for payroll costs, interest on mortgages, rent, and utilities (at least 60% of the forgiven amount must have been used for payroll). The program was designed to provide a direct incentive for small businesses to keep their workers on the payroll.

These “loans” create uncertainty as to how firms account for the government assistance. Does the government help represent a liability? Or, is it a grant from the government? After all, the company doesn’t have to repay the funds if it ultimately fulfills the requirements for the loan to be forgiven. The uncertainty is accentuated by the fact that there is no formal guidance under U.S. GAAP to account for government grants. Companies must choose guidance from among the three accounting standards most closely associated with the way the company views the funding. Under each of the three approaches, the funding is initially recorded as debt:

| | | |
|------|-------------------|-------------------|
| Cash | <amount borrowed> | |
| | Note payable | <amount borrowed> |

How and when the debt is adjusted depends on the choice of related guidance:

1. Accounting for debt (U.S. GAAP—ASC 405-20/470-50)

When it's determined that the conditions for forgiveness actually have been met, debit the liability, credit gain on extinguishment of debt.

2. Accounting for grants to *not-for-profit* organizations (U.S. GAAP—ASC 958-605)

When it's determined that the conditions for forgiveness have been *substantially met*, debit the liability, credit grant revenue.

3. Accounting for grants to *business* organizations (IFRS—IAS 20)

When there is *reasonable assurance* that the conditions for forgiveness have been met, debit the liability, credit "other income" to be reported as an offset to the expense(s) the funds paid for (for example, compensation expense).

If the conditions never are deemed to have been met, the loan along with 1% accrued interest is repaid.

Regardless of the approach taken, the company should provide extensive disclosure in the notes to the financial statements, including the accounting policies applied, the amount of PPP loans received, the expected amounts to be repaid or forgiven, the due date if the loan is not forgiven (five years from the date of the loan), the applicable interest rate (1%), the amount of interest expense recognized, and the amount and line item within the balance sheet or income statement that the loan and forgiven amounts has been recognized.

Financial Statement Disclosures

LO14–4 Describe the disclosures appropriate to long-term debt in its various forms and calculate related financial ratios.

In the balance sheet, long-term debt (liability for the debtor; asset for the creditor) typically is reported as a single amount, net of any discount or increased by any premium, rather than at its face amount accompanied by a separate valuation account for the discount or premium. Any portion of the debt to be paid (received) during the upcoming year or operating cycle, if longer, should be reported as a current amount.

The fair value of financial instruments must be disclosed either in the body of the financial statements or in disclosure notes.¹⁰ These fair values are available for bonds and other securities traded on market

Note disclosure is required of the fair value of bonds, notes, and other financial instruments.

exchanges in the form of quoted market prices. On the other hand, financial instruments not traded on market exchanges require other evidence of market value. For example, the market value of a note payable might be approximated by the present value of principal and interest payments using a current discount rate commensurate with the risks involved.

The disclosure note for debt includes the nature of the company's liabilities, interest rates, maturity dates, call provisions, conversion options, restrictions imposed by creditors, and any assets pledged as collateral. For all long-term borrowings, disclosures also should include the aggregate amounts payable for each of the next five years. To comply, **Microsoft's** annual report for the fiscal year ended June 30, 2020, included the disclosure shown in

 **Illustration 14–15.**

Illustration 14–15 Debt Disclosures—Microsoft Corporation

Real World Financials

Maturities of our long-term debt for each of the next five years and thereafter are as follows:

| Year Ending June 30, | (\$ in millions) |
|----------------------|------------------|
|----------------------|------------------|

| | |
|------------|---------------|
| 2021 | \$ 3,750 |
| 2022 | 7,966 |
| 2023 | 2,750 |
| 2024 | 5,250 |
| 2025 | 2,250 |
| Thereafter | <u>45,441</u> |
| Total | \$67,407 |

Source: Microsoft Corporation

In a statement of cash flows, issuing bonds or notes are reported as cash flows from financing activities by the issuer (borrower) and cash flows from investing activities by the investor (lender). Similarly, as the debt is repaid, the issuer (borrower) reports a financing activity while the investor (lender) reports an investing activity. However, because both interest expense and interest revenue are components of the income statement, both parties to the transaction report interest among operating activities. We discuss the cash flow reporting process in more depth in [Chapter 21](#).

Page 788

Borrowing is a financing activity; lending is an investing activity.

Paying or receiving interest is an operating activity.

Decision Makers' Perspective

Business decisions involve risk. Failure to properly consider risk in those decisions is one of the most costly, yet one of the most common mistakes investors and creditors can make. Long-term debt is one of the first places decision makers should look when trying to get a handle on risk.

In general, debt increases risk. As an owner, debt would place you in a subordinate position relative to creditors because the claims of creditors must be satisfied first in case of liquidation. In addition, debt requires payment, usually on specific dates. Failure to pay debt interest and principal on a timely basis may result in default and perhaps even bankruptcy. The debt to equity ratio, total liabilities divided by shareholders' equity, often is calculated to measure the degree of risk. Other things

Generally speaking, debt increases risk.

being equal, the higher the debt to equity ratio, the higher the risk. The type of risk this ratio measures is called *default risk* because it presumably indicates the likelihood a company will default on its obligations.

Debt also can be an advantage. It can be used to enhance the return to shareholders. This concept, known as leverage, was described and illustrated in Chapter 3. If a company earns a return on

borrowed funds in excess of the cost of borrowing the funds, shareholders are provided with a total return greater than what could have been earned with equity funds alone. This desirable situation is called *favorable financial leverage*.

Unfortunately, leverage is not always favorable. Sometimes the cost of borrowing the funds exceeds the returns they generate. This illustrates the typical risk-return trade-off faced by shareholders.

Creditors demand interest payments as compensation for the use of their capital. Failure to pay interest as scheduled may cause several adverse consequences, including bankruptcy. Therefore, another way to measure a company's ability to pay its obligations is by comparing interest payments with income available to pay those charges. The times interest earned ratio does this by dividing income, before subtracting interest expense or income tax expense, by interest expense.

Two points about this ratio are important. First, because interest is deductible for income tax purposes, income before interest and taxes is a better indication of a company's ability to pay interest than is income after interest and taxes (i.e., net income). Second, income before interest and taxes is a rough approximation for cash flow generated from operations. The primary concern of decision makers is, of course, the cash available to make interest payments. In fact, this ratio often is computed by dividing cash flow generated from operations by interest payments.

For illustration, let's compare the ratios for **Coca-Cola** and **PepsiCo**.

 **Illustration 14-16** provides condensed financial statements adapted from 2019 annual reports of those companies.

To evaluate a firm's risk, you might start by calculating its debt to equity ratio.

As a manager, you would try to create favorable financial leverage to earn a return on borrowed funds in excess of the cost of borrowing the funds.

As an external analyst or a manager, you are concerned with a company's ability to repay debt.

The debt to equity ratio is higher for PepsiCo:

The debt to equity ratio indicates the extent of trading on the equity, or financial leverage.

$$\begin{aligned} \text{Debt to equity ratio} &= \frac{\text{Total liabilities}}{\text{Shareholders' equity}} \\ \text{Coca-Cola} &= \frac{\$65,283}{\$21,098} = 3.1 \\ \text{PepsiCo} &= \frac{\$63,679}{\$14,868} = 4.3 \end{aligned}$$

Illustration 14–16 Condensed Financial Statements—Coca-Cola, PepsiCo

| Total liabilities | 65,283 | 63,679 |
| Shareholders' equity | <u>21,098</u> | <u>14,868</u> |
| Total liabilities and shareholders' equity | <u>\$86,381</u> | <u>\$78,547</u> |
| Income Statements | | |
| Net sales | \$37,266 | \$67,161 |
| Cost of goods sold | <u>(14,619)</u> | <u>(30,132)</u> |
| Gross profit | 22,647 | 37,029 |
| Operating and other expenses | (10,915) | (26,582) |
| Interest expense | <u>(946)</u> | <u>(1,135)</u> |

| Balance Sheets | | |
|-----------------------|------------------|-----------------|
| (\$ in millions) | | |
| | Coca-Cola | PepsiCo |
| Income before taxes | 10,786 | 9,312 |
| Tax expense | (1,801) | (1,959) |
| Net income | <u>\$ 8,985</u> | <u>\$ 7,353</u> |

Source: Coca-Cola, PepsiCo

Remember, that's not necessarily a positive or a negative. Let's look closer. When the return on equity is greater than the return on assets, management is using debt funds to enhance the earnings for shareholders. Both firms do this. We calculate return on assets as follows:

Page 789

The rate of return on assets indicates profitability without regard to how resources are financed.

$$\begin{aligned} \text{Rate of return on assets}^{11} &= \frac{\text{Net income}}{\text{Total assets}} \\ \text{Coca-Cola} &= \frac{\$8,985}{\$86,381} = 10.4\% \\ \text{PepsiCo} &= \frac{\$7,353}{\$78,547} = 9.4\% \end{aligned}$$

The return on assets indicates a company's overall profitability, ignoring specific sources of financing. In this regard, Coca-Cola's profitability is higher than PepsiCo's. That advantage reverses when we compare the return to shareholders:

The return on equity indicates the effectiveness of employing resources provided by owners.

$$\begin{aligned} \text{Return on equity} &= \frac{\text{Net income}}{\text{Shareholder's equity}} \\ \text{Coca-Cola} &= \frac{\$8,985}{\$21,098} = 42.6\% \\ \text{PepsiCo} &= \frac{\$7,353}{\$14,868} = 49.5\% \end{aligned}$$

The reason is that higher leverage has been used by Pepsi to provide a relatively greater return to shareholders. PepsiCo increased its return to shareholders 5.3 times (49.5%/9.4%) the return on assets. Coca-Cola increased its return to shareholders 4.1 times (42.6%/10.4%) the return on assets. Interpret this with caution, though. PepsiCo's higher leverage means higher risk as well. In down times, PepsiCo's return to shareholders will suffer proportionally more than will Coca-Cola's.

From the perspective of a creditor, we might look at which company offers the most comfortable margin of safety in terms of its ability to pay fixed interest charges:

The times interest earned ratio indicates the margin of safety provided to creditors.

$$\begin{aligned} \text{Times interest earned ratio} &= \frac{\text{Net income} + \text{interest} + \text{taxes}}{\text{Interest}} \\ \text{Coca-Cola} &= \frac{\$8,985 + \$946 + \$1,801}{\$946} = 12.4 \text{ times} \\ \text{PepsiCo} &= \frac{\$7,353 + \$1,135 + \$1,959}{\$1,135} = 9.2 \text{ times} \end{aligned}$$

In this regard, Coca-Cola provides a much greater margin of safety. And Pepsi has more debt in its capital structure relative to Coca-Cola. However, Pepsi clearly is able to pay the cost of borrowing and provide an impressive return to its shareholders. Both firms, though, trade quite favorably on their leverage.

Liabilities also can have misleading effects on the income statement. Decision makers should look carefully at gains and losses produced by early extinguishment of debt. These have nothing to do with a company's normal operating activities.

Decision makers should be alert to gains and losses that have nothing to do with a company's normal operating activities.

Unchecked, corporate management can be tempted to schedule debt buybacks to provide discretionary income in down years or even losses in up years to smooth income over time.

Alert investors and lenders also look outside the financial statements for risks associated with "off-balance-sheet" financing and other commitments that don't show up on the face of financial statements but nevertheless expose a company to risk. Relatedly, most companies attempt to actively manage the risk associated with

Outside analysts as well as managers should actively monitor risk management activities.

these and other obligations. It is important for top management to understand and closely monitor risk management strategies. Some of the financial losses that have grabbed headlines in recent years were permitted by a lack of oversight and scrutiny by senior management of companies involved. It is similarly important for investors and creditors to become informed about risks companies face and how well-equipped those companies are in managing that risk. The supplemental disclosures designed to communicate the degree of risk associated with the financial instruments we discuss in this chapter contribute to that understanding. We examine the significance of lease commitments in the next chapter.

PART C

Debt Retired Early, Convertible Into Stock, or Providing an Option to Buy Stock

Early Extinguishment of Debt

LO14–5 Record the early extinguishment of debt, its conversion into equity securities, and bond issues with warrants.

As we saw in the previous section, debt paid in installments is systematically retired over the term to maturity so that at the designated maturity date the outstanding balance is zero. On the other hand, when a maturity amount is specified as in our earlier illustrations, any discount or premium has been systematically reduced to zero as of the maturity date, and the debt is retired simply by paying the maturity amount. Sometimes, though, companies choose to retire debt before its scheduled maturity. In that case, a gain or a loss may result.

Earlier, we noted that a call feature accompanies most bonds to protect the issuer against declining interest rates. Even when bonds are not callable, the issuing company can retire bonds early by purchasing them on the open market. Regardless of the method, when debt of any type is retired prior to its scheduled maturity date, the transaction is referred to as **early extinguishment of debt**.

To record the extinguishment, the account balances pertinent to the debt obviously must be removed from the books. Of course, cash is credited for the amount paid—the call price or market price. The difference between the book value of the debt and the

Any difference between the outstanding debt and the amount paid to retire that debt represents either a gain or a loss.

reacquisition price represents either a gain or a loss on the early extinguishment of debt.

When the debt is retired for less than book value, the debtor is in a favorable position and records a gain. The opposite occurs for a loss. Let's continue an earlier example to illustrate the retirement of debt prior to its scheduled maturity ([Illustration 14-17](#)).

Illustration 14-17 Early Extinguishment of Debt

On January 1, 2025, Masterwear Industries called its \$700,000, 12% bonds when their book value was \$676,288.

- The indenture specified a call price of \$685,000.
- The bonds were issued previously at a price to yield 14%.

| | | |
|---|---------|---------|
| Bonds payable (face amount) | 700,000 | |
| Loss on early extinguishment (\$685,000 – \$676,288) | 8,712 | |
| Discount on bonds payable (\$700,000 – \$676,288) | | 23,712 |
| Cash (call price) | | 685,000 |

For instance, in its 2019 income statement, **Waste Management, Inc.**, reported an \$85 million loss on the early extinguishment of debt.

Convertible Bonds

Sometimes corporations include a convertible feature as part of a bond offering. **Convertible bonds** can be converted into (that is, exchanged for) shares of stock at the option of the bondholder. Among the reasons

for issuing convertible bonds rather than straight debt are (a) to sell the bonds at a higher price (which means a lower effective interest cost),¹² (b) to use as a medium of exchange in mergers and acquisitions, and (c) to enable smaller firms or debt-heavy companies to obtain access to the bond market. Sometimes convertible bonds serve as an indirect way to issue stock when there is shareholder resistance to direct issuance of additional equity.

Convertible bonds can be exchanged for shares of stock at the option of the investor.

Central to each of these reasons for issuing convertible debt is that the conversion feature is attractive to investors. This hybrid security has features of both

debt and equity. The owner has a fixed-income security that can become common stock if and when the firm's prosperity makes that feasible. This increases the investor's upside potential while limiting the downside risk. The conversion feature has monetary value. Just how valuable it is depends on both the conversion terms and market conditions. But from an accounting perspective the question raised is how to account for its value. To evaluate the question, consider  **Illustration 14-18**.

Convertible bonds have features of both debt and equity.

Illustration 14-18 Convertible Bonds

On January 1, 2024, HTL Manufacturers issued \$100 million of 8% convertible debentures due 2044 at 103 (103% of face value).

- The bonds are convertible at the option of the holder into no par common stock at a conversion ratio of 40 shares per \$1,000 bond.
- HTL recently issued nonconvertible, 20-year, 8% debentures at 98.

It would appear that the conversion feature is valued by the market at \$5 million—the difference between the market value of the convertible bonds, \$103 million,

Because of the inseparability of their debt and equity features, the entire issue price of convertible

and the market value of the nonconvertible bonds, \$98 million. Some accountants argue that we should record the value of the conversion option in a shareholders' equity account (\$5 million in this case) and the debt value in the bond accounts (\$100 million bonds payable less \$2 million discount). However, counter to that intuitive argument, the currently accepted practice is to record the entire issue price as debt in precisely the same way as for nonconvertible bonds.¹³ Treating the features as two inseparable parts of a single security avoids the practical difficulty of trying to measure the separate values of the debt and the conversion option.

bonds is recorded as debt, as if they are nonconvertible bonds.

Journal Entry at Issuance—Convertible Bonds

| | (\$ in millions) |
|---|------------------|
| Cash (103% × \$100 million) | 103 |
| Convertible bonds payable (face amount) | 100 |
| Premium on bonds payable (difference) | 3 |

Since we make no provision for the separate value of the conversion option, all subsequent entries, including the periodic reduction of the premium, are exactly the same as if these were nonconvertible bonds. So, the illustrations and examples of bond accounting we discussed earlier would pertain equally to nonconvertible or convertible bonds.

The value of the conversion feature is not separately recorded.

Additional Consideration

While we normally don't separate the conversion option from the debt for convertible bonds, an exception is when the conversion option is deemed to be a "beneficial conversion feature." That's the case when the conversion option has a positive "intrinsic value" at the time the bonds are issued, meaning the fair value of the stock into which the bonds are convertible exceeds the face amount of the bonds.¹⁴ Suppose, for instance, that HTL's stock in  **Illustration 14–18** has a fair value of \$30 per share when the

bonds are issued. This implies an intrinsic value of the conversion feature of **\$5** per share:

| | |
|---|-------------|
| Price per share to convert: $\$1,000 \div 40$ shares | |
| = \$25 per share | |
| Fair value of stock at issue date | \$30 |
| Conversion price for shares | <u>25</u> |
| Intrinsic value of beneficial conversion option per share | \$ 5 |

Intrinsic value of beneficial conversion feature:

100,000 bonds \times 40 shares = 4,000,000 shares \times **\$5** per share = **\$20,000,000**

The intrinsic value of the conversion option is recorded separately:

| | |
|--|------------------|
| | (\$ in millions) |
| Cash (103% \times \$100 million) | 103 |
| Discount on bonds payable (to balance) | 17 |
| Convertible bonds payable (face amount) | 100 |
| Equity—conversion option (intrinsic value) | 20 |

Journal Entry at Issuance—Convertible Bonds

LO14–7 Discuss the primary differences between U.S. GAAP and IFRS with respect to accounting for bonds and long-term notes.

International Financial Reporting Standards

Convertible bonds. Under IFRS, unlike U.S. GAAP, convertible debt is divided into its liability and equity elements. In [Illustration 14–18](#), if HTL prepared its financial statements in accordance with IFRS, it would record the convertible bonds as follows:

| | (\$ in millions) | |
|--|------------------|-----|
| Cash ($103\% \times \$100$ million) | 103 | |
| Convertible bonds payable (value of the debt only) | | 98* |
| Equity—conversion option (to balance) | | 5 |

*Notice that the discount is combined with the face amount of the bonds. This is the “net method.” Using the “gross method,” we would credit Convertible bonds payable \$100 and debit Discount on bonds \$2.

The components of compound financial instruments such as convertible bonds are valued and reported separately under IFRS.

In essence, HTL is selling two securities—(1) bonds and (2) an option to convert to stock—for one package price. The bonds represent a liability; the option is shareholders’ equity. Compound instruments such as this one are separated into their liability and equity components in accordance with *IAS No. 32*.¹⁵ Because the bonds have a separate fair value of \$98 million, we record that amount as the liability and the remaining \$5 million (the difference between the fair value of the convertible bonds, \$103 million, and the \$98 million) as equity. If the fair value of the bonds cannot be determined from an active trading market, that value can be calculated as the present value of the bonds’ cash flows, using the market rate of interest.

When the Conversion Option Is Exercised

If and when the bondholder exercises his or her option to convert the bonds into shares of stock, the bonds are removed from the accounting records and the new shares issued are recorded at the same amount (in other words, at the book value of the bonds). To illustrate, assume that half the convertible bonds issued by HTL Manufacturers are converted at a time when the remaining unamortized premium is \$2 million:

Journal Entry at Conversion

| | (\$ in millions) |
|---|------------------|
| Convertible bonds payable (½ the account balance) | 50 |
| Premium on bonds payable (½ the account balance) | 1 |
| Common stock (to balance) | 51 |

Additional Consideration

The method just described is referred to as the *book value method*, since the new shares are recorded at the book value of the redeemed bonds. It is by far the most popular method in practice. Another acceptable approach, the *market value method*, records the new shares at the market value of the shares themselves or of the bonds, whichever is more determinable. Because the market value most likely will differ from the book value of the bonds, a gain or loss on conversion will result. Assume for illustration that the market value of HTL's stock is **\$30** per share at the time of the conversion:

| | (\$ in millions) |
|--|------------------|
| Convertible bonds payable (½ the account balance) | 50 |
| Premium on bonds payable (½ the account balance) | 1 |
| Loss on conversion of bonds (to balance) | 9 |
| Common stock [(50,000 bonds × 40 shares) × \$30] | 60 |

If the 50,000 convertible bonds were held by a single investor, that company would record the conversion as follows:

The 2 million shares issued are recorded at the \$51 million book value of the bonds retired.

| | (\$ in millions) |
|---|------------------|
| Investment in common stock | 51 |
| Investment in convertible bonds (account balance) | 50 |
| Premium on investment in bonds (account balance) | 1 |

Induced Conversion

Investors often are reluctant to convert bonds to stock, even when share prices have risen significantly since the convertible bonds were purchased. This is because the market price of the convertible bonds will rise along with market prices of the stock. So companies sometimes try to induce conversion. The motivation might be to reduce debt and become a better risk to potential lenders or achieve a lower debt-to-equity ratio.

One way is through the call provision. As we noted earlier, most corporate bonds are callable by the issuing corporation. When the specified call price is less than the conversion value of the bonds (the market value of the shares), calling the convertible bonds provides bondholders with incentive to convert. Bondholders will choose the shares rather than the lower call price.

Occasionally, corporations may try to encourage voluntary conversion by offering an added inducement in the form of cash, stock warrants, or a more attractive conversion ratio. When additional consideration is provided to induce conversion, the fair value of that consideration is considered an expense incurred to bring about the conversion.¹⁶

Any additional consideration provided to induce conversion of convertible debt is recorded as an expense of the period.

Bonds with Detachable Warrants

Another (less common) way to sweeten a bond issue is to include **detachable stock purchase warrants** as part of the security issue. A stock warrant gives the investor an option to purchase a stated number of shares of common stock at a specified *option price*, often within a given period of time. Like a conversion feature, warrants usually mean a lower interest rate and often enable a company to issue debt when borrowing would not be feasible otherwise.

However, unlike the conversion feature for convertible bonds, warrants can be separated from the bonds. This means they can be exercised independently or traded in the market separately from bonds, having their own market price. In essence, two different securities—the bonds and the warrants—are sold as a package for a single issue price. Accordingly, the issue price is allocated between the two different securities on the basis of their fair values. If the independent market value of only one of the two securities is reliably determinable, that value establishes the allocation. This is demonstrated in [Illustration 14-19](#).

Illustration 14-19 Bonds with Detachable Warrants

The issue price of bonds with detachable warrants is allocated between the two different securities on the basis of their fair values.

On January 1, 2024, HTL Manufacturers issued \$100 million of 8% debentures due 2028 at 103 (103% of face value).

- Accompanying each \$1,000 bond were 20 warrants.
- Each warrant permitted the holder to buy one share of no par common stock at \$25 per share.
- Shortly after issuance, the warrants were listed on the stock exchange at **\$3 per warrant**.

| | (\$ in millions) |
|--|------------------|
| Cash (103% × \$100 million) | 103 |
| Discount on bonds payable (difference) | 3 |
| Bonds payable (face amount) | 100 |
| Equity—stock warrants* (100,000 bonds × 20 warrants × \$3) | 6 |

*Reported as part of shareholders' equity rather than as a liability.

Additional Consideration

Market imperfections may cause the separate market values not to sum to the issue price of the package. In this event, allocation is achieved on the basis of the **relative market values** of the two securities. Let's say the bonds have a separate market price of \$940 per bond (priced at 94):

| Market Values | Dollars (\$ in millions) | Percent |
|--|-----------------------------|----------|
| Bonds (100,000 bonds × \$940) | \$ 94 | 94% |
| Warrants (100,000 bonds × 20 warrants × \$3) | <u>6</u> | <u>6</u> |
| Total | \$100 | 100% |

Proportion of Issue Price Allocated to Bonds:

$$\$103 \text{ million} \times 94\% = \$96,820,000$$

Proportion of Issue Price Allocated to Warrants:

$$\$103 \text{ million} \times 6\% = \$6,180,000$$

| | (\$ in millions) | |
|---|------------------|--------|
| Cash (103% × \$100 million) | 103.00 | |
| Discount on bonds payable (\$100 million – \$96.82 million) | 3.18 | |
| Bonds payable (face amount) | | 100.00 |
| Equity—stock warrants (\$103 million × 6% = \$6,180,000) | | 6.18 |

Notice that this is the same approach we used in [Chapter 10](#) to allocate a single purchase price to two or more assets bought for that single price. We

also will allocate the total selling price of two equity securities sold for a single issue in proportion to their relative market values in [Chapter 18](#).

If one-half of the warrants (1 million) in [Illustration 14-19](#) are exercised when the market value of HTL's common stock is \$30 per share, 1 million shares would be issued for one warrant each plus the exercise price of \$25 per share.

Page 795

Journal Entry at Exercise of Detachable Warrants

| | (\$ in millions) |
|--|------------------|
| Cash (1,000,000 warrants × \$25) | 25 |
| Equity—stock warrants (1,000,000 warrants × \$3) | 3 |
| Common stock (to balance) | 28 |

The \$30 market value at the date of exercise is not used in valuing the additional shares issued. The new shares are recorded at the total of the previously measured values of both the warrants and the shares.

Concept Review Exercise

DEBT DISCLOSURES AND EARLY EXTINGUISHMENT OF DEBT

The disclosure notes to the 2024 financial statements of Olswanger Industries included the following:

Note 12: Bonds

On September 15, 2023, the Corporation sold bonds with an aggregate principal amount of \$500,000,000 bearing a 14% interest rate. The bonds will mature on September 15, 2033, and are unsecured subordinated obligations of the Corporation. Interest is payable semiannually on March 15 and September 15. The Corporation may redeem the bonds at any time beginning September 15, 2023, as a whole or from time to time in part, through maturity, at specified redemption prices ranging from 112% of principal in declining percentages of principal amount through 2030 when the percentage is set at 100% of principal amount. The cost of issuing the bonds, totaling \$11,000,000, and the discount of \$5,000,000 are being amortized over the life

of the bonds. Amortization of these items for the year ended December 31, 2024, was \$1,212,000.

During the year ended December 31, 2024, the Corporation repurchased, in open market transactions, \$200,000,000 in face amount of the bonds for \$219,333,000. The unamortized cost of issuing these bonds and the unamortized discount, totaling \$5,864,000, have been deducted in the current period.

From the information provided by Olswanger in Note 12, you should be able to recreate some of the journal entries the company recorded in connection with this bond issue.

Required:

1. Prepare the journal entry for the issuance of these bonds on September 15, 2023.
2. Prepare the journal entry for the repurchase of these bonds, assuming the date of repurchase was September 15, 2024. The cash paid to repurchase the bonds was \$219,333,000.

Solution:

1. Prepare the journal entry for the issuance of these bonds on September 15, 2023.

| | (\$ in thousands) |
|---|-------------------|
| Cash (to balance) | 484,000 |
| Discount and debt issue costs (given in note) | 16,000 |
| Bonds payable (face amount—given in note) | 500,000 |

2. Prepare the journal entry for the repurchase of these bonds, assuming the date of repurchase was September 15, 2024.

| | (\$ in thousands) |
|---|-------------------|
| Bonds payable (face amount repurchased) | 200,000 |
| Loss on early extinguishment (to balance) | 25,197 |
| Discount and debt issue costs (given in note) | 5,864 |

PART D

Option to Report Liabilities at Fair Value

LO14–6 Understand the option to report liabilities at their fair values.

Companies are not required to, but have the option to, value some or all of their financial assets and liabilities at fair value.¹⁷ In [Chapter 12](#), we saw examples of the option applied to financial assets—specifically, companies reporting their investments in securities at fair value. Now, we see how liabilities, too, can be reported at fair value.

A company has the option to value financial assets and liabilities at fair value.

How does a liability's fair value change? Remember that there are two sides to every investment. For example, if a company has an investment in **General Motors'** bonds, that investment is an asset to the investor, and the same bonds are a liability to GM. So, the same market forces that influence the fair value of an investment in debt securities (interest rates, credit risk, etc.) influence the fair value of liabilities. For bank loans or other debts that aren't traded on a market exchange, the mix of factors will differ, but in any case, changes in the current market rate of interest often are a major contributor to changes in fair value.

Determining Fair Value

For demonstration, we revisit the Masterwear Industries bonds that sold at a discount in [Illustration 14–3](#). Now, suppose it's six months later, the market rate of interest has fallen to 11%, and June 30 is the end of Masterwear's fiscal year. A decline in market interest rates means bond prices rise. Let's say that checking market prices in *The Wall Street Journal* indicates that the fair value of the Masterwear bonds on June 30, 2024, is **\$714,943**. Referring to the amortization schedule, we see that on the same date, with five periods remaining to

Changes in interest rates cause changes in the fair value of liabilities.

maturity, the present value of the bonds—their price—would have been \$671,297 if the market rate still had been 14% (7% semiannually).

Additional Consideration

If the bonds are not traded on an open-market exchange, their fair value would not be readily observable. In that case, the next most preferable way to determine fair value would be to calculate the fair value as the present value of the remaining cash flows discounted at the current interest rate. If the rate is 11% (5.5% semiannually),¹⁸ as we're assuming now, that present value would be \$714,943:

| Present Values | | | |
|-------------------------------|----------------------------------|---|------------------|
| Interest | \$ 42,000 × 4.27028* | = | \$179,352 |
| Principal | \$700,000 × 0.76513 [†] | = | <u>535,591</u> |
| Present value of the bonds | | | \$714,943 |

*Present value of an ordinary annuity of \$1: $n = 5, i = 5.5\%$.

[†]Present value of \$1: $n = 5, i = 5.5\%$.

When the bonds were issued, Masterwear had a choice—report this liability (a) at its amortized initial measurement throughout the term to maturity or (b) at its current fair value on each reporting date. Had the company not elected the fair value option, on June 30 it would report the \$671,297 we calculated earlier for the amortization schedule. On the other hand, if Masterwear had elected the fair value option, it would report the bonds at their current fair value, **\$714,943**.

Reporting Changes in Fair Value

If a company chooses the option to report at fair value, a change in fair value will create a gain or loss. Any portion of that gain or loss that is a result of a change

Electing the FVO means reporting unrealized holding gains and losses in OCI to the extent the change is due to credit risk.

in the “credit risk” of the debt, rather than a change in general interest rates, is reported, not as part of net income, but instead as other comprehensive income (OCI). Credit risk is the risk that the investor in the bonds will not receive the promised interest and maturity amounts at the times they are due. Companies can assume that any change in fair value that exceeds the amount caused by a change in the general (risk-free) interest rate is the result of credit risk changes.

In our example, Masterwear would report the increase in fair value from \$666,633 to **\$714,943**, or \$48,310. Note, though, that part of the change is due to the unpaid interest we discussed earlier. Here’s a recap.

At June 30, 2024, the interest that accrued during the first six months was \$46,664, but only \$42,000 of that was paid in cash; so the book value increased by the \$4,664 unpaid interest. We recorded the following entry:

| | | |
|---------------------------|--------|--------|
| Interest expense | 46,664 | |
| Discount on bonds payable | | 4,664 |
| Cash | | 42,000 |

Amortizing the discount in this entry increased the book value of the liability by \$4,664 to \$671,297:

Bonds payable

Less: Discount

Book value

| | |
|---|--------------|
| January 1 book value and fair value | \$666,633 |
| Increase from discount amortization | <u>4,664</u> |
| June 30 book value (amortized initial amount) | \$671,297 |

FAIR VALUE RISES

Comparing that book value with the fair value of the bonds on that date provides the amount needed to adjust the bonds to their fair value.

| | |
|---|------------------|
| June 30 fair value | \$714,943 |
| June 30 book value (amortized initial amount) | <u>671,297</u> |

Fair value adjustment needed \$ 43,646

Rather than increasing the bonds payable account itself, though, we instead adjust it *indirectly* with a credit to a valuation allowance (or contra) account. If general interest rates have not changed, we assume the change in fair value is due to the credit risk associated with the bonds and report the loss in OCI:

When the fair value option is elected, we report changes in fair value in OCI to the extent caused by changes in credit risk.

| | |
|---|--------|
| Loss on bonds payable (unrealized, OCI) | 43,646 |
| Fair value adjustment (\$714,943 – \$671,297) | 43,646 |

If any portion of the fair value change is due to a change in general interest rates, that portion would be reported in net income. For instance, if interest rate declines alone would have created a \$20,000 increase in fair value, we would report \$20,000 of the loss in the income statement and \$23,646 as OCI.

The *credit* balance in the fair value adjustment *increases* the book value; the discount reduces it.

The new book value of the bonds is now the fair value:

| | |
|-------------------------------------|------------------|
| Bonds payable | \$700,000 |
| Less: Discount (\$33,367 – \$4,664) | <u>(28,703)</u> |
| Amortization schedule value | \$671,297 |
| Plus: Fair value adjustment | <u>43,646</u> |
| Book value, June 30 | \$714,943 |

FAIR VALUE FALLS

Suppose the fair value at June 30, 2024, had been **\$650,000** instead of **\$714,943**. In that case, Masterwear would record a *reduction* in the liability from \$671,297 to **\$650,000**, or \$21,297. Again assuming no change in interest rates, the entry would be as follows:

| | |
|---|--------|
| Fair value adjustment (\$671,297 – \$650,000) | 21,297 |
| Gain on bonds payable (unrealized, OCI) | 21,297 |

The new book value of the bonds is the fair value:

The *debit* balance in the fair value adjustment *reduces* the book value; as does the discount.

| | |
|-------------------------------------|------------------|
| Bonds payable | \$ 700,000 |
| Less: Discount (\$33,367 – \$4,664) | <u>(28,703)</u> |
| Amortization schedule value | \$ 671,297 |
| Less: Fair value adjustment | <u>(21,297)</u> |
| Book value, June 30 | \$650,000 |

The outstanding balance in the last column of the amortization schedule at any date up to and including the balance at maturity will be the bonds payable less the discount (for instance, \$671,297 at June 30, 2024). But the amount we report in the balance sheet at any reporting date, the fair value, will be that amortized initial amount from the amortization schedule, plus or minus the fair value adjustment. That's the **\$714,943** or the **\$650,000** in the two scenarios above.

To understand why we report credit risk-related fair value changes as OCI, it's useful to consider the consequence of reporting them in the income statement, which was the prescribed treatment prior to the FASB mandating their classification as OCI beginning in 2015. Here's one example. As a result of adjusting for fair value changes in its debt, **J.P. Morgan Chase & Co.** reported an impressive \$1.9 billion gain in its 2011 third-quarter income statement. This was a reason for the company's shareholders and creditors to celebrate, right? Not so fast. It's true that the company followed the proper procedure for recording a decline in the fair value of its debt, which was to record a gain in the income statement. As it turned out, though, the reason the fair value declined was that the company's financial situation had worsened, resulting in increased credit risk, and the increased credit risk caused the fair value of liabilities to decline. This, in fact, is the reason for most if not all of J.P. Morgan's huge gain. Does it make sense to you that worsening credit ratings should result in higher net income? Most observers, including the FASB, saw that as counterintuitive, and as a result, credit risk-related fair value changes are now reported as part of OCI rather than part of net income.

Mix and Match

Remember from our discussions in prior chapters that if a company elects the fair value option, it's not

Companies choose which financial instruments to report at fair value.

necessary that the company elect the option to report all of its financial instruments at fair value or even all instruments of a particular type at fair value. They can “mix and match” on an instrument-by-instrument basis. So Masterwear, for instance, might choose to report these bonds at fair value but all its other liabilities at their amortized initial measurement. However, the company must make the election when the item originates, in this case, when the bonds are issued, and is not allowed to switch methods once a method is chosen.

Here’s an excerpt from the notes to the financial statements of **Citigroup Inc.** describing its fair value option election for some of its liabilities (omitting the portion of the note related to the fair value option election for financial assets):

25. FAIR VALUE ELECTIONS (In part)

The Company may elect to report most financial instruments and certain other items at fair value on an instrument-by-instrument basis. . . . The election is made upon the initial recognition of an eligible financial asset, financial liability or firm commitment or when certain specified reconsideration events occur. The fair value election may not otherwise be revoked once made. The changes in fair value are recorded in current earnings Movements in DVA [Debit Valuation Adjustments] are reported as a component of AOCI.

| | Changes in fair value gains (losses) for the years ended December 31 | |
|--|---|----------------|
| (\$ in millions) | 2020 | 2019 |
| Liabilities | | |
| Interest-bearing deposits | \$ (154) | \$ (205) |
| Federal funds purchased and securities loaned or sold under agreements to repurchase selected portfolios of securities | (559) | 386 |

| Short-term borrowings | 802 | (78) |
| Long-term debt | <u>(2,700)</u> | <u>(5,174)</u> |
| Total liabilities | \$(2,612) | \$(5,044) |

Financial Reporting Case Solution

Monkeybusinessimages/Getty Images

- 1. What does it mean that the bonds are “first mortgage” bonds? What effect does that have on financing?** A mortgage bond is backed by a lien on specified real estate owned by the issuer. This makes it less risky than unsecured debt, so Service Leader can expect to be able to sell the bonds at a higher price (lower interest rate).
- 2. From Service Leader’s perspective, why are the bonds callable? What does that mean?** The call feature gives Service Leader some protection against being stuck with relatively high-cost debt in case interest rates fall during the 15 years to maturity. Service Leader can buy back, or call, the bonds from bondholders before the 15-year maturity date, after June 30, 2023. The call price is prespecified at 103% of the face value—\$1,030 per \$1,000 bond.
- 3. How will it be possible to sell bonds paying investors 6.25% when other, similar investments will provide the investors a return of 6.5%?** Service Leader will be able to sell its 6.25% bonds in a 6.5% market only by selling them at a discounted price, below face amount. Bonds are priced by the marketplace to yield the market rate of interest for securities of similar risk and maturity. The price will be the present value of all the periodic cash interest payments (face amount \times stated rate) plus the present value of the principal payable at maturity, both discounted at the market rate.

4. Would accounting differ if the debt were designated as notes rather than bonds? No. Other things being equal, whether they're called bonds, notes, or some other form of debt, the same accounting principles apply. They will be recorded at present value, and interest will be recorded at the market rate over the term to maturity.

5. Why might the company choose to make the bonds convertible into common stock? Convertible bonds can be converted at the option of the bondholders into shares of stock. Sometimes the motivation for issuing convertible bonds rather than straight debt is to use the bonds as a medium of exchange in mergers and acquisitions, as a way for smaller firms or debt-heavy companies to obtain access to the bond market, or as an indirect way to issue stock when there is shareholder resistance to direct issuance of additional equity. None of these seems pertinent to Service Leader. The most likely reason is to sell at a higher price. The conversion feature is attractive to investors. Investors have a fixed-income security that can become common stock if circumstances make that attractive. The investor has additional possibilities for higher returns, with downside risk limited by the underlying debt. ●

The Bottom Line

- LO14-1** A liability requires the future payment of cash in specified amounts at specified dates. As time passes, interest accrues on debt at the effective interest rate times the amount of the debt outstanding during the period. This same principle applies regardless of the specific form of the liability. (*p.* 767)
- LO14-2** Forces of supply and demand cause a bond to be priced to yield the market rate, calculated as the present value of all the cash flows required, where the discount rate is the market rate. Interest expense is calculated as the effective market rate of interest multiplied by the outstanding balance (during the interest period). A company is permitted to allocate a discount or a premium equally to each period over the term to maturity if doing so produces results that are not materially different from the interest method. (*p.* 769)
- LO14-3** In concept, notes are accounted for in precisely the same way as bonds. When a note is issued with an unrealistic interest rate, the effective market rate is used both to determine the amount recorded in the transaction and to record periodic interest thereafter. (*p.* 781)
- LO14-4** In the balance sheet, disclosure should include, for all long-term borrowings, the aggregate amounts maturing and sinking fund requirements (if any) for each of the next five years. Supplemental disclosures are needed for (a) off-balance-sheet credit or market risk, (b) concentrations of credit risk, and (c) the fair value of financial instruments. (*p.* 787)
- LO14-5** A gain or loss on early extinguishment of debt should be recorded for the difference between the reacquisition price and the book value of the debt. Convertible bonds are accounted for as straight debt, but the value of the equity feature is recorded separately for bonds issued with detachable warrants. (*p.* 790)
- LO14-6** Companies are not required to, but have the option to, value some or all of their liabilities at fair value. If the option is elected, an increase (or decrease) in fair value from one balance sheet to the next is reported as a loss (or gain) as other comprehensive income to the extent it's related to credit risk.

Otherwise, it's reported in net income. It's a one-time election for each liability when the liability is created. (*p.* 796)

LO14-7

U.S. GAAP and IFRS are generally compatible with respect to accounting for bonds and long-term notes. Some differences exist in determining which securities are reported as debt, the way convertible securities are accounted for, and when the fair value option can be elected. (*p.* 792). ●

APPENDIX 14A Bonds Issued between Interest Dates

In [Part A](#) of this chapter, we assumed that the bonds were issued on the day they were dated (date printed in the indenture contract). But suppose a weak market caused a delay in selling the bonds until two months after that date (four months before semiannual interest was to be paid). In that case, the buyer would be asked to pay the seller **accrued interest** for two months in addition to the price of the bonds.

When Bonds Are Issued at Face Amount between Interest Dates

For illustration, assume that in [Illustration 14-1](#), Masterwear was unable to sell the bonds in the previous example until March 1—two months after they are dated. This variation is shown in [Illustration 14A-1](#). United would pay the price of the bonds (\$700,000) plus **\$14,000** accrued interest:

All bonds sell at their price plus any interest that has accrued since the last interest date.

$$\begin{array}{r} \$700,000 \\ \text{Face amount} \end{array} \times \begin{array}{r} 12\% \\ \text{Annual rate} \end{array} \times \begin{array}{r} \frac{2}{12} \\ \text{Fraction of the annual period} \end{array} = \begin{array}{r} \$14,000 \\ \text{Accrued interest} \end{array}$$

Illustration 14A-1 Bonds Sold at Face Amount between Interest Dates

| At Issuance (March 1) | |
|--|----------------|
| Masterwear (Issuer) | |
| Cash (price plus accrued interest) | 714,000 |
| Bonds payable (face amount) | 700,000 |
| Interest payable (accrued interest determined above) | 14,000 |
| United (Investor) | |
| Investment in bonds (face amount) | 700,000 |

At Issuance (March 1)

| | |
|---|---------|
| Interest receivable (accrued interest determined above) | 14,000 |
| Cash (price plus accrued interest) | 714,000 |

When Masterwear pays semiannual interest on June 30, a full six months' interest is paid. But having received two months' accrued interest in advance, Masterwear's net interest expense will be four months' interest, for the four months the bonds have been outstanding at that time. Likewise, when United receives six months' interest—after holding the bonds for only four months—United will net only the four months' interest to which it is entitled:

Since the investor will hold the bonds for only four months before receiving six months' interest, two months' accrued interest must be added to the price paid.

The issuer incurs interest expense, and the investor recognizes interest revenue, for only the four months the bonds are outstanding.

At the First Interest Date (June 30)

Masterwear (Issuer)

| | |
|---|--------|
| Interest expense (6 mo. – 2 mo. = 4 mo.) | 28,000 |
| Interest payable* (accrued interest determined above) | 14,000 |
| Cash (stated rate × face amount) | 42,000 |

United (Investor)

| | |
|---|--------|
| Cash (stated rate × face amount) | 42,000 |
| Interest receivable (accrued interest determined above) | 14,000 |
| Interest revenue (6 mo. – 2 mo. = 4 mo.) | 28,000 |

*Some accountants prefer to credit interest expense, rather than interest payable, when the bonds are sold. When that is done, this entry would require a debit to interest expense and a credit to cash for \$42,000. The interest expense account would then reflect the same *net* debit of four months' interest (\$42,000 – \$14,000).

Interest Expense

| |
|----------|
| 2 months |
|----------|

At the First Interest Date (June 30)

| | |
|----------|--|
| 6 months | |
| 4 months | |

Similarly, the investor could debit interest revenue, rather than interest receivable when buying the bonds.

When Bonds Are Issued at a Discount between Interest Dates

Our objective is the same when the bonds are not issued at their face amount. For instance, in

 **Illustration 14-3**, the \$700,000 of 12% bonds were issued on January 1 when the market rate was 14% and

thus were priced at a discount, \$666,633. Instead, if those bonds were issued March 1, two months after they are dated, the price will have increased. That's because the liability will have accrued two months' interest at the effective rate ($7\% \times \frac{2}{12} \times \$666,633$, or \$15,555). \$14,000 of that ($6\% \times \frac{2}{12} \times \$700,000$) represents stated interest that will be part of the first interest payment four months later, so the price of the bonds will have increased by the difference, $\$15,555 - \$14,000$, or \$1,555. We can think of this as the time value of the bonds for two months. The cash flows remain the same (six semiannual interest payments plus the face amount at maturity), but because the payments now will be received two months sooner, the *present value* of those payments is greater. The investor would pay the January 1 value of the bonds (\$666,633) plus the time value for two months (\$1,555) plus \$14,000 accrued interest (see  **Illustration 14A-2**).

All bonds sell at their price plus any interest that has accrued since the last interest date.

Illustration 14A-2 Bonds Sold at a Discount between Interest Dates

Masterwear (Issuer)

| | | |
|--|----------|---------------|
| Cash (price plus accrued interest) | 682,188* | |
| Discount on bonds payable (difference) | 31,812 | |
| Bonds payable (face amount) | | 700,000 |
| Interest payable (accrued interest determined above) | | 14,000 |

United (Investor)

| | |
|---|-----------------|
| Investment in bonds (face amount) | 700,000 |
| Interest receivable (accrued interest determined above) | 14,000 |
| Discount on bond investment (difference) | 31,812 |
| Cash (price plus accrued interest) | 682,188* |

*On March 1, the proceeds will be the price of the bonds based on the effective market interest rate on March 1, plus the \$14,000 accrued interest. If the price of the bonds was \$666,633 on January 1 as we assumed in Illustration 14–3, market conditions remained the same, and the effective market interest rate remained 7% semiannually for the next two months, that price will have increased to \$668,188:

| | |
|-----------------|---|
| \$666,633 | Balance, Jan. 1 |
| <u>15,555</u> | $7\% \times \frac{2}{6} \times \$666,633$ 2 mo. <i>effective</i> interest |
| \$682,188 | Balance, March 1 |
| <u>(14,000)</u> | $6\% \times \frac{2}{6} \times \$700,000$ 2 mo. <i>stated</i> interest |
| \$668,188 | Bond price, March 1 |
| <u>14,000</u> | Accrued interest |
| \$682,188 | Proceeds: price plus accrued interest |

By contract, a full six months' interest is paid on June 30 at the *stated* rate times the face amount. But having received two months' accrued interest in advance, Masterwear's *net* interest expense will be four months' interest, for the four months the bonds have been outstanding at that time. Interest is calculated at the effective (or market) rate. For this example, we're assuming market conditions at March 1 and January 1 were the same, so the price at January 1 would have been \$666,633 as in  **Illustration 14-3**. Interest for the first six months, then, would be $\$666,633 \times 14\% \times \frac{1}{2} = \$46,664$. But because on June 30 only four months have passed since the date the bonds were issued, only four months' interest, $\frac{4}{6} \times \$46,664$, or \$31,109, is recorded as interest expense. Similarly, the reduction of the discount, which for a full six-month interest period would be $\$46,664 - \$42,000$, or \$4,664, will be only $\frac{4}{6}$ of that amount. These amounts are recorded as follows:

Journal Entries—Interest between Interest Dates

At the First Interest Date (June 30)

Masterwear (Issuer)

| | |
|--|---------------|
| Interest expense ($\frac{4}{6} \times 46,664$) | 31,109 |
| Interest payable (accrued interest determined above) | 14,000 |
| Discount on bonds payable ($\frac{4}{6} \times 4,664$) | 3,109 |
| Cash (stated rate \times face amount) | 42,000 |

Only four months' interest is recorded because the bonds were outstanding only four months.

United (Investor)

| | |
|--|---------------|
| Cash (stated rate \times face amount) | 42,000 |
| Discount on bond investment ($\frac{4}{6} \times 4,664$) | 3,109 |
| Interest receivable (accrued interest determined above) | 14,000 |
| Interest revenue ($\frac{4}{6} \times 46,664$) | 31,109 |

APPENDIX 14B Troubled Debt Restructuring

A respected real estate developer, Brillard Properties, was very successful developing and managing a number of properties in the southeastern United States. To finance these investments, the developer had borrowed hundreds of millions of dollars from several regional banks. For years, events occurred as planned. The investments prospered. Cash flow was high. Interest payments on the debt were timely and individual loans were repaid as they matured.

Almost suddenly, however, the real estate climate soured. Investments that had provided handsome profits now did not provide the cash flow necessary to service the debt. Bankers who had loaned substantial funds to Brillard now faced a dilemma. Because contractual interest payments were unpaid, the bankers had the legal right to demand payment, which would force the developer to liquidate all or a major part of the properties to raise the cash. Sound business practice? Not necessarily.

A sharp rise in debt restructurings accompanied the 2008/2009 economic crisis.

If creditors force liquidation, they then must share among themselves the cash raised from selling the properties—at forced sale prices. Believing the developer’s financial difficulties were caused by temporary market forces, not by bad management, the bankers felt they could minimize their losses by *restructuring* the debt agreements rather than by forcing liquidation.

When changing the original terms of a debt agreement is motivated by financial difficulties experienced by the debtor (borrower), the new arrangement is referred to as a **troubled debt restructuring**. By definition, a troubled debt restructuring involves some concessions on the part of the creditor (lender) that it wouldn’t otherwise consider if not for the economic or legal reasons related to the debtor’s financial difficulties. A troubled debt restructuring may be achieved in either of two ways:

1. The debt may be *settled* at the time of the restructuring.
2. The debt may be *continued*, but with *modified terms*.

Debt Is Settled

In the situation described above, one choice the bankers had was to try to settle the debt outright at the time of the troubled debt restructuring. For instance, a bank holding a \$30 million note from the developer might agree to accept a property valued at, let's say, \$20 million as a final settlement of the debt. In that case, the developer has a \$10 million gain equal to the difference between the book value of the debt and the fair value of the property transferred. The debtor may need to adjust the book value of an asset to its fair value prior to recording its exchange for a debt. The developer in our example, for instance, would need to change the recorded amount for the property specified in the exchange agreement if it is carried at an amount other than its \$20 million fair value. In such an instance, an ordinary gain or loss on disposition of assets should be recorded as shown in  **Illustration 14B-1**.

In all areas of accounting, a noncash transaction is recorded at fair value.

Illustration 14B-1 Debt Settled

An asset is adjusted to fair value prior to recording its exchange for a debt.

First Prudent Bank agrees to settle Brillard's \$30 million debt in exchange for property having a fair value of \$20 million. The book value of the property on Brillard's books is \$17 million:

| | (\$ in millions) | |
|--|------------------|----|
| Land (\$20 million minus \$17 million) | 3 | |
| Gain on disposition of assets | | 3 |
| Notes payable (book value) | 30 | |
| Gain on troubled debt restructuring | | 10 |
| Land (fair value) | | 20 |

The payment to settle a debt in a troubled debt restructuring might be cash, or a noncash asset (as in the example here), or even shares of the debtor's stock. An example of shares of stock given in exchange for debt forgiveness is the celebrated reorganization of TWA in 1992 (since acquired by American Airlines), when creditors received a 55% stake in the company's common shares in return for forgiving about \$1

billion of the airline's \$1.5 billion debt. In any case, the debtor's gain is the difference between the book value of the debt and the fair value of the asset(s) or equity securities transferred.

Debt Is Continued, but with Modified Terms

In the previous example, we assumed that First Prudent Bank agreed to accept property in full settlement of the debt. A more likely occurrence would be that the bank allows the debt to continue, but modifies the terms of the debt agreement to make it easier for the debtor to comply. The bank might agree to reduce or delay the scheduled *interest payments*. Or, it may agree to reduce or delay the *maturity amount*. Often a troubled debt restructuring will call for some combination of these concessions.

The book value of a debt is the current balance of the primary debt plus any accrued (unpaid) interest.

Let's say the stated interest rate on the note in question is 10% and annual interest payments of \$3 million ($10\% \times \30 million) are payable in December of each of two remaining years to maturity. Also, assume that the developer was unable to pay the \$3 million interest payment for the year just ended. This means that the amount owed—the carrying amount (or book value) of the debt—is \$33 million (\$30 million plus one year's accrued interest).

The way the debtor accounts for the restructuring depends on the extent of the reduction in cash payments called for by the restructured arrangement. More specifically, the accounting procedure depends on whether, under the new agreement, total cash payments (a) are *less than* the book value of the debt or (b) still *exceed* the book value of the debt.

Two quite different situations are created when the terms of a debt are modified, depending on whether the cash payments are reduced to the extent that interest is eliminated.

WHEN TOTAL CASH PAYMENTS ARE LESS THAN THE BOOK VALUE OF THE DEBT

By the original agreement, the debtor was to pay at maturity the \$30 million loaned, plus enough periodic interest to provide a 10% effective rate of return. If the new agreement calls for less cash than the \$33 million now owed, interest is presumed to have been eliminated.

As one of many possibilities, suppose the bank agrees to (1) forgive the interest accrued from last year, (2) reduce the two remaining interest payments from \$3 million each to \$2

million each, and (3) reduce the face amount from \$30 million to \$25 million. Clearly, the debtor will pay less by the new agreement than by the original one. In fact, if we add up the total payments called for by the new agreement, the total [(\$2 million × 2) plus \$25 million] is less than the \$33 million book value. Because the \$29 million does not exceed the amount owed, the restructured debt agreement no longer provides interest on the debt. Actually, the new payments are \$4 million short of covering the debt itself. So, after the debt restructuring, no interest expense is recorded. All subsequent cash payments are considered to be payment of the debt itself. Consider [Illustration 14B-2](#).

Illustration 14B-2 Cash Payments Less than the Debt

| Book Value | | |
|------------------|------------|-----------------|
| Before Restr. | Adj. | After Restr. |
| \$30 | (1) | \$29 |
| <u>3</u> | <u>(3)</u> | <u>0</u> |
| \$33 | (4) | \$29 |

Brillard Properties owes First Prudent Bank \$30 million under a 10% note with years remaining to maturity. Due to financial difficulties of the developer, the previous year’s interest (\$3 million) was not paid. First Prudent Bank agrees to

1. Forgive the interest accrued from last year.
2. Reduce the remaining two interest payments to \$2 million each.
3. Reduce the principal to \$25 million.

| | | |
|------------------|-----------------|---|
| Analysis: | Book value | \$30 million + \$3 million = \$33 m |
| | Future payments | (\$2 million × 2) + \$25 million = <u>29 mi</u> |
| | Gain | \$ 4 million |

(\$ in millions)

Interest payable 3
(10% × \$30 million)

| | | |
|--|---|---|
| Notes payable (\$30 million – \$29 million) | 1 | |
| Gain on debt restructuring | | 4 |

When the total future cash payments are less than the book value of the debt, the difference is recorded as a gain at the date of restructure. No interest should be recorded thereafter. That is, all subsequent cash payments result in reductions of principal.

After restructuring, no interest expense is recorded. All cash payments are considered to be payment of the note itself.

The \$25 million payment at maturity reduces the note to zero.

| At Each of the Two Interest Dates | (\$ in millions) |
|-----------------------------------|------------------|
| Notes payable | 2 |
| Cash (revised “interest” amount) | 2 |
| At Maturity | |
| Notes payable | 25 |
| Cash (revised principal amount) | 25 |

WHEN TOTAL CASH PAYMENTS EXCEED THE BOOK VALUE OF THE DEBT

Let’s modify the example in the previous section. Now suppose the bank agrees to delay the due date for all cash payments until maturity and accept \$34,333,200 at that time in full settlement of the debt. Rather than just reducing the cash payments as in the previous illustration, the payments are delayed. It is not the nature of the change that creates the need to account differently for this situation, but the amount of the total cash payments under the agreement relative to the book value of the debt. This situation is demonstrated in

 **Illustration 14B-3.**

The discount rate that equates the present value on the debt (\$33 million) and its future value (\$34,333,200) is the effective rate of interest.

Brillard Properties owes First Prudent Bank \$30 million under a 10% note with two years remaining to maturity. Due to Brillard's financial difficulties, the previous year's interest (\$3 million) was not paid. First Prudent Bank agrees to:

1. Delay the due date for all cash payments until maturity.
2. Accept \$34,333,200 at that time in full settlement of the debt.

| | | |
|------------------|-----------------|--|
| Analysis: | Future payments | \$34,333,200 |
| | Book value | \$30 million + \$3 million = <u>33,000,000</u> |
| | Interest | \$ 1,333,200 |

Calculation of the New Effective Interest Rate

- $\$33,000,000 \div \$34,333,200 = 0.9612$, the Table 2 value for $n = 2$, $i = ?$
- In row 2 of Table 2, the number 0.9612 is in the **2%** column. So, this is the new effective interest rate.

Now the total payments called for by the new agreement, \$34,333,200, exceed the \$33 million book value. Because the payments exceed the amount owed, the restructured debt agreement still provides interest on the debt—but less than before the agreement was revised. No longer is the effective rate 10%. The accounting objective now is to determine what the new effective rate is and *record interest for the remaining term of the loan at that new, lower rate*, as shown in  **Illustration 14B-3**.

As long as cash payments exceed the amount owed there will be interest—although at a lower effective rate.

Because the total future cash payments are not less than the book value of the debt, no reduction of the existing debt is necessary and no entry is required at the time of the debt restructuring. Even though no cash is paid until maturity under the restructured debt agreement, interest expense still is recorded annually—but at the new rate.

Unpaid interest is accrued at the effective rate times the book value of the note.

The book value of the debt is increased by the unpaid interest from the previous year.

The total of the accrued interest account plus the note account is equal to the amount scheduled to be paid at maturity.

| | | |
|--|------------|------------|
| At the End of the First Year | | |
| Interest expense [$2\% \times (\$30,000,000 + \$3,000,000)$] | 660,000 | |
| Interest payable | | 660,000 |
| At the End of the Second Year | | |
| Interest expense [$2\% \times (\$30,000,000 + \$3,660,000)$] | 673,200 | |
| Interest payable | | 673,200 |
| At Maturity (End of the Second Year) | | |
| Notes payable | 30,000,000 | |
| Interest payable ($\$3,000,000 + \$660,000 + \$673,200$) | 4,333,200 | |
| Cash (required by new agreement) | | 34,333,200 |

Additional Consideration

To keep up with the changing amounts, it may be convenient to prepare an amortization schedule for the debt.

| Year | Cash Interest | Effective Interest | Increase in Balance | Outstar Balan |
|------|------------------|---|---------------------------|------------------|
| | | ($2\% \times$ Outstanding balance) | | |
| 1 | 0 | $0.02 (\$33,000,000) =$ 660,000 | 660,000 | 33,000 33,660 |
| 2 | <u>0</u> | $0.02 (\$33,660,000) =$ <u>673,200</u> | <u>673,200</u> | 34,333, |

| Year | Cash Interest | Effective Interest | Increase in Balance | Outstanding Balance |
|------|---------------|--------------------|---------------------|---------------------|
| | 0 | 1,333,200 | 1,333,200 | |

An amortization schedule is particularly helpful if there are several years remaining to maturity.

In our example, the restructured debt agreement called for a single cash payment at maturity (\$34,333,200). If more than one cash payment is required (as in the agreement in our earlier example), calculating the new effective rate is more difficult. The concept would remain straightforward: (1) determine the interest rate that provides a present value of all future cash payments that is equal to the current book value and (2) record the interest at that rate thereafter. Mechanically, though, the computation by hand would be cumbersome, requiring a time-consuming trial-and-error calculation. Since our primary interest is understanding the concepts involved, we will avoid the mathematical complexities of such a situation.

You also should be aware that when a restructuring involves modification of terms, accounting for a liability by the debtor, as described in this section, and accounting for a receivable by the creditor (essentially an impairment of a receivable), which was described in [Chapter 7](#), are inconsistent. You may recall that when a creditor's investment in a receivable becomes impaired, due to a troubled debt restructuring or for any other reason, the receivable is remeasured based on the discounted present value of currently expected cash flows at the loan's *original* effective rate (regardless of the extent to which expected cash receipts have been reduced). For ease of comparison, the example in this chapter ([Illustration 14B-3](#)) describes the same situation as the example in [Chapter 7](#) ([Illustration 7B-2](#)). There is no conceptual justification for the asymmetry between debtors' and creditors' accounting for troubled debt restructurings.

Questions For Review of Key Topics

- Q 14-1** How is periodic interest determined for outstanding liabilities? For outstanding receivables? How does the approach compare from one form of debt instrument (say, bonds payable) to another (say, notes payable)?
- Q 14-2** As a general rule, how should long-term liabilities be reported on the debtor's balance sheet?
- Q 14-3** How are bonds and notes the same? How do they differ?
- Q 14-4** What information is contained in a bond indenture? What purpose does it serve?
- Q 14-5** On January 1, 2024, Brandon Electronics issued \$85 million of 11.5% bonds, dated January 1. The market yield for bonds of maturity issued by similar firms in terms of riskiness is 12.25%. How can Brandon sell debt paying only 11.5% in a 12.25% market?
- Q 14-6** How is the price determined for a bond (or bond issue)?
- Q 14-7** A zero-coupon bond pays no interest. Explain.
- Q 14-8** When bonds are issued at a premium, the debt declines each period. Explain.
- Q 14-9** Compare the two commonly used methods of determining interest on bonds.
- Q 14-10** What are debt issue costs and how should they be reported?
- Q 14-11** When a note's stated rate of interest is unrealistic relative to the market rate, the concept of substance over form should be employed. Explain.
-
- Q 14-12** How does an installment note differ from a note for which the principal is paid as a single amount at maturity?
- Q 14-13** Long-term debt can be reported either (a) as a single amount, net of any discount or increased by any premium or (b) at its face amount accompanied by a separate valuation account for the discount or premium. Any portion of the debt to be paid during the upcoming year, or operating cycle if longer, should be reported as a current amount. Regarding amounts to be paid in the future, what additional disclosures should be made in connection with long-term debt?
- Q 14-14** Early extinguishment of debt often produces a gain or a loss. How is the gain or loss determined?

- Q 14–15** Air Supply issued \$6 million of 9%, 10-year convertible bonds at 101. The bonds are convertible into 24,000 shares of common stock. Bonds that are similar in all respects except that they are nonconvertible, currently are selling at 99 (that is, 99% of face amount). What amount should Air Supply record as equity and how much as a liability when the bonds are issued?
- Q 14–16** Both convertible bonds and bonds issued with detachable warrants have features of both debt and equity. How does the accounting treatment differ for the two hybrid securities? Why is the accounting treatment different?
- Q 14–17** At times, companies try to induce voluntary conversion by offering an added incentive—maybe cash, stock warrants, or a more favorable conversion ratio. How is such an inducement accounted for? How is it measured?
- Q 14–18** Cordova Tools has bonds outstanding during a year in which the market rate of interest has risen. If Cordova has elected the fair value option for the bonds, will it report a gain or a loss on the bonds for the year? Explain.

IFRS

- Q 14–19** If a company prepares its financial statements according to International Financial Reporting Standards, how would it account for convertible bonds it issues for \$12.5 million? What is the conceptual justification?
- Q 14–20** (Based on  **Appendix 14A**) Why will bonds always sell at their price plus any interest that has accrued since the last interest date?
- Q 14–21** (Based on  **Appendix 14B**) When the original terms of a debt agreement are changed because of financial difficulties experienced by the debtor (borrower), the new arrangement is referred to as a *troubled debt restructuring*. Such a restructuring can take a variety of forms. For accounting purposes, these possibilities are categorized. What are the accounting classifications of troubled debt restructurings?
- Q 14–22** (Based on  **Appendix 14B**) Pratt Industries owes First National Bank \$5 million but, due to financial difficulties, is unable to comply with the original terms of the loan. The bank agrees to settle the debt in exchange for land having a fair value of \$3 million. The book value of the property on Pratt's books is \$2 million. For the reporting period in which the debt is settled, what amount(s) will Pratt report on its income statement in connection with the troubled debt restructuring?

Q 14–23 (Based on  **Appendix 14B**) The way a debtor accounts for the restructuring depends on the extent of the reduction in cash payments called for by the restructured arrangement. Describe, in general, the accounting procedure for the two basic cases: when, under the new agreement, total cash payments (a) are less than the book value of the debt or (b) still exceed the book value of the debt.

Brief Exercises

BE 14–1 Bond interest **LO14–1**

Holiday Brands issued \$30 million of 6%, 30-year bonds for \$27.5 million. What is the amount of interest that Holiday will pay semiannually to bondholders?

BE 14–2 Determining the price of bonds **LO14–2**

A company issued 5%, 20-year bonds with a face amount of \$80 million. The market yield for bonds of similar risk and maturity is 6%. Interest is paid semiannually. At what price did the bonds sell?

BE 14–3 Determining the price of bonds **LO14–2**

A company issued 6%, 15-year bonds with a face amount of \$75 million. The market yield for bonds of similar risk and maturity is 6%. Interest is paid semiannually. At what price did the bonds sell?

BE 14–4 Determining the price of bonds **LO14–2**

A company issued 5%, 20-year bonds with a face amount of \$100 million. The market yield for bonds of similar risk and maturity is 4%. Interest is paid semiannually. At what price did the bonds sell?

BE 14–5 Effective interest on bonds **LO14–2**

On January 1, a company issued 7%, 15-year bonds with a face amount of \$90 million for \$82,218,695 to yield 8%. Interest is paid semiannually. What was interest expense at the effective interest rate on June 30, the first interest date?

BE 14–6 Effective interest on bonds **LO14–2**

On January 1, a company issued 3%, 20-year bonds with a face amount of \$80 million for \$69,057,776 to yield 4%. Interest is paid semiannually. What was the interest expense at the effective interest rate on the December 31 annual income statement?

BE 14–7 Straight-line interest on bonds  **LO14–2**

On January 1, a company issued 3%, 20-year bonds with a face amount of \$80 million for \$69,057,776 to yield 4%. Interest is paid semiannually. What was the straight-line interest expense on the December 31 annual income statement?

BE 14–8 Investment in bonds  **LO14–2**

On January 1, a company purchased 3%, 20-year corporate bonds for \$69,057,776 as an investment. The bonds have a face amount of \$80 million and are priced to yield 4%. Interest is paid semiannually. Prepare the journal entry to record revenue at the effective interest rate on December 31, the second interest payment date.

BE 14–9 Note issued for cash; borrower and lender  **LO14–3**

On January 1, 2024, Nantucket Ferry borrowed \$14,000,000 cash from BankOne and issued a four-year, \$14,000,000, 6% note. Interest was payable annually on December 31. Prepare the journal entries for both firms to record interest at December 31, 2024.

BE 14–10 Note with unrealistic interest rate  **LO14–3**

On January 1, Snipes Construction paid for earth-moving equipment by issuing a \$300,000, 3-year note that specified 2% interest to be paid on December 31 of each year. The equipment's retail cash price was unknown, but it was determined that a reasonable interest rate was 5%. At what amount should Snipes record the equipment and the note? What journal entry should it record for the transaction?

BE 14–11 Installment note  **LO14–3**

On January 1, a company borrowed cash by issuing a \$300,000, 5%, installment note to be paid in three equal payments at the end of each year beginning December 31. What would be the amount of each installment? Prepare the journal entry for the second installment payment.

BE 14–12 Early extinguishment; effective interest **LO14–5**

A company retired \$60 million of its 6% bonds at 102 (\$61.2 million) before their scheduled maturity. At the time, the bonds had a remaining discount of \$2 million. Prepare the journal entry to record the redemption of the bonds.

BE 14–13 Bonds with detachable warrants **LO14–5**

Hoffman Corporation issued \$60 million of 5%, 20-year bonds at 102. Each of the 60,000 bonds was issued with 10 detachable stock warrants, each of which entitled the bondholder to purchase, for \$20, one share of \$1 par common stock. At the time of sale, the market value of the common stock was \$25 per share and the market value of each warrant was \$5. Prepare the journal entry to record the issuance of the bonds.

BE 14–14 Convertible bonds **LO14–5**

Hoffman Corporation issued \$60 million of 5%, 20-year bonds at 102. Each of the 60,000 bonds was convertible into one share of \$1 par common stock. Prepare the journal entry to record the issuance of the bonds.

BE 14–15 Reporting bonds at fair value **LO14–6**

AI Tool and Dye issued 8% bonds with a face amount of \$160 million on January 1, 2024. The bonds sold for \$150 million. For bonds of similar risk and maturity the market yield was 9%. Upon issuance, AI elected the option to report these bonds at their fair value. On June 30, 2024, the fair value of the bonds was \$145 million as determined by their market value on the NASDAQ. Will AI report a gain or will it report a loss when adjusting the bonds to fair value? If the change in fair value is attributable to a change in the interest rate, did the rate increase or decrease? Will the gain or loss be reported in net income or as OCI?

Exercises

E 14-1 Bond valuation LO14-2

Your investment department has researched possible investments in corporate debt securities. Among the available investments are the following \$100 million bond issues, each dated January 1, 2024. Prices were determined by underwriters at different times during the last few weeks.

| | Company | Bond Price | Stated Rate |
|----|----------|---------------|-------------|
| 1. | BB Corp. | \$109 million | 11% |
| 2. | DD Corp. | \$100 million | 10% |
| 3. | GG Corp. | \$ 91 million | 9% |

Each of the bond issues matures on December 31, 2043, and pays interest semiannually on June 30 and December 31. For bonds of similar risk and maturity, the market yield at January 1, 2024, is 10%.

Required:

Other things being equal, which of the bond issues offers the most attractive investment opportunity if it can be purchased at the prices stated? The least attractive? Why?

E 14-2 Determine the price of bonds in various situations

LO14-2

Determine the price of a \$1 million bond issue under each of the following independent assumptions:

| | Maturity | Interest Paid | Stated Rate | Effective (Market) Rate |
|----|----------|---------------|-------------|-------------------------|
| 1. | 10 years | Annually | 10% | 12% |
| 2. | 10 years | Semiannually | 10% | 12% |
| 3. | 10 years | Semiannually | 12% | 10% |

| | Maturity | Interest Paid | Stated Rate | Effective (Market) Rate |
|----|----------|---------------|-------------|-------------------------|
| 4. | 20 years | Semiannually | 12% | 10% |
| 5. | 20 years | Semiannually | 12% | 12% |

E 14-3 Determine the price of bonds; issuance; effective interest  **LO14-2**

The Bradford Company issued 10% bonds, dated January 1, with a face amount of \$80 million on January 1, 2024.

- The bonds mature on December 31, 2033 (10 years).
- For bonds of similar risk and maturity, the market yield is 12%.
- Interest is paid semiannually on June 30 and December 31.

Required:

1. Determine the price of the bonds at January 1, 2024.
2. Prepare the journal entry to record their issuance by The Bradford Company on January 1, 2024.
3. Prepare the journal entry to record interest on June 30, 2024 (at the effective rate).
4. Prepare the journal entry to record interest on December 31, 2024 (at the effective rate).

E 14-4 Investor; effective interest  **LO14-2**

[This is a variation of  **E 14-3** modified to consider the investor's perspective.]

The Bradford Company sold the entire bond issue described in the previous exercise to Saxton-Bose Corporation.

Required:

1. Prepare the journal entry to record the purchase of the bonds by Saxton-Bose on January 1, 2024.
2. Prepare the journal entry to record interest revenue on June 30, 2024 (at the effective rate).
3. Prepare the journal entry to record interest revenue on December 31, 2024 (at the effective rate).

E 14–5 Bonds; issuance; effective interest; financial statement effects **LO14–2**

Myriad Solutions, Inc., issued 10% bonds, dated January 1, with a face amount of \$320 million on January 1, 2024, for \$283,294,720.

- The bonds mature on December 31, 2033 (10 years).
- For bonds of similar risk and maturity the market yield is 12%.
- Interest is paid semiannually on June 30 and December 31.

Required:

1. What would be the net amount of the liability Myriad would report in its balance sheet at December 31, 2024?
2. What would be the amount related to the bonds that Myriad would report in its income statement for the year ended December 31, 2024?
3. What would be the amount(s) related to the bonds that Myriad would report in its statement of cash flows for the year ended December 31, 2024?

E 14–6 Bonds; issuance; effective interest **LO14–2**

The Gonzalez Group issued \$900,000 of 13% bonds on June 30, 2024, for \$967,707.

- The bonds were dated on June 30 and mature on June 30, 2044 (20 years).
- The market yield for bonds of similar risk and maturity is 12%.
- Interest is paid semiannually on December 31 and June 30.

Required:

1. Prepare the journal entry to record their issuance by The Gonzalez Group on June 30, 2024.
2. Prepare the journal entry to record interest on December 31, 2024 (at the effective rate).
3. Prepare the journal entry to record interest on June 30, 2025 (at the effective rate).

E 14–7 Determine the price of bonds; issuance; straight-line method **LO14–2**

Universal Foods issued 10% bonds, dated January 1, with a face amount of \$150 million on January 1, 2024.

- The bonds mature on December 31, 2038 (15 years).
- The market rate of interest for similar issues was 12%. Interest is paid semiannually on June 30 and December 31.
- Universal uses the straight-line method.

Required:

1. Determine the price of the bonds at January 1, 2024.
2. Prepare the journal entry to record their issuance by Universal Foods on January 1, 2024.
3. Prepare the journal entry to record interest on June 30, 2024.
4. Prepare the journal entry to record interest on December 31, 2031.

E 14–8 Investor; straight-line method  **LO14–2**

[This is a variation of  **E 14–7** modified to consider the investor’s perspective.]

Universal Foods sold the entire bond issue described in the previous exercise to Wang Communications.

Required:

1. Prepare the journal entry to record the purchase of the bonds by Wang Communications on January 1, 2024.
2. Prepare the journal entry to record interest revenue on June 30, 2024.
3. Prepare the journal entry to record interest revenue on December 31, 2031.

E 14–9 Issuance of bonds; effective interest; amortization schedule; financial statement effects  **LO14–2**

When Patey Pontoons issued 6% bonds on January 1, 2024, with a face amount of \$600,000, the market yield for bonds of similar risk and maturity was 7%. The bonds mature December 31, 2027 (4 years). Interest is paid semiannually on June 30 and December 31.

Required:

1. Determine the price of the bonds at January 1, 2024.
2. Prepare the journal entry to record their issuance by Patey on January 1, 2024.

3. Prepare an amortization schedule that determines interest at the effective rate each period.
4. Prepare the journal entry to record interest on June 30, 2024.
5. What is the amount(s) related to the bonds that Patey will report in its balance sheet at December 31, 2024?
6. What is the amount(s) related to the bonds that Patey will report in its income statement for the year ended December 31, 2024? (Ignore income taxes.)
7. Prepare the appropriate journal entries at maturity on December 31, 2027.

E 14–10 Issuance of bonds; effective interest; amortization schedule  **LO14–2**

National Orthopedics Co. issued 9% bonds, dated January 1, with a face amount of \$500,000 on January 1, 2024.

- The bonds mature on December 31, 2027 (4 years).
- For bonds of similar risk and maturity the market yield was 10%.
- Interest is paid semiannually on June 30 and December 31.

Required:

1. Determine the price of the bonds at January 1, 2024.
2. Prepare the journal entry to record their issuance by National on January 1, 2024.
3. Prepare an amortization schedule that determines interest at the effective rate each period.
4. Prepare the journal entry to record interest on June 30, 2024.
5. Prepare the appropriate journal entries at maturity on December 31, 2027.

E 14–11 Bonds; effective interest; adjusting entry  **LO14–2**

On February 1, 2024, Strauss-Lombardi issued 9% bonds, dated February 1, with a face amount of \$800,000.

- The bonds sold for \$731,364 and mature on January 31, 2044 (20 years).
- The market yield for bonds of similar risk and maturity was 10%.
- Interest is paid semiannually on July 31 and January 31.

- Strauss-Lombardi's fiscal year ends December 31.

Required:

1. Prepare the journal entry to record their issuance by Strauss-Lombardi on February 1, 2024.
2. Prepare the journal entry to record interest on July 31, 2024 (at the effective rate).
3. Prepare the adjusting entry to accrue interest on December 31, 2024.
4. Prepare the journal entry to record interest on January 31, 2025.

E 14–12 Bonds; straight-line method; adjusting entry  **LO14–2**

On March 1, 2024, Tanaka Lighting issued 14% bonds, dated March 1, with a face amount of \$300,000.

- The bonds sold for \$294,000 and mature on February 28, 2044 (20 years).
- Interest is paid semiannually on August 31 and February 28.
- Tanaka uses the straight-line method and its fiscal year ends December 31.

Required:

1. Prepare the journal entry to record the issuance of the bonds by Tanaka Lighting on March 1, 2024.
2. Prepare the journal entry to record interest on August 31, 2024.
3. Prepare the journal entry to accrue interest on December 31, 2024.
4. Prepare the journal entry to record interest on February 28, 2025.

E 14–13 Issuance of bonds; effective interest; financial statement effects  **LO14–2**

Federal Semiconductors issued 11% bonds, dated January 1, with a face amount of \$800 million on January 1, 2024.

- The bonds sold for \$739,813,200 and mature on December 31, 2043 (20 years).
- For bonds of similar risk and maturity the market yield was 12%.
- Interest is paid semiannually on June 30 and December 31.

Required:

1. Prepare the journal entry to record their issuance by Federal on January 1, 2024.
2. Prepare the journal entry to record interest on June 30, 2024 (at the effective rate).
3. Prepare the journal entry to record interest on December 31, 2024 (at the effective rate).
4. At what amount will Federal report the bonds among its liabilities in the December 31, 2024, balance sheet?

E 14–14 New debt issues; offerings announcements **LO14–2**

When companies offer new debt security issues, they publicize the offerings in the financial press and on Internet sites. Assume the following were among the debt offerings reported in December 2024:

New Securities Issues

Corporate

National Equipment Transfer Corporation—\$200 million bonds via lead managers Second Tennessee Bank N.A. and Morgan, Dunavant & Co., according to a syndicate official. Terms: maturity, Dec. 15, 2033; coupon 7.46%; issue price, par; yield, 7.46%; noncallable; debt ratings: Ba-1 (Moody’s Investors Service, Inc.), BBB+ (Standard & Poor’s).

IgWig Inc.—\$350 million of notes via lead manager Stanley Brothers, Inc., according to a syndicate official. Terms: maturity, Dec. 1, 2035; coupon, 6.46%; Issue price, 99; yield, 6.56%; call date, NC; debt ratings: Baa-1 (Moody’s Investors Service, Inc.), A (Standard & Poor’s).

Required:

1. Prepare the appropriate journal entries to record the sale of both issues to underwriters. Ignore share issue costs and assume no accrued interest.
2. Prepare the appropriate journal entries to record the first semiannual interest payment for both issues.

E 14–15 Error correction; accrued interest on bonds **LO14–2**

At the end of 2023, Majors Furniture Company failed to accrue \$61,000 of interest expense that accrued during the last five months of 2023 on bonds payable. The bonds mature in

2037. The discount on the bonds is amortized by the straight-line method. The following entry was recorded on February 1, 2024, when the semiannual interest was paid:

| | | |
|---------------------------|--------|--------|
| Interest expense | 73,200 | |
| Discount on bonds payable | | 1,200 |
| Cash | | 72,000 |

Required:

Prepare any journal entry necessary to correct the errors as of February 2, 2024, when the errors were discovered. Also, prepare any adjusting entry at December 31, 2024, related to the situation described. (Ignore income taxes.)

E 14–16 Error in amortization schedule  **LO14–3**

Nakano Food Products, Inc., acquired a packaging machine from Lawrence Specialists Corporation.

- Lawrence completed construction of the machine on January 1, 2022.
- In payment for the machine Nakano issued a three-year installment note to be paid in three equal payments at the end of each year.
- The payments include interest at the rate of 10%.
- Lawrence made a conceptual error in preparing the amortization schedule, which Nakano failed to discover until 2024.
- The error had caused Nakano to understate interest expense by \$45,000 in 2022 and \$40,000 in 2023.

Required:

1. Determine which accounts are incorrect as a result of these errors at January 1, 2024, before any adjustments. Explain your answer. (Ignore income taxes.)
2. Prepare a journal entry to correct the error.
3. What other step(s) would be taken in connection with the error?

E 14–17 Note with unrealistic interest rate; borrower; amortization schedule  **LO14–3**

Amber Mining and Milling, Inc., contracted with Truax Corporation to have constructed a custom-made lathe.

- The machine was completed and ready for use on January 1, 2024.
- Amber paid for the lathe by issuing a \$600,000, three-year note that specified 4% interest, payable annually on December 31 of each year.
- The cash market price of the lathe was unknown.
- It was determined by comparison with similar transactions that 12% was a reasonable rate of interest.

Required:

1. Prepare the journal entry on January 1, 2024, for Amber Mining and Milling's purchase of the lathe.
2. Prepare an amortization schedule for the three-year term of the note.
3. Prepare the journal entries to record (a) interest for each of the three years and (b) payment of the note at maturity.

E 14–18 Note with unrealistic interest rate; lender; amortization schedule  **LO14–3**

Refer to the situation described in  **E 14–17**.

Required:

1. Prepare the journal entry on January 1, 2024, for Truax Corporation's sale of the lathe. Assume Truax spent \$400,000 to construct the lathe.
2. Prepare an amortization schedule for the three-year term of the note.
3. Prepare the journal entries to record (a) interest for each of the three years and (b) payment of the note at maturity for Truax.

E 14–19 Installment note; lender; amortization schedule  **LO14–3**

FinanceCo lent \$8 million to Corbin Construction on January 1, 2024, to construct a playground. Corbin signed a three-year, 6% installment note to be paid in three equal payments at the end of each year.

Required:

1. Prepare the journal entry for FinanceCo's lending the funds on January 1, 2024.
2. Prepare an amortization schedule for the three-year term of the installment note.
3. Prepare the journal entry for the first installment payment on December 31, 2024.
4. Prepare the journal entry for the third installment payment on December 31, 2026.

E 14–20 Installment note; amortization schedule  **LO14–3**

American Food Services, Inc., acquired a packaging machine from Barton and Barton Corporation.

- Barton and Barton completed construction of the machine on January 1, 2024.
- In payment for the \$4 million machine, American Food Services issued a four-year installment note to be paid in four equal payments at the end of each year.
- The payments include interest at the rate of 10%.

Required:

1. Prepare the journal entry for American Food Services' purchase of the machine on January 1, 2024.
2. Prepare an amortization schedule for the four-year term of the installment note.
3. Prepare the journal entry for the first installment payment on December 31, 2024.
4. Prepare the journal entry for the third installment payment on December 31, 2026.

E 14–21 Installment note; financial statement effects  **LO14–3**

LCD Industries purchased a supply of electronic components from Entel Corporation on November 1, 2024. In payment for the \$24 million purchase, LCD issued a 1-year installment note to be paid in equal monthly payments at the end of each month. The payments include interest at the rate of 12%.

Required:

1. Prepare the journal entry for LCD's purchase of the components on November 1, 2024.
2. Prepare the journal entry for the first installment payment on November 30, 2024.
3. What is the amount of interest expense that LCD will report in its income statement for the year ended December 31, 2024?

E 14–22 FASB codification research  **LO14–2**,  **LO14–3**,
 **LO14–4**

Access the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org). Determine the specific eight- or nine-digit Codification citation (XXX-XX-XX-XX) for accounting for each of the following items:

1. Disclosure requirements for maturities of long-term debt.
2. How to estimate the value of a note when a note having no ready market and no interest rate is exchanged for a noncash asset without a readily available fair value.
3. When the straight-line method can be used as an alternative to the interest method of determining interest.

E 14–23 Early extinguishment  **LO14–5**

The balance sheet of River Electronics Corporation as of December 31, 2023, included 12.25% bonds having a face amount of \$90 million. The bonds had been issued in 2016 and had a remaining discount of \$3 million at December 31, 2023. On January 1, 2024, River Electronics called the bonds before their scheduled maturity at the call price of 102.

Required:

Prepare the journal entry by River Electronics to record the redemption of the bonds at January 1, 2024.

E 14–24 Convertible bonds; straight-line interest  **LO14–5**

On January 1, 2024, Gless Textiles issued \$12 million of 9%, 10-year convertible bonds at 101.

- The bonds pay interest on June 30 and December 31.
- Each \$1,000 bond is convertible into 40 shares of Gless's no par common stock.
- Bonds that are similar in all respects, except that they are nonconvertible, currently are selling at 99 (that is, 99% of face amount).
- Century Services purchased 10% of the issue as an investment.

Required:

1. Prepare the journal entries for the issuance of the bonds by Gless and the purchase of the bond investment by Century.
2. Prepare the journal entries for the June 30, 2028, interest payment by both Gless and Century assuming both use the straight-line method.
3. On July 1, 2029, when Gless's common stock had a market price of \$33 per share, Century converted the bonds it held. Prepare the journal entries by both Gless and Century for the conversion of the bonds (book value method).

E 14–25 IFRS; convertible bonds  **LO14–5**,  **LO14–7**

Refer to the situation described in  **E 14–24**.

Required:

How might your solution to requirement 1 for the issuer of the bonds differ if Gless Textiles prepares its financial statements according to International Financial Reporting Standards? Include any appropriate journal entry in your response.

E 14–26 Convertible bonds; induced conversion  **LO14–5**

On January 1, 2024, Madison Products issued \$40 million of 6%, 10-year convertible bonds at a net price of \$40.8 million.

- Madison recently issued similar, but nonconvertible, bonds at 99 (that is, 99% of face amount). The bonds pay interest on June 30 and December 31. Each \$1,000 bond is convertible into 30 shares of Madison's no par common stock. Madison records interest by the straight-line method.
- On June 1, 2026, Madison notified bondholders of its intent to call the bonds at face value plus a 1% call premium on July 1, 2026. By June 30, all bondholders had chosen to convert their bonds into shares as of the interest payment date. On June 30, Madison paid the semiannual interest and issued the requisite number of shares for the bonds being converted.

Required:

1. Prepare the journal entry for the issuance of the bonds by Madison.
2. Prepare the journal entry for the June 30, 2024, interest payment.

3. Prepare the journal entries for the June 30, 2026, interest payment by Madison and the conversion of the bonds (book value method).

E 14–27 IFRS; convertible bonds  LO14–5,  LO14–7

IFRS

Refer to the situation described in  E 14–26.

Required:

How might your solution for the issuer of the bonds differ *if* Madison Products prepares its financial statements according to International Financial Reporting Standards? Include any appropriate journal entries in your response.

E 14–28 Bonds with detachable warrants  LO14–5

On August 1, 2024, Perez Communications issued \$30 million of 10% nonconvertible bonds at 104.

- The bonds are due on July 31, 2044.
- Each \$1,000 bond was issued with 20 detachable stock warrants, each of which entitled the bondholder to purchase, for \$60, one share of Perez Communications' no par common stock.
- Interstate Containers purchased 20% of the bond issue.
- On August 1, 2024, the market value of the common stock was \$58 per share and the market value of each warrant was \$8.

In February 2035, when Perez common stock had a market price of \$72 per share and the unamortized discount balance was \$1 million, Interstate Containers exercised the warrants it held.

Required:

1. Prepare the journal entries on August 1, 2024, to record (a) the issuance of the bonds by Perez and (b) the investment by Interstate.
2. Prepare the journal entries for both Perez and Interstate in February 2035, to record the exercise of the warrants.

E 14–29 Reporting bonds at fair value LO14–6

[This is a variation of  E 14–13 modified to consider the fair value option for reporting liabilities.]

Federal Semiconductors issued 11% bonds, dated January 1, with a face amount of \$800 million on January 1, 2024.

- The bonds sold for \$739,813,200 and mature on December 31, 2043 (20 years).
- For bonds of similar risk and maturity the market yield was 12%.
- Interest is paid semiannually on June 30 and December 31.
- Federal determines interest at the effective rate.
- Federal elected the option to report these bonds at their fair value.
- On December 31, 2024, the fair value of the bonds was \$730 million as determined by their market value in the over-the-counter market.

Required:

1. Prepare the journal entry to adjust the bonds to their fair value for presentation in the December 31, 2024, balance sheet. Federal determined that none of the change in fair value was due to a decline in general interest rates.
2. Assume the fair value of the bonds on December 31, 2025, had risen to \$736 million. Prepare the journal entry to adjust the bonds to their fair value for presentation in the December 31, 2025, balance sheet. Federal determined that one-half of the increase in fair value was due to a decline in general interest rates.

E 14–30 Reporting bonds at fair value LO14–6

On January 1, 2024, Rapid Airlines issued \$200 million of its 8% bonds for \$184 million.

- The bonds were priced to yield 10%.
- Interest is payable semiannually on June 30 and December 31.
- Rapid Airlines records interest at the effective rate and elected the option to report these bonds at their fair value.
- On December 31, 2024, the fair value of the bonds was \$188 million as determined by their market value in the over-the-counter market.

- Rapid determined that \$1,000,000 of the increase in fair value was due to a decline in general interest rates.

Required:

1. Prepare the journal entry to record interest on June 30, 2024 (the first interest payment).
2. Prepare the journal entry to record interest on December 31, 2024 (the second interest payment).
3. Prepare the journal entry to adjust the bonds to their fair value for presentation in the December 31, 2024, balance sheet.

E 14–31 Reporting bonds at fair value; calculate fair value

 **LO14–6**

On January 1, 2024, Essence Communications issued \$800,000 of its 10-year, 8% bonds for \$700,302.

- The bonds were priced to yield 10%.
- Interest is payable semiannually on June 30 and December 31.
- Essence Communications records interest at the effective rate and elected the option to report these bonds at their fair value.
- On December 31, 2024, the market interest rate for bonds of similar risk and maturity was 9%.The bonds are not traded on an active exchange.
- The decrease in the market interest rate was due to a 1% decrease in general (risk-free) interest rates.

Required:

1. Using the information provided, estimate the fair value of the bonds at December 31, 2024.
2. Prepare the journal entry to record interest on June 30, 2024 (the first interest payment).
3. Prepare the journal entry to record interest on December 31, 2024 (the second interest payment).
4. Prepare the journal entry to adjust the bonds to their fair value for presentation in the December 31, 2024, balance sheet.

E 14–32 Accrued interest  **Appendix A**

On March 1, 2024, Brown-Ferring Corporation issued \$100 million of 12% bonds, dated January 1, 2024, for \$99 million (plus accrued interest). The bonds mature on December 31, 2043, and pay interest semiannually on June 30 and December 31. Brown-Ferring's fiscal period is the calendar year.

Required:

1. Determine the amount of accrued interest that was included in the proceeds received from the bond sale.
2. Prepare the journal entry for the issuance of the bonds by Brown-Ferring.

E 14–33 Troubled debt restructuring; debt settled

 **Appendix B**

At January 1, 2024, Transit Developments owed First City Bank Group \$600,000, under an 11% note with three years remaining to maturity.

- Due to financial difficulties, Transit was unable to pay the previous year's interest.
- First City Bank Group agreed to settle Transit's debt in exchange for land having a fair value of \$450,000.
- Transit purchased the land in 2020 for \$325,000.

Required:

Prepare the journal entry(s) to record the restructuring of the debt by Transit Developments.

E 14–34 Troubled debt restructuring; modification of terms

 **Appendix B**

At January 1, 2024, Mahmoud Industries, Inc., owed Second BancCorp \$12 million under a 10% note due December 31, 2026. Interest was paid last on December 31, 2022. Mahmoud was experiencing severe financial difficulties and asked Second BancCorp to modify the terms of the debt agreement. After negotiation Second BancCorp agreed to:

- a. Forgive the interest accrued for the year just ended.
- b. Reduce the remaining two years' interest payments to \$1 million each and delay the first payment until December 31, 2025.
- c. Reduce the unpaid principal amount to \$11 million.

Required:

Prepare the journal entries by Mahmoud Industries, Inc., necessitated by the restructuring of the debt at (1) January 1, 2024; (2) December 31, 2025; and (3) December 31, 2026.

E 14–35 Troubled debt restructuring; modification of terms; unknown effective rate  **Appendix B**

At January 1, 2024, NCI Industries, Inc., was indebted to First Federal Bank under a \$240,000, 10% unsecured note.

- The note was signed January 1, 2017, and was due December 31, 2025.
- Annual interest was last paid on December 31, 2022.
- NCI was experiencing severe financial difficulties and negotiated a restructuring of the terms of the debt agreement.
- First Federal agreed to reduce last year's interest and the remaining two years' interest payments to \$11,555 each and delay all payments until December 31, 2025, the maturity date.

Required:

Prepare the journal entries by NCI Industries, Inc., necessitated by the restructuring of the debt at: (1) January 1, 2024; (2) December 31, 2024; and (3) December 31, 2025.

E 14–36 FASB codification research; legal fees in a troubled debt restructuring  **Appendix B**

In negotiating and effecting a troubled debt restructuring, the creditor usually incurs various legal costs. The *FASB Accounting Standards Codification* represents the single source of authoritative U.S. generally accepted accounting principles.

Required:

1. Obtain the relevant authoritative literature on the accounting treatment of legal fees incurred by a creditor to effect a troubled debt restructuring using the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org) and select Basic View for free access.

2. What is the specific eight-digit Codification citation (XXX-XX-XX-X) that describes the guidelines for reporting legal costs?
3. What is the appropriate accounting treatment?

E 14–37 General ledger exercise; bonds; installment note, early extinguishment  **LO14–2**,  **LO14–3**,  **LO14–5**

On January 1, 2024, the general ledger of Freedom Fireworks includes the following account balances:

| Account Title | Debits | Credits |
|--------------------------------------|------------------|------------------|
| Cash | \$ 101,200 | |
| Accounts receivable | 34,000 | |
| Inventory | 152,000 | |
| Land | 67,300 | |
| Buildings | 120,000 | |
| Allowance for uncollectible accounts | | \$ 1,800 |
| Accumulated depreciation | | 9,600 |
| Accounts payable | | 17,700 |
| Bonds payable | | 120,000 |
| Discount on bonds payable | 30,000 | |
| Common stock | | 200,000 |
| Retained earnings | | <u>155,400</u> |
| Totals | <u>\$504,500</u> | <u>\$504,500</u> |

During January 2024, the following transactions occurred:

- January 1 Borrowed \$100,000 from Captive Credit Corporation. The installment note bears interest at 7% annually and matures in 5 years. Payments of \$1,980 are required at the end of each month for 60 months.

- January 1 Called the bonds at the contractual call price of \$100,000. The 6% bonds pay interest semiannually each June 30 and December 31.
- January 4 Received \$31,000 from customers on accounts receivable.
- January 10 Paid cash on accounts payable, \$11,000.
- January 15 Paid cash for salaries, \$28,900.
- January 30 Firework sales for the month totalled \$195,000. Sales included \$65,000 for cash and \$130,000 on account. The cost of the units sold was \$112,500.
- January 31 Paid the first monthly installment of \$1,980 related to the \$100,000 borrowed on January 1. (Round your interest calculation to the nearest dollar.)

The following information is available on January 31, 2024.

1. Depreciation on the building for the month of January is calculated using the straight-line method. At the time the building was purchased, the company estimated a service life of ten years and a residual value of \$24,000.
2. At the end of January, \$3,000 of accounts receivable are past due, and the company estimates that 50% of these accounts will not be collected. Of the remaining accounts receivable, the company estimates that 2% will not be collected. No accounts were written off as uncollectible in January.
3. Unpaid salaries at the end of January are \$26,100.
4. Accrued income taxes at the end of January are \$5,000.

Required:

1. Record each of the transactions listed above in the “General Journal” tab (these are shown as items 1-7) assuming a FIFO perpetual inventory system. The transaction on January 30 requires two entries: one to record sales revenue and one to record cost of goods sold. Review the “General Ledger” and the “Trial Balance” tabs to see the effect of the transactions on the account balances.
2. Record adjusting entries on January 31. in the “General Journal” tab (these are shown as items 8-11).
3. Review the adjusted “Trial Balance” as of January 31, 2024, in the “Trial Balance” tab.
4. Prepare an income statement for the period ended January 31, 2024, in the “Income Statement” tab).

5. Prepare a classified balance sheet as of January 31, 2024, in the “Balance Sheet” tab.
6. Record closing entries in the “General Journal” tab (these are shown as items 12 and 13).
7. Using the information from the requirements above, complete the “Analysis” tab.
 - a. Calculate the debt to equity ratio. If the average debt to equity ratio for the industry is 1.0, is Freedom Fireworks more or less leveraged than other companies in the same industry?
 - b. Calculate the times interest earned ratio. If the average times interest earned ratio for the industry is 20 times, is the company more or less able to meet interest payments than other companies in the same industry?

E 14–38 Recording debt under the Payroll Protection Program; loan forgiven; COVID-19  **LO14–3**,  **COVID-19**

Hope Still, chief executive of Great Divide Technologies (GDT), a state-certified aircraft repair company, worked with her local bank to get a \$210,000 loan under the Paycheck Protection Program in early May of 2020 that allowed her to keep paying her 19 employees. The loan would be fully forgiven if GDT uses at least 60% of the funds for payroll costs and the remainder for interest on mortgages, rent, and utilities. Otherwise, the loan plus 1% accrued annual interest must be repaid after two years. The company recorded the loan with a \$210,000 credit to note payable.

Required:

Prepare the appropriate journal entry GDT would record when the conditions for debt forgiveness have been met assuming that GDT views the funding as being most closely aligned with guidance provided:

- a. For debt by FASB ASC 405-20/470-50.
- b. For grants to not-for-profit organizations by FASB ASC 958-605.
- c. For grants to business organizations by IFRS–IAS20.

E 14–39 Recording debt under the Payroll Protection Program; loan not forgiven; COVID-19  **LO14–3**,  **COVID-19**

Hope Still, chief executive of Great Divide Technologies (GDT), a state-certified aircraft repair company, worked with her local bank to get a \$210,000 loan under the Paycheck Protection Program in early May of 2020 that allowed her to keep paying her 19 employees.

The loan would be fully forgiven if GDT uses at least 60% of the funds for payroll costs and the remainder for interest on mortgages, rent, and utilities. Otherwise, the loan plus 1% accrued annual interest must be repaid after two years. The company recorded the loan with a \$210,000 credit to note payable.

Required:

Prepare the appropriate journal entry GDT would record when, after two years, it's determined that the conditions for debt forgiveness will not be met. Assume that accrued interest had been recorded with debits to interest expense and credits to the note payable.

Problems

P 14–1 Determining the price of bonds; discount and premium; issuer and investor **LO14–2**

On January 1, 2024, Instaform, Inc., issued 10% bonds with a face amount of \$50 million, dated January 1.

- The bonds mature in 2043 (20 years).
- The market yield for bonds of similar risk and maturity is 12%.
- Interest is paid semiannually.

Required:

1. Determine the price of the bonds at January 1, 2024, and prepare the journal entry to record their issuance by Instaform.
2. Assume the market rate was 9%. Determine the price of the bonds at January 1, 2024, and prepare the journal entry to record their issuance by Instaform.
3. Assume Broadcast Electronics purchased the entire issue in a private placement of the bonds. Using the data in requirement 2, prepare the journal entry to record the purchase by Broadcast.

P 14–2 Effective interest; financial statement effects **LO14–2**

On January 1, 2024, Baddour, Inc., issued 10%, 12-year bonds with a face amount of \$160 million.

- The bonds were priced at \$140 million to yield 12%.
- Interest is paid semiannually on June 30 and December 31.
- Baddour's fiscal year ends September 30.

Required:

1. What amount(s) related to the bonds would Baddour report in its balance sheet at September 30, 2024?

2. What amount(s) related to the bonds would Baddour report in its income statement for the year ended September 30, 2024?
3. What amount(s) related to the bonds would Baddour report in its statement of cash flows for the year ended September 30, 2024? In which section(s) should the amount(s) appear?

P 14–3 Straight-line and effective interest compared **LO14–2**

On January 1, 2024, Reyes Recreational Products issued \$100,000, 9%, four-year bonds. Interest is paid semiannually on June 30 and December 31. The bonds were issued at \$96,768 to yield an annual return of 10%.

Required:

1. Prepare an amortization schedule that determines interest at the effective interest rate.
2. Prepare an amortization schedule by the straight-line method.
3. Prepare the journal entries to record interest expense on June 30, 2026, by each of the two approaches.
4. Explain why the pattern of interest differs between the two methods.
5. Assuming the market rate is still 10%, what price would a second investor pay the first investor on June 30, 2026, for \$10,000 of the bonds?

P 14–4 Bond amortization schedule **LO14–2**

On January 1, 2024, Tennessee Harvester Corporation issued debenture bonds that pay interest semiannually on June 30 and December 31. Portions of the bond amortization schedule appear below:

| Payment | Cash Payment | Effective Interest | Increase in Balance | Outstanding Balance |
|----------------|---------------------|---------------------------|----------------------------|----------------------------|
| 1 | 320,000 | 331,364 | 11,364 | 6,638,637 |
| 2 | 320,000 | 331,932 | 11,932 | 6,650,569 |
| 3 | 320,000 | 332,528 | 12,528 | 6,663,097 |
| 4 | 320,000 | 333,155 | 13,155 | 6,676,252 |
| 5 | 320,000 | 333,813 | 13,813 | 6,690,065 |

| Payment | Cash Payment | Effective Interest | Increase in Balance | Outstanding Balance |
|-----------|----------------|--------------------|---------------------|---------------------|
| 6 | 320,000 | 334,503 | 14,503 | 6,704,568 |
| - | - | - | - | - |
| - | - | - | - | - |
| - | - | - | - | - |
| 38 | 320,000 | 389,107 | 69,107 | 7,851,247 |
| 39 | 320,000 | 392,562 | 72,562 | 7,923,809 |
| 40 | 320,000 | 396,191 | 76,191 | 8,000,000 |

Required:

1. What is the face amount of the bonds?
2. What is the initial selling price of the bonds?
3. What is the term to maturity in years?
4. Interest is determined by what approach?
5. What is the stated annual interest rate?
6. What is the effective annual interest rate?
7. What is the total cash interest paid over the term to maturity?
8. What is the total effective interest expense recorded over the term to maturity?

P 14–5 Issuer and investor; effective interest; amortization schedule; adjusting entries  **LO14–2**

On February 1, 2024, Sanyal Motor Products issued 9% bonds, dated February 1, with a face amount of \$80 million.

- The bonds mature on January 31, 2028 (four years).
- The market yield for bonds of similar risk and maturity was 10%.
- Interest is paid semiannually on July 31 and January 31.
- Barnwell Industries acquired \$80,000 of the bonds as a long-term investment.

- The fiscal years of both firms end December 31.

Required:

1. Determine the price of the bonds issued on February 1, 2024.
2. Prepare amortization schedules that indicate (a) Sanyal's effective interest expense and (b) Barnwell's effective interest revenue for each interest period during the term to maturity.
3. Prepare the journal entries to record (a) the issuance of the bonds by Sanyal and (b) Barnwell's investment on February 1, 2024.
4. Prepare the journal entries by both firms to record all events related to the bonds through January 31, 2026.

P 14–6 Issuer and investor; straight-line method; adjusting entries  **LO14–2**,  **Appendix A**

On April 1, 2024, Western Communications, Inc., issued 12% bonds, dated March 1, 2024, with face amount of \$30 million.

- The bonds sold for \$29.3 million and mature on February 28, 2027.
- Interest is paid semiannually on August 31 and February 28.
- Stillworth Corporation acquired \$30,000 of the bonds as a long-term investment.
- The fiscal years of both firms end December 31, and both firms use the straight-line method.

Required:

1. Prepare the journal entries to record (a) issuance of the bonds by Western and (b) Stillworth's investment on April 1, 2024.
2. Prepare the journal entries by both firms to record all events related to the bonds through maturity.

P 14–7 Issuer and investor; effective interest  **LO14–2**

McWherter Instruments sold \$400 million of 8% bonds, dated January 1, on January 1, 2024.

- The bonds mature on December 31, 2043 (20 years).

- For bonds of similar risk and maturity, the market yield was 10%.
- Interest is paid semiannually on June 30 and December 31.
- Blanton Technologies, Inc., purchased \$400,000 of the bonds as a long-term investment.

Required:

1. Determine the price of the bonds issued on January 1, 2024.
2. Prepare the journal entries to record (a) their issuance by McWherter and (b) Blanton's investment on January 1, 2024.
3. Prepare the journal entries by (a) McWherter and (b) Blanton to record interest on June 30, 2024 (at the effective rate).
4. Prepare the journal entries by (a) McWherter and (b) Blanton to record interest on December 31, 2024 (at the effective rate).

P 14–8 Bonds; effective interest; partial period interest; financial statement effects  **LO14–2**

The fiscal year ends December 31 for Lake Hamilton Development. To provide funding for its Moonlight Bay project, LHD issued 5% bonds with a face amount of \$500,000 on November 1, 2024. The bonds sold for \$442,215, a price to yield the market rate of 6%. The bonds mature October 31, 2043 (20 years). Interest is paid semiannually on April 30 and October 31.

Required:

1. What amount of interest expense related to the bonds will LHD report in its income statement for the year ending December 31, 2024?
2. What amount(s) related to the bonds will LHD report in its balance sheet at December 31, 2024?
3. What amount of interest expense related to the bonds will LHD report in its income statement for the year ending December 31, 2025?
4. What amount(s) related to the bonds will LHD report in its balance sheet at December 31, 2025?

P 14–9 Zero-coupon bonds **LO14–2**

On January 1, 2024, Rodriguez Window and Pane issued \$18 million of 10-year, zero-coupon bonds for \$5,795,518.

Required:

1. Prepare the journal entry to record the bond issue.
2. Determine the effective rate of interest.
3. Prepare the journal entry to record annual interest expense at December 31, 2024.
4. Prepare the journal entry to record annual interest expense at December 31, 2025.
5. Prepare the journal entry to record the extinguishment at maturity.

P 14–10 Notes exchanged for assets; unknown effective rate **LO14–3**

At the beginning of the year, Lambert Motors issued the three notes described below. Interest is paid at year-end.

1. The company issued a two-year, 12%, \$600,000 note in exchange for a tract of land. The current market rate of interest is 12%.
2. Lambert acquired some office equipment with a fair value of \$94,643 by issuing a one-year, \$100,000 note. The stated interest on the note is 6%. The current market rate of interest is 12%.
3. The company purchased a building by issuing a three-year installment note. The note is to be repaid in equal installments of \$1 million per year beginning one year hence. The current market rate of interest is 12%.

Required:

Prepare the journal entries to record each of the three transactions and the interest expense at the end of the first year for each.

P 14–11 Note with unrealistic interest rate **LO14–3**

At January 1, 2024, Brant Cargo acquired equipment by issuing a five-year, \$150,000 (payable at maturity), 4% note. The market rate of interest for notes of similar risk is 10%.

Required:

1. Prepare the journal entry for Brant Cargo to record the purchase of the equipment.
2. Prepare the journal entry for Brant Cargo to record the interest at December 31, 2024.
3. Prepare the journal entry for Brant Cargo to record the interest at December 31, 2025.

P 14–12 Noninterest-bearing installment note **LO14–3**

At the beginning of 2024, VHF Industries acquired a machine with a fair value of \$6,074,700 by issuing a four-year, noninterest-bearing note in the face amount of \$8 million. The note is payable in four annual installments of \$2 million at the end of each year.

Required:

1. What is the effective rate of interest implicit in the agreement?
2. Prepare the journal entry to record the purchase of the machine.
3. Prepare the journal entry to record the first installment payment at December 31, 2024.
4. Prepare the journal entry to record the second installment payment at December 31, 2025.
5. Suppose the market value of the machine was unknown at the time of purchase, but the market rate of interest for notes of similar risk was 11%. Prepare the journal entry to record the purchase of the machine.

P 14–13 Note and installment note with unrealistic interest rate **LO14–3**

Braxton Technologies, Inc., constructed a conveyor for A&G Warehouse that was completed and ready for use on January 1, 2024.

- A&G paid for the conveyor by issuing a \$100,000, four-year note that specified 5% interest to be paid on December 31 of each year, and the note is to be repaid at the end of four years.
- The conveyor was custom-built for A&G, so its cash price was unknown.
- By comparison with similar transactions it was determined that a reasonable interest rate was 10%.

Required:

1. Prepare the journal entry for A&G's purchase of the conveyor on January 1, 2024.

2. Prepare an amortization schedule for the four-year term of the note.
3. Prepare the journal entry for A&G's third interest payment on December 31, 2026.
4. If A&G's note had been an installment note to be paid in four equal payments at the end of each year beginning December 31, 2024, what would be the amount of each installment?
5. Prepare an amortization schedule for the four-year term of the installment note.
6. Prepare the journal entry for A&G's third installment payment on December 31, 2026.

P 14–14 Early extinguishment of debt **LO14–5**

Three years ago American Insulation Corporation issued 10%, \$800,000, 10-year bonds for \$770,000. American Insulation exercised its call privilege and retired the bonds for \$790,000. The corporation uses the straight-line method to determine interest.

Required:

Prepare the journal entry to record the call of the bonds.

P 14–15 Early extinguishment; effective interest **LO14–5**

The long-term liability section of Twin Digital Corporation's balance sheet as of December 31, 2023, included 12% bonds having a face amount of \$20 million and a remaining discount of \$1 million. Disclosure notes indicate the bonds were issued to yield 14%.

Interest expense is recorded at the effective interest rate and paid on January 1 and July 1 of each year. On July 1, 2024, Twin Digital retired the bonds at 102 (\$20.4 million) before their scheduled maturity.

Required:

1. Prepare the journal entry by Twin Digital to record the semiannual interest on July 1, 2024.
2. Prepare the journal entry by Twin Digital to record the redemption of the bonds on July 1, 2024.

P 14–16 Debt issue costs; issuance; expensing; early extinguishment; straight-line amortization **LO14–2**, **LO14–5**

Cupola Fan Corporation issued 10%, \$400,000, 10-year bonds for \$385,000 on June 30, 2024.

- Debt issue costs were \$1,500.
- Interest is paid semiannually on December 31 and June 30.
- One year from the issue date (July 1, 2025), the corporation exercised its call privilege and retired the bonds for \$395,000.
- The corporation uses the straight-line method both to determine interest expense and to amortize debt issue costs.

Required:

1. Prepare the journal entry to record the issuance of the bonds.
2. Prepare the journal entries to record the payment of interest and amortization of debt issue costs on December 31, 2024.
3. Prepare the journal entries to record the payment of interest and amortization of debt issue costs on June 30, 2025.
4. Prepare the journal entry to record the call of the bonds.

P 14–17 IFRS; transaction costs  **LO14–2**,  **LO14–7**

IFRS

Refer to the situation described in  **P 14–16**.

Required:

How might your solution for the issuer of the bonds differ if Cupola prepares its financial statements according to International Financial Reporting Standards? Include any appropriate journal entries in your response.

P 14–18 Early extinguishment  **LO14–5**

The long-term liability section of Eastern Post Corporation's balance sheet as of December 31, 2023, included 10% bonds having a face amount of \$40 million and a remaining premium of \$6 million. On January 1, 2024, Eastern Post retired some of the bonds before their scheduled maturity.

Required:

Prepare the journal entry by Eastern Post to record the redemption of the bonds under each of the independent circumstances below:

1. Eastern Post called half the bonds at the call price of 102 (102% of face amount).
2. Eastern Post repurchased \$10 million of the bonds on the open market at their market price of \$10.5 million.

P 14–19 Convertible bonds; induced conversion; bonds with detachable warrants; disclosure note  **LO14–5**

Bradley-Link's December 31, 2024, balance sheet included the following items:

| Long-Term Liabilities | (\$ in millions) |
|---|------------------|
| 9.6% convertible bonds, callable at 101 beginning in 2025, due 2028 (net of unamortized discount of \$2) [note 8] | \$198 |
| 10.4% registered bonds callable at 104 beginning in 2034, due 2038 (net of unamortized discount of \$1) [note 8] | 49 |
| Shareholders' Equity | |
| Equity—stock warrants | 4 |

Note 8: Bonds (in part)

The 9.6% bonds were issued in 2011 at 97.5 to yield 10%. Interest is paid semiannually on June 30 and December 31. Each \$1,000 bond is convertible into 40 shares of the Company's no par common stock.

The 10.4% bonds were issued in 2015 at 102 to yield 10%. Interest is paid semiannually on June 30 and December 31. Each \$1,000 bond was issued with 40 detachable stock warrants, each of which entitles the holder to purchase one share of the Company's no par common stock for \$25, beginning 2025.

On January 3, 2025, when Bradley-Link's common stock had a market price of \$32 per share, Bradley-Link called the convertible bonds to force conversion. Ninety percent were

converted; the remainder were acquired at the call price. When the common stock price reached an all-time high of \$37 in December of 2025, 40% of the warrants were exercised.

Required:

1. Prepare the journal entries that were recorded when each of the two bond issues was originally sold in 2011 and 2015.
2. Prepare the journal entry to record (book value method) the conversion of 90% of the convertible bonds in January 2025 and the retirement of the remainder.
3. Assume Bradley-Link induced conversion by offering \$150 cash for each bond converted. Prepare the journal entry to record (book value method) the conversion of 90% of the convertible bonds in January 2025.
4. Assume Bradley-Link induced conversion by modifying the conversion ratio to exchange 45 shares for each bond rather than the 40 shares provided in the contract. Prepare the journal entry to record (book value method) the conversion of 90% of the convertible bonds in January 2025.
5. Prepare the journal entry to record the exercise of the warrants in December 2025.

P 14–20 Concepts; terminology  **LO14–1** through  **LO14–5**

Listed below are several terms and phrases associated with long-term debt. Pair each item from List A with the item from List B (by letter) that is most appropriately associated with it.

| List A | List B |
|--|--|
| _____ 1. Effective rate times balance | a. Straight-line method |
| _____ 2. Promises made to bondholders | b. Discount |
| _____ 3. Present value of interest plus present value of principal | c. Liquidation payments after other claims satisfied |
| _____ 4. Call feature | d. Name of owner not registered |
| _____ 5. Debt issue costs | e. Premium |
| _____ 6. Market rate higher than stated rate | f. Checks are mailed directly |
| | g. No specific assets pledged |
| | h. Bond indenture |

| | List A | List B |
|-----------|-----------------------------------|-------------------------------------|
| _____ 7. | Coupon bonds | i. Backed by a lien |
| _____ 8. | Convertible bonds | j. Interest expense |
| _____ 9. | Market rate less than stated rate | k. May become stock |
| _____ 10. | Stated rate times face amount | l. Legal, accounting, printing |
| _____ 11. | Registered bonds | m. Protection against falling rates |
| _____ 12. | Debenture bond | n. Periodic cash payments |
| _____ 13. | Mortgage bond | o. Bond price |
| _____ 14. | Materiality concept | |
| _____ 15. | Subordinated debenture | |

P 14–21 Determine bond price; record interest; report bonds at fair value  **LO14–6**

On January 1, 2024, NFB Visual Aids issued \$800,000 of its 20-year, 8% bonds.

- The bonds were priced to yield 10%.
- Interest is payable semiannually on June 30 and December 31.
- NFB Visual Aids records interest expense at the effective rate and elected the option to report these bonds at their fair value.
- On December 31, 2024, the fair value of the bonds was \$668,000 as determined by their market value in the over-the-counter market.
- General (risk-free) interest rates did not change during 2024.

Required:

1. Determine the price of the bonds at January 1, 2024, and prepare the journal entry to record their issuance.
2. Prepare the journal entry to record interest on June 30, 2024 (the first interest payment).
3. Prepare the journal entry to record interest on December 31, 2024 (the second interest payment).

4. Prepare the journal entry to adjust the bonds to their fair value for presentation in the December 31, 2024, balance sheet.

P 14–22 Report bonds at fair value; quarterly reporting; financial statement effects  **LO14–6**

Appling Enterprises issued 8% bonds with a face amount of \$400,000 on January 1, 2024.

- The bonds sold for \$331,364 and mature in 2043 (20 years).
- For bonds of similar risk and maturity the market yield was 10%.
- Interest is paid semiannually on June 30 and December 31.
- Appling determines interest expense at the effective rate.
- Appling elected the option to report these bonds at their fair value.
- The fair values of the bonds at the end of each quarter during 2024 as determined by their market values in the over-the-counter market were the following:

| | |
|---------------------|------------------|
| March 31 | \$350,000 |
| June 30 | 340,000 |
| September 30 | 335,000 |
| December 31 | 342,000 |

General (risk-free) interest rates did not change during 2024.

Required:

1. By how much will Appling's comprehensive income be increased or decreased by the bonds (ignoring taxes) in the March 31 *quarterly* financial statements?
2. By how much will Appling's comprehensive income be increased or decreased by the bonds (ignoring taxes) in the June 30 *quarterly* financial statements?
3. By how much will Appling's comprehensive income be increased or decreased by the bonds (ignoring taxes) in the September 30 *quarterly* financial statements?
4. By how much will Appling's comprehensive income be increased or decreased by the bonds (ignoring taxes) in the December 31 *annual* financial statements?

P 14–23 Investments in bonds; accrued interest; sale; straight-line interest; financial statement effects  **LO14–2**,
 **Appendix A**

The following transactions relate to bond investments of Livermore Laboratories. The company's fiscal year ends on December 31. Livermore uses the straight-line method to determine interest.

2024

- July 1** Purchased \$16 million of Bracecourt Corporation 10% debentures, due in 20 years (June 30, 2044), for \$15.7 million. Interest is payable on January 1 and July 1 of each year.
- Oct. 1** Purchased \$30 million of 12% Framm Pharmaceuticals debentures, due May 31, 2034, for \$31,160,000 plus accrued interest. Interest is payable on June 1 and December 1 of each year.
- Dec. 1** Received interest on the Framm bonds.
- 31** Accrued interest.

2025

- Jan. 1** Received interest on the Bracecourt bonds.
- June 1** Received interest on the Framm bonds.
- July 1** Received interest on the Bracecourt bonds.
- Sept. 1** Sold \$15 million of the Framm bonds at 101 plus accrued interest.
- Dec. 1** Received interest on the remaining Framm bonds.
- 31** Accrued interest.

2026

- Jan. 1** Received interest on the Bracecourt bonds.
- Feb. 28** Sold the remainder of the Framm bonds at 102 plus accrued interest.
- Dec. 31** Accrued interest.

Required:

1. Prepare the appropriate journal entries for these long-term bond investments.
2. By how much will Livermore Labs' earnings increase in each of the three years as a result of these investments? (Ignore income taxes.)

P 14–24 Accrued interest; effective interest; financial statement effects  **Appendix A**

On March 1, 2024, Baddour, Inc., issued 10% bonds, dated January 1, with a face amount of \$160 million.

- The bonds were priced at \$140 million (plus accrued interest) to yield 12%.
- The price if issued on January 1 would have been \$137.25 million.
- Interest is paid semiannually on June 30 and December 31.
- Baddour's fiscal year ends September 30.

Required:

1. What would be the amount(s) related to the bonds Baddour would report in its balance sheet at September 30, 2024?
2. What would be the amount(s) related to the bonds that Baddour would report in its income statement for the year ended September 30, 2024?
3. What would be the amount(s) related to the bonds that Baddour would report in its statement of cash flows for the year ended September 30, 2024?

P 14–25 Troubled debt restructuring  **Appendix B**

At January 1, 2024, Rothschild Chair Company, Inc., was indebted to First Lincoln Bank under a \$20 million, 10% unsecured note. The note was signed January 1, 2021, and was due December 31, 2027. Annual interest was last paid on December 31, 2022. Rothschild Chair Company was experiencing severe financial difficulties and negotiated a restructuring of the terms of the debt agreement.

Required:

Prepare all journal entries by Rothschild Chair Company, Inc., to record the restructuring and any remaining transactions relating to the debt under each of the independent circumstances below:

1. First Lincoln Bank agreed to settle the debt in exchange for land having a fair value of \$16 million but carried on Rothschild Chair Company's books at \$13 million.
2. First Lincoln Bank agreed to (a) forgive the interest accrued from last year, (b) reduce the remaining four interest payments to \$1 million each, and (c) reduce the principal to \$15 million.
3. First Lincoln Bank agreed to defer all payments (including accrued interest) until the maturity date and accept \$27,775,000 at that time in settlement of the debt.

Decision Maker's Perspective

Apply your critical-thinking ability to the knowledge you've gained. These cases will provide you an opportunity to develop your research, analysis, judgment, and communication skills. You also will work with other students, integrate what you've learned, apply it in real-world situations, and consider its global and ethical ramifications. This practice will broaden your knowledge and further develop your decision-making abilities.

Real World Case 14–1 Zero-coupon debt; HP Inc. **LO14–2**

Real World Financials

HP Inc. (formerly Hewlett-Packard Company) issued zero-coupon notes at the end of its 1997 fiscal year that mature at the end of its 2017 fiscal year. One billion, eight hundred million dollars face amount of 20-year debt sold for \$968 million, a price to yield 3.149%. In fiscal 2002, HP repurchased \$257 million in face value of the notes for a purchase price of \$127 million, resulting in a gain on the early extinguishment of debt.

Required:

1. What journal entry did HP Inc. use to record the sale in 1997?
2. Using Excel, prepare an amortization schedule for the notes. Assume interest is calculated annually and use numbers expressed in millions of dollars; that is, the face amount is \$1,800.
3. What was the effect on HP's earnings in 1998?
4. From the amortization schedule, determine the book value of the debt at the end of 2002.
5. What journal entry did HP Inc. use to record the early extinguishment of debt in 2002, assuming the purchase was made at the end of the year?

6. If none of the notes is repaid prior to maturity, what entry would HP use to record their repayment at the end of 2017?

Source: Hewlett-Packard Company

Analysis Case 14–2 Issuance of bonds LO14–2

The following appeared in the October 15, 2024, issue of the *Financial Smarts Journal*:

This announcement is not an offer of securities for sale or an offer to buy securities.

New Issue

October 15,
2024

\$750,000,000

CRAFT FOODS, INC.

7.75% Debentures Due October 1, 2034

Price 99.57%

plus accrued interest if any from date of issuance

Copies of the prospectus and the related prospectus supplement may be obtained from such of the undersigned as may legally offer these securities under applicable securities laws.

Keegan Morgan & Co. Inc.

Coldwell Bros. & Co.

Robert Stacks & Co.

Sherwin-William & Co.

Required:

1. Based on the information provided in the announcement, indicate whether the market rate of interest is higher or lower than 7.75% when the Craft Foods bonds were issued.
2. If debt issue costs were \$75,000 and the bonds were issued on an interest payment date, what entry did Craft use to record the sale?

Judgment Case 14–3 Noninterest-bearing debt LO14–3

While reading a recent issue of *Health & Fitness*, a trade journal, Brandon Wilde noticed an ad for equipment he had been seeking for use in his business. The ad offered oxygen therapy equipment under the following terms:

Model BL 44582

\$204,000 zero interest loan

Quarterly payments of \$17,000 for only 3 years

The ad captured Wilde's attention, in part, because he recently had been concerned that the interest charges incurred by his business were getting out of line. The price, though, was somewhat higher than prices for this model he had seen elsewhere.

Required:

You are asked to advise Mr. Wilde on the purchase he is considering.

1. Assume the market rate of interest at the time for this type of transaction is 8%. At what amount should he record the asset purchased and the liability used to purchase it?
2. Assume the market rate of interest is unknown but we know the cash price of the equipment is \$185,430. What is the effective rate of interest?

Judgment Case 14–4 Noninterest-bearing note exchanged for cash and other privileges  **LO14–3**

The Liu Group, Inc., manufactures various kinds of hydraulic pumps. In June 2024, the company signed a four-year purchase agreement with one of its main parts suppliers, Hydraulics, Inc. Over the four-year period, Liu has agreed to purchase 100,000 units of a key component used in the manufacture of its pumps. The agreement allows Liu to purchase the component at a price lower than the prevailing market price at the time of purchase. As part of the agreement, Liu will lend Hydraulics \$200,000 to be repaid after four years with no stated interest (the prevailing market rate of interest for a loan of this type is 10%).

Liu's chief accountant has proposed recording the note receivable at \$200,000. The parts inventory purchase from Hydraulics over the next four years would then be recorded at the actual prices paid.

Required:

You do not agree with the chief accountant's valuation of the note and his intention to value the parts inventory acquired over the four-year period of the agreement at actual prices paid.

1. What entry would you use to account for the initial transaction?
2. What entry would you use to account for the subsequent purchase of 25,000 units of the component for \$650,000 when it's market value is \$26.60 per unit?

Judgment Case 14–5 Analyzing financial statements; financial leverage; interest coverage LO14–1, LO14–4

AGF Foods Company is a large, primarily domestic, consumer foods company involved in the manufacture, distribution, and sale of a variety of food products. Industry averages are derived from Troy's *The Almanac of Business and Industrial Financial Ratios*. Following are the 2024 and 2023 comparative income statements and balance sheets for AGF. (The financial data we use are from actual financial statements of a well-known corporation, but the company name is fictitious, and the numbers and dates have been modified slightly to disguise the company's identity.)

| AGF FOODS COMPANY | | | |
|---|--|----------------|----------------|
| Years Ended December 31, 2024 and 2023 | | | |
| (\$ in millions) | | | |
| Comparative Income Statements | | 2024 | 2025 |
| Net sales | | \$6,440 | \$5,800 |

| Total liabilities and shareholders' equity | <u>\$5,345</u> | <u>\$4,684</u> |

Long-term solvency refers to a company's ability to pay its long-term obligations. Financing ratios provide investors and creditors with an indication of this element of risk.

Required:

1. Calculate the debt to equity ratio for AGF for 2024.
2. The average ratio for the stocks listed on the New York Stock Exchange in a comparable time period was 1.0. Other things being equal, does AGF appear to have higher or lower default risk than others in its industry?
3. Is AGF experiencing favorable or unfavorable financial leverage?
4. Calculate AGF's times interest earned ratio for 2024.
5. The coverage for the stocks listed on the New York Stock Exchange in a comparable time period was 5.1. Other things being equal, does AGF appear to have higher or lower interest coverage than others in its industry?

Real World 14–6 Researching the way long-term debt is reported; Macy’s, Inc LO14–1 through LO14–4

Real World Financials

As a recently hired loan officer for USA Bank, your job description includes evaluating and recommending approval of commercial, real estate, or credit loans. USA has a policy of having its new hires go through a training exercise that includes evaluating a hypothetical loan application from a major corporation. The first step in the exercise is to peruse the financial statements of the chosen company, looking for trends in debt financing and in risk and profitability ratios for recent years. For this task, you are assigned to evaluate Macy’s Inc.

Required:

From Investor Relations at the **Macy’s, Inc.**, (www.macys.com) website, access the company’s 10-K filing for the year ended February 1, 2020. Search or scroll to find the financial statements and related notes.

1. What is the total debt (including current liabilities and deferred taxes) reported in the balance sheet in the most recent two years?
2. Compare the total liabilities (including current liabilities and deferred taxes) with the shareholders’ equity and calculate the debt to equity ratio for the most recent two years.
3. Does Macy’s obtain more financing through notes, bonds, or commercial paper?
4. How would you describe the pattern of required debt payments over the next five years, increasing, decreasing, or exhibiting no discernable pattern?

Analysis Case 14–7 Bonds; conversion; extinguishment LO14–5

On August 31, 2021, Chickasaw Industries issued \$25 million of its 30-year, 5% convertible bonds dated August 31, priced to yield 6%. The bonds are convertible at the option of the investors into 1,500,000 shares of Chickasaw’s common stock. Chickasaw records interest expense at the effective rate. On August 31, 2024, investors in Chickasaw’s convertible bonds tendered 20% of the bonds for conversion into common stock that had a market value of \$20 per share on the date of the conversion. On January 1, 2023, Chickasaw Industries issued \$40 million of its 20-year, 7% bonds dated January 1 at a price to yield 8%. On

December 31, 2024, the bonds were extinguished early through acquisition in the open market by Chickasaw for \$40.5 million.

Required:

1. Using the book value method, does the conversion of the 5% convertible bonds into common stock result in a gain, a loss, or no gain or loss?
2. Using the market value method, by how much does the conversion of the 5% convertible bonds into common stock result in a gain, a loss, or no gain or loss?
3. Were the 7% bonds issued at face value, at a discount, or at a premium?
4. In the second year of the term to maturity, will the amount of interest expense for the 7% bonds be higher than, lower than, or the same as in the first year?
5. Does the early extinguishment of the 7% bonds result in a gain, a loss, or no gain or loss?

Analysis Case 14–8 Is convertible debt a liability or is it shareholders' equity?  **LO14–5**

Some financial instruments can be considered compound instruments in that they have features of both debt and shareholders' equity. The most common example encountered in practice is convertible debt—bonds or notes convertible by the investor into common stock. A topic of debate for several years has been whether:

- **View 1:** Issuers should account for an instrument with both liability and equity characteristics entirely as a liability or entirely as an equity instrument depending on which characteristic governs.
- **View 2:** Issuers should account for an instrument as consisting of a liability component and an equity component that should be accounted for separately.

In considering this question, you should disregard what you know about the current position of the FASB on the issue. Instead, focus on conceptual issues regarding the practicable and theoretically appropriate treatment, unconstrained by GAAP. Also, focus your deliberations on convertible bonds as the instrument with both liability and equity characteristics.

Required:

1. Formulate an argument in support of View 1.
2. Formulate an argument in support of View 2.

Research Case 14–9 Convertible bonds; zero coupon; potentially convertible into cash; disclosure note; FASB codification research LO14–5

Being fairly new to the accounting team, you are eager to make a good impression in your meeting with the CFO. The meeting concerns the way you have proposed accounting for an upcoming issue of convertible bonds. Your proposal involves allocating the proceeds from the convertible bonds into two components and recording the fair value of the debt as a liability and the conversion option in an equity account. Upon seeing your proposal as part of an intra-team memo, your CFO sent you a personal reply asking for further explanation of your thinking, saying in part, “I thought that type of separation was practiced only under International Financial Reporting Standards. Under U.S. GAAP, don’t we simply record the proceeds entirely as debt?”

To help bolster your explanation, you decide to provide an example of another company’s description of how it accounted for a similar debt issue, demonstrating how that company would record the related transactions, and to cite the relevant authoritative literature on accounting for convertible debt under certain circumstances using the FASB’s Codification Research System.

Toward this end, you discover in the 2022 annual report of Mills General Corporation (MGC) the following disclosure note:

Page 826

Note 10: Borrowings (in part) Convertible Debt

On July 1, 2022, we issued \$125 million of zero coupon convertible unsecured debt due on July 1, 2025 in a private placement offering, priced to yield 1.85%. Proceeds from the offering were \$118.3115 million. Initially, each \$1,000 principal amount of bonds was convertible into 30 shares of MGC common stock at a conversion price of \$35 per share.

The bonds are convertible at any time. Upon conversion, we will pay cash up to the aggregate principal amount of the bonds and pay or deliver cash, shares of our common stock, or a combination of cash and shares of our common stock, at our election.

Because the convertible debt may be wholly or partially settled in cash, we are required to separately account for the liability and equity components of the bonds in a manner that reflects our nonconvertible debt borrowing rate when interest costs are recognized in subsequent periods. The net proceeds of \$118.3

million were allocated between debt for \$117.2 million and shareholders' equity for \$1.1 million with the portion in shareholders' equity representing the fair value of the option to convert the debt.

Required:

1. Prepare the journal entry that was recorded when the bonds were issued on July 1, 2023.
2. What amount of interest expense, if any, did MGC record the fiscal year ended June 30, 2024?
3. Normally under U.S. GAAP, we record the entire issue price of convertible debt as a liability. However, MGC's note states that "Because the convertible debt may be wholly or partially settled in cash, we are required to separately account for the liability and equity components of the notes." Obtain the relevant authoritative literature on classification of debt expected to be financed using the FASB's Codification Research System. You might gain access from the FASB website (www.fasb.org), from your school library, or some other source. Determine the criteria for reporting debt potentially convertible into cash. What is the specific nine-digit Codification citation (XXX-XX-XX-XX) that MGC would rely on in applying that accounting treatment?

Communication Case 14–10 Note receivable exchanged for cash and other services  **LO14–3**

The Pastel Paint Company recently loaned \$300,000 to KIX 96, a local radio station. The radio station signed a noninterest-bearing note requiring the \$300,000 to be repaid in three years. As part of the agreement, the radio station will provide Pastel with a specified amount of free radio advertising over the three-year term of the note.

The focus of this case is the valuation of the note receivable by Pastel Paint Company and the treatment of the "free" advertising provided by the radio station. Your instructor will divide the class into two to six groups depending on the size of the class. The mission of your group is to reach consensus on the appropriate note valuation and accounting treatment of the free advertising.

Required:

1. Each group member should deliberate the situation independently and draft a tentative argument prior to the class session for which the case is assigned.

2. In class, each group will meet for 10 to 15 minutes in different areas of the classroom. During that meeting, group members will take turns sharing their suggestions for the purpose of arriving at a single group treatment.
3. After the allotted time, a spokesperson for each group (selected during the group meetings) will share the group's solution with the class. The goal of the class is to incorporate the views of each group into a consensus approach to the situation.

Communication Case 14–11 Convertible securities and warrants; concepts LO14–5

It is not unusual to issue long-term debt in conjunction with an arrangement under which lenders receive an option to buy common stock during all or a portion of the time the debt is outstanding. Sometimes the vehicle is convertible bonds; sometimes warrants to buy stock accompany the bonds and are separable. Interstate Chemical is considering these options in conjunction with a planned debt issue.

“You mean we have to report \$7 million more in liabilities if we go with convertible bonds? Makes no sense to me,” your CFO said. “Both ways seem pretty much the same transaction. Explain it to me, will you?”

Required:

Write a memo. Include in your explanation each of the following:

1. The differences in accounting for proceeds from the issuance of convertible bonds and of debt instruments with separate warrants to purchase common stock.
2. The underlying rationale for the differences.
3. Arguments that could be presented for the alternative accounting treatment.

Ethics Case 14–12 Debt for equity swaps; have your cake and eat it too LO14–5

The cloudy afternoon mirrored the mood of the conference of division managers. Claude Meyer, assistant to the controller for Hunt Manufacturing, wore one of the gloomy faces that were just emerging from the conference room. “Wow, I knew it was bad, but not that bad,” Claude thought. “I don’t look forward to sharing those numbers with shareholders.”

The numbers he discussed with himself were fourth-quarter losses, which more than offset the profits of the first three quarters. Everyone had known for some time that poor sales forecasts and production delays had wreaked havoc on the bottom line, but most were caught off guard by the severity of the damage.

Later that night, he sat alone in his office, scanning and rescanning the preliminary financial statements on his computer monitor. Suddenly Claude's mood brightened. "This may work," he said aloud, though no one could hear. Fifteen minutes later, he congratulated himself, "Yes!"

The next day Claude eagerly explained his plan to Lisa Ahn, controller of Hunt for the last six years. The plan involved \$300 million in convertible bonds issued three years earlier.

- *Meyer:* By swapping stock for the bonds, we can eliminate a substantial liability from the balance sheet, wipe out most of our interest expense, and reduce our loss. In fact, the book value of the bonds is significantly more than the market value of the stock we'd issue. I think we can produce a profit.
- *Ahn:* But Claude, our bondholders are not inclined to convert the bonds.
- *Meyer:* Right. But, the bonds are callable. As of this year, we can call the bonds at a call premium of 1%. Given the choice of accepting that redemption price or converting to stock, they'll all convert. We won't have to pay a cent. And, since no cash will be paid, we won't pay taxes either.

Required:

Do you perceive an ethical dilemma? What would be the impact of following up on Claude's plan? Who would benefit? Who would be injured?

Data Analytics & Excel

Visit Connect to find a variety of Data Analytics activities that help build Excel, Tableau, and data visualization skills. Assignable materials include [Integrated Excel](#), [Data Visualizations](#), [Tableau Dashboard Activities](#), and [Applying Tableau Cases](#).

Continuing Cases

Target Case LO14-4

Target Corporation prepares its financial statements according to U.S. GAAP. Target's financial statements and disclosure notes for the year ended February 1, 2020, are available in Connect. This material is also available under the Investor Relations link at the company's website (www.target.com).

Long-term solvency refers to a company's ability to pay its long-term obligations. Financing ratios provide investors and creditors with an indication of this element of risk.

Required:

1. Calculate the debt to equity ratio for Target at February 1, 2020. The average ratio for companies in the Discount Retailers industry sector in a comparable time period was 1.95.
2. Calculate Target's times interest earned ratio for the year ended February 1, 2020. The coverage for companies in the Discount Retailers industry sector in a comparable time period was 6.5.

Air France-KLM Case LO14-7

IFRS

Air France-KLM (AF), a Franco-Dutch company, prepares its financial statements according to International Financial Reporting Standards. AF's financial statements and disclosure notes for the year ended December 31, 2019, are available in Connect. This material also is available at the company's website (www.airfranceklm.com/en/finance/publications/results.)

Required:

1. Examine the long-term borrowings described in AF's note (31.3). Note that AF has convertible bonds outstanding that it issued in 2019 (Ou d'Echange En Actions Nouvelles ou Existantes - OCEANE). Prepare the journal entry AF used to record the issue of convertible bonds.

2. Prepare the journal entry AF would use to record the issue of the convertible bonds if AF used U.S. GAAP.
3. AF does not elect the fair value option (FVO) to report its financial liabilities. Examine Note 36.3 “Market value of financial instruments.” If the company had elected the FVO for all of its debt measured at amortized cost, what would be the balance at December 31, 2019, in the fair value adjustment account?

CHAPTER 15

Leases

OVERVIEW

In  **Chapter 14**, we saw how companies account for their long-term debt. The focus of that discussion was *bonds* and *notes*. In this chapter, we continue our discussion of debt, but we now turn our attention to liabilities arising in connection with *leases*. A lease is a contract that gives a lessee (user) the right to control the use of an asset for a period of time. The lessee pays the lessor (owner) for that right, typically with a series of payments made over the lease term. The lessee initially accounts for this arrangement by recording a “right-of-use” asset and a lease liability at the beginning of the lease. Subsequent accounting depends on the nature of the lease contract. When the substance of the lease contract represents a temporary rental agreement between the lessee and lessor, we classify those as operating leases. However, in situations where the lease contract essentially represents the sale of an asset, the lessee has a finance lease, and the lessor has a sales-type lease. As we’ll see in this chapter, the way we account for a lease contract depends on how the lease is classified.

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

-  **LO15-1** Explain why companies frequently choose to lease assets and describe the basis for each of the criteria used to classify leases. (p. 829)
-  **LO15-2** Describe and demonstrate how the lessee accounts for a finance lease and the lessor accounts for a sales-type lease with no selling profit. (p. 835)
-  **LO15-3** Describe and demonstrate how the lessor accounts for a sales-type lease with a selling profit. (p. 840)

-  **LO15-4** Describe and demonstrate how the lessor and lessee account for all transactions associated with operating leases. (p. 841)
-  **LO15-5** Explain when and how a lessee accounts for a lease by the shortcut method. (p. 849)
-  **LO15-6** Explain the impact on lease accounting of uncertainties, including uncertain lease terms, variable lease payments, residual values, purchase options, and termination penalties. (p. 849)
-  **LO15-7** Determine whether a contract contains a lease and explain the impact on lease accounting of other payments, including nonlease payments, initial direct costs, and leasehold improvements. (p. 864)
-  **LO15-8** Describe the impact of leases on the statement of cash flows and disclosure requirements pertaining to leases. (p. 871)
-  **LO15-9** Discuss the primary differences between U.S. GAAP and IFRS with respect to leases. (pp. 846, 849, and 853)

FINANCIAL REPORTING CASE

Pressmaster/Shutterstock

It's a Hit!

“Don’t get too comfortable with those big numbers,” said Aaron Sanchez, controller for your new employer. “It’s likely our revenues will take a hit over the next couple of years as more of our customers lease our machines rather than buy them.” You’ve just finished your first look at Higher Graphics’ third-quarter

earnings report. Like most companies in your industry, HG leases its labeling machines to some customers and sells them to others. Eager to understand the implications of your new supervisor's concerns, you pull out your old intermediate accounting book and turn to the leases chapter.

QUESTIONS

By the time you finish this chapter, you should be able to respond appropriately to the questions posed in this case. Compare your response to the solution provided at the end of the chapter.

- 1.** How would HG's revenues "take a hit" as a result of more customers leasing rather than buying labeling machines?
- 2.** Under what kind of leasing arrangement would the "hit" not occur?

PART A

Accounting by the Lessor and Lessee

If you ever have leased an apartment, you know that a lease is a contractual arrangement by which a **lessor** (owner) provides a **lessee** (user) the right to use an asset for a specified period of time. In return for this

An apartment rental is a contractual arrangement constituting a lease.

right, the lessee agrees to make periodic cash payments during the term of the lease. When a company reports a lease, the right to use the asset for a period of time is recorded as a “right-of-use” asset in the balance sheet, while the obligation to make payments over the lease period is recorded as a lease liability.

You might be surprised to know that leases comprise more than \$3 trillion of asset financing and have become the number one method of external financing by U.S. companies.¹ The airplane in which you last flew probably was leased, as was the gate from which it departed. Your cell phone service provider likely leases the space in which it operates. Many of the stores where you shop and the last hotel you stayed in were probably leased properties. So, why the popularity?

Why Lease?

LO15–1 Explain why companies frequently choose to lease assets and describe the basis for each of the criteria used to classify leases.

1. Leasing reduces the upfront cash needed to use an asset.

The purchase of an asset can include several additional fees—loan origination fees, closing costs, brokerage fees, and certain taxes. You know that if you’ve ever bought a house or a car. Many leases, though, begin with the first lease payment, including nothing more than the agreed-upon monthly amount. Relatedly, some companies, especially newer ones,

Operational, financial, and tax incentives often make leasing an attractive alternative to purchasing.

might not have enough cash to pay the full purchase cost for an asset, but they likely have enough cash to begin monthly payments. Also, companies that have high credit risk may not be able to obtain financing to purchase an asset. Leasing might be these companies' only option to acquire an asset.

2. Lease payments often are lower than installment payments.

Installment payments to buy an asset are based on the asset's full fair value. On the other hand, lease payments often are tied only to the portion of the asset's fair value expected to decline over the lease period. Because the lease period can be less than the asset's full life, the monthly payments associated with leasing often are lower.

3. Leasing offers flexibility and a lower cost when disposing of the asset.

Returning a leased asset at the end of the lease term requires little effort or cost. When you've rented a car for the week, you simply return the car to the rental company. When a company is finished with an office building, the company simply moves out. However, selling an asset that you've previously purchased usually isn't that easy. Some unique assets might not have an available market in which used items can be easily sold. Selling an asset also can require significant costs. For example, many real estate agents charge up to 6% to sell your home or office building.

4. Leasing might offer protection against the risk of declining asset values.

When a company *buys* an asset, the price it might eventually sell the asset for at the end of its productive life is uncertain. On the other hand, when a company *leases* an asset, it avoids the risk of declining fair values (selling prices) but also misses out on any increase in fair value.

5. Leasing might offer tax advantages.

Sometimes leasing offers tax savings over outright purchases. For instance, a company with little or no taxable income—maybe a business just getting started or one experiencing an economic downturn—will get little benefit from deducting depreciation on its tax return. Normally, depreciation reduces taxable income and thus reduces taxes, but if there's little or no taxable income to reduce, there's little or no tax savings from owning and depreciating an asset. However, the company can benefit *indirectly* by leasing assets rather than buying. By allowing the *lessor* to retain ownership and thus benefit from depreciation deductions, the lessee often can negotiate lower lease payments. Lessees with sufficient taxable income to

take advantage of the depreciation deductions, but still in lower tax brackets than lessors, also can achieve similar indirect tax benefits.

Lease Classification

The way we account for a lease depends on whether the lease more naturally resembles the purchase of an asset with debt financing or whether it's a rental

A basic concept of accounting is substance over form.

agreement. In many cases, the true nature of the contract is obvious. For example, a 10-year noncancelable lease of a computer with a 10-year useful life, by which title passes to the lessee at the end of the lease term, obviously more nearly represents a purchase than a rental agreement. This type of lease is classified as a **finance lease** by the lessee and a **sales-type lease** by the lessor.² In contrast, a 10-day rental of the same computer, with no passage of title to the lessee, obviously represents a rental and not a sale. These types of rental arrangements are referred to as **operating leases**.  **Illustration 15-1** compares the classification possibilities.

Illustration 15-1 Basic Lease Classifications

| Lessee | Lessor |
|---|---|
| <ul style="list-style-type: none"> • Finance lease | <ul style="list-style-type: none"> • Sales-type lease <ul style="list-style-type: none"> ↳ without selling profit ↳ with selling profit |
| <ul style="list-style-type: none"> • Operating lease | <ul style="list-style-type: none"> • Operating lease* |

*In a very specific situation described in Part B, a lease that doesn't qualify as a sales-type lease might be classified as a "direct financing" lease rather than an operating lease.

In some leasing arrangements, whether the company has engaged in a purchase versus rental agreement is not clear. What if the terms of the contract don't transfer title, and the lease term is for only seven years of the asset's 10-year life? What if contractual terms permit the lessee to obtain title under certain prearranged conditions? What if the present value of payments provided by the lease contract is nearly equal to the value of the asset under lease? These situations are less clear-cut.

Professional judgment is needed to differentiate between leases that, in essence, are installment purchases/sales and those that are not. It's important to note that from an accounting perspective, *legal ownership is irrelevant* in the decision. As we do with other accounting decisions, we base our assessment on the *economic substance* of the transaction, even if that conflicts with its legal form. This reflects a basic concept of accounting referred to as "substance over form."

Accounting for leases attempts to see through the legal form of the agreements to determine their economic substance.

Although similar, a finance lease is not the same as the purchase of an asset. The rights a lease grants a lessee under any lease, whether classified as a finance lease or an operating lease, are different from the rights transferred in the outright purchase of an asset. As one example, a lessee can't sell the leased asset.

Nonetheless, a finance lease is economically similar to a purchase of the asset because the terms of a finance lease (a) normally allow the lessee to *direct the use* of the asset in a way that the lessee receives *substantially all of the remaining benefits* from the asset and (b) creates obligations for the lessee that are similar to those that financing the purchase of an asset would impose. An operating lease lacks those characteristics. Thus, the essential question when determining lease classification is whether a particular lease arrangement has the characteristics of a finance lease.

Determining lease classification based on judgment alone is likely to lead to inconsistencies in practice. The desire to encourage consistency in practice motivated the FASB to provide guidance for distinguishing between the two fundamental types of leases. As you study the classification criteria in the following paragraphs, keep in mind that some leases clearly fit the classifications we give them, but others fall in a gray area somewhere between the two extremes. For those, we end up classifying according to the best evidence available.

CLASSIFICATION CRITERIA

We classify a lease transaction as a *finance lease* (*sales-type lease* from the lessor's perspective) if one or more of the five criteria listed in  **Illustration 15-2** is met. Otherwise, it is an *operating lease*.

ILLUSTRATION 15-2 Criteria for Classification as a Finance Lease

1. The agreement specifies that ownership of the asset transfers to the lessee.
2. The agreement contains a purchase option that the lessee is reasonably certain to exercise.
3. The lease term is for the “major part” of the remaining economic life of the underlying asset.*
4. The present value of the total of the lease payments[†] equals or exceeds “substantially all” of the fair value of the underlying asset.
5. The underlying asset is of such a specialized nature that it is expected to have no alternative use to the lessor at the end of the lease term.

*If the lease begins at or near the end of the economic life of the asset, this criterion shouldn't be used for purposes of classifying the lease.

†This total includes any residual value of the asset at the end of the lease term that is guaranteed by the lessee. We discuss residual values, guaranteed and unguaranteed, later in the chapter.

Let's look closer at these criteria.

Criterion 1. Since our objective is to determine whether the lessor has, in substance, sold the asset to the lessee, the first criterion is self-evident. If legal title passes to the lessee during, or at the end of, the lease term, obviously ownership attributes are transferred.

Criterion 2. A **purchase option** is a provision in the lease contract that gives the lessee the option to purchase the leased property at a specified price. Criterion 2 is met if the specified price is sufficiently lower than the expected fair value of the property when the option becomes exercisable that the exercise of the option by the lessee appears “reasonably certain” at the beginning of the lease.

For example, suppose instead of purchasing farmland for its fair value of \$100,000, the farmland is leased for \$20,000 per year for five years with an option at the end of the lease period to purchase it for an additional \$25,000. If the farmland is expected to be worth, say, \$45,000 in five years, the \$25,000 would be considered a bargain price, so the lessee is reasonably certain to exercise the purchase option and buy the asset.

Criterion 1: Transfer of ownership.

Criterion 2: Purchase option the lessee is reasonably certain to exercise.

Although the lease accounting guidance (ASC Topic 842: Leases) does not use the term, in this chapter we will refer to this as a bargain purchase option (BPO). Though not immediately obvious, the logic of the second criterion is similar to that of the first. That is, we again expect title to transfer, this time because the lessee is expected to exercise the option to purchase the asset. Applying criterion 2 in practice, though, often is more difficult because it's necessary to make a judgment *now* about whether a *future* fair value will be sufficiently higher than the exercise price so that exercise is “reasonably certain.”

Criterion 3. The third criterion considers whether the asset is leased for the “major part” of its useful life. If that criterion is met, then most of the risks and rewards of ownership are deemed to have been transferred to the lessee, as would be the case if the asset had been purchased. The lease accounting guidance (ASC Topic 842: Leases) suggests that one reasonable approach to assessing this criterion would be to conclude that 75% or more of the remaining economic life of the underlying asset constitutes a “major part” of the remaining economic life of that underlying asset. Note, though, that this is only one approach and not a precise indication.

Although the intent of this criterion is fairly straightforward, implementation sometimes is troublesome. First, the lease term may be uncertain. It may be renewable beyond its initial term. Or, the lease may be cancelable after a designated noncancelable period. If the lease includes these provisions, we need to consider whether a change in the lease term is reasonably certain to occur.

Criterion 3: Lease term is for the major part of economic life.

Additional Consideration

Periods covered by renewal options are not included in the lease term if a bargain purchase option (BPO) is present. This is because the lease term cannot extend beyond the date a purchase option is exercised. For example, assume a bargain purchase option allows a lessee to buy a leased delivery truck at the end of a noncancelable five-year lease term. Even if an option to renew the lease beyond that date is considered to be reasonably certain to be exercised in the event of not exercising the purchase option, that renewal period would not be included as part of the lease term. Remember, we

presume the purchase option will be exercised after the initial five-year term, making the renewal option irrelevant.

A second implementation issue is estimating, at the beginning of the lease, the economic life of the leased property. This is the estimated remaining time the property is expected to be economically usable for its intended purpose, with normal maintenance and repairs. Estimates of the economic life of leased property are subject to the same uncertainty limitations of most estimates. This uncertainty presents the opportunity to arrive at estimates that cause this third criterion not to be met.

Finally, if the lease begins “at or near the end” of an asset’s economic life, this third criterion does not apply. That’s because most of the risks and rewards of ownership occur prior to that time.³

Criterion 4. The fourth criterion indicates that, if the **lease payments** have a total value that represents “substantially all” of the asset’s fair value, it’s logical to identify the lease contract as equivalent to a sale. That

is, we could say the lessee has paid enough to have purchased the asset. The lease accounting guidance suggests that one reasonable approach to assessing this criterion would be to conclude that payments with a present value of 90% or more of the fair value of the underlying asset represent “substantially all” of the fair value. (We review how to calculate present value later in the chapter.) In general, lease payments for the purpose of classifying a lease are payments the lessee is *required* to make in connection with the lease. We look closer at the makeup of lease payments later in the chapter when we discuss various uncertainties in lease transactions in more detail.

Criterion 4: Present value of payments is substantially all of fair value.

Criterion 5. The fifth criterion recognizes that if the underlying asset is of such a specialized nature that it is expected to have *no alternative use* to the lessor at the end of the lease term, then only the lessee can derive the usual risks and rewards of ownership of the asset. Likewise, the lessor will achieve its desired return on investment only through the lease payments from that particular lease, indicating that the lessor intends a sale of ownership rights.

Criterion 5: Leased asset is so specialized that it cannot reasonably be repurposed.

Prior to recent lease accounting guidance, another reason to lease rather than buy was to obtain “off-balance-sheet financing.” When funds are borrowed to purchase an asset, the liability has a detrimental effect

Traditionally, leasing was used as a means of off-balance-sheet financing.

on the company’s debt to equity ratio and other quantifiable indicators of riskiness. Similarly, the purchased asset increases total assets and correspondingly lowers calculations of the rate of return on assets. To avoid looking more risky and less profitable, managers previously were able to keep assets and liabilities “off balance sheet” by leasing them rather than buying them. Under that preexisting GAAP, if the lessee could construct a leasing arrangement so that it qualified as an operating lease, neither the asset nor the liability had to be reported in the balance sheet.⁴ That way, managers could avoid surpassing contractual limits on designated financial ratios (such as the debt to equity ratio).⁵ Also, despite research that indicates otherwise, some managers might have thought they were fooling the financial markets into thinking their strategies were less risky and more profitable than actually was the case. However, GAAP now requires lessees to record assets and liabilities for all but short-term leases. In fact, the primary impetus for the new guidance was to curtail off-balance-sheet financing.

Even without the incentive of off-balance-sheet financing, managers still are motivated to construct lease arrangements as an operating lease so they can get the favorable income statement effects those leases provide, as we see later in the chapter. Devising ways to tweak lease terms to avoid classification as finance leases is commonplace in practice. For instance, when we consider variable lease payments in Part B, we’ll see that those payments are not viewed as part of the lease payments used to calculate the lessee’s lease liability. This motivates some lessees to try to structure lease payments to be increased (or decreased) at some future date during the lease term, depending on whether or not some specified event occurs. Analysts should be aware of this tactic when evaluating and comparing companies’ reported profits. ●

Before we apply the classification criteria to identify a finance lease, it’s useful to see how accounting for a finance lease is similar to the way we accounted for the acquisition of an asset with an installment note in the previous chapter.

Finance Leases and Installment Notes Compared

You learned in [Chapter 14](#) how to account for an installment note. To a great extent, then, you already have learned how to account for a finance lease. Finance leases are agreements that we identify as being formulated outwardly as leases, but which in reality are essentially similar to installment purchases.

To illustrate, let's recall a situation we considered in the previous chapter. We assumed that Skill Graphics purchased a package-labeling machine from Hughes-Barker Corporation by issuing a three-year installment note that required six semiannual installment payments of \$139,857 each, with the first payment due six months from the purchase date. That arrangement provided for the purchase of the **\$666,633** machine as well as interest at an annual rate of 14% (7% twice each year). Remember, too, that each installment payment consisted of part interest (7% times the outstanding balance) and part payment for the machine (the remainder of each payment).

Now let's suppose that Skill Graphics instead acquired control of the package-labeling machine from Hughes-Barker Corporation under a three-year *lease* that required six semiannual lease payments of \$139,857 each. The fundamental nature of the transaction remains the same regardless of whether it is negotiated as an installment purchase or as a lease. So, we account for this lease in fundamentally the same way as an installment purchase. To see this, let's first compare how we account for an installment note versus a finance lease at the beginning (or commencement) of the lease (see [Illustration 15-3](#)).

Illustration 15-3 Comparison of a Note and Finance Lease

In keeping with the basic accounting concept of substance over form, accounting for a finance lease parallels that for an installment purchase.

| At Beginning (January 1) | | |
|--------------------------|---------|----------------|
| Installment Note | | |
| Machinery | 666,633 | |
| Notes payable | | 666,633 |
| Finance Lease | | |
| Right-of-use asset | 666,633 | |
| Lease payable | | 666,633 |

Notice that we debit an asset account and credit a liability, regardless of whether the machinery is acquired through financing with a note payable or through a finance lease.

With each periodic payment, interest expense accrues at the effective rate times the outstanding balance, and the balance of the liability is reduced for the difference as shown in [Illustration 15-3A](#).

Illustration 15-3A Interest Compared for a Note and Finance Lease

Each payment includes both an amount that represents interest and an amount that represents a reduction of principal.

| At the First Semiannual Payment Date (June 30) | | |
|---|---------------|---------|
| (7% × Outstanding balance) | | |
| Installment Note | | |
| Interest expense (7% × \$666,633) | 46,664 | |
| Notes payable (difference) | 93,193 | |
| Cash (installment payment) | | 139,857 |
| Finance Lease | | |
| Interest expense (7% × \$666,633) | 46,664 | |
| Lease payable (difference) | 93,193 | |
| Cash (lease payment) | | 139,857 |

Because the lease payable balance declines with each payment, the amount of interest expense decreases each period. An amortization schedule is convenient to track the changing amounts as shown in [Illustration 15-3B](#).

Illustration 15-4C Lease Amortization Schedule

Each lease payment includes interest on the outstanding balance at the effective rate. The remainder of each payment reduces the outstanding balance.

| Date | Payments | Effective Interest | Decrease in Balance | Outstanding Balance |
|------|----------------|---|---------------------|---------------------|
| | | (7% × Outstanding balance) | (Pmt. – Interest) | 666,633 |
| 1 | 139,857 | 0.07 (666,633) = 46,664 | 93,193 | 573,440 |
| 2 | 139,857 | 0.07 (573,440) = 40,141 | 99,716 | 473,724 |
| 3 | 139,857 | 0.07 (473,724) = 33,161 | 106,696 | 367,028 |
| 4 | 139,857 | 0.07 (367,028) = 25,692 | 114,165 | 252,863 |
| 5 | 139,857 | 0.07 (252,863) = 17,700 | 122,157 | 130,706 |
| 6 | <u>139,857</u> | 0.07 (130,706) = <u>9,151*</u> | <u>130,706</u> | 0 |
| | 839,142 | 172,509 | 666,633 | |

*Rounded

You should recognize this as the same amortization schedule we used in the previous chapter in connection with our installment note example. The reason for the similarity is that we view a finance lease as being, in substance, equivalent to an installment purchase. So naturally, the accounting treatment of the two essentially identical transactions should be consistent.

In the remaining sections of Part A of this chapter, we'll apply the lease classification criteria to a basic lease situation and consider, in order, (a) finance leases to the lessee/sales-type leases to the lessor and (b) operating leases.

Finance/Sales-Type Leases

LO15–2 Describe and demonstrate how the lessee accounts for a finance lease and the lessor accounts for a sales-type lease with no selling profit.

Let's look at an example that illustrates the application of the classification criteria listed in  **Illustration 15-2**. The earlier example in Illustration 15-3B, comparing a finance lease to an installment purchase, assumed lease payments at the *end* of each period. A more typical leasing contract requires lease payments at the *beginning* of each period. This more realistic payment schedule is assumed in  **Illustration 15-4**.

ILLUSTRATION 15-4 Finance Lease/Sales-Type Lease: No Selling Profit

If at least one of the five classification criteria is met, this is a finance/sales-type lease.

On January 1, 2024, Sans Serif Publishers leased printing equipment from First LeaseCorp. First LeaseCorp purchased the equipment from CompuDec Corporation at a cost of \$479,079.

- The lease agreement specifies six annual payments of \$100,000 beginning January 1, 2024, the beginning of the lease, and on each December 31 from 2024 through 2028.
- The six-year lease term ending December 31, 2029, is equal to the estimated useful life of the equipment.
- First Lease Corp routinely acquires electronic equipment for lease to other firms.
- The interest rate in these financing contracts is 10%.

How should this lease be classified by the lessee (finance or operating)? By the lessor (sales-type or operating)? We apply the five classification criteria:

1. Does the agreement specify that ownership of the asset transfers to the lessee? No

| | |
|---|--|
| 2. Does this agreement contain a purchase option reasonably certain to be exercised? | No |
| 3. Is the lease term for the “major part” of the estimated economic life of the asset? | Yes (6-year lease term; 6-year life) |
| 4. Is the present value of the lease payments equal to or greater than “substantially all” of the fair value of the asset? | Yes (\$479,079 present value; \$479,079 fair value) $\$100,000 \times 4.79079^* =$ \$479,079 |
| 5. Is the asset of such a specialized nature that it is expected to have no alternative use to the lessor at the end of the lease term? | No (First LeaseCorp routinely leases this type of equipment) |

Decision: Since at least one (two in this case) of the five classification criteria is met, this is a finance lease to the lessee and a sales-type lease to the lessor.

*Present value of an annuity due of \$1: $n = 6, i = 10\%$. Recall from Chapter 5 that we refer to periodic payments at the beginning of each period as an *annuity due*.

Let’s first think about this contract from the perspective of Sans Serif, the lessee. Because *at least one of the five classification criteria is met*, Sans Serif would classify the lease as a finance lease. While Sans Serif does not have legal ownership of the printing equipment as with a typical purchase, Sans Serif did acquire the right to use the printing equipment. That’s why Sans Serif records a “right-of-use asset.” In addition, just as if it were an installment purchase, Sans Serif also would record a liability for the present value of the lease payments. The entry by Sans Serif to record the finance lease is shown in  **Illustration 15-4A**.

Illustration 15-4A Finance Lease/Sales-Type Lease: No Selling Profit

An asset and liability are recorded by the lessee at the present value of the lease payments.

On January 1, 2024, Sans Serif Publishers leased printing equipment from First LeaseCorp. First LeaseCorp purchased the equipment from CompuDec Corporation at a cost of \$479,079.

- The lease agreement specifies six annual payments of \$100,000 beginning January 1, 2024, the beginning of the lease, and on each December 31 from 2024 through 2028.
- The six-year lease term ending December 31, 2029, is equal to the estimated useful life of the equipment.
- First LeaseCorp routinely acquires electronic equipment for lease to other firms.
- The interest rate in these financing arrangements is 10%.

The price Sans Serif pays for the right to control the use of the equipment is the present value of the lease payments:

$$\begin{aligned}
 & \$100,000 \times 4.79079^* = \$479,079 \\
 & \text{Lease Payments} \quad \text{Right-of-Use Asset} \\
 & * \text{Present value of an annuity due of } \$1 : n = 6, i = 10\%.
 \end{aligned}$$

Beginning of the Lease (January 1, 2024)

Sans Serif (Lessee)

| | |
|---|---------|
| Right-of-use asset (present value of lease payments) | 479,079 |
| Lease payable (present value of lease payments) | 479,079 |

First LeaseCorp (Lessor)

| | |
|--|----------------|
| Lease receivable (present value of lease payments) | 479,079 |
| Equipment (lessor's cost: carrying amount) | 479,079 |

Using Excel, enter: =PV(.10,6, -1000000,1)

Output: 479079

Using a calculator,
enter: BEG mode [N] 6
[I] 10
[PMT] -100000 [FV]
Output: [PV] 479079

On the flip side of the transaction, just as if it were an installment sale, First LeaseCorp records a lease receivable for the present value of the payments to be received and removes from its balance sheet (derecognizes) the asset being leased. Later, we'll look at situations in which the lease receivable (reflecting the "selling price") exceeds the asset's carrying value, creating the need to also record a selling profit for the difference. Indeed, some lessors use leasing as an alternative way to sell their assets and have no intention of reusing or re-leasing assets leased under a sales-type lease.

In the journal entries in [Illustrations 15-4A](#) and [15-4B](#) and throughout the chapter, we often look at the entries of the lessee and the lessor together. This way, we can be reminded that, usually, the entries for the lessor are essentially the mirror image of those for the lessee, the other side of the same coin.⁶

Page 836

Notice that the lessor's entries are the flip side or mirror image of the lessee's entries.

Illustration 15-4B Journal Entries for the First and Second Lease Payment

Lease payable/receivable:

\$479,079
(100,000) 1st payment
\$379,079
(62,092) 2nd payment
\$316,987

First Lease Payment (January 1, 2024)

Sans Serif (Lessee)

| | | |
|----------------------|---------|---------|

| Cash (lease payment) | | 100,000 |

First LeaseCorp (Lessor)

| | | |
|----------------------|----------------|----------------|
| Cash (lease payment) | 100,000 | |
| Lease receivable | | 100,000 |

Second Lease Payment (December 31, 2024)**Sans Serif (Lessee)**

| | | |
|--|---------------|---------|
| Interest expense [10% × (\$479,079 – \$100,000)] | 37,908 | |
| Lease payable (difference) | 62,092 | |
| Cash (lease payment) | | 100,000 |

First LeaseCorp (Lessor)

| | | |
|--|----------------|---------------|
| Cash (lease payment) | 100,000 | |
| Lease receivable | | 62,092 |
| Interest revenue [10% × (\$479,079 – \$100,000)] | | 37,908 |

Recording Interest Expense/Interest Revenue

As lease payments are made over the term of the lease, both the lessee and lessor record interest at the effective interest rate. In addition, the lessee, Sans Serif, will record amortization expense on its right-of-use asset over the term of the lease. Let's first consider interest.

As shown in  **Illustration 15-4B**, the entire \$100,000 first lease payment is applied to principal (lease payable/receivable) reduction.⁷ That's because the payment occurred at the beginning of the lease, so no interest had yet accrued. Subsequent lease payments, though, include interest of 10% on the outstanding balance as well as a portion that reduces that outstanding balance. As of the second lease payment twelve months later, one year's interest of **\$37,908** has accrued on the \$379,079 (\$479,079 – \$100,000) balance outstanding during 2024. After recording that interest, **\$62,092** of the \$100,000 payment remains to reduce the outstanding balance to \$316,987 (\$379,079 – \$62,092).

Interest accrues at the effective rate on the balance outstanding during the period.

Because the outstanding balance declines with each payment, the amount of interest decreases each period. An amortization schedule is convenient to track the changing amounts, as shown in [Illustration 15-4C](#). That schedule shows how the lease balance and the effective interest change over the six-year lease term, using an effective interest rate of 10%. Each lease payment after the first one includes both an amount that represents interest and an amount that represents a reduction of the outstanding balance. The periodic reduction is sufficient that, *at the end of the lease term, the outstanding balance is zero.*

Illustration 15-4C Lease Amortization Schedule

The first lease payment includes no interest.

The total of the cash payments (\$600,000) provides for:

1. **Payment for the equipment's use (\$479,079).**
2. **Interest (\$120,921) at an effective rate of 10%.**

| | Payments | Effective Interest (10% × Outstanding balance) | Decrease in Balance* | Outstanding Balance |
|----------|----------------|--|-------------------------|------------------------|
| 1/1/24 | | | | 479,079 |
| 1/1/24 | 100,000 | | 100,000 | 379,079 |
| 12/31/24 | 100,000 | 0.10 (379,079) = 37,908 | 62,092 | 316,987 |
| 12/31/25 | 100,000 | 0.10 (316,987) = 31,699 | 68,301 | 248,686 |
| 12/31/26 | 100,000 | 0.10 (248,686) = 24,869 | 75,131 | 173,555 |
| 12/31/27 | 100,000 | 0.10 (173,555) = 17,355 | 82,645 | 90,910 |
| 12/31/28 | <u>100,000</u> | 0.10 (90,910) = <u>9,090*</u> | <u>90,910</u> | 0 |
| | 600,000 | 120,921 [†] | 479,079 | |

*Payment in first column minus the interest in the second column.
[†]Adjusted for rounding of other numbers in the schedule.

Both the lessee and lessor would use this same amortization schedule for recording interest. The lessee amortizes its lease payable and records interest *expense*. Similarly, the lessor

amortizes its lease receivable and records interest *revenue*, reflecting the opposite side of the same transaction.

Now that we've seen how the lessee amortizes its *lease liability* to record interest and pay the liability, let's see how the lessee amortizes its *right-of-use asset* over the term of the lease.

Recording Amortization of the Right-of-Use Asset

Like other noncurrent assets, the lessee's right-of-use asset provides an economic benefit (the right to use a productive asset) over the period covered by the lease term. So, the lessee amortizes its right-of-use asset over the lease term. The amortization process usually is on a straight-line basis unless the lessee's pattern of using the asset is different.⁸ That amortization results in an *expense* for the lessee. In Sans Serif's case, it amortizes its right-of-use asset over the six-year lease term.

The lessee incurs an expense as it uses the asset.

December 31, 2024, and End of Next Five Years

| | | |
|--|--------|--------|
| Amortization expense ($\$479,079 \div 6$ years) | 79,847 | |
| Right-of-use asset | | 79,847 |

AMORTIZATION PERIOD

The lessee normally should amortize a leased asset over the term of the lease. However, if ownership transfers, or exercise of a purchase option is reasonably certain (i.e., either of the first two classification criteria is met), the asset should be amortized over its useful life. Meeting either of those two criteria means the lessee will have the asset beyond the lease term, and thus the asset is amortized over the useful life of the asset *to the lessee* whether or not that useful life is limited by the term of the lease.

The amortization period is restricted to the lease term unless the lease provides for transfer of title or a BPO.

Concept Review Exercise

FINANCE LEASE/SALES-TYPE LEASE: NO SELLING PROFIT

United Cellular Systems leased a satellite transmission device from Pinnacle Leasing Services on January 1, 2024. Pinnacle paid \$625,483 for the transmission device. Its fair value is \$625,483.

Terms of the Lease Agreement and Related Information:

| | |
|---------------------------|---------------------------------------|
| Lease term | 3 years (6 semiannual periods) |
| Semiannual lease payments | \$120,000 at beginning of each period |
| Economic life of asset | 3 years |
| Interest rate | 12% |

Required:

1. Prepare the appropriate entries for both United Cellular Systems and Pinnacle Leasing Services on January 1, 2024, the beginning of the lease.
2. Prepare an amortization schedule that shows the pattern of interest expense for United Cellular Systems and interest revenue for Pinnacle Leasing Services over the lease term.
3. Prepare the appropriate entries to *record* the second lease payment on July 1, 2024, and adjusting entries on December 31, 2024 (the end of both companies' fiscal years).

Solution:

1. Prepare the appropriate entries for both United Cellular Systems and Pinnacle Leasing Services on January 1, 2024, the beginning of the lease.

Present value of periodic lease payments:

Calculation of the present value of lease payments.

$$(\$120,000 \times 5.21236^*) = \$625,483$$

*Present value of an annuity due of \$1: $n = 6, i = 6\%$.

January 1, 2024

| United Cellular Systems (Lessee) | | |
|---|----------------|----------------|
| Right-of-use asset (calculated above) | 625,483 | |
| Lease payable (calculated above) | | 625,483 |
| Lease payable | 120,000 | |
| Cash (lease payment) | | 120,000 |
| Pinnacle Leasing Services (Lessor) | | |
| Lease receivable (calculated above) | 625,483 | |
| Equipment (lessor's cost) | | 625,483 |
| Cash (lease payment) | 120,000 | |
| Lease receivable | | 120,000 |

2. Prepare an amortization schedule that shows the pattern of interest expense for United Cellular Systems and interest revenue for Pinnacle Leasing Services over the lease term.

Page 839

| Date | Payments | Effective Interest (6% × Outstanding balance) | Decrease in Balance | Outstar Balar |
|--------|----------------|---|---------------------------|------------------|
| 1/1/24 | | | | 625,483 |
| 1/1/24 | 120,000 | | 120,000 | 505,483 |
| 7/1/24 | 120,000 | 0.06 (505,483) = 30,329 | 89,671 | 415,812 |
| 1/1/25 | 120,000 | 0.06 (415,812) = 24,949 | 95,051 | 320,761 |
| 7/1/25 | 120,000 | 0.06 (320,761) = 19,246 | 100,754 | 220,007 |
| 1/1/26 | 120,000 | 0.06 (220,007) = 13,200 | 106,800 | 113,207 |
| 7/1/26 | <u>120,000</u> | 0.06 (113,207) = <u>6,793*</u> | <u>113,207</u> | |
| | 720,000 | 94,517 | 625,483 | |

*Adjusted for rounding of other numbers in the schedule.

3. Prepare the appropriate entries to record the second lease payment on July 1, 2024, and adjusting entries on December 31, 2024 (the end of both companies' fiscal

years).

| July 1, 2024 | | |
|--|----------------|---------------|
| United Cellular Systems (Lessee) | | |
| Interest expense [6% × (\$625,483 – \$120,000)] | 30,329 | |
| Lease payable (difference) | 89,671 | |
| Cash (lease payment) | | 120,000 |
| Pinnacle Leasing Services (Lessor) | | |
| Cash (lease payment) | 120,000 | |
| Lease receivable (difference) | | 89,671 |
| Interest revenue [6% × (\$625,483 – \$120,000)] | | 30,329 |
| December 31, 2024 | | |
| United Cellular Systems (Lessee) | | |
| Interest expense (6% × \$415,812: from schedule) | 24,949 | |
| Interest payable | | 24,949 |
| Amortization expense (\$625,483 ÷ 3 years) | 208,494 | |
| Right-of-use asset | | 208,494 |
| Pinnacle Leasing Services (Lessor) | | |
| Interest receivable | 24,949 | |
| Interest revenue (6% × \$415,812: from schedule) | | 24,949 |

In our illustrations above, the present value of the lease payments, or “selling price,” is the same as the cost or carrying value of the asset “sold.” For example, in

 **Illustration 15-4A**, we assumed that First LeaseCorp bought the equipment for \$479,079 and then leased it for the same price. There was no profit on the “sale” itself. The only income derived by the lessor was interest revenue earned over the lease term. In effect, First LeaseCorp financed the acquisition of the equipment by Sans Serif Publishers.⁹ That’s usually the case when the lessor is a financial intermediary that provides financing by acquiring the asset and then leasing it to the lessee. In that case, the lessor records the “flip side” of the lessee’s transaction. That

is, the lessor records a receivable corresponding to the lessee's liability and removes the asset from its books as the lessee adds the asset to its books.

In some cases, though, the lessor is not a financial intermediary, but is a manufacturer or retailer using leases as a means of "selling" its products. In addition to interest revenue earned over the lease term, the lessor receives a selling profit on the "sale" of the asset. We look at this situation next.

Sales-Type Leases with Selling Profit

LO15–3 Describe and demonstrate how the lessor accounts for a sales-type lease with a selling profit.

Selling profit exists when the fair value of the asset (usually the present value of the lease payments, or “selling price”) exceeds the cost or carrying value of the asset sold. In addition to interest revenue earned over the lease term, the lessor recognizes a selling profit on the “sale” of the asset. Accounting is the same as for a sales-type lease without a selling profit except that profit is recognized at the beginning.¹⁰

As in the sale of any product, gross profit is the difference between sales revenue and cost of goods sold. **Dell Technologies Inc.** “sells” some of its products using sales-type leases and disclosed its accounting policy in a recent annual report shown in  **Illustration 15–5**.

ILLUSTRATION 15–5 Sales-Type Leases—Dell Technologies Inc.

Real World Financials

Note 1 (in part)

The Company records operating lease rental revenue as product revenue on a straight-line basis over the lease term. We record revenue from the sale of equipment under sales-type leases as product revenue in an amount equal to the present value of minimum lease payments at the inception of the lease. Sales-type leases also produce financing income, which is included in net products revenue in the Consolidated Statements of Income (Loss) and is recognized at effective rates of return over the lease term.

Source: Dell Technologies Inc.

When there is a selling profit, all lessor entries, other than the entry at the beginning of the lease to include the selling profit, are precisely the same as the entries for a sales-type lease without a selling profit. On the other side of the transaction, accounting by the *lessee* is not

affected by whether the *lessor* recognizes a profit or not. All lessee entries are exactly the same as in our previous illustration of a lessee's finance lease.

To illustrate accounting for sales-type leases with selling profit, let's modify our previous illustration. Assume all facts are the same except Sans Serif Publishers leased the equipment directly from CompuDec Corporation rather than through First LeaseCorp, the financing intermediary. Also assume that CompuDec's cost of the equipment was **\$300,000**. If you recall that the lease payments (their present value) provide a selling price of \$479,079, you see that CompuDec earns a gross profit on the sale of $\$479,079 - \$300,000 = \$179,079$. This sales-type lease that provides a selling profit is demonstrated in [Illustration 15-6](#).

ILLUSTRATION 15-6 Finance Lease / Sales-Type Lease: With Selling Profit

Because the PV of lease payments > cost, the lessor has a profit that is recorded at the beginning of the lease.

No interest has yet accrued when the first payment is made at the beginning of the lease.

On January 1, 2024, Sans Serif Publishers leased printing equipment from CompuDec Corporation.

- The lease agreement specifies six annual payments of \$100,000 beginning January 1, 2024, the beginning of the lease, and on each December 31 from 2024 through 2028.
- The six-year lease term ending December 31, 2029, is equal to the estimated useful life of the equipment.
- CompuDec manufactured the equipment at a cost of **\$300,000**.

Using an interest rate of 10% for financing this transaction, CompuDec calculates the present value of the lease payments to be received as **\$479,079** ($\$100,000 \times 4.79079^*$).

Beginning of the Lease (January 1, 2024)

CompuDec Corporation (Lessor)

| | | |
|--|----------------|----------------|
| Lease receivable (present value of lease payments) | 479,079 | |
| Cost of goods sold (lessor's cost) | 300,000 | |
| Sales revenue (present value of lease payments) | | 479,079 |
| Equipment (lessor's cost) | | 300,000 |

First Lease Payment (January 1, 2024)

CompuDec Corporation (Lessor)

| | | |
|------------------|---------|---------|
| Cash | 100,000 | |
| Lease receivable | | 100,000 |

*Present value of an annuity due of \$1: $n = 6, i = 10\%$.

| | |
|----------------|-----------|
| Sales revenue | \$479,079 |
| – COGS | 300,000 |
| Selling profit | \$179,079 |

You should recognize the similarity between recording both the revenue and cost components of this “sale by lease” and recording the same components of other sales transactions. Remember, when a company sells a product on account, two entries are recorded: one to record the receivable and sales revenue, and another to record the cost of goods sold and corresponding reduction in inventory. Let’s say you purchase a TV from **Best Buy** for \$479 and pay for it with your Best Buy credit card. And, assume Best Buy paid the wholesale price of \$300 to **Samsung** to acquire the TV. Here’s the way Best Buy would record the sale to you:

Recording a sales-type lease is similar to recording a sale of merchandise on account:

| | A/R | (price) |
|-----------|-----|---------|
| Sales rev | | (price) |
| COGS | | (cost) |
| Inventory | | (cost) |

| | | |
|-----------------------------|-----|-----|
| Accounts receivable (price) | 479 | |
| Sales revenue (price) | | 479 |
| Cost of goods sold (cost) | 300 | |
| Inventory (cost) | | 300 |

Now compare those entries to the entry to record our sale by lease. We'll reorder a few lines in the entry to make that comparison easier:

| | | |
|---------------------------|---------|---------|
| Lease receivable (price) | 479,079 | |
| Sales revenue (price) | | 479,079 |
| Cost of goods sold (cost) | 300,000 | |
| Equipment (cost) | | 300,000 |

In both cases, the seller is recording revenue and cost, and gross profit from the transaction will appear on the seller's income statement. Economically, leases are just one of the arrangements that sellers can use to help customers buy their products. Sales-type leases must be separately distinguished from nonlease sales in the financial statements.

Let's turn our attention now to situations in which at least one of the classification criteria is *not* met, so that the lease is classified as an operating lease.

Operating Leases

LO15-4 Describe and demonstrate how the lessor and lessee account for all transactions associated with operating leases.

In the finance/sales-type leases we've looked at, the lease is economically similar to the purchase of an asset, because the lessee has the ability to direct the use of the asset and obtain substantially all of its remaining benefits. If a lease doesn't meet any of the criteria for a finance/sales-type lease in [Illustration 15-2](#), then it's considered to be more in the nature of a rental agreement for a period of time. We refer to this second type of arrangement as an **operating lease**.¹¹

For the *lessor*, this distinction means *not* recording a lease receivable or derecognizing the leased asset (taking it off the balance sheet) for an operating lease as happens in a sales-type lease. It also means reporting *lease revenue* as an equal amount each period rather than a declining amount of interest revenue on a lease receivable as in a sales-type lease.

On the other hand, the *lessee* in an operating lease *does* report a right-of-use asset and a lease liability in its balance sheet exactly as in a finance lease. However, the lessee will calculate the amortization of the right-of-use asset a different way than it would for a finance lease (as we see demonstrated in the next illustration). Then, that amortization will be combined with the interest expense calculated on the lease liability, and the result will be an equal amount of *lease expense* reported in the lessee's income statement for each period of an operating lease.

So, the lessor and lessee both report straight-line amounts in their income statements for operating leases to reflect the fact that we consider an *operating lease* as a *straight-line rental* of the asset during the lease term.

To demonstrate accounting for operating leases, we need to change our example so none of the finance lease classification criteria in [Illustration 15-2](#) is met. We'll do that by changing the lease term. In the previous illustrations, the lease term is equal to the expected useful life of the asset (six years). Now, in [Illustration 15-7](#), the lease term is for only *four* years of the asset's six-year life, which is less than the "major part" of approximately 75%.

Assuming none of the other criteria are met, the arrangement is classified as an operating lease. (See  **Illustration 15-7.**)

Illustration 15-7 Operating Lease

On January 1, 2024, Sans Serif Publishers leased printing equipment from First LeaseCorp.

- First LeaseCorp purchased the equipment from CompuDec Corporation at a cost of \$479,079.
- Sans Serif’s borrowing rate for similar transactions is 10%.
- The lease agreement specifies **four** annual payments of \$100,000 beginning January 1, 2024, the beginning of the lease, and on each December 31 from 2024 through 2026.
- The useful life of the equipment is estimated to be six years.

The price Sans Serif pays for the right to control the use of the equipment is the present value of the lease payments:

$$\$100,000 \times 3.48685^* = \mathbf{\$348,685}$$

Lease Payments Lessee/s cost

* Present value of an annuity due of \$1 : $n = 4, i = 10\%$.

The lease doesn’t meet any of the criteria listed in  **Illustration 15-2**, so it is accounted for as an operating lease.

Beginning of the Lease (January 1, 2024)

Sans Serif (Lessee)

| | |
|---|---------|
| Right-of-use asset (present value of lease payments) | 348,685 |
| Lease payable (present value of lease payments) | 348,685 |

First LeaseCorp (Lessor)

(No entry to record a receivable or to derecognize asset)

How do we account for an operating lease? The lessee still records an asset and a liability at the beginning of the lease. The reason is that Sans Serif, although not having effectively purchased the asset via the lease agreement, still has acquired the *right to use the asset* for four years of the asset's six-year useful life. Just as in the case of a finance lease, the right to use the

By signing a lease, the lessee has an obligation to make payments (a liability), and in exchange for those payments, the lessee is receiving the right to use a specified asset (a right-of-use asset).

leased asset can be a significant benefit, even if for a shorter period of time, and the promise to make the lease payments can be a significant obligation. So, just like our prior example in which the asset was leased for its entire life, Sans Serif still recognizes a right-of-use asset and lease liability. The only difference in the initial entry is that, because the lease includes fewer payments, a smaller present value is recorded at the beginning of the lease.

Although an operating lease liability is reported in the balance sheet of the lessee, it is designated as a “non-debt liability” in order to distinguish it from traditional liabilities, including finance lease liabilities. That separate classification is intended to prevent operating lease liabilities from causing companies to violate debt covenants, such as restrictions that the debt to equity ratio not exceed a preset limit.

The lessor does not record a lease receivable. Instead, the lessor views an operating lease as simply renting the asset to the lessee, and, as we'll see next, records rent revenue on a straight-line basis over the lease term.

Recording Lease Expense/Lease Revenue

For an operating lease, the *lessee* will report a single lease expense rather than the separate interest and amortization associated with a finance lease. However, it's convenient to think of this single lease expense as consisting of those two components (interest and amortization). Although ASC 842 doesn't specify this decomposition, the lessee must (a) calculate the interest component in order to determine the reduction of the lease payable over the lease term and (b) calculate the amortization component in order to determine the reduction in the balance of the right-of-use asset over the lease term. So, for convenience and to more easily compare accounting for operating leases with finance leases, in this chapter we determine and *record* these two “components,” and then combine them to report a single lease expense amount.¹²

On the other hand, because the *lessor* in an operating lease does not record a lease receivable that would require determining a balance reduction (as happens in a sales-type lease), the lessor will simply record and report a single straight-line lease revenue. This lease revenue amount is the same as the lessee's lease expense.

INTEREST

Sans Serif (the lessee) determines interest on the lease payable in an operating lease the same way as in a finance lease, as demonstrated in [Illustration 15-7A](#).

ILLUSTRATION 15-7A Journal Entries for the First and Second Lease Payment

| First Lease Payment (January 1, 2024) | | |
|--|---------|---------|
| Sans Serif (Lessee) | | |
| Lease payable | 100,000 | |
| Cash (lease payment) | | 100,000 |
| First LeaseCorp (Lessor) | | |
| Cash (lease payment) | 100,000 | |
| Deferred lease revenue (lease revenue in 2024) | | 100,000 |
| Second Lease Payment (December 31, 2024) | | |
| Sans Serif (Lessee) | | |
| Interest expense [10% × (\$348,685 – 100,000)] | 24,869 | |
| Lease payable (difference) | 75,131 | |
| Cash (lease payment) | | 100,000 |
| First LeaseCorp (Lessor) | | |
| Deferred lease revenue (Jan. 1 lease payment) | 100,000 | |
| Lease revenue | | 100,000 |
| Cash (second lease payment) | 100,000 | |
| Deferred lease revenue (lease revenue in 2025) | | 100,000 |
| Depreciation expense (\$479,079 ÷ 6 years) | 79,847 | |
| Accumulated depreciation | | 79,847 |

Lease payable

\$ 348,685

\$(100,000) 1st payment

\$ 248,685

(75,131) 2nd payment

\$ 173,554

The lessor recognizes the lease revenue during the year after it is received.

The amortization schedule in [Illustration 15-7B](#) shows how the lease liability balance and the effective interest change over the four-year lease term.

Illustration 15-7B Lease Amortization Schedule

-
- The first lease payment includes no interest.
-
- The total of the cash payments (\$400,000) provides for:
1. Payment for the equipment's use (\$348,685).
 2. Interest (\$51,315) at an effective rate of 10%.

| | Payments | Effective Interest (10% × Outstanding balance) | Decrease in Balance | Outstanding Balance |
|----------|----------------|--|------------------------|------------------------|
| 1/1/24 | | | | 348,685 |
| 1/1/24 | 100,000 | | 100,000 | 248,685 |
| 12/31/24 | 100,000 | 0.10 (248,685) = 24,869 | 75,131 | 173,554 |
| 12/31/25 | 100,000 | 0.10 (173,554) = 17,355 | 82,645 | 90,909 |
| 12/31/26 | <u>100,000</u> | 0.10 (90,909) = <u>9,091</u> | <u>90,909</u> | 0 |
| | 400,000 | 51,315 | 348,685 | |

AMORTIZATION OF THE RIGHT-OF-USE ASSET

In an operating lease we determine the amortization of the right-of-use asset differently from the way we amortize it in a finance lease. The disparity considers the nature of finance leases and operating leases.

We can think of lease expenses in a *finance lease* as reflecting (a) the right to use the asset (amortization) plus (b) the financing of that right (interest). On the other hand, in an *operating lease*, lease expense is reported in a manner that is designed to mirror *straight-line rental* of the asset during the lease term. The way the lessee accomplishes that is to determine interest as in  **Illustration 15-7A** and  **15-7B** and

then to determine amortization of the right-of-use asset as the *amount needed to cause the total lease expense (interest plus amortization) to be an equal, straight-line amount over the lease term*. In other words, the lessee determines interest the normal way and then “plugs” the right-of-use asset amortization at whatever amount is needed for interest plus amortization to equal the straight-line lease payment. So, in  **Illustration 15-7C**, Sans Serif, having determined interest to be **\$24,869**, plugs an amortization amount of **\$75,131** to cause the total of the two components of the reported lease expense to be \$100,000.

In an operating lease, the lessee records interest the normal way and then “plugs” the right-of-use asset amortization at whatever amount is needed for interest plus amortization to equal the *straight-line* lease payment.

ILLUSTRATION 15-7C Lessee Entries for the Second Lease Payment: Interest and Amortization

| | | | |
|--|---------------|-----------|--|
| | Interest | \$ 24,869 | |
| | Amortization | 75,131 | |
| | Lease expense | \$100,000 | |

| | | | |
|--|--------|--|---------|
| Second Lease Payment (December 31, 2024) | | | |
| Interest expense [10% × (\$348,685 – \$100,000)] | 24,869 | | |
| Lease payable (difference) | 75,131 | | |
| Cash (second lease payment) | | | 100,000 |
| Amortization expense (\$100,000 – \$24,869) | 75,131 | | |
| Right-of-use asset | | | 75,131 |

Total lease expense (amortization plus interest) for Sans Serif will equal \$100,000 each year over the lease term.

LESSOR

On the flip side of the transaction, the lessor in an operating lease does not record a lease receivable at the beginning of the lease and does not remove from its balance sheet the asset being leased. With no receivable to accrue interest, First LeaseCorp simply records straight-line revenue as a single lease revenue amount equal to the \$100,000 lease payments and equal to the \$100,000 amount the lessee reports as lease expense. First LeaseCorp also depreciates the asset over the asset’s useful life (six years in this example), just as it would any other asset it owns and keeps on its books.

The lessor recognizes the lease revenue during the year for which payment is received at the beginning of the year.

Additional Consideration

Because ASC 842 doesn’t require recording interest and amortization separately for an operating lease, the two entries in [Illustration 15-7C](#) can be combined and recorded as follows:

December 31, 2024

| | | |
|--------------------|----------------------|---------------------|
| Lease expense | 100,000 ^a | |
| Lease payable | 75,131 ^b | |
| Right-of-use asset | | 75,131 ^b |
| Cash | | 100,000 |

^aIncludes the first year “interest component,” \$24,869 (= 10% × [\$348,685 – \$100,000]) and the “amortization component,” \$75,131 (= \$100,000 – \$24,869).

^b\$100,000 cash payment minus first year “interest component,” \$24,869 (= 10% × [\$348,685 – \$100,000])

Reporting Lease Expense and Lease Revenue

After recording these entries, the lessee will have two lease-related expenses—interest expense and amortization expense. However, the lessee combines these two accounts into a single *lease expense* and reports a single \$100,000 amount each year in its income statement. This is in keeping with the key objective of reporting a straight-line lease expense for an operating lease. Note that this is different than in a finance lease in which the lessee will report interest expense and amortization expense *separately* in the income statement.

In an operating lease, the lessee combines interest expense and amortization expense to report a single lease expense in the income statement.

First LeaseCorp, the lessor, has only a single lease revenue account in an operating lease and reports that straight-line amount, \$100,000, each year in its income statement. Thus, in keeping with the presumption that an operating lease is considered to be more in the nature of a rental agreement, the lessee reports *lease expense on a straight-line basis*, and the lessor reports *lease revenue on a straight-line basis* over the lease term.  **Illustration 15-7D** shows this accounting for both the lessee and the lessor over the life of the lease.

When it has been earned by the end of the year, it becomes lease revenue. †(\$479,079 ÷ 6). Depreciation expense also is recognized in 2028 and 2029, because the asset has a six-year useful life.</small> | | | | | |

COMPARISON OF LESSEE'S EXPENSE RECOGNITION BETWEEN FINANCE AND OPERATING LEASES

Now, let's turn to  **Illustration 15-8** to compare how the lessee reports its lease expense for a finance lease and an operating lease. Reflecting back to our illustrations for a finance lease, you should note that the lessee records more expense and the lessor records more revenue early in the life of a finance lease. This “front loading” of lease expense/revenue occurs due to the fact that interest is higher initially than it is in the later stages of a lease, while amortization expense for the lessee's right-of-use asset remains the same each period.¹³ Operating leases avoid front loading. As you might imagine, lessees tend to prefer the operating lease classification. It defers expense recognition, making net income higher in the early years of the lease.

Illustration 15-8 Comparison of Lessee's Expense Recognition between Finance and Operating Leases

In an operating lease, it's the total lease expense, not the amortization component, that's a straight-line amount.

| | Finance Lease Financing Approach | | | Operating Lease Straight-Line Approach | | |
|------|----------------------------------|----------------------|---------------|--|----------------------|---------------|
| | Interest Expense | Amortization Expense | Total Expense | Interest Expense | Amortization Expense | Total Expense |
| 2024 | 24,869 | 87,171 | 112,040 | 24,869 | 75,131 | 100,000 |
| 2025 | 17,355 | 87,171 | 104,526 | 17,355 | 82,645 | 100,000 |
| 2026 | 9,091 | 87,171 | 96,262 | 9,091 | 90,909 | 100,000 |
| 2027 | 0 | 87,171 | 87,171 | 0 | 100,000 | 100,000 |
| | 51,315 | 348,685* | 400,000* | 51,315 | 348,685 | 400,000 |

*Adjusted for rounding of other numbers in the schedule.

LO15–9 Discuss the primary differences between U.S. GAAP and IFRS with respect to leases.

International Financial Reporting Standards

No Operating Leases for Lessees under IFRS. Under *IFRS No. 16*, all leases are accounted for as finance leases by the lessee (one-model approach). Only lessors apply the classification criteria to distinguish between finance and operating leases. Thus, even for leases that qualify under U.S. GAAP (two-model approach) as operating leases, the lessee amortizes the right-of-use asset on a straight-line basis rather than “plugging” that amount to cause the total of interest and amortization to be a straight-line amount. This means that those leases under IFRS will have a front-loaded expense profile (because interest expense is more at the beginning than at the end).

Decision Makers’ Perspective—Financial Statement Impact

As indicated in the Decision Makers' Perspective earlier in the chapter, leasing can allow a firm to conserve assets, to avoid some risks of owning assets, and to obtain favorable tax benefits. These advantages are desirable. Accounting guidelines are designed to limit the ability of firms to obscure the realities of their financial position through off-balance-sheet financing or by avoiding violating terms of contracts that limit the amount of debt a company can have. Nevertheless, investors and creditors should be alert to the impact leases can have on a company's financial position and on its risk. Disclosure requirements include reporting finance lease liabilities and operating lease liabilities separately.

A noteworthy benefit to lessees of operating lease accounting is that expenses are recognized straight line, rather than front-loaded as in the case of finance leases for which interest expense and amortization are separately reported. In fact, the leasing industry lobbied the FASB extensively to make sure operating lease accounting was allowed. Lessees often went to extraordinary lengths to cause leases to qualify as operating leases under preexisting GAAP in order to avoid reporting lease liabilities in the balance sheet as well as to report straight-line lease expense. Now, following the new lease accounting guidance, many lessees continue to devise schemes to meet the criteria for operating leases so as to reap the benefits of straight-line lease expensing that those leases still convey.

From the perspective of an analyst, though, it's unclear why expenses associated with operating leases should be treated any differently than are expenses associated with finance leases. Consequently, even though a goal of ASC Topic 842: Leases was to reduce the need for investors to restate financial statements "as-if" leased assets and their related liabilities were on the balance sheet, it is likely that some sophisticated users now will restate financial statements to back out the straight-line recognition afforded operating leases and treat them like finance leases, similar to how they are treated under IFRS. ●

Discount Rate

An important factor in lease calculations that we've glossed over until now is the discount (interest) rate used in present value calculations. Because lease payments occur in future periods, we must consider the time value of money when evaluating their present value. The

rate is important because it influences virtually every amount reported by both the lessor and the lessee in connection with the lease.

One discount rate is implicit in the lease agreement.

This is the effective interest *rate of return the lease payments provide the lessor* under the lease. It is the desired rate of return the lessor has in mind when deciding the size of the lease payments. (Refer to our earlier calculations of the periodic lease payments.) If known by the lessee, the lessee also should make its calculations using the lessor's rate implicit in the lease agreement.

The lessee uses the interest rate implicit in the lease if known; otherwise the lessee uses its own incremental borrowing rate.

What if the lessee is unaware of the lessor's implicit rate? This is frequently the case in practice. This might happen, for example, if the leased asset has a relatively high residual value. As we will discuss later, if there's a residual value (guaranteed or not), it is an ingredient in the lessor's calculation of the lease payments. Sometimes it may be hard for the lessee to identify the residual value estimated by the lessor if the lessor chooses not to make it known.¹⁴ However, as the lease term and risk of obsolescence increase, the residual value typically is less of a factor.

When the lessor's implicit rate is not known, the lessee should use its own incremental borrowing rate. This is the rate the lessee would expect to pay a bank if funds were borrowed to buy the asset.¹⁵

Concept Review Exercise

OPERATING LEASE

United Cellular Systems leased a satellite transmission device from Pinnacle Leasing Services on January 1, 2024. Pinnacle paid \$800,000 for the transmission device. Its fair value is \$800,000.

Terms of the Lease Agreement and Related Information:

| | |
|---------------------------|---------------------------------------|
| Lease term | 3 years (6 semiannual periods) |
| Semiannual lease payments | \$120,000 at beginning of each period |
| Economic life of asset | 5 years |
| Interest rate | 12% |

Required:

1. Prepare the appropriate entries for both United Cellular Systems and Pinnacle Leasing Services on January 1, 2024, the beginning of the lease.
2. Prepare an amortization schedule that shows the pattern of interest expense for United Cellular Systems and interest revenue for Pinnacle Leasing Services over the lease term.
3. Prepare the appropriate entries to *record* the second lease payment on July 1, 2024, and adjusting entries on December 31, 2024 (the end of both companies' fiscal years).
4. What will United Cellular Systems *report* in its income statement in connection with the lease for the year ended December 31, 2024?

Solution:

1. Prepare the appropriate entries for both United Cellular Systems and Pinnacle Leasing Services on January 1, 2024, the beginning of the lease.

Page 848

Present value of periodic lease payments:

Calculation of the present value of lease payments.

$$(\$120,000 \times 5.21236^*) = \$625,483$$

*Present value of an annuity due of \$1: $n = 6$, $i = 6\%$.

January 1, 2024

United Cellular Systems (Lessee)

| | |
|-----------------------------------|---------|
| Right-of-asset (calculated above) | 625,483 |
|-----------------------------------|---------|

| | | |
|--|----------------|----------------|
| Lease payable (calculated above) | | 625,483 |
| Lease payable | 120,000 | |
| Cash (lease payment) | | 120,000 |
| Pinnacle Leasing Services (Lessor) | | |
| [No entry to record a receivable or to remove asset] | | |
| Cash (lease payment) | 120,000 | |
| Deferred lease revenue | | 120,000 |

2. Prepare an amortization schedule that shows the pattern of interest expense for United Cellular Systems and interest revenue for Pinnacle Leasing Services over the lease term.

| Date | Payments | Effective Interest | Decrease in Balance | Outstar Balanc |
|--------|----------------|--------------------------------|---------------------------|-------------------|
| | | (6% × Outstanding balance) | | |
| 1/1/24 | | | | 625,483 |
| 1/1/24 | 120,000 | | 120,000 | 505,483 |
| 7/1/24 | 120,000 | 0.06 (505,483) = 30,329 | 89,671 | 415,812 |
| 1/1/25 | 120,000 | 0.06 (415,812) = 24,949 | 95,051 | 320,761 |
| 7/1/25 | 120,000 | 0.06 (320,761) = 19,246 | 100,754 | 220,007 |
| 1/1/26 | 120,000 | 0.06 (220,007) = 13,200 | 106,800 | 113,207 |
| 7/1/26 | <u>120,000</u> | 0.06 (113,207) = <u>6,793*</u> | <u>113,207</u> | |
| | 720,000 | 94,517 | 625,483 | |

*Adjusted for rounding of other numbers in the schedule.

3. Prepare the appropriate entries to record the second lease payment on July 1, 2024, and adjusting entries on December 31, 2024 (the end of both companies' fiscal years).

| July 1, 2024 | | |
|--|----------------|----------------|
| United Cellular Systems (Lessee) | | |
| Interest expense [6% × (\$625,483 – \$120,000)]..... | 30,329 | |
| Lease payable (difference) | 89,671 | |
| Cash (lease payment) | | 120,000 |
| Amortization expense (\$120,000 – \$30,329)..... | 89,671 | |
| Right-of-use asset..... | | 89,671 |
| Pinnacle Leasing Services (Lessor) | | |
| Deferred lease revenue (Jan. 1 lease payment)..... | 120,000 | |
| Lease revenue..... | | 120,000 |
| Cash (second lease payment)..... | 120,000 | |
| Deferred lease revenue | | 120,000 |
| December 31, 2024 | | |
| United Cellular Systems (Lessee) | | |
| Interest expense (6% × \$415,812: from schedule) | 24,949 | |
| Interest payable..... | | 24,949 |
| Amortization expense (\$120,000 – \$24,949)..... | 95,051 | |
| Right-of-use asset..... | | 95,051 |
| Pinnacle Leasing Services (Lessor) | | |
| Deferred lease revenue (July 1 lease payment)..... | 120,000 | |
| Lease revenue..... | | 120,000 |
| Depreciation expense (\$800,000 ÷ 5 years)..... | 160,000 | |
| Accumulated depreciation..... | | 160,000 |

4. What will United Cellular Systems report in its income statement in connection with the lease for the year ended December 31, 2024?

In an operating lease, the lessee combines interest expense and amortization expense to report a *single lease expense* in the income statement. In 2024, that will be a single lease expense of \$240,000 (= \$30,329 + \$89,671 + \$24,949 + \$95,051).

Short-Term Leases—A Shortcut Method

LO15-5 Explain when and how a lessee accounts for a lease by the shortcut method.

It's not unusual to simplify accounting for situations in which doing so has no material effect on the financial statements. One such situation that permits a simpler application is a short-term lease. A lease is considered a "short-term lease" if it:

1. Has a lease term (including any options to renew or extend) of 12 months or less, *and*
2. Does not contain a purchase option that the lessee is reasonably certain to exercise, which would extend the term beyond 12 months.

The shortcut approach for short-term leases permits the lessee to choose *not* to record an asset and related liability associated with the lease at the beginning of the lease term. Instead, the lessee can simply record lease payments as rent expense over the lease term. Yes, this is the approach used by the lessor for lease revenue on the flip side of the transaction.

In a short-term lease, the lessee can elect not to record a right-of-use asset and lease payable at the beginning of the lease term, but instead to simply record lease payments as expense as they occur.

Let's look at an example that illustrates the relatively straightforward accounting for short-term leases. To do this, in [Illustration 15-9](#) we modify [Illustration 15-4A](#) to assume the lease term is *12 months*.

Illustration 15-9 Short-Term Lease

On January 1, 2024, Sans Serif Publishers leased printing equipment from First LeaseCorp. The lease agreement specifies 12 monthly payments of \$8,333 beginning January 1, 2024, the beginning of the lease, and on the first day of each of the next 11 months. The useful life of the equipment is estimated to be six years.

Beginning of the Lease (January 1, 2024)

No entry to record a right-of-use asset and liability (lease term \leq one year)

Monthly Lease Payments (January 1–December 1, 2024)

| | | |
|---------------|-------|-------|
| Lease expense | 8,333 | |
| Cash | | 8,333 |

LO15–9 Discuss the primary differences between U.S. GAAP and IFRS with respect to leases.

International Financial Reporting Standards

Shortcut Method. As in the case for short-term leases in U.S. GAAP, IFRS allows the lessee to elect not to record a right-of-use asset and lease payable at the beginning of the lease term, but instead to simply record lease payments as an expense as they occur. U.S. GAAP, though, defines a short-term lease as a lease that has a lease term of 12 months or less and does not include a purchase option *that the lessee is reasonably certain to exercise*. IFRS precludes a lease from being considered short term if the lease includes a purchase option regardless of whether the lessee is reasonably certain to exercise it.

In addition, though, unlike U.S. GAAP, IFRS allows “small ticket leases” also to apply this shortcut method. Small ticket leases are defined as those having a value of \$5,000 or less.

Uncertainty in Lease Transactions

LO15–6 Explain the impact on lease accounting of uncertainties, including uncertain lease terms, variable lease payments, residual values, purchase options, and termination penalties.

Let's turn our attention now to several issues related to uncertainty in lease transactions that impact lessee and lessor accounting. Among those issues are variable lease terms, variable lease payments, residual values, purchase options, and termination penalties.

What if the Lease Term Is Uncertain?

Sometimes the actual term of a lease is not obvious. Suppose, for instance, that the lease term is specified as four years, but it can be renewed at the option of the lessee for two additional years. Or maybe either party can terminate the lease after, say, three years. In such situations, we consider the lease term to be the contractual lease term adjusted for any periods covered by options to extend or terminate the lease for which there is a significant economic incentive to exercise the options. A company adjusts the lease term for an option only if it is “reasonably certain” that the lessee will exercise the option after considering the relevant economic factors.¹⁶ In other words, if the benefits of exercising an option are sufficiently high that we think the lessee will exercise it, we adjust the contractual term by adding the additional period of renewal, or by subtracting the period that follows a termination option.

REASSESSMENT OF THE LEASE TERM

Circumstances can change that require reassessment of how long the lease term will be. Reassessment requires a “triggering event” such that the lessee now has an economic incentive to exercise an option that

The lease term is the contractual lease term modified by any renewal or termination options that are reasonably certain to be exercised.

extends or terminates the lease. For example, assume that a lessee had no significant economic incentive as of the beginning of a six-year lease to exercise a two-year extension option. However, by the end of the third year, the lessee has made significant improvements to the asset whose cost could be recovered only if it exercises the extension option, making extension of the lease “reasonably certain.” In that case, the full term of the lease is now expected to be a total of eight years with five years remaining.

At the end of the third year, the lessee would remeasure the lease liability as the present value of the remaining five lease payments. Importantly, the discount rate for the new term is the incremental borrowing rate of the lessee using market interest rates *at the time of the reassessment*, rather than the rate used

The lease term is reassessed only when a significant event or change in circumstances indicates a change in the economic incentive for extension or termination of the lease.

at the beginning of the lease. Assuming the present value of the remaining five lease payments totaled \$400,000, while the current balance of the lease liability before remeasurement is \$250,000, the lessee would make the following adjustment:

| Reassessment of the Lease Term | | |
|--|--------------------|---------|
| Right-of-use asset | | 150,000 |
| Lease payable (increase in balance*) | | 150,000 |
| *PV of remaining 5 payments, discounted at the <i>current</i> rate | \$400,000 | |
| Liability balance after 3 years based on initial lease terms | <u>(\$250,000)</u> | |
| Increase [†] in balance | \$150,000 | |

[†]In situations when the lease term is shortened (termination option), the journal entry would be reversed to *reduce* the account balances.

Also, when there is a change in the lease term, lessees are required to reassess the *classification* of a lease. In the current example, because, with the assumed renewal, the lease term is for the entire useful life of the asset, the lease classification might need to be changed. Suppose, for instance, that the lease had been classified initially as an operating lease. Now, with the increase in the lease term, it might meet the criteria for a finance lease rather than an operating lease as previously classified. If so, we would have had an operating lease for three years and now have a five-year finance lease. That would mean amortizing the right-of-use asset as a straight-line allocation of the balance in that account at this point over the next five years, rather than “plugging” amortization as we would for an operating lease.

The discussion above pertains to a lessee. *A lessor is not permitted to reassess its initial determination of the lease term or discount rate.*

Decision Makers' Perspective—Considering the Economic Incentive for Exercising Options

What if we did not have the requirement to consider renewal options and the economic incentive for exercising them when we determine the lease term? Management might be tempted to structure leases with artificially short initial terms and numerous renewal options as a scheme to be able to use the shortcut method (which we discussed earlier) or to reduce significantly the amount of the lease liability to be reported (off-balance-sheet financing). ●

What if the Lease Payments Are Uncertain?

Sometimes lease payments are scheduled to be increased (or decreased) at some future date during the lease term, depending on whether or not some specified event occurs. Usually, the contingency is related to revenues, profitability, or asset usage above some designated level. For example in  **Illustration 15-10**, a recent annual report of **The Gap** included the following note:

ILLUSTRATION 15-10 Contingent Lease Payments—The Gap

Real World Financials

Rent Expense (in part)

Certain leases provide for contingent rents that are not measurable at inception. These contingent rents are primarily based on a percentage of sales that are in excess of a predetermined level and/or rent increase based on a change in the consumer price index or fair market value. These amounts are excluded from minimum rent and are included in the determination of rent expense when it is probable that the expense has been incurred and the amount can be reasonably estimated.

Why would a lease include a contingent payment provision? It's a way for lessees and lessors to share the

Most variable lease payments are recognized when incurred rather

risk associated with the asset's productivity. For example, let's assume a store owner, like at Gap, who pays for a premium mall location is doing so anticipating higher revenue. If the mall attracts a sufficiently higher number of shoppers, the lessee pays the lessor part of the resulting higher profits, but if not, the lessee makes only the normal lease payments. This arrangement also provides the lessor an incentive to attract shoppers to the mall, which is in the lessee's best interest. Because the amounts of future lease payments are uncertain and often avoidable, we don't consider them as part of the lease payments used to calculate the lessee's lease liability and the lessor's lease receivable. If and when lease payments increase, the change in the lease payments has no effect on balance sheet accounts and simply is reported as a separate lease expense (lessee) and lease revenue (lessor).¹⁷

than being estimated at lease commencement and included in the lessee's right-of-use asset and lease liability.

There are two exceptions to not including variable payments in the calculation of the lease liability recorded at the beginning of the lease. Let's take a look at both exceptions in order to understand when variable lease payments are included in the initial recording of the lease liability.

WHEN VARIABLE LEASE PAYMENTS ARE IN-SUBSTANCE FIXED PAYMENTS

The first exception to not including variable payments is when apparent "variable" payments actually are in-substance fixed payments. We include these "fixed payments in disguise" as part of the lessee's lease payments. For example, assume a retail store's monthly lease payments will increase next year by the higher of \$250 or 0.5% of monthly store revenue. In that case, we know that the lease payment will increase by at least \$250, so those payments are deemed to be in-substance fixed payments and are included in the lease payments used in present value calculations.

If future lease payments are uncertain, we consider them as part of the lease payments only if they are "in-substance fixed payments" or if payments vary solely when an index or rate changes.

WHEN VARIABLE LEASE PAYMENTS DEPEND ON AN INDEX OR RATE

Another exception to not including variable payments when initially recording the lease is when the amount of the lease payments depends on an index or a rate, such as the

Consumer Price Index or current interest rates. Even though lease payments will vary in the future, we use the initial lease payment amount, based on the current index (or rate), to discount to present value when determining the right-of-use asset, lease liability, and lease receivable. When lease payments do change in the future (because the index or rate changes), we don't remeasure the lease liability or leased asset at that time, but simply report the additional amount as a separate lease payment that produces expense for the lessee and revenue for the lessor.

Only if and when the lessee remeasures the lease liability for reasons other than a change in the index or rate should the lessee adjust the right-of-use asset and lease liability for changes in the amount of the payments. This might happen, for example, because of a reassessment of the lease term (as described in the previous section) or a modification of the lease (as described in the next section). In that case, the leased asset and lease liability are recalculated by determining the present value of future lease payments using (a) the new lease payments as adjusted for changes in the index or rate and (b) the discount rate that applies as of the date of the reassessment.

Only if the lease asset and lease liability are later remeasured for another reason, will a change in payments based on the CPI or market interest rates affect the right-of-use asset and liability.

The *lessor* never reassesses its lease receivable for variable lease payments.

What if Lease Terms Are Modified?

Sometimes the lessee and lessor will agree to modify the terms of a lease before the lease term ends. This creates two possibilities. First, the modification might grant the lessee an *additional right of use*. This would mean terminating the original lease and accounting for the modified arrangement as a new lease. Second, the modification might *alter the lessee's right to use* the asset rather than grant an additional right of use. This would mean adjusting, adding to, or deleting what has been recorded in order to conform to the new terms of the contract (say, a change in the lease term or lease payments) and perhaps reclassifying the lease from one type to another.

If a modification grants the lessee an *additional right of use*, the original lease is terminated and a new lease is created based on the modified arrangement.

As an example, assume a four-year operating lease of equipment with a useful life of six years (as we had in  **Illustration 15-7**). Let's say that after two years, the

Modifying lease terms sometimes requires reclassifying operating leases to finance/sales-type leases, or vice versa.

lessee and lessor agree to extend the lease term by two years and to alter the amount of the lease payments. The additional two years were not originally an option. In this case, the modification alters the lessee's right to use the equipment; it doesn't grant the lessee an additional right to use another asset. In addition, the modified lease term of two additional years (six years total) is now for a "major part" of the asset's six-year economic life, so classification changes from an operating lease to a finance/sales-type lease.

 **Illustration 15-11** demonstrates how modifications to the contract would be recorded.

Sans Serif, the lessee, updates the balances of the right-of-use asset and lease liability for the increase in present value. In addition, because the lease is now classified as a finance lease, Sans Serif no longer will recognize straight-line lease expense of \$100,000. Instead, at the end of each remaining year, Sans Serif will record interest expense and amortization of the right-of-use asset in the usual way for a finance lease.

First LeaseCorp, the lessor, records a lease receivable for the present value of the remaining lease payments and removes the equipment (and related accumulated depreciation) from its books. Because the sales revenue is higher than the carrying amount of the equipment, First LeaseCorp also recognizes selling profit for the difference: Sales revenue of **\$329,068** minus cost of goods sold of **\$319,386¹⁸** equals **\$9,682**. In addition, at the end of each remaining year, First LeaseCorp will record interest revenue at the now current effective rate of 9% for a sales-type lease (instead of straight-line rent revenue of \$100,000 for an operating lease).

COVID-19: Accounting and Reporting Implications

The *Coronavirus Aid, Relief, and Economic Security* (CARES) Act was designed to provide stimulus relief to businesses affected by COVID-19 in the form of loans, grants, and tax changes.

One provision of the CARES Act provided protections from eviction and late fees due to nonpayment of rent for many lessees. Even for lessees not protected by these provisions, many lessors chose to grant concessions due to the COVID-19 pandemic in the form of payment deferral or forgiveness.

You learned in this chapter that when the terms of a lease are modified, the lessee and lessor must adjust, add to, or delete what has been recorded in order to conform to the new terms of the contract (say, a change in the lease payments) and perhaps reclassify the lease from one type to another. However, when lessees receive rent concessions due to the COVID-19 pandemic, the FASB said that lessees and lessors can elect an option not to account for the changes as a modification, and instead choose to account for the concessions as if they were contemplated as part of the original lease agreement.

So, for example, suppose a lessor in an operating lease is required or encouraged by the government to extend the lease term and/or delay lease payments. The new payment schedule might cause the lease to now be classified as a finance/sales-type lease. In that case, the lessee would adjust the right-of-use asset and lease liability to conform to the new terms of the contract and could choose not to reclassify the lease from an operating lease to a finance lease and thus continue to record amortization so as to report lease expense (interest plus amortization) on a straight-line basis. Similarly, the lessor could choose not to reclassify the lease from an operating lease to a sales-type lease and thus continue to record lease receipts as lease revenue.

Residual Value

The **residual value** of leased property is an estimate of what its commercial value will be at the end of the lease term. Typically, we will have a residual value in an *operating* lease because the lease term usually ends before the lease asset's value has been depleted. A

residual value is less likely but certainly not unusual, when the lease qualifies as a sales-type lease because the lease term is for most, if not all, of the asset's life.

The residual value is an estimate of what a leased asset's commercial value will be at the end of the lease term.

■ **LO15–9** Discuss the primary differences between U.S. GAAP and IFRS with respect to leases.

International Financial Reporting Standards

Reassessment of the Right-of-Use Asset and Lease Liability. Under IFRS, a lessee will remeasure the variable lease payments that depend on an index or a rate not just when the lessee remeasures the right-of-use asset and lease liability for other reasons, but also whenever there is a change in the cash flows resulting from a change in the reference index or rate.

Typically, the lessee promises to return the leased asset to the lessor at the end of a lease. An asset being returned will likely have some value.

GUARANTEE OF THE RESIDUAL VALUE

Sometimes a lease agreement includes a guarantee by the lessee that the lessor will recover a specified residual value when custody of the asset reverts back to the lessor at the end of the lease term. This not only reduces the lessor's risk, but also provides an incentive for the lessee to exercise a higher degree of care in maintaining the leased asset to preserve the residual value. The lessee promises to return not only the property but possibly also sufficient cash to meet the guaranteed amount promised in the lease agreement.

A lessee sometimes will guarantee that the lessor will recover a specified residual value when custody of the asset reverts back to the lessor.

A residual value affects several aspects of lease accounting, including the size of the periodic lease payments, the classification of a lease, and the amounts recorded by both the lessee and lessor.

On January 1, 2024, Sans Serif Publishers leased printing equipment from First LeaseCorp.

- First LeaseCorp purchased the equipment from CompuDec Corporation at a cost of \$479,079.
- Sans Serif's borrowing rate for similar transactions is 10%.
- The lease agreement specifies four annual payments of \$100,000 beginning January 1, 2024, the beginning of the lease, and on each December 31 from 2024 through 2026.
- The useful life of the equipment is estimated to be six years.
- The present value of those four payments at a discount rate of 10% is \$348,685.
- On January 1, 2026 (after three payments*), the lessee and lessor agreed to (1) extend the lease term by two years and (2) increase the remaining three payments from \$100,000 to \$130,000 each.
- The market rate of interest at that time has decreased from 10% to 9%.

The table below summarizes the effect of four important contract modifications:

| Contract | Original Lease | Modified Lease | Effect |
|--------------------|----------------|------------------------|--|
| 1. Term | 4 years | 6 years | Increase in present value |
| 2. Payments | \$100,000 | \$130,000 | Increase in present value |
| 3. Discount rate | 10% | 9% | Increase in present value |
| PV on Jan. 1, 2026 | \$90,909** | \$329,068 [†] | Lessee: Increase PV balances by \$238,159^{††} |
| 4. Classification | Operating | Finance/Sales-type | Lessor: Record sale of asset for \$329,068 (and remove asset's carrying amount) |

Modification of the Lease (January 1, 2026)

Sans Serif (Lessee)

| | |
|---|----------------|
| Right-of-use asset | 238,159 |
| Lease payable (increase in PV from \$90,909 to \$329,068) | 238,159 |

First LeaseCorp (Lessor)

| | | |
|--|----------------|-------------------------|
| Lease receivable (PV of 3 remaining lease payments) | 329,068 | |
| Sales revenue (PV of 3 remaining lease payments) | | 329,068 } profit |
| | | 9,682 |
| Cost of goods sold (cost minus accumulated depreciation) | 319,386 | |
| Accumulated depreciation [(\$479,079 ÷ 6 years) × 2 years] | 159,693 | |
| Equipment | | 479,079 |

*The modification occurs two years into the lease, but there have been three payments since payments are at the beginning of each year.

**See Illustration 15-7B.

[†]Present value of remaining three lease payments = \$130,000 × 2.53129. (Present value of an ordinary annuity of \$1: $n = 3, i = 9\%$.)

^{††}\$329,068 – 90,909

EFFECT OF A RESIDUAL VALUE ON THE SIZE OF LEASE PAYMENTS

Suppose the printing equipment leased in our finance/sales-type lease ([Illustration 15-4](#)) was expected to be worth **\$60,000** at the end of the six-year lease term. Should this influence the lessor's (First LeaseCorp) calculation of periodic rental payments? Yes! Here's why.

The leasing company purchased the equipment for \$479,079. That's the amount the company needs to recover through the leasing contract along with interest revenue sufficient to achieve its business objectives. We are assuming that means a 10% return on investment. Where does that return come from? In some leases (our finance/sales-type lease in [Illustration 15-4](#), for instance) the entire return comes from the lessee's lease payments, which must be enough over the lease term to pay the lessor its investment in the lease asset plus the desired amount of interest (**10%**).

In that situation the lessor calculated the lease payments as follows:

We calculated the necessary payments by dividing the \$479,079 investment by the present value of an annuity due of \$1, discounted at 10% for six years. That calculation by the lessor yielded \$100,000 for each of the six payments.

| | |
|---|------------------|
| Amount to be recovered (present value) | \$479,079 |
| | <u>÷4.79079*</u> |
| Lease payments at the beginning of each of the next 6 years | <u>\$100,000</u> |

*Present value of an annuity due of \$1: n = 6, i = 10%.

However, if the lessor gets the asset back at the end of the lease, and the asset has commercial value at that time, the lessor has another source of return. The value of the asset itself, the residual value, will provide another source of recovery of the lessor's investment. That reduces the amount needed from periodic lessee payments for the lessor to generate its 10% return. To see how, in [Illustration 15-12](#) let's assume a \$60,000 residual value at the end of the six-year lease term.

Illustration 15-12 Effect of Residual Value on the Calculation of Lease Payments

On January 1, 2024, Sans Serif Publishers leased printing equipment from First LeaseCorp.

- First LeaseCorp purchased the equipment from CompuDec Corporation at a cost of \$479,079.
- Assume the lease includes six annual payments beginning January 1, 2024, and on each December 31 from 2024 through 2028.
- At the end of the six-year lease term ending December 31, 2029, the equipment is expected to have a **residual value of \$60,000**.
- The estimated useful life of the equipment is **seven years**.

If the six lease payments are of an equal amount, what payment amount would provide First LeaseCorp with a return of 10%?

| | |
|---|-------------------|
| Amount to be recovered* (fair value) | \$479,079 |
| Less: Present value of the residual value (\$60,000 × 0.56447*) | <u>(33,868)</u> |
| Amount to be recovered through periodic rental payments | \$ 445,211 |
| | <u>÷4.79079**</u> |

Lease payments at the beginning of each of the six years \$ 92,931^{††}

*The amount to be recovered would also include "initial direct costs" paid by the lessor. We discuss initial direct costs in Part C of this chapter.

*Present value of \$1: $n = 6, i = 10\%$.

**Present value of an annuity due of \$1: $n = 6, i = 10\%$.

††For another example, recall our four-year *operating* lease (Illustration 15–7) in which the lease payments are \$100,000 each. Although not stated at the time, First LeaseCorp anticipated that the fair value of the equipment at the end of the lease term (residual value) would be **\$190,911**, which is why the lease payments were \$100,000:

| | |
|---|-------------------------|
| Amount to be recovered (fair value) | \$ 479,079 |
| Less: Present value of the residual value (\$190,911 × 0.68301 [†]) | <u>(130,394)</u> |
| To be recovered through periodic lease payments (present value) | \$ 348,685 |
| | ÷ 3.48685 ^{††} |
| | <u><u>\$100,000</u></u> |

Lease payments at the beginning of each of the four years

† Present value of \$1: $n = 4, i = 10\%$.

††Present value of an annuity due of \$1: $n = 4, i = 10\%$.

The present value of the residual value of a lease asset is called a **residual asset**. Since the property will revert back to the lessor, the lessee doesn't have the right of use of the entire value of the asset and thus doesn't view the residual asset as *its* asset. However, from the lessor's perspective, even if a residual value is not guaranteed, the lessor still expects to receive it. So, the lessor will view the residual asset as contributing to the amount needed to recover its \$479,079 investment, causing the lessee's cash lease payments to be \$92,931 rather than \$100,000. *As the expected residual value increases, the size of the lease payments decreases.* The residual, whether guaranteed or unguaranteed, affects the size of the lease payments.

EFFECT OF A RESIDUAL VALUE ON AMOUNTS RECORDED BY THE LESSOR

Sales-Type Lease with Residual Value. The *lessee's accounting is unaffected* by the residual value other than its causing the payments to be lower. In the situation described in  **Illustration 15-12**, Sans Serif, the lessee, would record a right-of-use asset and lease liability for the present value of the six lease payments (\$445,211). Then, over the term of

the lease, it would record interest expense and amortization in the usual way for this finance-type lease.

The *lessor's accounting is affected* by the residual value. In [Illustration 15-12A](#), we see how the lessor will record the lease introduced in [Illustration 15-12](#).

Illustration 15-12A Sales-Type Lease with Residual Value: Lessor

The lessor's lease receivable includes the value of the asset expected at the end of the lease term.

Beginning of the Lease (January 1, 2024)

First LeaseCorp (Lessor)

| | |
|--|---------|
| Lease receivable (PV of lease payments plus PV of \$60,000 residual value)* | 479,079 |
| Equipment (lessor's cost: carrying amount) | 479,079 |

*Alternatively, the lessor could record the receivable and the residual asset separately:

| | |
|---|---------|
| Lease receivable (PV of lease payments) | 445,211 |
| Residual asset (PV of \$60,000 residual value) | 33,868 |
| Equipment (lessor's cost: carrying amount) | 479,079 |

Both (a) the present value of the lease payments and (b) the present value of the residual value combine to allow the lessor to recover its \$479,079 investment and are recorded as the lease receivable at the beginning of the lease. The lessor includes the residual value (at PV) in its lease receivable regardless of whether it's *guaranteed or not* because it expects to receive that value either way. The lessor includes the **\$60,000** residual value in its amortization schedule, along with the lease payments as demonstrated in [Illustration 15-12B](#).

Illustration 15-12B Lessor's Amortization Schedule—with Residual Value

| | Receipts | Effective Interest (10% × Outstanding balance) | Decrease in Balance | Outstanding Balance |
|----------|---------------|--|------------------------|------------------------|
| 1/1/24 | | | | 479,079 |
| 1/1/24 | 92,931 | | 92,931 | 386,148 |
| 12/31/24 | 92,931 | 0.10 (386,148) = 38,615 | 54,316 | 331,832 |
| 12/31/25 | 92,931 | 0.10 (331,832) = 33,183 | 59,748 | 272,084 |
| 12/31/26 | 92,931 | 0.10 (272,084) = 27,208 | 65,723 | 206,361 |
| 12/31/27 | 92,931 | 0.10 (206,361) = 20,636 | 72,295 | 134,066 |
| 12/31/28 | 92,931 | 0.10 (134,066) = 13,407 | 79,524 | 54,542 |
| 12/31/29 | 60,000 | 0.10 (54,542) = 5,458* | <u>54,542</u> | 0 |
| | 617,586 | 138,507 | 479,079 | |

*Adjusted for rounding of other numbers in the schedule.

The amortization schedule reveals several important points. Let's use the original information from [Illustration 15-4A](#) and the amortization schedule from [Illustration 15-4C](#) for comparison. In the original information First LeaseCorp entered into a lease for six cash payments that were calculated to be \$100,000 with no residual value. Now, in our illustration of a lease with a residual value, the payments are calculated to be only \$92,931, and there would also be a tangible asset returned to the lessor one year after the six cash payments. So, we now include in our calculation the **\$60,000** residual value.

The lessor expects to receive the residual value (**\$60,000**) in the form of equipment at the end of the lease term.

Despite the different composition of the amounts the lessor will receive, their present value (\$479,079) is the same as when we assumed \$100,000 periodic payments and no residual value. However, a greater amount of interest revenue will be recognized over the lease term: \$138,507. (It was \$120,921 before.) The higher interest reflects the fact that receipts are farther in the future, causing the outstanding lease balances (and interest on those balances) to be higher during the lease term. Also, note that a greater total amount of

The lessor's *gross investment in the lease* is the total of periodic lease payments and any residual value.

lease receipts is collected: \$617,586. (It was \$600,000 before.) This total is referred to as the lessor's *gross investment in the lease* and is included in the lessor's lease disclosure note. The present value of those same payments (\$479,079) is referred to as the *net investment in the lease* and is the amount recorded as the lease receivable in the journal entry at the beginning of the lease.

Remember, the final periodic cash payment on December 31, 2028, is at the beginning of the final year. Then, at the end of the year of the lease on December 31, 2029, the equipment is returned to the lessor and is reinstated on the lessor's books at its fair value, which we assume to be **\$60,000**, the amount predicted when the lease began. This entry is demonstrated in  **Illustration 15-12C**.

Illustration 15-12C End of Lease Term—Actual Residual Value Equals the Estimated Amount: Lessor

| End of the Lease (December 31, 2029) | | |
|--|---------------|--------|
| First LeaseCorp (Lessor) | | |
| Equipment (residual value) | 60,000 | |
| Lease receivable (account balance) | | 54,542 |
| Interest revenue (10% × outstanding balance) | | 5,458 |

If the actual residual value on December 31, 2029, is less (or more) than **\$60,000**, the lessor would record a loss (or gain). Notice, too, that the residual asset is returned to the lessor.

Additional Consideration

You might be wondering why we have a receivable balance of \$54,542 in this last entry. It's the residual value of the asset, right? Yes, the original receivable balance represented both (a) the cash payments to be collected (now collected) and (b) the amount to be received in the form of a residual asset when the leased asset is returned to the lessor. But the original residual value was \$60,000, and the amount we included in the receivable was the present

value of that amount (the residual asset), which was \$33,868 at the commencement of the lease. Now, though, that present value has grown to \$54,542 at the end of 2028 (as we see in the amortization schedule and this final journal entry) and \$60,000 at the end of 2029 (when the lessor gets the asset back at the end of the lease).

Sales-Type Lease with Selling Profit and Residual Value. When a sales-type lease that includes a residual value also has a selling profit, we need to take that into consideration when the lease is recorded initially. Recall that the lessor records both sales revenue and cost of goods sold to account for the selling profit. The sales revenue is the present value of only the periodic lease payments, not including the unguaranteed residual value. To visualize this, let's assume that our sales-type lease with a selling profit ([Illustration 15-6](#)) had included a residual value of **\$60,000**. In that case, the initial lessor entry would be modified as shown in [Illustration 15-13](#).

Illustration 15-13 Sales-Type Lease with Selling Profit and Residual Value: Lessor

| | |
|----------------|-----------|
| Sales revenue | \$445,211 |
| – COGS | 266,132 |
| Selling profit | \$179,079 |

The lease provides the lessor with a selling profit if the PV of payments exceeds the asset's cost.

On January 1, 2024, Sans Serif Publishers leased printing equipment from CompuDec Corporation.

- The lease agreement specifies six annual payments of \$100,000 beginning January 1, 2024, the beginning of the lease, and on each December 31 from 2024 through 2028.
- At the end of the six-year lease term ending December 31, 2029, the equipment is expected to have a **residual value of \$60,000** (not guaranteed).
- The estimated useful life of the equipment is **seven years**.
- The interest rate in these financing arrangements is 10%.

- CompuDec manufactured the equipment at a cost of **\$300,000**.

Beginning of the Lease (January 1, 2024)

CompuDec Corporation (Lessor)

| | | |
|--|---------|---------|
| Lease receivable (PV of lease payments* plus PV of \$60,000 residual value**) | 479,079 | |
| Cost of goods sold (\$300,000 – \$33,868 **) | 266,132 | |
| Sales revenue (\$479,079 – \$33,868 **) | | 445,211 |
| Equipment (lessor's cost) | | 300,000 |

* $\$92,931 \times 4.79079^{**} = \$445,211$ present value of lease payments

** $\$60,000 \times 0.56447^{\dagger} = \$33,868$ present value of residual value

[†] Present value of \$1: $n = 6, i = 10\%$.

^{**} Present value of an annuity due of \$1: $n = 6, i = 10\%$.

Sales revenue does not include the unguaranteed residual value because the revenue to be recovered from the lessee is lease payments only. The remainder of the lessor's investment is to be recovered—not from payment by the lessee, but by selling, releasing, or otherwise obtaining value from the asset when it reverts back to the lessor. Think of it this way: The portion of the asset sold is the portion not represented by the residual value. So, both the asset's cost of goods sold and its selling price are reduced by the present value of the portion *not sold*.

On the other hand, if the lessee had *guaranteed* the residual value, its present value would have been included in the selling price. The residual asset (\$33,868) would also be considered sold and thus *not* subtracted from either sales revenue or cost of goods sold.

When a Cash Payment Is Predicted Due to a Lessee-Guaranteed Residual Value.

We saw in  **Illustration 15-4** that without a residual value contributing to the lessor recovering its investment, the amount of the six payments needed to recover the \$479,079 investment would have been \$100,000. We also saw in  **Illustration 15-12** that with a residual value expected by the lessor at the end of the lease, the payments would be reduced to \$92,931. Other than this reduction of lease payments, should the *lessee* (Sans Serif Publishers) be concerned with the residual value of the leased asset? The answer is maybe. It depends on whether the lessee has arranged to guarantee a specific value of the residual

asset at the conclusion of the lease and, even then, how that value compares to the prediction of its actual value. We explore that possibility next.

As we discussed earlier, a lease agreement sometimes includes a guarantee by the lessee that the lessor will recover a specified residual value when custody of the asset reverts back to the lessor at the end of the lease term. The lessee promises to return not only the property but also sufficient cash to provide the lessor with a minimum combined value (residual value and cash). That doesn't necessarily mean, though, that the lessee will be required to make any cash payment. A cash payment would be expected as of the beginning of a lease only if the guaranteed amount exceeds the estimated residual value of the asset.

If a cash payment under a lessee-guaranteed residual value is predicted, the present value of that payment is added to the present value of the periodic lease payments that the lessee records as both a right-of-use asset and a lease liability. For instance, let's assume

A cash payment that's predicted because of a lessee-guaranteed residual value is treated the same as another lease payment.

that in the situation described in [Illustration 15-12](#) when the estimated residual value was \$60,000, negotiations led to Sans Serif guaranteeing an \$80,000 residual value. That means that if the property's value is less than \$80,000 at the end of the six-year lease term, the lessee will pay cash for the difference. Since that value is expected to be \$60,000, the expected *excess* guaranteed residual value is $\$80,000 - \$60,000 = \$20,000$. The lessee views the expected excess guaranteed residual value as an additional cash flow to be paid to the lessor (addition to lease payments). The present value of the expected excess guaranteed residual is \$11,289 ($\$20,000 \times 0.56447$), and the lessee would add this amount to the present value of the periodic lease payments to record the right-of-use asset and lease liability at the beginning of the lease.¹⁹

Looking at it from the other side of the transaction, does the lessor also view the expected *excess* guaranteed residual value as an additional amount to be collected? Yes. In fact, the lessor expects to receive that payment (\$20,000) *as well as the residual value itself* (\$60,000). So, the lessor includes in its *lease receivable* both the excess guaranteed residual value and the residual value itself (guaranteed or not). For its *sales revenue*, the lessor also includes that excess residual value payment but will include the *residual value itself only if it's guaranteed*.²⁰

Situations in which the lessee-guaranteed residual value exceeds the estimate of the actual residual value are rare in practice. It makes little economic sense for a lessee to agree to guarantee an amount greater than the estimated residual value, virtually ensuring an

additional cash payment at the conclusion of the lease. The requirement to account for it in this way, though, serves as a deterrent to lessees and lessors who might be inclined to manipulate reported numbers by reducing lease payments while creating an excess *lessee-guaranteed* residual value to compensate for the reduced lease payments.

Additional Consideration

If a residual value is not guaranteed by the lessee or is guaranteed by the lessee but the guaranteed amount does not differ from the estimate of the actual fair value at the end of the lease term, it does not affect the lessee's calculation of the right-of-use asset or lease liability other than influencing the amount of each lease payment as we saw in  **Illustration 15–12**.

EFFECT OF A RESIDUAL VALUE ON LEASE CLASSIFICATION

We classify a lease as a finance/sales-type lease if, in substance, the lessor is transferring control of the asset to the lessee. Recall that one of the classification criteria is a comparison of the fair value of an asset with the present value of the payments coming from the lessee. Payments from the lessee are the periodic lease payments plus any portion of the residual value the lessee has guaranteed. That's the basis for classification criterion 4 ( **Illustration 15-2**): If the present value of the lease payments, including any *lessee-guaranteed* residual value, constitutes “substantially all” of the fair value of the asset, it's a finance lease from the lessee's perspective and a sales-type lease from the lessor's perspective.

Additional Consideration

When the lessee does not control substantially all of the remaining benefits of the underlying asset, the lease usually is considered an operating lease.

When control is not transferred to the lessee, but the present value of lease payments constitutes substantially all of the asset's fair value due to a third-party guaranteed

residual value and it's probable that the lessor will collect the lease payments, the lease is considered a direct financing lease.

In the unlikely event of a profit in a direct financing lease, the revenue (and profit) must be deferred.

Recall that by one of the lease classification criteria, we have a finance/sales-type lease if the sum of the present value of the lease payments and any residual value guaranteed by the lessee amounts to substantially all of the fair value of the underlying asset. When that's the case, the lessee, through its contractually obligated payments, guarantees recovery of substantially all of the lessor's investment in the asset, so the lessee controls substantially all of the remaining benefits of the underlying asset. This control is consistent with the principle of a sale in ASC Topic 606: Revenue from Contracts with Customers for the lessor to recognize sales revenue on the lease.²¹ On the other hand, when the lessee lacks that control, the lease is considered an operating lease.

An exception is when the lease qualifies as a **direct financing lease**. We have a direct financing lease only when a third party (typically an insurance company) is paid to guarantee all or part of the residual value. When that happens, it's possible that the combined present value of (a) the *lessee's* periodic payments, (b) the *lessee-guaranteed* residual value, and (c) the *third-party* guaranteed residual value will constitute substantially all of the asset's fair value, but that the lessee's obligated payments, (a) and (b), are insufficient to do so. That situation would indicate that the lessee *does not* control substantially all of the remaining benefits of the underlying asset, so from the lessee's perspective the lease is an operating lease.

However, from the lessor's perspective, the *total* of the obligated payments guarantees recovery of substantially all the lessor's investment in the asset (assuming collection is probable) indicating that it shouldn't be an operating lease, but the lessee's portion of the total is insufficient to indicate control, so it shouldn't be a sales-type lease either.

A lease is considered a direct financing lease if:

1. It doesn't qualify as a sales-type lease.
2. The combined present value of (a) the *lessee's* periodic payments, (b) the *lessee-guaranteed* residual value, and (c) the *third-party* guaranteed residual value will constitute substantially all of the asset's fair value.

3. It's probable that the lessor will collect the lease payments.

When a lease is a direct financing lease rather than a sales-type lease, the lessor's primary involvement in the lease is providing financing of the asset in exchange for interest revenue. The lessor records the lease the same as it would a sales-type lease with no selling profit:

| | |
|---|-----|
| Lease receivable (present value of lease payments*) | XXX |
| Asset (carrying value) | XXX |

*Including the lessee's periodic payments, any lessee-guaranteed residual value, and the third-party guaranteed residual value.

Although rare, if a direct financing lease gives rise to selling profit, the lessor does not recognize the profit at the beginning of the lease. Instead, the lessor would credit deferred profit (considered a contra asset reduction in the receivable) in the entry above. The lessor then would recognize the profit over the lease term in such a manner that the total of that profit and the interest revenue on the remainder of the lease receivable is a constant periodic rate of return on the lease. This can be accomplished by not recording the "deferred profit" separately, but subtracting it from the lease receivable. Decreasing the receivable causes the implicit rate (the interest rate that causes the present value of the lease payments to equal the receivable) to be higher. Determining interest revenue at this higher rate accomplishes the purpose of increasing interest revenue (actually interest plus a portion of profit) each period by a portion of the deferred revenue.

Purchase Option

A **purchase option** is a provision of some lease contracts that gives the lessee the option to purchase the lease asset during, or at the end of, the lease term at a specified exercise price. If it is "reasonably certain" that the lessee will exercise the purchase

The exercise price of a purchase option is considered to be an additional cash payment if exercise of the option is "reasonably certain."

option, the accounting for the lease is affected in three ways: (1) the lease is classified as a finance/sales-type lease, (2) both the lessee and the lessor consider the exercise price of the

option to be an additional cash payment, and (3) we assume the lease term ends on the date that the option is expected to be exercised. Both the additional cash payment and the shortened lease term impact the calculation of the lessee’s right-of-use asset and lease liability and the lessor’s lease receivable. Another implication is that, since the lessee is predicted to own the asset after the lease term, the right-of-use asset recognized by the lessee should be amortized over the economic life of the asset, rather than over the lease term.

In practice, a purchase option whose exercise is reasonably certain is often referred to as a “bargain” purchase option (BPO), and we’ll use that term in this book. BPOs are so named because the exercise price of the purchase option is a good deal (a bargain) to the lessee, making it reasonably certain that the lessee will exercise the option. To see the accounting for a BPO, let’s again modify [Illustration 15-4](#), this time to assume the lease agreement allows Sans Serif the option to purchase the leased equipment for \$60,000 at the end of the lease term. At this time, the fair value is expected to be sufficiently high (\$75,000) to indicate reasonable certainty that Sans Serif will exercise the option. This situation is assumed in [Illustration 15-14](#).

Illustration 15-14 Bargain Purchase Option

The lessor *subtracts* the PV of the exercise price to determine lease payments.

The lessee *adds* the PV of the exercise price to determine its asset and liability.

On January 1, 2024, Sans Serif Publishers leased printing equipment from First LeaseCorp. First LeaseCorp purchased the equipment from CompuDec Corporation at a cost of \$479,079. The lease agreement specifies six annual payments of \$92,931 beginning January 1, 2024, the beginning of the lease, and on each December 31 from 2024 through 2028. On December 31, 2029, at the end of the six-year lease term, the equipment is expected to be worth \$75,000, and Sans Serif has the option to purchase it for **\$60,000** on that date. The residual value after seven years is zero.[†] First LeaseCorp routinely acquires electronic equipment for lease to other firms. The interest rate in these financing arrangements is 10%.

Lessor’s calculation of lease payments:

| | |
|---|-----------------|
| Amount to be recovered (fair value) | \$479,079 |
| Less: Present value of the exercise price (\$60,000 × 0.56447*) | <u>(33,868)</u> |

| | |
|---|---------------------|
| Amount to be recovered through periodic rental payments | \$ 445,211 |
| | $\div 4.79079^{**}$ |
| Lease payments at the beginning of each of the six years: | <u>\$ 92,931</u> |
| Lessee's calculation of PV of lease payments: | |
| Present value of periodic lease payments ($\$92,931 \times 4.79079^{**}$) | \$445,211 |
| Plus: Present value of the exercise price ($\$60,000 \times 0.56447^*$) | 33,868 |
| Present value of lease payments | <u>\$479,079</u> |

(Recorded as a leased asset and a lease liability)

^tOur discussion of the effect of a bargain purchase option (BPO) would be exactly the same if our illustration were of a sales-type lease with a selling profit (for instance, if the lessor's cost were \$300,000) except that, of course, sales revenue and cost of goods sold would be recorded.

* Present value of \$1: $n = 6, i = 10\%$.

**Present value of an annuity due of \$1: $n = 6, i = 10\%$.

The lessor's calculation of periodic lease payments is precisely the same as when we had the \$60,000 residual value in the previous illustration. In fact, the amortization schedule is exactly the same as in [Illustration 15-12B](#) when we had a residual value. This is because the exercise price is a component of the lease payments for both the lessor and lessee as was the residual value.

A question you might have at this point is: Why do we ignore the residual value now when we have a bargain purchase option? The reason is obvious when you recall an essential characteristic of such an option—it's expected to be exercised. So, when it is exercised, title to the leased asset passes to the lessee and, with title, any residual value also passes. When that happens, the residual value cannot be considered an additional lease payment to the lessor.

If the lessee obtains title, the lessor's computation of rental payments is unaffected by any residual value.

Recording the exercise of the option is similar to recording the periodic lease payments. That is, a portion of the payment covers interest for the year, and the remaining portion reduces the outstanding liability/receivable balance (to zero with this last payment), as shown in [Illustration 15-14A](#).

Illustration 15-14A Journal Entries—with Purchase Option

The cash payment expected when the BPO is exercised represents part interest and part principal just like the other cash payments.

Exercise of Purchase Option (December 31, 2029)

Sans Serif Publishers (Lessee)

| | | |
|------------------------------------|---------|---------------|
| Interest expense (10% × \$54,542*) | 5,458** | |
| Lease payable (difference) | 54,542 | |
| Cash (exercise price) | | 60,000 |

First LeaseCorp (Lessor)

| | | |
|--|---------------|----------------|
| Cash (exercise price) | 60,000 | |
| Lease receivable (account balance) | | 54,542 |
| Interest revenue (10% × outstanding balance) | | 5,458** |

*\$54,542 is the balance of lease payable after all periodic lease payments have been made (see [Illustration 15-12B](#)).

**Adjusted for rounding of other numbers in the schedule from [Illustration 15-12B](#).

Note also that amortization is affected by the BPO. As pointed out earlier, the lessee normally amortizes its right-of-use asset over the term of the lease. But if ownership transfers by contract or by the expected exercise of a purchase option, the lessee will have the asset beyond the lease term and will amortize it over the longer useful life. This reflects the fact that the lessee anticipates using the leased equipment for its full useful life. In [Illustration 15-14B](#), the lease term is six years, but the equipment is expected to be useful for **seven years**, so amortization each year is \$68,440 ($\$479,079 \div 7 \text{ years}$).

Illustration 15-14B Amortization Expense with Purchase Option

Each December 31 over the life of the asset

Sans Serif Publishers (Lessee)

| | | |
|---|--------|--------|
| Amortization expense ($\$479,079^* \div 7 \text{ years}$) | 68,440 | |
| Right-of-use asset | | 68,440 |

*The residual value is zero after the full seven-year useful life.

PURCHASE OPTION EXERCISABLE BEFORE THE END OF THE LEASE TERM

In  **Illustration 15-14**, we assumed that the purchase option was exercisable on December 31, 2029—the end of the lease term. Sometimes, though, the lease contract specifies that an option becomes exercisable

When we have a BPO, the length of the lease term is limited to the time up to when the purchase option becomes exercisable.

before the designated lease term ends. If the option is reasonably certain to be exercised, *the lease term ends for accounting purposes when the option becomes exercisable*. Lease payments include only the periodic cash payments specified in the agreement that occur prior to the date a BPO becomes exercisable. We assume the option is exercised at that time and the lease ends.

TERMINATION PENALTIES

Similar to a lease with a purchase option, if a lease contract includes a penalty payment if the lessee chooses to terminate the lease at a time specified in the contract, we consider the termination penalty to be an additional cash payment if the lessee is “reasonably certain” to terminate the lease. Again, if termination is predicted, we consider the lease term to be from the beginning of the lease to the expected termination date.

In  **Illustration 15-15**, we see the factors that are included in the lease term and the lease payments used in accounting for leases.

Illustration 15-15 Composition of Lease Term and Payments

LEASE PAYMENTS INCLUDE:

Noncancelable period
PLUS: Periods covered by renewal options if exercise is “reasonably certain”

LEASE PAYMENTS INCLUDE:

Fixed payments
PLUS: Exercise price for purchase option if exercise is “reasonably certain”

| | |
|--|--|
| <i>MINUS:</i> Periods following date of purchase option if exercise is “reasonably certain” | <i>PLUS:</i> Termination penalty for termination option if exercise is “reasonably certain” |
| <i>PLUS:</i> Periods covered by renewal options if <i>under control of lessor</i> | <i>PLUS:</i> Variable lease payments only if (a) deemed in-substance fixed payments or (b) based on an index or rate (with any changes in payments included only if and when the lessee remeasures the lease liability for another reason) |
| <i>PLUS:</i> Periods following date of termination option if it’s “reasonably certain” the option will not be exercised | <i>PLUS:</i> Excess of guaranteed residual value over expected residual value |

Summary of the Lease Uncertainties

 **Illustration 15-16** provides a summary of various uncertainties concerning lease arrangements that might influence the way lessees and lessors determine lease payments, the lessee’s right-of-use asset and lease liability, and the lessor’s lease receivable.

Illustration 15-16 Summary of Effects of Uncertainties

The lease term

Noncancelable period for which a lessee has the right to use an underlying asset, modified by any renewal or termination options that are “reasonably certain” to be exercised, or not exercised. Options whose exercise is under the control of the lessor are automatically

Variable lease payments

included.

Reassessed only when a significant occurrence indicates a change in the economic incentive.

Included only if payments are

- In-substance fixed payments or
- Based on an index or rate, with changes due to the index or rate considered only if and when the lessee remeasures the lease liability for another reason

Unguaranteed residual value

Present value (called residual asset)

- Influences the size of lease payments
- Added to lease receivable
- Subtracted from sales revenue and COGS in sales-type lease

Lessee guaranteed residual value

Present value

- Considered when determining lease classification (criterion 4)
- Included in lease receivable
- Included in sales revenue

Excess of guaranteed residual value over expected residual value

Present value

- Influences the size of lease payments
- Added to right-of-use asset and lease liability

Purchase options

If exercise is “reasonably certain,”

- Limits lease term
- PV of exercise price added to right-of-use asset and lease liability

Termination penalties

- PV of exercise price added to lease receivable

If exercise is “reasonably certain,”

- limits lease term
- PV of penalty amount added to right-of-use asset and lease liability
- PV of penalty amount added to lease receivable

Modification of a lease

- If a modification grants the lessee an *additional right of use*, the original lease is terminated and a new lease is created
- Otherwise, it means adjusting, adding, or deleting accounts to conform with the new terms and perhaps reclassifying it from one type of lease to another

Remeasurement of the Lease Liability

When considering the various uncertainties surrounding leases in the previous sections, we’ve encountered several situations that cause us to remeasure a lease liability (and right-of-use asset).  **Illustration 15-17** provides us with a summary.

In each case, we compare the remeasured liability with its current balance to see the adjustment needed, calculating the new amount as the present value of the *remaining* lease payments:

| | |
|--|------------|
| Present value of <i>remaining</i> payments | \$xxx |
| Liability balance (current) | <u>xxx</u> |
| Increase (or decrease) in balance | \$xxx |

Illustration 15–17 Situations Requiring Remeasurement of the Lease Liability

SITUATIONS REQUIRING REMEASUREMENT OF THE LEASE LIABILITY

Discount rate used in present value calculation **updated** from rate used at the beginning of the lease to rate **current** at remeasurement

| 1. There is a change in the assessment of | | Yes |
|--|---|-----|
| | • The lease term* | Yes |
| | • Whether exercise of a purchase or termination option is reasonably certain* | Yes |
| | • Any cash payment because of a guaranteed residual value | No |
| | • Whether a variable payment is | No |

| | | |
|--|--|---------------------------------------|
| 2. There is a modification of the terms of the lease [†] | <ul style="list-style-type: none"> • Not accounted for as a new lease | <p>now a fixed payment</p> <p>Yes</p> |
|--|--|---------------------------------------|

[†]We reassess the lease term or exercise of an option only when some new event, like a leasehold improvement, triggers a reassessment.

[†]Under prior GAAP, a modification was the only time the lease liability was remeasured.

Ethical Dilemma

“I know we had discussed that they’re supposed to be worth \$24,000 when our purchase option becomes exercisable,” Ferris insisted. “That’s why we agreed to the lease terms. But, Jenkins, you know how uncertain technology changes are. We can make a good case that they’ll be worth \$40,000 in three years.”

The computers to which Ferris referred were leased to a customer this week. The lease meets none of the criteria for classification as a sales-type lease except that it contains a purchase option that is reasonably certain to be exercised if the computers could be purchased for \$24,000 after three years. “We could record revenue earlier that way,” Jenkins agreed.

How could revenue be recorded earlier?
Do you perceive an ethical problem?

PART C

Other Lease Accounting Issues and Reporting Requirements

Is It a Lease?

LO15–7 Determine whether a contract contains a lease and explain the impact on lease accounting of other payments, including nonlease payments, initial direct costs, and leasehold improvements.

When does a contract meet the definition of a lease? Two key criteria must be met at the inception of the contract for an arrangement to constitute a lease for purposes of ASC 842:

1. There must be an *identified asset*. This means:
 - The asset must be property, plant, or equipment (not inventory, intangibles, or natural resources), and
 - The asset must be specified in the contract, either (a) *explicitly* with, say, a vehicle identification number or serial number or (b) *implicitly*, with enough information to recognize the physically distinct asset that is the subject of the lease.
2. The lessee must have the right to *control the use* of the identified asset, which requires that:
 - The customer can derive substantially all of the potential economic benefits from using the asset,
 - The customer can direct the use of the asset throughout the contract term, and
 - The lessor cannot have the right to substitute an alternative asset anytime during the period of use and possibly benefit economically from such a substitution.²²

Page 865

Often, judgment is needed to decide. For instance, some transportation contracts might explicitly or implicitly specify the exact truck, shipping vessel, or rail car that will be used to fulfill a service agreement. The contract might comprise a lease, depending on whether the

customer can control the use of the transportation vehicle. These criteria are easier to understand if we look at an illustration (see [Illustration 15-18](#)).

Illustration 15-18 Does the Contract Contain a Lease?

CastCom Communications entered into a contract to supply Phast Franchising with next-generation BoostServers, model BS12, that promise to monitor Phast's IT infrastructure and boost data transfer rates among its various locations for a period of four years.

- As part of the contract, CastCom installed the BoostServers at Phast's corporate office and will be responsible for general maintenance and will replace the servers with an equivalent model in the event of a breakdown.
- Phast will provide the necessary interface with its IT infrastructure and will be responsible for decisions related to the configuration and use of the servers.

Does this contract meet the definition of a lease?

Our first criterion for an arrangement to constitute a lease is: Do we have an identified asset? It appears we do. The servers are equipment and are specifically identified (BoostServers, model BS12) in the contract. Even if the model number had not been provided, the servers could have been "implicitly" stated with enough information to recognize the asset that is the subject of the lease.

Now that we have determined that there is an identified asset, we check criterion 2: Does Phast have *the right to control the use of the asset*? For that to happen, the customer must "derive substantially all of the potential economic benefits from using the asset" *and* "direct the use of the asset throughout the contract term." In our illustration, Phast (a) has sole use of the servers throughout the four-year period, indicating that it has the right to obtain substantially all the economic benefits from using of the servers and (b) has the right to direct the use of the server because it is "responsible for decisions related to the configuration and use of the servers."

But this second criterion is a bit more specific. For Phast to *control the use* of the identified asset, CastCom cannot have the right to substitute alternative assets throughout the period of use and also benefit economically from that substitution (substantive substitution right).

If so, Phast cannot *control the use* of the identified asset. That's because CastCom could substitute, let's say, a less costly asset whose use might not provide equivalent benefits to the customer who still makes the same payments. Having to replace an asset because of a malfunction, though, does not represent such a right because CastCom does not benefit economically from the substitution.

So, yes, both requirements are met: (1) There is an identified asset, and (2) the lessee has the right to control the use of the identified asset. We have a lease.

Now, let's modify the arrangement a bit (see  **Illustration 15-18A**).

Illustration 15-18A Does the Contract Contain a Lease?

CastCom Communications entered into a contract to supply network services to Phast Franchising promising to monitor its IT infrastructure and boost data transfer rates among its various locations.

- As part of the service, CastCom will install various servers at its discretion at Phast's corporate office through which it will proctor and maintain quality and data transfer rates.
- Phast cannot access or direct the use of the servers; CastCom is tasked with their operation and can replace or reconfigure them as needed to provide the contracted services.

Does this contract meet the definition of a lease?

At first glance, we might say the first requirement is met: the *servers* constitute an identified asset. But let's look again. Apparently there is no type of identifier for the servers, such as a model number or serial number. Even that might be okay because the lease accounting guidance says that an asset needn't be explicitly stated in the contract (like with a model number); it can be "implicitly" stated (like just saying servers) as long as there's enough information to recognize the physically distinct servers that are the subject of the contract. In this contract, though, CastCom will install unspecified servers at its discretion to proctor and maintain unspecified quality and data transfer rates.

Even if we had an identified asset, we still wouldn't have a lease because criterion 2: *The lessee must have the right to control the use of the identified asset* isn't met either. The contract

states that “Phast cannot access or direct the use of the servers.”

If it’s not a lease, we account for the arrangement as a service contract. We simply record each payment as an expense.

Some companies actually attempt to structure arrangements to intentionally fail the criteria that require lease accounting. That way, they’re accounted for as service contracts, which means avoiding the lease liability and right-of-use asset appearing on the balance sheet (off-balance-sheet financing). As we discussed earlier in the chapter, reporting a liability can have an unfavorable effect on the company’s debt to equity ratio and other quantifiable indicators of riskiness. And, similarly, reporting the asset increases total assets and correspondingly lowers calculations of the rate of return on assets. So, managers often feel they can avoid looking more risky and less profitable if they can configure agreements in a way that causes it not to be considered a lease. In fact, many of the lease accounting guidelines we’ve looked at in this chapter are designed to keep managers from doing that.

Now that we’ve considered the type of contract that constitutes a lease, let’s look at some other lease accounting issues.

Nonlease Components of Lease Payments

Service contracts, maintenance, hazard insurance, and property taxes are costs often associated with owning and operating an asset. Frequently, for convenience, a lease contract will specify that the lessor is to pay some or all of these costs, but in reality, these additional costs are embedded in the periodic payments made by the lessee. The accounting question is whether to include these costs as separate components of the lease contract (to be expensed by the lessee) or, instead, as amounts to be capitalized as part of the right-of-use asset. The determining factor is whether the charge represents a *transfer of a good or service to the lessee* apart from the leased asset. If so, it qualifies as a “nonlease component” of the payment and is separated from the lease payments.

For demonstration, let’s modify  **Illustration 15-4A**.

Recall that the lease payments in that illustration were \$100,000 each year. Now, let’s assume the periodic lease payments were increased to \$102,000 with the provision that the lessor (First LeaseCorp) pays an annual maintenance fee of \$2,000 to a third-party maintenance firm.  **Illustration 15-19** demonstrates how the lessee and lessor would account for the maintenance portion of the lease payment.

Nonlease components that are included in periodic lease payments to be paid by the lessor are, in effect, indirectly paid by the lessee—and expensed by the lessee.

Sans Serif receives two separate benefits in the lease contract—the right to use equipment as well as maintenance on that equipment. Thus, payments specified in the lease contract contain a lease component (use of equipment for \$100,000) and a nonlease component (maintenance service of \$2,000).

Illustration 15-19 Lease Payments That Include Nonlease Components Paid by the Lessor

On January 1, 2024, Sans Serif Publishers leased equipment from First LeaseCorp. First LeaseCorp purchased the equipment from CompuDec Corporation at a cost of \$479,079.

- Six annual payments of \$102,000 beginning January 1, 2024.
- Payments include **\$2,000**, which First LeaseCorp will use to pay an annual maintenance fee.
- The interest rate in these financing arrangements is 10%.
- Finance lease to Sans Serif Publishers.
- Sales-type lease to First LeaseCorp.

First Payment (January 1, 2024)

Sans Serif Publishers (Lessee)

| | | |
|--------------------------------|--------------|---------|
| Maintenance expense (2024 fee) | 2,000 | |
| Lease payable | 100,000 | |
| Cash (lease payment) | | 102,000 |

First LeaseCorp (Lessor)

| | | |
|--------------------------|----------------|----------------|
| Cash (lease payment) | 102,000 | |
| Lease receivable | | 100,000 |
| Maintenance fee payable* | | 2,000 |

*This assumes the **\$2,000** maintenance fee hasn't yet been paid to the outside maintenance service.

Note: The maintenance payment could be recorded as a prepaid expense at the beginning of the period. Then, before preparing financial statements at December 31, we would need to credit prepaid maintenance expense and debit maintenance expense.

At the beginning of the lease, Sans Serif would record a right-of-use asset and lease liability for the present value of the six \$100,000 lease payments, \$479,079 (see  **Illustration 15-4A**). For the first payment of \$102,000, **\$2,000** is recorded as maintenance expense, and the remaining \$100,000 reduces the lease liability.

On the other hand, if the \$2,000 had been a payment for *hazard insurance or property taxes*, that payment does not transfer to the lessee a separate good or service. Instead, payments for hazard insurance and property taxes are specifically identified in the lease accounting guidance as part of the lease payments rather than nonlease components. So, in that case, the right-of-use asset and lease liability (and the lessor's lease receivable) would be measured as the present value of the \$102,000 lease payments, not \$100,000.

As a practical expedient, the lessee is given the *option* to elect to *not* separate the nonlease components (like oil changes, snowplowing, and other forms of maintenance) and, instead, account for the entire arrangement as a lease. For example, the lessee in our illustration could elect to treat the \$2,000 maintenance cost, not as maintenance expense as shown, but instead as part of the lease payment like for insurance or taxes. If the amounts are material, the lessee likely will not elect this option because the effect is to increase the lease liability, something most lessees try to avoid.

The lessor, too, is permitted to elect to not separate the nonlease components and, instead, account for the entire arrangement as a lease. This practical expedient is allowed when:

1. The timing and pattern of transfer for the lease and nonlease components are identical (like when lease payments and payments for a maintenance contract both are equal straight-line amounts paid monthly), and
2. The lease would qualify as an operating lease if the lease payments alone (without the nonlease payments) are considered.²³

If initial direct costs are incurred by the lessor, they are (a) recorded as a *selling expense* in a sales-type lease that *includes selling profit*, (b) deferred and expensed over the lease term in a sales-type lease with no *selling profit*, and (c) deferred and expensed over the lease term in an *operating lease*.

INITIAL DIRECT COSTS

The costs that (a) are associated directly with consummating a lease, (b) are essential to acquire the lease, and (c) would not have been incurred had the lease agreement not occurred are referred to as **initial direct costs**. They include legal fees, commissions, and preparing and processing lease documents. While legal and processing fees for executing the lease document are included, legal fees for negotiations and drafting documents are not initial direct costs and are expensed as incurred.

For the lessee, initial direct costs incurred are added to the right-of-use asset. For the lessor, accounting for initial direct costs incurred depends on the classification of the lease.

- In a **sales-type lease that includes selling profit**, initial direct costs are expensed in the period of “sale”—that is, at the beginning of the lease. This treatment assumes that in a sales-type lease, the primary reason for incurring these costs is to facilitate the sale of the leased asset.

- In a **sales-type lease with no selling profit**, initial direct costs are deferred and expensed over the lease term. This can be accomplished by not recording the “prepaid expense” separately, but including it in the lease receivable. Increasing the receivable causes the implicit rate (the interest rate that causes the present value of the lease payments to equal the receivable) to be lower. Determining interest revenue at this lower rate accomplishes the purpose of reducing interest revenue each period by a portion of the prepaid expense.
- In an **operating lease**, initial direct costs are deferred and expensed over the lease term, generally on a straight-line basis.

ADVANCE PAYMENTS

Often lease agreements call for **advance payments** to be made at the beginning of the lease. Those payments represent prepaid rent (lease costs). Such payments are included with other payments when the lessee determines the present value of lease payments to determine the right-of-use asset and lease liability and when the lessor calculates its lease receivable in a sales-type lease. Remember, though, the lessor doesn’t record a lease receivable for an operating lease. In that case, these advance payments are recorded as deferred rent revenue and allocated (normally on a straight-line basis) to rent revenue over the lease term. The rent that is periodically reported in those cases consists of the periodic rent payments themselves plus an allocated portion of deferred rent revenue.

Advance payments represent prepaid rent.

LEASEHOLD IMPROVEMENTS

Sometimes a lessee will make improvements to leased property that reverts back to the lessor at the end of the lease. If a lessee constructs a new building or makes modifications to existing structures, that cost represents an asset just like any other capital expenditure. Like other assets, its cost is allocated as amortization or depreciation expense over its useful life to the lessee, which will be the shorter of the lease term or the physical life of the asset. Theoretically, such assets can be recorded in accounts descriptive of their nature, such as buildings or plant. In practice, the traditional account title used is **Leasehold Improvements**.²⁴ In any case, the undepreciated cost usually is reported in the balance sheet under the caption *property, plant, and equipment*. Movable assets like office furniture and equipment that are not attached to the leased property are not considered leasehold improvements.

The cost of a leasehold improvement is depreciated over its useful life to the lessee.

As discussed previously in [Part B](#) of this chapter, the existence of leasehold improvements can affect the determination of the lease term. For instance, let's say a company leased a building for a noncancelable term of six years with a two-year renewal option. Before it takes possession of the building, the company pays for leasehold improvements that are expected to have significant value at the end of six years. Because that value can be realized only through continued occupancy of the leased building, at the beginning of the lease the company would determine that it is reasonably certain to exercise the renewal option because it would suffer a significant economic penalty if the leasehold improvements were abandoned at the end of the initial lease term. As a result, at the beginning of the lease, the company would conclude that the lease term is eight years. Similarly, if the leasehold improvement is made during the lease term, that additional cost might trigger a reconsideration of whether a purchase or renewal option is reasonably certain to be exercised, and thus a reassessment of the lease term.

Concept Review Exercise

VARIOUS LEASE ACCOUNTING ISSUES: FINANCE/SALES-TYPE LEASE

(This is an extension of the previous Concept Review Exercise.)

United Cellular Systems leased a satellite transmission device from Satellite Technology Corporation on January 1, 2024. Satellite Technology paid \$500,000 for the transmission device. Its retail value is \$653,681. The lease qualifies as a finance lease to the lessee and a sales-type lease with a selling profit to the lessor.

Terms of the Lease Agreement and Related Information:

| | |
|-----------------------------|---|
| Lease term | 3 years (6 semiannual periods) |
| Semiannual lease payments | \$123,000 at the beginning of each period |
| Economic life of asset | 4 years |
| Interest rate | 12% |
| Unguaranteed residual value | \$40,000 |

Terms of the Lease Agreement and Related Information:

| | |
|---------------------------------|--|
| Maintenance fees paid by lessor | \$3,000/twice each year (included in lease payments) |
| Lessor's initial direct costs | \$4,500 |

Required:

1. Prepare an amortization schedule that describes the pattern of interest expense over the lease term for United Cellular Systems.
2. Prepare an amortization schedule that describes the pattern of interest revenue over the lease term for Satellite Technology.
3. Prepare the appropriate entries for both United Cellular Systems and Satellite Technology on January 1 and June 30, 2024. (Amortization is recorded only at year-end.)
4. Prepare the appropriate entries for both United Cellular Systems and Satellite Technology on December 31, 2026 (the end of the lease term), assuming the device is returned to the lessor and its actual residual value is \$14,000 on that date.

Solution:

1. Prepare an amortization schedule that describes the pattern of interest expense over the lease term for United Cellular Systems.

Calculation of the Present Value of Lease Payments:

Present value of periodic lease payments excluding maintenance costs of \$3,000:

$$(\$120,000 \times 5.21236^*) = \$625,483$$

*Present value of an annuity due of \$1: $n = 6, i = 6\%$.

Note: The residual value is excluded from lease payments for both the lessee and lessor but was influential in establishing the size of the lease payments.

| Date | Payments | Effective Interest (6% × Outstanding balance) | Decrease in Balance | Outs Ba |
|---------|----------------|---|---------------------------|------------|
| 1/1/24 | | | | |
| 1/1/24 | 120,000 | | 120,000 | |
| 6/30/24 | 120,000 | 0.06 (505,483) = 30,329 | 89,671 | |
| 1/1/25 | 120,000 | 0.06 (415,812) = 24,949 | 95,051 | |
| 6/30/25 | 120,000 | 0.06 (320,761) = 19,246 | 100,754 | |
| 1/1/26 | 120,000 | 0.06 (220,007) = 13,200 | 106,800 | |
| 6/30/26 | <u>120,000</u> | 0.06 (113,207) = <u>6,793*</u> | <u>113,207</u> | |
| | 720,000 | 94,517 | 625,483 | |

*Adjusted for rounding of other numbers in the schedule.

2. Prepare an amortization schedule that describes the pattern of interest revenue over the lease term for Satellite Technology.

Page 870

Calculation of the Lessor's Net Investment:

| | |
|--|------------------|
| Present value of periodic lease payments excluding maintenance costs of \$3,000 ($\$120,000 \times 5.21236^*$) | \$625,483 |
| Plus: Present value of the residual value ($\$40,000 \times 0.70496^\dagger$) | 28,198 |
| Lessor's net investment in lease | <u>\$653,681</u> |

*Present value of an annuity due of \$1: $n = 6, i = 6\%$.

†Present value of \$1: $n = 6, i = 6\%$.

Note: The residual value is excluded from lease payments, but is part of the lessor's gross and net investment in the lease.

| Date | Payments | Effective Interest (6% × Outstanding balance) | Decrease in Balance | Outst Bal |
|----------|---------------|---|---------------------------|--------------|
| 1/1/24 | | | | (|
| 1/1/24 | 120,000 | | 120,000 | ! |
| 6/30/24 | 120,000 | 0.06 (533,681) = 32,021 | 87,979 | 4 |
| 1/1/25 | 120,000 | 0.06 (445,702) = 26,742 | 93,258 | 3 |
| 6/30/25 | 120,000 | 0.06 (352,444) = 21,147 | 98,853 | 2 |
| 6/30/25 | 120,000 | 0.06 (352,444) = 21,147 | 98,853 | 2 |
| 1/1/26 | 120,000 | 0.06 (253,591) = 15,215 | 104,785 | 1 |
| 6/30/26 | 120,000 | 0.06 (148,806) = 8,928* | 111,072 | |
| 12/31/26 | <u>40,000</u> | 0.06 (37,734) = <u>2,266*</u> | <u>37,734</u> | |
| | 760,000 | 106,319 | 653,681 | |

*Adjusted for rounding of other numbers in the schedule.

3. Prepare the appropriate entries for both United Cellular Systems and Satellite Technology on January 1 and June 30, 2024. (Amortization is recorded only at year-end.)

January 1, 2024

United Cellular Systems (Lessee)

| | | |
|--|---------|---------|
| Right-of-use asset (calculated above) | 625,483 | |
| Lease payable (calculated above) | | 625,483 |
| Lease payable (payment less maintenance costs) | 120,000 | |
| Maintenance expense | 3,000 | |
| Cash (lease payment) | | 123,000 |

Satellite Technology (Lessor)

| | |
|--|----------------|
| Lease receivable (PV of lease payments) | 653,681 |
| Cost of goods sold [$\$500,000 - (\$40,000 \times 0.70496)$] | 471,802 |

| | | |
|---|----------------|----------------|
| Sales revenue (present value of lease payments) | | 625,483 |
| Equipment (lessor's cost) | | 500,000 |
| Selling expense | 4,500 | |
| Cash (initial direct costs [†]) | | 4,500 |
| Cash (lease payment) | 123,000 | |
| Maintenance fee payable (or cash) | | 3,000 |
| Lease receivable (payment less maintenance costs) | | 120,000 |

*This is the unguaranteed residual value.

[†]If incurred by the lessor, initial direct costs are recorded as a selling expense at the beginning of a sales-type lease.

June 30, 2024

United Cellular Systems (Lessee)

| | |
|---|---------|
| Interest expense [6% × (\$625,483 – \$120,000)] | 30,329 |
| Lease payable (difference) | 89,671 |
| Maintenance expense (annual fee) | 3,000 |
| Cash (lease payment) | 123,000 |

Satellite Technology (Lessor)

| | |
|---|----------------|
| Cash (lease payment) | 123,000 |
| Maintenance fee payable (or cash) | 3,000 |
| Lease receivable (to balance) | 87,979 |
| Interest revenue [6% × (\$653,681 – \$120,000)] | 32,021 |

4. Prepare the appropriate entries for both United Cellular Systems and Satellite Technology on December 31, 2026, (the end of the lease term) assuming the device is returned to the lessor and its actual residual value is \$14,000 on that date.

December 31, 2026

United Cellular Systems (Lessee)

| | |
|--|---------|
| Amortization expense (\$625,483 ÷ 3 years) | 208,494 |
|--|---------|

| | | |
|---|---------------|---------------|
| Right-of-use asset | | 208,494 |
| Satellite Technology (Lessor) | | |
| Equipment (actual residual value) | 14,000 | |
| Loss on leased assets (\$40,000 – \$14,000) | 26,000 | |
| Lease receivable (account balance) | | 37,734 |
| Interest revenue (6% × \$37,734: from schedule) | | 2,266 |

Statement of Cash Flow Impact

Operating Leases

■ **LO15–8** Describe the impact of leases on the statement of cash flows and disclosure requirements pertaining to leases.

Remember, lease payments for operating leases represent rent—expense to the lessee, revenue for the lessor. These amounts are included in net income, so both the lessee and lessor report cash payments for operating leases in a statement of cash flows as cash flows from operating activities.

Both the lessee and lessor report cash payments for operating leases as *operating activities*.

Finance Leases—Lessee

You've learned in this chapter that finance leases are agreements that we identify as being formulated outwardly as leases, but which are, in substance, installment purchases, so we account for them as such. Each lease payment (except the first if paid at the beginning) includes both an amount that represents interest and an amount that represents a reduction of principal. In a statement of cash flows, then, the lessee reports the interest portion as a cash outflow from operating activities and the principal portion as a cash outflow from financing activities.

The interest portion of a finance lease payment is a cash flow from operating activities and the principal portion is a cash flow from financing activities.

At the beginning of the lease, the lessee reports the right-of-use asset and lease liability as a noncash investing/financing activity in the disclosure notes to the financial statements.

Sales-Type Leases—Lessor

In a sales-type lease we assume the lessor is actually selling its product. Consistent with reporting sales of products under installment sales agreements rather

Cash receipts from a sales-type lease are cash flows from *operating activities*.

than lease agreements, the lessor reports cash receipts from a sales-type lease as cash inflows from operating activities.

At the beginning of the lease, the lessor reports the lease as a noncash investing activity (acquiring one asset and disposing of another) in the disclosure notes to the financial statements.

Lease Disclosures

Lease disclosure requirements are quite extensive for both the lessor and lessee. Virtually all aspects of the lease agreement must be disclosed. The guiding objective is that lessees and lessors provide disclosures that enable users of financial statements to assess the *amount*, *timing*, and *uncertainty* of cash flows arising from leases. Information disclosed is both qualitative and quantitative.

Qualitative Disclosures

A general description of the leasing arrangement is required, including information about variable lease payments, options, nonlease payments, and residual values. A reason for excluding variable lease payments from the measurement of the lessee's lease liability and the lessor's receivable is that they could result in unreliable measurements in the financial statements. Disclosing information in notes to financial statements about variable lease payments would be more useful than estimating and including the payments in assets and liabilities.

Quantitative Disclosures

LESSEE

- Present value of operating and finance lease right-of-use assets and liabilities.
- Finance lease costs, with separate disclosure of interest expense and amortization.
- Operating lease expense, with separate disclosure of interest and amortization. (The total of these two is reported together in the income statement as lease expense.)
- Short-term lease cost.
- Variable lease cost.
- Weighted-average lease term of operating leases and finance leases.
- Weighted-average discount rate.
- A reconciliation of opening and closing balances of the right-of-use asset.
- Contractual obligations (and options that the lessee is "reasonably certain" to exercise) for each of the five succeeding fiscal years, plus a total for the remaining years.

- Table of future lease payments, segregated by type of lease, for each of the next five years, and total of payments for the remaining years, and (for finance leases) reconciled with the balance sheet liabilities.

LESSOR

- Information about lease contracts and significant assumptions and judgments.
- Table of lease revenues received.
- Lease sales disclosed separately from regular sales.
- Table of future lease payments, segregated by type of lease, for each of the next five years, and total of payments thereafter and (for sales-type leases) reconciled with the balance sheet receivables.
- Information about assets under operating lease.
- Information about risks associated with residual values.
- Information about significant changes in unguaranteed residual values.
- The gross investment and net investment in leases.

Decision Maker's Perspective—Lease Disclosures

Ed Telling/Getty Images

Among the items that lessees should disclose for their operating and finance leases are the:

- Present value of operating and finance lease right-of-use assets and liabilities.
- Future lease payments for each of the next five years, and total of payments for the remaining years.
- Rate used to discount the future annual payments into a present value reported on the balance sheet as an asset and liability.

Unfortunately, many companies have been inconsistent in whether and how they disclose these amounts, particularly the future annual payments and the discount rate. Without the discount rate and future annual payments, investors can't assess the reasonableness of the lease obligation because companies can manipulate that present value with their choice of discount rates.²⁵

For instance, American Airlines disclosed the following future operating lease payments for each of the subsequent five years and total of payments for the remaining years:

Page 873

| | |
|---------------------|--------------|
| 2023 | \$ 1,990 |
| 2024 | 1,817 |
| 2025 | 1,620 |
| 2026 | 1,429 |
| 2027 | 1,030 |
| 2028 and thereafter | <u>3,276</u> |
| | \$11,162 |

The company also properly disclosed that an average discount rate of 4.7% applied to discount these amounts to present value produced an operating lease obligation of \$9,129. If American Airlines had instead used a discount rate of 6.8% (the rate used by another company for the same period), its operating lease obligation would have been only \$8,700.

Analysts must be alert to the potential for manipulation and examine disclosure notes to find the information needed to appropriately evaluate lease assets and liabilities.

Financial Reporting Case Solution

Pressmaster/Shutterstock

- 1. How would HG's revenues "take a hit" as a result of more customers leasing than buying labeling machines?** When HG leases machines under operating leases, it reports revenue as it collects "rent" over the lease term. When HG sells machines, on the other hand, it recognizes revenue "up front" in the year of sales. Total revenues are not necessarily less with a lease, but are spread out over the several years of the lease term. This delays the recognition of revenues, creating the "hit" in the reporting periods in which a shift to leasing occurs.
- 2. Under what kind of leasing arrangements would the "hit" not occur?** The hit will not occur when HG leases its machines under sales-type leases providing a selling profit. This occurs when the fair value of the asset (usually the present value of the lease payments, or "selling price") exceeds the cost or carrying value of the asset sold. In those sales-type lease contracts, HG is, in essence, selling its machines under the arrangement. Consequently, HG will recognize sales revenue (and cost of goods sold) at the inception of the lease. The amount recognized is roughly the same as if customers actually buy the machines. As a result, the income statement will not receive the hit created by substituting operating leases for outright sales. ●

The Bottom Line

-  **LO15-1** A variety of operational, financial, and tax incentives often make leasing an attractive alternative to purchasing. A lessee should classify a lease transaction as a finance lease if one or more of five classification criteria is met, and a lessor should record the lease as a sales-type lease. If none of the five criteria is met, both the lessee and the lessor classify the lease as an operating lease. The criteria are used to identify situations when the lease is economically similar to the purchase of an asset because the lessee obtains control of the underlying asset, meaning the ability to direct the use of the asset and obtain substantially all of its remaining benefits, in contrast to merely obtaining control over the use of the asset for a period of time. (*p. 829*)
-  **LO15-2** When a lease is classified as a finance lease from the lessee's perspective and a sales-type lease from the lessor's perspective, (1) the lessee records a right-of-use asset and lease liability for the present value of the lease payments, and (2) the lessor records a lease receivable for the same amount and removes the asset from its books. The lessor recognizes interest revenue, and the lessee recognizes interest expense at the effective rate times the outstanding balance. The lessee amortizes the right-of-use asset on a straight-line basis. (*p. 835*)
-  **LO15-3** The lessor records sales revenue and cost of goods sold for a sales-type lease with a selling profit. That happens when the present value of the lease payments exceeds the asset's carrying value. (*p. 840*)
-  **LO15-4** In an operating lease, a sale is not recorded by the lessor. Instead, the periodic lease payments are accounted for as rent revenue by the lessor. The lessee records a right-of-use asset and lease liability at the present value of the lease payments. Interest expense is recognized at the effective rate times the outstanding balance. Amortization of the right-of-use asset is determined as the amount needed to cause the total lease expense (interest plus amortization) to be a straight-line amount equal to the lease payment. For an operating lease, the two components, interest and amortization, are shown as one lease expense in the income statement. (*p. 841*)

-  **LO15-5** In a lease of 12 months or less, the lessee can elect not to record a right-of-use asset and lease payable at the beginning of the lease term, but instead simply record lease payments as expense as they occur (shortcut method). (p. 849)
-  **LO15-6** The lease term is the contractual lease term modified by any renewal or termination options that are reasonably certain to be exercised or not exercised. Options whose exercise is under the control of the lessor are automatically included. Lease payments include payments resulting from those options as well as excess guaranteed residual values. The calculation of the present value of lease payments at the beginning of the lease does not include any variable lease payments, unless those payments are “in-substance fixed payments” or if they are based solely on an index or rate. (p. 849)
-  **LO15-7** For an arrangement to constitute a lease there must be an *identified asset*, and the lessee must have the right to *control its use*. Nonlease components that are included in periodic lease payments (like maintenance) to be paid by the lessor are, in effect, indirectly paid by the lessee—and are expensed by the lessee. Insurance and property taxes included in periodic lease payments, however, do not transfer a good or service to the lessee and thus are considered part of lease payments. Initial direct costs incurred by the lessee are added to the right-of-use asset. If incurred by the lessor, they are recorded as a selling expense in a sales-type lease with a selling profit or expensed over the lease term in a sales-type lease with no selling profit or in an operating lease. The cost of a leasehold improvement is depreciated over its useful life to the lessee. (p. 864)
-  **LO15-8** We report all cash flows as operating cash flows, except the principal portion of each payment in a finance lease, which is a cash flow from financing activities. Extensive disclosure requirements for lessees and lessors are designed to enable users of financial statements to assess the amount, timing, and uncertainty of cash flows arising from leases. (p. 871)
-  **LO15-9** Accounting for leases is similar in most respects under U.S. GAAP or IFRS. The primary difference is that IFRS treats all leases as finance leases by the lessee. (pp. 846, 849 and 853) ●

APPENDIX 15 Sale-Leaseback Arrangements

In a **sale-leaseback transaction**, the owner of an asset sells it and immediately leases it back from the new owner. Sound strange? Maybe, but this arrangement is common. In a sale-leaseback transaction, two things happen:

1. The seller-lessee receives cash from the sale of the asset.
2. The seller-lessee pays periodic rent payments to the buyer-lessor to retain the use of the asset.

What motivates this kind of arrangement? The two most common reasons are (a) if the asset had been financed originally with debt and interest rates have fallen, the sale-leaseback transaction can be used to effectively refinance at a lower rate; or (b) the most likely motivation for a sale-leaseback transaction is to generate cash.

We account for this type of arrangement in one of two ways.

- **Sale-leaseback approach.** Record the sale of the asset (with any accompanying gain or loss) and then record a lease for the leaseback portion in accordance with the lease guidance described earlier in this chapter. As we see below, though, if the leaseback would qualify as a finance lease, no sale has occurred, and this approach cannot be applied. Thus, the sale-leaseback approach is allowed only if the leaseback qualifies as an operating lease.
- **Financing arrangement.** View the arrangement, not as a sale, but as a loan by the Page 875 lessor to the lessee for the “sale” price. The asset remains on the lessee’s books, and the leaseback is accounted for as debt. The “lease” payments are deemed to be repayment of the loan.

We apply the sale-leaseback approach only if the usual requirements for revenue recognition (Chapter 6) are met (so the sale can be recorded), and it wouldn’t qualify as a finance lease, which would indicate the asset is effectively sold back to the lessee.²⁶

If the transaction does not qualify for sale-leaseback accounting, both the companies account for it as a financing arrangement. The reasoning for allowing sale-leaseback accounting only for situations in which

Recording a sale-leaseback transaction follows the basic accounting concept of substance over form.

the leaseback qualifies as an operating lease is quite logical when we remember the primary distinction between a finance lease and an operating lease. A finance lease is substantively a “sale,” so if this is the nature of a leaseback, then we have a sale by the lessee and then a sale back to the lessee, so we really have no sale at all. Essentially, the asset still belongs to the lessee, and cash comes to the lessee at the time of the transaction which is paid back in the form of periodic “lease payments.” Of course, this is the nature of a loan, so we account for it that way.

Illustration 15-A1 demonstrates a sale-leaseback involving a leaseback that qualifies as an operating lease.

Illustration 15-A1 Sale-Leaseback

Teledyne Distribution Center was in need of cash. Its solution: sell its four warehouses for their fair value of \$1,000,000, and then lease back the warehouses to continue using them. The warehouses had a carrying value on Teledyne’s books of \$900,000 (original cost \$1,200,000). Other information:

1. The sale date is December 31, 2024.
2. The noncancelable lease term is 10 years and requires annual payments of \$118,360 beginning December 31, 2024. The estimated remaining useful life of the warehouses is 15 years.
3. The annual lease payments (present value \$800,000) provides the lessor with a 10% rate of return on the financing arrangement.*

| December 31, 2024 | | |
|---|-----------|-----------|
| Cash..... | 1,000,000 | |
| Accumulated depreciation (\$1,200,000 – \$900,000)..... | 300,000 | |
| Warehouses (cost)..... | | 1,200,000 |
| Gain on sale-leaseback (difference)..... | | 100,000 |
| Right-of-use asset (present value of lease payments)..... | 800,000 | |
| Lease payable (present value of lease payments)..... | | 800,000 |
| Lease payable..... | 118,360 | |
| Cash..... | | 118,360 |
| December 31, 2025 | | |
| Interest expense [10% × (\$800,000 – \$118,360)]..... | 68,164 | |
| Lease payable (difference)..... | 50,196 | |
| Cash (lease payment)..... | | 118,360 |
| Amortization expense (\$118,360 – \$68,164)..... | 50,196 | |
| Right-of-use asset..... | | 50,196 |

*\$118,360 × 6.75902 = \$800,000 (\$799,997.61 rounded)
 lease payments (from Table 6) n = 10, i = 10% Present value

The gain (or loss) on a sale-leaseback is recognized at the time of the sale.

In an operating lease, the lessee records interest the normal way and then “plugs” the amortization at whatever amount is needed for interest plus amortization to equal the straight-line lease payment.

Since none of the criteria for a finance lease is met, the leaseback is recorded by the lessee as an operating lease.²⁷ The sale-leaseback, then, is deemed to be two distinct transactions: a legitimate sale creating a \$100,000 gain and then an operating lease.

On the flip side of the transaction, the lessor would record the purchase of a \$1,000,000 asset and then record lease revenue of \$118,360 each year over the term of the lease.

Now suppose the remaining useful life is 12 years instead of 15 and that the 10 lease payments are \$147,950, creating a present value of \$1,000,000 instead of \$800,000.

According to the criteria in [Illustration 15-2](#), either of those circumstances would require that the arrangement be accounted for as a finance lease, instead of an operating lease. As such, the transaction does not qualify for sale-leaseback accounting. We would view the arrangement, not as a sale, but as a loan by the lessor to the lessee for the \$1,000,000 “sale” price. The asset remains on the lessee’s books. The “lease” payments would be considered to be repayment of the loan. It would be recorded as shown in [Illustration 15-A2](#). ●

Illustration 15–A2 Sale-Leaseback Deemed to Be a Loan

Though structured as a sale and then a lease, in substance, the lessee is actually borrowing \$1,000,000.

The “lease” payments would be considered to be repayment of the loan.

| December 31, 2024 | | |
|--|-----------|-----------|
| Cash | 1,000,000 | |
| Notes payable | | 1,000,000 |
| Notes payable | 147,950 | |
| Cash | | 147,950 |
| December 31, 2025 | | |
| Interest expense [10% × (\$1,000,000 – \$147,950)] | 85,205 | |
| Notes payable (difference) | 62,745 | |
| Cash (lease payment) | | 147,950 |

Questions For Review of Key Topics

- Q 15-1** One of the advantages of leasing rather than purchasing an asset is that leasing offers flexibility and a lower cost when disposing of the asset. Explain.
- Q 15-2** The basic concept of “substance over form” influences lease accounting. Explain.
- Q 15-3** How is interest expense determined in a finance lease transaction? How does the approach compare to other forms of debt (such as bonds payable or notes payable)?
- Q 15-4** How are leases and installment notes the same? How do they differ?
- Q 15-5** A lessee should classify a lease transaction as a finance lease if it is noncancelable and one or more of five classification criteria are met. Otherwise, it is an operating lease. What are these criteria?
- Q 15-6** Lukawitz Industries leased non-specialized equipment to Seminole Corporation for a four-year period, at which time possession of the leased asset will revert back to Lukawitz. The equipment cost Lukawitz \$4 million and has an expected useful life of six years. Its normal sales price is \$5.6 million. The present value of the lease payments for both the lessor and lessee is \$5.2 million. The first payment was made at the beginning of the lease. How should this lease be classified (a) by Lukawitz Industries (the lessor) and (b) by Seminole Corporation (the lessee)? Why?
- Q 15-7** In accounting for a finance lease/sales-type lease, how are the lessee’s and lessor’s income statements affected?
- Q 15-8** What is selling profit on a sales-type lease? How do we account for a sales-type lease with a selling profit?
- Q 15-9** At the beginning of an operating lease, the lessee will record what asset and liability, if any?
- Q 15-10** At the beginning of an operating lease, the lessor will record what asset or assets, if any?
- Q 15-11** In accounting for an operating lease, how are the lessee’s and lessor’s income statements affected?
- Q 15-12** Briefly describe the conceptual basis for asset and liability recognition under the right-of-use approach used by the lessee in a lease transaction.

Q 15–13 In a financing lease, “front loading” of lease expense and lease revenue occurs. What does this mean, and how is it avoided in an operating lease?

Q 15–14 The discount rate influences virtually every amount reported in connection with a lease by both the lessor and the lessee. What is the lessor’s discount rate when determining the present value of lease payments? What is the lessee’s discount rate?

Q 15–15 A lease that has a lease term (including any options to terminate or renew that are reasonably certain) of twelve months or less is considered a “short-term lease.” How does a lessee record a lease using the shortcut approach available as an option for short-term leases?

Q 15–16 A lease might specify that lease payments may be increased (or decreased) at some future time during the lease term depending on whether or not some specified event occurs, such as revenues or profits exceeding some designated level. Under what circumstances are contingent rentals included or excluded from lease payments? If excluded, how are they recognized in income determination?

Q 15–17 What is a purchase option? How does it affect accounting for a lease?

Q 15–18 A six-year lease can be renewed for two additional three-year periods, and it also can be terminated after only three years. How do the lessee and lessor decide the lease term to be used in accounting for the lease?

Q 15–19 Culinary Creations leased kitchen equipment under a five-year lease with an option to renew for three years at the end of five years and an option to renew for an additional three years at the end of eight years. The first three-year renewal option can be exercised for one-half the original and usual rate. What is the length of the lease term that Culinary Creations should assume in recording the transactions related to the lease?

Q 15–20 What situations cause us to remeasure a lease liability and right-of-use asset? How is that accomplished?

Q 15–21 Occasionally, a lease agreement includes a guarantee by the lessee that the lessor will recover a specified residual value when custody of the asset reverts back to the lessor at the end of the lease term. Under what circumstance can the guaranteed residual value influence the amounts recorded by the lessee and lessor? In that circumstance, how are the amounts affected?

- Q 15–22** Compare the way a purchase option that is reasonably certain to be exercised and a lessee-guaranteed residual value are treated by the lessee and lessor when determining lease payments.
- Q 15–23** What nonlease costs might be included as part of lease payments? How are they accounted for by the lessee in a finance lease when paid by the lessee? When paid by the lessor? Explain.
- Q 15–24** The lessor’s initial direct costs often are substantial. What are initial direct costs?
- Q 15–25** When are initial direct costs recognized in an operating lease? In a sales-type lease with selling profit? In a sales-type lease with no selling profit? Why?
- Q 15–26** What is the primary objective of the required lease disclosures for the lessor and lessee?
- Q 15–27** Where can we find authoritative guidance for accounting for leases under IFRS?
- Q 15–28** Could a finance lease under IFRS be classified as an operating lease under U. S. GAAP? Explain.
- Q 15–29** When a company sells an asset and simultaneously leases it back, what criteria must be met to apply sale-leaseback accounting rather than accounting for the transaction as a loan?
- Q 15–30** Zimmern Machines sold equipment with a 10-year economic life to Bourdain Acres, while concurrently entering into an eight-year leaseback. Eight years is considered a major part of the economic life of the equipment. The sale agreement contains no option for Zimmern to repurchase the equipment or any other provision that would prevent its sale. Can Zimmern Machines account for the transaction as a sale-leaseback? Why?

Brief Exercises

BE 15–1 Lease classification **LO15–1**, **LO15–2**

[ **BE 15–1** and  **15–2** are two variations of the same basic situation.]

Corinth Co. leased non-specialized equipment to Athens Corporation for an eight-year period, at which time possession of the equipment will revert back to Corinth. The equipment cost Corinth \$16 million and has an expected useful life of 12 years. Its normal sales price is \$22.4 million. The present value of the lease payments for both the lessor and lessee is \$20.6 million. The first payment was made at the beginning of the lease. How should Corinth classify this lease?

BE 15–2 Lease classification **LO15–1**, **LO15–2**

Corinth Co. leased non-specialized equipment to Athens Corporation for an eight-year period, at which time possession of the equipment will revert back to Corinth. The equipment cost Corinth \$16 million and has an expected useful life of 12 years. Its normal sales price is \$22.4 million. The present value of the lease payments for both the lessor and lessee is \$20.6 million. The first payment was made at the beginning of the lease. How should Athens classify this lease?

BE 15–3 Lessee and lessor; calculate interest; finance/sales-type lease **LO15–2**

A finance lease agreement calls for quarterly lease payments of \$5,376 over a 10-year lease term, with the first payment on July 1, the beginning of the lease. The annual interest rate is 8%. Both the present value of the lease payments and the cost of the asset to the lessor are \$150,000. What would be the amount of interest expense the lessee would record in conjunction with the second quarterly payment on October 1? What would be the amount of interest revenue the lessor would record in conjunction with the second quarterly payment on October 1?

BE 15–4 Finance lease; lessee; balance sheet effects

LO15–2

[ **BE 15-4**,  **15-5**, and  **15-6** are three variations of the same basic situation.]

A lease agreement that qualifies as a finance lease calls for annual lease payments of \$26,269 over a six-year lease term (also the asset's useful life), with the first payment on January 1, the beginning of the lease. The interest rate is 5%. If the lessee's fiscal year is the calendar year, what would be the amount of the lease liability that the lessee would report in its balance sheet at the end of the first year? What would be the interest payable?

BE 15–5 Finance lease; lessee; income statement effects

LO15–2

A lease agreement that qualifies as a finance lease calls for annual lease payments of \$26,269 over a six-year lease term (also the asset's useful life), with the first payment on January 1, the beginning of the lease. The interest rate is 5%. If the lessee's fiscal year is the calendar year, what would be the amounts related to the lease that the lessee would report in its income statement for the first year ended December 31(ignore taxes)?

BE 15–6 Sales-type lease; lessor; income statement effects

LO15–3

A lease agreement that qualifies as a finance lease calls for annual lease payments of \$26,269 over a six-year lease term (also the asset's useful life), with the first payment on January 1, the beginning of the lease. The interest rate is 5%. The lessor's fiscal year is the calendar year. The lessor manufactured this asset at a cost of \$125,000. What would be the increase in earnings that the lessor would report in its income statement for the first year ended December 31(ignore taxes)?

BE 15–7 Sales-type lease; lessor; calculate lease payments

LO15–3

Manning Imports is contemplating an agreement to lease equipment to a customer for five years. Manning normally sells the asset for a cash price of \$100,000. Assuming that 8% is a reasonable rate of interest, what must be the amount of quarterly lease payments (beginning

at the commencement of the lease) in order for Manning to recover its normal selling price as well as be compensated for financing the asset over the lease term?

BE 15–8 Operating lease; financial statement effects **LO15–4**

[ **BE 15–8** and  **15–9** are two variations of the same basic situation.]

At the beginning of its fiscal year, Lakeside Inc. leased office space to LTT Corporation under a seven-year operating lease agreement. The contract calls for quarterly rent payments of \$25,000 each. The office building was acquired by Lakeside at a cost of \$2 million and was expected to have a useful life of 25 years with no residual value. What will be the effect of the lease on LTT’s earnings for the first year (ignore taxes)?

BE 15–9 Operating lease; financial statement effects **LO15–4**

At the beginning of its fiscal year, Lakeside Inc. leased office space to LTT Corporation under a seven-year operating lease agreement. The contract calls for quarterly rent payments of \$25,000 each. The office building was acquired by Lakeside at a cost of \$2 million and was expected to have a useful life of 25 years with no residual value. What will be the effect of the lease on Lakeside’s earnings for the first year (ignore taxes)?

BE 15–10 Operating lease; financial statement effects

 **LO15–5**

King Cones leased ice cream-making equipment from Ace Leasing. Ace earns interest under such arrangements at a 6% annual rate. The lease term is eight months with monthly payments of \$10,000 due at the end of each month. King Cones elected the short-term lease option. What is the effect of the lease on King Cones’ earnings during the eight-month term (ignore taxes)?

BE 15–11 Uncertain lease term **LO15–6**

Java Hut leased a specialty espresso machine for a 10-year noncancelable term. At the end of the 10-year term, Java Hut has four consecutive one-year renewal options. A replacement machine can be acquired, but due to an expensive installation process and Java Hut’s lease term for its store, Java Hut expects to lease the machine for 12 years. What is the lease term?

BE 15–12 Uncertain lease payments **LO15–6**

On January 1, Espinoza Moving and Storage leased a truck for a four-year period, at which time possession of the truck will revert back to the lessor. Annual lease payments are \$10,000 due on December 31 of each year, calculated by the lessor using a 5% discount rate. If Espinoza's revenues exceed a specified amount during the lease term, Espinoza will pay an additional \$4,000 lease payment at the end of the lease. Espinoza estimates a 60% probability of meeting the target revenue amount. What amount should be added to the right-of-use asset and lease liability under the contingent rent agreement?

BE 15–13 Purchase option; lessor; sales-type lease **LO15–2,** **LO15–3,** **LO15–6**

Amaya Leasing acquires equipment and leases it to customers under long-term sales-type leases. Amaya earns interest under these arrangements at a 6% annual rate. Amaya leased a machine it purchased for \$600,000 under an arrangement that specified annual payments beginning at the commencement of the lease for five years. The lessee had the option to purchase the machine at the end of the lease term for \$100,000 when it was expected to have a residual value of \$160,000. Calculate the amount of the annual lease payments.

Page 879

BE 15–14 Residual value; sales-type lease **LO15–2,** **LO15–3,** **LO15–6**

On January 1, James Industries leased equipment to a customer for a four-year period, at which time possession of the leased asset will revert back to James. The equipment cost James \$700,000 and has an expected useful life of six years. Its normal sales price is \$700,000. The residual value after four years is \$100,000. Lease payments are due on December 31 of each year, beginning with the first payment at the end of the first year. The interest rate is 5%. Calculate the amount of the annual lease payments.

BE 15–15 Guaranteed residual value **LO15–6**

On January 1, Garcia Supply leased a truck for a four-year period, at which time possession of the truck will revert back to the lessor. Annual lease payments are \$10,000 due on December 31 of each year, calculated by the lessor using a 5% discount rate. Negotiations led to Garcia guaranteeing a \$36,000 residual value at the end of the lease term. Garcia

estimates that the residual value after four years will be \$35,000. What is the amount to be added to the right-of-use asset and lease liability under the residual value guarantee?

BE 15–16 Lessor’s initial direct costs; sales-type lease

 **LO15–3**,  **LO15–7**

Bryant leased equipment that had a retail cash selling price of \$600,000 and a useful life of five years with no residual value. The lessor spent \$530,000 to manufacture the equipment and used an implicit rate of 8% when calculating annual lease payments of \$139,142 beginning January 1, the beginning of the lease. Lease payments will be made January 1 each year of the lease. Incremental costs of consummating the lease transaction incurred by the lessor were \$15,000. What is the effect of the lease on the lessor’s earnings during the first year, not including any effect of depreciation no longer required on the asset under lease (ignore taxes)?

BE 15–17 Is it a lease?  **LO15–7**

Financial Machinery entered into an arrangement to provide Viable Bank with equipment for the bank’s data center. The contract does not explicitly identify the equipment to be used to fulfill the contract. Financial Machinery has several data centers that are interchangeable and can service multiple customers at one time. Due to security processes in place for its customer data, Viable Bank insists on specific restrictions on the equipment to be utilized and the arrangement imposes restrictions on access and substitution by Financial Machinery for the term of the contract. Does the contract include an identifiable asset for purposes of determining whether it contains a lease?

BE 15–18 Is it a lease?  **LO15–7**

Able Equipment entered into an arrangement to provide M. T. Bin Wholesale’s data center with Able’s newest server model. Due to security processes in place for its customer data, M. T. Bin requires access to the equipment and the ability to direct its use. Able can replace or reconfigure the equipment if Able finds it’s financially advantageous to do so. Does the contract contain a lease?

BE 15–19 Nonlease payments  **LO15–2**,  **LO15–7**

On January 1, 2024, Jasperse Corporation leased equipment under a finance lease designed to earn the lessor a 12% rate of return for providing long-term financing. The lease agreement specified ten annual payments of \$75,000 beginning January 1 and each December 31 thereafter through 2032. A 10-year service agreement was scheduled to provide maintenance of the equipment as required for a fee of \$5,000 per year. Insurance premiums of \$4,000 annually are related to the equipment. Both amounts were to be paid by the lessor, and lease payments reflect both expenditures. At what amount will Jasperse record a right-of-use asset?

Exercises

E 15–1 Lease classification LO15–1

Each of the four independent situations below describes a lease requiring annual lease payments of \$10,000. For each situation, determine the appropriate lease classification by the lessee and indicate why.

| | Situation | | | |
|--|-------------|------------|-------------|------------|
| | 1 | 2 | 3 | 4 |
| Lease term (years) | 4 | 4 | 4 | 4 |
| Asset's useful life (years) | 6 | 5 | 6 | 6 |
| Asset's fair value | \$44,000 | \$45,000 | \$41,000 | \$38,000 |
| Purchase option that is reasonably certain to be exercised? | No | Yes | No | No |
| Annual lease payments | Beg. of yr. | End of yr. | Beg. of yr. | End of yr. |
| Lessor's implicit rate (known by lessee) | 5% | 6% | 5% | 6% |
| Lessee's incremental borrowing rate | 5% | 5% | 5% | 5% |

E 15–2 Finance lease; calculate lease payments LO15–2

American Food Services, Inc., leased a packaging machine from Barton and Barton Corporation. Barton and Barton completed construction of the machine on January 1, 2024. The lease agreement for the \$4 million (fair value and present value of the lease

payments) machine specified four equal payments at the end of each year. The useful life of the machine was expected to be four years with no residual value. Barton and Barton's implicit interest rate was 10%.

Required:

1. Prepare the journal entry for American Food Services at the beginning of the lease on January 1, 2024.
2. Prepare an amortization schedule for the four-year term of the lease.
3. Prepare the appropriate entries related to the lease on December 31, 2024.
4. Prepare the appropriate entries related to the lease on December 31, 2026.

(Note: You may wish to compare your solution to this exercise with that of E 14-20, which deals with a parallel situation in which the packaging machine was acquired with an installment note.)

E 15-3 Finance lease; lessee; balance sheet and income statement effects  **LO15-2**

 **E 15-3**,  **15-4**, and  **15-5** are three variations of the same situation.]

On June 30, 2024, Georgia-Atlantic, Inc., leased warehouse equipment from IC Leasing Corporation. The lease agreement calls for Georgia-Atlantic to make semiannual lease payments of \$562,907 over a three-year lease term, payable each June 30 and December 31, with the first payment on June 30, 2024. Georgia-Atlantic's incremental borrowing rate is 10%, the same rate IC uses to calculate lease payment amounts. Amortization is recorded on a straight-line basis at the end of each fiscal year. The fair value of the equipment is \$3 million.

Required:

1. Determine the present value of the lease payments on June 30, 2024 (to the nearest \$000) that Georgia-Atlantic uses to record the right-of-use asset and lease liability.
2. What amounts related to the lease would Georgia-Atlantic report in its balance sheet at December 31, 2024 (ignore taxes)?
3. What amounts related to the lease would Georgia-Atlantic report in its income statement for the year ended December 31, 2024 (ignore taxes)?

E 15–4 Sales-type lease; lessor; balance sheet and income statement effects **LO15–2**

On June 30, 2024, Georgia-Atlantic, Inc., leased warehouse equipment from IC Leasing Corporation. The lease agreement calls for Georgia-Atlantic to make semiannual lease payments of \$562,907 over a three-year lease term (also the asset's useful life), payable each June 30 and December 31, with the first payment on June 30, 2024. Georgia-Atlantic's incremental borrowing rate is 10%, the same rate IC used to calculate lease payment amounts. IC purchased the equipment from Builders, Inc., at a cost of \$3 million.

Required:

1. What amount related to the lease would IC report in its balance sheet on December 31, 2024 (ignore taxes)?
2. What amount related to the lease would IC report in its income statement for the year ended December 31, 2024 (ignore taxes)?

E 15–5 Sales-type lease; lessor; balance sheet and income statement effects **LO15–3**

On June 30, 2024, Georgia-Atlantic, Inc., leased warehouse equipment from Builders, Inc. The lease agreement calls for Georgia-Atlantic to make semiannual lease payments of \$562,907 over a three-year lease term (also the asset's useful life), payable each June 30 and December 31, with the first payment on June 30, 2024. Georgia-Atlantic's incremental borrowing rate is 10%, the same rate Builders used to calculate lease payment amounts. Builders manufactured the equipment at a cost of \$2.5 million.

Required:

1. Determine the price at which Builders is "selling" the equipment (present value of the lease payments) on June 30, 2024 (to the nearest \$000).
2. What amount related to the lease would Builders report in its balance sheet on December 31, 2024 (ignore taxes)?
3. What line item amounts related to the lease would Builders report in its income statement for the year ended December 31, 2024 (ignore taxes)?

E 15–6 Finance lease; lessee **LO15–2**

[[E 15-6](#), [E 15-7](#), and [E 15-8](#) are three variations of the same basic situation.]

Manufacturers Southern leased high-tech electronic equipment from Edison Leasing on January 1, 2024. Edison purchased the equipment from International Machines at a cost of \$112,080.

Related Information:

| | |
|---|---|
| Lease term | 2 years (8 quarterly periods) |
| Quarterly rental payments | \$15,000 at the beginning of each period |
| Economic life of asset | 2 years |
| Fair value of asset | \$112,080 |
| Implicit interest rate | 8% |
| (Also lessee's incremental borrowing rate) | |

Required:

Prepare a lease amortization schedule and appropriate entries for Manufacturers Southern from the beginning of the lease through January 1, 2025. Amortization is recorded at the end of each fiscal year (December 31) on a straight-line basis.

E 15-7 Sales-type lease with no selling profit; lessor [LO15-2](#)

Edison Leasing leased high-tech electronic equipment to Manufacturers Southern on January 1, 2024. Edison purchased the equipment from International Machines at a cost of \$112,080.

Related Information:

| | |
|----------------------------------|---|
| Lease term | 2 years (8 quarterly periods) |
| Quarterly rental payments | \$15,000 at the beginning of each period |
| Economic life of asset | 2 years |
| Fair value of asset | \$112,080 |
| Implicit interest rate | 8% |

Required:

Prepare a lease amortization schedule and appropriate entries for Edison Leasing from the beginning of the lease through January 1, 2025. Edison's fiscal year ends December 31.

E 15–8 Sales-type lease with selling profit; lessor; calculate lease payments  **LO15–3**

Manufacturers Southern leased high-tech electronic equipment from International Machines on January 1, 2024. International Machines manufactured the equipment at a cost of \$85,000. Manufacturers Southern's fiscal year ends December 31.

Related Information:

| | |
|---|---|
| Lease term | 2 years (8 quarterly periods) |
| Quarterly rental payments | \$15,000 at the beginning of each period |
| Economic life of asset | 2 years |
| Fair value of asset | \$112,080 |
| Implicit interest rate | 8% |
| (Also lessee's incremental borrowing rate) | |

Required:

1. Show how International Machines determined the \$15,000 quarterly lease payments.
2. Prepare appropriate entries for International Machines to record the lease at its beginning, January 1, 2024, and the second lease payment on April 1, 2024.

E 15–9 Lessor calculation of annual lease payments; lessee calculation of asset and liability  **LO15–2**

Each of the three independent situations below describes a finance lease in which annual lease payments are payable at the beginning of each year. The lessee is aware of the lessor's implicit rate of return.

| | Situation | | |
|---------------------------|------------------|-----------|----------|
| | 1 | 2 | 3 |
| Lease term (years) | 10 | 20 | 4 |

| | | | |
|--|------------------|------------------|------------------|
| Lessor's rate of return (known by lessee) | 11% | 9% | 12% |
| Lessee's incremental borrowing rate | 12% | 10% | 10% |
| Fair value of lease asset | \$600,000 | \$980,000 | \$185,000 |

Required:

For each situation, determine:

- The amount of the annual lease payments as calculated by the lessor.
- The amount the lessee would record as a right-of-use asset and a lease liability.

E 15–10 Lessor calculation of annual lease payments; lessee calculation of asset and liability  **LO15–2**

[This is a variation of  **E 15–9** modified to assume lease payments are at the end of each period.]

Each of the three independent situations below describes a finance lease in which annual lease payments are payable at the *end* of each year. The lessee is aware of the lessor's implicit rate of return.

| | Situation | | |
|--|------------------|------------------|------------------|
| | 1 | 2 | 3 |
| Lease term (years) | 10 | 20 | 4 |
| Lessor's rate of return | 11% | 9% | 12% |
| Lessee's incremental borrowing rate | 12% | 10% | 10% |
| Fair value of lease asset | \$600,000 | \$980,000 | \$185,000 |

Required:

For each situation, determine:

- The amount of the annual lease payments as calculated by the lessor.
- The amount the lessee would record as a right-of-use asset and a lease liability.

E 15–11 Lessee and lessor; sales-type lease with selling profit **LO15–2, LO15–3**

Eye Deal Optometry leased vision-testing equipment from Insight Machines on January 1, 2024. Insight Machines manufactured the equipment at a cost of \$200,000 and lists a cash selling price of \$250,177. Appropriate adjusting entries are made quarterly.

Related Information:

| | |
|--|--|
| Lease term | 5 years (20 quarterly periods) |
| Quarterly lease payments | \$15,000 at Jan. 1, 2024, and at Mar. 31, June 30, Sept. 30, and Dec. 31 thereafter |
| Economic life of asset | 5 years |
| Interest rate charged by the lessor | 8% |

Required:

1. Prepare appropriate entries for Eye Deal to record the arrangement at its beginning, January 1, 2024, and on March 31, 2024.
2. Prepare appropriate entries for Insight Machines to record the arrangement at its beginning, January 1, 2024, and on March 31, 2024.

E 15–12 Lessee; finance lease; financial statement effects **LO15–2**

 **E 15–12**,  **15–13**,  **15–14**, and  **15–25** are variations of the same situation.]

At January 1, 2024, Café Med leased restaurant equipment from Crescent Corporation under a nine-year lease agreement.

- The lease agreement specifies annual payments of \$25,000 beginning January 1, 2024, the beginning of the lease, and on each December 31 thereafter through 2031.
- The equipment was acquired recently by Crescent at a cost of \$180,000 (its fair value) and was expected to have a useful life of 12 years with no salvage value at the end of its life.
- Because the lease term is only nine years, the asset does have an expected residual value at the end of the lease term of \$50,995.

- Crescent seeks a 10% return on its lease investments.

By this arrangement, the lease is deemed to be a finance lease.

Required:

1. What will be the effect of the lease on Café Med's earnings for the first year (ignore taxes)?
2. What will be the balances in the balance sheet accounts related to the lease at the end of the first year for Café Med (ignore taxes)?

E 15-13 Lessee; operating lease; financial statement effects

 **LO15-4**

At January 1, 2024, Café Med leased restaurant equipment from Crescent Corporation under a nine-year lease agreement.

- The lease agreement specifies annual payments of \$25,000 beginning January 1, 2024, the beginning of the lease, and on each December 31 thereafter through 2031.
- The equipment was acquired recently by Crescent at a cost of \$180,000 (its fair value) and was expected to have a useful life of 13 years with no salvage value at the end of its life.
- Because the lease term is only nine years, the asset does have an expected residual value at the end of the lease term of \$50,995.
- Crescent seeks a 10% return on its lease investments.

By this arrangement, the lease is deemed to be an operating lease.

Required:

1. What will be the effect of the lease on Café Med's earnings for the first year (ignore taxes)?
2. What will be the balances in the balance sheet accounts related to the lease at the end of the first year for Café Med (ignore taxes)?

E 15-14 Lessor; operating lease; financial statement effects

 **LO15-4**

At January 1, 2024, Café Med leased restaurant equipment from Crescent Corporation under a nine-year lease agreement.

- The lease agreement specifies annual payments of \$25,000 beginning January 1, 2024, the beginning of the lease, and on each December 31 thereafter through 2031.
- The equipment was acquired recently by Crescent at a cost of \$180,000 (its fair value) and was expected to have a useful life of 13 years with no salvage value at the end of its life.
- Because the lease term is only nine years, the asset does have an expected residual value at the end of the lease term of \$50,995.
- Crescent seeks a 10% return on its lease investments.

By this arrangement, the lease is deemed to be an operating lease.

Required:

Page 883

1. What will be the effects of the lease on Crescent's (lessor's) earnings for the first year (ignore taxes)?
2. What will be the balances in the balance sheet accounts related to the lease at the end of the first year for Crescent (ignore taxes)?

E 15–15 Sales-type lease; lessor; income statement effects

LO15–3

Zhang Company leased equipment from Mann Industries. The lease agreement qualifies as a finance lease and requires annual lease payments of \$52,538 over a six-year lease term (also the asset's useful life), with the first payment on January 1, the beginning of the lease. The interest rate is 5%. The asset being leased cost Mann \$230,000 to produce.

Required:

1. Determine the price at which the lessor is "selling" the asset (present value of the lease payments).
2. What would be the amounts related to the lease that the lessor would report in its income statement for the year ended December 31 (ignore taxes)?

E 15–16 Lessee; operating lease **LO15–4**

Baillie Power leased high-tech electronic equipment from Courtney Leasing on January 1, 2024. Courtney purchased the equipment from Doane Machines at a cost of \$250,000, its fair value.

Related Information:

| | |
|--|--|
| Lease term | 2 years (8 quarterly periods) |
| Quarterly lease payments | \$15,000 on Jan. 1, 2024, and on Mar. 31, June 30, Sept. 30, and Dec. 31 thereafter |
| Economic life of asset | 5 years |
| Interest rate charged by the lessor | 8% |

Required:

Prepare appropriate entries for Baillie Power from the beginning of the lease through December 31, 2024. December 31 is the fiscal year end for each company. Appropriate adjusting entries are recorded at the end of each quarter.

E 15–17 Lessee and lessor; operating lease  **LO15–4**

On January 1, 2024, Nath-Langstrom Services, Inc., a computer software training firm, leased several computers under a two-year operating lease agreement from ComputerWorld Leasing, which routinely finances equipment for other firms at an annual interest rate of 4%.

- The contract calls for four rent payments of \$10,000 each, payable semiannually on June 30 and December 31 each year.
- The computers were acquired by ComputerWorld at a cost of \$90,000 and were expected to have a useful life of five years with no residual value.
- Both firms record amortization and depreciation semiannually.

Required:

Prepare the appropriate entries for both (a) the lessee and (b) the lessor from the beginning of the lease through the end of 2024.

E 15–18 Short-term lease  **LO15–5**

Chance Enterprises leased equipment from Third Bank Leasing on January 1, 2024. Chance elected the short-term lease option.

Related Information:

| | |
|--|---|
| Lease term | 1 year (12 monthly periods) |
| Monthly lease payments | \$15,000 on Jan. 1, 2024, through Dec. 1, 2024 |
| Economic life of asset | 5 years |
| Interest rate charged by the lessor | 8% |

Required:

Prepare appropriate entries for Chance from the beginning of the lease through April 1, 2024.

E 15–19 Lessee; renewal option  **LO15–2, LO15–6**

Natick Industries leased high-tech instruments from Framingham Leasing on January 1, 2024. Natick has the option to renew the lease at the end of two years for an additional three years. Natick is subject to a \$45,000 penalty after two years if it fails to renew the lease. Framingham Leasing purchased the equipment from Waltham Machines at a cost of \$250,177.

Related Information:

| | |
|---|--|
| Lease term | 2 years (8 quarterly periods) |
| Lease renewal option for an additional | 3 years (12 quarterly periods) |
| Quarterly lease payments | \$15,000 at Jan. 1, 2024, and at Mar. 31, June 30, Sept. 30, and Dec. 31 thereafter |
| Economic life of asset | 5 years |
| Interest rate charged by the lessor | 8% |

Required:

Prepare appropriate entries for Natick Industries from the beginning of the lease through March 31, 2024. Appropriate adjusting entries are made quarterly.

E 15–20 Variable lease payments **LO15–2, LO15–6**

On January 1, 2024, Wetick Optometrists leased diagnostic equipment from Southern Corp., which had purchased the equipment at a cost of \$1,437,237.

- The lease agreement specifies six annual payments of \$300,000 beginning January 1, 2024, the beginning of the lease, and on each December 31 thereafter through 2028.
- The six-year lease term ending December 31, 2029 (a year after the final payment), is equal to the estimated useful life of the equipment.
- The contract specifies that lease payments for each year will increase on the basis of the increase in the Consumer Price Index for the year just ended.
- Thus, the first payment will be \$300,000, and the second and subsequent payments might be different.
- The CPI at the beginning of the lease is 120.
- Southern routinely acquires diagnostic equipment for lease to other firms.
- The interest rate in these financing arrangements is 10%.

Required:

1. Prepare the appropriate journal entries for Wetick to record the lease at its beginning.
2. Assuming the CPI is 124 at that time, prepare the appropriate journal entries related to the lease for Wetick at December 31, 2024.

E 15–21 Lessee; variable lease payments **LO15–2, LO15–6**

On January 1, 2024, QuickStream Communications leased telephone equipment from Digium, Inc. Digium's cash selling price for the equipment is \$1,306,578.

- The lease agreement specifies six annual payments of \$300,000 beginning December 31, 2024, and on each December 31 thereafter through 2029.
- The six-year lease is equal to the estimated useful life of the equipment.
- The contract specifies that lease payments for each year will increase by the higher of (a) the increase in the Consumer Price Index for the preceding year or (b) 3%.

- The CPI at the beginning of the lease is 120. Digium routinely leases equipment to other firms.
- The interest rate in these lease arrangements is 10%.

Required:

Prepare the appropriate journal entries for QuickStream to record the lease at its beginning date of January 1, 2024.

E 15–22 Lessee; variable lease payments  **LO15–2, LO15–6**

On January 1, 2024, Taco King leased retail space from Fogelman Properties. The 10-year finance lease requires quarterly variable lease payments equal to 3% of Taco King’s sales revenue, with a quarterly sales minimum of \$400,000. Payments at the beginning of each quarter are based on previous quarter sales. During the previous five-year period, Taco King has generated quarterly sales of over \$650,000. Fogelman’s interest rate, known by Taco King, was 4%.

Required:

1. Prepare the journal entries for Taco King at the beginning of the lease on January 1, 2024.
2. Prepare the journal entries for Taco King on April 1, 2024. First quarter sales were \$660,000. Amortization is recorded quarterly.

E 15–23 Lessee; renewal options  **LO15–2, LO15–6**

On January 1, 2024, Rick’s Pawn Shop leased a truck from Corey Motors for a six-year period with an option to extend the lease for three years. Rick’s had no significant economic incentive as of the beginning of the lease to exercise the three-year extension option. Annual lease payments are \$10,000 due on December 31 of each year, calculated by the lessor using a 5% interest rate. The agreement is considered an operating lease.

Required:

1. Prepare Rick’s journal entry to record for the right-of-use asset and lease liability on January 1, 2024.
2. Prepare the journal entries to record interest and amortization on December 31, 2024.

E 15–24 Calculation of annual lease payments; residual value
 **LO15–2, LO15–6**

Each of the four independent situations below describes a finance lease in which annual lease payments are payable at the beginning of each year. The lessee is aware of the lessor’s implicit rate of return.

| | Situation | | | |
|-------------------------------------|-----------------|------------------|-----------------|------------------|
| | 1 | 2 | 3 | 4 |
| Lease term (years) | 4 | 7 | 5 | 8 |
| Lessor’s rate of return | 10% | 11% | 9% | 12% |
| Fair value of lease asset | \$50,000 | \$350,000 | \$75,000 | \$465,000 |
| Lessor’s cost of lease asset | \$50,000 | \$350,000 | \$45,000 | \$465,000 |
| Residual value: | | | | |
| Estimated fair value | \$ 0 | \$ 50,000 | \$ 7,000 | \$ 45,000 |
| Guaranteed fair value | \$ 0 | \$ 0 | \$ 7,000 | \$ 50,000 |

Required:

For each situation, determine:

- The amount of the annual lease payments as calculated by the lessor.
- The amount the lessee would record as a right-of-use asset and a lease liability.

E 15–25 Lessor; sales-type lease; residual value effect on financial statements  **LO15–2, LO15–6**

At January 1, 2024, Café Med leased restaurant equipment from Crescent Corporation under a nine-year lease agreement.

- The lease agreement specifies annual payments of \$25,000 beginning January 1, 2024, the

beginning of the lease, and on each December 31 thereafter through 2031.

- The equipment was acquired recently by Crescent at a cost of \$180,000 (its fair value) and was expected to have a useful life of 12 years with no salvage value at the end of its life.
- Because the lease term is only nine years, the asset does have an expected residual value at the end of the lease term of \$50,995.
- Both (a) the present value of the lease payments and (b) the present value of the residual value (i.e., the residual asset) are included in the lease receivable because the two amounts combine to allow the lessor to recover its net investment.
- Crescent seeks a 10% return on its lease investments.

By this arrangement, the lease is deemed to be a finance lease to the lessee.

Required:

1. What will be the effect of the lease on Crescent's earnings for the first year (ignore taxes)?
2. What will be the balances in the balance sheet accounts related to the lease at the end of the first year for Crescent (ignore taxes)?

E 15–26 Lease concepts; finance/sales-type leases; guaranteed and unguaranteed residual value  **LO15–2, LO15–6**

Each of the four independent situations below describes a sales-type lease in which annual lease payments of \$100,000 are payable at the beginning of each year. Each is a finance lease for the lessee. Determine the following amounts at the beginning of the lease:

A. The lessor's

1. Lease payments
2. Gross investment in the lease
3. Net investment in the lease

B. The lessee's

4. Lease payments
5. Right-of-use asset
6. Lease liability

Situation

| | 1 | 2 | 3 | 4 |
|--|-------------|-----------------|----------------|-----------------|
| Lease term (years) | 7 | 7 | 8 | 8 |
| Lessor's and lessee's interest rate | 9% | 11% | 10% | 12% |
| Residual value: | | | | |
| Estimated fair value | \$ 0 | \$50,000 | \$8,000 | \$50,000 |
| Guaranteed by lessee | \$ 0 | \$ 0 | \$8,000 | \$60,000 |

E 15–27 Lessee; lessee guaranteed residual value

LO15–2, LO15–6

On January 1, 2024, Maywood Hydraulics leased drilling equipment from Aqua Leasing for a four-year period ending December 31, 2027, at which time possession of the leased asset will revert back to Aqua.

- The equipment cost Aqua \$412,184 and has an expected economic life of five years.
- Aqua and Maywood expect the residual value at December 31, 2027, to be \$50,000.
- Negotiations led to Maywood guaranteeing a \$70,000 residual value.
- Equal payments under the lease are \$100,000 and are due on December 31 of each year with the first payment being made on December 31, 2024.
- Maywood is aware that Aqua used a 5% interest rate when calculating lease payments.

Required:

1. Prepare the appropriate entry for Maywood on January 1, 2024, to record the lease.
2. Prepare all appropriate entries for Maywood on December 31, 2024, related to the lease.

E 15–28 Calculation of annual lease payments; purchase option

LO15–2, LO15–6

For each of the three independent situations below, determine the amount of the annual lease payments. Each describes a finance lease in which annual lease payments are payable at the beginning of each year. Each lease agreement contains an option that permits the lessee to acquire the leased asset at an option price that is sufficiently lower than the expected fair value that the exercise of the option appears reasonably certain.

| | Situation | | |
|--------------------------------------|------------------|------------------|------------------|
| | 1 | 2 | 3 |
| Lease term (years) | 5 | 5 | 4 |
| Lessor's rate of return | 12% | 11% | 9% |
| Fair value of leased asset | \$60,000 | \$420,000 | \$185,000 |
| Lessor's cost of leased asset | \$50,000 | \$420,000 | \$145,000 |
| Purchase option: | | | |
| Exercise price | \$ 10,000 | \$ 50,000 | \$ 22,000 |
| Exercisable at end of year: | 5 | 5 | 3 |
| Reasonably certain? | yes | no | yes |

E 15–29 Finance lease; purchase options; lessee

LO15–2, LO15–6

Federated Fabrications leased a tooling machine on January 1, 2024, for a three-year period ending December 31, 2026.

- The lease agreement specified annual payments of \$36,000 beginning with the first payment at the beginning of the lease, and each December 31 through 2025.
- The company had the option to purchase the machine on December 30, 2026, for \$45,000 when its fair value was expected to be \$60,000, a sufficient difference that exercise seems reasonably certain.
- The machine's estimated useful life was six years with no salvage value.
- Federated was aware that the lessor's implicit rate of return was 12%.

Required:

1. Calculate the amount Federated should record as a right-of-use asset and lease liability for this finance lease.
2. Prepare an amortization schedule that describes the pattern of interest expense for Federated over the lease term.
3. Prepare the appropriate entries for Federated from the beginning of the lease through the end of the lease term.

E 15–30 Purchase option; lessor; sales-type lease; no selling profit  **LO15–2, LO15–6**

Universal Leasing leases electronic equipment to a variety of businesses. The company's primary service is providing alternate financing by acquiring equipment and leasing it to customers under long-term sales-type leases.

- Universal earns interest under these arrangements at a 10% annual rate.
- The company leased an electronic typesetting machine it purchased for \$30,900 to a local publisher, Desktop Inc., on December 31, 2023.
- The lease contract specified annual payments of \$8,000 beginning January 1, 2024, the beginning of the lease, and each December 31 through 2025 (three-year lease term).
- The publisher had the option to purchase the machine on December 30, 2026, the end of the lease term, for \$12,000 when it was expected to have a residual value of \$16,000, a sufficient difference that exercise seems reasonably certain.

Required:

1. Show how Universal calculated the \$8,000 annual lease payments for this sales-type lease.
2. Prepare an amortization schedule that describes the pattern of interest revenue for Universal Leasing over the lease term.
3. Prepare the appropriate entries for Universal Leasing from the beginning of the lease through the end of the lease term.

E 15–31 Is it a lease?  **LO15–7**

Warren Marina owns a large marina that contains numerous boat slips of various sizes. Warren contracts with boat owners to provide slips to house the customers' boats. Lucky Fisher Fleet contracted with Warren to provide space for four of its fishing boats.

- The contract specifies that Lucky Fisher's boats will be kept in identified slips in the marina.
- Warren has the right to shift the boats to other slips within its marina at its discretion, subject to the requirement to provide 45-foot slips per boat for a three-year period. Warren frequently rearranges its customers' boats to meet the needs of new contracts. Costs of reallocating space is low relative to the benefits of being able to accommodate more customers and their specific requests.

- Lucky Fisher paid \$16,000 on March 1, 2024, for the first year's accommodations.
- The market rate of interest is 5%.

Required:

Prepare the appropriate entry(s) for Lucky Fisher Fleet at March 1, the commencement of the agreement.

E 15–32 Is it a lease?  **LO15–7**

[This exercise is a variation of  **E 15–31**.]

Warren Marina owns a large marina that contains numerous boat slips of various sizes. Warren contracts with boat owners to provide slips to house the customers' boats. Lucky Fisher Fleet contracted with Warren to provide space for four of its fishing boats.

- The contract specifies that Lucky Fisher's boats will be kept in identified slips in the marina.
- The agreement includes the requirement that Warren provide 45-foot slips per boat for a three-year period, space that Lucky Fisher can modify with fenders, docklines, and equipment needed to conduct its fishing business.
- Warren cannot switch locations of the boats or modify the slips without Lucky Fisher's consent.
- Lucky Fisher paid \$16,000 on March 1, 2024, for the first year's accommodations.
- The market rate of interest is 5%.

Required:

Prepare the appropriate entry(s) for Lucky Fisher Fleet at March 1, the commencement of the agreement.

E 15–33 Nonlease payments; lessor and lessee

 **LO15–2, LO15–7**

On January 1, 2024, NRC Credit Corporation leased equipment to Brand Services under a finance/sales-type lease designed to earn NRC a 12% rate of return for providing long-term financing. The lease agreement specified the following:

- a. Ten annual payments of \$55,000 beginning January 1, 2024, the beginning of the lease

and each December 31 thereafter through 2032.

- b. The estimated useful life of the leased equipment is 10 years with no residual value. Its cost to NRC was \$316,412.
- c. The lease qualifies as a finance lease/sales-type lease.
- d. A 10-year service agreement with Quality Maintenance Company was negotiated to provide maintenance of the equipment as required. Payments of \$5,000 per year are specified, beginning January 1, 2024. NRC was to pay this cost as incurred, but lease payments reflect this expenditure.
- e. A partial amortization schedule, appropriate for both the lessee and lessor, follows:

| | Payments | Effective Interest | Decrease in Balance | Outstanding Balance |
|-------------------|-----------------|--|----------------------------|----------------------------|
| | | (12% × Outstanding balance) | | 316,412 |
| 1/1/2024 | 50,000 | | 50,000 | 266,412 |
| 12/31/2024 | 50,000 | 0.12 (266,412) = 31,969 | 18,031 | 248,381 |
| 12/31/2025 | 50,000 | 0.12 (248,381) = 29,806 | 20,194 | 228,187 |

Required:

Prepare the appropriate entries for both the lessee and lessor related to the lease on the following dates:

- 1. January 1, 2024
- 2. December 31, 2024

E 15–34 Lessor’s initial direct costs; sales-type lease

 **LO15–2, LO15–7**

Terms of a lease agreement and related facts were as follows:

- a. Incremental costs of commissions for brokering the lease and consummating the

completed lease transaction incurred by the lessor were \$4,242.

- b. The retail cash selling price of the leased asset was \$500,000. Its useful life was three years with no residual value.
- c. The lease term was three years and the lessor paid \$500,000 to acquire the asset.
- d. Annual lease payments at the beginning of each year were \$184,330.
- e. Lessor's implicit rate when calculating annual rental payments was 11%.

Required:

- 1. Prepare the appropriate entries for the lessor to record the lease and related payments at its beginning, January 1, 2024.
- 2. Calculate the effective rate of interest revenue after adjusting the net investment by initial direct costs.
- 3. Record any entry(s) necessary on December 31, 2024, the fiscal year-end.

E 15–35 Lessor's initial direct costs; sales-type lease

 **LO15–3, LO15–7**

The lease agreement and related facts indicate the following:

- a. Leased equipment had a retail cash selling price of \$300,000. Its useful life was five years with no residual value.
- b. The lease term was five years and the lessor paid \$265,000 to acquire the equipment (thus, selling profit).
- c. Lessor's implicit rate when calculating annual lease payments was 8%.
- d. Annual lease payments beginning January 1, 2024, the beginning of the lease, were \$69,571.
- e. Incremental costs of commissions for brokering the lease and consummating the completed lease transaction incurred by the lessor were \$7,500.

Required:

Prepare the appropriate entries for the lessor to record:

- 1. The lease and the initial payment at its commencement.
- 2. Any entry(s) necessary on December 31, 2024, the fiscal year-end.

E 15–36 Lessor’s initial direct costs; operating lease

LO15–4, LO15–7

The following relate to an operating lease agreement:

- a. The lease term is three years, beginning January 1, 2024.
- b. The leased asset cost the lessor \$800,000 and had a useful life of eight years with no residual value. The lessor uses straight-line depreciation for its depreciable assets.
- c. Annual lease payments at the beginning of each year were \$137,000.
- d. Incremental costs of negotiating and consummating the completed lease transaction incurred by the lessor were \$2,400.

Required:

Prepare the appropriate entries for the lessor from the beginning of the lease through the end of the lease term.

E 15–37 Concepts; terminology **LO15–2** through **LO15–8**

Listed below are several terms and phrases associated with leases. Pair each item from List A with the item from List B (by letter) that is most appropriately associated with it.

| List A | | List B |
|-----------|--|--|
| _____ 1. | Effective rate times balance | a. PV of purchase option |
| _____ 2. | Revenue recognition issues | exercise price |

E 15–38 FASB codification research; reassessment of lease terms  **LO15–8**

The lease term is the noncancelable period for which a lessee has the right to use an underlying asset, modified by any renewal or termination options that are “reasonably certain” to be exercised, or not exercised. Options whose exercise is under the control of the lessor are automatically included. The *FASB Accounting Standards Codification*[®] represents the single source of authoritative U.S. generally accepted accounting principles.

Required:

1. Access the FASB’s Codification Research System at the FASB website (www.fasb.org) and select Basic View. Determine the specific eight-digit Codification citation (XXX-XX-XX-X) that describes the guidelines for determining when the lessee should reassess the term of the lease.
2. List the disclosure requirements.

E 15–39 FASB codification research  **LO15–8**

Access the FASB’s Codification Research System[Ⓜ] at the FASB website (www.fasb.org) and select Basic View. Determine the specific seven- or eight-digit Codification citation (XXX-XX-XX-X) for accounting for each of the following items:

1. Definition of initial direct costs.
2. When a modification to a contract is reported as a separate contract (that is, separate from the original contract).
3. The disclosures required in the notes to the financial statements for a lessor.
4. The classification criteria for when a lessee classifies a lease as a finance lease and a lessor classifies a lease as a sales-type lease.

E 15–40 Reporting leases in a statement of cash flows; disclosure note; Microsoft  **LO15-8**

Real World Financials

Microsoft Corporation reported the following disclosure note in its 2020 financial statements:

Note 14 — LEASES (in part)

Supplemental cash flow information related to leases was as follows:

| (In millions) | Fiscal Year Ended June 30, 2020 |
|---|------------------------------------|
| <i>Cash paid for amounts included in the measurement of lease liabilities:</i> | |
| Operating cash flows from operating leases | \$1,829 |
| Operating cash flows from finance leases | 336 |
| Financing cash flows from finance leases | 409 |

Required:

1. Prepare a journal entry that summarizes the cash payments for operating leases during the year.
2. Prepare a journal entry that summarizes the cash payments for finance leases during the year.

E 15–41 Sale-leaseback Appendix 15

To raise operating funds, Signal Aviation sold an airplane on January 1, 2024, to a finance company for \$770,000. Signal immediately leased the plane back for a 13-year period, at which time ownership of the airplane will transfer to Signal.

- The airplane has a fair value of \$800,000.
- Its cost and its book value were \$600,000.
- Its useful life is estimated to be 15 years.
- The lease requires Signal to make payments of \$102,771 to the finance company each January 1. Signal depreciates assets on a straight-line basis.
- The lease has an implicit rate of 11%.

Required:

Prepare the appropriate entries for Signal on

1. January 1, 2024, to record the transaction
2. December 31, 2024, to record necessary adjustments

E 15–42 Sale-leaseback; operating lease Appendix 15

To raise operating funds, National Distribution Center sold its office building to an insurance company on January 1, 2024, for \$800,000 and immediately leased the building back.

- The operating lease is for the final 12 years of the building's estimated 20-year remaining useful life.
- The building has a fair value of \$800,000 and a book value of \$650,000 (its original cost was \$1 million).
- The rental payments of \$100,000 are payable to the insurance company each December 31.
- The lease has an implicit rate of 9%.

Required:

Prepare the appropriate entries for National Distribution Center on

1. January 1, 2024, to record the sale-leaseback

2. December 31, 2024, to record necessary adjustments

Problems

P15–1 Integrating problem; bonds; note; lease LO15–2

You are the new controller for Moonlight Bay Resorts. The company CFO has asked you to determine the company's interest expense for the year ended December 31, 2024. Your accounting group provided you the following information on the company's debt:

1. On July 1, 2024, Moonlight Bay issued bonds with a face amount of \$2,000,000. The bonds mature in 20 years and interest of 9% is payable semiannually on June 30 and December 31. The bonds were issued at a price to yield investors 10%. Moonlight Bay records interest at the effective rate.
2. At December 31, 2023, Moonlight Bay had a 10% installment note payable to Third Mercantile Bank with a balance of \$500,000. The annual payment is \$60,000, payable each June 30.
3. On January 1, 2024, Moonlight Bay leased a building under a finance lease calling for four annual lease payments of \$40,000 beginning January 1, 2024. Moonlight Bay's incremental borrowing rate on the date of the lease was 11%, and the lessor's implicit rate, which was known by Moonlight Bay, was 10%.

Required:

Calculate interest expense for the year ended December 31, 2024.

P15–2 Finance lease LO15–2

At the beginning of 2024, VHF Industries acquired a machine with a fair value of \$6,074,700 by signing a four-year lease. The lease is payable in four annual payments of \$2 million at the end of each year.

Required:

1. What is the effective rate of interest implicit in the agreement?
2. Prepare the lessee's journal entry at the beginning of the lease.
3. Prepare the journal entry to record the first lease payment on December 31, 2024.
4. Prepare the journal entry to record the second lease payment on December 31, 2025.
5. Suppose the fair value of the machine and the lessor's implicit rate were unknown at the time of the lease, but that the lessee's incremental borrowing rate of interest for notes of similar risk was 11%. Prepare the lessee's entry at the beginning of the lease.

(Note: You may wish to compare your solution to  P 15-2 with that of P 14-12, which deals with a parallel situation in which the machine was acquired with an installment note.)

P15-3 Lease amortization schedule **LO15-2**

On January 1, 2024, Majestic Mantles leased a lathe from Equipment Leasing under a finance lease. Lease payments are made annually. Title does not transfer to the lessee and there is no purchase option or guarantee of a residual value by Majestic. Portions of the Equipment Leasing's lease amortization schedule appear below:

| Jan. 1 | Payments | Effective Interest | Decrease in Balance | Outstanding Balance |
|-------------------|-----------------|-------------------------------|--------------------------------|--------------------------------|
| | | | | 187,298 |
| 2024 | 20,000 | | 20,000 | 167,298 |
| 2025 | 20,000 | 16,730 | 3,270 | 164,028 |
| 2026 | 20,000 | 16,403 | 3,597 | 160,431 |
| 2027 | 20,000 | 16,043 | 3,957 | 156,474 |
| 2028 | 20,000 | 15,647 | 4,353 | 152,122 |
| 2029 | 20,000 | 15,212 | 4,788 | 147,334 |
| 2030 | 20,000 | 14,733 | 5,267 | 142,067 |
| — | — | — | — | — |
| — | — | — | — | — |
| — | — | — | — | — |
| 2041 | 20,000 | 4,974 | 15,026 | 34,711 |
| 2042 | 20,000 | 3,471 | 16,529 | 18,182 |

| Jan. 1 | Payments | Effective Interest | Decrease in Balance | Outstanding Balance |
|-----------|----------|-----------------------|------------------------|------------------------|
| 2043 | 20,000 | 1,818 | 18,182 | 0 |

Required:

1. What is Majestic's lease liability at the beginning of the lease (after the first payment)?
2. What amount would Majestic record as a right-of-use asset?
3. What is the lease term in years?
4. What is the effective annual interest rate?
5. What is the total amount of lease payments?
6. What is the total effective interest expense recorded over the term of the lease?

P15-4 Finance/sales-type lease; lessee and lessor  **LO15-1**,
 **LO15-2**,  **LO15-3**

Rand Medical manufactures lithotripters. Lithotripsy uses shock waves instead of surgery to eliminate kidney stones. Physicians' Leasing purchased a lithotripter from Rand for \$2,000,000 and leased it to Mid-South Urologists Group, Inc., on January 1, 2024.

Lease Description:

| | |
|---|---|
| Quarterly lease payments | \$130,516—beginning of each period |
| Lease term | 5 years (20 quarters) |
| No residual value; no purchase option | |
| Economic life of lithotripter | 5 years |
| Implicit interest rate and lessee's incremental borrowing rate | 12% |
| Fair value of asset | \$2,000,000 |

1. How should this lease be classified by Mid-South Urologists Group and by Physicians' Leasing?
2. Prepare appropriate entries for both Mid-South Urologists Group and Physicians' Leasing from the beginning of the lease through the second rental payment on April 1, 2024.

Adjusting entries are recorded at the end of each fiscal year (December 31).

3. Assume Mid-South Urologists Group leased the lithotripter directly from the manufacturer, Rand Medical, which produced the machine at a cost of \$1.7 million. Prepare appropriate entries for Rand Medical from the beginning of the lease through the second lease payment on April 1, 2024.

P15-5 Lessee; operating lease; advance payment; leasehold improvement  **LO15-4**

On January 1, 2024, Winn Heat Transfer leased office space under a three-year operating lease agreement. The arrangement specified three annual lease payments of \$80,000 each, beginning December 31, 2024, and on each December 31 through 2026. The lessor, HVAC Leasing, calculates lease payments based on an annual interest rate of 5%. Winn also paid a \$100,000 advance payment at the beginning of the lease. With permission of the owner, Winn made structural modifications to the building before occupying the space at a cost of \$180,000. The useful life of the building and the structural modifications were estimated to be 30 years with no residual value.

Required:

Prepare the appropriate entries for Winn Heat Transfer from the beginning of the lease through the end of 2026. Winn’s fiscal year is the calendar year.

P15-6 Lease amortization schedule  **LO15-2**,  **LO15-6**

On January 1, 2024, National Insulation Corporation (NIC) leased equipment from United Leasing under a finance lease. Lease payments are made annually. Title does not transfer to the lessee and there is no purchase option or guarantee of a residual value by NIC. Portions of the United Leasing’s lease amortization schedule appear below:

| Jan. 1 | Payments | Effective Interest | Decrease in Balance | Outstanding Balance |
|--------|----------|--------------------|---------------------|---------------------|
| | | | | 192,501 |
| 2024 | 20,000 | | 20,000 | 172,501 |
| 2025 | 20,000 | 17,250 | 2,750 | 169,751 |
| 2026 | 20,000 | 16,975 | 3,025 | 166,726 |

| Jan. 1 | Payments | Effective Interest | Decrease in Balance | Outstanding Balance |
|--------|----------|--------------------|---------------------|---------------------|
| 2027 | 20,000 | 16,673 | 3,327 | 163,399 |
| 2028 | 20,000 | 16,340 | 3,660 | 159,739 |
| 2029 | 20,000 | 15,974 | 4,026 | 155,713 |
| — | — | — | — | — |
| — | — | — | — | — |
| — | — | — | — | — |
| 2041 | 20,000 | 7,364 | 12,636 | 61,006 |
| 2042 | 20,000 | 6,101 | 13,899 | 47,107 |
| 2043 | 20,000 | 4,711 | 15,289 | 31,818 |
| 2044 | 35,000 | 3,182 | 31,818 | 0 |

Required:

1. What is the lease term in years?
2. What is the asset's residual value expected at the end of the lease term?
3. What is the effective annual interest rate?
4. What is the total amount of lease payments for United?
5. What is the total amount of lease payments for NIC?
6. What is United's net investment at the beginning of the lease (after the first payment)?
7. What is United's total effective interest revenue recorded over the term of the lease?
8. What amount would NIC record as a right-of-use asset at the beginning of the lease?

P15-7 Reassessment of lease term  **LO15-2**,  **LO15-4**,
 **LO15-6**

On January 1, 2024, Rick's Pawn Shop leased a truck from Corey Motors for a six-year period with an option to extend the lease for three years.

- Rick's had no significant economic incentive as of the beginning of the lease to exercise the three-year extension option. Annual lease payments are \$10,000 due on December 31 of each year, calculated by the lessor using a 5% discount rate.
- The expected useful life of the asset is nine years, and its fair value is \$75,000.

- Assume that at the beginning of the third year, January 1, 2026, Rick’s had made significant improvements to the truck whose cost could be recovered only if it exercises the extension option, creating an expectation that extension of the lease was “reasonably certain.”
- The relevant interest rate at that time was 6%.

Required:

1. Prepare the journal entry, if any, on January 1 and on December 31 of the third year, 2026 for the lessee to account for the reassessment.
2. Prepare the journal entry, if any, on January 1 and on December 31 of the third year, 2026 for the lessor to account for the reassessment.

P15–8 Lease concepts; sales-type leases; guaranteed and unguaranteed residual value  **LO15–2**,  **LO15–6**

Each of the four independent situations below describes a sales-type lease in which annual lease payments of \$10,000 are payable at the beginning of each year. Each is a finance lease for the lessee. Determine the following amounts at the beginning of the lease.

A. The lessor’s

1. Lease payments
2. Gross investment in the lease
3. Net investment in the lease

B. The lessee’s

4. Lease payments
5. Right-of-use asset
6. Lease liability

| | Situation | | | |
|---|------------|------------|------------|------------|
| | 1 | 2 | 3 | 4 |
| Lease term (years) | 4 | 4 | 4 | 4 |
| Asset’s useful life (years) | 4 | 5 | 5 | 7 |
| Lessor’s implicit rate (known by lessee) | 11% | 11% | 11% | 11% |

Residual value:

| | | | | |
|-----------------------------|-------------|----------------|----------------|----------------|
| Guaranteed by lessee | \$ 0 | \$4,000 | \$2,000 | \$ 0 |
| Unguaranteed | \$ 0 | \$ 0 | \$2,000 | \$4,000 |

Purchase option:

| | | | | |
|----------------------------|-------------|----------------|----------------|----------------|
| After (years) | none | 3 | 4 | 3 |
| Exercise price | n/a | \$7,000 | \$1,000 | \$3,000 |
| Reasonably certain? | n/a | no | no | yes |

P15-9 Sales-type lease; purchase option reasonably certain to be exercised before lease term ends; lessor and lessee

 **LO15-3**,  **LO15-6**

Mid-South Auto Leasing leases vehicles to consumers. The attraction to customers is that the company can offer competitive prices due to volume buying. On September 30, 2024, the company leased a delivery truck to a local florist, Anything Grows.

- The fiscal year for both companies ends December 31.
- The lease agreement specified quarterly payments of \$3,000 beginning September 30, 2024, the beginning of the lease, and each quarter (December 31, March 31, and June 30) through June 30, 2027 (three-year lease term).
- The florist had the option to purchase the truck on September 29, 2026, for \$6,000 when it was expected to have a residual value of \$10,000.
- The estimated useful life of the truck is four years.
- Mid-South Auto Leasing's quarterly interest rate for determining payments was 3% (approximately 12% annually).
- Mid-South paid \$25,000 for the truck.
- Both companies use straight-line depreciation or amortization. Anything Grows' incremental interest rate is 12%.

[*Hint*: A lease term ends for accounting purposes when an option becomes exercisable if it's expected to be exercised (i.e., a BPO)].

Required:

1. Calculate the amount of selling profit that Mid-South would recognize in this sales-type lease. (Be careful to note that, although payments occur on the last calendar day of each quarter, since the first payment was at the beginning of the lease, payments represent an annuity due.)
2. Prepare the appropriate entries for Anything Grows and Mid-South on September 30, 2024.
3. Prepare an amortization schedule(s) describing the pattern of interest expense for Anything Grows and interest revenue for Mid-South Auto Leasing over the lease term.
4. Prepare the appropriate entries for Anything Grows and Mid-South Auto Leasing on December 31, 2024.
5. Prepare the appropriate entries for Anything Grows and Mid-South on September 29, 2026, assuming the purchase option was exercised on that date.

P15–10 Change in lease term; operating lease; lessor

 **LO15–4**,  **LO15–6**

Universal Leasing leases electronic equipment to a variety of businesses. The company's primary service is providing alternate financing by acquiring equipment and leasing it to customers under long-term leases.

- Universal earns interest under these arrangements at a 10% annual rate.
- Universal purchased an electronic typesetting machine on December 31, 2023, for \$90,000 and then leased it to Desktop, Inc., a local publisher.
- The six-year operating lease term commenced January 1, 2024, and the lease contract specified annual payments of \$8,000 beginning December 31, 2024, and on each December 31 through 2029.
- The machine's estimated useful life is 15 years with no estimated residual value.
- The publisher had the option to terminate the lease after four years. At the beginning of the lease, there was no reason to believe the lease would be terminated.

Required:

1. Prepare the appropriate entries for Universal Leasing from the beginning of the lease through the end of 2024.
2. At the beginning of 2025, there was a significant indication that Desktop's economic incentive to terminate the lease had changed causing both companies to believe

termination of the lease at the end of four years (three years remaining) is “reasonably certain.” Prepare any appropriate entries for Universal Leasing on January 1, 2025, to reflect the change in the lease term.

3. Prepare the appropriate entries pertaining to the lease for Universal Leasing on December 31, 2025.

P15–11 Lessee; renewal option **LO15–2**, **LO15–6**

High Time Tours leased rock-climbing equipment from Adventures Leasing on January 1, 2024. High Time has the option to renew the lease at the end of two years for an additional three years for \$8,000 per quarter. Adventures purchased the equipment at a cost of \$198,375.

Related Information:

| | |
|---|--|
| Lease term | 2 years (8 quarterly periods) |
| Lease renewal option for an additional | 3 years at \$8,000 per quarter |
| Quarterly lease payments | \$15,000 on Jan. 1, 2024, and on Mar. 31, June 30, Sept. 30, and Dec. 31 thereafter |
| Economic life of asset | 5 years |
| Interest rate charged by the lessor | 8% |

Required:

1. Prepare appropriate entries for High Time Tours from the beginning of the lease through March 31, 2024. Appropriate adjusting entries are made quarterly.
2. Prepare an amortization schedule for the term of the lease.

P15–12 Lessee and lessor; lessee guaranteed residual value **LO15–2**, **LO15–6**

On January 1, 2024, Ghosh Industries leased a high-performance conveyer to Karrier Company for a four-year period ending December 31, 2027, at which time possession of the leased asset will revert back to Ghosh.

- The equipment cost Ghosh \$956,000 and has an expected useful life of five years.
- Ghosh expects the residual value at December 31, 2027, will be \$300,000.
- Negotiations led to the lessee guaranteeing a \$340,000 residual value.
- Equal payments under the finance/sales-type lease are \$200,000 and are due on December 31 of each year with the first payment being made on December 31, 2024.
- Karrier is aware that Ghosh used a 5% interest rate when calculating lease payments.

Required:

1. Prepare the appropriate entries for both Karrier and Ghosh on January 1, 2024, to record the lease.
2. Prepare all appropriate entries for both Karrier and Ghosh on December 31, 2024, related to the lease.

P15–13 Lessee and lessor; lessor; sales-type lease with selling profit; residual value  **LO15–2**,  **LO15–3**

Newton Labs leased chronometers from Brookline Instruments on January 1, 2024. Brookline Instruments manufactured the chronometers at a cost of \$200,000. The chronometers have a fair value of \$260,000. Appropriate adjusting entries are made quarterly.

Related Information:

| | |
|--|--|
| Lease term | 5 years (20 quarterly periods) |
| Quarterly lease payments | \$14,547 on Jan. 1, 2024, and on Mar. 31, June 30, Sept. 30, and Dec. 31 thereafter |
| Economic life of asset | 6 years |
| Estimated residual value of chronometers at end of lease term | \$25,823 |
| Interest rate charged by the lessor | 8% |

Required:

1. Prepare appropriate entries for Newton Labs to record the arrangement at its commencement, January 1, 2024, and on March 31, 2024.
2. Prepare appropriate entries for Brookline Instruments to record the arrangement at its commencement, January 1, 2024, and on March 31, 2024.

P15-14 Nonlease payments; lessor and lessee  **LO15-2**,
 **LO15-7**

On January 1, 2024, Lesco Leasing leased equipment to Quality Services under a finance/sales-type lease designed to earn Lesco a 12% rate of return for providing long-term financing. The lease agreement specified

- a. Ten annual payments of \$56,000 beginning January 1, 2024, the beginning of the lease and each December 31 thereafter through 2032.
- b. The estimated useful life of the leased equipment is 10 years with no residual value. Its cost to Lesco was \$322,741.
- c. The lease qualifies as a finance lease/sales-type lease.
- d. A 10-year service agreement with Quality Maintenance Company was negotiated to provide maintenance of the equipment as required. Payments of \$5,000 per year are specified, beginning January 1, 2024. Lesco was to pay this cost as incurred, but lease payments reflect this expenditure. Also included in the \$56,000 payments is an insurance premium of \$4,000 providing coverage for the equipment.

Required:

1. Prepare the appropriate entries for both the lessee and lessor related to the lease on January 1, 2024.
2. Prepare the appropriate entries for both the lessee and lessor related to the lease on December 31, 2024.

P15-15 Lessor's initial direct costs; operating and sales-type leases  **LO15-2**,  **LO15-3**,  **LO15-4**,  **LO15-7**

Terms of a lease agreement and related facts were as follows:

- a. The lease asset had a retail cash selling price of \$100,000. Its useful life was six years with no residual value (straight-line depreciation).
- b. Annual lease payments at the beginning of each year were \$20,873, beginning January 1.
- c. Lessor's implicit rate when calculating annual rental payments was 10%.
- d. Costs of \$2,062 for legal fees for the lease execution were the responsibility of the lessor.

Required:

Prepare the appropriate entries for the lessor to record the lease, the initial payment at its beginning, and at the December 31 fiscal year-end under each of the following three independent assumptions:

1. The lease term is three years and the lessor paid \$100,000 to acquire the asset (operating lease).
2. The lease term is six years and the lessor paid \$100,000 to acquire the asset. Also assume that adjusting the lease receivable (net investment) by initial direct costs reduces the effective rate of interest to 9%.
3. The lease term is six years and the lessor paid \$85,000 to acquire the asset.

P15–16 Nonlease costs; lessor and lessee  **LO15–2,**
 **LO15–7**

Branif Leasing leases mechanical equipment to industrial consumers under sales-type leases that earn Branif a 10% rate of return for providing long-term financing. A lease agreement with Branson Construction specified 20 annual payments beginning December 31, 2024, the beginning of the lease.

- The estimated useful life of the leased equipment is 20 years with no residual value.
- Its cost to Branif was \$936,492.
- The lease qualifies as a finance lease to Branson.
- Maintenance of the equipment was contracted for through a 20-year service agreement with Midway Service Company requiring 20 annual payments of \$3,000 beginning December 31, 2024.
- Progressive Insurance Company charges Branif \$3,000 annually for hazard insurance coverage on the equipment.
- Both companies use straight-line depreciation or amortization.

Required:

Prepare the appropriate entries for both the lessee and lessor to record the second lease payment and depreciation on December 31, 2025, under each of three independent assumptions:

1. The lessee pays maintenance costs as incurred. The lessor pays insurance premiums as incurred. The lease agreement requires annual payments of \$100,000.
2. The contract specifies that the lessor pays maintenance costs as incurred. The lessee's lease payments were increased to \$103,000 to include an amount sufficient to reimburse these costs.
3. The lessee's lease payments of \$103,000 included \$3,000 for hazard insurance on the equipment rather than maintenance.

On December 31, 2024, Yard Art Landscaping leased a delivery truck from Branch Motors.

P15–17 Lessee-guaranteed residual value; unguaranteed residual value; nonlease costs; different interest rates for lessor and lessee  **LO15–3**,  **LO15–6**,  **LO15–7**

- Branch paid \$40,000 for the truck. Its retail value is \$45,114.
- The lease agreement specified annual payments of \$11,000 beginning December 31, 2024, the beginning of the lease, and at each December 31 through 2027.
- Branch Motors' interest rate for determining payments was 10%.
- At the end of the four-year lease term (December 31, 2028) the truck was expected to be worth \$15,000.
- The estimated useful life of the truck is five years with no salvage value.
- Both companies use straight-line amortization or depreciation.
- Yard Art guaranteed a residual value of \$6,000. Yard Art's incremental borrowing rate is 9% and is unaware of Branch's implicit rate.

A \$1,000 per year maintenance agreement was arranged for the truck with an outside service firm. As an expedient, Branch Motors agreed to pay this fee. It is, however, reflected in the \$11,000 lease payments.

Required:

1. How should this lease be classified by Yard Art Landscaping (the lessee)? Why?
2. Calculate the amount Yard Art Landscaping would record as a right-of-use asset and a lease liability.
3. How should this lease be classified by Branch Motors (the lessor)? Why?
4. Show how Branch Motors calculated the \$11,000 annual lease payments.
5. Calculate the amount Branch Motors would record as sales revenue.
6. Prepare the appropriate entries for both Yard Art and Branch Motors on December 31, 2024.
7. Prepare an amortization schedule that describes the pattern of interest expense over the lease term for Yard Art.
8. Prepare an amortization schedule that describes the pattern of interest revenue over the lease term for Branch Motors.
9. Prepare the appropriate entries for both Yard Art and Branch Motors on December 31, 2025.
10. Prepare the appropriate entries for both Yard Art and Branch Motors on December 31, 2027 (the final lease payment).
11. Prepare the appropriate entries for both Yard Art and Branch Motors on December 31, 2028 (the end of the lease term), assuming the truck is returned to the lessor, and the actual residual value of the truck was \$4,000 on that date.

P15–18 Initial direct costs; sales-type lease  **LO15–2,**
 **LO15–7**

Lahiri Leasing purchased a single-engine plane for its fair value of \$645,526 and leased it to Red Baron Flying Club on January 1, 2024.

Terms of the lease agreement and related facts were

- a. Eight annual payments of \$110,000 beginning January 1, 2024, the beginning of the lease, and on each December 31 through 2030. Red Baron knows that Lahiri Leasing's implicit interest rate was 10%. The estimated useful life of the plane is eight years. Payments were calculated as follows:

| | |
|---|------------------|
| Amount to be recovered (fair value) | \$645,526 |
| Lease payments at the beginning of each of the next eight years: $(\$645,526 \div 5.86842^*)$ | <u>\$110,000</u> |

*Present value of an annuity due of \$1: $n = 8, i = 10\%$.

- b. Red Baron's incremental borrowing rate is 11%.
- c. Incremental costs of negotiating and consummating the completed lease transaction incurred by Lahiri Leasing were \$18,099.

Required:

1. How should this lease be classified (a) by Lahiri Leasing (the lessor) and (b) by Red Baron (the lessee)?
2. Prepare the appropriate entries for both Red Baron Flying Club and Lahiri Leasing on January 1, 2024.
3. Prepare an amortization schedule that describes the pattern of interest expense over the lease term for Red Baron Flying Club.
4. Determine the effective rate of interest for Lahiri Leasing for the purpose of recognizing interest revenue over the lease term.
5. Prepare an amortization schedule that describes the pattern of interest revenue over the lease term for Lahiri Leasing.
6. Prepare the appropriate entries for both Red Baron and Lahiri Leasing on December 31, 2024 (the second lease payment). Both companies use straight-line depreciation or amortization.
7. Prepare the appropriate entries for both Red Baron and Lahiri Leasing on December 31, 2030 (the final lease payment).

P15-19 Initial direct costs; sales-type lease with a selling profit

 LO15-3,  LO15-7

[This problem is a variation of  P 15-18, modified to cause the lease to be a sales-type lease with a selling profit.]

Lahiri Leasing purchased a single-engine plane for \$400,000 and leased it to Red Baron Flying Club for its fair value of \$645,526 on January 1, 2024.

Terms of the lease agreement and related facts were

- a. Eight annual payments of \$110,000 beginning January 1, 2024, the beginning of the lease, and on each December 31 through 2030. Red Baron knows that Lahiri Leasing's implicit interest rate was 10%. The estimated useful life of the plane is eight years. Payments were calculated as follows:

| | |
|---|------------------|
| Amount to be recovered (fair value) | \$645,526 |
| Lease payments at the beginning of each of the next eight years: ($\$645,526 \div 5.86842^*$) | <u>\$110,000</u> |

*Present value of an annuity due of \$1: $n = 8, i = 10\%$.

- b. Red Baron's incremental borrowing rate is 11%.
- c. Incremental costs of consummating the completed lease transaction incurred by Lahiri Leasing were \$18,099.

Required:

- How should this lease be classified (a) by Lahiri Leasing (the lessor) and (b) by Red Baron (the lessee)?
- Prepare the appropriate entries for both Red Baron Flying Club and Lahiri Leasing on January 1, 2024.
- Prepare an amortization schedule that describes the pattern of interest expense over the lease term for Red Baron Flying Club.
- Prepare the appropriate entries for both Red Baron and Lahiri Leasing on December 31, 2024 (the second lease payment). Both companies use straight-line depreciation or amortization.
- Prepare the appropriate entries for both Red Baron and Lahiri Leasing on December 31, 2030 (the final lease payment).

P15-20 Guaranteed residual value; sales-type lease

 **LO15-2**,  **LO15-5**,  **LO15-6**

[ **P15-20**  **P15-21**, and  **15-22**, are three variations of the same basic situation.]

On December 31, 2024, Rhone-Metro Industries leased equipment to Western Soya Co. for a four-year period ending December 31, 2028, at which time possession of the leased asset will revert back to Rhone-Metro.

- The equipment cost Rhone-Metro \$365,760 and has an expected useful life of six years.
- Its normal sales price is \$365,760.
- The lessee-guaranteed residual value on December 31, 2028, is \$25,000.
- Equal payments under the lease are \$100,000 and are due on December 31 of each year.
- The first payment was made on December 31, 2024.
- Western Soya's incremental borrowing rate is 12%.
- Western Soya knows the interest rate implicit in the lease payments is 10%.
- Both companies use straight-line depreciation or amortization.

Required:

1. Show how Rhone-Metro calculated the \$100,000 annual lease payments.
2. How should this lease be classified (a) by Western Soya Co. (the lessee) and (b) by Rhone-Metro Industries (the lessor)? Why?
3. Prepare the appropriate entries for both Western Soya Co. and Rhone-Metro on December 31, 2024.
4. Prepare an amortization schedule(s) describing the pattern of interest over the lease term for the lessee and the lessor.
5. Prepare all appropriate entries for both Western Soya and Rhone-Metro on December 31, 2025 (the second lease payment and amortization).
6. Prepare the appropriate entries for both Western Soya and Rhone-Metro on December 31, 2028, assuming the equipment is returned to Rhone-Metro and the actual residual value on that date is \$1,500.

P15–21 Unguaranteed residual value; nonlease payments; sales-type lease  **LO15–2**,  **LO15–6**,  **LO15–7**

Rhone-Metro Industries manufactures equipment that is sold or leased. On December 31, 2024, Rhone-Metro leased equipment to Western Soya Co. for a four-year period ending December 31, 2028, at which time possession of the leased asset will revert back to Rhone-Metro.

- The equipment cost \$300,000 to manufacture and has an expected useful life of six years.

- Its normal sales price is \$365,760.
- The expected residual value of \$25,000 on December 31, 2028, is not guaranteed.
- Equal payments under the lease are \$104,000 (including \$4,000 maintenance costs) and are due on December 31 of each year.
- The first payment was made on December 31, 2024.
- Western Soya's incremental borrowing rate is 12%.
- Western Soya knows the interest rate implicit in the lease payments is 10%.
- Both companies use straight-line depreciation or amortization.

Required:

1. Show how Rhone-Metro calculated the \$104,000 annual lease payments.
2. How should this lease be classified (a) by Western Soya Co. (the lessee) and (b) by Rhone-Metro Industries (the lessor)? Why?
3. Prepare the appropriate entries for both Western Soya Co. and Rhone-Metro on December 31, 2024.
4. Prepare an amortization schedule(s) describing the pattern of interest over the lease term for the lessee and the lessor.
5. Prepare the appropriate entries for both Western Soya and Rhone-Metro on December 31, 2025 (the second lease payment and amortization).
6. Prepare the appropriate entries for both Western Soya and Rhone-Metro on December 31, 2028, assuming the equipment is returned to Rhone-Metro and the actual residual value on that date is \$1,500.

P15-22 Purchase option reasonably certain to be exercised before lease term ends; nonlease payments; sales-type lease

 **LO15-3**,  **LO15-6**,  **LO15-7**

Rhone-Metro Industries manufactures equipment that is sold or leased. On December 31, 2024, Rhone-Metro leased equipment to Western Soya Co. for a noncancelable stated lease term of four years ending December 31, 2028, at which time possession of the leased asset will revert back to Rhone-Metro.

- The equipment cost \$300,000 to manufacture and has an expected useful life of six years.
- Its normal sales price is \$365,760.
- The expected residual value of \$25,000 on December 31, 2028, is not guaranteed.
- Western Soya Co. is reasonably certain to exercise a purchase option on December 30, 2027, at an option price of \$10,000.
- Equal payments under the lease are \$134,960 (including \$4,000 annual maintenance costs) and are due on December 31 of each year.
- The first payment was made on December 31, 2024.
- Western Soya's incremental borrowing rate is 12%.
- Western Soya knows the interest rate implicit in the lease payments is 10%.
- Both companies use straight-line depreciation or amortization.

[*Hint:* A lease term ends for accounting purposes when an option becomes exercisable if it's expected to be exercised (i.e., a BPO).]

Required:

1. Show how Rhone-Metro calculated the \$134,960 annual lease payments.
2. How should this lease be classified (a) by Western Soya Co. (the lessee) and (b) by Rhone-Metro Industries (the lessor)? Why?
3. Prepare the appropriate entries for both Western Soya Co. and Rhone-Metro on Page 897 December 31, 2024.
4. Prepare an amortization schedule(s) describing the pattern of interest over the lease term for the lessee and the lessor.
5. Prepare the appropriate entries for both Western Soya and Rhone-Metro on December 31, 2025 (the second rent payment and amortization).
6. Prepare the appropriate entries for both Western Soya and Rhone-Metro on December 30, 2027, assuming the purchase option is exercised on that date.

P15-23 Lessee and lessor; lessee guaranteed residual value

 LO15-2,  LO15-7

On January 1, 2024, Nguyen Electronics leased equipment from Nevels Leasing for a four-year period ending December 31, 2027, at which time possession of the leased asset will revert back to Nevels.

- The equipment cost Nevels \$1,236,552 and has an expected economic life of five years.
- Nevels expects the residual value on December 31, 2027, will be \$150,000.
- Negotiations led to the lessee guaranteeing a \$210,000 residual value.
- Equal payments under the lease are \$300,000 and are due on December 31 of each year with the first payment being made on December 31, 2024.
- Nguyen is aware that Nevels used a 5% interest rate when calculating lease payments.

Required:

1. Prepare the appropriate entries for both Nguyen and Nevels on January 1, 2024, to record the lease.
2. Prepare all appropriate entries for both Nguyen and Nevels on December 31, 2024, related to the lease.

P15–24 Operating lease; uneven lease payments  **LO15–4,**
 **LO15–7**

On January 1, 2024, Harlon Consulting entered into a three-year lease for new office space agreeing to lease payments of \$5,000 in 2024, \$6,000 in 2025, and \$7,000 in 2026. Payments are due on December 31 of each year with the first payment being made on December 31, 2024. Harlon is aware that the lessor used a 5% interest rate when calculating lease payments.

Required:

1. Prepare the appropriate entries for Harlon Consulting on January 1, 2024, to record the lease.
2. Prepare all appropriate entries for Harlon Consulting on December 31, 2024, related to the lease.
3. Prepare all appropriate entries for Harlon Consulting on December 31, 2025, related to the lease.
4. Prepare all appropriate entries for Harlon Consulting on December 31, 2026, related to the lease.

P15-25 Operating lease; uneven lease payments  **LO15-4,**
 **LO15-7**

On January 1, 2024, Harlon Consulting entered into a three-year lease for new office space agreeing to lease payments of \$7,000 in 2024, \$6,000 in 2025, and \$5,000 in 2026.

Payments are due on December 31 of each year with the first payment being made on December 31, 2024. Harlon is aware that the lessor used a 5% interest rate when calculating lease payments.

Required:

1. Prepare the appropriate entries for Harlon Consulting on January 1, 2024, to record the lease.
2. Prepare all appropriate entries for Harlon Consulting on December 31, 2024, related to the lease.
3. Prepare all appropriate entries for Harlon Consulting on December 31, 2025, related to the lease.
4. Prepare all appropriate entries for Harlon Consulting on December 31, 2026, related to the lease.

P15-26 Modification of a lease  **LO15-2,**  **LO15-3,**
 **LO15-6**

On January 1, 2024, Worcester Construction leased International Harvester equipment from Waltham LeaseCorp.

- Waltham LeaseCorp purchased the equipment from Wellesley Harvester at a cost of \$958,158. Worcester's borrowing rate for similar transactions is 10%.
- The lease agreement specified four annual payments of \$200,000 beginning January 1, 2024, the beginning of the lease, and on each December 31 thereafter through 2026.
- The useful life of the equipment is estimated to be six years.
- The present value of those four payments at a discount rate of 10% is \$697,370.

On January 1, 2026 (after two years and three payments), Worcester and Waltham agreed to extend the lease term by two years. The market rate of interest at that time was 9%.

Required:

1. Prepare any appropriate entry(ies) for Worcester Construction on January 1, 2026, to record the lease modification.
2. Prepare all appropriate entries for Waltham LeaseCorp on January 1, 2026, to record the lease modification.
3. Prepare any appropriate entry(ies) for Worcester Construction on December 31, 2026, related to the lease.
4. Prepare all appropriate entries for Waltham LeaseCorp on December 31, 2026, related to the lease.

P15-27 Finance lease; lessee; financial statement effects

 **LO15-2**,  **LO15-8**

[ **15-27**  **P15-28** and  **15-29**, and are three variations of the same basic situation.]

Werner Chemical, Inc., leased a protein analyzer on September 30, 2024. The five-year lease agreement calls for Werner to make quarterly lease payments of \$391,548, payable each September 30, December 31, March 31, and June 30, with the first payment on September 30, 2024. Werner's incremental borrowing rate is 12%. Amortization is recorded on a straight-line basis at the end of each fiscal year. The useful life of the equipment is five years.

Required:

1. Determine the present value of the lease payments on September 30, 2024 (to the nearest \$000).
2. What pretax amounts related to the lease would Werner report in its balance sheet on December 31, 2024?
3. What pretax amounts related to the lease would Werner report in its income statement for the year ended December 31, 2024?
4. What pretax amounts related to the lease would Werner report in its statement of cash flows for the year ended December 31, 2024?

P15-28 Sales-type lease; lessor; financial statement effects

 **LO15-2**,  **LO15-8**

Abbott Equipment leased a protein analyzer to Werner Chemical, Inc., on September 30, 2024.

- Abbott purchased the machine from NutraLabs, Inc., at a cost of \$6 million.
- The five-year lease agreement calls for Werner to make quarterly lease payments of \$391,548, payable each September 30, December 31, March 31, and June 30, with the first payment on September 30, 2024.
- Abbott's implicit interest rate is 12%. The useful life of the equipment is five years.

Required:

1. What pretax amounts related to the lease would Abbott report in its balance sheet on December 31, 2024?
2. What pretax amounts related to the lease would Abbott report in its income statement for the year ended December 31, 2024?
3. What pretax amounts related to the lease would Abbott report in its statement of cash flows for the year ended December 31, 2024?

P15–29 Sales-type lease; lessor; financial statement effects

 **LO15–3**,  **LO15–8**

NutraLabs, Inc., leased a protein analyzer to Werner Chemical, Inc., on September 30, 2024.

- NutraLabs manufactured the machine at a cost of \$5 million.
- The five-year lease agreement calls for Werner to make quarterly lease payments of \$391,548, payable each September 30, December 31, March 31, and June 30, with the first payment on September 30, 2024.
- NutraLabs' implicit interest rate is 12%.
- The useful life of the equipment is five years.

Required:

1. Determine the price at which NutraLabs is “selling” the equipment (present value of the lease payments) on September 30, 2024 (to the nearest \$000).
2. What pretax amounts related to the lease would NutraLabs report in its balance sheet on December 31, 2024?

3. What pretax amounts related to the lease would NutraLabs report in its income statement for the year ended December 31, 2024?
4. What pretax amounts related to the lease would NutraLabs report in its statement of cash flows for the year ended December 31, 2024?

P15–30 Sale-leaseback **Appendix 15**

To raise operating funds, North American Courier Corporation sold its building on January 1, 2024, to an insurance company for \$500,000 and immediately leased the building back.

- The lease is for a 10-year period ending December 31, 2033, at which time ownership of the building will revert to North American Courier.
- The building has a carrying amount of \$400,000 (original cost \$1,000,000).
- The lease requires North American to make payments of \$88,492 to the insurance company each December 31.
- The building had a total original useful life of 30 years with no residual value and is being depreciated on a straight-line basis.
- The lease has an implicit rate of 12%.

Required:

1. Prepare the appropriate entries for North American (a) on January 1, 2024, to record the transaction and (b) on December 31, 2024, to record necessary adjustments.
2. Show how North American's December 31, 2024, balance sheet and income statement would reflect the sale-leaseback.

Decision Makers' Perspective

Ed Telling/Getty Images

Apply your critical-thinking ability to the knowledge you've gained. These cases will provide you an opportunity to develop your research, analysis, judgment, and communication skills. You also will work with other students, integrate what you've learned, apply it in real world situations, and consider its global and ethical ramifications. This practice will broaden your knowledge and further develop your decision-making abilities.

Research Case 15–1 FASB codification; locate and extract relevant information and authoritative support for a financial reporting issue; finance lease; sublease of a leased asset

 **LO15–2**,  **LO15–8**

“I don’t see that in my intermediate accounting text I saved from college,” you grumble to a colleague in the accounting division of Dowell Chemical Corporation. “This will take some research.” Your comments pertain to the appropriate accounting treatment of a proposed sublease of warehouses Dowell has used for product storage.

Dowell leased the warehouses one year ago on December 31, 2024. The five-year lease agreement called for Dowell to make quarterly lease payments of \$2,398,303, payable each December 31, March 31, June 30, and September 30, with the first payment at the lease’s beginning. As a finance lease, Dowell had recorded the right-of-use asset and liability at \$40 million, the present value of the lease payments at 8%. Dowell records amortization on a straight-line basis at the end of each fiscal year.

Today, Dowell's controller, explained a proposal to sublease the underused warehouses to American Tankers, Inc., for the remaining four years of the lease term. American Tankers would be substituted as lessee under the original lease agreement. As the new lessee, it would become the primary obligor under the agreement, and Dowell would not be secondarily liable for fulfilling the obligations under the lease agreement. "Check on how we would need to account for this and get back to me," the controller had said.

Required:

1. After the first full year under the warehouse lease, what is the balance in Dowell's lease liability? An amortization schedule will be helpful in determining this amount but is not required.
2. After the first full year under the warehouse lease, what is the carrying amount of Dowell's leased warehouses?
3. Obtain the relevant authoritative literature on accounting for derecognition of finance leases by lessees using the FASB's Codification Research System. You might gain access from the FASB website ( www.fasb.org), from your school library, or some other source. To determine the appropriate accounting treatment for the proposed sublease, what is the specific seven-digit Codification citation (XXX-XX-XX) that Dowell would rely on to determine:
 - a. If the proposal will qualify as a termination of a finance lease?
 - b. The appropriate accounting treatment for the sublease?
4. What, if any, journal entry would Dowell record in connection with the sublease?

Analysis Case 15-2 Classification issues; lessee accounting
 LO15-1,  LO15-2,  LO15-3,  LO15-6,  LO15-7

Interstate Automobiles Corporation leased 40 vans to VIP Transport under a four-year noncancelable lease on January 1, 2024. Information concerning the lease and the vans follows:

- a. Equal annual lease payments of \$300,000 are due on January 1, 2024, and thereafter on December 31 each year. The first payment was made January 1, 2024. Interstate's implicit interest rate is 10% and known by VIP.
- b. VIP has the option to purchase all of the vans at the end of the lease for a total of \$290,000. The vans' estimated residual value is \$50,000 at the end of 7 years, the

estimated life of each van.

- c. VIP estimates the fair value of the vans to be \$1,260,000. Interstate's cost was \$1,050,000.
- d. VIP's incremental borrowing rate is 9%.
- e. VIP will pay the maintenance fees not included in the annual lease payments of \$1,000 per year. The amortization method is straight-line.

Required:

1. If the vans' estimated residual value is \$300,000 at the end of the lease term, how should the lease be classified by VIP? by Interstate?
2. If the vans' estimated residual value is \$400,000 at the end of the lease term, how should the lease be classified by VIP? by Interstate?
3. Regardless of your response to previous requirements, suppose VIP recorded the lease on January 1, 2024, as a finance lease in the amount of \$1,100,000 and that a bargain purchase option exists. What would be the appropriate journal entries related to the finance lease for the second lease payment on December 31, 2024?

IFRS Case 15–3 Lease classification; U.S. GAAP  **LO15–1**,
 **LO15–2**,  **LO15–4**,  **LO15–9**

IFRS

Security Devices Inc. (SDI) needs additional office space to accommodate expansion. SDI wants to avoid income statement effects that would disrupt its attempts to “smooth” income over time.

Required:

1. Which lease classification would management prefer?
2. Would meeting its reporting objective be more difficult or less difficult under IFRS?

Real World Case 15–4 Lease concepts; financial statement effects; Walmart  **LO15–1** through  **LO15–4**

Real World Financials

Walmart Inc. is the world's largest retailer. A large portion of the premises that the company occupies are leased. Its financial statements revealed the following information:

| <i>(Amounts in millions)</i> | July 31, 2020 | July 31, 2019 |
|---|------------------|------------------|
| Assets | | |
| Operating lease right-of-use assets, net | \$16,869 | \$17,239 |
| Finance lease right-of-use assets, net | 4,843 | 3,949 |
| Liabilities | | |
| Current liabilities: | | |
| Operating lease obligations due within one year | 1,734 | 1,795 |
| Finance lease obligations due within one year | 549 | 439 |
| Long-term debt: | | |
| Long-term operating lease obligations | 15,669 | 16,079 |
| Long-term finance lease obligations | 4,673 | 3,915 |

Required:

1. The net asset "Finance lease right-of-use assets, net" has a July 31, 2020 balance of \$4,843 million. Liabilities for these leases total \$5,222 (\$549 + \$4,673). Why do the asset and liability amounts differ?
2. Prepare a journal entry that summarizes Walmart's finance lease payments for the twelve months ended July 31, 2020. Walmart's income statement reports finance lease interest of \$331 million.

Real World Case 15–5 Lease Disclosures; Microsoft  **LO15–2**,  **LO15–4**,  **LO15–8**

"You know, we heard in our accounting class today that a few years ago, there were advantages to structuring lease arrangements as operating leases," your study partner said unexpectedly. "Now I'm wondering if that's changing things for companies that lease assets." Not happy with having to suddenly change your train of thought, but now curious, you open

a new tab on your laptop and locate the following disclosure note in **Microsoft's** 2020 financial statements.

We have operating and finance leases for datacenters, corporate offices, reasearch and development facilities, retail stores, and certain equipment. Our leases have remaining lease terms of 1 year to 20 years, some of which include options to extend the leases for up to 5 years, and some of which include options to terminate the leases within 1 year. The components of lease expense were as follows:

| \$ (in millions) | 2020 | 2019 | 2018 |
|-------------------------------------|----------------|----------------|----------------|
| Year Ended June 30, | | | |
| Operating lease cost | <u>\$2,043</u> | <u>\$1,707</u> | <u>\$1,585</u> |
| Finance lease cost: | | | |
| Amortization of right-of-use assets | \$ 611 | \$ 370 | \$ 243 |
| Interest on lease liabilities | 336 | <u>247</u> | <u>175</u> |
| Total finance lease cost | <u>\$ 947</u> | <u>\$ 617</u> | <u>\$ 418</u> |

Supplemental cash flow information related to leases was as follows:

| \$ (in millions) | 2020 | 2019 | 2018 |
|--|---------|---------|---------|
| Cash paid for amounts included in the measurements of lease liabilities: | | | |
| Operating cash flows from operating leases | \$1,829 | \$1,670 | \$1,522 |
| Operating cash flows from finance leases | 336 | 247 | 175 |
| Financing cash flows from finance leases | 409 | 221 | 144 |

Maturities of lease liabilities were as follows:

| \$ (in millions) | Operating Leases | Finance Leases |
|---------------------|------------------|----------------|
| Year Ended June 30, | | |
| 2021 | \$ 1,807 | \$880 |
| 2022 | 1,652 | 894 |

| | | |
|-----------------------|-----------------|-----------------|
| 2023 | 1,474 | 903 |
| 2024 | 1,262 | 916 |
| 2025 | 1,000 | 1,236 |
| Thereafter | 3,122 | 7,194 |
| Total leases payments | 10,317 | 12,023 |
| Less imputed interest | (1,030) | (2,527) |
| Total | <u>\$ 9,287</u> | <u>\$ 9,496</u> |

Required:

1. What do you notice about the trends in operating versus finance leases for Microsoft?
2. Prepare a journal entry that summarizes the lease payments for Microsoft's finance leases during 2020.
3. Prepare a journal entry that summarizes the amortization of the right-of-use assets for Microsoft's finance leases during 2020.

Analysis Case 15–6 Modification of a Lease; COVID-19

 **LO15–2**,  **LO15–3**,  **LO15–6**

COVID-19

Anthony's Ristorante has served award-winning, traditional Italian dishes, including pasta, steak, veal, ossobuco, saltimbocca, and seafood, using recipes that were handed down by Anthony's grandmother and that are still prepared the way they were nearly 50 years ago. On January 1, 2004, Anthony decided to open a second location and leased restaurant space from Fauci Properties under a 20-year lease agreement. The lease agreement specified annual payments of \$50,000 beginning January 1, 2004, the beginning of the lease, and on each December 31 thereafter through 2022. The leased property had been acquired by Fauci at a cost of \$625,000 (its fair value) and when it was expected to have a remaining useful life of 30 years. Fauci calculated the lease payments to provide an 8% return on its investment. By this arrangement, the lease was deemed to be an operating lease.

On December 31, 2020, Anthony's was barely able to make its 2020 lease payment (for 2021) as a result of the impact of COVID-19 on Anthony's operations. Anthony's asked for, and received, a deferral of the next two years lease payments (2021 and 2022) until

December 31, 2023, with the addition of three years to the lease term. The new payment schedule is:

| December 31: | 2021 | 2022 | 2023 | 2024 | 2025 |
|--------------|------|------|-----------|----------|----------|
| | \$0 | \$0 | \$150,000 | \$50,000 | \$50,000 |

The market rate of interest at the time was 6%. The present value of the new payments was \$202,911 on December 31, 2020, at which time the fair value of the restaurant space was \$210,000.

Required:

Assuming that both companies choose the option under the CARES Act to not reclassify the lease from an operating lease:

1. Prepare the appropriate entries for Anthony's Ristorante on December 31, 2020, to adjust its lease liability for the lease modification.
2. Prepare all appropriate entries for Fauci Properties on December 31, 2020, to record the lease modification.
3. Prepare all appropriate entries for Anthony's Ristorante on December 31, 2021, related to the lease.
4. Prepare all appropriate entries for Fauci Properties on December 31, 2021, related to the lease.

Real World Case 15–7 Reporting leases in a statement of cash flows; disclosure note; FedEx  **LO15-8**

Real World Financials

“Why does **FedEx** show operating cash flows for both types of leases, but only financing cash flows for finance leases,” your colleague wonders aloud. “We need to draft our lease disclosure by tomorrow morning.” Tossing a sheet of paper in front of you, he moans, “I found this disclosure note to FedEx’s financial statements that promises ‘supplemental cash flow information related to leases,’ but it’s not helping. The department’s draft of our cash flow statement, and the income statement for that matter, don’t specifically break out any lease payments. This being our first time to follow the new lease standard, we need to get it right. And while we’re at it, why do you think they list new leases in connection with cash

flows? Did they pay all this cash in addition to incurring lease liabilities for the right-of-use assets?”

Knowing your colleague is a new hire, you want to diplomatically point him in the right direction. So, you pick up the disclosure note:

| Note 7 — LEASES (in part) | |
|---|---|
| Supplemental cash flow information related to leases is as follows: | |
| (In millions) | Fiscal Year Ended May 31, 2020 |
| <i>Cash paid for amounts included in the measurement of lease liabilities:</i> | |
| Operating cash flows paid for operating leases | \$2,608 |
| Operating cash flows paid for finance leases | 14 |
| Financing cash flows paid for finance leases | 84 |
| Right-of-use assets obtained in exchange for new operating leases | 1,915 |
| Right-of-use assets obtained in exchange for new finance leases | 484 |

Required:

1. Why does FedEx show operating cash flows for both types of leases, but only financing cash flows for finance leases?
2. To aid in your explanation, prepare a journal entry that summarizes the cash payments for operating leases during the year.
3. To aid in your explanation, prepare a journal entry that summarizes the cash payments for finance leases during the year.
4. Did FedEx pay the amounts indicated in addition to incurring lease liabilities for the right-of-use assets for new leases? Why or why not?
5. To aid in your explanation, prepare a journal entry that summarizes the acquisition of assets by operating leases during the year.

General Tools is seeking ways to maintain and improve cash balances. As company controller, you have proposed the sale and leaseback of much of the company's equipment. As seller-lessee, General Tools would retain the right to essentially all of the remaining use of the equipment. The term of the lease would be six years.

You previously convinced your CFO of the cash flow benefits of the arrangement, but now he doesn't understand the way you will account for the transaction. "I really had counted on that gain on the sale portion of the transaction to bolster this period's earnings. What gives?" he wondered. "Put it in a memo, will you? I'm having trouble following what you're saying to me."

Required:

Write a memo to your CFO. Include discussion of each of these points:

1. How the transaction should be accounted for.
2. Why General Tools will not get the gain the CFO had counted on.

Ethics Case 15–9 Leasehold improvements  **LO15–3**

American Movieplex, a large movie theater chain, leases most of its theater facilities. In conjunction with recent operating leases, the company spent \$28 million for seats and carpeting. The question being discussed over breakfast on Wednesday morning was the length of the depreciation period for these leasehold improvements. The company controller, Sarah Keene, was surprised by the suggestion of Larry Person, her new assistant.

Keene: Why 25 years? We've never depreciated leasehold improvements for such a long period.

Person: I noticed that in my review of back records. But during our expansion to the Midwest, we don't need expenses to be any higher than necessary.

Keene: But isn't that a pretty rosy estimate of these assets' actual life? Trade publications show an average depreciation period of 12 years.

Required:

1. How would increasing the depreciation period affect American Movieplex's earnings?
2. Does revising the estimate pose an ethical dilemma?
3. Who would be affected if Person's suggestion is followed?

Data Analytics & Excel

Visit Connect to find a variety of Data Analytics activities that help build Excel, Tableau, and data visualization skills. Assignable materials include [Integrated Excel](#), [Data Visualizations](#), [Tableau Dashboard Activities](#), and [Applying Tableau Cases](#).

Continuing Cases

Target Case LO15–2, LO15–4

Real World Financials

Target Corporation prepares its financial statements according to U.S. GAAP. Target's financial statements and disclosure notes for the year ended February 1, 2020, are available in Connect. This material is also available under the Investor Relations link at the company's website ( www.target.com).

1. Note 17 indicates that Target's finance lease liability at February 1, 2020 is \$1,370 (= \$67 current + \$1,303 noncurrent) while its finance lease assets are \$1,180. Why do the asset and liability amounts differ?
2. Target's finance lease assets are listed on February 1, 2020, at \$1,180 million. What was the original amount recorded for these specific right-of-use assets when the leases commenced?
3. Refer to Target's Statement of Cash Flows. Prepare a journal entry that summarizes Target's acquisition of assets by operating lease for the twelve months ended February 1, 2020.

Air France–KLM Case LO15–9

Real World Financials

IFRS

Air France–KLM (AF), a Franco-Dutch company, prepares its financial statements according to International Financial Reporting Standards. AF's financial statements and disclosure notes for the year ended December 31, 2019, are available in Connect. This material is also available under the Finance link at the company's website ( www.airfranceklm.com).

Required:

1. In Note 4.15: Lease contracts, AF states that “leases recorded in the balance sheet and lead to the recognition of:

- an asset representing a right of use of the asset leased during the lease term of the contract and
- a liability related to the payment obligation.”

Is this policy generally consistent with U.S. GAAP?

2. From your reading of Note 4.15: Lease contracts, what would you say is the primary difference between IFRS 16 and U.S. GAAP in the way lessees account for leases?

CHAPTER 16

Accounting for Income Taxes

OVERVIEW

In this chapter we explore financial accounting and reporting for the effects of income taxes. The discussion defines and illustrates temporary differences, which are the basis for recognizing deferred tax assets and deferred tax liabilities, as well as permanent differences, which have no deferred tax consequences. You will learn how to adjust deferred tax assets and deferred tax liabilities when tax laws or rates change. We also discuss accounting for the tax effects of net operating losses and uncertain tax positions, as well as intraperiod tax allocation. Finally, we discuss how to account for the various tax effects associated with the Coronavirus Aid, Relief, and Economic Security (CARES) Act.

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

-  **LO16-1** Explain the conceptual underpinnings of accounting for temporary differences and the four-step method used to calculate income tax expense. (p. 905)
-  **LO16-2** Describe the types of temporary differences that cause deferred tax liabilities and determine the amounts needed to record periodic income taxes. (p. 908)
-  **LO16-3** Describe the types of temporary differences that cause deferred tax assets and determine the amounts needed to record periodic income taxes. (p. 915)
-  **LO16-4** Describe when and how a valuation allowance is recorded for deferred tax assets. (p. 921)

-  **LO16-5** Explain why permanent differences have no deferred tax consequences. (p. 925)
-  **LO16-6** Explain how a change in tax rates affects the measurement of deferred tax amounts. (p. 930)
-  **LO16-7** Describe when and how the tax effects of net operating losses are recognized in the financial statements. (p. 934)
-  **LO16-8** Explain how deferred tax assets and deferred tax liabilities are reported in a classified balance sheet and describe related disclosures. (p. 939)
-  **LO16-9** Demonstrate how to account for uncertainty in income tax decisions. (p. 941)
-  **LO16-10** Explain intraperiod tax allocation. (p. 944)
-  **LO16-11** Discuss the primary differences between U.S. GAAP and IFRS with respect to accounting for income taxes. (pp. 923 and 928)

FINANCIAL REPORTING CASE

stockfour/Shutterstock

What's the Difference?

Laura Drake, the new CEO of Times-Lehrer Industries, has asked you, a senior member of the company's audit staff, to help her prepare for an upcoming board meeting. A brilliant

engineer and operations specialist, Laura has limited knowledge of accounting and has been pouring over the past several years of the company's financial statements.

“Why isn't the amount we report as tax expense equal to the amount we pay in taxes?”

Laura asked. “And I see we are blaming reduced profitability that we had back in 2017 on our net deferred tax assets and the fact that Congress passed rules reducing future tax rates. I thought assets and lower taxes were good things—why did they combine to hurt our earnings? And I also see we have something called a net operating loss carryforward—what's that?”

QUESTIONS

By the time you finish this chapter, you should be able to respond appropriately to the questions posed in this case. Compare your response to the solution provided at the end of the chapter.

1. Explain to Laura how differences between financial reporting standards and income tax rules might cause the income tax expense and the amount of income tax paid to differ.
2. How might a reduction in future tax rates affect deferred tax assets in a way that reduces current net income?
3. What are net operating loss carryforwards and how can they provide cash savings?

PART A

Temporary Differences

LO16–1 Explain the conceptual underpinnings of accounting for temporary differences and the four-step method used to calculate income tax expense.

Let's say that JCorp's 2024 tax return indicates that the company is obligated to pay \$25 million in income taxes. JCorp's CFO knows that another \$5 million in income taxes is attributable to operations in 2024, but tax rules allow JCorp to delay paying that amount until subsequent tax years. The reason that JCorp is able to defer paying these taxes is that tax rules allow some revenues and expenses to be reported in its tax return in years other than when those amounts are reported in its income statement. These differences cause JCorp's pretax income in its tax return to differ from pretax income in its income statement.

Here are the financial reporting questions to consider:

1. What *tax liability* should JCorp report in its 2024 balance sheet? Tax rules obligate the company to pay \$25 million now for the current tax year, but the company will eventually pay the remaining \$5 million that was deferred to subsequent tax years.
2. What *tax expense* should JCorp report in its 2024 income statement? The company eventually will pay taxes of \$30 million attributable to operations in 2024, but taxes to be paid for the current tax year are only \$25 million.

For perspective on these questions, let's first consider the circumstances that give rise to deferred taxes and then think about how we should account for them.

Conceptual Underpinnings

In general, the revenues and expenses (and gains and losses) included in a company's tax return for a given year are the same as those reported in the company's income statement for the same year. However, in some

The objectives of financial accounting and tax accounting are not the same.

instances, tax laws and financial accounting standards differ because the fundamental objectives of financial reporting and those of taxing authorities are not the same. Financial accounting standards are established to provide useful information to investors and creditors. Congress, on the other hand, establishes tax regulations to allow it to raise funds in a socially acceptable manner, as well as to influence the behavior of taxpayers. Congress uses tax laws to encourage activities it deems desirable, such as investment in productive assets, and to discourage activities it deems undesirable, such as violations of law.

An income statement and a tax return both include revenues and expenses, but differences between financial accounting standards and tax rules create a **temporary difference** between pretax accounting income and taxable income. For temporary differences, the issue is not *whether* an amount is taxable or deductible, but *when*.

Temporary differences arise when tax rules and accounting rules recognize income in different periods.

For example, assume that Watson Associates purchases \$60 thousand of computer equipment in January of 2024. Watson estimates that the computer equipment will have an estimated useful life of three years. For financial reporting purposes, Watson records straight-line depreciation each year of \$20 thousand.

| | 2024 | 2025 | 2026 | Total |
|---|--------------|--------------|--------------|--------------|
| Income before tax and depreciation | \$120 | \$120 | \$120 | \$360 |
| Depreciation in the income statement | (20) | (20) | (20) | (60) |
| Pretax accounting income | <u>\$100</u> | <u>\$100</u> | <u>\$100</u> | <u>\$300</u> |

| | 2024 | 2025 | 2026 | Total |
|--|------|------|------|-------|
|--|------|------|------|-------|

However, tax rules allow Watson to deduct the entire \$60 thousand cost of the equipment in 2024, essentially taking 100% of the depreciation for tax purposes in the year the asset is purchased. Assuming that Watson has a tax rate of 25%, deducting the entire depreciation in 2024 reduces taxable income that year by \$60 thousand but leaves none of the depreciation to reduce taxable income in 2025 and 2026:

| | 2024 | 2025 | 2026 | Total |
|---|---------------------|---------------------|---------------------|---------------------|
| Income before tax and depreciation | \$120 | \$120 | \$120 | \$360 |
| Depreciation on the tax return | <u>(60)</u> | <u>(0)</u> | <u>(0)</u> | (60) |
| Taxable income (tax return) | \$ 60 | \$120 | \$120 | <u><u>\$300</u></u> |
| Tax rate | × 25% | × 25% | × 25% | |
| Tax payable | <u><u>\$ 15</u></u> | <u><u>\$ 30</u></u> | <u><u>\$ 30</u></u> | |

Let's first focus on pretax accounting income and taxable income. Notice that pretax accounting income and taxable income both total \$300 thousand over the three-year depreciation period. But these two amounts differ from each other in each of the three years. In 2024, tax depreciation (\$60 thousand) is greater than accounting depreciation (\$20 thousand), causing taxable income to be less than pretax accounting income by \$40 thousand. This difference is temporary and reverses in 2025 and 2026 when Watson recognizes depreciation expense in the income statement (\$20 thousand in 2025 and \$20 thousand in 2026) but can't deduct any more depreciation in the tax return.

Now let's consider tax expense and tax payable. We can see that Watson has *tax payable* of \$15 thousand in 2024 but \$30 thousand in 2025 and 2026. But what about *tax expense*? One simple approach would be to make tax expense in the income statement each period equal to whatever tax is payable in that period and ignore any future implications of the timing difference. However, that approach would not communicate to investors that Watson's

current activities have resulted in future tax consequences. Investors might incorrectly think that Watson's low tax expense in 2024 and resulting high net income will persist in the future. Likewise, investors might not realize that Watson anticipates higher tax payable in the future (\$30 thousand in 2025 and 2026 rather than only \$15 thousand in 2024).

Instead, Watson should recognize income tax expense based on the "accrual concept," just like other

expenses. That is, income tax expense reported each period should be the amount caused by that period's events and activities, regardless of the period in which

the tax laws indicate a tax obligation exists. If tax laws allow a company to postpone paying taxes on activities reported in the current period's income statement, the company must report a deferred tax liability because the company anticipates those activities will lead to **future taxable amounts**. On the other hand, if tax laws require the company to pay more tax than is indicated by the activities reported in the current period's income statement, the company reports a **deferred tax asset** reflecting the benefit of **future deductible amounts**. Each year's tax expense reported in the income statement includes not only a current portion related to tax payable in the current year but also a deferred portion that includes any changes in deferred tax assets and liabilities.

Accounting for income taxes is consistent with the accrual concept of accounting.

The 4-Step Process

The discussion of differences between accounting income and taxable income leads us to the real key to understanding accounting for income taxes. Tax expense is not calculated directly but rather is the

result of the combination of income tax payable and

any changes in deferred tax assets and liabilities. We'll use the following color-coded 4-step process to maintain that perspective throughout the chapter.

Tax expense is a "plug" determined by changes in the tax payable, deferred tax assets, and deferred tax liability accounts.

1. **Calculate tax payable:** This is the amount of tax currently payable based on the current year's tax return.
2. **Calculate ending DTAs and DTLs:** In this step, we calculate the appropriate ending balances of the deferred tax assets (DTAs) and deferred tax liabilities (DTLs).
3. **Calculate change in DTAs and DTLs:** In this step, we determine the change (debit or credit) in each of the deferred tax assets and liabilities needed to move from their

previous balances to the ending balances calculated in step 2.

4. **Plug tax expense:** In this final step, we combine the tax payable (step 1) and any changes in the deferred tax accounts (step 3) to determine income tax expense.

Types of Temporary Differences

You will see that we apply this 4-step process to four basic types of temporary differences.

As shown in [Illustration 16-1](#), temporary differences can be categorized by whether they are associated with a revenue (gain) or expense (loss), and whether that revenue or expense is recognized in the income statement before or after it is reported in the tax return.

Illustration 16-1 Types of Temporary Differences

| | Revenues (or gains) | Expenses (or losses) |
|---|---|--|
| Reported in the income statement now, but on the tax return later | <ul style="list-style-type: none"> • Installment sales of property (installment method for taxes) • Unrealized gain from recording investments at fair value (taxable when asset is sold) | <ul style="list-style-type: none"> • Estimated expenses and losses (tax deductible when paid) • Unrealized loss from recording investments at fair value or inventory at LCM (tax-deductible when asset is sold) |
| Reported on the tax return now, but in the income statement later | <ul style="list-style-type: none"> • Rent collected in advance • Subscriptions collected in advance • Other revenue collected in advance | <ul style="list-style-type: none"> • Accelerated depreciation on the tax return in excess of straight-line depreciation in the income statement • Prepaid expenses (tax deductible when paid) |

Note that:

- The temporary differences shown in the diagonal purple areas create *deferred tax liabilities* because they result in *taxable* amounts in some future year(s).
- The temporary differences in the opposite diagonal blue areas create *deferred tax assets* because they result in *deductible* amounts in some future year(s).

Next, we'll walk through examples applying the 4-step process to each of these four types of temporary differences, starting with the Watson depreciation example we already began. You can refer back to this table throughout our discussion.

Additional Consideration

As shown in  **Illustration 16–1**, temporary differences are primarily caused by revenues, expenses, gains, and losses being included in taxable income in a year other than the year in which they are recognized for financial reporting purposes. Other events that are beyond the scope of this textbook also can cause temporary differences and are briefly described in FASB ASC 740–10–25: Income Taxes–Overall–Recognition. Our discussions in this chapter focus on temporary differences caused by the timing of revenue and expense recognition, but it's important to realize that the concept of temporary differences embraces all differences that will result in taxable or deductible amounts in future years.

Deferred Tax Liabilities

Expense-Related Deferred Tax Liabilities

LO16-2 Describe the types of temporary differences that cause deferred tax liabilities and determine the amounts needed to record periodic income taxes.

The lower right corner of  **Illustration 16-1** lists some common expense-related deferred tax liabilities. Perhaps the most common relates to depreciation. Tax laws typically permit the cost of a depreciable asset to be deducted in the tax return sooner than it is reported as depreciation expense in the income statement.¹ The

difference in tax laws creates a temporary difference in taxable income and pretax accounting income. Taxable income will be lower in the initial years when the tax depreciation deduction is higher, but the situation reverses in later years when the pretax accounting income will be lower. Let's return to our Watson example to see how this works.

 **Illustration 16-2** summarizes the relevant information by reconciling pretax accounting income and taxable income. In each year, it adds back the depreciation expense that was shown on the income statement, and then subtracts the depreciation deduction that was taken on the tax return.

To determine taxable income, we add back to pretax accounting income any depreciation expense in the income statement and then subtract any tax deduction allowed on the tax return.

Illustration 16-2 Expense Reported on the Tax Return *before* the Income Statement

Watson Associates purchased \$60 thousand of equipment in early January of 2024. Watson estimates the equipment has a useful life of three years, so it depreciates the equipment straight line, with \$20 thousand of depreciation expense 2024–2026. However, tax rules allow Watson to take the entire \$60 thousand deduction for the cost of the equipment on its 2024 tax return. Watson has a 25% tax rate and pretax accounting income of \$100 thousand in each of those years.

| (\$ in thousands) | 2024 | 2025 | 2026 | Total |
|---|---------------------|---------------------|---------------------|---------------------|
| Pretax accounting income (income statement) | \$100 | \$100 | \$100 | \$300 |
| Depreciation expense in the income statement | \$20 | \$20 | \$20 | 60 |
| Depreciation deduction on the tax return | <u>(60)</u> | <u>(0)</u> | <u>(0)</u> | (60) |
| Temporary difference | (40) | 20 | 20 | 0 |
| Taxable income (tax return) | <u><u>\$ 60</u></u> | <u><u>\$120</u></u> | <u><u>\$120</u></u> | <u><u>\$300</u></u> |

Now let's apply the 4-step process to account for the temporary difference related to depreciation expense that is shown in [Illustration 16-2](#). The journal entry to record 2024 income taxes is shown in [Illustration 16-2A](#).

In 2024, taxable income is less than accounting income because depreciation deductions on the tax return are greater than tax expense on the income statement.

Illustration 16-2A Expense-Related Deferred Tax Liability—2024

| (\$ in thousands) | Current Year 2024 | Future Taxable Amounts | | Total |
|------------------------------------|----------------------|------------------------|------|--------------------|
| | | 2025 | 2026 | |
| Pretax accounting income | \$100 | | | |
| Temporary difference: | | | | |
| Depreciation | (40) | \$20 | \$20 | \$40 |
| Taxable income (tax return) | <u>\$ 60</u> | | | |
| Enacted tax rate | 25% | | | 25% |
| Tax payable | <u><u>\$ 15</u></u> | | | <u><u>\$10</u></u> |

| Deferred Tax Liability | |
|------------------------|-----------|
| | 0 |
| | <u>10</u> |
| | 10 |

Journal Entry at the End of 2024

| | | |
|---|----|----|
| Income tax expense (to balance) | 25 | |
| Income tax payable (determined above) | | 15 |
| Deferred tax liability (determined above) | | 10 |

Step 1: Tax payable: \$15
Step 2: DTL end bal: \$10
Step 3: DTL change: \$10
Step 4: Tax exp plug: \$25

Let's walk through the 4-step process (\$ in thousands).

- Step 1:** Pretax accounting income for 2024 is \$100, but taxable income is only \$60 because of a \$40 higher depreciation deduction for tax purposes. Tax payable for 2024 is recorded for \$15 (= \$60 taxable income × 25% tax rate).
- Step 2:** Watson needs to recognize a deferred tax liability of \$10 (= \$40 temporary difference × 25% tax rate) for the tax the company is allowed to defer to future years as a result of being able to depreciate the asset's entire cost the first period. We say that the temporary difference *originated* in 2024, because that is the year in which it gave rise to the deferred tax liability.
- Step 3:** The balance of the deferred tax liability account needs to be adjusted from its current balance (which is \$0 in the origination year) to the amount that needs to be reported (the ending balance of \$10 from step 2). In this case, that adjustment is \$10.
- Step 4:** Total tax expense equals \$25. This amount includes a current portion that's payable now (\$15 from step 1) plus the deferred portion that's represented by the increase in the deferred tax liability (\$10 from step 3).

Now, let's follow the determination of income taxes for this illustration all the way through the complete reversal of the temporary difference. Remember, we're assuming the pretax accounting income is \$100 thousand each year and the only difference between that amount and taxable income is the difference in depreciation. We determine income tax expense for 2025 in [Illustration 16-2B](#).

Illustration 16-2B Expense-Related Deferred Tax Liability—2025

| (\$ in thousands) | Current Year | Future Taxable Amounts | |
|------------------------------------|--------------|------------------------|-------------|
| | 2025 | 2026 | Total |
| Pretax accounting income | \$100 | | |
| Temporary difference: | | | |
| Depreciation | 20 | \$20 | \$20 |
| Taxable income (tax return) | \$120 | | |
| Enacted tax rate | 25% | | 25% |
| Tax payable | \$ 30 | | \$ 5 |

| Deferred Tax Liability | |
|------------------------|----|
| 5 | 10 |
| 5 | 5 |

Journal Entry at the End of 2025

| | | |
|---|----|----|
| Income tax expense (to balance) | 25 | |
| Deferred tax liability (determined above) | 5 | |
| Income tax payable (determined above) | | 30 |

- Step 1: Tax payable: \$30
 Step 2: DTL end bal: \$5
 Step 3: DTL change: \$(5)
 Step 4: Tax exp plug: \$25

Let's look closer at [Illustration 16-2B](#) (\$ in thousands). In 2025, Watson's tax payable is **\$30** (= \$120 taxable income × 25% tax rate). There's no tax deduction for depreciation in 2025 because the tax rules enabled Watson to depreciate the asset's entire cost in 2024. The income statement, though, reports a straight-line depreciation expense of \$20, giving us a \$20 difference between pretax income in the income statement and taxable income in the tax return. This difference reverses half of the \$40 temporary difference that originated in 2024. So, at this point, the tax to be deferred to future periods is **\$5**, and we need to reduce the balance of the deferred tax liability by **\$5** (from **\$10** in 2024 to **\$5** in 2025). As a consequence, total tax expense is **\$25**, equal to its current portion (**\$30** from step 1) combined with the *decrease* in the deferred tax liability (**\$(5)** from step 3).

As you can see from [Illustration 16-2C](#), Watson's accounting in 2026 is very similar to its accounting in 2025. Watson's 2026 tax payable again is **\$30**, and again there's no tax deduction even though the income statement reports a straight-line depreciation expense of \$20. This difference reverses the remaining \$20 of the \$40 temporary difference that originated in 2024. So, at this point, the tax to be deferred to future periods is **\$0**, and we need to reduce the balance of the deferred tax liability by **\$5** (from **\$5** in 2025 to **\$0** in 2026). As a consequence, total tax expense is **\$25**, equal to its current portion (**\$30** from step 1) combined with the *decrease* in the deferred tax liability [**\$(5)** from step 3].

Illustration 16-2C Expense-Related Deferred Tax Liability—2026

Step 1: Tax payable: \$30

Step 2: DTL end bal: \$0

Step 3: DTL change: \$(5)

| 2026 ($\$20 \times 25\%$) | 5 |
| | 0 Balance after 3 years |

Balance Sheet and Income Statement Perspectives

Our perspective in this example so far has focused on the *income statement* effects of the depreciation.

Another perspective starts with the *balance sheet*. An assumption underlying a balance sheet is that assets will be recovered (used or sold to produce cash), and liabilities will be settled (paid with cash). Those assets and liabilities typically create taxable or deductible amounts in the future when they are recovered or settled. Before that occurs, there is a temporary

difference between the *book value* of assets and liabilities in the balance sheet and their equivalent **tax basis** (which is an asset or liability's original value for tax purposes reduced by any amounts included to date on tax returns). A difference between book value and tax basis, commonly called a *book-tax difference*, implies a future taxable or deductible amount, so we can use book-tax differences to calculate deferred tax assets and liabilities.

To see how this works, let's look back at our depreciation example for Watson. At the end of 2024, the asset's book value is reported as \$40 in the balance sheet, equal to the asset's original cost of \$60 minus depreciation of \$20 in 2024. However, for tax purposes, the asset was fully depreciated in 2024, so its tax basis at the end of 2024 was \$0. This creates a book-tax difference of \$40. That book-tax difference implies that, in the future, Watson will have \$40 less tax deduction for depreciation, so Watson's *future taxable* income will be higher by \$40. Therefore, Watson should recognize a deferred tax liability of $\$40 \times 25\% = \10 .²

Deferred tax assets and liabilities can be computed from temporary book-tax differences.

The *tax basis* of an asset or liability is its original value for tax purposes reduced by any amounts included to date on tax returns.

Illustration 16-2D Calculating Expense-Related Deferred Tax Liability from Book-Tax Differences

| | Initial Year | | | | |
|-------------------------------------|--------------------|--------|--------------------|--------|--------------------|
| | 2024 | 2025 | | 2026 | |
| | 12/31 Balance | Depr | 12/31 Balance | Depr | 12/31 Balance |

| Tax rate | 25% | | 25% | | 25% |
| Deferred tax liability (DTL) | <u>\$10</u> | → | <u>\$ 5</u> | → | <u>\$ 0</u> |
| DTL change needed | \$10 | | \$ (5) | | \$(5) |

* \$60 (initial cost) – \$20 (depreciation for 2024) = \$40

As shown in [Illustration 16-2D](#), Watson can use the asset's book-tax difference each year to calculate the related deferred tax liability balance. That's just another way to accomplish **step 2** of our 4-step process. Notice that the deferred tax liability balances (**step 2**) and changes in those balances (**step 3**) shown in this table are the same as those shown in [Illustration 16-2A](#), [16-2B](#), and [16-2C](#). The income statement and balance sheet perspectives are two complementary ways to accomplish the same objectives.

Revenue-Related Deferred Tax Liabilities

Deferred tax liabilities also can be driven by temporary differences related to revenue recognition. The upper left corner of [Illustration 16-1](#) lists some common revenue-related deferred tax liabilities. One example relates to installment sales. Income from selling properties on an installment basis is reported for financial reporting purposes in the year of the sale. But tax laws permit installment income to be reported in the tax return later, as cash is received. As a consequence, a temporary difference occurs because taxable income is less than accounting income in the year of an installment sale but higher than accounting

income in later years when the installment receivable is collected. A numerical example is provided in **Illustration 16-3**.

Illustration 16-3 Revenue Reported on the Tax Return *after* the Income Statement

Kent Land Management reported pretax accounting income in 2024, 2025, and 2026 of \$180 million, \$100 million, and \$100 million, respectively, which includes 2024 income of \$80 million from installment sales of property. However, the installment sales are reported on the tax return when collected in 2025 (\$20 million) and 2026 (\$60 million). The enacted tax rate is 25% each year.

| (\$ in millions) | 2024 | 2025 | 2026 | Total |
|---|--------------|--------------|--------------|--------------|
| Pretax accounting income (income statement) | \$180 | \$100 | \$100 | \$380 |
| Installment sale income in the income statement | \$(80) | \$ 0 | \$ 0 | (80) |
| Installment sale income on the tax return | <u>0</u> | <u>20</u> | <u>60</u> | 80 |
| Temporary difference | (80) | 20 | 60 | 0 |
| Taxable income (tax return) | <u>\$100</u> | <u>\$120</u> | <u>\$160</u> | <u>\$380</u> |

Notice that pretax accounting income and taxable income total the same amount (\$380) over the three-year period but are different in each individual year. In 2024, taxable income is \$80 million *less* than accounting income because it does not include income from installment sales. That temporary difference reverses over the next two years. In 2025 and 2026, taxable income is *more* than accounting income because income from the installment sales, reported in the income statement in 2024, becomes taxable during the next two years as installments are collected. Because tax

In 2024, taxable income is less than accounting income because income from installment sales is not reported on the tax return until 2025–2026.

laws permit the company to delay reporting this income as part of taxable income, the company is able to defer paying tax on that income. As shown in [Illustration 16-3A](#), that tax is not avoided, just deferred.

Illustration 16-3A Revenue-Related Deferred Tax Liability—2024

| (\$ in millions) | Current | Future | | |
|------------------------------------|--------------|-----------------|------|-------------|
| | Year | Taxable Amounts | | Total |
| | 2024 | 2025 | 2026 | |
| Pretax accounting income | \$180 | | | |
| Temporary difference: | | | | |
| Installment income | (80) | \$20 | \$60 | \$80 |
| Taxable income (tax return) | \$100 | | | |
| Enacted tax rate | 25% | | | 25% |
| Tax payable | \$ 25 | | | \$20 |

| Deferred Tax Liability | |
|------------------------|----|
| | 0 |
| | 20 |
| | 20 |

Journal Entry at the End of 2024

| | | |
|---|----|----|
| Income tax expense (to balance) | 45 | |
| Income tax payable (determined above) | | 25 |
| Deferred tax liability (determined above) | | 20 |

Step 1: Tax payable: \$25
 Step 2: DTL end bal: \$20
 Step 3: DTL change: \$20
 Step 4: Tax exp plug: \$45

We calculate income tax expense by following the four steps (\$ in millions). Kent’s 2024 tax payable is \$25. With future taxable amounts of \$80, taxable at 25%, a \$20 deferred tax liability should be recognized as of the end of 2024. Because no previous balance exists, we credit deferred tax liability for the entire \$20 change in the account. That amount combines with tax payable of \$25 to give us income tax expense of \$45.

In [Illustration 16-3B](#), we see that some of the initial \$80 temporary difference reverses in 2025 as the company collects some of the installment receivable (\$20) and includes that amount in 2025 taxable income.

Illustration 16-3B Revenue-Related Deferred Tax Liability—2025

| (\$ in millions) | Current Year 2025 | Future Taxable Amounts | |
|------------------------------------|----------------------|------------------------|-------------|
| | | 2026 | Total |
| Pretax accounting income | \$100 | | |
| Temporary difference: | | | |
| Installment income | 20 | \$60 | \$60 |
| Taxable income (tax return) | \$120 | | |
| Enacted tax rate | 25% | | 25% |
| Tax payable | \$ 30 | | \$15 |

| Deferred Tax Liability | |
|------------------------|----|
| | 20 |
| (5) | 15 |

Journal Entry at the End of 2025

| | | |
|---|----|----|
| Income tax expense (to balance) | 25 | |
| Deferred tax liability (determined above) | 5 | |
| Income tax payable (determined above) | | 30 |

Step 1: Tax payable: \$30
Step 2: DTL end bal: \$15
Step 3: DTL change: \$(5)
Step 4: Tax exp plug: \$25

Kent's 2025 tax payable is \$30. Now that \$20 of the installment income is taxed in 2025, the remaining \$60 of the temporary difference will be taxed later, so future taxable amounts as of the end of 2025 are \$60. This means that a deferred tax liability of \$15 should be shown in the balance sheet. Reducing the deferred tax liability from \$20 in 2024 to \$15 now requires us to debit the deferred tax liability for \$5. As a consequence, total tax expense is \$25 in 2025, equal to its current portion (\$30 from step 1) combined with the decrease in the deferred tax liability [(5) from step 3].

 **Illustration 16-3C** shows us that Kent's 2026 tax payable is \$40. Now that the remaining \$60 of the installment income is taxed in 2026, none of the temporary difference remains to be taxed later, so future taxable amounts as of the end of 2026 are \$0. With no future taxable amounts remaining, the deferred tax liability should be reported as \$0 as of the end of 2026, requiring us to debit the deferred tax liability for \$15. As a consequence, total tax expense is \$25 in 2026, equal to its current portion (\$40 from step 1) combined with the decrease in the deferred tax liability [(15) from step 3].

Illustration 16-3C Revenue-Related Deferred Tax Liability—2026

Step 1: Tax payable: \$40
 Step 2: DTL end bal: \$0
 Step 3: DTL change: \$(15)
 Step 4: Tax exp plug: \$25

| (\$ in millions) | Current Year 2026 | Future Taxable Amounts |
|------------------------------------|-------------------|------------------------|
| Pretax accounting income | \$100 | |
| Temporary difference: | | |
| Installment income | 60 | \$ 0 |
| Taxable income (tax return) | \$160 | |
| Enacted tax rate | 25% | 25% |
| Tax payable | \$ 40 | \$ 0 |

| Deferred Tax Liability | |
|------------------------|----|
| 15 | 15 |
| 0 | 0 |

Journal Entry at the End of 2026

| | |
|---|----|
| Income tax expense (to balance) | 25 |
| Deferred tax liability (determined above) | 15 |
| Income tax payable (determined above) | 40 |

Now look at what happened to the deferred tax liability account over the life of the installment receivable. Do you see how the \$80 temporary difference originates in 2024 and reverses in 2025 and 2026 as that \$80 is taxed?

| Deferred Tax Liability | | |
|------------------------|----|-----------------------|
| (\$ in millions) | | |
| | 20 | 2024 (\$80 × 25%) |
| 2025 (\$20 × 25%) | 5 | |
| 2026 (\$60 × 25%) | 15 | |
| | 0 | Balance after 3 years |

Taking a balance sheet perspective, we can calculate the deferred tax liability each year by looking at the book-tax difference that exists for the installment receivable. The book value of the receivable starts in 2024 at \$80, drops to \$60 in 2025, and then drops to \$0 in 2026 as cash is collected. There is no receivable from a tax perspective because taxable income is only recognized as cash is collected, so the tax basis of the receivable is \$0 each year. The book-tax difference in the receivable in a given year represents additional taxable income that Kent will pay tax on in the future. The balance of the deferred tax liability each year is calculated as the book-tax difference times the applicable tax rate. To make sure you understand this point, refer back to [Illustration 16-3A](#), [16-3B](#), and [16-3C](#) and compare the deferred tax liability balances (**step 2**) and changes in those balances (**step 3**) in those illustrations with those shown in [Illustration 16-3D](#).

Illustration 16-3D Calculating Revenue-Related Deferred Tax Liability from Book-Tax Differences

| | Initial Year | | | | |
|-------------------------------------|--------------------|------------------|--------------------|------------------|--------------------|
| | 2024 | 2025 | | 2026 | |
| | 12/31 Balance | Cash Received | 12/31 Balance | Cash Received | 12/31 Balance |

| Accounting book value | \$80 | \$(20) | \$60 | \$(60) | \$ 0 |
| Tax basis | <u>0</u> | | <u>0</u> | | <u>0</u> |
| Temporary difference | \$80 | | \$60 | | \$ 0 |
| Tax rate | 25% | | 25% | | 25% |
| Deferred tax liability (DTL) | <u>\$20</u> | → | <u>\$15</u> | → | <u>\$ 0</u> |
| DTL change needed | \$20 | | \$ (5) | | \$(15) |

Deferred Tax Assets

LO16–3 Describe the types of temporary differences that cause deferred tax assets and determine the amounts needed to record periodic income taxes.

The temporary differences illustrated to this point produce future *taxable* amounts when the temporary differences reverse. Sometimes, though, the future tax consequence of a temporary difference will be to *decrease* taxable income relative to accounting income.

We report deferred tax assets for the future tax benefits of temporary differences that create future deductible amounts.

Such situations produce what's referred to as **future deductible amounts**. These have favorable future tax consequences that are recognized as **deferred tax assets**.

Expense-Related Deferred Tax Assets

As noted in the upper right corner of  **Illustration 16-1**, one circumstance that requires recognition of a deferred tax asset is when an estimated expense is reported in the income statement when incurred but deducted on the tax return in later years when the expense is actually paid.  **Illustration 16-4** provides an example: a quality-assurance warranty (discussed extensively in  **Chapter 13**).

Illustration 16-4 Expense Reported on the Tax Return after the Income Statement

RDP Networking reported pretax accounting income in 2024, 2025, and 2026 of \$120 million, \$100 million, and \$100 million, respectively. The 2024 income statement includes an \$80 million warranty expense that is deducted for tax purposes when paid in 2025 (\$36 million) and 2026 (\$44 million). The income tax rate is 25% each year.

| (\$ in millions) | 2024 | 2025 | 2026 | Total |
|--|-------|-------|-------|-------|
| Pretax accounting income (income statement) | \$120 | \$100 | \$100 | \$320 |

| | | | | |
|--|---------------------|---------------------|---------------------|---------------------|
| Warranty expense in the income statement | \$80 | \$ 0 | \$ 0 | (80) |
| Warranty expense on the tax return | <u>0</u> | <u>(36)</u> | <u>(44)</u> | 80 |
| Temporary difference | 80 | (36) | (44) | 0 |
| Taxable income (tax return) | <u><u>\$200</u></u> | <u><u>\$ 64</u></u> | <u><u>\$ 56</u></u> | <u><u>\$320</u></u> |

At the end of 2024, the amounts needed to record income tax for 2024 would be determined as shown in [Illustration 16-4A](#).

In 2024, taxable income is greater than accounting income because warranty expense is not reported on the tax return until 2025–2026.

Illustration 16-4A Expense-Related Deferred Tax Asset—2024

| (\$ in millions) | Current Year 2024 | Future Deductible Amounts | | |
|------------------------------------|-------------------|---------------------------|--------|---------------|
| | | 2025 | 2026 | Total |
| Pretax accounting income | \$120 | | | |
| Temporary difference: | | | | |
| Warranty expense | <u>80</u> | \$(36) | \$(44) | \$(80) |
| Taxable income (tax return) | <u>\$200</u> | | | |
| Enacted tax rate | 25% | | | 25% |
| Tax payable | <u>\$ 50</u> | | | <u>\$(20)</u> |

Deferred Tax Asset

| | |
|----|----|
| 0 | 20 |
| 20 | 20 |

Journal Entry at the End of 2024

| | | |
|---------------------------------------|----|----|
| Income tax expense (to balance) | 30 | |
| Deferred tax asset (determined above) | 20 | |
| Income tax payable (determined above) | | 50 |

- Step 1: Tax payable: \$50
- Step 2: DTA end bal: \$20
- Step 3: DTA change: \$20
- Step 4: Tax exp plug: \$30

Let's review what happened (\$ in millions). In 2024, RDP's tax payable is \$50 (= \$200 taxable income × 25% tax rate). The reason taxable income is \$80 higher than pretax accounting income is that, while GAAP requires the \$80 warranty expense to be subtracted

from accounting income in 2024, the tax rules don't permit RDP to deduct the expense on the tax return until the cost of satisfying the warranty actually is paid, which in this case will occur over the next two years. So, when those warranty payments are deducted in the future, taxable income will be reduced by that amount, saving a total of \$20 at a 25% tax rate. To represent that future tax savings, RDP reports a **\$20** deferred tax asset at the end of 2024. Because no previous balance exists, we debit the deferred tax asset for the entire **\$20**. That amount combined with the tax payable credit of **\$50** gives us income tax expense of **\$30**. RDP must pay **\$50** tax now, but as a result of something that happens in 2024 (selling goods under warranty), it will save \$20 in future taxes, so the 2024 tax expense is actually only **\$30**.

We follow the situation to 2025 in [Illustration 16-4B](#).

Illustration 16-4B Expense-Related Deferred Tax Asset—2025

| (\$ in millions) | Current Year | Future Deductible Amounts | |
|------------------------------------|--------------|---------------------------|---------------|
| | 2025 | 2026 | Total |
| Pretax accounting income | \$100 | | |
| Temporary difference: | | | |
| Warranty expense | (36) | \$(44) | \$(44) |
| Taxable income (tax return) | \$ 64 | | |
| Enacted tax rate | 25% | | 25% |
| Tax payable | \$ 16 | | \$(11) |

| Deferred Tax Asset | |
|--------------------|---|
| 20 | 9 |
| 11 | |

Journal Entry at the End of 2025

| | |
|---|----|
| Income tax expense (to balance) | 25 |
| Deferred tax asset (determined above) | 9 |
| Income tax payable (determined above) | 16 |

Step 1: Tax payable: \$16
Step 2: DTA end bal: \$11
Step 3: DTA change: \$(9)
Step 4: Tax exp plug: \$25

Again, income tax expense is a combination of the tax payable now and the change in deferred tax (\$ in millions). RDP's 2025 tax payable is **\$16**. One reason it's not more is that taxable income is reduced by deducting \$36 of last year's warranty expense. Because \$36 of the original \$80 temporary difference has reversed, only \$44 remains to be deducted in the future. So, RDP should report a deferred tax asset of **\$11** ($= \$44 \times 25\%$) as of the end of 2025. So, RDP must credit the deferred tax asset for **\$9** to reduce the \$20 existing balance to that amount. This combines with the tax payable currently of **\$16** to give us income tax expense of **\$25**.

We follow the example through the last year in [Illustration 16-4C](#).

Illustration 16-4C Expense-Related Deferred Tax Asset—2026

| (\$ in millions) | Current Year 2026 | Future Deductible Amounts |
|------------------------------------|-------------------|---------------------------|
| Pretax accounting income | \$100 | |
| Temporary difference: | | |
| Warranty expense | (44) | \$ 0 |
| Taxable income (tax return) | \$ 56 | |
| Enacted tax rate | 25% | 25% |
| Tax payable | \$ 14 | \$ 0 |

| Deferred Tax Asset | |
|--------------------|------|
| 11 | (11) |
| 0 | |

Journal Entry at the End of 2026

| | | |
|---|----|----|
| Income tax expense (to balance) | 25 | |
| Deferred tax asset (determined above) | | 11 |
| Income tax payable (determined above) | | 14 |

- Step 1: Tax payable: \$14
- Step 2: DTA end bal: \$0
- Step 3: DTA change: \$(11)
- Step 4: Tax exp plug: \$25

RDP’s accounting in 2026 is very similar to its accounting in 2025. Tax payable is **\$14**. As of the end of 2026, no future deductible amounts remain, so the balance in RDP’s deferred tax asset should be **\$0**. That requires RDP to credit the deferred tax asset for **\$11**, which combines with the tax payable of **\$14** to give us income tax expense of **\$25**.

At the end of 2024 and 2025, the company reports a deferred tax asset representing future income tax benefits. That deferred tax asset is reduced to zero by the end of 2026, after the tax savings the asset represented have been realized.

| Deferred Tax Asset | | |
|-----------------------|----|-------------------|
| (\$ in millions) | | |
| 2024 (\$80 × 25%) | 20 | |
| | | 9 |
| | | 2025 (\$36 × 25%) |
| | | 11 |
| | | 2026 (\$44 × 25%) |
| Balance after 3 years | 0 | |

We also can calculate this deferred tax asset each year using the book-tax difference that exists for the warranty liability in the balance sheet. As shown in **Illustration 16-4D**, the warranty liability starts in

Income taxes payable in 2025 and 2026 are less because of the taxes prepaid in 2024.

2024 with a book value of \$80, falls to \$44 in 2025, and then to \$0 in 2026 as the warranty liability is settled. The tax basis stays at \$0 each year because tax deductions are allowed

only as cash is used to settle warranty claims, so there is no liability from a tax perspective. The book-tax difference in the warranty liability in a given year represents additional tax deductions RDP will receive in the future. This creates a deferred tax asset. The balance of the deferred tax asset each year is calculated as the book-tax difference times the applicable tax rate. You can verify that these deferred tax asset balances (**step 2**) and changes in those balances (**step 3**) are the same as those shown in [Illustrations 16-4A](#), [16-4B](#), and [16-4C](#).

Illustration 16-4D Calculating Expense-Related Deferred Tax Asset from Book-Tax Differences

| | Initial year | | | | |
|---------------------------------|--------------------|----------|--------------------|----------|--------------------|
| | 2024 | 2025 | 2026 | | |
| | 12/31 | Warranty | 12/31 | Warranty | 12/31 |
| | balance | work | balance | work | balance |
| Warranty liability: | | | | | |
| Accounting book value | \$80 | \$(36) | \$44 | \$(44) | \$ 0 |
| Tax basis | <u>0</u> | | <u>0</u> | | <u>0</u> |
| Temporary difference | \$80 | | \$44 | | \$ 0 |
| Tax rate | 25% | | 25% | | 25% |
| Deferred tax asset (DTA) | <u><u>\$20</u></u> | → | <u><u>\$11</u></u> | → | <u><u>\$ 0</u></u> |
| DTA change needed | \$20 | | \$ (9) | | \$(11) |

Additional Consideration

Unlike most assets, management views deferred tax assets to be *less* desirable than deferred tax liabilities because deferred tax assets result from taxable income (and tax) being higher now than later. It's more desirable to delay paying taxes as long as possible. Therefore, all else equal, managers

would prefer to recognize deferred tax liabilities, which result from having lower taxable income (and thus lower tax) now.

Revenue-Related Deferred Tax Assets

As shown in the lower left corner of [Illustration 16-1](#), another type of temporary difference that gives rise to a deferred tax asset is a *revenue* that is taxed when collected but recognized in the income statement in later years when performance obligations are satisfied. [Illustration 16-5](#) demonstrates this second type with a common example: deferred revenue.

Illustration 16-5 Revenue Reported on the Tax Return before the Income Statement

Tomorrow Publications reported pretax accounting income of \$100 thousand in 2024, 2025 and 2026. The 2024 income statement does not include \$80 thousand of magazine subscriptions received that year for one- and two-year subscriptions. Instead, that revenue will be recognized for financial reporting purposes in 2025 (\$60 thousand) and 2026 (\$20 thousand). The entire \$80 thousand is included in taxable income in 2024. The income tax rate is 25% each year.

| (\$ in thousands) | 2024 | 2025 | 2026 | Total |
|---|--------------|--------------|--------------|--------------|
| Pretax accounting income (income statement) | \$100 | \$100 | \$100 | \$300 |
| Subscription revenue in the income statement | \$ 0 | \$(60) | \$(20) | (80) |
| Subscription revenue on the tax return | <u>80</u> | <u>0</u> | <u>0</u> | 80 |
| Temporary difference | 80 | (60) | (20) | 0 |
| Taxable income (tax return) | <u>\$180</u> | <u>\$ 40</u> | <u>\$ 80</u> | <u>\$300</u> |

Notice that this temporary difference produces *future deductible* amounts—amounts that are deducted from pretax accounting income to arrive at taxable income in future years. In 2024, taxable income is \$80 thousand *more* than pretax accounting income because it includes the deferred subscription revenue not yet reported in the income statement. However, in 2025 and 2026 taxable income is *less* than accounting income because the subscription revenue is recognized and reported in the income statements but not on the tax returns of those two years.

In 2024, taxable income is greater than accounting income because subscription revenue is not reported in the income statement until 2025–2026.

In effect, tax laws require the company to prepay the income tax on this revenue, which is a sacrifice now but will benefit the company later when the revenue is recognized in the financial statements but not taxed. In the meantime, the company has an asset representing this future income tax benefit.

At the end of 2024, the amounts needed to record 2024 income tax expense would be determined as shown in  **Illustration 16-5A** (\$ in thousands). Tomorrow's 2024 tax payable is **\$45**. Taxable income is greater than pretax accounting income in 2024, but the opposite will be true in 2025 and 2026 when the \$60 and \$20 of deferred revenue are included in the income statement but not taxable on the tax return. With future deductible amounts related to deferred revenue of \$80, taxable at 25%, Tomorrow needs a **\$20** deferred tax asset as of the end of 2024. Because no previous balance exists, Tomorrow debits the deferred tax asset for the entire **\$20**. That amount reduces tax payable of **\$45** to give us income tax expense of **\$25**.

Illustration 16-5A Revenue-Related Deferred Tax Asset—2024

| (\$ in thousands) | Current Year | Future Deductible Amounts | | Total |
|------------------------------------|--------------|---------------------------|--------|---------------|
| | 2024 | 2025 | 2026 | |
| Pretax accounting income | \$100 | | | |
| Temporary difference: | | | | |
| Deferred revenue | 80 | \$(60) | \$(20) | \$(80) |
| Taxable income (tax return) | \$180 | | | |
| Enacted tax rate | 25% | | | 25% |
| Tax payable | \$ 45 | | | \$(20) |

| Deferred Tax Asset | |
|--------------------|--|
| 0 | |
| 20 | |
| 20 | |

Journal Entry at the End of 2024

| | | |
|---|----|----|
| Income tax expense (to balance) | 25 | |
| Deferred tax asset (determined above) | 20 | |
| Income tax payable (determined above) | | 45 |

Step 1: Tax payable: \$45
Step 2: DTA end bal: \$20
Step 3: DTA change: \$20
Step 4: Tax exp plug: \$25

Let's look at [Illustration 16-5B](#) to continue the example for 2025. Tomorrow's 2025 tax payable is **\$10**. Because \$60 of the original \$80 temporary difference has reversed, only \$20 remains. So, Tomorrow should report a deferred tax asset of **\$5** ($= \$20 \times 25\%$) as of the end of 2025, requiring that Tomorrow credit the deferred tax asset for **\$15** to reduce the \$20 existing balance to that amount. This combines with the tax payable of **\$10** to give us income tax expense of **\$25**.

Illustration 16-5B Revenue-Related Deferred Tax Asset—2025

| (\$ in thousands) | Current Year | Future Deductible Amounts | | Total |
|------------------------------------|--------------|---------------------------|--|---------------|
| | 2025 | 2026 | | |
| Pretax accounting income | \$100 | | | |
| Temporary difference: | | | | |
| Deferred revenue | (60) | \$(20) | | \$(80) |
| Taxable income (tax return) | \$ 40 | | | |
| Enacted tax rate | 25% | | | 25% |
| Tax payable | \$ 10 | | | \$(5) |

| Deferred Tax Asset | |
|--------------------|--|
| 20 | |
| 15 | |
| 5 | |

Journal Entry at the End of 2025

| | | |
|---|----|----|
| Income tax expense (to balance) | 25 | |
| Deferred tax asset (determined above) | 15 | |
| Income tax payable (determined above) | | 10 |

Step 1: Tax payable: \$10
Step 2: DTA end bal: \$5
Step 3: DTA change: \$(15)
Step 4: Tax exp plug: \$25

Here's another way to look at it. One reason taxable income is not a higher number in 2025 is that \$60 of subscription revenue reported in the 2025 *income statement* was reported on the 2024 *tax return*, so the tax on that amount, \$15 ($= \$60 \times 25\%$) already has been paid.

This \$15 tax benefit in 2025 that was represented as part of the \$20 deferred tax asset now has been realized, so \$5 of the asset remains.

In [Illustration 16-5C](#), we see what happens in the last year of our example.

Illustration 16-5C Revenue-Related Deferred Tax Asset—2026

| (\$ in thousands) | Current Year 2026 | Future Deductible Amounts |
|------------------------------------|-------------------|---------------------------|
| Pretax accounting income | \$100 | |
| Temporary difference: | | |
| Deferred revenue | 20 | \$ 0 |
| Taxable income (tax return) | \$ 80 | |
| Enacted tax rate | 25% | 25% |
| Tax payable | \$ 20 | \$ 0 |

Deferred Tax Asset

| | |
|---|---|
| 5 | 5 |
| 0 | 0 |

Journal Entry at the End of 2026

| | |
|---|----|
| Income tax expense (to balance) | 25 |
| Deferred tax asset (determined above) | 5 |
| Income tax payable (determined above) | 20 |

Step 1: Tax payable: \$20
 Step 2: DTA end bal: \$0
 Step 3: DTA change: \$(5)
 Step 4: Tax exp plug: \$25

In 2026, the remaining deferred tax benefit is realized. Tomorrow's tax payable is \$20. As of the end of 2026, no future deductible amount remains, so the balance in Tomorrow's deferred tax asset should be \$0. So, Tomorrow should credit the deferred tax asset for \$5, which combines with the tax payable of \$20 to give us income tax expense of \$25.

At the end of 2024 and 2025, the company reports a deferred tax asset for future income tax benefits. That deferred tax asset is reduced to zero by the end of 2026.

| Deferred Tax Asset | | |
|-----------------------------|----|-----------------------------|
| (\$ in thousands) | | |
| 2024 ($\$80 \times 25\%$) | 20 | |
| | 15 | 2025 ($\$60 \times 25\%$) |
| | 5 | 2026 ($\$20 \times 25\%$) |
| Balance after 3 years | 0 | |

Of course, we instead could view this from a balance sheet perspective and calculate the deferred tax asset based on book-tax differences. As shown in [Illustration 16-5D](#), the deferred revenue liability has a book value of \$80 in 2024, and that liability reduces to \$20

in 2025 and to \$0 in 2026 when it is settled by providing the promised magazines. The tax basis of that liability remains at \$0 because subscription receipts are included in taxable income in 2024, and no additional liability exists. The book-tax difference in deferred revenue represents less taxable income that the company will recognize in the future. This creates a deferred tax asset. The balance of the deferred tax asset each year is calculated as the book-tax difference times the applicable tax rate. Compare those balances (**step 2**) and changes in those balances (**step 3**) in the table below with those shown in [Illustrations 16-5A](#), [16-5B](#), and [16-5C](#) to see that the balance sheet approach accomplishes the same steps in our 4-step process for calculating tax expense.

Illustration 16-5D Calculating Revenue-Related Deferred Tax Asset from Book-Tax Differences

| | Initial Year | | | | |
|---------------------------------|--------------------|-------------------|--------------------|-------------------|--------------------|
| | 2024 | 2025 | | 2026 | |
| | 12/31 Balance | Goods Provided | 12/31 Balance | Goods Provided | 12/31 Balance |
| Deferred revenue: | | | | | |
| Accounting book value | \$80 | \$(60) | \$ 20 | \$(20) | \$ 0 |
| Tax basis | <u>0</u> | | <u>0</u> | | <u>0</u> |
| Temporary difference | \$80 | | \$ 20 | | \$ 0 |
| Tax rate | 25% | | 25% | | 25% |
| Deferred tax asset (DTA) | <u>\$20</u> | → | <u>\$ 5</u> | → | <u>\$ 0</u> |
| DTA change needed | \$20 | | \$(15) | | \$(5) |

Valuation Allowance

LO16–4 Describe when and how a valuation allowance is recorded for deferred tax assets.

We recognize deferred tax assets for all temporary differences giving rise to future deductible amounts.³ However, we then reduce a deferred tax asset by a valuation allowance if it is “more likely than not” that some portion or all of the deferred tax asset will not be realized.⁴ Remember, a future deductible amount reduces taxable income in the future and saves taxes only if there is taxable income to be reduced when that deduction is available. So, a **valuation allowance** is needed if taxable income is anticipated to be insufficient to realize the tax benefit.

For example, let’s say management has previously recorded a deferred tax asset of \$8 million. However, due to declining income in some tax districts, management determines in 2024 that it’s more likely than not that \$3 million of the deferred tax asset ultimately will not be realized in future years. The net deferred tax asset would be reduced by the creation of a valuation allowance as follows:

A valuation allowance is needed if it is more likely than not that some portion or all of a deferred tax asset will not be realized.

Page 922

| | (\$ in millions) |
|---------------------------------|------------------|
| Income tax expense (to balance) | 3.0 |
| Valuation allowance | 3.0 |

The effect is to increase income tax expense in the year the valuation allowance is established as a result of reduced expectations of future tax savings. In the 2024 balance sheet, the deferred tax asset would be reported at the net amount expected to reduce taxes in the future:

| | |
|---------------------------|------------|
| Deferred tax asset | \$8 |
| Less: Valuation allowance | <u>(3)</u> |
| | \$5 |

This is not a new concept for you. You've reduced assets before using an allowance account. Suppose, for example, that you have accounts receivable of \$8 million but expect that \$3 million of that amount will not ultimately be collected from your customers. You would reduce the asset indirectly using an allowance:

| | |
|--|------------|
| Accounts receivable | \$8 |
| Less: Allowance for uncollectible accounts | <u>(3)</u> |
| | \$5 |

Additional Consideration

The decision as to whether a valuation allowance is needed should be based on the weight of all available evidence. The real question is whether or not there will be sufficient taxable income in future years for the anticipated tax benefit to be realized. After all, a deduction reduces taxes only if it reduces taxable income.

All evidence—both positive and negative—should be considered, and much managerial judgment is required. For instance, operating losses in recent years or anticipated circumstances that would adversely affect future operations would constitute negative evidence. On the other hand, a strong history of profitable operations or sizable, existing contracts would constitute positive evidence of sufficient taxable income to be able to realize the deferred tax asset.

We also must take into account any managerial actions that could be taken to recognize taxable income and thereby reduce or eliminate a valuation allowance. These tax-planning strategies include any prudent and feasible actions management might take to realize a tax benefit while it is available.

At the end of each reporting period, the valuation allowance is reevaluated. The appropriate balance is determined and the valuation allowance is adjusted—up or down—to create that balance. For instance, let's say that at the end of the following year, 2025, available evidence now indicates that only **\$500,000** of the deferred tax asset ultimately will not be realized. We would adjust the valuation allowance to reflect the indicated amount:

| Valuation Allowance | |
|---------------------|-----------|
| 1/1/2025 | 3,000,000 |
| | 2,500,000 |
| 12/31/2025 | 500,000 |

In the journal entry that adjusts the valuation allowance, income tax expense is the final plug. In this case, because the valuation allowance is reduced with a debit, income tax expense is reduced with a credit.

| | (\$ in millions) |
|-----------------------------------|------------------|
| Valuation allowance (\$3 - \$0.5) | 2.5 |
| Income tax expense | 2.5 |

If a company's financial condition deteriorates, it may need to increase its valuation allowance because it may now believe it is more likely than not that it will not generate enough future income to realize its deferred tax assets. For example, home furnishings retailer **Pier 1 Imports, Inc.**, increased its valuation allowance from \$1.3 million to \$46.5 million during fiscal 2019. Why this big increase? [Illustration 16-6](#) provides Pier 1's depressing explanation.

Illustration 16-6 Explanation for Valuation Allowance—Pier 1 Imports, Inc.

Real World Financials

Note 7—Income Taxes (in part)

A valuation allowance is recorded to reduce the carrying amounts of deferred tax assets unless it is more likely than not that such assets will be realized. . . . Recent cumulative losses were determined to be significant negative evidence that management considered in determining it was not more likely than not that certain of its deferred tax assets would be realized, resulting in an increase to the Company's valuation allowance.

Source: Pier 1 Imports, Inc.

Pier 1's pessimism was well founded. It filed for bankruptcy on February 17, 2020, ensuring that future income would not be available to utilize its deferred tax assets.

International Financial Reporting Standards LO16–11

Valuation Allowances. Under U.S. GAAP, companies recognize deferred tax assets and then reduce those assets with an offsetting valuation allowance if it is “more likely than not” that the asset will not be realized. In contrast, under IFRS, deferred tax assets only are recognized to begin with if it is probable (defined as “more likely than not”) that they will be realized. That means that we could see more deferred tax assets and offsetting valuation allowances under U.S. GAAP than how the same company would appear under IFRS.

Disclosures Linking Tax Expense with Changes in Deferred Tax Assets and Liabilities

We've now looked at four examples that illustrate revenue-related and expense-related deferred tax assets and deferred tax liabilities. In each example, the journal entry to recognize income tax expense included three items: income tax payable, the change in the deferred tax asset or liability, and (to balance) the income tax expense. We've also seen that changes in the valuation allowance sometimes needed to adjust deferred tax assets also can affect the tax expense. Companies provide disclosure in the notes that help investors see these relationships. As an example, let's look at the tax note that appeared in the February 1, 2020, annual report of **Citi Trends, Inc.**, a discount retailer of fashion apparel, accessories and home goods.

Illustration 16–7A Disclosure of Tax Expense—Citi Trends, Inc.

Real World Financials

Note 6—Income Taxes (in part)

Income tax expense for fiscal 2019, 2018, and 2017 consists of the following (in thousands):

| | 2019 | 2018 | 2017 |
|----------------|----------------|----------------|----------------|
| Current: | | | |
| Federal | \$(2,650) | \$(4,326) | \$(5,249) |
| State | <u>(945)</u> | <u>(1,390)</u> | <u>(948)</u> |
| Total current | <u>(3,595)</u> | <u>(5,716)</u> | <u>(6,197)</u> |
| Deferred: | | | |
| Federal | 104 | 619 | (3,078) |
| State | <u>26</u> | <u>143</u> | <u>349</u> |
| Total deferred | <u>130</u> | <u>762</u> | <u>(2,729)</u> |

| | | | |
|--------------------------|--------------------------|--------------------------|--------------------------|
| Total income tax expense | <u>\$ (3,465)</u> | <u>\$ (4,954)</u> | <u>\$ (8,926)</u> |
|--------------------------|--------------------------|--------------------------|--------------------------|

 **Illustration 16-7A** gives us enough information to reproduce a journal entry that summarizes Citi Trends' 2019 tax expense. We just need to understand that "total current" in the note refers to current tax expense, and therefore to tax payable, and "total deferred" refers to the deferred portion of tax expense, which is equal to the net change in deferred tax assets and liabilities. Here's the journal entry (\$ in thousands):

| | | |
|-------------------------------------|--------------|--------------|
| Income tax expense (to balance) | 3,465 | |
| Deferred tax assets and liabilities | 130 | |
| Income tax payable | | 3,595 |

We can see from this journal entry that Citi Trends's operations caused deferred tax assets and liabilities to change by a net debit of **\$130** during 2019. In  **Illustration 16-7B**, we verify that amount by seeing how the balances of Citi Trends's deferred tax assets, valuation allowance and deferred tax liabilities, changed between its 2018 fiscal year (ending February 2, 2019) and its 2019 fiscal year (ending February 1, 2020).

Illustration 16-7B Disclosure of Deferred Tax Assets and Liabilities—Citi Trends, Inc.

Real World Financials

Note 6—Income Taxes (in part)

The components of deferred tax assets and deferred tax liabilities as of February 1, 2020, and February 2, 2019 are as follows (in thousands):

| | February 1, 2020 | February 2, 2019 |
|---------------------------------------|---------------------|---------------------|
| Deferred tax assets: | | |
| Deferred rent amortization | \$ — | \$ 652 |
| Inventory capitalization | 2,176 | 1,953 |
| Book and tax depreciation differences | — | 853 |
| Vacation liability | 705 | 653 |
| Operating lease liabilities | 46,595 | — |

| | | | | |
|---|-----------------|---|-----------------|-------|
| State tax credits | 3,038 | | 2,863 | |
| Stock compensation | 796 | | 843 | |
| Legal expense reserve | 128 | | 178 | |
| Insurance liabilities | 541 | | 319 | |
| Other | <u>659</u> | | <u>412</u> | |
| Subtotal deferred tax assets | 54,638 | | 8,726 | |
| Less: State tax credits valuation allowance - net | <u>(1,714)</u> | | <u>(1,615)</u> | |
| Total deferred tax assets | <u>52,924</u> | | <u>7,111</u> | |
| Deferred tax liabilities: | | | | |
| Right of use asset | (45,095) | | — | |
| Book and tax depreciation differences | (373) | | — | |
| Prepaid expenses | <u>(787)</u> | | <u>(572)</u> | |
| Total deferred tax liabilities | <u>(46,255)</u> | | <u>(572)</u> | |
| Net deferred tax asset | <u>\$ 6,669</u> | - | <u>\$ 6,539</u> | = 130 |

We can see from [Illustration 16-7B](#) that Citi Trends has a net deferred tax asset of **\$6,669** as of February 1, 2020 (the end of its 2019 fiscal year). The net deferred tax asset is calculated as the difference between total deferred tax assets of \$52,924 (which equals the gross deferred tax asset of \$54,638 minus a valuation allowance of \$1,714) and total deferred tax liabilities of \$46,255. Compared to the net deferred tax asset of **\$6,539** as of February 2, 2019, we see that the net deferred tax asset increased by $\$6,669 - \$6,539 = \$130$ during fiscal 2019. Now look back at our journal entry following [Illustration 16-7A](#). Remember, that entry showed a debit to deferred tax assets and liabilities of **\$130**. See how the tax expense journal entry ties to the change in deferred tax assets, liabilities and valuation allowance?

Additional Consideration

The amount of change in deferred taxes reconciles perfectly between the tables shown in [Illustrations 16–7A](#) and [16–7B](#). That often won't be the case in practice because the table shown in [Illustration 16–7A](#) focuses on taxes from *continuing operations*, but the deferred tax assets and liabilities listed in [Illustration 16–7B](#) relate to all aspects of the company. For example, if Citi Trends had deferred taxes associated with discontinued operations or other comprehensive income items, or if it had added deferred tax assets and liabilities from an acquisition during the year, the change in deferred taxes from continuing operations wouldn't capture everything that affected deferred tax assets and liabilities.

Sometimes the plug to tax expense can be a credit rather than a debit, such that a company records a tax *benefit* rather than a tax *expense*. One way that can happen is if there is a large debit to the net deferred asset or liability. As an example, consider the financial statements of **Ark Restaurants Corp.** for the year ended September 28, 2019. Relevant information from Ark's tax disclosure note is shown in [Illustration 16–7C](#) (amounts shown in thousands of dollars).

Illustration 16–7C Disclosure of Deferred Tax Assets and Liabilities—Ark Restaurants Corp.

Real World Financials

| | Year Ended | |
|---------------------------------|------------------------|-----------------------|
| | Sept. 28, 2019 | Sept. 29, 2018 |
| Current provision (benefit) | \$ 527 | \$ 350 |
| Deferred provision (benefit) | <u>(1,118)</u> | <u>(1,497)</u> |
| Income tax expense (benefit) | <u><u>\$ (591)</u></u> | <u><u>(1,147)</u></u> |

| | | | | |
|--|----------------|---|----------------|------------------|
| Deferred tax assets, net of valuation allowance | \$6,349 | | \$5,607 | |
| Deferred tax liabilities | (2,243) | | (2,619) | |
| Net deferred tax assets | <u>\$4,106</u> | – | <u>\$2,988</u> | = \$1,118 |

This information shown in  **Illustration 16-7C** implies the following journal entry:

| | |
|-------------------------------------|--------------|
| Deferred tax assets and liabilities | 1,118 |
| Income tax benefit | 591 |
| Income tax payable | 527 |

See how the large debit to deferred taxes results in a credit plug to tax expense (or, in other words, a tax benefit)?

PART B

Permanent Differences

LO16–5 Explain why permanent differences have no deferred tax consequences.

So far, we've dealt with temporary differences between the reported amount of an asset or liability in the financial statements and its tax basis. However, some differences aren't temporary. Rather, they are caused by transactions and events that under existing tax law will *never* affect taxable income or taxes payable. For example, interest received from investments in governmental bonds issued by state and municipal governments typically is permanently exempt from taxation. Interest revenue of this type is, of course, reported as revenue on the recipient's income statement, but not on its tax return—not now, not later. So, there is a **permanent difference** between pretax accounting income and taxable income. This situation will *not* reverse in a later year—the tax-free income will *never* be reported on the tax return.

 **Illustration 16–8** provides examples of permanent differences that commonly occur in practice.

Page 926

Illustration 16–8 Differences without Deferred Tax Consequences

Provisions of the tax laws, in some instances, dictate that the amount of a revenue that is taxable or expense that is deductible permanently differs from the amount reported in the income statement.

- Interest received from investments in bonds issued by state and municipal governments (generally not taxable).
- Investment expenses incurred to obtain tax-exempt income (not tax deductible).
- Life insurance proceeds on the death of an insured executive (not taxable).

- Premiums paid for life insurance policies when the payer is the beneficiary (not tax deductible).
- Compensation expense pertaining to some employee stock option plans (not tax deductible).
- Fines and penalties due to violations of the law (generally not tax deductible).
- Difference in tax paid on foreign income permanently reinvested in the foreign country and the amount that would have been paid if taxed at U.S. rates.[&]
- Portion of dividends received from U.S. corporations that is not taxable due to the dividends received deduction.*
- Tax deduction for depletion of natural resources (percentage depletion) that is allowed in excess of an already full-depleted asset's cost.[†]

[&]These differences were largely eliminated by tax reform instituted by the U.S. Congress in late 2017.

*When a corporation owns shares of another U.S. corporation, a percentage of the dividends from those shares is exempt from taxation due to the dividends received deduction. The percentage is 50% if the investor owns less than 20% of the investee's shares, 65% for over 20% ownership, and 100% for dividends from members of the same affiliated group.

[†]The cost of natural resources is reported as depletion expense over their extraction period for financial reporting purposes, but tax rules prescribe sometimes different percentages of cost to be deducted for tax purposes. There usually is a difference between the cost depletion and percentage depletion that doesn't eventually reverse.

Accounting for permanent differences is less complex than is accounting for temporary differences. We calculate taxes payable according to the tax law, and, since permanent differences are not temporary, we don't create a deferred tax asset or liability. Therefore, when we "plug" tax expense, tax expense is determined by tax payable. The term *permanent difference* doesn't refer to a difference between tax payable and tax expense—those are the *same* with respect to these. Rather, it refers to a permanent difference between taxable income and pretax accounting income. That's why we adjust pretax accounting income in the illustrations that follow to eliminate permanent differences when calculating tax payable.

To compare temporary and permanent differences, we can modify [Illustration 16-3](#) to include nontaxable income in Kent Land Management's 2024 pretax accounting income. We do this in [Illustration 16-9](#).

Illustration 16-9 Permanent and Temporary Differences

Kent Land Management reported pretax accounting income in 2024 of \$185 million, which included \$80 million from installment sales of property and **\$5 million interest from investments in municipal bonds in 2024**. The installment sales income is reported for tax purposes in 2025 (\$20 million) and 2026 (\$60 million). The enacted tax rate is 25% each year.

| (\$ in millions) | Current Year 2024 | Future Taxable Amounts | | Total |
|------------------------------------|----------------------|------------------------|------|-------------|
| | | 2025 | 2026 | |
| Pretax accounting income | \$185 | | | |
| Permanent difference: | | | | |
| Municipal bond interest | (5) | | | |
| Temporary difference: | | | | |
| Installment income | (80) | \$20 | \$60 | \$80 |
| Taxable income (tax return) | \$100 | | | |
| Enacted tax rate | 25% | | | 25% |
| Tax payable | \$ 25 | | | \$20 |

Step 1: Tax payable: \$25
 Step 2: DTL end bal: \$20
 Step 3: DTL change: \$20
 Step 4: Tax exp plug: \$45

| Deferred Tax Liability | |
|------------------------|----|
| | 0 |
| | 20 |
| | 20 |

Journal Entry at the End of 2024

| | | |
|---|----|----|
| Income tax expense (to balance) | 45 | |
| Income tax payable (determined above) | | 25 |
| Deferred tax liability (determined above) | | 20 |

A company's **effective tax rate** is calculated by dividing the company's tax expense by its pretax accounting income. Permanent differences affect the effective tax rate because they affect pretax accounting income.

The effective tax rate equals tax expense divided by pretax accounting income.

Because pretax accounting income is the denominator in that calculation, a permanent difference that *reduces* pretax accounting income will *increase* the effective tax rate, and a permanent difference that increases pretax accounting income will *reduce* the effective tax rate.

Page 927

As an example, let's look at [Illustration 16-9](#). The effective tax rate is \$45 million ÷ \$185 million, or 24.3%. That's with \$5 million of municipal bond interest included in the \$185 million of pretax accounting income. If, instead, pretax accounting income hadn't included the \$5 million of municipal bond interest, it would have been lower (only \$180 million), so the effective tax rate would have been higher (\$45 million ÷ \$180 million, or 25%).

Companies are required to disclose a reconciliation that reveals the impact of these permanent differences by showing how income tax expense differs from what it would be if the statutory tax rate was applied to pretax accounting income. That lets us see the primary factors that influence the effective tax rate. As an example, see

Permanent differences affect a company's effective tax rate.

| Statutory rate applied to income before income taxes | \$(4,193) | (21.0)% |
| Revaluation of net deferred tax assets due to the Tax Cuts and Jobs Act | — | |
| State income taxes, net of federal benefit | (791) | (4.0) |
| State tax credits | 308 | 1.5 |
| State tax credits-valuation allowance (net of federal benefit) | (99) | (0.5) |
| Tax exempt interest | 34 | 0.2 |
| General business credits | 1,456 | 7.3 |
| (Deficit) Excess tax benefits from stock based compensation | (83) | (0.4) |
| Other | (97) | (0.5) |
| Income tax expense | \$(3,465) | (17.4)% |

The percentages in the column on the right are calculated by dividing each amount by Citi Trends' pretax accounting income of \$19,968. You can see that \$4,193 is the amount of tax expense Citi Trends would have recognized if it only applied the statutory rate of 21% to pretax accounting income. Citi Trends' actual *effective* tax rate of 17.4% is lower than the statutory rate, primarily because of the beneficial effect of various general business tax credits that reduced its tax payable and tax expense without reducing its pretax accounting income.

Additional Consideration

Accounting for Taxes on Unrepatriated Foreign Earnings. Historically, the largest “permanent difference” in many companies’ effective tax rate reconciliation related to taxes on foreign earnings. Companies often seek to minimize their tax bills by arranging their operations, so their income is recognized outside the United States in jurisdictions that have low tax rates. Those lower tax bills are viewed as creating permanent differences so long as the company does not intend to “repatriate” the foreign earnings by transferring those earnings back to the United States. A company still must include the foreign income in pretax accounting income in the income statement, but that income is taxed at the lower foreign rate, so income tax payable is lower, tax expense is lower, and the company’s effective tax rate is lower. As an example, **Goldman Sachs Group, Inc’s** 2019 10-K indicated that the effect of such “Non-U.S. operations” was to cut its effective tax rate by 3.6 percentage points from the federal statutory rate of 21%. The 2017 Tax Cuts and Jobs Act passed by the U.S. Congress increased taxes on such foreign earnings, but some of these permanent differences still are likely to appear in effective tax rate reconciliations.

What if management changes its mind and decides to repatriate foreign earnings? In that case, the company must pay tax at a higher rate. For example, the 2017 tax act imposed a one-time “deemed repatriation tax” on accumulated, untaxed earnings of foreign corporations that was equal to 15.5% on earnings held as “cash and cash equivalents” and 8% on other earnings. These taxes can be significant. For example, **JPMorgan Chase & Co.**, announced on its 2019 10-K that, as a result of the 2017 Act, it will no longer assert that it is indefinitely reinvesting undistributed earnings of its non-U.S. subsidiaries. As a consequence, the Firm owed an additional \$7.8 billion of tax associated with foreign earnings, increasing tax expense by the same amount. Pretax accounting income was unaffected (remember, that income appeared in the income statement in the period in which revenue was recognized), so the higher tax expense resulted in a higher effective tax rate. JP Morgan’s original choice not to repatriate created a “permanent” difference that reduced the effective tax rate, and its later payment of this repatriation tax created an offsetting “permanent” difference in the other direction.

LO16–11 Discuss the primary differences between U.S. GAAP and IFRS with respect to accounting for income taxes.

International Financial Reporting Standards

Non-Tax Differences Affect Taxes. Despite the similar approaches for accounting for taxation under *IAS No. 12*, “Income Tax,” and U.S. GAAP, differences in reported amounts for deferred taxes are among the most frequent between the two reporting approaches.⁵ The reason is that a great many of the nontax differences between IFRS and U.S. GAAP affect deferred taxes as well.

For example, we noted in  **Chapter 13** that we accrue a loss contingency under U.S. GAAP if it’s both probable and can be reasonably estimated and that IFRS guidelines are similar, but the threshold is “more likely than not.” This is a lower threshold than “probable.” In this chapter, we noted that accruing a loss contingency (like warranty expense) in the income statement leads to a deferred tax asset if it can’t be deducted on the tax return until a later period. As a result, under the lower threshold of IFRS, we might record a loss contingency and thus a deferred tax asset, but under U.S. GAAP we might record neither. So, even though accounting for deferred taxes is the same, accounting for loss contingencies is different, causing a difference in the reported amounts of deferred taxes under IFRS and U.S. GAAP.

Concept Review Exercise

TEMPORARY AND PERMANENT DIFFERENCES

Mid-South Cellular Systems began operations in 2024. That year the company reported pretax accounting income of \$150 million, which included the following amounts:

1. Compensation expense of \$6 million related to employee stock option plans granted to organizers was reported in the 2024 income statement. This expense is

not deductible for tax purposes.

2. An asset with a four-year useful life was acquired at the beginning of 2024. It is depreciated by the straight-line method in the income statement. For this asset, Mid-South uses MACRS on the tax return, causing deductions for depreciation to be more than straight-line depreciation the first two years but less than straight-line depreciation the next two years (\$ in millions):

Depreciation

| | Income Statement | Tax Return | Difference |
|------|------------------|--------------|-------------|
| 2024 | \$150 | \$198 | \$ (48) |
| 2025 | 150 | 264 | (114) |
| 2026 | 150 | 90 | 60 |
| 2027 | 150 | 48 | 102 |
| | <u>\$600</u> | <u>\$600</u> | <u>\$ 0</u> |

The enacted tax rate is 25%.

Required:

Prepare the journal entry to record Mid-South Cellular's income taxes for 2024.

Solution:

Because the compensation expense is not tax deductible, taxable income is not reduced by the \$6 million deduction and is higher than accounting income by that amount.

| (\$ in millions) | Current Year 2024 | Future Taxable Amounts | | | Total |
|------------------------------------|-------------------|------------------------|------|-------|-------------|
| | | 2025 | 2026 | 2027 | |
| Pretax accounting income | \$150 | | | | |
| Permanent difference: | | | | | |
| Nondeductible compensation | 6 | | | | |
| Temporary difference: | | | | | |
| Depreciation | (48) | \$(114) | \$60 | \$102 | \$48 |
| Taxable income (tax return) | \$108 | | | | |
| Enacted tax rate | 25% | | | | 25% |
| Tax payable | \$ 27 | | | | \$12 |

| Deferred Tax Liability | |
|------------------------|----|
| | 0 |
| | 12 |
| | 12 |

Journal Entry at the End of 2024

| | | |
|---|----|----|
| Income tax expense (to balance) | 39 | |
| Income tax payable (determined above) | | 27 |
| Deferred tax liability (determined above) | | 12 |

Step 1: Tax payable: \$27
Step 2: DTL end bal: \$12
Step 3: DTL change: \$12
Step 4: Tax exp plug: \$39

The necessary journal entry is:

Journal Entry at the End of 2024

| | |
|---|----|
| Income tax expense (to balance) | 39 |
| Income tax payable (determined above) | 27 |
| Deferred tax liability (determined above) | 12 |

Note that tax expense of \$39 equals $25\% \times \$156$. Because the compensation expense of \$6 will never be deductible (its a permanent difference), tax expense is calculated as if the compensation expense had never occurred. On the other hand, the differences associated with depreciation are temporary, so a deferred tax liability is established to account for those effects.

PART C

Other Tax Accounting Issues

Tax Rate Considerations

LO16–6 Explain how a change in tax rates affects the measurement of deferred tax amounts.

To measure a deferred tax liability or asset, we multiply a temporary difference by the currently *enacted* tax rate that will be effective in the year(s) the temporary difference reverses.⁶ A conceptual case can be made that these measurements should be based on the tax rates that are *expected* to apply in future periods, regardless of whether those rates have yet been enacted. However, this is one of many examples of the frequent trade-off between relevance and reliability. In this case, the FASB chose to favor reliability by waiting until an anticipated change actually is enacted into law before recognizing its tax consequences.

When Enacted Tax Rates Differ between Years

Existing tax laws may call for enacted tax rates to differ in the future years in which a temporary difference is expected to reverse. When a phased-in change in rates is scheduled to occur, the specific tax rates of each future year are multiplied by the amounts reversing in each of those years. The total is the deferred tax liability or asset.

A deferred tax liability (or asset) is calculated using enacted tax rates and laws.

To illustrate, let's again modify our Kent Land Management illustration, this time to assume a scheduled change in tax rates. See [Illustration 16-11](#).

Illustration 16-11 Scheduled Change in Tax Rates

Kent Land Management reported pretax accounting income in 2024 of \$185 million, which included \$80 million from installment sales of property and \$5 million interest from investments in municipal bonds in 2024. The installment sales income is reported for tax purposes in 2025 (\$20 million) and 2023 (\$60 million). The enacted tax rate is 25% in 2024 and 2025, but increases to 30% in 2026.

| (\$ in millions) | Current | Future | | Total |
|------------------------------------|--------------|--------|--------|---------------|
| | Year 2024 | 2025 | 2026 | |
| Pretax accounting income | \$185 | | | |
| Permanent difference: | | | | |
| Municipal bond interest | (5) | | | |
| Temporary difference: | | | | |
| Installment income | (80) | \$20 | \$60 | |
| Taxable income (tax return) | \$100 | | | |
| Enacted tax rate | 25% | 25% | 30% | |
| Tax payable | \$ 25 | \$ 5 | + \$18 | = \$23 |
| Deferred tax liability | | | | |

- Step 1: Tax payable: \$25
- Step 2: DTL end bal: \$23
- Step 3: DTL change: \$23
- Step 4: Tax exp plug: \$48

| Deferred Tax Liability | |
|------------------------|----|
| | 0 |
| | 23 |
| | 23 |

Journal Entry at the End of 2024

| | | |
|---|----|----|
| Income tax expense (to balance) | 48 | |
| Income tax payable (determined above) | | 25 |
| Deferred tax liability (determined above) | | 23 |

Because the 2026 rate is higher (30% as opposed to 25%), the future taxable amount will generate a higher amount of tax (\$18 million, rather than the \$15 million that would be generated if the tax rate were 25% in 2026). That requires a larger increase in the deferred tax liability and a higher corresponding tax expense. Be sure to note that, when the deferred tax liability of \$23 million is established in 2024, the 2025 rate (25%) and the 2026 rate (30%) already have been enacted into law. In the next section, we discuss how to handle a change resulting from new legislation.

Changes in Enacted Tax Laws or Rates

Tax laws sometimes change. When such a change in a tax law or rate is enacted, any existing deferred tax liability or asset must be adjusted to reflect the effects of the change. Remember, a deferred tax liability or asset is meant to reflect the amount to be paid or recovered in the future. When legislation changes that amount, the deferred tax liability or asset also should change. The effect is reflected in operating income in the year the change in the tax law or rate is enacted.⁷

When an enacted tax rate changes, the deferred tax liability or asset should be adjusted and the effect shown in tax expense in the year the change is enacted.

For clarification, let's consider what happened in late December of 2017. Congress revised the federal tax rate, dropping it from 35% to 21% starting in 2018. There was no change in

tax payable for companies in 2017 because that amount was still calculated using the old 35% rate. However, the change did affect the value of companies' deferred tax assets and liabilities, and adjusting those accounts in turn affected each company's 2017 tax expense and net income. To see this more clearly, let's walk through a couple of examples.

EFFECT OF A TAX RATE CHANGE ON A DEFERRED TAX LIABILITY

Imagine that, late in 2017, GladCo has future taxable amounts of \$1 million and a tax rate (federal plus state) of 39%, so has already recognized a deferred tax liability of \$390,000 (= \$1 million × 39%). GladCo then learns that Congress has enacted a law decreasing the tax rate for future years from 35% to 21%, meaning that GladCo's total enacted future tax rate has dropped from 39% to 25%. GladCo revises its deferred tax liability downwards on December 31, 2017, as follows:

| Deferred Tax Liability | |
|---|------------------------------------|
| | 390,000 (\$1 million × 39%) |
| Plug to revise DTL for decrease in tax rate | 140,000 |
| | 250,000 (\$1 million × 25%) |

To recognize the effect of the change in future tax rates, GladCo debits its deferred tax liability for **\$140,000**. There is no effect on 2017 tax payable, so the plug to tax expense is a credit of **\$140,000**.

| December 31, 2017 | |
|------------------------|----------------|
| Deferred tax liability | 140,000 |
| Income tax expense | 140,000 |

GladCo is particularly glad about the decrease in future tax rates because GladCo's future taxable amount of \$1 million will cost it less in taxes under a 25% rate than under a 39% rate. In 2017, the period in which the future tax rate change is enacted, GladCo revises its estimate of future tax payments and consequently recognizes a reduction in tax expense (i.e., a tax benefit) that improves its 2017 net income. If, instead, future tax rates had been revised upward, GladCo would need to credit its deferred tax liability to revise it upward, and the offsetting debit would increase tax expense and reduce 2017 net income.

EFFECT OF A TAX RATE CHANGE ON A DEFERRED TAX ASSET

Now let's modify our example to consider SadCo, which has future *deductible* amounts of \$1 million and a tax rate (federal plus state) of 39%. SadCo already has recognized a deferred tax *asset* of \$390,000 (= \$1 million × 39%). Late in 2017, SadCo learns that Congress has enacted a law decreasing the future tax rate from 35% to 21%, such that SadCo's total enacted future tax rate has dropped from 39% to 25%. SadCo revises its deferred tax asset on December 31, 2017, as follows:

| Deferred Tax Asset | |
|---------------------|--|
| (\$1 million × 39%) | 390,000 |
| | 140,000 Plug to revise DTA for decrease in tax rate |
| (\$1 million × 25%) | 250,000 |

To recognize the effect of the change in future tax rates, SadCo credits the deferred tax asset for **\$140,000** in the year the change is enacted. There is no effect on 2017 tax payable, so the plug to tax expense is a debit of **\$140,000**.

| December 31, 2017 | |
|--------------------|----------------|
| Income tax expense | 140,000 |
| Deferred tax asset | 140,000 |

While SadCo is generally happy that tax rates will decrease in future years, it is sad with respect to the effect of that tax rate change on the value of its deferred tax assets, and therefore its 2017 net income. SadCo's future deductible amount of \$1 million will reduce future tax payments by less with a 25% rate than with a 39% rate. So, that asset is less valuable, and SadCo must reduce the carrying value of its deferred tax asset. The offsetting increase in tax expense reduces SadCo's net income in 2017, the period in which it revises its deferred tax asset. If, instead, future tax rates had been revised upward, SadCo would debit its deferred tax asset to revise it upward, and the offsetting credit would decrease tax expense and increase 2017 net income.

The effect of a tax rate change on earnings can be very significant, given that the entire effect on the balances of deferred tax assets and deferred tax liabilities is included in earnings in the period the change is enacted. Whether the change increases or decreases earnings depends on the direction of the change as well as on whether a company has a net

deferred tax asset or deferred tax liability. For example, the decrease in federal tax rates enacted in late 2017 required **Citigroup** to *decrease* earnings by \$22.6 billion in the fourth quarter of 2017 as it reduced the carrying value of its large net deferred tax asset. On the other hand, the same decrease in tax rates *increased* **Verizon**'s earnings by \$16.8 billion in the fourth quarter of 2017 as it reduced the carrying value of its large net deferred tax liability.

Multiple Temporary Differences

It would be unusual for any but a very small company to have only a single temporary difference in any given year. Having multiple temporary differences, though, doesn't change any of the principles you've learned so far in connection with single differences. We categorize all temporary differences according to whether they create (a) future taxable amounts or (b) future deductible amounts. The total of the future taxable amounts then is multiplied by the future tax rate to determine the appropriate balance for the deferred tax liability, and the total of the future deductible amounts is multiplied by the future tax rate to determine the appropriate balance for the deferred tax asset. This is demonstrated in  **Illustration 16-12**.

Illustration 16-12 Multiple Temporary Differences

2024

During 2024, its first year of operations, Eli-Wallace Distributors reported pretax accounting income of \$200 million, which included the following amounts:

1. Income (net) from installment sales of warehouses in 2024 of \$8 million will be reported for tax purposes in 2025 (\$6 million) and 2026 (\$2 million).
2. Depreciation is reported by the straight-line method on an asset with a four-year useful life. On the tax return, deductions for depreciation will be more than straight-line depreciation the first two years but less than straight-line depreciation the next two years (\$ in millions):

| | Income Statement | Tax Return | Difference |
|------|-----------------------------|-----------------------|-------------------|
| 2024 | \$ 50 | \$ 66 | \$(16) |
| 2025 | 50 | 88 | (38) |
| 2026 | 50 | 30 | 20 |
| 2027 | 50 | 16 | 34 |
| | <u>\$200</u> | <u>\$200</u> | <u>\$ 0</u> |

3. Estimated warranty expense will be deductible on the tax return when actually paid during the next two years. Estimated deductions are as follows (\$ in millions):

| | Income Statement | Tax Return | Difference |
|------|---------------------|---------------|-------------|
| 2024 | \$12 | | \$12 |
| 2025 | | \$ 4 | (4) |
| 2026 | | 8 | (8) |
| | <u>\$12</u> | <u>\$12</u> | <u>\$ 0</u> |

2025

During 2025, pretax accounting income of \$200 million included an estimated loss of \$2 million from having accrued a loss contingency. The loss is expected to be paid in 2027, at which time it will be tax deductible.

The enacted tax rate is 25% each year.

Look at [Illustration 16-12A](#) to see how Eli-Wallace determines the income tax amounts for 2024. Then look at [Illustration 16-12B](#) to see how those amounts are determined for 2025.

Illustration 16-12A Deferred Taxes with Multiple Differences—Initial Year

| (\$ in millions) | Current Year 2024 | Future Taxable (Deductible) Amounts | | | Future Taxable Amounts (total) | Future Deductible Amounts (total) |

| Warranty expense | (4) | (8) | | | \$ (8) |
| Estimated loss | 2 | | (2) | | (2) |
| Taxable income (tax return) | \$166 | | | \$56 | \$(10) |
| Enacted tax rate | 25% | | | 25% | 25% |
| Tax payable | \$ 41.5 | | | \$14 | \$(2.5) |

| Deferred Tax Liability | | Deferred Tax Asset | |
|------------------------|-----|--------------------|-------|
| | 6 | | 3 |
| | (8) | | (0.5) |
| | 14 | | 2.5 |

Journal Entry at the End of 2025

| | | |
|---|----|------|
| Income tax expense (to balance) | 50 | |
| Deferred tax asset (determined above) | | 0.5 |
| Deferred tax liability (determined above) | | 8.0 |
| Income tax payable (determined above) | | 41.5 |

Step 1: Tax payable: \$41.5
 Step 2: DTA end bal: \$2.5
 DTL end bal: \$14.0
 Step 3: DTA change: \$(0.5)
 DTL change: \$8.0
 Step 4: Tax exp plug: \$50.0

Of course, if a phased-in change in tax rates is scheduled to occur, it would be necessary to determine the total of the future taxable amounts and the total of the future deductible amounts for each future year, as outlined previously. Then the specific tax rates of each future year would be multiplied by the two totals in each of those years. Those annual tax effects then would be summed to find the balances for the deferred tax liability and the deferred tax asset.

Net Operating Losses

LO16–7 Describe when and how the tax effects of net operating losses are recognized in the financial statements.

A **net operating loss** (NOL) is negative taxable income: tax-deductible expenses exceed taxable revenues. Of course, there is no tax payable for the year a net operating loss occurs because there's no taxable income. In addition, tax laws permit a net operating loss to be used to reduce taxable income in subsequent profitable years. Why do the tax laws permit that offsetting? Well, let's consider two imaginary companies. Volatile Co. has negative income some years and positive income other years that averages out to \$0 income over time. Stable Co. has \$0 income each year. It wouldn't be fair to tax Volatile in the good years and provide no relief in the bad years, while not taxing Stable at all, because Volatile and Stable generate the same total amount of income over time. It's more fair to allow Volatile to offset the income in its good years with the losses in its bad years when determining how much tax it should pay.

The accounting question is: When should the tax benefit created by a net operating loss be recognized in the income statement? The answer is: In the year the loss occurs.

Net Operating Loss Carryforward

Current federal tax laws allow most companies to carryforward an NOL and offset it against taxable income in future years. Companies are limited to offsetting a maximum of 80% of the taxable income in any given year. If an NOL is big enough, it could be used in multiple future years to offset taxable income and reduce tax payable. NOLs don't expire. Rather, companies can carryforward an NOL indefinitely until it is used.

Additional Consideration

NOLs arising in tax years beginning before December 31, 2017, are treated differently. Those NOLs can offset 100% of the taxable income in each future year to which they are carried forward, but can only be carried forward 20 years before expiring.

Because NOL carryforwards offset future taxable income and therefore reduce tax payable, they produce cash savings for the company when future taxable income is generated. Large NOL carryforwards also can make an unprofitable company an attractive target for acquisition by a company that could use those NOL carryforwards to shelter its own future earnings from taxes. If the IRS determines that an acquisition is made solely to obtain the tax benefits of NOL carryforwards, the deductions will not be allowed. Still, the motivation for making an acquisition is difficult to determine, so it is not uncommon for companies to purchase other companies to obtain their NOL carryforwards.

How do we account for an NOL prior to it being used to offset future taxable income? You have learned in this chapter that a deferred tax asset is recognized for the future tax benefit of temporary differences that create future deductible amounts. A **net operating loss carryforward** also creates future deductible amounts. Logically, then, a deferred tax asset is recognized for an NOL carryforward. Debiting the deferred tax asset associated with the NOL carryforward requires an offsetting credit to tax expense. This is demonstrated in  **Illustration 16-13A**.

Illustration 16-13A Net Operating Loss Carryforward

During 2024, its first year of operations, American Laminating Corporation reported an operating loss of \$120 million for financial reporting and tax purposes. The enacted tax rate is 25%.

| (\$ in millions) | Current Year 2024 | Future Deductible Amounts |
|-----------------------------|-------------------|---------------------------|
| Net Operating loss | \$(120) | |
| NOL carryforward | 120 | \$(120) |
| Taxable income (tax return) | \$ 0 | |
| Enacted tax rate | 25% | 25% |
| Tax payable | <u>\$ 0</u> | <u>\$30</u> |

Deferred Tax Asset

| |
|----|
| 0 |
| 30 |
| 30 |

}

Journal Entry at the End of 2024

| | | |
|---------------------------------------|----|----|
| Deferred tax asset (determined above) | 30 | |
| Income tax expense (to balance) | | 30 |

Step 1: Tax payable: \$0

Step 2: DTA end bal: \$30

Step 3: DTA change: \$30

Step 4: Tax exp plug: \$30

RECOGNIZING AN NOL CARRYFORWARD

You can see that the reduction of tax expense associated with the NOL is recognized for accounting purposes in the year the net operating loss occurs. That reduction in tax expense is sometimes labeled a tax benefit in the income statement. Just as we reduce pretax *income* by tax *expense* to calculate net income, we reduce a pretax *loss* by its tax *benefit* to calculate a net loss. That way, the net after-tax operating loss shown on the income statement reflects the tax savings that the operating loss is expected to create.

Income Statement (partial)

| | (\$ in millions) |
|------------------------------------|-----------------------|
| Operating loss before income taxes | \$(120) |
| Less: Income tax benefit | <u>30</u> |
| Net loss | <u><u>\$ (90)</u></u> |

UTILIZING AN NOL CARRYFORWARD

In a future year, a company can reduce its tax payable by offsetting taxable income with an NOL carried forward from a prior year. Using an NOL is accounted for essentially the same way as using the deductible amounts associated with any deferred tax asset. Let's return to our example to see how this is done. American Laminating's loss in 2024 created a \$120 million NOL carryforward. As demonstrated in [Illustration 16-13B](#), American Laminating will be able to use \$80 million of the NOL in 2025, and will carryforward the remaining \$40 million to subsequent years.

Illustration 16-13B Utilizing an NOL Carryforward

During 2025, its second year of operations, American Laminating Corporation reported pretax income of \$100 million for financial reporting and tax purposes. American is limited to offsetting 80% of income with its NOL carryforward in any tax year. The enacted tax rate is 25%.

| (\$ in millions) | Current Year 2025 | Future Deductible Amounts |
|--------------------------------------|-------------------------|---------------------------------|
| Pretax accounting income | \$100 | |
| NOL carryforward (using 80% × \$100) | (80) | \$(40) |
| Taxable income (tax return) | \$ 20 | |
| Enacted tax rate | 25% | 25% |
| Tax payable | \$ 5 | \$(10) |

| Deferred Tax Asset | |
|--------------------|----|
| 30 | 20 |
| 10 | |

Journal Entry at the End of 2025

| | | |
|---|----|----|
| Income tax expense (to balance) | 25 | |
| Deferred tax asset (determined above) | | 20 |
| Income tax payable (determined above) | | 5 |

American Laminating’s income statement would show \$100 million of pretax accounting income reduced by \$25 million of tax expense:

Income Statement (partial)

| | (\$ in millions) |
|---------------------------------|------------------|
| Pretax accounting income | \$100 |
| Less: Income tax expense | <u>25</u> |
| Net income | \$ 75 |

Of the \$25 million of tax expense, \$5 million is payable currently, and the other \$20 million is a result of reducing (using up) the deferred tax asset associated with the NOL. An additional \$40 million of NOL remains to reduce future taxable income, to be represented by a deferred tax asset of \$10 million (= \$40 million × 25%) as of the end of 2025.

VALUATION ALLOWANCE

Just as for all other deductible temporary differences, a deferred tax asset is recognized for an NOL without regard to the likelihood of having taxable income in future years sufficient to absorb future deductible amounts. However, the deferred tax asset is then reduced by a valuation allowance if it is “more likely than not” that some of the deferred tax asset will not

be realized. Even though current tax law allows NOLs to be carried forward indefinitely, a valuation allowance still might be necessary because the same problems that give rise to current operating losses also make it less likely the company will be able to stay in business.

Additional Consideration

Net Operating Loss Carryback. For tax years beginning before January 1, 2018, companies could elect to carry an NOL *back* to the past two years and carryforward any amount of NOL that remained. Carrybacks produced an immediate refund of taxes paid in those prior years, so this option was very attractive. Carryback was limited to two years and carryforward up to 20 years. The NOL could be offset against 100% of taxable income in those years.

For tax years beginning after December 31, 2017, NOL carrybacks are not allowed for most companies. Rather, NOLs can only be carried forward, and the use of an NOL carryforward in any individual tax year is limited to offsetting a maximum of 80% of taxable income in that year. However, the old rules still apply for property and casualty insurance companies, and some farm-related businesses are allowed to carry NOLs back two years and forward indefinitely. For these companies, there is no 80% limitation. Also, many states continue to allow NOL carrybacks with respect to calculating state income taxes. Therefore, it is useful to understand how to account for NOL carrybacks.

To illustrate accounting for NOL carrybacks, let's assume we are dealing with a property and casualty insurance company and there was taxable income in the two years prior to the net operating loss. Note that the net operating loss must be applied to the earlier year first and then brought forward to the next year. If any of the NOL remains after reducing taxable income to zero in the two previous years, the remainder is carried forward to future years as a net operating loss carryforward.

During 2024, American Property and Casualty Insurance Corporation reported a net operating loss of \$120 million for financial reporting and tax purposes. The enacted tax rate is 25% for 2024. Taxable income, tax rates, and income taxes paid in the two previous years were as follows:

| | Taxable Income | Tax Rate | Income Taxes Paid |
|------|----------------|----------|-------------------|
| 2022 | \$20 million | 20% | \$ 4 million |
| 2023 | \$60 million | 25% | \$15 million |

Here's how the income tax benefit of the net operating loss carryback and the net operating loss carryforward is determined:

| (\$ in millions) | Prior Years | | Current Year | Future Deductible Amounts |
|-----------------------------|---------------|----------------|--------------|------------------------------|
| | 2022 | 2023 | 2024 | |
| Net operating loss | | | \$ (120) | |
| NOL carryback | \$(20) | \$(60) | 80 | |
| NOL carryforward | | | 40 | \$(40) |
| Taxable income (tax return) | | | \$ 0 | |
| Enacted tax rate | 20% | 25% | 25% | 25% |
| Tax refund | <u>\$ (4)</u> | <u>\$ (15)</u> | <u>\$ 0</u> | <u>\$ (10)</u> |
| Deferred tax asset | | | | |

| Deferred Tax Asset | |
|--------------------|--|
| 0 | |
| <u>10</u> | |
| 10 | |

Journal Entry at the End of 2024

| | | |
|--|----|-----------|
| Income tax refund receivable (\$4 + \$15, determined above)..... | 19 | |
| Deferred tax asset (determined above) | 10 | |
| Income tax expense (to balance)..... | | <u>29</u> |

American's income statement would include the following:

| | (\$ in millions) | |
|---|------------------|-----------------------|
| | | |
| Operating loss before income taxes | | \$(120) |
| Income tax benefit: | | |
| Current: Tax refund from NOL carryback | \$19 | |
| Deferred: Tax savings from NOL carryforward | <u>10</u> | 29 |
| Net loss | | <u><u>\$ (91)</u></u> |

The income tax benefit (reduction in tax expense) of both a net operating loss carryback and a net operating loss carryforward is recognized for accounting purposes in the year the NOL occurs. The net after-tax loss reflects the reduction of past taxes from the NOL carryback and future tax savings that the NOL carryforward is expected to create. In this example, the income tax benefit (\$29 million) is less than it was when we assumed a carryforward only

(\$30 million; see [Illustration 16–13A](#)). This is because the tax rate in one of the carryback years (20% in 2022) was lower than the carryforward rate (25%).

COVID-19: Accounting and Reporting Implications

The *Coronavirus Aid, Relief, and Economic Security (CARES) Act* was designed to provide stimulus relief to businesses affected by COVID-19 in the form of loans, grants, and tax changes.

The CARES Act included some very important provisions relevant to NOLs. Specifically:

1. It suspends the 80% limitation on utilization of NOLs that were generated after December 31, 2017, for tax years beginning before January 1, 2021. So, when a company uses an NOL, it can use all of it. (For tax years beginning after December 31, 2020, the 80% limitation is reinstated.)
2. Companies can carry back NOLs that arose in tax years beginning after December 31, 2017, and before January 1, 2021, to offset taxable income generated in the previous five years.

In combination, these provisions could provide an immediate tax refund rather than delaying tax savings into future years. Also, given that federal tax rates decreased from 35% to 21% starting in 2018, an NOL carryback could provide higher tax savings than would be possible with an NOL carryforward. Let's look at an example to see how this works. CashStrapped Co. (hereafter, "Strapped") reports net operating income (loss) in each year as follows:

| 2016 | 2017 | 2018 | 2019 | 2020 |
|-------|-------|------|------|---------|
| \$100 | \$100 | \$0 | \$0 | \$(200) |

Strapped's federal tax rate decreased from 35% to 21% starting in 2018. Without the changes provided by the CARES Act, Strapped would have made

the following journal entry in 2020 to record a deferred tax asset associated with its NOL carryforward and a related tax benefit:

| | |
|--|----|
| Deferred tax asset ($\$200 \times 21\%$) | 42 |
| Tax benefit | 42 |

Strapped would be able to utilize its NOL carryforward in 2021 and beyond, but could only offset a maximum of 80% of taxable income in those years. Now let's consider Strapped's accounting under the CARES Act instead. Strapped could carry back its 2020 NOL to offset taxable income in its 2016 and 2017 tax years, when it paid taxes at a 35% tax rate. Therefore, instead of the journal entry above, it would make the following entry:

| | |
|---|----|
| Tax refund receivable ($(\$100 + \$100) \times 35\%$) | 70 |
| Tax benefit | 70 |

So, you can see that the CARES Act helped Strapped in a couple of ways. First, rather than having to wait to reduce tax payments in the future, Strapped gets an immediate refund of taxes it paid previously. Second, rather than saving future taxes at a tax rate of 21%, it recovers previously taxes paid at the higher rate of 35%. It saves more taxes and saves them immediately. Strapped also reports a larger tax benefit on the income statement, so it shows a smaller net loss (specifically, a net loss of $\$(200) + \$70 = \$(130)$, rather than $\$(200) + \$42 = \$(158)$). These provisions were intended to stimulate the U.S. economy during the initial months of the COVID-19 pandemic.

The NOL carryback provision of the CARES Act provides one other advantage that's a bit more subtle. Suppose that Strapped's 2020 loss was part of a more general downward trend in its business, such that Strapped couldn't argue that it is more likely than not that it would generate enough future income to realize the deferred tax asset associated with its NOL carryforward. In that case, without the CARES Act, it would have to set up a valuation allowance in 2020 as follows:

| | |
|--|----|
| Deferred tax asset ($\$200 \times 21\%$) | 42 |
|--|----|

Strapped wouldn't get to recognize *any* tax benefit in 2020, which would force it to report a net loss of \$(200). Under the CARES Act, Strapped utilizes its NOL carryback, so it doesn't recognize a deferred tax asset and doesn't risk being forced to recognize an offsetting valuation allowance.

Financial Statement Presentation

Balance Sheet Classification

LO16–8 Explain how deferred tax assets and deferred tax liabilities are reported in a classified balance sheet and describe related disclosures.

All deferred tax liabilities, deferred tax assets, and any valuation allowance against deferred tax assets are classified as noncurrent in the balance sheet.⁸ If these deferred tax accounts relate to the same tax-paying component of the company and the same tax jurisdiction, they are netted against each other and shown as a single net number in the balance sheet. For example, a company with a deferred tax liability of \$10 million, a deferred tax asset of \$5 million, and a valuation allowance of \$2 million would show a net noncurrent deferred tax liability of \$7 million [$\$10 \text{ million} - (\$5 \text{ million} - \$2 \text{ million})$].

Sometimes components of a single company are viewed as different companies for tax purposes, or pay tax in different jurisdictions. If deferred tax liabilities and assets relate to components of a company that are separate for tax purposes, or relate to different tax jurisdictions, they should not be offset. So, in the prior illustration, if the deferred tax assets (and related valuation allowance) applied to a separate tax jurisdiction from the deferred tax liabilities, the company would show a noncurrent deferred tax liability of \$10 million and a noncurrent deferred tax asset of \$3 million ($\$5 \text{ million} - \2 million).

Disclosure Notes

We've already seen many of the disclosures that companies have to present in the tax note, but there are a few we haven't yet covered.

INCOME TAX EXPENSE

 **Illustration 16-7A** shows Citi Trends' disclosure of current tax payable, deferred tax, and tax expense. More generally, disclosure notes should indicate the following:

- Current portion of the tax expense (or tax benefit); that's new tax payable this period.

- Deferred portion of the tax expense (or tax benefit), with separate disclosure of amounts attributable to:
 - Portions that do not include the effect of separately disclosed amounts.
 - Operating loss carryforwards.
- Adjustments due to changes in tax laws or rates.
- Adjustments to the beginning-of-the-year valuation allowance due to revised estimates.
- Tax credits.

Additional Consideration

Throughout this chapter, we have used a single journal entry to record entries for tax payable, deferred tax accounts, and tax expense. As an alternative, we could record two journal entries that separate (a) the current portion of the tax expense and (b) the deferred portion of the tax expense.

For example, in  **Illustration 16–12A**, we recorded tax expense in a single journal entry:

December 31, 2024

| | | |
|------------------------|----|----|
| Income tax expense | 50 | |
| Deferred tax asset | 3 | |
| Deferred tax liability | | 6 |
| Income tax payable | | 47 |

Instead, we could have separately recorded the current and deferred tax expense:

December 31, 2024

| | | |
|-----------------------------|----|----|
| Current income tax expense | 47 | |
| Income tax payable | | 47 |
| Deferred income tax expense | 3 | |
| Deferred tax asset | 3 | |

Throughout the chapter, we demonstrated the simpler approach, but using two entries provides the same result.

DEFERRED TAX ASSETS AND DEFERRED TAX LIABILITIES

 **Illustration 16-7B** shows Citi Trends' disclosure of its deferred tax assets and deferred tax liabilities. It shows a total net deferred tax asset of \$6,669 thousand, which would appear in its February 1, 2020, balance sheet. More generally, companies must disclose the following:

- Total of all deferred tax liabilities.
- Total of all deferred tax assets.
- Total valuation allowance recognized for deferred tax assets.
- Net change in the valuation allowance.
- Approximate tax effect of each type of temporary difference (and carryforward).

EFFECTIVE TAX RATE RECONCILIATION

 **Illustration 16-10** shows Citi Trends' disclosure of its effective tax rate reconciliation. Companies are required to provide that reconciliation, indicating the amount and nature of each significant reconciling item.

NET OPERATING LOSS (NOL) CARRYFORWARDS

Companies must disclose the amounts of any NOL carryforwards, as well as any applicable expiration dates. As indicated previously, NOLs arising in tax years beginning after December 31, 2017, can be carried forward indefinitely for federal taxes, but sometimes there are expiration dates that apply to older NOLs, to other unusual circumstances, or with respect to state or local taxes.

PART D

Coping with Uncertainty in Income Taxes

LO16–9 Demonstrate how to account for uncertainty in income tax decisions.

As you might imagine, most companies strive to legitimately reduce their overall tax burden and to reduce or delay cash outflows for taxes. However, even without these efforts to reduce taxes, most companies' tax returns will include many tax positions that are subject to multiple interpretations. That is, the position management takes with respect to an element of tax expense might differ from the position the IRS or other taxing authorities might take on that same item. It can take many years to resolve uncertainty about whether management's tax positions will be challenged and, if challenged, whether those positions will be upheld. How should we account for such uncertain tax positions? Should we assume management will prevail, or assume that questioned positions will be disallowed and the company ultimately will owe more tax?

For example, assume that Derrick Company claims on its tax return a particular deduction it believes is legitimate, and that position saves the company \$8 million in 2024 income taxes. Derrick knows that, historically, the IRS has challenged many deductions of this type. Since tax returns usually aren't examined for one, two, or more years, uncertainty exists.

TWO-STEP DECISION PROCESS

To deal with that uncertainty, companies are only allowed to reduce tax expense (recognize a tax benefit) for a questionable position if it is “more likely than not” (defined as a greater than 50% chance) that the position will be sustained if challenged.⁹ Guidance also prescribes how to *measure* the amount to be recognized if, in fact, it can be recognized. The decision, then, is a “two-step” process.

Step 1. A tax benefit may be reflected in the financial statements only if it is “more likely than not” that the company will be able to sustain the tax position, based on its technical merits.

Step 2. A tax benefit should be measured as the largest amount of benefit that is “cumulatively greater than 50 percent likely to be realized” (demonstrated later).

For the step 1 decision as to whether the position can be sustained, companies must assume that the position will be reviewed by the IRS or other taxing authority and litigated to the “highest court possible,” and that the taxing authority has knowledge of all relevant facts.

NOT “MORE LIKELY THAN NOT”

Let’s say that in the step 1 decision, Derrick believes the more-likely-than-not criterion is *not* met. In that case, none of the tax benefit (reduction in tax expense) can be recorded in 2024, and income tax expense is recorded at the same amount as if the tax deduction was not taken.

Tax expense can’t be reduced to reflect a tax benefit unless there is at least a 50% chance that the company can sustain its position upon examination.

Suppose, for instance, that Derrick’s current income tax payable is \$24 million after being reduced by the full \$8 million tax benefit.¹⁰ If Derrick does not believe it is *more likely than not* that the tax position will be sustained upon examination, the benefit can’t be recognized as a reduction of tax expense. So, Derrick would record (a) current income tax payable that reflects the entire \$8 million benefit of the deduction, (b) an additional tax liability that represents the obligation to pay an additional \$8 million of taxes under the assumption that the deduction ultimately will not be upheld, and (c) tax expense as if the deduction had never been taken.

Page 942

| | (\$ in millions) |
|--|------------------|
| Income tax expense (without \$8 tax benefit) | 32 |
| Income tax payable (with \$8 tax benefit) | 24 |
| Liability—uncertain tax positions | 8 |

The \$8 million difference is the tax that Derrick didn’t pay because Derrick took the deduction. That amount is potentially due if the deduction is not upheld later. Because the ultimate outcome probably won’t be determined within the upcoming year, the *Liability—*

The \$8 million liability is recognized to account for the fact that it is probable that tax officials will disallow the tax treatment used to compute income tax payable.

uncertain tax positions is reported as a long-term liability unless it's known to be current.¹¹

MEASURING THE TAX BENEFIT

Now, let's say that even though Derrick is aware of the IRS's tendency to challenge deductions of this sort, management believes it *is* more likely than not that the position will be upheld if later challenged. Since Derrick has determined in step 1 that yes, a tax benefit can be recognized, it now needs to decide how much. That's step 2.

Suppose the following table represents management's estimates of the likelihood of various amounts of tax benefit that would be upheld:

The largest amount that has a cumulative greater-than-50%-chance of being realized is \$6 million (10% + 20% + 25% = 55%).

Likelihood Table (\$ in millions)

| | | | |
|--|-----|-----|-----|
| Amount of the tax benefit that management expects to be sustained | \$8 | \$7 | \$4 |
| Percentage likelihood that the tax position will be sustained at this level | 10% | 20% | 25% |
| <i>Cumulative</i> probability that at least that much tax position will be sustained | 10% | 30% | 55% |

The amount of tax benefit that Derrick can recognize in the financial statements (reduce tax expense) is **\$6** million because it represents the largest amount of benefit that is more likely than not (greater than 50% probability) to be sustained. So, Derrick would record (a) current income tax payable that reflects the entire \$8 million benefit of the deduction, (b) an additional tax liability that represents the obligation to pay an additional \$2 million of taxes under the assumption that **\$6** million of tax benefit ultimately will be upheld, and (c) tax expense as if there is a **\$6** million tax benefit.

| | (\$ in millions) | |
|---|------------------|----|
| Income tax expense (with \$6 tax benefit) | 26 | |
| Income tax payable (with \$8 tax benefit) | | 24 |
| Liability—uncertain tax positions (\$8 - \$6) | | 2 |

In summary, the highest amount Derrick might have to pay is the full \$8 million of tax previously avoided

Only \$6 million of the tax benefit is recognized in income tax

because of the 2024 deduction; the least amount, of course, is zero. The most likely amount (the largest amount of benefit that is cumulatively greater than 50 percent likely to be realized) is \$6 million. Therefore, the most likely additional liability is \$2 million ($\$8 - \$6 = \2). That's the amount we record as a *Liability—uncertain tax positions*, along with the current income tax payable of \$24 million.

RESOLUTION OF THE UNCERTAINTY

Now let's consider what happens in the future, when the uncertainty associated with the tax position has been resolved. We'll consider three scenarios. Note that, in each scenario, the "Liability—uncertain tax positions" gets reduced to zero in the period in which the uncertainty is resolved.

1. **Worst case scenario.** The entire position is disallowed, such that Derrick owes \$8 million tax (plus any interest and penalties, which we are ignoring).

| | (\$ in millions) |
|-----------------------------------|------------------|
| Income tax expense | 6 |
| Liability—uncertain tax positions | 2 |
| Income tax payable (or cash) | 8 |

2. **Best case scenario.** The entire position is upheld, so Derrick owes no additional tax.

| | (\$ in millions) |
|-----------------------------------|------------------|
| Liability—uncertain tax positions | 2 |
| Income tax expense | 2 |

3. **Expected scenario.** The \$6 million position is allowed as expected, so Derrick owes the expected \$2 million tax (plus any interest and penalties, which we are ignoring).

| | (\$ in millions) |
|-----------------------------------|------------------|
| Liability—uncertain tax positions | 2 |
| Income tax payable (or cash) | 2 |

Companies are required to include in the disclosure notes a clear reconciliation of the beginning and ending balance of their liability for unrecognized tax benefits. As an example,

 **Illustration 16-14** includes an excerpt from the tax note of **Walmart, Inc.**, for its fiscal year ended January 31, 2020.

Illustration 16-14 Disclosure of Deferred Taxes—Walmart, Inc.

Real World Financials

The following summarizes the activity related to the Company's unrecognized tax benefits (\$ in millions):

| | 2020 | 2019 | 2018 |
|---|----------------|----------------|----------------|
| Unrecognized tax benefits, beginning of year | \$1,305 | \$1,010 | \$1,050 |
| Increases related to prior year tax positions | 516 | 620 | 130 |
| Decreases related to prior year tax positions | (15) | (107) | (254) |
| Increases related to current year tax positions | 66 | 203 | 122 |
| Settlements during the period | (29) | (390) | (23) |
| Lapse in statutes of limitations | <u>(26)</u> | <u>(31)</u> | <u>(15)</u> |
| Unrecognized tax benefits, end of year | \$1,817 | \$1,305 | \$1,010 |

Additional Consideration

Putting it All Together: A Template for Income Tax Accounting. The way we account for income taxes is a useful example of the FASB's balance sheet emphasis. Rather than calculating tax expense directly, it always is calculated as whatever amount is implied by the combination of income tax payable and the changes that occurred during the period in deferred tax assets, deferred tax liabilities, the valuation allowance for deferred tax assets, and the liability for uncertain tax positions. In fact, we can summarize virtually everything in this chapter by visualizing the journal entry implied by the changes in those

accounts and applying our 4-step process. Let's draw some T-accounts to see how that works:

| | Deferred Tax Assets | | Val. Allowance—Deferred Tax Assets | | Deferred Tax Liabilities | | Liability for Uncertain Tax Positions | |
|-----------|---------------------|-------------|------------------------------------|-------------|--------------------------|-------------|---------------------------------------|-------------|
| Beg. bal. | S | | | U | | W | | Y |
| | B | or B | C | or C | D | or D | E | or E |
| End. Bal. | T | | | V | | X | | Z |

With these T-accounts in mind, think of a company's tax accounting as including the following steps:

- Step 1:** Determine income tax payable (tax rate times taxable income). We'll call that number "A."
- Step 2:** Determine **T**, **V**, **X**, and **Z**, the ending balances needed in the tax-related balance sheet accounts, as we do in the chapter.
- Step 3:** Determine whatever changes in those accounts, **B**, **C**, **D**, and **E**, are needed to reach their required ending balances. We already know the beginning balances in those accounts because they are the same as the ending balances reported in the prior period.
- Step 4:** Finally, calculate tax expense, **F**, as the amount necessary to balance the journal entry. For example:

| | |
|--|----------|
| Tax expense (to balance) | F |
| Deferred tax asset (amount needed to achieve needed balance) | B |
| Deferred tax liability (amount needed to achieve needed balance) | D |
| Valuation allowance—deferred tax asset (amount needed to achieve needed balance) | C |

Liability—uncertain tax positions (amount needed to achieve needed balance)

E

Taxes payable (tax rate \times taxable income)

A

Tax expense (**F**) always is a “plug” figure to make the journal entry balance. Usually the plug is a debit, but sometimes it’s a credit to recognize a tax benefit. Depending on a company’s particular circumstances, a debit or a credit could be required to reach the appropriate ending balance in each of the tax-related balance sheet accounts, **B**, **C**, **D**, and **E**. To the extent these accounts changed because of other transactions (for example, an acquisition), we would account for those effects first and then determine the amounts necessary to reach the appropriate ending balances.

Intraperiod Tax Allocation

LO16–10 Explain intraperiod tax allocation.

You should recall that an income statement reports discontinued operations separately from income (or loss) from continuing operations to better allow the user of the statement to isolate irregular components of net income from those that represent recurring business operations.¹² This helps the user to more accurately project future operations. Because taxes are an important part of operations, the total income tax expense for a reporting period should be allocated between continuing and discontinued operations.

The related tax effect can be either a tax expense or a tax benefit. A gain on disposal of a discontinued operation increases taxable income, so it produces tax expense, while a loss on disposal reduces taxable income, so it produces a tax benefit.¹³ For example, assume a company has \$84 million of pretax income from continuing operations and \$16 million of pretax income from discontinued operations. Assuming a 25% tax rate, the company would report the gain from discontinued operations net of tax in its income statement:

| | (\$ in millions) |
|---|---------------------|
| Income before tax and discontinued operation | \$84 |
| Less: Income tax expense ($\$84 \times 25\%$) | <u>(21)</u> |
| Income before discontinued operations | 63 |
| Income from discontinued operations (net of \$4 income tax expense) | 12 |
| Net income | <u><u>\$75</u></u> |

Similarly, if instead the company has \$116 million of pretax income from continuing operations and \$16 million of pretax *loss* from discontinued operations, the company would report the loss from discontinued operations net of tax in its income statement:

| | (\$ in millions) |
|---|---------------------|
| Income before tax and discontinued operation | \$116 |
| Less: Income tax expense (\$116 × 25%) | <u>(29)</u> |
| Income before discontinued operations | 87 |
| Loss from discontinued operations (net of \$4 income tax benefit) | (12) |
| Net income | <u><u>\$ 75</u></u> |

Allocating income taxes among financial statement components in this way within a particular reporting period is referred to as *intra*period tax allocation. You should recognize the contrast with *inter*period tax

allocation—terminology sometimes used to describe allocating income taxes between two or more reporting periods by recognizing deferred tax assets and liabilities. While interperiod tax allocation is challenging and controversial, *intra*period tax allocation is relatively straightforward and substantially free from controversy.

Allocating income taxes within a particular reporting period is *intra*period tax allocation.

OTHER COMPREHENSIVE INCOME

Allocating income tax expense or benefit also applies to components of comprehensive income reported separately from net income. You should recall from our discussions in [🔗 Chapters 4](#) and [🔗 12](#) that “comprehensive income” extends our view of income beyond conventional net income to include four types of gains and losses that traditionally haven’t been included in income statements. The other comprehensive income (OCI) items relate to investments, postretirement benefit plans, derivatives, and foreign currency translation. When these OCI items are reported in a statement of comprehensive income and shown in accumulated other comprehensive income (AOCI) in shareholders’ equity, they are reported net of their respective income tax effects.¹⁴

Additional Consideration

The huge federal tax rate reduction that occurred in 2017 created an interesting situation: “stranded tax effects.” Here’s what happened. Let’s say a company had a large unrealized gain from an investment in a previous year. As you learned in [Chapter 12](#), that gain would be reflected in AOCI, net of related tax expense. Because tax is not payable until an investment is sold, this gain would have created a deferred tax liability. So, when the tax rate was reduced by Congress, the company reduced its deferred tax liability to reflect the lower tax to be paid upon sale. But that fixed only one of two accounts affected. The gain sitting in AOCI was reduced by tax expense calculated under the old, high tax rate, and now, the extra tax above the newer, low tax rate was “stranded” in AOCI. Unless an adjustment was made, that inappropriately high tax would be reflected in earnings in some future period when the investment is sold. To solve this problem, the FASB issued ASU 2018-02,¹⁵ which allowed companies to make a one-time adjustment that restated AOCI to reflect the new tax rate, with an offsetting entry to retained earnings.

Decision Makers’ Perspective

Income taxes represent one of the largest expenditures that many firms incur. When state, local, and foreign taxes are considered along with federal taxes, the total bite can easily consume 25% to 30% of income. A key factor, then, in any decision that managers make should be the impact on taxes. Decision makers must constantly be alert to options that minimize or delay taxes. During the course of this chapter, we encountered situations that are not taxable (for example, interest on governmental bonds) and those that delay taxes (for example, using accelerated depreciation on the tax return). Astute managers make investment decisions that consider the tax effect of available alternatives. Similarly, outside analysts should consider how effectively management has managed its tax exposure and monitor the current and prospective impact of taxes on their interests in the company.

Consider an example. Large, capital-intensive companies with significant investments in buildings and equipment often have sizable deferred tax liabilities from temporary differences in depreciation. If new investments cause the level of depreciable assets to at least remain the same over time, the deferred tax liability can be effectively delayed indefinitely. Investors and creditors should be watchful for

situations that might cause material paydowns of that deferred tax liability, such as impending plant closings or investment patterns that suggest declining levels of depreciable assets. Unexpected additional tax expenditures can severely diminish an otherwise attractive prospective rate of return.

You also learned in the chapter that deferred tax assets represent future tax benefits. One such deferred tax asset that often reflects sizable future tax deductions is a net operating loss (NOL)

carryforward. When a company has a large net operating loss carryforward, a large amount of future income can be earned tax-free. This tax shelter can be a huge advantage, not to be overlooked by careful analysts.

Investment patterns and other disclosures can indicate potential tax expenditures.

Managers and outsiders are aware that increasing debt increases risk. Deferred tax liabilities increase reported debt. As discussed and demonstrated in

the previous chapter, financial risk often is measured by the debt to equity ratio, total liabilities divided by shareholders' equity. Other things being equal, the higher the debt to equity ratio, the higher the risk. Should the deferred tax liability be included in the computation of this ratio? Some analysts will argue that it should be excluded, observing that in many cases, the deferred tax liability account remains the same or continually grows larger. Their contention is that no future tax payment will be required. Others, though, contend that is no different from the common situation in which long-term borrowings tend to remain the same or continually grow larger. Research supports the notion that deferred tax liabilities are, in fact, viewed by investors as real liabilities, and investors appear to discount them according to the timing and likelihood of the liabilities' settlement.¹⁶

Net operating loss carryforwards can indicate significant future tax savings.

Whenever managerial discretion can materially impact reported earnings, analysts should be wary of the implications for earnings quality

assessment. We indicated earlier that the decision as to whether or not a valuation allowance is used, as well as the size of the allowance, is largely discretionary. Research indicates that an increase in a valuation allowance provides useful information, signaling that management is pessimistic about its ability to generate enough future income to benefit from the tax deductions provided by

Deferred tax liabilities increase risk as measured by the debt to equity ratio.

deferred tax assets.¹⁷ However, research also indicates that some companies do use the deferred tax asset valuation allowance account to manage earnings upward to meet analyst forecasts.¹⁸ More generally, a survey of nearly 600 corporate tax executives provides evidence that most top management care at least as much about tax expense and its effect on earnings per share as they do about the actual cash taxes that are paid by their companies, and that an important consideration in tax planning is increasing earnings per share.¹⁹ Alert investors should not overlook the potential for companies using tax expense to manage their earnings.

In short, managers who make decisions based on estimated pretax cash flows and outside investors and creditors who make decisions based on pretax income numbers are perilously ignoring one of the most important aspects of those decisions. Taxes should be a primary consideration in any business decision. ●

Concept Review Exercise

MULTIPLE DIFFERENCES AND NET OPERATING LOSS

Mid-South Cellular Systems began operations in 2024. In 2025, its second year of operations, pretax accounting income was \$88 million, which included the following amounts:

1. Insurance expense of \$14 million, representing one-third of a \$42 million, three-year casualty and liability insurance policy that is deducted for tax purposes entirely in 2025.
2. Insurance expense for a \$2 million premium on a life insurance policy that guarantees a \$50 million payment upon the death of the company president. The

premium is not deductible for tax purposes.

3. An asset with a four-year useful life was acquired last year. It is depreciated by the straight-line method in the income statement. MACRS is used on the tax return, causing deductions for depreciation to be more than straight-line depreciation the first two years but less than straight-line depreciation the next two years (\$ in millions):

| | Income Statement | Tax Return | Difference |
|------|-------------------------|-------------------|-------------------|
| 2024 | \$150 | \$198 | \$ (48) |
| 2025 | 150 | 264 | (114) |
| 2026 | 150 | 90 | 60 |
| 2027 | 150 | 48 | 102 |
| | <u>\$600</u> | <u>\$600</u> | <u>\$ 0</u> |

4. Equipment rental revenue of \$80 million is reported in the income statement, which does not include an additional \$20 million of advance payment for 2026 rent. Because tax law requires that advance rent be taxed when it is received, \$100 million of rental revenue is correctly reported on the 2025 income tax return.

The enacted tax rate is 25%.

Required:

1. Prepare the journal entry to record Mid-South Cellular's income taxes for 2025.
2. What is Mid-South Cellular's 2025 net income?

Solution

1. Prepare the journal entry to record Mid-South Cellular's income taxes for 2025.

| (\$ in millions) | Current Year | Future Taxable (Deductible) Amounts | | Future Taxable Amounts | Future Deductible Amounts |
|---------------------------------|--------------|-------------------------------------|-------|------------------------|---------------------------|
| | 2025 | 2026 | 2027 | (total) | (total) |
| Pretax accounting income | \$ 88 | | | | |
| Permanent difference: | | | | | |
| Life insurance premium | 2 | | | | |
| Temporary difference: | | | | | |
| Prepaid insurance | (28) | \$14 | \$ 14 | \$ 28 | |
| Depreciation | (114) | 60 | 102 | 162 | |
| Advance rent received | <u>20</u> | (20) | | | \$ (20) |
| Net operating loss (tax return) | \$(32) | | | | |
| NOL carryforward | <u>32</u> | | | | (32) |
| | \$ 0 | | | \$190 | \$(52) |
| Enacted tax rate | 25% | | | 25% | 25% |
| Tax payable | <u>\$ 0</u> | | | <u>\$47.5</u> | <u>\$ (13)</u> |

| Deferred Tax Liability | | Deferred Tax Asset | |
|------------------------|-------------|--------------------|-----------|
| | 12* | | 0 |
| | <u>35.5</u> | | <u>13</u> |
| | 47.5 | | 13 |

(Continued)

Step 1: Tax payable: \$0
Step 2: DTA end bal: \$13.0
DTL end bal: \$47.5
Step 3: DTA change: \$13.0
DTL change: \$35.5
Step 4: Tax exp plug: \$22.5

Journal Entry at the End of 2025

| | | |
|---|------|------|
| Income tax expense (to balance) | 22.5 | |
| Deferred tax asset (determined above) | 13.0 | |
| Deferred tax liability (determined above) | | 35.5 |

*The opening balance of the deferred tax liability relates to the temporary difference for depreciation in 2024, and is $\$48 \times 25\% = \12 .

2. What is Mid-South Cellular's 2025 net income?

| | |
|--------------------------|---------------|
| Pretax accounting income | \$88.0 |
| Income tax expense | (22.5) |
| Net income | <u>\$65.5</u> |

stockfour/Shutterstock

- 1. Explain to Laura how differences between financial reporting standards and income tax rules might cause the income tax expense and the amount of income tax paid to differ.** The differences in the rules for computing taxable income and those for financial reporting often cause amounts to be included in taxable income in a different year(s) from the year in which they are recognized for financial reporting purposes. Temporary differences result in future taxable or deductible amounts when the temporary differences reverse. As a result, tax payments frequently occur in years different from the years in which the revenues and expenses that cause the taxes are generated.
- 2. How might a reduction in future tax rates affect deferred tax assets in a way that reduces current net income?** Deferred tax assets capture anticipated reductions in future tax bills that result from the company being able to use tax deductions that have arisen from its operations but not yet been taken. For example, a company may have recognized \$100 of warranty expense in the financial statements but won't report the expense on the tax return until future warranty costs are actually incurred. The company knows it has a \$100 tax deduction coming when those costs are incurred, so it recognizes an asset for the anticipated tax savings arising from that deduction. Given a tax rate of 25%, the company would show a deferred tax asset of $25\% \times \$100 = \25 . Now imagine the company learns

that future tax rates have been reduced to 20%. In that case, the future \$100 tax deduction will save only \$20 of taxes, so the value of its deferred tax asset has declined by \$5. In the period the future tax rate change is enacted, the company is required to include in tax expense and therefore net income all of the effects of the tax rate change on existing deferred tax assets and liabilities. That's what happened in 2020 to companies that had big deferred tax assets when Congress enacted legislation that dramatically reduced future corporate tax rates.

3. What are net operating loss carryforwards and how can they provide cash savings? When a company has negative taxable income on its tax return, it is permitted to carry that net operating loss forward and offset it against taxable income in future years and to not pay tax in those years. Such NOL carryforwards can produce valuable tax savings in those future years. ●

The Bottom Line

- LO16-1** Temporary differences between pretax accounting income and taxable income produce future taxable or deductible amounts, which give rise to deferred tax liabilities and deferred tax assets. Consistent with the accrual concept, tax expense includes not only an amount associated with current tax payable, but also includes a deferred amount associated with changes in deferred tax assets and liabilities. To calculate tax expense, we follow a 4-step process: (1) calculate tax payable, (2) calculate the ending balances of any deferred tax accounts or any liability for uncertain tax positions, (3) calculate changes in those accounts, and (4) plug for tax expense. (*p. 905*)
- LO16-2** When the future tax consequence of a temporary difference will be to increase taxable income relative to pretax accounting income, future taxable amounts are created. The future tax consequences associated with those amounts are recognized as deferred tax liabilities. (*p. 908*)
- LO16-3** When the future tax consequence of a temporary difference will be to decrease taxable income relative to pretax accounting income, future deductible amounts are created. The future tax consequences associated with those amounts are recognized as deferred tax assets. (*p. 915*)
- LO16-4** Deferred tax assets are recognized for all deductible temporary differences. However, a deferred tax asset is then reduced by a valuation allowance if it is more likely than not that some portion or all of the deferred tax asset will not be realized. (*p. 921*)
- LO16-5** Permanent differences between the reported amount of an asset or liability in the financial statements and its tax basis are those caused by transactions and events that under existing tax law will never affect taxable income or taxes payable. These are disregarded when determining both the tax payable currently, the deferred tax effect, and tax expense. (*p. 925*)
- LO16-6** Deferred tax liabilities (and assets) are calculated by multiplying future taxable (and deductible) amounts by the currently enacted tax rates that will apply to them. If a change in a tax law or rate occurs, the deferred tax liability or asset is adjusted to reflect the change in the amount to be paid or recovered. That effect is reflected in tax expense in the year of the enactment of the change in the tax law or rate. (*p. 930*)

- LO16-7** Tax laws permit a net operating loss (NOL) to be used to reduce taxable income in other profitable years. For most companies, NOLs can be carried forward indefinitely and used to offset up to 80% of the taxable income reported in each future year. Some farm-related companies and insurance companies also are allowed to carry NOLs back two years to offset taxable income in those years and generate an immediate tax refund. The tax benefit of an NOL carryforward or carryback is recognized in the year of the loss. (*p. 934*)
- LO16-8** Deferred tax assets and deferred tax liabilities are classified as noncurrent. If they relate to the same taxable component of the company and the same tax jurisdiction, they are netted against each other and shown as a single noncurrent net deferred tax asset or liability. Otherwise they are not offset against each other for purposes of balance sheet presentation. Disclosure notes should reveal additional relevant information pertaining to deferred tax amounts reported on the balance sheet, the components of income tax expense, and available operating loss carryforwards. (*p. 939*)
- LO16-9** A tax benefit associated with an uncertain tax position may be reflected in the financial statements only if it is “more likely than not” that the company will be able to sustain the tax return position, based on its technical merits. It should be measured as the largest amount of benefit that is cumulatively greater than 50 percent likely to be realized. (*p. 941*)
- LO16-10** Through intraperiod tax allocation, the total income tax expense for a reporting period is allocated among the financial statement items that gave rise to it: specifically, income (or loss) from continuing operations, discontinued operations, and prior period adjustments (to the beginning retained earnings balance). (*p. 944*)
- LO16-11** Despite the similar approaches for accounting for taxation under IFRS and U.S. GAAP, differences in reported amounts for deferred taxes are among the most frequent between the two approaches because a great many of the *nontax* differences between IFRS and U.S. GAAP affect deferred taxes. (*pp. 923 and 928*) ●

Questions For Review of Key Topics

- Q 16-1** A member of the board of directors is concerned that the company's income statement reports income tax expense of \$12.3 million, but the income tax obligation to the government for the year is only \$7.9 million. How might the corporate controller explain this difference?
- Q 16-2** A deferred tax liability (or asset) is described as the tax effect of the temporary difference between the financial statement carrying amount (book value) of an asset or liability and its tax basis. Explain this tax effect of the temporary difference. How might it produce a deferred tax liability? A deferred tax asset?
- Q 16-3** Sometimes a temporary difference will produce future deductible amounts. Explain what is meant by future deductible amounts. Describe two general situations that have this effect. How are such situations recognized in the financial statements?
- Q 16-4** The benefit of future deductible amounts can be achieved only if future income is sufficient to take advantage of the deferred deductions. For that reason, not all deferred tax assets will ultimately be realized. How is this possibility reflected in the way we recognize deferred tax assets?
- Q 16-5** Temporary differences result in future taxable or deductible amounts when the related asset or liability is recovered or settled. Some differences, though, are not temporary. What events create permanent differences? What effect do these have on the determination of income taxes payable? Of deferred income taxes? Of tax expense?
- Q 16-6** Identify three examples of differences with no deferred tax consequences.
- Q 16-7** The income tax rate for Hudson Refinery has been 35% for each of its 12 years of operation. Company forecasters expect a much-debated tax reform bill to be passed by Congress early next year. The new tax measure would increase Hudson's tax rate to 42%. When measuring this year's deferred tax liability, which rate should Hudson use?
- Q 16-8** In late 2017, the federal tax rate for subsequent years was decreased from 35% to 21%. How would this affect an existing deferred tax liability? How would the change be reflected in net income?
- Q 16-9** A net operating loss occurs when tax-deductible expenses exceed taxable revenues. Tax laws permit the net operating loss to be used to reduce taxable

income in future profitable years. How are loss carryforwards recognized for financial reporting purposes?

Q 16-10 How are deferred tax assets and deferred tax liabilities reported in a classified balance sheet?

Q 16-11 Additional disclosures are required pertaining to deferred tax amounts reported on the balance sheet. What are the needed disclosures?

Q 16-12 Additional disclosures are required pertaining to the income tax expense reported in the income statement. What are the needed disclosures?

Q 16-13 Accounting for uncertainty in tax positions is prescribed by GAAP in FASB ASC 740-10: Income Taxes-Overall [previously *FASB Interpretation No. 48 (FIN 48)*]. Describe the two-step process required by GAAP.

Q 16-14 What is intraperiod tax allocation?

IFRS

Q 16-15 IFRS and U.S. GAAP follow similar approaches to accounting for taxation. Nevertheless, differences in reported amounts for deferred taxes are among the most frequent between IFRS and U.S. GAAP. Why?

COVID-19

Q 16-16 What are the primary ways in which the CARES Act changed accounting for the tax effects of NOLs?

COVID-19

Q 16-17 The CARES Act allows some companies to (1) save more taxes and (2) obtain those savings faster. How does the Act enable those benefits?

Brief Exercises

BE 16–1 Temporary difference LO16–1, LO16–2

A company reports 2024 *pretax accounting income* of \$10 million, but because of a single temporary difference, *taxable income* is only \$7 million. No temporary differences existed at the beginning of the year, and the tax rate is 25%. Prepare the appropriate journal entry to record income taxes.

BE 16–2 Temporary difference for depreciation; financial statement effects LO16–2

Kara Fashions uses straight-line depreciation for financial statement reporting and MACRS for income tax reporting. Three years after its purchase, one of Kara's buildings has a book value of \$400,000 and a tax basis of \$300,000. There were no other temporary differences and no permanent differences. Taxable income was \$4 million and Kara's tax rate is 25%. What is the deferred tax liability to be reported in the balance sheet? Assuming that the deferred tax liability balance was \$20,000 the previous year, prepare the appropriate journal entry to record income taxes this year.

BE 16–3 Temporary difference for asset 100% depreciated in year of purchase; financial statement effects LO16–2

Milo Manufacturing uses straight-line depreciation for financial statement reporting and is able to deduct 100% of the cost of equipment in the year the equipment is purchased for tax purposes. Four years after its purchase, one of Milo's manufacturing machines has a book value of \$600,000. There were no other temporary differences and no permanent differences. Taxable income was \$10 million and Milo's tax rate is 25%. What is the deferred tax liability to be reported in the balance sheet? Assuming that the deferred tax liability balance was \$175,000 the previous year, prepare the appropriate journal entry to record income taxes this year.

BE 16–4 Temporary difference LO16–1, LO16–3

A company reports *pretax accounting income* of \$10 million, but because of a single temporary difference, *taxable income* is \$12 million. No temporary differences existed at the beginning of the year, and the tax rate is 25%. Prepare the appropriate journal entry to record income taxes.

BE 16–5 Temporary difference; income tax payable given LO16–3

In 2024, Ryan Management collected rent revenue for 2025 tenant occupancy. For financial reporting, the rent is recorded as deferred revenue and then recognized as revenue in the period tenants occupy rental property. For tax reporting, the rent is taxed when collected in 2024. The deferred portion of the rent collected in 2024 was \$50 million. Taxable income is \$180 million in 2024. No temporary differences existed at the beginning of the year, and the tax rate is 25%. Prepare the appropriate journal entry to record income taxes in 2024.

BE 16–6 Temporary difference; income tax payable given LO16–3

Refer to the situation described in  BE 16–5. Suppose the deferred portion of the rent collected was \$40 million at the end of 2025. Taxable income is \$200 million. Prepare the appropriate journal entry to record income taxes in 2025.

BE 16–7 Valuation allowance LO16–3, LO16–4

At the end of the year, the deferred tax asset account had a balance of \$4 million attributable to a temporary difference of \$16 million in a liability for estimated expenses. Taxable income is \$60 million. No temporary differences existed at the beginning of the year, and the tax rate is 25%. Prepare the journal entry(s) to record income taxes, assuming it is more likely than not that three-fourths of the deferred tax asset will not ultimately be realized.

BE 16–8 Valuation allowance LO16–3, LO16–4

Uber Technologies, Inc., is a ridesharing provider. In its 2019 annual report, the company reported deferred tax assets totaling about \$11,230 million. The company also reported

valuation allowances totaling about \$9,855 million. Does that suggest that it is more likely than not that Uber will be able to realize most of its deferred tax assets?

BE 16–9 Temporary and permanent differences; financial statement effects  **LO16–2**,  **LO16–3**,  **LO16–5**

Differences between pretax accounting income and taxable income were as follows during 2024:

| | (\$ in millions) |
|--------------------------|---------------------|
| Pretax accounting income | \$300 |
| Permanent difference | <u>(24)</u> |
| | 276 |
| Temporary difference | <u>(16)</u> |
| Taxable income | <u><u>\$260</u></u> |

The cumulative temporary difference as of the end of 2024 is \$40 million (also the future taxable amount). The enacted tax rate is 25%. What is the deferred tax asset or liability to be reported in the balance sheet?

BE 16–10 Calculate taxable income  **LO16–2**,  **LO16–5**

Shannon Polymers uses straight-line depreciation for financial reporting purposes for equipment costing \$800,000 and with an expected useful life of four years and no residual value. Assume that, for tax purposes, the deduction is 40%, 30%, 20%, and 10% in those years. Pretax accounting income the first year the equipment was used was \$900,000, which includes interest revenue of \$20,000 from municipal governmental bonds. Other than the two described, there are no differences between accounting income and taxable income. The enacted tax rate is 25%. Prepare the journal entry to record income taxes.

BE 16–11 Multiple tax rates  **LO16–6**

J-Matt, Inc., had pretax accounting income of \$291,000 and taxable income of \$300,000 in 2024. The only difference between accounting and taxable income is estimated product warranty costs of \$9,000 for sales in 2024. Warranty payments are expected to be in equal

amounts over the next three years (2025–2027) and will be tax deductible at that time. Recent tax legislation will change the tax rate from the current 25% to 20% in 2026. Determine the amounts necessary to record J-Matt’s income taxes for 2024 and prepare the appropriate journal entry.

BE 16–12 Change in tax rate; financial statement effects

LO16–6

Superior Developers sells lots for residential development. When lots are sold, Superior recognizes income for financial reporting purposes in the year of the sale. For some lots, Superior recognizes income for tax purposes when the cash is collected. In 2023, Superior sold lots for \$20 million, for which no cash was collected at the time of the sale. This cash will be collected equally over 2024 and 2025. The enacted tax rate was 40% at the time of the sale. In 2024, a new tax law was enacted, revising the tax rate from 40% to 25% beginning in 2025. Calculate the total amount by which Superior should change its deferred tax liability in 2024.

BE 16–13 Net operating loss carryforward **LO16–7**

LossCo reported a net operating loss of \$25 million for financial reporting and tax purposes. The enacted tax rate is 25%. Assume that LossCo does **not** qualify as a type of company that is allowed to carry back an NOL to prior taxable years. Prepare the journal entry to recognize the income tax benefit of the net operating loss.

BE 16–14 Net operating loss carryback **LO16–7**

LossCo reported a net operating loss of \$25 million for financial reporting and tax purposes. Taxable income last year and the previous year, respectively, was \$20 million and \$15 million. The enacted tax rate each year is 25%. Assume that LossCo qualifies as a type of company that is allowed to carry back an NOL to two prior taxable years, using the earliest year first. Prepare the journal entry to recognize the income tax benefit of the net operating loss.

BE 16–15 Tax uncertainty **LO16–9**

First Bank has some questions as to the tax-free nature of \$5 million of governmental bonds held in its investment portfolio. This amount is excluded from First Bank’s taxable income

of \$55 million. Management has determined that there is a 65% chance that the tax-free status of this entire amount of interest can't withstand scrutiny of taxing authorities. Assuming a 25% tax rate, what amount of income tax expense should the bank report?

BE 16–16 Intrapерiod tax allocation  **LO16–10**

Southeast Airlines had pretax earnings of \$65 million. Included in this amount is income from discontinued operations of \$10 million. The company's tax rate is 25%. What is the amount of income tax expense that Southeast would report in its income statement for continuing operations? How should the gain on disposal of a discontinued operation be reported?

BE 16–17 COVID-19; Net operating loss  **LO16–7**

COVID-19

Hwang Inc. had taxable income of \$100,000 in 2017, no income or loss in 2018 and 2019, and an NOL of \$50,000 in 2020. The applicable tax rate was 40% in 2017 and 25% in 2018 and thereafter. Prepare the journal entry that Hwang would make in 2020, assuming it accounted for the NOL under the CARES Act.

BE 16–18 COVID-19; Net operating loss; financial statement effects  **LO16–7**

COVID-19

Krand Corp had been a very profitable company until the current tax year, in which it generated an NOL because a competitor launched a product that is much better than Krand's. Krand recognized a deferred tax asset associated with the NOL carryforward, as well as an offsetting valuation allowance that reduced the carrying value of the DTA to \$0. If instead the CARES Act applied to the year in which Krand generated its NOL, what would be the likely balance of its valuation allowance?

Exercises

E 16–1 Temporary difference; taxable income given; financial statement effects **LO16–1**, **LO16–2**, **LO16–8**

Alvis Corporation reports *pretax accounting income* of \$400,000, but due to a single temporary difference, *taxable income* is only \$250,000. At the beginning of the year, no temporary differences existed.

Required:

1. Assuming a tax rate of 25%, what will be Alvis's net income?
2. What will Alvis report in the balance sheet pertaining to income taxes?

E 16–2 Determine taxable income; determine prior year deferred tax amount; financial statement effects **LO16–2**

On January 1, 2021, Ameen Company purchased major pieces of manufacturing equipment for a total of \$36 million. Ameen uses straight-line depreciation for financial statement reporting and MACRS for income tax reporting. At December 31, 2023, the book value of the equipment was \$30 million and its tax basis was \$20 million. At December 31, 2024, the book value of the equipment was \$28 million and its tax basis was \$12 million. There were no other temporary differences and no permanent differences. Pretax accounting income for 2024 was \$50 million.

Required:

1. Prepare the appropriate journal entry to record Ameen's 2024 income taxes. Assume an income tax rate of 25%.
2. What is Ameen's 2024 net income?

E 16–3 Determine taxable income; determine prior year deferred tax amount; 100% depreciation in year of purchase;

financial statement effects LO16-2

[This exercise is a variation of  E 16-2, modified to have the asset fully depreciated in the year of purchase.] On January 1, 2021, Ameen Company purchased major pieces of manufacturing equipment for a total of \$36 million. Ameen uses straight-line depreciation for financial statement reporting and deducted 100% of the equipment's cost for income tax reporting in 2021. At December 31, 2023, the book value of the equipment was \$30 million. At December 31, 2024, the book value of the equipment was \$28 million. There were no other temporary differences and no permanent differences. Pretax accounting income for 2024 was \$50 million.

Required:

1. Prepare the appropriate journal entry to record Ameen's 2024 income taxes. Assume an income tax rate of 25%.
2. What is Ameen's 2024 net income?

E 16-4 Taxable income given; calculate deferred tax liability from book-tax difference; financial statement effects LO16-2

Ayres Services acquired an asset for \$80 million in 2024. The asset is depreciated for financial reporting purposes over four years on a straight-line basis (no residual value). For tax purposes the asset's cost is depreciated by MACRS. The enacted tax rate is 25%. Amounts for pretax accounting income, depreciation, and taxable income in 2024, 2025, 2026, and 2027 are as follows:

| | (\$ in millions) | | | |
|--------------------------------------|------------------|--------------|--------------|--------------|
| | 2024 | 2025 | 2026 | 2027 |
| Pretax accounting income | \$330 | \$350 | \$365 | \$400 |
| Depreciation on the income statement | 20 | 20 | 20 | 20 |
| Depreciation on the tax return | (25) | (33) | (15) | (7) |
| Taxable income | <u>\$325</u> | <u>\$337</u> | <u>\$370</u> | <u>\$413</u> |

Required:

For December 31 of each year, determine (a) the temporary book-tax difference for the depreciable asset and (b) the balance to be reported in the deferred tax liability account.

E 16–5 Taxable income given; calculate deferred tax liability from book-tax difference; 100% depreciation in the year of purchase; financial statement effects  **LO16–2**

[This exercise is a variation of  **E 16–4**, modified to have the asset fully depreciated in the year of purchase.] Ayres Services acquired an asset for \$80 million in 2024. The asset is depreciated for financial reporting purposes over four years on a straight-line basis (no residual value). Ayers deducted 100% of the asset's cost for income tax reporting in 2024. The enacted tax rate is 25%. Amounts for pretax accounting income, depreciation, and taxable income in 2024, 2025, 2026, and 2027 are as follows:

| | (\$ in millions) | | | |
|--------------------------------------|------------------|--------------|--------------|--------------|
| | 2024 | 2025 | 2026 | 2027 |
| Pretax accounting income | \$330 | \$350 | \$365 | \$400 |
| Depreciation on the income statement | 20 | 20 | 20 | 20 |
| Depreciation on the tax return | (80) | (0) | (0) | (0) |
| Taxable income | <u>\$270</u> | <u>\$370</u> | <u>\$385</u> | <u>\$420</u> |

Required:

For December 31 of each year, determine (a) the temporary book-tax difference for the depreciable asset and (b) the balance to be reported in the deferred tax liability account.

E 16–6 Temporary difference; income tax payable given  **LO16–3**

In 2024, DFS Medical Supply collected rent revenue for 2025 tenant occupancy. For income tax reporting, the rent is taxed when collected. For financial statement reporting, the

rent is recorded as deferred revenue and then recognized as revenue in the period tenants occupy the rental property. The deferred portion of the rent collected in 2024 amounted to \$300,000 at December 31, 2024. DFS had no temporary differences at the beginning of the year.

Required:

Assuming an income tax rate of 25% and 2024 income tax payable of \$950,000, prepare the journal entry to record income taxes for 2024.

E 16–7 Temporary difference; future deductible amounts; taxable income given  **LO16–3**

Lance Lawn Services reports warranty expense by estimating the amount that eventually will be paid to satisfy warranties on its product sales. For tax purposes, the expense is deducted when the warranty work is completed. At December 31, 2024, Lance has a warranty liability of \$2 million and taxable income of \$75 million. At December 31, 2023, Lance reported a deferred tax asset of \$435,000 related to this difference in reporting warranties; it's only temporary difference. The enacted tax rate is 25% each year.

Required:

Prepare the appropriate journal entry to record Lance's income tax provision for 2024.

E 16–8 Unrealized gain reported in net income from reporting investments at fair value; taxable when investments are sold  **LO16–2**,  **LO16–3**

Listed below are 10 causes of temporary differences. For each temporary difference, indicate (by letter) whether it will create future deductible amounts (D) or future taxable amounts (T).

Temporary Difference

- _____ 1. Accrual of loss contingency; tax deductible when paid.
- _____ 2. Newspaper subscriptions; taxable when cash is received, recognized for financial reporting when the performance obligation is satisfied.
- _____ 3. Prepaid rent; tax deductible when paid.

Temporary Difference

- _____ 4. Accrued bond interest expense; tax deductible when paid.
- _____ 5. Prepaid insurance; tax deductible when paid
- _____ 6. Unrealized loss reported in net income from recording investments at fair value; tax deductible when investments are sold.
- _____ 7. Warranty expense; estimated for financial reporting when products are sold; deducted for tax purposes when paid.
- _____ 8. Advance rent receipts on an operating lease as the lessor; taxable when received.
- _____ 9. Straight-line depreciation for financial reporting; accelerated depreciation for tax purposes.
- _____ 10. Accrued expense for employee vacation days not yet taken; tax deductible when employee takes vacation in future.

E 16–9 Unrealized gain reported in net income from reporting investments at fair value; taxable when investments are sold.

 **LO16–2**,  **LO16–3**

[This is a variation of  **E 16–8**, modified to focus on the balance sheet accounts related to the deferred tax amounts.]

Listed below are 10 causes of temporary differences. For each temporary difference indicate the balance sheet account for which the situation creates a temporary difference.

Temporary Difference

- _____ 1. Accrual of loss contingency; tax deductible when paid.
- _____ 2. Newspaper subscriptions; taxable when cash is received, recognized for financial reporting when the performance obligation is satisfied.
- _____ 3. Prepaid rent; tax deductible when paid.
- _____ 4. Accrued bond interest expense; tax deductible when paid.
- _____ 5. Prepaid insurance; tax deductible when paid
- _____ 6. Unrealized loss reported in net income from recording investments at fair value; tax deductible when investments are sold.

Temporary Difference

- _____ 7. Warranty expense; estimated for financial reporting when products are sold; deducted for tax purposes when paid.
- _____ 8. Advance rent receipts on an operating lease as the lessor; taxable when received.
- _____ 9. Straight-line depreciation for financial reporting; accelerated depreciation for tax purposes.
- _____ 10. Accrued expense for employee vacation days not yet taken; tax deductible when employee takes vacation in future.

E 16–10 Calculate income tax amounts under various circumstances; financial statement effects  **LO16–2**,  **LO16–3**

Four independent situations are described below. Each involves future deductible amounts and/or future taxable amounts produced by temporary differences:

| | (\$ in thousands) | | | |
|--------------------------------------|-------------------|-------|-------|-------|
| | Situation | | | |
| | 1 | 2 | 3 | 4 |
| Taxable income | \$84 | \$216 | \$196 | \$260 |
| Future deductible amounts | 16 | | 20 | 20 |
| Future taxable amounts | | 16 | 16 | 28 |
| Balance(s) at beginning of the year: | | | | |
| Deferred tax asset | 2 | | 9 | 4 |
| Deferred tax liability | | 8 | 2 | |

The enacted tax rate is 25%.

Required:

For each situation, determine the:

- Income tax payable currently.
- Deferred tax asset–balance.

- c. Deferred tax asset—change.
- d. Deferred tax liability—balance.
- e. Deferred tax liability—change.
- f. Income tax expense.

E 16–11 Determine taxable income  **LO16–2**,  **LO16–3**

Eight independent situations are described below. Each involves future deductible amounts and/or future taxable amounts (\$ in millions).

| Temporary Differences Reported First on: | | | |
|--|---------|----------------|---------|
| The Income Statement | | The Tax Return | |
| Revenue | Expense | Revenue | Expense |
| 1. | \$20 | | |
| 2. | | \$20 | |
| 3. | | | \$20 |
| 4. | | | \$20 |
| 5. | 15 | 20 | |
| 6. | | 15 | |
| 7. | 15 | | 10 |
| 8. | 15 | 5 | 10 |

Required:

For each situation, determine taxable income, assuming pretax accounting income is \$100 million.

E 16–12 Deferred tax asset; taxable income given; valuation allowance  **LO16–4**

At the end of 2023, Payne Industries had a deferred tax asset account with a balance of \$25 million attributable to a temporary book-tax difference of \$100 million in a liability for estimated expenses. At the end of 2024, the temporary difference is \$64 million. Payne has no other temporary differences and no valuation allowance for the deferred tax asset. Taxable income for 2024 is \$180 million and the tax rate is 25%.

Required:

1. Prepare the journal entry(s) to record Payne's income taxes for 2024, assuming it is more likely than not that the deferred tax asset will be realized.
2. Prepare the journal entry(s) to record Payne's income taxes for 2024, assuming it is more likely than not that only one-fourth of the deferred tax asset ultimately will be realized.

E 16–13 Deferred tax asset; income tax payable given; previous balance in valuation allowance  **LO16–4**

[This is a variation of [E 16–12](#), modified to assume a previous balance in the valuation allowance.]

At the end of 2023, Payne Industries had a deferred tax asset account with a balance of \$25 million attributable to a temporary book-tax difference of \$100 million in a liability for estimated expenses. At the end of 2024, the temporary difference is \$64 million. Payne has no other temporary differences. Taxable income for 2024 is \$180 million and the tax rate is 25%.

Payne has a valuation allowance of \$10 million for the deferred tax asset at the beginning of 2024.

Required:

1. Prepare the journal entry(s) to record Payne's income taxes for 2024, assuming it is more likely than not that the deferred tax asset will be realized.
2. Prepare the journal entry(s) to record Payne's income taxes for 2024, assuming it is more likely than not that only one-fourth of the deferred tax asset ultimately will be realized.

E 16–14 FASB codification research; valuation allowance  **LO16–4**

When a company records a deferred tax asset, it may need to also report a valuation allowance if it is “more likely than not” that some portion or all of the deferred tax asset will not be realized.

Required:

1. Access the FASB Accounting Standards Codification at the FASB website (www.fasb.org) and select Basic View for free access. What is the specific nine-digit Codification citation (XXX-XX-XX-XX) that describes the guidelines for determining the disclosure requirements pertaining to how a firm should determine whether a valuation allowance for deferred tax assets is needed?
2. What are the guidelines?

E 16–15 Multiple differences; calculate taxable income; financial statement effects  **LO16–2**,  **LO16–5**

Southern Atlantic Distributors began operations in January 2024 and purchased a delivery truck for \$40,000. Southern Atlantic plans to use straight-line depreciation over a four-year expected useful life for financial reporting purposes. For tax purposes, the deduction is 50% of cost in 2024, 30% in 2025, and 20% in 2026. Pretax accounting income for 2024 was \$300,000, which includes interest revenue of \$40,000 from municipal governmental bonds. The enacted tax rate is 25%.

Required:

Assuming no differences between accounting income and taxable income other than those described above:

1. Prepare the journal entry to record income taxes in 2024.
2. What is Southern Atlantic’s 2024 net income?

E 16–16 Multiple differences; financial statement effects  **LO16–2**,  **LO16–3**,  **LO16–5**

For the year ended December 31, 2024, Fidelity Engineering reported pretax accounting income of \$978,000. Selected information for 2024 from Fidelity’s records follows:

| | |
|---|----------|
| Interest income on municipal governmental bonds | \$32,000 |
| Depreciation claimed on the 2024 tax return in excess of depreciation on the income statement | 58,000 |
| Carrying amount of depreciable assets in excess of their tax basis at year-end | 88,000 |

| | |
|---|--------|
| Warranty expense reported on the income statement | 26,000 |
| Actual warranty expenditures in 2024 | 10,000 |

Fidelity's income tax rate is 25%. At January 1, 2024, Fidelity's records indicated balances of zero and \$7,500 in its deferred tax asset and deferred tax liability accounts, respectively.

Required:

1. Determine the amounts necessary to record income taxes for 2024, and prepare the appropriate journal entry.
2. What is Fidelity's 2024 net income?

E 16–17 Multiple tax rates; financial statement effects

 **LO16–3**,  **LO16–6**

Allmond Corporation, organized on January 3, 2024, had pretax accounting income of \$14 million and taxable income of \$20 million for the year ended December 31, 2024. The 2024 tax rate is 25%. The only difference between accounting income and taxable income is estimated product warranty costs. Assume that expected payments and scheduled tax rates (based on recently enacted tax legislation) are as follows:

| | | |
|------|-------------|-----|
| 2025 | \$2 million | 20% |
| 2026 | 1 million | 20% |
| 2027 | 1 million | 20% |
| 2028 | 2 million | 15% |

Required:

1. Determine the amounts necessary to record Allmond's income taxes for 2024 and prepare the appropriate journal entry.
2. What is Allmond's 2024 net income?

E 16–18 Change in tax rates; calculate taxable income

 **LO16–2**,  **LO16–6**

Arnold Industries has pretax accounting income of \$32 million for the year ended December 31, 2024. The tax rate is 25%. The only difference between accounting income and taxable income relates to an operating lease in which Arnold is the lessee. The

inception of the lease was December 28, 2024. An \$8 million advance rent payment at the inception of the lease is tax deductible in 2024 but, for financial reporting purposes, represents prepaid rent expense to be recognized equally over the four-year lease term.

Required:

1. Determine the amounts necessary to record Arnold's income taxes for 2024, and prepare the appropriate journal entry.
2. Determine the amounts necessary to record Arnold's income taxes for 2025, and prepare the appropriate journal entry. Pretax accounting income was \$50 million for the year ended December 31, 2025.
3. Assume a new tax law is enacted in 2025 that causes the tax rate to change from 25% to 15% beginning in 2026. Determine the amounts necessary to record Arnold's income taxes for 2025, and prepare the appropriate journal entry.
4. Why is Arnold's 2025 income tax expense different when the tax rate change occurs from what it would be without the change?

E 16–19 Deferred taxes; change in tax rates; financial statement effects  **LO16–2**,  **LO16–6**

Bronson Industries reported a deferred tax liability of \$5 million for the year ended December 31, 2023, related to a temporary difference of \$20 million. The tax rate was 25%. The temporary difference is expected to reverse in 2025, at which time the deferred tax liability will become payable. There are no other temporary differences in 2023–2025. Assume a new tax law is enacted in 2024 that causes the tax rate to change from 25% to 15% beginning in 2025. (The rate remains 25% for 2024 taxes.) Taxable income in 2024 is \$30 million.

Required:

Determine the effect of the tax rate change and prepare the appropriate journal entry to record Bronson's income tax expense in 2024. What effect, if any, will enacting the change in the 2025 tax rate have on Bronson's 2024 net income?

E 16–20 Deferred taxes; change in tax rates; financial statement effects  **LO16–3**,  **LO16–6**

Shwonson Industries reported a deferred tax asset of \$5 million for the year ended December 31, 2023, related to a temporary difference of \$20 million. The tax rate was 25%. The temporary difference is expected to reverse in 2025, at which time the deferred tax asset will reduce taxable income. There are no other temporary differences in 2023–2025. Assume a new tax law is enacted in 2024 that causes the tax rate to change from 25% to 15% beginning in 2025. (The rate remains 25% for 2024 taxes.) Taxable income in 2024 is \$30 million.

Required:

Determine the effect of the tax rate change and prepare the appropriate journal entry to record Shwonson’s income tax expense in 2024. What effect, if any, will enacting the change in the 2025 tax rate have on Shwonson’s 2024 net income?

E 16–21 Multiple temporary differences; record income taxes

 **LO16–2**,  **LO16–3**

The information that follows pertains to Esther Food Products:

- a. At December 31, 2024, temporary differences were associated with the following future taxable (deductible) amounts:

| | |
|-------------------|----------|
| Depreciation | \$60,000 |
| Prepaid expenses | 17,000 |
| Warranty expenses | (12,000) |

- b. No temporary differences existed at the beginning of 2024.
 c. Pretax accounting income was \$80,000 and taxable income was \$15,000 for the year ended December 31, 2024.
 d. The tax rate is 25%.

Required:

Determine the amounts necessary to record income taxes for 2024, and prepare the appropriate journal entry.

E 16–22 Multiple temporary differences; record income taxes; financial statement effects  **LO16–2**,  **LO16–3**

The information that follows pertains to Richards Refrigeration, Inc.:

- a. At December 31, 2024, temporary differences existed between the financial statement book values and the tax bases of the following (\$ in millions):

| | Book Value | Tax Basis | Future Taxable (Deductible) Amount |
|---|-----------------------|----------------------|---|
| Buildings and equipment (net of accumulated depreciation) | \$120 | \$90 | \$ 30 |
| Prepaid insurance | 50 | 0 | 50 |
| Liability—loss contingency | 25 | 0 | (25) |

- b. No temporary differences existed at the beginning of 2024.
- c. Pretax accounting income was \$200 million and taxable income was \$145 million for the year ended December 31, 2024. The tax rate is 25%.

Required:

1. Determine the amounts necessary to record income taxes for 2024, and prepare the appropriate journal entry.
2. What is the 2024 net income?

E 16–23 Net operating loss carryforward; financial statement effects  **LO16–7**

During 2024, its first year of operations, Baginski Steel Corporation reported a net operating loss of \$360,000 for financial reporting and tax purposes. The enacted tax rate is 25%.

Required:

1. Prepare the journal entry to recognize the income tax benefit of the net operating loss. Assume the weight of available evidence suggests that future taxable income will be sufficient to benefit from future deductible amounts arising from the net operating loss carryforward.

2. Show the lower portion of the 2024 income statement that reports the income tax benefit of the net operating loss.

E16–24 Net operating loss carryforward; financial statement effects  **LO16–7**

Assume the same facts as in  **E 16-23**. During 2025, Baginski reported income of \$200,000 for financial reporting and tax purposes. The enacted tax rate is 25%.

Required:

1. Prepare the journal entry to recognize Baginski’s 2025 tax expense or tax benefit.
2. Show the lower portion of the 2025 income statement that reports income tax expense or benefit.

E 16–25 Net operating loss carryback; financial statement effects  **LO16–7**

Wynn Farms reported a net operating loss of \$100,000 for financial reporting and tax purposes in 2024. The enacted tax rate is 25%. Taxable income, tax rates, and income taxes paid in Wynn’s first four years of operation were as follows:

| | Taxable Income | Tax Rates | Income Taxes Paid |
|------|----------------|-----------|-------------------|
| 2020 | \$60,000 | 15% | \$ 9,000 |
| 2021 | 70,000 | 15 | 10,500 |
| 2022 | 80,000 | 25 | 20,000 |
| 2023 | 60,000 | 30 | 18,000 |

Required:

1. Prepare the journal entry to recognize the income tax benefit of the net operating loss. NOL carrybacks are not allowed for most companies, except for property and casualty insurance companies as well as some farm-related businesses. Assume Wynn is one of those businesses.
2. Show the lower portion of the 2024 income statement that reports the income tax benefit of the net operating loss.

E 16–26 Net operating loss carryback and carryforward;
financial statement effects  **LO16–7**

[This exercise is based on the situation described in  **E 16–25**, modified to include a carryforward in addition to a carryback.]

Wynn Farms reported a net operating loss of \$160,000 for financial reporting and tax purposes in 2024. The enacted tax rate is 25%. Taxable income, tax rates, and income taxes paid in Wynn’s first four years of operation were as follows:

| | Taxable Income | Tax Rates | Income Taxes Paid |
|------|-----------------------|------------------|--------------------------|
| 2020 | \$60,000 | 15% | \$ 9,000 |
| 2021 | 70,000 | 15 | 10,500 |
| 2022 | 80,000 | 25 | 20,000 |
| 2023 | 60,000 | 30 | 18,000 |

Required:

1. NOL carrybacks are not allowed for most companies, except for property and casualty insurance companies as well as some farm-related businesses. Assume Wynn is one of those businesses. Prepare the journal entry to recognize the income tax benefit of the net operating loss.
2. Show the lower portion of the 2024 income statement that reports the income tax benefit of the net operating loss.

E 16–27 Identifying income tax deferrals  **LO16–2**,
 **LO16–3**,  **LO16–5**,  **LO16–7**

Listed below are ten independent situations. For each situation indicate (by letter) whether it will create a deferred tax asset (A), a deferred tax liability (L), or neither (N).

Situation

- _____ 1. Advance payments on insurance, tax deductible when paid.
- _____ 2. Estimated warranty costs; tax deductible when paid.
- _____ 3. Rent revenue collected in advance; cash basis for tax purposes.

Situation

- _____ 4. Interest received from investments in municipal governmental bonds.
- _____ 5. Prepaid expenses, tax deductible when paid.
- _____ 6. Net operating loss carryforward.
- _____ 7. Net operating loss carryback.
- _____ 8. Straight-line depreciation for financial reporting; MACRS for tax purposes.
- _____ 9. Organization costs expensed when incurred; tax deductible over 15 years.
- _____ 10. Life insurance proceeds received upon the death of the company president.

E 16–28 Multiple temporary differences; balance sheet presentation; financial statement effects  **LO16–2**,  **LO16–3**,  **LO16–5**,  **LO16–6**,  **LO16–8**

On December 31, DePaul Corporation had the following cumulative temporary differences associated with its operations:

1. Estimated warranty expense, \$16 million temporary difference: expense recorded in the year of the sale; tax deductible when paid (one-year warranty).
2. Depreciation expense, \$120 million temporary difference: straight-line in the income statement; MACRS on the tax return.
3. Income from installment sales of properties, \$20 million temporary difference: income recorded in the year of the sale; taxable when received equally over the next five years.
4. Rent revenue collected in advance, \$24 million temporary difference; taxable in the year collected; recorded as income when the performance obligation is satisfied in the following year.

Required:

Assuming DePaul will show a single noncurrent net amount in its December 31 balance sheet, indicate that amount and whether it is a net deferred tax asset or liability. The tax rate is 25%.

E 16–29 Multiple tax rates; financial statement effects

 LO16–2,  LO16–5,  LO16–6

Case Development began operations in December 2024. When property is sold on an installment basis, Case recognizes installment income for financial reporting purposes in the year of the sale. For tax purposes, installment income is reported by the installment method. The 2024 installment income was \$600,000 and will be collected over the next three years. Scheduled collections and enacted tax rates for 2025–2027 are as follows:

| | | |
|------|-----------|-----|
| 2025 | \$140,000 | 20% |
| 2026 | 260,000 | 25 |
| 2027 | 200,000 | 25 |

Pretax accounting income for 2024 was \$810,000, which includes interest revenue of \$10,000 from municipal governmental bonds. The enacted tax rate for 2024 is 20%.

Required:

Page 959

1. Assuming no differences between accounting income and taxable income other than those described above, prepare the appropriate journal entry to record Case's 2024 income taxes.
2. What is Case's 2024 net income?

E 16–30 Multiple differences; multiple tax rates; financial statement effects LO16–2, LO16–3, LO16–5, LO16–6

[This exercise is a variation of  E 16–29, modified to include a second temporary difference.]

Case Development began operations in December 2024. When property is sold on an installment basis, Case recognizes installment income for financial reporting purposes in the year of the sale. For tax purposes, installment income is reported by the installment method. 2024 installment income was \$600,000 and will be collected over the next three years. Scheduled collections and enacted tax rates for 2025–2027 are as follows:

| | | |
|------|-----------|-----|
| 2025 | \$140,000 | 20% |
| 2026 | 260,000 | 25 |
| 2027 | 200,000 | 25 |

Case also had product warranty costs of \$80,000 expensed for financial reporting purposes in 2024. For tax purposes, only the \$20,000 of warranty costs actually paid in 2024 was deducted. The remaining \$60,000 will be deducted for tax purposes when paid over the next three years as follows:

| | |
|------|----------|
| 2025 | \$20,000 |
| 2026 | 24,000 |
| 2027 | 16,000 |

Pretax accounting income for 2024 was \$810,000, which includes interest revenue of \$10,000 from municipal bonds. The enacted tax rate for 2024 is 20%.

Required:

1. Assuming no differences between accounting income and taxable income other than those described above, prepare the appropriate journal entry to record Case's 2024 income taxes.
2. What is Case's 2024 net income?

E 16–31 Balance sheet classification; financial statement effects

 **LO16–8**

As of December 31, 2024, Lange Company has the following deferred tax assets and liabilities:

Deferred tax assets

| | |
|---------------------------|----------------|
| Pension plans | \$300,000 |
| Inventory | <u>200,000</u> |
| Total deferred tax assets | \$500,000 |

Deferred tax liabilities

| | |
|---|----------------|
| Property, plant and equipment | \$100,000 |
| Gain on equity investments (unrealized) | <u>350,000</u> |
| Total deferred tax liabilities | \$450,000 |

Required:

1. Assume that all of Lange's deferred tax assets and liabilities are in the same tax jurisdiction. How would deferred taxes be shown on Lange's balance sheet?
2. Assume that the deferred tax effects of Lange's pension plans and unrealized gains on investments occurred in a different tax jurisdiction from Lange's other deferred tax effects. How would deferred taxes be shown on Lange's balance sheet?

E 16–32 Concepts; terminology  **LO16–2** through  **LO16–8**

Listed below are several terms and phrases associated with accounting for income taxes. Pair each item from List A with the item from List B (by letter) that is most appropriately associated with it.

| List A | List B |
|---|--|
| _____ 1. No deferred tax consequences. | a. Deferred tax liability. |
| _____ 2. Originates, then reverses. | b. Deferred tax asset. |
| _____ 3. Revise deferred tax amounts. | c. 2 years. |
| _____ 4. Operating loss. | d. Current and deferred tax consequence combined. |
| _____ 5. Future tax effect of prepaid expenses; tax deductible when paid. | e. Temporary difference. |
| _____ 6. Loss carryback. | f. Specific tax rates times amounts reversing each year. |
| _____ 7. Future tax effect of estimated warranty expense. | g. Nontemporary differences. |
| _____ 8. Valuation allowance. | h. When enacted tax rate changes. |
| _____ 9. Phased-in change in rates. | i. Net deferred tax asset or liability. |
| _____ 10. Balance sheet presentation. | j. "More likely than not" test. |
| _____ 11. Individual tax consequences of financial statement components. | k. Intraproduct tax allocation. |
| _____ 12. Income tax expense. | l. Negative taxable income. |

E 16–33 Tax credit; uncertain tax position; financial statement effects LO16–9

Delta Catfish Company has taken a position in its tax return to claim a tax credit of \$10 million (direct reduction in taxes payable) and has determined that its sustainability is “more likely than not,” based on its technical merits. Delta has developed the probability table shown below of all possible material outcomes (\$ in millions):

| Probability Table | | | | | |
|--|------|------|------|------|------|
| Amount of the tax benefit that management expects to receive | \$10 | \$ 8 | \$ 6 | \$ 4 | \$ 2 |
| Percentage likelihood that the tax benefit will be sustained at this level | 10 % | 20 % | 25 % | 20 % | 25 % |

Delta’s taxable income is \$84 million for the year. Its effective tax rate is 25%. The tax credit would be a direct reduction in current taxes payable.

Required:

1. At what amount would Delta measure the tax benefit in its income statement?
2. Prepare the appropriate journal entry for Delta to record its income taxes for the year.

E 16–34 Intraperiod tax allocation; financial statement effects LO16–10

The following income statement does not reflect intraperiod tax allocation.

Required:

Recast the income statement to reflect intraperiod tax allocation.

| INCOME STATEMENT | |
|---|---------------------|
| For the Fiscal Year Ended March 31, 2024 | |
| (\$ in millions) | |
| Sales revenue | \$830 |
| Cost of goods sold | <u>(350)</u> |
| Gross profit | 480 |
| Operating expenses | (180) |
| Income tax expense | <u>(54)</u> |
| Income before discontinued operations | 246 |
| Loss from discontinued operations | <u>(84)</u> |
| Net income | <u><u>\$162</u></u> |

The company's tax rate is 25%.

E 16–35 FASB codification research  **LO16–6**,  **LO16–8**,
 **LO16–10**

Access the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org) and select Basic View for free access. What is the specific eight-digit Codification citation (XXX-XX-XX-X) that applies to each of the following items:

1. The specific items to which income tax expense is allocated for intraperiod tax allocation.
2. The tax rate used to calculate deferred tax assets and liabilities.
3. The required disclosures in the notes to financial statements for the components of income tax expense.

E 16–36 COVID-19; Net operating loss; financial statement effects  **LO16–7**

COVID-19

Hallock Inc. reports net operating income (loss) for financial reporting and tax purposes in each year as follows:

| 2016 | 2017 | 2018 | 2019 | 2020 |
|-------|-------|------|------|---------|
| \$100 | \$100 | \$0 | \$0 | \$(180) |

Hallock's federal tax rate decreased from 35% to 21% starting in 2018. Hallock accounts for its 2020 NOL under the CARES Act.

Required:

1. Prepare the appropriate journal entry to record Hallock's 2020 income taxes.
2. Show the lower portion of the 2020 income statement that reports income tax expense or benefit.

E 16–37 COVID-19; Net operating loss; financial statement effects  **LO16–7**

COVID-19

Mallock Inc. reports net operating income (loss) for financial reporting and tax purposes in each year as follows:

| 2016 | 2017 | 2018 | 2019 | 2020 |
|-------|------|------|------|---------|
| \$100 | \$20 | \$0 | \$0 | \$(180) |

Mallock's federal tax rate decreased from 35% to 21% starting in 2018. Mallock accounts for its 2020 NOL under the CARES Act.

Required:

1. Prepare the appropriate journal entry to record Mallock's 2020 income taxes.
2. Show the lower portion of the 2020 income statement that reports income tax expense or benefit.

Problems

P 16–1 Single temporary difference originates each year for four years  **LO16–2**

Alsup Consulting sometimes performs services for which it receives payment at the conclusion of the engagement, up to six months after services commence. Alsup recognizes service revenue for financial reporting purposes when the services are performed. For tax purposes, revenue is reported when fees are collected. Service revenue, collections, and pretax accounting income for 2023–2026 are as follows:

| | Service Revenue | Collections | Pretax Accounting Income |
|------|-----------------|-------------|--------------------------|
| 2023 | \$660,000 | \$620,000 | \$186,000 |
| 2024 | 750,000 | 778,000 | 260,000 |
| 2025 | 710,000 | 702,000 | 228,000 |
| 2026 | 716,000 | 720,000 | 200,000 |

There are no differences between accounting income and taxable income other than the temporary difference described above. The enacted tax rate for each year is 25%.

Required:

1. Prepare the appropriate journal entry to record Alsup's 2024 income taxes.
2. Prepare the appropriate journal entry to record Alsup's 2025 income taxes.
3. Prepare the appropriate journal entry to record Alsup's 2026 income taxes.

(*Hint:* You will find it helpful to prepare a schedule that shows the balances in service revenue receivable at December 31, 2023–2026.)

P 16–2 Temporary difference; determine deferred tax amount for three years; financial statement effects  **LO16–3**

Times-Roman Publishing Company reports the following amounts in its first three years of operation:

| (\$ in thousands) | 2024 | 2025 | 2026 |
|--------------------------|-------|-------|-------|
| Pretax accounting income | \$250 | \$240 | \$230 |
| Taxable income | 290 | 220 | 260 |

The difference between pretax accounting income and taxable income is due to subscription revenue for one-year magazine subscriptions being reported for tax purposes in the year received, but reported in the income statement in later years when the performance obligation is satisfied. The income tax rate is 25% each year. Times-Roman anticipates profitable operations in the future.

Required:

1. What is the balance sheet account that gives rise to a temporary difference in this situation?
2. For each year, indicate the cumulative amount of the temporary difference at year-end.
3. Determine the balance in the related deferred tax account at the end of each year. Is it a deferred tax asset or a deferred tax liability?

P 16–3 Change in tax rate; single temporary difference; financial statement effects  **LO16–2**,  **LO16–6**

Dixon Development began operations in December 2024. When lots for industrial development are sold, Dixon recognizes income for financial reporting purposes in the year of the sale. For some lots, Dixon recognizes income for tax purposes when collected. Income recognized for financial reporting purposes in 2024 for lots sold this way was \$12 million, which will be collected over the next three years. Scheduled collections for 2025–2027 are as follows:

| | |
|------|------------------|
| 2025 | \$ 4 million |
| 2026 | 5 million |
| 2027 | <u>3 million</u> |

\$12 million

Pretax accounting income for 2024 was \$16 million. The enacted tax rate is 25%.

Required:

1. Assuming no differences between accounting income and taxable income other than those described above, prepare the journal entry to record income taxes in 2024.
2. Suppose a new tax law, revising the tax rate from 25% to 20%, beginning in 2026, is enacted in 2025, when pretax accounting income was \$20 million. No 2025 lot sales qualified for the special tax treatment. Prepare the appropriate journal entry to record income taxes in 2025.
3. If the new tax rate had not been enacted, what would have been the appropriate balance in the deferred tax liability account at the end of 2025? Why?

P 16–4 Change in tax rate; record taxes for four years

 **LO16–2**,  **LO16–6**

Zekany Corporation would have had identical income before taxes on both its income tax returns and income statements for the years 2024 through 2027 except for differences in depreciation on an operational asset. The asset cost \$120,000 and is depreciated for income tax purposes in the following amounts:

| | |
|------|----------|
| 2024 | \$39,600 |
| 2025 | 52,800 |
| 2026 | 18,000 |
| 2027 | 9,600 |

The operational asset has a four-year life and no residual value. The straight-line method is used for financial reporting purposes.

Income amounts before depreciation expense and income taxes for each of the four years were as follows:

| | 2024 | 2025 | 2026 | 2027 |
|--------------------------|----------|----------|----------|----------|
| Accounting income before | \$60,000 | \$80,000 | \$70,000 | \$70,000 |

| | 2024 | 2025 | 2026 | 2027 |
|--|------|------|------|------|
|--|------|------|------|------|

taxes and
depreciation

Assume the income tax rate for 2024 and 2025 was 30%; however, during 2025, tax legislation was passed to raise the tax rate to 40% beginning in 2026. The 40% rate remained in effect through the years 2026 and 2027. Both the accounting and income tax periods end December 31.

Required:

Prepare the journal entries to record income taxes for the years 2024 through 2027.

P 16–5 Change in tax rate; record taxes for four years

 **LO16–2**,  **LO16–5**,  **LO16–6**

The DeVille Company reported pretax accounting income on its income statement as follows:

| | |
|------|-----------|
| 2024 | \$350,000 |
| 2025 | 270,000 |
| 2026 | 340,000 |
| 2027 | 380,000 |

Included in the income of 2024 was an installment sale of property in the amount of \$50,000. However, for tax purposes, DeVille reported the income in the year cash was collected. Cash collected on the installment sale was \$20,000 in 2025, \$25,000 in 2026, and \$5,000 in 2027.

Included in the 2026 income was \$15,000 interest from investments in municipal governmental bonds.

The enacted tax rate for 2024 and 2025 was 40%, but during 2025, new tax legislation was passed reducing the tax rate to 25% for the years 2026 and beyond.

Required:

Prepare the year-end journal entries to record income taxes for the years 2024–2027.

P 16–6 Multiple differences; temporary difference yet to originate; tax rates change  **LO16–2**,  **LO16–3**,  **LO16–6**

You are the new accounting manager at the Barry Transport Company. Your CFO has asked you to provide input on the company's income tax position based on the following:

1. Pretax accounting income was \$45 million and taxable income was \$8 million for the year ended December 31, 2024.
2. The difference was due to three items:
 - a. Tax depreciation exceeds book depreciation by \$30 million in 2024 for the business complex acquired that year. This amount is scheduled to be \$60 million in 2025 and to reverse as (\$50 million) and (\$40 million) in 2026 and 2027, respectively.
 - b. Insurance of \$12 million was paid in 2024 for 2025 coverage.
 - c. A \$5 million loss contingency was accrued in 2024, to be paid in 2026.
3. No temporary differences existed at the beginning of 2024.
4. The tax rate is 25%.

Required:

1. Determine the amounts necessary to record income taxes for 2024, and prepare the appropriate journal entry.
2. Assume the enacted federal income tax law specifies that the tax rate will change from 25% to 20% in 2026. When scheduling the reversal of the depreciation difference, you were uncertain as to how to deal with the fact that the difference will continue to originate in 2025 before reversing the next two years. Upon consulting **PricewaterhouseCoopers'** *Comperio* database, you found:

.441 Depreciable and amortizable assets

Only the reversals of the temporary difference at the balance sheet date would be scheduled. Future originations are not considered in determining the reversal pattern of temporary differences for depreciable assets. *FAS 109* [FASB ASC 740–Income Taxes] is silent as to how the balance sheet date temporary differences are deemed to reverse, but the FIFO pattern is intended.

You interpret that to mean, when future taxable amounts are being scheduled, and a portion of a temporary difference has yet to originate, only the reversals of the *temporary difference at the balance sheet date* can be scheduled and multiplied by the tax rate that will be in effect when the difference reverses. Future originations (like the depreciation difference the second year) are not considered when determining the timing of the reversal. For the existing temporary difference, it is assumed that the difference will reverse the first year the difference begins reversing.

Determine the amounts necessary to record income taxes for 2024, and prepare the appropriate journal entry.

P 16–7 Multiple differences; calculate taxable income; balance sheet classification; financial statement effects  **LO16–2**,  **LO16–3**,  **LO16–5**,  **LO16–8**

Sherrod, Inc., reported pretax accounting income of \$76 million for 2024. The following information relates to differences between pretax accounting income and taxable income:

- a. Income from installment sales of properties included in pretax accounting income in 2024 exceeded that reported for tax purposes by \$3 million. The installment receivable account at year-end 2024 had a balance of \$7 million (representing portions of 2023 and 2024 installment sales), expected to be collected equally in 2025 and 2026.
- b. Sherrod was assessed a penalty of \$2 million by the Environmental Protection Agency for violation of a federal law in 2024. The fine is to be paid in equal amounts in 2024 and 2025.
- c. Sherrod rents its operating facilities but owns one asset acquired in 2023 at a cost of \$80 million. Depreciation is reported by the straight-line method, assuming a four-year useful life. On the tax return, deductions for depreciation will be more than straight-line depreciation the first two years but less than straight-line depreciation the next two years (\$ in millions):

| | Income Statement | Tax Return | Difference |
|------|------------------|------------|------------|
| 2023 | \$20 | \$26 | \$ (6) |
| 2024 | 20 | 35 | (15) |
| 2025 | 20 | 12 | 8 |
| 2026 | 20 | 7 | 13 |

| Income Statement | Tax Return | Difference |
|------------------|-------------|-------------|
| <u>\$80</u> | <u>\$80</u> | <u>\$ 0</u> |

- d. For tax purposes, warranty expense is deducted when costs are incurred. The balance of the warranty liability was \$2 million at the end of 2023. Warranty expense of \$4 million is recognized in the income statement in 2024. \$3 million of cost is incurred in 2024, and another \$3 million of cost anticipated in 2025. At December 31, 2024, the warranty liability is \$3 million (after adjusting entries).
- e. In 2024, Sherrod accrued an expense and related liability for estimated paid future absences of \$7 million relating to the company's new paid vacation program. Future compensation will be deductible on the tax return when actually paid during the next two years (\$4 million in 2025; \$3 million in 2026).
- f. During 2023, accounting income included an estimated loss of \$2 million from having accrued a loss contingency. The loss is paid in 2024, at which time it is tax deductible.

Balances in the deferred tax asset and deferred tax liability accounts at January 1, 2024, were \$1 million and \$2.5 million, respectively. The enacted tax rate is 25% each year.

Required:

1. Determine the amounts necessary to record income taxes for 2024, and prepare the appropriate journal entry.
2. What is the 2024 net income?
3. Show how any deferred tax amounts should be classified and reported in the 2024 balance sheet.

P 16–8 Multiple differences; taxable income given; two years; change in tax rate; financial statement effects  **LO16–1**,  **LO16–2**,  **LO16–3**,  **LO16–5**,  **LO16–6**,  **LO16–8**

Arndt, Inc., reported the following for 2024 and 2025 (\$ in millions):

| | 2024 | 2025 |
|---|------------|------------|
| Revenues | \$888 | \$980 |
| Expenses | <u>760</u> | <u>800</u> |
| Pretax accounting income (income statement) | \$128 | \$180 |
| Taxable income (tax return) | \$116 | \$200 |

Tax rate: 25%

- Expenses each year include \$30 million from a two-year casualty insurance policy purchased in 2024 for \$60 million. The cost is tax deductible in 2024.
- Expenses include \$2 million insurance premiums each year for life insurance on key executives.
- Arndt sells one-year subscriptions to a weekly journal. Subscription sales collected and taxable in 2024 and 2025 were \$33 million and \$35 million, respectively. Subscriptions included in 2024 and 2025 financial reporting revenues were \$25 million (\$10 million collected in 2023 but not recognized as revenue until 2024) and \$33 million, respectively. (*Hint: View this as two temporary differences—one reversing in 2024; one originating in 2024*).
- 2024 expenses included a \$14 million unrealized loss from reducing investments (classified as trading securities) to fair value. The investments were sold and the loss realized in 2025.
- During 2023, accounting income included an estimated loss of \$6 million from having accrued a loss contingency. The loss was paid in 2024, at which time it is tax deductible.
- At January 1, 2024, Arndt had a deferred tax asset of \$4 million and no deferred tax liability.

Required:

- Which of the five differences described in items a–e are temporary and which are permanent differences? Why?
- Prepare a schedule that (a) reconciles the difference between pretax accounting income and taxable income and (b) determines the amounts necessary to record income taxes for 2024. Prepare the appropriate journal entry.
- Show how any 2024 deferred tax amounts should be classified and reported on the 2024 balance sheet.

4. Prepare a schedule that (a) reconciles the difference between pretax accounting income and taxable income and (b) determines the amounts necessary to record income taxes for 2025. Prepare the appropriate journal entry.
5. Indicate how any 2025 deferred tax amounts should be classified and reported on the 2025 balance sheet.
6. Suppose that during 2025, tax legislation was passed that will lower Arndt's effective tax rate to 15% beginning in 2026. Repeat requirement 4.

P 16–9 Determine deferred tax assets and liabilities from book-tax differences; financial statement effects  **LO16–2**,  **LO16–3**

Corning-Howell reported taxable income in 2024 of \$120 million. At December 31, 2024, the reported amount of some assets and liabilities in the financial statements differed from their tax bases as indicated below:

| | Carrying Amount | Tax Basis |
|--|----------------------------|------------------|
| Assets | | |
| Current | | |
| Net accounts receivable | \$ 10 million | \$ 12 million |
| Prepaid insurance | 20 million | 0 |
| Prepaid advertising | 6 million | 0 |
| Noncurrent | | |
| Investments in equity securities (fair value)* | 4 million | 0 |
| Buildings and equipment (net) | 360 million | 280 million |
| Liabilities | | |
| Current | | |
| Deferred subscription revenue | 14 million | 0 |
| Long-term | | |
| Liability—compensated future absences | 594 million | 0 |

*Gains and losses taxable when investments are sold.

The total deferred tax asset and deferred tax liability amounts at January 1, 2024, were \$156.25 million and \$25 million, respectively. The enacted tax rate is 25% each year.

Required:

1. Determine the total deferred tax asset and deferred tax liability amounts at December 31, 2024.
2. Determine the increase (decrease) in the deferred tax asset and deferred tax liability accounts at December 31, 2024.
3. Determine the income tax payable currently for the year ended December 31, 2024.
4. Prepare the journal entry to record income taxes for 2024.

P 16–10 Net operating loss carryforward; multiple differences; financial statement effects  **LO16–3**,  **LO16–5**,  **LO16–7**

Fore Farms reported a pretax operating loss of \$137 million for financial reporting purposes in 2024. Contributing to the loss were (a) a penalty of \$5 million assessed by the Environmental Protection Agency for violation of a federal law and paid in 2024 and (b) an estimated loss of \$12 million from accruing a loss contingency. The loss will be tax deductible when paid in 2025.

The enacted tax rate is 25%. There were no temporary differences at the beginning of the year and none originating in 2024 other than those described above.

Required:

1. Prepare the journal entry to recognize the income tax benefit of the net operating loss in 2024.
2. Show the lower portion of the 2024 income statement that reports the income tax benefit of the net operating loss.
3. Prepare the journal entry to record income taxes in 2025 assuming pretax accounting income is \$160 million. No additional temporary differences originate in 2025.

P 16–11 Net operating loss carryback and carryforward; multiple differences; financial statement effects  **LO16–3**,  **LO16–5**,

LO16-7

[This problem is a variation of  P 16-10, modified to allow a net operating loss carryback.]

Fore Farms reported a pretax operating loss of \$137 million for financial reporting purposes in 2024. Contributing to the loss were (a) a penalty of \$5 million assessed by the Environmental Protection Agency for violation of a federal law and paid in 2024 and (b) an estimated loss of \$12 million from accruing a loss contingency. The loss will be tax deductible when paid in 2025.

The enacted tax rate is 25%. There were no temporary differences at the beginning of the year and none originating in 2024 other than those described above. Taxable income in Fores's two previous years of operation was as follows:

| | |
|-------------|---------------------|
| 2022 | \$80 million |
| 2023 | \$32 million |

Required:

1. Prepare the journal entry to recognize the income tax benefit of the net operating loss in 2024. Assume Fore will carry back its NOL to prior years.
2. Show the lower portion of the 2024 income statement that reports the income tax benefit of the net operating loss.
3. Prepare the journal entry to record income taxes in 2025 assuming pretax accounting income is \$160 million. No additional temporary differences originate in 2025.

P 16-12 Integrating problem—bonds, leases, taxes; financial statement effects  LO16-2,  LO16-6,  LO16-8

The long-term liabilities section of CPS Transportation's December 31, 2023, balance sheet included the following:

- a. A lease liability with 15 remaining lease payments of \$10,000 each, due annually on January 1:

| | |
|-----------------------|-----------------|
| Lease liability | \$76,061 |
| Less: Current portion | 2,394 |
| | <u>\$73,667</u> |

The incremental borrowing rate at the inception of the lease was 11% and the lessor's implicit rate, which was known by CPS Transportation, was 10%.

- b. A deferred income tax liability due to a single temporary difference. The only difference between CPS Transportation's taxable income and pretax accounting income is depreciation on a machine acquired on January 1, 2023, for \$500,000. The machine's estimated useful life is five years, with no salvage value. Depreciation is computed using the straight-line method for financial reporting purposes and the MACRS method for tax purposes. Depreciation expense for tax and financial reporting purposes for 2024 through 2027 is as follows:

| Year | MACRS Depreciation | Straight-line Depreciation | Difference |
|------|--------------------|----------------------------|------------|
| 2024 | \$160,000 | \$100,000 | \$60,000 |
| 2025 | 80,000 | 100,000 | (20,000) |
| 2026 | 70,000 | 100,000 | (30,000) |
| 2027 | 60,000 | 100,000 | (40,000) |

The enacted federal income tax rates are 20% for 2023 and 25% for 2024 through 2027. CPS had a deferred tax liability of \$7,500 as of December 31, 2023. For the year ended December 31, 2024, CPS's income before income taxes was \$900,000.

On July 1, 2024, CPS Transportation issued \$800,000 of 9% bonds. The bonds mature in 20 years, and interest is payable each January 1 and July 1. The bonds were issued at a price to yield the investors 10%. CPS records interest at the effective interest rate.

Required:

1. Determine CPS Transportation's income tax expense and net income for the year ended December 31, 2024.
2. Determine CPS Transportation's interest expense for the year ended December 31, 2024.

3. Prepare the long-term liabilities section of CPS Transportation’s December 31, 2024, balance sheet.

P 16–13 Multiple differences; uncertain tax position  **LO16–2**,  **LO16–5**,  **LO16–9**

Tru Developers, Inc., sells plots of land for industrial development. Tru recognizes income for financial reporting purposes in the year it sells the plots. For some of the plots sold this year, Tru took the position that it could recognize the income for tax purposes when the installments are collected. Income that Tru recognized for financial reporting purposes in 2024 for plots in this category was \$60 million. The company expected to collect 60% of each sale in 2025 and 40% in 2026. This amount over the next two years is as follows:

| | |
|------|---------------------|
| 2025 | \$36 million |
| 2026 | 24 million |
| | <u>\$60 million</u> |

Tru’s pretax accounting income for 2024 was \$88 million. In its income statement, Tru reported interest income of \$16 million, unrelated to the land sales, for which the company’s position is that the interest is not taxable. Accordingly, the interest was not reported on the tax return. There are no differences between accounting income and taxable income other than those described above. The enacted tax rate is 25%.

Management believes the tax position taken on the land sales has a greater than 50% chance of being upheld based on its technical merits, but the position taken on the interest has a less than 50% chance of being upheld. It is further believed that the following likelihood percentages apply to the tax treatment of the land sales (\$ in millions):

| Amount Qualifying for Installment Sales Treatment | Percentage Likelihood of Tax Treatment Being Sustained |
|--|---|
| \$60 | 20% |
| 50 | 20% |

| Amount Qualifying for Installment Sales Treatment | Percentage Likelihood of Tax Treatment Being Sustained |
|--|---|
| 40 | 20% |
| 30 | 20% |
| 20 | 20% |

Required:

1. What portion of the tax benefit of tax-free interest will Tru recognize on its 2024 tax return?
2. What portion of the tax benefit of tax-free interest will Tru recognize on its 2024 financial statements?
3. (a) What portion of the tax on the \$60 million income from the plots sold on an installment basis will Tru defer on its 2024 tax return? (b) What portion of the tax on the \$60 million income from the plots sold on an installment basis will Tru show as a deferred tax asset or liability in its 2024 financial statements? (c) How is the difference between these two amounts reported?
4. Prepare the journal entry to record income taxes in 2024, assuming full recognition of the tax benefits in the financial statements of both differences between pretax accounting income and taxable income.
5. Prepare the journal entry to record income taxes in 2024, assuming the recognition of the tax benefits in the financial statements you indicated in requirements 1-3.

P 16–14 COVID-19; Net operating loss; financial statement effects  **LO16–7**

COVID-19

Syer Co. reports net operating income (loss) for financial reporting and tax purposes in each year as follows:

| 2016 | 2017 | 2018 | 2019 | 2020 |
|-------|-------|------|------|---------|
| \$300 | \$100 | \$0 | \$0 | \$(600) |

Syer's 2020 NOL is driven by an unfortunate obsolescence of its primary product. Given great uncertainty in Syer's future profitability, Syer's management does not believe it is more

likely than not that it will be able to realize deferred tax assets in future years. Syer's federal tax rate decreased from 35% to 21% starting in 2018.

Required:

1. Assume that Syer does **not** account for its NOL under the CARES Act. Instead, Syer accounts for its NOL using the general requirement that NOLs be carried forward. Prepare the appropriate journal entry to record Syer's 2020 income taxes, and indicate Syer's 2020 net income(loss).
2. Now assume that Syer **does** account for its NOL under the CARES Act. Prepare the appropriate journal entry to record Syer's 2020 income taxes, and indicate Syer's 2020 net income(loss).

Decision Maker's Perspective

Ed Telling/Getty Images

Apply your critical-thinking ability to the knowledge you've gained. These cases will provide you an opportunity to develop your research, analysis, judgment, and communication skills. You also will work with other students, integrate what you've learned, apply it in real-world situations, and consider its global and ethical ramifications. This practice will broaden your knowledge and further develop your decision-making abilities.

Real World Case 16–1 Reconciling deferred taxes; tax payable and tax expense; financial statement effects; disclosures; Buckle  **LO16–2**,  **LO16–3**

Access the financial statements and related disclosure notes of **Buckle** for the fiscal year ended February 1, 2020, from its website at corporate.buckle.com. Buckle is a fashion retailer operating over 400 stores in more than 40 states under the names Buckle or The Buckle.

Required:

1. Focusing only on Note G's reconciliation of the provision for income taxes, prepare a journal entry that summarizes Buckle's tax expense for the fiscal year ended February 1, 2020.
2. Looking elsewhere in Note G, calculate the actual change in Buckle's net deferred tax asset or liability during the fiscal year ended February 1, 2020. Does that change reconcile with the change indicated in your summary journal entry?
3. Find the tax expense on Buckle's income statement for the fiscal year ended February 1, 2020. Does that amount reconcile with the change indicated in your summary journal entry?

4. Calculate Buckle's effective tax rate from its income statement for the fiscal year ended February 1, 2020, and find that number in the effective tax rate reconciliation in Note G. What was the biggest factor causing Buckle's effective tax rate to deviate from the statutory rate of 21%?

Real World Case 16–2 Reconciling deferred taxes; valuation allowances; tax payable and tax expense; financial statement effects; disclosures; Francesca's  **LO16–2**,  **LO16–3**,  **LO16–4**

Francesca's Holdings Corporation is a specialty retailer that operates boutiques throughout the United States under Francesca's trademark. Access the financial statements and related disclosure notes of Francesca for the fiscal year ended February 1, 2020, from EDGAR database as [SEC.gov/EDGAR](https://www.sec.gov/EDGAR).

Required:

1. Focusing only on Note 6's reconciliation of the provision for income taxes, prepare a journal entry that summarizes Francesca's' tax expense or benefit for the fiscal year ended February 1, 2020.
2. Looking elsewhere in Note 6, calculate the actual change in Francesca's' total gross deferred tax assets, valuation allowance, and gross deferred tax liabilities, and include each of those elements in a new summary journal entry.
3. Based on Francesca's' income statement alone, what is Francesca's' effective tax rate for the fiscal year ended February 1, 2020? Find this number in the effective tax rate reconciliation in Note G. What was the biggest factor causing Francesca's' effective tax rate to deviate from the statutory rate of 21%?
4. Now assume that Francesca's did not change its valuation allowance during the fiscal year ended February 1, 2020. Prepare a journal entry that summarizes Francesca's' tax expense or benefit for the fiscal year ended February 1, 2020, and calculate Francesca's' net income or net loss and effective tax rate.

Analysis Case 16–3 Reconciling deferred taxes, tax payable and tax expense; disclosures; Walmart, Inc.  **LO16–2**,  **LO16–3**,  **LO16–4**

Real World Financials

The income tax disclosure note accompanying the January 31, 2020, financial statements of **Walmart** is reproduced below:

| (\$ in millions) | Fiscal Years Ended January 31, | | |
|---|--------------------------------|-----------------|-----------------|
| | 2020 | 2019 | 2018 |
| Current: | | | |
| U.S. federal | \$ 2,794 | \$2,763 | \$2,998 |
| U.S. state and local | 587 | 493 | 405 |
| International | <u>1,205</u> | <u>1,495</u> | <u>1,377</u> |
| Total current tax provision | <u>4,586</u> | <u>4,751</u> | <u>4,780</u> |
| Deferred: | | | |
| U.S. federal | 663 | (361) | (22) |
| U.S. state and local | 35 | (16) | (12) |
| International | <u>(369)</u> | <u>(93)</u> | <u>(146)</u> |
| Total deferred tax expense (benefit) | 329 | (470) | (180) |
| Total provision for income taxes | <u>\$ 4,915</u> | <u>\$ 4,281</u> | <u>\$ 4,600</u> |
| | 2020 | 2019 | |
| Deferred tax assets: | | | |
| Loss and tax credit carryforwards | \$ 9,056 | \$2,964 | |
| Accrued liabilities | 2,483 | 2,135 | |
| Share-based compensation | 250 | 245 | |
| Lease obligations | 4,098 | - | |
| Other | <u>1,020</u> | <u>1,131</u> | |
| Total deferred tax assets | <u>16,907</u> | <u>6,475</u> | |
| Valuation allowances | <u>(8,588)</u> | <u>(2,448)</u> | |
| Deferred tax assets, net of valuation allowances | <u>8,319</u> | <u>4,027</u> | |

Deferred tax liabilities:

| | | |
|---------------------------------------|-----------------|-----------------|
| Property and equipment | 4,621 | 4,175 |
| Acquired intangibles | 1,152 | 2,099 |
| Inventory | 1,414 | 1,354 |
| Lease right of use assets | 3,998 | - |
| Mark-to-market investments | 724 | 335 |
| Other | 700 | 564 |
| Total deferred tax liabilities | 12,609 | 8,527 |
| Net deferred tax liabilities | \$ 4,290 | \$ 4,500 |

Required:

1. Focusing on only the first part of Note 9, relating current, deferred, and total provision for income taxes, prepare a summary journal entry that records Walmart's 2020 tax expense associated with income from continuing operations. Make a single entry to "Deferred tax liability (net)" for the total effect on deferred tax assets, deferred tax liabilities and the valuation allowance.
2. Calculate the actual change in Walmart's net deferred tax liability for fiscal 2020. Does that change equal the change indicated in your summary journal entry? What besides continuing operations might account for the difference?

Source: Walmart

Analysis Case 16-4 Reporting deferred taxes; disclosures; financial statement effects; Kroger Co.  **LO16-2**,  **LO16-3**,  **LO16-4**,  **LO16-7**,  **LO16-8**

Real World Financials

Kroger Co. is one of the largest retail food companies in the United States as measured by total annual sales. The Kroger Co. operates supermarkets, convenience stores, and manufactures and processes food that its supermarkets sell.

Using EDGAR ([sec.gov](https://www.sec.gov)) or the company's website ([kroger.com](https://www.kroger.com)), check the company's annual report for the year ended February 1, 2020.

Required:

1. From the income statement, determine the income tax expense for the fiscal year ended February 1, 2020. Tie that number to the first table in disclosure Note 5: "Taxes Based on Income," and prepare a summary journal entry that records Kroger's tax expense from continuing operations in the fiscal year ended February 1, 2020.
2. From Kroger's Note 5, calculate the total net deferred tax asset or liability as of February 1, 2020, and February 2, 2019. By how much did that amount change? To what extent did you account for that change in the journal entry you wrote for the first requirement of this case? Speculate as to the explanation of any difference.

Analysis Case 16–5 Disclosures; Ford Motor Company

[LO16–2](#), [LO16–3](#), [LO16–4](#), [LO16–7](#)

Real World Financials

Access the 2019 financial statements and related disclosure notes of **Ford Motor Company** from its website at corporate.ford.com.

Required:

1. In Note 7, find Ford's net deferred tax asset or liability. What is that number?
2. Does Ford show a valuation allowance against deferred tax assets? If so, what is the number, and what is Ford's explanation for it?
3. Does Ford have any NOL carryforwards? What is the amount of any carryforward, what deferred tax asset or liability is associated with it, and what effective tax rate does that imply was used to calculate its deferred tax effect?

Judgment Case 16–6 Valuation allowance; disclosures; CVS

Health [LO16–4](#)

Real World Financials

CVS Health Corporation showed 2019 net income from continuing operations of \$6,631 million. The following is an excerpt from a disclosure note to CVS Health's 2019 financial statements:

| (\$ in millions) | 2019 | 2018 |
|---|-------------------|-------------------|
| Deferred income tax assets: | | |
| Lease and rents | \$ 267 | \$ 277 |
| Inventory | 23 | 28 |
| Employee benefits | 191 | 243 |
| Bad debts and other allowances | 294 | 243 |
| Retirement benefits | 47 | 130 |
| Net operating loss and capital loss carryforwards | 480 | 529 |
| Deferred income | 36 | 104 |
| Insurance reserves | 430 | 467 |
| Investments | - | 11 |
| Other | 451 | 242 |
| Valuation allowance | <u>(374)</u> | <u>(520)</u> |
| Total deferred income tax assets | \$ 1,845 | \$ 1,754 |
| Deferred income tax liabilities: | | |
| Investments | \$ (289) | - |
| Depreciation and amortization | <u>(8,850)</u> | <u>(9,431)</u> |
| Total deferred income tax liabilities | \$ (9,139) | \$ (9,431) |

Required:

1. Did CVS's valuation allowance increase or decrease during 2019? By how much?
2. If CVS had not adjusted its valuation allowance during 2019 (the allowance remained the same), what would have been its income from continuing operations?
3. All else equal, would CVS need to assert that it would be more profitable or less profitable in future years in order to justify the change that occurred in its valuation allowance during 2019?

Source: CVS Health Corporation

Integrating Case 16–7 Postretirement benefits  **LO16–3**

FASB ASC 715–60: Compensation—Retirement Benefits—Defined Benefit Plans—Other Postretirement (previously *Statement of Financial Accounting Standards No. 106*) establishes

accounting standards for postretirement benefits other than pensions, most notably postretirement health care benefits. Essentially, the standard requires companies to accrue compensation expense each year employees perform services for the expected cost of providing future postretirement benefits that can be attributed to that service. Typically, companies do not prefund these costs for two reasons: (a) unlike pension liabilities, no federal law requires companies to fund nonpension postretirement benefits, and (b) funding contributions, again unlike for pension liabilities, are not tax deductible. (The costs aren't tax deductible until paid to, or on behalf of, employees.)

Required:

1. As a result of being required to record the periodic postretirement expense and related liability, most companies report lower earnings and higher liabilities. How might many companies also report higher deferred tax assets as a result of GAAP for postretirement plans?
2. One objection to current GAAP, as cited in the chapter, is the omission of requirements to discount deferred tax amounts to their present values. This objection is inappropriate in the context of deferred tax amounts necessitated by accounting for postretirement benefits. Why?

Integrating Case 16–8 Tax effects of accounting changes and error correction; six situations  **LO16–2**,  **LO16–3**,  **LO16–8**

Williams-Santana Inc. is a manufacturer of high-tech industrial parts that was started in 2010 by two talented engineers with little business training. In 2024, the company was acquired by one of its major customers. As part of an internal audit, the following facts were discovered. The audit occurred during 2024 before any adjusting entries or closing entries were prepared. The income tax rate is 25% for all years.

- a. A five-year casualty insurance policy was purchased at the beginning of 2022 for \$35,000. The full amount was debited to insurance expense at the time.
- b. On December 31, 2023, merchandise inventory was overstated by \$25,000 due to a mistake in the physical inventory count using the periodic inventory system.
- c. The company changed inventory cost methods to FIFO from LIFO at the end of 2024 for both financial statement and income tax purposes. The change will cause a \$960,000 increase in the beginning inventory at January 1, 2023.

- d. At the end of 2023, the company failed to accrue \$15,500 of sales commissions earned by employees during 2023. The expense was recorded when the commissions were paid in early 2024.
- e. At the beginning of 2022, the company purchased a machine at a cost of \$720,000. Its useful life was estimated to be 10 years with no salvage value. The machine has been depreciated by the double declining-balance method. Its carrying amount on December 31, 2023, was \$460,800. On January 1, 2024, the company changed to the straight-line method.
- f. Additional industrial robots were acquired at the beginning of 2021 and added to the company's assembly process. The \$1,000,000 cost of the equipment was inadvertently recorded as repair expense. The robots have 10-year useful lives and no material salvage value. This class of equipment is depreciated by the straight-line method for both financial reporting and income tax reporting.

Required:

For each situation:

1. Identify whether it represents an accounting change or an error. If an accounting change, identify the type of change.
2. Prepare any journal entry necessary as a direct result of the change or error correction, as well as any adjusting entry for 2024 related to the situation described. Any tax effects should be adjusted for through the deferred tax liability account.

Research Case 16–9 Researching the way tax deductions are reported on a corporation tax return; retrieving a tax form from the Internet  **LO16–2**,  **LO16–3**,  **LO16–4**,  **LO16–8**

The Internal Revenue Service (IRS) maintains an information site on the Internet that provides tax information and services. Among those services is a server for publications and forms which allows a visitor to download a variety of IRS forms and publications.

Required:

1. Access the IRS site at [irs.gov](https://www.irs.gov). After exploring the information available there, navigate to the forms and instructions page.
2. Download the corporation tax return, Form 1120.

3. Note the specific deductions listed that are deductible from total income to arrive at taxable income. Are any deductions listed that might not also be included among expenses in the income statement? One of the deductions indicated is “net operating loss deduction.” Will every company report this tax deduction in every year? If not, under what circumstances might a company report an amount for this item?

Analysis Case 16–10 Analyzing the effect of deferred tax liabilities on firm risk; disclosures; financial statement effects; Macy’s, Inc.  **LO16–8**

Real World Financials

The following is a portion of the balance sheets of **Macy’s, Inc.**, for the years ended February 1, 2020, and February 2, 2019:

| | February 1, 2020 | February 2, 2019 |
|---|------------------|------------------|
| Liabilities and Shareholders’ Equity | | |
| Current Liabilities: | | |
| Short-term debt | \$ 539 | \$ 43 |
| Merchandise accounts payable | 1,682 | 1,655 |
| Accounts payable and accrued liabilities | 3,448 | 3,366 |
| Income taxes | <u>81</u> | <u>168</u> |
| Total Current Liabilities | 5,750 | 5,232 |
| Long-Term Debt | | |
| Long-Term Lease Liabilities | 2,918 | - |
| Deferred Income Taxes | 1,169 | 1,238 |
| Other Liabilities | 1,337 | 1,580 |
| Shareholders’ Equity: | | |
| Common stock | 3 | 3 |
| Additional paid-in capital | 621 | 652 |
| Accumulated equity | 7,989 | 8,050 |
| Treasury stock | (1,241) | (1,318) |
| Accumulated other comprehensive loss | <u>(995)</u> | <u>(951)</u> |

| | February 1, 2020 | February 2, 2019 |
|--|------------------|------------------|
| Total Shareholders' Equity | 6,377 | 6,436 |
| Total Liabilities and Shareholders' Equity | <u>\$21,172</u> | <u>\$19,194</u> |

Required:

1. What is Macy's debt to equity ratio for the year ended February 1, 2020?
2. What would Macy's debt to equity ratio be if we excluded long-term net deferred tax liabilities from its calculation? What would be the percentage change?
3. What might be the rationale for excluding long-term net deferred tax liabilities from liabilities when computing the debt to equity ratio?

Source: Macy's, Inc.

Research Case 16–11 Deferred tax assets, liabilities and valuation allowances; balance sheet disclosure; uncertain tax positions  **LO16–2**,  **LO16–3**,  **LO16–4**,  **LO16–8**,  **LO16–9**

As a senior auditor with Klein and Co, you are interacting with David Perkins, CFO of a prominent public company and an important client. Perkins has a reputation for pushing for favorable accounting treatments, and frequently asks auditors to “prove to me where it says I can’t do that.”

Required:

Access the FASB Accounting Standards Codification at the FASB website ( www.fasb.org) and select Basic View for free access. Determine the specific eight-digit Codification citation (XXX-XX-XX-X) that indicates the appropriate accounting treatment for each of the following situations, and in each case indicate whether Perkins has authoritative support in the Codification for his preferred treatment.

1. Perkins believes that his deferred tax liabilities should be calculated on a discounted present value basis, which allows him to report a smaller amount of liability. “After all,

those are amounts that are going to be paid in the future—why can't I discount them like I would other long-term liabilities?"

2. Perkins argues that, when determining whether he should record a valuation allowance against deferred tax assets, he should include as a source of future taxable income any future reversals of existing taxable temporary differences, which will increase taxable income. Doing so will reduce his valuation allowance and tax expense. "We have deferred tax liabilities that will reverse in the same periods as deferred tax assets reverse, so they will provide taxable income that will soak up the deductions produced by reversal of the deferred tax assets. I should get to include them when determining the amount of any valuation allowance we would have to record."
3. Perkins wants to separately list his net *current* deferred tax *asset* and his net *noncurrent* deferred tax *liability* in his company's balance sheet, thereby improving his company's current ratio. "I have deferred tax assets that I know will reverse next year, and I know my investors will be better off with information about both current and noncurrent assets and liabilities."
4. Perkins does not want to provide a reconciliation of changes in the company's unrecognized tax benefits during the year, given previous concerns by investors that his company is too aggressive in its attempts to avoid paying taxes. "I know your firm has required that we recognize a liability for these uncertain tax positions, and we have done that, but more disclosure is unnecessary. Our financial statements and notes are too long as it is."

Judgment Case 16–12 Intrapersonal tax allocation; financial statement effects LO16–10

Russell-James Corporation is a diversified consumer products company. During 2024, Russell-James discontinued its line of cosmetics, which constituted discontinued operations for financial reporting purposes. As vice president of the food products division, you are interested in the effect of the discontinuance on the company's profitability. One item of information you requested was an income statement. The income statement you received was labeled *preliminary* and *unaudited*:

RUSSELL-JAMES CORPORATION

Income Statement

For the Year Ended December 31, 2024

(\$ in millions, except per share amounts)

| | | |
|--|-----------|-----------------------|
| Sales revenue | | \$ 300 |
| Cost of goods sold | | <u>(90)</u> |
| Gross profit | | 210 |
| Selling and administrative expenses | | <u>(50)</u> |
| Income from continuing operations before income taxes | | 160 |
| Income tax expense | | <u>(19)</u> |
| Income from continuing operations | | 141 |
| Discontinued operations: | | |
| Loss from operations of cosmetics division | \$(100) | |
| Gain from disposal of cosmetics division | <u>16</u> | (84) |
| Net income | | <u><u>\$ 57</u></u> |
| Per Share of Common Stock (100 million shares): | | |
| Income from continuing operations | | \$ 1.41 |
| Loss from operations of cosmetics division | | (1.00) |
| Gain from disposal of cosmetics division | | 0.16 |
| Net income | | <u><u>\$ 0.57</u></u> |

You are somewhat surprised at the magnitude of the loss incurred by the cosmetics division prior to its disposal. Another item that draws your attention is the apparently low tax rate indicated by the statement ($\$19 \div 160 = 12\%$). Upon further investigation, you are told the company's tax rate is 25%.

Required:

1. Recast the income statement to reflect intraperiod tax allocation.
2. How would you reconcile the income tax expense shown on the statement above with the amount your recast statement reports?

Real World Case 16–13 COVID-19; Net operating loss carryback; financial statement effects; disclosures **Marathon**

 **LO16–2**,  **LO16–3**,  **LO16–4**

COVID-19

An August 11, 2020 article from WorldOil Magazine had the following headline: “Marathon Sets Up for \$1.1 Billion Tax Refund via Coronavirus Aid Law.” *The article goes on to indicate, “That measure included a tax provision that allows companies to immediately deduct net operating losses and apply them to previous returns for five years from 2018, 2019, and 2020 – instead of only applying those deductions to future years. The benefit is supercharged because deductions taken before the 2017 tax overhaul can be claimed at the 35% corporate tax rate instead of the current 21%.”

Marathon Petroleum Corporation’s June 30, 2020, 10Q states the following: “As of June 30, 2020, the estimated cash tax refund resulting from the NOL carryback provided in the CARES Act is \$1.1 billion and arises solely due to taxes paid in prior years. Absent the CARES Act, we would have recorded a deferred tax asset for the expected NOL carryforward under the currently effective federal income tax rate.”

Required:

1. Based only on the information provided above, prepare a journal entry that records any tax expense (benefit) associated with the NOL carryback.
2. Assuming a tax rate of 35% in prior years, how much pretax net operating loss did Marathon carryback to prior periods?
3. Assume now that the CARES Act was not in effect. Prepare a journal entry that records any tax expense (benefit) associated with the NOL carryforward, assuming a tax rate of 21% for current and future periods.
4. Whether Marathon could do an NOL carryback or an NOL carryforward, it would recover or avoid some taxes by utilizing the NOL. How much extra tax did it recover or avoid due to the difference in tax rates between prior years and future years?

Trueblood Accounting Case 16–14 Valuation allowances against deferred tax assets **LO16–4**

The following Trueblood case is recommended for use with this chapter. The case provides an excellent opportunity for class discussion, group projects, and writing assignments. The

case, along with Professor's Discussion material, can be obtained from the Deloitte foundation at its website: www.deloitte.com/us/truebloodcases.

Case 19-5: Cocoa Co.

This case gives students an opportunity to better understand how valuation allowances against deferred tax assets are estimated and calculated. Students consider the sources of taxable income that can be used to determine whether a deferred tax asset is more likely than not to be realized in the future.

Trueblood Accounting Case 16–15 Measuring deferred tax assets and liabilities  **LO16–2**,  **LO16–3**

The following Trueblood case is recommended for use with this chapter. The case provides an excellent opportunity for class discussion, group projects, and writing assignments. The case, along with Professor's Discussion Material, can be obtained from the Deloitte Foundation at its website: www.deloitte.com/us/truebloodcases.

Case 20-8: To Sell or Not to Sell

This case gives the students an opportunity to better understand measurement of deferred tax assets and liabilities in the context of the sale of a reporting unit.

Communication Case 16–16 Deferred taxes; changing rates; write a memo  **LO16–2**,  **LO16–5**,  **LO16–6**

The date is November 15, 2020. You are the new controller for Engineered Solutions. The company treasurer, Randy Patey, believes that as a result of pending legislation, the currently enacted 40% income tax rate may be decreased for 2021 to 25% and is uncertain which tax rate to apply in determining deferred taxes for 2020. Patey also is uncertain which temporary differences should be included in that determination and has solicited your help. Your accounting group provided you the following information.

Two items are relevant to the decisions. One is the \$50,000 insurance premium the company pays annually for the CEO's life insurance policy, for which the company is the beneficiary. The second is that Engineered Solutions purchased a building on January 1, 2019, for \$6,000,000. The building's estimated useful life is 30 years from the date of purchase, with no salvage value. Depreciation is computed using the straight-line method for financial

reporting purposes and the MACRS method for tax purposes. As a result, the building's tax basis is \$5,200,000 at December 31, 2020.

Required:

Write a memo to Patey that:

- a. Identifies the objectives of accounting for income taxes.
- b. Differentiates temporary differences and permanent differences.
- c. Explains which tax rate to use.
- d. Calculates the deferred tax liability at December 31, 2020.

Ethics Case 16–17 Deferred tax assets; valuation allowances; financial statement effects  **LO16–3**,  **LO16–4**,  **LO16–7**

The date is January 10, 2023, and Maryton Hotels' CFO George Smith is looking with dismay at his company's financial performance during 2022. Already facing stiff competition from other hotel chains as well as Airbnb, Maryton had run an operating loss in 2020 and 2021 and had responded by engaging in a broad effort to refresh hotel décor and update wi-fi and other infrastructure. That effort concluded in late 2021 and seemed to be showing success in early 2022. However, a variant of the COVID-19 virus reached pandemic status in mid-2022, and business and leisure travel fell off considerably. Occupancy rates at Maryton properties plunged, producing a \$10 million pre-tax net operating loss for 2022. Maryton's CEO has asked that George "work some of his accounting magic" to "put a positive spin on things" and minimize Maryton's net loss, hoping to calm concerns being voiced by investors and lenders.

Required:

1. Assume Maryton has a 25% tax rate. Prepare a journal entry that records the tax effects of its NOL, assuming that no valuation allowance is necessary and that the CARES Act does not apply. Calculate Maryton's net income or net loss under that scenario.
2. Repeat requirement 1, but now assume that a valuation allowance is necessary that completely offsets any new deferred tax asset that Maryton is adding as a result of its NOL carryforward.
3. Consider your answers to requirements 1 and 2. What "accounting magic" might Smith work to minimize Maryton's net loss?

Data Analytics & Excel

Visit Connect to find a variety of Data Analytics activities that help build Excel, Tableau, and data visualization skills. Assignable materials include [Integrated Excel](#), [Data Visualizations](#), [Tableau Dashboard Activities](#), and [Applying Tableau Cases](#).

Continuing Cases

Target Case  LO16-2,  LO16-3,  LO16-5,  LO16-8,  LO16-9

Real World Financials

Target Corporation prepares its financial statements according to U.S. GAAP. Target's financial statements and disclosure notes for the year ended February 1, 2020, are available in Connect. This material also is available under the Investor Relations link at the company's website (www.target.com).

Required:

1. From the income statement, determine the income tax expense for the year ended February 1, 2020. Tie that number to the second table in disclosure Note 18, "Provision for Income Taxes," and prepare a summary journal entry that records Target's tax expense from continuing operations for the year ended February 1, 2020.
2. Focusing on the third table in disclosure Note 18, "Net Deferred Tax Asset/(Liability)," calculate the change in net deferred tax assets or liability. By how much did that amount change? To what extent did you account for that change in the journal entry you wrote for the first requirement of this case? List possible causes of any difference.
3. Target's Note 18 indicates that "We recognized a net tax benefit of \$36 million and \$372 million in 2018 and 2017, respectively, primarily because we remeasured our net deferred tax liabilities using the new lower U.S. corporate tax rate." What was the effect of the tax rate change on 2018 net income?
4. What is Target's liability for unrecognized tax benefits as of February 1, 2020? If Target were to prevail in court and realize \$50 million more in tax savings than it thought more likely than not to occur, what would be the effect on the liability for unrecognized tax benefits and on net income?

Air France-KLM Case  LO16-11

IFRS

Real World Financials

Air France-KLM (AF), a Franco-Dutch company, prepares its financial statements according to International Financial Reporting Standards. AF's financial statements and disclosure notes for the year ended December 31, 2019, are available in Connect. This material is also available under the Finance link at the company's website (www.airfranceklm.com).

Required:

1. What amounts are shown in AF's December 31, 2019, balance sheet for deferred taxes?
2. Here's an excerpt from AF's notes to its financial statements:

Deferred taxes (in part)

The Group records deferred taxes using the balance sheet liability method, providing for any temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for taxation purposes, except for exceptions described in IAS 12 "Income taxes." The tax rates used are those enacted or substantively enacted at the balance sheet date.

Is this policy consistent with U.S. GAAP? Explain.

3. Here's an excerpt from one of AF's notes to its financial statements:

Deferred taxes (in part)

Deferred tax assets related to temporary differences and tax losses carried forward are recognized only to the extent it is probable that a future taxable profit will be available against which the asset can be utilized at the tax entity level.

Is this policy consistent with U.S. GAAP? Explain.

CHAPTER 17

Pensions and Other Postretirement Benefits

OVERVIEW

Employee compensation comes in many forms. Salaries and wages, of course, provide direct and current payment for services provided. However, it's also commonplace for compensation to include benefits payable after retirement. We discuss pension benefits and other postretirement benefits in this chapter. Accounting for pension benefits recognizes that they represent deferred compensation for current service. Accordingly, the cost of these benefits is recognized on an accrual basis during the years that employees earn the benefits.

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

-  **LO17-1** Explain the fundamental differences between a defined contribution pension plan and a defined benefit pension plan. (p. 976)
-  **LO17-2** Distinguish among the vested benefit obligation, the accumulated benefit obligation, and the projected benefit obligation (PBO). (p. 981)
-  **LO17-3** Describe the five events that might change the balance of the PBO. (p. 982)
-  **LO17-4** Explain how plan assets accumulate to provide retiree benefits and understand the role of the trustee in administering the fund. (p. 988)
-  **LO17-5** Describe the funded status of pension plans and how that amount is reported. (p. 990)
-  **LO17-6** Describe how pension expense is a composite of periodic changes that occur in both the pension obligation and the plan assets. (p. 990)

-  **LO17-7** Record for pension plans the periodic expense and funding as well as new gains and losses and new prior service cost as they occur. (p. 996)
-  **LO17-8** Understand the interrelationships among the elements that constitute a defined benefit pension plan. (p. 1002)
-  **LO17-9** Describe the nature of postretirement benefit plans other than pensions and identify the similarities and differences in accounting for those plans and pensions. (p. 1007)
-  **LO17-10** Explain how the obligation for postretirement benefits is measured and how the obligation changes. (p. 1009)
-  **LO17-11** Determine the components of postretirement benefit expense. (p. 1010)
-  **LO17-12** Discuss the primary differences between U.S. GAAP and IFRS with respect to accounting for postretirement benefit plans. (pp. 996, 999, 1003, and 1005)

FINANCIAL REPORTING CASE

Constantine Johnny/Moment/Getty Images

United Dynamics

You read yesterday that many companies in the United States have pension plans that are severely underfunded. This caught your attention in part because you have your office interview tomorrow with United Dynamics. You hadn't really thought that much about the

pension plan of your potential future employer, in part because your current employer has a defined contribution 401(k) plan, for which funding is not a concern. However, United Dynamics is an older firm with a defined benefit plan, for which funding is the employer's responsibility.

To prepare for your interview, you obtained a copy of United Dynamics' financial statements. Unfortunately, the financial statements themselves are of little help. You are unable to find any pension liability in the balance sheet, but the statement does report a relatively small "pension asset." The income statement reports pension expense for each of the years reported. For help, you search the disclosure notes. In part, the pension disclosure note reads as follows:

Note 7: Pension Plan

United Dynamics has a defined benefit pension plan covering substantially all of its employees. Plan benefits are based on years of service and the employee's compensation during the last three years of employment. The company's funding policy is consistent with the funding requirements of federal law and regulations. The net periodic pension expense for the company included the following components. The company's pension expense was as follows (\$ in millions):

| | 2024 | 2023 | 2022 |
|---|--------------|--------------|--------------|
| Current service costs | \$ 43 | \$ 47 | \$ 42 |
| Interest cost on projected benefit obligation | 178 | 164 | 152 |
| Return on assets | (213) | (194) | (187) |
| Amortization of prior service cost | 43 | 43 | 43 |
| Amortization of net gain | (2) | (1) | — |
| Net pension costs | <u>\$ 49</u> | <u>\$ 59</u> | <u>\$ 50</u> |

The following table describes the change in projected benefit obligation for the plan years ended December 31, 2024, and December 31, 2023 (\$ in millions):

| | 2024 | 2023 |
|---|----------------|----------------|
| Projected benefit obligation at beginning of year | \$2,194 | \$2,121 |
| Service cost | 43 | 47 |
| Interest cost | 178 | 164 |
| Actuarial (gain) loss | 319 | (40) |
| Benefits paid | (106) | (98) |
| Projected benefit obligation at end of year | <u>\$2,628</u> | <u>\$2,194</u> |

The weighted-average discount rate and rate of increase in future compensation levels used in determining the actuarial present value of the projected benefit obligations in the above table were 8.1% and 4.3%, respectively, at December 31, 2024, and 7.73% and 4.7%, respectively, at December 31, 2023. The expected long-term rate of return on assets was 9.1% at December 31, 2024 and 2023.

The following table describes the change in the fair value of plan assets for the same two years (\$ in millions):

Page 976

| | 2024 | 2023 |
|--|----------------|----------------|
| Fair value of plan assets at beginning of year | \$2,340 | \$2,133 |
| Actual return on plan assets | 215 | 178 |
| Employer contributions | 358 | 127 |
| Benefits paid | (106) | (98) |
| Fair value of plan assets at end of year | <u>\$2,807</u> | <u>\$2,340</u> |

“Ouch! I can’t believe how much of my accounting I forgot,” you complain to yourself. “I’d better get out my old intermediate accounting book.”

QUESTIONS

By the time you finish this chapter, you should be able to respond appropriately to the questions posed in this case. Compare your response to the solution provided at the end of the chapter.

1. Why is pension plan underfunding not a concern in your present employment?
2. Were you correct that the pension liability is not reported in the balance sheet? What is the liability?
3. What is the amount of the plan assets available to pay benefits? What are the factors that can cause that amount to change?
4. What does the “pension asset” represent? Are you interviewing with a company whose pension plan is severely underfunded?

5. How is the pension expense influenced by changes in the pension liability and plan assets?

PART A

The Nature of Pension Plans

LO17-1 Explain the fundamental differences between a defined contribution pension plan and a defined benefit pension plan.

United States pension funds total more than \$30 trillion, roughly 18 times the size of Russia's gross national product. This powerful investment base now controls a sizable portion of the stock market. At the company level, the enormous size of pension funds is reflected in a periodic pension cost that constitutes one of the largest expenses many companies report. The corporate liability for providing pension benefits is huge. Obviously, then, the financial reporting responsibility for pensions has important social and economic implications.

Pension plans are designed to provide income to individuals during their retirement years. This is accomplished by setting aside funds during an employee's working years so that at retirement, the accumulated funds plus earnings from investing those funds are available to replace wages. Actually, an individual who periodically invests in stocks, bonds, certificates of deposit (CDs), or other investments for the purpose of saving for retirement is establishing a personal pension fund. Often, such individual plans take the form of individual retirement accounts (IRAs) to take advantage of tax breaks offered by that arrangement. In employer plans, some or all of the periodic contributions to the retirement fund often are provided by the employer.

Corporations establish pension plans for a variety of reasons. Sponsorship of pension plans provides employees with a degree of retirement security and fulfills a moral obligation felt by many employers. This security also can induce a degree of job satisfaction and perhaps loyalty that might enhance productivity and reduce turnover. Motivation to sponsor a plan sometimes comes from union demands and often relates to being competitive in the labor market.

Pension plans often enhance productivity, reduce turnover, satisfy union demands, and allow employers to compete in the labor market.

Additional Consideration

Qualified pension plans offer important tax benefits.

When established according to tight guidelines, a pension plan gains important tax advantages. Such arrangements are called *qualified plans* because they qualify for favorable tax treatment. In a qualified plan, the employer is permitted an immediate tax deduction for amounts paid into the pension fund (within specified limits). The employees, on the other hand, are not taxed at the time employer contributions are made—only when retirement benefits are received. Moreover, earnings on the funds set aside by the employer are not taxed while in the pension fund, so the earnings accumulate tax free. If you are familiar with the tax advantages of IRAs, you probably recognize the similarity between those individual plans and corporate pension arrangements.

For a pension plan to be qualified for special tax treatment, it must meet these general requirements.

1. It must cover at least 70% of employees.
2. It cannot discriminate in favor of highly compensated employees.
3. It must be funded in advance of retirement through contributions to an irrevocable trust fund.
4. Benefits must vest after a specified period of service, commonly five years. (We discuss this in more detail later.)
5. It complies with specific restrictions on the timing and amount of contributions and benefits.

Sometimes, employers agree to annually contribute a specific (defined) amount to a pension fund on behalf of employees but make no commitment regarding benefit amounts at retirement. In other arrangements, employers don't specify the amount of annual contributions but promise to provide determinable (defined) amounts at retirement. These two arrangements describe defined contribution pension plans and defined benefit pension plans, respectively:

- **Defined contribution pension plans** promise fixed annual contributions to a pension fund (say, 5% of the employees' pay or, more often, to match contributions by workers). Employees choose (from designated options) where funds are invested—usually stocks or fixed-income securities. Retirement pay depends on the size of the fund at retirement.
- **Defined benefit pension plans** promise fixed retirement benefits defined by a designated formula. Typically, the pension formula bases retirement pay on the employees' (a) years of service, (b) annual compensation (often final pay or an average for the last few years), and sometimes (c) age. Employers are responsible for ensuring that sufficient funds are available to provide promised benefits.

Today, approximately three-fourths of workers covered by pension plans are covered by defined contribution plans, roughly one-fourth by defined benefit plans. In

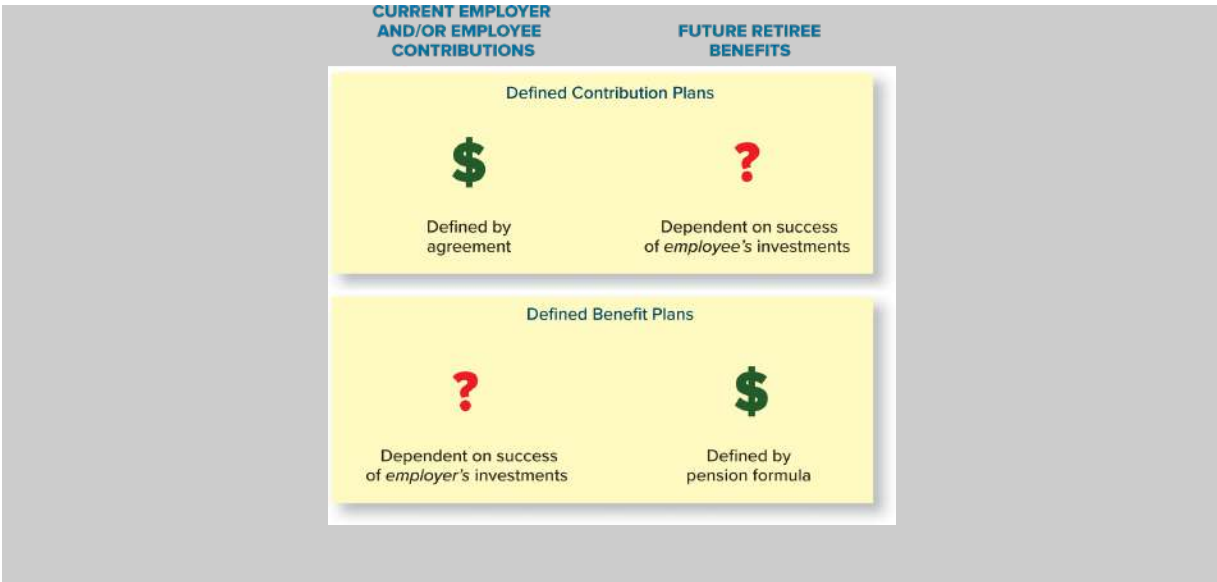

Virtually all *new* pension plans are defined contribution plans.

recent years, very few *new* pension plans are of the defined benefit variety. In fact, only 14% of Fortune 500 companies offered a defined benefit pension plan to new employees in 2022.

That's a radical drop from 59% in 1998.¹ Why the shift? There are three main reasons:

1. Government regulations make defined benefit plans cumbersome and costly to administer.
2. Employers are increasingly unwilling to bear the risk of defined benefit plans; with defined contribution plans, the company's obligation ends when contributions are made.
3. There has been a shift among many employers from trying to "buy long-term loyalty" (with defined benefit plans) to trying to attract new talent (with more mobile defined contribution plans).

The two categories of pension plans are depicted in  **Illustration 17-1**.

Both types of plans have a common goal: to provide income to employees during their retirement years. Still, the two types of plans differ regarding who bears the risk—the employer or the employees—for whether the retirement objectives are achieved. The two types of plans also have entirely different implications for accounting and financial reporting. Our discussion of defined contribution plans will be brief. Although these are now the most popular type of corporate pension plan, their relative simplicity permits a rather straightforward accounting treatment that requires little explanation. On the other hand, defined benefit plans require considerably more complex accounting treatment and constitute the primary focus of this chapter.

Defined Contribution Pension Plans

Defined contribution pension plans are becoming increasingly popular vehicles for employers to provide retirement income without the paperwork, cost, and risk generated by the more traditional defined benefit plans. Defined contribution plans promise fixed periodic contributions to a pension fund. Retirement income depends on the size of the fund at retirement. No further commitment is made by the employer regarding benefit amounts at retirement.

Defined contribution plans promise defined periodic contributions to a pension fund, without further commitment regarding benefit amounts at retirement.

These plans have several variations. In money purchase plans, employers contribute a fixed percentage of employees' salaries. Thrift plans, savings plans, and 401(k) plans (named after the Tax Code section that specifies the conditions for the favorable tax treatment of these plans) permit voluntary contributions by employees. These contributions typically are matched to a specified extent by employers. Many employers match up to 50% of employee contributions up to the first 5% or 6% of salary.

When plans link the amount of contributions to company performance, labels include profit sharing plans, incentive savings plans, 401(k) profit sharing plans, and similar titles. When employees make contributions to the plan in addition to employer contributions, it's called a *contributory* plan. Sometimes the amount the employer contributes is tied to the amount of the employee contribution.² Variations are seemingly endless. An example from a recent annual report of **Microsoft Corporation** is shown in  **Illustration 17-2**.

ILLUSTRATION 17-2 Defined Contribution Plan—Microsoft Corporation

Real World Financials

Note 18 (in part)

Savings plan

We have savings plans in the U.S. that qualify under Section 401(k) of the Internal Revenue Code and a number of savings plans in international locations. Eligible U.S. employees may contribute a portion of their salary into the savings plans, subject to certain limitations. We contribute fifty cents for each dollar a participant

contributes into the plans, with a maximum employer contribution of 50% of the IRS contribution limit for the calendar year. Employer-funded retirement benefits for all plans were \$1.0 billion, \$877 million, and \$807 million in fiscal years 2020, 2019, and 2018, respectively, and were expensed as contributed.

Accounting for these plans is quite easy. Each year, the employer simply records pension expense equal to the amount of the annual contribution. Suppose a plan promises an annual contribution equal to 3% of an employee's salary. If an employee's salary is \$110,000 in a particular year, the employer would simply recognize pension expense in the amount of the contribution:

For defined contribution plans, the employer simply records pension expense equal to the cash contribution.

| | | |
|---------------------------------|-------|-------|
| Pension expense | 3,300 | |
| Cash ($\$110,000 \times 3\%$) | | 3,300 |

The employee's retirement benefits are totally dependent upon how well investments perform. Who bears the risk (or reward) of that uncertainty? The employee would bear the risk of uncertain investment returns and, potentially, settle for far less at retirement than at first expected.³ On the other hand, the employer would be free of any further obligation. Because the actual investments are held by an independent investment firm, the employer is free of that record-keeping responsibility as well.

Risk is reversed in a defined benefit plan. Because specific benefits are promised at retirement, the employer would be responsible for making up the difference when investment performance is less than expected. We look at defined benefit plans next.

Defined Benefit Pension Plans

When setting aside cash to fund a pension plan, the uncertainty surrounding the rate of return on plan assets is but one of several uncertainties inherent in a defined benefit plan. Employee turnover affects the number of employees who ultimately will become eligible for retirement benefits. The age at which employees will choose to retire as well as life expectancies will impact both the length of the retirement period and the amount of the benefits. Inflation, future compensation levels, and interest rates also have obvious influence on eventual benefits.

This is particularly true when pension benefits are defined by a pension formula, as usually is the case. A typical formula might specify that a retiree will receive annual retirement benefits based on the employee's years of service and annual pay at retirement (say, pay level in the final year, highest pay achieved, or average pay in the last two or more years). For example, a pension formula might define annual retirement benefits as follows:

$$1\frac{1}{2}\% \times \text{Years of service} \times \text{Final year's salary}$$

By this formula, the annual benefits to an employee who retires after 30 years of service, with a final salary of \$100,000, would be

$$1\frac{1}{2}\% \times 30 \text{ Years} \times \$100,000 = \$45,000$$

Typically, a firm will hire an **actuary**, a professional trained in a particular branch of statistics and mathematics, to assess the various uncertainties (employee turnover, salary levels, mortality, etc.) and to estimate the company's

Defined benefit plans promise fixed retirement benefits defined by a designated formula.

Uncertainties complicate determining how much to set aside each year to ensure that sufficient funds are available to provide promised benefits.

A pension formula typically defines retirement pay based on the employee's (a) years of service, (b) annual compensation, and sometimes (c) age.

Pension gains and losses occur when the *pension obligation* is lower or higher than expected.

obligation to employees in connection with its pension plan. Such estimates are inherently subjective, so regardless of the skill of the actuary, estimates invariably deviate from the actual outcome to one degree or another.⁴ For instance, the return on assets can turn out to be more or less than expected. These deviations are referred to as *gains* and *losses* on pension assets. When it's necessary to revise estimates related to the pension obligation because it's determined to be more or less than previously thought, these revisions are referred to as *losses* and *gains*, respectively, on the pension liability. Later, we will discuss the accounting treatment of gains and losses from either source. The point here is that the risk of the pension obligation changing unexpectedly or the pension funds being inadequate to meet the obligation is borne by the employer with a defined benefit pension plan.

The key elements of a defined benefit pension plan are listed below:

1. The *employer's obligation* to pay retirement benefits in the future.
2. The *plan assets* set aside by the employer from which to pay the retirement benefits in the future.
3. The *periodic expense* of having a pension plan.

As you will learn in this chapter, the first two of these elements are not reported individually in the employer's financial statements. This may seem confusing at first because it is inconsistent with the way you're accustomed to treating assets and liabilities. Even though they are not separately reported, it's critical that you understand the composition of both the pension obligation and the plan assets because (a) they are reported as a net amount in the balance sheet and (b) their balances are reported in disclosure notes. And, importantly, the pension expense reported in the income statement is a direct composite of periodic changes that occur in both the pension obligation and the plan assets.

Neither the pension obligation nor the plan assets are reported individually in the balance sheet.

For this reason, we will devote a considerable portion of our early discussion to understanding the composition of the pension obligation and the plan assets before focusing on the derivation of pension expense and required financial statement disclosures.

The pension expense is a direct composite of periodic changes that occur in both the pension obligation and the plan assets.

We will begin with a quick overview of how periodic changes that occur in both the pension obligation and the plan assets affect pension expense. Next, we will explore how those changes occur, beginning with changes in the pension obligation followed by changes in plan

assets. We'll then return to pension expense for a closer look at how those changes influence its calculation. After that, we will bring together the separate but related parts by using a simple spreadsheet to demonstrate how each element of the pension plan articulates with the other elements.

Pension Expense—An Overview

The annual pension expense reflects changes in both the pension obligation and the plan assets.  **Illustration 17-3** provides a brief overview of how these changes are included in pension expense. After the overview, we'll look closer at each of the components.

Illustration 17-3 Components of Pension Expense—Overview (More Later)

Interest and investment return are financing aspects of pension cost.

The recognition of some elements of the pension expense is delayed.

Components of Pension Expense

| | |
|----------|--|
| + | Service cost ascribed to employee service during the period |
| + | Interest accrued on the pension liability |
| - | Return on the plan assets* |
| | <i>Amortized portion of:</i> |
| + | Prior service cost attributed to employee service before an amendment to the pension plan |
| + or (-) | Losses or (gains) from revisions in the pension liability or from investing plan assets |
| = | Pension expense |

*The actual return is adjusted for any difference between actual and expected return, resulting in the expected return being reflected in pension expense. This loss or gain from investing plan assets is combined with losses and gains from revisions in the pension liability for deferred inclusion in pension expense. (See the last component of pension expense.)

Next, we explore each of these pension expense components in the context of its being a part of either (a) the pension obligation or (b) the plan assets. After you learn how the expense components relate to these elements of the pension plan, we'll return to explore further how they are included in the pension expense.

PART B

The Pension Obligation and Plan Assets

The Pension Obligation

LO17-2 Distinguish among the vested benefit obligation, the accumulated benefit obligation, and the projected benefit obligation (PBO).

Now we consider more precisely what is meant by the pension obligation. Unfortunately, there's not just one definition, nor is there uniformity concerning which definition is most appropriate for pension accounting. Actually, three different ways to measure the pension obligation have meaning in pension accounting, as shown in  **Illustration 17-4**.

Illustration 17-4 Ways to Measure the Pension Obligation

1. **Accumulated benefit obligation (ABO)** The actuary's estimate of the total retirement benefits (at their discounted present value) earned so far by employees, applying the pension formula using **existing** compensation levels.
2. **Vested benefit obligation (VBO)** The portion of the accumulated benefit obligation that plan participants are entitled to receive regardless of their continued employment.
3. **Projected benefit obligation (PBO)** The actuary's estimate of the total retirement benefits (at their discounted present value) earned so far by employees, applying the pension formula using **estimated future** compensation levels. (If the pension formula does not include future compensation levels, the PBO and the ABO are the same.)

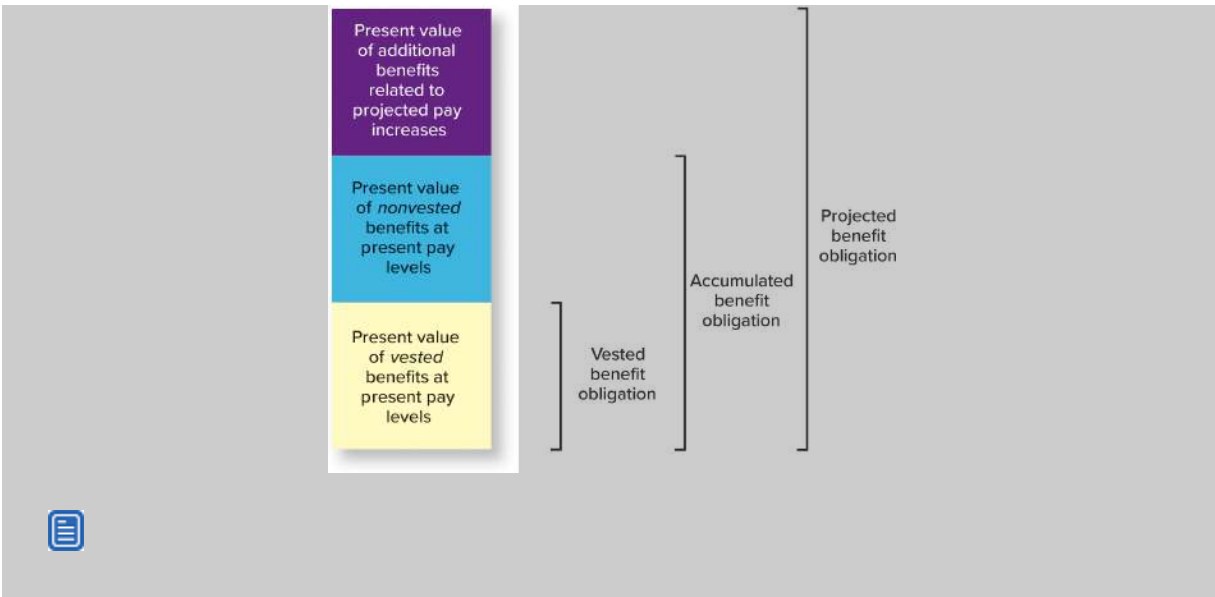

Later you will learn that the projected benefit obligation is the basis for some elements of the periodic pension expense. Remember, there is but one obligation; these are three ways to measure it. The relationship among the three is depicted in  **Illustration 17-5**.

ILLUSTRATION 17-5 Alternative Measures of the Pension Obligation

Now let's look closer at how the obligation is measured in each of these three ways. Keep in mind, though, that it's not the accountant's responsibility to actually derive the measurement; a professional actuary provides these numbers. However, for the accountant to effectively use the numbers provided, she or he must understand their derivation.

Accumulated Benefit Obligation

The **accumulated benefit obligation (ABO)** is an estimate of the discounted present value of the retirement benefits earned so far by employees, applying the plan's pension formula using *existing compensation levels*. When we look at a detailed calculation of the projected benefit obligation later, keep in mind that simply substituting the employee's existing compensation in the pension formula for her projected salary at retirement would give us the accumulated benefit obligation.

The accumulated benefit obligation ignores possible pay increases in the future.

Vested Benefit Obligation

Suppose an employee leaves the company to take another job. Will she still get earned benefits at retirement? The answer depends on whether the benefits are vested under the terms of this particular pension plan. If benefits are fully vested—yes. **Vested benefits** are those that employees have the right to receive even if their employment were to cease today.

Pension plans typically require some minimum period of employment before benefits vest. Before the Employee Retirement Income Security Act (ERISA) was passed in 1974, horror stories relating to lost benefits were commonplace. It was possible, for example, for an employee to be dismissed a week before retirement and be left with no pension benefits. Vesting requirements were tightened drastically to protect employees. These requirements have been changed periodically since then. Today, benefits must vest (a) fully within five years or (b) 20% within three years, with another 20% vesting each subsequent year until fully vested after seven years. Five-year vesting is most common. ERISA also established the Pension Benefit Guaranty Corporation (PBGC) to impose liens on corporate assets for unfunded pension liabilities in certain instances and to administer terminated pension plans. The PBGC provides a form of insurance for employees similar to the role of the FDIC for bank accounts and is financed by premiums from employers equal to specified amounts for each covered employee. It makes retirement payments for terminated plans and guarantees basic vested benefits when pension liabilities exceed assets. The vested benefit obligation is actually a subset of the ABO, the portion attributable to benefits that have vested.

The benefits of most pension plans vest after five years.

Projected Benefit Obligation

LO17–3 Describe the five events that might change the balance of the PBO.

As described earlier, when the ABO is estimated, the most recent salary is included in the pension formula to estimate future benefits, even if the pension formula specifies the final year's salary. No attempt is made to forecast what that salary would be the year before retirement. Of course, the most recent salary certainly offers an objective number to measure the obligation, but is it realistic? Since it's unlikely that there will be no salary increases between now and retirement, a more meaningful measurement should include a projection of what the salary might be at retirement.⁵ Measured this way, the liability is referred to as the **projected benefit obligation (PBO)**. Hereafter in the chapter, when we

The *PBO* estimates retirement benefits by applying the pension formula using projected future compensation levels.

mention the “pension obligation,” we are referring to the PBO. The PBO measurement may be less reliable than the ABO but is more relevant and representationally faithful.

To understand the concepts involved, it’s helpful to look at a numerical example. We’ll simplify the example (🔗 **Illustration 17-6**) by looking at how pension amounts would be determined for a single employee. Keep in mind though, that in actuality, calculations would be made (by the actuary) for the entire employee pool rather than on an individual-by-individual basis.

If the actuary’s estimate of the final salary hasn’t changed, the PBO a year later at the end of 2023 would be \$139,715 as demonstrated in 🔗 **Illustration 17-6A**.

CHANGES IN THE PBO

Notice that the PBO increased during 2023 (🔗 **Illustration 17-6A**) from \$119,822 to \$139,715 for two reasons:

1. One more service year is included in the pension formula calculation (service cost).
2. The employee is one year closer to retirement, causing the present value of benefits to increase due to the time value of future benefits (interest cost).

ILLUSTRATION 17-6 Projected Benefit Obligation

Jessica Farrow was hired by Global Communications at the beginning of 2013. The company has a defined benefit pension plan that specifies annual retirement benefits equal to:

$$1.5\% \times \text{Service years} \times \text{Final year's salary}$$

- Farrow is expected to retire at the end of 2052 after 40 years service.
- Her retirement period is expected to be 20 years.
- At the end of 2022, 10 years after being hired, her salary is \$100,000.
- The interest rate is 6%.
- The company's actuary projects Farrow's salary to be \$400,000 at retirement.*

What is the company's projected benefit obligation with respect to Jessica Farrow?

Steps to calculate the projected benefit obligation:

1. Use the pension formula (including a projection of future salary levels) to determine the retirement benefits earned to date.
2. Find the present value of the retirement benefits as of the retirement date (end of 2052).
3. Find the present value of retirement benefits as of the current date (end of 2022).

3. Present value ($n = 30, i = 6\%$) of retirement benefits at 2022 is **\$688,195** × .17411 = **\$119,822 (PBO)**

1. Actuary estimates employee has earned (as of 2022) retirement benefits of $1.5\% \times 10 \text{ years} \times \$400,000 =$ **\$60,000 per year**

| | | | |
|-----------------|---------------|---------------|---------------|
| 2013 (begin) | 2022 (end) | 2052 (end) | 2072 (end) |
| | | | |
| 10 years | 30 years | 20 years | |
| Service period | | Retirement | |

3. Present value ($n = 20, i = 6\%$) of the retirement annuity at the retirement date is $\$60,000 \times 11.46892 =$ **\$688,195**

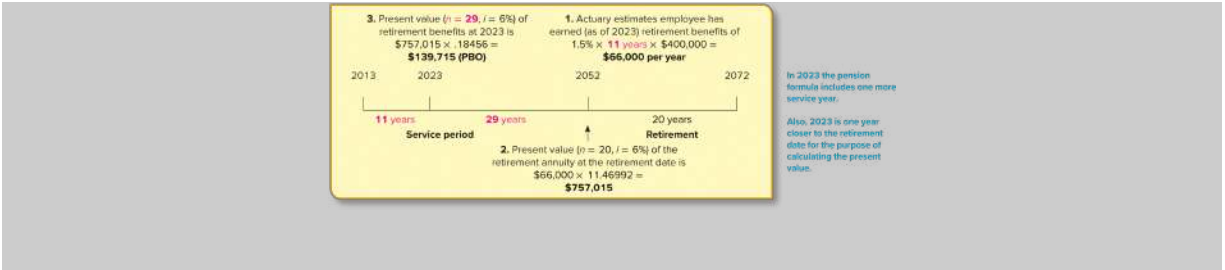

*The salary reflects an estimated compound rate of increase of about 5% and should take into account expectations concerning inflation, promotions, productivity gains, and other factors that might influence salary levels.

The actuary includes projected salaries in the pension formula. The projected benefit obligation is the present value of these benefits.

Using Excel, enter: =PV(.06,20,-60000) Output: 688195

Using a calculator, enter: [1] 20 [1] 6 [PMT] -60000 [FV] Output: [PV]688195

ILLUSTRATION 17-6A PBO in 2023

These represent two of the events that might possibly cause the balance of the PBO to change. Let’s elaborate on these and the three other events that might change the balance of the PBO. The five events are (1) service cost, (2) interest cost, (3) prior service cost, (4) gains and losses, and (5) payments to retired employees.

1. Service Cost. As we just witnessed in the illustration, the PBO increases each year by the amount of that year’s **service cost**. This represents the increase in the projected benefit obligation attributable to employee service performed during the period. As we explain later, it also is the primary component of the annual pension expense.

Each year’s service adds to the obligation to pay benefits.

2. Interest Cost. The second reason the PBO increases is called the **interest cost**. Even though the projected benefit obligation is not formally recognized as a liability in the company’s balance sheet, it is a liability nevertheless. And, as with other liabilities, interest accrues on its balance as time passes. The amount can be calculated directly as the assumed discount rate multiplied by the projected benefit obligation at the beginning of the year.⁶

Interest accrues on the PBO each year.

Additional Consideration

We can verify the increase in the PBO as being caused by the service cost and interest cost as follows:

| | | | | | |
|--|---|-----------|---|----------------------|-----------|
| PBO at the beginning of 2023 (end of 2022) | | | | | \$119,822 |
| Service cost: | × | 11.46992* | × | 0.18456 [†] | 12,701 |
| (1.5%×1 yr × | | To | | To | |

| | | |
|---|----------|------------------------------|
| \$400,000) | discount | discount |
| Annual | to 2052 | to 2023 |
| retirement | | |
| benefits | | |
| from | | |
| 2023 service | | |
| Interest | | 7,189 |
| cost: \$119,822 × | | |
| 6% | | |
| PBO at the end of | | <u>\$139,712[‡]</u> |
| 2023 | | |
| *Present value of an ordinary annuity of \$1; $n = 20, i = 6\%$. | | |
| †Present value of \$1; $n = 29, i = 6\%$. | | |
| ‡Differs from \$139,715 due to rounding. | | |

3. Prior Service Cost. Another reason the PBO might change is when the pension plan itself is *amended* to revise the way benefits are determined. For example, Global Communications in our illustration might choose to revise the pension formula by which benefits are calculated. Let's back up and assume the formula's salary percentage is increased in 2023 from 1.5% to **1.7%**:

$$1.7\% \times \text{Service years} \times \text{Final year/s salary}$$

(revised pension formula)

Obviously, the annual service cost from this date forward will be higher than it would have been without the amendment. This will cause a more rapid future expansion of the PBO. But it also might cause an immediate increase in the PBO as well. Here's why.

Suppose the amendment becomes effective for future years' service only, without consideration of employee service to date. As you might imagine, the morale and dedication of long-time employees of the company could be expected to suffer. So, for economic as well as ethical reasons, most companies choose to make amendments retroactive to prior years. In

When a pension plan is amended, credit often is given for employee service rendered in prior years. The cost of doing so is called *prior service cost*.

other words, the more beneficial terms of the revised pension formula are not applied just to future service years, but benefits attributable to all prior service years also are recomputed under the more favorable terms. Obviously, this decision is not without cost to the company. Making the amendment retroactive to prior years adds an extra layer of retirement benefits, increasing the company’s benefit obligation. The increase in the PBO attributable to making a plan amendment retroactive is referred to as **prior service cost**.⁷

For instance,  **Illustration 17-7** presents an excerpt from an annual report of **Ecolab, Inc.** describing the increase in its PBO as a result of making an amendment retroactive.

ILLUSTRATION 17-7 Prior Service Cost—Ecolab, Inc.

Real World Financials

Note 1: Retirement Plans (in part)

... The Company amended its U.S. pension plan to change the formula for pension benefits and to provide a more rapid vesting schedule. The plan amendments resulted in a \$6 million increase in the projected benefits obligation.

Source: Ecolab, Inc.

Let’s put prior service cost in the context of our illustration.

At the end of 2022, and therefore the beginning of 2023, the PBO is \$119,822. If the plan is amended on January 3, 2023, the PBO for that date could be recomputed as follows:

| PBO without Amendment | | PBO with Amendment | | Retroactive benefits from an amendment add additional costs, increasing the company's PBO. This increase is the prior service cost. | |
|------------------------------|---|--|---|--|--|
| 1. | $1.5\% \times 10 \text{ yr} \times \$400,000 = \$ 60,000$ | | $1.7\% \times 10 \text{ yr} \times \$400,000 = \$ 68,000$ | | |
| 2. | $\$60,000 \times 11.46992 = 688,195$ | | $\$68,000 \times 11.46992 = 779,955$ | | |
| 3. | $\$688,195 \times .17411 = \underline{\underline{119,822}}$ | | $\$779,955 \times .17411 = \underline{\underline{135,798}}$ | | |
| | | <div style="border-top: 1px solid black; width: 100%; margin-top: 5px;"></div> <p style="text-align: center;">\$15,976 Prior service cost</p> | | | |

The **\$15,976** increase in the PBO attributable to applying the more generous terms of the amendment to prior service years is the prior service cost. And, because we assumed the amendment occurred at the beginning of 2023, both the 2023 service cost and the 2023 interest cost would change as a result of the prior service cost. This is how:

PBO at the beginning of 2023 (end of 2022)

Prior service cost (determined above)

PBO including prior service cost at the beginning of 2023

Service cost: $(1.7\% \times 1\text{yr} \times \$400,000) \times 11,46992^* \times 0.18456^\dagger$

Annual retirement benefits To discount To discount
from 2023 service to 2052 to 2023

Interest cost : $\$135,798^\ddagger \times 6\%$

PBO at the end of 2023

*Present value of an ordinary annuity of \$1; $n = 20, i = 6\%$.

†Present value of \$1; $n = 29, i = 6\%$.

‡Includes the beginning balance plus the prior service cost because the amendment occurred at the beginning of

Additional Consideration

We can verify the PBO balance by calculating it directly.

3. Present value ($n = 29, i = 6\%$) of retirement benefits at 2023 is $\$857,950 \times .18456 = \$158,341^*$ (PBO)

1. Actuary estimates employee has earned (as of 2023) retirement benefits of $1.7\% \times 11 \text{ years} \times \$400,000 = \$74,800$ per year

2. Present value ($n = 20, i = 6\%$) of the retirement annuity at the retirement date is $\$74,800 \times 11.46992 = \$857,950$

The pension formula reflects the plan amendment.

*Adjusted by \$2 to compensate for the rounding of present value factors.

The plan amendment would affect not only the year in which it occurs, but also each subsequent year because the revised pension formula determines each year's service cost. Continuing our illustration to 2024 demonstrates this:

During 2024, the PBO increased as a result of service cost and interest cost.

| | |
|---|----------------|
| PBO at the beginning of 2024 (end of 2023) | \$158,3 |
| Service cost: $(1.7\% \times 1 \text{ yr} \times \$400,000) \times 11,46992^* \times 0.19563^\dagger$ | 15,2 |
| Annual retirement benefits To discount To discount from 2024 service to 2052 to 2024 | |
| Interest cost : $\$158,341 \times 6\%$ | 9,5 |
| PBO at the end of 2024 | <u>\$183,0</u> |

*Present value of an ordinary annuity of \$1; $n = 20, i = 6\%$.

†Present value of \$1; $n = 28, i = 6\%$.

4. Gain or Loss on the PBO. We mentioned earlier that a number of estimates are necessary to derive the PBO. When one or more of these estimates requires revision, the estimate of the PBO also will require revision. The resulting decrease or increase in the PBO is referred to as a *gain* or *loss*, respectively. Let's

Decreases and increases in estimates of the PBO because of periodic re-evaluation of uncertainties are called gains and losses.

modify our illustration to imitate the effect of revising one of the several possible estimates involved. Suppose, for instance, that new information at the end of 2024 about inflation and compensation trends suggests that the estimate of Farrow's final salary should be increased by 5% to **\$420,000**. This would affect the estimate of the PBO as follows:

| PBO without Revised Estimate | | PBO with Revised Estimate | |
|------------------------------|---|--|--|
| 1. | $1.7\% \times 12 \text{ yr} \times \$400,000 = \$ 81,600$ | $1.7\% \times 12 \text{ yr} \times \mathbf{\$420,000} = \$ 85,680$ | |
| 2. | $\$81,600 \times 11.46992 = 935,945$ | $\$85,680 \times 11.46992 = 982,743$ | |
| 3. | $\$935,945 \times .19563 = \underline{\underline{183,099}}$ | $\$982,743 \times .19563 = \underline{\underline{192,254}}$ | |
| | | $\mathbf{\$9,155}$ Loss on PBO | |

The difference of **\$9,155** represents a loss on the PBO because the obligation turned out to be higher than previously expected. Now there would be three elements of the increase in the PBO during 2024.⁸

Changing the final salary estimate changes the PBO.

The revised estimate caused the PBO to increase.

| | |
|---|-------------------------|
| PBO at the beginning of 2024 | \$158,341 |
| Service cost (calculated above) | 15,258 |
| Interest cost (calculated above) | 9,500 |
| Loss on PBO (calculated above) | 9,155 |
| PBO at the end of 2024 | <u><u>\$192,254</u></u> |

If a revised estimate causes the PBO to be lower than previously expected, a gain would be indicated. Consider how a few of the other possible estimate changes would affect the PBO:

- A change in life expectancies might cause the retirement period to be estimated as 21 years rather than 20 years. Calculation of the present value of the retirement annuity would use $n = 21$, rather than $n = 20$. The estimate of the PBO would increase.
- The expectation that retirement will occur two years earlier than previously thought would cause the retirement period to be estimated as 22 years rather than 20 years and the service period to be estimated as 28 years rather than 30 years. The new expectation would probably also cause the final salary estimate to change. The net effect on the PBO would depend on the circumstances.
- A change in the assumed discount rate would affect the present value calculations. A lower rate would increase the estimate of the PBO. A higher rate would decrease the estimate of the PBO.

5. Payment of Retirement Benefits. We've seen how the PBO will change due to the accumulation of service cost from year to year, the accrual of interest as time passes, making plan amendments retroactive to prior years, and periodic adjustments when estimates change. Another change in the PBO occurs when the obligation is reduced as benefits actually are paid to retired employees.

The payment of such benefits is not applicable in our present illustration because we've limited the situation to calculations concerning an individual employee who is several years from retirement. Remember, though, in reality the actuary would make these calculations for the entire pool of employees covered by the pension plan. But the concepts involved would be the same. [Illustration 17-8](#) summarizes the five ways the PBO can change.

Payment of retirement benefits reduces the PBO.

Illustration 17-8 Components of Change in the PBO

| The Projected Benefits Obligation Changes as a Result of: | | |
|---|--------|---|
| Cause | Effect | Frequency |
| Service cost | + | Each period |
| Interest cost | + | Each period (except the first period of the plan, when no obligation exists to accrue interest) |

The Projected Benefits Obligation Changes as a Result of:

| Cause | Effect | Frequency |
|-----------------------|--------|---|
| Prior service cost | + | Only if the plan is amended (or initiated) that period |
| Loss or gain on PBO | + or - | Whenever revisions are made in the pension liability estimate |
| Retiree benefits paid | - | Each period (unless no employees have yet retired under the plan) |

Illustration Expanded to Consider the Entire Employee Pool

For our single employee, the PBO at the end of 2024 is \$192,254. Let's say now that Global Communications has 2,000 active employees covered by the pension plan and 100 retired employees receiving retirement benefits. [Illustration 17-9](#) expands the numbers to represent all covered employees.

The PBO is not formally recognized in the balance sheet.

Illustration 17-9 The PBO Expanded to Include All Employees

The changes in the PBO for Global Communications during 2024 were as follows:*

| | (\$ in millions) |
|--|------------------|
| PBO at the beginning of 2024 [†] (amount assumed) | \$400 |
| Service cost, 2024 (amount assumed) | 41 |
| Interest cost: \$400 × 6% | 24 |
| Loss (gain) on PBO (amount assumed) | 23 |
| Less: Retiree benefits paid (amount assumed) | (38) |
| PBO at the end of 2024 | <u>\$450</u> |

*Of course, these expanded amounts are not simply the amounts for Jessica Farrow multiplied by 2,000 employees because her years of service, expected retirement date, and salary are not necessarily representative of other employees. Also, the expanded amounts take into account

expected employee turnover and current retirees.

*Includes the prior service cost that increased the PBO when the plan was amended in 2023.

Additional Consideration

We are witnessing an accelerating trend of companies changing the way they calculate pension costs. Traditionally the discount rate companies use to calculate the present value of their future pension obligations has been a *weighted average* of interest rates from a bond yield curve. A bond yield curve charts the difference (spread) between near-term and long-term rates. This average rate is used to calculate the present value of estimated future retirement payments of all employees regardless of their anticipated retirement dates. This is what we did in the illustrations in this section. In a variation of this approach, called the “spot-rate” method, we use different rates for different employees depending on when they are expected to retire. Let’s say a typical 30-year yield curve is “upward-sloping,” reflecting an increase from 1% for very short-term bonds to 4% for 30-year maturities, averaging 3%. Using the traditional method, we would calculate the present value of everyone’s expected retirement pay as well as the increase in that present value (remember, that’s the service cost) using a 3% rate. We also use the same rate when determining interest cost each year. With the spot-rate approach, we instead would apply rates corresponding to expected retirement periods. For instance, we would use the 5-year “spot” rate, let’s say 1.2%, for employees expected to retire in 5 years, the 10-year “spot” rate, let’s say 2.9%, for employees expected to retire in 10 years, and the 15-year “spot” rate, let’s say 3.4%, for employees expected to retire in 15 years. After AT&T switched to the “spot-rate” method in 2014, several dozen companies followed suit in the next two years, and the trend continues. Why the popularity? Idealistically, we could refer to the perception that the spot-rate method provides more precise measurements, but more likely, it’s because the method can improve a company’s financial results, at least

temporarily. How? It actually reduces both the *service cost* and *interest cost* components of pension expense and thus increases reported profit. Service cost is the present value of the year-to-year benefits earned by employees. The bulk of that cost is generated by employees farthest from retirement (far out on the yield curve). When the spot-rate approach is used with a typical upward sloping yield curve, that's when the highest interest rates are applied. Higher interest rates create lower present values, lower service cost in this case. Interest cost also is reduced. Lower spot interest rates apply to employees nearer retirement, and those are the ones with higher accumulated benefits. Lower rates times the higher balances, and higher rates times the lower balances, produce a lower interest cost. These effects would be eliminated or reversed if the yield curve were to become flat or inverted. Although this has been historically infrequent, recent increases in short-term rates with little change in longer-term rates suggest a flattening of the curve and less motivation to use the spot-rate approach.

Pension Plan Assets

LO17–4 Explain how plan assets accumulate to provide retiree benefits and understand the role of the trustee in administering the fund.

So far, our focus has been on the employer’s obligation to provide retirement benefits in the future. We turn our attention now to the resources with which the company will satisfy that obligation—the **pension plan assets**. Like the PBO, the pension plan assets are not reported separately in the employer’s balance sheet but are netted together with the PBO to report either a net pension asset (debit balance) or a net pension liability (credit balance). Its separate balance, too, must be reported in the disclosure notes to the financial statements (as does the separate PBO balance), and as explained below, the return on these assets is included in the calculation of the periodic pension expense.

We assumed in the previous section that Global Communications’ obligation is \$450 million for service performed to date. When employees retire, will there be sufficient funds to provide the anticipated benefits? To ensure sufficient funding, Global will contribute cash each year to a pension fund.

The assets of a pension fund must be held by a **trustee**.

A trustee accepts employer contributions, invests the contributions, accumulates the earnings on the

investments, and pays benefits from the plan assets to retired employees or their beneficiaries. The trustee can be an individual, a bank, or a trust company. Plan assets are invested in stocks, bonds, and other income-producing assets. The accumulated balance of the annual employer contributions plus the return on the investments (dividends, interest, market price appreciation) must be sufficient to pay benefits as they come due.

A trustee manages pension plan assets.

When an employer estimates how much it must set aside each year to accumulate sufficient funds to pay retirement benefits as they come due, it’s necessary to estimate the return those investments will produce. This is the **expected return on plan assets**. The higher the return, the less the employer must actually contribute. On the other hand, a relatively low return means the difference must be made up by higher contributions. In practice, recent estimates of the rate of return have ranged from 3.6% to 9%, with 6.6% being the most

commonly reported expectation.⁹ In [Illustration 17-10](#), we shift the focus of our numerical illustration to emphasize Global’s pension plan assets.

Illustration 17-10 How Plan Assets Change

A trustee accepts employer contributions, invests the contributions, accumulates the earnings on the investments, and pays benefits from the plan assets.

Global Communications funds its defined benefit pension plan by contributing each year the year’s service cost plus a portion of the prior service cost.

- Cash of \$48 million was contributed to the pension fund at the end of 2024.
- Plan assets at the beginning of 2024 were valued at \$300 million. The expected rate of return on the investment of those assets was 9%, but the actual return in 2024 was 10%
- Retirement benefits of \$38 million were paid at the end of 2024 to retired employees. What is the value of the company’s pension plan assets at the end of 2024?

| | (\$ in millions) |
|--|------------------|
| Plan assets at the beginning of 2024 | \$300 |
| Actual return on plan assets (10% × \$300) | 30 |
| Cash contributions | 48 |
| Less: Retiree benefits paid | (38) |
| Plan assets at the end of 2024 | \$340 |

Recall that Global’s PBO at the end of 2024 is \$450 million. Because the plan assets are only \$340 million, the pension plan is said to be *underfunded*. One reason is that we assumed Global incurred a \$60 million prior service cost from amending the pension plan at the beginning of 2023, and that cost is being funded over several years. Another factor is the loss from increasing the PBO due to the estimate revision, since funding has been based on the previous estimate. Later, we’ll assume earlier revisions also have increased the PBO. Of course, actual performance of the investments also impacts a plan’s funded status.

An *underfunded* pension plan means the PBO exceeds plan assets.

It is not unusual for pension plans today to be underfunded. Historically, the funded status of pension plans has varied considerably. Prior to the Employee Retirement Income Security Act (ERISA) in 1974, many plans were grossly underfunded. The law established minimum funding standards, among other matters designed to protect plan participants. The new standards brought most plans closer to full funding. Then the stock market boom of the 1980s caused the value of plan assets for many pension funds to swell to well in excess of their projected benefit obligations. More than 80% of pension plans were overfunded. As a result, managers explored ways to divert funds to other areas of operations. Today, a majority of plans again are underfunded. The economic crisis of 2008–2009 took its toll. Stock market declines reduced the funded status of pension plans from 108% at the end of 2007 to 79% at the end of 2008.¹⁰ Despite recent positive stock market returns, at the beginning of 2021, about 88% of pension funds still were underfunded. One culprit has been low interest rates. Low interest rates hurt plans' funded status because the pension obligation is a present value calculation that increases with a lower discount rate. Even small interest rate changes have big effects on funded status. Many of the underfunded plans are with troubled companies, placing employees at risk. The PBGC guarantees are limited to about \$5,000 per month, often less than promised pension benefits.

An *overfunded* pension plan means plan assets exceed the PBO.

Reporting the Funded Status in the Balance Sheet

LO17–5 Describe the funded status of pension plans and how that amount is reported.

A company's PBO is not reported separately among liabilities in the balance sheet. Similarly, the plan assets a company sets aside to pay those benefits are not separately reported among assets in the balance sheet. However, firms do report the net difference between those two amounts, referred to as the "funded status" of the plan.¹¹ From our previous discussion, we see the funded status for Global to be the following at December 31, 2024, and December 31, 2023:

A company must report in its balance sheet a liability for the underfunded (or asset for the overfunded) status of its postretirement plans.

| (\$ in millions) | 2024 | 2023 |
|------------------------------------|--------------|--------------|
| Projected benefit obligation (PBO) | \$450 | \$400 |
| Fair value of plan assets | 340 | 300 |
| Underfunded status | <u>\$110</u> | <u>\$100</u> |

Because the plan is underfunded, Global reports a net pension liability of \$110 million in its 2024 balance sheet and \$100 million in 2023. Be sure to note that the “net pension liability” is not an actual account balance. Instead, it’s the PBO account balance and the Plan assets account balance simply reported in the balance sheet as a single net amount. If the plan becomes overfunded in the future, Global will report a net pension asset instead.

Now, let’s look at all the ways that changes in the PBO and the pension plan assets affect pension expense.

PART C

Determining Pension Expense

The Relationship between Pension Expense and Changes in the PBO and Plan Assets

LO17-6 Describe how pension expense is a composite of periodic changes that occur in both the pension obligation and the plan assets.

Like wages, salaries, commissions, and other forms of pay, pension expense is part of a company's compensation for employee services each year.

The costs are allocated to the periods the services are performed.

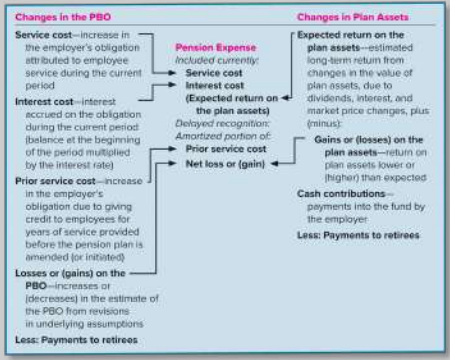

Accordingly, the accounting objective is to achieve a matching of the costs of providing this form of compensation with the benefits of the services performed. However, the fact that this form of compensation actually is paid to employees many years after the service is performed means that other elements in addition to the annual service cost will affect the ultimate pension cost. These other elements are related to changes that occur over time in both the pension obligation and the pension plan assets.  **Illustration 17-11** provides a summary of how some of these changes influence pension expense.

ILLUSTRATION 17-11 Components of the Periodic Pension Expense

The pension expense is a composite of periodic changes that occur in both the pension obligation and the plan assets.

Components of Pension Expense

 **Illustration 17-12** demonstrates the relationship between some of the changes in the PBO and in plan assets and the components of pension expense: service cost, interest cost, the return on plan assets, prior service cost amortization, and net gain or loss amortization. Let's look at these five components of pension expense one at a time.

Illustration 17-12 Pension Expense

These are the changes in the PBO and in the plan assets we previously discussed ( **Illustration 17-9** and  **Illustration 17-10**).

Reports from the actuary and the trustee of plan assets indicate the following changes during 2024 in the PBO and plan assets of Global Communications (\$ in millions).

| | PBO | | Plan Assets |
|--------------------------|--------------|-------------------------------|--------------------|
| <i>Beginning of 2024</i> | \$400 | <i>Beginning of 2024</i> | \$300 |
| Service cost | 41 | Actual return on plan assets, | |
| Interest cost, 6% | 24 | 10% (9% expected)* | 30 |
| Loss (gain) on PBO | 23 | Cash contributions | 48 |
| Less: Retiree benefits | (38) | Less: Retiree benefits | (38) |
| <i>End of 2024</i> | <u>\$450</u> | <i>End of 2024</i> | <u>\$340</u> |

Assume a *prior service cost* of \$60 million was incurred at the beginning of the previous year (2023) due to a plan amendment increasing the PBO. Also assume that at the beginning of 2024, Global had a *net loss* of \$55 million (previous losses exceeded previous gains). The average remaining service life of employees is estimated at 15 years.

Global's 2024 Pension Expense Is Determined as Follows: (\$ in millions)

| | |
|---|-------------|
| Service cost | \$41 |
| Interest cost | 24 |
| Expected return on the plan assets (\$30 actual, less \$3 gain) | (27) |
| Amortization of prior service cost (calculated later) | 4 |
| Amortization of net loss (calculated later) | 1 |
| Pension expense | <u>\$43</u> |

*Expected rates of return anticipate the performance of various investments of plan assets. This is not necessarily the same as the discount rate used by the actuary to estimate the pension obligation. Assumed rates of return recently reported have ranged from 3.6% to 9%, with 6.6% being the most commonly assumed rate (Pension/OPEB 2020 Assumption and Disclosure Survey, PWC, 2020).

We've examined each of the components of pension expense from the viewpoint of its effect on the PBO or on plan assets, using the Global Communications illustration to demonstrate

that effect. Now, let's expand the same illustration to see how these changes affect *pension expense*.

1. SERVICE COST

The \$41 million service cost represents the increase in the projected benefit obligation attributable to employee service performed during 2024 (benefits earned by employees during the year). Each year, this is the first component of the pension expense. As we discuss later in Part D, we don't actually include the service cost along with the other components of pension expense we report in the income statement. Instead, we break out that component of the expense and include it in the income statement as part of the total compensation costs (salaries and payroll taxes, etc.).

We report service cost as part of compensation costs, separate from the other components of pension expense.

Page 992

2. INTEREST COST

The interest cost is calculated as the interest rate (discount rate) multiplied by the projected benefit obligation at the beginning of the year. In 2024, this is 6% times \$400 million, or \$24 million.

Interest cost is the discount rate times the PBO balance at the beginning of the year.

The PBO balance is not separately reported as a liability in the company's balance sheet, but it is a liability nevertheless.¹² The interest expense that accrues on its balance is not separately reported in the income statement but instead becomes the second component of the annual pension expense.

3. RETURN ON PLAN ASSETS

Remember, plan assets comprise funds invested in stocks, bonds, and other securities that presumably will generate dividends, interest, and capital gains. Each year, these earnings represent the return on plan assets during that year. When accounting for the return, we need to differentiate between its two modes: the *expected* return and the *actual* return.

The return earned on investment securities increases the plan asset balance.

Actual versus Expected Return. We've assumed Global's expected rate of return is 9%, so its expected return on plan assets in 2024 was 9% times \$300 million, or \$27 million. But, as

previously indicated, the actual rate of return in 2024 was 10%, producing an actual return on plan assets of 10% times \$300 million, or \$30 million.

Obviously, investing plan assets in income-producing assets lessens the amounts employers must contribute to the fund. So, the return on plan assets reduces the net cost of having a pension plan. Accordingly, the return on plan assets each year *reduces* the amount recorded as pension expense. Just as the interest expense that accrues on the PBO is included as a component of pension expense rather than being separately reported, the investment revenue on plan assets is not separately reported either. In actuality, both the interest and return-on-assets components of pension expense do not directly represent employee compensation. Instead, they are financial items created only because the future obligation to retirees must be funded currently.

The interest and return-on-assets components are financial items created rather than direct employee compensation.

Adjustment for Loss or Gain. A controversial question is *when* differences between the actual and expected return should be recognized in pension expense. It seems logical that since the net cost of having a pension plan is reduced by the actual return on plan assets, the charge to pension expense should be the actual return on plan assets. However, the FASB concluded that the actual return should first be adjusted by any difference between that return and the return amount that had been expected. So, it's actually the *expected* return that is included in the calculation of pension expense. In our illustration, Global's pension expense is reduced by the expected return of \$27 million.

The return on plan assets reduces the net cost of having a pension plan.

The difference between the actual and expected return is considered a loss or gain on plan assets. Although we don't include these losses and gains as part of pension expense when they occur, it's possible they will affect pension expense at a later time. Soon, we will discuss how that might happen.

Any loss or gain is not included in pension expense right away.

4. AMORTIZATION OF PRIOR SERVICE COST

Recall that the \$60 million increase in Global's PBO due to recalculating benefits employees earned in prior years as a result of a plan amendment is referred to as the prior service cost. Obviously, prior service cost adds to the cost of having a pension plan. But when should this cost be recognized as pension expense? An argument can be made that the cost should be

recognized as expense in the year of the amendment when the cost increases the company's pension obligation. In fact, some members of the FASB have advocated this approach. At present, though, we amortize the cost gradually to pension expense. Here's the rationalization.

Amending a pension plan, and especially choosing to make that amendment retroactive, typically is done with the idea that future operations will benefit from those choices. For that reason, the cost is not recognized as pension expense in the year the plan is amended. Instead, it is recognized as pension expense over the time that the employees who benefited from the retroactive amendment will work for the company in the future. Presumably, this future service period is when the company will receive the benefits of its actions.

Prior service cost is recognized as pension expense over the future service period of the employees whose benefits are recalculated.

In our illustration, the amendment occurred in 2023, increasing the PBO at that time. For the individual employee, Jessica Farrow, the prior service cost was calculated to be \$15,976. Our illustration assumes that, for *all* plan participants, the prior service cost was \$60 million at the beginning of 2023. The prior service cost at the beginning of 2024 is \$56 million. The following section explains how this amount was computed.

One assumption in our illustration is that the average remaining service life of the active employee group is 15 years. To recognize the \$60 million prior service cost in equal annual amounts over this period, the amount amortized as an increase in pension expense each year is \$4 million.¹³

By the straight-line method, prior service cost is recognized over the average remaining service life of the active employee group.

| Amortization of Prior Service Cost | (\$ in millions) |
|--|------------------|
| Service cost | \$41 |
| Interest cost | 24 |
| Expected return on the plan assets | (27) |
| Amortization of prior service cost—AOCI | 4 |
| Amortization of net loss—AOCI | 1 |
| 2024 pension expense | <u>\$43</u> |

Be sure to note that, even though we're amortizing it, the prior service cost is not an asset, but instead a part of *accumulated other comprehensive income* (AOCI), a shareholders' equity account. This is a result of the FASB's disinclination to treat the cost as an expense as it is incurred. The Board, instead, prefers to consider it to be *other comprehensive income* (OCI) like the handful of losses and gains also categorized the same way and not reported among the gains and losses in the traditional income statement. You first learned about comprehensive income in [Chapter 4](#) and again in [Chapter 12](#). We'll revisit it again later in this chapter.

Prior service cost is not expensed as it is incurred. Instead, it is reported as a component of AOCI to be amortized over time.

The prior service cost balance in AOCI declines by \$4 million each year:

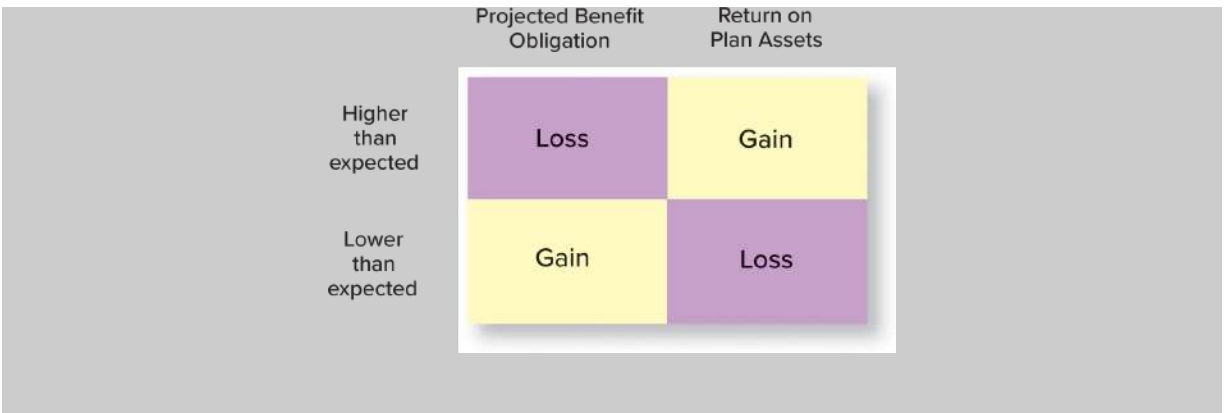

| Prior Service Cost—AOCI | (\$ in millions) |
|---|------------------|
| Prior service cost at the beginning of 2024 | \$56 |
| Less: 2024 amortization | (4) |
| Prior service cost at the end of 2024 | <u>\$52</u> |

5. AMORTIZATION OF A NET LOSS OR NET GAIN

You learned previously that gains and losses can occur when expectations are revised concerning either the PBO or the return on plan assets. [Illustration 17-13](#) summarizes the possibilities.

ILLUSTRATION 17-13 Gains and Losses

Gains and losses occur when either the PBO or the return on plan assets turns out to be different than expected.

Like the prior service cost we just discussed, we typically don't include these gains and losses as part of pension expense in the income statement, but instead report them as OCI in the statement of comprehensive income as they occur. We then report the gains and losses (net of subsequent amortization) on a cumulative basis as a net loss-

We report gains and losses as OCI in the statement of comprehensive income.

AOCI or a net gain-AOCI, depending on whether we have greater losses or gains over time. We report this amount in the balance sheet as a part of *accumulated other comprehensive income* (AOCI), a shareholders' equity account.

There is no conceptual justification for not including losses and gains in earnings. After all, these increases and decreases in either the PBO or plan assets immediately impact the net cost of providing a pension plan and, conceptually, should be included in pension expense as they occur.

Nevertheless, the FASB allows companies to delay income statement recognition of gains and losses from either source. Why? For practical reasons.

Income Smoothing

The FASB acknowledged the conceptual shortcoming of delaying the recognition of a gain or a loss while opting for this more politically acceptable approach. Delayed recognition was favored by a dominant segment of corporate America that was concerned with the effect of allowing gains and losses to immediately impact reported earnings.

The practical justification for delayed recognition is that, over time, gains and losses might cancel one another out. Given this possibility, why create unnecessary fluctuations in reported income by letting temporary gains and losses decrease and increase (respectively)

pension expense? Of course, as years pass, there may be more gains than losses, or vice versa, preventing their offsetting one another completely. So, if a net gain or a net loss gets “too large,” pension expense must be adjusted.

The FASB defines too large rather arbitrarily as being when a net gain or a net loss at the beginning of a year exceeds an amount equal to 10% of the PBO, or 10% of plan assets, whichever is higher.¹⁴ This threshold amount is referred to as the “corridor.” When the corridor is exceeded, the excess is not charged to pension expense all at once. Instead, as a further concession to income smoothing, only a portion of the excess is included in pension expense. The minimum amount that should be included is the excess divided by the average remaining service period of active employees expected to receive benefits under the plan.

Additional Consideration

Although the vast majority of companies choose to delay recognition of gains and losses as described above, companies are permitted to recognize them immediately (FASB ASC 715-30-35-25: Compensation—Retirement Benefits—Defined Benefit Plans—Pension—Subsequent Measurement—Gains and Losses). Recently, several companies have chosen that option. The option to recognize pension gains and losses immediately is called the *mark-to-market* (MTM) method. More than 50 companies, including **Verizon** and **FedEx**, have switched to MTM since 2010.

Why, you might ask, would a company voluntarily choose to report what often is a massive expense at the time of the adoption? While companies usually announce that the reason for the switch is to make operating performance easier to understand and provide a more current picture of pension plan performance (which it does), the more pragmatic reason is to get rid of large accumulated pension actuarial losses all at once, rather than amortizing them to pension expense over time and allowing them to negatively affect profits for years to come.

In our illustration, we’re assuming a net loss-AOCI of \$55 million at the beginning of 2024. Also recall that the PBO and plan assets are \$400 million and \$300 million, respectively, at that

time. The amount amortized to 2024 pension expense is **\$1** million, calculated as follows:

an amount equal to 10% of the PBO, or 10% of plan assets, whichever is higher.

| Determining Net Loss Amortization—2024 | (\$ in millions) |
|--|--------------------|
| Net loss (previous losses exceeded previous gains) | \$55 |
| 10% of \$400 (\$400 is greater than \$300): the “corridor” | (40) |
| Excess at the beginning of the year | \$15 |
| Average remaining service period | ÷ 15 years |
| Amount amortized to 2024 pension expense | <u>\$ 1</u> |

The pension expense is increased because a net loss is being amortized. If a net *gain* were being amortized, the amount would be *deducted* from pension expense because a gain would indicate that balance of the net cost of providing the pension plan had decreased.

Because the net loss exceeds an amount equal to the greater of 10% of the PBO or 10% of plan assets, part of the excess is amortized to pension expense.

Amortization of a net gain would decrease pension expense.

| Amortization of the Net Loss-AOCI | (\$ in millions) |
|--|--------------------|
| Service cost | \$41 |
| Interest cost | 24 |
| Expected return on the plan assets | (27) |
| Amortization of prior service cost-AOCI | 4 |
| Amortization of net loss-AOCI | 1 |
| 2024 pension expense | <u>\$43</u> |

This amortization reduces the net loss-AOCI in 2024 by **\$1** million. Also recall that Global incurred (a) a \$23 million loss in 2024 from revising estimates relating to the PBO and (b) a \$3 million gain when the 2024 return on plan assets was higher than expected. These three changes affected the net loss-AOCI in 2024 as follows:

Amortization of a net loss increases pension expense.

New losses add to a net loss; new gains reduce a net loss.

| Net Loss-AOCI | (\$ in millions) |
|--|------------------|
| Net loss-AOCI at the beginning of 2024 | \$55 |
| Less: 2024 amortization | (1) |
| Plus: 2024 loss on PBO | 23 |
| Less: 2024 gain on plan assets | (3) |
| Net loss-AOCI at the end of 2024 | <u>\$74</u> |

Additional Consideration

The \$74 million balance in net loss–AOCI at the end of 2024 would be the beginning balance in 2025. It would be compared with the 2025 beginning balances in the PBO and plan assets to determine whether amortization would be necessary in 2025. If you were to look back to our analyses of the changes in those two balances, you would see the 2025 beginning balances in the PBO and plan assets to be \$450 million and \$340 million, respectively. The amount amortized to 2025 pension expense will be \$1.93 million, calculated as follows:

| | |
|--|----------------------|
| | (\$ in millions) |
| Net loss (previous losses exceeded previous gains) | \$ 74 |
| 10% of \$450 (\$450 is greater than \$340) | <u>(45)</u> |
| Excess at the beginning of the year | \$ 29 |
| Average remaining service period | ÷ 15 years* |
| Amount amortized to 2025 pension expense | <u><u>\$1.93</u></u> |

*Assumes the average remaining service period of active employees is still 15 years in 2025, due to new employees joining the firm.

PART D

Reporting Issues

Recording Gains and Losses

LO17-7 Record for pension plans the periodic expense and funding as well as new gains and losses and new prior service cost as they occur.

As we discussed earlier, gains and losses (either from changing assumptions regarding the PBO or from the return on assets being higher or lower than expected) are deferred and not immediately included in pension expense and net income. Instead, we report them as *other comprehensive income (OCI)* in the statement of comprehensive income. So Global records a *loss-OCI* for the \$23 million loss that occurs in 2024 when it revises its estimate of future salary levels causing its PBO estimate to increase. Global also records a \$3 million *gain-OCI* that occurred when the \$30 million actual return on plan assets exceeded the \$27 million expected return. Here's the entry:

Losses and gains are reported as OCI.

Remember, the PBO and Plan Assets are netted together on the balance sheet rather than being separately reported.

| To Record New Gains and Losses | (\$ in millions) | |
|---|------------------|----|
| Loss-OCI (from change in assumption) | 23 | |
| PBO | | 23 |
| Plan assets | 3 | |
| Gain-OCI (\$30 actual return on assets minus \$27 expected return) | | 3 |

The loss is an increase in the PBO due to a change in an assumption. In this entry, we are recording that increase in the PBO account balance. If the change in assumption had caused the PBO to be reduced instead, we would debit the PBO here and credit a gain-OCI.

Similarly, the gain due to the actual return on plan assets exceeding the expected return is an increase in plan assets. In the next section, we record a journal entry that increases plan assets for the expected return (as a component of pension expense), so the two adjustments together cause the plan assets account balance to reflect the *actual* return (expected increase

plus the additional increase represented by the gain). Of course, if the actual return had been less than expected, we would debit a loss-OCI and credit plan assets here.

Additional Consideration

Just as we record new losses and gains as they occur, we also will record a change in the prior service cost account for any new prior service cost should it occur. For instance, if Global revised its pension formula again and recalculated its PBO using the more generous formula, causing a \$40 million increase in the PBO, the company would record the new prior service cost this way:

| To Record New Prior Service Cost | (\$ in millions) |
|--|------------------|
| Prior service cost-OCI (increase in PBO due to plan amendment) | 40 |
| PBO | 40 |

If an amendment *reduces* rather than increases the PBO, we would have a *prior service credit*, in which case we would debit (reduce) the PBO and credit prior service credit-OCI.

LO17-12 Discuss the primary differences between U.S. GAAP and IFRS with respect to accounting for postretirement benefit plans.

International Financial Reporting Standards

Accounting for Gains and Losses. Accounting for gains and losses in defined benefit plans (called “remeasurement” gains and losses under IFRS) under *IAS No. 19* is similar to U.S. GAAP, but there are two important differences.

The first difference relates to the make-up of the gain or loss on plan assets. As we know from the chapter, this amount under U.S. GAAP is the difference between the actual and expected returns, where the expected return is different from company to company and usually different from the interest rate used to determine the interest cost. Not so under IFRS, which requires that we use the same rate (the rate for “high grade corporate bonds”) for both the interest cost on the defined benefit obligation (called projected benefit obligation or PBO under U.S. GAAP) and the interest revenue on the plan assets. In fact, under IFRS, we multiply that rate, say 6%, times the net difference between the defined benefit obligation (DBO) and plan assets and report the **net interest cost/income**:

| | (\$ in millions) |
|---|------------------|
| Net interest cost [6% × (\$400 – \$300)] | 6 |
| Plan assets (6% × \$300: interest income) | 18 |
| DBO (6% × \$400: interest cost) | 24 |

Under IFRS, we have a *remeasurement* gain when the actual return on plan assets exceeds the “high grade corporate bond rate” we use to determine the net interest cost/income.

As a result, the remeasurement gain (or loss) under IFRS usually is an amount different from the gain (or loss) on plan assets under GAAP:

To Record Gains and Losses

Remeasurement gains and losses under IFRS are reported as OCI but, unlike under U.S. GAAP, are *not subsequently amortized to expense and recycled into net income*.

A second difference relates to the treatment of gains and losses *after* they are initially recorded in OCI. We’ve seen that U.S. GAAP requires that gains and losses (either from the actual return exceeding an assumed amount [*entries above*] or from changing assumptions regarding the pension obligation [*entries below*]) are to be (a) included among OCI items in the statement of comprehensive income when they first arise

and then (b) gradually amortized or recycled out of OCI and into expense (when the accumulated net gain or net loss exceeds the 10% threshold). Similar to U.S. GAAP, under IFRS these gains and losses are included in OCI when they first arise, but unlike U.S. GAAP those amounts are *not subsequently amortized out of OCI and into expense*.^{*} Instead, under IFRS those amounts remain in the balance sheet as accumulated other comprehensive income. The initial entries, then, are the same:

| U.S. GAAP | | |
|--------------------------------------|----|----|
| Loss-OCI [†] | 23 | |
| PBO | | 23 |
| IFRS | | |
| Remeasurement loss-OCI ^{††} | 23 | |
| DBO | | 23 |

^{**}"Employee Benefits," *International Accounting Standard No. 19* (IASCF).

[†]Subsequently amortized to expense and recycled from other comprehensive income to net income.

^{††}Not subsequently amortized to expense; remains in accumulated other comprehensive income.

Recording the Pension Expense

Recall from [Illustration 17-12](#) that Global's 2024 pension expense is \$43 million. The expense includes the \$41 million service cost and the \$24 million interest cost, both of which, as we learned earlier, add to Global's PBO. Similarly, the expense includes a \$27 million expected return on plan assets, which adds to the plan assets.¹⁵ These changes are reflected in the following entry:

| | | |
|------------------------------------|-------------|--|
| Service cost | \$41 | |
| Interest cost | 24 | |
| Expected return on assets | (27) | |
| Amortization of prior service cost | 4 | |
| Amortization of net loss | 1 | |
| Pension expense | <u>\$43</u> | |

| To Record Pension Expense | | (\$ in millions) |
|--|--|------------------|
| Pension expense (total) | | 43 |
| Plan assets (\$27 expected return on assets) | | 27 |
| PBO (\$41 Service Cost + \$24 Interest Cost) | | 65 |
| Amortization of prior service cost—OCI (2024 amortization) | | 4 |
| Amortization of net loss—OCI (2024 amortization) | | 1 |

The pension expense also includes the \$4 million amortization of the prior service cost and the \$1 million amortization of the net loss. As we discussed earlier, we report prior service cost when it arises, as well as gains and losses as they occur as *other comprehensive income (OCI)* in the statement of comprehensive income. These OCI items accumulate as Prior service cost—AOCI and Net loss (or gain)—AOCI. So, when we amortize these AOCI accounts, we report the amortization amounts as OCI items in the statement of comprehensive income as well. These amortized amounts are being “reclassified” from OCI to net income.

Amortization reduces the Prior service cost—AOCI and the Net loss—AOCI. Since these accounts have

New gains and losses and prior service cost are reported as OCI.

debit balances, we credit the accounts for the amortization. If we were amortizing a net gain, we would *debit* the account because a net gain has a credit balance.

So is the amortization of their accumulated balances.

Remember, we report the funded status of the plan in the balance sheet. That's the difference between the PBO and plan assets. In this case, it's a net pension liability since the plan is underfunded; that is, the PBO exceeds plan assets.

Reporting Pension Expense in the Income Statement

The service cost represents benefits earned by employees during the year as part of their compensation. Consistent with that characteristic, companies report the service cost component of pension expense in the income statement as part of the total *compensation costs* arising from services rendered by the employees during the period, separate from the other (non-service cost) components of pension expense. This presentation reflects the nature of service cost being different from that of the other elements of pension cost. The non-service cost components of pension expense are presented in the income statement also, but separate from the service cost component and outside the subtotal of income from operations.¹⁶ In our illustration, then, Global will report the \$41 million service cost as one of the elements of compensation expense and the \$2 million net amount of the remaining components of pension expense on a separate line below income from operations:

The service cost component of pension expense is reported separate from the non-service cost components of pension expense in the income statement as part of the total compensation costs.

| | (\$ in millions) | |
|--|------------------|---------------|
| Revenue | | \$xxx |
| Operating expenses | | <u>(xxx)*</u> |
| Income from operations | | \$xxx |
| Other income (expenses), net | \$xxx | |
| Non-service cost components of pension expense | <u>2</u> | <u>(xxx)</u> |

Net income

\$xxx

*The \$41 million service cost component of pension expense is reported in the same line item or items of other employee compensation.

In addition, the components of pension expense are itemized in disclosure notes. For instance, **General Mills, Inc.** described the composition of its pension expense in the disclosure note in a recent annual report, shown in  **Illustration 17-14**.

ILLUSTRATION 17-14 Disclosure of Pension Expense—General Mills, Inc.

Real World Financials

The components of pension expense are itemized in the disclosure note.

| Components of Pension Expense | | | |
|---|-----------------|---------------|----------------|
| (\$ in millions) | 2020 | 2019 | 2018 |
| Service cost | \$ 92.7 | \$94.6 | \$102.9 |
| Interest cost | 230.5 | 248.0 | 217.9 |
| Expected return on plan assets | (449.9) | (445.8) | (408.2) |
| Amortization of losses (gains) | 106.0 | 109.8 | 177.0 |

LO17-12 Discuss the primary differences between U.S. GAAP and IFRS with respect to accounting for postretirement benefit plans.

International Financial Reporting Standards

Prior Service Cost. Under *IAS No. 19*, prior service cost (called past service cost under IFRS) is combined with the current service cost and reported within the income statement rather than as a component of other comprehensive income as it is under U.S. GAAP.¹⁷ For Global, the service cost would be recorded under IFRS in 2023 when the plan amendment occurred as follows (\$ in millions):

| | | |
|--|-----|-----|
| Service cost (service cost-2023 plus \$60) | xxx | |
| DBO (service cost-2023) | | xxx |
| DBO (past service cost) | | 60* |

*From  Illustration 17-12.

Recording the Funding of Plan Assets

When Global adds its annual cash investment to its plan assets in 2024, the value of those plan assets increases by \$48 million:

| To Record Funding | (\$ in millions) |
|------------------------------------|------------------|
| Plan assets | 48 |
| Cash (contribution to plan assets) | 48 |

It's not unusual for the cash contribution to differ from that year's pension expense. After all, determining the periodic pension expense and the funding of the pension plan are two separate processes. Pension expense is an accounting decision. How much to contribute each year is a financing decision affected by cash flow and tax considerations, as well as minimum funding requirements. The Pension Protection Act of 2006 and the Employee Retirement Income Security Act of 1974 (ERISA) establish the pension funding requirements. Subject to these considerations, cash contributions are actuarially determined with the objective of accumulating (along with investment returns) sufficient funds to provide promised retirement benefits.

We saw earlier that when pension benefits are paid to retired employees, those payments reduce the plan assets established to pay the benefits and also reduce the obligation to pay the benefits, the PBO:

| To Record Payment of Benefits | (\$ in millions) |
|---|------------------|
| PBO | 38 |
| Plan assets (payments to retired employees) | 38 |

Now that we've recorded these entries for the funding of the pension plan and payment of benefits, we have recorded all the changes in the PBO and plan assets for 2024:

| (\$ in millions) | PBO |
|------------------|---------------|
| 400 | Balance |
| 23 | Loss |
| 41 | Service cost |
| 24 | Interest cost |

| (\$ in millions) | | PBO | |
|------------------|----|-----|---------|
| Benefits paid | 38 | | |
| | | 450 | Balance |

| Plan Assets | | | |
|-----------------|-----|----|---------------|
| Balance | 300 | | |
| Gain | 3 | | |
| Expected return | 27 | | |
| Funding | 48 | | |
| | | 38 | Benefits paid |
| Balance | 340 | | |

Remember, though, we don't report either of these balances separately in the balance sheet. Instead, we net the two and report a net pension liability of $\$450 - \$340 = \$110$ million, the funded status of the pension plan.

Additional Consideration

Rather than recording each of these changes in the PBO and Plan Asset accounts, we could have recorded them in a single Net pension (liability) asset account. For example, we could have recorded the gains and losses, pension expense, and funding as follows:

| | (\$ in millions) | |
|--|---------------------|----|
| Loss—OCI (from change in assumption) | 23 | |
| Net pension (liability) asset | | 23 |
| Net pension (liability) asset | 3 | |
| Gain—OCI (\$30 actual return on assets – \$27 expected return) | | 3 |
| Pension expense | 43 | |
| Net pension (liability) asset | | 38 |

| | | |
|---|----|----|
| Amortization of prior service cost—OCI* | | 4 |
| Amortization of net loss—OCI* | | 1 |
| Net pension (liability) asset | 48 | |
| Cash | | 48 |

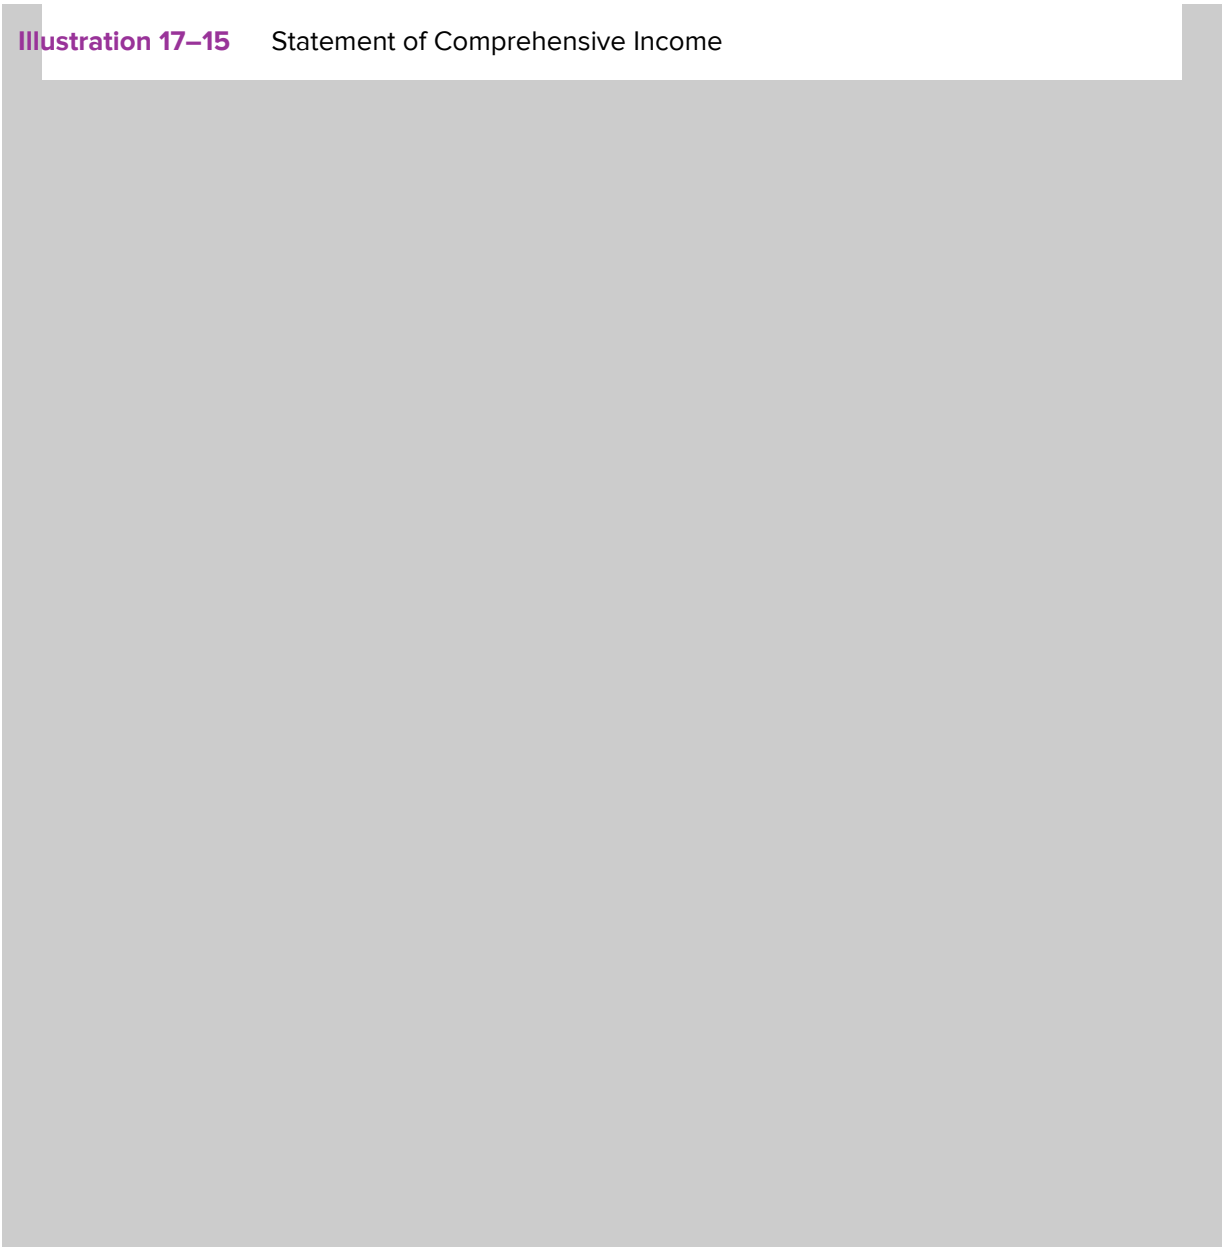

In fact many companies use this abbreviated approach. However, recording the changes in the accounts they affect (PBO and Plan assets) and then combining the two accounts for balance sheet reporting as we do in our illustrations has two advantages. First, we need the separate balances for the required disclosure in the pension disclosure note. Second, it is a more logical approach. It's easier to see that the return on plan assets is an increase in plan assets than it is to see it as a reduction in Net pension (liability) asset.

*Because Prior service cost—OCI and Net loss—OCI have debit balances, we amortize them with credits. We would amortize a Net gain—OCI (credit balance) or a prior service *credit* with a debit.

Comprehensive Income

Comprehensive income, as you may recall from [Chapter 4](#), is a more expansive view of income than traditional net income. In fact, it encompasses all changes in equity other than from transactions with owners.¹⁸ So, in addition to net income, comprehensive income includes up to four other changes in equity. A statement of comprehensive income is demonstrated in [Illustration 17-15](#), highlighting the presentation of the components of OCI pertaining to Global's pension plan.

Illustration 17-15 Statement of Comprehensive Income

| | (\$ in millions) | |
|---|------------------|---------------------|
| Net income | | \$xxx |
| Other comprehensive income: | | |
| Gain (loss) on AFS investments (unrealized)* | \$ x | |
| Pension plan: | | |
| Loss—due to revising a PBO estimate [†] | (23) | |
| Gain—return on plan assets exceeds expected [†] | 3 | |
| Amortization of net loss | 1 | |
| Amortization of prior service cost | 4 | |
| Deferred gains (losses) from derivatives | x | |
| Gains (losses) from foreign currency transactions and exchange rate adjustments | <u>x</u> | <u>xx</u> |
| Comprehensive income | | <u><u>\$xxx</u></u> |

Note: These amounts are shown without considering taxes. Actually each of the elements of comprehensive income should be reported net of tax. For instance, if the tax rate is 25%, the loss would be reported as \$17.25 million: \$23 million less a \$5.75 million tax benefit.

*An unrealized loss also might occur from recording an impairment of a debt security investment as described in [Chapter 12](#) and, as discussed in [Chapter 14](#), applying the “fair value option” to a liability entails reporting in OCI any part of the change in the liability’s fair value that’s due to the liability’s credit risk.

[†]From [Illustration 17–12](#).

Other comprehensive income (OCI) items are reported both (a) as they occur and then (b) as an accumulated balance within shareholder’s equity in the balance sheet as shown in [Illustration 17–16](#).¹⁹

Illustration 17–16 Balance Sheet Presentation of Pension Amounts

Global Communication
Balance Sheets
For Years Ended December 31

| | 2024 | 2023 |
|---|-------------|-------------|
| Assets | | |
| Current assets | \$xxx | \$xxx |
| Property, plant, and equipment | xxx | xx |
| Liabilities | | |
| Current liabilities | \$xxx | \$xxx |
| Net pension liability | 110 | 100 |
| Other long-term liabilities | xxx | xxx |
| Shareholders' Equity | | |
| Common stock | \$xxx | \$xxx |
| Retained earnings | xxx | xxx |
| Accumulated other comprehensive | | |
| Gain (loss) on AFS investments (unrealized) | xxx | xxx |
| Net loss* | (74) | (55) |
| Prior service cost* | (52) | (56) |

*These are debit balances and therefore negative components of accumulated other comprehensive income; a net gain would have a credit balance and be a positive component of accumulated other comprehensive income.

In addition to reporting the gains or losses (and other elements of comprehensive income) that occur in the current reporting period, we also report these amounts on a *cumulative* basis in the balance sheet. Comprehensive income includes (a) net income and (b) OCI. Remember that we report net income that occurs in the current reporting period in the income statement and also report accumulated net income (that hasn't been distributed as dividends) in the balance sheet as retained earnings. Similarly, we report OCI as it occurs in the current reporting period (see [Illustration 17-15](#)) and also report *accumulated other comprehensive income* in the balance

Reporting OCI as it occurs and also as an accumulated balance is consistent with the way we report net income and its accumulated counterpart, retained earnings.

Income Tax Considerations

We have ignored the income tax effects of the amounts in order to focus on the core issues. Note, though, that as gains and losses occur, they are reported along with their tax effects (tax expense for a gain, tax savings for a loss) in the statement of comprehensive income.

This can be accomplished by presenting components of other comprehensive income either net of related income tax effects or *before* income tax effects with disclosure of the income taxes allocated to each component either in a disclosure note or parenthetically in the statement.²⁰ Likewise, AOCI in the balance sheet also is reported net of tax.

OCI items are reported net of tax, in both the (a) statement of comprehensive income and (b) AOCI.

Putting the Pieces Together

LO17-8 Understand the interrelationships among the elements that constitute a defined benefit pension plan.

In preceding sections, we've discussed (1) the projected benefit obligation (including changes due to periodic service cost, accrued interest, revised estimates, plan amendments, and the payment of benefits), (2) the plan assets (including changes due to investment returns, employer contributions, and the payment of benefits), (3) prior service cost, (4) gains and losses, (5) the periodic pension expense (comprising components of each of these), and (6) the funded status of the plan. These elements of a pension plan are interrelated. It's helpful to see how each element relates to the others. One way is to bring each part together in a *pension spreadsheet*. We do this for Global Communications in  **Illustration 17-17**.

You should spend several minutes studying this spreadsheet, focusing on the relationships among the elements that constitute a pension plan. Notice that the first numerical column simply repeats the actuary's report of how the PBO changed during the year, as explained previously ( **Illustration 17-9**). Likewise, the second column reproduces the changes in plan assets we discussed earlier ( **Illustration 17-10**). We've also previously noted the changes in the prior service cost–AOCI and the net loss–AOCI that are duplicated in the third and fourth columns. The fifth column repeats the calculation of the 2024 pension expense we determined earlier, and the cash contribution to the pension fund is the sole item in the next column.

The last column shows the changes in the funded status of the plan. Be sure to notice that the funded status is the difference between the PBO (column 1) and the plan assets (column 2). That means that each of the changes we see in either of the first two columns also is reflected as a change in the funded status in the last column. The net pension liability (or net pension asset) balance is not carried in company records. Instead, we use this label to report the PBO and plan assets in the balance sheet as a single net amount.

Rather than report the PBO and plan asset balances separately, we combine those balances and report a single net pension liability or net pension asset in the balance sheet.

Notice that each change in a formal account (light-shaded columns) is reflected in exactly two of those columns with one debit and one credit.

Illustration 17–17 Pension Spreadsheet

When the PBO exceeds plan assets, we have a net pension liability. If plan assets exceed the PBO we have a net pension asset.

The net pension liability (or net pension asset) is not recorded in a journal entry but is the amount reported in the balance sheet as the PBO and plan assets combined.

| | Recorded in Accounts | | | | | Reported Only | |
|-----------------------------------|----------------------|-------------|---------------------------|-----------------|-----------------|---------------|--------------------------------|

 *This amount was \$60 million in the 2023 pension spreadsheet.

LO17–12 Discuss the primary differences between U.S. GAAP and IFRS with respect to accounting for postretirement benefit plans.

International Financial Reporting Standards

Reporting Pension Expense. Under IFRS we separately report (a) the service cost component (including past service cost) and (b) the net interest cost/income component in the *income statement* and (c) rereasurement gains and losses as *other comprehensive income*.

Decision Makers' Perspective

Although financial statement items are casualties of the political compromises of GAAP guidance, information provided in the disclosure notes fortunately makes up for some of the deficiencies.²¹ Foremost among the useful disclosures are changes in the projected benefit obligation, changes in the fair value of plan assets, and a breakdown of the components of the annual pension expense. Other information also is made available to make it possible for interested analysts to reconstruct the

financial statements with pension assets and liabilities included. We'll look at specific disclosures after we discuss postretirement benefits other than pensions because the two types of plans are reported together.

Investors and creditors must be cautious of the nontraditional treatment of pension information when developing financial ratios as part of an analysis of financial statements. The various elements of pensions that are not reported

separately on the balance sheet and income statement (PBO, plan assets, gains and losses) can be included in ratios such as the debt to equity ratio or return on assets, but only by deliberately obtaining those numbers from the disclosure notes and adjusting the computation of the ratios. Similarly, without adjustment, profitability ratios and the times interest earned ratio will be distorted because pension expense includes the financial components of interest and return on assets.

Pension amounts reported in the disclosure notes fill a reporting gap left by the minimal disclosures in the primary financial statements.

Earnings quality (as defined in Chapter 4 and discussed in other chapters) also can be influenced by amounts reported in pension disclosures. Companies with relatively sizable unrecognized pension costs (prior service cost, net gain or loss) can be expected to exhibit a relatively high “temporary” earnings component. Recall that temporary earnings are expected to be less predictive of future earnings than the “permanent” earnings component. ●

Settlement or Curtailment of Pension Plans

To cut down on cumbersome paperwork and lessen their exposure to the risk posed by defined benefit plans, many companies are providing defined contribution plans instead. When a plan is terminated, a change in earnings is reported at that time.²² For instance, **Accenture** described the termination of its pension plan in the following disclosure note from its 2020 financial statements (see  **Illustration 17-18**).

Companies sometimes terminate defined benefit plans to reduce costs and lessen risk.

ILLUSTRATION 17-18 Loss on the Termination of a Defined Benefit Plan—Accenture

Real World Financials

U.S. Defined Benefit Pension Plan Settlement Charges (in part)

In May 2017, we settled our U.S. pension plan obligations. Plan participants elected to receive either a lump-sum distribution or to transfer benefits to a third-party annuity provider. As a result of the settlement, we were relieved of any further obligation under our U.S. pension plan. During fiscal 2017, we recorded a pension settlement charge of \$509,793 and related income tax benefits of \$198,219.

Concept Review Exercise

PENSION PLANS

Allied Services, Inc. has a noncontributory, defined benefit pension plan. Pension plan assets had a fair value of \$900 million at December 31, 2023.

On January 3, 2024, Allied amended the pension formula to increase benefits for each service year. By making the amendment retroactive to prior years, Allied incurred a prior service cost of \$75 million, adding to the previous projected benefit obligation of \$875 million. The prior service cost is to be amortized (expensed) over 15 years. The service cost is \$31 million for 2024. Both the actuary's discount rate and the expected rate of return on plan assets were 8%. The actual rate of return on plan assets was 10%.

At December 31, 2024, \$16 million was contributed to the pension fund and \$22 million was paid to retired employees. Also, at that time, the actuary revised a previous assumption, increasing the PBO estimate by \$10 million. The net loss AOCI at the beginning of the year was \$13 million.

Required:

Determine each of the following amounts as of December 31, 2024, the fiscal year-end for Allied: (1) projected benefit obligation; (2) plan assets; and (3) pension expense.

Solution:

| (\$ in millions) | Projected Benefit Obligation | Plan Assets | Pension Expense |
|--------------------|------------------------------------|----------------|--------------------|
| Balances at Jan. 1 | \$ 875 | \$900 | \$ 0 |
| Prior service cost | 75 | | |
| Service cost | 31 | | 31 |

| | | | |
|---|----------------|--------------|----------------|
| Interest cost [(\$875 + \$75)* × 8%] | 76 | | 76 |
| Return on plan assets: | | | |
| Actual (\$900 × 10%) | | 90 | |
| Expected (\$900 × 8%) | | | (72) |
| Amortization of prior service cost (\$75 ÷ 15 yr) | | | 5 |
| Amortization of net loss | | | 0 [†] |
| Loss on PBO | 10 | | |
| Cash contribution | | 16 | |
| Retirement payments | (22) | (22) | |
| Balance at Dec. 31 | <u>\$1,045</u> | <u>\$984</u> | <u>\$40</u> |

Note: The \$18 million gain on plan assets (\$90 – \$72 million) is not recognized yet; it is carried forward to be combined with previous and future gains and losses, which will be recognized only if the net gain or net loss exceeds 10% of the higher of the PBO or plan assets.

*Since the plan was amended at the beginning of the year, the prior service cost increased the PBO at that time.

[†]Since the net loss (\$13) does not exceed 10% of \$900 (higher than \$875), no amortization is required for 2024.

LO17–12 Discuss the primary differences between U.S. GAAP and IFRS with respect to accounting for postretirement benefit plans.

Page 1005

Page 1006

Page 1007

Accounting for pensions and other postretirement benefits under IFRS is specified in a recent IASB amendment to its postemployment benefit standard, *IAS No. 19*.

Under the update, the changes that constitute the components of the net pension cost are separated into (a) the cost of service, (b) the cost of financing that cost, and (c) gains or losses from occasional remeasurement of the cost:

| Components | Include: | Recognized immediately in the: |
|---|--|--|
| Service cost | <ul style="list-style-type: none"> • Current service costs • Past service costs (if any) | <ul style="list-style-type: none"> • balance sheet • income statement |
| Net interest cost or Net interest income | <ul style="list-style-type: none"> • Interest rate* × net pension liability (if DBO > plan assets) or • Interest rate* × net pension asset (if plan assets > DBO) | <ul style="list-style-type: none"> • balance sheet • income statement |
| Remeasurement cost | <ul style="list-style-type: none"> • Remeasurements of service costs caused by changes in assumptions (i.e., assumptions like salary expectations, length of service, length of retirement, etc.) • Gains and losses arising from experience differing from what was assumed • Investment gains and losses on plan assets | <ul style="list-style-type: none"> • balance sheet • statement of comprehensive income as OCI |

*High-quality corporate bond rate.

Classifying the Components of the Net Pension Cost

Using the amounts from our Global Communications illustration, the changes in 2024 would be classified as follows:

Profit & Loss (Income Statement)

| Service cost: | (\$ in millions) | |
|---|------------------|--------------------|
| Service cost—2024 | \$ 41 | |
| Past service cost | <u>0*</u> | \$41 |
| Net interest cost/income: | | |
| Net interest cost [6% × (\$400 – \$300)] | | <u>6</u> |
| | | \$47 |
| Other Comprehensive Income (OCI) | | |
| Remeasurement cost: | | |
| Loss (gain) on DBO—change in salary estimate | \$23 | |
| Loss (gain) on plan assets: (10% –6%) × \$300 | <u>(12)</u> | 11 |
| Net pension cost | | <u><u>\$58</u></u> |

*Last year (2023), this amount was \$60 million.

Notice that there is no separate interest cost and there is no “expected” return on plan assets. Instead, those two are essentially combined into a single measure, net interest cost/income. Because they’re combined, the same rate (6% in this case) is used for both, rather than having one rate for interest cost and another for expected return on assets.

Recording the Components of the Net Pension Cost

We record (a) individual components of the net pension cost (in net income or OCI) and (b) the balance sheet accounts they affect.

We report the (a) service cost and (b) net interest cost/income in *net income* and (c) remeasurement costs in *OCI*, as each of those amounts occurs. By recording each component, we record the total pension expense. Remember, each component is a change in either plan assets (the return on assets) or the defined benefit obligation (all others), so as we record each component we also record its effect on plan assets and the defined benefit obligation, as follows:

| To Record Net Pension Cost | (\$ in millions) | |
|-----------------------------------|------------------|----|
| Service cost | 41 | |
| DBO (service cost-2024) | | 41 |

| | |
|--|----|
| DBO (past service cost: none in 2024) | 0 |
| Net interest cost [6% × (\$400 – \$300)] | 6 |
| Plan assets (6% × \$300: interest income) | 18 |
| DBO (6% × \$400: interest cost) | 24 |
| Plan assets (actual return in excess of 6%) | 12 |
| Remeasurement gain on plan assets—OCI [(10% – 6%) × \$300] | 12 |
| Remeasurement loss from change in assumption—OCI | 23 |
| DBO (change in future salary estimate) | 23 |

When Global adds its annual cash investment to its plan assets, the value of those plan assets increases by \$48 million:

| To Record Funding | (\$ in millions) |
|------------------------------------|------------------|
| Plan assets | 48 |
| Cash (contribution to plan assets) | 48 |

In our illustration, Global’s retired employees were paid benefits of \$38 million in 2024. Paying those benefits, of course, reduces the obligation to pay benefits (the DBO), and since the payments are made from the plan assets, that balance is reduced as well:

| To Record Payment of Benefits | (\$ in millions) |
|-------------------------------|------------------|
| DBO | 38 |
| Plan assets | 38 |

Reporting the Components of the Net Pension Cost

We report the components of the total pension cost in the **statement of comprehensive income** as follows:

| | |
|---|-------------|
| Revenue | \$xxx |
| Operating expenses (including \$41 pension service cost) | (xx) |
| Finance costs (including \$6 net interest cost on pensions) | <u>xx</u> |
| Profit before tax | \$xxx |
| Tax expense | <u>(xx)</u> |

| | |
|---|-------------|
| Net income | \$xxx |
| Other comprehensive income | |
| Remeasurement loss arising from change in pension assumption | \$ 23 |
| Remeasurement gain from the return on plan assets exceeding the interest rate | <u>(12)</u> |
| Comprehensive income | \$xxx |

Under IFRS, we report separately the three costs of having a defined benefit plan:

In net income:

- **service cost**
- **net interest cost**

In OCI:

- **remeasurement cost**

Notice in the journal entries that we have no “pension expense” being recorded as we had using U.S. GAAP in the chapter. Instead, individual components of the net pension cost are recorded. The reason is that the amendment calls for components, not the net total, to be reported in the income statement and statement of comprehensive income.

PART E

Postretirement Benefits Other Than Pensions

LO17–9 Describe the nature of postretirement benefit plans other than pensions and identify the similarities and differences in accounting for those plans and pensions.

As we just discussed, most companies have pension plans that provide for the future payments of retirement benefits to compensate employees for their current services. Many companies also furnish *other postretirement benefits* to their retired employees. These may include medical coverage, dental coverage, life insurance, group legal services, and other benefits. By far, the most common is health care benefits. One of every three U.S. workers in medium- and large-size companies participates in health care plans that provide for coverage that continues into retirement. The aggregate impact is considerable; the total obligation for all U.S. corporations is measured in trillions of dollars.

Prior to 1993, employers accounted for postretirement benefit costs on a pay-as-you-go basis, meaning the expense each year was simply the amount of insurance premiums or medical claims paid, depending on the way the company provided health care benefits. The FASB revised GAAP to require a completely different approach. The expected future health care costs for retirees now must be recognized as an expense over the years necessary for employees to become entitled to the benefits.²³ This is the accrual basis that also is the basis for pension accounting.

In fact, accounting for postretirement benefits is similar in most respects to accounting for pension benefits. This is because the two forms of benefits are fundamentally similar. Each is a form of deferred compensation earned during the employee's service life and each can be estimated as the present value of the cost of providing the expected future benefits.

General Motors described its plan as shown in  **Illustration 17-19**.

Real World Financials

Note 5: Other Postretirement Benefits (in part)

The Corporation and certain of its domestic subsidiaries maintain hourly and salaried benefit plans that provide postretirement medical, dental, vision, and life insurance to retirees and eligible dependents. ... [GAAP] requires that the cost of such benefits be recognized in the financial statements during the period employees provide service to the Corporation.

Source: General Motors

Despite the similarities, though, there are a few differences in the characteristics of the benefits that necessitate differences in accounting treatment. Because accounting for the two types of retiree benefits is so nearly the same, our discussion in this portion of the chapter will emphasize the differences. This will allow you to use what you learned earlier in the chapter regarding pension accounting as a foundation for learning how to account for other postretirement benefits, supplementing that common base only when necessary. Focusing on the differences also will reinforce your understanding of pension accounting.

What Is a Postretirement Benefit Plan?

Before addressing the accounting ramifications, let's look at a typical retiree health care plan.²⁴ First, it's important to distinguish retiree health care benefits

Eligibility usually is based on age and/or years of service.

from health care benefits provided during an employee's working years. The annual cost of providing *preretirement* benefits is simply part of the annual compensation expense. However, many companies offer coverage that continues into retirement. It is the deferred aspect of these *postretirement* benefits that creates an accounting issue.

Usually a plan promises benefits in exchange for services performed over a designated number of years, or reaching a particular age, or both. For instance, a plan might specify that employees are eligible for postretirement benefits after both working 20 years and reaching age 62 while in service. Eligibility requirements and the nature of benefits usually are specified by a written plan, or sometimes only by company practice.

Postretirement Health Benefits and Pension Benefits Compared

Keep in mind that retiree health benefits differ fundamentally from pension benefits in some important respects:

1. The amount of *pension* benefits generally is based on the number of years an employee works for the company so that the longer the employee works, the higher are the benefits. On the other hand, the amount of *postretirement health care* benefits typically is unrelated to service. It's usually an all-or-nothing plan in which a certain level of coverage is promised upon retirement, independent of the length of service beyond that necessary for eligibility.
2. Although coverage might be identical, the cost of providing the coverage might vary significantly from retiree to retiree and from year to year because of differing medical needs.
3. Postretirement health care plans often require the retiree to share in the cost of coverage through monthly contribution payments. For instance, a company might pay 80% of insurance premiums, with the retiree paying 20%. The net cost of providing coverage is

reduced by these contributions as well as by any portion of the cost paid by Medicare or other insurance.

4. Coverage often is provided to spouses and eligible dependents.

Determining the Net Cost of Benefits

To determine the postretirement benefit obligation and the postretirement benefit expense, the company's actuary first must make estimates of what the postretirement benefit costs will be for current employees. Then, as illustrated in [Illustration 17-20](#), contributions to those costs by employees are deducted, as well as Medicare's share of the costs (for retirement years when the retiree will be 65 or older), to determine the estimated net cost of benefits to the employer:

ILLUSTRATION 17-20 Estimating the Net Cost of Benefits

Remember, postretirement health care benefits are anticipated actual costs of providing the promised health care, rather than an amount estimated by a defined benefit formula. This makes these estimates inherently more intricate, particularly because health care costs in general are notoriously difficult to forecast. And, since postretirement health care benefits are partially paid by the retiree and by Medicare, these cost-sharing amounts must be estimated as well.

On the other hand, estimating postretirement benefits costs is similar in many ways to estimating pension costs. Both estimates entail a variety of assumptions to be made by the company's actuary. Many of these assumptions are the same; for instance, both require estimates of

Many of the assumptions needed to estimate postretirement health care benefits are the same as those needed to estimate pension benefits.

1. A discount rate.

2. Expected return on plan assets (if the plan is funded).
3. Employee turnover.
4. Expected retirement age.
5. Expected compensation increases (if the plan is pay-related).
6. Expected age of death.
7. Number and ages of beneficiaries and dependents.

Of course, the relative importance of some estimates is different from that for pension plans. Dependency status, turnover, and retirement age, for example, take on much greater significance. Also, additional assumptions become necessary as a result of differences between pension plans and other postretirement benefit plans. Specifically, it's necessary to estimate

Some additional assumptions are needed to estimate postretirement health care benefits besides those needed to estimate pension benefits.

1. The current cost of providing health care benefits at each age that participants might receive benefits.
2. Demographic characteristics of plan participants that might affect the amount and timing of benefits.
3. Benefit coverage provided by Medicare, other insurance, or other sources that will reduce the net cost of employer-provided benefits.
4. The expected health care cost trend rate.²⁵

Taking these assumptions into account, the company's actuary estimates what the net cost of postretirement benefits will be for current employees in each year of their expected retirement. The discounted present value of those costs is the expected postretirement benefit obligation.

The postretirement benefit obligation is the discounted present value of the benefits during retirement.

Postretirement Benefit Obligation

LO17-10 Explain how the obligation for postretirement benefits is measured and how the obligation changes.

There are two related obligation amounts. As indicated in  **Illustration 17-21**, one measures the total obligation and the other refers to a specific portion of the total:

ILLUSTRATION 17-21 Two Views of the Obligation for Postretirement Benefits Other Than Pensions

1. **Expected postretirement benefit obligation (EPBO):** The actuary's estimate of the total postretirement benefits (at their discounted present value) expected to be received by plan participants.
2. **Accumulated postretirement benefit obligation (APBO):** The portion of the EPBO attributed to employee service to date.

The accumulated postretirement benefit obligation (APBO) is analogous to the projected benefit obligation (PBO) for pensions. Like the PBO, the APBO is reported in the balance sheet only to the extent that it exceeds plan assets.

Measuring the Obligation

To illustrate, assume the actuary estimates that the net cost of providing health care benefits to Jessica Farrow (our illustration employee from earlier in the chapter) during her retirement years has a present value of \$10,842 as of the end of 2022. This is the EPBO. If the benefits (and therefore the costs) relate to an estimated 35 years of service and 10 of those years have been completed, the APBO would be²⁶

\$3,098 represents the portion of the EPBO related to the first 10 years of the 35-year service period.

$$\begin{array}{rcl}
 \$10,842 & \times & \frac{10}{35} & = & \$3,098 \\
 \text{EPBO} & & \text{Fraction attributed} & & \text{APBO} \\
 & & \text{to service to date} & &
 \end{array}$$

If the assumed discount rate is 6%, a year later the EPBO will have grown to **\$11,493** simply because of a year's interest accruing at that rate ($\$10,842 \times 1.06 = \$11,493$). Notice that there is no increase in the EPBO for service because, unlike the obligation in most pension plans, the total obligation is not increased by an additional year's service.

The APBO, however, is the portion of the EPBO related to service up to a particular date. Consequently, the APBO will have increased both because of interest and because the service fraction will be higher (service cost):

\$3,612 represents the portion of the EPBO related to the first 11 years of the 35-year service period.

$$\begin{array}{rcl}
 \$11,493 & \times & \frac{11}{35} & = & \$3,612 \\
 \text{EPBO} & & \text{Fraction attributed} & & \text{APBO} \\
 & & \text{to service to date} & &
 \end{array}$$

The two elements of the increase in 2023 can be separated as follows:

The APBO increases each year due to (a) interest accrued on the APBO and (b) the portion of the EPBO attributed to that year.

| | |
|---|-----------------------|
| APBO at the beginning of the year | \$3,098 |
| Interest cost: $\$3,098 \times 6\%$ | 186 |
| Service cost: $(\$11,493 \times \frac{1}{35})$ portion of EPBO attributed to the year | 328 |
| APBO at the end of the year | <u><u>\$3,612</u></u> |

Attribution

Attribution is the process of assigning the cost of benefits to the years during which those benefits are assumed to be earned by employees. We accomplish this by assigning an equal fraction of the EPBO to each year of service from the employee's date of hire to the employee's full eligibility date.²⁷ This is the date the employee has performed all the service necessary to have earned all the retiree benefits estimated to be received by the employee.²⁸

In our earlier example, we assumed the attribution period was 35 years and accordingly accrued $\frac{1}{35}$ of the EPBO each year. The amount accrued each year increases both the APBO and the postretirement benefit expense. In [Illustration 17-22](#) we see how the 35-year attribution (accrual) period was determined.

ILLUSTRATION 17-22 Determining the Attribution Period

The attribution period spans each year of service from the employee’s date of hire to the employee’s full eligibility date.

Jessica Farrow was hired by Global Communications at age 22 at the beginning of 2013 and is expected to retire at the end of 2052 at age 62. The retirement period is estimated to be 20 years.*

Global’s employees are eligible for postretirement health care benefits after both reaching age 56 while in service and having worked 20 years.

Since Farrow becomes fully eligible at age 56 (the end of 2047), retiree benefits are attributed to the 35-year period from her date of hire through that date. Graphically, the situation can be described as follows:

*You probably recognize this as the situation used earlier in the chapter to illustrate pension accounting.

Some critics of this approach feel there is a fundamental inconsistency between the way we measure the benefits and the way we assign the benefits to specific service periods. The benefits

The attribution period does not include years of service beyond the full eligibility date even if the employee is expected to work after that date.

(EPBO) are measured with the concession that the employee may work beyond the full eligibility date; however, the attribution period does not include years of service after that date. The counterargument is the fact that at the full eligibility date the employee will have earned the right to receive the full benefits expected under the plan and the amount of the benefits will not increase with service beyond that date.

Accounting for Postretirement Benefit Plans Other Than Pensions

LO17-11 Determine the components of postretirement benefit expense.

As we just discussed, it's necessary to attribute a portion of the accumulated postretirement benefit obligation to each year as the service cost for that year as opposed to measuring the actual benefits employees earn during the year as we did for pension plans. That's due to the fundamental nature of these other postretirement plans under which employees are ineligible for benefits until specific eligibility criteria are met, at which time they become 100% eligible. This contrasts with pension plans under which employees earn additional benefits each year until they retire (see [Illustration 17-23](#)).

We account for pensions and for other postretirement benefits essentially the same way.

Page 1011

ILLUSTRATION 17-23 Measuring Service Cost

Measuring the service cost differs, though, due to a fundamental difference in the way employees acquire benefits under the two types of plans.

While we report service cost and the non-service components the same way as for pensions, the measurement of service cost is the primary difference between accounting for pensions and for other postretirement benefits. Otherwise, though, accounting for the two is virtually identical. For example, a company with an underfunded postretirement benefit plan with

existing prior service cost and net loss–AOCI would record the following journal entries annually:

| | | |
|---|----|----|
| To Record Postretirement Benefit Expense | | |
| Postretirement benefit expense (total) | XX | |
| Plan assets (expected return on assets) | XX | |
| Amortization of net gain–OCI (current amortization) | XX | |
| APBO (service cost+ interest cost) | | XX |
| Amortization of net loss–OCI (current amortization) | | XX |
| Amortization of prior service cost–OCI* (current amortization) | | XX |
| To Record Cash Funding of Plan Assets | | |
| Plan assets | XX | |
| Cash (contribution to plan assets) | | XX |
| To Record Gains and Losses | | |
| Loss–OCI (from change in assumption) | XX | |
| APBO | | XX |
| or | | |
| APBO | XX | |
| Gain–OCI (from change in assumption) | | XX |
| Plan assets | XX | |
| Gain–OCI (actual return on assets minus expected return) | | XX |
| or | | |
| Loss–OCI (expected return on assets minus actual return) | XX | |
| Plan assets | | XX |

*The prior service cost for other postretirement benefits is amortized over the average remaining time until “full eligibility” for employees rather than

until retirement, as is the case for pension plans. This is consistent with recording “regular” service cost over the time to full eligibility.

Ethical Dilemma

Earlier this year, you were elected to the board of directors of Champion International, Inc. Champion has offered its employees postretirement health care benefits for 35 years. The practice of extending health care benefits to retirees began modestly. Most employees retired after age 65, when most benefits were covered by Medicare. Costs also were lower because life expectancies were shorter and medical care was less expensive. Because costs were so low, little attention was paid to accounting for these benefits. The company simply recorded an expense when benefits were provided to retirees. The FASB changed all that. Now, the obligation for these benefits must be anticipated and reported in the annual report. Worse yet, the magnitude of the obligation has grown enormously, almost unnoticed. Health care costs have soared in recent years. Medical technology and other factors have extended life expectancies. Of course, the value to employees of this benefit has grown parallel to the growth of the burden to the company.

Without being required to anticipate future costs, many within Champion’s management were caught by surprise at the enormity of the company’s obligation. Equally disconcerting was the fact that such a huge liability now must be exposed to public view. Now you find that several board members are urging the dismantling of the postretirement plan altogether.

A Comprehensive Illustration

We assumed earlier that the actuary determined the EPBO at the end of 2022 to be \$10,842. This was the present value on that date of all anticipated future benefits. Then we noted that the EPBO at the end of the next year would have grown by 6% to \$11,493. This amount, too, would represent the present value of the same anticipated future benefits, but as of a year later. The APBO, remember, is the portion of the EPBO attributed to service performed to a particular date. So, we determined the APBO at the end of 2023 to be $\$11,493 \times \frac{1}{35}$, or \$3,612. We determined the \$328 service cost noted earlier for 2023 as the portion of the EPBO attributed to that year: $\$11,493 \times \frac{1}{35}$.

Now, let's review our previous discussion of how the EPBO, the APBO, and the postretirement benefit expense are determined by calculating those amounts a year later, at the end of 2024. Before doing so, however, we can anticipate (a) the EPBO to be $\$11,493 \times 1.06$, or $\$12,182$, (b) the APBO to be $\frac{1}{35}$ of that amount, or $\$4,177$, and (c) the 2024 service cost to be $\frac{1}{35}$ of that amount, or $\$348$. In  **Illustration 17-24**, we see if our expectations are borne out by direct calculation.

Illustration 17-24 Determining the Postretirement Benefit Obligation

The EPBO is the discounted present value of the total benefits expected to be earned.

The fraction of the EPBO considered to be earned this year is the service cost.

The fraction of the EPBO considered to be earned so far is the APBO.

Assume the actuary has estimated the net cost of retiree benefits in each year of Jessica Farrow's 20-year expected retirement period to be the amounts shown in the calculation below. She is fully eligible for benefits at the end of 2047 and is expected to retire at the end of 2052.

Calculating the APBO and the postretirement benefit expense at the end of 2024, 12 years after being hired, begins with estimating the EPBO. Steps to calculate (a) the EPBO, (b) the APBO, and (c) the annual service cost at the end of 2024, 12 years after being hired, follow:

- (a) (a) Estimate the cost of retiree benefits in each year of the expected retirement period and deduct anticipated Medicare reimbursements and retiree cost-sharing to derive the net cost to the employer in each year of the expected retirement period.
- (b) Find the present value of each year's net benefit cost as of the retirement date.
- (c) Find the present value of the total net benefit cost as of the current date. This is the **EPBO**.
- (b) Multiply the EPBO by the attribution factor (service to date/total attribution period). This is the **APBO**. The **service cost** in any year is simply one year's worth of the EPBO.
- (c) Multiply the EPBO by $\frac{1}{\text{total attribution period}}$.

The steps are demonstrated in  **Illustration 17-24A**.

ILLUSTRATION 17-24A EPBO, APBO, and Service Cost in 2022

(a.1) Actuary estimates the net cost of benefits paid during retirement years:

| Year | Age | Net Benefit | Present Value at 2052 |
|------|-----|-------------|-----------------------|
| 2053 | 62 | \$ 5,000 | \$ 4,717 |
| 2054 | 63 | 5,600 | 4,984 |
| 2055 | 64 | 6,300 | 5,290 |
| 2056 | 65 | 3,000 | 2,376 |
| ~ | ~ | ~ | ~ |
| 2071 | 80 | 9,550 | 3,156 |
| 2072 | 81 | 10,300 | 3,212 |
| | | | <u>\$62,269</u> |

(a.2) Present value [$n = 1, 2, 3, 4, \dots, 19, 20; i = 6\%$] of the net benefits as of the retirement date:

- (a.3) Present value ($n = 28, i = 6\%$) of postretirement benefits at 2024 is
 $\$62,269 \times 0.19563 = \mathbf{\$12,182}$ (EPBO)
 (b) $\$12,182 \times \frac{12}{35} = \mathbf{\$4,177}$ (APBO)
 (c) $\$12,182 \times \frac{1}{35} = \mathbf{\$348}$ (Service Cost)

The actuary estimates the net cost to the employer in each year the retiree is expected to receive benefits.

As of the retirement date, the lump-sum equivalent of the expected yearly costs is \$62,269.

The EPBO in 2024 is the present value of those benefits.

The APBO is the portion of the EPBO attributed to service to date.

The service cost is the portion of the EPBO attributed to a particular year's service.

Decision Makers' Perspective

When they analyze financial statements, investors and creditors should be wary of the nonstandard way companies report pension and other postretirement information. Recall that in the balance sheet, firms do not separately report the benefit obligation and the plan assets. Also,

companies have considerable latitude in making the several assumptions needed to estimate the components of postretirement benefit plans. Fortunately, information provided in the disclosure notes makes up for some of the deficiency in balance sheet information and makes it possible for interested analysts to modify their analysis. As for pensions, the choices companies make for the discount rate, expected return on

Postretirement benefit amounts reported in the disclosure notes fill a reporting gap left by the minimal disclosures in the primary financial statements.

plan assets, and the compensation growth rate can greatly impact postretirement benefit expense and earnings quality. The disclosures required are very similar to pension disclosures. In fact, disclosures for the two types of retiree benefits typically are combined.²⁹ Disclosures include the following:

- Descriptions of the plans.
- Estimates of the obligations (PBO, ABO, vested benefit obligation, EPBO, and APBO).
- The percentage of total plan assets for each major category of assets (equity securities, debt securities, real estate, other) as well as a description of investment strategies, including any target asset allocations and risk management practices.
- A breakdown of the components of the annual pension and postretirement benefit expenses for the years reported.
- The discount rates, the assumed rate of compensation increases used to measure the PBO, the expected long-term rate of return on plan assets, and the expected rate of increase in future medical and dental benefit costs.
- Estimated benefit payments presented separately for the next five years and in the aggregate for years 6–10.
- Estimate of expected contributions to fund the plan for the next year.
- (a) Any changes to the net gain or net loss and prior service cost arising during the period, (b) the accumulated amounts of these components of accumulated other comprehensive income, and (c) the amounts of those balances expected to be amortized in the next year.
- Other information to make it possible for interested analysts to reconstruct the financial statements with plan assets and liabilities included. ●

Concept Review Exercise

OTHER POSTRETIREMENT BENEFITS

Technology Group, Inc., has an unfunded retiree health care plan. The actuary estimates the net cost of providing health care benefits to a particular employee during his retirement years to have a present value of \$24,000 as of the end of 2024 (the EPBO). The benefits, and therefore the expected postretirement benefit

obligation, relate to an estimated 36 years of service, and 12 of those years have been completed. The interest rate is 6%.

Required:

Pertaining to the one employee only:

1. What is the accumulated postretirement benefit obligation at the end of 2024?
2. What is the expected postretirement benefit obligation at the end of 2025?
3. What is the service cost to be included in 2025 postretirement benefit expense?
4. What is the interest cost to be included in 2025 postretirement benefit expense?
5. What is the accumulated postretirement benefit obligation at the end of 2025?
6. Show how the APBO changed during 2025 by reconciling the beginning and ending balances.
7. What is the 2025 postretirement benefit expense, assuming no net gains or losses and no prior service cost?

Page 1015

Solution:

1. What is the accumulated postretirement benefit obligation at the end of 2024?

$$\begin{array}{rcccl} \$24,000 & \times & \frac{12}{36} & = & \$8,000 \\ \text{EPBO} & & \text{Fraction} & & \text{APBO} \\ 2024 & & \text{earned} & & 2024 \end{array}$$

2. What is the expected postretirement benefit obligation at the end of 2025?

$$\begin{array}{rcccl} \$24,000 & \times & 1.06 & = & \$25,440 \\ \text{EPBO} & & \text{To accrue} & & \text{EPBO} \\ 2024 & & \text{interest} & & 2025 \end{array}$$

3. What is the service cost to be included in 2025 postretirement benefit expense?

$$\begin{array}{rcl}
 \$25,440 & \times & 1/36 & = & \$707 \\
 \text{EPBO} & & \text{Attributed to} & & \text{Service} \\
 \text{2025} & & \text{2025} & & \text{cost}
 \end{array}$$

4. What is the interest cost to be included in 2025 postretirement benefit expense?

$$\begin{array}{rcl}
 \$8,000 & \times & 6\% & = & \$480 \\
 \text{(beginning} & & & & \\
 \text{APBO)} & & & &
 \end{array}$$

5. What is the accumulated postretirement benefit obligation at the end of 2025?

$$\begin{array}{rcl}
 \$25,440 & \times & 13/36 & = & \$9,187 \\
 \text{EPBO} & & \text{Fraction attributed} & & \text{APBO} \\
 \text{2025} & & \text{to service to date} & & \text{2025}
 \end{array}$$

6. Show how the APBO changed during 2025 by reconciling the beginning and ending balances.

| | |
|---|----------------|
| APBO at the beginning of 2025 (from req. 1) | \$8,000 |
| Service cost (from req. 3) | 707 |
| Interest cost (from req. 4) | 480 |
| APBO at the end of 2025 (from req. 5) | <u>\$9,187</u> |

7. What is the 2025 postretirement benefit expense, assuming no net gains or losses and no prior service cost?

| | |
|---|--------------|
| Service cost | \$ 707 |
| Interest cost | 480 |
| Actual return on the plan assets | (not funded) |
| Adjusted for: gain or loss on the plan assets | (not funded) |

| | |
|------------------------------------|-----------------|
| Amortization of prior service cost | none |
| Amortization of net gain or loss | none |
| Postretirement benefit expense | <u>\$ 1,187</u> |

Financial Reporting Case Solution

Constantine Johnny/Moment/Getty Images

- 1. Why is pension plan underfunding not a concern in your present employment?** In a defined contribution plan, the employer is not obliged to provide benefits beyond the annual contribution to the employees' plan. No liability is created. Unlike retirement benefits paid in a defined benefit plan, the employee's retirement benefits in a defined contribution plan are totally dependent on how well invested assets perform in the marketplace.
- 2. Were you correct that the pension liability is not reported in the balance sheet? What is the liability?** Yes and no. The pension liability is not reported separately in the balance sheet. It is, however, combined with pension assets with the net difference reported in the balance sheet. The separate balance is disclosed, though, in the notes. For United Dynamics, the PBO at the end of 2024 is \$2,628 million.
- 3. What is the amount of the plan assets available to pay benefits? What are the factors that can cause that amount to change?** The plan assets at the end of 2024 total \$2,807 million. A trustee accepts employer contributions,

invests the contributions, accumulates the earnings on the investments, and pays benefits from the plan assets. So the amount is increased each year by employer cash contributions and (hopefully) a return on assets invested. It is decreased by amounts paid out to retired employees.

4. What does the “pension asset” represent? Are you interviewing with a company whose pension plan is severely underfunded? The pension asset is not the plan assets available to pay pension benefits. Instead, it's the net difference between those assets and the pension obligation. United Dynamics' plan assets exceed the pension obligation in each year presented, and therefore it is one of the few companies whose pension plan is overfunded.

5. How is the pension expense influenced by changes in the pension liability and plan assets? The pension expense reported on the income statement is a composite of periodic changes that occur in both the pension obligation and the plan assets. For United Dynamics in 2024, the pension expense included the service cost and interest cost, which are changes in the PBO, and the return on plan assets. It also included an amortized portion of prior service costs (a previous change in the PBO) and of net gains (gains and losses result from changes in both the PBO and plan assets). ●

The Bottom Line

- LO17-1** Pension plans are arrangements designed to provide income to individuals during their retirement years. *Defined contribution* plans promise fixed annual contributions to a pension fund, without further commitment regarding benefit amounts at retirement. *Defined benefit* plans promise fixed retirement benefits defined by a designated formula. The employer sets aside cash each year to provide sufficient funds to pay promised benefits. (p. 976)
- LO17-2** The *accumulated benefit obligation* is an estimate of the discounted present value of the retirement benefits earned so far by employees, applying the plan's pension formula to *existing* compensation levels. The vested benefit obligation is the portion of the accumulated benefit obligation that plan participants are entitled to receive regardless of their continued employment. The *projected benefit obligation* estimates retirement benefits by applying the pension formula to *projected future* compensation levels. (p. 981)
- LO17-3** The PBO can change due to the accumulation of *service cost* from year to year, the accrual of *interest* as time passes, making plan amendments retroactive to prior years (prior service cost), and periodic adjustments when estimates change (gains and losses). The obligation is reduced as benefits actually are paid to retired employees. (p. 982)
- LO17-4** The plan assets consist of the accumulated balance of the annual employer contributions plus the return on the investments less benefits paid to retirees. (p. 988)
- LO17-5** The difference between an employer's obligation (PBO for pensions, APBO for other postretirement benefit plans) and the resources available to satisfy that obligation (plan assets) is the funded status of the pension plan. The employer must report the "funded status" of the plan in the balance sheet as a net pension liability if the obligation exceeds the plan assets or as a net pension asset if the plan assets exceed the obligation. (p. 990)
- LO17-6** The pension expense is a composite of periodic changes in both the projected benefit obligation and the plan assets. Service cost is the increase in the PBO attributable to employee service and is the primary component

of pension expense. The interest and return-on-assets components are financial items created only because the pension payment is delayed and the obligation is funded currently. Prior service cost is recognized over employees' future service period. Also, neither a loss (gain) on the PBO nor a loss (gain) on plan assets is immediately recognized in pension expense; they are recognized on a delayed basis to achieve income smoothing. (*p. 990*)

 **LO17-7**

Recording pension expense causes the net pension liability/asset to change by the service cost, the interest cost, and the expected return on plan assets. Any amortization amounts included in the expense will reduce the *accumulated other comprehensive income* balances being amortized; for example, net loss—AOCI and prior service cost—AOCI. Similarly, the plan assets are increased by the annual cash investment. New losses and gains (as well as any new prior service cost should it occur) are recognized as other comprehensive income. The service cost is reported in the income statement separately from the other (non-service cost) components of the expense. (*p. 996*)

 **LO17-8**

The various elements of a pension plan—projected benefit obligation, plan assets, prior service cost, gains and losses, pension expense, and the funded status of the plan—are interrelated. One way to see how each element relates to the other is to bring each part together in a *pension spreadsheet*. (*p. 1002*)

 **LO17-9**

Accounting for postretirement benefits is similar in most respects to accounting for pension benefits. Like pensions, other postretirement benefits are a form of deferred compensation. Unlike pensions, their cost is attributed to the years from the employee's date of hire to the full eligibility date. (*p. 1007*)

 **LO17-10**

The expected postretirement benefit obligation (EPBO) is the actuary's estimate of the total postretirement benefits (at their discounted present value) expected to be received by plan participants. The accumulated postretirement benefit obligation (APBO) is the portion of the EPBO attributed to employee service to date. (*p. 1009*)

 **LO17-11**

The components of postretirement benefit expense are essentially the same as those for pension expense. (*p. 1010*)

 **LO17-12**

Under both U.S. GAAP and IFRS, we report all changes in the obligation and in the value of plan assets as they occur. The ways the changes are

determined and reported are different, though, for some of the changes. The changes that constitute the components of the net pension cost are reported separately as (a) the service cost, (b) the net interest cost/income, and (c) remeasurement gains or losses. Under IFRS, *past service cost* is combined with current service cost and reported as service cost within the income statement rather than as a component of other comprehensive income as it is under U.S. GAAP. Under IFRS, gains and losses are not recycled from other comprehensive income as is required under U.S. GAAP (when the accumulated net gain or net loss exceeds the 10% threshold). Also, the interest cost and return on plan assets are replaced by net interest cost/income (interest rate times the difference between the DBO and plan assets). (pp. 996, 999, 1003, and 1005) ●

APPENDIX 17 Service Method of Allocating Prior Service Cost

When amortizing prior service cost, our objective is to match the cost with employee service. The straight-line method described in this chapter allocates an equal amount of the prior service cost to each year of the 15-year average service period of affected employees. But consider this: fewer of the affected employees will be working for the company toward the end of that period than at the beginning. Some probably will retire or quit in each year following the amendment.

An allocation approach that reflects the declining service pattern is called the **service method**. This method allocates the prior service cost to each year in proportion to the fraction of the total remaining service years worked in each of those years. To do this, it's necessary to estimate how many of the 2,000 employees working at the beginning of 2023 when the amendment is made will still be employed in each year after the amendment.

Let's suppose, for example, that the actuary estimates that a declining number of these employees still will be employed in each of the next 28 years as indicated in the abbreviated schedule below. The portion of the prior service cost amortized to pension expense each year is \$60 million times a declining fraction. Each year's fraction is that year's service divided by the 28-year total (30,000). This is demonstrated in [Illustration 17A-1](#).

Illustration 17A-1 Service Method of Amortizing Prior Service Cost

By the service method, prior service cost is recognized each year in proportion to the fraction of the total remaining service years worked that year.

| Year | Number of Employees Still Employed (assumed for the illustration) | Fraction of Total Service Years | (\$ in millions) | |
|------|---|---------------------------------|--------------------|------------------|
| | | | Prior Service Cost | Amount Amortized |
| 2023 | 2,000 | $2,000/30,000$ | $\times \$60$ | $= \$ 4.0$ |
| 2024 | 2,000 | $2,000/30,000$ | $\times 60$ | $= 4.0$ |
| 2025 | 1,850 | $1,850/30,000$ | $\times 60$ | $= 3.7$ |

| Year | Number of Employees Still Employed (assumed for the illustration) | Fraction of Total Service Years | (\$ in millions) | |
|--------|---|-----------------------------------|--------------------|------------------------|
| | | | Prior Service Cost | Amount Cost Amortized |
| 2026 | 1,700 | $1,700/30,000$ | $\times 60$ | $= 3.4$ |
| 2027 | 1,550 | $1,550/30,000$ | $\times 60$ | $= 3.1$ |
| — | — | — | \times | $=$ |
| 2048 | 400 | $400/30,000$ | $\times 60$ | $= 0.8$ |
| 2049 | 250 | $250/30,000$ | $\times 60$ | $= 0.5$ |
| 2050 | 100 | $100/30,000$ | $\times 60$ | $= 0.2$ |
| Totals | <u>30,000</u> | <u>$30,000/30,000$</u> | | <u>\$60.0</u> |
| | Total number of service years | | | Total amount amortized |

Conceptually, the service method achieves a better matching of the cost and benefits. In fact, this is the FASB’s recommended approach. However, GAAP permits the consistent use of any method that

The service method amortized an equal amount per employee each year.

amortizes the prior service cost at least as quickly.³⁰ The straight-line method meets this condition and is the approach most often used in practice. In our illustration, the cost is completely amortized over 15 years rather than the 28 years required by the service method. The 15-year average service life is simply the total estimated service years divided by the total number of employees in the group:

$$\begin{array}{rcl}
 30,000 \text{ years} & \div & 2,000 & = & 15 \text{ years} \\
 \text{Total number} & & \text{Total number} & & \text{Average} \\
 \text{of service years} & & \text{of employees} & & \text{service years}
 \end{array}$$

Questions For Review of Key Topics

- Q 17-1** What is a pension plan? What motivates a corporation to offer a pension plan for its employees?
- Q 17-2** Qualified pension plans offer important tax benefits. What is the special tax treatment and what qualifies a pension plan for these benefits?
- Q 17-3** Lamont Corporation has a pension plan in which the corporation makes all contributions and employees receive benefits at retirement based on the balance in their accumulated pension fund. What type of pension plan does Lamont have?
- Q 17-4** What is the vested benefit obligation?
- Q 17-5** Differentiate between the accumulated benefit obligation and the projected benefit obligation.
- Q 17-6** Name five events that might change the balance of the PBO.
- Q 17-7** Name three events that might change the balance of the plan assets.
- Q 17-8** What are the components that might be included in the calculation of net pension cost recognized for a period by an employer sponsoring a defined benefit pension plan?
- Q 17-9** Define the service cost component of the periodic pension expense.
- Q 17-10** Define the interest cost component of the periodic pension expense.
- Q 17-11** The return on plan assets is the increase in plan assets (at fair value), adjusted for contributions to the plan and benefits paid during the period. How is the return included in the calculation of the periodic pension expense?
- Q 17-12** Define prior service cost. How is it reported in the financial statements? How is it included in pension expense?
- Q 17-13** How should gains or losses related to pension plan assets be recognized? How does this treatment compare to that for gains or losses related to the pension obligation?
- Q 17-14** Is a company's PBO reported in the balance sheet? Its plan assets? Explain.
- Q 17-15** What two components of pension expense may be negative (i.e., reduce pension expense)?
- Q 17-16** Which are the components of pension expense that involve delayed recognition?
- Q 17-17** Evaluate this statement: The excess of the actual return on plan assets over the expected return decreases the employer's pension cost.

- Q 17-18** When accounting for pension costs, how should the payment into the pension fund be recorded? How does it affect the funded status of the plan?
- Q 17-19** TFC Inc. revises its estimate of future salary levels, causing its PBO estimate to increase by \$3 million. How is the \$3 million reflected in TFC's financial statements?
- Q 17-20** A pension plan is underfunded when the employer's obligation (PBO) exceeds the resources available to satisfy that obligation (plan assets) and overfunded when the opposite is the case. How is this funded status reported on the balance sheet if plan assets exceed the PBO? If the PBO exceeds plan assets?
- Q 17-21** What are two ways to measure the obligation for postretirement benefits other than pensions? Define these measurement approaches.
- Q 17-22** How are the costs of providing postretirement benefits other than pensions expensed?
- Q 17-23** The components of postretirement benefit expense are similar to the components of pension expense. In what fundamental way does the service cost component differ between these two expenses?
- Q 17-24** The APBO for Branch Industries at the end of 2024 was determined by the actuary to be \$20,000 as it relates to employee Will Lawson. Lawson was hired at the beginning of 2010. He will be fully eligible to retire with health care benefits after 15 more years but is expected to retire in 25 years. What is the APBO as it relates to Will Lawson?

IFRS

- Q 17-25** The income statement of Mid-South Logistics includes \$12 million for amortized prior service cost. Does Mid-South Logistics prepare its financial statements according to U.S. GAAP or IFRS? Explain.

IFRS

- Q 17-26** How do U.S. GAAP and IFRS differ with regard to reporting gains and losses from changing assumptions used to measure the pension obligation?

Brief Exercises

BE 17-1 Changes in the projected benefit obligation **LO17-3**

The projected benefit obligation was \$80 million at the beginning of the year. Service cost for the year was \$10 million. At the end of the year, pension benefits paid by the trustee were \$6 million and there were no pension-related other comprehensive income accounts. The actuary's discount rate was 5%. What was the amount of the projected benefit obligation at year-end?

BE 17-2 Changes in the projected benefit obligation **LO17-3**

The projected benefit obligation was \$80 million at the beginning of the year and \$85 million at the end of the year. At the end of the year, pension benefits paid by the trustee were \$6 million and there were no pension-related other comprehensive income accounts. The actuary's discount rate was 5%. What was the amount of the service cost for the year?

BE 17-3 Changes in the projected benefit obligation **LO17-3**

The projected benefit obligation was \$80 million at the beginning of the year and \$85 million at the end of the year. Service cost for the year was \$10 million. At the end of the year, there were no pension-related other comprehensive income accounts. The actuary's discount rate was 5%. What was the amount of the retiree benefits paid by the trustee?

BE 17-4 Changes in the projected benefit obligation **LO17-3**

The projected benefit obligation was \$80 million at the beginning of the year and \$85 million at the end of the year. Service cost for the year was \$10 million. At the end of the year, pension benefits paid by the trustee were \$6 million. The actuary's discount rate was 5%. At the end of the year, the actuary revised the estimate of the percentage rate of increase in compensation levels in upcoming years. What was the amount of the gain or loss the estimate change caused?

BE 17-5 Changes in pension plan assets  **LO17-4**

Pension plan assets were \$80 million at the beginning of the year. The return on plan assets was 5%. At the end of the year, retiree benefits paid by the trustee were \$6 million and cash invested in the pension fund was \$7 million. What was the amount of the pension plan assets at year-end?

BE 17-6 Changes in pension plan assets  **LO17-4**

Pension plan assets were \$80 million at the beginning of the year and \$83 million at the end of the year. The return on plan assets was 5%. At the end of the year, cash invested in the pension fund was \$7 million. What was the amount of the retiree benefits paid by the trustee?

BE 17-7 Changes in pension plan assets  **LO17-4**

Pension plan assets were \$100 million at the beginning of the year and \$104 million at the end of the year. At the end of the year, retiree benefits paid by the trustee were \$6 million and cash invested in the pension fund was \$7 million. What was the percentage rate of return on plan assets?

BE 17-8 Reporting the funded status of pension plans
 **LO17-5**

JDS Shipyard's projected benefit obligation, accumulated benefit obligation, and plan assets were \$40 million, \$30 million, and \$25 million, respectively, at the end of the year. What, if any, pension liability must be reported in the balance sheet? What would JDS report if the plan assets were \$45 million instead?

BE 17-9 Pension expense  **LO17-6**

The projected benefit obligation was \$80 million at the beginning of the year. Service cost for the year was \$10 million. At the end of the year, pension benefits paid by the trustee were \$6 million and there were no pension-related other comprehensive income (OCI) accounts requiring amortization. The actuary's discount rate was 5%. The actual return on plan assets was \$5 million although it was expected to be only \$4 million. What was the total pension expense for the year?

BE 17–10 Pension expense; prior service cost **LO17–6**

The pension plan was amended last year, creating a prior service cost of \$20 million. Service cost and interest cost for the year were \$10 million and \$4 million, respectively. At the end of the year, there was a negligible balance in the net gain—pensions account. The actual return on plan assets was \$4 million although it was expected to be \$6 million. On average, employees' remaining service life with the company is 10 years. What was the total pension cost for the year?

BE 17–11 Net gain **LO17–6**

The projected benefit obligation and plan assets were \$80 million and \$100 million, respectively, at the beginning of the year. Due primarily to favorable stock market performance in recent years, there also was a net gain of \$30 million. On average, employees' remaining service life with the company is 10 years. As a result of the net gain, what was the increase or decrease in pension expense for the year?

BE 17–12 Recording pension expense **LO17–7**

The Warren Group's pension cost is \$67 million. This amount includes a \$70 million service cost, a \$50 million interest cost, a \$55 million reduction for the expected return on plan assets, and a \$2 million amortization of a prior service cost. How is the net pension liability affected when the pension cost is recorded?

BE 17–13 Recording pension expense **LO17–7**

Major Medical reported a net loss—AOCI in last year's balance sheet. This year, the company revised its estimate of future salary levels causing its PBO estimate to decline by \$4 million. Also, the \$8 million actual return on plan assets fell short of the \$9 million expected return. How does this gain and loss affect Major's income statement, statement of comprehensive income, and balance sheet?

BE 17–14 Postretirement benefits; determine the APBO and service cost **LO17–9**, **LO17–10**

Prince Distribution Inc. has an unfunded postretirement benefit plan. Medical care and life insurance benefits are provided to employees who render 10 years service and attain age 55 while in service. At the end of 2024, Jim Lukawitz is 31. He was hired by Prince at age 25 (6

years ago) and is expected to retire at age 62. The expected postretirement benefit obligation for Lukawitz at the end of 2024 is \$50,000 and \$54,000 at the end of 2025. Calculate the accumulated postretirement benefit obligation at the end of 2024 and 2025 and the service cost for 2024 and 2025, as pertaining to Lukawitz.

BE 17–15 Postretirement benefits; changes in the APBO

LO17–11

On January 1, 2024, Medical Transport Company's accumulated postretirement benefit obligation was \$25 million. At the end of 2024, retiree benefits paid were \$3 million. Service cost for 2024 is \$7 million. Assumptions regarding the trend of future health care costs were revised at the end of 2024, causing the actuary to revise downward the estimate of the APBO by \$1 million. The actuary's discount rate is 8%. Determine the amount of the accumulated postretirement benefit obligation at December 31, 2024.

Exercises

E 17-1 Changes in the PBO LO17-3

Indicate by letter whether each of the events listed below increases (**I**), decreases (**D**), or has no effect (**N**) on an employer's projected benefit obligation.

Events

- _____ 1. Interest cost.
- _____ 2. Amortization of prior service cost.
- _____ 3. A decrease in the average life expectancy of employees.
- _____ 4. An increase in the average life expectancy of employees.
- _____ 5. A plan amendment that increases benefits is made retroactive to prior years.
- _____ 6. An increase in the actuary's assumed discount rate.
- _____ 7. Cash contributions to the pension fund by the employer.
- _____ 8. Benefits are paid to retired employees.
- _____ 9. Service cost.
- _____ 10. Return on plan assets during the year are lower than expected.
- _____ 11. Return on plan assets during the year are higher than expected.

E 17-2 Determine the projected benefit obligation LO17-3

On January 1, 2024, Ravetch Corporation's projected benefit obligation was \$30 million. During 2024, pension benefits paid by the trustee were \$4 million. Service cost for 2024 is \$12 million. Pension plan assets (at fair value) increased during 2024 by \$6 million as expected. At the end of 2024, there were no pension-related other comprehensive income (OCI) accounts. The actuary's discount rate was 10%.

Required:

Determine the amount of the projected benefit obligation at December 31, 2024.

E 17-3 Components of pension expense LO17-6

Indicate by letter whether each of the events listed below increases (**I**), decreases (**D**), or has no effect (**N**) on an employer's periodic pension expense in the year the event occurs.

Events

- _____ 1. Interest cost.
- _____ 2. Amortization of prior service cost—AOCI.
- _____ 3. Excess of the expected return on plan assets over the actual return.
- _____ 4. Expected return on plan assets.
- _____ 5. A plan amendment that increases benefits is made retroactive to prior years.
- _____ 6. Actuary's estimate of the PBO is increased.
- _____ 7. Cash contributions to the pension fund by the employer.
- _____ 8. Benefits are paid to retired employees.
- _____ 9. Service cost.
- _____ 10. Excess of the actual return on plan assets over the expected return.
- _____ 11. Amortization of net loss—AOCI.
- _____ 12. Amortization of net gain—AOCI.

E 17-4 Recording pension expense **LO17-6**, **LO17-7**

Harrison Forklift's pension expense includes a service cost of \$10 million. Harrison began the year with a pension liability of \$28 million (underfunded pension plan).

Required:

Prepare the appropriate general journal entries to record Harrison's pension expense in each of the following independent situations regarding the other (non-service cost) components of pension expense (\$ in millions):

- 1. Interest cost, \$6; expected return on assets, \$4; amortization of net loss, \$2.
- 2. Interest cost, \$6; expected return on assets, \$4; amortization of net gain, \$2.
- 3. Interest cost, \$6; expected return on assets, \$4; amortization of net loss, \$2; amortization of prior service cost, \$3 million.

E 17-5 Determine pension plan assets **LO17-4**

The following data relate to Ramesh Company's defined benefit pension plan:

| | (\$ in millions) |
|---|------------------|
| Plan assets at fair value, January 1 | \$600 |
| Expected return on plan assets | 60 |
| Actual return on plan assets | 48 |
| Contributions to the pension fund (end of year) | 100 |
| Amortization of net loss | 10 |
| Pension benefits paid (end of year) | 11 |
| Pension expense | 72 |

Required:

Determine the amount of pension plan assets at fair value on December 31.

E 17-6 Changes in the pension obligation; determine service cost  **LO17-3**,  **LO17-6**

Pension data for David Emerson Enterprises include the following:

| | (\$ in millions) |
|---|------------------|
| Discount rate, 10% | |
| Projected benefit obligation, January 1 | \$360 |
| Projected benefit obligation, December 31 | 465 |
| Accumulated benefit obligation, January 1 | 300 |
| Accumulated benefit obligation, December 31 | 415 |
| Cash contributions to pension fund, December 31 | 150 |
| Benefit payments to retirees, December 31 | 54 |

Required:

Assuming no change in actuarial assumptions and estimates, determine the service cost component of pension expense for the year ended December 31.

E 17-7 Changes in plan assets; determine cash contributions  **LO17-4**

Pension data for Fahy Transportation Inc. include the following:

| | (\$ in millions) |
|---|------------------|
| Discount rate, 7% | |
| Expected return on plan assets, 10% | |
| Actual return on plan assets, 11% | |
| Projected benefit obligation, January 1 | \$730 |
| Plan assets (fair value), January 1 | 700 |
| Plan assets (fair value), December 31 | 750 |
| Benefit payments to retirees, December 31 | 66 |

Required:

Assuming cash contributions were made at the end of the year, what was the amount of those contributions?

E 17–8 Components of pension expense  **LO17–6**

Pension data for Sterling Properties include the following:

| | (\$ in thousands) |
|--|-------------------|
| Service cost, 2024 | \$112 |
| Projected benefit obligation, January 1, 2024 | 850 |
| Plan assets (fair value), January 1, 2024 | 900 |
| Prior service cost–AOCI (2024 amortization, \$8) | 80 |
| Net loss–AOCI (2024 amortization, \$1) | 101 |
| Interest rate, 6% | |
| Expected return on plan assets, 10% | |
| Actual return on plan assets, 11% | |

Required:

Determine pension expense for 2024.

E 17–9 Components of pension expense; IFRS  **LO17–6,**
 **LO17–12**

Refer to the situation described in [E 17-8](#).

Required:

How might your answer differ if we assume Sterling Properties prepares its financial statements according to International Financial Reporting Standards (IFRS)? The interest rate on high-grade corporate bonds is 6%.

E 17-10 Determine pension expense [LO17-6](#), [LO17-7](#)

Abbott and Abbott has a noncontributory, defined benefit pension plan. At December 31, 2024, Abbott and Abbott received the following information:

| Projected Benefit Obligation | (\$ in millions) |
|-------------------------------------|------------------|
| Balance, January 1 | \$120 |
| Service cost | 20 |
| Interest cost | 12 |
| Benefits paid | (9) |
| Balance, December 31 | <u>\$143</u> |
| Plan Assets | |
| Balance, January 1 | \$ 80 |
| Actual return on plan assets | 9 |
| Contributions 2024 | 20 |
| Benefits paid | (9) |
| Balance, December 31 | <u>\$100</u> |

The expected long-term rate of return on plan assets was 10%. There was no prior service cost and a negligible net loss—AOCI on January 1, 2024.

Required:

1. Determine Abbott and Abbott's pension expense for 2024.
2. Prepare the journal entries to record Abbott and Abbott's (a) pension expense, (b) funding, and (c) payment for 2024.

E 17–11 Components of pension expense; journal entries

 LO17–6,  LO17–7

Pension data for Barry Financial Services Inc. include the following:

| | (\$ in thousands) |
|---|-------------------|
| Discount rate, 7% | |
| Expected return on plan assets, 10% | |
| Actual return on plan assets, 9% | |
| Service cost, 2024 | \$ 310 |
| January 1, 2024: | |
| Projected benefit obligation | 2,300 |
| Accumulated benefit obligation | 2,000 |
| Plan assets (fair value) | 2,400 |
| Prior service cost—AOCI (2024 amortization, \$25) | 325 |
| Net gain—AOCI (2024 amortization, \$6) | 330 |
| There were no changes in actuarial assumptions. | |
| December 31, 2024: | |
| Cash contributions to pension fund, December 31, 2024 | 245 |
| Benefit payments to retirees, December 31, 2024 | 270 |

Required:

1. Determine pension expense for 2024.
2. Prepare the journal entries to record (a) pension expense, (b) gains and losses (if any), (c) funding, and (d) retiree benefits for 2024.

E 17–12 PBO calculations; ABO calculations; present value concepts LO17–1, LO17–2, LO17–3

Clark Industries has a defined benefit pension plan that specifies annual, year-end retirement benefits equal to

$$1.2\% \times \text{Service years} \times \text{Final year's salary}$$

Stanley Mills was hired by Clark at the beginning of 2005.

- Mills is expected to retire at the end of 2049 after 45 years of service.
- His retirement is expected to span 15 years. At the end of 2024, 20 years after being hired, his salary is \$80,000.
- The company's actuary projects Mills's salary to be \$270,000 at retirement. The actuary's discount rate is 7%.

Required:

1. Estimate the amount of Stanley Mills's annual retirement payments for the 15 retirement years earned as of the end of 2024.
2. Suppose Clark's pension plan permits a lump-sum payment at retirement in lieu of annuity payments. Determine the lump-sum equivalent as the present value as of the earned retirement annuity at the expected date of retirement (the end of 2049).
3. What is the company's projected benefit obligation at the end of 2024 with respect to Stanley Mills?
4. Even though pension accounting centers on the PBO calculation, the ABO still must be disclosed in the pension disclosure note. What is the company's accumulated benefit obligation at the end of 2024 with respect to Stanley Mills?
5. If we assume no estimates change in the meantime, what is the company's projected benefit obligation at the end of 2025 with respect to Stanley Mills?
6. What portion of the 2025 increase in the PBO is attributable to 2025 service (the service cost component of pension expense) and to accrued interest (the interest cost component of pension expense)?

E 17-13 Determining the amortization of net loss or net gain

 **LO17-6**

Hicks Cable Company has a defined benefit pension plan. Three alternative possibilities for pension-related data at January 1, 2024, are shown below:

| | (\$ in thousands) | | |
|------------------------------|-------------------|--------|--------|
| | Case 1 | Case 2 | Case 3 |
| Net loss (gain)—AOCI, Jan. 1 | \$ 320 | \$ | \$ 260 |

| | (\$ in thousands) | | |
|--|-------------------|---------|---------|
| | Case 1 | Case 2 | Case 3 |
| | | (330) | |
| 2024 loss (gain) on plan assets | (11) | (8) | 2 |
| 2024 loss (gain) on PBO | (23) | 16 | (265) |
| Accumulated benefit obligation, Jan. 1 | (2,950) | (2,550) | (1,450) |
| Projected benefit obligation, Jan. 1 | (3,310) | (2,670) | (1,700) |
| Fair value of plan assets, Jan. 1 | 2,800 | 2,700 | 1,550 |
| Average remaining service period of active employees (years) | 12 | 15 | 10 |

Required:

1. For each independent case, calculate any amortization of the net loss or gain that should be included as a component of pension expense for 2024.
2. For each independent case, determine the net loss–AOCI or net gain–AOCI as of January 1, 2025.

E 17–14 Effect of pension expense components on balance sheet accounts; financial statement effects  **LO17–7**,  **LO17–8**

Luciana Fashions calculated pension expense for its underfunded pension plan as follows:

| | (\$ in millions) |
|---|---------------------|
| Service cost | \$224 |
| Interest cost | 150 |
| Expected return on the plan assets (\$100 actual, less \$10 gain) | (90) |
| Amortization of prior service cost | 8 |
| Amortization of net loss | 2 |
| Pension expense | <u><u>\$294</u></u> |

Required:

Which elements of Luciana’s balance sheet are affected by the components of pension expense? What are the specific changes in these accounts?

E 17–15 Pension spreadsheet LO17–8

A partially completed pension spreadsheet showing the relationships among the elements that comprise the defined benefit pension plan of Universal Products is given below. The actuary’s discount rate is 5%. At the end of 2022, the pension formula was amended, creating a prior service cost of \$120,000. The expected rate of return on assets was 8%, and the average remaining service life of the active employee group is 20 years in the current year, as well as, the previous two years.

Required:

Fill in the missing amounts.

| ()s indicate credits; debits otherwise (\$ in thousands) | PBO | Plan Assets | Prior Service Cost / AOCI | Net Loss / AOCI | Pension Expense | Cash |
|---|-------|-------------|---------------------------|-----------------|-----------------|------|
| <i>Balance, Jan. 1, 2024</i> | (800) | 600 | 114 | 80 | | |
| Service cost | | | | | 84 | |
| Interest cost, 5% | (40) | | | | | |
| Expected return on assets | | | | | (48) | |
| <i>Adjust for:</i> | | | | | | |
| Loss on assets | | | | 6 | | |
| <i>Amortization:</i> | | | | | | |

| ()s indicate credits; debits otherwise (\$ in thousands) | PBO | Plan Assets | Prior Service Cost / AOCI | Net Loss / AOCI | Pension Expense | Cash |
|---|-------|-------------|---------------------------|-----------------|-----------------|------|
| Prior service cost | | | | | | |
| <i>Amortization:</i> | | | | | | |
| Net loss | | | | | | |

E 17-16 Determine and record pension expense and gains and losses; funding and retiree benefits  **LO17-6**,  **LO17-7**

Actuary and trustee reports indicate the following changes in the PBO and plan assets of Mahomes Industries during 2024:

| | |
|---|--------------|
| Prior service cost at Jan. 1, 2024, from plan amendment at the beginning of 2021 (amortization: \$4 million per year) | \$28 million |
| Net loss—AOCI at Jan. 1, 2024 (previous losses exceeded previous gains) | \$80 million |
| Average remaining service life of the active employee group | 10 years |
| Actuary's discount rate | 7% |

(\$ in millions)

| PBO | | Plan Assets | |
|--------------------------|--------------|--------------------------|--------------|
| <i>Beginning of 2024</i> | \$600 | <i>Beginning of 2024</i> | \$400 |
| Service cost | 80 | Return on plan assets, | |
| Interest cost, 7% | 42 | 8% (10% expected) | 32 |
| Loss (gain) on PBO | (14) | Cash contributions | 90 |
| Less: Retiree benefits | (38) | Less: Retiree benefits | (38) |
| <i>End of 2024</i> | <u>\$670</u> | <i>End of 2024</i> | <u>\$484</u> |

Required:

1. Determine the company's pension expense for 2024, and prepare the appropriate journal entry to record the expense.
2. Prepare the appropriate journal entry(s) to record any 2024 gains and losses.
3. Prepare the appropriate journal entry to record the cash contribution to plan assets.
4. Prepare the appropriate journal entry to record retiree benefits.

E 17-17 Concepts; terminology  **LO17-2** through  **LO17-8**

Listed below are several terms and phrases associated with pensions. Pair each item from List A with the item from List B (by letter) that is most appropriately associated with it.

| List A | | List B | |
|---------------|---|---------------|--------------------------------|
| _____ 1. | Future compensation levels estimated. | a. | Actual return exceeds expected |
| _____ 2. | All funding provided by the employer. | b. | Net gain—AOCI |
| _____ 3. | Credit to OCI and debit to plan assets. | c. | Vested benefit obligation |

| List A | | List B |
|-----------|---|------------------------------------|
| _____ 4. | Retirement benefits specified by formula. | d. Projected benefit obligation |
| _____ 5. | Trade-off between being relevant and representationally faithful. | e. Choice between PBO and ABO |
| _____ 6. | Cumulative gains in excess of losses. | f. Noncontributory pension plan |
| _____ 7. | Current pay levels implicitly assumed. | g. Accumulated benefit obligation |
| _____ 8. | Created by the passage of time. | h. Plan assets |
| _____ 9. | Not contingent on future employment. | i. Interest cost |
| _____ 10. | Risk borne by employee. | j. Delayed recognition in earnings |
| _____ 11. | Increased by employer contributions. | k. Defined contribution plan |
| _____ 12. | Caused by plan amendment. | l. Defined benefit plan |
| _____ 13. | Loss on plan assets. | m. Prior service cost |
| _____ 14. | Excess over 10% of plan assets or PBO. | n. Amortize net loss—AOCI |

E 17–18 IFRS; actuarial gains and losses LO17–7, LO17–12

Patel Industries has a noncontributory, defined benefit pension plan. Since the inception of the plan, the actuary has used as the discount rate the rate on high-quality corporate bonds, which recently has been 7%. During 2024, changing economic conditions caused the rate to change to 6%, and the actuary decided that 6% is the appropriate rate.

Required:

1. Does the change in discount rate create a gain, or does it create a loss for Patel under U.S. GAAP? Why?
2. Assume the magnitude of the change is \$13 million. Prepare the appropriate journal entry to record any 2024 gain or loss under U.S. GAAP. If Patel prepares its financial

statements according to U.S. GAAP, how will the company report the gain or loss?

3. Would your response to requirement 2 differ if Patel prepares its financial statements according to International Financial Reporting Standards (IFRS)?

E 17–19 Record pension expense, funding, and gains and losses; financial statement effects  **LO17–6**,  **LO17–7**,  **LO17–8**

Beale Management has a noncontributory, defined benefit pension plan. On December 31, 2024 (the end of Beale’s fiscal year), the following pension-related data were available:

| Projected Benefit Obligation | (\$ in millions) |
|--|-------------------------|
| Balance, January 1, 2024 | \$480 |
| Service cost | 82 |
| Interest cost, discount rate, 5% | 24 |
| Gain due to changes in actuarial assumptions in 2024 | (10) |
| Pension benefits paid | (40) |
| Balance, December 31, 2024 | <u>\$536</u> |
| Plan Assets | |
| Balance, January 1, 2024 | \$500 |
| Actual return on plan assets | 40 |
| (Expected return on plan assets, \$45) | |
| Cash contributions | 70 |
| Pension benefits paid | (40) |
| Balance, December 31, 2024 | <u>\$570</u> |
| January 1, 2024, balances: | |
| Pension asset | \$ 20 |
| Prior service cost—AOCI (amortization \$8 per year) | 48 |
| Net gain—AOCI (any amortization over 15 years) | 80 |

Required:

1. Prepare the 2024 journal entry to record pension expense.

2. Prepare the journal entry(s) to record any 2024 gains and losses.
3. Prepare the 2024 journal entries to record the contribution to plan assets and benefit payments to retirees.
4. Determine the balances at December 31, 2024, in (a) the net gain—AOCI, and (b) prior service cost—AOCI. Show how the balances changed during 2024. (*Hint:* You might find T-accounts useful.)
5. What amount will Beale report in its 2024 balance sheet as a net pension asset or net pension liability for the funded status of the plan?

E 17–20 Pension spreadsheet **LO17–8**

Refer to the data provided in  **E 17–19**.

Required:

Prepare a pension spreadsheet to show the relationship among the PBO, plan assets, prior service cost, the net gain, pension expense, and the net pension asset.

E 17–21 Determine pension expense; prior service cost **LO17–6**, **LO17–7**

Lacy Construction has a noncontributory, defined benefit pension plan. At December 31, 2024, Lacy received the following information:

| Projected Benefit Obligation | (\$ in millions) |
|-------------------------------------|-------------------------|
| Balance, January 1 | \$360 |
| Service cost | 60 |
| Prior service cost | 12 |
| Interest cost (7.5%) | 27 |
| Benefits paid | (37) |
| Balance, December 31 | <u>\$422</u> |
| Plan Assets | |
| Balance, January 1 | \$240 |
| Actual return on plan assets | 27 |
| Contributions, 2024 | 60 |

| Projected Benefit Obligation | (\$ in millions) |
|------------------------------|------------------|
| Benefits paid | (37) |
| Balance, December 31 | <u>\$290</u> |

The expected long-term rate of return on plan assets was 10%. There were no AOCI balances related to pensions on January 1, 2024. At the end of 2024, Lacy amended the pension formula creating a prior service cost of \$12 million.

Required:

1. Determine Lacy's pension expense for 2024.
2. Prepare the journal entry(s) to record Lacy's (a) pension expense, (b) gains or losses, (c) prior service cost, (d) funding, and (e) payment of retiree benefits for 2024.

E 17-22 IFRS; prior service cost  **LO17-7**,  **LO17-12**

Refer to the situation described in  **E 17-21**.

Required:

How might your solution differ if Lacy Construction prepares its financial statements according to International Financial Reporting Standards (IFRS)? Assume the actuary's discount rate is the rate on high-quality corporate bonds. Include any appropriate journal entries in your response.

E 17-23 Classifying accounting changes and errors  **LO17-8**

Indicate with the appropriate letter the nature of each adjustment described below:

Type of Adjustment

- A. Change in principle
- B. Change in estimate
- C. Correction of an error
- D. Neither an accounting change nor an error

- _____ 1. Change in actuarial assumptions for a defined benefit pension plan.
- _____ 2. Determination that the projected benefit obligation under a pension plan exceeded the fair value of plan assets at the end of the previous year by \$17,000. The only pension-related amount on the balance sheet was a net pension liability of \$30,000.
- _____ 3. Pension plan assets for a defined benefit pension plan achieving a rate of return in excess of the amount anticipated.
- _____ 4. Instituting a pension plan for the first time and adopting GAAP for employers' accounting for defined benefit pension and other postretirement plans.

E 17–24 Postretirement benefits; determine APBO, EPBO

LO17–10

Classified Electronics has an unfunded retiree health care plan. Each of the company's three employees has been with the firm since its inception at the beginning of 2023. As of the end of 2024, the actuary estimates the total net cost of providing health care benefits to employees during their retirement years to have a present value of \$72,000. Each of the employees will become fully eligible for benefits after 28 more years of service but aren't expected to retire for 35 more years. The interest rate is 6%.

Required:

1. What is the expected postretirement benefit obligation at the end of 2024?
2. What is the accumulated postretirement benefit obligation at the end of 2024?
3. What is the expected postretirement benefit obligation at the end of 2025?
4. What is the accumulated postretirement benefit obligation at the end of 2025?

E 17–25 Postretirement benefits; determine APBO, service cost, interest cost; prepare journal entry **LO17–10**, **LO17–11**

The following data are available pertaining to Household Appliance Company's retiree health care plan for 2024:

Number of employees covered

2

| | |
|--|-----------------|
| Years employed as of January 1, 2024 | 3 (each) |
| Attribution period | 25 years |
| Expected postretirement benefit obligation, Jan. 1 | \$50,000 |
| Expected postretirement benefit obligation, Dec. 31 | \$53,000 |
| Interest rate | 6% |
| Funding | none |

Required:

1. What is the accumulated postretirement benefit obligation at the beginning of 2024?
2. What is interest cost to be included in 2024 postretirement benefit expense?
3. What is service cost to be included in 2024 postretirement benefit expense?
4. Prepare the journal entry to record the postretirement benefit expense for 2024.

E 17–26 Postretirement benefits; determine EPBO; attribution period  **LO17–10**,  **LO17–11**

Lorin Management Services has an unfunded postretirement benefit plan. On December 31, 2024, the following data were available concerning changes in the plan’s accumulated postretirement benefit obligation with respect to one of Lorin’s employees:

| | |
|---|------------------------|
| APBO at the beginning of 2024 | \$16,364 |
| Interest cost: (\$16,364 × 10%) | 1,636 |
| Service cost: (\$44,000 × 1/22) | <u>2,000</u> |
| Portion of EPBO attributed to 2024 | |
| APBO at the end of 2024 | <u>\$20,000</u> |

Required:

1. Over how many years is the expected postretirement benefit obligation being expensed (attribution period)?
2. What is the expected postretirement benefit obligation at the *end* of 2024?
3. When was the employee hired by Lorin?
4. What is the expected postretirement benefit obligation at the *beginning* of 2024?

E 17–27 Postretirement benefits; components of postretirement benefit expense  **LO17–11**

Data pertaining to the postretirement health care benefit plan of Sterling Properties include the following for 2024:

| | (\$ in thousands) |
|--|-------------------|
| Service cost | \$124 |
| Accumulated postretirement benefit obligation, January 1 | 700 |
| Plan assets (fair value), January 1 | 50 |
| Prior service cost—AOCI | none |
| Net gain—AOCI (2024 amortization, \$1) | 91 |
| Retiree benefits paid (end of year) | 87 |
| Contribution to health care benefit fund (end of year) | 185 |
| Discount rate, 7% | |
| Return on plan assets (actual and expected), 10% | |

Required:

1. Determine the postretirement benefit expense for 2024.
2. Prepare the appropriate journal entries to record the (a) postretirement benefit expense, (b) funding, and (c) retiree benefits for 2024.

E 17–28 Postretirement benefits; amortization of net loss  **LO17–11**

Tsai-Ming Company has a postretirement health care benefit plan. On January 1, 2024, the following plan-related data were available:

| | (\$ in thousands) |
|--|--------------------------------------|
| Net loss—AOCI | \$ 336 |
| Accumulated postretirement benefit obligation | 2,800 |
| Fair value of plan assets | 500 |
| Average remaining service period to retirement | 14 years (same in previous 10 years) |

The rate of return on plan assets during 2024 was 10%, although it was expected to be 9%. The actuary revised assumptions regarding the APBO at the end of the year, resulting in a \$39,000 increase in the estimate of that obligation.

Required:

1. Calculate any amortization of the net loss that should be included as a component of postretirement benefit expense for 2024.
2. Assume the postretirement benefit expense for 2024, not including the amortization of the net loss component, is \$212,000. What is the expense for the year?
3. Determine the net loss or gain as of December 31, 2024.

E 17–29 Postretirement benefits; determine and record expense  **LO17–11**

Gorky-Park Corporation provides postretirement health care benefits to employees who provide at least 12 years of service and reach age 62 while in service. On January 1, 2024, the following plan-related data were available:

| | (\$ in millions) |
|--|--------------------------------------|
| Accumulated postretirement benefit obligation | \$130 |
| Fair value of plan assets | none |
| Average remaining service period to retirement | 25 years (same in previous 10 years) |
| Average remaining service period to full eligibility | 20 years (same in previous 10 years) |

On January 1, 2024, Gorky-Park amends the plan to provide certain dental benefits in addition to previously provided medical benefits. The actuary determines that the cost of making the amendment retroactive increases the APBO by \$20 million. Management chooses to amortize the prior service cost on a straight-line basis. The service cost for 2024 is \$34 million. The interest rate is 8%.

Required:

1. Calculate the postretirement benefit expense for 2024.
2. Prepare the journal entry to record the expense.

E 17–30 Postretirement benefits; negative plan amendment **LO17–11**

Southeast Technology provides postretirement health care benefits to employees. On January 1, 2024, the following plan-related data were available:

| | (\$ in thousands) |
|--|--------------------------------------|
| Prior service cost—originated in 2019 | \$ 50 |
| Accumulated postretirement benefit obligation | 530 |
| Fair value of plan assets | none |
| Average remaining service period to retirement | 20 years (same in previous 10 years) |
| Average remaining service period to full eligibility | 15 years (same in previous 10 years) |

On January 1, 2024, Southeast amends the plan in response to spiraling health care costs. The amendment establishes an annual maximum of \$3,000 for medical benefits that the plan will provide. The actuary determines that the effect of this amendment is to decrease the APBO by \$80,000. Management amortizes prior service cost on a straight-line basis. The interest rate is 8%. The service cost for 2024 is \$114,000.

Required:

1. Calculate the prior service cost amortization for 2024.
2. Calculate the postretirement benefit expense for 2024.

E 17–31 Prior service cost; service method; straight-line method

(Based on  **Appendix 17**)

Frazier Refrigeration amended its defined benefit pension plan on December 31, 2024, to increase retirement benefits earned with each service year. The consulting actuary estimated the prior service cost incurred by making the amendment retroactive to prior years to be \$110,000. Frazier's 100 current employees are expected to retire at the rate of approximately 10 each year at the end of each of the next 10 years.

Required:

1. Using the service method, calculate the amount of prior service cost to be amortized to pension expense in each of the next 10 years.
2. Using the straight-line method, calculate the amount of prior service cost to be amortized to pension expense in each of the next 10 years.

E 17–32 FASB codification research; postretirement benefit plan  **LO17–11**

When a company sponsors a postretirement benefit plan other than a pension plan, benefits typically are not earned by employees on the basis of a formula, so assigning the service cost to specific periods is more difficult. The *FASB Accounting Standards Codification* represents the single source of authoritative U.S. generally accepted accounting principles.

Required:

1. Obtain the relevant authoritative literature on how a firm should attribute the expected postretirement benefit obligation to years of service using the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org). Find the specific seven-digit Codification citation (XXX-XX-XX) that describes the guidelines for each of the following questions:
 - a. What is the objective for attributing expected postretirement benefit obligations to years of service?
 - b. When does the attribution period for expected postretirement benefits begin for an employee?
 - c. When does the attribution period for expected postretirement benefits end for an employee?
2. What are the guidelines for each?

E 17–33 FASB codification research; disclosure notes  **LO17–1**,  **LO17–2**,  **LO17–5**

Access the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org). Determine the specific eight-digit Codification citation (XXX-XX-XX-X) for accounting for each of the following items:

1. The disclosure required in the notes to the financial statements for pension plan assets.
2. Recognition of the net pension asset or net pension liability.
3. Disclosures required in the notes to the financial statements for pension cost for a defined contribution plan.

Problems

(Note: Problems 1–5 are variations of the same situation, designed to focus on different elements of the pension plan.)

P 17–1 ABO calculations; present value concepts LO17–2, LO17–3

Sachs Brands’s defined benefit pension plan specifies annual retirement benefits equal to $1.6\% \times \text{service years} \times \text{final year’s salary}$, payable at the end of each year. Angela Davenport was hired by Sachs at the beginning of 2010 and is expected to retire at the end of 2044 after 35 years’ service. Her retirement is expected to span 18 years. Davenport’s salary is \$90,000 at the end of 2024 and the company’s actuary projects her salary to be \$240,000 at retirement. The actuary’s discount rate is 7%.

Required:

1. Draw a time line that depicts Davenport’s expected service period, retirement period, and a 2024 measurement date for the pension obligation.
2. Estimate by the accumulated benefits approach the amount of Davenport’s annual retirement payments earned as of the end of 2024.
3. What is the company’s accumulated benefit obligation at the end of 2024 with respect to Davenport?
4. If no estimates are changed in the meantime, what will be the accumulated benefit obligation at the end of 2027 (three years later), when Davenport’s salary is \$100,000?

P 17–2 PBO calculations; present value concepts LO17–3

Sachs Brands’s defined benefit pension plan specifies annual retirement benefits equal to $1.6\% \times \text{service years} \times \text{final year’s salary}$, payable at the end of each year. Angela Davenport was hired by Sachs at the beginning of 2010 and is expected to retire at the end of 2044 after 35 years’ service. Her retirement is expected to span 18 years. Davenport’s salary is \$90,000

at the end of 2024 and the company's actuary projects her salary to be \$240,000 at retirement. The actuary's discount rate is 7%.

Required:

1. Draw a time line that depicts Davenport's expected service period, retirement period, and a 2024 measurement date for the pension obligation.
2. Estimate by the projected benefits approach the amount of Davenport's annual retirement payments earned as of the end of 2024.
3. What is the company's projected benefit obligation at the end of 2024 with respect to Davenport?
4. If no estimates are changed in the meantime, what will be the company's projected benefit obligation at the end of 2024 (three years later) with respect to Davenport?

P 17-3 Service cost, interest, and PBO calculations; present value concepts  **LO17-3**

Sachs Brands's defined benefit pension plan specifies annual retirement benefits equal to $1.6\% \times \text{service years} \times \text{final year's salary}$, payable at the end of each year. Angela Davenport was hired by Sachs at the beginning of 2010 and is expected to retire at the end of 2044 after 35 years' service. Her retirement is expected to span 18 years. Davenport's salary is \$90,000 at the end of 2024 and the company's actuary projects her salary to be \$240,000 at retirement. The actuary's discount rate is 7%.

Required:

1. What is the company's projected benefit obligation at the beginning of 2024 (after 14 years' service) with respect to Davenport?
2. Estimate by the projected benefits approach the portion of Davenport's annual retirement payments attributable to 2024 service.
3. What is the company's service cost for 2024 with respect to Davenport?
4. What is the company's interest cost for 2024 with respect to Davenport?
5. Combine your answers to requirements 1, 3, and 4 to determine the company's projected benefit obligation at the end of 2024 (after 15 years' service) with respect to Davenport.

P 17-4 Prior service cost; components of pension expense; present value concepts  **LO17-3**,  **LO17-6**

Sachs Brands's defined benefit pension plan specifies annual retirement benefits equal to $1.6\% \times \text{service years} \times \text{final year's salary}$, payable at the end of each year. Angela Davenport was hired by Sachs at the beginning of 2010 and is expected to retire at the end of 2044 after 35 years' service. Her retirement is expected to span 18 years. Davenport's salary is \$90,000 at the end of 2024 and the company's actuary projects her salary to be \$240,000 at retirement. The actuary's discount rate is 7%.

At the beginning of 2025, the pension formula was amended to:

$$1.75\% \times \text{Service years} \times \text{Final year's salary}$$

The amendment was made retroactive to apply the increased benefits to prior service years.

Required:

1. What is the company's prior service cost at the beginning of 2025 with respect to Davenport after the amendment described above?
2. Since the amendment occurred at the *beginning* of 2025, amortization of the prior service cost begins in 2025. What is the prior service cost amortization that would be included in pension expense?
3. What is the service cost for 2025 with respect to Davenport?
4. What is the interest cost for 2025 with respect to Davenport?
5. Calculate pension expense for 2025 with respect to Davenport, assuming plan assets attributable to her of \$150,000 and a rate of return (actual and expected) of 10%.

P 17-5 Gain on PBO; present value concepts  **LO17-3,**
 **LO17-6**

Sachs Brands's defined benefit pension plan specifies annual retirement benefits equal to $1.6\% \times \text{service years} \times \text{final year's salary}$, payable at the end of each year. Angela Davenport was hired by Sachs at the beginning of 2010 and is expected to retire at the end of 2044 after 35 years' service. Her retirement is expected to span 18 years. Davenport's salary is \$90,000 at the end of 2024 and the company's actuary projects her salary to be \$240,000 at retirement. The actuary's discount rate is 7%.

At the beginning of 2025, changing economic conditions caused the actuary to reassess the applicable discount rate. It was decided that 8% is the appropriate rate.

Required:

Calculate the effect of the change in the assumed discount rate on the PBO at the beginning of 2025 with respect to Davenport.

P 17–6 Determine the PBO; financial statement effects; plan assets; pension expense; two years  **LO17–3**,  **LO17–4**,  **LO17–6**

Stanley-Morgan Industries adopted a defined benefit pension plan on April 12, 2024. The provisions of the plan were not made retroactive to prior years. A local bank, engaged as trustee for the plan assets, expects plan assets to earn a 10% rate of return. The actual return was also 10% in 2024 and 2025.* A consulting firm, engaged as actuary, recommends 6% as the appropriate discount rate. The service cost is \$150,000 for 2024 and \$200,000 for 2025. Year-end funding is \$160,000 for 2024 and \$170,000 for 2025. No assumptions or estimates were revised during 2024.

*We assume the estimated return was based on the actual return on similar investments at the inception of the plan and that, since the estimate didn't change, that also was the actual rate in 2025.

Required:

Calculate each of the following amounts as of both December 31, 2024, and December 31, 2025:

1. Projected benefit obligation.
2. Plan assets.
3. Pension expense.
4. Net pension asset or net pension liability.

P 17–7 Determining the amortization of net gain; financial statement effects  **LO17–6**

Herring Wholesale Company has a defined benefit pension plan. On January 1, 2024, the following pension-related data were available:

| | (\$ in thousands) |
|---|-------------------|
| Net gain—AOCI | \$ 170 |
| Accumulated benefit obligation | 1,170 |
| Projected benefit obligation | 1,400 |
| Fair value of plan assets | 1,100 |
| Average remaining service period of active employees (expected to remain constant for the next several years) | 15 years |

The rate of return on plan assets during 2024 was 9%, although it was expected to be 10%. The actuary revised assumptions regarding the PBO at the end of the year, resulting in a \$23,000 decrease in the estimate of that obligation.

Required:

1. Calculate any amortization of the net gain that should be included as a component of net pension expense for 2024.
2. Assume the net pension expense for 2024, not including the amortization of the net gain component, is \$325,000. What is pension expense for the year?
3. Determine the net loss—AOCI or net gain—AOCI as of January 1, 2025.

P 17–8 Pension spreadsheet; record pension expense and funding; new gains and losses  **LO17–7**,  **LO17–8**

A partially completed pension spreadsheet showing the relationships among the elements that constitute Carney, Inc.’s defined benefit pension plan follows. Six years earlier, Carney revised its pension formula and recalculated benefits earned by employees in prior years using the more generous formula. The prior service cost created by the recalculation is being amortized at the rate of \$5 million per year. At the end of 2024, the pension formula was amended again, creating an additional prior service cost of \$40 million. The expected rate of return on assets and the actuary’s discount rate were 10%, and the average remaining service life of the active employee group is 10 years.

| ()s indicate credits; debits otherwise (\$ in millions) | PBO | Plan Assets | Prior Service Cost | Net Loss | Pension Expense | Cash | Net Pension (Liability) / Asset |
|--|-------|-------------|--------------------|----------|-----------------|------|---------------------------------|
| Balance, Jan. 1, 2024 | (830) | 680 | 20 | 93 | | | (150) |
| Service cost | ? | | | | 74 | | ? |
| Interest cost | ? | | | | ? | | ? |
| Expected return on asset | | ? | | | | | |

| Retiree benefits | ? | ? | | | | | |
| Balance, Dec. 31, 2024 | ? | 775 | ? | ? | ? | | ? |

Required:

1. Fill in the missing amounts.
2. Prepare the 2024 journal entry to record pension expense.
3. Prepare the journal entry(s) to record any 2024 gains and losses and new prior service cost in 2024.
4. Prepare the 2024 journal entries to record (a) the cash contribution to plan assets and (b) the payment of retiree benefits.

P 17–9 Determine pension expense; PBO; plan assets; net pension asset or liability; journal entries  **LO17–3 through**
 **LO17–8**

U.S. Metallurgical Inc. reported the following balances in its financial statements and disclosure notes at December 31, 2023.

| | |
|------------------------------|-----------|
| Plan assets | \$400,000 |
| Projected benefit obligation | 320,000 |

U.S.M.'s actuary determined that 2024 service cost is \$60,000. Both the expected and actual rate of return on plan assets are 9%. The interest (discount) rate is 5%. U.S.M. contributed \$120,000 to the pension fund at the end of 2024, and retirees were paid \$44,000 from plan assets.

Required:

1. What is the pension expense at the end of 2024?
2. What is the projected benefit obligation at the end of 2024?
3. What is the plan assets balance at the end of 2024?
4. What is the net pension asset or net pension liability at the end of 2024?
5. Prepare journal entries to record the (a) pension expense, (b) funding of plan assets, and (c) retiree benefit payments.

P 17–10 Prior service cost; calculate pension expense; journal entries; financial statement effects  **LO17–5 through**
 **LO17–7**

Electronic Distribution has a defined benefit pension plan. Characteristics of the plan during 2024 are as follows:

| | (\$ in millions) |
|--|------------------|
| PBO balance, January 1 | \$480 |
| Plan assets balance, January 1 | 300 |
| Service cost | 75 |
| Interest cost | 45 |
| Gain from change in actuarial assumption | 22 |
| Benefits paid | (36) |
| Actual return on plan assets | 20 |
| Contributions 2024 | 60 |

The expected long-term rate of return on plan assets was 8%. There were no AOCI balances related to pensions on January 1, 2024, but at the end of 2024, the company amended the pension formula, creating a prior service cost of \$12 million.

Required:

1. Calculate the pension expense for 2024.
2. Prepare the journal entries to record (a) pension expense, (b) gains or losses, (c) prior service cost, (d) funding, and (e) payment of benefits for 2024.
3. What amount will Electronic Distribution report in its 2024 balance sheet as a net pension asset or net pension liability?

P 17–11 IFRS; calculate pension expense; journal entries; determine net pension asset or liability  **LO17–5** through  **LO17–7**,  **LO17–12**

Refer to the situation described in  **P 17–10**. Assume Electronic Distribution prepares its financial statements according to International Financial Reporting Standards (IFRS). Also assume that 10% is the current interest rate on high-quality corporate bonds.

Required:

1. Calculate the net pension cost for 2024, separating its components into appropriate categories for reporting.
2. Prepare the journal entries to record (a) the components of net pension cost, (b) gains or losses, (c) past service cost, (d) funding, and (e) payment of benefits for 2024.
3. What amount will Electronic Distribution report in its 2024 balance sheet as a net pension asset or net pension liability?

P 17-12 Determine pension expense; journal entries; two years
 **LO17-3** through  **LO17-8**

The Kollar Company has a defined benefit pension plan. Pension information concerning the fiscal years 2024 and 2025 are presented below (\$ in millions):

Information Provided by Pension Plan Actuary:

- a. Projected benefit obligation as of December 31, 2023 = \$1,800.
- b. Prior service cost from plan amendment on January 2, 2024 = \$400 (straight-line amortization for 10-year average remaining service period).
- c. Service cost for 2024 = \$520.
- d. Service cost for 2025 = \$570.
- e. Discount rate used by actuary on projected benefit obligation for 2024 and 2025 = 10%.
- f. Payments to retirees in 2024 = \$380.
- g. Payments to retirees in 2025 = \$450.
- h. No changes in actuarial assumptions or estimates.
- i. Net gain—AOCI on January 1, 2024 = \$230.
- j. Net gains and losses are amortized for 10 years in 2024 and 2025.

Information Provided by Pension Fund Trustee:

- a. Plan asset balance at fair value on January 1, 2024 = \$1,600.
- b. 2024 contributions = \$540.
- c. 2025 contributions = \$590.
- d. Expected long-term rate of return on plan assets = 12%.
- e. 2024 actual return on plan assets = \$180.
- f. 2025 actual return on plan assets = \$210.

Required:

1. Calculate pension expense for 2024 and 2025.
2. Prepare the journal entries for 2024 and 2025 to record pension expense.
3. Prepare the journal entries for 2024 and 2025 to record any gains and losses and new prior service cost.
4. Prepare the journal entries for 2024 and 2025 to record (a) the cash contribution to plan assets and (b) the benefit payments to retirees.

P 17–13 Determine the PBO, plan assets, pension expense; prior service cost  **LO17–3**,  **LO17–4**,  **LO17–6**

Lewis Industries adopted a defined benefit pension plan on January 1, 2024.

- By making the provisions of the plan retroactive to prior years, Lewis incurred a prior service cost of \$2 million.
- The prior service cost was funded immediately by a \$2 million cash payment to the fund trustee on January 2, 2024.
- However, the cost is to be amortized (expensed) over 10 years.
- The service cost—\$250,000 for 2024—is fully funded at the end of each year.
- Both the actuary’s discount rate and the expected rate of return on plan assets were 9%.
- The actual rate of return on plan assets was 11%.
- At December 31, the trustee paid \$16,000 to an employee who retired during 2024.

Required:

Determine each of the following amounts as of December 31, 2024, the fiscal year-end for Lewis:

1. Projected benefit obligation.
2. Plan assets.
3. Pension expense.

P 17–14 Relationship among pension elements  **LO17–3**
through  **LO17–8**

The funded status of Patel Paneling Inc.'s defined benefit pension plan and the balances in prior service cost and the net gain—pensions, are given below (\$ in thousands):

| | 2024 Beginning Balances | 2024 Ending Balances |
|------------------------------|----------------------------|-------------------------|
| Projected benefit obligation | \$2,300 | \$2,501 |
| Plan assets | <u>2,400</u> | <u>2,591</u> |
| Funded status | 100 | 90 |
| Prior service cost—AOCI | 325 | 300 |
| Net gain—AOCI | 330 | 300 |

Retirees were paid \$270,000, and the employer contribution to the pension fund was \$245,000 at the end of 2024. The expected rate of return on plan assets was 10%, and the actuary's discount rate is 7%. There were no changes in actuarial estimates and assumptions regarding the PBO.

Required:

Determine the following amounts for 2024:

1. Actual return on plan assets.
2. Loss or gain on plan assets.
3. Service cost.
4. Pension expense.
5. Average remaining service life of active employees (used to determine amortization of the net gain).

P 17–15 Comprehensive—pension elements; spreadsheet

LO17–8

The following pension-related data pertain to Metro Recreation's noncontributory, defined benefit pension plan for 2024 (\$ in thousands):

| | Jan. 1 | Dec. 31 |
|------------------------------|-------------|------------|
| Projected benefit obligation | \$ 4,100 | \$4,380 |

| | Jan. 1 | Dec. 31 |
|---|--------|---------|
| Accumulated benefit obligation | 3,715 | 3,950 |
| Plan assets (fair value) | 4,530 | 4,975 |
| Interest (discount) rate, 7% | | |
| Expected return on plan assets, 10% | | |
| Prior service cost—AOCI (from Dec. 31, 2023, amendment) | 840 | |
| Net loss—AOCI | 477 | |
| Average remaining service life: 12 years | | |
| Gain due to changes in actuarial assumptions | | 44 |
| Contributions to pension fund (end of year) | | 340 |
| Pension benefits paid (end of year) | | 295 |

Required:

Prepare a pension spreadsheet that shows the relationships among the various pension balances, shows the changes in those balances, and computes pension expense for 2024.

P 17–16 Comprehensive—reporting a pension plan; pension spreadsheet; financial statement effects; two years  **LO17–3** through  **LO17–8**

Actuary and trustee reports indicate the following changes in the PBO and plan assets of Lakeside Cable during 2024:

| | |
|---|--------------|
| Prior service cost at Jan. 1, 2024, from plan amendment at the beginning of 2022 (amortization: \$4 million per year) | \$32 million |
| Net loss-pensions at Jan.1, 2024 (previous losses exceeded previous gains) | \$40 million |
| Average remaining service life of the active employee group | 10 years |

Actuary's discount rate 8%

| (\$ in millions) | | | |
|---------------------------|--------------|--------------------------|--------------|
| | PBO | | Plan Assets |
| <i>Beginning of 2024</i> | \$300 | <i>Beginning of 2024</i> | \$200 |
| Service cost | 48 | Return on plan assets, | |
| Interest cost, 8% | 24 | 7.5% (10% expected) | 15 |
| Loss (gain) on PBO | (2) | Cash contributions | 45 |
| Less: Retiree benefits | (20) | Less: Retiree benefits | (20) |
| <i>End of 2024</i> | <u>\$350</u> | <i>End of 2024</i> | <u>\$240</u> |

Required:

Page 1035

1. Determine Lakeside's pension expense for 2024, and prepare the appropriate journal entries to record the expense as well as the cash contribution to plan assets and payment of benefits to retirees.
2. Determine the new gains and/or losses in 2024 and prepare the appropriate journal entry(s) to record them.
3. Prepare a pension spreadsheet to assist you in determining end of 2024 balances in the PBO, plan assets, prior service cost–AOCI, the net loss–AOCI, and the pension liability.
4. Assume the following actuary and trustee reports indicating changes in the PBO and plan assets of Lakeside Cable during 2025 (\$ in millions):

| | PBO | | Plan Assets |
|--------------------------|-------|--------------------------|-------------|
| <i>Beginning of 2025</i> | \$350 | <i>Beginning of 2025</i> | \$240 |
| Service cost | 38 | Return on plan assets, | |
| Interest cost at 8% | 28 | 15% (10% expected) | 36 |

| | PBO | | Plan Assets |
|------------------------|--------------|------------------------|--------------|
| Loss (gain) on PBO | 5 | Cash contributions | 30 |
| Less: Retiree benefits | (16) | Less: Retiree benefits | (16) |
| <i>End of 2025</i> | <u>\$405</u> | <i>End of 2025</i> | <u>\$290</u> |

Determine Lakeside's pension expense for 2025, and prepare the appropriate journal entries to record the expense, the cash funding of plan assets, and payment of benefits to retirees.

5. Determine the new gains and/or losses in 2025, and prepare the appropriate journal entry(s) to record them.
6. Using T-accounts, determine the balances at December 31, 2025, in the net loss–AOCI and prior service cost–AOCI.
7. Confirm the balances determined in *requirement 6* by preparing a pension spreadsheet.

P 17–17 Integrating Problem—Deferred tax effects of pension entries; integrate concepts learned in Chapter 16  **LO17–7**

Reproduced below are the journal entries related to  **Illustration 17-12** in this chapter that Global Communications used to record its pension expense and funding in 2024 and the new gain and loss that occurred that year. To focus on the core issues, we ignored the income tax effects of the pension amounts.

| To Record Pension Expense | (\$ in millions) |
|--|------------------|
| Pension expense (total) | 43 |
| Plan assets (expected return on plan assets) | 27 |
| PBO (\$41 service cost + \$24 interest cost) | 65 |

| To Record Pension Expense | (\$ in millions) | |
|--|------------------|----|
| Amortization of prior service cost—OCI (2024 amortization) | | 4 |
| Amortization of net loss—OCI (2024 amortization) | | 1 |
| To Record Funding | | |
| Plan assets | 48 | |
| Cash (contribution to plan assets) | | 48 |
| To Record Payment of Benefits | | |
| PBO | 38 | |
| Plan assets (retiree benefits) | | 38 |
| To Record Gains and Losses | | |
| Loss—OCI (from change in assumption) | 23 | |
| PBO | | 23 |
| Plan assets | 3 | |
| Gain—OCI (from actual return exceeding expected return) | | 3 |

Required:

1. Recast these journal entries to include the income tax effects of the events being recorded. Assume that Global's tax rate is 25%. (*Hint:* Costs are incurred and recognized for financial reporting purposes now, but the tax impact comes much later—when these amounts are deducted for tax purposes as actual payments for retiree benefits occur in the future. As a result, the tax effects are deferred, creating the need to record deferred tax assets and deferred tax liabilities. So, you may want to refer back to Chapter 16 to refresh your memory on these concepts.)
2. Prepare a statement of comprehensive income for 2024, assuming Global's only other sources of comprehensive income were net income of \$300 million and a \$30 million unrealized holding gain on investments in securities available for sale.

P 17–18 Postretirement benefits; EPBO calculations; APBO calculations; components of postretirement benefit expense; present value concepts  **LO17–9**,  **LO17–10**

Century-Fox Corporation's employees are eligible for postretirement health care benefits after both being employed at the end of the year in which age 60 is attained and having worked 20 years. Jason Snyder was hired at the end of 2001 by Century-Fox at age 34 and is expected to retire at the end of 2029 (age 62). His retirement is expected to span five years (unrealistically short in order to simplify calculations). The company's actuary has estimated the net cost of retiree benefits in each retirement year as shown below. The discount rate is 6%. The plan is not prefunded. Assume costs are incurred at the end of each year.

| Year | Expected Age | Net Cost |
|------|--------------|----------|
| 2030 | 63 | \$4,000 |
| 2031 | 64 | 4,400 |
| 2032 | 65 | 2,300 |
| 2033 | 66 | 2,500 |
| 2034 | 67 | 2,800 |

Required:

1. Draw a time line that depicts Snyder's attribution period for retiree benefits and expected retirement period.
2. Calculate the present value of the net benefits as of the expected retirement date.
3. With respect to Snyder, what is the company's expected postretirement benefit obligation at the end of 2024?
4. With respect to Snyder, what is the company's accumulated postretirement benefit obligation at the end of 2024?
5. With respect to Snyder, what is the company's accumulated postretirement benefit obligation at the end of 2025?
6. What is the service cost to be included in 2025 postretirement benefit expense?
7. What is the interest cost to be included in 2025 postretirement benefit expense?
8. Show how the APBO changed during 2025 by reconciling the beginning and ending balances.

P 17–19 Postretirement benefits; schedule of postretirement benefit costs  **LO17–9 through**  **LO17–11**

Stockton Labeling Company has a retiree health care plan. Employees become fully eligible for benefits after working for the company eight years. Stockton hired Misty Newburn on January 1, 2024. As of the end of 2024, the actuary estimates the total net cost of providing health care benefits to Newburn during her retirement years to have a present value of \$18,000. The actuary's discount rate is 10%.

Required:

Prepare a schedule that shows the EPBO, the APBO, the service cost, the interest cost, and the postretirement benefit expense for each of the years 2024–2031.

P 17–20 Postretirement benefits; relationship among elements of postretirement benefit plan; financial statement effects  **LO17–9 through**  **LO17–11**

The information below pertains to the retiree health care plan of Thompson Technologies:

Thompson began funding the plan in 2024 with a contribution of \$127,000 to the benefit fund at the end of the year. Retirees were paid \$52,000. The actuary's discount rate is 5%. There were no changes in actuarial estimates and assumptions.

| (\$ in thousands) | 2024 Beginning Balances | 2024 Ending Balances |
|---|-------------------------------|----------------------------|
| Accumulated postretirement benefit obligation | \$460 | \$485 |
| Plan assets | <u>0</u> | <u>75</u> |
| Funded status | (460) | (410) |
| Prior service cost—AOCI | 120 | 110 |
| Net gain—AOCI | (50) | (49) |

Required:

Determine the following amounts for 2024:

1. Service cost.
2. Postretirement benefit expense.
3. Net benefit liability.

The following is an excerpt from a disclosure note in **The Clorox Company's** annual report for the fiscal year ended June 30, 2020:

P 17–21 Pension disclosure notes; financial statement effects of actuarial gain or loss; The Clorox Company.  **LO17–3** through  **LO17–7**

Real World Financials

Required:

1. What amount did Clorox report in its balance sheet related to the pension plan at June 30, 2020?

| NOTE 17: EMPLOYEE BENEFIT PLANS (in part) | | |
|--|-------------------------|-------------|
| (\$ in millions) | Pension Benefits | |
| | 2020 | 2019 |
| Changes in projected benefit obligation: | | |
| Obligation at beginning of year | \$ 604 | \$ 593 |
| Service cost | 1 | 1 |
| Interest cost | 20 | 23 |
| Actuarial (gain) loss | 43 | 26 |
| Benefits paid | (39) | (39) |
| Obligation at end of year | \$ 628 | \$ 604 |
| Change in plan assets: | | |
| Fair value of plan assets at beginning of year | \$ 485 | \$ 420 |
| Actual return (loss) on plan assets* | 48 | 41 |
| Employer contribution | 13 | 63 |

NOTE 17: EMPLOYEE BENEFIT PLANS (in part)

| (\$ in millions) | Pension Benefits | |
|--|------------------|----------|
| | 2020 | 2019 |
| Benefits paid | (39) | (39) |
| Fair value of plan assets at end of year | \$ 507 | \$ 485 |
| Net Funded Status | \$ (121) | \$ (119) |

*Expected return \$19 and \$18 in 2020 and 2019, respectively

2. When calculating pension expense at June 30, Clorox included \$10 million in its income statement as the amortization of unrecognized net actuarial loss (net loss—AOCI). This AOCI account had a balance of \$240 million at the beginning of the year and was the only AOCI account related to pensions. What was the average remaining service life of employees as of 2020?
3. What was the pension expense?
4. What were the appropriate journal entries to record Clorox's pension expense and to record gains and/or losses related to the pension plan?

Decision Makers' Perspective

Ed Telling/Getty Images

Apply your critical-thinking ability to the knowledge you've gained. These cases will provide you an opportunity to develop your research, analysis, judgment, and communication skills. You also will work with other students, integrate what you've learned, apply it in real-world situations, and consider its global and ethical ramifications. This practice will broaden your knowledge and further develop your decision-making abilities.

Judgment Case 17–1 Choose your retirement option

 **LO17–1**,  **LO17–3**,  **LO17–4**,  **LO17–5**

“I only get one shot at this?” you wonder aloud. Martina, human resources manager at Covington State University, has just explained that newly hired assistant professors must choose between two retirement plan options. “Yes, I’m afraid so,” Martina concedes. “But you do have a week to decide.”

Martina explanation was that your two alternatives are (1) the state’s defined benefit plan and (2) a defined contribution plan under which the university will contribute each year an amount equal to 8% of your salary. The defined benefit plan will provide annual retirement benefits determined by the following formula: $1.5\% \times \text{years of service} \times \text{salary at retirement}$.

“It’s a good thing I studied pensions in my accounting program,” you tell Martina. “Now let’s see. You say the state is currently assuming our salaries will rise about 3% a year, and the interest rate they use in their calculations is 6%? And, for someone my age, you say they assume I’ll retire after 40 years and draw retirement pay for 20 years. I’ll do some research and get back to you.”

Required:

1. You were hired at the beginning of 2024 at a salary of \$100,000. If you choose the state's defined benefit plan and projections hold true, what will be your annual retirement pay? What is the present value of your retirement annuity as of the anticipated retirement date (end of 2063)?
2. Suppose instead that you choose the defined contribution plan. Assuming that the rate of increase in salary is the same as the state assumes and that the rate of return on your retirement plan assets will be 6% compounded annually, what will be the future value of your plan assets as of the anticipated retirement date (end of 2063)? What will be your annual retirement pay (assuming continuing investment of remaining assets at 6%)?
3. Based on this numerical comparison, which plan would you choose? Page 1038
4. What other factors must you also consider in making the choice?

[*Hint:* The calculations are greatly simplified using an electronic spreadsheet such as Excel. There are many ways to set up the spreadsheet. One relatively easy way is to set up the first few rows with the formulas as shown below, then use the “fill down” function to fill in the remaining 38 rows, and use the Insert: Name: Define: function to name column B “n”. Since contributions are assumed made at the end of each year, there are 39 years remaining to maturity at the end of 2024. Note that multiplying each contribution by $(1.06)^n$, where n equals the remaining number of years to retirement, calculates the future value of each contribution invested at 6% until retirement.]

| | A | B | C | D | E |
|---|--------|------------|-----------|--------------|---------------|
| 1 | End of | Years to | | | Future Value |
| 2 | Year | Retirement | Salary | Contribution | at Retirement |
| 3 | 2024 | 39 | 100,000 | = C3*0.08 | = D3*1.06^n |
| 4 | =A3+1 | = B3-1 | = C3*1.03 | = C4*0.08 | = D4*1.06^n |

Real World Case 17–2 Types of pension plans; disclosure notes; Microsoft LO17–1

Real World Financials

Refer to the 2020 financial statements and related disclosure notes of **Microsoft Corporation** (www.microsoft.com).

Required:

1. What type of pension plan does Microsoft sponsor for its employees?
2. Who bears the “risk” of factors that might reduce retirement benefits in this type of plan?
3. Assuming that employee and employer contributions vest immediately, suppose a Microsoft employee contributes \$1,000 to the pension plan during her first year of employment and directs investments to a bond mutual fund. If she leaves Microsoft early in her second year, after the mutual fund’s value has increased by 2%, how much will she be entitled to roll over into an Individual Retirement Account (IRA)?
4. What journal entry did Microsoft use to account for its participation in the pension plan in fiscal 2020?

Real World Case 17–3 Types of pension plans; reporting postretirement plans; disclosure notes; FedEx  **LO17–5**,  **LO17–8**

Real World Financials

Refer to the 2020 financial statements and related disclosure notes of **FedEx Corporation**. The financial statements can be found at the company’s website (www.fedex.com).

Required:

1. Does FedEx sponsor defined benefit pension plans for its employees? Defined contribution plans? Postretirement health care plans?
2. What amount does FedEx report in its balance sheet in 2020 for its U.S. pension plans?
3. What amount does FedEx report in its balance sheet in 2020 for its postretirement health care plans?
4. FedEx reports three actuarial assumptions used to determine reported pension amounts. What were the discount rate and rate of increase in future compensation levels used to determine the projected benefit obligation in 2020?
5. Did reported changes in the discount rate from the previous year increase, decrease, or have no effect on the projected benefit obligation?
6. Did reported changes in the rate of increase in future compensation levels from the previous year increase, decrease, or have no effect on the projected benefit obligation?

Analysis Case 17–4 Pension amendment LO17–5, LO17–8

Charles Rubin is a 30-year employee of Amalgamated Motors. Charles was pleased with recent negotiations between his employer and the United Auto Workers. Among other favorable provisions of the new agreement, the pact also includes a 14% increase in pension payments for workers under 64 years of age with 30 years of service who retire during the agreement. Although the elimination of a cap on outside income earned by retirees has been generally viewed as an incentive for older workers to retire, Charles sees promise for his dream of becoming a part-time engineering consultant after retirement. What has caught Charles’s attention is the following excerpt from an article in the financial press:

Amalgamated Motors Corp. will record a \$240 million charge due to increases in retirement benefits for hourly United Auto Workers employees.

The charge stems from AM’s new tentative labor contract with the UAW. According to a filing with the Securities and Exchange Commission, the charge amounts to 26 cents a share.

The company warned that its “net pension obligation and pension expense are expected to be unfavorably impacted as a result of the recently completed labor negotiations.”

Taking advantage of an employee stock purchase plan, Charles has become an active AM stockholder as well as employee. His stockholder side is moderately concerned by the article’s reference to the unfavorable impact of the recently completed labor negotiations.

Page 1039

Required:

1. When a company modifies its pension benefits the way Amalgamated Motors did, what name do we give the added cost?
2. How do we account for this added cost?
3. What does AM mean when it says its “net pension obligation and pension expense are expected to be unfavorably impacted as a result of the recently completed labor negotiations”?

Analysis Case 17–5 Effect of pensions on earnings LO17–7

While doing some online research concerning a possible investment you come across an article that mentions in passing that a representative of **Morgan Stanley** had indicated that a company's pension plan had benefited its reported earnings. Curiosity piqued, you seek your old Intermediate Accounting text.

Required:

1. Normally, a company's net periodic pension cost represents an expense and therefore decreases earnings. Sometimes, though, circumstances cause this element of the income statement to actually *increase* reported earnings. How can the net periodic pension "cost" cause a company's reported earnings to increase?.
2. Companies must report the actuarial assumptions used to make estimates concerning pension plans, namely the discount rate, the average rate of compensation increase, and the expected long-term rate of return on plan assets. How might these estimates influence reported profits?

Analysis Case 17–6 Pensions and other postretirement benefit plans; disclosure notes; Macy's  **LO17–6**,  **LO17–11**

Real World Financials

Refer to the financial statements of Macy's, Inc. for the year ended February 1, 2020, and related disclosure notes of the company. The financial statements can be found at the company's website (www.macys.com).

Required:

1. From the information provided in various portions of Note 9, reconcile the beginning balance (\$1,109) and ending balances for Net loss–AOCI associated with Macy's pension plan. Clearly label each reconciling amount.
2. Macy's was required to amortize a portion of its Net loss–AOCI associated with its pension plan in the year ended February 1, 2020. Based on the calculation of that amount, determine the average remaining service life of the company's employees used in that calculation.
3. Suppose you believe that Macy's should have assumed a 1% lower health care cost trend during the year ended February 1, 2020. What would the accumulated postretirement benefit obligation have been on February 1, 2020, under that assumption? See Note 10.

Judgment Case 17–7 Relationship among pension elements; disclosure notes LO17–8

LGD Consulting is a medium-sized provider of environmental engineering services. The corporation sponsors a noncontributory, defined benefit pension plan. Alan Barlow, a new employee and participant in the pension plan, obtained a copy of the 2024 financial statements, partly to obtain additional information about LGD's obligation under the plan. In part, the pension disclosure note reads as follows:

Note 8: Retirement Benefits

The Company has a defined benefit pension plan covering substantially all of its employees. The benefits are based on years of service and the employee's compensation during the last two years of employment. The company's funding policy is consistent with the funding requirements of federal law and regulations. Generally, pension costs accrued are funded. Plan assets consist primarily of stocks, bonds, commingled trust funds, and cash.

The change in projected benefit obligation for the plan years ended December 31, 2024, and December 31, 2023.

| (\$ in thousands) | 2024 | 2023 |
|---|----------------|----------------|
| Projected benefit obligation at beginning of year | \$3,786 | \$3,715 |
| Service cost | 103 | 94 |
| Interest cost | 287 | 284 |
| Actuarial (gain) loss | 302 | (23) |
| Benefits paid | (324) | (284) |
| Projected benefit obligation at end of year | <u>\$4,154</u> | <u>\$3,786</u> |

The weighted-average discount rate and rate of increase in future compensation levels used in determining the actuarial present value of the projected benefit obligations in the above table were 7.0% and 4.3%, respectively, at December 31, 2024, and 7.75% and 4.7%, respectively, at December 31, 2023. The expected long-term rate of return on assets was 10.0% at December 31, 2024 and 2023.

The change in the fair value of plan assets for the plan years ended December 31, 2024 and 2023.

| (\$ in thousands) | 2024 | 2023 |
|--|---------|---------|
| Fair value of plan assets at beginning of year | \$3,756 | \$3,616 |

| | | |
|--|----------------|----------------|
| Actual return on plan assets | 1,100 | 372 |
| Employer contributions | 27 | 52 |
| Benefits paid | (324) | (284) |
| Fair value of plan assets at end of year | <u>\$4,559</u> | <u>\$3,756</u> |

Included in the Consolidated Balance Sheets are the following components of accumulated other comprehensive income.

| (\$ in thousands) | 2024 | 2023 |
|--------------------|---------|---------|
| Net actuarial gain | \$(620) | \$(165) |
| Prior service cost | 44 | 46 |

Net periodic defined benefit pension cost for fiscal 2024, 2023, and 2022 is included the following components.

| (\$ in thousands) | 2024 | 2023 | 2022 |
|--------------------------------------|--------------|--------------|--------------|
| Service cost | \$ 103 | \$ 94 | \$ 112 |
| Interest cost | 287 | 284 | 263 |
| Expected return on plan assets | (342) | (326) | (296) |
| Amortization of prior service cost | 2 | 2 | 1 |
| Recognized net actuarial (gain) loss | (2) | 2 | 4 |
| Net periodic pension cost | <u>\$ 48</u> | <u>\$ 56</u> | <u>\$ 84</u> |

In attempting to reconcile amounts reported in the disclosure note with amounts reported in the income statement and balance sheet, Barlow became confused. He was able to find the pension expense on the income statement but was unable to make sense of the balance sheet amounts. Expressing his frustration to his friend, Barlow said, "It appears to me that the company has calculated pension expense as if they have the pension liability and pension assets they include in the note, but I can't seem to find those amounts in the balance sheet. In fact, there are several amounts here I can't seem to account for. They also say they've made some assumptions about interest rates, pay increases, and profits on invested assets. I wonder what difference it would make if they assumed other numbers."

Barlow's friend took accounting courses in college and remembers most of what she learned about pension accounting. She attempts to clear up Barlow's confusion.

Required:

Assume the role of Barlow's friend. Answer the following questions for Barlow.

1. Is Barlow's observation correct that the company has calculated pension expense on the basis of amounts not reported in the balance sheet?
2. What amount would the company report as a pension liability in the balance sheet for 2023?
3. What amount would the company report as a pension asset in the balance sheet for 2024?
4. Which of the other two amounts reported in the disclosure note would the company report in the balance sheet?
5. The disclosure note reports a net actuarial gain as well as an actuarial loss. Does the loss in 2024 indicate that the PBO is higher or is lower than previously expected due to some unspecified change in an actuarial assumption?
6. Losses and gains are reported in the statement of comprehensive income as they occur. These amounts accumulate as a net gain or net loss in the balance sheet as part of what account?

Research Case 17–8 FASB codification; researching the way changes in postretirement benefit estimates are reported; retrieving disclosures from the Internet  **LO17–11**

It's financial statements preparation time at Center Industries, where you have been assistant controller for two months. Ben Ortega, the controller, seems to be pleasant but unpredictable. Today, although your schedule is filled with meetings with internal and outside auditors and two members of the board of directors, Ben made a request. "As you know, we're decreasing the rate at which we assume health care costs will rise when measuring our postretirement benefit obligation. I'd like to know how others have reported similar changes. Can you find me an example?" he asked. "I'd bet you could get one off the Internet."

Required:

Access a recent 10-K filing of a firm you think might have a postretirement health care plan. You may need to look up several companies before you find what you're looking for. Older,

established companies are most likely to have such benefit plans. (Note: You may be able to focus your search by searching with keywords and phrases in Google on the Internet.) Find the portion of the disclosures that reports the effect of a change in health care cost trends.

1. What information is provided about the effect of the change on the company's estimated benefit obligation? Page 1041
2. Obtain the relevant authoritative literature on the disclosure of accounting policies using the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org). What is the specific eight-digit Codification citation (XXX-XX-XX-X) companies rely on when disclosing the effect of a change in health care cost trends?

Communication Case 17–9 Barlow's wife; relationship among pension elements LO17–8

The focus of this case is question 1 in the previous case. Your instructor will divide the class into two to six groups, depending on the size of the class. The mission of your group is to assess the correctness of Barlow's observation and to suggest the appropriate treatment of the pension obligation. The suggested treatment need not be that required by GAAP.

Required:

1. Each group member should deliberate the situation independently and draft a tentative argument prior to the class session for which the case is assigned.
2. In class, each group will meet for 10 to 15 minutes in different areas of the classroom. During that meeting, group members will take turns sharing their suggestions for the purpose of arriving at a single group treatment.
3. After the allotted time, a spokesperson for each group (selected during the group meetings) will share the group's solution with the class. The goal of the class is to incorporate the views of each group into a consensus approach to the situation.

Communication Case 17–10 Pension concepts; disclosure notes LO17–2 through LO17–8

Stacy Persoff is the newly hired assistant controller of Kemp Industries, a regional supplier of hardwood derivative products. The company sponsors a defined benefit pension plan that covers its 420 employees. On reviewing last year's financial statements, Persoff was concerned about some items reported in the disclosure notes relating to the pension plan. Portions of the relevant note follow:

Note 8: Pensions

The company has a defined benefit pension plan covering substantially all of its employees. Pension benefits are based on employee service years and the employee's compensation during the last two years of employment. The company contributes annually the maximum amount permitted by the federal tax code. Plan contributions provide for benefits expected to be earned in the future as well as those earned to date. The following reconciles the plan's funded status and amount recognized in the balance sheet at December 31, 2024 (\$ in thousands).

Actuarial Present Value Benefit Obligations:

| | |
|---|------------------|
| Accumulated benefit obligation (including vested benefits of \$318) | <u>\$(1,305)</u> |
| Projected benefit obligation | \$(1,800) |
| Plan assets at fair value | 1,575 |
| Projected benefit obligation in excess of plan assets | <u>\$ (225)</u> |

Kemp's comparative income statements reported total pension expense of \$108,000 in 2024 and \$86,520 in 2023. Since employment has remained fairly constant in recent years, Persoff expressed concern over the increase in the pension expense. She expressed her concern to you, a three-year senior accountant at Kemp. "I'm also interested in the differences in these liability measurements," she mentioned.

Required:

Write a memo to Persoff. In the memo, do the following:

1. Explain to Persoff how the composition of the total pension expense can create the situation she sees. Briefly describe the components of pension expense. Include a description of how the service cost component is reported in the income statement.
2. Briefly explain how pension gains and losses are recognized in earnings.
3. Describe for her the differences and similarities between the accumulated benefit obligation and the projected benefit obligation.
4. Explain how the "Projected benefit obligation in excess of plan assets" is reported in the financial statements.

You are in your third year as internal auditor with VXI International, manufacturer of parts and supplies for jet aircraft. VXI began a defined contribution pension plan three years ago. The plan is a so-called 401(k) plan (named after the Tax Code section that specifies the conditions for the favorable tax treatment of these plans) that permits voluntary contributions by employees. Employees' contributions are matched with one dollar of employer contribution for every two dollars of employee contribution. Approximately \$500,000 of contributions is deducted from employee paychecks each month for investment in one of three employer-sponsored mutual funds.

While performing some preliminary audit tests, you happen to notice that Page 1042
employee contributions to these plans usually do not show up on mutual fund statements for up to two months following the end of pay periods from which the deductions are drawn. On further investigation, you discover that when the plan was first begun, contributions were invested within one week of receipt of the funds. When you question the firm's investment manager about the apparent change in the timing of investments, you are told, "Last year Liam Maxwell (the CFO) directed me to initially deposit the contributions in the corporate investment account. At the close of each quarter, we add the employer matching contribution and deposit the combined amount in specific employee mutual funds."

Required:

1. What is Liam Maxwell's apparent motivation for the change in the way contributions are handled?
2. Do you perceive an ethical dilemma?

Continuing Cases

Target Case LO17-3, LO17-4, LO17-5, LO17-6

Target Corporation prepares its financial statements according to U.S. GAAP. Target's financial statements and disclosure notes for the year ended February 1, 2020, are available in Connect. This material also is available under the Investor Relations link at the company's website (www.target.com).

Target has both defined contribution and defined benefit pension plan. In Note 23 "Pension Plans," Target describes its defined benefit plans.

Required:

1. What were the changes in Target's Projected Benefits Obligation in the fiscal years ended February 1, 2020 (fiscal 2019), and February 2, 2019 (fiscal 2018), for its qualified pension plans?
2. What were the changes in Target's Pension Plan Assets in the fiscal years ended February 1, 2020, and February 2, 2019, for its qualified pension plans?
3. Were these pension plans overfunded or underfunded for the fiscal years ended February 1, 2020, and February 2, 2019?
4. What were the components of Target's Pension Expense in the fiscal years 2019, 2018, and 2017?

Air France–KLM Case LO17-12

IFRS

Air France–KLM (AF), a Franco-Dutch company, prepares its financial statements according to International Financial Reporting Standards. AF's financial statements and disclosure notes for the year ended December 31, 2019, are available in Connect. This material also is available under the Finance link at the company's website (www.airfranceklm.com/en/finance/).

Required:

1. AF reported past service cost (called prior service cost under U.S. GAAP) in its income statement as part of net periodic pension cost. How does that reporting method compare with the way we report prior service cost under U.S. GAAP?
2. Look at AF's balance sheet. How does the way that AF reports Pension assets and Pension liabilities (provisions) compare with the way we report those amounts under U.S. GAAP?
3. See Note 29.3: "Evolution of commitments." For its Netherlands operations, did AF report (a) net interest *cost* or (b) net interest *income* in 2019?

CHAPTER 18

Shareholders' Equity

OVERVIEW

We turn our attention from liabilities, which represent the creditors' interests in the assets of a corporation, to the shareholders' residual interest in those assets. The discussions distinguish between the two basic sources of shareholders' equity: (1) *invested capital* and (2) *earned capital*. We explore the expansion of corporate capital through the issuance of shares and the contraction caused by the retirement of shares or, equivalently, the purchase of treasury shares. In our discussions of retained earnings, we examine cash dividends, property dividends, stock dividends, and stock splits.

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

-  **LO18-1** Describe the components of shareholders' equity and explain how they are reported in a statement of shareholders' equity. (p. 1045)
-  **LO18-2** Describe comprehensive income and its components. (p. 1048)
-  **LO18-3** Understand the corporate form of organization and the nature of stock. (p. 1049)
-  **LO18-4** Record the issuance of shares when sold for cash and for noncash consideration. (p. 1057)
-  **LO18-5** Distinguish between accounting for retired shares and for treasury shares. (p. 1061)
-  **LO18-6** Describe retained earnings and distinguish it from paid-in capital. (p. 1067)

-  **LO18-7** Explain the basis of corporate dividends, including the similarities and differences between cash and property dividends. (p. 1067)
-  **LO18-8** Explain stock dividends and stock splits and how we account for them. (p. 1069)
-  **LO18-9** Discuss the primary differences between U.S. GAAP and IFRS with respect to accounting for shareholders' equity. (pp. 1050 and 1057)

FINANCIAL REPORTING CASE

Samuel Borges Photography/Shutterstock

Nike, Inc.

Finally, you have some uninterrupted time to get back on the net. Earlier today, you noticed on the Internet that the market price of Nike's common stock was up almost 10%. You've been eager to look into why this happened, but have had one meeting after another all day.

You've been a stockholder of **Nike** since the beginning of the year when you bought your last pair of running shoes and saw how much they sell for these days. The dividends that you receive quarterly are nice, but that's not why you bought the stock; you were convinced at the time that the stock price was poised to rise rapidly. A few well-placed clicks of the mouse and you come across the following news article:

BEAVERTON, Ore.—(BUSINESS WIRE)—NIKE, Inc. (NYSE: NKE) said Thursday it will boost its dividend and plans a two-for-one stock split.

The Oregon-headquartered athletic shoe and clothing company said Thursday both classes of its stock will split on December 24 and it expects its common stock to begin trading at the split-adjusted price on December 26.

“Nike has a consistent track record of delivering value to our shareholders,” said Nike president and CEO Mark Parker. “Today’s increase, together with the four-year, \$8 billion share repurchase program announced in September, reflects our commitment to delivering value for our shareholders and the ongoing confidence we have in our strategy to generate long-term profitable growth and strong cash flows.”

The company also declared a 17 percent hike in its quarterly dividend to 21 cents per share. The new dividend is payable December 26 to shareholders of record as of December 10.

QUESTIONS

By the time you finish this chapter, you should be able to respond appropriately to the questions posed in this case. Compare your response to the solution provided at the end of the chapter.

1. Do you think the stock price increase is related to Nike’s share repurchase plan?
2. What are Nike’s choices in accounting for the share repurchases?
3. What effect does the quarterly cash dividend of 21 cents a share have on Nike’s assets? Its liabilities? Its shareholders’ equity?
4. What effect does the stock split have on Nike’s assets? Its liabilities? Its shareholders’ equity?

PART A

The Nature of Shareholders' Equity

LO18–1 Describe the components of shareholders' equity and explain how they are reported in a statement of shareholders' equity.

A corporation raises money to fund its business operations by some mix of debt and equity financing. In earlier chapters, we examined debt financing in the form of notes, bonds, leases, and other liabilities. Amounts representing those liabilities denote *creditors' interest* in the company's assets. Now we focus on various forms of *equity* financing. Specifically, in this chapter we consider transactions that affect shareholders' equity—those accounts that represent the *ownership interests* of shareholders.

In principle, shareholders' equity is a relatively straightforward concept. Shareholders' equity is a residual amount—what's left over after creditor claims have been subtracted from assets (in other words, net assets). You probably recall the residual nature of shareholders' equity from the basic accounting equation:

Page 1046

Net assets equal shareholders' equity.

$$\begin{array}{r} \text{Assets} - \text{Liabilities} = \text{Shareholders' Equity} \\ \text{Net Assets} \end{array}$$

Ownership interests of shareholders arise primarily from two sources: (1) amounts *invested* by shareholders in the corporation and (2) amounts *earned* by the corporation on behalf of its shareholders. These two sources are reported as (1) paid-in capital and (2) retained earnings.

Shareholders' equity accounts denote the ownership interests of shareholders.

Despite being a seemingly clear-cut concept, shareholders' equity and its component accounts often are misunderstood and misinterpreted. As we explore the transactions that

affect shareholders' equity and its component accounts, try not to allow yourself to be overwhelmed by unfamiliar terminology or to be overly concerned with precise account titles. Terminology pertaining to shareholders' equity accounts is notoriously diverse. Every shareholders' equity account has several aliases. Indeed, shareholders' equity itself is often referred to as *stockholders' equity* (**Walmart**), *shareowners' equity* (**General Electric**), *shareholders' investment* (**Target**), *stockholders' investment* (**FedEx**), *shareholders' equity* (**Apple**), *equity* (**Air France-KLM**), and many other similar titles.

Complicating matters, transactions that affect shareholders' equity are influenced by corporation laws of individual states in which companies are located. And, as we see later, generally accepted accounting principles provide companies with considerable latitude when choosing accounting methods in this area.

Keeping this perspective in mind while you study the chapter should aid you in understanding the essential concepts. At a very basic level, each transaction we examine can be viewed simply as an increase or decrease in shareholders' equity, per se, without regard to specific shareholders' equity accounts. In fact, for a business organized as a single proprietorship, all capital changes are recorded in a single owner's equity account. The same concepts apply to a corporation. But for corporations, additional considerations make it desirable to separate owners' equity into several separate shareholders' equity accounts. These additional considerations—legal requirements and disclosure objectives—are discussed in later sections of this chapter. So, as you study the separate effects of transactions on retained earnings and specific paid-in capital accounts, you may find it helpful to ask yourself frequently, “What is the net effect of this transaction on shareholders' equity?” or, equivalently, “By how much are net assets (assets minus liabilities) affected by this transaction?”

Legal requirements and disclosure objectives make it preferable to separate a corporation's capital into several separate shareholders' equity accounts.

Financial Reporting Overview

Before we examine the events that underlie specific shareholders' equity accounts, let's summarize how individual accounts relate to each other. The condensed balance sheet in [Illustration 18-1](#) of Exposition Corporation, a hypothetical company, provides that perspective.

Illustration 18-1 Detailed Shareholders' Equity Presentation

| EXPOSITION CORPORATION | |
|---|----------|
| Balance Sheet | |
| December 31, 2024 | |
| (\$ in millions) | |
| Assets | |
| \$3,000 | |
| Liabilities | |
| \$1,000 | |
| Shareholders' Equity | |
| Paid-in capital: | |
| Capital stock (par): | |
| Preferred stock, 10%, \$10 par, cumulative, nonparticipating | \$100 |
| Common stock, \$1 par | 55 |
| Common stock dividends distributable | 5 |
| Additional paid-in capital: | |
| Paid-in capital—excess of par, preferred | 50 |
| Paid-in capital—excess of par, common | 260 |
| Paid-in capital—share repurchase | 8 |
| Paid-in capital—conversion of bonds | 7 |
| Paid-in capital—stock options | 9 |
| Paid-in capital—restricted stock | 5 |
| Paid-in capital—lapse of stock options | <u>1</u> |

| | | |
|---|----------|----------------|
| Total paid-in capital | | \$ 500 |
| Retained earnings | | 1,670 |
| Accumulated other comprehensive income: | | |
| Gain (loss) on AFS investments (unrealized) | (85) | |
| Net unrecognized gain (loss) on pensions | (75) | |
| Deferred gain (loss) on derivatives* | (4) | |
| Adjustments from foreign currency translation** | <u>0</u> | (164) |
| Treasury stock (at cost) | | <u>(6)</u> |
| Total shareholders' equity | | <u>\$2,000</u> |

*When a derivative designated as a cash flow hedge is adjusted to fair value, the gain or loss is deferred as a component of other comprehensive income and included in earnings later, at the same time as earnings are affected by the hedged transaction (described in Appendix A at the end of this textbook).

**Changes in foreign currency exchange rates are discussed elsewhere in your accounting curriculum. The amount could be an addition to or reduction in shareholders' equity.

 **Illustration 18-1** depicts a rather comprehensive situation. It's unlikely that any one company would have shareholders' equity from all of these sources at any one time. Remember that, at this point, our objective is only to get a general perspective of the items constituting shareholders' equity. Although company records would include separate accounts for each of these components of shareholders' equity in the balance sheet, in practice Exposition would report a more condensed version similar to that in  **Illustration 18-1A** and the one we will see later in the chapter when we look at the presentation by Abercrombie & Fitch (in  **Illustration 18-3**).

Illustration 18-1A Typical Shareholders' Equity Presentation

Assets *minus* Liabilities equals Shareholders' Equity.

The primary source of paid-in capital is the investment made by shareholders when buying preferred and common stock.

Several other events also affect paid-in capital.

Retained earnings represents earned capital.

| | |
|--|--------|
| Preferred stock, 10%, \$10 par, cumulative, nonparticipating | \$ 100 |
|--|--------|

| | |
|---|----------------|
| Common stock, \$1 par | 60 |
| Additional paid-in capital | 340 |
| Retained earnings | 1,670 |
| Accumulated other comprehensive income: | |
| Gain (loss) on AFS investments (unrealized) | (85) |
| Net unrealized loss on pensions | (75) |
| Deferred loss on derivatives | (4) |
| Treasury stock | (6) |
| Total shareholders' equity | <u>\$2,000</u> |

The four classifications within shareholders' equity are paid-in capital, retained earnings, accumulated other comprehensive income, and treasury stock. We discuss these now in the context of Exposition Corporation.

Paid-in Capital

Paid-in capital consists primarily of amounts invested by shareholders when they purchase shares of stock from the corporation or arise from the company buying back some of those shares or from share-based compensation activities. Later in this chapter and the next, we consider in more detail the events and transactions that affect paid-in capital.

Page 1047

Retained Earnings

Retained earnings is accumulated on behalf of shareholders and reported as a single amount. We discuss retained earnings in Part C of this chapter.

Page 1048

Treasury Stock

We discuss the final component of shareholders' equity—treasury stock—later in the chapter. It indicates that some of the shares previously sold were bought back by the corporation from shareholders.

Accumulated Other Comprehensive Income

LO18–2 Describe comprehensive income and its components.

Also, notice that shareholders' equity of Exposition Corporation is adjusted for three events that are not included in net income and don't affect retained earnings. Instead, these events are part of "other comprehensive income" and therefore are included as a separate component of shareholders' equity:

Comprehensive income includes net income as well as other gains, losses, and adjustments that change shareholders' equity but are not included in traditional net income.

accumulated comprehensive income.¹ **Comprehensive income** provides a more expansive view of the change in shareholders' equity than does traditional net income. It's the total *nonowner* change in equity for a reporting period. That is, comprehensive income encompasses all changes in equity other than those from transactions with owners. Transactions between the corporation and its shareholders primarily include dividends and the issuance or purchase of shares of the company's stock. Most nonowner changes are reported in the income statement. So, the nonowner changes other than those that are part of traditional net income are the ones reported as "other comprehensive income."

Comprehensive income extends our view of income beyond net income reported in an income statement to include four types of gains and losses not included in income statements.

1. Net holding gains (losses) on available-for-sale investments in debt securities.
2. Gains (losses) from and amendments to postretirement benefit plans.
3. Deferred gains (losses) on derivatives.
4. Adjustments from foreign currency translation.

The first of these are the gains and losses on some securities that occur when the fair values of these investments increase or decrease. As you learned in [📖 Chapters 12](#) and [📖 14](#), gains and losses on available-for-sale investments in debt securities aren't included in earnings until they are realized through the sale of the securities but are considered components of *other comprehensive income (OCI)* in the meantime. Similarly, as we discussed in [📖 Chapter 17](#), net gains and losses as well as "prior service cost" on pensions sometimes affect other comprehensive income rather than net income as they occur. You have not yet

studied the third and fourth potential components of other comprehensive income. As described in Appendix A, “Derivatives,” at the back of this textbook, when a derivative designated as a “cash flow hedge” is adjusted to fair value, the gain or loss is deferred as a component of other comprehensive income and included in earnings later, at the same time as earnings are affected by the hedged transaction. Adjustments from changes in foreign currency exchange rates are discussed elsewhere in your accounting curriculum. These, too, are included in other comprehensive income (OCI) but not net income.

OCI shares another trait with net income. Just as net income is reported periodically in the income statement and also on a *cumulative* basis as part of retained earnings, OCI too, is reported periodically in the statement of comprehensive income and also as **accumulated other comprehensive income (AOCI)** in the

OCI is reported in the statement of comprehensive income.

AOCI is reported in the balance sheet.

balance sheet along with retained earnings. In other words, we report two attributes of OCI: (1) components of comprehensive income *created during the reporting period* and (2) the comprehensive income *accumulated* over the current and prior periods.

The first attribute—components of comprehensive income *created during the reporting period*—can be reported either as (a) an expanded version of the income statement or (b) a separate statement immediately following the income statement. Regardless of the placement a company chooses, the presentation is similar. It will report net income, other components of comprehensive income, and total comprehensive income, similar to the presentation in  **Illustration 18-2**. Note that each component is reported net of its related income tax expense or income tax benefit.²

Illustration 18-2 Statement of Comprehensive Income

| | (\$ in millions) |
|---|------------------|
| Net income | \$xxx |
| Other comprehensive income: | |
| Gains (loss) on AFS investments (unrealized), (net of tax)* | \$x |
| Gain (loss) from amendments to postretirement benefit plans (net of tax) [†] | (x) |
| Deferred gain (loss) on derivatives (net of tax) [‡] | (x) |

| | | |
|--|--------------|-------------------------|
| Adjustments from foreign currency translation (net of tax) [§] | <u> X </u> | XX |
| Comprehensive income | | <u><u> \$XXX </u></u> |
| <p>*Changes in the fair value of some investments in debt securities (described in Chapter 12). An unrealized loss also might occur from recording an “other than temporary” impairment in excess of a credit loss for a debt investment. And, as discussed in Chapter 14, applying the “fair value option” to a liability entails reporting in OCI any part of the change in the liability’s fair value that’s due to the liability’s credit risk.</p> <p>†Gains and losses due to revising assumptions or market returns differing from expectations and prior service cost from amending the plan (described in Chapter 17).</p> <p>‡When a derivative designated as a cash flow hedge is adjusted to fair value, the gain or loss is deferred as a component of comprehensive income and included in earnings later, at the same time as earnings are affected by the hedged transaction (described in the Derivatives Appendix to the text).</p> <p>§Changes in foreign currency exchange rates when translating financial statements of foreign subsidiaries to U.S. dollars. The amount could be an addition to or reduction in shareholders’ equity. (This item is discussed elsewhere in your accounting curriculum.)</p> | | |

The second measure—the comprehensive income *accumulated* over the current and prior periods—is reported as a separate component of shareholders’ equity following retained earnings, similar to the presentation by Exposition Corporation in [Illustration 18-1](#). Note that amounts reported here—accumulated other comprehensive income (AOCI)—represent the *cumulative* sum of the changes in each component of other comprehensive income created during each reporting period ([Illustration 18-2](#)) throughout all prior years.

Reporting Shareholders’ Equity on the Balance Sheet

You seldom, if ever, will see the numerous list of items shown in [Illustration 18-1](#) reported in the presentation of paid-in capital. Instead, companies keep track of individual additional paid-in capital accounts in company records but ordinarily report these amounts as a single subtotal: additional paid-in capital. Pertinent rights and privileges of various securities outstanding, such as dividend and liquidation preferences, call and conversion information, and voting rights, are summarized in disclosure notes.³ The shareholders’

equity portion of the balance sheet of **Abercrombie & Fitch**, shown in [Illustration 18-3](#), is a typical presentation format.

Illustration 18-3 Typical Presentation Format—Abercrombie & Fitch

Source: Walmart

The current year changes that Walmart statements of shareholders' equity reveal are net income, other comprehensive income, the purchase of common stock, and dividends declared.

Rather than presenting a Statement of Shareholders' Equity that reports the changes in each shareholders' equity account, some companies with few, if any, changes in accounts other than retained earnings will present a Statement of Retained Earnings instead. The

format of that statement would be the same as that of a Statement of Shareholders' Equity,

A statement of retained earnings reports the transactions that cause changes in its retained earnings account balance.

except that it would contain only one column—Retained Earnings—and typically the only changes in that account would be increases for net income and decreases for dividends.

The Corporate Organization

LO18–3 Understand the corporate form of organization and the nature of stock.

A company may be organized in any of three ways: (1) a sole proprietorship, (2) a partnership, or (3) a corporation. In your introductory accounting course, you studied each form. In this course, we focus exclusively on the corporate form of organization.

Most well-known companies, such as **Microsoft**, **Amazon**, and **General Electric**, are corporations. Also, many smaller companies—even one-owner businesses—are corporations. Although fewer in number than sole proprietorships and partnerships, in terms of business volume, corporations are the predominant form of business organization.

Corporations are the dominant form of business organization.

In most respects, transactions are accounted for in the same way regardless of the form of business organization. Assets and liabilities are unaffected by the way a company is organized. The exception is the method of accounting for capital, the ownership interest in the company. Rather than recording all changes in ownership interests in a single capital account for each owner, as we do for sole proprietorships and partnerships, we use the several capital accounts described in the previous section to record those changes for a corporation. Before discussing how we account for specific ownership changes, let's look at the characteristics of a corporation that make this form of organization distinctive and require special accounting treatment.

Page 1050

Accounting for most transactions is the same regardless of the form of business organization.

LO18–9 Discuss the primary differences between U.S. GAAP and IFRS with respect to accounting for shareholders' equity.

International Financial Reporting Standards

Use of the term “reserves” and other terminology differences.

Shareholders’ equity is classified under IFRS into two categories: share capital and “reserves.” The term reserves is considered misleading and thus is discouraged under U.S. GAAP. Here are some other differences in equity terminology:

| U.S. GAAP | IFRS |
|---|------------------------------------|
| Capital stock: | Share capital: |
| Common stock | Ordinary shares |
| Preferred stock | Preference shares |
| Paid-in capital—excess of par, common | Share premium, ordinary shares |
| Paid-in capital—excess of par, preferred | Share premium, preference shares |
| Accumulated other comprehensive income: | Reserves: |
| Net gains (losses) on investments—AOCI | Investment revaluation reserve |
| Net gains (losses) foreign currency translation—AOCI | Translation reserve |
| <i>{N/A: adjusting P, P, & E to fair value not permitted}</i> | Revaluation reserve |
| Retained earnings | Retained earnings |
| Total shareholders’ equity | Total equity |
| Presented after Liabilities | Often presented before Liabilities |

Limited Liability

The owners are not personally liable for debts of a corporation. Unlike a proprietorship or a partnership, a corporation is a separate legal entity responsible for its own debts. Shareholders' liability is limited to the amounts they invest in the company when they purchase shares (unless the shareholder also is an officer of the corporation). The limited liability of shareholders is perhaps the single most important advantage of corporate organization. In other forms of business, creditors may look to the personal assets of owners for satisfaction of business debt.

A corporation is a separate legal entity—separate and distinct from its owners.

Page 1052

Ease of Raising Capital

A corporation is better suited to raising capital than is a proprietorship or a partnership. All companies can raise funds by operating at a profit or by borrowing.

Ownership interest in a corporation is easily transferred.

However, attracting equity capital is easier for a corporation. Because corporations sell ownership interest in the form of shares of stock, ownership rights are easily transferred. An investor can sell his/her ownership interest at any time and without affecting the corporation or its operations.

From the viewpoint of a potential investor, another favorable aspect of investing in a corporation is the lack of mutual agency. Individual partners in a

Shareholders do not have a mutual agency relationship.

partnership have the power to bind the business to a contract. Therefore, an investor in a partnership must be careful regarding the character and business savvy of fellow co-owners. On the other hand, shareholders' participation in the affairs of a corporation is limited to voting at shareholders' meetings (unless the shareholder also is a member of management). Consequently, a shareholder needn't exercise the same degree of care that partners must in selecting co-owners.

Obviously, then, a corporation offers advantages over the other forms of organization, particularly in its ability to raise investment capital. As you might guess, though, these benefits do not come without a price.

Disadvantages

Paperwork! To protect the rights of those who buy a corporation's stock or who loan money to a corporation, the state in which the company is incorporated and the federal government impose extensive reporting requirements. Primarily, the required paperwork is intended to ensure adequate disclosure of information needed by investors and creditors.

Corporations are subject to extensive government regulation.

You read earlier that corporations are separate legal entities. As such, they also are separate taxable entities. Often this causes what is referred to as *double taxation*. Corporations first pay income taxes on their earnings. Then, when those earnings are distributed as cash dividends, shareholders pay personal income taxes on the previously taxed earnings. Proprietorships and partnerships are not taxed at the business level; each owner's share of profits is taxed only as personal income.

Corporations create double taxation.

Types of Corporations

When referring to corporations in this text, we are referring to corporations formed by private individuals for the purpose of generating profits. These corporations raise capital by selling stock. There are, however, other types of corporations.

Some corporations, such as churches, hospitals, universities, and charities, do not sell stock and are not organized for profit. Also, some not-for-profit corporations are government-owned—the **Federal Deposit Insurance Corporation (FDIC)**, for instance. Accounting for not-for-profit corporations is discussed elsewhere in the accounting curriculum.

Corporations organized for profit may be publicly held or privately (or closely) held. The stock of publicly held corporations is available for purchase by the general public. You can buy shares of **Home Depot**, **Ford Motor Company**, or **Walmart** through a stockbroker. These shares are traded on the New York Stock Exchange. Other publicly held stock, like **Apple** and **Microsoft**, are available through Nasdaq (National Association of Securities Dealers Automated Quotations).

Not-for-profit corporations may be owned:

1. By the public sector.
2. By a governmental unit.

Corporations organized for profit may be:

1. Publicly held and traded:
 - a. On an exchange.
 - b. Over-the-counter.
2. Privately held.

On the other hand, shares of privately held companies are owned by only a few individuals (perhaps a family) and are not available to the general public. Corporations whose stock is privately held do not need to register those shares with the Securities and Exchange Commission and are spared the voluminous, annual reporting requirements of the SEC. Of course, new sources of equity financing are limited when shares are privately held, as is the market for selling existing shares.

Frequently, companies begin as smaller, privately held corporations. Then as success broadens opportunities for expansion, the corporation goes public. For example, in 2012, the shareholders of **Facebook** decided to take public the privately held company. The result was the largest initial public offering since **Visa** in 2008. In 2014, **Alibaba**'s IPO surpassed that of both companies to become the largest in history.

Privately held companies' shares are held by only a few individuals and are not available to the general public.

Hybrid Organizations

A corporation can elect to comply with a special set of tax rules and be designated an **S corporation**. S corporations have characteristics of both regular corporations and partnerships. Owners have the limited liability protection of a corporation, but income and expenses are passed through to the owners as in a partnership, avoiding double taxation.

Two particular business structures have evolved in response to liability issues and tax treatment—limited liability companies and limited liability partnerships.

A **limited liability company** offers several advantages. Owners are not liable for the debts of the business, except to the extent of their investment. Unlike a limited partnership, all members of a limited liability company can be involved with managing the business without losing liability protection. Like an S corporation, income and expenses are passed through to the owners as in a partnership, avoiding double taxation, but there are no limitations on the number of owners as in an S corporation.

A **limited liability partnership (LLP)** is similar to a limited liability company, except it doesn't offer all the liability protection available in the limited liability company structure. Partners are liable for their own actions but not entirely liable for the actions of other partners. Professional firms, such as for law and CPAs, often are formed as LLPs.

The Model Business Corporation Act

Corporations are formed in accordance with the corporation laws of individual states. State laws are not uniform, but share many similarities, thanks to the widespread adoption of the **Model Business Corporation Act**.⁵ This act is designed to serve as a guide to states in the development of their corporation statutes. It presently serves as the model for the majority of states.

The *Model Business Corporation Act* serves as the model for the corporation statutes of most states.

State laws regarding the nature of shares that can be authorized, the issuance and repurchase of those shares, and conditions for distributions to shareholders obviously influence actions of corporations. Naturally, differences among state laws affect how we account for many of the shareholders' equity transactions discussed in this chapter. For that reason, we will focus on the normal case, as described by the Model Business Corporation Act, and note situations where variations in state law might require different accounting. Your goal is not to learn diverse procedures caused by peculiarities of state laws, but to understand the broad concepts of accounting for shareholders' equity that can be applied to any specific circumstance.

Variations among state laws influence GAAP pertaining to shareholders' equity transactions.

The process of incorporating a business is similar in all states. The **articles of incorporation** (sometimes called the *corporate charter*) describe (a) the nature of the firm's business activities, (b) the shares to be issued, and (c) the composition of the initial **board of directors**. The board of directors establishes corporate policies and appoints officers who manage the corporation.

The number of shares authorized is the maximum number of shares that a corporation is legally permitted to issue, as specified in its articles of incorporation. The number of authorized shares is determined at the company's creation and can only be increased by a vote of the shareholders. At least some of the shares authorized by the articles of incorporation are sold (issued) at the inception of the corporation. Frequently, the initial shareholders include members of the board of directors or officers (who may be one and the same). Ultimately, it is the corporation's shareholders that control the company. Shareholders are the owners of the corporation. By voting their shares, they determine the makeup of the board of directors—who in turn appoint officers, who in turn manage the company.

Shareholders' investment in a corporation ordinarily is referred to as paid-in capital. In the next section, we examine the methods normally used to maintain records of shareholders' investment and to report such paid-in capital in financial statements.

Paid-in Capital

Fundamental Share Rights

In reading the previous paragraphs, you noted that corporations raise equity funds by selling shares of the corporation. Shareholders are the owners of a corporation. If a corporation has only one class of shares, no designation of the shares is necessary, but they typically are labeled *common* shares, or shares of *common* stock. Ownership rights held by common shareholders, unless specifically withheld by agreement with the shareholders, are as follows:

1. The right to vote on matters that come before the shareholders, including the election of corporate directors. Each share represents one vote.
2. The right to share in profits when dividends are declared. The percentage of shares owned by a shareholder determines his/her share of dividends distributed.
3. The right to share in the distribution of assets if the company is liquidated. The percentage of shares owned by a shareholder determines his/her share of assets after creditors and preferred shareholders are paid.

Another right sometimes given to common shareholders is the right to maintain one's percentage share of ownership when new shares are issued. This is referred to as a *preemptive right*. Each shareholder is offered the opportunity to buy a percentage of any new shares issued equal to the percentage of shares he/she owns at the time. In most states, this right must be specifically granted; in others, it is presumed unless contractually excluded.

However, this right usually is not explicitly stated because of the inconvenience it causes corporations when they issue new shares. The exclusion of the preemptive right ordinarily is inconsequential because few shareholders own enough stock to be concerned about their ownership percentage.

Distinguishing Classes of Shares

It is not uncommon for a firm to have more than one, and perhaps several, classes of shares, each with different rights and limitations. To attract investors, companies have devised quite a variety of ownership securities.

If more than one class of shares is authorized by the articles of incorporation, the specific rights of each (for instance, the right to vote, residual interest in assets, and dividend rights) must be stated. Also, some designation must be given to distinguish each class.

Some of the distinguishing designations often used are these:

1. Class A, class B, and so on (**Tyson Foods**)
2. Preferred stock, common stock, and class B stock (**Hershey's**)
3. Common and preferred (**HP**)
4. Common stock and capital stock (**Alphabet, Inc.**)
5. Common and serial preferred (**Smucker's**)

Terminology varies in the way companies differentiate among share types.

In your introductory study of accounting, you probably became most familiar with the common stock–preferred stock distinction. That terminology has deep roots in tradition. Early English corporate charters provided for shares that were preferred over others as to dividends and liquidation rights. These provisions were reflected in early American corporation laws. But as our economy developed, corporations increasingly felt the need for innovative ways of attracting investment capital. The result has been a gradual development of a wide range of share classifications that cannot easily be identified by these historical designations.

It often is difficult to predict the rights and privileges of shares on the basis of whether they are labeled *common* or *preferred*.

To reflect the flexibility that now exists in the creation of equity shares, the Model Business Corporation Act, and thus many state statutes, no longer mention the words common and preferred. But the influence of tradition lingers. Most corporations still designate shares as common or preferred. For consistency with practice, the illustrations you study in this chapter use those designations. As you consider the examples, keep in mind that the same concepts apply regardless of the language used to distinguish shares.

Typical Rights of Preferred Shares

An issue of shares with certain preferences or features that distinguish it from the class of shares customarily called common shares may be assigned any of the several labels mentioned earlier. Very often the distinguishing designation is **preferred stock**. The special rights of preferred shareholders usually include one or both of the following:

1. Preferred shareholders typically have a preference to a specified amount of dividends (stated dollar amount per share or % of par value per share). That is, if the board of directors declares dividends, preferred shareholders will receive the designated dividend before any dividends are paid to common shareholders.
2. Preferred shareholders customarily have a preference (over common shareholders) as to the distribution of assets in the event the corporation is dissolved.

Preferred shareholders sometimes have the **right of conversion**, which allows them to exchange shares of preferred stock for common stock at a specified conversion ratio. For instance, in 2020, **Wells Fargo** had outstanding 4.8 million shares of convertible preferred stock. Alternatively, a **redemption privilege** might allow preferred shareholders the option, under specified conditions, to return their shares for a predetermined redemption price. Preferred shareholders have preference over common stockholders in dividends and liquidation rights. Each Wells Fargo preferred share is convertible into 32 common shares. Similarly, shares may be redeemable at the option of the issuing corporation (sometimes referred to as *callable*).

Preferred shares may be **cumulative** or **noncumulative**. Typically, preferred shares are cumulative, which means that if the specified dividend is not paid for a given year, the unpaid dividends (called *dividends in arrears*) accumulate and must be made up in a later dividend year before any dividends are paid on common shares. We see this illustrated in Part B of the chapter.

Shares might be:

1. **Convertible** into a specified number of another class of shares.
2. **Redeemable at the option of:**
 - a. Shareholders.
 - b. The corporation.

Preferred shares may be **participating** or **nonparticipating**. A participating feature allows preferred shareholders to receive additional dividends beyond the stated amount. If the preferred shares are fully participating, the distribution of dividends to common and

preferred shareholders is a pro rata allocation based on the relative par amounts of common and preferred stock outstanding. Participating preferred stock, previously quite common, is rare today.

Remember that the designations of common and preferred imply no necessary rights, privileges, or limitations of the shares so designated. Such relative rights must be specified by the contract with shareholders. A corporation can create classes of preferred shares that are indistinguishable from common shares in voting rights and/or the right to participate in assets (distributed as dividends or distributed upon liquidation). Likewise, it is possible to devise classes of common shares that possess preferential rights, superior to those of preferred shares.

Is It Equity or Is It Debt?

You probably also can imagine an issue of preferred shares that is almost indistinguishable from a bond issue. Let's say, for instance, that preferred shares call for annual cash dividends of 10% of the par value, dividends are cumulative, and the shares must be redeemed for cash in 10 years. Although the declaration of dividends rests in the discretion of the board of directors, the contract with preferred shareholders can be worded in such a way that directors are compelled to declare dividends each year the company is profitable. For a profitable company, it would be difficult to draw the line between this issue of preferred shares and a 10%, 10-year bond issue. Even in a more typical situation, preferred shares are somewhat hybrid securities—a cross between equity and debt.

The line between debt and equity is hard to draw.

Sometimes the similarity to debt is even more obvious.

Page 1056

Suppose shares are mandatorily redeemable—the company is obligated to buy back the shares at a specified future date. The fact that the company is obligated to pay cash (or other assets) at a fixed or determinable date in the future makes this financial instrument tantamount to debt. A mandatorily redeemable financial instrument must be reported in the balance sheet as a liability, not as shareholders' equity.⁶ **Extended Stay America**, for instance, reported its mandatorily redeemable preferred shares as a liability in its 2019 balance sheet.

Mandatorily redeemable shares are classified as liabilities.

The Concept of Par Value

Another prevalent practice (besides labeling shares as common and preferred) that has little significance other than historical is assigning a par value to shares.

We have inherited the archaic concept of par value from early corporate law.

The concept of par value dates back as far as the concept of owning shares of a business. Par value originally indicated the real value of shares. All shares were issued at that price.

During the late 19th and early 20th centuries, many cases of selling shares for less than par value—known as *watered shares*—received a great deal of attention and were the subject of a number of lawsuits. Investors and creditors contended that they relied on the par value as the permanent investment in the corporation and therefore net assets must always be at least that amount. Not only was par value assumed to be the amount invested by shareholders, but it also was defined by early corporation laws as the amount of net assets not available for distribution to shareholders (as dividends or otherwise).

COVID-19: Accounting and Reporting Implications

The *Coronavirus Aid, Relief, and Economic Security* (CARES) Act was designed to provide stimulus relief to businesses affected by COVID-19 in the form of loans, grants, and tax changes.

One provision of the CARES Act was the **Payroll Support Program (PSP)**, which provided large loans to eligible businesses (e.g., airlines) that incurred losses related to COVID-19. One caveat of this assistance, though, was that it required the borrowing company to issue warrants* to the government (the Treasury Department), along with the debt instrument. These warrants enable the government to buy a specified number of shares of the company's stock at a specified exercise price. The warrants must have met certain requirements, including participation by the U.S. Treasury Department for the benefit of taxpayers in the company's stock price appreciation, but the

government will not exercise voting power with respect to any shares of common stock acquired.

Interestingly, in some cases, the amounts of stock represented by the warrants were sizable enough to put the government among the largest shareholders of a company. The number of shares was based on the amount borrowed. For example, if United Airlines took full advantage of the government aid, the U.S. taxpayers would own over 18 million shares, or about 7.5% of the shares outstanding, making taxpayers the fourth-largest shareholder of United.

To illustrate accounting for funds borrowed under the PSP, let's suppose that Friendly Airlines obtains a \$200 million loan under the program and, in conjunction with the loan, issues a warrant the government can exercise to buy 15 million shares of its common stock at \$33 per share. Friendly would record both the debt and the warrants, allocating the \$200 million received between the loan liability and the warrant on a relative fair value basis as described in [Chapter 14](#):

| | | |
|--------------|-----|-------------------------|
| Cash | 200 | |
| Note payable | | <fair value of note> |
| Warrant | | <fair value of warrant> |

Then, Friendly would account for the note at amortized cost in the liability section of its balance sheet and classify the warrant in shareholders' equity.

*Or other equity interest or senior debt instrument.

LO18-9 Discuss the primary differences between U.S. GAAP and IFRS with respect to accounting for shareholders' equity.

Distinction between Debt and Equity for Preferred Stock. Differences in the definitions and requirements can result in the same instrument being classified differently between debt and equity under IFRS and U.S. GAAP. Under U.S. GAAP, preferred stock normally is reported as equity, but is reported as debt with the dividends reported in the income statement as interest expense if it is “mandatorily redeemable” preferred stock. Under IFRS, most non-mandatorily redeemable preferred stock (preference shares) also is reported as debt, as well as some preference shares that aren’t redeemable. Under IFRS (*IAS No. 32*), the critical feature that distinguishes a liability is if the issuer is or can be required to deliver cash (or another financial instrument) to the holder.⁷ **Unilever** describes such a difference in a disclosure note:

**Additional Information for U.S. Investors (in part)
Preference Shares**

Under IAS 32, Unilever recognizes preference shares that provide a fixed preference dividend as borrowings with preference dividends recognized in the income statement. Under U.S. GAAP such preference shares are classified in shareholders’ equity with dividends treated as a deduction to shareholder’s equity.

Many companies began turning to par value shares with very low par values—often pennies—to escape the watered shares liability of issuing shares below an arbitrary par value and to limit the restrictions on distributions. This practice is common today.

Shares with nominal par value became common to dodge elaborate statutory rules pertaining to par value shares.

Accountants and attorneys have been aware for decades that laws pertaining to par value and legal capital not only are bewildering but fail in their intent to safeguard creditors from payments to shareholders. Actually, to the extent that creditors are led to believe that they are afforded protection, they are misled. Like the designations of common and preferred shares, the concepts of par value and legal capital have been eliminated entirely from the Model Business Corporation Act.⁸

Many states already have adopted these provisions of the Model Act. But most established corporations issued shares prior to changes in the state statutes. Consequently, most companies have par value shares outstanding and continue to issue previously authorized par value shares. The evolution will be gradual to the simpler, more meaningful provisions of the Model Act.

In the meantime, accountants must be familiar with the outdated concepts of par value and legal capital in order to properly record and report transactions related to par value shares. For that reason, most of the discussion in this chapter centers on par value shares. Largely, this means only that proceeds from shareholders' investment is allocated between stated capital and additional paid-in capital. Be aware, though, that in the absence of archaic laws that prompted the creation of par value shares, there is no theoretical reason to do so.

Most shares continue to bear arbitrarily designated par values.

Accounting for the Issuance of Shares

Par Value Shares Issued for Cash

LO18-4 Record the issuance of shares when sold for cash and for noncash consideration.

When shares are sold for cash (see [Illustration 18-5](#)), the capital stock account (usually common or preferred) is credited for the amount representing stated capital. When shares have a designated par value, that amount denotes stated capital and is credited to the stock account. Proceeds in excess of this amount are credited to paid-in capital—excess of par (also called additional paid-in capital).

Illustration 18-5 Shares Sold for Cash

When par value shares are issued, only the par amount is credited to the stock account; the remainder to paid-in capital in excess of par.

Dow Industrial sells 10 million of its common shares, \$1 par per share, for \$10 per share:

| | (\$ in millions) |
|--|------------------|
| Cash (10 million shares at \$10 per share) | 100 |
| Common stock (10 million shares at \$1 par per share) | 10 |
| Paid-in capital—excess of par (remainder: 10 million shares at \$10 - \$1 = \$9 per share) | 90 |

No-Par Shares Issued for Cash

In states that allow no-par stock, when no-par shares are sold for cash (see **Illustration 18-5A**), the entire amount received is credited to the stock account.

Illustration 18-5A No-Par Shares Sold for Cash

The total amount received from the sale of no-par shares is credited to the stock account.

Dow Industrial sells 10 million of its no-par common shares for \$10 per share:

| | (\$ in millions) | |
|--|------------------|-----|
| Cash (10 million shares at \$10 per share) | 100 | |
| Common stock | | 100 |

Shares Issued for Noncash Consideration

Occasionally, a company might issue its shares for consideration other than cash. It is not uncommon for a new company, yet to establish a reliable cash flow, to pay for promotional and legal services with shares rather than with cash. Similarly, shares might be given in payment for land, or for equipment, or for some other noncash asset.

Even without a receipt of cash to establish the fair value of the shares at the time of the exchange, the transaction still should be recorded at the grant-date fair value of the shares to be issued. This treatment is consistent with the accounting requirement for employee share-based payment awards we discuss in the next chapter and with the general rule for accounting for noncash transactions.⁹

Shares should be issued at fair value.

Illustration 18-6 demonstrates a situation where the quoted market price is the best evidence of fair value.

Illustration 18-6 Shares Sold for Noncash Consideration

The quoted market price for the shares issued might be the best evidence of fair value.

DuMont Chemicals issues 1 million of its common shares, \$1 par per share, in exchange for a custom-built factory for which no cash price is available.

Today's issue of *The Wall Street Journal* lists DuMont's stock at **\$10 per share**:

| | (\$ in millions) |
|---|------------------|
| Property, plant, and equipment (1 million shares at \$10 per share) | 10 |
| Common stock (1 million shares at \$1 par per share) | 1 |
| Paid-in capital—excess of par (remainder) | 9 |

More Than One Security Issued for a Single Price

Although uncommon, a company might sell more than one security—perhaps common shares and preferred shares—for a single price. As you might expect, the cash received usually is the sum of the separate market values of the two securities. Of course, each is then recorded at its market value. However, if only one security's value is known, the second security's market value is inferred from the total selling price, as demonstrated in

 **Illustration 18-7.**

Illustration 18-7 More Than One Security Sold for a Single Price

When only one security's value is known (\$40 million), the second security's market value (\$60 million) is assumed from the total selling price (\$100 million).

AP&P issues 4 million of its common shares, \$1 par per share, and 2 million of its preferred shares, \$5 par, for \$100 million. Today's issue of *The Wall Street Journal* lists AP&P's common at \$10 per share. There is no established market for the preferred shares.

| | (\$ in millions) |
|---|------------------|
| Cash | 100 |
| Common stock (4 million shares × \$1 par) | 4 |
| Paid-in capital—excess of par, common | 36 |

| | |
|--|----|
| Preferred stock (2 million shares × \$5 par) | 10 |
| Paid-in capital—excess of par, preferred | 50 |

Because the shares sell for a total of \$100 million, and the market value of the common shares is known to be \$40 million (4 million × \$10), the preferred shares are inferred to have a market value of \$60 million.

Additional Consideration

In the unlikely event that the total selling price is not equal to the sum of the two market prices (when both market values are known), the total selling price is allocated between the two securities, in proportion to their relative market values. You should note that this is the same approach we use (a) when more than one asset is purchased for a single purchase price to allocate the single price to the various assets acquired, (b) when detachable warrants and bonds are issued for a single price, and (c) in any other situation when more than one item is associated with a single purchase price or selling price.

Share Issue Costs

When a company sells shares, it obtains the legal, promotional, and accounting services necessary to effect the sale. The cost of these services reduces the net proceeds from selling the shares. Since paid-in capital—excess of par is credited for the excess of the proceeds over the par value of the shares sold, the effect of share issue costs is to reduce the amount credited to that account. For example, in 2020, **Mohawk Group Holdings** sold 3,357,140 shares of its \$0.0001 par common stock at \$7 per share. the company received net proceeds from the public offering of \$20,600,000, after deducting underwriting discounts

Share issue costs reduce the net cash proceeds from selling the shares and thus paid-in capital—excess of par.

and commissions and other offering expenses. Mohawk's entry to record the sale was as follows:

The cash proceeds is the net amount received after paying share issue costs.

| | | |
|---|------------|------------|
| Cash | 20,600,000 | |
| Common stock (3,357,140 shares at \$0.0001 par per share) | | 336 |
| Paid-in capital—excess of par (remainder) | | 20,599,664 |

Concept Review Exercise

EXPANSION OF CORPORATE CAPITAL

Situation: The shareholders' equity section of the balance sheet of National Foods, Inc. included the following accounts at December 31, 2022:

| Shareholders' Equity | (\$ in millions) |
|---|------------------|
| Paid-in capital: | |
| Common stock, 120 million shares at \$1 par | \$ 120 |
| Paid-in capital—excess of par | 836 |
| Retained earnings | 2,449 |
| Total shareholders' equity | <u>\$3,405</u> |

Required:

Page 1060

1. During 2023, several transactions affected the stock of National Foods. Prepare the appropriate entries for these events.
 - a. On March 11, National Foods issued 10 million of its 9.2% preferred shares, \$1 par per share, for \$44 per share.
 - b. On November 22, 1 million common shares, \$1 par per share, were issued in exchange for eight labeling machines. Each machine was built to custom specifications so no cash price was available. National Food's stock was listed at \$10 per share.

- c. On November 23, 1 million of the common shares and 1 million preferred shares were sold for \$60 million. The preferred shares had not traded since March, and their market value was uncertain.
2. Prepare the shareholders' equity section of the comparative balance sheets for National Foods at December 31, 2023 and 2022. Assume that net income for 2023 was \$400 million and the only other transaction affecting shareholders' equity was the payment of the 9.2% dividend on the 11 million preferred shares (\$1 million).

Solution:

1. During 2023 several transactions affected the stock of National Foods. Prepare the appropriate entries for these events.
- a. On March 11, National Foods issued 10 million of its preferred shares, \$1 par per share, for \$44 per share.

| | (\$ in millions) |
|---|------------------|
| Cash | 440 |
| Preferred stock (10 million shares × \$1 par per share) | 10 |
| Paid-in capital—excess of par, preferred | 430 |

- b. On November 22, 1 million common shares, \$1 par per share, were issued in exchange for eight labeling machines:

The transaction was recorded at the fair value of the shares exchanged for the machinery.

| | (\$ in millions) |
|--|------------------|
| Machinery (fair value of shares) | 10 |
| Common stock (1 million shares × \$1 par per share) | 1 |
| Paid-in capital—excess of par, common (1 million shares × \$9) | 9 |

- c. On November 23, 1 million of the common shares and 1 million preferred shares were sold for \$60 million:

Since the value of only the common stock was known, the preferred stock's market value (\$50 per share) was inferred from the total selling price.

| | (\$ in millions) |
|--|------------------|
| Cash | 60 |
| Common stock (1 million shares × \$1 par per share) | 1 |
| Paid-in capital—excess of par, common | 9 |
| Preferred stock (1 million shares × \$1 par per share) | 1 |
| Paid-in capital—excess of par, preferred (to balance) | 49 |

2. Prepare the shareholders' equity section of the comparative balance sheets for National Foods at December 31, 2023 and 2022.

Page 1061

| NATIONAL FOODS, INC. | | |
|---|----------------|----------------|
| Balance Sheet | | |
| (Shareholders' Equity Section) | | |
| (\$ in millions) | 2023 | 2022 |
| Shareholders' Equity | | |
| Preferred stock, 9.2%, \$1 par (2023: \$10 million + \$1 million) | \$ 11 | \$ — |
| Common stock, \$1 par (2023: \$120 million + \$1 million + \$1 million) | 122 | 120 |
| Paid-in capital—excess of par, preferred (2023: \$430 million + \$49 million) | 479 | — |
| Paid-in capital—excess of par, common (2023: \$836 million + \$9 million + \$9 million) | 854 | 836 |
| Retained earnings (2022: \$2,449 million + \$400 million – \$1 million) | 2,848 | 2,449 |
| <i>Total shareholders' equity</i> | <u>\$4,314</u> | <u>\$3,405</u> |

Note: This situation is continued in the next Concept Review Exercise.

Share Repurchases

LO18–5 Distinguish between accounting for retired shares and for treasury shares.

In the previous section we examined various ways stock might be issued. In this section, we look at situations in which companies reacquire shares previously sold. Most medium- and large-size companies buy back their own shares. Many have formal share repurchase plans to buy back stock over a series of years.

Decision Makers' Perspective

When a company's management feels the market price of its stock is undervalued, it may attempt to support the price by decreasing the supply of stock in the marketplace. A **Johnson & Johnson** announcement that it planned to buy back up to \$5 billion of its outstanding shares triggered a buying spree that pushed the stock price up by more than 3%.

When announcing plans to expand its stock buyback program to \$90 billion, **Apple** chief executive Tim Cook said it "views its shares as undervalued."¹⁰

Decreasing the supply of shares in the marketplace supports the price of remaining shares.

Although clearly a company may attempt to increase net assets by buying its shares at a low price and selling them back later at a higher price, that investment is not viewed as an asset. Similarly, increases and decreases in net assets from that activity are not reported as gains and losses in the company's income statement. Instead, buying and selling its shares are transactions between the corporation and its owners, analogous to retiring shares and then selling previously unissued shares. You should

note the contrast between a company's purchasing of its own shares and its purchasing of shares in another corporation as an investment.

Though not considered an investment, the repurchase of shares often is a judicious use of a company's cash. By increasing per share earnings and supporting share price, shareholders benefit. To the extent this strategy is effective, a share buyback can be viewed as a way to "distribute" company profits without paying dividends. Capital gains from any stock price increase are taxed at lower capital gains tax rates than ordinary income tax rates on dividends.

Unlike an investment in another firm's shares, the acquisition of a company's own shares does not create an asset.

The Tax Cuts and Jobs Act of 2017 ignited an unprecedented volume of share buybacks, exceeding a trillion dollars in 2017 and 2018. The corporate tax rate was slashed from 35% to 21% and other provisions

Buybacks zoomed to record highs when tax cuts freed up massive amounts of cash in 2017–18.

made it advantageous for companies to bring home from overseas huge sums of accumulated earnings from foreign operations. Suddenly finding themselves in the enviable position of having mountains of excess cash, share buybacks became the obvious choice for how to distribute that surplus to shareholders. **Apple**, alone, bought back over \$23 billion of its own stock in March 2018, a record amount for any U.S. company.

Perhaps the primary motivation for most stock repurchases is to offset the increase in shares that routinely are issued to employees under stock award and stock option compensation programs. **Microsoft**

Companies buy back shares to offset the increase in shares issued to employees.

reported its stock buyback program designed to offset the effect of its stock option and stock purchase plans, as shown in  **Illustration 18-8**.

Illustration 18-8 Disclosure of Share Repurchase Program—Microsoft

Real World Financials

Note 11: Stockholders' Equity (in part)

Our board of directors has approved a program to repurchase shares of our common stock to reduce the dilutive effect of our stock option and stock purchase plans.

Similarly, shares might be reacquired to distribute in a stock dividend, a proposed merger, or as a defense against a hostile takeover.¹¹

Whatever the reason shares are repurchased, a company has a choice of how to account for the buyback.

1. The shares can be formally retired.
2. The shares can be called treasury stock.

The choice, however, is not dictated by the nature of the buyback, but by practical motivations of the company. ●

Shares Formally Retired or Viewed as Treasury Stock

When a corporation retires its own shares, those shares assume the same status as authorized but unissued shares, just the same as if they never had been issued. We saw earlier in the chapter that when shares are sold, both cash (usually) and shareholders' equity are increased, and the company becomes larger. Conversely, when cash is paid to **retire stock**, the effect is to decrease both cash and shareholders' equity; the size of the company literally is reduced.

Out of tradition and for practical reasons, companies usually reacquire shares of previously issued stock without formally retiring them.¹² Shares repurchased and not retired are referred to as **treasury stock**.

Reacquired shares are equivalent to authorized but unissued shares.

Because reacquired shares are essentially the same as shares that never were issued at all, treasury shares have no voting rights, nor do they receive cash dividends. As demonstrated in  **Illustration 18-9**, when shares are repurchased as treasury stock, we reduce shareholders' equity with a debit to a negative (or contra) shareholders' equity account labeled treasury stock. That entry is reversed later through a credit to treasury stock when the treasury stock is resold. Like the concepts of par value and legal capital, the concept of treasury shares no longer is recognized in most state statutes.¹³ Some companies, in fact, are eliminating treasury shares from their financial statements as corporate statutes are

modernized. **Microsoft** retires the shares it buys back rather than labeling them treasury stock. Still, you will see treasury shares reported in the balance sheets of many companies.

Illustration 18–9 Comparison of Share Retirement and Treasury Stock Accounting—Share Buybacks

Formally retiring shares restores the balances in both the common stock account and paid-in capital—excess of par to what those balances would have been if the shares never had been issued.

When we view a buyback as treasury stock, the cost of acquiring the shares is debited to the treasury stock account.

American Semiconductor’s balance sheet included the following:

| Shareholders’ Equity | (\$ in millions) |
|---|------------------|
| Common stock, 100 million shares at \$1 par | \$ 100 |
| Paid-in capital—excess of par | 900 |
| Paid-in capital—share repurchase | 2 |
| Retained earnings | 2,000 |

Retirement

Treasury Stock

Reacquired 1 million of its common shares

Case 1: Shares repurchased at \$7 per share

| | | | | |
|---|---|----------|-----------------------|----------|
| Common stock (\$1 par × 1 million shares) | 1 | | Treasury stock (cost) | 7 |
| Paid-in capital—excess of par (\$9 per share) | 9 | | | |
| Paid-in capital—share repurchase (difference) | | 3 | | |
| Cash | | 7 | Cash | 7 |

OR

Case 2: Shares repurchased at \$13 per share

| | | | | |
|---|---|--|-----------------------|----|
| Common stock (\$1 par × 1 million shares) | 1 | | Treasury stock (cost) | 13 |
|---|---|--|-----------------------|----|

| | | | |
|---|----|----|---------|
| Paid-in capital—excess of par (\$9 per share) | 9 | | |
| Paid-in capital—share repurchase | 2* | | |
| Retained earnings (difference) | 1 | | |
| Cash | | 13 | Cash 13 |

*Because there is a \$2 million credit balance.

Accounting for Retired Shares

When shares are formally retired, we should reduce precisely the same accounts that previously were increased when the shares were sold, namely, common (or preferred) stock and paid-in capital—excess of par. The first column of [Illustration 18-9](#) demonstrates this. The paid-in capital—excess of par account for American Semiconductor shows a balance of \$900 million while the common stock account shows a balance of \$100 million. Thus the 100 million outstanding shares were originally sold for an average of \$9 per share above par, or \$10 per share. Consequently, when 1 million shares are retired (regardless of the retirement price), American Semiconductor should reduce its common stock account by \$1 per share and its paid-in capital—excess of par by \$9 per share. Another way to view the reduction is that because 1% of the shares are retired, both share account balances (common stock and paid-in capital—excess of par) are reduced by 1%.

How we treat the difference between the cash paid to buy the shares and the amount the shares originally sold for (amounts debited to common stock and paid-in capital—excess of par) depends on whether the cash paid is *less* than the original issue price (credit difference) or the cash paid is *more* than the original issue price (debit difference):

1. If a *credit* difference is created (as in Case 1 of [Illustration 18-9](#)), we credit paid-in capital—share repurchase.
2. If a *debit* difference is created (as in Case 2 of [Illustration 18-9](#)), we debit paid-in capital—share repurchase, but only if that account already has a credit balance. Otherwise, we debit retained earnings. (Reducing paid-in capital beyond its previous balance would create a negative balance, which can never happen.)

Why is paid-in capital credited in Case 1 and retained earnings debited in Case 2? The answer lies in the fact that the payments made by a corporation to repurchase its own shares are a distribution of corporate assets to shareholders.

Paid-in capital—share repurchase is debited to the extent of its credit balance before debiting retained earnings.

In Case 1, only \$7 million is distributed to shareholders to retire shares that originally provided \$10 million of paid-in capital. Thus, some of the original investment (\$3 million in this case) remains and is labeled *paid-in capital—share repurchase*.

Payments made by a corporation to retire its own shares are viewed as a distribution of corporate assets to shareholders.

In Case 2, more cash (\$13 million) is distributed to shareholders to retire shares than originally was paid in. The amount paid in comprises the original investment of \$10 million for the shares being retired, plus \$2 million of paid-in capital created by previous repurchase transactions—\$12 million total. Thirteen million is returned to shareholders. The additional \$1 million paid is viewed as a dividend on the shareholders' investment, and thus a reduction of retained earnings.¹⁴

Additional Consideration

Some companies choose to debit retained earnings for the entire debit difference between the cash paid to repurchase shares and the par amount of those shares rather than allocate that difference in the prescribed way. **Target Corporation** is an example of a company that follows this approach. While this method lacks conceptual merit by itself, it's permitted by ASC 505-30-30-8, which states that "a corporation can always capitalize or allocate retained earnings for such purposes."

Accounting for Treasury Stock

We view the purchase of treasury stock as a temporary reduction of shareholders' equity, to be reversed later when the treasury stock is resold. The cost of acquiring the shares is

“temporarily” debited to the treasury stock account (second column of  **Illustration 18-9**). At this point, the shares are considered to be *issued, but not outstanding*.

The purchase of treasury stock and its subsequent resale are considered to be a “single transaction.” The purchase of treasury stock is perceived as a temporary reduction of shareholders’ equity, to be reversed later when the treasury stock is resold. The company “temporarily” debits the treasury stock account when acquiring the shares. The common stock account is not affected. Later, when the shares are resold, the treasury stock account will be credited, and any difference from the cash proceeds upon resale will be allocated to specific shareholders’ equity accounts. Effectively, we consider the purchase of treasury stock and its subsequent resale to be a “single transaction.”

Additional Consideration

The approach to accounting for treasury stock we discuss in this chapter is referred to as the “cost method.” Another permissible approach is the “par value method.” It is essentially identical to formally retiring shares, which is why it sometimes is referred to as the *retirement method of accounting for treasury stock*. In fact, if we substitute Treasury stock for Common stock in each of the journal entries we used to account for retirement of shares in  **Illustrations 18-9** and  **18-11**, we have the par value method. Because the method has virtually disappeared from practice, we do not discuss it further in this chapter.

BALANCE SHEET EFFECT

Formally retiring shares restores the balances in both the Common stock account and Paid-in capital—excess of par to what those balances would have been if the shares never had been issued at all. If the amount paid in this subsequent repurchase is *less* than the amount received from the initial sale (credit difference), that net increase in assets (cash) is reflected as Paid-in capital—share repurchase. On the other hand, if the amount paid in this subsequent repurchase is *more* than the amount received from the initial sale plus any paid-in capital created by previous repurchases (debit difference), a net reduction in assets (cash) occurs and that reduction is reflected as a decrease in retained earnings.

In contrast, when a share repurchase is viewed as treasury stock, the cost of the treasury stock is simply reported as a reduction in total shareholders' equity. Reporting under the two approaches is compared in [Illustration 18-10](#), using the situation described above for American Semiconductor after the purchase of treasury stock in [Illustration 18-9](#) (Case 2). Notice that either way total shareholders' equity is the same.

Illustration 18-10 Reporting Share Buyback in the Balance Sheet

Retirement reduces common stock and associated shareholders' equity accounts.

| (\$ in millions) | Shares Retired Treasury Stock | |
|--|--------------------------------------|-----------------|
| Shareholders' Equity | | |
| Paid-in capital: | | |
| Common stock, 100 million shares at \$1 par | \$ 99 | \$ 100 |
| Paid-in capital—excess of par | 891 | 900 |
| Paid-in capital—share repurchase | | 2 |
| Retained earnings | 1,999 | 2,000 |
| Less: Treasury stock, 1 million shares (at cost) | | (13) |
| Total shareholders' equity | <u>\$ 2,989</u> | <u>\$ 2,989</u> |

Resale of Shares

After shares are formally retired, any subsequent sale of shares is simply the sale of new, unissued shares and is accounted for accordingly. This is demonstrated in the first column of [Illustration 18-11](#).

Illustration 18-11 Comparison of Share Retirement and Treasury Stock Accounting—Subsequent Sale of Shares

After formally retiring shares, we record a subsequent sale of shares exactly like any sale of shares.

The resale of treasury shares is viewed as the consummation of the “single transaction” begun when the treasury shares were purchased.

American Semiconductor sold 1 million shares after reacquiring shares at \$13 per share (Case 2 in [Illustration 18-9](#)).

| Retirement | | Treasury Stock | |
|--|----|--------------------------------------|----|
| Sold 1 million shares | | | |
| Case A: Shares sold at \$14 per share | | | |
| Cash | 14 | Cash | 14 |
| Common stock (par) | 1 | Treasury stock (cost) | 13 |
| Paid-in capital— excess of par | 13 | Paid-in capital— share repurchase | 1 |
| Or | | | |
| Case B: Shares sold at \$10 per share | | | |
| Cash | 10 | Cash | 10 |
| Common stock (par) | 1 | Retained earnings (to balance) | 1 |
| Paid-in capital— excess of par | 9 | Paid-in capital—share repurchase | 2* |
| | | Treasury stock (cost) | 13 |

*Because there is a \$2 million credit balance.

The resale of treasury shares is viewed as the consummation of the single transaction begun when the treasury shares were repurchased. The effect of the single transaction of purchasing treasury stock and

reselling it for more than cost (Case 2 of [Illustration 18-9](#) and Case A of

[Illustration 18-11](#)) is to *increase* both cash and shareholders' equity (by \$1 million). The

effect of the single transaction of purchasing treasury stock and reselling it for less than cost

Allocating the cost of treasury shares occurs when the shares are resold.

(Case 2 of  **Illustration 18-9** and Case B of  **Illustration 18-11**) is to *decrease* both cash and shareholders' equity (by \$3 million).

Note that retained earnings may be debited in a treasury stock transaction, but not credited. Also, notice that transactions involving treasury stock have no impact on the income statement. Both of those statements—no credit (increase) to retained earnings and no impact on the income statement—follow the reasoning that a corporation's buying and selling of its own shares are transactions between the corporation and its owners and not part of the revenue recognition process.

Additional Consideration

Treasury Shares Acquired at Different Costs

Determining the cost of treasury stock sold is similar to determining the cost of goods sold.

Notice that the treasury stock account always is credited for the cost of the reissued shares (\$13 million in  **Illustration 18-11**). When shares are reissued, if treasury stock on hand has been purchased at different per share prices, the cost of the shares sold must be determined using a cost flow assumption—FIFO, LIFO, or weighted average—similar to determining the cost of goods sold when inventory items are acquired at different unit costs.

Concept Review Exercise

TREASURY STOCK

Situation: The shareholders' equity section of the balance sheet of National Foods, Inc., included the following accounts at December 31, 2023.

| Shareholders' Equity | (\$ in millions) |
|---|-----------------------|
| Paid-in capital: | |
| Preferred stock, 11 million shares at \$1 par | \$ 11 |
| Common stock, 122 million shares at \$1 par | 122 |
| Paid-in capital—excess of par, preferred | 479 |
| Paid-in capital—excess of par, common | 854 |
| Retained earnings | <u>2,848</u> |
| Total shareholders' equity | <u>\$4,314</u> |

Required:

1. National Foods reacquired common shares during 2024 and sold shares in two separate transactions later that year. Prepare the entries for both the purchase and subsequent sale of shares during 2024, assuming that the shares were (a) retired and (b) considered to be treasury stock.
 - a. National Foods purchased 6 million shares at \$10 per share.
 - b. National Foods sold 2 million shares at \$12 per share.
 - c. National Foods sold 2 million shares at \$7 per share.
2. Prepare the shareholders' equity section of National Foods' balance sheet at December 31, 2024, assuming the shares were both (a) retired and (b) viewed as treasury stock. Net income for 2024 was \$400 million, and preferred shareholders were paid \$1 million cash dividends.

Solution:

1. National Foods reacquired common shares during 2024 and sold shares in two separate transactions later that year. Prepare the entries for both the purchase and subsequent sale of shares during 2024, assuming that the shares were (a) retired and (b) considered to be treasury stock.

a. National Foods **purchased** 6 million shares at **\$10** per share:

| Retirement (\$ in millions) | | Treasury Stock (\$ in millions) | |
|---|----|--|----|
| Common stock (6 million shares × \$1) | 6 | Treasury stock (6 million shares × \$10) | 60 |
| Paid-in capital—excess of par (6 million shares × \$7*) | 42 | Cash | 60 |
| Retained earnings (to balance) | 12 | | |
| Cash | 60 | | |

*\$854 million ÷ 122 million shares

b. National Foods **sold** 2 million shares at **\$12** per share (\$ in millions):

| | | | |
|---------------------------------------|----|--|----|
| Cash | 24 | Cash | 24 |
| Common stock (2 million shares × \$1) | 2 | Treasury stock (2 million shares × \$10) | 20 |
| Paid-in capital—excess of par | 22 | Paid-in capital—share repurchase | 4 |

c. National Foods **sold** 2 million shares at **\$7** per share (\$ in millions):

| | | | |
|---|----|--|----|
| Cash | 14 | Cash | 14 |
| Common stock (2 million shares × \$1 par) | 2 | Paid-in capital—share repurchase | 4 |
| Paid-in capital—excess of par | 12 | Retained earnings (to balance) | 2 |
| | | Treasury stock (2 million shares × \$10) | 20 |

2. Prepare the shareholders' equity section of National Foods's balance sheet at December 31, 2024, assuming the shares were both (a) retired and (b) viewed as treasury stock.

| NATIONAL FOODS, INC. | | |
|--|---------------------------|---------------------------|
| Balance Sheet | | |
| (Shareholders' Equity Section) | | |
| At December 31, 2024 | | |
| (\$ in millions) | Shares Retired | Treasury Stock |
| Shareholders' Equity | | |
| Preferred stock, 11 million shares at \$1 par | \$ 11 | \$ 11 |
| Common stock, 122 million shares at \$1 par | 120 | 122 |
| Paid-in capital—excess of par, preferred | 479 | 479 |
| Paid-in capital—excess of par, common | 846* | 854 |
| Retained earnings | 3,235 [†] | 3,245 [‡] |
| Treasury stock, at cost; 2 million common shares | — | (20) |
| Total shareholders' equity | <u>\$4,691</u> | <u>\$4,691</u> |

Note: This situation is continued in the next Concept Review Exercise.

*\$854 - \$42 + \$22 + \$12

[†]\$2,848 - \$12 + \$400 - \$1

[‡]\$2,848 - \$2 + \$400 - \$1

PART C

Retained Earnings

Characteristics of Retained Earnings

LO18–6 Describe retained earnings and distinguish it from paid-in capital.

In the previous section, we examined *invested* capital. Now we consider *earned* capital, that is, retained earnings. In general, retained earnings represents a corporation's accumulated, undistributed net income (or net loss). A more descriptive title used by some companies is reinvested earnings. A credit balance in this account indicates a dollar amount of assets previously earned by the firm but not distributed as dividends to shareholders. We refer to a debit balance in retained earnings as a **deficit**. **Microsoft** reported a deficit for several years until retained earnings grew to a positive balance in 2013.

You saw in the previous section that the buyback of shares (as well as the resale of treasury shares in some cases) can decrease retained earnings. We examine in this section the effect on retained earnings of dividends and stock splits.¹⁵

Dividends

LO18–7 Explain the basis of corporate dividends, including the similarities and differences between cash and property dividends.

Shareholders' initial investments in a corporation are represented by amounts reported as paid-in capital. One way a corporation provides a return to its shareholders on their investments is to pay them a **dividend**, typically cash.¹⁶

Dividends are distributions of assets the company has generated on behalf of its shareholders. If dividends are paid that exceed the amount of assets earned by the company, then management is, in effect, returning to shareholders a portion of their investments, rather than providing them a return on that investment. So most companies view retained earnings as the amount available for dividends.¹⁷

Page 1068

Liquidating Dividend
